**Reply to objection 1:** Given the opinion that matter’s being unformed temporally (*duratione*) preceded its being formed, one must claim that matter was created from the beginning as the subject of substantial forms, but was later formed with respect to certain accidental conditions, among which light holds the first place.

**Reply to objection 2:** Some claim that the light in question was a kind of luminous cloud, which afterwards, once the sun was made, returned to its original matter. But this is implausible. For at the beginning of Genesis Scripture commemorates the establishment of nature, which afterwards perseveres. Hence, one should not claim that something which had been made at that point ceased to exist later on.

Accordingly, others claim that this luminous cloud remains even now and is conjoined to the sun in such a way that it cannot be distinguished from the sun. However, on this view the cloud would remain to no purpose (*remaneret superflua*); yet among the works of God there is nothing useless.

And so others claim that the body of the sun was formed from that cloud. However, this claim cannot be made if one posits that the body of the sun is not made from the nature of the four elements, but is instead incorruptible by its nature (cf. q. 66, a. 2). For according to this opinion, the sun’s matter could not have been the subject of any other form.

Therefore, one should claim, with Dionysius in *De Divinis Nominibus*, chap. 4, that the light in question was the light of the sun, but that the sun was as yet unformed in the sense that the substance of the sun existed and had the power to illuminate in general, but was only afterwards given a special and

determinate power with respect to particular effects. On this view, there were three respects in which light was divided from darkness in the production of this light:

First, with respect to its *cause*, since the cause of the light existed in the substance of the sun, whereas the cause of darkness lay in the opaqueness of the earth.

Second, with respect to *place*, since there was light in one hemisphere and darkness in the other.

Third, with respect to *time*, since within the same hemisphere there was light for one part of the time and darkness for the other part. And this is what it means when it says, “The light He called day, and the darkness night.”

**Reply to objection 3:** Basil claims that at the time in question light and darkness were effected not by motion, but by the emission and retraction (*contractio*) of light. But against this Augustine objects that there would be no reason for this alternation of the emitting and retracting of light, since there were as yet no men or animals whose uses this would serve. In addition, the nature of a luminous body is not such that light retracts in its presence; and even though this could be done miraculously, it is not, as Augustine points out, the miraculous that is to be sought in the first establishment of nature, but rather what the nature of the things dictates.

And so one should reply that there are two motions in the heavens. One is common to the whole of the heavens, and it causes day and night; and it is this motion that seems to have been established on the first day. The second motion is the one that is diversified by different bodies, and it is according to these motions that there is a diversity of days with respect to one another, and months, and years. And so on the first day mention is made only of the distinction between night and day, which is effected by the common motion. But on the fourth day there is mention of the diversity of days and seasons (*tempora*) and years, when it says, “... and let them be for seasons and for days and for years.” This diversity is effected by the particular motions.

**Reply to objection 4:** According to Augustine, formlessness does not temporally precede formation. Hence, he has to say that what the production of light means here is the formation of spiritual creatures—not of spiritual creatures perfected by glory, with which they were not created, but of spiritual creatures perfected by grace, with which they were indeed created, as has been explained (q. 62, a. 3). Thus, through this light there was a division of light from darkness, i.e., from the formlessness of [corporeal] creatures, which had not yet been formed.

Alternatively, if both kinds of creatures (*tota creatura*) were simultaneously formed, then the division was of light from that spiritual darkness which did not then exist (since the devil was not created evil), but which God foresaw would exist in the future.

## QUESTION 68

### The Work of the Second Day

The next thing to consider is the work of the second day. On this topic there are four questions: (1) Was the firmament made on the second day? (2) Are there waters above the firmament? (3) Does the firmament divide waters from waters? (4) Are there many heavens, or just one?

#### Article 1

##### Was the firmament made on the second day?

It seems that the firmament was not made on the second day:

**Objection 1:** Genesis 1:8 says, “God called the firmament ‘heaven’. But heaven was made before any of the days, as is clear when it says, “In the beginning God created heaven and earth.” Therefore, the firmament was not made on the second day.

**Objection 2:** The works of the six days are ordered in accord with God’s wisdom. But it would not befit God’s wisdom for Him to make at a later time (*posterius*) something that is naturally prior. But the firmament is naturally prior to water and earth, mention of which is made before the formation of light, which occurred on the first day. Therefore, the firmament was not made on the second day.

**Objection 3:** Everything that was made during the six days was formed from the matter that had been created before any of the days. But the firmament could not have been formed from pre-existing matter, since then it would be subject to generation and corruption. Therefore, the firmament was not made on the second day.

**But contrary to this:** Genesis 1:6 says, “God said, let there be a firmament.” And this is later followed by, “... and the evening and the morning were the second day.”

**I respond:** As Augustine teaches, in questions of this sort there are two norms to be followed. The first is that the truth of Scripture must be unshakably held to. The second is that when divine Scripture can be interpreted in a number of different ways, one should not adhere to any of the interpretations so exclusively that what he presumes to assert to be the meaning of Scripture might turn out to be proven false by a compelling argument—lest, because of this, the Scripture be exposed to ridicule by non-believers, and lest the way of belief be thereby closed off to them.

Note, then, that there are two possible ways to understand the passage, “The firmament was made ... on the second day.”

In the first way, it is speaking of the firmament in which the stars exist. And on this reading, we must explain the verse in different ways, corresponding to the different opinions men have about the firmament.

For instance, some have claimed that this firmament is composed of the elements. This was the opinion of Empedocles, who nonetheless claimed that this body is incorruptible (*indissolubile*) because its composition involved only ‘love’ (*amicitia*) and not ‘strife’ (*lis*). Others have claimed that the firmament is of the nature of the four elements, not in the sense that it is composed of the elements, but in the sense that it is a simple element. This was the opinion of Plato, who claimed that a celestial body is elemental fire. Still others have claimed that the heavens are not of the nature of the four elements, but are a fifth body, beyond the four elements. And this was Aristotle’s opinion.

Given the first opinion, one could concede without qualification that the firmament was made on the second day, even with respect to its substance. For the work of *creation* involves producing the very substance of the elements, whereas the work of *division* and the work of *adornment* involve forming things out of the pre-existing elements.

Given Plato's opinion, on the other hand, it is wrong to believe that the firmament was made with respect to its substance on the second day. For on this view, to make the firmament is to produce the element fire. But the production of the elements pertains to the work of creation, according to those who claim that matter's not being formed temporally preceded its being formed. For the forms of the elements are the ones that first characterize matter.

*A fortiori*, given Aristotle's opinion, one cannot claim that the firmament was produced with respect to its substance on the second day, assuming that the six days involve temporal succession. For since the heavens are incorruptible by their nature, they have matter that cannot be the subject of any other form, and so it is impossible that the firmament should be out of matter that has existed at some previous time. Hence, the production of the substance of the firmament belongs to the work of creation [and not to the work of division].

However, according to these last two opinions, there is a type of formation of the firmament that belongs to the work of the second day—just as in *De Divinis Nominibus*, chap. 4, Dionysius claims that the sun's light was unformed in the first three days and was later formed on the fourth day.

On the other hand, if, as Augustine claims, the six days designate only an order of nature and not a temporal succession, then nothing prevents one from claiming, given any of these opinions, that the formation of the firmament with respect to its substance pertains to the second day.

Now the second possible way to understand the passage, "The firmament was made on the second day," is not to think of the firmament in which the stars are fixed, but to think instead of the part of the air in which clouds gather and which is called a firmament because of the density of the air in that region. For as Basil explains, what is dense and solid is said to be a 'firm body', as opposed to a 'mathematical body'. Given this interpretation, nothing follows that is incompatible with any of the above opinions. Hence, in *Super Genesim ad Litteram 2* Augustine, commending this interpretation, says, "I judge this view to be the most praiseworthy. For what it says is not contrary to the faith, and it can be promptly accepted once the proof is presented."

**Reply to objection 1:** According to Chrysostom, Moses first told in summary what God had done, beginning with, "In the beginning God created heaven and earth," and afterwards explained it part by part. It is like someone saying, "This builder made that house," and then adding, "First he made the foundation, and later he erected the walls, and then he put a roof over it." And so we do not have to understand two different heavens when it says, "In the beginning God created heaven and earth," and when it later says, "On the second day the firmament was made."

It also possible to claim that the heaven said to be created at the beginning is different from the heaven said to be made on the second day. There are different ways to make this claim.

For instance, according to Augustine, the heaven said to have been made on the first day is unformed spiritual nature, whereas the heaven said to have been made on the second day is the corporeal heaven.

By contrast, according to Bede and Strabo, the heaven said to have been made on the first day is the empyrean heaven, whereas the firmament that is said to have been made on the second day is the starry heaven.

Again, according to Damascene, the heaven said to have been made on the first day is a spherical heaven without stars—the philosophers speak of this, calling it the ninth sphere and the first movable thing, which is moved by the diurnal motion—whereas he understands the firmament made on the second day to be the starry heaven.

According to yet another interpretation mentioned by Augustine, the heaven made on the first day is the starry heaven itself, whereas the firmament made on the second day is the region of the air in which clouds gather and which is also called 'heaven' equivocally. And it is in order to signal the equivocation that the text expressly says, "God called the firmament 'heaven'," just as it had previously said, "God

called the light ‘day’” (for ‘day’ is also used to mean a period of twenty-four hours). And, as Rabbi Moses points out, this same practice can be observed in other places.

**Reply to objection 2 and reply to objection 3:** The replies to these objections are clear from what was said above.

## Article 2

### Are there waters above the firmament?

It seems that there are no waters above the firmament:

**Objection 1:** Water is naturally heavy. But the proper place of what is heavy is just down below and not up above. Therefore, there are no waters above the firmament.

**Objection 2:** Water is naturally a fluid. But, as is clear from experience, a fluid cannot stay still on the surface of a round body. Therefore, since the firmament is a round body, there cannot be water above the firmament.

**Objection 3:** Since water is an element, it is ordered toward the generation of mixed bodies, in the way that what is incomplete (*imperfectum*) is ordered toward what is complete (*perfectum*). But the place for such mixing is upon the earth and not above the firmament. Therefore, water would be useless above the firmament. But nothing in the works of God is useless. Therefore, there are no waters above the firmament.

**But contrary to this:** Genesis 1:7 says, “He divided the waters that were above the firmament from those that were under the firmament.”

**I respond:** As Augustine says in *Super Genesim ad Litteram* 2, “The authority of this passage of Scripture is greater than all the capability of human genius. Hence, whatever sort of waters these were, and in whatever way they were there, we do not at all doubt that they were there.”

However, the question of what sort of waters these are is not answered in the same way by everyone.

For Origen says that the waters above the heavens are the spiritual substances, and this is why Psalm 148:4 says, “Let the waters that are above the heavens praise the name of the Lord,” and Daniel 3:60 says, “Bless the Lord, all you waters that are above the heavens.”

But to this Basil replies in *Hexameron* 3 that these things are said not because the waters are rational creatures, but because “the consideration of them, contemplated thoughtfully by beings with understanding, brings to completion the glorification of their Creator.” Hence, in the same place (Daniel 3) the same thing is said about fire and hail and other things of this sort, which are clearly not rational creatures.

Therefore, one should claim that the waters are corporeal. However, it is necessary to specify in different ways what kinds of waters they are, in accord with the different opinions about the firmament.

For if the firmament is understood to be the starry heaven and is claimed to be of the nature of the four elements, then by parity of reasoning the waters that are above the heavens can be believed to be of the same nature as elemental waters.

On the other hand, if the firmament is understood to be the starry heaven but not of the nature of the four elements, then the waters above the firmament will not be of the nature of elementary waters. Instead, just as, according to Strabo, one heaven is called ‘empyrean’, i.e., fiery, only because of its splendid light (*splendor*), so too the other heaven, which is above the starry heaven, will be called ‘aqueous’ (*aequeum*) only because of its transparency.

Again, if one claims that the firmament has a nature different from that of the four elements, then, as Augustine points out in *Super Genesim contra Manichaeos*, he can still say that the firmament divides the waters if we mean by ‘water’ the unformed matter of bodies and not the element water. For on this view, whatever lies between bodies divides waters from waters.

However, if the firmament is understood to be that part of the air in which clouds gather, then the waters that are above the firmament are those waters which, having been evaporated (*vaporabiliter resolutae*), are elevated above the part of the air from which rain is generated. For it is altogether impossible to claim, as some have (Augustine touches on this view in *Super Genesim ad Litteram 2*), that evaporated waters are elevated above the starry heaven—and this (a) because of the solidity of the heavens, (b) because of the intermediate region of fire, which would consume vapors of this sort, (c) because the place where light and rarified things are carried is under the curve of the moon’s orbit, and also (d) because vapors do not appear to the senses to be elevated even as far as the peaks of certain mountains. What’s more, the reply that the rarefaction of a body goes on *ad infinitum* because bodies are infinitely divisible is groundless. For a natural body is divided or rarified only to a set limit and not *ad infinitum*.

**Reply to objection 1:** To some it seems that the correct response to this argument is that even though the waters are naturally heavy, they are retained above the heavens by God’s power. But in *Super Genesim ad Litteram 2* Augustine rules out this response, saying, “At this point it is fitting to inquire into how God made the natures of things, and not what He intended to do in them by His miraculous power.”

Hence, one should respond alternatively that, given the last two opinions above about the waters and the firmament, the solution is clear from what has been said. According to the first opinion, one has to posit an order among the elements that is different from the one Aristotle posits, so that certain dense waters surround the earth, whereas certain rarified waters surround the heavens—with the result that those waters are related to the heavens in the same way that these waters here below are related to the earth. Yet another response, as has been explained, is that ‘water’ here means the matter of bodies.

**Reply to objection 2:** Given the last two opinions mentioned above, the answer here is clear from what was said above.

On the other hand, given the first opinion mentioned above, Basil has two replies. The first is that it is not necessary that everything that appears round on its concave side is also round up above on its convex side. Second, the waters that are above the heavens are not fluids, but are, as it were, firmed up with a glacier-like solidity around the heavens. That is why some call these waters the ‘crystalline’ heaven.

**Reply to objection 3:** According to the third opinion, the waters above the firmament are elevated as vapor because of the usefulness of rain.

By contrast, given the second opinion, the waters are above the firmament, i.e., above the whole diaphanous heaven without stars. Some say that this heaven is the first moveable thing and that it turns all of heaven with the diurnal motion in order to effect, through the diurnal motion, the continuity of generation—just as the heaven in which the stars exist, through a motion that is in accord with the zodiac, effects the diversity of generation and corruption by approaching and receding and by the diverse powers of the stars.

On the other hand, given the first opinion, the waters are there, as Basil says, to temper the heat of the celestial bodies. As Augustine points out, some take as an indication of this the fact that the star Saturn is the coldest because of its proximity to the higher waters.

### Article 3

#### Does the firmament divide waters from waters?

It seems that the firmament does not divide waters from waters:

**Objection 1:** There is just one natural place for one body according to its species. But as the Philosopher says, all water is the same in species as all other water. Therefore, waters are not distinct from waters with respect to place.

**Objection 2:** Someone might reply that the waters above the firmament differ in species from the waters below the firmament.

Against this: Things that are diverse in species do not need anything else to distinguish them. Therefore, if the higher waters and lower waters differ in species, then it is not the firmament that distinguishes them from one another.

**Objection 3:** It seems that what divides waters from waters is something touched by waters on both sides, like a wall built in the middle of a river. But it is clear that the lower waters do not reach all the way to the firmament. Therefore, the firmament does not divide waters from waters.

**But contrary to this:** Genesis 1:6 says, “Let there be a firmament made in the middle of the waters, and let it divide waters from waters.”

**I respond:** If one looked at just the surface of the text of Genesis, he could construct a picture that corresponds to the position of certain ancient philosophers. For some of them claimed that water is an infinite body and the principle of all other bodies. Indeed, one could read the immensity of the waters into the name ‘deep’ (*abyssum*), when it says, “Darkness was upon the face of the deep.” In addition, they claimed that the sensible heaven which we see does not contain all corporeal things under itself, but that there is an infinite body of waters above the heaven. And so one could claim that the firmament of the heaven divides the outer waters from the inner waters, i.e., from all the bodies contained below the heaven whose principle they claimed to be water.

However, since this position is shown to be false by sound arguments, one should not claim that this is what Scripture means.

Instead, consider that Moses was speaking to an uneducated people and, in accommodating himself to their intellectual weakness, he proposed to them only what is manifestly obvious to the senses. Now everyone, no matter how uneducated, perceives through the senses that earth and water are bodies. Air, however, is not perceived by everyone to be a body, since even some philosophers have claimed that air is nothingness, calling what is full of air a vacuum. And so Moses explicitly mentions water and earth, but does not explicitly name air, so as not to propose something unknown to the uneducated. Yet in order to express the truth to those capable of understanding it, he makes room for an interpretation involving air by signifying it as connected to the water, when he says, “Darkness was upon the face of the deep”—which means that a diaphanous body, the subject of light and darkness, is upon the face of the water. So, then, regardless of whether we mean by the firmament the starry heaven or the cloudy part of the air, it is appropriate to say that the firmament divides waters from waters, given either that ‘water’ means unformed matter or that all diaphanous bodies are understood by the name ‘waters’. For the starry heaven divides the lower diaphanous bodies from the higher bodies, whereas the cloudy air divides the higher part of the air, in which rains and similar irruptions are generated, from the lower part of the air, which is connected with water and is understood under the name ‘waters’.

**Reply to objection 1:** If ‘firmament’ means the starry heaven, then the higher waters are not the same in species as the lower waters.

On the other hand, if ‘firmament’ means the cloudy air, then both waters are of the same species.

And in that case the two places are not assigned to the waters for the same reason; instead, the higher place is the place of the generation of waters, whereas the lower place is the place of rest for those waters.

**Reply to objection 2:** If the waters are taken to be diverse in species, the firmament is said to divide waters from waters not in the sense that it causes the distinction between them, but in the sense that it is the terminus of both sorts of waters.

**Reply to objection 3:** Because of the invisibility of the air and of similar bodies, Moses includes all bodies of this sort under the name ‘waters’. And in this way it is clear that there are waters on both sides of the firmament, no matter how ‘firmament’ is understood.

#### Article 4

##### Is there just one heaven?

It seems that there is just one heaven:

**Objection 1:** Heaven is distinguished from earth when it says, “In the beginning God created heaven and earth.” But there is just one earth. Therefore, there is likewise just one heaven.

**Objection 2:** Everything that includes all its own matter is just one. But heaven is like this, as the Philosopher proves in *De Caelo* 1. Therefore, there is just one heaven.

**Objection 3:** Whatever is predicated univocally of many things is predicated of them in accord with a single common concept. But if there is more than one heaven, then ‘heaven’ is predicated univocally of many things; for if it were being predicated equivocally, then it would not be proper to say ‘many heavens’. Therefore, if there are said to be many heavens, then there must be some common concept in accord with which they are called heavens. But there is no such ascribable concept. Therefore, one should not say that there are many heavens.

**But contrary to this:** Psalm 148:4 says, “Praise Him, you heavens of heavens.”

**I respond:** On this question, there seems to be a disagreement between Basil and Chrysostom. For Chrysostom says that there is just one heaven and the fact that the Psalm says “... you heavens of heavens” in the plural is due to an idiom of the Hebrew language, in which it is customary to signify heaven only in the plural, just as in Latin there are likewise many nouns that lack a singular form. On the other hand, Basil and Damascene, who follows him, claim that there are many heavens.

This disagreement, however, is more verbal than substantive. For what Chrysostom calls ‘the one heaven’ is the whole of the body that is above the earth and waters, so that even the birds that fly in the air are on this account called ‘the birds of heaven’. On the other hand, it was because there are many distinctions to be drawn within this body that Basil posited many heavens.

Thus, in order to understand the division of the heavens, note that there are three ways in which ‘heaven’ is used in Scripture:

Sometimes the name ‘heaven’ is used properly and naturally. Given this usage, ‘heaven’ means a body that is (a) very high (*sublime*), (b) either actually or potentially luminous, and (c) incorruptible by its nature. Accordingly, three heavens are posited. The first is totally luminous and is called the *empyrean* heaven. The second is totally diaphanous and is called the *aqueous* or *crystalline* heaven. The third is partly diaphanous and partly luminous in actuality, and this is called the *starry* heaven; it is divided into eight spheres, viz., the sphere of the fixed stars and the seven spheres of the planets, which can themselves be called eight heavens.

Second, the name ‘heaven’ is used to designate participation in a property of a celestial body, viz.,

(a) height or (b) actual or potential luminosity. It is according to this usage that Damascene posits as a single heaven the entire region from the waters to the orbit of the moon. This he calls the ‘airy heaven’. And so, according to him, there are three heavens: the *airy* heaven, the *starry* heaven, and the other higher heaven, which he understands to be the “*third* heaven” the Apostle reports he was taken up to (*raptus usque*) (2 Corinthians 12:2).

However, since that first heaven contains two elements, viz., fire and air, and since there is a higher and lower region in each of them, Rabanus divides it into four: (a) the highest region of fire, which he calls the *fiery* heaven, (b) the lower region of fire, which he calls the *olympian* heaven because of the height of a mountain that is called Olympus, (c) the highest region of air, which he called the *ethereal* heaven because of its illumination (*inflammatio*), and (d) the lower region of air, which he calls the *airy* heaven. And so when these four heavens are added to the three higher heavens, there are, according to Rabanus, seven corporeal heavens in the universe.

Third, the name ‘heaven’ is used metaphorically. Sometimes the Holy Trinity is itself called ‘heaven’ in this way, because of its spiritual sublimity and light; it is of this heaven that the devil is understood to have said, “I will ascend into heaven,” i.e., into equality with God. Again, sometimes the spiritual goods with which the saints are rewarded are called heavens because of their preeminence, as in Augustine’s interpretation of the passage, “Your reward will be manifold (*multa*) in the heavens” (Matthew 5:12 and Luke 6:23). Again, sometimes the three types of supernatural vision, viz., corporeal, imaginative, and intellectual, are called three heavens; it is with these in mind that Augustine interprets Paul’s being taken up to the third heaven.

**Reply to objection 1:** Earth is related to heaven as the center to a circumference. But around one center there can be many circumferences. Hence, even though there is one earth, many heavens are posited.

**Reply to objection 2:** This argument goes through insofar as ‘heaven’ means the universe of corporeal creatures. Given this meaning, there is indeed just one heaven.

**Reply to objection 3:** As is clear from what has been said, height and some sort of luminosity are common to all the heavens.

## QUESTION 69

### The Work of the Third Day

The next thing to consider is the work of the third day. On this topic there are two questions, (1) one about the gathering together of the waters and (2) the other about the production of plants.

#### Article 1

#### Was the gathering together of the waters fittingly said to have been done on the third day?

It seems that the gathering together of the waters was not fittingly said to have been done on the third day:

**Objection 1:** The things that were made on the first and second days are expressed by the verb ‘to make’; for it says, “God said ‘Let light be made’ ... and ‘Let a firmament be made’.” But the third day is grouped with the first two days. Therefore, the work of the third day should have been expressed by the verb ‘to make’ and not just by the verb ‘to gather together’.

**Objection 2:** Prior to the third day the earth was everywhere covered with the waters; this is why it was said to be “invisible.” Therefore, there was no place on the earth (*super terram*) where the waters could be gathered together.

**Objection 3:** Things that are not continuous with one another do not have a single location. But it is not the case that all waters have continuity with one another. Therefore, it is not the case that all the waters are gathered together into one place.

**Objection 4:** To gather together involves local motion. But it seems natural for waters to flow and to run to the sea. Therefore, no divine command had to be given for this.

**Objection 5:** The earth is already named at the beginning of its creation, when it says, “In the beginning God created heaven and earth.” Therefore, it is inappropriate to say that the name ‘earth’ was imposed on it on the third day.

**But contrary to this:** The authority of Scripture suffices for the contrary.

**I respond:** On this topic one has to reply in different ways, depending on whether he follows Augustine’s interpretation or that of the other saints.

In all these works Augustine posits only an ordering of origin and nature and not a temporal ordering. For he says that the first things created are (a) unformed spiritual nature and (b) corporeal nature without any form (which, he says, is first signified by the names ‘earth’ and ‘water’)—first only in origin and not because the lack of form preceded formation in time. And again, according to him, the one formation preceded the other only in the order of nature and not in duration. According to this ordering, the formation of the highest nature, viz., the spiritual, has to be posited first, because light is said to have been made on the first day. But just as spiritual nature has preeminence over corporeal nature, so the higher bodies have preeminence over the lower ones. Hence, the formation of the higher bodies is mentioned in the second place, when it says, “Let there be a firmament”—which means the impressing of a celestial form on unformed matter that exists antecedently only in origin and not in time. In the third place he posits the impressing of elemental forms on unformed matter that exists antecedently in origin and not in time. Hence, the verse, “Let the waters be gathered together and let the dry land appear,” has to do with the impressing on corporeal matter of (a) the substantial form of water, through which the relevant sort of motion belongs to it, and (b) the substantial form of earth, through which it belongs to it to be seen in the relevant way.

However, according to the other saints, there is a temporal ordering in these works. For they claim that matter’s being unformed temporally precedes its being formed, and the one formation temporally

precedes the next. But according to them, matter's being unformed is not to be understood as the absence of all form, since there was already heaven and water and earth (the three of them having been named because they are manifestly perceptible by the senses); instead, matter's being unformed is understood as the absence of due division and of any finished beauty. And corresponding to the three names in question, Scripture posited three sorts of formlessness. For heaven, which is the highest, has the formlessness of darkness, since the source of light comes from it, whereas the formlessness of water, which is in the middle, is signified by the name 'deep' (*abyssum*), since, as Augustine explains in *Contra Faustum*, this name signifies an immensity of turbulent water. On the other hand, the formlessness of earth is touched on when it says, "The earth was invisible (or: void)," because it was covered with water. On this view, then, the formation of the highest body was done on the first day. And since time follows upon the motion of the heavens and is the number of the motion of the highest body, this formation effected the division of time, viz., into night and day. On the other hand, the middle body, viz., water, was formed on the second day through the firmament, and it received a certain distinctness and order (so that other things are also included under the name 'water', as was explained above (q. 68, a. 3)). And on the third day the last body, viz., earth, was formed as a result of its being uncovered by the waters. And a division was made in the lowest body, viz., between the earth and the sea. Hence, fittingly enough, just as he had expressed the formlessness of the earth by saying "The earth was invisible (or: void)," so he expressed its being formed by saying, "And dry land appeared."

**Reply to objection 1:** According to Augustine, the reason that Scripture does not use the verb 'to make' for the work of the third day, as it had for the preceding works, is in order to show that the higher forms, viz., the spiritual forms of the angels and the forms of the celestial bodies, are perfect and stable in *esse*, whereas the forms of the lower bodies are imperfect and changeable. And so the gathering together of the waters and the appearance of dry land signify that it is forms of this latter sort that are being impressed. For as he himself says in *Super Genesim ad Litteram* 2, "Water flows in a transient manner, and earth is fixed in a stable manner."

By contrast, according to the others, one must reply that the work of the third day is perfect only with respect to local motion. And so it was unnecessary for Scripture to use the verb 'to make'.

**Reply to objection 2:** The reply is clear, given Augustine's view. For it is unnecessary to say that the earth was first covered with the waters and that the waters were afterwards gathered together; instead, the waters were produced already gathered together in this way.

Given the view of the others, however, there are three possible replies, as Augustine himself points out in *Super Genesim ad Litteram* 1.

The first possible reply is that the waters are elevated to a greater height in the place where they are gathered together. For as Basil explains, it is known from experience that in the case of the Red Sea, the sea is higher than the land.

The second possible reply is that the water covered the earth while more rarified as a cloud and was then condensed and gathered together.

The third possible reply is that the earth could have had certain hollowed out parts in which to receive the flowing waters.

Of these replies, the first seems the most probable.

**Reply to objection 3:** All waters have a single terminus, viz., the sea, into which they flow together by either apparent or hidden channels. It is for this reason that the waters are said to be gathered together into one place.

An alternative reply is that it says 'one place' not in an absolute sense, but by contrast with the place of dry land, so that the meaning is, "The waters are gathered together in one place," i.e. separately from dry land. For in order to signify the plurality of the places of the water, it adds, "The gathering together of the waters He called 'seas'."

**Reply to objection 4:** It is God’s command that gives natural motion to bodies. Hence, [Psalm 148:8] says that by their natural motions “they fulfill His word.”

An alternative reply is that it would be natural for water to be everywhere around the earth, just as the air is everywhere around the water and the earth, but that because of the necessity of the end, viz., that animals and plants should live upon the earth, some part of the earth needed not to be covered by the waters. Some philosophers attribute this to the action of the sun, which dries the earth by the elevation of vapors. But Sacred Scripture attributes it to God’s power, not only in Genesis, but also in Job 38:10, where it says in the personage of the Lord, “I set my bounds around the sea,” and in Jeremiah 5:22, ““Will you not then fear me’, says the Lord, ‘who has placed the sand as a boundary for the sea?’”

**Reply to objection 5:** According to Augustine, what is meant by the earth which is first mentioned is primary matter, whereas in the present context what is meant is the element earth.

An alternative reply, taken from Basil, is that the earth was first named with respect to its nature, whereas in the present context it is named with respect to its principal property, which is dryness. This is why it says, “The dry land He called earth.”

Another reply, taken from Rabbi Moses, is that whenever it says, “He called ...,” this signals an equivocation in the relevant name. Hence, it had previously said, “He called the light ‘day’,” because a period of twenty-four hours is also called ‘day’, in accord with which it says in the same place, “There was evening and morning, one day.” Similarly, it says, “He called the firmament (read: the air) heaven,” because what was first created is also called ‘heaven’. Again, it says, “The dry land (read: the part that was not covered by the waters) He called ‘earth’,” as opposed to ‘sea’, even though the earth is called by the common name ‘earth’, regardless of whether or not it is covered with waters.

Moreover, the phrase “He called .....” is understood throughout to mean that He gave the relevant nature or property so that the thing could be so called.

## Article 2

### Is it inappropriate that the production of plants is said to have been effected on the third day?

It seems inappropriate that the production of plants is said to have been effected on the third day:

**Objection 1:** Plants have life, just as animals do. But the production of animals is placed among the works of adornment and not among the works of division. Therefore, the production of plants should not have been recorded under the third day, which has to do with the work of dividing.

**Objection 2:** What pertains to the cursing of the earth should not be recorded along with the formation of the earth. But the production of certain plants pertains to the cursing of the earth—this according to Genesis 3:17-18 (“Cursed is the earth in your work; it will bring forth thorns and thistles for you”). Therefore, the production of plants in general should not have been recorded under the third day, which has to do with the formation of the earth.

**Objection 3:** Just as plants stay close to the earth, so do rocks and metals, and yet no mention is made of the latter in the formation of the earth. Therefore, plants should not have been made on the third day, either.

**But contrary to this:** Genesis 1:12 says, “The earth brought forth the green herb,” and afterwards, “The evening and the morning were the third day.”

**I respond:** As was explained above (a. 1), on the third day the earth’s formlessness is removed. Now two kinds of formlessness were set forth concerning the earth: (a) that it was “invisible” (*invisibilis*) or “void” (*inanis*), because it was covered with the waters; and (b) that it was nondescript

(*incomposita*) or empty (*vacua*), i.e., it did not have the due attractiveness that the earth derives from the plants that, as it were, clothe it. And so both types of formlessness are removed on the third day: (a) the first by virtue of the fact that the waters were gathered together into one place and that the dry land appeared, and (b) the second by virtue of the fact that earth brought forth the green herb.

However, as far as the production of plants is concerned, Augustine's opinion differs from that of the others. For the other commentators, following what the text says on its face (*secundum quod superficies litterae sonat*), claim that plants were produced in actuality within their own species on the third day. By contrast, in *Super Genesim ad Litteram* 5 Augustine says, "The earth is said at that time to have produced the plant and the tree in their causes (*causaliter*), i.e., to have received the power to produce them."

He confirms this claim with the authority of Scripture. For Genesis 2:4-5 says, "These are the generations of heaven and earth, when they were created, on the day when God made heaven and earth and every green thing of the field before it sprang out of the earth, and every plant of the region, before it grew." Therefore, before they sprang out of the earth, they were made in their causes within the earth.

And he also confirms it with the following line of reasoning: In those first days God established creatures in their origins and causes (*originaliter et causaliter*) and later rested from His work; but after that, in order to administer the things created through the work of propagation, He is at work up to the present time. But the production of plants from the earth belongs to the work of propagation. Therefore, plants were produced on the third day only in their causes and not in actuality.

However, according to the others, one could say that the first establishment of the species belongs to the work of the six days, but that what now belongs to the administration of things is that the generation of things similar in species proceeds from the species that were established at the beginning. And this is what Scripture says: "before they sprang out of the earth" or "before they grew"—that is, before similar things were produced from things similar to them in species, just as we now see them to be made naturally through insemination. Hence, Scripture explicitly says, "The earth brings forth the green and seed-bearing plant," because what was produced were perfect species of plants, from which the seeds of the other plants sprang forth. And it does not matter where they have the power of insemination—whether in the root, or in the stalk, or in the fruit.

**Reply to objection 1:** The life in plants is hidden, since they lack local motion and sensation, by which animate things are especially distinguished from inanimate things. And so since they stay close to the earth without motion, their production is posited as an aspect of the formation of the earth.

**Reply to objection 2:** Even before the curse in question, thorns and thistles had been produced either virtually or in actuality. But they had not been produced as a punishment for man, viz., in such a way that the earth which he cultivated for food would bring forth certain unfruitful and harmful things. This is why it says, "... it will bring forth ... *for you*."

**Reply to objection 3:** As has already been explained (q. 67, a. 4 and q. 68, a. 3), Moses set forth only what was manifestly apparent. But mineral bodies have a generation that it is hidden in the bowels of the earth. And, again, they are not obviously distinct from the earth, but seem to be certain species of earth. And this is why he made no mention of them.

## QUESTION 70

### The Work of Adornment: The Fourth Day

The next thing to consider is the work of adornment: first, each of the days in itself (questions 70-73) and, second, all six days in general (question 74). On the first topic we must consider, first, the work of the fourth day (question 70); second, the work of fifth day (question 71); third, the work of the sixth day (question 72); and, fourth, matters pertaining to the seventh day (question 73).

On the first topic there are three questions: (1) Should the celestial lights (*luminaria*) have been produced on the fourth day? (2) What is the reason for their being produced? (3) Are they living beings?

#### Article 1

##### Should the celestial lights have been produced on the fourth day?

It seems that the celestial lights should not have been produced on the fourth day:

**Objection 1:** The lights are bodies that are incorruptible by nature. Therefore, their matter cannot exist without their forms. But their matter was produced in the work of creation, before any of the days. Therefore, their forms were produced in the work of creation, too. Therefore, they were not made on the fourth day.

**Objection 2:** The lights are, as it were, vessels of light (*vasa luminis*). But light (*lux*) was made on the first day. Therefore, the lights should have been made on the first day and not on the fourth day.

**Objection 3:** Just as plants are fixed in the earth, so the lights are fixed in the firmament; this is why Scripture says, “He set them in the firmament” (Genesis 1:17). But the production of plants is described simultaneously with the formation of the earth in which they inhere. Therefore, the production of the lights should likewise have been placed on the second day, in conjunction with the production of the firmament.

**Objection 4:** The sun and moon and other lights are causes of plants. But in the natural order a cause precedes its effect. Therefore, the lights should not have been made on the fourth day, but should instead have been made on the third day or earlier.

**Objection 5:** According to astronomers (*secundum astrologos*), many stars are greater than the moon. Therefore, it should not have been the case that the only two “great lights” (Genesis 1:16) posited are the sun and moon.

**But contrary to this:** The authority of Scripture suffices for the contrary.

**I respond:** In recapitulating God’s works Scripture says, “So the heavens and the earth were completed (*perfecti*), and all their adornments” (Genesis 2:1). Three works can be understood in these words:

The first is *the work of creation (opus creationis)*, through which heaven and earth are described as produced but unformed.

The second is *the work of division (opus distinctionis)*, through which heaven and earth are brought to completion (*sunt perfecta*), either (a) through substantial forms given to wholly unformed matter (as Augustine claims) or else (b) with respect to a fitting order and elegance (as the other saints claim).

To these two works is added the *work of adornment (opus ornatus)*, which differs from completion. For the completion of heaven and earth seems to involve what is intrinsic to heaven and earth, whereas adornment involves things that are distinct from heaven and earth—in the way that a man is completed by his proper parts and forms, while he is adorned by his clothes or things of that sort. Now the distinction among things is made especially clear through local motion, by which they are separated from one another. And so the work of adornment involves the production of those things that have motion in

heaven and on earth.

Now as was explained above (q. 69, a. 1), there are three things mentioned in the work of creation, viz., heaven, water, and earth. And the three of them receive formation through the work of division on the first three days: Heaven is divided on the first day; the waters are divided on the second day; and on the third day a division is made among the earth, the sea, and the dry land.

In similar manner, on the first day of the work of adornment, i.e., on the fourth day, there is the production of the lights that move in heaven, in order to adorn heaven. On the second day, i.e., on the fifth day, the birds and the fish are made, in order to adorn the middle element, since the birds and fish have motion in the air and water, which are taken as one. On the third day, i.e., on the sixth day, the animals that have motion on earth are produced, in order to adorn the earth.

Note that Augustine does not disagree with the other saints about the production of the lights. For he claims that they were made in actuality and not just virtually, since the firmament does not have the power to produce lights in the way that the earth does have the power to produce plants. Hence, Scripture does not say, “Let the firmament produce lights,” in the way that it does say, “Let the earth bring forth the green herb” (Genesis 1:11).

**Reply to objection 1:** According to Augustine’s position, this objection does not give rise to any difficulties. For he does not posit a temporal succession in these works, and thus he does not have to concede that the matter of the lights existed with any other form.

Likewise, if we follow those who hold that the celestial bodies are of the nature of the four elements, then there is no difficulty, since they can claim that the celestial bodies, like animals and plants, are formed from pre-existing matter.

However, according to those who hold that the celestial bodies are of a nature different from the elements and are incorruptible by their nature, one must claim that the substance of the lights was created at the beginning, but that they were at first unformed and are now formed—formed not, to be sure, by their substantial forms, but rather by the conferral of specific powers. And the reason why the lights are mentioned only on the fourth day and not at the beginning is, as Chrysostom says, in order to draw the people away from idolatry by showing them that the lights are not gods, since they did not exist from the beginning.

**Reply to objection 2:** According to Augustine’s position, no difficulty results, since the light which is mentioned on the first day was spiritual light, whereas in the present context it is corporeal light that is being made.

However, if the light made on the first day is understood to be corporeal light, then one must claim that light was produced on the first day with respect to the general nature of light, whereas on the fourth day the lights are given specific power for specific effects, in accord with which we see that the rays of the sun have different effects from the rays of the moon, and so on for the others. And it is because of this specification of power that Dionysius says, in *De Divinis Nominibus*, chap. 4, that the sun’s light, which was at first unformed, was formed on the fourth day.

**Reply to objection 3:** According to Ptolemy, the lights are not fixed in the spheres, but instead have a motion that is distinct from the motion of the spheres. Hence, Chrysostom says that the reason why the text says “He set them in the firmament” is not that they were fixed there, but rather that He commanded them to exist there, just as He placed man in paradise, in order that he might exist there.

However, according to Aristotle’s opinion, the stars are fixed in their orbs and in reality are moved only with the motion of the orbs. Still, it is the motion of the lights and not the motion of the spheres that is perceived by the senses. And as has been explained (q. 67, a. 4 and q. 68, a. 3), Moses, accommodating himself to an uneducated people, followed what is apparent to the senses.

On the other hand, if the firmament made on the second day is distinct in nature from the one in which the stars are placed, then the objection disappears—even though the senses (which, as has been

explained, Moses is following) do not discern this distinction,. For in that case the firmament was made on the second day with respect to its lower part, whereas on the fourth day the stars were placed in the firmament with respect to its upper part—so that the firmament is taken as a whole for one single thing, as it appears to the senses.

**Reply to objection 4:** As Basil explains, the production of the plants is placed ahead of the production of the lights in order to discourage idolatry. For those who believe that the lights are gods claim that plants have their first origin from the lights—even though, as Chrysostom explains, through their motions the lights cooperate in the production of plants in just the way that a farmer does.

**Reply to objection 5:** As Chrysostom says, the two lights are called great because of their efficacy and power and not because of their size. For even if other stars exceed the moon in size, the moon’s effects are still sensed more in things here below. And the moon also appears greater to the senses.

## Article 2

### Is the reason for the production of the lights appropriately ascribed?

It seems that the reason for the production of the lights is not appropriately ascribed:

**Objection 1:** Jeremiah 10:2 says, “Be not afraid of the signs of heaven, which the heathens fear.” Therefore, the lights were not made “as signs” (Genesis 1:14).

**Objection 2:** A sign is opposed to a cause. But the lights are causes of what is done here below. Therefore, they are not signs.

**Objection 3:** The distinction among seasons and among days began on the first day. Therefore, the lights were not made “for seasons and for days and for years ” (Genesis 1:14), i.e., for the distinctions among them.

**Objection 4:** Nothing is done for the sake of something more lowly than itself, since the end is better than the things that exist for the sake of the end. But the lights are better than the earth. Therefore, the lights were not made “in order to give light to the earth” (Genesis 1:15).

**Objection 5:** The moon does not “rule over the night” (Genesis 1:16) when it is a new moon (*luna prima*). But it is probable that the moon was a new moon when it was made, since men begin to make computations at the new moon. Therefore, the moon was not made to rule over the night.

**But contrary to this:** The authority of Scripture suffices for the contrary.

**I respond:** As was explained above (q. 65, a. 2) a corporeal creature can be said to have been made (a) for the sake of its proper act or (b) for the sake of some other creature or (c) for the sake of the whole universe or (d) for the sake of God’s glory. But in order to turn the people back from idolatry, Moses touched only on reasons that had to do with the usefulness to men of the things made. Hence, Deuteronomy 4:19 says, “Lest, perhaps, lifting up your eyes to heaven, you see the sun and the moon, and all the stars of heaven, and being deceived by error you adore and serve those things that the Lord your God created for the service of all the nations.”

Now at the beginning of Genesis Moses explains this service in three ways:

First, the lights are useful to men with respect to vision, which directs them in their works and is especially useful in coming to know things. In this regard God says, “Let them shine in the firmament ... and give light to the earth” (Genesis 1:15).

Second, he explains it by reference to the changes of seasons, through which weariness is relieved, health is conserved, and the conditions necessary for food are satisfied—none of which would be the case if there were always summer or always winter. And in this respect He says, “Let them be for

seasons and for days and years” (Genesis 1:14).

Third, he explains it by reference to the opportunities for business and work, given that the lights of heaven are taken to signal rainy weather or sunny weather, which are favorable for different kinds of occupations. And in this regard He says, “Let them be as signs” (Genesis 1:14).

**Reply to objection 1:** The lights are signs of corporeal changes—though not of those that depend on free choice.

**Reply to objection 2:** We are sometimes led by a sensible cause to the knowledge of a hidden effect, and vice versa. Hence, nothing prevents a sensible cause from being a sign. Yet the reason why he says “signs” rather than “causes” is to remove an occasion for idolatry.

**Reply to objection 3:** On the first day there was the general division of time into day and night, in accord with the diurnal motion, which is common to all of heaven and which can be understood to have begun on the first day. However, the specific divisions into days and seasons—in accord with which one day is hotter than another, and one season hotter than another, and one year hotter than another—comes from the stars’ particular motions and can be understood to have begun on the fourth day.

**Reply to objection 4:** The illumination of the earth is understood as being useful for man, who is better than the bodies of the lights because of his soul.

Yet there is nothing to prevent one from saying that a more worthy creature has been made for the sake of a lower creature, not insofar as the higher creature is considered in itself but insofar as it is ordered to the completeness (*integritas*) of the universe.

**Reply to objection 5:** When the moon is full (*luna perfecta*), it rises in the evening and sets in the morning, and in this sense it rules over the night. Also, it is probable enough that the moon was made when it was full, just as plants were made in their completeness, already productive of seeds, and likewise the animals and man. For even though natural processes go from the incomplete to the complete, nonetheless, what is complete is prior, absolutely speaking, to what is incomplete.

However, Augustine does not endorse this claim, since he asserts that it is not inappropriate for God to have made something incomplete which He later brought to completion.

### Article 3

#### Are the celestial lights living beings?

It seems that celestial lights are living things:

**Objection 1:** A higher body ought to be adorned with more noble adornments. But the adornment of lower bodies consists in living beings, viz., fish, birds, and terrestrial animals. Therefore, the lights, which belong to the adornment of heaven, are living beings.

**Objection 2:** The form of a more noble body is itself more noble. But the sun and moon and other lights are more noble than the bodies of plants and animals. Therefore, they have a more noble form. But the most noble form of all is a soul, which is a principle of life; for as Augustine says in *De Vera Religione*, any living substance is more eminent (*praefertur*) in the order of nature than any non-living substance. Therefore, the celestial lights are living beings.

**Objection 3:** A cause is more noble than its effect. But the sun and moon and other lights are a cause of life, as is especially clear in the case of animals generated by putrefaction, which attain life by the power of the sun and stars. Therefore, *a fortiori*, the celestial bodies are alive and are living beings.

**Objection 4:** As is clear from *De Caelo* 1, the motions of heaven and of the celestial bodies are natural. But natural motion derives from an intrinsic principle. Therefore, since the principle of the

motion of the celestial bodies is an intelligent substance (*substantia apprehensiva*), which, as *Metaphysics* 12 says, is moved in the way that one who desires is moved by what he desires, it seems that the intelligent principle is a principle intrinsic to the celestial bodies. Therefore, they are living beings.

**Objection 5:** The first moveable being is heaven. But as is shown in *Physics* 8, within the genus of moveable beings, the first is one that moves itself, since that which is such-and-such through itself (*per se*) is prior to that which is such-and-such through another (*per aliud*). But as is shown in the same book, only living beings move themselves. Therefore, the celestial bodies are living beings.

**But contrary to this:** In *De Fide Orthodoxa* 2 Damascene says, “No one thinks that the heavens or the lights are living beings; for they are inanimate and insensible.”

**I respond:** On this question the philosophers had differing opinions. For as Augustine reports in *De Civitate Dei* 18, Anaxagoras “was found guilty by the Athenians of claiming that the sun is a hot rock and thereby denying that it is a god” or anything living. By contrast, the Platonists claimed that the celestial bodies are living beings.

Similarly, among the doctors of the faith there was a diversity of opinion on this topic. For Origen claimed that the celestial bodies are living beings. Jerome, too, seems to have thought the same thing in his exposition of Ecclesiastes 1:6 (“The spirit goes forth, surveying all places round about”). By contrast Basil and Damascene insist that the celestial bodies are not living beings. Augustine, on the other hand, leaves the matter in doubt, not embracing either side—as is clear from *Super Genesim ad Litteram* 2 and from *Enchiridion*, where he also adds that if the celestial bodies are living beings, then their souls belong in fellowship with the angels.

Now in order that the truth might to some extent come to be known amid this diversity of opinions, note that the union of the soul and the body is for the sake of the soul and not for the sake of the body; for form does not exist for the sake of matter, but just the opposite. But the nature and power of a soul are known from its operation, which is also in some sense its end.

Now as is clear from the works of nutritive and sentient souls, the body is necessary for those of a soul’s operations that are exercised by means of the body. Hence, it is necessary for souls of this kind to be united to bodies for the sake of their operations. Moreover, there are other operations of a soul that are not exercised by means of the body and yet which are such that some assistance is supplied by the body for those operations. For instance, the human soul is supplied by the body with phantasms, which it needs in order to exercise its act of understanding (*indiget ad intelligendum*). Hence, a soul of this sort has to be united with its body for the sake of its own operation, even though it is possible for such a soul to be separated from its body.

Now it is clear that the soul of a celestial body could not have the operations of a *nutritive* soul, viz., to take nourishment, to grow, and to generate. For operations of this sort do not belong to a body that is incorruptible by its nature.

Similarly, the operations of a *sentient* soul do not befit a celestial body, since all sensation is based on touch, which apprehends the elemental qualities. Again, all the organs of the sentient powers require a specific proportion in their mixture of the elements, whereas the celestial bodies are held to be devoid of the elemental natures.

Therefore, it follows that there are only two operations of a soul that could belong to a celestial soul, viz., to understand and to effect motion. (For desire follows upon sensation and intellection and is ordered in conjunction with them.)

Now since an intellectual operation is not exercised by means of a body, it needs the body only insofar as phantasms are supplied to it through the senses. But as has been explained, the operations of a sentient soul do not belong to the celestial bodies. So, then, it is not for the sake of any intellectual operation that a soul would be united to a celestial body.

It follows, then, that a soul would be united to a celestial body solely for the sake of motion. But in

order to effect motion, the soul does not need to be united to a body as the form of the body; instead, it effects motion through a contact of power, in the way that a mover is united to what is moveable. Hence, in *Physics* 8, after Aristotle has shown that the first self-mover is composed of two parts, one of which effects motion and the other of which is moved, and while he is explaining how these two parts are united, he says that they are united through contact, either (a) contact of the two of them with one another, if they are both bodies, or (b) contact of the one with the other and not vice versa, if the one is a body and the other is not a body. Likewise, the Platonists held that souls are united to bodies only through a contact of power, in the way that a mover is united to what is moveable. And so from the fact that Plato posits celestial bodies as living beings, nothing should be inferred other than that spiritual substances are united to celestial bodies in the way that movers are united to what is moveable.

Now the claim that the celestial bodies are moved by an intelligent substance—and not just by their natures, as are heavy and light things—is clear from the fact that a thing’s nature effects motion solely toward a single place which is such that the body comes to rest in it once it occupies it, whereas this is not the case with the motion of the celestial bodies. Hence it follows that the celestial bodies are moved by an intelligent substance. In *De Trinitate* 3 Augustine likewise says that “all bodies” are administered by God “through the spirit of life.”

So, then, it is clear that the celestial bodies are not living beings in the way that plants and animals are. Rather, they are ‘alive’ only in an equivocal sense. Hence, between those who claim that the celestial bodies are living beings and those who claim that they are inanimate there is only a verbal difference and little or no substantive difference.

**Reply to objection 1:** Some things pertain to adornment because of their proper motions. And in this regard, the celestial lights agree with other things that pertain to adornment, given that they are moved by a living substance.

**Reply to objection 2:** Nothing prevents a thing from being more noble absolutely speaking and yet not more noble in some given respect. Therefore, even if the form of a celestial body is not more noble, absolutely speaking, than the soul of an animal, it is nonetheless more noble with respect to the character of its form. For the form of a celestial body, unlike a soul, totally perfects its matter, with the result that its matter has no potentiality for any other form. Also, with respect to motion, the celestial bodies are moved by more noble movers.

**Reply to objection 3:** Since a celestial body is a moved mover, it has the character of an instrument that acts in the power of the principal agent. And so it is by virtue of its mover, which is a living substance, that it is able to be a cause of life.

**Reply to objection 4:** The motion of a celestial body is natural not because of its active principle but because of its passive principle, viz., because a celestial body has within its nature an aptitude for being moved with this motion by an intellect.

**Reply to objection 5:** A celestial body is said to move itself insofar as it is composed of a mover and a moveable thing—not in the sense of being composed of them as of form and matter, but in the sense of being composed of them according to a contact of power, as has been explained. And in this way one could even say that a celestial body’s mover is an intrinsic principle, so that its motion could be called natural even on the part of the active principle, in the way that a voluntary motion can be called natural to an animal insofar as it is an animal, as is explained in *Physics* 8.

## QUESTION 71

### The Work of the Fifth Day

The next thing to consider is the work of the fifth day.

#### The Only Article

#### Is the Work of the Fifth Day Appropriately Described?

It seems that the work of the fifth day is not appropriately described:

**Objection 1:** Waters produce what the power of water is sufficient to produce. But the power of water is not sufficient to produce all the fish and birds, since we see that many of them are generated by insemination (*ex semine*). Therefore, it is not appropriate to say, “Let the waters bring forth the creeping creature having life, and the creature that flies over the earth” (Genesis 1:20).

**Objection 2:** Fish and birds are not produced from just water; rather, earth seems to be more dominant in their composition than water is. For their bodies naturally move toward the earth, and so they also come to rest on the earth. Therefore, it is not appropriate to say that fish and birds are produced from water.

**Objection 3:** Just as fish have motion in the waters, so birds have motion in the air. Therefore, if fish are produced from the waters, then birds should be produced from the air and not from the waters.

**Objection 4:** Not all fish creep in the waters, since some, like sea lions, have feet with which to walk on land. Therefore, the production of fish is not sufficiently captured by saying, “Let the waters bring forth the creeping creature having life” (Genesis 1:20).

**Objection 5:** Terrestrial animals are more perfect than birds and fish. This is clear from the fact that their parts are more distinct and that they have a more perfect type of generation. For they generate animals, whereas fish and birds generate eggs. But the more perfect is prior in the order of nature. Therefore, fish and birds should not have been generated on the fifth day, before the terrestrial animals.

**But contrary to this:** The authority of Scripture suffices for the contrary.

**I respond:** As was explained above (q. 70, a. 1), the work of adornment corresponds in its ordering to the ordering of the divisions. Hence, just as the middle day of the three days given over to division, i.e., the second day, is devoted to the division of the middle body, viz., the waters, so too the middle day of the three days given over to adornment, i.e., the fifth day, is devoted to the adornment of the middle body through the production of birds and fish. Hence, just as on the fourth day Moses refers to “the lights” and “light” in order to signal that the fourth day corresponds to the first day, on which he had said that light was made, so on this fifth day he makes mention of “the waters” and “the firmament of heaven” in order to signal that the fifth day corresponds to the second day.

Note, however, that just as Augustine differs from the others over the production of plants, so too he differs from them over the production of the fish and birds. For the others claim that on the fifth day the fish and birds were produced in actuality, whereas in *Super Genesim ad Litteram 5* Augustine claims that on the fifth day the nature of the waters produced the fish and birds in potentiality.

**Reply to objection 1:** Avicenna claimed that all the animals can be generated by mixing the elements together in some combination or other, even through a natural process, in the absence of semen.

But this seems wrong. For nature proceeds to its effects by determinate means, and so what is naturally generated from semen cannot be naturally generated without semen.

So one should reply in a different way: In the natural generation of animals the active principle is a formative power that exists in the semen in the case of those animals that are generated from semen. What takes the place of this power in animals that are generated from putrefaction is the power of a

celestial body. And in both kinds of the generation of animals, the material principle is an element or something elemental.

Now in the first establishment of things the active principle was the word of God, which produced animals out of elemental matter either in actuality (according to the other saints) or virtually (according to Augustine). It is not that water or earth has within itself the power to produce all the animals, as Avicenna claimed, but rather that the very fact that animals can be produced out of elemental matter by the power of semen or by the power of the stars is itself the result of the power originally given to the elements.

**Reply to objection 2:** There are two possible ways to consider the bodies of birds and fish.

The first way is to consider them in themselves. And if we consider them in this way, then the earthly element must be more dominant in them, because in order for the right mixture to be effected in an animal body, the element that is less active, viz., earth, must be the quantitatively most abundant element in that body.

However, if the bodies in question are considered insofar as they are apt to move with certain particular movements, then in this sense they have an affinity with the bodies within which they move. And their generation is being described along these lines in the present context.

**Reply to objection 3:** Because air is not sensed, it is not counted by itself, but is instead counted along with the others—(a) partly with water, as far as the lower part of the air is concerned, since this part is made more thick by water vapors, and (b) partly with the heavens, as far as the higher part of the air is concerned.

Now birds have their motion in the lower part of the air, and so they are said to fly “under the firmament of heaven” (Genesis 1:20), even if ‘firmament’ is being taken for the cloudy part of the air. And this is why the production of birds is ascribed to water.

**Reply to objection 4:** Nature passes from one extreme to another through what lies in between them. And so there are certain animals that lie between terrestrial animals and aquatic animals. They share something in common with both kinds, and they are numbered among those with which they have the most in common, in accord with what they share in common with them, and not with the other extreme.

Still, in order to include all animals of this sort, which have something that is specific to the fish, the text adds “God created the great whales ...” (Genesis 1:21) after it had already said, “Let the waters bring forth the creeping creature having life” (Genesis 1:20).

**Reply to objection 5:** The production of these animals is ordered in accord with the order of the bodies that are adorned by them more than in accord with their own proper dignity.

In any case, the path of generation goes from the less perfect animals to the more perfect animals.

## QUESTION 72

### The Work of the Sixth Day

The next thing to consider is the work of the sixth day.

#### The Only Article

#### Is the Work of the Sixth Day Appropriately Described?

It seems that the work of the sixth day is not appropriately described:

**Objection 1:** Just as birds and fish have a living soul (*viventem animam*), so too do the terrestrial animals. And yet the terrestrial animals are not the living soul itself. Therefore, it was inappropriate to say, “Let the earth bring forth the living soul (*viventem animam*)” (Genesis 1:24); instead, it should have said, “Let the earth bring forth the four-footed animals (*quadrupedia*) that have a living soul.”

**Objection 2:** A genus should not be divided in such a way that it itself is a contrary of its own species (*genus non debet dividi contra speciem*). But *cattle* and *beast* fall under *four-footed animal*. Therefore, it is wrong for “four-footed animals” to be named alongside “cattle” and “beasts” (Genesis 1:25).

**Objection 3:** Just as the other animals are in a determinate genus and species, so too is man. But when man is made, there is no mention of his genus or species. Therefore, no mention of the genus or species should have been made in the case of the production of the other animals, either—as when it says, “... in their genus” or “... in their species” (Genesis 1:24-25).

**Objection 4:** Terrestrial animals are more similar to man, who is said to be blessed by God, than are the birds and fish. Therefore, since the birds and fish are said to be blessed (see Genesis 1:22), *a fortiori* this should likewise have been said of the other animals.

**Objection 5:** Some animals are generated from putrefaction, which is a certain kind of corruption. But corruption is not fitting in the first establishment of things. Therefore, animals should not have been produced in the first establishment of things.

**Objection 6:** Some animals are poisonous and harmful to man. But nothing harmful to man should have been created before the sin. Therefore, these animals either (a) should not have been made by God at all, since He is the author of good things, or (b) should not have been made before the sin.

**But contrary to this:** The authority of Scripture suffices for the contrary.

**I respond:** Just as the middle body is adorned on the fifth day, where this corresponds to the second day, so too the last body, viz., earth, is adorned on the sixth day, where this corresponds to the third day by the production of the terrestrial animals. Hence, on both the third day and the sixth day there is mention of the earth. And here again, according to Augustine the terrestrial animals are produced in potentiality, whereas according to the other saints they are produced in actuality.

**Reply to objection 1:** As Basil says, the different grades of life found among the different living things can be inferred from Scripture’s way of speaking. For instance, plants have the most imperfect and concealed form of life. Hence, in their production there is mention only of generation and not of life, since the act of life exists in them only with respect to generation—given that, as will be explained below (q. 78, a. 2), the powers of nutrition and growth are at the service of the power of generation.

Among the animals, by contrast, the terrestrial animals are, generally speaking, more perfect than the birds and the fish—not because the fish lack memory (which Basil asserts and Augustine disproves), but because of the distinctions among the organic parts of the terrestrial animals and the perfection of their act of generation (though with respect to some aspects of intelligence, certain imperfect animals, such as bees and ants, are more eminent). And so Scripture calls fish “creeping things having life” rather

than “living souls.” But it calls terrestrial animals “living souls” because of the perfection of life found in them. It is as if fish were bodies having some aspect of a soul, whereas terrestrial animals, because of the perfection of their life, were souls that dominate their bodies.

However, the most perfect grade of life exists in man. And so Scripture does not say that the life of man is produced from the water or from the earth, as with the rest of the animals. Rather, it says that the life of man is produced by God.

**Reply to objection 2:** By ‘beasts of burden’ (*iumenta*) or ‘cattle’ (*pecora*) Scripture means domestic animals, which are of service to man in some way or other. On the other hand, by ‘beasts’ it means wild animals such as bears or lions. And by ‘creeping animals’ (*reptilia*) it means either (a) animals that do not have feet by which to be raised from the earth, such as serpents, or (b) animals that have short feet by which they are raised just a little, such as lizards and turtles and others of this sort. However, because there are animals that are not included under any of these classifications, such as deer and goats, it added ‘four-footed animals’ in order to include them as well.

An alternative reply is that Scripture first used ‘four-footed animals’ as a genus, so to speak, and then added other things as something like species. For there are also certain four-footed reptiles, such as lizards and turtles.

**Reply to objection 3:** In the case of the other animals and plants, the text made mention of genera and species in order to signal the generation of like from like. In the case of man, however, it was unnecessary to say this, since what had already been said about the other animals could also be understood to apply to man.

An alternative reply is that animals and plants are produced “according to their own genera and species” (see Genesis 1:24-25) in the sense that they are far removed from being like God, whereas man is said to be formed to the image and likeness of God.

**Reply to objection 4:** God’s blessing bestowed the power to multiply through generation. And so given that this blessing was posited in the case of the birds and the fish, which are there first, it was unnecessary to repeat it in the case of the earthly animals; instead, it is taken for granted. However, in the case of men the blessing is repeated because among men there are special reasons for the multiplication, viz., (a) to bring to completion the number of the elect and (b) “lest anyone claim that there is some sin involved in the role of generating children” (*Super Genesim ad Litteram* 3). By contrast, plants “have no desire to propagate offspring, and they generate without any sensations; hence, they are judged unworthy of a verbal blessing” (*ibid.*).

**Reply to objection 5:** Since the generation of one thing is the corruption of something else, it is not incompatible with the first establishment of things that more noble things should be generated from the corruption of less noble things. Hence, animals that are generated from the corruption of inanimate things or of plants could have been generated at that time. However, animals that are generated from the corruption of animals could not have been produced at that time, except only in potentiality.

**Reply to objection 6:** As Augustine says in *Super Genesim contra Manichaeos* 1, “If an inexperienced man enters a craftsman’s workshop, he sees there many instruments, the reasons for which he does not know, and if he is really foolish, he thinks that they are superfluous. And if he incautiously falls into the fire or hurts himself with some sharp tool, he comes to believe that there are many harmful things there. But because the craftsman knows what these tools are used for, he laughs at the man’s foolishness. So, too, in this world some dare to find fault with many things, the reasons for which they do not see. For even if many things are not necessary for our own house, they nonetheless bring the universe to completion.”

Moreover, before the sin man had made ordinate use of the things of the world. Hence, the poisonous animals would not have been dangerous to him.

## QUESTION 73

### The Seventh Day

The next things to consider are those that are relevant to the seventh day. On this topic there are three questions: (1) about the completion of the works, (2) about God's rest, and (3) about the blessing and sanctification of this day.

#### Article 1

#### Should the completion of God's works be ascribed to the seventh day?

It seems that the completion of God's works (*completio divinatorum operum*) should not be ascribed to the seventh day:

**Objection 1:** All the things that are done in the world belong to God's works. But as Matthew 13:37ff. says, the consummation of the ages (*consummatio saeculi*) will occur at the end of the world (*in fine mundi*). Again, the time of Christ's Incarnation is the time of a certain completion and is thus called "the fullness of time" in Galatians 4:4. And, as John 19:30 reports, Christ Himself said at His death, "It is finished." Therefore, it is not the case that the completion of God's works belongs to the seventh day.

**Objection 2:** If someone is completing his work, then he is doing something. But God is not said to have done anything on the seventh day; just the opposite, He is said to have "rested from all His work" (Genesis 2:2). Therefore, the completion of the works does not belong to the seventh day.

**Objection 3:** If something is such that many things are being added to it, then it is not said to be complete (*completum*), unless perhaps those things are superfluous. For what is called perfect (*perfectum*) is such that it lacks nothing it ought to have. But many things have been made since the seventh day; there has been the production of many individuals and even of new species that often come to light, especially in the case of animals generated from putrefaction. Also, God creates new souls even now. The Incarnation was likewise a new work; Jeremiah 31:22 says of it, "The Lord has created something new on the earth." Moreover, there are new miraculous works, about which Ecclesiasticus 36:6 says, "Renew your signs, and work new miracles." Again, all things will be made new in the glorification of the saints—this according to Apocalypse 21:5 ("And He who sat on the throne said: "Behold, I make all things new"). Therefore, the completion of God's works should not be attributed to the seventh day.

**But contrary to this:** Genesis 2:2 says, "On the seventh day God completed His work which He had done."

**I respond:** There are two kinds of perfection for a thing, first perfection and second perfection. A thing has *first perfection* (*prima perfectio*) insofar as it is perfect in its substance. This perfection is the form of the whole that arises from the integration of the parts. On the other hand, *second perfection* (*secunda perfectio*) is the end. Now the end is either (a) an operation, e.g., the end of the harpist is the playing of the harp, or (b) something that is arrived at through an operation, e.g., the end of the builder is the house that he makes by building it. First perfection is a cause of second perfection, since the form is a principle of operation.

Now the last perfection, which is the end of the whole universe, is the perfect happiness of the saints, which will come at the last consummation of the ages. But the first perfection, which consists in the completeness of the universe (*integritas universi*), existed in the first establishment of things. It is this perfection that is ascribed to the seventh day.

**Reply to objection 1:** As has been explained, first perfection is a cause of second perfection. Now two things are required to attain happiness, viz., nature and grace. As has been explained, the perfection

itself of happiness will come at the end of the world. But this consummation will have pre-existed in its causes—with respect to *nature*, in the first establishment of things, and with respect to *grace*, in Christ's Incarnation, since, as John 1:17 says, grace and truth were made through Jesus Christ. So, then, (a) on the seventh day there was the consummation of *nature*, (b) in Christ's Incarnation there was the consummation of *grace*, and (c) at the end of the world there will be the consummation of *glory*.

**Reply to objection 2:** God did something on the seventh day—not by making a new creature, but rather by governing (*administrando*) his creatures and moving them to their proper operations, which already in some sense belongs to a sort of initiation of second perfection.

And so the consummation of His works is attributed to the seventh day, according to our version of Scripture (*secundum nostram translationem*), whereas, according to the other version, it is attributed to the sixth day. And both versions can stand. For the consummation that involves the *completeness* of the parts of the universe belongs to the sixth day, whereas the consummation that involves the *operations* of the parts belongs to the seventh day.

A possible alternative reply is to claim that in the case of continuous motion, as long as something can continue moving (*potest moveri ulterius*), the motion is not said to be complete (*perfectus*) until there is rest, since rest signals a completed motion (*motum consummatum*). Now God could have made more creatures beyond those that He had made in the six days. Hence, by the very fact that He stopped making new creatures on the seventh day, He is said to have finished His work.

**Reply to objection 3:** Nothing made afterwards by God is totally new, without in some sense having pre-existed in the work of the six days. For certain things pre-existed *in their matter* (*materialiter*), in the sense in which God formed the woman from Adam's rib. Others pre-existed in the work of the six days not only in their matter but also *in their causes* (*causaliter*), in the sense in which individuals that are now being generated pre-existed in the first individuals of their species. Also, if any new species arise, they pre-existed *in certain active powers*; for instance, animals generated from putrefaction are produced by the powers that the stars and elements received at the beginning—even if new species of such animals are produced. Again, animals of new species sometimes arise from *mixing animals of diverse species*, as when a mule is generated from a donkey and a horse, and these likewise pre-existed in their causes in the work of the six days. On the other hand, some things pre-existed *by way of likeness*, in the way that [human] souls are now created; the same holds for the work of the Incarnation, since, as Philippians 2:7 says, “The Son of God was made in the likeness of men.” Also, spiritual glory pre-existed in the angels by way of likeness, whereas bodily glory pre-existed in the heavens, mainly the empyrean heaven.

Thus, Ecclesiastes 1:10 says, “Nothing under the sun is new; for it has already pre-existed in the ages that were before us.”

## Article 2

### Did God rest from all His work on the seventh day?

It seems that God did not rest from all His work on the seventh day:

**Objection 1:** John 5:17 says, “My Father is working even until now, and I am working.” Therefore, He did not rest from all His work on the seventh day.

**Objection 2:** Rest is opposed to movement or to the labor that is sometimes caused by movement. But God produced His works without movement (*immobiliter*) and without labor. Therefore, He cannot be said to have rested from His work on the seventh day.

**Objection 3:** If someone replies that God rested on the seventh day by virtue of His making man rest, then against this: Rest is a counterbalance to His operation. But the expression “God created or made this or that” is not understood to mean that God made man create or make things. Therefore, neither can it be correct to claim that God is said to have rested by virtue of His making man rest.

**But contrary to this:** Genesis 2:2 says, “God rested on the seventh day from all the work He had done.”

**I respond:** Rest is properly opposed to movement and, as a result, it is opposed to labor, which arises from movement. Now even though movement is properly understood of bodies, the name ‘movement’ (*motus*) is nonetheless extended to spiritual things in two ways. First, insofar as every operation is called a movement; for instance, even God’s goodness is said to be moved in a certain sense and to proceed into things insofar as it communicates itself to them—this according to Dionysius in *De Divinis Nominibus*, chap. 2. Second, a desire that tends toward something else is said to be a sort of movement. Hence, rest is likewise understood in two ways: first, it is taken for the cessation of work; second, it taken for the fulfillment of desire.

God is said to have rested in both these ways on the seventh day. First of all, on the seventh day He stopped making new creatures, since, as has been explained (a. 1), afterwards He made nothing that did not in some sense pre-exist in those first works. Second, He did not need the things that had been made, but was happy in enjoying Himself. Hence, after all His works were posited, He is not said to have rested “*in His works*,” in the sense that He needed them for His happiness; instead, He is said to have rested “*from His works*,” i.e., He rested in Himself, since He is sufficient for Himself and He fulfills His own desire.

Moreover, even though He rested from eternity in Himself, still, it is the fact that He rested in Himself after His works were finished that pertains to the seventh day. And this is what it is to rest *from* His works, as Augustine explains in *Super Genesim ad Litteram* 4.

**Reply to objection 1:** God is operating even until now by conserving and governing the creatures He has made and not by making new creatures.

**Reply to objection 2:** As has been explained, rest is opposed not to labor or movement but rather to the production of new things and to a desire that tends toward another.

**Reply to objection 3:** Just as God rests in Himself alone and is happy in His enjoyment of Himself, so too we are likewise made happy only through the enjoyment of God. And so He likewise makes us rest in Himself from His works and our works. Therefore, it is appropriate to interpret this passage as saying that God rested by virtue of His making man rest.

However, this explanation should not be proposed by itself; instead, the other explanation is more principal than and prior to this one.

### Article 3

#### Do blessing and sanctification befit the seventh day?

It seems that blessing and sanctification do not befit the seventh day:

**Objection 1:** It is customary to call a time blessed or holy because of something good that happens at that time or because some evil is avoided. But God gains nothing and loses nothing, regardless of whether he works or ceases to work. Therefore, it is not the case that a special blessing and sanctification befit the seventh day.

**Objection 2:** ‘Blessing’ (*benedictio*) comes from ‘goodness’ (*bonitas*). But according to

Dionysius, the good diffuses and communicates itself. Therefore, it would have been fitting for the days on which God produced creatures to be blessed rather than the day on which He stopped producing creatures.

**Objection 3:** Before this in the text, a blessing had been recorded in the case of each creature, when it said in the case of each of the works, “God saw that it was good.” Therefore, it was unnecessary for the seventh day to be blessed, after the production of all things.

**But contrary to this:** Genesis 2:3 says, “God blessed the seventh day and sanctified it, because on that day He rested from all His work.”

**I respond:** As was explained above (a. 2), there are two ways to understand God’s resting on the seventh day: (a) insofar as He stopped doing new works, though in such a way that He conserves and governs the creatures that have been made; (b) insofar as He rested in Himself after His works.

Thus, with respect to the former, a blessing befits the seventh day. For as was explained above (q. 72), the blessing pertains to multiplication; hence, He said to the creatures He blessed, “Grow and multiply.” But the multiplication of things is accomplished through the creature’s being governed, insofar as like comes from like.

With respect to the latter, sanctification befits the seventh day. For sanctification occurs especially in the fact that one rests in God, and this is why things dedicated to God are called holy.

**Reply to objection 1:** The seventh day is sanctified not because God is able to acquire or lose anything, but because something accrues to creatures through multiplication and through rest in God.

**Reply to objection 2:** On the first six days things were produced in their first causes. But afterwards things are multiplied and conserved from those first causes, and this likewise pertains to God’s goodness. The perfection of God’s goodness is especially shown by the fact it is in God’s goodness alone that He Himself rests and that we are able to rest, enjoying that goodness.

**Reply to objection 3:** The good that is recalled on each of the days pertains to the first establishment of nature, whereas the blessing of the seventh day pertains to the propagation of nature.

## QUESTION 74

### All Seven Days in General

Next we consider all seven days in general. And on this topic there are three questions: (1) about whether there are enough days, (2) about whether there is just one day or more than one, (3) about certain ways of speaking that Scripture uses in narrating the works of the six days.

#### Article 1

##### Are these days adequately enumerated?

It seems that these days are not adequately enumerated:

**Objection 1:** The work of creation is no less distinct from the works of division and adornment than these latter two works are from one another. But distinct days are assigned to division and other distinct days to adornment. Therefore, distinct days should likewise be assigned to creation.

**Objection 2:** Air and fire are more noble elements than are earth and water. But one day is assigned to the division of the waters and another day to the division of the earth. Therefore, other distinct days should be assigned to the division of the fire and the division of the air.

**Objection 3:** Birds and fish are no less diverse from one another than are birds and terrestrial animals. What's more, man is more diverse from the other animals than any of the other animals are from one another. But one day is assigned to the production of the fish of the sea and another separate day to the production of the animals of the earth. Therefore, separate days should likewise have been assigned to the production of the birds of the heavens and to the production of man.

**But contrary to this:**

1. It seems that some of the days are superfluous. For instance, light is related to the celestial lights as an accident to a subject. But a subject is produced simultaneously with its proper accident. Therefore, it should not have been the case that light was produced on one day and the celestial lights on another day.

2. These days are devoted to the first establishment of the world. But on the seventh day nothing was established for the first time. Therefore, the seventh day should not be counted with the other days.

**I respond:** The explanation for the distinctions among these days can be made clear on the basis of what has gone before (q. 70, a. 1). For the parts of the world had first to be divided, and afterwards each part had to be adorned by being filled, as it were, with its own inhabitants.

Thus, according to the other saints, corporeal creation has three designated parts: (a) the first part, which is signified by the name 'heaven'; (b) the middle part, which is signified by the name 'water'; and (c) the last part, which is signified by the name 'earth'. (As *De Caelo I* reports, the Pythagoreans likewise held that perfection consists in a triad, viz., a beginning, a middle, and an end.) Therefore, the first part is divided on the first day and adorned on the fourth day; the middle part is divided on the second day and adorned on the fifth day; and the last part is divided on the third day and adorned on the sixth day.

By contrast, Augustine, while agreeing with the other saints about the last three days, differs from them over the first three days. For according to him, spiritual creation is formed on the first day, whereas corporeal creation is formed on the other two days, with the higher bodies are formed on the second day and the lower bodies on the third day. And so the perfection of God's works corresponds to the perfection of the number *six*, which arises from its parts being joined together in a certain way, where these parts are *one, two, and three*. For one day is assigned to the formation of spiritual creation, two days are assigned to the formation of corporeal creation, and three days are assigned to adornment.

**Reply to objection 1:** According to Augustine, the work of creation has to do with the production of unformed matter and unformed spiritual nature. These two productions occur outside of time (*extra tempus*), as he himself says in *Confessiones* 12, and so the creation of both sorts of creature is posited before any of the days.

However, according to the other saints, one can reply that the work of division and the work of adornment involve certain changes in creatures, and that this change is measured by time. By contrast, the work of creation consists solely in God's action at the instant of His producing the substance of things. And so every work of division and work of adornment is said to have been accomplished "in a day," whereas creation is said to have been accomplished "in the beginning," a phrase that bespeaks something indivisible.

**Reply to objection 2:** Since the fire and the air are not discerned by ordinary people, they are not explicitly named by Moses among the parts of the world. Instead, as Augustine explains, they are counted either (a) along with the middle part, viz., water, especially as regards the lower part of the air, or (b) along with the heavens, as regards the higher part of the air.

**Reply to objection 3:** The production of animals is recorded insofar as they serve to adorn the various parts of the world. And so the days that involve the production of animals are distinguished or combined according to whether they agree or differ with respect to the part of the world that is being adorned.

**Reply to argument 1 for the contrary:** On the first day the nature of light was made in some subject. But it is on the fourth day that the celestial lights are said to have been made—not, as was explained above (q. 70, a. 1), because their substance was made *de novo*, but because they were formed in a way in which they had not been formed before.

**Reply to argument 2 for the contrary:** According to Augustine, there is something assigned to the seventh day after everything that is attributed to the six days, viz., that God rested in Himself from His works. And so after the six days it was necessary to make mention of the seventh day.

By contrast, according to the other saints, one can reply that on the seventh day the world had a certain new status, viz., that nothing would be added to it *de novo*. And so after the six days a seventh day is posited and designated as the cessation of work.

## Article 2

### Are all the days a single day?

It seems that all the days are a single day:

**Objection 1:** Genesis 2:4-5 says, "These are the generations of the heaven and the earth, when they were created, in the day that the Lord made the heaven and the earth and every plant of the field, before it sprang up in the earth." Therefore, there was a single day on which He made heaven and earth and every plant of the field. But heaven and earth were made on the first day (or, better, before all the days), whereas the plants of the field were made on the third day. Therefore, a single day is both the first day and the third day and, by parity of reasoning, a single day is all the days.

**Objection 2:** Ecclesiasticus 18:1 says, "He who lives forever created all things at once (*creavit omnia simul*)." But this would not be the case if there were many days of these works, since many days do not occur "at once." Therefore, there is just a single day and not many days.

**Objection 3:** On the seventh day God stopped doing new works. Therefore, if the seventh day is distinct from the other days, it follows that He did not make the seventh day—which is absurd.

**Objection 4:** God finished in an instant the whole of the work ascribed to a given day; for in the case of each work it says, “He spoke and it was done.” Therefore, if He had reserved a later work for another day, it would follow that for the rest of the day in question He would have stopped working—which would be superfluous. Therefore, it is not the case that there is any day of subsequent work that is distinct from a day of previous work.

**But contrary to this:** Genesis 1 says, “The evening and the morning were the second day ... and the third day,” and so on for the others. But one cannot say ‘second’ and ‘third’ when there is just one. Therefore, there was not just a single day.

**I respond:** On this question Augustine disagrees with the other commentators. For in *Super Genesim ad Litteram* 4, *De Civitate Dei* 11, and *Ad Orosium*, Augustine claims that what are called seven days are all a single day presented in a sevenfold manner. By contrast, the other commentators think that there were seven distinct days and not just a single day.

Now there is a big difference between these two opinions when they are applied to the exposition of the text of Genesis.

According to Augustine, ‘day’ refers to a cognition in the angelic mind, so that the first day is a cognition of the first divine work, the second day is a cognition of the second work, and so on for the others. And each work is said to have been done on a given day because God did not produce anything in reality without impressing it upon the angelic mind. But the angelic mind is able to understand many things at once—especially in the Word, in whom every angelic cognition is perfected and terminated. And so a day is distinguished according to the natural order of the things known and not according to either a succession of cognitions or a succession in the production of the things. On the other hand, an angelic cognition can be truly and properly called a ‘day’, since, according to Augustine, light, which is the cause of a day, is properly found in spiritual entities.

By contrast, according to the others, what is indicated by means of these days is both a succession of temporal days and a succession in the production of things.

On the other hand, there is not a big difference between the two opinions when they are applied to the manner in which things were produced. This is because of the two points of interpretation on which, as is clear from what was said above (q. 67, a. 1 and q. 69, a. 1), Augustine differs from the others.

First, Augustine understands the earth and the water that were created first to be totally unformed corporeal matter, whereas he understands the making of the firmament and the gathering of the waters and the appearance of dry land to be the bestowal of forms on corporeal matter. By contrast, the other saints understand the earth and the water that were created first to be the world’s elements themselves, existing with their own proper forms, whereas they understand the subsequent works to be the division of the previously existing bodies. This was explained above (q. 67 a. 1 and 4 and q. 69, a. 1).

Second, they differ over the production of the plants and animals. The other saints claim that in the work of the six days the plants and animals were produced in actuality, whereas Augustine claims that they were produced only in potentiality.

Therefore, given Augustine’s claim that the works of the six days were accomplished simultaneously, what follows is the same mode of production for creatures. For on both views, in the first establishment of things matter existed with the substantial forms of the elements, and, according to both views, in the first establishment of things there were no actual plants or animals.

However, differences remain with respect to four points. For according to the other saints, after the initial production of creatures there was a temporal interval during which (a) light did not exist, (b) the firmament had not been formed, (c) the earth was still covered with the waters, and (d) the celestial lights had not been formed. On Augustine’s interpretation there is no need to make these claims.

Therefore, in order not to do prejudice to either of these opinions, we must reply to the arguments for both sides.

**Reply to objection 1:** On the day on which God created heaven and earth He also created every green plant of the field—not in actuality but before they grew up out of the earth, i.e., in potentiality. Augustine ascribes this to the third day, whereas the others ascribe it to the first establishment of things.

**Reply to objection 2:** God created all things at once with respect to their substance—a substance that was in some sense unformed. But as far as the formation that was accomplished through division and adornment is concerned, it did not all take place at the same time. Hence, Scripture expressly uses the verb *to create* [for the first establishment of things].

**Reply to objection 3:** On the seventh day God stopped doing new works, but He did not stop propagating some things from others. The fact that other things come along after the first day pertains to this propagation.

**Reply to objection 4:** The fact that not all things are divided and adorned at the same time does not stem from God’s lack of power (as though He needed time to operate), but is instead meant to preserve order within the establishment of things. And so different days had to be devoted to the different states of the world, and a new state of perfection was in every case added to the world by a subsequent work.

**Reply to argument for the contrary:** According to Augustine the order of the days has to be traced back to the natural order of the works that are attributed to the days.

### Article 3

#### Does Scripture use appropriate language to express the works of the six days?

It seems that Scripture does not use appropriate language to express the works of the six days:

**Objection 1:** Just as light and the firmament and other such works were made through God’s Word, so too were heaven and earth, since “all things were made through Him,” as John 1:3 says. Therefore, mention should have been made of the Word of God in the creation of heaven and earth, just as it was in the other works.

**Objection 2:** Water was created by God, even though there is no mention of its having been created. Therefore, the creation of things is not adequately described.

**Objection 3:** As Genesis 1:31 says, “God saw all the things that He had made, and they were very good.” Therefore, in the case of each work it should have said, “God saw that it was good.” Therefore, it was wrong to omit this in the case of the work of creation and in the case of the work of the second day.

**Objection 4:** The spirit of God is God. But it does not befit God to move (*ferra*) or to have a position. Therefore, it was wrong to say, “The spirit of God moved over the waters” (Genesis 1:2).

**Objection 5:** No one makes what has already been made. Therefore, after it said, “God said, ‘Let there be a firmament (Genesis 1:6)’” and it was made, it was wrong to add, “God made a firmament” (Genesis 1:7). And the same thing holds for the other works.

**Objection 6:** Morning and evening are not sufficient to divide a day, since there are many parts of a day. Therefore, it was wrong to say, “Morning and evening were the second (or third) day” (Genesis 1:8 and 1:13).

**Objection 7:** It is the term ‘first’—and not the term ‘one’—that corresponds to ‘second’ and ‘third’. Therefore, it should have said, “Morning and evening were the first day,” where it in fact says “one day” (Genesis 1:5).

**Reply to objection 1:** According to Augustine, the person of the Son is mentioned both in the first

creation of things and in the division and adornment of things, though in different ways.

For the division and adornment pertain to the formation of things. But just as the formation of artifacts is accomplished through the form of the craft that exists in the craftsman's mind and is called his 'intelligible word', so too the formation of the whole of creation is accomplished through the Word of God. And this is the sense in which there is mention of the Word in the work of division and adornment.

On the other hand, in the creation the Son is mentioned as a beginning, when it says, "In the beginning God created ...," since 'creation' is being understood as the production of unformed matter. However, according to the other saints, who claim that the elements were created first with their proper forms, a different reply must be given. For instance, Basil claims that the phrase "God said ..." signifies a divine command. But before mention is made of a divine command, a creature has to be produced that would obey the command.

**Reply to objection 2:** According to Augustine, 'heaven' refers to unformed spiritual matter, whereas 'earth' refers to the unformed matter of all bodies. And so no creature is omitted.

By contrast, according to Basil, heaven and earth are posited here as two endpoints, so that the things in the middle are implicitly understood by reference to them, especially in light of the fact that the motion of each body in the middle is either toward the heaven, as with the motion of light bodies, or toward the earth, as with the motion of heavy bodies.

Others, however, claim that Scripture normally includes all four elements under the name 'earth'. Hence, in Psalm 148:7, after it says, "Praise the Lord from the earth," it adds, "fire, hail, snow, and ice."

**Reply to objection 3:** In the case of the work of creation there is something that corresponds to what is said in the case of the work of division and adornment, viz., "God saw that this or that was good."

To see this clearly, notice that the Holy Spirit is the Love. Now as Augustine explains in *Super Genesim ad Litteram* 1, "There are two things for the sake of which God loves His creatures, viz., (a) that they might exist and (b) that they might remain in existence. Therefore, (a) in order that what would remain in existence might exist, it says, 'The spirit of God moved over the waters'"—insofar as 'waters' refers to unformed matter, in the way that the craftsman's love 'moves over' a given material in order that he might form a work from it—"whereas (b) in order that what He had made should remain in existence, it says, 'God saw that it was good'." The latter signifies the divine craftsman's delight in the thing made (not that He knows it in any other way, or that it pleases Him in any other way, than before He had made it).

And so the Trinity of persons is made known both in the work of creation and in the work of formation. More specifically, in the work of creation, the person of the Father is made known through "God created ...," the person of the Son is made known through "the beginning" in which He created, and the person of Holy Spirit is made known by the fact that He "moved over the waters." Again, in the work of formation, the person of the Father is made known in God's speaking, the person of the Son is made known in the Word by which He speaks, and the person of the Holy Spirit is made known in the delight with which God sees that what He has made is good.

On the other hand, in the work of the second day, the reason why it does not say, "God saw that it was good" is that the work of dividing the waters is begun on that day and completed on the third day. Hence, what is said on the third day refers back to the second day as well.

An alternative reply is that the reason why Scripture does not use an approval of this sort is that the division posited on the second day is of things that are not evident to the people.

Yet another reply is that 'firmament' here is being taken for the cloudy air, which is not one of the permanent parts of the universe or one of the principal parts of the world.

These are the three explanations given by Rabbi Moses.

On the other hand, some give a mystical explanation based on numbers: The reason why the work of second day is not given an approval is that the number *two* recedes from oneness.

**Reply to objection 4:** By ‘the spirit of the Lord’ Rabbi Moses understands the air or the wind, just as Plato did. And he claims that the text says “the spirit of the Lord” because Scripture was everywhere accustomed to attributing the breathing of the winds to God.

However, according to the saints, “the spirit of the Lord” refers to the Holy Spirit, who is said to move over the waters—i.e., over unformed matter, according to Augustine—“so that no one might think that God loves the works He has made out of a necessity of need. For a love borne of need is subject to the things that it loves. And it is appropriate that what is first made known is something inchoate over which He is said to move. For He does not move over a place, but rather moves with a preeminent power” (Augustine, *Super Genesim ad Litteram* 1).

On the other hand, according to Basil, he moves over the element water, i.e., “He fosters and enlivens the nature of the waters, like a hovering mother-hen, impressing vital power on the things that are being fostered.” For water especially has a vital power, since most animals are generated in water and the semen of all animals is liquid. Also, spiritual life is given through the water of Baptism; hence John 3:5 says, “Unless you are reborn of water and the Holy Spirit ....”

**Reply to objection 5:** According to Augustine, the threefold *esse* of things is designated by three of the phrases: (a) the *esse* of things in the Word is designated by its saying, “Let there be ...”; (b) the *esse* of things in the angelic mind is designated by its saying, “It was made”; and (c) the *esse* of things in their proper natures is designated by its saying, “He made it.” And since the formation of the angels is described on the first day, it was not necessary to add “He made it” there.

By contrast, according to the other saints, one can reply that the fact that it says, “God said, ‘Let there be ...’” signifies God’s command with respect to making, whereas the fact that it says, “It was made” signifies the completion of the work. But it was necessary to add how it was made, especially because of those who claimed that all visible things were made by the angels. And so to exclude this, it adds that God Himself made them. Hence, in the case of each of the works, after it says, “And it was made,” some act of God’s is added, either “He made it” or “He divided them” or “He called it ...” or something of this sort.

**Reply to objection 6:** According to Augustine, ‘morning’ and ‘evening’ refer to the morning knowledge and evening knowledge of angels, which was explained above (q. 58, aa. 6 and 7).

Alternatively, according to Basil, the whole of a time was customarily named by its principal part, viz., day, in the way that Jacob said, “The days of my wandering” (Genesis 47:9), without making any mention of night.

Now evening and morning are posited as the endpoints of a day, the beginning of which is morning and the end of which is evening.

Alternatively, ‘evening’ designates the beginning of night, whereas ‘morning’ designates the beginning of day. And it was fitting that when the first division of things was mentioned, only the beginnings of the times should be designated.

Moreover, evening is mentioned first because, given that the day begins with light, the terminus of light, i.e., evening, occurs before the terminus of darkness and night, i.e., morning.

Alternatively, according to Chrysostom, evening is mentioned first in order to signify that a natural day ends in the morning and not in the evening.

**Reply to objection 7:** It says ‘one day’ on the first establishment of a day in order to signify that a period of twenty-four hours pertains to a single day. Hence, by saying “one day” it fixes the measure of a natural day.

An alternative reply is that it says “one day” in order to signify that the day is consummated by the return of the sun to one and the same point.

Yet another reply is that it says “one day” because once the seven days have been completed, there will be a return to the first day, which is one with the eighth day.

These are the three reasons that Basil gives.

## QUESTION 75

### The Essence of the Human Soul

Now that we have considered the spiritual creature and the corporeal creature, we must consider man, who is composed of a spiritual and a corporeal substance (*ex spiritali et corporali substantia componitur*). We will consider first the nature of man (questions 75-89) and then the production of man (questions 90-102).

Now the theologian's role is to consider man's nature with respect to the soul and not the body, except insofar as the body is related to the soul. And so the first part of our consideration will have to do with the soul. Since, according to Dionysius, *De Caelesti Hierarchia*, chap. 11, there are three aspects of spiritual substances, viz., their essence, their power, and their operation, we will consider, first, that which has to do with the essence of the soul (questions 75-76); second, that which has to do with the soul's powers or capacities (*virtutem vel potentias*) (questions 77-83); and, third, that which has to do with the soul's operations (questions 84-89).

On the first point there are two things to consider. The first is the soul itself in its own right (question 75), and the second is the union of the soul with the body (question 76).

On the first topic there are seven questions: (1) Is a soul a body? (2) Is the human soul something subsistent? (3) Are the souls of brute animals subsistent? (4) Is the soul a man or is a man instead something composed of a soul and a body? (5) Is the soul composed of form and matter? (6) Is the human soul incorruptible? (7) Is the soul the same in species as an angel?

### Article 1

#### Is a soul a body?

It seems that a soul is a body:

**Objection 1:** A soul is a mover of a body. But it does not give movement without being moved, both because (a) it seems that nothing can be a mover unless it is moved, since nothing gives to another what it itself does not have—e.g., something that is not itself hot does not give heat—and because (b) if something is an unmoved mover, then, as *Physics* 8 shows, it is a cause of a movement that is everlasting (*sempiternum*) and uniform (*eodem modo se habentem*)—but this does not appear to be the case with an animal's movement, which is from the soul. Therefore, a soul is a mover that is moved. But every mover that is moved is a body. Therefore, a soul is a body.

**Objection 2:** Every cognition is effected by means of some sort of likeness. But a body cannot bear a likeness to an incorporeal thing. Therefore, if a soul were not a body, it would not be able to have any cognition of corporeal things.

**Objection 3:** A mover must have some contact with the thing moved. But only bodies have contact. Therefore, since a soul moves a body, it seems that a soul is a body.

**But contrary to this:** In *De Trinitate* 6 Augustine says that a soul "is simple in comparison to a body, since it is not spread out with its mass (*mole*) through a region in space (*per spatium loci*)."

**I respond:** In order to inquire into the nature of a soul, one must take for granted that what is called a 'soul' (*anima*) is a first principle of life in those things around us that are alive; for we say that living things are 'ensouled' (*animata*) and that things which lack life are 'not ensouled' (*inanimata*).

There are two operations by which life is especially made manifest, viz., cognition and movement. The ancient philosophers, unable to transcend the imagination, posited bodies as the principle of these operations, and they claimed that bodies alone are entities and that what is not a body is nothing. Accordingly, they claimed that a soul is a certain sort of body.

Even though the falsity of this view can be shown in many ways, we will make use of just the one way in virtue of which it is most surely and most generally clear that a soul is not a body:

It is evident that not every principle of a vital operation is a soul, since otherwise an eye would be a soul, given that it is a principle of seeing; and the same thing would have to be said of others among the soul's instruments. Instead, we are claiming that a soul is the *first* principle of life. For even though a body can in some sense be a principle of life, in the way that the heart is a principle of life in an animal, nonetheless, a body cannot be the *first* principle of life. For it is clear that *being a principle of life*, or *being alive* (*vivens*), cannot belong to a body by reason of its being a body; otherwise, each body would be alive or would be a principle of life. Therefore, the fact that a body is alive—or is even a principle of life—is something that belongs to it by virtue of the fact that it is a body of a given sort (*tale corpus*). But the fact that a body is actually of a given sort (*actu tale*) is due to a principle that is called its act (*eius actus*). Therefore, a soul, i.e., a first principle of life, is the *act of a body* and not itself a body—just as heat, i.e., a principle of heating, is a certain act of a body and not itself a body.

**Reply to objection 1:** Since everything that is moved is moved by another, and since this cannot go on *ad infinitum*, one must admit that not every mover is moved. For since to be moved is to go from potentiality to actuality, a mover gives what it has to the moveable thing insofar as it makes that thing to be actually such-and-such (*esse in actu*).

Now as is shown in *Physics* 8, there is a sort of mover that is completely unmoveable and that is moved neither *per se* nor *per accidens*; and this sort of mover can effect a movement that is always uniform (*semper uniformem*). On the other hand, there is another sort of mover that is moved *per accidens* and not *per se*, and because of this it does not effect a movement that is always uniform; a soul is a mover of this sort. Finally, there is a sort of mover that is moved *per se*, viz., a body.

Since the ancient natural philosophers believed that only bodies exist, they claimed that (a) every mover is itself moved and that (b) a soul is moved *per se* and is a body.

**Reply to objection 2:** It is not necessary that a likeness of the thing of which there is a cognition should exist *in actuality* in the *nature* of that which has the cognition. Instead, if something is such that it has cognition first in potentiality and afterwards in actuality, then a likeness of the thing of which there is cognition exists only *in potentiality*, and not in actuality, in the *nature* of the thing having the cognition—just as a color exists in the pupil only in potentiality and not in actuality. Hence, it is not necessary for there to be an actual likeness of corporeal entities in the nature of a soul; rather, it is necessary only that likenesses of this sort should exist in a soul in potentiality.

However, since the ancient natural philosophers were ignorant of the distinction between actuality and potentiality, they claimed that a soul is a body in order that it might have cognition of bodies; and they claimed that it is composed of the principles of all bodies in order that it might have cognition of all bodies.

**Reply to objection 3:** There are two sorts of contact, contact of *quantity* and contact of *power* (*contactus quantitatis et virtutis*). In the case of the first sort of contact, a body is touched only by a body. In the case of the second sort of contact, a body can be touched by an incorporeal entity that moves the body.

## Article 2

### Is a human soul something subsistent?

It seems that a human soul is not something subsistent:

**Objection 1:** That which is subsistent is said to be a *this-something* (*hoc aliquid*). Yet it is not the

soul that is a *this-something*, but rather that which is composed of a soul and a body. Therefore, a soul is not something subsistent.

**Objection 2:** Anything that is subsistent can be said to operate. But a soul is not said to operate, since, as *De Anima* 1 puts it, “To say that a soul senses or understands is like saying that a soul weaves or builds.” Therefore, a soul is not something subsistent.

**Objection 3:** If a soul were something subsistent, then it would have an operation without a body (*operatio sine corpore*). But none of its operations occurs without a body (*nulla est sine corpore*)—not even the act of intellectual understanding, since the soul cannot have an act of intellectual understanding without phantasms, and phantasms cannot exist without a body. Therefore, a human soul is not something subsistent.

**But contrary to this:** In *De Trinitate* 10 Augustine says, “If anyone discerns the nature of the mind and sees that it is a substance, but not a corporeal substance, he will see that those who think it is a corporeal substance make this mistake because they attach to the soul those things, viz., the images of bodies, without which they cannot think of any nature.” Therefore, the nature of a human mind is not only incorporeal but also a substance, i.e., something subsistent.

**I respond:** One must claim that the principle of intellectual operations, which we call a man’s soul, is an incorporeal and subsistent principle. For it is clear that by means of his intellect a man is able to have cognition of the natures of all bodies. But that which is able to have cognition of given things must be such that it has nothing of those things in its own nature, since what exists in it naturally would in that case impede the cognition of those other things. For instance, we see that a sick tongue infected with bilious and bitter humors (*infecta cholericis et amaris humoribus*) is unable to perceive anything sweet; instead, everything seems bitter to it. Therefore, if an intellectual principle had within itself the nature of any sort of body, it would be unable to have cognition of all bodies. But each body has some determinate nature. Therefore, it is impossible that this intellectual principle should be a body. And, similarly, it is impossible that it should have intellectual understanding through a bodily organ, since the determinate nature of that bodily organ would likewise prevent its having cognition of all bodies—in just the same way that if some determinate color exists not only in the pupil but also in the glass vase, then a liquid poured into that vase seems to be of that same color.

Therefore, the intellectual principle itself, which is called the *mind* or the *intellect*, has an operation in its own right (*habet operationem per se*) that the body does not share in. But nothing can operate in its own right unless it subsists in its own right (*nil potest per se operari nisi quod per se subsistit*). For to operate belongs to a being that is actual (*in actu*), and so a thing operates in the way in which it exists. It is for this reason that we say that it is the hot thing (*calidum*), rather than the heat (*calor*), that gives warmth. It follows, then, that the human soul, which is called the intellect or mind, is something incorporeal and subsistent.

**Reply to objection 1:** The term ‘*this-something*’ can be taken in two senses. In the first sense it is taken for any subsistent thing, whereas in the second sense it is taken for a subsistent thing that is complete in the nature of some species. The first sense excludes inherence of the sort that belongs to an accident or material form; the second sense excludes in addition the incompleteness that belongs to a part. Hence, a hand could be called a *this-something* in the first sense, but not in the second sense.

So, then, since the human soul is a part of the human species, it can be called a *this-something*, i.e., subsistent, in the first sense, but not in the second sense. For in the second sense what is called a *this-something* is that which is composed of a soul and a body.

**Reply to objection 2:** Aristotle is making this assertion (*verba illa dicit*) not to express his own opinion, but rather to express the opinion of those who were claiming that to have intellectual understanding is to be moved. This is clear from what he says just before the cited passage.

An alternative reply is that to act in its own right (*per se agere*) befits something that exists in its own right (*per se existenti*). But the phrase ‘exists in its own right’ (*per se existens*) can sometimes be predicated of a thing as long as it is not inherent like an accident or a material form, even if it is a part. On the other hand, what is said to subsist properly and *per se* is such that it is neither inherent in the aforementioned ways nor a part. In this sense, neither an eye nor a hand could be said to subsist in its own right, and so neither could it be said to operate on its own. Hence, the operations of the parts are attributed to the whole *by means of* the parts (*per partes*). For we say that a man sees by means of his eye, and that he touches by means of his hand. This is different from saying that a hot thing gives warmth by means of its heat (*per calorem*), since there is no sense in which the heat gives warmth, properly speaking. Therefore, one can claim that a soul understands in the same sense in which an eye sees, but that it is more proper to say that the man understands by means of his soul.

**Reply to objection 3:** The body is not required for the intellect’s action as an organ by means of which that action is exercised; rather, the body is required for the sake of the action’s object (*ratione obiecti*). For a phantasm is related to intellectual understanding in the way that a color is related to seeing. But needing the body in this sense does not rule out the intellect’s being subsistent; otherwise, it would be the case that because it needs external sensible things in order to have sensation, an animal is not something subsistent.

### Article 3

#### Are the souls of brute animals subsistent?

It seems that the souls of brute animals are subsistent:

**Objection 1:** Man agrees with the other animals in genus. But as has been shown (a. 2), man’s soul is subsistent. Therefore, the souls of the other animals are likewise subsistent.

**Objection 2:** Something sentient (*sensitivum*) is related to what can be sensed (*ad sensibilia*) in the same way that something intellectual (*intellecivum*) is related to what can be understood intellectually (*intelligibilia*). But the intellect understands intelligible things without the body. Therefore, the senses apprehend sensible things without the body. But the souls of brute animals are sentient. Therefore, they are subsistent for the same reason that the human soul, which is intellectual, is subsistent.

**Objection 3:** A brute animal’s soul moves its body. But a body is moved and does not effect movement. Therefore, a brute animal’s soul has an operation without its body.

**But contrary to this:** In *De Ecclesiasticis Dogmatibus* it says, “We believe that man alone has a soul that is a substance (*anima substantiva*), whereas the souls of animals are not substances.”

**I respond:** The ancient philosophers did not draw a distinction between sensation and intellectual understanding, and they attributed both of them to a corporeal principle, as has already been explained (a. 1).

Now Plato did distinguish intellectual understanding from sensation, but he attributed both of them to an incorporeal principle, arguing that just as intellectual understanding belongs to the soul in its own right, so too does sensing. And from this it followed that even the souls of brute animals are subsistent.

Aristotle, on the other hand, claimed that, among the works of the soul, only intellectual understanding is exercised without a corporeal organ. By contrast, sensing and the resulting operations of the sentient soul clearly occur with bodily changes; for instance, in the act of seeing the pupil is changed by the species of color, and the same thing is clear with the other senses.

And so it is clear that the sentient soul does not have any proper operation of its own (*non habet*

*aliquam operationem propriam per seipsam*); instead, every operation of the sentient soul belongs to the conjoined entity (*est coniuncti*). From this it follows that since the souls of brute animals do not operate in their own right (*per se*), they are not subsistent; for each thing has its *esse* in the same way that it has its operation (*similiter unumquodque habet esse et operationem*).

**Reply to objection 1:** Even though man agrees with the other animals in genus, he nonetheless differs from them in species, and a difference in species is accompanied by a difference in form. Nor does it have to be the case that every difference of form makes for a diversity of genera.

**Reply to objection 2:** There is a sense in which the sentient part of the soul (*sensitivum*) is related to what can be sensed in the way that the intellective part (*intellectivum*) is related to what can be understood intellectually, viz., each is in potentiality with respect to its objects.

However, there is another sense in which they are related in different ways to their objects; for the sentient part is acted upon by the sensible object via a corporeal change, and hence an excessiveness in the sensible objects harms the sensory power (*excellencia sensibilium corrumpit sensum*). This does not occur in the case of the intellect, for an intellect that is having an intellective understanding of the most intelligible objects is more able afterwards to understand lesser objects. What's more, even though the body gets tired out in intellective understanding, this is incidental (*per accidens*), given that the intellect needs the operation of the sentient powers to prepare phantasms for it.

**Reply to objection 3:** There are two sorts of moving powers.

There is one which *commands* movement (*imperat motum*), viz., the appetitive power. And its operation in the sentient soul does not occur without the body. Rather, anger and joy and all passions of this sort exist along with some change in the body.

The second sort of moving power is one which *executes* movement (*exequetur motum*) and through which the members of the body are rendered capable of obeying the appetite. This power's act is to be moved and not to effect movement.

Hence, it is clear that to effect movement is not an act that the sentient soul has without the body.

#### Article 4

##### Is the [human] soul the man?

It seems that the [human] soul is the man:

**Objection 1:** 2 Corinthians 4:16 says, "Though our outward man is corrupted, yet the inward man is renewed day by day." But what is 'inward' in a man is the soul. Therefore, the soul is the interior man.

**Objection 2:** The human soul is a certain substance. But it is not a universal substance. Therefore, it is a particular substance. Therefore, it is a hypostasis or person. But it is not a person unless it is a human person. Therefore, the soul is the man, since a human person is a man.

**But contrary to this:** In *De Civitate Dei* 19 Augustine commends Varro for thinking that "a man is neither the soul alone nor the body alone, but the soul and the body together."

**I respond:** There are two ways to understand the claim that the soul is the man.

In the first way, it is understood to mean that (a) *man* is a soul and yet that (b) *this* man, e.g., Socrates, is not a soul but is instead composed of a soul and a body. I bring this position up because some have claimed that the form alone belongs to the nature of the species, whereas the matter is part of the individual and not of the species.

However, this cannot be true. For what pertains to the nature of the species is what is signified by

the definition. But in the case of natural things the definition signifies both the form and the matter—and not just the form. Hence, the matter is part of the species in the case of natural things—not, to be sure, *designated* matter (*materia signata*), which is a principle of individuation, but rather *common* matter (*materia communis*). For just as it is of the nature of *this* man to be composed of *this* soul and *this* flesh and *these* bones, so it is of the nature of *man* to be composed of a soul and flesh and bones, since whatever belongs to the substance of the species must belong in a general way (*communiter*) to the substance of all the individuals contained under that species.

In the second way, the claim that the soul is the man is understood to mean that *this* soul is *this* man. To be sure, this claim could be sustained if one asserted that the sentient soul's operations are its own without the body, since in that case all the operations attributed to the man would belong to the soul alone. But it is the entity that performs the entity's operations. Hence, it is the man that performs the man's operations. But it has been shown (a. 3) that an act of sensing is not an operation belonging only to the soul. Therefore, since sensing is one of the man's operations, even if not his proper operation, it is clear that a man is something composed of a soul and a body and is not the soul alone.

However, Plato, who claimed that sensing is proper to the soul, was able to hold that a man is a soul making use of a body.

**Reply to objection 1:** According to the Philosopher in *Ethics* 9, each thing seems to be mainly what is principal in it, in the way that a city is said to do what the mayor of the city (*rector civitatis*) does. It is in this sense that what is principal in a man is sometimes called the man. In some cases this is the intellective part of man, which is indeed principal and is called the 'interior' man, and in other cases it is the sentient part along with the body, which is principal in the opinion of those who are engaged only with sensible things. And the latter is called the 'exterior' man.

**Reply to objection 2:** Not every particular substance is a hypostasis or person; rather, a hypostasis or person is a particular substance that has the *complete* nature of a species. Hence, a hand or foot cannot be called a hypostasis or a person. And, likewise, neither can a soul, since it is a part of a human nature (*pars speciei humanae*).

## Article 5

### Is a [human] soul composed of matter and form?

It seems that a [human] soul is composed of matter and form:

**Objection 1:** Potentiality (*potentia*) is contrasted with actuality (*actus*). But everything that exists in actuality participates in the *First Actuality* (*primus actus*), who is God and through participation in whom all things exist and are good and are alive—as is clear from Dionysius's teaching in *De Divinis Nominibus*. Therefore, everything that exists in potentiality participates in the *first potentiality* (*prima potentia*). But the first potentiality is primary matter (*materia prima*). Therefore, since a human soul in some sense exists in potentiality, which is clear from the fact that a man is sometimes engaged in intellective understanding [only] in potentiality, it seems that a human soul participates in primary matter as one of its parts.

**Objection 2:** Anything in which the properties of matter are found is such that matter is found in it. But the properties of matter are found in a soul. These properties are *to be a subject* (*subiici*) and *to undergo change* (*transmutari*). For a soul is the subject of knowledge and of virtue, and it undergoes a change from ignorance to knowledge and from vice to virtue. Therefore, there is matter in the soul.

**Objection 3:** As *Metaphysics* 8 says, anything that does not have matter does not have a cause of

its *esse*. But a soul has a cause of its *esse*, since it is created by God. Therefore, a soul has matter.

**Objection 4:** Anything that is just a form and does not have matter is pure and infinite actuality (*actus purus et infinitus*). But this belongs to God alone. Therefore, a soul has matter.

**But contrary to this:** In *Super Genesim ad Litteram* 7 Augustine shows that a soul is made neither from corporeal matter nor from spiritual matter.

**I respond:** A soul does not have matter. This can be seen in two ways.

The first way stems from *the nature of a soul in general*. For it belongs to the nature of a soul to be the form of a body. Therefore, either it is (a) a form as regards the whole of itself or (b) a form as regards some part of itself. If it is a form as regards the whole of itself, then it is impossible that a part of it should be matter—given that ‘matter’ means a being that exists only in potentiality. For a form *qua* form is an actuality, whereas what exists just in potentiality cannot be part of an actuality. For potentiality is incompatible with actuality, since it is divided off against actuality. On the other hand, if a soul is a form as regards some part of itself, then we will call that part ‘the soul’, and we will call the matter of which it is primarily the actuality ‘the first animated thing’.

The second way stems from *the specific nature of a human soul insofar as it is intellective*. For it is clear that whatever is received in a thing is received in it according to the mode of the receiver. So each thing is such that there is cognition of it insofar as its form exists in the one who has cognition of it. But an intellective soul has cognition of an entity in that entity’s nature taken absolutely speaking (*in sua natura absolute*); for instance, it has cognition of a rock insofar as the rock is a rock taken absolutely speaking. Therefore, it is the form of a rock taken absolutely speaking, i.e., according to its proper formal notion (*secundum propriam rationem formalem*), that exists in the intellective soul. Thus, an intellective soul is a form absolutely speaking and not something composed of matter and form. For if an intellective soul were composed of matter and form, then the forms of the things would be received in it as individuals, and so the soul would know them only as singulars, just as happens in the case of the sentient powers, which receive the forms of things in a corporeal organ. For matter is a principle of individuation for forms.

Therefore, it follows that an intellective soul, along with every intellectual substance that has cognition of forms taken absolutely, lacks a composition of form and matter.

**Reply to objection 1:** The First Actuality is the universal source of all actualities (*universale principium omnium actuum*), since it is infinite and has “everything virtually within itself to begin with,” as Dionysius puts it. Hence, things participate in it not as parts, but rather according to the diffusion of its procession (*secundum diffusionem processionis ipsius*). Now since potentiality is receptive of actuality, it must be proportioned to the actuality. But the received actualities that proceed from the infinite First Actuality and are participations in it are diverse. Hence, there cannot be a single potentiality that receives all the actualities, in the way that there is a single actuality that flows into (*influens*) all the participated actualities; otherwise, the receptive potentiality would equal the active power of the First Actuality.

However, the receptive potentiality that exists in an intellective soul is different from the receptive potentiality of primary matter, as is clear from the differences in what is received. For primary matter receives individual forms, whereas the intellect receives forms absolutely speaking. Hence, a potentiality of the sort that exists in the intellective soul does not indicate that the soul is composed of matter and form.

**Reply to objection 2:** To be a subject (*subiici*) and to undergo change (*transmutari*) belong to matter insofar as it is in potentiality. Therefore, just as an intellect’s potentiality is different from primary matter’s potentiality, so the notions of *being a subject of* and *undergoing change* are different in the two cases. For it is insofar as it is in potentiality with respect to intelligible species that the intellect

is the subject of knowledge and undergoes a change from ignorance to knowledge.

**Reply to objection 3:** The form is a cause of the matter's *esse*, along with the agent. Hence, insofar as the agent brings matter to the actuality of a form by transforming it, it is a cause of *esse* for it. But if something is a subsistent form, it does not have *esse* through any formal principle; nor does it have a cause that changes it from potentiality to actuality. Hence, after the cited passage, the Philosopher concludes that in the case of things composed of matter and form "the cause is none other than that which moves the thing from potentiality to actuality, whereas things that do not have matter are all simply beings that are truly something."

**Reply to objection 4:** Everything that is participated in is related to what participates in it as its actuality. But if a created form is posited as subsisting *per se*, then it must participate in *esse*, since "its very life," or whatever else is said of it, "participates in *esse* itself," as Dionysius puts it in *De Divinis Nominibus*, chap. 5. Now participated *esse* is limited to the capacity of that which participates. Hence, God alone, who is His own *esse* itself, is pure and infinite actuality (*actus purus et infinitus*). On the other hand, in intellectual substances there is a composition of actuality and potentiality—not, to be sure, a composition of form and matter, but rather a composition of form and participated *esse*. Hence, an intellectual substance is said by some to be composed of *that by which* it exists and *that which* exists (*componi ex quo est et quod est*). For *esse* itself is *that by which* something exists.

## Article 6

### Is the human soul corruptible?

It seems that the human soul is corruptible:

**Objection 1:** Things whose principles and processes are similar seem to have similar ends as well. But the principle of generation for men is similar to the principle of generation for beasts, since they are made from the earth. Again, the processes of life are similar in both cases, since "all things breathe alike, and man has no more than the beast," as Ecclesiastes 3:19 puts it. Therefore, as Ecclesiastes 3 concludes, "Death (*interitus*) for a man and a beast is one, and the condition of both is equal." But the souls of brute animals are corruptible. Therefore, the human soul is likewise corruptible.

**Objection 2:** Everything that is made *ex nihilo* is reducible to nothingness, since the end must correspond to the beginning. But as Wisdom 2:2 says, "We are born from nothing"—which is true not only with respect to the body but also with respect to the soul. Therefore, as that same passage concludes, "After this we shall be as if we had never existed"—even with respect to the soul.

**Objection 3:** No entity exists without its proper operation. But the soul's proper operation, which is to understand intellectually in conjunction with a phantasm (*intelligere cum phantasmate*), cannot exist without a body, since the soul understands nothing without a phantasm and, as *De Anima* says, "there is no phantasm without the body." Therefore, the soul does not remain after the body has been destroyed.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says that out of God's goodness human souls are such that they are "intellectual" and have "an incorruptible substantial life."

**I respond:** One must claim that the human soul, which we call the intellective principle, is incorruptible.

For a thing is corrupted in one of two ways, either (a) *per se* or (b) *per accidens*. But it is impossible for anything subsistent to be generated or corrupted *per accidens*, i.e., generated or corrupted because something else is generated or corrupted. For *being generated* and *being corrupted* belong to a thing in the same way as does its *esse*, which is acquired through generation and lost through corruption.

Hence, that which has *esse per se* can be generated or corrupted only *per se*, whereas things that do not subsist, such as accidents and material forms, are said to be made and corrupted through the generation and corruption of composite things. Now it was shown above (a. 3) that only human souls, and not the souls of brute animals, are subsistent *per se*. Hence, the souls of brute animals are corrupted when their bodies are corrupted, whereas the human soul could not be corrupted unless it were corrupted *per se*.

However, this is wholly impossible—not only in the case of the human soul, but in the case of any subsistent thing that is just a form. For it is clear that what belongs to a thing because of its very self (*secundum se*) is inseparable from that thing. But *esse* belongs *per se* to form, i.e., to actuality. This is why matter acquires *esse* in actuality to the extent that it acquires form, whereas corruption occurs in it to the extent that form is separated from it. But it is impossible for a form to be separated from itself. Hence, it is impossible that a subsistent form should cease to exist.

Even if one conceded that the soul is, as some claim, composed of form and matter, he would still have to claim that it is incorruptible. For there is corruption only where there is contrariety, since instances of generation and corruption are from contraries into contraries; hence, the celestial bodies are incorruptible because they do not have a matter that is subject to contrariety. But there cannot be any contrariety within the intellective soul. For it receives *esse* in its own mode, and the things that are received in it exist without contrariety. For within the intellect the concepts of contraries (*rationes contrariorum*) are not themselves contraries; rather, there is a single science of the contraries. Therefore, it is impossible for the intellective soul to be corruptible.

Again, an indication of this can also be found in the fact that each thing naturally desires *esse* in its own mode. But in things with cognition, desire follows upon cognition. Now the senses have cognition of *esse* only in the here and now, whereas the intellect apprehends *esse* absolutely speaking and with respect to all of time. Hence, everything that has an intellect naturally desires to exist always. But a natural desire cannot be in vain. Therefore, every intellectual substance is incorruptible.

**Reply to objection 1:** As is made clear in Wisdom 2, Solomon introduces this argument on behalf of the foolish. Thus, the claim that man and the other beasts have a similar principle of generation is true with respect to the body; for all animals are alike in being made from the earth. However, it is not true with respect to the soul; for the soul of brute animals is produced by a corporeal power, whereas the human soul is produced by God. In order to indicate this, Genesis says of the other animals, “Let the earth bring forth the living soul” (1:24), whereas of man it says, “He breathed into his face the breath of life” (2:7). And so Ecclesiastes 12:7 concludes, “The dust returns to the earth, from where it came, and the spirit returns to God, who made it.”

Likewise, the process of life is similar with respect to the body; on this score Ecclesiastes 3:19 says, “All things breathe alike,” and Wisdom 2:2 says, “The breath in our nostrils is smoke ...” But the process is not similar with respect to the soul. For a man has intellective understanding, whereas brute animals do not.

Hence, the claim that man has nothing more than the beast is false. And so death is similar with respect to the body, but not with respect to the soul.

**Reply to objection 2:** Just as a thing is said to be able to be created not through any passive potentiality (*per potentiam passivam*) but only through the active power (*per potentiam activam*) of the creator, who is able to produce something *ex nihilo*, so too when a thing is said to be able to be reduced to nothingness, this does not imply *within the creature* a potentiality for *non-esse*, but instead implies *within the creator* a power not to communicate *esse* (*in creatore potentia ad hoc quod esse non influat*). By contrast, a thing is said to be able to be corrupted because there exists *within it* a potentiality for *non-esse*.

**Reply to objection 3:** To understand intellectually in conjunction with a phantasm is the proper operation of the soul insofar as it is united to the body. However, when it is separated from the body, it

will have another mode of understanding like that of other substances that are separate from a body. This will be explained more fully below (q. 89, a. 1 ).

### Article 7

#### Does a [human] soul belong to the same species as an angel?

It seems that a [human] soul belongs to the same species as an angel (*anima et angelus sint unius speciei*):

**Objection 1:** Each thing is ordered toward its proper end by the nature of its species, through which it has an inclination toward that end. But the soul's end is the same as an angel's, viz., eternal beatitude. Therefore, they belong to the same species.

**Objection 2:** The ultimate specific difference is the most noble, since it brings the nature of the species to completion. But in an angel and in a soul there is nothing more noble than intellectual *esse*. Therefore, an angel and a soul agree in their ultimate specific difference. Therefore, they belong to the same species.

**Objection 3:** A soul seems to differ from an angel only in being united to a body. But since the body lies outside the soul's essence, it does not seem relevant to its species. Therefore, an angel and a soul belong to the same species.

**But contrary to this:** Things that have diverse natural operations differ in species. But an angel and a soul have diverse natural operations. For as Dionysius says in *De Divinis Nominibus*, chap. 7, "Angelic minds have simple and beatific acts of intellective understanding (*simplices et beatos intellectus*), not inferring (*non congregantes*) their knowledge of God from visible things"—whereas a little later he says the opposite about the soul. Therefore, a soul and an angel do not belong to the same species.

**I respond:** Origen claimed that all angels and human souls belong to the same species. As was explained above (q. 47, a. 2), he said this because he held that the different grades found among such substances were incidental, stemming from free choice.

But this cannot be the case, since among incorporeal substances there is no numerical diversity without a diversity of species and without natural inequality.

For if incorporeal substances are not composed of matter and form but are instead subsistent forms, then it will clearly be necessary for there to be a diversity of species among them. For it is unintelligible that there should be a separated form that is not the only one of its species (*una unius speciei*)—just as, if whiteness were separated, then there could be only one whiteness, since *this* whiteness differs from *that* whiteness only because it is the whiteness of *this* thing or the whiteness of *that* thing. Now diversity in species is always accompanied by a natural diversity; for instance, among the species of color one is more perfect than another, and likewise for the other species. This is because the differences that divide the genus are contraries. But contraries are related to one other as the perfect and the imperfect, since the sources of contrariety are, as *Metaphysics* 10 says, the disposition and [corresponding] privation.

The same thing would follow even if substances of the sort in question were composed of matter and form. For if the matter of *this* thing is distinct from the matter of *that* thing, then it must be the case either that (a) the form is the source (*principium*) of the distinction between the matters, in the sense that the matters are diverse because of their relation to diverse forms, in which case it still follows that there is a difference in species and a natural inequality, or that (b) the matter is the source of the distinctness of the forms, in which case *this* matter can be said to be distinct from *that* matter only because of a

distinction in quantity (*secundum divisionem quantitativam*)—something that has no place in the case of incorporeal substances such as an angel or a soul.

Hence, it is impossible for an angel and a soul to belong to the same species.

Now we will show below (q. 76, a. 2) how it is that many souls belong to the same species.

**Reply to objection 1:** This argument goes through in the case of an end that is proximate and natural. However, eternal beatitude is an end that is ultimate and supernatural.

**Reply to objection 2:** The ultimate specific difference is the most noble because it is maximally determinate, in the way in which an actuality is more noble than the corresponding potentiality. However, in this sense *intellectual (intellectuale)* is not the most noble, because it is indeterminate and common with respect to the many grades of intellectuality, just as *sentient (sensibile)* is indeterminate and common with respect to the many grades within sentient *esse*. Hence, just as it is not the case that all sentient beings belong to the same species, so neither is it the case that all intellectual beings belong to the same species.

**Reply to objection 3:** Even though the body does not belong to the essence of the soul, the soul is by the nature of its essence such that it can be united to the body (*sit corpori unibilis*). Hence, it is not the soul, but rather the composite, that properly speaking belongs to a species. And the very fact that the soul needs the body in a certain way for its operation shows that the soul has a lower grade of intellectuality than does an angel, who is not united to a body.

## QUESTION 76

### The Union of the Soul with the Body

Next we must consider the union of the soul with the body. On this topic there are eight questions: (1) Is the intellectual principle united to the body as a form? (2) Is the intellectual principle multiplied in accord with the multiplication of the bodies, or is there a single intellect for all men? (3) Are there any other souls in a body whose form is an intellectual principle? (4) Are there any other substantial forms in such a body? (5) What sort of body does it have to be that has an intellectual principle as its form? (6) Is the intellectual principle united to the sort of body in question by the mediation of some accident? (7) Is the intellectual principle united to the sort of body in question by the mediation of some other body? (8) Does the soul exist as a whole in each part of the body?

#### Article 1

##### Is the intellectual principle united to the body as its form?

It seems that the intellectual principle is not united to the body as its form:

**Objection 1:** In *De Anima* 3 the Philosopher says that the intellect is “separated” and that it is not the act or actuality of a body (*nullius corporis est actus*). Therefore, it is not united to the body as its form.

**Objection 2:** Every form is specified (*determinatur*) in accord with the nature of the matter whose form it is; otherwise, a proportionality between the form and the matter would not be required. Therefore, if the intellect were united to the body as its form, then since each body has a determinate nature, it would follow that the intellect has a determinate nature. And in that case, as is clear from what was said above (q. 75, a. 2), the intellect would not have cognition of all things—which is contrary to the nature of the intellect. Therefore, the intellect is not united to the body as its form.

**Objection 3:** If a given receptive potentiality is the actuality of a body, then it receives its form materially and individually, since what is received exists in the receiver in accord with the mode of the receiver (*receptum est in recipiente secundum modum recipientis*). But the form of a thing that is understood intellectually is not received materially and individually in the intellect; instead, it is received immaterially and universally. Otherwise, the intellect would not have cognition of immaterial things and universals, but would instead have cognition only of singulars, in the way that the senses do. Therefore, the intellect is not united to the body as its form.

**Objection 4:** A power (*potentia*) and [corresponding] action belong to the same thing, since it is the same thing that is able to act and that acts. But as is clear from what was said above (q. 75, a. 2), an intellectual action does not belong to a body. Therefore, neither is an intellectual power a power that belongs to a body. But a power or potentiality (*virtus sive potentia*) cannot be more abstract or more simple than the essence from which that power or potentiality is derived. Therefore, the intellect’s substance is not the form of the body.

**Objection 5:** That which has *esse per se* is not united to a body as its form. For a form is that *by which* something exists, and so the *esse* of a form does not belong to the form itself in its own right (*secundum se*). But as was explained above (q. 75, a. 2), the intellectual principle does have *esse* in its own right and is subsistent. Therefore, it is not united to the body as its form.

**Objection 6:** That which exists in a thing in its own right (*secundum se*) exists in it always. But a form is such that it is united to matter in its own right. For it is through its essence, and not through any accident, that it is the actuality of the matter; otherwise, what comes to be from the matter and the form would be unified accidentally and not substantially. Therefore, a form cannot exist without its proper

matter. But as was shown above (q. 75, a. 6), since the intellectual principle is incorruptible, it persists without being united to a body, after its body has been corrupted. Therefore, the intellectual principle is not united to the body as its form.

**But contrary to this:** According to the Philosopher in *Metaphysics* 8, the difference is taken from a thing's form. But the constitutive difference of *man* is *rational*, which is said of man because of his intellectual principle. Therefore, the intellectual principle is the form of a man.

**I respond:** One must claim that the intellect, which is the principle of an intellectual operation, is the form of the human body.

For that by which something operates first and foremost (*primo operatur*) is the form of that to which the operation is attributed. For instance, that by which the body is first and foremost made healthy is health, and that by which the soul first and foremost knows is knowledge (*scientia*); hence, health is a form belonging to the body, and knowledge is a form belonging to the soul. The reason for this is that nothing acts except insofar as it is actually such-and-such, and so that by which it is actually such-and-such is that by which it acts. But it is obvious that the soul is that by which the body is first and foremost alive. And since life is made manifest by different operations within the different grades of living things, the soul is that by which we perform each of these vital works. For instance, the soul is that by which we first and foremost assimilate nourishment (*nutrimur*), have sensory cognition (*sentimus*), and move from place to place (*movemur secundum locum*); and, similarly, the soul is that by which we first and foremost have intellectual understanding (*intelligimus*). Therefore, this principle by which we first and foremost have intellectual understanding—regardless of whether it is called the intellect or the intellectual soul—is the form of the body. This is Aristotle's demonstration in *De Anima* 2.

Now if someone wants to claim that the intellectual soul is not the form of the body, then he has to find a sense in which the action in question, viz., intellectual understanding, is an action that belongs to *this* man. For each of us experiences that it is he himself who understands. But as is clear from the Philosopher in *Physics* 5, there are three ways in which an action is attributed to someone. For he is said to effect something, or to act, either (a) *by himself as a whole* (*secundum se totum*), as in 'The physician heals'; or (b) *by a part of himself*, as in 'The man sees with his eyes'; or (c) *incidentally* (*per accidens*), as in 'The one who is white is building', since it is incidental to a builder that he is white. Thus, when we say that Socrates (or Plato) understands, it is obvious that this is not being attributed to him incidentally, since it is attributed to him insofar as he is a man, and 'man' is predicated essentially of him. Therefore, either (a) one must claim that Socrates has intellectual understanding by himself as a whole, as Plato posited when he claimed that a man is an intellectual soul, or (b) one must claim that the intellect is a part of Socrates. However, as was shown above (q. 75, a. 4), the first answer cannot hold up. For it is the very same man who perceives that he both understands and senses, and yet sensation does not exist without the body. Hence, the body must be a part of the man. Therefore, it follows that the intellect by which Socrates has intellectual understanding is a part of Socrates in such a way that the intellect is somehow united to Socrates' body.

In *De Anima* 3 the Commentator claims that this union is effected by the intelligible species, which has two subjects, viz., (a) the potential intellect (*intellectus possibilis*) and (b) the phantasms that exist in the bodily organs. And so it is through the intelligible species that the potential intellect is connected with the body of *this* man or *that* man.

However, this sort of connection or union is not sufficient for the intellect's action to be *Socrates'* action. This is clear from a comparison with sensation, on the basis of which Aristotle proceeds to a consideration of what is involved in intellectual understanding. For as *De Anima* 3 explains, phantasms are related to the intellect as colors are related to the visual power (*ad visum*). Therefore, species of the phantasms exist in the potential intellect in the same way that species of the colors exist in the visual

power. But it is clear that the action of the visual power is not attributed to a wall in virtue of the fact that the colors whose likenesses are in the visual power exist in that wall. For we do not say that the wall *sees*; rather, we say that the wall *is seen*. Therefore, from the fact that species of the phantasms exist in the potential intellect it does not follow that *Socrates*, in whom the phantasms exist, *understands*; rather, what follows is that he or, better, his phantasms *are understood*.

Again, some have wanted to claim that an intellect is united to a body as its mover, and that a single entity is made up of an intellect and a body in such a way that the intellect's action can be attributed to the whole.

However, there are a number of things wrong (*multipliciter vanum*) with this claim:

First, an intellect moves a body only through an appetite, whose movement presupposes the intellect's operation. Therefore, it is not because Socrates is moved by an intellect that he understands; to the contrary, it is because he understands that Socrates is moved by an intellect.

Second, Socrates is an individual in a nature whose essence is unified (*una*) and composed of matter and form. If an intellect were not his form, it would follow that it lies outside his essence, and in that case an intellect would be related to the whole Socrates as a mover is related to the thing moved. But intellectual understanding is an action that comes to rest within the agent and that, unlike the action of heating, does not pass into another. Therefore, it cannot be the case that understanding is attributed to Socrates by virtue of his being moved by an intellect.

Third, a mover's action is never attributed to the thing moved except as an instrument, in the way that the carpenter's action is attributed to the saw. Therefore, if it is because of his mover's action that understanding is attributed to Socrates, then it follows that understanding is attributed to him as an instrument. But this contradicts the Philosopher, who claims that intellectual understanding does not occur by means of a corporeal instrument.

Fourth, even though the action of a part may be attributed to the whole—in the way that the eye's action is attributed to the man—still, the action of one part is never attributed to another part, except perhaps incidentally. For we do not say that the hand sees in virtue of the fact that the eye sees. Therefore, if Socrates and his intellect are made one in the way in question, then the intellect's action cannot be attributed to Socrates.

On the other hand, if (a) Socrates is a whole composed by the union of the intellect to the other things belonging to Socrates and if (b) the intellect is nonetheless united to the other things belonging to Socrates only as a mover, then it follows that Socrates is not a single thing absolutely speaking (*non sit unum simpliciter*) and hence is not an entity absolutely speaking. For an entity is a being in the same sense in which it has oneness (*sic enim aliquid est ens quomodo et unum*).

Therefore, the only way left is the one proposed by Aristotle, viz., that *this* man understands because an intellectual principle is his form. Thus, it is clear from the intellect's very operation that an intellectual principle is united to the body as its form.

The same point can also be made clear from the nature of the human species, since the nature of an entity is shown by its operation. But the proper operation of a man *qua* man is to have intellectual understanding, since it is through this operation that he transcends all the animals. Hence, in the *Ethics* Aristotle locates ultimate happiness in this operation, as in something proper to man. Therefore, a man must be assigned his species in accord with the principle of this operation, since each thing is assigned a species by reference to its proper form. Therefore, it follows that an intellectual principle is the proper form of a man.

But note that the more noble a form is, the more it dominates corporeal matter, and the less immersed it is in it, and the more it exceeds it in its operation or power. Hence, we see that the form of a mixed body has certain operations that are not caused by the qualities of the elements. And the further one proceeds in nobility among forms, the more the power of the form exceeds elemental matter; for

instance, the vegetative soul exceeds it more than does the form of a metal, and the sentient soul exceeds it more than does the vegetative soul. But the human soul ranks first in nobility among forms. Hence, by its power it exceeds corporeal matter to such a degree that it has a certain operation and power that corporeal matter does not share in at all. And this power is called the intellect.

Now notice that if someone were to claim that the soul is composed of matter and form, he could in no way agree that the soul is the form of the body. For given that form is actuality, whereas matter is being only in potentiality, there is no way in which what is composed of matter and form can in its own right as a whole be the form of something else. Still, as was explained above (q. 75, a. 5), if some part of it is a form, then we will call that which is form ‘the soul’ and that whose form it is ‘the first animated thing’.

**Reply to objection 1:** As the Philosopher says in *Physics 2*, the highest (*ultima*) among natural forms, and the one that completes the natural philosopher’s investigation, viz., the human soul, is (a) separated, to be sure, and yet (b) in matter. The latter he proves from the fact that “man, along with the sun, generates a man out of matter.” On the other hand, it is separated with respect to its intellectual power, since the intellectual power is not a power that belongs to any corporeal organ in the way that the visual power is an act that belongs to the eye. For intellectual understanding is an act that cannot be exercised by means of a corporeal organ, in the way that the act of seeing is exercised. Still, the soul exists in matter to the extent that the soul itself, to which the power of understanding belongs, is the form of the body and the terminus of human generation.

So, then, the reason why the Philosopher says in *De Anima 3* that the intellect is “separated” is that it is not a power that belongs to any corporeal organ.

**Reply to objection 2 and objection 3:** This makes clear the replies to the second and third objections. For the fact that the intellectual power is not an act belonging to the body is sufficient both (a) for a man’s being able to understand all things through his intellect and (b) for the intellect’s understanding immaterial things and universals.

**Reply to objection 4:** Because of its perfection, the human soul is not a form that is immersed in corporeal matter or entirely encompassed (*totaliter comprehensa*) by it. And so nothing prevents it from being the case that a certain power of the soul is not an act belonging to the body, even though the soul is by its essence the form of the body.

**Reply to objection 5:** The soul communicates the *esse* in which it itself subsists to the corporeal matter that, along with the intellectual soul, makes up a single entity, with the result that the *esse* that belongs to the whole composite is also the *esse* of the soul itself. This is not the case with other forms that are not subsistent. And it is for this reason that the human soul, but not other forms, remains in its own *esse* after its body has been destroyed.

**Reply to objection 6:** It is fitting for the soul in its own right to be united to the body, in the same way that it is fitting for a lightweight body to be high up. And just as a lightweight body remains lightweight when separated from its proper place and retains its aptitude for, and inclination toward, its proper place, so too the human soul remains in its *esse* when it has been separated from its body—even while retaining its natural aptitude for, and inclination toward, union with the body.

## Article 2

### Is the intellectual principle multiplied as the bodies are multiplied?

It seems that the intellectual principle is not multiplied as the bodies are multiplied, but that instead

there is just a single intellect for all men (*sit unus intellectus in omnibus hominibus*):

**Objection 1:** No immaterial substance is numerically multiplied within a single species. But the human soul is an immaterial substance; for as was shown above (q. 75, a. 5), it is not composed of matter and form. Therefore, it is not the case that there are many human souls belonging to a single species. But all men belong to a single species. Therefore, there is a single intellect for all men (*unus intellectus omnium hominum*).

**Objection 2:** When a cause is removed, its effect is removed. Therefore, if human souls were multiplied as the bodies are multiplied, it would seem to follow that when the bodies are removed, what remains is not a multitude of souls, but just a single one of all the souls. But this is heretical, since the difference between rewards and punishments would disappear.

**Objection 3:** If my intellect is distinct from your intellect, then my intellect is a certain individual, and likewise your intellect; for they are particulars that differ numerically and agree in a single species. But whatever is received in a thing exists in that thing according to the mode of the receiver. Therefore, the species of things are received individually in my intellect and in your intellect. But this is contrary to the nature of the intellect, because the intellect has cognition of universals.

**Objection 4:** What is understood (*intellectum*) exists in an intellect when that intellect has an act of understanding (*in intellectu intelligente*). Therefore, if my intellect is distinct from your intellect, then what is understood by me must be distinct from what is understood by you (*aliud sit intellectum a me et aliud intellectum a te*). And so what is understood will be counted as an individual (*individualiter numeratum*), and it is only in potentiality that it will be understood intellectually; and so it will be necessary to abstract a common intention from the two things understood, since from any two different things it is possible to abstract a common intelligible thing. But this is contrary to the nature of the intellect, since if it were so, then the intellect would not seem to be distinct from the power of imagining (*a virtute imaginativa*). Therefore, it seems to follow that there is a single intellect for all men.

**Objection 5:** When a student receives knowledge from a teacher, one cannot say that the teacher's knowledge generates knowledge in the student, since otherwise knowledge would be an active form in the way that heat is—which is clearly false. Therefore, it seems that numerically the same knowledge that is in the teacher is communicated to the student. But this is impossible unless there is a single intellect for the two of them. Therefore, it seems that there is a single intellect for the student and the teacher—and, consequently, for all men.

**Objection 6:** In his book *De Quantitate Animae* Augustine says, "If I were to claim that there are as many human souls as that, I would laugh at myself." But it is especially with respect to the intellect that the soul seems to be one. Therefore, there is a single intellect for all men.

**But contrary to this:** In *Physics 2* the Philosopher says that particular causes are related to particulars in the same way that universal causes are related to universals. But it is impossible for a soul that is one in species to belong to animals that are diverse in species. Therefore, it is impossible for an intellectual soul that is one in number to belong to things that are numerically diverse.

**I respond:** It is altogether impossible for there to be a single intellect for all men.

This is utterly obvious if, in keeping with Plato's opinion, a man is the intellect itself. For it would follow that if there is just one intellect for Socrates and Plato, then Socrates and Plato are a single man and are distinct from one another only in what lies outside the essence of both. And in that case the distinction between Socrates and Plato will be no different from the distinction between a man wearing a tunic and the same man wearing a cape (*distinctio non alia quam hominis tunicati et cappati*)—which is completely absurd.

It is likewise clear that this is impossible if, in keeping with Aristotle's opinion, the intellect is thought of as a part, i.e., a power, of that soul which serves as the form of a man. For it is impossible that

many numerically diverse things should have a single form, just as it is impossible that numerically diverse things should have a single *esse*. For the form is the source of *esse* (*principium essendi*).

Similarly, it is clear that the claim in question is impossible regardless of how one thinks of the intellect's union with *this* man and *that* man:

(a) For instance, it is obvious that if they are a single principal agent and two instruments, then one can say that there is a single agent absolutely speaking but more than one action—just as, if a single man touches different things with his two hands, there will be one toucher and two touches.

(b) Conversely, if they are a single instrument and two different principal agents, then there would be more than one agent but a single action—in the same way that if many men are dragging a boat with a single rope, there will be many draggers but only a single dragging.

(c) On the other hand, if they are a single principal agent and a single instrument, then there will be one agent and one action—just as, when a blacksmith strikes with one hammer, there is one striker and one striking.

But it is clear that however the intellect might be united to or connected with *this* man or *that* man, the intellect has preeminence over the other things that belong to a man. For instance, the sentient powers obey the intellect and serve it. Therefore, if one supposed that two men had more than one intellect but a single sensory power—for instance, if the two men had a single eye—then there would be more than one man seeing but just a single act of seeing (*visio*). But if there is a single intellect, then no matter how different the other powers used by the intellect as instruments are, Socrates and Plato could not in any way be called anything but a single knower (*intelligens*). And if we add that the very act of intellectual understanding (*ipsum intelligere*), which is the intellect's action, is not effected by any organ other than the intellect itself, it will follow further that there is both a single agent and a single action; that is, it will follow that all men are a single knower and that there is a single act of understanding (I mean with respect to the same intelligible object).

To be sure, my intellectual action and yours could be diversified by a diversity of phantasms—that is, by the fact that the phantasm of a rock in me is different from the one in you—if the phantasm itself, differing in the two of us, were the form of the potential intellect. For a single agent produces different actions corresponding to different forms; for instance, there are different acts of seeing (*visiones*) corresponding to the different forms of things in the same eye.

However, the phantasm is not itself the form of the potential intellect; rather, the form of the potential intellect is the intelligible species that is abstracted from the phantasms. But in a single intellect there is just one intelligible species that is abstracted from different phantasms of the same species. For instance, it is clear that in one man there can be different phantasms of a rock, and yet what is abstracted from all of them is a single intelligible species of a rock, through which that one man's intellect understands the nature *rock* by means of a single operation, despite the diversity of the phantasms. Therefore, if there were a single intellect for all men, then the diversity of the phantasms existing in *this* man and *that* man could not, as the Commentator imagines in *De Anima* 3, cause a diversity of intellectual operations in *this* man and *that* man.

Therefore, what follows is that it is altogether impossible and absurd to posit a single intellect for all men.

**Reply to objection 1:** Even though the intellectual soul, just like an angel, has no matter *out of which* it is made (*non habeat materiam ex qua sit*), it is nonetheless the form of a certain matter—something that is not true of an angel. And so corresponding to the division of matter (*secundum divisionem materiae*) there are many souls of a single species, whereas it is altogether impossible for there to be many angels of a single species.

**Reply to objection 2:** Each thing has oneness in the same way that it has *esse* and, as a result, the same judgment should be made about the multiplication of a thing as about its *esse*. But it is obvious that

by its own *esse* an intellectual soul is united to a body as its form and, yet, when the body is destroyed, the intellectual soul remains with its *esse*. For the same reason, a multitude of souls corresponds to the multitude of bodies, and, yet, when the bodies are destroyed, the souls remain multiplied in their *esse*.

**Reply to objection 3:** The *individuality* (*individuatio*) of that which has intellective understanding, or of the species through which it understands, does not rule out its understanding universals; otherwise, given that intellects are certain subsistent substances and thus particulars, they would not be able to understand universals. Rather, it is the *materiality* of a cognitive [power] and of the species through which it has cognition that impedes the cognition of a universal. For just as every action follows the mode of the form by which its agent acts—in the way that the action of giving warmth follows the mode of heat—so too a cognition follows the mode of the species by which the knower has the cognition. But it is obvious that a common nature is made distinct and is multiplied in accord with the individuating principles, which come from the side of the matter. Therefore, if the form by which a cognition comes to be is a material form that is not abstracted from the conditions of matter, then it will be a likeness of the nature of a species or genus insofar as that nature is made distinct and multiplied by individuating principles, and so the nature will not be able to be known in its commonality. By contrast, if the species is abstracted from the conditions of the material individual, then it will be a likeness of the nature in the absence of the principles that divide and multiply it; and it is in this way that there is cognition of a universal.

Also, as far as this present point is concerned, it makes no difference whether there is a single intellect or more than one. For even if there were just one intellect, it would have to be a certain individual (*aliquem quendam*), and the species through which it has intellective understanding would have to be a certain individual (*aliquam quendam*).

**Reply to objection 4:** What is understood intellectually is a single thing, regardless of whether there is a single intellect or many. For what is understood exists in the intellect not in its own right (*non secundum se*) but as a likeness. For as *De Anima* 3 says, “It is not the rock, but a likeness of the rock, that exists in the soul.” And yet, except when the intellect is reflecting upon itself, what is understood is the rock, and not a likeness of a rock; otherwise, scientific knowledge would be about intelligible species and not about the things.

Now it is possible for diverse things to be assimilated to one and the same thing by means of diverse forms. And since cognition comes to be by an assimilation of the knower to the thing known (*secundum assimilationem cognoscentis ad rem cognitam*), it follows that it is possible for the same thing to be known by different knowers. This is clear in the case of the senses; for many knowers see the same color by means of different likenesses. Similarly, many intellects have intellective understanding of a single thing that is understood (*plures intellectus intelligunt unam rem intellectam*).

According to Aristotle’s position, the only difference between the senses and the intellect is that a thing is sensed in accord with the disposition it has outside the soul, in its particularity, whereas the nature of a thing, which is what there is intellective understanding of, exists, to be sure, outside the soul, but outside the soul it does not have the very mode of existence according to which it is understood. For a common nature is understood intellectually with its individuating principles set aside, but it does not have this mode of existing outside the soul. However, according to Plato’s position, the thing that is understood intellectually exists outside the soul in the same mode as that in which it is understood; for he claimed that the natures of things are separated from matter.

**Reply to objection 5:** The student’s knowledge is different from the teacher’s. In what follows (q. 117, a. 1) we will show how it is caused.

**Reply to objection 6:** Augustine’s meaning is that there are not so many souls that they cannot be united in a single concept of the species.

### Article 3

#### Are there, in addition to the intellective soul, other souls in a man that differ from it in their essence, viz., a sentient soul and a nutritive soul?

It seems that there are, in addition to the intellective soul, other souls in a man that differ from it in their essence, viz., a sentient soul and a nutritive soul:

**Objection 1:** The corruptible and the incorruptible cannot belong to the same substance. But as is clear from what was said above (q. 75, a. 6), the intellective soul is incorruptible, whereas the other souls, viz., the sentient soul and the nutritive soul, are corruptible. Therefore, it cannot be the case that in a man the intellective soul, the sentient soul, and the nutritive soul have a single essence.

**Objection 2:** If someone replies that in a man the sentient soul is incorruptible, then against this:

As *Metaphysics* 10 says, “The corruptible and the incorruptible differ in genus.” But the sentient soul is corruptible in a horse and in a lion and in other brute animals. Therefore, if the sentient soul were incorruptible in a man, it would not be of the same genus in a man and in a brute animal. But something is called ‘an animal’ from the fact that it has a sentient soul. Therefore, *animal* will not be a single genus common to both man and the other animals—which is absurd.

**Objection 3:** In *De Generatione Animalium* the Philosopher claims that the embryo is an animal before being a man. But this cannot be the case if the same essence belongs to both the sentient soul and the intellective soul, since something is an animal through the sentient soul and a man through the intellective soul. Therefore, it is not the case that in a man the sentient and intellective souls have a single essence.

**Objection 4:** In *Metaphysics* 8 the Philosopher says that the genus is taken from the matter and the difference from the form. But *rational*, which is the constitutive difference of man, is taken from the intellective soul, whereas something is called an *animal* because it has a body animated by a sentient soul. Therefore, the intellective soul is related to a body animated by a sentient soul as form to matter. Therefore, it is not the case that in a man the intellective soul is the same in essence as the sentient soul. Rather, the intellective soul presupposes the sentient soul as a material suppositum.

**But contrary to this:** *De Ecclesiasticis Dogmatibus* says, “Unlike Jacob and the other Syrians, we do not say that there are two souls in a man—the one an animal soul, by which the body is animated and which is mixed with the blood, and the other a spiritual soul, which gives rise to reason. To the contrary, we say that in a man there is one and same soul which both vivifies the body by its association with it and conducts itself by its reason.”

**I respond:** Plato held that there are diverse souls in the one body and even, corresponding to the organs, distinct souls to which he attributed the various vital operations—claiming that the nutritive power resides in the liver, the concupiscible power in the heart, and the cognitive power in the brain.

In *De Anima* Aristotle argues against this opinion as regards the parts of the soul that use corporeal organs in their operations; he does so by appealing to the fact that in animals that live after having been divided, the different operations of the soul, such as sensation and appetition, are found in each part. But this would not be so if different principles of the soul’s operations—i.e., souls diverse in their essence—were distributed among the different parts of the body. However, as regards the intellective soul, he seems to leave it in question whether it is separate from the other parts of the soul “only conceptually or also spatially” (*solum ratione, an etiam loco*).

Now Plato’s position could be sustained if one claimed that the soul is united to the body not as a form but as a mover, as Plato did in fact claim. For nothing absurd follows if the same moveable thing is moved by different movers, especially with respect to different parts.

However, if we claim that the soul is united to the body as a form, it seems altogether impossible for many souls, differing in their essence, to exist in a single body. This can be made clear in three ways:

First, an animal would not have oneness absolutely speaking (*non esset simpliciter unum*) if it had more than one soul. For nothing has oneness absolutely speaking except because of a single form through which the thing has *esse*, since the fact that an entity is a being and the fact that it is unified derive from the same source. And so things that are denominated from different forms, e.g., *white man*, do not have oneness absolutely speaking. Therefore, if the fact that a man is living were derived from one form, viz., the vegetative soul, and the fact that he is an animal were derived from a second form, viz., the sentient soul, and the fact that he is a man were derived from a third form, viz., the rational soul, then it would follow that a man does not have oneness absolutely speaking—in just the way Aristotle argued against Plato in *Metaphysics* 8 that if the idea *animal* were different from the idea *bipedal*, then a bipedal animal would not have oneness absolutely speaking. It is for this reason that in *De Anima* 1 he asks, in opposition to those who posit diverse souls in the body, what it is that contains those souls, i.e., what it is that is constituted as one thing from them. One cannot reply that they are made one by the body's oneness, since it is the soul that contains the body and makes it to have oneness, rather than vice versa.

Second, the position in question is seen to be impossible by appeal to the modes of predication. For things derived from different forms are such that either (a) they are predicated of one another *per accidens*, if the forms are not ordered to one another, as when we say that something white is sweet, or (b), if the forms are ordered to one another, then there will be *per se* predication in the second mode of *per se* predication, since the subject occurs in the definition of the predicate. For instance, a surface is a prerequisite for color, and so if we say that a body with a surface is colored, this will be the second mode of *per se* predication. Therefore, if the form from which something is called 'an animal' were different from the form from which it is called 'a man', then either (a) one of them would be able to be predicated of the other only *per accidens*, if they have no ordering with respect to one another, or (b) there would be a predication in the second mode of *per se* predication, if one of the souls were a prerequisite for the other. But both of these alternatives are manifestly false. For *animal* is predicated *per se* of *man* and not *per accidens*; nor does *man* occur in the definition of *animal*—just the opposite. Therefore, the form through which something is an animal must be the same form through which something is a man; otherwise, a man would not truly be something that is an animal, so that *animal* might be predicated *per se* of *man*.

Third, the position in question is seen to be impossible from the fact that when one operation of the soul is intense, it impedes the other operations. But this would not be possible if the principle of the actions were not one in essence.

Therefore, one should claim that in a man the sentient, intellectual, and nutritive souls are numerically the same (*eadem numero*).

Now just how this is possible can easily be seen if one attends to the differences among species and forms. For the species and forms of things are found to differ with respect to the more perfect and the less perfect. For instance, within the order of things, the living are more perfect than the non-living, and animals are more perfect than plants, and men are more perfect than brute animals; and within each of these genera there are diverse levels. This is why in *Metaphysics* 8 Aristotle compares the species of things to numbers, which themselves differ in species insofar as the number *one* (*unitas*) is added or subtracted. And in *De Anima* 2 he compares the different types of soul to shapes that are such that one of them contains the other, in the way that a pentagon contains a tetragon and goes beyond it. So, then, the intellectual soul has within its power whatever the sentient soul of brutes animals has and whatever the nutritive soul of plants has. Therefore, just as a surface with a pentagonal shape is not tetragonal through one shape and pentagonal through another shape—since the tetragonal shape would be superfluous, given

that it is contained within the pentagon—so neither is Socrates a man through one soul and an animal through another soul; instead, it is through one and the same soul that he is a man and an animal.

**Reply to objection 1:** The sentient soul does not have incorruptibility by virtue of its being sentient; rather, incorruptibility is owed to it by virtue of its being intellective. Therefore, when a soul is merely sentient, it is corruptible, whereas when it is intellective in addition to being sentient, then it is incorruptible. For even though sentience does not bestow incorruptibility (*incorruptio*), it nonetheless cannot rob what is intellective of its incorruptibility.

**Reply to objection 2:** It is the composites, and not the forms, that are collected together into a genus or species. Now man is corruptible, just as the other animals are. Hence, the difference with respect to corruptibility and incorruptibility, which has to do with the forms, does not make man differ in genus from the other animals.

**Reply to objection 3:** The embryo first has a soul that is merely sentient, but when this is cast off, there comes a more perfect soul that is both sentient and intellective (*qua abiecta advenit perfectior anima quae est simul sensitiva et intellectiva*). This will be shown in more detail below (q. 118, a. 2).

**Reply to objection 4:** It is not necessary for there to be among natural things a diversity that corresponds to the diverse concepts (*rationes*) or logical intentions (*intentiones logicae*) that follow upon our mode of understanding. For reason can apprehend one and the same entity in diverse ways. Therefore, since, as has been explained, the intellective soul contains within its power what the sentient soul has and more besides, reason is able to consider what pertains to the power of the sentient soul separately as something imperfect and material (*quasi imperfectum et materiale*), so to speak. And since it finds this to be common to men and other animals, it forms the concept of the genus from it. On the other hand, it takes that in which the intellective soul exceeds the sentient soul as formal and perfective (*quasi formale et completivum*), and from this it formulates the specific difference of man.

#### Article 4

##### Is there in man any other form besides the intellective soul?

It seems that there is in man some other form besides the intellective soul:

**Objection 1:** In *De Anima 2* the Philosopher says, “The soul is the actuality of a physical body that has life in potentiality.” Therefore, the soul is related to the body as form to matter. But a body has a substantial form through which it is a body. Therefore, in the body there is a substantial form prior to the soul.

**Objection 2:** Man, along with every animal, is a self-mover. But as *Physics 8* shows, everything that moves itself is divided into two parts, one of which effects the movement and the other of which is moved. Now the part that effects the movement is the soul. Therefore, the other part must be such that it is capable of being moved. But as *Physics 5* says, primary matter cannot be moved, since it is an entity only in potentiality, whereas everything that is moved is a body. Therefore, in man—and in every animal—there must be a second substantial form through which the body is constituted.

**Objection 3:** There is an ordering among forms according to their relation to primary matter, since ‘prior’ and ‘posterior’ are predicated relative to some principle. Therefore, if in man there were no substantial form besides the rational soul, and if instead the rational soul directly inhered in primary matter, then it would follow that the rational soul belongs to the order of the most imperfect forms, viz., those that directly inhere in matter.

**Objection 4:** The human body is a mixed body. But a mixture cannot be made just of matter (*non*

*fit secundum materiam tantum*), since in that case it would be a mere corruption. Therefore, the forms of the elements, which are substantial forms, must remain in a mixed body. Therefore, in the human body there are other substantial forms besides the intellectualive soul.

**But contrary to this:** A single entity has just a single substantial *esse*. But it is the substantial form that gives substantial *esse*. Therefore, a single entity has just one substantial form. But the soul is the substantial form of man. Therefore, it is impossible for there to be in a man any substantial form other than the intellectualive soul.

**I respond:** If one claimed, as did the Platonists, that the intellectualive soul is united to the body only as its mover and not as its form, then he would have to assert that in a man there is another substantial form through which the body moved by the soul is constituted in its own *esse*. However, if, as we have already claimed above (a. 1), the intellectualive soul is united to the body as its substantial form, then it is impossible for any other substantial form besides it to be found in a man.

To see this clearly, note that a substantial form differs from an accidental form in that an accidental form gives such-*esse* (*esse tale*) and not *esse* absolutely speaking (*esse simpliciter*); for instance, heat makes its subject *to be hot* and not *to be* absolutely speaking. And so when an accidental form appears, one does not say that a thing is made or generated absolutely speaking (*fieri vel generari simpliciter*); rather, one says that the thing comes to be such-and-such (*fieri tale*) or that it comes to be disposed in a certain way (*fieri aliquo modo habens se*). Similarly, when an accidental form disappears, one does not say that something is corrupted absolutely speaking (*corrumpi simpliciter*); rather, one says that it is corrupted in a certain respect (*corrumpi secundum quid*). By contrast, a substantial form gives *esse* absolutely speaking, and so at its appearance something is said to be generated absolutely speaking, and at its disappearance something is said to be corrupted absolutely speaking. This is why the ancient natural philosophers, who thought that primary matter is some actual being (e.g., fire or air or something of this sort), claimed that nothing is either generated or corrupted absolutely speaking; instead, as *Physics* 1 reports, they maintained that every instance of coming-to-be is an instance of being-altered. Therefore, if it were true that besides the intellectualive soul there are other preexistent substantial forms in the matter through which the soul's subject is an actual being, then it would follow that the soul does not give *esse* absolutely speaking, and that consequently it is not a substantial form, and that at the soul's appearance there is no generation absolutely speaking, and that at its disappearance there is no corruption absolutely speaking; instead, there would be generation or corruption only in a certain respect. But all of these claims are manifestly false.

Hence, one should reply that (a) there is no substantial form in a man other than the intellectualive soul alone, and that (b) just as the intellectualive soul virtually contains the sentient soul and the nutritive soul, so too it virtually contains all the lower forms, and that (c) it brings about by itself alone whatever the more imperfect forms bring about in other things. And the same should be said of the sentient soul in brute animals and of the nutritive soul in plants and, in general, of all more perfect forms in relation to less perfect forms.

**Reply to objection 1:** Aristotle did not say merely that the soul is “the actuality of a body.” Rather, he said that the soul is “the actuality of an organic physical body that has life in potentiality,” and that this potentiality “does not exclude the soul.” Hence, the soul is also clearly included in what the soul is called the actuality of, in the same manner of speaking in which one says that heat is the actuality of what is hot, and that light is the actuality of what is bright—not that it is bright taken separately without the light, but that it is bright because of the light. Likewise, the soul is said to be the actuality of a body, etc., because it is through the soul that it is a body, and that it is organic, and that it “has life in potentiality.” And first actuality is said to be in potentiality with respect to second actuality, i.e., operation; for this potentiality does not rule out, i.e., exclude, the soul.

**Reply to objection 2:** It is not through its own *esse*, or insofar as it is united to the body as its

form, that the soul moves the body; instead, it moves the body through its moving power, the actualization of which presupposes that the body has already been brought into actuality through the soul. So through its moving power the soul is the part that effects movement, and the animated body is the part that is moved.

**Reply to objection 3:** In matter there are different grades of perfection, e.g., *to exist (esse)*, *to live (vivere)*, *to sense (sentire)*, and *to understand intellectually (intelligere)*. Now the next in line (*secundum*), which supervenes on what is prior to it (*superveniens priori*), is always more perfect than what is prior to it. Therefore, a form that gives only the first grade of perfection to matter is the least perfect, while a form that gives the first and second and third grades, and so on, is the most perfect, even though it inheres directly in the matter (*tamen materiae immediata*).

**Reply to objection 4:** Avicenna claimed that (a) the substantial forms of the elements maintain their integrity in a mixed thing, but that (b) a mixture comes into existence insofar as the contrary qualities of the elements are moderated to a mean (*reducuntur ad medium*).

But this is impossible. For the diverse forms of the elements can exist only in diverse parts of matter, and the diversity of those parts must presuppose dimensions, without which matter cannot be divisible. But matter subject to dimensions is found only in bodies, and diverse bodies cannot exist in the same place. Hence, it follows that the elements in a mixed thing are distinct from one another in place. Hence, there will not be a *genuine mixture (vera mixtio)*, i.e., a mixture with respect to the whole, but instead there will be a *mixture with respect to the senses (mixtio ad sensum)*, which consists of very small entities positioned close to one another.

Averroes, on the other hand, claimed in *De Caelo* 3 that, because of their imperfection, the forms of the elements lie midway between accidental forms and substantial forms, and so they admit of more and less. And so in a mixture they are remitted and moderated to a mean, and a single form is fused together from them.

But this is even more impossible. For the substantial *esse* of any given thing consists in something indivisible, and, as *Metaphysics* 7 puts it, every addition or subtraction changes the species, just as with numbers. Hence, it is impossible that any substantial form should admit of more and less. Nor is it any less impossible for something to lie midway between a substance and an accident.

And so, in keeping with what the Philosopher says in *De Generatione et Corruptione* 1, one should reply that the forms of the elements remain in a mixed thing *virtually* but *not in actuality*. For what remains are the qualities which, though less intense (*remissae*), are proper to the elements, and it is in these qualities that the power of the elemental forms resides. And the quality of this sort of mixture is a proper disposition for the substantial form of the mixed body, e.g., the form of a rock or of any type of soul.

## Article 5

### Is it fitting for an intellectual soul to be united to the sort of body in question?

It seems that it is not fitting for an intellectual soul to be united to the sort of body in question:

**Objection 1:** The matter has to be proportionate to the form. But the intellectual soul is an incorruptible form. Therefore, it is not fitting for it to be united to a corruptible body.

**Objection 2:** The intellectual soul is a maximally immaterial form; an indication of this is that it has an operation in which corporeal matter does not share. But the more subtle a body is, the less it has of matter. Therefore, the soul should have been united to the most subtle sort of body, viz., fire, and not to a body that is mixed and rather earthy (*non corpori mixto et terrestri magis*).

**Objection 3:** Since the form is the principle of the species, it is not the case that diverse species spring from a single form. But the intellectual soul is a single form. Therefore, it should not be united to a body that is composed of parts of dissimilar species.

**Objection 4:** There ought to be a more perfect subject (*perfectius susceptibile*) for a more perfect form. But the intellectual soul is the most perfect of forms. Therefore, since the bodies of the other animals are naturally provided with covering, e.g., fur instead of clothes and hooves instead of shoes, and since they are also naturally endowed with weapons such as claws, teeth, and horns, it seems that the intellectual soul should not have been united to an imperfect body, i.e., one deprived of these sorts of assistance.

**But contrary to this:** In *De Anima 2* the Philosopher says that the soul is “the actuality of an organic physical body that has life potentially.”

**I respond:** Since the form does not exist for the sake of the matter, but instead the matter exists for the sake of the form, the reason why the matter is the way that it is has to be taken from the form (*ex forma oportet rationem accipere quare materia sit talis*), and not vice versa.

Now as was established above (q. 55, a. 2), within the order of nature the intellectual soul occupies the lowest grade among intellectual substances. For unlike the angels, the intellectual soul is not endowed by nature with knowledge of the truth, but instead, as Dionysius puts it in *De Divinis Nominibus*, chap. 7, it must gather its knowledge from divisible things by way of the senses.

Now nature is not lacking in necessities, and so the intellectual soul had to possess not only the power of intellectual understanding, but also the power of sensing. But the action of the senses does not exist in the absence of a corporeal instrument. Therefore, the intellectual soul had to be united to a body of a sort that could serve as an appropriate instrument of the sensory power (*conveniens organum sensus*). But all the other senses are grounded in the sense of touch, and the organ of touch must be a medium between those contraries that the sense of touch apprehends, viz., hot and cold, moist and dry, etc. And in this way it is in potentiality with respect to the contraries and able to sense them. Hence, the more the organ of touch is drawn toward a balanced composition (*reductum ad aequalitatem complexionis*), the more sensitive the sense of touch will be. But the intellectual soul has the sentient power most fully, because, as Dionysius says in *De Divinis Nominibus*, what belongs to the lower exists more perfectly in the higher. Hence, the body to which the intellectual soul is united had to be a mixed body that, among all others, was more drawn toward a balanced composition. And because of this, among all the animals man has the best sense of touch. And among men themselves, those who have a better sense of touch have better intellectual understanding. An indication of this is that as, *De Anima 2* points out, “We see that those who are refined in body are very capable mentally.”

**Reply to objection 1:** Someone might want to evade this objection by claiming that man’s body was incorruptible before sin.

But this reply does not seem adequate. For prior to sin, man’s body was immortal not by nature, but by a gift of God’s grace. Otherwise, his immortality would not have been taken away because of sin, just as a demon’s immortality was not taken away because of sin.

And so one must reply in an alternative way, viz., that there are two conditions in which matter is found: (a) one is chosen in order that it might be appropriate for the form, and (b) the other follows from a necessity of a prior disposition. For instance, a craftsman chooses iron as the matter for the form of a saw because of iron’s aptness for cutting through hard material, whereas the fact that the teeth of the saw can become blunt and rusted follows from a necessity of the matter. So, then, the intellectual soul needs a body that has a balanced composition, but it thereby follows, from a necessity of the matter, that the body is corruptible.

Now if someone objects that God could have circumvented this necessity, the appropriate reply

is that, as Augustine says in *Super Genesim ad Litteram* 2, when it comes to the constitution of natural things, one takes into account not what God can do, but instead what is fitting for the nature of things. Still, God provided in this case by applying the remedy against death through the gift of grace.

**Reply to objection 2:** It is not because of the intellectual operation itself, taken in its own right, that the intellective soul needs the body; rather, it needs the body because of the sentient power, which requires an instrument with balanced composition (*organum aequaliter complexionatum*). And this is the reason why the intellective soul had to be united to this sort of body and not to a simple element or to a mixed body in which fire dominated quantitatively. For because of fire's excessively active power, such a body could not have had a balanced composition. On the other hand, this body, with its balanced composition, has a certain dignity because of its remoteness from the contraries, and in this feature it is in some sense similar to a celestial body.

**Reply to objection 3:** It is not the parts of an animal, such as the eye, the hand, the flesh and bone, etc., that belong to a species, but rather the whole animal. And so it cannot be said, properly speaking, that these parts are diverse in *species*; rather, they are diverse in *disposition*. And this fact is traced to the intellective soul, which, even though it is one in essence, is nonetheless, because of its perfection, complex in its power (*multiplex in virtute*). And so for the diverse operations it needs diverse dispositions in the parts of the body to which it is united. Because of this, we see that there is more diversity in the parts of perfect animals than in the parts of imperfect animals, and more diversity in animals than in plants.

**Reply to objection 4:** Since the intellective soul comprehends universals, it has power with respect to infinitely many things. And so it was impossible for nature to have given it determinate natural judgments (*determinatae existimationes naturales*) or even determinate aids or defenses or coverings like those of the other animals, whose souls have apprehension and power with respect to a limited range of particulars (*ad aliqua particularia determinata*). In place of all of these, man by nature has reason and hands, which are "the instruments of instruments" (*organa organum*), since by use of them man is able to make instruments of infinitely many kinds and for the sake of infinitely many effects.

## Article 6

### Is the intellective soul united to the body through the mediation of certain accidental dispositions?

It seems that the intellective soul is united to the body through the mediation of certain accidental dispositions:

**Objection 1:** Every form is in a matter that is proper to it and disposed for it. But the dispositions for a form are certain accidents. Therefore, certain accidents must be presupposed in the matter prior to the substantial form—and so prior to the soul, since the soul is a substantial form.

**Objection 2:** Diverse forms of a single species require diverse parts of matter. But diverse parts of matter can be thought of only as corresponding to the division of dimensional quantities. Therefore, dimensions have to be presupposed in the matter prior to those substantial forms that are multiplied within a single species.

**Objection 3:** The spiritual is applied to the corporeal through a virtual contact. But the soul's virtue (*virtus*) is its power (*potentia*). Therefore, it seems that the soul is united to the body by the mediation of power, which is a certain accident.

**But contrary to this:** As *Metaphysics 7* says, an accident is posterior to its substance “both temporally and conceptually.” Therefore, no accidental form can be thought of as existing in the matter prior to the soul, which is the substantial form.

**I respond:** If the soul were united to the body as its mover, then nothing would prevent its being the case—indeed, it would have to be the case—that certain dispositions mediate between the soul and the body, viz., (a) on the part of the soul, a power by which it moves the body, and (b) on the part of the body, a certain aptitude by which the body is able to be moved by the soul.

However, if, as has already been explained (a. 1), the intellective soul is united to the body as its substantial form, then it is impossible for any accidental disposition to mediate (*cadat media*) between the body and the soul—or, for that matter, between *any* substantial form and its matter. The reason is that there is a certain order in which the matter is in potentiality to all its corresponding actualities, and so the actuality that is the first of all the actualities, absolutely speaking, must be thought of as the first one that is in the matter. But the first among all the actualities is *esse*. Therefore, it is impossible to think of the matter as being hot or quantified before thinking of it as existing in actuality. But *esse* in actuality is had through the substantial form, which makes a thing to exist absolutely speaking, as has already been explained (a. 4). Hence, it is impossible that any accidental disposition should exist in the matter prior to the substantial form or, consequently, prior to the soul.

**Reply to objection 1:** As is clear from what was said above (a. 4), a more perfect form virtually contains whatever belongs to the lower forms. And so one and the same existent form perfects the matter with respect to diverse grades of perfection. For it is one and the same form in essence through which a man is (a) a being in actuality, (b) a body, (c) a living being, (d) an animal, and (e) a man. But it is clear that every genus is such that its proper accidents follow from it. Therefore, just as the matter is thought of as being complete in its *esse* (*perfecta secundum esse*) prior to its being thought of as a body (*ante intellectum corporeitatis*), and so on, so too the accidents that are proper to it as a being are thought of as preceding its being a body (*ante corporeitatem*). And so dispositions are thought of as being present in the matter prior to the form with respect to the form’s later effects, but not with respect to all its effects.

**Reply to objection 2:** Quantitative dimensions are accidents that follow upon the thing’s being a body, which belongs to the matter as a whole (*accidentia consequentia corporeitatem, quae toti materiae convenit*). Hence, once the matter is thought of as existing under the corporeity and dimensions, it can then be thought of as being divided into distinct parts, so that it might receive diverse forms corresponding to further grades of perfection. For even though, as has been explained (a. 4), it is in essence the same form that gives the diverse grades of perfection to the matter, there are nonetheless differences according to reason’s consideration of it.

**Reply to objection 3:** A spiritual substance that is united to a body only as its mover is united to it through its power, i.e., virtually (*per potentiam vel virtutem*). But the intellective soul is united to the body as a form through its own *esse*.

Still, it is through the soul’s power or virtue that it oversees (*administrat*) the body and moves it.

## Article 7

### Is the soul united to the animal body by the mediation of some other body?

It seems that the soul is united to the animal body by the mediation of some other body:

**Objection 1:** In *Super Genesim ad Litteram 7* Augustine says, “The soul oversees (*administrat*) the body through light, i.e., fire, and air, which are more similar to a spirit.” But fire and air are bodies.

Therefore, the soul is united to the human body by the mediation of a body.

**Objection 2:** If something is such that when it is taken away, the union of things that had been united is dissolved, then it seems to be a mediator between those things. But when breathing (*spiritus*) ceases, the soul is separated from the body. Therefore, breath, which is a subtle body, is a mediator in the union of the body and the soul.

**Objection 3:** Things that are distant from one another are united only through a medium. But the intellective soul is distant from the body, both because it is incorporeal and because it is incorruptible. Therefore, it seems that it is united to the body by the mediation of something that is an incorruptible body. And this seems to be some sort of celestial light, which harmonizes the elements and makes them one.

**But contrary to this:** In *De Anima* 2 the Philosopher says, “one need not ask if the soul and body are one, just as one need not ask whether the wax and the shape are one.” But the shape is united to the wax without the mediation of any other body. Therefore, the soul is likewise united to the body without the mediation of a body.

**I respond:** If, as the Platonists hold, the soul were united to the body only as a mover, then it would be appropriate to claim that certain other bodies intervene between man’s soul—or that of any animal—and his body. For it is appropriate that a mover should effect movement in a distant thing through the mediation of things that are closer.

However, if, as has already been explained (a. 1), the soul is united to the body as its form, then it is impossible that it should be united to it by the mediation of a body. The reason for this is that a thing is called *one* in the same way that it is called *a being*. But it is the form that through itself makes a thing to exist in actuality, since it is an actuality through its own essence and so does not give *esse* through any mediator. Hence, the oneness of an entity composed of matter and form is due to the form itself, which is united to the matter in its own right as the actuality of the matter. Nor, with the exception of the agent, is there anything else that makes the matter to exist in actuality—as *Metaphysics* 8 explains.

Hence, the views of those who claimed that certain bodies mediate between man’s soul and body are clearly false. Certain Platonists among them asserted that (a) the intellective soul has an incorruptible body that is naturally united to it and from which it is never separated, and that (b) it is by the mediation of this body that the intellective soul is united to a corruptible human body.

Others claimed that it is united to the body by the mediation of a corporeal spirit.

Still others said that it is united to the body by the mediation of light, which they claimed to be a body and a fifth essence by nature, so that (a) the vegetative soul is united to the body by the mediation of the light of the starry heaven, (b) the sentient soul is united by the mediation of the light of the crystalline heaven, and (c) the intellectual soul is united by the mediation of the light of the empyrean heaven. All of this is clearly fictitious and ridiculous, since (a) light is not a body, (b) the fifth essence enters only virtually and not materially into the composition of mixed bodies, given that it is not subject to alteration (*inalterabilis*), and (c) the soul is directly united to the body as the form of its matter.

**Reply to objection 1:** Augustine is talking about the soul insofar as it moves the body; this is why he uses the word ‘oversight’ (*administratio*). And it is true that the grosser parts of the body are moved by the more subtle ones. As the Philosopher puts it in *De Causa Motus Animalium*, the first instrument of the moving power is a spirit.

**Reply to objection 2:** The reason why the union of the soul with the body ceases when breath ceases is not that breath is a mediator, but that the disposition by which the body is disposed toward such a union is destroyed. Still, breath is a mediator in effecting movement as the first instrument of movement.

**Reply to objection 3:** If the conditions of the body and the soul are thought of separately, then

there are several senses in which the soul is distant from the body. Hence, if the two of them had *esse* separately from one another, then many mediators would have to intervene. But since the soul is the form of the body, it does not have *esse* separately from the body's *esse*; instead, it is united to the body directly through its own *esse*. In the same way, if any form at all is thought of as an actuality, it has a great distance from matter, which is a being only in potentiality.

## Article 8

### Does the soul exist as a whole in each part of the body?

It seems that the soul does not exist as a whole in each part of the body:

**Objection 1:** In *De Causa Motus Animalium* the Philosopher says, "It is not necessary for the soul to be in each part of the body; rather, if it is in some principle of the body, then it will vivify the other parts, since all of them are apt by nature to effect their proper movement."

**Objection 2:** The soul is in the body whose actuality it is. But it is the actuality of an organic body. Therefore, it exists only in an organic body. But not every part of the human body is an organic body. Therefore, the soul does not exist as a whole in each part of the body.

**Objection 3:** *De Anima 2* says that the soul as a whole is related to the whole body of the animal in the same way that a part of the soul is related to a part of the body, e.g., the power of vision to the pupil. Therefore, if the whole soul exists in each part of the body, then it will follow that each part of the body is an animal.

**Objection 4:** Every power of the soul is grounded in the very essence of the soul. Therefore, if the whole soul is in each part of the body, then it will follow that every power of the soul exists in every part of the body—and so vision will exist in the ear and hearing in the eye. But this is absurd.

**Objection 5:** If each part of the body were such that the soul as a whole exists in it, then each part of the body would be directly dependent on the soul. Therefore, it would not be the case that one part of the body depends upon another, or that one part is more important than another—which is manifestly false. Therefore, the soul does not exist as a whole in each part of the body.

**But contrary to this:** In *De Trinitate 6* Augustine says, "In each body the soul exists as a whole in the whole and as a whole in each part of it."

**I respond:** As we have already explained in the other articles, if the soul were united to the body only as a mover, then one could claim that it is not in every part of the body, but is just in the one part of the body by which it moves the other parts.

However, since the soul is in fact united to the body as its form, it must exist in the whole body and in each part of the body. For it is a substantial form and not an accidental form. But a substantial form is the perfection not only of the whole, but of each part. For since a whole consists of its parts, a form of a whole that does not give *esse* to each part of a body is a form which is, like the form of a house, itself a composition and an ordering [of parts]; and a form of this sort is an accidental form. The soul, by contrast, is a substantial form, and so it has to be the form and actuality not only of the whole but also of each part. And so just as, when the soul departs, [the body] is only equivocally called an animal and a man, like an animal in a picture or one made out of stone, so it is with the hands and eyes, or bones and flesh—as the Philosopher explains. An indication of this is that when the soul departs, no part of the body retains its proper function (*proprium opus*), whereas anything that retains its species retains the operation of that species. Now an actuality exists in that of which it is the actuality. Hence, the soul has to be in the whole body and in each part of the body.

From here we can consider the claim that the soul exists *as a whole* in each part of the body. For there are three kinds of wholes, corresponding to the three types of division in which a whole is divided into parts. One type is a whole divided into *quantitative parts*, e.g., a whole line or a whole body. Next, there is the type of whole divided into *rational or essential parts* (*partes rationis et essentiae*), as when what is defined is divided into the parts of the definition, or when what is composed is resolved into its matter and form. The third type is a whole power (*totum potentiale*), which is divided into *virtual parts* (*partes virtutis*).

Now the first type of wholeness belongs to forms only *per accidens* and then only to those forms that have a uniform relation (*habent indifferentem habitudinem*) to a quantitative whole and to its parts. For instance, as far as its own nature is concerned, a whiteness (*albedo*) is equally in a whole surface and in each part of the surface, and so the whiteness is incidentally (*per accidens*) divided when the surface is divided. By contrast, a form that requires diversity in the parts—such as a soul, and especially the soul of a perfect animal—is not related in the same way to the whole and to the parts, and so it is not divided *per accidens* when the quantity is divided. So, then, quantitative wholeness cannot be attributed to the soul either *per se* or *per accidens*.

On the other hand, the second kind of wholeness, which involves a completeness of concept or of essence, belongs to forms properly and *per se*. And the same holds for a wholeness of power (*totalitas virtutis*), since a form is a principle of operation.

Therefore, if one were asking whether or not whiteness exists as a whole in the whole surface and in each of the parts, it would be necessary to draw a distinction. For if the question were about a quantitative whole that has whiteness *per accidens*, then the whiteness would not exist as a whole in each of the parts. And the same would have to be said of a complete power, since the whiteness that exists in the whole surface is able to affect vision more than is the whiteness that exists in some small part (*particula*) of the surface. On the other hand, if the question were about the specific and essential whole (*de totalitate speciei et essentiae*), then whiteness as a whole is in each part of the surface.

However, since, as has been explained, the soul does not have a quantitative wholeness either *per se* or *per accidens*, it is enough to say that the soul exists as a whole in each part of the body with respect to a wholeness of perfection and essence, but not with respect to a completeness of power. For it is not the case that the soul is in each part of the body with respect to each of its powers; rather, it is in the eye with respect to the power of seeing (*secundum visum*) and in the ear with respect to the power of hearing (*secundum auditum*), and so on for the others.

Note, however, that since the soul requires diversity in the parts, it is not related in the same way to the whole and to the parts. Rather, it is related to the whole in the first place and *per se* (*primo et per se*), since the whole is what it properly and proportionately perfects; by contrast, it is related to the parts secondarily (*per posterius*), insofar as they are ordered toward the whole.

**Reply to objection 1:** The Philosopher is talking about the soul's moving power.

**Reply to objection 2:** The soul is the actuality of an organic body in the sense that the organic body is what it perfects in the first place and proportionately.

**Reply to objection 3:** An animal is composed of the soul and the whole body, which the soul perfects in the first place and proportionately. But the soul is not in a part in this same way. Hence, it is not necessary for a part of an animal to be an animal.

**Reply to objection 4:** Some powers of the soul, viz., the intellect and will, are in it insofar as it exceeds the whole capacity of the body, and powers of this sort are not said to be in any part of the body. However, other powers are common to the soul and the body, and so it is not necessary for each of these powers to be in whatever part the soul is; instead, a power is just in that part of the body that is proportionate to its operation.

**Reply to objection 5:** One part of the body is said to be more important (*principalior*) than another because of the diverse powers whose organs are parts of the body. A more important part of the body is one that is an organ of a more important power or one that serves that power in a more important way.

## QUESTION 77

### The Powers of the Soul in General

Next we must consider what pertains to the powers of the soul—first in general (question 77), and then specifically (questions 78-83). On the first topic there are eight questions: (1) Is the essence of the soul the soul's own power? (2) Is there just a single power of the soul, or are there many powers? (3) How are the powers of the soul distinguished from one another? (4) What is the ordering of the powers with respect to one another? (5) Is the soul the subject of all the powers? (6) Do the powers flow from the essence of the soul (*fluant ab essentia animae*)? (7) Does one power arise from another? (8) Do all the powers of the soul remain in it after death?

#### Article 1

##### Is the very essence of the soul the soul's power?

It seems that the very essence of the soul is the soul's power (*potentia*):

**Objection 1:** In *De Trinitate* 9 Augustine says, "Mind, knowledge, and love exist in the soul substantially or, what amounts to the same thing, essentially." And in *De Trinitate* 10 he says, "Memory, understanding, and will constitute one life, one mind, one essence."

**Objection 2:** The soul is more noble than primary matter. But primary matter is its own power or potentiality (*potentia*). Therefore, *a fortiori*, so is the soul.

**Objection 3:** A substantial form is more simple than an accidental form; an indication of this is that a substantial form is not intensified or remitted, but consists in what is indivisible. But an accidental form is its own power itself (*ipsa sua virtus*). Therefore, *a fortiori*, so is the substantial form, i.e., the soul.

**Objection 4:** The sentient power is that by which we have sensation, and the intellective power is that by which we have intellective understanding. But according to the Philosopher in *De Anima* 2, it is first and foremost (*primo*) the soul by which we sense and understand. Therefore, the soul is its own powers.

**Objection 5:** Everything that does not belong to a thing's essence is an accident. Therefore, if the soul's power lies outside its essence, it follows that the soul's power is an accident. But this is contrary to Augustine in *De Trinitate* 9, where he says that the aforementioned powers "are not in the soul as in a subject, in the way that color or shape or any other quality or quantity is in a body; for nothing like that goes beyond the subject it is in, whereas the mind is able to love and to know other things as well."

**Objection 6:** "A simple form cannot be a subject." But the soul is a simple form, since, as was explained above (q. 75, a. 5), it is not composed of form and matter. Therefore, it cannot be the case that the soul's power is in it as in a subject.

**Objection 7:** An accident is not the principle of a substantial difference. But *sentient* and *rational* are substantial differences, and they are taken from sensation and reason, which are powers of the soul. Therefore, the soul's powers are not accidents. And so it seems that the soul's power is its essence.

**But contrary to this:** In *De Caelesti Hierarchia*, chap. 11, Dionysius says, "The celestial spirits are divided into essence, power, and operation." So, *a fortiori*, in the case of the soul, the essence is one thing and the virtue or power (*virtus sive potentia*) is something else.

**I respond:** It is impossible to maintain that the soul's essence is its power, even though some have made this claim. For present purposes, this will be shown in two ways:

First, since *potentiality* (*potentia*) and *actuality* (*actus*) divide *being* and every genus of being,

potentiality and actuality have to be referred back to the same genus. And so, if an actuality is not in the genus of substance, then the potentiality corresponding to it cannot be in the genus of substance. Now the soul's operation is not in the genus of substance; rather, it is only in the case of God that His operation is His substance. Hence, God's power, which is a principle of operation, is the very essence of God. But as was explained above for the case of angels (q. 54, a. 3) as well, this cannot be true either of the soul or of any other creature.

Second, this is likewise obviously impossible in the case of the soul. For in its essence the soul is an actuality. Therefore, if the soul's essence were itself an immediate principle of operation, then whatever has a soul would always actually be engaging in [all of the] vital works, in the same way that whatever has a soul is always actually alive. For the soul, just insofar as it is a form, is not an actuality ordered toward any further actuality, but is instead the ultimate terminus of generation. Hence, the fact that the soul is in potentiality with respect to some further actuality is not something that belongs to it because of its *essence*, just insofar as it is a form; rather, it is something that belongs to it because of its *power*.

And so insofar as the soul itself is the subject of its own power, it is called a *first actuality* that is ordered toward a *second actuality*. But a thing that has a soul is not always in actuality with respect to [all the] vital works (*non semper esse in actu operum vitae*). Hence, in the definition of the soul one likewise says that the soul is "the actuality of a body having life in potentiality," where this potentiality "does not exclude the soul." Therefore, it follows that the soul's essence is not its power. For nothing is in potentiality with respect to an actuality insofar as it itself is an actuality.

**Reply to objection 1:** Augustine is talking about the mind insofar as it knows itself and loves itself. So, then, insofar as the knowledge and love are referred back to the mind itself as what is known and loved, they are substantially or essentially in the soul, since it is the soul's very substance or essence that is being known and loved. And this is likewise the way to understand what he says in the other place, viz., "[Memory, understanding, and will constitute] one life, one mind, one essence."

An alternative reply is that, as some claim, this last passage is rendered true by the way in which a *whole of power* (*totum potestativum*) is predicated of its parts, where this sort of whole lies between a *universal whole* (*totum universale*) and an *integral whole* (*totum integrale*). For a universal whole is present to each part with its whole essence and power, in the way that *animal* is predicated of *man* and *horse*, and in this sense is properly predicated of each part. By contrast, an integral whole is not in each part either with its whole essence or with its whole power; and so it is not in any way predicated of each part—though in a certain way, albeit improperly, it is predicated of all the parts taken together, as when we say that the walls, the roof, and the foundation are a house. Lastly, a whole of power (*totum potentiale*) is present to each part with its whole essence but not with its whole power; and there is a sense in which it can be predicated of each part, but not as properly as a universal whole is. And it is in this sense that Augustine is claiming that memory, understanding, and will are a single essence of the soul.

**Reply to objection 2:** The actuality with respect to which primary matter is in potentiality is the substantial form. And this is why the power or potentiality (*potentia*) of the matter is not distinct from its essence (*non est aliud quam eius essentia*).

**Reply to objection 3:** Acting belongs to the composite, in the same way that the *esse* belongs to the composite; for acting belongs to that which exists. But the composite has *esse* substantively through its substantial form, whereas it acts through a power that follows upon its substantial form. Hence, a power of the soul is related to the soul in the way that an active accidental form is related to the agent's substantial form, e.g., in the way that heat is related to the form of fire.

**Reply to objection 4:** The very fact that an accidental form is a principle of action is something it derives from the substantial form. And so the substantial form is the *first* principle of action, but not the

*proximate* principle of action. This is the sense in which the Philosopher is claiming that “the soul is that by which we understand and sense.”

**Reply to objection 5:** If *accident* is taken in the sense in which it is divided off against *substance*, then there cannot be anything between a substance and an accident, since they are divided off as an affirmation and a negation, viz., *existing in a subject* and *not existing in a subject*. And in this sense, since the soul’s power is not its essence, it must be an accident contained within the second species of *quality*.

On the other hand, if *accident* is taken in the sense in which it is posited as one of the five universals, then there is something between a substance and an accident. For whatever is essential to a thing pertains to *substance*, but not everything that lies outside of the essence can be called an accident; rather, an accident is only that which is not caused by the essential principles of the species. For a *property (proprium)* does not belong to the thing’s essence, but is caused by the essential principles of the thing, and so it lies between an essence and an accident taken in the present sense. In this way, the powers of the soul can be said to lie between a substance and an accident in the sense that they are natural properties of the soul.

As for Augustine’s claim that knowledge and love are not in the soul as accidents are in a subject, this is to be understood in the way explained above; that is, knowledge and love are being related to the soul insofar as the soul is that which is being loved and known—and not insofar as the soul is that which is knowing and loving. In this way his argument goes through. For if the love were in the-soul-as-loved as in a subject, then it would follow that an accident transcends its own subject, since there are also other things loved through the soul.

**Reply to objection 6:** Even though the soul is not composed of matter and form, it nonetheless has potentiality mixed in with it, as was explained above (q. 75, a. 5). And so it can be the subject of an accident.

The cited proposition, [viz., “A simple form cannot be a subject,”] has a place in the case of God, who is Pure Actuality, and it is in the material on God that Boethius introduces this proposition.

**Reply to objection 7:** Insofar as *rational* and *sentient* are differences, they are taken not from the powers of sentience and reason, but from the sentient and rational soul itself. Yet because substantial forms, which are unknown to us in their own right, are known through their accidents, nothing prevents accidents from sometimes being used [in definitions] in place of substantial differences.

## Article 2

### Does the soul have more than one power?

It seems that the soul does not have more than one power (*non sint plures potentiae animae*):

**Objection 1:** The intellective soul comes closest to a likeness of God. But in God there is a single and simple power. Therefore, the same holds for the intellective soul.

**Objection 2:** The higher a power is, the more unified it is. But the intellective soul exceeds all other forms in its power. Therefore, it is especially the case that it ought to have a single power or potentiality (*unam virtutem seu potentiam*).

**Objection 3:** Operating belongs to that which exists in actuality. But as was established above (q. 76, a. 3-4), it is through one and the same essence of the soul that a man has *esse* with respect to the diverse grades of perfection. Therefore, it is through one and the same power of the soul that he carries out the diverse operations of those diverse grades.

**But contrary to this:** In *De Anima* 2 the Philosopher posits a multiplicity of powers of the soul.

**I respond:** One must claim that the soul has a multiplicity of powers (*plures potentias*). To see this clearly, note that, as the Philosopher says in *De Caelo* 2, the lowest things cannot attain perfect goodness, but they do attain a certain imperfect goodness by means of a few movements; and things higher than these acquire perfect goodness by means of many movements; and still higher things acquire perfect goodness by means of a few movements; and the highest perfection is found in those things that possess perfect goodness without any movements at all—in the same way that someone who is least disposed toward health cannot attain perfect health, but does attain some measure of health by means of a few medicines; and someone who is better disposed toward health can attain perfect health, but by means of many medicines; and someone who is still better disposed can attain perfect health by means of a few medicines; and someone who is the best disposed toward health has perfect health without any medicines at all.

Therefore, one should reply that the things below man attain certain particular goods and so have a few limited operations and powers, whereas man can attain universal and perfect goodness, since he is able to possess beatitude. However, he is, according to nature, in the lowest order of beings to whom beatitude belongs, and so the human soul needs many and diverse operations and powers. By contrast, the angels have a lesser diversity of powers, whereas in God there is no power or action at all beyond His essence.

There is also another reason why the human soul abounds in a diversity of powers, viz., that it is at the boundary between spiritual and corporeal creatures (*est in confinio spiritualium et corporalium creaturarum*), and so the powers of both sorts of creatures come together in it.

**Reply to objection 1:** The intellective soul comes closer to a likeness of God than do lower creatures in the very fact that it is able to attain perfect goodness—even if through many diverse operations, a point on which it falls short of higher beings.

**Reply to objection 2:** A unified power is higher as long as it extends to just as many effects. But a multiplicity of powers is higher if more effects are subject to it.

**Reply to objection 3:** There is a single substantial *esse* for a single entity, but it is possible for there to be many operations. And so there is a single essence of the soul, but many powers.

### Article 3

#### Are the powers distinguished from one another by their acts and objects?

It seems that the powers are not distinguished from one another by their acts and objects:

**Objection 1:** Nothing is contracted to a species by anything posterior to it or extrinsic to it. But the act is posterior to the corresponding power, whereas the object is extrinsic to the power. Therefore, it is not through their acts or objects that the powers are distinguished from one another in species.

**Objection 2:** Contraries differ from one another to the maximal degree. Therefore, if powers were distinguished from one another by their objects, it would follow that there is no one power with respect to contraries. But this is obviously false in almost all the relevant cases; for instance, the same visual power has black and white [as objects], and the same sense of taste has the sweet and the bitter [as objects].

**Objection 3:** When a cause is removed, its effect is removed. Therefore, if the differences among the powers stemmed from differences among their objects, the same object would not belong to diverse powers. But this is obviously false; for instance, the same thing is such that the cognitive power has

cognition of it and the appetitive power desires it.

**Objection 4:** That which is a *per se* cause of something is a cause of that thing in all cases. But certain diverse objects belonging to diverse powers also belong to some one power. For instance, color and sound belong to the sense of sight and the sense of hearing, which are diverse powers; and yet they also belong to the unified common sensory power (*ad unam potentiam sensus communis*). Therefore, powers are not distinguished from one another by differences in their objects.

**But contrary to this:** Things that are posterior are distinguished by appeal to what is prior. But in *De Anima 2* the Philosopher says that “acts and operations are conceptually prior to the corresponding powers and prior still to them are their opposites,” i.e., their objects. Therefore, powers are distinguished from one another by their acts and objects.

**I respond:** A power, insofar as it is a power, is ordered toward an act. Hence, the nature of the power (*ratio potentiae*) has to be taken from the act toward which it is ordered and, as a result, the nature of the power must vary as the nature of the act varies. But the nature of the acts varies with the diverse nature of the objects.

Now every action belongs to either an *active power* or a *passive power*. The object is related to the act of a *passive power* as its source (*principium*) and moving cause; for instance, color is a source of the act of seeing (*principium visionis*) insofar as it moves the visual power (*inquantum movet visum*). On the other hand, the object is related to the act of an *active power* as its terminus and end; for instance, the object of the power to grow is a full size (*quantum perfectum*), which is the end of growth. Now an action receives its species from these two things, viz., either from its source or from its end, i.e., its terminus; for instance, heating differs from cooling insofar as the former proceeds from what is hot, viz., the active principle, to the hot, whereas the latter proceeds from what is cold to the cold. Hence, it must be the case that powers vary according to their acts and objects.

Note, however, that what is incidental (*per accidens*) does not make for a diversity of species. For instance, since being of a certain color is incidental to an animal, the species that belong to *animal* do not vary according to differences in color; instead, they vary according to the difference in what accrues *per se* to an animal, viz., by differences belonging to the sentient soul, which is sometimes found accompanied by reason and sometimes found without reason. Hence, *rational* and *non-rational* are differences that divide *animal* and constitute its diverse species.

So, then, not just any variation in the objects makes for a variation in the powers of the soul; rather, what makes for a variation is a difference in something that the power is related to *per se*. For instance, the sensory power is related *per se* to *sensible quality* (*passibilem qualitatem*), which is divided *per se* into *color*, *sound*, etc.; and so the sentient power that has to do with color (the sense of sight) is distinct from the sentient power that has to do with sound (the sense of hearing). But it is incidental to sensible qualities such as color whether a thing is a musician or a grammarian, large or small, a man or a rock. And so it is not by differences of this latter sort that the powers of the soul are distinguished.

**Reply to objection 1:** Even though the act is posterior to the power in *esse*, it is nonetheless prior in intention and conceptually, in the way that the end is prior to the agent. And even though the object is extrinsic, it is nonetheless a principle and end of the action; and those things that are intrinsic to the thing are proportioned to the principle and to the end.

**Reply to objection 2:** If a power is related *per se* to one of two contraries as its object, then the other contrary must be related to some other power. However, a power of the soul relates *per se* not to the proper natures of the contraries, but rather to a nature that is common to both of the contraries; for instance, the sense of sight is related *per se* not to the nature *white*, but to the nature *color*. And the reason for this is that the one contrary is in some sense the nature of the other, since they are related as the perfect and the imperfect.

**Reply to objection 3:** Nothing prevents what is the same in subject from being conceptually diverse. And in this sense it can be related to diverse powers of the soul.

**Reply to objection 4:** A higher power is related *per se* to a more universal conception of its object (*respicit universalio rem rationem obiecti*) than a lower power is. For the higher a power is, the more things it extends to. And so more things agree in the single conception of the object that the higher power is related to *per se*, and yet those things differ from one another in the conceptions that the lower powers are related to *per se*. And this is how diverse objects belong to diverse lower powers, even though they fall under a single higher power.

#### Article 4

##### Is there any ordering among the powers of the soul?

It seems that there is no ordering among the powers of the soul (*in potentiis animae non sit ordo*):

**Objection 1:** There is no ‘before’ (*prius*) or ‘after’ (*posterius*) among things that fall under the same division; rather, they are naturally ‘simultaneous’ (*naturaliter simul*). But the powers of the soul are divided off against one another. Therefore, there is no ordering among them.

**Objection 2:** The powers of the soul are related to their objects and to the soul itself. But from the side of the soul, there is no ordering among the powers, since the soul is one. Likewise, from the side of the objects, there is no ordering among the powers, since the objects are diverse and wholly disparate, as is clear in the case of color and sound. Therefore, there is no ordering among the powers of the soul.

**Objection 3:** In powers that are ordered with respect to one another one finds that the operation of the one depends upon the operation of the other. But it is not the case that the act of one power of the soul depends on the act of another; for instance, the sense of sight can act without the sense of hearing, and vice versa. Therefore, it is not the case that there is an ordering among the powers of the soul.

**But contrary to this:** In *De Anima 2* the Philosopher compares the parts or powers of the soul to shapes. But shapes have an ordering with respect to one another. Therefore, so do the powers of the soul.

**I respond:** Since the soul is one, whereas the powers are many, and since a multitude proceeds from one thing in a certain order, there must be an ordering among the powers of the soul.

In fact, three types of ordering are found among them. Two of these types have to do with the dependence of one power on another, while the third is taken from an ordering among their objects.

Now there are two ways to think of the dependence of one power on another: the first concerns an *ordering of nature*, insofar as what is perfect is naturally prior to what is imperfect; and the second concerns an *ordering of time and generation*, insofar as the perfect arises from the imperfect.

According to the first type of ordering among the powers, the intellectual powers are prior to the sentient powers, and so they direct them and command them. Similarly, the sentient powers are prior in this type of ordering to the powers of the nutritive soul.

According to the second type of ordering, the converse holds. For the powers of the nutritive soul are prior, in the line of generation, to the powers of the sentient soul and so prepare the body for the actions of the sentient powers. And the same holds for the powers of the sentient soul with respect to the powers of the intellectual soul.

On the other hand, according to the third type of ordering, certain of the sentient powers (*vires sensitivae*) have an ordering with respect to one another, viz., the sense of sight, the sense of hearing, and the sense of smell. For the visible is naturally prior to the other [objects], since it is common to both

higher and lower bodies. And the audible sound exists in the air, which is naturally prior to the mixing of the elements that the odoriferous follows upon.

**Reply to objection 1:** The species of certain genera are related as ‘before’ and ‘after’, e.g., the genera *number* and *shape*, as far as their *esse* is concerned—even though the species in question are said to be ‘simultaneous’ insofar as they bear the predication of a common genus.

**Reply to objection 2:** The relevant ordering of the powers of the soul is (a) on the part of the soul, which has an aptitude for diverse acts in a certain order, even though it is one in essence, and (b) on the part of the objects, and also (c) on the part of the acts, as has been explained.

**Reply to objection 3:** This argument goes through in the case of those powers among which there is an ordering only of the third type. By contrast, those powers that are ordered according to the other two modes are related in such a way that the act of the one is dependent on the act of the other.

## Article 5

### Are all the soul’s powers in the soul as in a subject?

It seems that all the soul’s powers are in the soul as in a subject:

**Objection 1:** The powers of the soul are related to the soul in the same way that the powers of the body are related to the body. But the body is the subject of the corporeal powers. Therefore, the soul is the subject of the powers of the soul.

**Objection 2:** The operations of the soul’s powers are attributed to the body because of the soul; for, as is explained in *De Anima* 2, “the soul is first and foremost (*primum*) that by which we have sensation and intellective understanding.” But the powers are the proper principles of the operations of the soul. Therefore, the powers are first and foremost (*per prius*) in the soul.

**Objection 3:** In *Super Genesim ad Litteram* 12 Augustine says that the soul senses (*sentit*) certain things but not through the body—indeed, without the body—e.g., fear and things of that sort. But if the sentient power were not in the soul alone as in a subject, it would not be able to sense anything without a body. Therefore, the soul is the subject of the sentient power and, by parity of reasoning, of all the other powers as well.

**But contrary to this:** In *De Somno et Vigilia* the Philosopher says, “Sensing is proper neither to the soul nor the body, but to the conjoined being.” Therefore, the sentient power is in the conjoined being as in a subject. Therefore, it is not the case that the soul is by itself (*sola*) the subject of all its own powers.

**I respond:** The subject of an operative power is that which is able to operate, since every accident denominates its proper subject. But the thing that is able to operate is the same as the thing that does operate. Hence, “what has the power” as a subject “is that to which the operation belongs,” as the Philosopher likewise says at the beginning of *De Somno et Vigilia*.

Now it is clear from what was said above (q. 75, a. 2-3 and q. 76, a. 1) that certain operations that are exercised without a corporeal organ, e.g., intellective understanding and willing, belong to the soul. Hence, the powers that are the principles of these operations are in the soul as in a subject.

However, there are certain operations of the soul that are exercised through corporeal organs, e.g., the act of seeing with the eyes and the act of hearing with the ears. And the same holds for all the other operations of the nutritive and sentient parts of the soul. And so the powers that are the principles of such operations are in the conjoined being as in a subject, and not in the soul alone.

**Reply to objection 1:** All the powers are said to belong to the soul not as a *subject* but as a

*principle*, since it is through the soul that the conjoined being is able to carry out such operations.

**Reply to objection 2:** All the powers in question are in the soul prior to being in the conjoined being, but as in a *principle* and not as in a *subject*.

**Reply to objection 3:** Plato's opinion was that sensing is an operation proper to the soul, just as intellectual understanding is, and in many matters related to philosophy Augustine makes use of Plato's opinions by reciting them without asserting them.

Now as far as the matter at hand is concerned, there are two possible ways to understand the claim that the soul senses some things with the body and some without the body:

In the first way, the phrases 'with the body' (*cum corpore*) and 'without the body' (*sine corpore*) modify *the act of sensing* insofar as it proceeds from the one who is sensing. And given that the phrases are taken in this way, nothing has sensation without a body, since the action of sensing cannot proceed from the soul except through a corporeal organ.

In the second way, the phrases modify the act of sensing on the part of *the object that is sensed*. And given that the phrases are taken in this way, the soul senses some things 'with the body', i.e., as existing in the body, as when it senses a wound or something of that sort, whereas it senses other things 'without the body', i.e., as existing not in the body but only in the soul's apprehension, as when it senses that it is sad or joyful about something that has been heard.

## Article 6

### Do the powers of the soul flow from its essence?

It seems that the powers of the soul do not flow from its essence (*non fluent ab eius essentia*):

**Objection 1:** Diverse things do not proceed from one simple thing. But the essence of the soul is one and simple. Therefore, since the powers of the soul are many and diverse, they cannot proceed from the soul's essence.

**Objection 2:** That from which something else proceeds is a cause of that thing. But the soul's essence cannot be called a cause of the powers, as is clear to one who runs through each of the genera of causes. Therefore, the powers of the soul do not flow from its essence.

**Objection 3:** 'Emanation' names a certain movement. But as *Physics 7* proves, nothing is moved by itself—except perhaps by reason of a part, as when an animal is said to be moved by itself because one part of it is the mover and another part the thing moved. Again, as *De Anima 1* proves, the soul is not moved. Therefore, it is not the case that the soul in itself is a cause of its own powers.

**But contrary to this:** The powers of the soul are certain properties that are natural to it. But a subject is a cause of its proper accidents and thus, as is clear from *Metaphysics 7*, is mentioned in the definition of its accident. Therefore, the powers of the soul proceed from the soul's essence as from a cause.

**I respond:** A substantial form and an accidental form agree in some things and differ in others. They agree in that both are actualities and each is such that because of it something in some way exists in actuality. However, there are two ways in which they differ:

First, a substantial form makes something to exist absolutely speaking, and its subject is a being only in potentiality. By contrast, an accidental form does not make a thing to exist absolutely speaking, but makes it to be such-and-such qualitatively (*esse tale*), or to be such-and-such a size (*esse tantum*), or to be related in some way (*esse aliquo modo se habens*); for its subject is a being in actuality. Hence, it is clear that actuality is found in a substantial form prior to being found in its subject; and because the

first thing in any genus is the cause, the substantial form causes *esse* in actuality in its subject. By contrast, actuality is found in the subject of an accidental form prior to being found in the accidental form, and so the actuality of the accidental form is caused by the actuality of the subject. Hence, insofar as the subject exists in potentiality, it is receptive of the accidental form, whereas insofar as it exists in actuality, it is productive of the accidental form. (I am making this claim about a proper and *per se* accident, since with respect to extraneous accidents the subject is receptive only, while an extrinsic agent produces such an accident.)

The second difference between a substantial form and an accidental form is that because what is less important (*minus principale*) exists for the sake of what is more important (*principalius*), the matter exists for the sake of the substantial form, whereas, conversely, the accidental form exists for the sake of the completion of its subject.

Now it is clear from what has been said (a. 5) that the subject of the soul's powers is either (a) just the soul itself, which, as was explained above (q. 75, a. 3), can, insofar as it has some sort of potentiality (*secundum quod habet aliquid potentialitatis*), be the subject of an accident, or (b) the composite. But the composite exists in actuality because of the soul. Hence, it is clear that all the soul's powers—whether their subject is the soul by itself or the composite—flow from the soul's essence as their principle. For it has already been explained that an accident (a) is caused by its subject insofar as its subject exists in actuality and (b) is received in its subject insofar as its subject is in potentiality.

**Reply to objection 1:** Many things can naturally proceed from a single simple thing according to a certain order, and this, once again, because of the diversity of the things receiving them. So, then, from a single essence of the soul there proceed many and diverse powers, both because of the ordering among the powers, and also because of the diversity of the corporeal organs.

**Reply to objection 2:** The subject is a *final cause* and, in some sense, an *acting cause* of its proper accidents—and also a *material cause*, insofar as it receives the accidents. And from this one can infer that the soul's essence is a cause of all the soul's powers as an *end* and an *active principle*, whereas it is a cause of some of its powers as their *subject*.

**Reply to objection 3:** The emanation of the proper accidents from a subject is not through any sort of transmutation but through a sort of natural resultancy (*per aliquam naturalem resultationem*), in the manner in which one thing naturally results from another, e.g., color from light.

## Article 7

### Does one power arise from another?

It seems that it is not the case that one power arises from another:

**Objection 1:** Things that begin to exist at the same time are such that the one does not arise from the other. But all the powers of the soul are co-created together with the soul. Therefore, it is not the case that one of those powers arises from another.

**Objection 2:** A power of the soul arises from the soul as an accident arises from its subject. But one power of the soul cannot be the subject of another, since an accident does not have accidents. Therefore, it is not the case that one power arises from another.

**Objection 3:** An opposite does not arise from its opposite, but instead each of them arises from something similar to it in species. But the powers of the soul are divided off from one another as opposites, in the way that diverse species are divided off from one another as opposites. Therefore, it is not the case that one of them arises from another.

**But contrary to this:** Powers are known through their acts. But the act of one power is caused by another power; for instance, an act of imagining (*actus phantasiae*) is caused by an act of sensing. Therefore, one power of the soul is caused by another.

**I respond:** Among things that proceed in a certain natural ordering from one first thing, just as the first thing is a cause of all of them, so what is closer to the first thing is in some sense a cause of what is more remote from the first thing. But it was shown above (a. 4) that there is a multiple ordering among the powers of the soul. And so one power of the soul proceeds from the soul's essence by the mediation of another power. But since (a) the soul's essence is related to the powers both as an active and final principle and also as a receptive principle (either separately by itself or together with the body), and since (b) that which is an agent and an end is more perfect, whereas that which is a receptive principle is as such less perfect, it follows that those powers of the soul which are prior in the order of perfection and nature are principles of the other powers in the manner of an end and an active principle. For we see that the sensory power exists for the sake of the intellect, and not vice versa. Again, the sensory power is a certain deficient participation in the intellect, and so according to its natural origin it in some sense arises from the intellect in the way that what is imperfect arises from what is perfect.

Conversely, along the path of receptive principles, the more imperfect powers are principles with respect to the others, in the same way that the soul, insofar as it has the sentient power, is thought of as a subject and as a sort of material [cause] with respect to the intellect. And because of this, the less perfect powers are prior on the path of generation, since the animal is generated before the man.

**Reply to objection 1:** Just as a power of the soul flows from the soul's essence—not through a transmutation but through a sort of natural resultancy—and yet is simultaneous with it, so the same holds for one power with respect to another.

**Reply to objection 2:** An accident cannot *per se* be the subject of an accident, but one accident is received in the substance prior to another, in the way that quantity is received before quality. And in this sense the one accident is said to be the subject of the other—in the way that a surface is said to be the subject of a color—because it is by the mediation of the one accident that the substance receives the other accident. And something similar can be said about the powers of the soul.

**Reply to objection 3:** The powers of the soul are opposed to one another by an opposition of what is perfect to what is imperfect, in the way that the species of number and shape are opposed to one another. However, this sort of opposition does not prevent one power from arising from another, since what is imperfect naturally proceeds from what is perfect.

## Article 8

### Do all the powers of the soul remain in a soul that is separated from its body?

It seems that all the powers of the soul remain in a soul that is separated from its body:

**Objection 1:** In *De Spiritu et Anima* it says, “The soul recedes from the body, taking the sensory power and power of imagination with it, along with reason, and intellect, and understanding, and concupiscibility, and irascibility.”

**Objection 2:** The powers of the soul are the soul's natural properties. But a property always exists in, and is never separated from, that of which it is a property. Therefore, the powers of the soul remain in it even after death.

**Objection 3:** The soul's powers, even its sentient powers, are not weakened when the body is weakened, since, as *De Anima* 1 says, “If an old man received the eyes of a young man, he would see in

the same way that a young man does.” But weakening is a path to corruption. Therefore, the powers of the soul are not corrupted when the body is corrupted; instead, they remain in the separated soul.

**Objection 4:** As the Philosopher shows, memory is a power of the sentient soul. But memory remains in a separated soul; for in Luke 16:25 the rich glutton, whose soul is in hell, is told, “Remember that you received good things in your life.” Therefore, memory remains in a separated soul and, consequently, so do the other powers of the sentient part of the soul.

**Objection 5:** Joy and sadness exist in the concupiscible power, which is a power of the sentient part of the soul. But it is obvious that separated souls are sad or joyful about the rewards or punishments they have. Therefore, the concupiscible power remains in a separated soul.

**Objection 6:** In *Super Genesim ad Litteram* 12 Augustine says that just as when the body lies senseless though not yet wholly dead, the soul sees certain things by means of an imaginative vision, so the same holds when the soul is completely separated from its body through death. But the imagination is a power of the sentient part of the soul. Therefore, the power of the sentient part remains in a separated soul and, consequently, so do all the other powers.

**But contrary to this:** In *De Ecclesiasticis Dogmatibus* it says, “A man is composed of just two substances, the soul with its reason and the flesh with its senses.” Therefore, when the flesh is dead, the sentient powers do not remain.

**I respond:** As has already been explained (a. 5-7), all the powers of the soul have the soul alone as their *principle*.

However, certain of the powers, viz., the intellect and the will, have the *soul alone* as their subject, and powers of this sort must remain in the soul after its body has been destroyed.

By contrast, certain of the powers, viz., all the powers of the sentient and nutritive parts of the soul, have the *conjoined being* as their subject. Now when a subject is destroyed, its accidents cannot remain. Hence, when the conjoined being is corrupted, powers of the sort in question do not remain in actuality but remain only *virtually* in the soul as in their principle or root. And so the claim made by some, viz., that powers of this sort remain in the soul even after the body is corrupted, is false. And the further claim that the acts of these powers remain in a separated soul is all the more false, since no action belongs to these powers except through a corporeal organ.

**Reply to objection 1:** The book in question has no authority. Hence, what is written in it is rejected just as easily as it is asserted.

Still, one can reply that the soul takes powers of the sort in question along with it virtually and not actually.

**Reply to objection 2:** The powers which we claim do not remain actual in the separated soul are properties not of the soul alone, but of the conjoined being.

**Reply to objection 3:** Powers of the sort in question are said not to be weakened when the body is weakened because the soul, which is a virtual principle of these powers, remains immutable.

**Reply to objection 4:** Memory as referred to here (*illa recordatio*) is taken in the sense in which Augustine posits memory in the mind, and not in the sense in which it is posited as a part in the sentient soul.

**Reply to objection 5:** Sadness and joy are in the separated soul not with respect to the sentient appetite, but with respect to the intellective appetite—as is also the case with the angels.

**Reply to objection 6:** Augustine is speaking here by way of inquiry and not by way of assertion. That is why he retracts some of the things that were said in this place.

## QUESTION 78

### The Specific Powers of the Soul

Next we have to consider the specific powers of the soul. It is relevant to the theologian's inquiry to ask specifically only about the intellective and appetitive powers, in which the virtues are found. But because knowledge of these powers in some way depends on the others, our inquiry concerning the specific powers of the soul will have three parts. For we have to consider, first, those powers that are preparatory for intellective understanding (question 78); second, the intellective powers (question 79); and, third, the appetitive powers (questions 80-83).

On the first topic there are four questions: first, concerning the genera of the powers of the soul; second, concerning the species of the vegetative part of the soul; third, concerning the exterior sensory powers; and fourth, concerning the interior sensory powers.

#### Article 1

##### Are there five kinds of power that belong to the soul?

It seems that there are not five kinds of power that belong to the soul, viz., (a) the vegetative, (b) the sentient, (c) the appetitive, (d) the power to effect movement with respect to place, and (e) the intellective:

**Objection 1:** The powers of the soul are called the soul's 'parts'. But there are only three parts of the soul commonly enumerated by everyone, viz., the vegetative soul, the sentient soul, and the rational soul. Therefore, there are only three kinds of power that belong to the soul, and not five.

**Objection 2:** The powers of the soul are the principles of the vital works (*principia operum vitae*). But there are four senses in which something is said to be alive (*vivere*). For in *De Anima 2* the Philosopher says, "There are many senses of 'to be alive' (*multipliciter ipso vivere dicto*), so that something is said to be alive even if just one of the following is present: intellective understanding; sensing; movement and standing still with respect to place; and movement with respect to nourishment, decrease, and increase." Therefore, given that the appetitive is left out, there are just four genera of the powers of the soul.

**Objection 3:** What is common to all the powers ought not to be designated as a special kind of soul. But appetite (*appetere*) belongs to each of the powers of the soul. For the sense of sight desires a fitting visible object, and thus Ecclesiasticus 40:22 says, "The eye will desire favor and beauty (*gratiam et speciem*) but, more than these, green sown fields (*virides sationes*)." And by the same line of reasoning, each of the other powers desires an object fitting for itself. Therefore, the appetitive should not be posited as a special type of power belonging to the soul.

**Objection 4:** As is explained in *De Anima 3*, in animals the principle that effects movement is either the sensory power, the intellect, or the appetite. Therefore, the principle that effects movement should not be posited as a special kind of soul beyond the ones mentioned above.

**But contrary to this:** In *De Anima 2* the Philosopher says, "We claim that the powers are the vegetative, the sentient, the appetitive, the power to effect movement with respect to place, and the intellective."

**I respond:** There are five *kinds of power* that belong to the soul, and they are enumerated above. Three are called *souls (animae)*, whereas four are called *ways of being alive (modi vivendi)*.

The reason for this difference is that the different *souls* are distinguished by the fact that there are diverse ways in which the soul's operation exceeds the operation of corporeal nature; for the whole of the corporeal nature is subject to the soul (*tota natura corporalis subiacet animae*) and is related to it as its

matter and instrument.

Thus, there is a certain operation of the soul that exceeds corporeal nature to the extent that it is not even exercised by means of a corporeal organ (*per organum corporale*); and this is the operation of the *rational soul*.

Again, there is another operation of the soul, lower than this one, which is, to be sure, effected by means of a corporeal organ, but not by means of any corporeal quality (*fit per organum corporale non tamen per aliquam corpoream qualitatem*); and this is the operation of the *sentient soul*. For even though *hot* and *cold* and *moist* and *dry* and other corporeal qualities of this sort are required for the operation of the sensory power, they are nonetheless not required in such a way that the sentient soul's operation proceeds by the mediation of the power of such qualities; instead, they are required only for appropriately disposing the organ.

Again, the lowest operation of the soul is that which is effected by means of a corporeal organ and by the power of a corporeal quality. Yet this operation exceeds the operation of corporeal nature because the motions of bodies are from an exterior principle, whereas operations of the sort in question are from an intrinsic principle—something that is common to all the operations of the soul, since anything with a soul (*omne animatum*) moves itself in some way. And this is the operation of the *vegetative soul*; for, as *De Anima 2* explains, digestion and what follows upon digestion are effected instrumentally by the action of heat.

By contrast, the *kinds of powers* belonging to the soul are distinguished by their objects. As was explained above (q. 77, a. 3), the higher a power is, the more universal the object it is related to. But the object of the soul's operation can be thought of in a three-step ordering:

For the object of some of the soul's operations is just the body that is united to the soul. And this kind of power belonging to the soul is the *vegetative*, since the vegetative power acts only on the body to which the soul is united.

Again, there is another kind of power belonging to the soul that has a more universal object, viz., all bodies that can be sensed (*omne corpus sensibile*), and not just the body united to the soul.

And there is yet another kind of power belonging to the soul that has a still more universal object, viz., not just all the bodies that can be sensed but every being in general (*universaliter omne ens*).

From this it is clear that these last two kinds of power belonging to the soul have an operation not only with respect to the conjoined being, but also with respect to extrinsic beings. But since something that operates must in some way be conjoined to the object with respect to which it operates, it is necessary for an extrinsic being that is the object of an operation of the soul to be related to the soul in two ways:

First, it must be related to the soul in such a way that it is apt to be conjoined to the soul and to exist in the soul through a likeness of itself (*per suam similitudinem*); and in this regard there are two kinds of power, viz., the *sentient power* with respect to the less general object (*respectu obiecti minus communis*), i.e., the sensible body, and the *intellective power* with respect to the most general object of all, i.e., being in general (*ens universale*).

Second, the soul is itself inclined toward and tends toward the exterior being. And in accord with this relation there are two kinds of power belonging to the soul, viz., the *appetitive power*, according to which the soul is related to an extrinsic being as to an end, which is the first thing in intention, and the *power of effecting movement with respect to place*, insofar as the soul is related to the exterior being as to a terminus of operation and motion; for every animal effects movement in order to obtain something that is desired and intended.

Lastly, the *ways of being alive* are distinguished in a manner that corresponds to the grades of living things. For some living things, viz., *plants*, are such that only the vegetative is present in them. Some are such that, in addition to the vegetative, the sentient is also present, but not movement with

respect to place; these are the *immobile animals* such as small shellfish (*conchilia*). Still other living things are such that they have, in addition, movement with respect to place; these are the *perfect animals*, which require many things for their life and so need movement in order to be able to find the necessities that are situated at some distance from them. Finally, there are some living beings, viz., *men*, in whom the intellective is combined with the others. However, as *De Anima 2* explains, the appetitive does not constitute a separate grade of living thing, since appetite exists in everything in which sentience exists.

**Reply to objection 1 and objection 2:** The first two objections are answered by what has been said.

**Reply to objection 3:** A *natural appetite* is an inclination which an entity has by its nature toward something; hence, it is by a natural appetite that every power desires what is fitting for it. However, an *animal's appetite* follows upon an apprehended form. And for an appetite of this sort a special power of the soul is required; the power of apprehension (*apprehensio*) is not by itself sufficient. For a thing is desired insofar as it exists in its own nature. But it does not exist with its own nature in the apprehensive power; instead, it exists there by means of a likeness.

Hence, it is clear that it is only for its own act that the sense of sight naturally desires the visible thing; that is, it desires to see it. By contrast, an animal, through its appetitive power, desires the thing seen not only in order to see it, but also for its other uses. And if the soul needed the things perceived by the sensory powers only for the sake of the actions of those powers—i.e., only in order that it might sense those things—then it would not be necessary to posit the appetitive as a special genus among the powers of the soul. For in that case the natural appetite of the powers would be sufficient.

**Reply to objection 4:** Even though the appetitive and sensory powers are principles for effecting movement in perfect animals, it is nonetheless not the case that the appetitive and sensory powers as such are sufficient to effect movement without some other power being added to them. For immobile animals have appetitive and sensory powers, and yet they do not have the power to effect movement. Moreover, this power to effect movement exists not only in the appetitive and sensory powers insofar as they command movement, but also in the parts of the body themselves, in order that they might readily obey the appetitive power of the soul that moves them. An indication of this is that when the members of the body lose their natural disposition, they do not obey the appetitive power with respect to movement.

## Article 2

### Are the parts of the vegetative soul appropriately enumerated as the nutritive, the augmentative and the generative?

It seems that the parts of the vegetative soul are not appropriately enumerated as the nutritive, the augmentative and the generative:

**Objection 1:** Powers (*vires*) of this sort are called 'natural'. But the powers (*potentiae*) of the soul go beyond natural powers (*supra vires naturales*). Therefore, powers (*vires*) of this sort should not be posited as powers of the soul (*potentiae animae*).

**Objection 2:** What is common to both living and non-living things should not be counted as a power of the soul. But generation is common to all generable and corruptible things, both living and non-living. Therefore, the generative power should not be posited as a power of the soul.

**Objection 3:** The soul is more powerful than a corporeal nature is. But it is by the very same active power that a corporeal nature communicates both the species and appropriate size (*speciem et debitam quantitatem*). Therefore, *a fortiori*, the same holds for the soul. Therefore, the augmentative

power of the soul is not distinct from the generative power.

**Objection 4:** Each thing is conserved in *esse* by that through which it has *esse*. But it is the generative power through which an entity acquires the *esse* of a living thing. Therefore, a living thing is conserved through that same power. But as *De Anima 2* explains, it is the nutritive power that is ordered toward the conservation of a living thing, since it is a power that is able preserve its subject. Therefore, the nutritive power should not be distinguished from the generative power.

**But contrary to this:** In *De Anima 2* the Philosopher says that the works of this soul are “to generate and to make use of nourishment,” and again, “to effect growth” (*augmentum facere*).

**I respond:** There are three powers of the vegetative part [of the soul]. For as has been explained (a. 1), the vegetative part has as its object the very body that is alive through the soul, and there are three operations of the soul that are necessary for such a body.

One operation is that through which it acquires *esse*, and this is what the *generative* power is ordered toward. The second is that through which the living body acquires its appropriate size, and this is what the *augmentative* power is ordered toward. The third operation is that through which the body of a living thing is preserved both in *esse* and in its appropriate size, and this is what the *nutritive* power is ordered toward.

However, there is a certain difference among these powers that has to be noted. For the nutritive and augmentative powers have their effect in the thing in which they exist, since it is the very body that is united to the soul that grows and is conserved through the augmentative and nutritive powers that exist in that same soul. By contrast, the generative power has its effect not in the same body but in another body, since nothing generates its very own self. And so the generative power in a certain sense approaches the dignity of the sentient soul, which has an operation with respect to exterior things—even though the sentient soul has this sort of operation in a more excellent and universal way—since, as is clear from Dionysius in *De Divinis Nominibus*, chap. 7, the highest manifestation of a lower nature attains to the lowest manifestation of a higher nature.

And so, as *De Anima 2* says, among these three powers it is the generative that is closer to the boundary [with the sentient] and more important and more perfect; for it is an already perfected entity that “has the role of making another entity like itself.” Moreover, the augmentative and nutritive powers serve the generative power, while the nutritive power serves the augmentative.

**Reply to objection 1:** Powers of the sort in question are called ‘natural’ both (a) because they have an effect that is similar to that of nature, which likewise communicates *esse*, size, and conservation (though these powers do it in a higher way), and also (b) because these powers exercise their actions by the instrumentality of the active and passive powers that are the principles of natural actions.

**Reply to objection 2:** Among inanimate things, generation is totally from the outside (*ab extrinseco*). By contrast, the generation of living things has a higher mode, through something that belongs to the living being itself, viz., its seed (*semen*), in which there resides a principle that gives form to the body. And so in a living thing there has to be a power through which this sort of seed is prepared; and this is the generative power.

**Reply to objection 3:** Since the generation of living things is by means of seed, the animal that is generated must be small in size at the beginning. Because of this, it has to have a power of the soul through which it is brought to its appropriate size. By contrast, an inanimate body is generated from determinate matter by an extrinsic agent, and so it receives both its species and quantity simultaneously in accord with the condition of the matter.

**Reply to objection 4:** As has already been explained (a. 1), the operation of the vegetative principle is brought to completion by the mediation of heat, the role of which is to consume moisture. And so in order to restore the moisture that is lost, the vegetative principle needs to have a nutritive

power through which food is converted into the substance of the body. This is likewise necessary for the action of the augmentative and generative powers.

### Article 3

#### Are the five exterior sensory powers appropriately distinguished?

It seems that the five exterior sensory powers (*sensus*) are not appropriately distinguished:

**Objection 1:** The senses have cognition of accidents. But there are many kinds of accidents. Therefore, since powers are distinguished by their objects, it seems that the sensory powers are multiplied according to the number of the kinds of accidents.

**Objection 2:** Shape and size and the other accidents that are called ‘common sensibles’ are not ‘*per accidens* sensibles’, but are instead divided off against the latter in *De Anima* 2. But it is a diversity of *per se* objects that diversifies powers. Therefore, since shape and size differ more from color than sound does, it seems that, *a fortiori*, there should be another sentient power that has cognition of shape and size rather than of color and sound.

**Objection 3:** A single sense has cognition of a single pair of contraries (*unus sensus est unius contrarietatis*); for instance, the sense of sight has cognition of white and black. But the sense of touch has cognition of several pairs of contraries, viz., hot and cold, moist and dry, etc. Therefore, the sense of touch is not a single sensory power, but a number of them. Therefore, there are more than five sensory powers.

**Objection 4:** Species are not divided off against their genus. But the sense of taste is a sort of sense of touch. Therefore, it should not be posited as another sense over and beyond the sense of touch.

**But contrary to this:** In *De Anima* 3 the Philosopher says that “there is no other sensory power beyond these five.”

**I respond:** Some want to take the explanation for the distinctions among, and number of, the exterior sensory powers from the organs in which one or another of the elements dominates—either water or air or something of that sort. Others take the explanation from the medium, either the conjoined medium or the extrinsic medium, be it air or water or something else of that sort. Still others take it from the diverse natures of the sensible qualities, depending on whether the quality in question belongs to a simple body or whether instead it follows upon complexity.

However, none of these views is satisfactory. For the powers do not exist for the sake of the organs; rather, the organs exist for the sake of the powers. Hence it is not because there are diverse organs that there are diverse powers. Rather, nature instituted diversity in the organs in order that they might correspond to a diversity of powers. Similarly, nature provided the diverse media for the diverse sensory powers, insofar as this was appropriate for the acts of the powers. And it is the intellect—and not the sensory powers—that has cognition of the natures of the sensible qualities.

Therefore, the explanation for the number of, and distinctions among, the exterior sensory powers has to be taken from what is proper and *per se* to the sensory powers themselves. Now a sensory power is a passive power that is susceptible to being affected by an exterior sensible thing. Therefore, the exterior things that effect the changes are what a sensory power perceives *per se*, and the sensory powers are distinguished from one another in a way that corresponds to the diversity of such things.

Now there are two kinds of change, *natural change* (*immutatio naturalis*) and *spiritual change* (*immutatio spiritualis*). A change is *natural* insofar as the form of the thing that effects the change is received with its natural *esse* in the thing changed, e.g., heat in a thing that is heated. The change is

*spiritual* insofar as the form of the thing that effects the change is received with spiritual *esse* in the thing changed, e.g., the form of a color in the pupil, which does not thereby become colored. And for the operation of a sensory power what is required is a spiritual change, through which an *intention* of the sensible form (*intentio formae sensibilis*) comes to exist in the organ of the sensory power. Otherwise, if a natural change were by itself sufficient for sensing, then every natural body would have sensation whenever it was altered.

Now in certain sensory powers, e.g., the *sense of sight*, there is only a spiritual change, whereas in the other sensory powers the spiritual change is accompanied by a natural change either on the part of the object alone or on the part of the organ as well.

On the part of the object, the natural change is with respect to place in the case of sound, which is the object of the *sense of hearing*. For sound is caused by vibration and movement in the air. And as for alteration, in the case of odor, which is the object of the *sense of smell*, a body has to be altered in some way through heat in order to give off an odor.

On the part of the organ, a natural change is involved in the *sense of touch* and the *sense of taste*; for instance, when a hand touches something hot, it itself becomes hot; and the tongue is moistened by the moistness of various tastes. By contrast, the organ of the sense of smell and the organ of the sense of hearing do not undergo any natural change in sensing, except incidentally.

Now since the sense of sight does not involve a natural change in either the organ or the object, it is maximally spiritual, and it is the most perfect and the most general of all the sensory powers. And after the sense of sight comes the sense of hearing, and then the sense of smell, both of which involve a natural change on the part of the object; for as *Physics* 8 proves, local motion is more perfect than, and naturally prior to, the motion of alteration. On the other hand, the sense of touch and the sense of taste are the most material; the distinction between them will be explained in a moment (*ad* 3 and *ad* 4 below). The reason why the first three senses are not effected through a conjoined medium is so that no natural change will touch the organ, as occurs with these last two sensory powers.

**Reply to objection 1:** Not all accidents have the power to effect change (*vim immutativam*) in their own right; rather, only qualities of the third species are such that alteration occurs because of them. And so only qualities of this sort are the objects of the sensory powers; for as *Physics* 7 explains, “A sensory power is altered in the same way that inanimate bodies are.”

**Reply to objection 2:** Size and shape and other such accidents, which are called *common sensibles*, lie between *per accidens sensibles* and *proper sensibles*, where the latter are the objects of the sensory powers.

For the proper sensibles effect change in the sensory powers directly and primarily (*primo et per se*), since they are the qualities that effect alterations.

By contrast, the common sensibles are all traced back to quantity. In the case of size and number, it is clear that they are species of quantity, whereas shape is a quality that involves quantity, since the nature of a shape consists in its being the boundary of a magnitude (*terminatio magnitudinis*). On the other hand, motion and rest are sensed insofar as the subject is related in one or more ways to (a) the magnitude of an object or of its spatial distance (in the case of augmentation or local motion), or to (b) sensible qualities (in the case of alteration). And so to sense motion and rest is in a certain way to sense one thing and many things.

Now a quantity is the proximate subject of a quality that effects alteration; for instance, a surface is the proximate subject of a color. And so the common sensibles do not effect change primarily and directly in a sensory power. Rather, they effect such change by means of a sensible quality; for instance, a surface effects change in a sensory power by means of its color.

And yet the common sensibles are not *per accidens sensibles*, since common sensibles make for variations in the way that a sensory power is affected. For instance, a sensory power is affected in

different ways by a large surface and by a small surface, since the whiteness itself is also called large or small and so is divided in accord with its proper subject.

**Reply to objection 3:** As the Philosopher seems to say in *De Anima 2*, the sense of touch is one in genus but divided into many species of sensory power; and this is why it has diverse pairs of contraries as objects. However, these species are not separated from one another by organ, but are instead spread throughout the whole body, and so the distinction among them is not obvious. On the other hand, the sense of taste, which perceives the sweet and the bitter, is joined together with the sense of touch in the tongue, but not throughout the whole body, and so it is easily distinguished from the sense of touch.

However, one could reply that all these pairs of contraries are such that (a) each belongs to a single proximate genus and (b) all of them together belong to a common genus that is the object of the sense of touch according to its common nature. But this common genus is unnamed, in the same way that the proximate genus of *hot* and *cold* is unnamed.

**Reply to objection 4:** According to what the Philosopher says, the sense of taste is that species of the sense of touch which exists just in the tongue, and it is distinct not from the sense of touch in general but from those species of the sense of touch that are spread throughout the body.

On the other hand, if the sense of touch is just a single sensory power because of the single common nature of its object, one will have to say that the sense of taste is distinguished from the sense of touch by reason of different sorts of changes. For as far as its organ is concerned, and given the quality which is its proper object, the sense of touch is affected by a natural change and not just a spiritual change. The organ of the sense of taste, however, is not necessarily affected with a natural change by the quality that is its proper object, in such a way, namely, that the tongue itself becomes sweet or bitter; instead, it is affected by the preparatory quality on which taste is based, viz., moistness, which is an object of the sense of touch.

#### Article 4

##### Are the interior sensory powers appropriately distinguished?

It seems that the interior sensory powers are not appropriately distinguished:

**Objection 1:** What is common is not divided off [on the same level] over against what is proper (*commune non dividitur contra proprium*). Therefore, the common sensory power (*sensus communis*) should not be enumerated among the interior sentient powers, over against the proper exterior sensory powers.

**Objection 2:** One should not posit an interior apprehensive power for any object that a proper and exterior sensory power is sufficient for. But the proper exterior sensory powers are sufficient for judging sensible things, since each sensory power judges with respect to its own proper object. These sensory powers seem likewise sufficient for perceiving their own acts; for instance, since the action of a sensory power in some sense lies between the power and the object, it seems that the sense of sight is much more capable of perceiving its own act of seeing, as something closer to itself, than of seeing color—and so on for the other sensory powers. Therefore, it was unnecessary to posit an interior power, called the ‘common sensory power’, for this purpose.

**Objection 3:** According to the Philosopher, the power of imagining (*vis phantastica*) and the power of remembering (*vis memorativa*) are passions of the primary sentient power. But a passion is not divided off over against its subject. Therefore, memory (*memoria*) and imagination (*phantasia*) should not be posited as powers distinct from the sensory power.

**Objection 4:** The intellect is less dependent on the sensory power than is any power of the sentient part of the soul. But the intellect does not have cognition of anything unless it receives it from the sensory power; for as *Posterior Analytics* 1 says, “Whoever lacks one of the sensory powers lacks one sort of knowledge.” Therefore, *a fortiori*, one should not posit a power of the sentient part, called the estimative power (*vis aestimativa*), to perceive intentions that are not perceived by the sensory power.

**Objection 5:** Acts of the cogitative power (*vis cogitativa*), i.e., comparing and composing and dividing, and acts of the power of reminiscing (*vis reminiscitiva*), i.e., using a sort of syllogism to conduct an inquiry, are no less distant from the acts of the estimative power and of the power of remembering than acts of the estimative power are from an act of imagining (*ab actu phantasiae*). Therefore, either the cogitative power and power of reminiscing should be posited as powers distinct from the estimative power and the power of remembering, or else the estimative power and the power of remembering should not be posited as powers over and beyond the power of imagining.

**Objection 6:** In *Super Genesim ad Litteram* 12 Augustine posits three types of vision: (a) *corporeal vision*, which is effected through the sensory power; (b) *spiritual vision*, which is effected through the power of imagining or fantasizing (*per imaginationem sive phantasiam*); and (c) *intellectual vision*, which is effected through the intellect. Therefore, there is no interior power other than the power of imagining that lies between the sensory powers and the intellect.

**But contrary to this:** In his *Liber de Anima* Avicenna posits five interior sentient powers, viz., “the common sensory power (*sensus communis*), the imaging power (*phantasia*), the imaginative power (*potentia imaginativa*), the estimative power (*potentia aestimativa*), and the power of remembering (*potentia memorativa*).”

**I respond:** Since nature is not lacking in what is necessary, there must be as many actions of the sentient part of the soul as are sufficient for the life of a perfect animal. And if these actions cannot all be traced back to a single principle, then they require diverse powers, since a power of the soul is nothing other than a proximate principle for the soul’s operation.

Note, then, that the life of a perfect animal requires that the animal apprehend a thing not only in the presence of the sensible object, but also in its absence. Otherwise, since an animal’s movement and action follow upon apprehension, the animal would not move in order to find out about a thing that is absent—just the opposite of what appears to be true, especially in the case of perfect animals, which move purposefully (*moventur motu processivo*), since they are moving toward something absent that has been apprehended. Therefore, through its sentient soul the animal must not only receive the species of sensible things when it is presently being affected by those things, but must also retain and conserve the species. But among corporeal things, to receive and to retain are traced back to diverse principles; for instance, moist things are good at receiving but bad at retaining, and the opposite holds for dry things. Hence, since the sentient power is the act of a corporeal organ, a power that receives sensible species must be different from a power that conserves them.

Again, note that if an animal moved solely because of sensibly pleasurable or painful things, one would have to posit in the animal only an apprehension of forms that the sensory power perceives and with respect to which it takes delight or feels revulsion. But an animal has to seek out or flee from certain things not only because they are pleasant or unpleasant to sense, but also because of other kinds of suitability and utility, or harm—as, for instance, when a sheep, seeing a wolf coming, flees not because of the ugliness of the wolf’s color or shape, but because of the danger to the sheep’s nature; or as when a bird collects straw not because the straw delights its senses, but because this is useful for building a nest. Therefore, an animal has to perceive intentions of this sort which the exterior sensory powers do not perceive. And for this sort of perception there has to be some distinct principle, since perception of sensible forms comes from changes effected by the sensible thing, whereas the perception of the

intentions just alluded to does not.

So, then, the *proper sensory powers* and the *common sensory power* are ordered toward the reception of sensible forms. (The distinction between them will be explained below.)

On the other hand, the *imaging power* or *power of imagining* (*phantasia vel imaginatio*)—they are the same—is ordered toward the retention or conservation of forms. For the imaging (or imagining) power is, as it were, a sort of treasury of forms that have been received through the sensory power.

Now the *estimative power* (*vis aestimativa*) is ordered toward apprehending intentions that are not received through the sensory power, whereas the *power of remembering* (*vis memorativa*), which is a treasury of intentions of this sort, is ordered toward conserving them. An indication of this is that, in animals, the source of remembering comes from some intention of this sort, e.g., that something is harmful or agreeable. And the very nature of the past, which the power of remembering attends to, is intertwined with intentions of this sort.

Now note that as far as sensible forms are concerned, there is no difference between man and the other animals, since they are affected in similar ways by sensible exterior things. However, there is a difference with respect to the intentions we have just been talking about. For the other animals perceive intentions of this sort only by a sort of natural instinct, whereas man also perceives them through a certain comparison (*per quamdam collationem*). And so what in animals is called the *natural estimative power*, in man is called the *cogitative power*, which arrives at intentions of this sort through a certain comparison. Hence, it is also called *particular reason*, and physicians assign it a determinate organ, viz., the middle part of the head; for it compares intentions of individuals in the way in which *intellective reason* compares intentions of universals.

As for the power of remembering, man has not only *memory* (*memoria*), like the other animals, in the immediate recording of past things, but also *reminiscence* (*reminiscentia*) in inquiring quasi-syllogistically into the memory of the past by means of individual intentions.

Now Avicenna posits a fifth power, between the estimative power and the power of imagining, which composes and divides the imagined forms—as is clear, for instance, when from the imagined form of gold and imagined form of a mountain we compose a single form of a golden mountain, which we never actually see. But this operation is not apparent in animals other than man, in whom the power of imagining is sufficient for this. In his book *De Sensu et Sensibilibus* Averroes likewise attributes this action to the power of imagining.

And so it is necessary to posit just four interior powers of the sentient part of the soul, viz., the common sensory power (*sensus communis*), the power of imagining (*vis imaginativa*), the estimative power (*vis aestimativa*), and the power of remembering (*vis memorativa*).

**Reply to objection 1:** The interior sensory power is called ‘common’ not through predication, like a genus, but as the common root and principle of the exterior senses.

**Reply to objection 2:** A proper sensory power judges a proper sensible by distinguishing it from other things that fall under the same sensory power, e.g., distinguishing white from black or green. But neither the sense of sight nor the sense of taste can distinguish white from sweet, since whatever makes a distinction between two things must have cognition of both of them. Hence, the judgment regarding this distinction must belong to the common sensory power, which is such that (a) all the apprehensions of the senses are referred to it as to a common terminus, and such that (b) it also perceives the intentions of the sensory powers, as when someone sees that he is seeing. For the latter cannot be done through a proper sensory power, which has cognition only of the sensible form by which it is changed. The act of seeing is perfected in such a change, and from this change there follows another change in the common sensory power, which perceives the act of seeing.

**Reply to objection 3:** Just as one power arises from the soul by the mediation of another power in the way explained above (q. 77, a. 7), so too the soul is the subject of one power by the mediation of

another. It is in this sense that the power of imagining and the power of remembering are called passions of the primary sentient power (*passiones primi sensitivi*).

**Reply to objection 4:** Even though the intellect's operation arises from the sensory power, nonetheless, in the entity apprehended through the sensory power the intellect knows many things that the sensory power is unable to perceive. The same holds for the estimative power, though on a lower level.

**Reply to objection 5:** The cogitative power and power of remembering have an eminence in man not because they are proper to the sentient part of the soul, but—by a sort of overflow—because of their affinity for and nearness to universal reason. And so they are not different powers from the ones in other animals, but the same powers, and yet more perfect.

**Reply to objection 6:** Augustine is calling 'spiritual vision' the vision which is effected by the likenesses of bodies in the absence of the bodies. From this it is clear that spiritual vision is common to all interior apprehensions.

## QUESTION 79

### The Intellective Powers

Next we ask about the intellective powers. On this topic there are thirteen questions: (1) Is the intellect a power of the soul, or is it the soul's essence? (2) If it is a power, is it a passive power? (3) If it is a passive power, should one posit an active intellect (*intellectus agens*)? (4) Is the active intellect a part of the soul? (5) Is there a single active intellect for everyone? (6) Does memory exist in the intellect? (7) Is it a power distinct from the intellect? (8) Is reason a power different from the intellect? (9) Are higher reason and lower reason distinct powers? (10) Is intellective understanding (*intelligentia*) a distinct power over and beyond the intellect? (11) Are the speculative intellect and the practical intellect distinct powers? (12) Is *synderesis* a power of the intellective part of the soul? (13) Is conscience a power of the intellective part of the soul?

#### Article 1

##### Is the intellect a power of the soul, or is it instead the soul's essence?

It seems that the intellect (*intellectus*) is not a power of the soul, but is instead the soul's essence:

**Objection 1:** The intellect (*intellectus*) seems to be the same thing as the mind (*mens*). But the mind is the essence of the soul and not a power of the soul; for in *De Trinitate* 9 Augustine says, "Mind (*mens*) and 'spirit' (*spiritus*) are not predicated as relations (*relative*), but instead point to the essence." Therefore, the intellect is the very essence of the soul.

**Objection 2:** The diverse kinds of power that belong to the soul are united in the soul's essence alone and not in any one power. But as *De Anima* 2 says, the appetitive and the intellective are diverse kinds of power belonging to the soul. And yet they come together in the mind (*mens*); for in *De Trinitate* 10 Augustine locates intellective understanding (*intelligentia*) and willing (*voluntas*) in the mind. Therefore, the mind or intellect (*mens et intellectus*) is the very essence of the soul and not one of its powers.

**Objection 3:** According to Gregory in his homily on the feast of the Ascension, "Man has intellective understanding along with the angels." But the angels are called 'minds' and 'intellects'. Therefore, the mind or intellect of a man is the soul itself and not one of the powers of the soul.

**Objection 4:** It is because a substance is immaterial that it is intellective. But the soul is immaterial through its essence. Therefore, it seems that the soul is intellective through its essence.

**But contrary to this:** As is clear from *De Anima* 2, the Philosopher posits the intellective as a power of the soul.

**I respond:** Given what was said above (q. 54, a. 3 and q. 77, a. 1), one should reply that the intellect is a power of the soul and not the very essence of the soul. The only time the immediate principle of an operation is the very essence of a thing is when the operation itself is the thing's *esse*. For an essence is related to its *esse* in the same way that a power is related to its operation, i.e., its act. But it is only in the case of God that His intellective understanding (*intelligere*) is the same as His *esse*. Hence, it is only in the case of God that His intellect is His essence, whereas in other intellectual creatures the intellect is a certain power of the one who has intellective understanding (*quaedam potentia intelligentis*).

**Reply to objection 1:** 'Sense' (*sensus*) is sometimes taken for a power and sometimes for the sentient soul itself, since the sentient soul is denominated by the name of its principal power, viz., the sensory power. Likewise, the intellective soul is sometimes denominated by the name 'intellect' as by its principal power. For instance, *De Anima* 1 says, "The intellect is a certain substance." And this is also

the sense in which Augustine says that the mind is ‘spirit’ or ‘essence’.

**Reply to objection 2:** The appetitive and the intellective are diverse kinds of power belonging to the soul, corresponding to diverse types of objects. But the appetitive agrees in part with the intellective and in part with the sentient as regards the mode of operating with a corporeal organ and the mode of operating without a corporeal organ. For appetite follows upon apprehension. This is why Augustine locates willing (*voluntas*) in the mind (*mens*) and the Philosopher puts it in reason (*ratio*).

**Reply to objection 3:** In the angels there are no powers other than the intellective power and the will, which follows upon intellective understanding. And the reason why an angel is called a ‘mind’ or an ‘intellect’ is that all his power consists in this. By contrast, the soul has many other powers, such as the sentient and nutritive powers. And so the two cases are not parallel.

**Reply to objection 4:** The immateriality of an intelligent created substance is not itself its intellect; rather, it is because of its immateriality that it has the power to have intellective understanding (*virtutem ad intelligendum*). Hence, the intellect does not have to be the substance of the soul; all it has to be is the soul’s virtue and power (*virtus et potentia*).

## Article 2

### Is the intellect a passive power?

It seems that the intellect is not a passive power:

**Objection 1:** Each thing is acted upon or suffers (*patitur*) in accord with its matter, whereas it acts by reason of its form. But the intellective power follows upon the immateriality of an intelligent substance. Therefore, it seems that the intellect is not a passive power.

**Objection 2:** As was explained above (q. 75, a. 6), the intellective power is incorruptible. But as *De Anima* 3 says, if the intellect is passive, then it is corruptible. Therefore, the intellective power is not passive.

**Objection 3:** As Augustine says in *Super Genesim ad Litteram* 12 and as Aristotle says in *De Anima* 3, to act is more noble than to be acted upon. But all the powers of the vegetative part of the soul are active, and yet they are the lowest among the powers of the soul. Therefore, *a fortiori*, the intellective powers, which are the highest, are all active powers.

**But contrary to this:** In *De Anima* 3 the Philosopher says, “To have intellective understanding (*intelligere*) is in some way to be acted upon.”

**I respond:** ‘To suffer’ or ‘to be acted upon’ (*pati*) has three senses:

First, its most proper sense, viz., when something that belongs to a thing by its nature or by a proper inclination is taken away from it—as, for instance, when water loses its coldness by being heated, or when a man gets sick or becomes sad.

Second, a less proper sense, viz., when someone is said to suffer or be acted upon by reason of the fact that something is taken away from him, whether or not the thing in question is agreeable to him. In this sense, someone is said to suffer or be acted upon not only when he gets sick but also when he gets well, not only when he becomes sad but also when he becomes joyful, or when he is altered or moved in any way at all.

Third, a thing is said to be acted upon in a general sense (*pati communiter*) solely by reason of the fact that what is in potentiality in some respect receives what it was in potentiality with respect to, without losing anything at all. In this sense, anything that goes from potentiality to actuality can be said to suffer or be acted upon, even when it is being perfected. And this is the sense in which for us to have

intellective understanding is to be acted upon.

This is clear from the following line of reasoning:

As was explained above (q. 78, a. 1), an intellect has its operation with respect to being in general (*ens in universali*). Therefore, we can think about whether a given intellect is in potentiality or in actuality by considering how that intellect is related to being in general (*ens universale*).

For there is an intellect that is related to being in general (*ens universale*) as the actuality of all being (*actus totius entis*), and this is the divine intellect, i.e., God's essence, in which all being preexists virtually and in its origin, as in its first cause. And so God's intellect is not in potentiality but is instead pure actuality (*actus purus*).

By contrast, no created intellect can be related as actuality to the whole of being in general (*ut actus respectu totius entis universalis*), since in that case it would have to be an unlimited being (*ens infinitum*). Hence, by the very fact that it is created, a created intellect is not the actuality of all intelligible things, but is instead related to intelligible things themselves as potentiality is related to actuality.

Now there are two ways in which potentiality is related to actuality. There are some potentialities that are always being perfected by an actuality, as we claimed above (q. 58, a. 1) concerning the matter of the celestial bodies. On the other hand, there are some potentialities that are not always actualized (*non semper in actu*) but instead proceed from potentiality into actuality, as is the case with generable and corruptible things. Thus, the angelic intellect is always in actuality with respect to its intelligible things—and this because of its closeness to the first intellect, which, as was just explained, is pure actuality. By contrast, the human intellect, which is the lowest in the order of intellects and furthest from the perfection of God's intellect, is in potentiality with respect to intelligible things, and at the start it is “like a blank slate on which nothing has been written,” as the Philosopher puts it in *De Anima* 3. This is manifestly obvious from the fact that at the start we have intellective understanding only in potentiality, and afterwards we are brought to have intellective understanding in actuality.

So, then, it is clear that for us to have intellective understanding is for us to be acted upon, in the third sense of being acted upon. And, as a result, our intellect is a passive power.

**Reply to objection 1:** This argument goes through for the first and second senses of being acted upon, which are proper to primary matter. However, the third sense of being acted upon belongs to anything that is in potentiality and is then brought to actuality.

**Reply to objection 2:** According to some, the passive intellect is the sentient appetite, in which the passions of the soul reside and which, in *Ethics* 1, is called “rational by participation” because it obeys reason. On the other hand, according to others, the passive intellect is the cogitative power, which is named ‘particular reason’. In both cases, ‘passive’ is being taken in accord with the first two senses of being acted upon, insofar as such an ‘intellect’, so-called, is the act of a corporeal organ.

However, the intellect which is in potentiality with respect to intelligible things and which Aristotle for this reason names the ‘passive intellect’ (*intellectus possibilis*) is passive only in the third sense. For it is not the act of a corporeal organ. And so it is incorruptible.

**Reply to objection 3:** The agent is more noble than the patient as long as the action and passion are being referred back to the same thing; however, it is not always the case if they are being referred back to diverse things. Now the intellect is a passive power with respect to the whole of being in general, whereas the vegetative power is active with respect to a particular being, viz., the conjoined body. Hence, nothing prevents what is passive in the one way from being more noble than what is active in the other way.

### Article 3

#### Is it appropriate to posit an active or agent intellect?

It seems that it is inappropriate to posit an active or agent intellect (*intellectus agens*):

**Objection 1:** Our intellect is related to intelligible things in the same way that the sensory power is related to sensible things. But it is not the case that because the sensory power is in potentiality with respect to sensible things, an active sensory power is posited; instead, only a passive sensory power is posited. Therefore, since our intellect is in potentiality with respect to intelligible things, it seems that only a passive intellect (*intellectus possibilis*) and not an active intellect (*intellectus agens*) should be posited.

**Objection 2:** If someone replies that there is also an agent, such as light, involved in sensing, then against this: Light is required for vision insofar as it makes the medium actually lucid; for color itself is in its own right the mover of what is lucid. By contrast, in the case of the intellect's operation there is no medium posited that has to be actualized (*quod necesse sit fieri in actu*). Therefore, it is unnecessary to posit an active intellect.

**Objection 3:** A likeness of the agent is received in the patient according to the mode of the patient. But the passive intellect is an immaterial power (*virtus immaterialis*). Therefore, the intellect's immateriality is sufficient for its being the case that forms are received in it in an immaterial mode (*immaterialiter*). But a form is actually intelligible by the very fact that it is immaterial. Therefore, there is no need to posit an active intellect in order that it might make the species actually intelligible (*ad hoc quod faciat species intelligibiles in actu*).

**But contrary to this:** In *De Anima* 3 the Philosopher says, "Just as in every nature, so also in the soul, there is something by which it becomes all things and something by which it makes all things." Therefore, it is appropriate to posit an active intellect.

**I respond:** According to Plato's opinion, there was no need to posit an active intellect in order to make things actually intelligible (*ad faciendum intelligibilia in actu*)—though, as will be explained below (a. 4 and q. 84, a. 6), positing an active intellect was perhaps necessary in order to provide the 'intelligible light' for the one having intellectual understanding (*ad praebendum lumen intelligibile intelligenti*). For Plato held that the forms of natural things subsist without matter and are consequently intelligible, since a thing is actually intelligible by virtue of being immaterial. He called them 'species' or 'ideas' (*species sive ideas*), and he said that it was by participating in these ideas that (a) corporeal matter is formed in the sense that the individuals are naturally constituted in their own genera and species, and that (b) our intellects are formed in the sense of having knowledge (*scientia*) of the genera and species of things.

By contrast, since Aristotle did not hold that the forms of natural things subsist without matter and since forms that exist in matter are not actually intelligible, it followed that the natures or forms of sensible things—natures that we have intellectual understanding of—are not actually intelligible. But nothing is brought from potentiality into actuality except by some actual being, in the way that the sensory power is brought into act by what is actually sensible. Therefore, it was necessary to posit some power on the part of the intellect that would render them actually intelligible by abstracting the species from material conditions. And this is why it is necessary to posit an active intellect.

**Reply to objection 1:** Sensible things are actualized outside the soul, and so there is no need to posit an active sensory power. And in this way it is clear that (a) in the nutritive part of the soul all the powers are active, whereas (b) in the sentient part all of them are passive, and (c) in the intellectual part there is something active and something passive.

**Reply to objection 2:** There are two opinions about what the effect of light is:

Some claim that light is required for vision because it makes the colors actually visible. And given this view, the active intellect is required for intellectual understanding in a way similar to, and for the same reason that, light is required for seeing.

By contrast, according to others, light is required for seeing not in order that the colors might become actually visible, but in order that the medium might become actually lucid, as the Commentator claims in *De Anima* 2. And given this view, the analogy by which Aristotle assimilates the active intellect to light consists in the fact that just as light is necessary for seeing something, so the active intellect is necessary for understanding something intellectually—but not for the same reason.

**Reply to objection 3:** Assuming that an agent already exists, it is quite possible for its likeness to be received in different ways in diverse patients because of their diverse dispositions. But if there is no preexistent agent, then the patient's disposition makes no difference in this regard.

Now as regards the nature of sensible things, which do not subsist outside of matter, there is nothing in the nature of the things that is actually intelligible. And so the immateriality of the passive intellect would not be sufficient for the intellectual understanding of those things if there were no active intellect present to make them actually intelligible by way of abstraction.

#### Article 4

##### Is the active intellect something that belongs to our soul?

It seems that the active intellect is not something that belongs to our soul:

**Objection 1:** The active intellect's effect is to illuminate for the sake of intellectual understanding. But this illumination is effected by something higher than the soul—this according to John 1:9 (“This was the true light, which enlightens every man who comes into this world”). Therefore, it seems that the active intellect is not something that belongs to the soul.

**Objection 2:** In *De Anima* 3 the Philosopher says of the active intellect (*intellectui agenti*) that it “is not such that it is sometimes engaged in intellectual understanding and sometimes not (*non aliquando intelligit et aliquando non intelligit*).” But our soul is not always engaged in intellectual understanding; rather, sometimes it is engaged in intellectual understanding and sometimes not. Therefore, the active intellect is not something that belongs to our soul.

**Objection 3:** An agent and a patient are sufficient for something's being done. Therefore, if the passive intellect, which is a passive power, belongs to our soul, and if the active intellect, which is an active power, does, too, then it will follow that a man is always able to engage in intellectual understanding when he wants to. But this is obviously false. Therefore, the active intellect is not something that belongs to our soul.

**Objection 4:** In *De Anima* 3 the Philosopher says that the active intellect is “a substantial being in actuality (*substantia actu ens*).” But there is nothing that is both in actuality and in potentiality in the same respect. Therefore, if the passive intellect, which is in potentiality with respect to all intelligible things, is something that belongs to our soul, then it seems impossible for the active intellect to be something that belongs to our soul.

**Objection 5:** If the active intellect is something that belongs to our soul, then it must be a power. For it is neither a passion nor a habit, since habits and passions do not have the character of an agent with respect to the ‘passions of the soul’; rather, a passion is the action itself as belonging to the passive power, whereas a habit is something that follows upon actions. But every power of the soul flows from

the essence of the soul. Therefore, it would follow that the active intellect proceeds from the essence of the soul. And so it would not be in the soul through participation in any higher intellect—which is just wrong. Therefore, the active intellect is not something that belongs to our soul.

**But contrary to this:** In *De Anima* 3 the Philosopher says, “It is necessary for these differences to exist in the soul,” viz., the passive intellect and the active intellect.

**I respond:** The active intellect of which the Philosopher speaks is something that belongs to the soul.

To see this clearly, note that beyond the human intellective soul it is necessary to posit a higher intellect from which the soul obtains its power to engage in intellective understanding. For it is always the case that what participates in something and is changeable and imperfect requires prior to itself something that is such-and-such through its essence, unchangeable, and perfect. But the human soul is called ‘intellective’ through participation in an intellectual power. An indication of this is that the human soul is intellective not as a whole, but rather with respect to a part of itself. Moreover, it arrives at an intellective understanding of truth discursively and through a movement, by way of argument. Again, it has imperfect intellective understanding, both because it does not understand all things and also because in the case of those things that it does understand, it proceeds from potentiality to actuality. Therefore, there must be some higher intellect by which the soul is assisted in engaging in intellective cognition. Thus, some have claimed that it is this intellect, separated with respect to its substance, which is the active intellect and which, by illuminating the phantasms, renders things actually intelligible.

However, granted that there is some such separated active intellect, it is nonetheless still necessary to posit within the human soul itself a power which is a participation in that higher intellect and through which the human soul renders things actually intelligible. As in the case of other perfect natural entities, there are, in addition to the universal agent causes, proper powers that are derived from the universal agents and given to individual perfect things. For instance, it is not the sun alone that generates a man; rather, there is in man a power to generate man—and the same holds for the other perfect animals. But among lower things there is none more perfect than the human soul. Hence, one must claim that within the human soul there is a power, derived from a higher intellect, through which it can illuminate phantasms. We know this from experience when we perceive ourselves abstracting universal forms from particular conditions—which is what it is to render things actually intelligible. But as was explained above (q. 76, a. 1) when we were discussing the passive intellect, an action belongs to a being only through some principle that formally inheres in it. Therefore, the power that is the principle of this action must be something within the soul. This is why Aristotle compared the active intellect to light, which is something received in the air.

Plato, on the other hand, compared the separated intellect that leaves an impression on our souls (*imprimentem in animas nostras*) to the sun, as Themistius reports in his commentary on *De Anima* 3. Now according to the teaching of our Faith, this separated intellect is God Himself, who is the creator of the soul and in whom alone the soul is beatified, as will become clear below (q. 90, a. 3 and *ST* 1-2, q. 3, a. 7). Hence, it is because of Him that the human soul participates in the intellectual light—this according to Psalm 4:7 (“The light of your countenance, O Lord, is signed upon us”).

**Reply to objection 1:** The true light in question illuminates as a universal cause, because of which, as has been explained, the human soul participates in a certain particular power.

**Reply to objection 2:** The Philosopher is talking about actually engaging in intellective understanding and not about the active intellect. Hence, a little before this he had said of the former that it is the same as actual knowledge of the thing.

An alternative reply is that if he is indeed talking about the active intellect, what he means is that it is not because of the active intellect (*non est ex parte intellectus agentis*) that we are sometimes engaged in intellective understanding and sometimes not; instead, it is because of the intellect that is in

potentiality.

**Reply to objection 3:** If the active intellect were related to the passive intellect as an active object is related to a power, in the way that something visible in actuality is related to the power of sight, then it would follow that we have intellectual understanding of all things immediately, since the active intellect's function is to fashion all things.

As things stand, however, the active intellect behaves not as an object but as that which renders the objects actual, and what is required for this, besides the presence of the active intellect, are (a) the presence of phantasms, (b) well-disposed sentient powers, and (c) the exercise of the right sort of act. For through one thing that is understood intellectually other things come to be understood as well; for instance, propositions come to be understood through terms, and conclusions come to be understood through first principles. And as far as this is concerned, it makes no difference whether the active intellect is something that belongs to the soul or something separated.

**Reply to objection 4:** The intellectual soul is, to be sure, actually immaterial, but it is in potentiality with respect to the determinate species of things. Conversely, the phantasms are in actuality likenesses of certain appearances (*similitudines specierum quarundam*), but they are immaterial in potentiality. Hence, nothing prevents one and the same soul, insofar as it is actually immaterial, from having (a) one power—a power called the active intellect—through which it renders things actually immaterial by abstracting them from the conditions of individual matter, and (b) another power that is receptive of this sort of species—and this power is called the passive intellect insofar as it is in potentiality with respect to species of this sort.

**Reply to objection 5:** Since the essence of the soul is immaterial and is created by the highest intellect, there is no problem with a power proceeding from it—just as other powers of the soul do—which is a participation in the highest intellect and by which it abstracts from matter.

## Article 5

### Is there a single active intellect for everyone?

It seems that there is a single active intellect for everyone:

**Objection 1:** Nothing that is separated from a body is multiplied as bodies are multiplied. But as *De Anima* 3 says, the active intellect is “separated.” Therefore, it is not multiplied in the many bodies of men, but is the same in everyone.

**Objection 2:** The active intellect fashions the universal, which is one in many. But that which is the cause of oneness is *a fortiori* one. Therefore, there is a single active intellect for everyone.

**Objection 3:** All men agree in the first conceptions of the intellect. But they assent to these conceptions through the active intellect. Therefore, all men agree in having a single active intellect.

**But contrary to this:** In *De Anima* 3 the Philosopher says that the active intellect is like light. But it is not the case that the same light exists in diverse illuminated things. Therefore, it is not the case that the same active intellect exists in diverse men.

**I respond:** The truth with regard to this question depends on what has already been said (a. 4).

For if the active intellect were not something that belongs to the soul but were instead a separated substance, then there would be a single active intellect for all men. And this is how those who posit the oneness of the intellect understand the situation.

On the other hand, if the active intellect is something that belongs to the soul as one of its powers, then one must claim that there are many active intellects corresponding to the plurality of souls, and that

they are multiplied as men are multiplied, as was explained above (q. 76, a. 2). For it is impossible for numerically one and the same power to belong to diverse substances.

**Reply to objection 1:** The Philosopher proves that the active intellect is separated from the premise that the passive intellect is separated. For, as he points out, the active intellect is more noble than the passive intellect. But the reason why the passive intellect is called ‘separated’ is that it is not the act of any corporeal organ. And it is in this sense, too, that the active intellect is said to be ‘separated’—and not in the sense that it is a separated substance.

**Reply to objection 2:** The active intellect is a cause of the universal by abstracting it from matter. What is required for this is not that it be [numerically] one in everyone who has an intellect, but rather that it be one in everyone as regards its relation to those things from which it abstracts the universal and with respect to which the universal is one. And this feature belongs to the active intellect insofar as it is immaterial.

**Reply to objection 3:** All things of the same species share in an action that follows upon the nature of the species, and, consequently, they share in the power that is the principle of that action—but not in the sense that the power is numerically the same in all of them. Now to have cognition of the first intelligible things (*cognoscere prima intelligibilia*) is an action that follows upon the human species. Hence, all men must share in the power that is the principle of that action, and this is the power of the active intellect. But it is not necessary for this power to be numerically the same in everyone; what is necessary is that it should be derived from a single principle in each of them. And so the fact that men share in the first intelligible things points to the oneness of the separated intellect that Plato compares to the sun, but not to the oneness of the active intellect that Aristotle compares to light.

## Article 6

### Does memory exist in the intellective part of the soul?

It seems that memory does not exist in the intellective part of the soul:

**Objection 1:** In *De Trinitate* 12 Augustine says that what belongs to the higher part of the soul “are not things that are common to men and beasts.” But memory is common to men and beasts; for in the same place he says, “Beasts can sense corporeal things through their bodily senses and commit those things to memory.” Therefore, memory does not belong to the intellective part of the soul.

**Objection 2:** Memory is of past things. But ‘past’ expresses a determinate time. Therefore, memory provides cognition of a thing under the rubric of a determinate time (*sub determinato tempore*), i.e., it provides cognition of something under the rubric of a *here* and *now*. But this feature belongs to the sensory power and not to the intellective power. Therefore, memory exists only in the sentient part of the soul and not in the intellective part.

**Objection 3:** What is conserved in the memory are the species of things that are not actually being thought about. But this cannot occur in the intellect, since the intellect becomes actualized (*fit in actu*) by being formed by an intelligible species (*per hoc quod informatur specie intelligibili*), and for the intellect to be actualized is just for it to be actually engaged in intellective understanding (*intellectum esse in actu est ipsum intelligere in actu*). And so the intellect understands in actuality all the things whose species it has within it. Therefore, it is not the case that memory exists in the intellective part.

**But contrary to this:** In *De Trinitate* 10 Augustine says, “Memory, intellective understanding (*intelligentia*), and will are one mind.”

**I respond:** Since it is the nature of memory to conserve species of things that are not actually

being apprehended, the first thing that has to be considered is whether intelligible species are able to be conserved in this way in the intellect.

Avicenna, for one, claimed that this is impossible. For, he said, this sort of thing happens in the sentient part of the soul with respect to certain powers insofar as they are acts of corporeal organs in which species can be conserved without actual apprehension. But in the intellect, which lacks a corporeal organ, nothing exists except as actually intelligible (*nisi intelligibiliter*). Hence, if the likeness of a thing exists in the intellect, then that thing is such that it is actually being understood intellectually. So, then, according to him, as soon as someone ceases to be having an actual intellectual cognition of a given thing, the species of that thing ceases to exist in the intellect. Moreover, if he once again wants to have an intellectual cognition of that thing, then he must turn to the active intellect, which Avicenna posits as a separated substance, in order for the intelligible species to flow from it into the passive intellect. And from the exercise and practice of turning to the active intellect, there follows in the passive intellect, according to him, a certain facility of turning to the active intellect, a facility that he claimed is the habit of knowledge (*habitus scientiae*). Therefore, according to this position, there is nothing conserved in the intellectual part of the soul that is not actually being considered. Hence, on this view memory cannot be posited in the intellectual part of the soul.

However, this opinion is manifestly incompatible with what Aristotle says. For in *De Anima* 3 he says that (a) “when the passive intellect becomes each of the things in knowing them, it is said to be actually knowing them (*dicitur qui secundum actum*),” and that (b) “this happens when it is able to act *through itself*; thus, even at that point it is in some sense in potentiality, though not in the same way as it was before it learned or discovered the relevant thing.” Now the passive intellect is said to ‘become each thing’ insofar as it receives the species of each thing. Therefore, by the fact that it receives the species of intelligible things, it is such that it is able to operate when it wants to, but not such that it is always operating; for even then it is in some sense in potentiality, though in a different way from the way it was in potentiality before it had intellectual cognition. More specifically, it is in potentiality in the way in which someone who knows something habitually is in potentiality with respect to actually considering that thing.

Moreover, the position described above is contrary to reason. For what is received in a thing is received in it in accord with the mode of what receives it. But the intellect has a more stable and unchanging nature than does corporeal matter. Therefore, if corporeal matter holds on to the forms it receives not only while actually acting through them but also after it has ceased to act through them, then *a fortiori* the intellect will receive intelligible species in an unchangeable and permanent way, regardless of whether they are taken from sensible things or flow forth from some higher intellect.

So, then, if ‘memory’ is taken to mean merely a power that conserves species, then one must claim that memory exists in the intellectual part of the soul. On the other hand, if it is also part of the concept of memory that its object is something past insofar as it is past, then memory will exist only in the sentient part of the soul, which apprehends particulars, and not in the intellectual part. For since ‘the past insofar as it is the past’ signifies being under the rubric of a determinate time, it involves the condition of a particular.

**Reply to objection 1:** Insofar as it conserves species, memory is not common to us and the beasts. For species are conserved not in the sentient part of the soul alone, but rather in the conjoined being, since the power of remembering is the act of an organ. By contrast, the intellect conserves species in its own right, without a connection to any corporeal organ. Hence, in *De Anima* 3 the Philosopher says, “The soul is the locus of species—not the whole soul, but the intellect.”

**Reply to objection 2:** Pastness (*praeteritio*) can apply to two things, viz., the *object* that one has cognition of, and the *act of cognition*.

These two are joined together in the sentient part of the soul, which apprehends a thing when it is

changed by a present sensible object. Hence, an animal remembers at the same time both (a) that it was *sensing at a prior time* in the past and (b) that it was sensing some *past sensible object*.

By contrast, as far as the intellectual part is concerned, pastness is incidental to, and does not belong *per se* to, the intellect's *object*. For the intellect has an intellectual understanding of a man insofar as he is a man, and it is incidental to a man insofar as he is a man that he exists in the present or in the past or in the future.

On the other hand, as far as the *act* is concerned, pastness can be taken account of *per se* in the intellect as well as in the sensory power. Our soul's having an intellectual cognition is a particular act that exists at this or that time, since a man is said to be having an intellectual cognition now or yesterday or tomorrow. This is not incompatible with the status of intellection (*non repugnat intellectualitati*), since even though this sort of act of intellectual cognition is a particular, it is nonetheless an immaterial act, as was explained above concerning the intellect (q. 76, a. 1). And so just as the intellect has an intellectual understanding of itself even though it itself is a singular intellect, so it has an intellectual understanding of its own act of intellectual understanding, which is a singular act existing in either the present or the past or the future.

So, then, insofar as it concerns past things, the nature of memory is preserved in the intellect by the fact that it understands intellectually that it has previously had an intellectual understanding—but not by its having an intellectual understanding of a past thing insofar as that thing has a *here* and *now*.

**Reply to objection 3:** An intelligible species sometimes exists in the intellect only in potentiality, and in such a case the intellect is said to be in potentiality. On the other hand, an intelligible species sometimes exists in the intellect because of the full completion of the act (*secundum ultimam completionem actus*), and in such a case the intellect is said to be actually engaged in intellectual understanding (*tunc intelligit actu*). And sometimes the intellect is in a middle state between potentiality and actuality, and in that case the intellect is said to be habituated (*in habitu*); and it is in this mode that the intellect conserves species even when it is not actually engaged in intellectual understanding.

## Article 7

### Is intellectual memory a power distinct from the intellect?

It seems that intellectual memory is a power distinct from the intellect:

**Objection 1:** In *De Trinitate* 10 Augustine posits in the mind “memory, intellectual understanding (*intelligentia*), and will.” But it is clear that memory is a power distinct from the will. Therefore, it is likewise a power distinct from the intellect.

**Objection 2:** The nature of the distinctions among the powers is the same in the case of the sentient part of the soul as it is in the case of the intellectual part. But as was explained above (q. 78, a. 4), in the sentient part memory is a power distinct from the sensory power. Therefore, memory in the intellectual part of the soul is a power distinct from the intellect.

**Objection 3:** According to Augustine, memory, intellectual understanding, and will are equal to one another, and one of them arises from another. But this could not be the case if memory were the same power as the intellect. Therefore, it is not the same power.

**But contrary to this:** It is part of the nature of memory that it is a treasury or locus where species are conserved. But as has been pointed out (a. 6), in *De Anima* 3 the Philosopher attributes this role to the intellect. Therefore, in the intellectual part of the soul it is not the case that memory is a power distinct from the intellect.

**I respond:** As has been explained (q. 77, a 3), the powers of the soul are distinguished by the diverse natures of their objects, since the nature of each power consists in its being ordered toward what it is related to, i.e., its object. It was also explained above (q. 59, a. 4) that if a power is by its proper nature ordered toward an object taken under some general concept of the object, that power will not be diversified by the diversity of particular differences; for instance, the visual power, which relates to its object under the concept *being colored*, is not diversified by the difference between *white* and *black*.

Now the intellect is related to its object under the common conception *being (respicit suum obiectum secundum communem rationem entis)*, since the passive intellect is that by which the intellect becomes all things. Hence, there is no difference among beings by which the passive intellect is diversified. Yet the passive intellect is diversified as a power from the active intellect because, with respect to the very same object, there must be one principle that is an active power and makes a thing to be an object in actuality, and another principle that is a passive power and is moved by the object now existing in actuality. And so the active power is related to its object as a being in actuality is related to a being in potentiality, whereas the passive power's relation to its object is just the opposite, as a being in potentiality is related to a being in actuality. So, then, there can be no difference among the powers in the intellect except the difference between the passive and the active.

Hence, it is clear that memory is not a power distinct from the intellect; for it pertains to the nature of a passive power to conserve as well as to receive.

**Reply to objection 1:** Even though in *Sentences* 1, dist. 3 the claim is made that memory, intellective understanding, and will are three "powers," this is nonetheless not what Augustine means. For in *De Trinitate* 14 he explicitly says, "If memory (*memoria*), intellective understanding (*intelligentia*), and will (*voluntas*) are taken to be always present in the soul regardless of whether they are being thought of, then they seem to belong to memory alone. At present, by 'intellective understanding' I mean that by which we understand when we are thinking, and by 'will' I mean love or affection (*dilectio*), which joins together the child with the parent." From this it is clear that Augustine is not using these words for three powers, but that he is instead taking 'memory' for the soul's habitual retention, whereas he is taking 'intellective understanding' for an act of the intellect and 'will' for an act of the will.

**Reply to objection 2:** The past and the present can be proper differences that diversify sentient powers, but they cannot, for the reason stated above (a. 6), be proper differences that diversify intellective powers.

**Reply to objection 3:** Intellective understanding arises from memory in the way that an act arises from a habit. And it is in this sense, too—and not as one power with respect to another—that memory is equal to intellective understanding.

## Article 8

### Is reason a power distinct from intellect?

It seems that reason (*ratio*) is a power distinct from the intellect (*intellectus*):

**Objection 1:** In *De Spiritu et Anima* it says, "When we wish to ascend from the lower to the higher, the first thing to occur to us is the sensory power, then the imagination, next reason (*ratio*), after that the intellect (*intellectus*)." Therefore, reason is a power distinct from the intellect, just as imagination is distinct from reason.

**Objection 2:** In *De Consolatione Philosophiae* Boethius says that the intellect is related to reason

in the way that eternity is related to time. But being in eternity does not belong to the same power as does being in time. Therefore, reason and intellect are not the same power.

**Objection 3:** Man shares intellect with the angels and sensory power with the brute animals. But reason, which is proper to man and by which man is called a ‘rational’ animal, is a power distinct from the sensory power. Therefore, by parity of reasoning, reason is a power distinct from the intellect, which belongs properly to the angels and is the source of their being called ‘intellectual’ beings.

**But contrary to this:** In *Super Genesim ad Litteram* 3 Augustine says, “That by which man exceeds the non-rational animals is reason (*ratio*), or mind (*mens*), or intellective understanding (*intelligentia*), or whatever other word it is most appropriately called by.” Therefore, reason and intellect and mind are a single power.

**I respond:** Reason and intellect cannot be diverse powers in man. This is seen clearly if the acts of the two of them are examined. For to have intellective understanding (*intelligere*) is simply to apprehend intelligible truth, whereas to engage in discursive reasoning (*ratiocinari*) is to proceed from one thing that is understood to another in order to come to a cognition of intelligible truth (*veritatem intelligibilem cognoscere*). And so as Dionysius says in *De Divinis Nominibus*, chap. 7, angels, who by their nature have perfect possession of the cognition of intelligible truth, do not have to proceed from one thing to another, but instead apprehend the truth about things simply and without discursive reasoning (*simpliciter et absque discursu*). By contrast, as he says in the same place, men arrive at the understanding of intelligible truth by proceeding from one thing to another, and this is why they are called ‘rational’.

Therefore, it is clear that to engage in discursive reasoning (*ratiocinari*) is related to having intellective understanding (*intelligere*) in the way that moving (*moveri*) is related to coming to rest (*quiescere*), or in the way that coming to acquire (*acquirere*) is related to possessing (*habere*)—where the one is complete (*perfecti*) and the other incomplete (*imperfecti*). And since motion always proceeds from what is unmoved and terminates in what is at rest, so it is that (a) on the path of *inquiry* (or *discovery*) (*secundum viam inquisitionis vel inventionis*) human reasoning proceeds from some things that are simply understood, viz., first principles, and, again, (b) on the path of *judgment* (*in via iudicii*) it returns through analysis (*resolvendo*) to the first principles and in light of them examines what has been discovered. Now it is clear that even among natural things, moving and coming to rest are traced back to one and the same power and not to diverse powers, since it is through the same nature that a thing moves to a place and rests in that place. Therefore, *a fortiori*, it is through the same power that we have intellective understanding and reason discursively. And so it is clear that in man reason and intellect are the same power.

**Reply to objection 1:** This enumeration is made in accord with an ordering of acts and not in accord with a distinction among powers—though the book in question does not have much authority in any case.

**Reply to objection 2:** The reply is clear from what has been said. For eternity is related to time in the way that what is unchanging is related to what is changing. And so Boethius is likening intellective understanding to eternity and discursive reasoning to time.

**Reply to objection 3:** The other animals are inferior to man to such an extent that they cannot attain to the cognition of the truth that reason seeks. Man, however, attains in an imperfect way the understanding of intelligible truth had by the angels. And so the angels’ cognitive power is not of a different genus from the cognitive power of reason, but is instead related to it as the perfect is related to the imperfect.

## Article 9

### Are higher reason and lower reason diverse powers?

It seems that higher reason and lower reason are diverse powers:

**Objection 1:** In *De Trinitate* 12 Augustine says that the image of the Trinity exists in the higher part of reason but not in the lower part. But the parts of the soul are its powers. Therefore, higher reason and lower reason are two distinct powers.

**Objection 2:** Nothing takes its origin from itself. But lower reason takes its origin from higher reason and is regulated and directed by it. Therefore, higher reason is a power distinct from lower reason.

**Objection 3:** In *Ethics* 6 the Philosopher says that the *scientific* (*scientificum*) part of the soul, by which the soul knows necessary things, is a different principle and different part of the soul from the *opivative* and *ratiocinative* part (*alia pars animae ab opinativo et ratiocinativo*), by which it has cognition of contingent things. And he proves this by appealing to the fact that “parts of the soul that differ in genus are ordered toward things that differ in genus.” Now the contingent and the necessary differ in genus as the corruptible and the incorruptible. But since the necessary is the same as the eternal and the temporal is the same as the contingent, it seems that (a) what the Philosopher is calling the ‘scientific’ part is the same as higher reason, which, according to Augustine, “tends toward considering and consulting eternal things,” and that (b) what the Philosopher is calling the ‘ratiocinative’ or ‘opivative’ part is the same as lower reason, which, according to Augustine, “tends toward dealing with temporal things.” Therefore, higher reason is a power of the soul that is distinct from lower reason.

**Objection 4:** Damascene says, “From the imagination comes opinion. Then the mind, judging that the opinion is true or false, judges with respect to truth, and then it is called ‘mind’ (*mens*), from ‘measuring’ (*mentio*). Therefore, what is called ‘intellect’ has to do with those things that have already been judged and truly determined.” So, then, the opivative part, which is lower reason, is different from ‘mind’ and ‘intellect’, which can be interpreted as higher reason.

**But contrary to this:** In *De Trinitate* 12 Augustine says that higher and lower reason are distinguished only as functions (*non nisi per officia distinguuntur*). Therefore, they are not two distinct powers.

**I respond:** As higher and lower reason are understood by Augustine, they cannot in any way be two distinct powers of the soul. For he says, “Higher reason tends toward considering and consulting eternal things”—‘considering’ in the sense that it looks at them in themselves, and ‘consulting’ in the sense that takes from them rules for acting. On the other hand, he says that lower reason “tends toward temporal things.” Now these two sorts of things, viz., the temporal and the eternal, are related to our cognition in such a way that the one is the medium for the cognition of the other. For on the path of *discovery*, we go by way of temporal things to a cognition of eternal things—this according to the Apostle in Romans 1:20 (“The invisible things of God are clearly seen, being understood through the things that have been made”)—whereas on the path of *judgment*, we pass judgment on temporal things by reference to eternal things, once we have cognition of them, and we go on to deal with temporal things in light of the nature of eternal things.

Now it is possible for a medium and that which is arrived at through the medium to belong to diverse *habits*, in the way that the first indemonstrable principles belong to the habit of understanding (*intellectus*), whereas the conclusions deduced from them belong to the habit of scientific knowledge (*scientia*). And so from the principles of geometry it is possible to draw a conclusion in another science, viz., the science of perspective.

However, both the medium and ultimate end belong to the same *power* of reason. For an act of reason is, as it were, a movement that arrives at one thing from another; but the same moving thing that passes through the medium is the one that arrives at the terminus. Hence, higher and lower reason are one and the same power of reason. They are distinguished, according to Augustine, by the functions of their acts and by diverse habits; for instance, wisdom (*sapientia*) is attributed to higher reason and scientific knowledge (*scientia*) to lower reason.

**Reply to objection 1:** The term ‘part’ can be used in a way corresponding to any sort of partition. Therefore, it is because reason is divided by diverse functions that higher and lower reason are called parts (*partitiones*)—and not because they are diverse powers.

**Reply to objection 2:** Lower reason is said to be derived (*deduci*) from higher reason, or regulated by it, insofar as the principles that lower reason makes use of are derived from and directed by the principles of higher reason.

**Reply to objection 3:** The ‘scientific’ part of the soul that the Philosopher is talking about is not the same thing as higher reason. For necessary knowable things are also found among temporal things, and there is natural science and mathematics with respect to them. On the other hand, since the opinative and ratiocinative part has to do only with contingent things, it is concerned with less than lower reason is.

But neither should one claim simply that there is one power by which the intellect has cognition of necessary things and another power by which it has cognition of contingent things. For it has cognition of both in accord with the same type of object, viz., in accord with the natures *being* and *true*. Hence, necessary things, which have perfect *esse* in truth, are such that the intellect has perfect cognition of them as far as their ‘what-ness’ (*quidditas*) is concerned, and it is by appeal to the ‘what-ness’ that the intellect infers (*demonstrat*) their proper accidents. On the other hand, contingent things are such that the intellect has imperfect cognition of them, even as they themselves have imperfect *esse* and truth. However, the actual perfect and imperfect do not diversify powers; instead, they diversify acts with regard to their mode of acting and, as a result, they diversify the principles of the acts and the habits themselves.

And the reason why the Philosopher posited the scientific and the ratiocinative as two parts of the soul is not that they are two distinct powers, but that they are distinguished according to their diverse aptitudes for receiving diverse habits. And it was the diversity of the habits that he wanted to inquire about in that place. For even if contingent things and the necessary things differ in their proper genera, they nonetheless agree in the common nature *being*, which is what the intellect looks to and which contingent and necessary things are related to in diverse ways as the imperfect and the perfect.

**Reply to objection 4:** This distinction of Damascene’s has to do with a diversity of acts and not with a diversity of powers. For ‘opinion’ signifies an act of the intellect that is drawn to one part of a contradiction with fear of the other part. And to ‘pass judgment on’, or to ‘measure’ (*mensurare*), is an act of the intellect that applies firm principles to the examination of proposed objects; and this is what the name ‘mind’ (*mens*) is taken from. On the other hand, to ‘have intellectual understanding’ is to adhere with a sort of approbation to what has been judged.

## Article 10

### Is intellectual understanding a power distinct from the intellect?

It seems that intellectual understanding (*intelligentia*) is a power distinct from the intellect (*intellectus*):

**Objection 1:** In *De Spiritu et Anima* it says, “When we wish to ascend from the lower to the

higher, the first thing to occur to us is the sensory power, then the imagination, next reason (*ratio*), after that the intellect (*intellectus*), and after that intellectual understanding (*intelligentia*)." But imagination and the sensory power are distinct powers. Therefore, so are intellect and intellectual understanding.

**Objection 2:** In *De Consolatione Philosophiae* 5 Boethius says, "The sensory power, the imagination, reason (*ratio*), and intellectual understanding (*intelligentia*) all see the man himself in different ways." But the intellect (*intellectus*) is the same power as reason (*ratio*). Therefore, it seems that intellectual understanding is a power distinct from the intellect, in the same way that reason is a power distinct from the imagination and the sensory power.

**Objection 3:** As *De Anima* 2 says, "Acts are prior to powers." But intellectual understanding (*intelligentia*) is a certain act divided off from the other acts that are attributed to the intellect. For Damascene says, "The first movement is called intellectual understanding (*intelligentia*), and when there is intellectual understanding with respect to something, this is called an intention (*intentio*); and when the soul is stable and configured to that of which there is intellectual understanding (*permanens et figurans animam ad id quod intelligitur*), this is called thinking things out (*excogitatio*); and when thinking things out remains the same and the soul examines itself and passes judgement, this is called *phronesis*, i.e., wisdom (*sapientia*); and *phronesis* extended in time (*dilatata*) makes for cogitation (*cogitatio*), i.e., orderly interior speech (*interius dispositum sermonem*), from which, they say, comes forth speech expressed by the tongue." Therefore, it seems that intellectual understanding is a certain special power.

**But contrary to this:** In *De Anima* 3 the Philosopher says, "Intellectual understanding (*intelligentia*) is of indivisibles, in which there is nothing false." But this sort of cognition belongs to the intellect. Therefore, intellectual understanding is not a distinct power over and beyond the intellect.

**I respond:** The name 'intellectual understanding' (*intelligentia*) signifies the very act of the intellect, viz., to have intellectual understanding (*intelligere*). However, in certain books translated from Arabic, the separated substances that we call angels are called 'intelligences' (*intelligentiae*), perhaps because they are always actually engaged in intellectual understanding. By contrast, in the books translated from Greek they are called 'intellects' (*intellectus*) or 'minds' (*mentes*).

So, then, intellectual understanding (*intelligentia*) is distinguished from the intellect (*intellectus*) not as one power from another, but as an act from a power. Such a division is found also among the philosophers. For instance, they sometimes posit four 'intellects', viz., the *active intellect* (*intellectus agens*), the *passive intellect* (*intellectus possibilis*), the *habitual intellect* (*intellectus in habitu*), and the *acquired intellect* (*intellectus adeptus*). Of these four, the active intellect and passive intellect are diverse powers, just as in all other cases the active power is one thing and the corresponding passive power is another. However, the other three are distinguished as three states of the passive intellect, which (a) sometimes is only in potentiality, and in that case it is called the *passive intellect*; (b) sometimes is in first actuality, i.e., knowledge (*scientia*), and in that case it is called the *habitual intellect*; and (c) sometimes is in second actuality, i.e., actual consideration, and in that case it is called the *intellect in act or actuality* (*intellectus in actu*) or acquired intellect (*intellectus adeptus*).

**Reply to objection 1:** Assuming that this authority should be taken seriously, 'intellectual understanding' is being posited as an act of the intellect. And so it is divided off against the intellect as an act is divided off against its corresponding power.

**Reply to objection 2:** Boethius is taking 'intellectual understanding' (*intelligentia*) for an act of the intellect that transcends the act of reason. Hence, in the same place he says that reason belongs only to the human race, just as intellectual understanding belongs only to God, since it is proper to God to understand all things without any inquiry at all.

**Reply to objection 3:** All these acts enumerated by Damascene belong to a single power, viz., the intellectual power. First, the intellectual power simply apprehends something, and this act is called

*intellective understanding (intelligentia)*. Second, it orders what it apprehends either toward having cognition of something else or toward acting, and this is called *intention (intentio)*. When it persists in inquiring into that which it intends, then this is called *thinking things out (excogitatio)*. And when it examines what has been thought out with respect to some things that have certitude, it is said to know (*scire*) or to be wise (*sapere*)—which is *phronesis* or wisdom (*sapientia*), since, as *Metaphysics* 1 says, it belongs to wisdom to pass judgment. And from the fact that it holds something as certain and as having been examined, it thinks about how it might be possible to make it manifest to others; this is the *ordering of interior speech (dispositio interioris sermonis)*, and from this flows *exterior speech (exterior locutio)*. For it is not every difference among acts that makes for diverse powers; instead, as was explained above (q. 78, a. 4), it is only the sort of difference that cannot be traced back to the same principle.

## Article 11

### Are the speculative intellect and the practical intellect diverse powers?

It seems that the speculative intellect and the practical intellect are diverse powers:

**Objection 1:** As *De Anima* 2 makes clear, the apprehensive power and the power that effects movement are diverse powers. But the speculative intellect is purely apprehensive, whereas the practical intellect is a power that effects movement. Therefore, they are diverse powers.

**Objection 2:** Powers are diversified by the diverse natures of their objects. But the object of the speculative intellect is the true, whereas the object of the practical intellect is the good; and these objects differ in nature. Therefore, the speculative intellect and practical intellect are diverse powers.

**Objection 3:** In the intellective part of the soul, the practical intellect is related to the speculative intellect in the way that, in the sentient part of the soul, the estimative power is related to the power of imagining. But as was explained above (q. 78, a. 4), the estimative power differs from the power of imagining as one power from another. Therefore, the practical intellect and speculative intellect differ in the same way.

**But contrary to this:** *De Anima* 3 says that the speculative intellect becomes practical by extension. But it is not the case that one power is changed into another. Therefore, the speculative intellect and practical intellect are not diverse powers.

**I respond:** The practical intellect and speculative intellect are not diverse powers. The reason for this, as was explained above (q. 77, a. 3), is that something related incidentally to the nature of a power's object does not diversify the power. For instance, it is incidental to what is colored that it is a man, or that it is large or small; hence, all things of this sort are apprehended by one and the same visual power.

Now it is incidental to what is apprehended by the intellect that it is ordered or not ordered toward an action—but it is in this that the speculative intellect and the practical intellect differ. For the speculative intellect orders what it apprehends only toward the consideration of truth and not toward an action, whereas the practical intellect is such that it does order what it apprehends toward an action. And this is just what the Philosopher says in *De Anima* 3, viz., that “the speculative intellect differs from the practical intellect in its end.” Hence, each is denominated from its end, the one being speculative, and the other practical, i.e., operative (*operativus*).

**Reply to objection 1:** The practical intellect is a power that effects movement not in the sense that it executes movement, but in the sense that it directs one toward movement. This feature belongs to it because of the mode of its apprehension.

**Reply to objection 2:** The true and the good include one another, since the true is a certain good

(otherwise it would not be desirable) and the good is in a certain sense true (otherwise it would not be intelligible). Therefore, just as the true can be an object of desire insofar as it has the nature of a good, as when someone desires to have cognition of the truth, so the object of the practical intellect is a good that can be ordered toward action, under the concept of the true. For the practical intellect has cognition of truth in the same way that the speculative intellect does, but it orders the truth it has cognition of toward action.

**Reply to objection 3:** As was explained above (a. 7), there are many differences that diversify the sentient powers but do not diversify the intellectual powers.

## Article 12

### Is synderesis a special power distinct from the others?

It seems that synderesis (*synderesis*) is a special power distinct from the others:

**Objection 1:** Things that fall under the same division seem to belong to the same genus. But in Jerome's Gloss on Ezechiel 1:6, synderesis is divided off against the irascible, the concupiscible, and the rational, all of which are powers. Therefore, synderesis is a certain power.

**Objection 2:** Opposites belong to the same genus. But synderesis and sensuality (*sensualitas*) appear to be opposites, since synderesis always inclines one toward what is good, whereas sensuality always inclines one toward what is bad; this is why sensuality is signified by a serpent, as is clear from Augustine in *De Trinitate* 12. Therefore, it seems that synderesis is a power in the same way that sensuality is.

**Objection 3:** In *De Libero Arbitrio* Augustine says that present in nature's court of judgment (*in naturali iudicatorio*) are certain "rules and seeds of the virtues, both true and unchangeable," and these we call synderesis. Therefore, since, as Augustine claims in *De Trinitate* 12, the unchangeable rules by which we make judgments have to do with the higher part of reason, it seems that synderesis is the same as reason. And so it is a power.

**But contrary to this:** According to the Philosopher, the rational powers bear a relation to opposites. However, synderesis does not bear a relation to opposites, but inclines one only toward what is good. Therefore, synderesis is not a power. For if it were a power, it would have to be a rational power, since it is not found in brute animals.

**I respond:** Synderesis is a habit and not a power, even though some have claimed that synderesis is a certain power higher than reason (*ratio*) and others have claimed that it is reason itself—not reason insofar as it is reason, but reason insofar as it is a nature.

To see this clearly, note that, as was explained above (a. 8), since man's discursive reasoning (*ratiocinatio*) is a movement, it proceeds from the intellectual understanding of certain things (*ab intellectu aliquorum*) that serve as unchangeable principles—viz., things known naturally without reason's inquiry—and likewise terminates in an intellectual understanding, insofar as we make judgments on the basis of principles naturally known in themselves (*per principia per se naturaliter nota*) about the things that we discover by reasoning discursively. But it is clear that practical reason reasons about actions (*de operabilibus*) in the same way that speculative reason reasons about speculative objects (*de speculativis*). Therefore, just as we have been naturally endowed with principles regarding speculative objects (*principia speculabilium*), so too we have been naturally endowed with principles regarding actions (*principia operabilium*).

Now the first principles regarding speculative objects that we have been naturally endowed with do

not involve any special power, but instead involve a special habit, which is called the *intellective understanding of principles* (*intellectus principiorum*), as is clear from *Ethics* 6. Hence, the principles that we have been naturally endowed with regarding actions do not involve a special power, either, but instead involve a special natural habit, which we call *synderesis*. Hence, *synderesis* is said to goad us toward what is good and to murmur about what is bad (*instigare ad bonum et murmurare de malo*), insofar as (a) we proceed to discover things on the basis of the first principles and (b) we pass judgment about what has been discovered.

It is clear, then, that *synderesis* is a natural habit and not a power.

**Reply to objection 1:** Jerome's division is made according to a diversity of acts and not a diversity of powers. But diverse acts can belong to the same power.

**Reply to objection 2:** Similarly, the opposition between sensuality and *synderesis* is made by reference to an opposition of acts and not an opposition of diverse species within a single genus.

**Reply to objection 3:** Unchangeable natures of the sort in question are the first principles of actions, concerning which one cannot be in error. And they are attributed to reason as a power and to *synderesis* as a habit. Hence, we make natural judgments by means of both, viz., reason and *synderesis*.

### Article 13

#### Is conscience a power?

It seems that conscience (*conscientia*) is a power:

**Objection 1:** Origen says that conscience is “the spirit corrector” and “companion teacher of the soul, by which the soul is separated from what is bad and adheres to what is good.” But ‘spirit’ names a power in the soul, either the mind—this according to Ephesians 4:23 (“Be renewed in the spirit of your mind”)—or the imagination; hence, it is also called an imaginative spiritual vision, as is clear from Augustine in *Super Genesim ad Litteram* 12. Therefore, conscience is a power.

**Objection 2:** Nothing is subject to sin except a power of the soul. But conscience is subject to sin; for Titus 1:15 says, “Their mind and conscience are defiled.” Therefore, it seems that conscience is a power.

**Objection 3:** Conscience must be either an act or a habit or a power. But it is not an act, since in that case it would not always remain in a man. Nor is it a habit, since in that case there would be many such habits and not just one; for in our acting we are directed by many cognitive habits. Therefore, conscience is a power.

**But contrary to this:** Conscience can be laid aside (*deponi potest*), but a power cannot be laid aside. Therefore, conscience is not a power.

**I respond:** Properly speaking, conscience is an act and not a power. This is clear both from the name ‘conscience’ and also from what is attributed to conscience by common linguistic usage.

For according to the strict meaning of the word, conscience implies an ordering of knowledge toward something, since ‘conscience’ means ‘knowledge with another’ (*cum alio scientia*). But the application of knowledge to something is accomplished through an act. Hence, from the meaning of the name it is clear that conscience is an act.

The same thing is evident from what is attributed to conscience. For conscience is said to testify (*testificari*), to bind (*ligare*), or to goad (*instigare*), and also to accuse (*accusare*) or rebuke (*remordere*), or to restrain (*reprehendere*). And all of these follow upon the application of our cognition or knowledge to the things we do. This application is accomplished in three ways. First, insofar as we recognize that

we have done or not done something—this according to Ecclesiastes 7:23 (“Your conscience knows that you have often spoken ill of others”), and it is in this sense that conscience is said to *testify*. Second, our knowledge is applied when through our conscience we judge that something should be done or should not be done, and it is in this sense that conscience is said to *goad* or *bind*. Third, our knowledge is applied when through our conscience we judge that something that has been done was good to do or was not good to do (*quod est factum sit bene factum vel non bene factum*), and it is in this sense that conscience is said to *excuse* (*excusare*) or to *accuse* (or *rebuke*).

Now it is clear that all these things follow upon the actual application of knowledge to what we do. Hence, properly speaking, ‘conscience’ names an act. However, since habits are the principles of acts, sometimes the name ‘conscience’ is attributed to the first natural habit, viz., synderesis, in the way that in a Gloss on Ezechiel 1:6 Jerome calls synderesis ‘conscience’, and in the way that Basil calls natural judgment ‘conscience’, and in the way that Damascene says that conscience is the law of our intellect. For it is common for causes and effects to be named by one another.

**Reply to objection 1:** Conscience is ‘spirit’ in the sense that ‘spirit’ is standing in for ‘mind’, since conscience is a sort of dictate of the mind.

**Reply to objection 2:** Defilement (*inquinatio*) is said to exist in a conscience not in the sense that conscience is the subject of the defilement, but in the sense that what is known exists in the cognition of it, i.e., insofar as someone knows himself to be defiled.

**Reply to objection 3:** Even if the act does not always remain in its own right, it nonetheless remains at all times in its cause, which is the power and the habit. And even if there are many habits by which a conscience is informed, all of them nonetheless have their efficacy from a single first habit, viz., from the habit with respect to the first principles, which is called ‘synderesis’. This is why, as was noted above, this habit especially is sometimes called conscience.

## QUESTION 80

### The Appetitive Powers in General

Next we have to consider the appetitive powers. And on this topic there are four things to be considered: first, the appetitive powers in general (question 80); second, the sentient appetite (*sensualitas*) (question 81); third, the will (question 82); and, fourth, free choice (question 83).

On the first topic there are two questions: (1) Should appetite be posited as a special power of the soul? (2) Is the division of appetite into the sentient appetite and the intellective appetite a division into diverse powers?

#### Article 1

##### Is appetite a special power of the soul?

It seems that appetite (*appetitus*) is not a special power of the soul:

**Objection 1:** No power should be assigned to the soul with respect to what is common to living and non-living things. But to desire (*appetere*) is common to living and non-living things, since, as *Ethics* 1 says, the good is “what all things desire.” Therefore, appetite is not a special power of the soul.

**Objection 2:** Powers are distinguished by their objects. But it is the very same thing that we have cognition of and that we desire. Therefore, it is unnecessary for there to be a distinct appetitive power in addition to the apprehensive power.

**Objection 3:** What is common is not divided off from what is proper. But every power of the soul desires some particular desirable thing, viz., the object that is fitting for it. Therefore, there is no need to countenance a power which is distinct from the others and which is called the appetitive power with respect to the object *desirable in general* (*appetibile in communi*).

**But contrary to this:** In *De Anima* 2 the Philosopher distinguishes the appetitive from the other powers. Likewise, in *De Fide Orthodoxa* 2 Damascene distinguishes the appetitive powers from the cognitive powers.

**I respond:** It is necessary to posit an appetitive power in the soul. To see this clearly, note that every form has some inclination following upon it, in the way that fire is by its form inclined toward the highest place and toward generating what is similar to itself.

However, in those things that participate in cognition the form exists in a higher mode than in things that lack cognition.

For among those things that lack cognition, the form determines each thing only to its own singular *esse*, which is likewise its *natural esse*. Therefore, a natural inclination, which is called *natural appetite*, follows upon this sort of natural form.

By contrast, among things that have cognition, each is determined to its own proper natural *esse* through a natural form, yet in such a way that it is receptive to the species of other things, in the way that the sensory power receives the species of all sensible things and the intellect receives the species of all intelligible things. The result is that man’s soul is in a certain sense all things through its sensory power and intellect, and in this respect things that have cognition come close in a certain sense to a likeness of God, “in whom all things preexist,” as Dionysius says. Therefore, just as forms exist in a higher mode in things that have cognition, beyond the mode of natural forms, so there must exist in them an inclination beyond the natural inclination called ‘natural appetite’. And this higher inclination involves the appetitive power of the soul, through which an animal is able to desire what it apprehends and not merely to desire what it is inclined toward by its natural form.

So, then, it is necessary to posit an appetitive power of the soul.

**Reply to objection 1:** As has been explained, in things that have cognition, desire (*appetere*) is found in a mode higher than the common mode in which it is found in all things in general. And so there must be a power of the soul that is prescribed for this (*oportet ad hoc determinari aliquam potentiam animae*).

**Reply to objection 2:** What is apprehended and desired is the same in subject but conceptually diverse. For a thing is apprehended as a sensible or intelligible being, but it is desired as something fitting or good. Now what is required for a diversification of powers is a *conceptual* diversity in the objects of those powers, and not a *material* diversity.

**Reply to objection 3:** Each power of the soul is a sort of form or nature, and it has a natural inclination toward something. Hence, it is by a *natural appetite* that each power of the soul desires an object fitting for itself. Beyond this, there is *animal appetite*, which follows upon apprehension and by which something is desired not because it is fitting for the act of this or that power, in the way that the visual power (*visio*) is for seeing and the power of hearing (*auditio*) is for hearing, but because it is fitting for the animal absolutely speaking.

## Article 2

### Are the sentient appetite and the intellective appetite diverse powers?

It seems that the sentient appetite and the intellective appetite are not diverse powers:

**Objection 1:** As was explained above (q. 77, a. 3), powers are not diversified by incidental differences. But the difference between being apprehended by the sensory power and being apprehended by the intellect is incidental to a desirable object. Therefore, the sentient appetite and the intellective appetite are not diverse powers.

**Objection 2:** Intellective cognition is of universals, and this is what distinguishes it from sentient cognition, which is of singulars. But there is no room for this distinction in the case of appetite; for since appetite is a movement from the soul toward the things—i.e., toward singulars—every desire seems to be a desire for a singular thing. Therefore, it is not the case that the intellective appetite should be distinguished from sentient appetite.

**Objection 3:** Just as the appetitive power falls as a lower power under the apprehensive power, so it is with the power to effect movement. But the power to effect movement that follows upon man's intellective understanding is not distinct from the power to effect movement that follows upon sensory cognition in the other animals. Therefore, by parity of reasoning, neither is the appetitive power in man distinct from the appetitive power in the other animals.

**But contrary to this:** In *De Anima* 3 the Philosopher distinguishes two appetites, and he says that the higher appetite moves the lower appetite.

**I respond:** It is necessary to claim that the intellective appetite is a power distinct from the sentient appetite. For an appetitive power is a passive power that is naturally moved by what is apprehended; hence, as is explained in *De Anima* 3 and *Metaphysics* 12, the desirable apprehended thing is an unmoved mover, whereas the appetite is a moved mover. But things that are passive and movable are distinguished in a way that corresponds to the distinction among active movers, since what effects movement must be proportioned to what is moved, and what is active must be proportioned to what is passive. And the passive power itself has its proper nature from being ordered toward its active counterpart (*ipsa potentia passiva propriam rationem habet ex ordine ad suum activum*). Therefore, since what is apprehended by the intellect is different in genus from what is apprehended by the sensory power, it follows that the

intellective appetite is a power distinct from the sentient appetite.

**Reply to objection 1:** The difference between being apprehended by the sensory power and apprehended by the intellect is not incidental to what is desirable. Rather, this feature belongs to it *per se*, since what is desirable moves the appetite only insofar as it is apprehended. Hence, differences in what is apprehended are *per se* differences in what is desired. And so the appetitive powers are distinguished by the differences in the apprehended things as by their proper objects.

**Reply to objection 2:** Even if the intellective appetite is led toward things which are singulars outside the soul, it is nonetheless led toward them under some universal notion (*secundum aliquam rationem universalem*)—as when it desires something because it is good. Hence, in the *Rhetoric* the Philosopher says that there can be hatred with respect to a universal, as when “we hate every type of thief.” Similarly, through the intellective appetite we can desire non-material goods that the sensory power does not apprehend—e.g., knowledge, virtue, and other things of this sort.

**Reply to objection 3:** As is explained in *De Anima* 3, a general opinion (*opinio universalis*) does not effect movement except by the mediation of a particular case (*mediante particulari*). Similarly, a higher appetite effects movement by the mediation of a lower appetite. This is why the power to effect movement that follows upon the intellect is not distinct from the power to effect movement that follows upon the sensory power.

## QUESTION 81

### The Sentient Appetite

Next we have to consider sensuality or the sentient appetite (*sensualitas*). And on this topic there are three questions: (1) Is sensuality a purely appetitive power? (2) Is it divided into the irascible and the concupiscible as into diverse powers? (3) Do the irascible and concupiscible powers obey reason?

#### Article 1

##### Is sensuality a purely appetitive power?

It seems that sensuality (*sensualitas*) is not a purely appetitive power, but a cognitive power as well:

**Objection 1:** In *De Trinitate* 12 Augustine says, “The soul’s sensual movement, which is concentrated in the bodily senses, is common to us and the beasts.” But the bodily senses fall under the cognitive powers. Therefore, sensuality is a cognitive power.

**Objection 2:** Whatever falls under the same division seems to belong to the same genus. But in *De Trinitate* 12 Augustine divides sensuality off against higher reason and lower reason, both of which involve cognition. Therefore, sensuality is likewise a cognitive power.

**Objection 3:** In a man’s temptations sensuality takes the place of the serpent. But in the temptation of the first parents the serpent’s role was to introduce and propose the sin, and this role belongs to a cognitive power. Therefore, sensuality is a cognitive power.

**But contrary to this:** Sensuality is defined as “a desire for things that have to do with the body.”

**I respond:** The name ‘sensuality’ (*sensualitas*) seems to be taken from ‘sensual movement’ (*sensualis motus*)—which is what Augustine is talking about in *De Trinitate* 12—in the way that the name of a power is taken from its act, e.g., the visual power (*visus*) from the act of seeing (*visio*).

Now sensual movement is a desire (*appetitus*) that follows upon sentient apprehension. For an act of the apprehensive power is not called a movement in as proper a sense as the action of the appetitive power is, since the apprehensive power’s operation finds its perfection in the fact that the things apprehended exist in the one apprehending them, whereas the appetitive power’s operation finds its perfection in the fact that the one who has the desire is inclined toward the desirable thing. And so the apprehensive power’s operation is more like rest, whereas the operation of an appetitive power is more like a movement. Hence, ‘sensual movement’ means the operation of an appetitive power. And so ‘sensuality’ is a name of the sentient appetite.

**Reply to objection 1:** Augustine’s claim that the soul’s sensual movement is concentrated in the bodily senses means not that the senses are included under sensuality, but rather that the movement of sensuality is a certain inclination toward the bodily senses, viz., when we desire the things that are apprehended by the bodily senses. And in this way the bodily senses are, as it were, entries (*praeambulae*) into sensuality.

**Reply to objection 2:** Sensuality is divided off from higher reason and lower reason insofar as they all share in the act of motion. For the cognitive power, which is what higher and lower reason belong to, is a power that effects movement, just like the appetitive power, which sensuality belongs to.

**Reply to objection 3:** The serpent not only displayed and proposed the sin, but also incited them to commit the sin (*inclinavit in effectum peccati*). And it is in this last respect that sensuality is signified by the serpent.

## Article 2

### Is the sentient appetite divided into the irascible and the concupiscible as into diverse powers?

It seems that the sentient appetite is not divided into the irascible (*irascibilis*) and the concupiscible (*concupiscibilis*) as into diverse powers:

**Objection 1:** As *De Anima 2* explains, the same power of the soul is related to a pair of contraries, in the way that the power of seeing is related to both white and black. But the agreeable (*conveniens*) and the harmful (*nocivum*) are contraries. Therefore, since the concupiscible has to do with the agreeable and the irascible with the harmful, it seems to be the same power of the soul that is both irascible and concupiscible.

**Objection 2:** The sentient appetite is directed only at things that are agreeable to the senses. But what is agreeable to the senses is the object of the concupiscible power. Therefore, there is no sentient appetitive power that differs from the concupiscible power.

**Objection 3:** Hatred (*odium*) resides in the irascible power; for in *Super Matthaenum* Jerome says, “Let us have in the irascible power a hatred for vices.” But since hatred is the contrary of love (*amor*), it is in the concupiscible power. Therefore, the same power is both concupiscible and irascible.

**But contrary to this:** Gregory of Nyssa and Damascene posit two powers, the irascible and the concupiscible, as parts of the sentient appetite.

**I respond:** The sentient appetite is generically one faculty (*una vis*), which is called sensuality, but it is divided into two powers, which are the species of the sentient appetite, viz., the irascible and the concupiscible. To see this clearly, consider that in a natural corruptible thing there has to be not only (a) an inclination toward pursuing what is agreeable and avoiding what is harmful, but also (b) an inclination toward resisting the corrupting or contrary things that pose an obstacle to what is agreeable and that inflict what is harmful—in just the way that fire has a natural inclination not only (a) to recede from a lower place that is not agreeable to it and to tend toward a higher place that is agreeable to it, but also (b) to resist what corrupts it or impedes it.

Therefore, since the sentient appetite is an inclination that follows upon sentient apprehension in the way that a natural appetite is an inclination that follows upon a natural form, it must be the case that in the sentient part of the soul there are two appetitive powers: (a) one through which the soul is simply inclined to pursue those things that are agreeable according to the senses and to avoid those things that are harmful, and this is called the *concupiscible* power; and (b) a second through which the animal resists aggressors that pose obstacles to what is agreeable and that inflict harm, and this is called the *irascible* power. Hence, the object of the irascible power is said to be what is difficult (*arduum*), because the irascible power tends toward overcoming contraries and winning out over them.

Moreover, these two inclinations are not reducible to a single principle. For sometimes the soul, in opposition to the inclination of the concupiscible power, inflicts hardships upon itself in order to fight off contraries in accord with the inclination of the irascible power. The passions of the irascible power even seem to fight against the passions of the concupiscible power, since, in most cases, aroused concupiscence diminishes anger, and aroused anger diminishes concupiscence.

This point is also clear from the fact that the irascible power is, as it were, a promoter and defender of the concupiscible power when it rises up against obstacles to those agreeable things sought by the concupiscible power, and when it fights against the harmful things that the concupiscible power shrinks from. And for this reason all the passions of the irascible power take their origin from passions of the concupiscible power and terminate in the latter. For instance, anger arises from an inflicted pain and,

having gained vengeance, terminates in joy. It is also for this reason that, as is explained in *De Animalibus* 8, struggles among animals are over concupiscible objects like food and sexual pleasure.

**Reply to objection 1:** The concupiscible power is directed toward both the agreeable and the disagreeable. By contrast, the irascible power is directed toward resisting the disagreeable that stands in opposition to it.

**Reply to objection 2:** Just as, in keeping with what was pointed out above (q. 78, a. 2), among the apprehensive powers of the sentient part of the soul there is an estimative power that perceives things that do not affect the sensory powers, so also in the sentient appetite there is a power that does not seek what is appropriate for delighting the senses, but instead seeks something that is appropriate insofar as it is useful to the animal for its own defense. And this is the irascible power.

**Reply to objection 3:** Hatred absolutely speaking belongs to the concupiscible power. However, because of the pugnacity caused by hatred, it can also be relevant to the irascible power.

### Article 3

#### Do the irascible and concupiscible powers obey reason?

It seems that the irascible and concupiscible powers do not obey reason:

**Objection 1:** The irascible and concupiscible powers are parts of sensuality. But sensuality does not obey reason; this is why it is signified by the serpent, as Augustine points out in *De Trinitate* 12. Therefore, the irascible and concupiscible powers do not obey reason.

**Objection 2:** Whatever obeys a given thing does not fight against it. But the irascible and concupiscible powers fight against reason—this according to the Apostle in Romans 7:23 (“But I see another law in my members, fighting against the law of my mind”). Therefore, the irascible and concupiscible powers do not obey reason.

**Objection 3:** Just as the appetitive power is lower than the rational part of the soul, so too is the sentient [apprehensive] power. But the sentient [apprehensive] part of the soul does not obey reason, since we do not hear or see when we want to. Therefore, it is likewise not the case that the powers of the sentient appetite, viz., the irascible and the concupiscible, obey reason.

**But contrary to this:** Damascene says that what is “obedient to” reason and susceptible to persuasion “by reason is divided into concupiscence (*concupiscentia*) and anger (*ira*).”

**I respond:** There are two ways in which the irascible and concupiscible powers obey the higher part of the soul, where one finds the intellect (or reason) and will. The first of these ways has to do with reason, and the second has to do with the will.

The irascible and concupiscible powers obey *reason* with respect to their *acts*. The explanation for this is that in the other animals the sentient appetite is apt to be moved by the estimative power, in the way that a sheep, taking the wolf to be an enemy, fears it. But as was explained above (q. 78, a. 4), in man the estimative power is replaced by the cogitative power, which some call ‘particular reason’ because it brings together intentions of individuals (*collativa intentionum individualium*). This is why the sentient appetite is apt to be moved by the cogitative power in a man. Now particular reason is itself apt to be moved and directed by ‘universal reason’, and so there are syllogisms in which singular conclusions are derived from universal propositions. Thus, it is clear that universal reason gives commands to (*imperat*) the sentient appetite, which is divided into the concupiscible and irascible, and that this appetite obeys it. And since deriving singular conclusions from universal principles is the work of discursive reason and not of simple intellective understanding (*non est opus simplicis intellectus sed*

*rationis*), the irascible and concupiscible powers are said to obey reason rather than the intellect. Moreover, anyone can experience within himself that when he applies universal considerations, anger and fear and other such [passions] are mitigated or, as the case may be, instigated.

Likewise, the sentient appetite is subject to the *will* as regards *execution*, which is brought about by the power that effects movement. For in the other animals movement follows immediately upon an appetitive act (*appetitum*) of the concupiscible and irascible powers; for instance, when the sheep becomes fearful of the wolf, it immediately flees, since in sheep there is no higher appetitive act that might resist this movement. By contrast, a man is not immediately moved by an appetitive act of the concupiscible or irascible powers; rather, he awaits the command of the will (*expectatur imperium voluntatis*), which is a higher appetite. For in the case of all ordered powers that effect movement, a mover effects movement only by the power of the first mover; thus, the lower appetite is not sufficient to effect movement unless the higher appetite consents—which is what the Philosopher is saying in *De Anima* 3: “The higher appetite moves the lower appetite in the way that a higher sphere moves a lower sphere.”

Therefore, these are the ways in which the irascible and concupiscible powers are subject to reason.

**Reply to objection 1:** Sensuality is signified by the serpent as regards what is proper to the sentient part of the soul, whereas ‘irascible’ and ‘concupiscible’ name the sentient appetite as regards its act, to which the irascible and concupiscible powers are induced by reason, as has been explained.

**Reply to objection 2:** As the Philosopher says in *Politics* 1, “One finds in the animal both despotic rule (*despoticus principatus*) and constitutional rule (*politicus principatus*). For the soul rules the body with a despotic rule, whereas the intellect rules the appetite with a constitutional and royal rule.” Despotic rule is that by which someone rules slaves, who do not have the ability to resist the ruler in any of his commands, since they have nothing of their own (*quia nihil sui habent*). By contrast, political and royal rule is that by which someone rules free men, who, even if they are subject to the rule of the leader, nonetheless have something of their own (*habent aliquid proprium*) by which they are able to resist the leader’s command.

So, then, the soul is said to rule the body with despotic rule because the bodily members cannot in any way resist the soul’s rule, but instead at the soul’s desire the hand and foot move immediately, along with any member of the body that is apt to be moved by a voluntary movement. By contrast, the intellect, i.e., reason, is said to rule the irascible and concupiscible powers with constitutional rule, since the sentient appetite has something of its own by which it is able to resist reason’s command. For the sentient appetite is apt to be moved not only by the estimative power in other animals and the cogitative power (which is ruled by universal reason) in man, but also by the power of imagining and the sensory power. Hence, we experience the irascible and concupiscible powers resisting reason when we sense or imagine something pleasant that reason forbids, or something unpleasant that reason prescribes. And so the fact that the irascible and concupiscible powers fight against reason in some cases does not rule out their being obedient to reason.

**Reply to objection 3:** The exterior sensory powers need for their acts exterior sensible things by which they are affected and whose presence is not within reason’s power. By contrast, the interior powers, both appetitive and apprehensive, do not need exterior things. And so they are subject to the command of reason, which is able not only to instigate or mitigate the affections of the appetitive power, but also to form the phantasms that belong to the power of imagining.

## QUESTION 82

### The Will

Next we have to consider the will. And on this topic there are five questions: (1) Does the will desire anything by necessity? (2) Does the will desire everything by necessity? (3) Is the will a more eminent power than the intellect? (4) Does the will move the intellect? (5) Is the will divided into the irascible and the concupiscible?

### Article 1

#### Is there anything the will desires by necessity?

It seems that the will desires nothing by necessity (*nihil ex necessitate appetat*):

**Objection 1:** In *De Civitate Dei* 5 Augustine says that if something is necessary, then it is not voluntary. But everything that the will desires is voluntary. Therefore, nothing that the will desires (*appetit*) is desired necessarily (*est necessario desideratum*).

**Objection 2:** According to the Philosopher, rational powers are directed toward opposites. But the will is a rational power, since, as *De Anima* 3 says, the will exists in reason. Therefore, the will is directed toward opposites. Therefore, it is not determined to anything by necessity (*ad nihil de necessitate determinatur*).

**Objection 3:** Because of the will we are masters of our own acts (*domini nostrorum actuum*). But we are not masters of what exists by necessity (*ex necessitate*). Therefore, no act of the will can exist by necessity (*de necessitate*).

**But contrary to this:** In *De Trinitate* 13 Augustine says, “Everyone desires beatitude with one accord (*una voluntate*).” But if this fact were contingent and not necessary, then in at least a few cases it would not be true. Therefore, there is something the will wills by necessity (*voluntas ex necessitate aliquid vult*).

**I respond:** There are many senses of ‘necessity’ (*necessitas*). Now the necessary is what is *not able not to be*.

One way in which this feature belongs to something is in virtue of an *intrinsic principle*—either a *material* intrinsic principle, as when we say that it is necessary for everything composed of contraries to be corrupted, or a *formal* intrinsic principle, as when we say that it is necessary for a triangle to have three angles equal to two right angles. This is *natural and absolute necessity* (*necessitas naturalis et absoluta*).

In a second way, some things are *not able not to be* in virtue of some *extrinsic principle*—either an *end* or an *agent*. In virtue of an *end*, as when without this thing one cannot attain a given end at all, or one cannot attain it in a satisfying way (*bene*); it is in this sense that food is said to be necessary for life, or that a horse is said to be necessary for a journey. This is called the *necessity of the end* (*necessitas finis*), and it is also sometimes called utility (*utilitas*). On the other hand, some things are not able not to be because of an *agent*, as when someone is coerced by some agent in such a way that he cannot do the contrary. And this is called the *necessity of coercion* (*necessitas coactionis*).

The necessity of coercion is altogether at odds with the will (*omnino repugnat voluntati*). For what is contrary to a thing’s inclination we call ‘violent’. But the movement of the will is itself an inclination toward something. And so just as something is called ‘natural’ because it accords with a natural inclination (*inclinatio naturae*), so something is called ‘voluntary’ because it accords with the will’s inclination. Therefore, just as it is impossible for something to be simultaneously both violent and natural, so it is impossible for something to be, absolutely speaking, both coerced (or violent) and

voluntary.

However, the necessity of the end is not at odds with the will when the end can be arrived at in just one way; for instance, given that one wills to cross the sea, a necessity arises in the will for willing a ship.

Similarly, a *natural necessity* is not at odds with the will, either. At the very least, it is necessary that just as the intellect adheres by necessity to its first principles, so too the will adheres by necessity to its final end, which is beatitude. For as *Physics 2* says, the end plays the role in matters of action (*in operativis*) that a [first] principle plays in speculative matters (*in speculativis*). For what belongs to something naturally and immutably must be the foundation and source (*fundamentum et principium*) of everything else, since in each thing what is primary is its nature, and all movement proceeds from something immovable.

**Reply to objection 1:** Augustine should be understood to be talking about the necessity of coercion. By contrast, natural necessity “does not destroy the will’s freedom,” as Augustine himself says in the same book.

**Reply to objection 2:** Insofar as the will wills something naturally, it is more like the intellective understanding of natural principles than it is like reason, which is directed toward opposites. Hence, in this sort of case the will is more an *intellectual* power than a *rational* power.

**Reply to objection 3:** We are masters of our own actions insofar as we are able to choose *this* or *that*. But as *Ethics 3* says, choice (*electio*) is about the means to an end and not about the end. Hence, the desire for the ultimate end is not among those acts of which we are the masters.

## Article 2

### Does the will will by necessity everything it wills?

It seems that the will wills by necessity everything it wills:

**Objection 1:** In *De Divinis Nominibus 4* Dionysius says, “Evil lies beyond the will.” Therefore, it is by necessity that the will tends toward the good proposed to it.

**Objection 2:** The will’s object is related to the will as a mover to what is moved. But the movement of what is moved follows necessarily from the mover. Therefore, it seems that the will’s object moves it by necessity.

**Objection 3:** Just as what is apprehended by the sensory power is an object of the sentient appetite, so what is apprehended by the intellect is an object of the intellective appetite, which is called the will. But what is apprehended by the sensory power moves the sentient appetite by necessity; for in *Super Genesim ad Litteram* Augustine says that animals are moved by what they see. Therefore, it seems that what is apprehended by the intellect moves the will by necessity.

**But contrary to this:** Augustine says, “The will is that by which one sins and that by which one lives in an upright way”—and so it is directed toward opposites. Therefore, it is not the case that the will wills by necessity everything it wills.

**I respond:** The will does not will by necessity everything it wills. To see this clearly, note that, as has already been explained (a.1), the will adheres to its ultimate end in the same way that the intellect adheres naturally and by necessity to its first principles.

Now some intelligible things do not have a necessary connection to the first principles, e.g., contingent propositions, the denial of which does not imply the denial of the first principles. Propositions like these are such that the intellect does not assent to them by necessity.

On the other hand, there are some propositions which are necessary and which have a necessary connection with the first principles, e.g., demonstrable conclusions, the denial of which implies the denial of the first principles. These propositions are such that the intellect assents to them by necessity once it recognizes the necessary connection of the conclusions to the principles by way of a demonstrative deduction; however, it does not assent to them by necessity before it recognizes the necessity of the connection by way of the demonstration.

Something similar holds for the will as well.

For there are some particular goods which do not have a necessary connection to beatitude and in the absence of which someone can have beatitude (*potest esse beatus*). The will does not adhere to goods of this sort by necessity.

On the other hand, there are some particular goods which have a necessary connection to beatitude and by which a man adheres to God, in whom alone true beatitude consists. However, before the necessity of this sort of connection is demonstrated by the certitude of the vision of God, the will does not adhere to God by necessity, or to the things that are of God. On the other hand, the will of one who sees God through His essence adheres to God necessarily, in the same way that we now will by necessity to have beatitude.

Thus, it is clear that the will does not will by necessity everything it wills.

**Reply to objection 1:** The will tends toward nothing except under the notion of the good (*sub ratione boni*). But because the good is complex (*quia bonum est multiplex*), the will is not determined by necessity to one alternative (*non ex necessitate determinatur ad unum*).

**Reply to objection 2:** A mover causes movement by necessity in the movable thing when the power of the mover exceeds the movable thing in such a way that the totality of the movable thing's possibilities is subject to the mover (*ita quod tota eius possibilitas moventi subdatur*). But since the will's possibilities encompass a universal and perfect good (*possibilitas voluntatis sit respectu boni universalis et perfecti*), it is not the case that the totality of its possibilities is subject to any particular good. And so no particular good moves it by necessity.

**Reply to objection 3:** The sentient power is not a power that brings together diverse things in the way that reason does; instead, it simply apprehends some one thing. And this is why one thing determinately moves the sentient appetite. By contrast, reason brings together many things, and for this reason the intellective appetite, i.e., the will, is able to be moved by many things and is not moved by any one of them with necessity.

### Article 3

#### Is the will a higher power than the intellect?

It seems that the will is a higher power than the intellect:

**Objection 1:** The good or the end is the object of the will. But the end is the first and highest of all causes. Therefore, the will is the first and highest of all powers.

**Objection 2:** Natural entities proceed from the imperfect to the perfect. And this is also apparent among the powers of the soul; for they proceed from the sensory power to the intellect, which is the more noble. But there is a natural progression from an act of the intellect to an act of the will. Therefore, the will is a more perfect and more noble power than the intellect.

**Objection 3:** Habits are proportioned to their powers in the way that perfections are proportioned to the things they perfect. But the habit by which the will is perfected, viz., charity, is more noble than

the habits by which the intellect is perfected; for 1 Corinthians 13:2 says, “If I should know all mysteries ... and if I should have all faith ... and have not charity, I am nothing.” Therefore, the will is a higher power than the intellect.

**But contrary to this:** In *Ethics* 10 the Philosopher claims that the highest power of the soul is the intellect.

**I respond:** There are two ways to think about the eminence of two things with respect to one another: (a) absolutely speaking (*simpliciter*) and (b) relatively speaking (*secundum quid*). Something is thought of as such-and-such absolutely speaking insofar as it is such-and-such in its own right (*secundum seipsum tale*), whereas it is thought of as such-and-such relatively speaking insofar as it such-and-such in relation to something else (*secundum respectum ad alterum*).

Thus, if the intellect and the will are considered *in their own right*, then the intellect is the more eminent. This is apparent from a comparison of their objects to one another. For the intellect’s object is more simple and more absolute than the will’s object, since the notion *desirable good* is itself an object of the intellect (*objectum intellectus est ipsa ratio boni appetibilis*), whereas it is the desirable good, whose notion exists in the intellect, that is the will’s object. But the more simple and abstract something is, the higher and more noble it is in its own right. And so the intellect’s object is higher than the will’s object. Therefore, since the proper nature of a power has to do with the object it is ordered toward, it follows that the intellect is in its own right and absolutely speaking higher and more noble than the will.

On the other hand, *relatively speaking* and in relation to something else, the will is in some cases higher than the intellect, viz., because the will’s object exists in a higher entity than the intellect’s object does. For instance, I might claim that hearing is, relatively speaking, more noble than seeing, because some entity that makes a sound is more noble than some entity that is colored, even though color is more simple and more noble than sound. For as was explained above (q. 16, a. 1 and q. 27, a. 4), the intellect’s action consists in the nature of what is understood existing in the one who understands, whereas the act of the will is perfected in the will’s being inclined toward that thing as it exists in itself. And this is why in *Metaphysics* 6 the Philosopher says that the good and the bad, which are objects of the will, exist in the things, whereas the true and the false, which are objects of the intellect, exist in the mind. Therefore, when an entity in which a given good exists is more noble than the soul itself, in which the nature as understood exists, then the will is higher than the intellect in relation to such an entity. But when the entity in which a given good exists is inferior to the soul, then the intellect is higher than the will in relation to such an entity. Hence, the love of God is better than the cognition of God, whereas, conversely, the cognition of corporeal things is better than the love of corporeal things.

Still, absolutely speaking, the intellect is more noble than the will.

**Reply to objection 1:** The notion of a cause is taken from a comparison of the one thing to the other, and in such a comparison the notion of the good is the most important; but ‘true’ is said, rather, in an absolute sense, and it signifies the notion of the good itself. Hence, even the good is something true.

On the other hand, the true is itself a certain good, because the intellect is an entity, and the true is its end. And among other ends this end is the most excellent, just as the intellect is the most excellent among the powers.

**Reply to objection 2:** What is prior in generation and in time is less perfect, since in one and the same thing potentiality temporally precedes actuality and imperfection temporally precedes perfection.

However, what is prior absolutely speaking and according to the order of nature is more perfect, since this is the sense in which actuality is prior to potentiality. And it is in this sense that the intellect is prior to the will—as a mover is prior to what is moved, and as what is active is prior to what is passive. For it is the good as intellectually understood that moves the will.

**Reply to objection 3:** This argument goes through for the will taken in comparison to what is

above the soul. For the virtue of charity is the virtue by which we love God.

#### Article 4

##### Does the will move the intellect?

It seems that the will does not move the intellect:

**Objection 1:** The mover is more noble than and prior to what is moved, since the mover is an agent and, as Augustine says in *Super Genesim ad Litteram* 12 and the Philosopher in *De Anima* 3, an agent is more noble than its patient. But as was explained above (a. 3), the intellect is prior to and more noble than the will. Therefore, the will does not move the intellect.

**Objection 2:** A mover is not moved by the thing it moves, except perhaps incidentally. But the intellect moves the will, since the desirable thing as apprehended by the intellect is an unmoved mover, whereas the appetite is a moved mover. Therefore, the intellect is not moved by the will.

**Objection 3:** We can will only what is understood intellectually. Therefore, if the will moves the intellect to intellectual understanding by willing to have intellectual understanding, then another act of intellectual understanding will have to precede this act of willing, and another act of willing will have to precede that act of intellectual understanding, and so on *ad infinitum*—which is impossible. Therefore, it is not the case that the will moves the intellect.

**But contrary to this:** Damascene says, “It is within our power to learn an art or not to learn it, as we will.” But something is within our power through the will, and we learn an art through the intellect. Therefore, the will moves the intellect.

**I respond:** There are two ways in which something is said to effect movement.

The first way is in the manner of an *end*, in the sense in which an end is said to move an agent. It is in this way that the intellect moves the will, since the will’s object is a good as intellectually understood, and it moves the will as an end.

The second way in which something is said to effect movement is in the manner of an *agent*—in the way in which the thing that effects an alteration moves the thing that is altered, and in the way in which the thing that gives an impulse moves the thing that is impelled. This is the way in which the will moves the intellect and all the powers of the soul, as Anselm explains in *De Similitudinibus*.

The reason for this is that in the case of all ordered active powers, the power that is directed toward a universal end moves the powers that are directed toward particular ends. This is apparent both in natural matters and political matters. For the heavens, which act for the sake of conserving generable and corruptible things in general, move all the lower bodies, each of which acts for the sake of conserving its own species or even the individual. Again, a king, who intends the common good of the whole kingdom, moves by his commands all the heads of the cities (*praepositi civitatum*), who devote themselves to ruling the individual cities.

Now the will’s object is the good and the end in general (*bonum et finis in communi*). But each power is directed toward some proper good that is appropriate for it, in the way that the power of sight is directed toward the perception of color, and in the way that the intellect is directed toward the cognition of what is true. And so the will moves all the powers of the soul to their acts in the manner of an agent—except for the natural powers of the vegetative part of the soul, which are not subject to our choice.

**Reply to objection 1:** The intellect can be thought of in two ways: first, insofar as it apprehends being and truth in general (*est apprehensivus entis et veri universalis*), and, second, insofar as it is a

certain entity and particular power that has a determinate act.

Similarly, the will can be thought of in two ways: first, according to the universality of its object, i.e., insofar as it desires the good in general (*appetitiva boni communis*), and, second, insofar as it is a certain determinate power of the soul having a determinate act.

Thus, if the intellect and will are compared with respect to the nature of the universality of both their objects, it has already been explained above (a. 3) that in this sense the intellect is absolutely speaking higher and more noble than the will.

Moreover, if the intellect is thought of with respect to the universality of its object and the will insofar as it is a certain determinate power, then, once again, the intellect is higher than and prior to the will, since the will itself, along with its act and its object, is contained under the notions *being* and *true*, which the intellect apprehends. Hence, the intellect has intellectual understanding of the will and of its act and its object, just as it has intellectual understanding of the other specific things it understands, such as a rock or a piece of wood, which are contained under the common notions *being* and *true*.

However, if the will is thought of with respect to the general notion of its object, which is the good, and the intellect is thought of insofar as it is a certain specific entity and power, then the intellect is contained under the common notion *good* as a certain specific good, along with the act of intellectual understanding itself and its object, which is the true; each of them is a certain specific good. And in this respect the will is higher than the intellect and able to move it.

From these considerations it is apparent that the reason why these powers include one another by their acts is that the intellect understands that the will wills, and the will wills that the intellect understand. And by a similar line of reasoning, the good is contained under the true insofar as the good is a certain true thing that is understood, and the true is contained under the good insofar as the true is a certain desired good.

**Reply to objection 2:** As has already been explained, the intellect moves the will in a way different from the way in which the will moves the intellect.

**Reply to objection 3:** There is no need to proceed to infinity; instead, one stops with the intellect as the first thing. For an apprehension must precede every movement of the will, but it is not the case that a movement of the will precedes every apprehension. Rather, the source of counsel and understanding is an intellectual principle that is higher than our intellect, viz., God. Aristotle likewise makes this claim in *Eudemian Ethics* 7, and in this way he shows that there is no infinite regress.

## Article 5

### Should the irascible and the concupiscible be distinguished in the higher appetite, i.e., the will?

It seems that the irascible and the concupiscible should be distinguished in the higher appetite, i.e., the will:

**Objection 1:** The name of the concupiscible power is taken from desire (*a concupiscendo*) and the name of the irascible power is taken from anger (*ab irascendo*). But there are some instances of desire (*concupiscentia*) that can involve only the intellectual appetite, i.e., the will, and cannot involve the sentient appetite, e.g., the desire for wisdom (*concupiscentia sapientiae*) of which Wisdom 6:21 says, “The desire for wisdom leads to the everlasting kingdom.” There are likewise instances of anger that can involve only the intellectual appetite and cannot involve the sentient appetite, as when we are angry about vices; hence, in *Super Matthaenum* Jerome says, “Let us have in the irascible power a hatred for vices.” Therefore, the irascible and the concupiscible should be distinguished in the intellectual appetite, just as in the sentient appetite.

**Objection 2:** According to what is commonly said, charity exists in the concupiscible power, whereas hope exists in the irascible power. But charity and hope cannot exist in the sentient appetite, since they are intelligible objects and not sensible objects. Therefore, the concupiscible and the irascible should be posited in the intellective part of the soul.

**Objection 3:** *De Spiritu et Anima* says, “The soul has these powers [viz., the irascible, the concupiscible, and the rational] before it is mixed with the body.” But no power of the sentient part belongs just to the soul; instead, as was explained above (q. 77, a. 5), it belongs to the conjoined being. Therefore, the irascible and the concupiscible exist in the will, i.e., in the intellective appetite.

**But contrary to this:** Gregory of Nyssa says that the non-rational part of the soul is divided into the desirous power and the irascible power (*dividitur in desiderativum et irascitivum*); and Damascene says the same thing in *De Fide Orthodoxa* 2. Moreover, in *De Anima* 3 the Philosopher says that “the will exists in reason, whereas concupiscence and anger, or desire and vehemence (*animus*), exist in the non-rational part of the soul.”

**I respond:** The irascible and the concupiscible are not parts of the intellective appetite, which is called the will. For, as was explained above (q. 59, a. 4 and q. 79, a. 7), a power that is ordered toward an object under a common notion is not diversified by special differences contained under that common notion. For instance, since the power of sight is directed to the visible under the notion *colored*, visual powers are not multiplied according to the diverse species of color. However, if there were a power that was directed toward what is white insofar as it is white and not insofar as it is colored, then it would be diverse from a power directed toward what is black insofar as it is black.

Now the sentient appetite is not directed toward the common notion *good*, since the sensory powers do not apprehend the universal. And so the parts of the sentient appetite are diversified in a way that corresponds to the diverse notions of particular goods. For the concupiscible is directed at the proper notion of the good insofar as it is pleasant to the senses and agreeable to the nature, whereas the irascible is directed toward the notion of the good insofar as it repels and attacks that which inflicts harm.

The will, however, is directed toward the good under the common notion *good*. And so it is not the case that appetitive powers are diversified within it, i.e., within the intellective appetite, in such a way that within the intellective appetite there would be a distinct irascible power and a distinct concupiscible power—just as it is not the case that apprehensive powers are multiplied in the intellect, even though they are multiplied among the sensory powers.

**Reply to objection 1:** Love (*amor*), concupiscence (*concupiscentia*), and other things of this sort are taken in two ways.

For sometimes they are taken insofar as they are certain passions, bringing with them a certain arousal of feeling (*cum concitatione animi*). This is the way they are commonly taken, and when they are taken in this way, they exist only in the sentient appetite.

In the second way, they signify a simple affection, without passion or an arousal of feeling. Taken in this way, they are acts of the will, and in this sense they are likewise attributed to the angels and to God. But insofar as they are taken in this way, they involve only a single power, which is called the will, and not diverse powers.

**Reply to objection 2:** The will can be called irascible insofar as it wills to fight off evil not from the force of passion, but by the judgment of reason. And, in the same way, it can be called concupiscible because of its desire for the good. And this is the sense in which charity and hope exist in a concupiscible power and an irascible power, i.e., they are in the will insofar as it is ordered toward acts of this sort.

This is likewise the way one can interpret what *De Spiritu et Anima* says, viz., that the irascible and the concupiscible belong to the soul before it is united to the body (insofar as one understands this to be a

natural ordering and not a temporal ordering)—even though it is unnecessary to pay heed to what this particular book says.

**Reply to objection 3:** From this the answer to the third objection is obvious.

## QUESTION 83

### Free Choice

Next we ask about free choice (*liberum arbitrium*). And on this topic there are four questions: (1) Does man have free choice? (2) What is free choice: a power, an act, or a habit? (3) If it is a power, is it an appetitive power or a cognitive power? (4) If it is an appetitive power, is it the same power as the will, or a distinct power?

### Article 1

#### Does man have free choice?

It seems that man does not have free choice or free judgment (*liberum arbitrium*):

**Objection 1:** Anyone who has free choice does what he wants to. But a man does not do what he wants to; for Romans 7:15 says, “For the good which I will, I do not; but the evil which I will not, that I do.” Therefore, man does not have free choice.

**Objection 2:** Anyone who has free choice is such that it is up to him to will or not to will, to act or not to act. But this is not the way it is with man; for Romans 9:16 says, “It is not up to him that wills”—i.e., it is not up to him to will—“nor up to him that runs ...”—i.e., it is not up to him to run. Therefore, man does not have free choice.

**Objection 3:** As *Metaphysics* 1 says, “The free is that which is a cause of itself.” Therefore, that which is moved by another is not free. But God moves the will; for Proverbs 21:1 says, “The heart of the king is in the hand of the Lord; wherever He will He shall turn it,” and Philippians 2:13 says, “It is God who works in us both to will and to accomplish.” Therefore, man does not have free choice.

**Objection 4:** Anyone who has free choice is the master of his own acts. But man is not the master of his own acts, since, as Jeremiah 10:23 says, “The way of a man is not his; neither is it in a man ... to direct his own steps.” Therefore, man does not have free choice.

**Objection 5:** In *Ethics* 3 the Philosopher says, “Each man is such that the end appears to him in a way that corresponds to what he is like (*qualis est*).” But what we are like is not within our power; rather, it is ours by nature. Therefore, it is natural to us that we should pursue a given end. Therefore, this does not come from free choice.

**But contrary to this:** Ecclesiasticus 15:14 says, “God made man from the beginning, and left him in the hand of his own counsel”—and a Gloss adds, “... that is, left him with freedom of choice.”

**I respond:** Man has free choice. Otherwise, deliberations, exhortations, precepts, prohibitions, rewards, and punishments would make no sense (*frustra essent*).

To see this clearly, note that some things act without judgment, e.g., a rock moving downward and, similarly, all things that lack cognition.

Other things act with judgment, but not with *free* judgment, viz., brute animals. For instance, a sheep, seeing a wolf, judges by a natural judgment—and not by a free judgment—that it should run away from the wolf, since it makes this judgment by natural instinct (*ex naturali instinctu*) and not by comparing alternatives (*non ex collatione*). And the same holds for every judgment made by brute animals.

Now a man acts by judgment, since through his cognitive power he judges that something should be pursued or avoided. But the reason why he acts by *free* judgment and is able to go in alternative ways (*potens in diversa ferri*) is that in the case of a particular action this judgment arises from a comparison made by reason (*ex collatione quadam rationis*) and not from natural instinct. For with respect to contingent matters, reason has an openness with respect to opposites (*ratio habet viam ad opposita*), as is

clear from dialectical syllogisms and rhetorical persuasions. But particular actions (*operabilia*) are contingent matters, and so with respect to them the judgment of reason is related to different alternatives and is not determined to just one (*ad diversa se habet et non est determinatum ad unum*). Accordingly, by the very fact that he is rational, man must have free choice.

**Reply to objection 1:** As was explained above (q. 81, art. 3), even though the sentient appetite obeys reason, it is still able to resist it in some cases by having desires that are contrary to what reason dictates. This, then, is the good that a man does not do when he wants to, viz., not to have a desire contrary to reason—as Augustine’s gloss on the same passage explains.

**Reply to objection 2:** This passage from the Apostle should not be interpreted to mean that man does not will by free choice or that he does not run by free choice. Rather, it should be interpreted to mean that free choice is not sufficient for these things unless it is moved and assisted by God.

**Reply to objection 3:** Free choice is a cause of its own movement in the sense that through free choice a man moves himself to act. However, freedom does not require that what is free should be the first cause of itself—just as, in order for something to be a cause of another, it is not required that it be the first cause of that thing. Therefore, God is the first cause and moves both natural causes and voluntary causes. And just as, in the case of natural causes, He does not, by moving them, deprive their acts of being natural, so too He does not, by moving voluntary causes, deprive their actions of being voluntary, but instead He brings this very thing about in them (*sed potius hoc in eis facit*). For within each thing He operates in accord with what is proper to that thing (*secundum eius proprietatem*).

**Reply to objection 4:** Man’s way is said not to be within his power with respect to the *execution* of his choices, in which a man can be impeded, whether he wants to be or not. However, the choices themselves (*electiones ipsae*) exist *within us*, assuming God’s assistance.

**Reply to objection 5:** There are two senses of ‘what a man is like’ (*qualitas hominis*): (a) natural and (b) subsequent (*superveniens*).

The *natural* sense of what a man is like can be understood either with respect to *the intellective part of the soul* or with respect to *the body and the powers associated with the body*. Thus, given what man is naturally like because of the intellective part of the soul, a man naturally desires his ultimate end, viz., beatitude. As was explained above (q. 82, art. 1 and 2), this is a natural appetite and is not subject to free choice. On the other hand, as regards the body and the powers associated with the body, a man can be what he is like naturally insofar as he has a certain temperament (*complexio*) or disposition because of the influence of corporeal causes which cannot affect the intellective part of the soul, since that part of the soul is not the actuality of a body (*non est alicuius corporis actus*). So, then, given what each man is like according to his corporeal makeup (*secundum corpoream qualitatem*), the end will strike him in a certain way, since a man is inclined by this sort of disposition to choose something or to reject it. However, inclinations of this sort are subject to the judgment of reason, which, as was explained above (q. 81, a. 3), the lower appetite obeys. Hence, this is not prejudicial to freedom of choice.

Now the *subsequent* qualities (*qualitates supervenientes*) are those such as habits and passions, in accord with which someone is more inclined toward one alternative than toward another. Yet even these inclinations are subject to the judgment of reason, and the qualities themselves are also subject to reason, since it is within our power (a) to acquire such qualities, either by causing them or by disposing ourselves to them (*vel causiter vel dispositivè*), or (b) to exclude them from ourselves. And there is nothing here that is incompatible with freedom of choice.

## Article 2

### Is free choice a power?

It seems that free choice is not a power:

**Objection 1:** Free choice (*liberum arbitrium*) is nothing other than free judgment (*liberum iudicium*). But ‘judgment’ names an act and not a power. Therefore, free choice is not a power.

**Objection 2:** Free choice is said to be “a faculty of will and reason (*facultas voluntatis et rationis*).” But ‘faculty’ names a facility with respect to a power, and this sort of facility occurs through a habit. Therefore, free choice is a habit. Also, Bernard says that free choice “is a habit of the soul, free for itself.” Therefore, it is not a power.

**Objection 3:** No natural power is destroyed by sin (*tollitur per peccatum*). But free choice is destroyed by sin; for Augustine says, “A man who uses free choice badly loses both himself and free choice.” Therefore, free choice is not a power.

**But contrary to this:** Nothing except a power, it seems, is the subject of a habit. But free choice is the subject of grace, with the assistance of which it chooses the good. Therefore, free choice is a power.

**I respond:** Even though, according to the proper signification of the term, ‘free choice’ names a certain act, nevertheless, in the common usage of speakers, what we call free choice is the principle of this act, viz., that by which a man judges freely (*quo homo libere iudicat*).

Now the principles of our acts include both powers and habits; for we are said to have cognition both through [the habit of] knowledge (*per scientiam*) and through the intellective power (*per intellectivam potentiam*). Therefore, free choice has to be either a power or a habit or a power along with a habit.

But there are two ways in which it is clear that free choice is neither a habit nor a power along with a habit.

First, if it were a habit, it would have to be a natural habit, since it is natural to man to have free choice. But there is no natural habit available to us for the things that fall under free choice, since the things with respect to which we have natural habits, e.g., assenting to first principles, are such that we are inclined toward them naturally, and things that we are inclined toward naturally do not fall under free choice—as has already been explained in the case of the desire for beatitude (q. 82, a. 1 and 2). Hence, it is contrary to the proper notion of free choice that it be a natural habit. But for it to be a non-natural habit is contrary to its status as something natural (*contra naturalitatem eius*). And so it follows that free choice is in no way a habit.

Second, as *Ethics 2* says, a habit is something according to which we are related either in a good way or in a bad way (*bene vel male*) to passions or actions. For instance, through temperance we are related in a good way to sensory desires (*bene ad concupiscentias*), whereas through intemperance we are related to them in a bad way; again, through knowledge we are related in a good way to acts of intellective understanding, whereas through the contrary habit we do badly with respect to the cognition of truth. But free choice is related indifferently to both choosing well and choosing badly (*indifferenter se habet ad bene eligendum vel male*). Hence, it is impossible for free choice to be a habit.

Therefore, it follows that free choice is a power.

**Reply to objection 1:** It is customary for a power to be signified by the name of its act. And so the power which is the principle of the act of free judgment is signified by the act. Otherwise, if ‘free choice’ named an act, then it would not always be present (*non semper maneret*) in a man.

**Reply to objection 2:** ‘Faculty’ sometimes names a power that stands ready to operate. And this

is the sense in which ‘faculty’ occurs in the definition of free choice.

Now Bernard is taking ‘habit’ not in the sense in which it is divided off against ‘power’, but rather insofar as it signifies a relation (*habitus*) by which someone is in some way related to an act—and this is either through a power or through a habit. For through a power a man is related as one who is able to act, whereas through a habit he is related as one who is ready to act well or as one who is ready to act badly.

**Reply to objection 3:** By sinning, a man is said to have lost free choice not with respect to his natural freedom, i.e., freedom from coercion, but with respect to that freedom which is freedom from sin and misery (*a culpa et a miseria*). This will be treated below in the tract on morals, in the second part of this work (*ST* 1-2, qq. 85-89 and q. 109).

### Article 3

#### Is free choice an appetitive power?

It seems that free choice is a cognitive power and not an appetitive power:

**Objection 1:** Damascene says, “Free choice immediately accompanies the rational (*cum rationali confestim comitatur*).” But reason (*ratio*) is a cognitive power. Therefore, free choice is a cognitive power.

**Objection 2:** Free choice is, as it were, free judgment. But judging is an act of a cognitive power (*cognitiva virtus*). Therefore, free choice is a cognitive power.

**Objection 3:** Free choice (*liberum arbitrium*) mainly involves the act of choosing (*electio*). But the act of choosing seems to involve cognition, since choosing implies a sort of comparison of one alternative to another, and this is proper to a cognitive power (*proprium cognitivae virtutis*). Therefore, free choice is a cognitive power (*potentia cognitiva*).

**But contrary to this:** In *Ethics* 3 the Philosopher says that choice (*electio*) is “a desire for those things that are within our power (*desiderium eorum quae sunt in nobis*).” But desire is an act of an appetitive power. Therefore, so is the act of choosing. But free choice (*liberum arbitrium*) exists insofar as we choose. Therefore, free choice is an appetitive power (*virtus appetitiva*).

**I respond:** The act of choosing is what is proper to free choice (*proprium liberi arbitrii est electio*); for we are said to have free choice because we are able to take one thing while rejecting another, and this is what it is to choose. And so it is on the basis of the act of choosing that one must inquire into the nature of free choice.

Now in an act of choosing, something from the cognitive power comes together with something from the appetitive power. On the part of the cognitive power it is required that there be deliberation (*consilium*), through which one judges which of the alternatives is to be preferred, whereas on the part of the appetitive power it is required that the judgment made through deliberation be accepted by desiring it. And so in *Ethics* 6 Aristotle leaves it in doubt whether the act of choosing belongs mainly to the appetitive power or to the intellective power; for he says that choice “is either an appetitive understanding or an intellective desire (*intellectus appetitivus vel appetitus intellectivus*).”

However, in *Ethics* 3 he leans more to the view that it is an intellective desire, when he calls choice a ‘deliberative desire’ (*desiderium consiliabile*). The reason for this is that the proper object of an act of choosing is the means to an end. But the means to an end has, as such, the character of the sort of good that is called ‘useful’ (*bonum utile*). And so, since it is the good as such that is the object of the appetite, it follows that an act of choosing is mainly an act of the appetitive power. And so free choice is an

appetitive power.

**Reply to objection 1:** Appetitive powers accompany apprehensive powers. And this is why Damascene says, “Free choice immediately accompanies the rational.”

**Reply to objection 2:** Judgment is, as it were, the conclusion and determination of deliberation. But deliberation is made determinate, first of all, by the decision of reason (*per sententiam rationis*) and, secondly, by the approval of the appetite (*per acceptationem appetitus*). That is why in *Ethics* 3 the Philosopher says, “When we have judged on the basis of deliberating, we desire in accord with the deliberation.” This is the sense in which the act of choosing is itself called a sort of judgment, from which comes the name ‘free decision’ (*liberum arbitrium*).

**Reply to objection 3:** The comparison that is implied by the name ‘choice’ pertains to the antecedent deliberation, which belongs to reason. For even though the appetite does not itself carry out a comparison, still, insofar as it is moved by a cognitive power that does carry out comparisons, it has a certain likeness to a comparison when it opts for one alternative over the other (*dum unum alteri praeoptat*).

#### Article 4

##### Is free choice a power distinct from the will?

It seems that free choice is a power distinct from the will:

**Objection 1:** In *De Fide Orthodoxa* 2 Damascene says that *thelesis* is one thing and *bulesis* another. But *thelesis* is the will (*voluntas*) and *bulesis* seems to be free choice (*liberum arbitrium*), since *bulesis*, according to Damascene, is a willing (*voluntas*) with respect to some aspect of one thing in comparison to another. Therefore, it seems that free choice is a power distinct from the will.

**Objection 2:** Powers are known through their acts. But choosing (*electio*), which is the act of free choice, is distinct from the act of willing (*aliud a voluntate*), as *Ethics* 3 says. For the act of willing (*voluntas*) has to do with the end, whereas the act of choosing has to do with the means to the end. Therefore, free choice is a power distinct from the will (*liberum arbitrium est alia potentia a voluntate*).

**Objection 3:** The will is an intellectual appetite. But the intellect has two powers, viz., the active intellect and the passive intellect (*agens et possibilis*). Therefore, the intellectual appetite should likewise have another power besides the will. And there does not seem to be such a power except for free choice. Therefore, free choice is a separate power over and beyond the will (*alia potentia praeter voluntatem*).

**But contrary to this:** In *De Fide Orthodoxa* 3 Damascene says that free choice is nothing other than the will.

**I respond:** As was explained above (q. 80, a. 2), the appetitive powers have to be proportioned to the apprehensive powers. But, within the intellectual appetite, the will and free choice, which is nothing other than the power of choosing (*vis electiva*), bear the same relation to one another that, within intellectual apprehension, the intellect and reason bear to one another. This is clear from the relations among their objects and acts.

For to understand a thing intellectually (*intelligere*) implies a simple acceptance (*importat simplicem acceptationem*) of it, and so, properly speaking, what is said to be understood intellectually are principles that are known in their own right without any comparisons (*sine collatione per seipsa cognoscuntur*). By contrast, to reason discursively (*ratiocinari*) is, properly speaking, to come to the cognition of one thing on the basis of something else, and so, properly speaking, we have discursive

reasoning with respect to conclusions that are known from principles (*proprie de conclusionibus ratiocinamur quae ex principiis innotescunt*).

Something similar holds for the appetite. An act of willing (*velle*) implies a simple desire (*importat simplicem appetitum*) for something, and so the will (*voluntas*) is said to be concerned with the end, which is desired for its own sake (*propter se appetitur*). On the other hand, to choose (*eligere*) is to desire something for the sake of attaining something else, and so, properly speaking, choice is directed toward the means to an end.

Now, in appetitive matters, the end is related to the means to the end, which are desired for the sake of the end, in the same way that, in cognitive matters, the principle is related to the conclusion, to which we assent because of the principles. Hence, it is clear that the will is related to the power to choose, i.e., to free choice, in the same way that the intellect is related to reason. But it was shown above (q. 79, a. 8) that understanding intellectually and reasoning discursively belong to the same power, just as coming to rest and being moved belong to the same power. Hence, an act of willing and an act of choosing likewise belong to the same power (*eiusdem potentiae est velle et eligere*). Because of this, the will and free choice are a single power and not two powers.

**Reply to objection 1:** *Bulesis* is distinguished from *thelesis* because of a difference between the acts and not because of a diversity of powers.

**Reply to objection 2:** As has been explained, choosing (*electio*) and willing (*voluntas*), i.e., the act itself of willing (*ipsum velle*), are diverse acts, and yet they belong to a single power, just as understanding intellectually (*intelligere*) and reasoning discursively (*ratiocinari*) likewise belong to the same power.

**Reply to objection 3:** The intellect is related to the will as its mover. And so there is no need to distinguish an active will from a passive will (*non oportet in voluntate distinguere agens et possibile*).

## QUESTION 84

### How the Conjoined Soul Understands Corporeal Things That are Below Itself

Next we have to consider the acts of the soul with respect to the intellective and appetitive powers, since the other powers of the soul are not directly relevant to the theologian's inquiry. Now the acts of the appetitive part of the soul are relevant to moral knowledge (*moralis scientia*), and so they will be treated in the second part of this work (*ST* 1-2 and 2-2), in which moral matters will be discussed. At present, however, we will discuss the acts of the intellective part.

In the consideration of these acts, we will proceed in the following way: We have to consider, first, how the soul has intellective understanding when it is conjoined to the body (questions 84-88), and, second, how the soul has intellective understanding when it is separated from the body (question 89).

The consideration of the first topic will have three parts: We will consider, first, how the soul has intellective understanding of corporeal things, which are below it (questions 84-86); second, how it has intellective understanding of itself and of what is contained within itself (question 87); and, third, how it has intellective understanding of immaterial substances, which are above it (question 88).

As for the cognition of corporeal things, there are three matters to be considered: first, by what means (*per quid*) it has cognition of them (question 84); second, in what manner and order (*quomodo et quo ordine*) it has cognition of them (question 85); and, third, what (*quid*) it has cognition of in them (question 86).

On the first topic there are eight questions: (1) Does the soul have cognition of corporeal things through the intellect? (2) Does the soul have intellective understanding of them through its own essence or instead through species? (3) If through species, are the species of all intelligible things naturally inherent (*naturaliter innatae*) in the soul? (4) Do the species flow into the soul from immaterial separated forms? (5) Does our soul see in the eternal conceptions (*in rationibus aeternis*) all the things it has intellective understanding of? (6) Does it acquire intelligible cognition from the sensory power? (7) Can the intellect engage in actual intellective understanding through the intelligible species that it possesses without turning itself toward phantasms? (8) Is the intellect's judgment impeded when the sentient powers are impeded?

### Article 1

#### Does the soul have cognition of bodies through the intellect?

It seems that the soul does not have cognition of bodies through the intellect:

**Objection 1:** In *Soliloquia* 2 Augustine says, "Bodies cannot be comprehended by the intellect; nor can a body be seen except by the senses." Also, in *Super Genesim ad Litteram* 12 he says that intellectual vision is of things that by their essence exist in the soul. But bodies are not things of this sort. Therefore, the soul cannot have cognition of bodies through the intellect.

**Objection 2:** The intellect is related to sensible things in the same way that the sensory power is related to intelligible things. But through the sensory power the soul cannot in any way have cognition of spiritual things, which are intelligible. Therefore, through the intellect the soul cannot in any way have cognition of bodies, which are sensible.

**Objection 3:** The intellect has as its objects things that are necessary and always remain the same way. But all bodies are changeable and do not remain the same way. Therefore, the soul cannot have cognition of bodies through the intellect.

**But contrary to this:** Scientific knowledge (*scientia*) exists in the intellect. Therefore, if the intellect does not have cognition of bodies, it follows that there is no scientific knowledge of bodies.

And so natural science, which is about changeable bodies, will amount to nothing (*peribit*).

**I respond:** To make this question clear, note that the first philosophers who inquired into the natures of things thought that there was nothing in the world except bodies. And because they saw that all bodies are changeable and believed them to be in constant flux, they judged that we can have no certitude concerning the truth about things. For what is in continuous flux cannot be apprehended with certitude, because it perishes before the mind can reach a judgment about it; for instance, as the Philosopher reports in *Metaphysics* 4, Heraclitus claimed that “it is impossible to touch the water of a flowing stream twice.”

Coming along later, and wishing to be able to salvage the claim that we can have stable cognition (*certam cognitionem*) of truth through the intellect, Plato posited, over and beyond corporeal things, another kind of entity separated from matter and movement, which he called *species* or *ideas* (*species sive ideas*), through participation in which each singular and sensible thing is said to be either a man or a horse or something else of that sort. In this way, then, he claimed that scientific knowledge, definitions, and whatever else pertains to the act of intellectual understanding has to do not with sensible bodies but instead with those immaterial and separated entities. The result is that the soul does not have intellectual understanding of corporeal entities, but instead has intellectual understanding of the separated species of corporeal entities.

But there are two reasons why this view is evidently false:

First, since the species in question are immaterial and unchangeable, the cognition of motion and matter (which is proper to natural science), along with demonstration by means of moving causes and material causes, would be excluded from the sciences.

Second, it seems laughable that while we are seeking knowledge of things that are manifest to us, we should introduce other entities that cannot be the substances of those things, because they differ from them in *esse*; and so even if we do have cognition of the separated substances in question, we cannot on that account make judgments about sensible things.

Plato seems to have deviated from the truth in this matter because his view that every cognition involves some sort of likeness led him to believe that the form of a thing that is known must exist in the knower in the same way that it exists in the thing known. Now he thought that the form of a thing that is understood exists in the intellect in a way that is universal, immaterial, and without change. This is apparent from the very operation of the intellect, which has intellectual understanding in a mode that is universal and in some sense necessary; for the mode of an action corresponds to the mode of the agent’s form. And so he thought that the things that are understood must subsist in this same way in themselves, viz., immaterially and unchangeably.

However, this is not necessary. For we see even among sensible things that a form exists in one sensible thing in a way different from the way in which it exists in another sensible thing; for instance, in one thing whiteness is more intense (*intensior*) and in another it is less intense (*remissior*), and in one thing whiteness is combined with sweetness and in another thing it exists without sweetness. Along the same lines, a sensible form exists in one way in a thing that exists outside the soul and in another way in the sensory power, which receives the forms of sensible things without matter; for instance, it receives the color of the gold without the gold. Similarly, the intellect receives the species of corporeal things, which are material and changeable, in its own way, viz., immaterially and without change. For what is received exists in the thing receiving it according to the mode of the thing receiving it.

Therefore, one must reply that the soul, through the intellect, has cognition of bodies by means of a cognition that is immaterial, universal, and necessary.

**Reply to objection 1:** Augustine’s words should be taken to apply to the things *by which* our intellect has cognition and not to the things *of which* it has cognition. For the intellect has cognition by understanding bodies intellectually. But it understands not through the bodies, or through material and

corporeal likenesses, but instead through immaterial and intelligible species, which by their essence (*per sui essentiam*) are able to exist in the soul.

**Reply to objection 2:** As Augustine says in *De Civitate Dei* 22, one should not claim that just as the senses have cognition only of bodies, so the intellect has cognition only of spiritual things. For then it would follow that God and angels have no cognition of corporeal things. The reason for this disanalogy (*diversitas*) is that the lower power does not extend to those things that belong to the higher power, but the higher power accomplishes in a more excellent way what belongs to the lower power.

**Reply to objection 3:** Every change (*motus*) presupposes something that perdures (*aliquid immobile*). For instance, when there is a change (*transmutatio*) with respect to a quality, the substance perdures; and when a substantial form is changed, the matter perdures. Also, there are unchanged relations involving changing things; for instance, even if Socrates is not always sitting, it is nonetheless unchangeably true that whenever he is sitting, he remains in one place. Because of this, nothing prevents us from having unchangeable scientific knowledge about changeable things.

## Article 2

### Does the soul have intellectual understanding of corporeal things through its own essence?

It seems that the soul has intellectual understanding of corporeal things through its own essence:

**Objection 1:** In *De Trinitate* 10 Augustine says that the soul “captures and collects images of bodies that are made in its very self and of its very self; for in forming them it communicates something of its own substance.” But it is through likenesses of bodies that the soul has intellectual understanding of bodies. Therefore, it is through its own essence, which it communicates in forming such likenesses and from which it forms them, that the soul has cognition of corporeal things.

**Objection 2:** In *De Anima* 3 the Philosopher says, “The soul is in some sense all things.” Therefore, since like is known by like, it is through itself, it seems, that the soul has cognition of corporeal things.

**Objection 3:** The soul is higher than corporeal creatures. But as Dionysius says, lower things exist in a more eminent way in higher things than they do in themselves. Therefore, all corporeal creatures exist in a more noble way in the substance of the soul than they do in themselves. Therefore, it is through its own substance that the soul is able to have cognition of corporeal creatures.

**But contrary to this:** In *De Trinitate* 9 Augustine says, “The mind gathers knowledge of corporeal things through the body’s sensory power.” But the soul itself is not knowable through the bodily sensory power. Therefore, it does not have cognition of corporeal things through its own substance.

**I respond:** The ancient philosophers claimed that it is through its own essence that the soul has cognition of bodies. For it was generally instilled in the minds of all of them that like is known by like. And they believed that the form of the thing known exists in the knower in the same way that it exists in the thing known.

The Platonists, on the other hand, held a contrary opinion. For since Plato perceived that the intellectual soul is immaterial and has cognition non-materially, he claimed that the forms of the things that are known subsist immaterially.

By contrast, since the prior naturalists had believed that the things known were corporeal and material, they claimed that the things known must also exist materially in the soul when it has cognition. And so, in order to attribute cognition of all things to the soul, they claimed that the soul has a nature in common with all things. And since the nature of things that have a beginning (*natura principiatorum*) is

constituted from the principles, they attributed to the soul the nature of a principle, so that those who thought that fire was the principle of all things held that the soul has the nature of fire, and similarly for air and water. Empedocles, who posited four material elements and two principles that effect movement, likewise claimed that the soul was constituted by these. And so since they posited things materially in the soul, they held that all the soul's cognition is material, and they did not distinguish the intellect from the sensory power.

However, this opinion is disproved, first, by the fact that things that have a beginning exist only in potentiality in the material principle, which is what they were talking about. However, as is clear from *Metaphysics* 9, there is cognition of a thing only insofar as it exists in actuality and not insofar as it exists in potentiality, and so neither is the potentiality itself known except through the actuality. So, then, it would not be sufficient to attribute the nature of the principles to the soul in order for the soul to have cognition of all things—unless there existed within it the natures and forms of *all* the singular effects, e.g., bone and flesh and other things of this sort, as Aristotle argues, in opposition to Empedocles, in *De Anima* 1.

Second, if the thing known had to exist materially in the knower, then there would be no reason why entities subsisting materially outside the soul should themselves lack cognition; for instance, if it is by means of fire that the soul has cognition of fire, then fire which exists outside the soul would likewise have cognition of fire.

It follows, then, that material things that are known must exist in the knower not in a material way, but rather in a non-material way. The reason for this is that an act of cognition extends to things that exist outside the one who has the cognition; for we have cognition even of those things that exist outside of us. But it is through matter that the form of an entity is determined to a singular thing (*determinatur ad aliquid unum*). Hence, it is clear that the nature of cognition stands in opposition to the nature of materiality. And so, as *De Anima* 2 says, things that receive forms only materially, such as plants, have no cognition at all (*nullo modo sint cognoscitiva*). But to the extent that something possesses the form of the thing known in a more non-material way, its cognition is more perfect. Hence, our intellect, which abstracts species not only from matter but also from individuating material conditions, has more perfect cognition than does the sensory power, which receives without matter but with material conditions the forms of the things it has cognition of. And among the senses themselves, the sense of sight has the most perfect cognition (*est magis cognoscitivus*), since it is the least material—as was explained above (q. 78, a. 3). And among intellects themselves, any given one is more perfect to the extent that it is more non-material.

From these considerations it is clear that if there is any intellect that has cognition of all things through its own essence, then its essence must possess everything within itself in a non-material way—just as the ancients claimed that the soul's essence is actually composed of the principles of all material things, so that it might have cognition of all things. But it is proper to God that His essence should, in a non-material way, comprehend all things in the sense in which effects preexist virtually in their cause. Therefore, it is God alone who has intellectual understanding of all things through His own essence—and not the human soul or even the angels.

**Reply to objection 1:** Augustine is talking here about imaginative vision, which is effected by the images of bodies. In forming these images, the soul communicates something of its own substance in the sense in which a subject exists in order to be informed by some form. And so it makes images of this sort 'from' itself—not in the sense that the soul or something of the soul is converted into this or that image, but in the sense in which a body is said to become something colored when it is informed by a color.

This interpretation is clear from what follows the quoted passage. For he says, "It keeps something"—namely, something not formed by such an image—"that freely judges concerning the species of such images"—and this, he says, is the mind or intellect. And he says that the part of the soul

which is informed by images of this sort, viz., the imagination (*partem imaginativam*), “is common to us and to the beasts.”

**Reply to objection 2:** Unlike the ancient naturalists, Aristotle did not claim that the soul is actually composed of all things. Rather, he said that “the soul is in some sense all things” insofar as it is in potentiality with respect to all things—in potentiality to sensible things through the senses and to intelligible things through the intellect.

**Reply to objection 3:** Every creature has finite and determinate *esse*. Hence, even if a higher creature’s essence bears a certain likeness to a lower creature’s essence insofar as they share in the same genus, it nonetheless does not bear a perfect likeness to it, since it is determined to a species that lies outside of the lower thing’s species. By contrast, God’s essence, as the universal principle of all things, is a perfect likeness of all things with respect to *everything* that is found in things.

### Article 3

#### Does the soul have intellectual understanding of all things through species that it is naturally endowed with?

It seems that the soul has intellectual understanding of all things through species that it is naturally endowed with (*per species sibi naturaliter inditas*):

**Objection 1:** In his homily on the feast of the Ascension Gregory says, “Man has intellectual understanding in common with the angels.” But the angels have intellectual understanding through forms that they are naturally endowed with; thus, in the *Liber de Causis* it says, “Every intelligence is filled with forms.” Therefore, the soul likewise has species of things which it is naturally endowed with and by means of which it has intellectual understanding of corporeal things.

**Objection 2:** The intellectual soul is more noble than the primary matter of a corporeal thing. But primary matter is created by God with forms that it is in potentiality with respect to. Therefore, *a fortiori*, the intellectual soul is created by God with intelligible species. And so the soul has intellectual understanding of corporeal things through species that it is naturally endowed with.

**Objection 3:** No one can give true replies except about something he knows (*scit*). But even someone uneducated (*idiotia*), who has not acquired any scientific knowledge (*scientiam*), gives true replies about singular things if he is interrogated in the right order—as is told of a certain man in Plato’s *Meno*. Therefore, before someone acquires scientific knowledge, he has a cognition of things (*antequam aliquis acquirat scientiam, habet rerum cognitionem*). But this would not be so unless the soul had species that it is naturally endowed with. Therefore, the soul has intellectual understanding of corporeal things through species that it is naturally endowed with.

**But contrary to this:** In *De Anima* 3, talking about the intellect, the Philosopher says that it is “like a slate on which nothing has been written.”

**I respond:** Since a form is a principle of action, a thing has to be related to the form that is the principle of an action in the same way that it is related to the action; for instance, if moving upwards derives from the form of being lightweight (*ex levitate*), then what is borne upwards only in potentiality is lightweight only in potentiality, whereas what is being carried upwards in actuality is lightweight in actuality.

Now we see that a man sometimes has cognition only in potentiality, both with respect to the sensory power and with respect to the intellect. And from this potentiality he is led into actuality (a) by the actions of sensible things on the sensory power in order to have sensation and (b) by learning or

discovery in order to have intellectual understanding. Hence, one must claim that a soul with cognitive powers (*anima cognoscitiva*) is in potentiality both with respect to those likenesses that are principles of sensing and also with respect to those likenesses that are principles of intellectual understanding. Because of this, Aristotle claimed that the intellect, by which the soul has intellectual understanding, does not have any species that it is naturally endowed with, but is in potentiality at the beginning with respect to all species of this sort.

Now that which actually has a form is sometimes unable to act in accord with that form because of some impediment, as when a lightweight thing is impeded from being borne upwards. For this reason, Plato claimed that man's intellect is naturally full of all the intelligible species, but is prevented by its union with the body from being able to make the transition into actual [understanding] (*exire in actum*).

However, this claim does not seem right.

For, first, if the soul has a natural knowledge of all things, it does not seem possible to suffer such a great forgetfulness of this natural knowledge that one would not know that he possesses knowledge of this sort. For no man is oblivious of those things that he knows naturally, such as that a whole is greater than its part, and other things of this sort. This seems especially problematic if one claims, as we established above (q. 76, a. 1), that it is natural for the soul to be united to the body; for it is absurd that a thing's natural operation should be totally impeded by something that belongs to it by nature.

Second, the falsity of the claim in question is manifestly obvious from the fact that when one of the senses is inoperative (*deficiente aliquo sensu*), there is no knowledge (*scientia*) of the things apprehended by that sense; for instance, someone born blind cannot have cognition of colors (*notitiam de coloribus*). This would not be the case if the soul were naturally endowed with the notions of all intelligible things.

And so one should reply that the soul does not have cognition of corporeal things through species that it is naturally endowed with.

**Reply to objection 1:** Man does, to be sure, agree with the angels in having intellectual understanding, but he falls short of the eminence of their intellect, just as lower bodies, which *merely exist* according to Gregory, fall short of the sort of existence had by higher bodies. For the matter of the lower bodies is not totally perfected (*completa*) by their form, but instead remains in potentiality to forms that it does not now have, whereas the matter of the celestial bodies is totally perfected by their forms in such a way that it does not remain in potentiality with respect to any other form, as was established above (q. 66, a. 2). Similarly, an angel's intellect is by its own nature perfected by intelligible species, whereas the human intellect is in potentiality to species of this sort.

**Reply to objection 2:** Primary matter has substantial *esse* (*esse substantiale*) through form, and so it had to be created with some form; otherwise, it would not exist in actuality. Yet when it exists with one form, it remains in potentiality with respect to other forms. By contrast, the intellect does not have substantial *esse* through an intelligible species. And so the cases are not parallel.

**Reply to objection 3:** A well-ordered interrogation (*ordinata interrogatio*) proceeds from common principles, known *per se* (*per se notis*), to more particular matters (*ad propria*), and scientific knowledge is caused by such a progression in the learner's soul. Hence, when at a later point he gives true replies about the things concerning which he is being questioned, this is not because he knew those things beforehand; rather, it is because at that point he is learning them *de novo*. For regardless of whether it is by making a presentation or by asking a series of questions (*proponendo vel interrogando*) that the teacher proceeds from the common principles to the conclusions, in both cases the listener's mind becomes certain about the conclusions by means of the principles.

#### Article 4

##### Do the intelligible species flow into the soul from separated forms?

It seems that the intelligible species flow into the soul from separated forms (*effluent in animam ab aliquibus formis separatis*):

**Objection 1:** Everything that is such-and-such by participation is caused to be that way by something that is such-and-such by its essence; for instance, what is on fire is traced back to fire as a cause. But insofar as the intellective soul is actually engaged in intellective understanding, it participates in the intelligible things themselves; for the intellect in act is in a certain sense the thing understood in act. Therefore, the things that are actually understood in their own right and in their essence are causes of the intellective soul's actually having intellective understanding. But the things that are actually understood through their essence are forms that exist without matter. Therefore, the intelligible species by which the soul has intellective understanding are caused by separated forms.

**Objection 2:** Intelligible things are related to the intellect in the same way that sensible things are related to the sensory power. But sensible things, which exist in actuality outside the soul, are causes of the sensible species which exist in the sensory power and by which we have sensation. Therefore, the intelligible species by which our intellect has intellective understanding are caused by actually intelligible things that exist outside the soul. But intelligible things of this sort are not anything other than forms separated from matter. Therefore, the intelligible forms that belong to our intellect flow from separated substances.

**Objection 3:** Everything that is in potentiality is led into actuality by what is actual. Therefore, if our intellect, at first being in potentiality, later has actual intellective understanding, this must be caused by some intellect that is always active. But this is a separated intellect. Therefore, the intelligible species by which we have actual intellective understanding are caused by separated substances.

**But contrary to this:** On the view just proposed we would not need the sensory powers in order to have intellective understanding. That this is false is clear mainly from the fact that someone who lacks one of the sensory powers can in no way have scientific knowledge of the sensible things that correspond to that sensory power.

**I respond:** Some have claimed that the intelligible species that belong to our intellect proceed from certain separated forms or substances—and this in one of two ways:

(a) Plato, as has been explained (a. 1), posited forms of sensible things that subsist in their own right without matter, e.g., the form of man, which he called *man per se*, and the form or idea of a horse, which he called *horse per se*, and so on for the others. Therefore, he claimed that these separated forms are participated in both by our soul and by corporeal matter—by our soul in order for the soul to have cognition, and by corporeal matter in order for corporeal matter to exist. So just as corporeal matter, by participating in the idea *rock* becomes *this* rock, so our intellect, by participating in the idea *rock*, comes to have an intellective understanding of *rock*. Now this participation is effected by a likeness of the idea itself in the thing that participates in it, in the way in which an exemplar is participated in by an example of it. Therefore, just as he claimed that the sensible forms that exist in corporeal matter flow from the ideas as certain likenesses of them, so too he claimed that our intellect's intelligible species are likenesses of the ideas that they flow from. Because of this, as was explained above (a. 1), he referred scientific knowledge and definitions to the ideas.

(b) However, since, as Aristotle proves a number of times, it is contrary to the nature of sensible things that their forms should subsist without matter, Avicenna, having rejected [Plato's] position, claimed that the intelligible species of all sensible things do not, to be sure, subsist *per se* without matter,

but that instead they preexist in a non-material way in separated intellects. Species of this sort flow from the first of these separated intellects into the next one, and so on for the others up to the last separated intellect, which he names ‘the active intellect’ (*intellectus agens*). From this active intellect, he says, intelligible species flow into our souls and sensible forms flow into corporeal matter.

And so Avicenna agrees with Plato that our intellect’s intelligible species flow from certain separated forms, but whereas Plato claims that these forms subsist *per se*, Avicenna places them in the active intelligence (*in intelligentia agente*). They also disagree in that Avicenna claims that the intelligible species do not remain in our intellect after our intellect ceases to have actual intellectual understanding; instead, the intellect needs to turn itself [toward the active intelligence] once again in order to receive the intelligible species anew. Hence, he does not posit a knowledge that our soul is naturally endowed with, as Plato does when he claims that participations in the ideas remain in the soul permanently (*immobilter*).

However, given this position, no sufficient reason can be given for why our soul is united with a body. For one cannot claim that the intellectual soul is united with a body for the sake of the body, since it is not the case that form exists for the sake of matter or that what effects movement exists for the sake of the thing moved; in fact, just the opposite is true. Now given that the soul does not depend on the body with respect to its *esse*, the body seems necessary to the intellectual soul mainly for the soul’s proper operation, i.e., intellectual understanding. But if the soul were by its nature apt to receive intelligible species only through the influence of separated principles and did not take them from the sensory powers, then it would not need the body in order to have intellectual understanding, and its union with the body would be pointless (*frustra corpori uniretur*).

Nor does it seem adequate to reply that our soul needs the sensory powers for intellectual understanding because it is in some way stimulated by them to consider the things whose intelligible species it has received from the separated principles. For a stimulation of this sort does not seem necessary to the soul except insofar as it is in some sense sleepy or oblivious because of its union with the body, as the Platonists claim. And so the sensory powers would be of no use to the intellectual soul except to remove an impediment that is posed for the soul because of its union with the body. Therefore, one still needs to ask what reason there is for the soul’s union with the body.

On the other hand, if one claims, in accord with Avicenna, that the sensory powers are necessary for the soul because the soul is stimulated by them to turn itself toward the active intelligence, from which it receives the species, then this, too, is inadequate. For if it were in the soul’s nature to have intellectual understanding through species that flow from the active intelligence, it would follow that the soul is sometimes able to turn itself toward the active intelligence by an inclination of its own nature—or even that it is sometimes stimulated by one of the other senses to turn itself toward the active intelligence in order to receive the species of sensible things for which the man in question does not have [the appropriate] sensory power. And in this way someone born blind would be able to have scientific knowledge of colors (*scientia colorum*)—which is manifestly false.

Hence, one should reply that the intelligible species by which our soul has intellectual understanding do not flow from separated forms.

**Reply to objection 1:** The intelligible species that our intellect participates in are traced back, as to a first cause, to a principle that is intelligible through its essence, viz., God. But they proceed from that principle by the mediation of the forms of sensible and material things, from which, as Dionysius puts it, we gather knowledge.

**Reply to objection 2:** Given the *esse* that they have outside the soul, material things are able to be sensible in actuality, but not intelligible in actuality. Hence, there is no parallel between the sensory power and the intellect.

**Reply to objection 3:** Our passive intellect is led from potentiality into actuality by some actual

being, viz., by the active intellect, which, as has been explained (q. 79, a. 4), is a certain power of our soul. But it is not led into actuality by any separated intellect as a proximate cause—though perhaps as a remote cause.

## Article 5

### Does the intellective soul have cognition of material things in the eternal conceptions?

It seems that the intellective soul does not have cognition of material things in the eternal conceptions (*in rationibus aeternis*):

**Objection 1:** That *in which* something is known is itself known to a greater extent and in a prior way. But in the state of the present life, man's intellective soul does not have cognition of the eternal conceptions, since it does not have cognition of God Himself, in whom the eternal conceptions exist, but is instead "conjoined to Him as something unknown," as Dionysius puts in *Mystica Theologia*, chap. 1. Therefore, the soul does not have cognition of all things in the eternal conceptions.

**Objection 2:** Romans 1:20 says, "The invisible things of God are clearly seen through the things that have been made." But the eternal conceptions are numbered among the invisible things of God. Therefore, it is the eternal conceptions that are known through material creatures, and not vice versa.

**Objection 3:** The eternal conceptions are nothing other than the ideas; for in *83 Quaestiones* Augustine says, "The ideas are stable conceptions of things that exist in God's mind." Therefore, if one claims that the intellective soul has cognition of all things in the eternal conceptions, there will be a return to the opinion of Plato, who claimed that all knowledge is derived from the ideas.

**But contrary to this:** In *Confessiones* 12 Augustine says, "If both of us see that what you say is true and if both of us see that what I say is true, then where, I ask, do we see it? Certainly, I do not see it in you, and you do not see it in me; rather, both of us see it in that immutable truth that lies beyond our minds." But immutable truth is contained in the eternal conceptions. Therefore, the intellective soul has cognition of all true things in the eternal conceptions.

**I respond:** As Augustine says in *De Doctrina Christiana* 2, "If those who are called philosophers have by chance made claims that are true and compatible with our Faith, then we must appropriate those truths from them, as from unjust possessors, for our own advantage. For the teachings of the Gentiles contain certain counterfeit and superstitious inventions (*simulata et superstitiosa figmenta*) that each of us who has left the company of the Gentiles should avoid." And so if Augustine, who had been imbued with the teachings of the Platonists, found anything consistent with the Faith in their sayings, he took it over, whereas when he found anything opposed to the Faith, he changed it into something better.

Now, as was explained above (a. 4), Plato claimed that the forms of things subsist in their own right separated from matter, and he claimed that through participation in these forms, which he called 'ideas', our intellect has cognition of all things. For instance, just as corporeal matter becomes a rock through participation in the idea *rock*, so too our intellect comes to have a cognition of *rock* through participation in that same idea. However, as Dionysius points out in *De Divinis Nominibus*, chap. 11, it seems alien to the Faith that the forms of things should subsist in their own right without matter, as the Platonists claimed when they said that *life per se* or *wisdom per se* were certain creative substances. So in *83 Quaestiones* Augustine posited, in place of these ideas that Plato had posited, the conceptions of all creatures existing in God's mind; all things are formed in accord with these conceptions, and, in addition, the human soul has cognition of all things in accord with these conceptions (*secundum quas rationes*).

Therefore, when the question arises whether the human soul has cognition of all things in the

eternal conceptions, one should reply that there are two senses of ‘having a cognition of something *in* something’.

The first sense is to have a cognition ‘in something’ as *in an object that is known*—as, for instance, when someone sees in a mirror those things whose images are reflected back in the mirror (*in speculo resultant*). And in this sense the soul, in the state of the present life, is unable to see all things in the eternal conceptions. However, the blessed in heaven, who see God and see all things in Him, do in this sense have cognition of all things in the eternal conceptions.

In the second sense, one is said to have a cognition of something ‘in something’ as *in a principle of cognition*, as if we were to say that we see ‘in the sun’ those things that we see because of the sun (*per solem*). And given this sense, one must claim that the human soul has cognition of all things in the eternal conceptions, by participation in which we have cognition of all things. For the intellectual light that exists in us is nothing other than a participated likeness of the uncreated light in which the eternal conceptions are contained. Hence, in Psalm 4:6-7 it says, “Many say, ‘Who shows us good things?’” And to this question the Psalmist replies by saying, “The light of your countenance, O Lord, is signed upon us”—as if to say that all things are shown to us by the very mark (*sigillatio*) of the divine light in us.

Still, since in addition to the intellectual light in us, intelligible species taken from the things are necessary for having scientific knowledge of material things, it follows that it is not solely through participation in the eternal conceptions that we have knowledge of material things, in the way that the Platonists claimed that participation in the ideas was by itself sufficient for having knowledge. Hence, in *De Trinitate* 4 Augustine says, “Given that the philosophers prove with convincing arguments that all temporal things are caused by the eternal conceptions, have they been able because of this to see in these conceptions, or infer from them, how many kinds of animals there are, or what the origins (*semina*) of each are? Have they not instead looked for all these things through the history of places and times?”

Moreover, Augustine did not think that all things are known in the eternal conceptions, or in immutable truth, in such a way that the eternal conceptions themselves are seen; this is clear from what he himself says in *83 Quaestiones*: “Not each and every rational soul is claimed to be fit for that vision”—namely, the vision of the eternal conceptions—“but only one that is holy and pure”—as are the souls of the blessed in heaven.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

## Article 6

### Is intellectual cognition taken from sensible things?

It seems that intellectual cognition is not taken from sensible things:

**Objection 1:** In *83 Quaestiones* Augustine says, “Purity of truth should not be expected from the sensory powers of the body.” And there are two ways to prove this. First, from the fact that “everything that a corporeal sense touches is changing without any temporal intermission, and what does not remain the same cannot be perceived.” Second, from the fact that “even when all the things we sense through the body are not present to the senses, we still have their images, as when we are sleeping or furiously angry; but we are unable to discern with the senses whether we are sensing the sensible things themselves or their misleading images, and nothing can be perceived that is not distinguished from what is false.” And so he concludes that truth should not be expected from the sensory powers. But intellectual cognition apprehends truth. Therefore, it is not the case that intellectual cognition should be expected

from the senses.

**Objection 2:** In *Super Genesim ad Litteram* 12 Augustine says, “Do not think that the body has an effect on the spirit, as if the spirit, instead of matter, might be subjected to the body’s action; for what acts is in every way more excellent than what it acts on.” Hence, he concludes that “the body does not cause an image of a body in the spirit, but that the spirit itself causes an image within itself.” Therefore, intellectual cognition is not derived from sensible things.

**Objection 3:** An effect does not extend beyond the power of its cause. But intellectual cognition extends beyond sensible things; for we have intellectual cognition of certain things that cannot be perceived by the sensory power. Therefore, intellectual cognition is not derived from sensible things.

**But contrary to this:** In *Metaphysics* 1 and at the end of *Posterior Analytics* the Philosopher says that our cognition begins from the sensory power.

**I respond:** On this question philosophers have held three positions.

As Augustine explains in his letter *Ad Dioscorum*, Democritus claimed that “the only cause of our cognition is that images come from the bodies we are thinking about and enter into our souls.” And in *De Somno et Vigilia* Aristotle likewise says that Democritus claimed that cognition is effected “by images and discharges (*per idola et defluxiones*).” As Aristotle explains in *De Anima*, the reason for this position was that Democritus himself and the other ancient naturalists did not believe that the intellect differs from the sensory power. And so since the sensory power is affected by the sensible thing, they thought that all of our cognition is brought about just by the changes caused by sensible things. Democritus asserted that these changes are effected through a discharge of images.

By contrast, Plato claimed that the intellect differs from the sensory power, and that the intellect is an immaterial power that does not use a corporeal organ in its own act. And because what is immaterial cannot be affected by what is corporeal, he claimed that intellectual cognition comes about not through the intellect’s being affected by the senses, but rather, as was explained above (aa. 4 and 5), through the intellect’s participation in separated intelligible forms. Moreover, he claimed that the sensory power operates on its own (*operantem per se*). Hence, because the sensory power is a certain spiritual power, it is not affected by the sensible things; rather, the sensory organs are affected by the sensible things, and the soul is in some way stimulated by this change to form the species of sensible things within itself. This is the opinion that Augustine seems to be alluding to in *Super Genesim ad Litteram* 12, when he remarks, “The body does not sense, but instead the soul senses through the body, which it uses as a messenger in order to form within itself what is announced from the outside.” So, then, according to Plato’s opinion, intellectual cognition does not proceed from the sensible thing; not even sentient cognition proceeds entirely from sensible things. Instead, sensible things stimulate the sentient soul to exercise sentient cognition and, similarly, the senses stimulate the intellectual soul to exercise intellectual understanding.

Aristotle, on the other hand, proceeded along a middle course. For with Plato he claimed that the intellect differs from the sensory power. But he claimed that the sensory power does not have a proper operation that the body does not share in (*sine communicatione corporis*), and so sensing is an act of the conjoined being and not of the soul alone; and he made a similar claim about all the operations of the sentient part of the soul. Therefore, since it is not unfitting that sensible things existing outside the soul should cause something in the conjoined being, Aristotle agreed with Democritus that the operations of the sentient part are caused by the impression sensible things make on the sensory power—not by way of discharges, as Democritus had held, but rather through a certain operation. (For as is clear from *De Generatione et Corruptione* 1, Democritus held that every action is effected by a discharge of atoms.) On the other hand, Aristotle held that the intellect has an operation that it does not share with the body. But nothing corporeal can leave an impression (*potest imprimere*) on an incorporeal entity. And so, according to Aristotle, the mere impression of sensible bodies is not enough to cause an intellectual

operation; instead, what is required is something more noble, since “an agent is more honorable than a patient,” as he himself puts it. However, it is not the case that intellectual operations are caused in us by the mere impression of some higher entities, as Plato had claimed. Instead, that higher and more noble agent, which Aristotle calls the ‘active intellect’ and which we have already talked about above (q. 79, aa. 3-4), makes the phantasms received from the senses intelligible in actuality, in the manner of a sort of abstraction (*per modum abstractionis cuiusdam*). Accordingly, as far as the phantasms are concerned, the intellectual operation is caused by the sensory power. But because (a) the phantasms are not sufficient to affect the passive intellect and because (b) they have to be made intelligible in actuality by the active intellect, it cannot be claimed that sentient cognition is the total and perfect cause of intellectual cognition; instead, it is more like a material cause.

**Reply to objection 1:** What these words of Augustine’s mean is that truth is not to be expected in its totality. What is required is the light of the active intellect, through which we have cognition in an unchangeable way of the truth in changeable things, and through which we distinguish those things from their likenesses.

**Reply to objection 2:** Augustine is talking here about imaginative cognition and not intellectual cognition. And since, according to Plato’s opinion, the power of imagining has an operation that belongs to the soul alone, Augustine used the same line of reasoning to show that bodies do not impress their likenesses on the power of imagining, but that the soul itself does this. Aristotle uses the same argument, viz., that an agent is more honorable than a patient, to prove that the active intellect is something separate. There is no doubt that, given Plato’s position, it is necessary to posit in the power of imagining not just a passive power, but an active power as well.

However, if we hold, in accord with Aristotle’s opinion, that the operation of the power of imagining belongs to the conjoined being, then no difficulty ensues. For a sensible body is more noble than an animal’s sensory organ, since it is related to the sensory organ as a being in actuality is related to a being in potentiality—for instance, as something colored in actuality is related to the pupil, which is colored in potentiality.

Still, one could claim that even though the first change in the power of imagining is effected by the sensible things—given that “an image (*phantasia*) is a movement effected in the sensory power (*motus factus secundum sensum*),” as *De Anima* says—nonetheless, there is an operation of man’s soul which, by dividing and composing, fashions diverse images of things, even images that have not been received from the senses. And Augustine’s words can be understood to be making this point.

**Reply to objection 3:** Sentient cognition is not the total cause of intellectual cognition. And so it is no surprise that intellectual cognition extends further than sentient cognition does.

## Article 7

### Can the intellect have actual intellectual understanding through the intelligible species it has within itself, without turning itself to phantasms?

It seems that the intellect can have actual intellectual understanding through the intelligible species it has within itself, without turning itself to phantasms:

**Objection 1:** The intellect becomes active (*fit in actu*) because of the intelligible species by which it is informed. But the intellect’s becoming active is the very act of intellectual understanding. Therefore, the intelligible species are sufficient for the intellect’s actually engaging in intellectual understanding, without turning itself to phantasms.

**Objection 2:** The imagination depends more on the sensory power than the intellect depends on the imagination. But the imagination can be actually engaged in imagining in the absence of sensible things. Therefore, *a fortiori*, the intellect can be actually engaged in intellectual understanding without turning itself to phantasms.

**Objection 3:** There are no phantasms of incorporeal things, since the imagination does not transcend time and continuous quantity (*continuum*). Therefore, if our intellect were unable to have actual intellectual understanding of anything without turning itself to phantasms, it would follow that it cannot have intellectual understanding of anything incorporeal. But this is clearly false, since we have intellectual understanding of truth itself and of God and of the angels.

**But contrary to this:** In *De Anima* 3 the Philosopher says, “The soul does not have intellectual understanding of anything without a phantasm.”

**I respond:** In the state of our present life, in which our intellect is joined to a passible body, it is impossible for it to have an actual intellectual understanding of anything unless it turns itself toward phantasms. There are two indications that make this apparent.

First of all, given that the intellect is a power that does not use a corporeal organ, if no act of a power that uses a corporeal organ were required for its act, then the intellect would not in any way be impeded in its act by an injury to a corporeal organ. But the senses, the imagination, and all the other powers that belong to the sentient part of the soul use a corporeal organ. Hence, it is clear that in order for the intellect to be actually engaged in intellectual understanding—not only for attaining knowledge *de novo*, but also for making use of already acquired knowledge—what is required are acts of the imagination and of the rest of the powers. For we see that when the act of the power of imagining is impeded by an injury to an organ, as in the case of those who are delirious (*in phreneticis*) or, similarly, when the act of the power of remembering is impeded, as in those who are groggy (*in lethargicis*), a man is prevented from having actual intellectual understanding even of those things that he previously had scientific knowledge of.

Second, everyone can experience in his own case that when someone tries to have an intellectual understanding of something, he forms for himself phantasms as examples in which he inspects, as it were, what he is trying to understand. And so, too, when we want to make someone else understand something, we propose to him examples from which he can form phantasms in order to understand the matter at hand. The reason for this is that a cognitive power is proportioned to the thing it has cognition of. Hence, the proper object of an angelic intellect, which is totally separated from a body, is an intelligible substance separated from a body, and it is through intelligible things of this sort that an angel has cognition of material things. By contrast, the proper object of the human intellect, which is conjoined to a body, is a ‘what-ness’ or nature existing in corporeal matter (*quidditas sive naturam in materia corporali existens*), and it is through these natures of visible things that it ascends to some sort of cognition of invisible things as well. But it is part of the conception of this sort of nature that it exists in an individual and not without corporeal matter; for instance, it is part of the conception of the nature of a rock that it exists in individual rocks (*de ratione naturae lapidis est quod sit in hoc lapide*), and part of the conception of the nature of a horse that it exists in individual horses, and so on for the others. Hence, the nature of a rock, or of any material entity, is such that there cannot be a complete and true cognition of it except insofar as it is thought of as existing in a particular. But we apprehend particulars through the sensory power and the imagination. And so for the intellect to have an actual intellectual understanding of its own proper object, it is necessary that it turn itself to phantasms, in order that it might inspect the universal nature as it exists in the particular (*ut speculetur naturam universalem in particulari existentem*). On the other hand, if the proper object of our intellect were a separated form, or if the natures of sensible things did not subsist in particulars (as the Platonists held), then it would not be necessary that our intellect always turn itself to phantasms when engaging in intellectual understanding.

**Reply to objection 1:** As was explained above (q. 79, a. 6), the species that are conserved in the passive intellect exist in it habitually when it is not actually engaged in intellectual understanding. Hence, the conservation of these species is not itself sufficient for us to be actually engaged in intellectual understanding; instead, it is necessary for us to make use of the species in a way appropriate to the entities whose species they are, and these entities are natures that exist in particulars.

**Reply to objection 2:** A phantasm is itself a likeness of a particular thing, and so the imagination does not need any other likeness of the particular in the way that the intellect does.

**Reply to objection 3:** We have cognition of incorporeal things, of which there are no phantasms, by way of a comparison to sensible bodies, of which there are phantasms. For instance, we come to an intellectual understanding of truth by considering things with respect to which we see the truth, whereas, as Dionysius says, we have cognition of God (a) as a cause, and (b) through preeminence (*per excessum*), and (c) through negation (*per remotionem*). Again, other incorporeal substances are such that, in the state of our present life, we cannot have cognition of them except through negation or through some sort of comparison to corporeal things. And so when we have intellectual understanding of something of this sort, we necessarily have to be turned toward the phantasms of bodies, even though there are no phantasms of these things themselves.

## Article 8

### Is the intellect's judgment impeded when the sensory power is inoperative?

It seems that the intellect's judgment is not impeded when the sensory power is inoperative (*per ligamentum sensus*):

**Objection 1:** Something higher is not dependent on something lower. But the intellect's judgment is higher than the sensory power. Therefore, the intellect's judgment is not impeded when the sensory power is inoperative.

**Objection 2:** Reasoning by means of a syllogism (*syllogizare*) is an act of the intellect. Now as *De Somno et Vigilia* says, during sleep the sensory power is inoperative; and yet it sometimes happens that someone who is sleeping reasons by means of a syllogism. Therefore, the intellect's judgment is not impeded by the fact that the senses are inoperative.

**But contrary to this:** As Augustine says in *Super Genesim ad Litteram* 12, morally illicit things that occur during sleep (*contingunt in dormiendo*) do not count as sins. But this would not be so if a sleeping man had the free use of his reason and intellect. Therefore, the use of reason is impeded when the sensory power is inoperative.

**I respond:** As has been explained (a. 7), the proper object proportioned to our intellect is the nature of a sensible thing. Now a perfect judgment cannot be made about a thing if not everything that pertains to that thing is known, and especially if the terminus or end of the judgment is unknown. But in *De Caelo* 3 the Philosopher says, "Just as the end of productive knowledge (*factiva scientia*) is a piece of work (*opus*), so the end of natural knowledge (*naturalis scientia*) is that which is apparent principally to the senses." For a craftsman seeks to have cognition of knives only for the sake of his work, so that he might make this particular knife; and, similarly, a natural scientist seeks to have cognition of the nature of a rock or of a horse only in order to know the natures of those things that are apparent to the senses.

Now it is obvious that the craftsman could not render a perfect judgment about a knife if he did not know how to make one (*si opus ignoraret*); and, similarly, no perfect judgment of natural knowledge can be made about natural things if sensible things are not known. But all the things we have intellectual

understanding of in our present state are such that we have cognition of them in relation to natural sensible things. Hence, it is impossible for a perfect judgment of the intellect to exist in us when the sensory power is inoperative, since it is through the sensory power that we have cognition of sensible things.

**Reply to objection 1:** Even though the intellect is higher than the sensory power, it nonetheless receives in a certain way from the sensory power, and its first and principal objects are grounded in sensible things (*fundatur in sensibilibus*). And so it is necessary that the intellect's judgment should be impeded when the sensory power is inoperative.

**Reply to objection 2:** As *De Somno et Vigilia* says, the sensory power is inoperative in those who are asleep because of the release of certain vapors and fumes. And so the sensory power can be more or less inoperative, depending on the disposition of such evaporations.

For instance, when there is a lot of movement of vapors, both the senses and the imagination are inoperative, so that there are no phantasms; this happens especially when someone goes to sleep after heavy eating or drinking.

However, if the movement of vapors is a bit less intense, then phantasms appear, but they are distorted and chaotic (*distorta et inordinata*); this occurs in those who are feverish.

Again, if the movement is still more sedate, then well-ordered phantasms appear; this occurs mainly near the end of the time of sleep and in men who are sober and have a strong imagination.

On the other hand, if the movement of the vapors is minimal, not only does the imagination remain free, but even the common sensory power is partly operative (*ex parte solvitur*), so that a man sometimes judges in his sleep that what he is seeing are dreams, as if he were distinguishing between things and their likenesses. But to some extent the common sensory power remains inoperative, and so even if he distinguishes certain likenesses from the things, he is nonetheless always deceived about some matters.

So, then, depending on the way in which the sensory power and imagination are operating in sleep, the intellect's judgment is freed up, but not entirely. Hence, those who engage in syllogistic reasoning while asleep always recognize, when they wake up, that they have made a mistake in some matter.

## QUESTION 85

### The Mode and Order of Intellective Understanding

Next we have to consider the mode and order of intellective understanding. And on this topic there are eight questions: (1) Does our intellect have intellective understanding by abstracting species from phantasms? (2) Are the intelligible species abstracted from the phantasms related to our intellective understanding as *that which* is understood or as *that by which* something is understood? (3) Does our intellect by its nature first have intellective understanding of what is more universal? (4) Can our intellect have intellective understanding of many things at once? (5) Does our intellect come to intellective understanding by composing and dividing? (6) Can our intellective understanding be mistaken? (7) Is it possible for someone to understand the same thing better than someone else? (8) Does our intellect understand what is indivisible prior to what is divisible?

#### Article 1

##### Does our intellect have intellective understanding of corporeal and material things through abstraction from phantasms?

It seems that our intellect does not have intellective understanding of corporeal and material things through abstraction from phantasms (*per abstractionem a phantasmatibus*):

**Objection 1:** If an intellect understands a thing otherwise than it is, then it has falsity. But the forms of material things are not abstracted from the particulars whose likenesses the phantasms are. Therefore, if we understand material things by means of the abstraction of species from phantasms, then falsity will exist in our intellect.

**Objection 2:** Material things are natural things that have matter as part of their definition (*in quarum definitione cadit materia*). But nothing can be understood intellectually in the absence of something that is part of its definition. Therefore, material things cannot be understood without matter. But matter is a principle of individuation. Therefore, material things cannot be understood by means of the abstraction of a universal from a particular—which is what it is to abstract intelligible species from phantasms.

**Objection 3:** *De Anima* 3 says that phantasms are related to the intellective soul in the way that colors are related to the power of vision. But an act of seeing occurs not by means of an abstraction of species from colors, but by the colors' leaving an impression on the power of vision (*per hoc quod colores imprimunt in visum*). Therefore, it is impossible to have intellective understanding by means of something's being abstracted from phantasms; instead, it must be had by means of the phantasms' leaving an impression on the intellect (*per hoc quod phantasmata imprimunt in intellectum*).

**Objection 4:** *De Anima* 3 says that there are two [cognitive powers] in the intellective soul, viz., the passive intellect and the active intellect (*intellectus possibilis et agens*). But the passive intellect's function is to receive the species that have already been abstracted and not to abstract the intelligible species from phantasms. Nor does abstracting the species belong to the active intellect. For the active intellect is related to the phantasms in the way that light (*lumen*) is related to colors; but light flows into the colors rather than abstracting anything from them (*non abstrahit aliquid a coloribus sed magis eis influit*). Therefore, there is no way in which we have intellective understanding by means of abstraction from phantasms.

**Objection 5:** In *De Anima* 3 the Philosopher says, "The intellect *understands* species in the phantasms"—and thus does not *abstract* them.

**But contrary to this:** *De Anima* 3 says, "Things are susceptible to intellective understanding

(*circa intellectum sunt*) insofar as they are separable from matter.” Therefore, it must be the case that material things are understood intellectually insofar as they are abstracted from matter and from material likenesses, i.e., phantasms.

**I respond:** As was explained above (q. 84, a. 7), an object of cognition (*obiectum cognoscibile*) is proportioned to the relevant cognitive power. Now there are three levels of cognitive power:

For there is a cognitive power, viz., *the sensory power*, that is the act of a corporeal organ. And so the object of any sentient power is *a form insofar as it exists in matter*. And since matter of this sort is a principle of individuation, it follows that every power of the sentient part of the soul has cognition only of particulars.

On the other hand, there is a cognitive power, viz., *the angelic intellect*, which is not the act of a corporeal power and is not conjoined in any way with corporeal matter. And so the object of this sort of cognitive power is a form that subsists without matter; for even though the angels have cognition of material things, they nonetheless have their intuitive vision of them (*ea intuentur*) ‘in’ immaterial things, viz., in themselves and in God (cf. q. 84, a. 5).

By contrast, human understanding (*intellectus humanus*) is situated in the middle. For as is clear from what was said above (q. 76, a. 1), human understanding is not the act of any [corporeal] organ. Yet it is a certain power belonging to a soul that is the form of a body, and so it is proper to it to have cognition of forms that exist individually in corporeal matter, though not insofar as they exist in such matter. But to have a cognition of what exists in a material individual, but not insofar as it exists in such matter, is to abstract the form from the individual matter represented by the phantasms. And so it is necessary to say that our intellect has intellectual understanding of material things by abstracting from the phantasms. And it is through material things considered in this way that we come to have a certain sort of cognition of immaterial things —just the opposite of the way that angels have cognition of material things through immaterial things.

However, Plato, who paid attention only to the immateriality of the human intellect, but not to the fact that it is united in some way to a body, claimed that the objects of the intellect are separated ideas and that we have intellectual understanding not by abstracting but rather by participating in abstract entities. This was explained above (q. 84, a. 1).

**Reply to objection 1:** There are two ways in which it is possible to abstract: *first*, in the *mode of composition and division*, as when we understand intellectually that one thing does not exist in another, or that it is separated from it; *second*, in the *mode of simple and absolute consideration*, as when we have an intellectual understanding of the one thing without considering the other at all.

Thus, in the *first* mode of abstraction, it involves falsity to abstract through intellection things that are not abstracted in reality (*secundum rem*). By contrast, in the *second* mode, it does not involve falsity to abstract through intellection things that are not abstracted in reality, as is manifestly obvious in the case of sensible things. For instance, if we think or say (*si intelligamus vel dicamus*) ‘No color exists in a body that is colored’, or ‘Color is separated from a body that is colored’, there will be falsity in what we think or in what we say (*in opinione vel in oratione*). On the other hand, if we are considering a color and its properties, paying no attention at all to the apple that is colored, then what we think or orally express in so doing will involve no falsity in thought or speech. For an apple is not part of the nature of a color (*pomum not est de ratione coloris*), and nothing prevents the color from being thought of without the apple’s being thought of at all. Similarly, I claim that what belongs to the nature (*ratio*) of any species of material thing, e.g., *rock* or *man* or *horse*, can be considered without the individual principles, which do not belong to the nature (*ratio*) of the species. And to abstract the universal from the particular, or to abstract the intelligible species from the phantasms, is just this: to consider the nature (*natura*) of the species without considering the individual principles that are represented through the phantasms.

Therefore, when one says, ‘An intellect has falsity when it understands a thing otherwise than it is’,

the sentence is true if ‘otherwise’ refers to the thing that is understood. For the intellect has falsity when it understands a thing to be otherwise than it is. Hence, the intellect would have falsity if it abstracted the species of a rock from matter in such a way that it understood this species not to exist in matter, as Plato posited.

However, the proposition ‘The intellect has falsity when it understands a thing otherwise than it is’ is not true if ‘otherwise’ is referred to the one who is doing the understanding (*accipiatur ex parte intelligentis*). For there is no falsity involved in the fact that the mode of the one who understands is, in his understanding, different from the mode of the thing in its existing. For in the one who is doing the understanding, the thing that is understood exists immaterially, in the manner of an intellect, and not materially, in the manner of a material thing.

**Reply to objection 2:** Some have thought that the species of a natural thing is the form alone, and that the matter is not part of the species. But according to this view, matter would have no place in the definitions of natural things.

And so one should reply in an alternative way that there are two types of matter, viz., (a) *common matter* and (b) *designated* (or *individual*) matter (*materia communis et signata vel individualis*)—where common matter is, e.g., *flesh* and *bone*, and individual matter is, e.g., *this flesh* and *these bones*.

Thus, the intellect abstracts the species of a *natural* thing from *individual* sensible matter, but not from *common* sensible matter. For instance, it abstracts the species *man* from *this* flesh and *these* bones, which, as *Metaphysics 7* points out, are not part of the nature of the species but are instead parts of the individual; and so the nature can be thought about without them. However, the species *man* cannot be abstracted by the intellect from *flesh* and *bones*.

By contrast, *mathematical* species can be abstracted by the intellect not only from *individual* sensible matter but also from *common* sensible matter—and yet not from common *intelligible* matter, but only from individual *intelligible* matter. For sensible matter is called ‘corporeal’ matter insofar as it is subject to sensible qualities like hot and cold, hard and soft, and so on, whereas what is called intelligible matter is a substance insofar as it is subject to quantity. Now it is clear that quantity exists in a substance prior to its sensible qualities. Hence, quantities such as numbers, dimensions, and shapes (which are the limits of quantities) can be thought about without sensible qualities—which is what it is to abstract them from sensible matter. Now these quantities cannot be thought about without an understanding of a substance’s being the subject of quantity—which would be to abstract them from *common* intelligible matter. But they can indeed be thought about without *this* or *that* substance—which is to abstract them from *individual* intelligible matter.

On the other hand, there are certain [species], e.g., *being*, *one*, *potentiality*, *actuality*, and others of this sort, that can be abstracted even from common intelligible matter. These can exist without any matter at all, as is clear in the case of immaterial substances.

And because Plato did not take into account what was said above about the two modes of abstraction, he posited as abstract entities, existing in reality, all the things that we have claimed to be abstracted by the intellect.

**Reply to objection 3:** Colors have the same mode of existing in a material corporeal individual as the power of sight does, and so colors can impress their likeness on the power of sight. But as is clear from what has been said, since phantasms are likenesses of individuals and exist in corporeal organs, they do not have the same mode of existing that the human intellect does. And so they cannot by their own power leave an impression on the passive intellect. Rather, by the power of the active intellect, a certain likeness results in the passive intellect from the active intellect’s turning toward the phantasms; and this likeness is representative of those things that the phantasms are about, though only with respect to the nature of their species. This is the sense in which the intelligible species is said to be abstracted from the phantasms—and not in the sense that numerically the same form at first existed in the

phantasms and later comes to exist in the passive intellect, in the way that a body is taken from one place and transferred to another.

**Reply to objection 4:** It is the case both that (a) the phantasms are illuminated by the agent intellect and, again, that (b) the intelligible species are abstracted from them by the power of the active intellect.

They are *illuminated* in the sense that just as the sentient part of soul is made more powerful by being conjoined to the intellect, so by the power of the active intellect the phantasms are rendered suitable for intelligible intentions to be abstracted from them.

And the active intellect *abstracts* the intelligible species from the phantasms in the sense that (a) by the power of the active intellect we are able, in our thinking, to grasp the natures of the species without their individual conditions, and that (b) the passive intellect is informed by the likenesses of these natures.

**Reply to objection 5:** On the one hand, our intellect *abstracts* intelligible species *from* the phantasms insofar as it considers the natures in general (*in universali*); on the other hand, it *understands* them *in* the phantasms, since, as was explained above (q. 84, a. 7), it is unable to understand even the things whose species it abstracts except by turning itself to the phantasms.

## Article 2

### Are the intelligible species abstracted from the phantasms related to our intellect as *that which* is understood intellectually?

It seems that the intelligible species abstracted from the phantasms are related to our intellect as *that which (id quod)* is understood intellectually:

**Objection 1:** A thing which is actually being understood (*intellectum in actu*) exists in the one who is engaged in understanding, since a thing which is actually being understood is the intellect itself insofar as it is acting (*ipse intellectus in actu*). But nothing of the things which is being understood, except the abstracted intelligible species, exists in an intellect actually engaged in understanding. Therefore, it is a species of this sort that is the very thing which is actually being understood.

**Objection 2:** A thing which is actually being understood has to exist in something; otherwise, it would be nothing at all. But it does not exist in the thing that is outside the soul; for since the thing outside the soul is material, nothing that is in it can be a thing which is actually being understood. Therefore, it follows that what is actually being understood exists in the intellect. And so the thing which is actually being understood is nothing other than the aforementioned intelligible species.

**Objection 3:** In *Perihermenias* 1 the Philosopher says, “Spoken words (*voces*) are signs of things received in the soul (*notae earum quae sunt in anima passionum*).” But spoken words signify the things which are understood; for we signify by spoken words what we understand intellectually. Therefore, the things received in the soul (*passiones animae*), i.e., the intelligible species, are themselves the things which are actually understood.

**But contrary to this:** Intelligible species are related to the intellect in the way that sensible species are related to the sensory power. But a sensible species is *that by which (id quo)* the sensory power senses and not *that which (illud quod)* is sensed. Therefore, the intelligible species is *that by which* the intellect understands intellectually and not *that which (quod)* is understood.

**I respond:** Some have claimed that the cognitive powers that exist in us have cognition of nothing except what they receive within themselves (*nihil nisi proprias passiones*); for instance, they claim that a

sensory power senses only what is received in its corresponding organ (*passionem sui organi*). On this view, the intellect has intellectual understanding of nothing except what is received within itself, i.e., the intelligible species received within it (*nisi suam passionem, idest speciem intelligibilem in se receptam*). Accordingly, this sort of species is itself what is understood.

However, there are two reasons why this opinion is manifestly false.

First, the things we have intellectual understanding of are the same things that scientific knowledge is about. Therefore, if the things we have intellectual understanding of were just the species that exist in the soul, then it would follow that all types of scientific knowledge are not about things that exist outside the soul, but only about the intelligible species that exist within the soul—just as, according to the Platonists, all types of scientific knowledge are about the ideas, which they claimed to be the things which are actually understood.

Second, this would entail the error of those ancients who claimed that “whatever seems to be the case is true,” with the result that contradictories would be simultaneously true. For if a power has cognition only of what it receives within itself (*non cognoscit nisi propriam passionem*), then that is all it makes judgments about. But something seems to be the case insofar as the cognitive power is affected in a given way. Therefore, the cognitive power’s judgment will always be a judgment about what it itself receives as such (*de propria passione, secundum quod est*); and so every judgment will be true. For instance, if the sense of taste senses only what it itself receives, then when someone with a healthy sense of taste judges that honey is sweet, he will be judging correctly; and, similarly, when someone with a diseased sense of taste judges that honey is bitter, he will be judging correctly. For each of them judges in accord with how his own sense of taste is affected. And so it follows that every opinion—and, in general, every instance of accepting a proposition (*omnis acceptio*)—will be equally true.

Therefore, one should reply instead that an intelligible species is related to the intellect as *that by which* (*quo*) the intellect has intellectual understanding. This is made clear as follows:

As *Metaphysics* 9 says, there are two kinds of action, one of which *remains within the agent* (*manet in agente*), e.g., seeing and understanding intellectually, and the other of which *passes into an exterior thing* (*transit in rem exteriorem*), e.g., heating and cutting. Both kinds of action stem from some form. And just as the form from which an action tending toward an exterior thing arises is a likeness of the action’s object—in the way that a heating agent’s heat is a likeness of the thing that is made hot (*ut calor calefacientis est similitudo calefacti*)—so, similarly, the form from which an action remaining within the agent arises is a likeness of the object. Thus, the likeness of a visible thing is that in virtue of which the power of sight sees, and the likeness of a thing that is understood, i.e., the intelligible species, is the form in virtue of which the intellect has intellectual understanding.

However, since the intellect reflects upon itself (*supra seipsum reflectit*), it is by the same act of reflection (*secundum eandem reflexionem*) that it understands both its own act of intellectual understanding (*suum intelligere*) and the species by which it understands intellectually (*speciem qua intelligit*). And so the intellectual species is in a secondary sense that which is understood intellectually. But that which is understood intellectually in the primary sense is the thing of which the intelligible species is a likeness.

This point is also made clear by the opinion of the ancients, who claimed that like is known by like. For they claimed that it is through the element earth that exists within the soul that the soul has cognition of the element earth as it exists outside the soul—and so on for the other elements. Therefore, if we substitute the intelligible species of the element earth for the element itself—in accord with the teaching of Aristotle, who said that “it is not a rock, but the species of a rock that exists within the soul”—then it will follow that it is by means of intelligible species that the soul has cognition of things that exist outside the soul.

**Reply to objection 1:** It is through its likeness that the thing which is being understood

intellectively exists in the who is engaged in understanding. The sense in which it is said that a thing which is actually being understood is the intellect itself insofar as it is acting, is that a likeness of the thing which is being understood is the form of the intellect in the same way that the likeness of a sensible thing is the form of a sensory power that is acting. Hence, it does not follow that the abstracted intelligible species is the thing which is actually being understood; rather, what follows is that the abstracted intelligible species is a *likeness* of the thing which is actually being understood.

**Reply to objection 2:** When one says ‘a thing which is actually being understood’ (*intellectum in actu*), there are two things implied, viz., (a) the thing which is being understood and (b) the very fact of its being understood. Similarly, when one says ‘the abstracted universal’, there are two things implied, viz., (a) the nature itself of the thing and (b) its abstractness or universality.

Therefore, the nature which happens to be understood intellectually or to be abstracted, or to which the intention of universality accrues, does not itself exist except in singular things; but the intention of universality, or the very fact of the nature’s being understood or abstracted exists in the intellect.

We can see this by a comparison with a sensory power. For the power of sight sees the color of an apple without seeing its smell. Therefore, if someone asked where the color is that is seen without the smell, it is obvious that the color which is seen exists only in the apple; however, the fact that it is perceived without its smell accrues to it because of the power of sight, since within the power of sight there exists a likeness of its color but not of its smell.

Similarly, the human-ness (*humanitas*) that is understood intellectually exists only in this or that man; but the fact that human-ness is apprehended without individual conditions—i.e., the fact that human-ness is abstracted, and that an intention of universality results from this—happens to human-ness insofar as it is perceived by the intellect, in which there is a likeness of the nature of the species without a likeness of the individual principles.

**Reply to objection 3:** There are two types of operation in the sentient part of the soul. One involves just [the sensory power’s] *being affected* (*immutatio*), and on this score the sensory power’s operation is perfected by its being affected by the sensible thing. The second operation is [the sensory power’s] *being formed* (*formatio*), insofar as the power of imagining forms for itself an image (*idolum*) of an absent thing or even of a thing that has never been seen.

These two types of operation are joined together in the intellect. For the first thing to consider is the passive intellect’s being acted upon insofar as it is informed by the intelligible species (*passio intellectus possibilis secundum quod informatur specie intelligibili*). Once it is formed by the intelligible species, it forms, in the second place, a definition or composition or division that is signified by spoken words.

Hence, the concept (*ratio*) that the spoken name (*nomen*) signifies is the definition. And the spoken sentence (*enuntiatio*) signifies the intellect’s composition or division. Thus, it is not the case that spoken words signify the intelligible species themselves; instead, they signify the things that the intellect forms for itself in order to make its judgments about exterior things (*ea quae intellectus sibi format ad iudicandum de rebus exterioribus*).

### Article 3

#### Is what is more universal prior in our intellectual cognition?

It seems that what is more universal is not prior in our intellectual cognition (*magis universalia non sint priora in nostra cognitione intellectuali*):

**Objection 1:** What is prior and better known by its nature (*secundum naturam*) is posterior and

less well known as far as we are concerned (*quoad nos*). But universals are prior and better known by their nature, since “what is prior is such that there is no valid inference from it [to what is posterior] with respect to subsistence.” Therefore, universals are posterior in our intellect’s cognition.

**Objection 2:** Composites are prior to simples as far as we are concerned. But universals are more simple. Therefore, they are known later as far as we are concerned.

**Objection 3:** In *Physics* 1 the Philosopher says that, in our cognition, what is defined comes earlier than the parts of the definition. But the parts of a definition of what is less universal are more universal; e.g., *animal* is part of the definition of *man*. Therefore, universals are known later as far as we are concerned.

**Objection 4:** It is through effects that we arrive at causes and principles. But universals are a sort of principle. Therefore, universals are known later as far as we are concerned.

**But contrary to this:** *Physics* 1 says, “One must descend (*oportet devenire*) from universals to singulars.”

**I respond:** In our intellect’s cognition there are two things that have to be taken in account.

The first is that intellective cognition in some sense takes its origin from sentient cognition. And since the sensory power deals with singulars and the intellect with universals, it must be the case that, as far as we are concerned, the cognition of singulars is prior to the cognition of universals.

The second thing that has to be taken into account is that our intellect proceeds from potentiality to actuality. But everything that proceeds from potentiality to actuality first arrives at an incomplete actuality, which lies between the potentiality and the actuality, before arriving at perfect actuality. Now the perfect actuality at which the intellect arrives is *complete scientific knowledge (scientia completa)*, through which it has a distinct and determinate cognition of things. And the incomplete actuality is *imperfect scientific knowledge (scientia imperfecta)*, through which things are known indistinctly with a sort of murkiness (*indistincte sub quadam confusione*); for what is known in this way is known in some respect in actuality and in some sense in potentiality. Hence, in *Physics* 1 the Philosopher says, “What is first manifest and certain to us are things that are somewhat indistinct (*confusa*), but later on, by drawing distinctions, we come to have distinct cognition of principles and elements.” And it is clear that to have cognition of something that contains many things without having a proper knowledge of each of the things contained in it is for our cognition of it to be somewhat indistinct. And it is possible for us to have this sort of indistinct cognition both of a *universal whole*, which contains its parts in potentiality, and also of an *integral whole*, since it is possible for there to be an indistinct cognition of both kinds of whole in the absence of a distinct cognition of the parts.

Now to have a distinct cognition of what is contained in a *universal whole* is to have a cognition of something less general (*de re minus communi*) than it. For instance, to have an indistinct cognition of an animal is to have a cognition of the animal insofar as it is an animal, whereas to have a distinct cognition of an animal is to have a cognition of the animal insofar as it is a rational animal or a non-rational animal—e.g., to have a cognition of it as a man or a lion.

Thus, what happens is that our intellect has the cognition *animal* prior to having the cognition *man*, and the same line of reasoning holds whenever we are comparing something more universal to something less universal. And since the sensory power goes from potentiality to actuality in the same way that the intellect does, this same order of cognition is evident in the case of the sensory power as well. For in accord with the sensory power, we judge what is more general prior to what is less general, both with respect to place and with respect to time. For instance, with respect to place, when something is seen from afar, it is perceived to be a body before it is perceived to be an animal, and it is perceived to be an animal before it is perceived to be a man, and it is perceived to be a man before it is perceived to be Socrates or Plato. Again, with respect to time, at the beginning a young child distinguishes a man from a

non-man before distinguishing *this* man from *that* man; this is why, as *Physics* 1 points out, “At the beginning young children call all men ‘father’, whereas later on they mark each man as distinct (*determinant unumquemque*).”

The reason for this is clear. If someone knows something indistinctly, he is still in potentiality with respect to knowing a principle of division (*principium distinctionis*); for instance, someone who knows the genus is in potentiality with respect to knowing the specific differences. And so it is clear that indistinct cognition lies between potentiality and actuality.

Therefore, one should claim that, as far as we are concerned, the cognition of singulars is prior to the cognition of universals in the sense that sentient cognition is prior to intellectual cognition. However, with respect to both the sensory power and the intellect, cognition that is more general (*communis*) is prior to cognition that is less general.

**Reply to objection 1:** A universal can be considered in two ways:

First, insofar as the universal nature is considered along with the intention of universality. Since the intention of universality, viz., one and the same thing’s having a relation to many, arises from the intellect’s act of abstracting (*proveniat ex abstractione intellectus*), the universal must be posterior when considered in this way. Hence, *De Anima* 1 says, “Either the universal *animal* is nothing or else it is posterior.” By contrast, according to Plato, who posited subsistent universals, the universal, when considered in this first way, would be prior to the particular, which, on his view, exists only through participation in those subsistent universals that are called ‘ideas’.

The second way in which a universal can be considered is with respect to the nature itself, e.g., *animal-ness* or *human-ness*, insofar as it is found in the particulars. When the universal is considered in this way, one should say that there are two orderings of nature:

The first is the *path of generation and time* (*via generationis et temporis*), and on this path the things that are imperfect and in potentiality are prior. In this sense, what is more general is prior in nature. This is obvious in the generation of man and animal; for “the animal is generated prior to the man,” as *De Generatione Animalium* puts it.

The second is the *ordering of perfection* (*ordo perfectionis*), or the *ordering of nature’s intention* (*ordo intentionis naturae*), in the sense that actuality is absolutely speaking prior in nature to potentiality, and the perfect is absolutely speaking prior in nature to the imperfect. Given this ordering, the less general is prior in nature to the more general, e.g., *man* is prior in nature to *animal*. For nature’s intention does not stop at the generation of the animal; instead, nature tends toward generating the man.

**Reply to objection 2:** The more general universal is related to the less general universal as both a whole and a part:

As a whole, in the sense that the more universal contains in potentiality not only the less universal but other things as well. For instance, it is not only *man*, but also *horse*, that is contained under *animal*.

As a part, in the sense that in its definition (*ratio*) the less general contains not only the more general, but other things as well. For instance, *man* contains not only *animal*, but also *rational*.

So, then, considered in itself, *animal* is prior in our cognition to *man*, but *man* is prior in our cognition to *animal*’s being a part of the definition of man.

**Reply to objection 3:** There are two ways in which to have a cognition of a part:

First, *absolutely speaking*, according to what the part is in its own right. And in this sense nothing prevents there being a cognition of the parts prior to the cognition of the whole—e.g., a cognition of the rocks prior to a cognition of the house.

Second, *insofar as they are parts of this whole*. And in this sense it is necessary for us to have a cognition of the whole before a cognition of the parts; for instance, we first have a cognition of the house by means of an indistinct cognition, before we distinguish each of its parts from the others.

So, then, one should reply that the parts of a definition (*definiencia*), *considered absolutely*, are

known before that which is defined. Otherwise, what is defined would not be made known to us through those parts. On the other hand, *insofar as they are the parts of the definition*, they are known after what is defined; for instance, we know *man* in a sort of indistinct cognition before we know how to distinguish everything that belongs to the definition of *man*.

**Reply to objection 4:** Insofar as a universal is taken together with *the intention of universality*, it is in some sense a principle of cognition, since the intention of universality follows upon that mode of intellectual understanding that occurs through abstraction. However, it is not the case that, as Plato thought, everything that is a principle of cognition has to be a principle of being; for sometimes we have cognition of a cause through its effect and of a substance through its accidents. Hence, according to Aristotle, the universal, taken in this way, is neither a principle of being nor a substance; this is clear from *Metaphysics* 7.

On the other hand, if we consider the nature of the genus and the nature of the species (*natura generis et speciei*) *insofar as they exist in singulars*, then the universal taken in this way has the character of a formal principle with respect to the singulars; for something is singular because of the matter, whereas the nature of the species (*ratio speciei*) is taken from the form. However, the nature of the genus is related to the nature of the species more in the manner of a material principle, since the nature of the genus (*natura generis*) is taken from what is material in the thing, whereas the nature of the species (*ratio speciei*) is taken from what is formal; for instance, the notion (*ratio*) *animal* is taken from the sentient, whereas the notion *man* is taken from the intellectual. And the reason why nature's ultimate intention is directed toward the species and not toward the individual or toward the genus is that the form is the end of generation, whereas the matter exists for the sake of the form.

However, it is not necessary for every cognition of a cause or principle to be posterior as far as we are concerned, since sometimes we come to a cognition of unknown effects through their sensible causes, and sometimes vice versa.

#### Article 4

##### Can we have an intellectual understanding of many things at once?

It seems that we can have an intellectual understanding of many things at once:

**Objection 1:** The intellect lies beyond time (*est supra tempus*). But *before* (*prior*) and *after* (*posterior*) have to do with time. Therefore, the intellect understands diverse things at once and not according to *before* and *after*.

**Objection 2:** Nothing prevents diverse forms that are not opposed to one another from actually existing in the same thing at the same time, in the way that a smell and a color exist in an apple. But intelligible species are not opposed to one another. Therefore, nothing prevents a single intellect from coming into act with respect to diverse intelligible species simultaneously, and in this way it can have an intellectual understanding of many things at once.

**Objection 3:** The intellect has an intellectual understanding of a whole, such as a man or a house, all at once. But many parts are contained in a whole. Therefore, the intellect can have an intellectual understanding of many things at once.

**Objection 4:** As *De Anima* says, one cannot have a cognition of the difference between one thing and another without apprehending both of them at the same time; and the same line of reasoning holds for any comparison whatsoever. But our intellect has cognition of the differences between one thing and another, and of comparisons between one thing and another. Therefore, it has a cognition of many things

at once.

**But contrary to this:** *Topics* says, “Intellective understanding is of one thing only, but scientific knowledge is of many things.”

**I respond:** The intellect can have an intellective understanding of many things in the manner of one thing (*per modum unius*), but not in the manner of many things (*per modum multorum*)—and by ‘in the manner of one thing (or many things)’ I mean through one (or many) intelligible species. For the mode of an action follows upon the form that is the principle of that action.

On the other hand, if certain things are such that the intellect can understand them under a single intelligible species, then it can understand them all at once. For the reason why God sees all things at once is that He sees all things through one thing, viz., His own essence.

However, if certain things are such that the intellect understands them through diverse intelligible species, then it does not understand them all at once. The reason for this is that it is impossible for a subject to be perfected all at once by several forms that belong to the same genus but different species; for instance, it is impossible for the same body to be simultaneously colored in the same respect by diverse colors, or for it to have diverse shapes. But all intelligible species belong to one genus, since they are perfections of a single intellective power, even though the things that they are the species of belong to diverse genera. Therefore, it is impossible for a single intellect to be perfected all at once by diverse intelligible species in such a way as to have an actual intellective understanding of diverse things.

**Reply to objection 1:** The intellect lies beyond the time that measures the motion of corporeal things. But the plurality of intelligible species causes an alternation of intelligible operations (*quandam vicissitudinem intelligibilium operationum*), in accord with which one operation occurs before another. In *Super Genesim ad Litteram* Augustine calls this ‘time’ when he says, “God moves the spiritual creature through time.”

**Reply to objection 2:** It is not only forms which are opposites that cannot exist all at once in the same subject; neither can forms of the same genus, even if they are not opposites. This is clear from the example adduced above about colors and shapes.

**Reply to objection 3:** Parts can be thought of in two ways:

First, they can be thought of with a certain *indistinctness* insofar as they exist in the whole, in which case they are being thought of through the single form of the whole and so are being thought of all at once.

Second, they can be thought of by a *distinct* cognition insofar as each is thought of through its own intelligible species, in which case they cannot all be understood intellectually at once.

**Reply to objection 4:** When the intellect understands a distinction between two things or a comparison of the one to the other, it has a cognition of the two distinct things, or of the two things being compared, under the notion *comparison* or *distinction* itself—just as it was claimed above that the intellect has a cognition of the parts under the notion *whole*.

## Article 5

### Does our intellect engage in intellective understanding by composing and dividing?

It seems that our intellect does not engage in intellective understanding by composing and dividing (*non intelligat componendo et dividendo*):

**Objection 1:** Composition and division [of subject and predicate] always involve many items. But the intellect cannot have an intellective understanding of many things at once. Therefore, the intellect

cannot engage in intellectual understanding by composing and dividing.

**Objection 2:** Either the present tense, the past tense, or the future tense (*tempus praesens, praeteritum vel futurum*) is adjoined to every composition and division. But the intellect abstracts from time, just as it abstracts from other particular conditions. Therefore, the intellect does not engage in intellectual understanding by composing and dividing.

**Objection 3:** The intellect engages in intellectual understanding by assimilating itself to the things (*per assimilationem ad res*). But there is no composition or division [of subject and predicate] among the things; for among the things there is nothing except what is signified by the predicate and by the subject—and this is one and the same thing if the composition is true. For a man is truly that which is an animal. Therefore, the intellect does not compose and divide.

**But contrary to this:** As the Philosopher says in *Perihermenias* 1, spoken words signify the intellect's conceptions (*conceptiones intellectus*). But in spoken language there is composition and division, as is clear in the case of affirmative and negative propositions (*in propositionibus affirmativis et negativis*). Therefore, the intellect composes and divides.

**I respond:** It is necessary for the human intellect to engage in intellectual understanding by composing and dividing. For since the human intellect passes from potentiality into actuality, it has a certain likeness to generable things, which do not have their perfection immediately, but instead acquire it successively. In the same way, the human intellect does not immediately come to a perfect cognition of a thing in its first apprehension of it. Instead, it first apprehends an aspect of it (*aliquid de ipsa*), viz., the 'what-ness' (*quidditas*) of the thing itself, which is the first and proper object of the intellect; and then it comes to understand the properties, accidents, and relations associated with the thing's essence (*circumstantes rei essentiam*). Accordingly, it must necessarily (a) compose one apprehended thing with another or divide one apprehended thing from another and (b) proceed from one composition or division to another, i.e., reason discursively (*ratiocinari*).

By contrast, the angelic intellect and the divine intellect are incorruptible beings that have their total perfection immediately from the beginning. Hence, the angelic intellect and the divine intellect are immediately in perfect possession of a complete cognition of a thing. Thus, in having a cognition of a thing's 'what-ness', they have, with respect to that thing, an immediate cognition of whatever we ourselves can come to a cognition of by composing and dividing and reasoning discursively.

And so the human intellect engages in intellectual cognition by composing and dividing, as well as by reasoning discursively. By contrast, the divine intellect and the angelic intellect do, to be sure, have a cognition of composition and division and discursive reasoning; however, they have this cognition not by themselves composing or dividing or reasoning discursively, but instead through an intellectual understanding of their simple 'what-ness' (*quidditas*).

**Reply to objection 1:** The intellect's composing and dividing are effected through a sort of comparison or contrast. Hence, the sense in which the intellect, in composing and dividing, has a cognition of many things is the same sense in which it has a cognition of contrasts or comparisons between things.

**Reply to objection 2:** As was explained above (a. 1 and q. 84, a. 7), the intellect abstracts from phantasms, and yet it does not have actual intellectual understanding except by turning itself back to the phantasms. And it is because the intellect turns itself back to the phantasms that tense is adjoined to the intellect's compositions and divisions.

**Reply to objection 3:** The likeness of a thing is received into the intellect according to the intellect's own mode and not according to the mode of the thing. Hence, even though there is something on the part of the thing that corresponds to the intellect's composition and division, it is not present in the thing in the same way that it is present in the intellect. For the proper object of the human intellect is the

‘what-ness’ (*quidditas*) of a material thing that falls under the sensory power and imagination.

Now there are two sorts of composition found in a material thing:

The first is the composition of *form* with respect to *matter*, and the intellect’s composition corresponds to this sort of composition by a universal whole’s being predicated of its part. For the genus is taken from the common matter, whereas the difference that completes the species is taken from the form, and the particular is taken from the material individual.

The second sort of composition is the composition of an *accident* with respect to its *subject*, and the intellect’s composition corresponds to this sort of real composition by an accident’s being predicated of its subject, as when one says, ‘The man is white’.

On the other hand, the intellect’s composition differs from the thing’s composition by the fact that the items composed in the thing are diverse from one another, whereas the intellect’s composition is a sign of the identity of the items that are composed. For the intellect does not compose in such a way as to affirm that the man is the whiteness (*homo est albedo*); rather, it composes in such a way as to affirm that the man is white, i.e., that the man is a thing that has the whiteness (*homo est albus, id est habens albedinem*). For that which is the man is the same subject as that which has the whiteness.

Something similar holds for the composition of form and matter. For ‘animal’ signifies that which has a sentient nature, ‘rational’ signifies that which has an intellective nature, and ‘man’ signifies that which has both a sentient nature and an intellective nature. But Socrates has all these things along with a material individual. And it is according to this notion of identity that our intellect composes one thing with another by predicating.

## Article 6

### Is there falsity in the intellect?

It seems that there can be falsity in the intellect (*intellectus possit esse falsus*):

**Objection 1:** In *Metaphysics* 6 the Philosopher says, “The true and the false exist in the mind.” But as was explained above (q. 79), the mind and the intellect are the same thing. Therefore, there is falsity in the intellect.

**Objection 2:** Opinion and discursive reasoning belong to the intellect. But falsity is found in both of them. Therefore, there can be falsity in the intellect.

**Objection 3:** Sin exists in the intellective part of the soul. But sin is accompanied by falsity, since, as Proverbs 14:22 says, “Those err who work evil.” Therefore, falsity can exist in the intellect.

**But contrary to this:** In 83 *Quaestiones* Augustine says, “Everyone who makes a mistake fails to understand intellectually that which he is mistaken about.” And in *De Anima* the Philosopher says, “Intellective understanding is always correct (*intellectus semper est rectus*).”

**I respond:** In *De Anima* 3 the Philosopher compares the intellect to the sensory power on the point at issue here. For the sensory power is not deceived with respect to its proper object; for instance, the power of sight is not deceived about color, except perhaps incidentally (*per accidens*) because of an impediment involving the organ—as when a feverish man’s sense of taste judges sweet things as bitter because his tongue is full of bad humors.

In the case of the common sensibles, however, the sensory power makes mistakes in judging about size or shape, as when it judges that the sun is the size of a human foot, even though it is larger than the earth. Moreover, the sensory power makes many more mistakes with respect to things that are sensible *per accidens*, as when it judges that vinegar is honey because of a similarity in their color. The reason

for this is clear. Each power is, as such, ordered *per se* toward its proper object, and things of this sort always behave in the same way. Hence, as long as the power remains, its judgment does not fail with respect to its proper object.

Now the proper object of the intellect is the ‘what-ness’ (*quidditas*) of a thing. Hence, with respect to the ‘what-ness’ of a thing the intellect does not make mistakes, speaking *per se*. But with respect to what accompanies a thing’s essence or ‘what-ness’, the intellect can be mistaken when it relates one thing to another, either by composing or by dividing or by reasoning discursively.

For this reason, it is also the case that the intellect cannot err with respect to those propositions that it has an immediate cognition of once it has a cognition of the ‘what-ness’ of their terms. This occurs in the case of first principles, from which an infallibility of truth also arises, and in the case of conclusions in accord with the certitude of scientific knowledge. Still, it happens incidentally (*per accidens*) that the intellect is mistaken about what something is in the case of composite things. This is not because of any [bodily] organ, since the intellect is not a power that uses an organ; rather, it is because of compositions that intervene with respect to the definition in cases where either the definition of one thing is applied falsely to another thing, e.g., the definition of a circle is applied to a triangle, or when the definition is false in itself and implies an impossible composition, as would occur if, say, *rational animal with wings* were taken to be the definition of some entity.

Hence, in the case of simple things, where no composition can intervene in their definitions, we cannot be mistaken; rather, as *Metaphysics* 9 says, in such cases we are mistaken when we totally fail to grasp them (*deficimus in totaliter non attingendo*).

**Reply to objection 1:** The Philosopher is claiming that falsity exists in the mind with respect to composition and division.

**Reply to objection 2:** In this second objection, he is saying the same thing about opinion and discursive reasoning.

**Reply to objection 3:** As for the error of sinners, this consists in an application with respect to something desirable. However, the intellect is never deceived in its absolute consideration of the ‘what-ness’ of a thing and of those things that we have cognition of through the ‘what-ness’. And this is what the passages [from Augustine and the Philosopher] that are adduced for the contrary position are talking about.

## Article 7

### Can someone understand one and the same thing better than someone else does?

It seems that it cannot be the case that someone understands one and the same thing better (*melius*) than someone else does:

**Objection 1:** In *83 Quaestiones* Augustine says, “If anyone understands (*intelligit*) a thing to be otherwise than it is, then he does not understand (*intelligit*) it at all. Therefore, there is no doubt that there is a perfect understanding, unsurpassable in excellence. And so there are not infinitely many degrees of understanding a given thing; nor can one man understand it more (*plus*) than another.”

**Objection 2:** When the intellect has intellectual understanding, it has truth. But since truth is a sort of equality (*aequalitas quaedam*) between the intellect and the thing, it does not admit of more and less, since it is not proper to say that something is more equal or less equal. Therefore, neither is it proper to say that something is more understood or less understood intellectually.

**Objection 3:** The intellect is the most formal aspect of a man. But a difference in form causes a

difference in species. Therefore, if one man has greater understanding than another man (*si unus homo magis alio intelligit*), it seems that they do not belong to the same species.

**But contrary to this:** Our experience indicates that some understand more deeply (*profundius*) than others; for instance, someone who can trace a conclusion back to its first principles and first causes understands it more deeply than someone who is able to trace it back only to its proximate causes.

**I respond:** There are two ways to interpret what it means for someone to understand one and the same thing more (*magis*) than someone else does.

On the first interpretation, ‘more’ modifies the act of intellectual understanding *on the part of the thing that is understood*. And on this interpretation, it is not possible for someone to understand the very same thing more than someone else, since if he understood it to be otherwise than it is—whether better than it is or worse—he would be mistaken and, as Augustine argues, would not understand it at all.

On the second interpretation, ‘more’ determines the act of intellectual understanding *on the part of the one who is engaged in understanding*. And on this interpretation, someone can understand the same thing better than someone else, in virtue of having more power of understanding—in the same way that someone who has a more perfect power and in whom the visual power is more perfect sees a given thing better by a corporeal act of seeing than someone else does.

There are two ways in which this occurs in the case of the intellect:

One way is on the part of the intellect itself, when it is more perfect. For it is clear that to the extent that the body is better disposed, the soul is better. This is manifestly obvious in the case of beings that are diverse in species. The reason is that actuality and form are received into matter in accord with the matter’s capacity. Hence, since even among men there are those who have a body that is better disposed, they receive a soul that has a greater power of intellectual understanding. Hence, *De Anima 2* says, “We notice that those with soft flesh are more mentally gifted.”

The second way is on the part of the lower powers that the intellect needs for its own operation. For those in whom the power of imagining and the cogitative power and the power of remembering are better disposed are better disposed for intellectual understanding.

**Reply to objection 1:** The reply to the first objection is obvious from what has been said.

**Reply to objection 2:** The same holds for the second objection. For the truth of the intellect consists in the thing’s being understood intellectually as it is.

**Reply to objection 3:** A difference of form that arises only from the different dispositions of the matter makes for a diversity only in number and not in species. For diverse individuals have diverse forms that are diversified according to the matter.

## Article 8

### Does our intellect have cognition of what is indivisible prior to what is divisible?

It seems that our intellect has cognition of what is indivisible prior to what is divisible:

**Objection 1:** In *Physics 1* the Philosopher says, “We have intellectual understanding and scientific knowledge on the basis of our cognition of principles and elements.” But indivisibles are the principles and elements of what is divisible. Therefore, indivisibles are known to us prior to what is divisible.

**Objection 2:** That which is posited in a thing’s definition is such that we have a prior cognition of it, since, as *Topics 6* says, a definition comes “from what is prior and more known.” But indivisibles are posited in the definition of what is divisible; for instance, as Euclid says, “A line is a length without breadth whose extremities are two points.” And oneness is posited in the definition of number, since, as

*Metaphysics* 10 says, “Number is a multitude measured by *one*.” Therefore, our intellect understands the indivisible prior to the divisible.

**Objection 3:** Cognition is by means of what is similar. But what is indivisible is more similar to the intellect than what is divisible, since, as *De Anima* 3 says, “The intellect is something simple.” Therefore, our intellect first has a cognition of what is indivisible.

**But contrary to this:** *De Anima* 3 says, “What is indivisible is shown to be a privation.” But a privation is known later. Therefore, what is indivisible is known later as well.

**I respond:** As is clear from what has gone before (a. 1 and q. 84, a. 7), in the state of the present life the object of our intellect is the ‘what-ness’ of a material thing, which the intellect abstracts from the phantasm. And since a cognitive power’s proper object is that which it has cognition of in the first place and *per se*, the order in which we have intellectual understanding of the indivisible can be thought about in terms of the indivisible’s relation to a ‘what-ness’ of the sort in question.

Now as *De Anima* 3 says, ‘indivisible’ is used in three senses:

In one sense, a continuum is indivisible by virtue of the fact that it is actually undivided, even though it is divisible in potentiality. The indivisible in this sense is understood by us prior to its division into parts, since, as was explained above (a. 3), an indistinct cognition is prior to a distinct cognition.

In a second sense, something is indivisible by its species, in the way that a man’s reason is something indivisible. And in this sense, too, the indivisible is understood prior to its division into the parts of reason, as was explained above (a. 3), and likewise prior to the intellect’s composing and dividing by affirming or negating.

The reason for this is that the intellect in its own right understands indivisibles of these two sorts as its proper object.

In a third sense, what is indivisible is altogether indivisible—e.g., a point (*punctus*) and oneness (*unitas*), which are divided neither in actuality nor in potentiality. And the indivisible in this sense is understood in a posterior way through the privation of divisibility (*per privationem divisibilis*). Hence, a point is defined by a privation (*privative*): A point is that which has no parts. Similarly, the definition of *one* is that which is not divisible, as *Metaphysics* 10 says. The reason is that an indivisible in this sense has a certain sort of opposition to a corporeal thing, whose ‘what-ness’ is what the intellect grasps in the first place and *per se*.

However, if, as the Platonists claimed, our intellect had intellectual understanding by participating in separated indivisibles, then it would follow that what is indivisible in this third sense would be understood first. For according to the Platonists, things participate first in what is prior.

**Reply to objection 1:** In the acquisition of scientific knowledge, it is not always the principles and elements that are prior, since sometimes we go from sensible effects to a cognition of intelligible principles and causes.

On the other hand, in fully completed scientific knowledge (*in complemento scientiae*), the knowledge of the effects always depends on the cognition of principles and elements. For as the Philosopher says in the same place, “We are thought to have scientific knowledge when we are able to resolve what is derived from the principles into its causes.”

**Reply to objection 2:** ‘Point’ does not occur in the commonly accepted definition of a line, since it is obvious that in an infinite line, or even in a circular line, there are no points except in potentiality. However, Euclid is here defining a finite straight line, and so he posits ‘point’ in the definition of a line in the way that a terminus occurs in the definition of what it terminates.

Oneness (*unitas*), on the other hand, is the measure of number and so occurs in the definition of a number that is measured. It does not, however, have a place in the definition of the divisible; instead, just the opposite occurs.

**Reply to objection 3:** The likeness through which we have intellectual understanding is the species of what we have cognition of that exists in the one who understands. And so it is not because of the likeness of a nature to the cognitive power that something is understood first; rather it is because of the cognitive power's agreement with the object. Otherwise, the power of seeing would have cognition of the sense of hearing rather than of color.

## QUESTION 86

### What Our Intellect Has Cognition of in Material Things

Next we have to consider what our intellect understands in material things. And on this topic there are four questions: (1) Does our intellect have cognition of singulars? (2) Does our intellect have cognition of infinitely many things? (3) Does our intellect have cognition of contingent things? (4) Does our intellect have cognition of future things?

#### Article 1

##### Does our intellect have cognition of singulars?

It seems that our intellect has cognition of singulars (*cognoscat singularia*):

**Objection 1:** If someone has cognition of a composition, then he has cognition of the terms (*extrema*) of the composition. But our intellect has cognition of the composition ‘Socrates is a man’; for it is the intellect’s role to form a proposition. Therefore, our intellect has cognition of the singular thing that is Socrates.

**Objection 2:** The practical intellect directs one in acting. But acts have to do with singulars. Therefore, the intellect has cognition of singulars.

**Objection 3:** Our intellect has an intellective understanding of itself. But the intellect is itself a singular; otherwise, it would not have any acts at all, since acts belong to singular things. Therefore, our intellect has cognition of something singular.

**Objection 4:** A higher power is capable of whatever a lower power is capable of. But the sensory power has cognition of singulars. Therefore, *a fortiori*, so does the intellect.

**But contrary to this:** In *Physics* 1 the Philosopher says, “The universal is known in accord with reason (*secundum rationem*), the singular in accord with the sensory power (*secundum sensum*).”

**I respond:** Our intellect cannot have a direct and primary cognition of the singular in material things. The reason for this is that the principle of singularity in material things is individual matter (*materia individualis*), while, as was explained above (q. 85, a. 1), our intellect has intellective understanding by abstracting the intelligible species from individual matter. But it is the universal that is abstracted from individual matter. Hence, our intellect has direct cognition only of the universals (*directe est cognoscitivus nisi universalium*).

However, our intellect can have cognition of the singular indirectly and, as it were, by a sort of turning back (*indirecte et quasi per quandam reflexionem*). For as was explained above (q. 85, a. 7), even after it has abstracted intelligible species, it cannot have actual intellective understanding except by turning itself to the phantasms, in which it has intellective understanding of the intelligible species, as *De Anima* 3 says.

So, then, our intellect understands the universal itself directly through the intelligible species, whereas it indirectly understands the singulars that the phantasms are phantasms of. And it is in this way that it forms the proposition ‘Socrates is a man’.

**Reply to objection 1:** The reply to the first object is obvious from what was just said.

**Reply to objection 2:** As *Ethics* 7 puts it, the choice of a particular action (*electio particularis operabilis*) is, as it were, the conclusion of the practical intellect’s syllogism. But a singular conclusion cannot be inferred directly from a universal proposition; rather, it is inferred by the mediation of some assumed singular proposition. Hence, as *De Anima* 3 says, the practical intellect’s universal conception effects movement only through the mediation of a particular apprehension by the sentient part of the soul.

**Reply to objection 3:** The problem with a singular’s being intelligible is not that it is *singular* but

rather that it is *material*, since nothing is understood intellectually except in an immaterial mode. And so if a given singular, such as the intellect, is immaterial, there is no problem with its being intelligible (*hoc non repugnat intelligibilitati*).

**Reply to objection 4:** A higher power can do what a lower power does, but it does it in a more eminent way. Hence, what the sensory power has cognition of materially and concretely—which is what it is to have direct cognition of a singular—the intellect has cognition of immaterially and abstractly—which is what it is to have cognition of a universal.

## Article 2

### Can our intellect have cognition of infinitely many things?

It seems that our intellect can have cognition of infinitely many things (*possit cognoscere infinita*):

**Objection 1:** God exceeds all infinities (*excedit omnia infinita*). But as was explained above (q. 12, a. 1), our intellect can have cognition of God. Therefore, *a fortiori*, our intellect can have cognition of all other infinities.

**Objection 2:** Our intellect is apt by nature to have cognition of genera and species. But some genera—e.g., *number*, *ratio*, and *shape*—have infinitely many species. Therefore, our intellect can have cognition of infinitely many things.

**Objection 3:** If one body did not prevent another body from being in one and the same place, then nothing would prevent infinitely many bodies from being in one place. But one intelligible species does not prevent another intelligible species from existing simultaneously in the same intellect, since it is possible to have habitual knowledge of many things (*multa scire in habitu*). Therefore, nothing prevents our intellect from having habitual knowledge of infinitely many things.

**Objection 4:** Since, as was explained above (q. 76, a. 1), our intellect is not a power that belongs to corporeal matter, it seems to be infinite in potentiality. But an infinite power ranges over infinitely many things (*virtus infinita est super infinita*). Therefore, our intellect can have cognition of infinitely many things.

**But contrary to this:** *Physics* 1 says, “The infinite, insofar as it is infinite, is unknown.”

**I respond:** Since a power is proportioned to its object, the intellect must be related to the infinite in the way that it is related to its object, viz., the ‘what-ness’ (*quidditas*) of a material thing. Now as *Physics* 3 explains, in material things there is no actual infinity (*infinitum in actu*), but only a potential infinity (*infinitum in potentia*) insofar as one thing succeeds another. And so a *potential infinity* is found in our intellect when it takes one thing after another, since our intellect never has an intellectual understanding of so many things that it cannot have an intellectual understanding of more things.

However, our intellect cannot have either an *actual* or a *habitual* cognition of infinitely many things.

Our intellect cannot have an *actual* cognition of infinitely many things, because it can have an actual cognition all at once only of that which it understands through a single species. But an infinity does not have a single species; otherwise, it would have the character of something total and complete. And so an infinity cannot be understood intellectually except by taking one part after another. This is clear from the definition of an infinity given in *Physics* 3. For the infinite is “that which is such that when one takes a quantity from it, it is always possible to take more,” and so it would be possible to have an actual cognition of an infinity only if all its parts were enumerated—which is impossible.

For the same reason, we cannot have a *habitual* intellectual cognition of infinitely many things. For

in our case a habitual cognition is caused by an actual thought, since as *Ethics 2* says, it is by understanding intellectually that we become scientific knowers (*scientes*). Hence, we would not be able to have the habit of having a distinct cognition of infinitely many things unless we had thought of all the infinitely many things by enumerating them through a succession of cognitions—which is impossible.

And so our intellect cannot have either an actual or habitual cognition of infinitely many things; rather, as has been explained, it can have a cognition of infinitely many things only in potentiality.

**Reply to objection 1:** As was explained above (q. 7, a. 1), God is called infinite as a form that is not terminated by any *matter*, whereas among material things something is called infinite because of a lack of *formal* termination (*per privationem formalis terminationis*). And because form is known in its own right (*secundum se*), whereas matter without form is not known, it follows that a material infinite is unknown in its own right. By contrast, a formal infinite, i.e., God, is known in His own right (*notum secundum se*), but He is unknown as far as we are concerned (*ignotum quoad nos*) because of the weakness of our intellect, which in the state of the present life has a natural ability to understand material things. And so in our present state we cannot know God except through His material effects. However, in our future state this defect of our intellect will be removed by [the light of] glory, and at that time we will be able to see God Himself in His essence—though without comprehending Him.

**Reply to objection 2:** Our intellect is apt to have a cognition of species by abstracting them from phantasms. And so one cannot have either an actual or habitual cognition of those species of numbers or shapes which he has not imagined—except, perhaps, generically (*in genere*) and in their general principles, which is to understand them potentially and indistinctly.

**Reply to objection 3:** If two or more bodies were in one place, they would not have to enter that place successively in such a way that the located bodies would be enumerated by a succession of entrances. By contrast, intelligible species enter our intellect successively, since it is not the case that many of them are actually understood all at once. And so it is necessary for the species in our intellect to be numbered and not to be infinitely many.

**Reply to objection 4:** Our intellect has cognition of the infinite in the same sense in which it is infinite in power. For its power is infinite in the sense that it is not terminated by corporeal matter. And it has cognition of the universal, which is abstracted from the material individual, and, as a result, it is not terminated in any individual, but, as far as it itself is concerned, it extends to infinitely many individuals.

### Article 3

#### Does our intellect have cognition of contingent things?

It seems that our intellect does not have cognition of contingent things (*non sit cognoscitivus contingentium*):

**Objection 1:** As *Ethics 6* says, understanding (*intellectus*), scientific knowledge (*scientia*), and wisdom (*sapientia*) have to do with necessary things and not contingent things.

**Objection 2:** As *Physics 4* explains, things that exist at some times and not at others are measured by time. But the intellect abstracts from time in the same way that it abstracts from the other conditions of matter. Therefore, since it is a property of contingent things to exist at some times and not at others, it seems that our intellect cannot have cognition of contingent things.

**But contrary to this:** All scientific knowledge exists in the intellect. But some sciences have to do with contingent things—e.g., the moral sciences, which have to do with human acts subject to free choice, and the natural sciences, as regards that part of them which treats generable and corruptible

things. Therefore, the intellect has cognition of contingent things.

**I respond:** Contingent things can be thought of in two ways: first, insofar as they are contingent and, second, insofar as something necessary is found in them. For nothing is contingent to such an extent that it has nothing necessary within itself. For instance, the very thing that is Socrates' running is, to be sure, contingent in itself, but the relation of running to movement is necessary, since it is necessary that Socrates is moving if he is running.

Each thing is contingent on the part of its matter. For the contingent is that which is able to be and able not to be, and potentiality has to do with matter. By contrast, necessity follows upon the nature of form, since what follows upon the form is in the thing by necessity. Matter is a principle of individuation, whereas the universal notion (*ratio universalis*) is obtained by the abstraction of the form from particular matter. It was explained above (a. 1) that the intellect has *per se* and direct cognition of universals and the sensory power has *per se* and direct cognition of singulars, which, as was said above (a. 1), are also understood intellectually in a certain indirect way.

So, then, contingent things, insofar as they are contingent, are such that the sensory power has direct cognition of them and the intellect has indirect cognition of them, whereas the intellect has cognition of the universal and necessary aspects of contingent things. Hence, if we attend to the universal aspects of knowable things, all scientific knowledge has to do with what is necessary. But if we attend to the things themselves, then some scientific knowledge has to do with necessary things and some has to do with contingent things.

**Reply to objection 1 and objection 2:** The reply to the objections is clear from what has been said.

#### Article 4

##### Does our intellect have cognition of future things?

It seems that our intellect has cognition of future things (*cognoscat futura*):

**Objection 1:** Our intellect has cognition through intelligible species, which abstract from the here and now, and so they are related indifferently to all times. But the intellect can have cognition of present things. Therefore, it can have cognition of future things.

**Objection 2:** When a man is bereft of his sensory powers, he is able to have cognition of some future things, as is clear in the case of those who are asleep and those who are delirious. But when someone is bereft of his sensory powers, his intellect becomes stronger. Therefore, the intellect, as far as it itself is concerned, has cognition of future things.

**Objection 3:** Man's intellective cognition is more efficacious than any sort of cognition on the part of brute animals. But there are certain animals that have cognition of some future things; for instance, crows that caw repeatedly signify that rain is coming soon. Therefore, *a fortiori*, the human intellect can have cognition of future things.

**But contrary to this:** Ecclesiastes 8:6-7 says, "There is a great affliction for man, because he is ignorant of things past; and things to come he cannot know by any messenger."

**I respond:** As with the cognition of contingent things, so in the same way we have to draw a distinction concerning the cognition of future things. For *insofar as they fall under a time*, future things are singulars, which, as was explained above (a. 1), the human intellect has cognition of only by turning back [to the phantasms] (*per reflexionem*). However, the *natures* of future things can be universal and perceptible by the intellect, and there can even be scientific knowledge of them.

Speaking in general about the cognition of future things, notice that there are two possible ways to have cognition of future things, viz., (a) *in themselves* and (b) *in their causes*.

Cognition of future things *in themselves* can be had only by God, to whom they are present even while they are future in the course of time; for as was explained above when we discussed God's knowledge (q. 14, a. 13), His eternal intuitive vision (*aeternus intuitus*) ranges over the whole course of time all at once.

However, even we can have cognition of future things insofar as they exist *in their causes*. And if they exist in their causes in such a way that they proceed from those causes with necessity, then our cognition has the certitude of scientific knowledge (*cognoscuntur per certitudinem scientiae*), as when an astronomer (*astrologus*) foreknows a future eclipse. On the other hand, if they exist in their causes in such a way that they proceed from those causes in most cases (*ut in pluribus*), then there can be cognition of them through a prediction that is more or less certain (*conjectura vel magis vel minus certam*), depending on whether the causes are more or less inclined toward the effects.

**Reply to objection 1:** This argument goes through for a cognition that involves the universal aspects of causes, on the basis of which there can be a cognition of future things that stems from the way in which an effect is ordered toward its cause (*secundum modum ordinis effectus ad causam*).

**Reply to objection 2:** As Augustine puts it in *Confessiones* 12, the soul has a certain power of prophecy, so that it is able, by its nature, to have cognition of future things; and so when it withdraws from the bodily senses and in a sense reverts to itself, it participates in the knowledge of future things.

And this opinion would indeed be reasonable if we held, as the Platonists do, that the soul receives its cognition of things by participating in the ideas. For in that case, if it were unimpeded by the body, the soul would by its nature have cognition of the universal causes of all effects. Hence, it knows future things when it is withdrawn from the body's senses.

However, since this mode of cognition is not connatural to our intellect, given that our intellect instead receives its cognition from the sensory powers, it follows that it is not because of the soul's nature that it has cognition of future things when it turns itself away from the senses, but rather because of the action of certain higher spiritual or corporeal causes (*per impressionem aliquarum causarum superiorum spiritualium et corporalium*).

Through *spiritual* causes, as when a human intellect is illuminated by God's power through the ministry of the angels and its phantasms are ordered toward the cognition of future things—or even, as was explained above (q. 57, a. 3), when through the action of demons there is a movement in the imagination toward foreknowing certain future things that the demons have cognition of. It is when it is turned away from the senses that the human soul is more susceptible to these impressions from spiritual causes; for in turning away from the senses it becomes more like the spiritual substances and more unimpeded by external disturbances.

This also happens through the action of higher *corporeal* causes. For it is clear that higher bodies act upon lower bodies. Hence, since the sentient powers are the acts of corporeal organs, it follows that the imagination is in some way affected by the action of the celestial bodies. Hence, since celestial bodies are a cause of many future things, certain signs of future things come to exist in the imagination. These signs are perceived more often at night and by those who are asleep than during the day and by those who are awake. For as *De Somno et Vigilia* says, "Impressions made by day more easily dissipate. The night air is calmer, because the nights are more silent. And within the body these impressions do the job of the sensory power because of sleep, since small interior movements are sensed more readily by those who are asleep than by those who are awake. And these movements produce phantasms, on the basis of which future things are foreseen."

**Reply to objection 3:** Brute animals do not have anything beyond the imagination to order their phantasms, in the way that men have reason. And so a brute animal's imagination is wholly led by the

celestial impressions. Thus, some future things, like rain and others of this type, can be known better through movements of this sort in animals than through such movements in men, who are moved by the counsel of reason. Hence, in *De Somno et Vigilia* the Philosopher says, “Some extremely foolish men have the most foreknowledge. For their mind (*intelligentia*) is not affected by cares, but is, as it were, vacuous and empty of all anxiety and moves wherever it is led.”

## QUESTION 87

### How Our Intellect Has Cognition of Itself and of What Exists Within It

Next we have to consider how the intellectual soul has cognition of itself and of what exists within it. And on this topic there are four questions: (1) Does the intellectual soul have cognition of itself through its own essence? (2) How does it have cognition of the habits that exist within it? (3) How does the intellect have cognition of its own act? (4) How does it have cognition of an act of the will?

#### Article 1

##### Does the intellectual soul have cognition of itself through its own essence?

It seems that the intellectual soul has cognition of itself through its own essence:

**Objection 1:** In *De Trinitate* 9 Augustine says, “The mind knows itself through itself, because it is incorporeal.”

**Objection 2:** An angel and a human soul share in the genus *intellectual substance*. But an angel has intellectual understanding of himself through his own essence. Therefore, so does the human soul.

**Objection 3:** As *De Anima* 3 says, “In things that exist without matter, the intellect and what is understood are the same.” But the human mind exists without matter, since, as was explained above (q. 76, a. 1), it is not the actuality of any body. Therefore, in the human mind the intellect and what is understood are the same. Therefore, it has intellectual understanding of itself through its own essence.

**But contrary to this:** *De Anima* 3 says, “The intellect has intellectual understanding of itself in the same way that it has intellectual understanding of other things.” But it has intellectual understanding of other things through likenesses of those things and not through their essence. Therefore, neither does it have intellectual understanding of itself through its own essence.

**I respond:** As *Metaphysics* 9 says, each thing is such that there can be cognition of it insofar as it is actual and not insofar as it is potential. For something is a being and is true, i.e., falls under cognition, insofar as it is actual. This is manifestly obvious in the case of sensible things; for instance, the power of seeing perceives only what is actually colored and not what is potentially colored. Similarly, it is clear that insofar as the intellect has cognition of material things, it has cognition only of what is actual; and so, as *Physics* 1 says, the intellect does not have cognition of primary matter except in relation to form (*secundum proportionem ad formam*).

Hence, among immaterial substances, too, each of them bears the same relation to being intelligible through its essence that it bears to being actual through its essence.

Thus, God’s essence, which is pure and perfect (*perfectus*) actuality, is simply and perfectly intelligible in its own right (*secundum seipsam*). Hence, it is through His essence that God has perfect intellectual understanding not only of Himself but also of all things.

On the other hand, an angel’s essence is, to be sure, in the genus of intelligible things as an actuality, but not as a pure and completely perfect (*completus*) actuality. Hence, an angel’s act of intellectual understanding (*eius intelligere*) is not completely perfected (*completur*) through his essence. For even though an angel has intellectual cognition of himself through his essence, he nonetheless cannot have cognition of all things through his essence; instead, he has cognition of things other than himself through likenesses of those things.

By contrast, a human intellect is in the genus of intelligible things only as a being in potentiality, in the same way that primary matter is in the genus of sensible things; this is why the intellect is called the passive or potential intellect (*intellectus possibilis*). Therefore, if the intellect is considered in its essence, it has intellectual understanding in potentiality (*potentia intelligens*). Hence, of itself it has the

power to have intellectual understanding, but it is not itself understood intellectually except insofar as it becomes activated (*actu*).

On this score, the Platonists likewise held that the order of intelligible entities transcends the order of intellects; for the intellect has intellectual understanding only through participation in what is intelligible, and, according to them, what participates is inferior to what it participates in. Therefore, if, as the Platonists held, the human intellect were activated (*fieret actu*) through participation in separated intelligible forms, then the human intellect would understand itself through this sort of participation in incorporeal things.

However, since, as was explained above (q. 86, a. 4), it is connatural to our intellect, in the state of the present life, to be directed toward material and sensible things, it follows that our intellect understands itself insofar as it is activated (*fit actu*) by species abstracted from sensible things through the light of the active intellect—and this is the actualization (*actus*) both of the intelligible things themselves and, through their mediation, of the passive intellect (*intellectus possibilis*).

Therefore, it is through its act, and not through its essence, that our intellect has cognition of itself. And this in two ways:

First, in a *particular* way (*particulariter*), insofar as Socrates or Plato perceives himself to have an intellectual soul in virtue of the fact that he perceives himself to have intellectual understanding.

Second, in a *general* way (*in universali*), insofar as we consider the nature of the human mind on the basis of the intellect's act. But, as was explained above (q. 84, a. 5), it is true that the discernment (*iudicium*) and efficacy of the cognition by which we grasp the nature of the soul belongs to us because of the derivation of our intellect's light from God's truth, in which the conceptions (*rationes*) of all things are contained. Hence, in *De Trinitate* 9 Augustine says, "We intuitively see (*intuemur*) inviolable truth, on the basis of which we perfectly define, as far as we are able to, not how each man's mind in fact is, but rather how it ought to be in light of the eternal conceptions."

However, there is a difference between these two types of cognition. For the mind's very presence, which is the principle of the act by which the mind perceives itself, is sufficient for the first type of cognition that is had of the mind. And it is for this reason that the mind is said to have a cognition of itself through its own presence. By contrast, the mind's presence is not itself sufficient for the second type of cognition that is had of the mind; instead, what is required is diligent and subtle inquiry. Hence, many are ignorant of the nature of the soul, and many have fallen into error about the nature of the soul. This is why, in *De Trinitate* 10, Augustine says of this sort of inquiry into the mind, "It is not as something absent that the mind seeks to discern itself; rather, it seeks to discern itself as something present"—that is, to have a cognition of how it differs from other things, which is what it is to have a cognition of its own 'what-ness' and nature.

**Reply to objection 1:** The mind knows itself through itself in the sense that it eventually (*tandem*) arrives at a cognition of itself, but through its own act. For the mind itself is what is known, because it loves itself, as Augustine adds in the place cited. For there are two possible reasons why something is said to be known in itself (*per se notum*): either (a) because there is nothing else through which one arrives at a knowledge of it, in the way that the first principles are said to be known in themselves, or (b) because it is not known *per accidens*—in the way in which color is *per se* visible, whereas a substance is visible *per accidens*.

**Reply to objection 2:** An angel's essence is an actuality in the genus of intelligible things, and so it is both an intellect and something that is understood intellectually. Hence, an angel apprehends his own essence through himself.

By contrast, this is not the case with a human intellect, which either (a) is entirely in potentiality with respect to intelligible things, as is the case with the passive intellect (*intellectus possibilis*), or else (b) is the actuality of the intelligible things which are abstracted from the phantasms, as is the case with

the active intellect.

**Reply to objection 3:** This proposition (*verbum*) of the Philosopher's is true in general of all types of intellect. For just as an activated sensory power (*sensus in actu*) is the sensible thing, because of the likeness of the sensible thing that serves as the form of the activated sensory power, so too the activated intellect (*intellectus in actu*) is the thing as actually understood (*intellectum in actu*), because of the likeness of the thing understood that serves as the form of the activated intellect. And so the human intellect, which proceeds into act because of the species of the thing understood, is itself understood through that same species as through its own form.

Now to say that in those things without matter the intellect is the same as the thing understood is the same as saying that in things that are actually being understood the intellect and what is understood are the same. For something is actually being understood intellectually because it is without matter. But there is a difference here. For the essences of certain things exist without matter, e.g., the separated substances we call angels, and each of them is both something that is understood intellectually and something that understands intellectually. On the other hand, there are some things whose essences do not exist without matter; instead, all that exists without matter are the likenesses abstracted from them.

Hence, in *De Anima* 3 the Commentator says that the proposition adduced in the objection is true only in the case of the separated substances. For, as was just explained, the proposition is rendered true in their case in a way in which it is not rendered true in the case of other things.

## Article 2

### Does our intellect have cognition of the soul's habits through their essence?

It seems that our intellect has cognition of the soul's habits through their essence:

**Objection 1:** In *De Trinitate* 13 Augustine says, "Faith is not seen in the heart in which it exists in the same way that the soul of another man is seen from the movements of his body. Rather, a most certain knowledge grasps it, and the conscience calls out in testimony to it." And the same argument holds for the other habits of the soul. Therefore, the habits of the soul are perceived (*cognoscuntur*) through themselves and not through their acts.

**Objection 2:** We have cognition of material things that exist outside the soul in virtue of the fact that their likenesses are present in the soul, and this is why they are said to be understood (*cognoscuntur*) through their likenesses. But the soul's habits are present in the soul through their essence. Therefore, it is through their essence that they are understood.

**Objection 3:** That because of which a thing is such-and-such is itself such-and-such to a greater degree (*propter quod unumquodque tale, et illud magis*). But other things are understood by the soul because of its habits and intelligible species. Therefore, the soul's habits and intelligible species are understood by the soul to a greater degree through themselves.

**But contrary to this:** Habits are principles of acts, just as powers are. But as *De Anima* 2 says, "Acts and operations are conceptually prior (*priores secundum rationem*) to powers." For the same reason, therefore, acts and operations are prior to habits. And so habits are known through their acts, just as powers are.

**I respond:** In some sense a habit lies between a pure potentiality (*potentia pura*) and a pure actuality (*actus purus*). Now it has already been explained (a. 1) that nothing is understood except insofar as it is actual. So, then, insofar as a habit falls short of being a complete actuality, it falls short of being knowable through itself. Rather, it has to be known through its act—whether this be (a) when

someone perceives himself to have a habit by virtue of perceiving himself to be producing the act proper to that habit, or (b) when someone is inquiring into the nature and character of a habit by considering its act. The first type of cognition of a habit is effected by the very presence of the habit, since by the very fact that it is present it causes the act in which it is immediately perceived. On the other hand, the second type of cognition of a habit comes about through diligent inquiry, as was explained above (a. 1) in the case of the mind.

**Reply to objection 1:** Even though faith is not perceived through exterior bodily movements, it is nonetheless perceived by the one in whom it exists through an interior act of the heart. For no one knows that he has faith unless he perceives himself to be making an act of faith (*nisi per hoc quod se credere percipit*).

**Reply to objection 2:** Habits are not present in our intellect as objects of the intellect, since, as was explained above (q. 84, a. 7), in the state of the present life the object of our intellect is the nature of a material thing. Instead, habits are present in the intellect as things by which the intellect engages in intellectual understanding.

**Reply to objection 3:** The dictum ‘That because of which (*propter quod*) a thing is such-and-such is itself such-and-such to a greater degree’ is true if it is understood to apply to things that belong to the same order, e.g., things in the same genus of cause. For instance, if one claimed that health exists for the sake of life (*propter vitam*), it would follow that life is desirable to a greater degree.

However, the dictum is not true if it is applied to things that belong to diverse orders. For instance, if one claimed that health exists because of medicine (*propter medicinam*), it would not thereby follow that medicine is more desirable; for health belongs to the order of ends, while medicine belongs to the order of efficient causes.

So, then, if we take two things, both of which belong *per se* to the order of the objects of cognition, the one because of which the other is known (*cognoscitur*) will itself be known (*notum*) to a greater degree—in the way that principles are known to a greater degree than their conclusions are. However, a habit does not, insofar as it is a habit, belong to the order of objects of cognition. Furthermore, it is not because of a habit as an *object* of cognition that certain things are known; instead, certain things are known because of a habit as a *disposition* or *form* by which the knower understands. And so the argument does not go through.

### Article 3

#### Does the intellect have cognition of its own act?

It seems that the intellect does not have cognition of its own act (*non cognoscat proprium actum*):

**Objection 1:** It is the object of a cognitive power (*cognoscitiva virtus*) that is properly speaking such that there is cognition of it. But an act differs from its object. Therefore, the intellect does not have cognition of its own act.

**Objection 2:** If there is a cognition of something, then there is an act by which that cognition takes place. Therefore, if the intellect has a cognition of its own act, then there is an act by which it has the cognition of that act; and, again, the cognition of this latter act will take place by means of yet another act. Therefore, there will be an infinite regress (*erit procedere in infinitum*)—which seems impossible.

**Objection 3:** The intellect is related to its own act in the same way that a sensory power is related to its own act. But a proper sensory power does not sense its own act; rather, as *De Anima* says, this is the role of the common sensory power. Therefore, neither does the intellect have intellectual cognition

of its own act.

**But contrary to this:** In *De Trinitate* 10 Augustine says, “I understand that I understand.”

**I respond:** As has already been explained (a. 1), there is cognition of a thing insofar as it is actual. Now the ultimate perfection of an intellect is its operation. For this operation is not like an action which tends toward something else (*tendens in alterum*) and which is a perfection of the thing acted upon, in the way that an act of building is a perfection of the thing built. Rather, as is explained in *Metaphysics* 9, the intellect’s action remains within the agent as the agent’s own perfection and actuality.

Therefore, the first thing that is understood about an intellect is its very act of intellectual understanding. But this applies in different ways to the different types of intellects:

For there is one type of intellect, viz., God’s intellect, which is its very act of intellectual understanding. And so in the case of God, His understanding that He understands is the same as His understanding His own essence, since His essence is His very act of intellectual understanding.

On the other hand, there is another type of intellect, viz., the angelic intellect, which, as was explained above (q. 79, a. 1), is not its own act of intellectual understanding, but is nonetheless such that the first object of its act of understanding is its own essence. Hence, even though, in an angel, his understanding that he understands is conceptually different from his understanding his own essence, he nonetheless understands both of them together and in a single act; for his understanding his own essence is a proper perfection of his essence, and an entity taken together with its perfection is understood all at once and by a single act.

But there is another type of intellect, viz., the human intellect, which (a) is not its own act of understanding and which (b) is such that the primary object of its act of understanding is not its own essence but instead something extrinsic, viz., the nature of a material thing. And so what is understood in the first place by the human intellect is an object of this latter sort, and what is understood in the second place is the very act by which the [primary] object is understood. Furthermore, by this act the intellect itself is understood, since the intellect’s perfection is the very act of intellectual understanding. This is why the Philosopher says that objects are understood prior to their acts, and acts prior to their powers.

**Reply to objection 1:** The object of the intellect is something general, viz., *being* and *true*, under which is also included the very act of intellectual understanding. Hence, the intellect is able to have intellectual understanding of its own act. But it does not understand its own act in the first place, since in the state of the present life the primary object of our intellect is not just any being or any true thing but rather, as was explained above (q. 84, a. 7), *being* and *true* as thought of in material things (*ens et verum consideratum in rebus materialibus*). And it is on this basis that our intellect arrives at the cognition of all other things.

**Reply to objection 2:** The human act of intellectual understanding is not itself the actuality and perfection of the material nature that is understood, in the sense that the nature of the material thing and the very act of understanding it could be understood in a single act, in the way that a thing together with its perfection is understood by a single act. Hence, the act by which the intellect understands a rock is different from the act by which it understands that it understands the rock, and so on. Nor, as was explained above (q. 86, a. 2), is it problematic for there to be a potential infinity in the intellect.

**Reply to objection 3:** A proper sensory power has an act of sensing (*sentit*) because of a change effected in the material organ by a sensible exterior thing. But it is impossible for something material to effect a change within itself; instead, one material thing is affected by another. And so the act of a proper sensory power is perceived through the common sensory power.

By contrast, the intellect does not have intellectual understanding through any material change in an organ, and so the cases are not parallel.

#### Article 4

##### Does the intellect have intellectual understanding of acts of willing?

It seems that the intellect does not have intellectual understanding of acts of willing (*non intelligat actum voluntatis*):

**Objection 1:** The intellect does not have cognition of anything that is not in some way present in the intellect. But an act of willing is not present in the intellect, since the intellect and the will are diverse powers. Therefore, the intellect does not have cognition of acts of willing.

**Objection 2:** An act takes its species from its object. But the object of the will differs from the object of the intellect. Therefore, an act of willing has a species different from that of an object of the intellect. Therefore, the intellect does not have cognition of it.

**Objection 3:** In *Confessiones* 10 Augustine says of the soul's affections that they are perceived "neither through images, in the way that bodies are, nor through their presence, in the way that crafts (*artes*) are, but through certain notions (*per quasdam notiones*)." But it does not seem to be possible for there to be notions of things in the soul other than the essences of the things perceived or likenesses of those things. Therefore, it seems impossible for the intellect to have cognition of the soul's affections, i.e., of acts of willing.

**But contrary to this:** In *De Trinitate* 10 Augustine says, "I understand myself to have an act of willing (*intelligo me velle*)."

**I respond:** As was explained above (q. 59, a. 1), an act of willing is nothing other than a certain inclination that follows upon an understood form, in the same way that a natural desire (*appetitus naturalis*) is an inclination that follows upon a natural form. But a thing's inclination exists within the thing itself in the way appropriate to it (*per modum eius*). Hence, a natural inclination exists naturally in a natural thing; and an inclination which is a sentient desire exists in a sensible way in a thing that has sentience; and, similarly, an intelligible inclination, which is an act of willing, exists intelligibly, as in its source and proper subject, in someone who has intellectual understanding. This is why, in *De Anima* 3, the Philosopher employs the following manner of speaking: "The will exists in reason." But if something exists intelligibly in someone who has intellectual understanding, then it follows that that thing is understood by him.

Hence, an act of willing is understood by the intellect both (a) insofar as someone perceives himself to be willing (*inquantum aliquis percipit se velle*) and also (b) insofar as someone has cognition of the nature of this act (*inquantum aliquis cognoscit naturam huius actus*) and, as a result, cognition of the nature of its source (*principium*), which is either a habit or a power.

**Reply to objection 1:** This argument would go through if the will and the intellect differed in subject in addition to being diverse powers. For in that case what exists in the will would be absent from the intellect. As things stand, however, since both of them are rooted (*radicetur*) in the same substance of the soul and the one is in some sense a principle of the other, it follows that what exists in the will somehow exists in the intellect as well.

**Reply to objection 2:** The good and the true, which are the objects of the will and the intellect, do, to be sure, differ conceptually, but, as was explained above (q. 16, a. 4 and q. 82, a. 4), the one is contained under the other. For the true is something good, and the good is something true. And so what belongs to the will falls under the intellect, and what belongs to the intellect is able to fall under the will.

**Reply to objection 3:** The soul's affections do not exist in the intellect just through a likeness, as bodies do, or through their presence in the subject, as crafts do. Rather, they exist in the intellect in the way that something that is derived from a principle exists in a principle that is such that a notion of what

is derived exists in it (*principiatum est in principio in quo habetur notio principiati*). And this is why Augustine says that the soul's affections exist in memory through certain notions (*per quasdam notiones*).

## QUESTION 88

### How the Human Soul Understands Things That are Above It

Next we have to consider how the human soul has cognition of things that are above it, viz., immaterial substances. And on this topic there are three questions: (1) Can the human soul, in the state of the present life, have intellectual understanding of the immaterial substances which we call angels through themselves? (2) Can the human soul come to a knowledge (*notitia*) of immaterial substances through its cognition of material things? (3) Is it God that is understood by us in the first place?

#### Article 1

##### Can the human soul, in the state of the present life, have intellectual understanding of immaterial substances through themselves?

It seems that the human soul, in the state of the present life, can have intellectual understanding of immaterial substances through themselves (*possit intelligere substantias immateriales per seipsas*):

**Objection 1:** In *De Trinitate* 9 Augustine says, “Just as the mind itself gathers knowledge of corporeal things through the bodily senses, so it gathers knowledge of incorporeal things through its very self (*per semetipsam*).” But things of this latter sort are immaterial substances. Therefore, the mind has intellectual understanding of immaterial substances.

**Objection 2:** What is similar is known by means of what is similar to it. But the human mind is more similar to immaterial things than to material things, since, as is clear from what was said above (q. 76, a. 1), the mind is itself immaterial. Therefore, since our mind has intellectual understanding of material things, *a fortiori* it has intellectual understanding of immaterial things.

**Objection 3:** The fact that things that are maximally sensible in their own right (*secundum se maxime sensibilia*) are not maximally sensible by us stems from the fact that excesses in the case of sensibles (*excellantiae sensibilibus*) damage our sensory power. But as *De Anima* 3 says, excesses in the case of intelligibles (*excellantiae intelligibilium*) do not damage our intellect. Therefore, things that are maximally intelligible in their own right are likewise maximally intelligible to us. But since material things are intelligible only because we make them actually intelligible through abstraction from matter, it is clear that substances that are immaterial are by their nature more intelligible in their own right. Therefore, *a fortiori*, we have a much better intellectual understanding of them than of material things.

**Objection 4:** In *Metaphysics* 2 the Commentator says that if we could not understand abstract substances intellectually, then “nature would have acted pointlessly (*otiose*), since it would have rendered what is naturally intelligible in its own right (*intellectum in se*) unintelligible by anyone (*non intellectum ab aliquo*).” But there is nothing pointless or useless (*otiosum sive frustra*) in nature. Therefore, we can have intellectual understanding of immaterial substances.

**Objection 5:** The intellect is related to intelligible things in the same way that the sensory power is related to sensible things. But our sense of sight can see all bodies, regardless of whether they are higher and incorruptible bodies or lower and corruptible bodies. Therefore, our intellect can have intellectual understanding of all intelligible substances, even higher and immaterial substances.

**But contrary to this:** Wisdom 9:16 says, “Who will investigate the things in the heavens?” But substances of the sort in question are said to be ‘in the heavens’ (*in caelis*)—this according to Matthew 18:10 (“Their angels in heaven (*in caelis*) ...”). Therefore, immaterial substances cannot be understood through human inquiry (*per investigationem humanam*).

**I respond:** According to Plato’s opinion, not only are immaterial substances understood by us intellectually, but they are the very first things understood by us. For Plato claimed that immaterial

subsistent forms, which he called ‘ideas’, are the proper object of our intellect, and so they are understood by us in the first place and *per se* (*primo et per se*). However, the soul’s cognition is applied to material things insofar as the imagination and sensory power are mixed in with intellection (*intellectui permiscetur phantasia et sensus*). Hence, the more the soul has been purified (*depuratus*), the more it perceives the intelligible truth that belongs to the immaterial things.

By contrast, according to Aristotle’s position, which is closer to our experience (*quam magis experimur*), in the state of the present life our intellect has a natural relation to the natures of material things. Hence, as is clear from what has been said (q. 84, a. 7), our intellect does not understand anything except by turning itself toward the phantasms. And so it is clear that given the mode of cognition that we experience, we cannot have intellectual understanding in the first place and *per se* of immaterial substances, which do not fall under the sensory power or the imagination.

However, in his commentary on *De Anima* 3, Averroes claims that in this life man can in the end arrive at an intellectual understanding of separated substances because of our continuity or union with a certain separated substance which he calls the active intellect and which, because it is a separated substance, naturally understands separated substances. Hence, when the active intellect has been perfectly united with us in such a way that we are able to have perfect intellectual understanding through it, then we will understand separated substances in the same way that we now understand material substances through the passive intellect that is united with us.

Now Averroes claimed that the active intellect is united with us in the following way: Since we have intellectual understanding through the active intellect and through the contemplated intelligibles (*per intelligibilia speculata*), as is clear when we understand conclusions through their understood principles, the active intellect has to be related to the contemplated intelligibles either (a) as a principal agent to its instruments or (b) as a form to its matter. For these are the two ways in which an action is attributed to two principles. That is, the action is attributed either (a) to a principal agent and to its instrument, as when the action of cutting is attributed to the craftsman and to his saw, or (b) to a form and its subject, as when the action of heating is attributed to the heat and to the fire. But in both these ways the active intellect will be related to the contemplated intelligibles as a perfection to what is perfectible, and as an actuality to a potentiality. Now what is perfected is received along with the perfection itself all at once in something; for instance, what is actually visible is received along with the light all at once in the pupil. Therefore, the contemplated intelligibles are received along with the active intellect all at once in the passive intellect. And the greater the number of contemplated intelligibles we receive, the closer we get to the active intellect’s being perfectly united with us—so that when we have had cognition of all the contemplated intelligibles, the agent intellect will be perfectly united with us and we will be able to have cognition of all things, material and immaterial, through it. This is what he posits as ultimate human happiness. Moreover, as far as this proposal is concerned, it does not matter (a) whether in that state of happiness the passive intellect understands separated substances through the active intellect, as Averroes himself thinks, or (b) whether instead—a view Averroes attributes to Alexander—the man understands separated substances through the active intellect, and the passive intellect never understands separated substances (because he posits a corruptible passive intellect).

However, the positions just laid out cannot stand.

First of all, if the active intellect is a separated substance, it is impossible for us to formally have intellectual understanding through it. For that by which an agent formally acts is a form and actuality that belongs to the agent, since every agent acts insofar as it is actualized—just as was explained above (q. 76, a. 1) concerning the passive intellect.

Second, given the position in question, if the active intellect is a separated substance, then it is not united with us in its substance. Instead, only its light is united to us to the extent that there is a participation in the contemplated intelligibles (*secundum quod participatur in intellectis speculatis*); and

the active intellect is not united to us with respect to its other actions, so that we might thereby be able to understand immaterial substances. This is like the fact that when we see colors illuminated by the sun, it is not the sun's substance that is united with us, so that we might be able to perform the sun's actions. Instead, it is only the sun's light that is united with us for seeing colors.

Third, even on the assumption that the active intellect's substance is united with us along the lines explained above, they themselves do not claim that the active intellect is totally united with us after one or two intelligibles—instead, it is totally united with us after *all* the contemplated intelligibles. But all the contemplated intelligibles together fall short of the active intellect's power, since it takes much more power to understand separated substances intellectually than to understand all material substances. Hence, it is clear that even if all material substances were understood intellectually, the active intellect would not be united with us in such a way that we would be able to understand separated substances through it.

Fourth, it is scarcely possible for anyone in this world to have an intellectual understanding of all material intelligibles, and so no one—or at most very few—would attain happiness. But this contradicts the Philosopher in *Ethics* 1, where he says that happiness is “a general good that is accessible to all who are not bereft of virtue.” It is likewise contrary to reason that the end of a species should be attained only by a few members of the species (*ut in paucioribus consequantur ea quae continentur sub specie*).

Fifth, in *Ethics* 1 the Philosopher explicitly says that happiness “is an operation in accord with perfect virtue.” And having enumerated many virtues, he concludes in *Ethics* 10 that ultimate happiness, which consists in the cognition of the most intelligible things, is in accord with the virtue of wisdom, which he had claimed in *Ethics* 6 is “the chief among the speculative virtues.” Hence, it is clear that Aristotle located man's ultimate happiness in cognition of separated substances of a sort that can be had through the speculative sciences—and not through the sort of continuity with the active intellect fabricated by some.

Sixth, it was shown above (q. 79, a. 4) that the active intellect is not a separated substance, but a certain power of the soul that extends actively to the same things that the passive intellect extends to passively. For as *De Anima* 3 says, the passive intellect “is that by which the intellect becomes all things,” whereas the active intellect is “that by which the intellect makes all things.” Therefore, both the active intellect and the passive intellect extend, in the state of the present life, only to material things, which the active intellect makes actually intelligible and which are received in the passive intellect.

Hence, in the state of the present life, we cannot understand immaterial substances through themselves either by means of the passive intellect or by means of the active intellect.

**Reply to objection 1:** From this quotation from Augustine one can infer that what our mind is capable of attaining by way of cognition of incorporeal things is such that the mind can have this cognition through itself. And this is true to the extent that even among the philosophers one finds the claim that knowledge concerning the soul is a certain source of cognition about separated substances. For by understanding itself, our soul takes a step toward having the sort of cognition of incorporeal substances that it is possible for it to have. But it does not, by understanding itself, understand them absolutely speaking or perfectly.

**Reply to objection 2:** Likeness to a nature is not a sufficient explanation for cognition; otherwise, one would have to say what Empedocles said, viz., that the soul shares in the nature of all things in order to have cognition of all things. Instead, what is required for cognition is that a likeness of the thing understood should exist in the one having the cognition as a certain form of his own. Now in the state of the present life our passive intellect is apt to be informed by the likenesses of material things abstracted from phantasms, and so it has a better cognition of material substances than of immaterial substances.

**Reply to objection 3:** The object must have a certain proportion to the cognitive power—more specifically, a proportion of what is active to what is passive, and a proportion of what is perfect to what

is perfectible. Hence, the fact that excessive sensibles (*excellencia sensibilia*) are not grasped by the sensory power is explained not only by the fact that they damage the sensory organs but also by the fact that they are disproportionate to the sentient powers. And it is in this latter way that immaterial substances are disproportionate to our intellect, in its present state, with the result that they cannot be understood by it.

**Reply to objection 4:** This argument of the Commentator's is defective in several ways.

First, from the fact that separated substances are not understood by us, it does not follow that they are not understood by any intellect. For they are understood by themselves and by one another.

Second, separated substances do not have being understood by us as their end. But what is called 'pointless' or 'useless' is that which does not attain the end for which it exists. And so even if immaterial substances were not understood in any way by us, it would not follow that they are useless.

**Reply to objection 5:** The sensory power has cognition of higher and lower bodies in the same way, viz., through an organ's being affected by the sensible thing. But we do not have intellectual cognition of material substances, which are understood by means of abstraction, in the same way that we have intellectual cognition of immaterial substances, which cannot be understood in this way by us, since there are no phantasms of them.

## Article 2

### Can our intellect arrive at an intellectual understanding of immaterial substances through its cognition of material things?

It seems that our intellect can arrive at an intellectual understanding of immaterial substances through its cognition of material things:

**Objection 1:** In *De Caelesti Hierarchia*, chap. 1, Dionysius says, "It is impossible for the human mind to be stimulated upward to the immaterial contemplation of the heavenly hierarchies unless in its own right it uses material guidance." Therefore, it follows that we can be led by material things to an intellectual understanding of immaterial substances.

**Objection 2:** Scientific knowledge exists in the intellect. But there are sciences about immaterial substances, along with definitions. For instance, Damascene defines an angel, and certain texts about angels are proposed in both the theological and philosophical disciplines. Therefore, immaterial substances can be understood by us.

**Objection 3:** The human soul belongs to the genus of immaterial substances. But it itself can be understood intellectually by us through its own act, by which it understands material things. Therefore, other immaterial substances, too, can be understood by us through their effects on material things.

**Objection 4:** The only sort of cause that cannot be comprehended through its effects is one which lies at an infinite distance from its effects. But this is proper to God alone. Therefore, other immaterial substances, which are created, can be understood by us through material things.

**But contrary to this:** In *De Divinis Nominibus*, chap. 1, Dionysius says, "Intelligible things cannot be understood by means of sensible things, and simples cannot be understood by means of composites, and incorporeal things cannot be understood by means of corporeal things."

**I respond:** As Averroes reports in *De Anima* 3, a thinker by the name of Avempace held that through the understanding of material substances we are able to arrive, through true philosophical principles, at an intellectual understanding of immaterial substances. For given that our intellect is able to abstract the 'what-ness' (*quidditas*) of a material thing from matter, if there is still something material

left in that ‘what-ness’, our intellect will be able to do another abstraction; and since this process does not go on to infinity, it will be able at last to arrive at an understanding of a ‘what-ness’ that is wholly without matter. And this is what it is to understand an immaterial substance intellectually.

This argument would be effective if, as the Platonists held, immaterial substances were the forms and species of the material things around us. However, if we do not hold this but presuppose instead that immaterial substances have a nature that is altogether different from the ‘what-nesses’ of material things, then no matter how much our intellect abstracts the ‘what-ness’ of a material thing from matter, it will never arrive at anything like an immaterial substance. And so it is not the case that through material substances we can perfectly (*perfecte*) understand immaterial things.

**Reply to objection 1:** We can ascend from material things to some sort of cognition of immaterial things, but not to perfect cognition, since there is not enough likeness (*comparatio*) between material things and immaterial things. Instead, as Dionysius points out in *De Caelesti Hierarchia*, chap. 2, if the likenesses taken from material things are used for understanding immaterial things, they turn out to be very dissimilar.

**Reply to objection 2:** In the sciences the higher things are treated principally through the way of negation (*per viam remotionis*). So, for instance, Aristotle makes the celestial bodies known by negating the properties of lower bodies. Hence, *a fortiori*, we cannot have cognition of immaterial substances in such a way as to apprehend their ‘what-nesses’. Instead, the treatments proposed to us in the sciences about immaterial substances proceed by appeal to the way of negation and to certain of their relations to material things.

**Reply to objection 3:** The human soul has intellective cognition of itself through its own act of understanding, which is the act proper to it and which perfectly reveals its power and nature. By contrast, the human soul is not able, either through its own act or through any other features found in material things, to have a perfect cognition of the power or nature of immaterial substances. For material things do not measure up to (*non adaequant*) the powers of immaterial substances.

**Reply to objection 4:** Created immaterial substances do not share the same *natural* genus with material substances, since immaterial substances do not have the same type of power or matter. However, they do share the same *logical* genus with material substances, since even immaterial substances are in the category of *substance*, given that their ‘what-ness’ is not the same as their *esse*.

By contrast, God does not share with material substances either a *natural* genus or a *logical* genus, since, as was explained above (q. 3, a. 5), there is no sense in which God is in a genus. Hence, through the likenesses of material things something affirmative can be understood of the angels in accord with a common conception (*secundum rationem communem*), though not in accord with any conception of a species (*secundum rationem speciei*); but this cannot occur in any way in the case of God.

### Article 3

#### Is God the first thing that the human mind has cognition of?

It seems that God is the first thing (*primum*) that the human mind has cognition of:

**Objection 1:** That in which all other things are understood and by appeal to which we pass judgment on other things is the first object understood by us—in the way that light is sensed by the eye, and in the way that first principles are understood by the intellect. But as Augustine says in *De Trinitate* and in *De Vera Religione*, we have cognition of all things in the light shed by the First Truth, and it is through this truth that we pass judgment on all things. Therefore, God is that which is first understood

by us.

**Objection 2:** That because of which a thing is such-and-such is itself such-and-such to a greater degree (*propter quod unumquodque, et illud magis*). But God is a cause of all of our cognitions, since as John 1:9 says, “He is the true light, which enlightens every man who comes into the world.” Therefore, God is that which is understood by us in the first place and to the greatest degree.

**Objection 3:** That which is first understood in an image is the exemplar by reference to which the image is formed (*exemplar quo imago formatur*). But as Augustine says, the image of God exists in our mind. Therefore, God is that which is first understood in our mind.

**But contrary to this:** John 1:18 says, “No one has ever seen God.”

**I respond:** Since, as has been explained (a. 1), the human intellect cannot, in the state of the present life, have cognition of created immaterial substances, *a fortiori* it cannot have cognition of the essence of the uncreated substance. Hence, one should reply simply that God is not the first object understood by us; instead, we come to a cognition of God through creatures—this according to the Apostle in Romans 1:20 (“The invisible things of God are clearly seen, being understood through the things that have been made”).

Now, as has been explained many times above (q. 84, a. 7 and q. 85, a. 8 and q. 87, a. 2), in the state of the present life the first thing understood by us is the ‘what-ness’ of a material thing, which is the object of our intellect.

**Reply to objection 1:** The sense in which we understand and pass judgment on all things in the light of the First Truth is that, as was explained above (q. 12, a. 2 and q. 84, a. 5), the intellect’s very light—whether its natural light (*lumen naturale*) or the light of grace (*lumen gratuitum*)—is nothing other than the imprint of the First Truth. Hence, since our intellect’s light is itself related to our intellect not as *that which* is understood but as *that by which* things are understood, *a fortiori* God is not that which is first understood by our intellect.

**Reply to objection 2:** As was explained above (q. 87, a. 2), the dictum ‘That because of which a thing is such-and-such is itself such-and-such to a greater degree’ must be thought of as applying to things that belong to the same order.

Now the sense in which other things are understood ‘because of God’ is not that God is the first object, but rather that He is the first cause of our cognitive power.

**Reply to objection 3:** If the image of God in our soul were perfect, in the way that the Son is the perfect Image of the Father, then our mind would immediately have an intellective understanding of God. However, our mind is an imperfect image. Hence, the argument does not go through.

## QUESTION 89

### A Separated Soul's Cognition

Next we have to consider a separated soul's cognition. And on this topic there are eight questions: (1) Can a soul that has been separated from its body have intellectual understanding? (2) Does a separated soul have intellectual understanding of separated substances? (3) Does a separated soul have intellectual understanding of all natural things? (4) Does a separated soul have cognition of singulars? (5) Does a habit of knowledge acquired here remain in a separated soul? (6) Can a separated soul make use of a habit of knowledge acquired here? (7) Does spatial distance impede a separated soul's cognition? (8) Do souls separated from their bodies have cognition of what is happening here?

#### Article 1

##### Can a separated soul have intellectual understanding of anything at all?

It seems that a separated soul cannot have intellectual understanding of anything at all:

**Objection 1:** In *De Anima* 1 the Philosopher says, "Understanding is corrupted when something is corrupted interiorly." But everything interior that belongs to a man is corrupted by death. Therefore, understanding is itself likewise corrupted.

**Objection 2:** As was explained above (q. 84, a. 7 and 8), the human soul is prevented from understanding by impediments in the sensory power (*per ligamentum sensus*) and by an unruly imagination. But as is clear from what was said above (q. 77, a. 8), the sensory power and imagination are totally corrupted by death. Therefore, after death the soul does not have intellectual understanding of anything at all.

**Objection 3:** If a separated soul has intellectual understanding, then it must have this understanding by means of certain [intelligible] species. But it does not have understanding by means of innate species, since in the beginning the soul "is like a slate on which nothing has been written." Nor does it have understanding by means of species that it abstracts from things, since it no longer has the organs associated with the sensory power and imagination, by the mediation of which intelligible species are abstracted from things. Nor does it have understanding by means of species that have been previously abstracted and are now conserved in the soul; for in that case a child's soul would not understand anything after death. Nor does it have understanding even by means of intelligible species that flow into it from God (*per species intelligibiles divinitus influxas*), since this sort of cognition would not be natural cognition—which is what we are talking about now—but would instead be a cognition associated with grace. Therefore, a soul separated from its body cannot have intellectual understanding of anything.

**But contrary to this:** In *De Anima* 1 the Philosopher says, "If the soul had no proper operations, then it would not be possible for the soul to be separated." But it is possible for the soul to be separated. Therefore, it has proper operations—and especially that operation which is intellectual understanding (*intelligere*). Therefore, it has intellectual cognition when it exists without its body.

**I respond:** This question derives its difficulty from the fact that as long as a soul is conjoined with its body, it cannot have intellectual understanding of anything except by turning itself toward phantasms. This is clear from experience.

Now if, as the Platonists held, this fact were not due to the nature of the soul, but instead belonged to the soul incidentally (*per accidens*) because it is tied to a body, then the question could easily be answered. For once the impediment of the body were removed, the soul would revert to its own nature, so that it would understand intelligible things directly (*simpliciter*) and without turning itself to

phantasms—just as happens in the case of other separated substances.

However, on this view, the soul would not be united to its body for the soul's own good, given that its intellectual understanding would be poorer (*peius*) when it is united with the body than when it is separated. Instead, the union would be solely for the sake of the betterment of the body. But this is ludicrous (*irrationabile*), since the matter exists for the sake of the form, and not vice versa.

By contrast, if we hold that it is by its nature that the soul has to turn itself toward phantasms in order to have intellectual understanding, then, since the soul's nature is not changed by the death of the body, it seems that a [separated] soul cannot have intellectual understanding of anything. For there are no phantasms at hand toward which it might turn itself.

So to remove this difficulty, note that since nothing operates except insofar as it is actualized, each thing's mode of operating (*modus operandi*) follows upon its mode of being (*modus essendi ipsius*). But even while a soul's nature remains the same, its mode of being when it is united with a body is different from its mode of being when it is separated from its body—not in such a way that the soul's being united to a body is incidental (*accidentale*) to it, but rather in such a way that it is by reason of its nature that the soul is united to a body. In the same way, the nature of something lightweight is not changed when it goes from being in its proper place, which is natural to it, to being outside its proper place, which lies beyond its nature (*est ei praeter naturam*). Therefore, corresponding to the mode of being by which a soul is united to a body, the soul has a mode of understanding that involves turning toward the phantasms of bodies that exist in the bodily organs. But when a soul is separated from its body, it has a mode of understanding that involves turning toward those things that are intelligible absolutely speaking—just like the mode of understanding had by the other separated substances. Hence, the mode of understanding that involves turning toward phantasms is natural to a soul in the same way that being united to a body is likewise natural to it, whereas being separated from its body lies outside the conception of its nature (*praeter rationem suae naturae*), just as understanding without turning toward phantasms lies outside its nature. And so a soul is united to a body in order that it might exist and operate in accord with its nature.

However, this reply once again provokes a doubt. For since (a) nature is always ordered toward what is better, and since (b) the mode of understanding that involves turning toward intelligible things absolutely speaking is better than the mode of understanding that involves turning toward phantasms, God should have constituted the soul's nature in such a way that (a) the more noble mode of understanding would be natural to it and that (b) for this reason it would not need to be united to a body.

Notice, then, that even if intellectual understanding by turning toward higher things is more noble, absolutely speaking, than understanding by turning toward phantasms, nonetheless, the former mode of understanding was less perfect as a possibility for the soul (*prout erat possibilis animae erat imperfectior*). This is made clear as follows:

In all intellectual substances the intellectual power comes through the influence of the divine light. This light is unitary and simple in the first principle, and the further away intellectual creatures are from the first principle, the more this light is divided and differentiated, like lines emanating from a central point. And so it is that God understands all things through His own unitary essence. The higher intellectual substances, on the other hand, even if they have intellectual understanding through more than one form (*per plures formas*), nonetheless understand through forms that are fewer and more universal and more powerful for comprehending things because of the efficacy of the intellectual power that exists in them, whereas in the lower intellectual substances, to the extent that they fall short of the intellectual power of the higher substances, the forms are greater in number, less universal, and less efficacious for comprehending things. Therefore, if the lower substances had forms with the same degree of universality that the higher substances do, then because they have weaker intellects, they would not receive through those forms a perfect cognition of things, but would instead have a cognition that was somewhat general and indistinct. In a certain way, this same thing is apparent among men; for those of weaker intellect do

not receive perfect cognition through the universal conceptions had by more intelligent men, unless each individual case is specifically (*in speciali*) explained to them.

Now it is clear that, according to the order of nature, human souls are the lowest among intellectual substances. The perfection of the universe requires this, so that diverse grades might exist among things. Therefore, if human souls had been constituted by God in such a way as to have intellectual understanding in the mode in which separated substances have it, then they would not have had perfect cognition, but would instead have had indistinct cognition in general. Therefore, in order for them to be able to have perfect and proper cognition of things, they were naturally constituted in such a way as to be united to bodies and so to receive their proper cognition of sensible things from the things themselves, in much the same way that uneducated men cannot be led to scientific knowledge except through sensible examples.

So, then, it is clear that it is for the soul's own good that it should be united to a body and have intellectual cognition by turning itself toward phantasms. And yet the soul is able to be separated and to have a different mode of intellectual understanding.

**Reply to objection 1:** If the Philosopher's words are carefully unpacked (*diligenter discutantur*), the Philosopher asserted this claim after having first made a certain assumption, viz., that the act of intellectual understanding is a certain movement of the conjoined being in the same way that the act of sensing is. For he had not yet shown the difference between intellectual understanding and sensing.

An alternative reply is that he is speaking of the mode of intellectual understanding which involves turning toward phantasms.

**Reply to objection 2:** The second objection is about this same mode of intellectual understanding.

**Reply to objection 3:** A separated soul has intellectual understanding neither through innate [intelligible] species, nor through species that it abstracts during the time it is separated, nor solely through conserved species, as the objection proves. Instead, it has intellectual understanding through participated species which come from the influence of God's light and which the soul comes to participate in just as the other separated substances do, though in an inferior mode. Hence, as soon as it ceases to turn itself toward the body, the soul turns itself toward higher things. And yet the cognition is not for this reason non-natural. For God is the source not only of the influence of the light of grace, but also of the influence of the natural light.

## Article 2

### Does a separated soul have intellectual understanding of separated substances?

It seems that a separated soul does not have intellectual understanding of separated substances:

**Objection 1:** A soul that is joined to a body is more perfect than a soul separated from a body, since the soul is naturally part of a human nature, and every part is more perfect within its own whole. But as was established above (q. 88, a. 1), a soul conjoined to a body does not have intellectual understanding of separated substances. Therefore, *a fortiori*, it does not have such understanding when it has been separated from its body.

**Objection 2:** If anything is understood, it is understood either through its presence or through a species of it. But separated substances cannot be understood by the soul through their presence, since nothing penetrates the soul except God alone. Nor can they be understood by the soul through any species of them that the soul is able to abstract from an angel, since an angel is more simple than the soul is. Therefore, there is no way in which a separated soul is able to have cognition of separated substances.

**Objection 3:** Certain philosophers have held that man's ultimate happiness consists in the cognition of separated substances. Therefore, if a separated soul is able to have intellectual understanding of separated substances, it will attain happiness solely by virtue of being separated. But this is absurd.

**But contrary to this:** Separated souls have cognition of other separated souls. For instance, the rich man in hell sees Lazarus and Abraham, according to Luke 16:23. Therefore, separated souls also see both demons and angels.

**I respond:** As Augustine says in *De Trinitate* 9, "Our mind receives cognition of incorporeal things through itself," i.e., by having cognition of itself, as was explained above (q. 88, a. 1). Therefore, by appeal to the fact that a separated soul has cognition of itself, we are able to grasp the way in which it understands other separated substances.

Now it was explained above (a. 1) that as long as a soul is united to its body, it has intellectual understanding by turning itself toward phantasms. And so it cannot even understand itself except insofar as it comes to be actually engaged in intellectual understanding through a species abstracted from phantasms. For as was explained above (q. 87, a. 1), it is through its own act that it understands itself. However, when it has been separated from its body, it will have intellectual understanding by turning itself not toward phantasms but toward things that are intelligible in their own right, and so it will understand itself through itself.

Now it is common to each separated substance that it understands what lies above it and what lies below it in a mode that corresponds to its own substance. For a thing is understood intellectually insofar as it exists in the one who is engaged in understanding, and something exists in another in accord with the mode of thing that it exists in. Now the mode of a separated soul's substance is lower than an angelic substance's mode, but it is similar to the mode of other separated souls. And so a separated soul has perfect cognition of other separated souls, whereas it has imperfect and deficient cognition of the angels.

Now I am speaking here of the *natural* cognition had by a separated soul; there is a different account of the cognition associated with [the light of] *glory*.

**Reply to objection 1:** A separated soul is indeed less perfect if one considers the nature that it shares in common with the nature of the body (*natura qua communicat cum natura corporis*). However, a separated soul is nonetheless more free with respect to intellectual understanding, since the soul is kept from a purity of understanding by the burdensomeness of the body and its care for it (*per gravedinem et occupationem corporis*).

**Reply to objection 2:** A separated soul has intellectual understanding of the angels through divinely impressed likenesses (*per similitudines divinitus impressas*). However, these likenesses fall short of a perfect representation of the angels, because the soul's nature lies below that of an angel.

**Reply to objection 3:** Man's ultimate happiness does not consist in the cognition of just any separated substances; rather, it consists solely in the cognition of God, who cannot be seen except through grace. However, there is indeed a great, even if not ultimate, happiness in the cognition of other separated substances—if, that is, they are understood perfectly. However, as has been explained, a separated soul does not understand them perfectly by its natural cognition.

### Article 3

#### Does a separated soul have cognition of all natural things?

It seems that a separated soul has cognition of all natural things:

**Objection 1:** In separated substances there are conceptions (*rationes*) of all natural things. But separated souls have cognition of the separated substances. Therefore, they have cognition of all natural things.

**Objection 2:** If someone has intellective understanding of something more intelligible, then, *a fortiori*, he can have intellective understanding of something less intelligible. But a separated soul has intellective understanding of the separated substances, which are the greatest among intelligible things. Therefore, *a fortiori*, it can have intellective understanding of all natural things, which are less intelligible.

**But contrary to this:**

1. Natural cognition is more vigorous in the demons than in a separated soul. But the demons do not have cognition of all natural things; instead, as Isidore says, they learn many things by experience over a long period of time. Therefore, neither do separated souls have cognition of all natural things.

2. If as soon as a soul were separated, it had cognition of all natural things, then it would be pointless for men to study diligently in order to gain scientific knowledge of things. But this is absurd. Therefore, it is not the case that a separated soul has cognition of all natural things.

**I respond:** As was explained above (a. 1), a separated soul has intellective understanding through species that it receives by the influence of the divine light, just as angels do. However, since the soul's nature lies below the nature of an angel, for whom this mode of cognition is connatural, a separated soul does not acquire perfect cognition of things through species of this sort, but instead receives a cognition that is general and indistinct. Therefore, a separated soul bears the same relation to imperfect and indistinct cognition of natural things through these species that angels bear to perfect cognition of natural things.

Now through species of this sort angels understand all natural things by a perfect cognition, since, as Augustine says in *Super Genesim ad Litteram*, God effects in the angelic understanding whatever He effects in the proper natures of things. Hence, separated souls likewise have a cognition of all things—not a certain and proper cognition, but a general and indistinct cognition.

**Reply to objection 1:** As was explained above (q. 55, a. 1 and q. 87, a. 4), an angel has cognition of all natural things through [intelligible] species and not through his own substance. And so from the fact that a soul has some sort of cognition of a separated substance it does not follow that it has cognition of all natural things.

**Reply to objection 2:** Just as a separated soul does not have a perfect intellective understanding of the separated substances, so neither does it have a perfect intellective understanding of all natural things. Instead, as has been explained, it has a sort of indistinct cognition of natural things.

**Reply to argument 1 for the contrary:** Isidore is here talking about the cognition of *future* things, which angels and demons and separated souls have cognition of only in their causes or through divine revelation. By contrast, we ourselves are talking about the cognition of *natural* things.

**Reply to argument 2 for the contrary:** Cognition that is acquired in this life through study is proper and perfect cognition, whereas the cognition in question is indistinct. Hence, it does not follow that an eagerness for learning is pointless.

#### Article 4

##### Does a separated soul have cognition of singulars?

It seems that a separated soul does not have cognition of singulars:

**Objection 1:** As is clear from what was said above (q. 77, a. 8), the only cognitive power that remains in a separated soul is the intellect. But as was established above (q. 86, a. 1), the intellect does not have cognition of singulars. Therefore, a separated soul does not have cognition of singulars.

**Objection 2:** A cognition by which something is understood as a singular (*in singulari*) is more determinate than a cognition by which something is understood in general (*in universali*). But a separated soul does not have determinate cognition of the species of natural things. Therefore, *a fortiori*, it does not have cognition of singulars.

**Objection 3:** If a separated soul had cognition of singulars and not through the sensory power, then by parity of reasoning it would have cognition of all singulars. But it does not have cognition of all singulars. Therefore, it does not have cognition of any singulars.

**But contrary to this:** In Luke 16:27 the rich man situated in hell said, “I have five brothers.”

**I respond:** Separated souls have cognition of some singulars, but not all of them, not even all of the ones that exist at the present time (*quae sunt praesentia*). To see this clearly, note that there are two modes of intellectual understanding. One mode is through abstraction from phantasms and, in accord with this mode, singulars cannot be understood directly by the intellect; instead, they are understood indirectly, as was explained above (q. 86, a. 1). The second mode of intellectual understanding is through an influx of species from God, and, in accord with this mode, the intellect can have cognition of singulars. For just as in accord with what was explained above (q. 14, aa. 5-8), God Himself has cognition of all things, both universals and singulars, through His essence and insofar as He is a cause of all universal and individual principles, so too, through the species that are certain participated likenesses of the divine essence, separated substances are able to have cognition of singulars.

However, on this score there is a difference between angels and separated souls. For through species of this sort angels have perfect and proper cognition of things, whereas separated souls have indistinct cognition. Hence, because of the efficacy of their intellect angels have, through species of this sort, a perfect and proper cognition not only of the natures of things at the level of a species (*in speciali*) but also of the singulars contained under those species. By contrast, through species of the sort in question separated souls can have cognition only of those singulars on which they are in some way fixed (*ad quae quodammodo determinantur*), viz., either by a previous cognition or by some affective tie (*per aliquam affectionem*) or by a natural relation or by divine ordination. For everything that is received in an entity has determinate conditions (*determinatur*) that correspond to the mode of the recipient.

**Reply to objection 1:** The intellect does not have cognition of singulars by way of abstraction. But this is not the manner in which a separated soul has intellectual understanding; instead, that manner is the one that has been explained.

**Reply to objection 2:** As has been explained, a separated soul’s cognition is fixed on the species of those things that it bears some determinate relation to, or on individuals belonging to those species.

**Reply to objection 3:** A separated soul is not related in the same way to all singulars; instead, it has a relation to some of them that it does not have to others. And so there is no universally applicable reason (*aequalis ratio*) why a separated soul should have cognition of all singulars.

## Article 5

### Does a habit of scientific knowledge acquired here remain in a separated soul?

It seems that a habit of scientific knowledge acquired here does not remain in a separated soul:

**Objection 1:** In 1 Corinthians 13:8 the Apostle says, “Knowledge shall be destroyed.”

**Objection 2:** In this world some less virtuous men (*quidam minus boni*) abound in scientific knowledge, while other more virtuous men lack scientific knowledge. Therefore, if a habit of scientific knowledge remained in the soul after death, it would follow that some less virtuous men would be more competent (*potiores*) in the future state than some more virtuous men. But this seems absurd.

**Objection 3:** Separated souls will have scientific knowledge because of the influx of the divine light. Therefore, if scientific knowledge acquired here remains in the separated soul, it follows that two forms of the same species will exist in the same subject. But this is impossible.

**Objection 4:** In the *Categories* the Philosopher says that a habit is a quality that is difficult to change, whereas scientific knowledge is sometimes corrupted by illness or something else of this sort. But no change in this life is as powerful as the change effected by death. Therefore, it seems that a habit of knowledge is corrupted by death.

**But contrary to this:** In his letter to Paulinus Jerome says, “Let us learn on earth things such that the knowledge of them will survive for us in heaven.”

**I respond:** Some have claimed that (a) a habit of scientific knowledge exists not in the intellect itself but in the sentient powers—more specifically, in the power of imagining, in the cogitative power, and in the power of remembering—and that (b) intelligible species are not conserved in the passive intellect. And if this opinion were true, then it would follow that once the body is destroyed, any habit of scientific knowledge acquired here would be totally destroyed.

However, since scientific knowledge exists in the intellect, which, as *De Anima* 3 says, is “the locus of species,” a habit of scientific knowledge acquired here exists partly in the aforementioned sentient powers and partly in the intellect itself. This can be thought about by appeal to the very acts by which a habit of scientific knowledge is acquired, since, as *Ethics* 2 says, “habits are similar to the acts by which they are acquired.” Now the acts of the intellect by which scientific knowledge is acquired in the present life involve the intellect’s turning itself toward phantasms, which exist in the aforementioned sentient powers. Hence, through such acts the passive intellect itself acquires a certain capacity (*facultas*) for thinking by means of the species it has received, and the aforementioned lower powers acquire a certain aptitude (*habilitas*) such that the intellect, by turning toward them, is more easily able to think about intelligible things. But just as an act of the intellect principally and formally exists in the intellect itself, whereas it exists materially and dispositively in the lower powers, so too the same thing must be said about the corresponding habit.

Therefore, as regards what someone has of present scientific knowledge in the lower powers, this will not remain in a separated soul; on the other hand, what he has in the intellect itself must remain. For as *De Longitudine et Brevitate Vitae* says, there are two ways in which a form is corrupted, viz., (a) *per se*, when it is corrupted by its contrary, e.g., hot by cold, and (b) *per accidens*, viz., through the corruption of its subject. Now it is clear that the scientific knowledge that exists in a human intellect cannot be corrupted through the corruption of its subject; for as was shown above (q. 79, a. 2), the intellect is incorruptible. Similarly, neither can the intelligible species that exist in the passive intellect be corrupted by a contrary; for there is no contrary to an intelligible intention, especially with respect to the simple understanding by which one understands a thing’s ‘what-ness’ (*praecipue quantum ad simplicem intelligentiam, qua intelligitur quod quid est*). On the other hand, as regards the operation by which the intellect composes and divides, or even as regards the operation by which it reasons discursively, contrariety is found in the intellect in the sense that falsity in a proposition or argument is contrary to truth. And in this sense scientific knowledge is sometimes corrupted by a contrary, viz., when someone is drawn away from knowledge of the truth by false argumentation. And so the Philosopher, in the book already cited, claims that there are two ways in which scientific knowledge is corrupted *per se*, viz., through forgetfulness on the part of the memory and through deception by false argumentation. But

these have no relevance in the case of a separated soul.

Hence, one should reply that to the extent that a habit of scientific knowledge exists in the intellect, it remains in a separated soul.

**Reply to objection 1:** In this passage the Apostle is speaking not about scientific knowledge as a habit, but about the act of cognition. Hence, he adds by way of proof: “Now I know in part ...”

**Reply to objection 2:** Just as someone who is less virtuous will be greater in bodily stature than someone who is more virtuous, so too nothing prevents someone who is less virtuous from having in the future a habit of scientific knowledge that someone more virtuous does not have. But this is of no importance in comparison with the other prerogatives that more virtuous men will have.

**Reply to objection 3:** The two types of knowledge do not have the same nature. Hence, nothing absurd follows.

**Reply to objection 4:** This argument goes through in the case of the corruption of scientific knowledge as regards that part of it that belongs to the sentient powers.

## Article 6

### Does an act of scientific knowledge acquired here remain in a separated soul?

It seems that an act of scientific knowledge acquired here does not remain in a separated soul:

**Objection 1:** In *De Anima* 1 the Philosopher says that when the body is corrupted, the soul “neither remembers nor loves.” But to remember is to think about things that one previously knew. Therefore, a separated soul cannot have an act of the scientific knowledge which it acquired here.

**Objection 2:** Intelligible species will not be more powerful in a separated soul than they are in a soul united to a body. But as was established above (q. 84, a. 7), we are at present able to have an act of intellective understanding through intelligible species only by turning ourselves toward phantasms. Therefore, a separated soul will not be able to do this. And so there is no way in which a separated soul will be able to have an act of intellective understanding through intelligible species acquired here.

**Objection 3:** In *Ethics* 2 the Philosopher says, “Habits give rise to acts that are similar to the acts through which they are acquired.” But a habit of scientific knowledge is acquired here through acts of an intellect that is turning itself toward phantasms; therefore, this habit cannot give rise to other sorts of acts (*alios actus reddere*). But acts of the sort in question do not belong to a separated soul. Therefore, a separated soul will not have any acts of the scientific knowledge that has been acquired here.

**But contrary to this:** In Luke 16:25 the following is said to the rich man who is in hell: “Remember that you received good things in your life.”

**I respond:** There are two things to consider in an act, viz., the species of the act and its mode. The species of an act is thought of by reference to the object which the act of the cognitive power is directed toward through the [intelligible or sensible] species that is a likeness of the object, whereas the mode is thought of by reference to the agent’s power. For instance, the fact that someone sees a rock depends on the species of a rock that exists in the eye, but the fact that he sees it in a sharp-sighted way (*acute*) depends on the eye’s visual power.

Therefore, since, as has been explained (a. 5), the intelligible species remain in a separated soul despite the fact that a separated soul’s status is not the same as it is at present, it follows that a separated soul is able to understand what it previously understood through the intelligible species acquired here. However, it does not understand them in the same mode, viz., through turning toward phantasms. Instead, it understands them in a mode appropriate to a separated soul. And so an act of scientific

knowledge acquired here remains in a separated soul, but not with the same mode.

**Reply to objection 1:** The Philosopher is talking about memory (*reminiscentia*) insofar as memory (*memoria*) pertains to the sentient part of the soul, but not insofar as memory exists in a certain way in the intellect, as was explained above (q. 79, a. 6).

**Reply to objection 2:** Different modes of intellective understanding stem from the different states of the soul that is engaged in understanding and not from different levels of power (*ex diversa virtute*) on the part of the [intelligible] species.

**Reply to objection 3:** It is with respect to the species of the acts, but not with respect to the mode of acting, that the acts through which a habit is acquired are similar to the acts which the habit causes. For instance, performing just deeds without performing them justly, i.e., with delight, causes a habit of political justice, through which one operates with delight.

## Article 7

### Does spatial distance impede a separated soul's cognition?

It seems that spatial distance (*distantia localis*) impedes a separated soul's cognition:

**Objection 1:** In *De Cura pro Mortuis Agenda* Augustine says, "The souls of the dead are in a place where they cannot know what is happening here." But they do know what is happening among themselves. Therefore, spatial distance impedes a separated soul's cognition.

**Objection 2:** In *De Divinatione Daemonum* Augustine says, "Because of their swift motion, the demons report certain things that are unknown to us." But agility of movement would not matter if spatial distance did not impede the demons' cognition. Therefore, *a fortiori*, spatial distance impedes the cognition of a separated soul, which is inferior in nature to a demon.

**Objection 3:** In the same way that someone is distant with respect to place, so too he can be distant with respect to time. But temporal distance impedes a separated soul's cognition, since a separated soul does not have cognition of future things. Therefore, it seems that distance with respect to place likewise impedes a separated soul's cognition.

**But contrary to this:** Luke 16:23 says, "When the rich man was in torment, he raised his eyes and saw Abraham in the distance." Therefore, spatial distance does not impede a separated soul's cognition.

**I respond:** Some have claimed that a separated soul has cognition of singulars by abstracting from sensible things. If this were true, then one could claim that spatial distance impedes a separated soul's cognition. For it would be required either that sensible things act on a separated soul or that a separated soul acts on sensible things—and in either case determinate distances would be required.

But the position just described is impossible, since the abstraction of species from sensible things is effected by means of the senses and other sentient powers, which do not remain as actualities in a separated soul.

Now a separated soul has intellective understanding of singulars through an influx of species from the divine light, and this light is related in the same way to what is distant as to what is close by. Hence, spatial distance does not in any way impede a separated soul's cognition.

**Reply to objection 1:** Augustine is not claiming that the reason why the souls of the dead cannot see things *here* is that they are *there*, as if he believed spatial distance to be the cause of this ignorance. Rather, the ignorance can be due to something else, as will be explained below (a. 8).

**Reply to objection 2:** Augustine is here speaking in accord with the opinion by which some had claimed that demons have bodies naturally united to them. According to this position, they can even

have sentient powers whose cognition requires determinate distances. Augustine also touches on this position explicitly in the same book, even though he seems to touch on it by reciting it rather than by asserting it. This is clear from what he says in *De Civitate Dei* 21.

**Reply to objection 3:** Future things, which are distant with respect to time, are not actual entities (*entia in actu*). Hence, they are unknowable in themselves, since something lacks knowability in the same way that it lacks being (*entitas*). But things that are distant with respect to place are actual entities and knowable in their own right. Hence, the argument from spatial distance is distinct from the argument from temporal distance.

## Article 8

### Do separated souls have cognition of what is happening here?

It seems that separated souls have cognition of what is happening here:

**Objection 1:** If they did not have cognition of these things, then they would not care about them. But they do care about what is happening here—this according to Luke 16:28 (“I have five brothers ... so that he might give witness to them, lest they, too, come into this place of torment”). Therefore, separated souls have cognition of what is happening here.

**Objection 2:** The dead frequently appear to the living, whether asleep or awake, and warn them about what is happening here—in the way that Samuel appeared to Saul, as 1 Kings 28:11 reports. But this would not be the case if they had no cognition of what is happening here. Therefore, they have cognition of what is happening here.

**Objection 3:** Separated souls have cognition of what is happening around them. Therefore, if they did not have cognition of what is happening among us, then it would be the case that their cognition is impeded by spatial distance. But this was denied above (a. 7).

**But contrary to this:** Job 14:21 says, “He will not know whether his children turn out noble or ignoble.”

**I respond:** As regards natural cognition, which is what we are now talking about, the souls of the dead do not know what is happening here. The reason for this can be gathered from what has already been said (a. 4). For a separated soul has cognition of singulars by being in some sense directed toward them (*determinata ad illa*), either through a vestige of some previous cognition or affective tie, or else through divine ordination. Now it is both because of divine ordination and because of their mode of being that the souls of the dead are segregated off from fellowship with the living and joined in fellowship with spiritual substances that are separate from bodies. Hence, they are ignorant of what is happening among us. In *Moralia* 12 Gregory gives this explanation: “The dead do not know how life after them in the flesh is going among the living. For the life of the spirit is far from the life of the flesh, and just as the corporeal and the incorporeal are diverse in genus, so too they are distinct in cognition.” Augustine seems to touch on this, too, in *De Cura pro Mortuis Agenda*, where he says, “The souls of the dead are not involved (*non intersunt*) in the affairs of the living.”

However, there seems to be a disagreement between Gregory and Augustine as far as the souls of the blessed in heaven are concerned.

For in the same place Gregory adds, “Yet do not think the same way about the saintly souls, for since they see interiorly the clarity of almighty God, it is impossible to believe that there is anything exterior that they do not know.”

By contrast, in *De Cura pro Mortuis Agenda* Augustine explicitly says, “The dead, even the saints,

do not know what the living are doing, even their own children”—as we have it in a Gloss on Isaiah 63:16 (“Abraham has not known us ...”). Augustine confirms this claim by appeal to the fact that he was not visited by his mother or consoled by her in his sorrows, as he was when she was alive, and it is unlikely that she is less kind in her happier life. He also confirms it by the fact that the Lord promised king Josiah that he would die first, lest he see the evils that were going to befall his people (4 Kings 22:20). However, Augustine says this with hesitation; that is why he prefaces his remarks by saying, “Let each one take as he wishes what I am about to say.”

Gregory, on the other hand, speaks with confidence (*assertive*), as is evident from the fact that he says, “It is impossible to believe ...” But according to Gregory’s opinion, it seems that the souls of the saints, seeing God, have cognition of all present things that are happening here. For these souls are equal to the angels, of whom even Augustine asserts that they are not ignorant of what is happening among the living. But because the souls of the saints are most perfectly joined to God’s justice, they do not grieve; nor do they enter into the affairs of the living, except insofar as the order of divine justice requires it.

**Reply to objection 1:** The souls of the dead can care about the affairs of the living, even if they do not know their condition—just as we ourselves exercise care for the dead by offering suffrages for them, even though we do not know their condition.

It is also possible for the souls of the dead to have cognition of the deeds of the living not on their own, but through the souls of those who join them from here, or through the angels or demons, or even when God’s Spirit reveals these things to them, as Augustine says in the same book.

**Reply to objection 2:** When the dead appear in some way to the living, either (a) this happens because of God’s specially arranging for the souls of the dead to enter into the affairs of the living, in which case it is counted among God’s miracles, or (b) apparitions of this sort are effected by the actions of good or bad angels, even when the dead do not know about it—just as the living likewise, without knowing it, appear in the dreams of others of the living, as Augustine says in the aforementioned book.

Hence, one can say of Samuel that he appeared through a divine revelation—this according to Ecclesiasticus 46:23 (“He slept, and he made known to the king ... the end of his life”). Or else, if one does not accept the authority of Ecclesiasticus because it was not counted by the Hebrews among the canonical writings, one can claim that the apparition was arranged by demons.

**Reply to objection 3:** This sort of ignorance occurs for the reasons explained above and not because of spatial distance.

## QUESTION 90

### The Initial Production of Man with respect to His Soul

After what has gone before, we have to consider the initial production of man. And on this topic there are four things to consider: first, the production of man himself (questions 90-93); second, the goal of this production (question 93); third, the status and condition of man as he was first produced (questions 94-101); fourth, his location (question 102).

As far as the production is concerned, there are three topics to consider: first, the production of man with respect to his soul (question 90); second, the production of man with respect to the male body (question 91); third, the production of the woman.

On the first topic there are four questions: (1) Is the human soul something made, or is it part of God's substance? (2) Assuming that it is made, is it created? (3) Is the soul produced by the mediation of angels? (4) Was the soul produced before the body?

### Article 1

#### Is a [human] soul made, or is it part of God's substance?

It seems that a [human] soul is not made, but is instead part of God's substance (*sit de substantia Dei*):

**Objection 1:** Genesis 2 says: "The Lord God formed man from the slime of the earth, and breathed into his face the breath of life, and man became a living soul." But when one breathes, he emits something from himself. Therefore, the soul by which man lives is part of God's substance.

**Objection 2:** As was established above (q. 75, a. 5), a [human] soul is a simple form. But a form is an actuality. Therefore, a soul is a pure actuality—a feature that belongs to God alone. Therefore, a soul is part of God's substance.

**Objection 3:** If things exist and do not differ from one another in any way, then they are the same. But God and a [human] mind exist, and they do not differ from one another in any way—since they would have to differ from one another in virtue of certain differences, and if that were so, they would be composite. Therefore, God and a human mind are the same.

**But contrary to this:** In *De Origine Animae* Augustine enumerates certain positions that he takes to be "exceedingly and openly perverse and opposed to the Catholic Faith," the first among which is the claim, asserted by some, that "God made the soul from Himself and not from nothing."

**I respond:** There is an obvious implausibility in the claim that a [human] soul is part of God's substance. For as is clear from what has been said (q. 77, a. 2 and q. 79, a. 2 and q. 84, a. 6), the human soul (a) sometimes has intellectual understanding [only] in potentiality, (b) in some sense acquires scientific knowledge from the things themselves, and (c) has diverse powers—all of which are foreign to the nature of God, who, as was proved above (q. 3), (a) is pure actuality, (b) acquires nothing from another, and (c) has no differentiation within Himself.

Now the error in question seems to have originated in two positions held by the ancients.

Those who first began to consider the natures of things were unable to transcend the imagination and so claimed that there is nothing beyond bodies. So they claimed that God is a certain body that they judged to be the source of other bodies. And since, as *De Anima* 1 reports, they claimed that the soul is part of the nature of that body said to be the source, it followed as a result that the soul is part of the nature of God. Verging on this position, the Manicheans, who took God to be a certain sort of corporeal light, claimed that the soul is a part of this light that is tied down to a body.

Second, things progressed to the point that certain thinkers apprehended that something incorporeal

exists—not something separated from a body, but something that is the form of a body. Hence, as Augustine reports in *De Civitate Dei* 7, Varro claimed that God is a soul that governs the world by motion and reason. Accordingly, there were some who claimed that a man’s soul is a part of this whole soul in the same way that a man is a part of the whole world; for they were unable to reach the point intellectually of distinguishing the different grades of spiritual substances except by reference to the distinctions among bodies.

But as was proved above (q. 3), all these claims are impossible. Hence, it is manifestly false that a [human] soul is a part of God’s substance.

**Reply to objection 1:** ‘Breathe’ should not be taken in a corporeal sense here. Instead, God’s ‘breathing’ is the same as His making a spirit—though it is true in any case that in breathing corporeally a man emits something extraneous to himself and not something of his own substance.

**Reply to objection 2:** Even though a [human] soul is a simple form in its essence, it is not its own *esse*; instead, it is a being by participation, as is clear from what was said above (q. 75, a. 5). And so, unlike God, a human soul is not pure actuality.

**Reply to objection 3:** Things that *differ* in the proper sense differ *in* something (*differt aliquo*); this is why a difference is sought in cases where there is agreement. Because of this, things that differ from one another must be composite in some sense, since they differ in something and agree in something.

Given this, as *Metaphysics* 10 points out, even if it is the case that all things that *differ* from one another are *diverse*, it is nonetheless not the case that all things that are *diverse* also *differ* from one another (*licet omne differens est diversum, non tamen omne diversum est differens*). For simple things are diverse in their own right (*seipsis*), but they do not differ by any differences out of which they might be composed. For instance, a man and a donkey differ by the differences *rational* and *non-rational*, but one cannot say of these differences themselves that they differ from one another by still other differences.

## Article 2

### Is a [human] soul brought into being through creation?

It seems that a [human] soul is not brought into being (*producta in esse*) through creation:

**Objection 1:** That which has something material within itself is made from matter. But a soul has something material within itself, since it is not pure actuality. Therefore, a soul is made from matter. Therefore, it is not created.

**Objection 2:** Every actuality that belongs to some matter seems to be brought forth from the matter’s potentiality (*educi de potentia materiae*); for since matter is in potentiality with respect to actuality, every actuality preexists in potentiality within the matter. But a soul is the actuality of corporeal matter, as is clear from the definition of a soul. Therefore, a soul is brought forth from the potentiality of matter.

**Objection 3:** A soul is a certain form. Therefore, if a soul is made through creation, then by parity of reasoning all other forms are likewise made through creation. And so no form will come into being through generation—which is absurd.

**But contrary to this:** Genesis 1:27 says, “God created man in His own image.” But man is “in God’s image” because of the soul. Therefore, the soul came into being through creation.

**I respond:** A rational soul can be made only through creation—something that is not true of other

forms. The reason for this is that since being-made (*feri*) is a path to *esse*, being-made belongs to a given thing in the same way that *esse* belongs to it.

Now what is properly said to exist is that which itself has *esse* in the sense of subsisting in its own *esse* (*quasi in suo esse subsistens*); hence, it is only substances that are properly and truly called beings (*entia*). By contrast, an accident does not have *esse*, but is that *by which* something is such-and-such (*eo aliquid est*). This is the sense in which it is called a being (*ens*); for instance, a whiteness is called a being because by it something is white (*quia ea aliquid est album*). It is for this reason that *Metaphysics 7* says that an accident “is said to be ‘of-a-being’ (*entis*) rather than ‘a being’ (*ens*).” Moreover, the same line of reasoning holds for every other non-subsistent form. And so being-made does not properly belong to any non-subsistent form; instead, such forms are said to be made by virtue of the fact that subsistent composites are made.

By contrast, as was shown above (q. 75, a. 2), a rational soul is a subsistent form. Hence, both being-made and *esse* belong to it properly speaking. And since a soul cannot be made from preexistent matter—either corporeal matter, since in that case it would have a corporeal nature, or spiritual matter, since in that case spiritual substances would be transformed into one another—one must claim that a soul can be made only through creation.

**Reply to objection 1:** In a soul the simple essence itself is akin to the material aspect (*sicut materiale*), whereas the formal aspect in it (*formale in ipsa*) is the participated *esse*, which is necessarily simultaneous with the essence of the soul, since *esse* follows *per se* upon form.

The same line of reasoning would hold if one claimed—as some do—that [a human soul] is composed of spiritual matter. For like celestial matter, spiritual matter is not in potentiality with respect to any other [substantial] form; otherwise, a soul would be corruptible.

Hence, there is no way in which a [human] soul can be made from preexisting matter.

**Reply to objection 2:** For an actuality to be drawn from the potentiality of matter (*actum extrahi de potentia materiae*) is nothing other than for something that previously existed in potentiality to be brought into actuality (*aliquid fieri actu quod prius erat in potentia*). However, since a rational soul has subsistent *esse* and not *esse* that depends on corporeal matter, and since, as was explained above (q. 75, a. 2), a rational soul exceeds the capability of corporeal matter, it follows that it is not brought forth from the potentiality of matter.

**Reply to objection 3:** As has been explained, there is no parallel between a rational soul and other forms.

### Article 3

#### Is a rational soul produced directly by God, or is it produced through the mediation of angels?

It seems that a rational soul is not produced directly (*immediate*) by God, but is instead produced through the mediation of angels (*mediantibus angelis*):

**Objection 1:** There is more order among spiritual things than among corporeal things. But as Dionysius says in *De Divinis Nominibus*, chap. 4, lower bodies are produced through higher bodies. Therefore, lower spirits, i.e., rational souls, are likewise produced through higher spirits, i.e., angels.

**Objection 2:** The end of things corresponds to their source; for instance, God is both the source and the end of things. Therefore, it is also the case that a thing’s issuing forth from its source (*exitus a principio*) corresponds to its being brought back to its end (*reductio in finem*). But as Dionysius says,

“the lowest things are brought back to their end through the first things.” Therefore, the lowest things likewise proceed into *esse* through the first things; more specifically, souls proceed into being (*procedunt in esse*) through angels.

**Objection 3:** As *Meteorologia* 4 says, “The perfect is that which can make what is similar to itself.” But spiritual substances are much more perfect than corporeal substances are. Therefore, since bodies make things that are similar in species to themselves, *a fortiori* angels will be able to make something that is lower than they are in its natural species (*secundum speciem naturae*), viz., a rational soul.

**But contrary to this:** Genesis 2:7 says that God Himself “breathed into man’s face the breath of life.”

**I respond:** Some have claimed that angels, acting in the power of God, cause rational souls. But this opinion is altogether impossible and alien to the Faith.

For it has been shown (a. 2) that a rational soul can be produced only through creation. But God alone is able to create. For it belongs to the first agent alone to act without presupposing anything, since, as was established above (q. 65, a. 3), a secondary agent always presupposes something that comes from the first agent. But if an agent effects something out of what is presupposed (*quod agit aliquid ex aliquo praesupposito*), then it acts by transforming (*transmutando*). And so every other agent acts only by transforming, whereas God acts by creating. And since a rational soul cannot be produced by the transformation of any matter, it follows that it cannot be produced except directly by God.

**Reply to objection 1 and objection 2 and objection 3:** The reply to the objections is clear from what has been said. For the fact that bodies cause what is similar to themselves or what is lower than themselves, and the fact that lower beings are brought back [to their end] through higher beings—all of this occurs through one or another sort of transformation.

#### Article 4

##### Was the human soul produced before the human body?

It seems that the human soul was produced before the human body:

**Objection 1:** As was established above (q. 66, a. 1 and q. 70, a. 1), the work of creation preceded the work of division and the work of adornment. But the soul was brought into being (*producta in esse*) through creation, whereas the body was made at the end of the work of adornment. Therefore, the soul of man was produced before the body.

**Objection 2:** A rational soul shares more in common (*magis convenit*) with angels than with brute animals. But angels were created either before bodies or right at the beginning along with corporeal matter, whereas the human body was formed on the sixth day, after the brute animals had already been produced. Therefore, the human soul was created before the human body.

**Objection 3:** The end is proportionate to the beginning. But the soul remains in the end after the body. Therefore, it was likewise created at the beginning before the body.

**But contrary to this:** A proper actuality is effected in a proper potentiality. Therefore, since the soul is the proper actuality of the body, the soul was produced in the body (*anima producta est in corpore*).

**I respond:** Origen claimed that not only the first man’s soul, but the souls of all men, were created along with the angels before bodies—and he made this claim because he believed that all spiritual substances, both souls and angels, were equal in the status of their natures and unequal only in merit

(*solum merito distare*). The result is that some of these spiritual substances were tied to bodies—these are the souls of men and the souls of the celestial bodies—whereas others remained in their purity, divided into diverse orders (*secundum diversos ordines*).

We have already replied to this opinion above (q. 47, a. 2), and so we will leave it aside at present.

However, in *Super Genesim ad Litteram* 7 Augustine has a different reason for claiming that the soul of the first man was created along with the angels and before the body, viz., because he holds that (a) in the work of the six days man's body was produced only with respect to its causal principles (*solum secundum causales rationes*) and not in actuality, whereas (b) this cannot be said of the soul, because the soul was not made from any preexisting matter, whether corporeal or spiritual, and because the soul could not have been produced by any created power. And so it seems that (a) the soul itself was created along with the angels during the work of the six days, when all things were made, and that (b) afterwards it was directed by its own will to be in charge of a body (*propria voluntate inclinata fuit ad corpus administrandum*).

However, Augustine does not make these claims by way of assertion, as his words demonstrate. For he says, "As long as no Scriptural passage or sound argument contradicts it, it is permissible to believe that man was made on the sixth day in the sense that the causal principle of the human body was created in the elements of the world, whereas the soul itself had already been created."

Now this view could indeed be tolerated according to those who claim that the soul has a complete species and nature in its own right (*per se*) and is united to the body not as its form, but only in order to be in charge of the body. However, if the soul is united to the body as its form and is naturally a part of a human nature, then this view is altogether impossible. For it is clear that God instituted the first things in a state of natural perfection (*in perfecto statu suae naturae*), in the way required by the species of each thing. But since a soul is part of a human nature, it does not have its natural perfection except insofar as it is united to a body. Hence, it would not have been appropriate for the soul to be created without a body.

Therefore, in order to sustain Augustine's opinion about the work of the six days (cf. q. 74, a. 2), one could claim that (a) in the work of the six days the human soul came beforehand (*praecessit*) by way of a certain likeness of genus, in the sense that it agrees with the angels in being an intellectual nature, but that (b) it itself was created simultaneously with the body. By contrast, according to the other saints, both the soul and the body of the first man were produced during the work of the six days.

**Reply to objection 1:** If the soul's nature had a complete species, so that it might be created in its own right (*secundum se*), then the argument that the soul was created by itself (*per se*) at the beginning would go through. However, since the soul is naturally the form of a body, it must not have been created separately (*non fuit seorsum creanda*), but instead it had to be created in a body.

**Reply to objection 2:** The reply to the second objection is similar. If a soul had a species in its own right (*per se*), it would share more in common with the angels. However, because a soul is the form of a body, it belongs, as a formal principle, to the genus *animal*.

**Reply to objection 3:** The fact that a soul remains after its body stems from a defect of the body, i.e., death. This defect was not supposed to exist at the beginning of the soul's creation (cf. q. 97, a. 1).

## QUESTION 91

### The Production of the First Man's Body

The next thing we have to consider is the production of the first man's body. On this topic there are four questions: (1) What was the matter from which it was produced? (2) Which agent was it produced by? (3) What sort of constitution (*dispositio*) was given it through its production? (4) What was the manner and order of its production?

#### Article 1

##### Was the first man's body made from the slime of the earth?

It seems that the first man's body was not made from the slime of the earth (*de limo terrae*):

**Objection 1:** It takes more power to make something from nothing (*ex nihilo*) than to make it from something, since non-being (*non ens*) is more distant from actuality than is being-in-potentiality (*ens in potentia*). But since man is the most dignified of the lower creatures (*dignissima creaturarum inferiorum*), it was fitting that God's power should be manifested to the highest degree in the production of man's body. Therefore, it ought to be the case that man's body was made from nothing and not from the slime of the earth.

**Objection 2:** Celestial bodies are more noble than earthly bodies are. But the human body has the greatest nobility, since it is perfected by the most noble form, viz., the rational soul. Therefore, it ought to be the case that it was made from a celestial body rather than from an earthly body.

**Objection 3:** As is clear from their subtlety, fire and air are more noble bodies than earth and water. Therefore, since the human body is the most dignified of all bodies, it ought to be the case that it was made from fire and air rather than from the slime of the earth.

**Objection 4:** The human body is composed of the four elements. Therefore, it was made from all the elements and not from the slime of the earth.

**But contrary to this:** Genesis 2:7 says, "God formed man from the slime of the earth."

**I respond:** Since God is perfect, He has given to His works a perfection corresponding to their mode [of being]—this according to Deuteronomy 32:4 ("God's works are perfect"). Now He Himself is perfect absolutely speaking because He contains all things within Himself antecedently—not in the mode of composition, but "in a simple and unified way (*simpliciter et unite*)," as Dionysius puts it, in the manner in which diverse effects preexist in a cause in accord with its unified essence (*secundum unam eius essentiam*).

Now this perfection flows into the angels insofar as all the things produced by God in nature fall within their cognition through diverse [intelligible] forms. By contrast, perfection of this sort flows into man in a lower-level way (*inferiori modo*). For man does not have within his natural cognition a knowledge of all natural things. Instead, he is in a certain sense *composed of* all things. For (a) he has within himself a rational soul from the genus of spiritual substances, and (b) he is, by way of likeness to the celestial bodies, far removed from contraries because of the exceptional balance of his constitution (*habet elongationem a contrariis per maximam aequalitatem complexionis*), whereas (c) he has the elements with respect to his substance. However, he has the elements in such a way that the higher elements, viz., fire and air, dominate in him with respect to their *power* (since life consists principally in heat, which comes from fire, and in moistness, which comes from air), whereas the lower elements are abundant in him with respect to their *substance*. For a balanced mixture would not be possible if the lower elements, which have less power, were not quantitatively more abundant in man; and the reason why man's body is said to have been formed from the slime of the earth is that slime is earth mixed with

water. And because all the creatures of the world are in some sense found in him, man is called a ‘miniature world’ (*minor mundus*).

**Reply to objection 1:** God’s creative power is manifested in man’s body because its matter was produced through creation.

Now the human body had to be made from the matter of the four elements in order that man might share something in common with the lower bodies (*haberet convenientiam cum inferioribus corporibus*), constituting, as it were, a certain middle ground between spiritual substances and corporeal substances.

**Reply to objection 2:** Even though a celestial body is, absolutely speaking, more noble than an earthly body, nonetheless, a celestial body shares less in common with the activity of the rational soul. For the rational soul takes its knowledge of truth in a certain way from the sensory powers, whose organs cannot be formed from a celestial body, because a celestial body cannot be acted upon (*cum sit impassibile*).

Nor is it true that a bit of the fifth essence (*aliquid de quinta essentia*) enters materially into the composition of the human body; this claim is made by some who hold that the soul is united to the body by the mediation of a certain sort of light (cf. q. 76, a. 7).

First of all, their claim that light is a body is false (cf. q. 67, a. 2).

Second, it is impossible for any part of the fifth essence to be divided off from a celestial body or to be mixed in with the elements—and this because of the celestial body’s impassibility. Hence, a celestial body can enter into the composition of mixed bodies only through the effect of its power.

**Reply to objection 3:** If fire and air, which are more powerful in their action, also abounded quantitatively in the composition of the human body, then they would completely draw the other elements to themselves, and it would be impossible to fashion the balanced mixture that man’s composition needs in order to have a good sense of touch, which is the foundation for the other senses. For the organ associated with each sense must have only in potentiality—and not in actuality—the contraries which are perceived by that sense. This must be so either in such a way that (a) the organ lacks the whole genus of relevant contraries, in the way that the pupil lacks color, so that it might be in potentiality with respect to all colors—something not possible in the case of the organ of touch, since it is composed of the elements, whose qualities the sense of touch perceives—or in such a way that (b) the organ is midway between the contraries, as is necessary in the case of the sense of touch. For the middle is in some sense in potentiality with respect to both extremes.

**Reply to objection 4:** The slime of the earth contains both earth and also water cementing the parts of earth together. Scripture does not make mention of the other [two] elements, both because (a) they are quantitatively less abundant in man’s body, as has been explained, and also because (b) in the whole account of the production of things Scripture, which was handed down to an uneducated people, does not make mention of fire and air, which uneducated people do not perceive with their sensory power.

## Article 2

### Was the human body produced directly by God?

It seems that the human body was not produced directly by God (*non sit immediate a Deo*):

**Objection 1:** In *De Trinitate* 3 Augustine says that God takes care of corporeal things through the angelic creature. But, as has been explained (a. 1), the human body was formed from corporeal matter. Therefore, it ought to be the case that it was produced by the mediation of angels and not directly by

God.

**Objection 2:** It is unnecessary for anything that can be effected by a created power to be produced directly by God. But the human body can be produced through the created power of a celestial body; for instance, certain animals are generated by putrefaction through the active power of a celestial body, and Albumasar says that men are generated only in places with temperate climates (*in locis temperatis tantum*) and not in places where heat or cold is excessive. Therefore, it was unnecessary for the human body to be formed directly by God.

**Objection 3:** Nothing is made from corporeal matter except through matter's being transformed (*per aliquam materiae transmutationem*). But every corporeal transformation has as a cause that movement of a celestial body that is the first of the movements. Therefore, since the human body is produced from corporeal matter, it seems that a celestial body contributed something to the human body's being formed.

**Objection 4:** In *Super Genesim ad Litteram* Augustine says that man's body was made during the work of the six days in the sense that God placed certain causal principles within corporeal creation (*secundum causales rationes quas Deus inseruit creaturae coporali*), whereas later on man's body was formed in actuality. But that which preexists by means of its causal principles in corporeal creation can be produced through a corporeal power. Therefore, the human body was produced by some created power and not directly by God.

**But contrary to this:** Ecclesiasticus 17:1 says, "God created man out of the earth."

**I respond:** The first formation of the human body could not have occurred through any created power, but was instead directly from God.

To be sure, some have claimed that the forms existing in corporeal matter are derived from certain immaterial forms. But as has already been explained (q. 63, a. 4), the Philosopher fends off this position in *Metaphysics 7* by appeal to the fact that it is composite things, and not forms, that are made *per se*. And since an agent is similar to what it makes, it is not fitting that a pure form, which exists without matter, should produce a form which exists in matter and which is made only in virtue of the fact that the relevant composite is made. And so it has to be the case that the cause of a form that exists in matter is itself a form that exists in matter; for what is composite is generated from what is composite.

On the other hand, even though God is altogether immaterial, it is He alone who through His power can produce matter by creating it. Hence, it belongs to Him alone to produce a form in matter without the assistance of a preexisting material form. For this reason, angels cannot transform bodies with respect to any form unless they are aided by certain 'seeds', as Augustine puts it in *De Trinitate 3*.

Therefore, since the human body—by the power of which another similar in species might be formed by way of generation—had never previously been formed, it was necessary for the first human body to be formed directly by God.

**Reply to objection 1:** Even if angels provide some sort of ministry to God in what He does with respect to bodies, it is nonetheless the case that God does certain things among corporeal creatures that angels cannot in any way do—e.g., bringing back the dead and giving sight to the blind. It was likewise this sort of power by which He formed the body of the first man from the slime of the earth.

Still, it could have happened that angels provided some sort of ministry in the formation of the body of the first man—like the ministry they will provide at the last resurrection by collecting the dust.

**Reply to objection 2:** Perfect animals, which are generated from semen, cannot be generated solely through the power of a celestial body in the way that Avicenna imagines—this, despite the fact that the power of a celestial body does cooperate in the natural generation of perfect animals, in keeping with the Philosopher's claim in *Physics 2* that "a man and the sun generate a man from matter." This is why a place with a temperate climate is required for the generation of men and other perfect animals.

However, the power of celestial bodies is indeed sufficient for generating certain imperfect animals from properly disposed matter, since it is clear that more is required for the production of a perfect entity than for the production of an imperfect entity.

**Reply to objection 3:** The movement of the heavens is a cause of natural transformations, but not of transformations that are effected outside the order of nature (*praeter naturae ordinem*) and by God's power alone, e.g., raising the dead and giving sight to the blind. It is these transformations that are similar to a man's being formed from the slime of the earth.

**Reply to objection 4:** There are two ways in which, among creatures, something is said to preexist through its causal principles.

In the first way it preexists in virtue of both an active and a passive power; that is, the thing preexists not only in the sense that it can be made out of preexisting matter, but also in the sense that there is some preexisting creature that is able to make it.

In the second way it preexists in virtue of a passive power alone, i.e., in the sense that it can be made by God from preexisting matter. It is in this sense that, according to Augustine, the human body preexisted through causal principles in the works that were produced.

### Article 3

#### Is the human body appropriately constituted?

It seems that the human body is not appropriately constituted (*non habuerit convenientem dispositionem*):

**Objection 1:** Since man is the most noble of the animals, the human body should be optimally constituted for doing what is proper to animals, viz., sensing and moving about. But some animals have a more acute sensory power than man, and some have swifter movement; for instance, dogs have a better sense of smell than man, and birds move more swiftly. Therefore, man's body is not appropriately constituted.

**Objection 2:** The perfect is that which is lacking in nothing. But the human body lacks more things than do the bodies of other animals, which have hides and natural weapons for their protection—something that man lacks. Therefore, the human body is very imperfectly constituted.

**Objection 3:** Man is more distant from the plants than from the brute animals. But plants have an upright stature, whereas brute animals are on all fours. Therefore, it ought not to have been the case that man has an upright stature.

**But contrary to this:** Ecclesiastes 7:30 says, "God made man upright."

**I respond:** All natural things have been produced by God's craftsmanship (*ab arte divina*), and so they are in a certain sense the artifacts of God Himself (*sunt quodammodo artificata ipsius Dei*). Now every craftsman intends to give the best constitution to his work—not the best constitution absolutely speaking, but the best constitution relative to its end. And if such a constitution has some defect associated with it, the craftsman does not care. For instance, a craftsman who makes a saw for cutting makes it out of iron in order that it might be fit for cutting, and he does not care to make it out of glass, which is a more beautiful material, since such beauty would pose an obstacle to its end.

So, then, God gave the best constitution to each natural thing—not, to be sure, the best constitution absolutely speaking, but rather the best constitution relative to its being ordered toward its proper end. As the Philosopher puts it in *Physics 2*, "... because it is more worthy—not absolutely speaking, but relative to the substance of each one."

Now the proximate end of the human body is the rational soul and its operations, since matter is for the sake of form and instruments are for the sake of the agent's actions. Therefore, I claim that God made (*instituit*) the human body with the best constitution as far as appropriateness for this sort of form and its operations is concerned. And if there seems to be any defect in the constitution of the human body, notice that such a defect follows by material necessity from what is required in the body in order for it have a due proportion to the soul and to the soul's operations.

**Reply to objection 1:** The sense of touch, which is the basis for the other sensory powers, is more perfect in man than in any other animal, and for this reason it was necessary for man to have the most balanced physical constitution (*haberet temperatissimam complexionem*) of all the animals. Moreover, as is clear from what was said above (q. 78, a. 4), man is superior to all the other animals with respect to the interior sentient powers.

On the other hand, as far as some of the exterior sensory powers are concerned, it happens by a certain necessity that man falls short of the other animals. For instance, among all the animals, man has the worst sense of smell. For it was necessary that man, among all the animals, should have the largest brain in relation to his body (*respectu sui corporis haberet maximum cerebrum*), both in order to perfect in a less restricted way (*liberius*) the operations of the interior sentient powers—which, as was explained above (q. 84, a. 7), are necessary for the intellect's operation—and in order for the brain's cool temperature (*frigiditas cerebri*) to moderate the heart's heat, which has to abound in man in order for him to have an upright stature. But because of the brain's moistness, its size is an impediment to the sense of smell, which requires dryness.

In this same way, one can likewise give reasons for why certain animals have more acute vision or more sensitive hearing than man—because the obstacles to these senses must follow in man from the perfect balance of his constitution. And the same reason is also to be given for why other animals are swifter than man; for the balance of the human constitution is incompatible with excessive swiftness.

**Reply to objection 2:** Horns and hooves, which are the weapons of certain animals, along with a toughness of hide and a multitude of hair or feathers, which are the coverings of animals, attest to an abundance of the element earth, which is incompatible with the balance and tenderness of the human constitution. And so such things were not fitting for man. Rather, in place of these things man has his reason and his hands, by which he can make for himself, in an unlimited number of ways, weapons and coverings and the other things necessary for life. Hence, in *De Anima* 3 the hand is called “the organ of organs.” This was more appropriate for a rational nature, which has an unlimited number of ideas, with the result that it has the capacity to make an unlimited number of instruments.

**Reply to objection 3:** There are four reasons why having an upright stature was appropriate for man.

First, the sensory powers were given to man not only, as with the other animals, in order to procure the necessities of life, but also in order to have cognition. Hence, whereas the other animals do not delight in sensible things except in their relation to food and sexual attraction, man alone takes delight in the very beauty of sensible things in its own right. And so since the sensory powers are particularly strong in the facial area, the other animals have their faces turned toward the earth, as if in order to seek food and provide nourishment for themselves, whereas man has his face held up, in order that through the senses—and chiefly through the sense of sight, which is more subtle and reveals the many differences among things—he might be able in an unrestricted way (*libere*) to have cognition of sensible things, both earthly and celestial, from every angle, so that he might gather intelligible truth from all things.

Second, he has an upright stature so that the interior powers might have their operations more freely, given that the brain, in which the interior powers are in some sense activated (*perficiuntur*), is not close to the ground (*non depressum*) but is instead elevated over all the parts of the body.

Third, if man had a prone posture, he would have to use his hands as front feet. And so the hands

would cease to be useful for performing diverse works.

Fourth, if man had a prone posture and used his hands as front feet, then he would have to capture food with his mouth. And so, as is clear from the case of the other animals, he would have an oblong mouth, and hard and large lips, and a hardened tongue as well, so as not to be harmed by exterior things. And this sort of arrangement would completely impede speech, which is a proper work of reason.

And yet even though he has an upright stature, man is still maximally remote from plant life. For man has his superior part, i.e., the head, facing the higher part of the world, and he has his inferior part facing the lower part of the world, and so he is optimally arranged in his entire constitution. By contrast, plants have their superior part facing the lower part of the world (for their roots are, as it were, their mouths), whereas their inferior part is found in the higher part of the world. On the other hand, brute animals lie between the two, since the superior part of an animal is the part which takes in nourishment, whereas the inferior part is the part that emits waste products.

#### Article 4

##### Is the production of the human body appropriately described in Scripture?

It seems that the production of the human body is not appropriately described in Scripture:

**Objection 1:** Just as the human body was made by God, so too were the other works of the six days. But in the case of the other works it says, “God said, ‘Let such-and-such be made’, and it was made.” Therefore, something similar should have been said concerning the production of man.

**Objection 2:** As was explained above (a. 2), the human body was made directly by God. Therefore, it is inappropriate to say, “Let *us* make man.”

**Objection 3:** The form of the human body is the soul itself, which is the breath of life. Therefore, after it had said, “God formed man from the slime of the earth,” it was not appropriate to add, “... and He breathed into his face the breath of life.”

**Objection 4:** The soul, which is the breath of life, is in the whole body and most especially in the heart. Therefore, it was inappropriate to say, “He breathed into his face the breath of life.”

**Objection 5:** The male and female sexes have to do with the body, whereas the image of God has to do with the soul. But according to Augustine, the soul was made before the body. Therefore, after it had said, “To His image He made him,” it was not appropriate to add, “... male and female He created them.”

**But contrary to this** is the authority of Scripture.

**I respond** [by replying to the objections]:

**Reply to objection 1:** As Augustine says in *Super Genesim ad Litteram* 6, the reason why man is preeminent over other things is not that God Himself made man—as if He Himself did not make the other things. For it is written, “The heavens are the works of your hands” (Psalm 101:26), and in another place, “His hands laid down the dry land” (Psalm 94:5). Rather, man is preeminent over other things because man was made to the image of God.

Nonetheless, in the case of the production of man Scripture uses a special way of speaking in order to indicate that the other things were made for the sake of man. For we normally make with greater thought and care those things that we principally intend.

**Reply to objection 2:** This phrase should not be taken to mean—as some have perversely taken it to mean—that God was saying to the *angels*, “Let us make man.” Instead, this is said in order to signify the plurality of the divine persons, whose image is found explicitly in man.

**Reply to objection 3:** Some have claimed that the [first] man’s body was formed antecedently in time, and that later on God infused a soul into the already formed body. But it is contrary to the nature of the perfection of the first institution of things that God would make either the body without the soul or the soul without the body; for each of them is a part of human nature.

It is especially inappropriate to make the body without the soul, since the body depends on the soul, but not vice versa. And so to rule this out, some have claimed that (a) when it says, “God formed man,” this means that the production of the body was simultaneous with the soul, and that (b) when it is added, “... and He breathed (*inspiravit*) into his face the breath of life,” this is referring to the Holy Spirit—just as our Lord breathed (*insufflavit*) on the Apostles, saying, “Receive the Holy Spirit” (John 20:22).

However, as Augustine points out in *De Civitate Dei*, this reading is ruled out by the words of Scripture. For the following is added to what was just cited: “And man was made a living soul”—but in 1 Corinthians 15:45 the Apostle relates this phrase to man’s animal life and not to his spiritual life. Therefore, the words “breath of life” refer to the soul, so that when it says, “He breathed into his face the breath of life,” this serves as an explanation, so to speak, of what had gone before; for the soul is the form of the body.

**Reply to objection 4:** The reason why it says that the breath of life was breathed into the man’s face is that the vital operations (*operationes vitae*) are more manifest in man’s face because of the sensory powers that exist there.

**Reply to objection 5:** According to Augustine, all the works of the six days were effected simultaneously. Hence, he does not hold that the first man’s soul, which he claims to have been made simultaneously with the angels, was made before the sixth day. Instead, he claims that on the sixth day itself (a) the first man’s soul was made in actuality and (b) his body was made with respect to its causal principles.

By contrast, the other doctors claim that both the man’s soul and his body were made in actuality on the sixth day.

## QUESTION 92

### The Production of the Woman

The next thing we have to consider is the production of the woman. On this topic there are four questions: (1) Was it fitting for the woman to be produced in this [initial] production of things? (2) Was it fitting for the woman to be made from the man? (3) Was it fitting for the woman to be produced from the man's rib? (4) Was the woman made directly by God?

#### Article 1

##### Was it fitting for the woman to be produced in the initial production of things?

It seems that it was not fitting for the woman to be produced in the initial production of things [*in prima rerum productione*]:

**Objection 1:** In *De Generatione Animalium* the Philosopher says, "The female is an inadvertently caused male (*femina est mas occasionatus*)." But it was not fitting for anything inadvertent and deficient to exist in the initial institution of things. Therefore, it was not fitting for the woman to be produced in that initial production of things.

**Objection 2:** Subjection and abasement are the result of sin; for it is after the sin that the woman is told, "You shall be under the man's power" (Genesis 3:16), and Gregory says, "When we do not sin, we are all equal." But the woman has less natural power and dignity than the man, since, as Augustine says in *Super Genesim ad Litteram* 12, "What acts is always more honorable than what is acted upon." Therefore, it was not fitting for the woman to be produced in the initial production of things, before the sin.

**Objection 3:** The occasions of sin should be eliminated. But God foreknew that the woman would be an occasion of sin for the man. Therefore, He should not have produced the woman.

**But contrary to this:** Genesis 2:18 says, "It is not good for the man to be alone; let us make him a helper like to himself."

**I respond:** As Scripture says, it was necessary for the woman to be made as a helper to the man—more specifically, as a helper in the work of generation and not as a helper for just any other work, as some have claimed, since for any other work a man can be helped more appropriately by another man than by a woman.

This can be made clearer if one considers the modes of generation among living things:

For some living things do not have within themselves the active power of generation, but are instead generated by an agent of another species, e.g., those plants and animals that are generated from the appropriate matter without seed (*sine semine*) by the active power of the celestial bodies.

On the other hand, other living things have the active and passive powers of generation joined together [within themselves], as in the case of plants that are generated from seeds. For in plants there is no vital work that is more noble than the work of generation, and so it is appropriate in their case for the active power of generation to be joined with the passive power of generation at all times.

By contrast, perfect animals have the active power of generation in the male sex and the passive power of generation in the female sex. And because in animals there is a vital work which is more noble than generation and which their life is principally ordered toward, the masculine sex is not joined at all times to the female in perfect animals, but is joined only at the time of coitus. So we might imagine that through coitus the male and the female become one in a way similar to that in which the masculine and feminine powers are joined at all times in a plant—even though in some plants the one power is more abundant, and in others the other power is more abundant.

Now man is ordered toward an even more noble vital work, viz., intellectual understanding. And so in the case of man there is an even stronger reason for why there ought to be a distinction between the two powers, with the result that the female is produced separately from the male and yet they are joined together as one carnally (*carnaliter in unum*) for the work of generation. And this is why, immediately after the formation of the woman, Genesis 2:24 says, “They will be two in one flesh.”

**Reply to objection 1:** In relation to *a particular nature*, the female is something deficient and inadvertent (*aliquid deficiens et occasionatum*). For the active power that exists in the male’s seed aims at producing something complete and similar to itself in the masculine sex, and the fact that a female is generated is due either to a weakness in the active power, or to some indisposition on the part of the matter, or even to some transformation from without, e.g., from the southern winds (*a ventis australibus*), which are humid, as *De Generatione Animalium* says.

However, in relation to *nature as a whole* (*per comparationem ad naturam universalem*), the female is not something inadvertent, but is instead ordered by the intention of nature toward the work of generation. Now the intention of nature as a whole depends on God, who is the universal author of nature. And so in instituting the nature, He produced not only the male but also the female.

**Reply to objection 2:** There are two kinds of subjection:

The first kind is *servile subjection*, according to which the one who presides makes use of his subjects for his own advantage. This kind of subjection was introduced after the sin.

The second kind is *civil* or *economic subjection*, according to which the one who presides makes use of his subjects for their own advantage and good. This kind of subjection existed even before the sin. For the good of order would have been lacking within the human multitude if some had not been governed by others who were wiser. And so it is by this sort of subjection that the woman is naturally subject to the man (*ex tali subiectione naturaliter femina subiecta est viro*), since the discernment of reason (*discretio rationis*) naturally abounds more in the man. Nor, as will be explained below (q. 96, a. 3), is inequality among men (*inaequalitas hominum*) excluded by the state of innocence.

**Reply to objection 3:** If God had removed from the world everything that man (*homo*) has turned into an occasion of sin (*omnia ex quibus homo sumpsit occasionem peccandi*), the universe would have remained incomplete (*imperfectum*). Nor should the common good have been destroyed in order that a particular evil might be avoided, especially in light of the fact that God is powerful enough to order every evil toward the good.

## Article 2

### Was it fitting for the woman to be made from the man?

It seems that it was not fitting for the woman (*mulier*) to be made from the man (*vir*):

**Objection 1:** The sexes are common to both man (*homo*) and the other animals. But in the case of the other animals the females (*feminae*) were not made from the males (*mares*). Therefore, this should not have been the case with man, either.

**Objection 2:** Things that belong to the same species have the same type of matter. But the male (*mas*) and the female (*femina*) belong to the same species. Therefore, since the man was made from the slime of the earth, the woman (*femina*) should have been made from the same thing, and not from the man (*vir*).

**Objection 3:** The woman (*mulier*) was made as a helper to the man (*vir*) in the work of generation. But excessively close kinship renders a person unsuitable for generation, and this is why closely related

persons are excluded from matrimony, as is clear from Leviticus 18:6. Therefore, the woman should not have been made from the man.

**But contrary to this:** Ecclesiasticus 17:5 says, “He created from him”—that is, from the man—“a helper like to himself”—that is, the woman.

**I respond:** In the initial institution of things it was fitting for the woman (*mulier*) to be formed from the man (*vir*)—more so than in the case of the other animals.

It was fitting, first of all, in order that a certain dignity might be preserved for the first man (*primus homo*), viz., that, by way of likeness to God, he himself would be the source of his whole species in the way that God is the source of the whole universe. Hence, in Acts 17:26 Paul says that God “made the whole human race from one.”

It was fitting, second, in order that the man might love the woman more and adhere to her in a more inseparable way, given his realization that she had been produced from him. Hence, Genesis 2:23-24 says, “... she was taken out of man. Wherefore a man shall leave father and mother, and shall cleave to his wife.” This was especially necessary in the case of the human species, in which the male and the female remain together throughout their whole life (*per totam vitam*)—something that does not happen in the case of the other animals.

Third, it was fitting because, as the Philosopher says in *Ethics* 8, in the case of human beings, the male and the female are conjoined not only because of the necessity for generation, as with the other animals, but also for the sake of their domestic life, in which the other works of the man and the woman take place and in which the man is the head of the woman (*in qua vir est caput mulieris*). Hence, it was fitting for the woman to be formed from the man as her source.

Fourth, there is a reason having to do with the mysteries [of the Faith] (*ratio sacramentalis*). For [the woman’s being made from the man] is a figure of the Church’s taking her origin from Christ. Hence, in Ephesians 5:32 the Apostle says, “This is a great mystery (*sacramentum magnum*); I mean in Christ and in the Church.”

**Reply to objection 1:** The reply to the first objection is clear from what has been said.

**Reply to objection 2:** The matter is that from which something is made. But a created nature has a determinate source, and since it is determined to one outcome, it also has a determinate process. Hence, it produces from determinate matter something that belongs to a determinate species.

By contrast, since God’s power is infinite, He can make something that is the same in species from any kind of matter whatsoever, e.g., the man from the slime of the earth and the woman from the man.

**Reply to objection 3:** The sort of close kinship that is an impediment to matrimony comes from natural generation. But the woman was produced from the man solely by God’s power and not through natural generation. This is why Eve is not called Adam’s daughter. For this reason, the argument is invalid (*non sequitur*).

### Article 3

#### Was it fitting for the woman to be formed from the man’s rib?

It seems that it was not fitting for the woman to be formed from the man’s rib:

**Objection 1:** The man’s rib was much smaller than the woman’s body. But more can be made from less only either (a) through *addition*—but if this had happened, then the woman would be said to be made from what was added rather than from the rib—or (b) through *rarefaction*, since, as Augustine says in *Super Genesim ad Litteram*, it is impossible for a body to increase unless it becomes rarified. But a

woman's body (*corpus mulieris*) is not more rarified than a man's, at least not in the proportion that a rib has to Eve's body. Therefore, Eve was not formed from Adam's rib.

**Objection 2:** There was nothing superfluous in the works that were initially created. Therefore, Adam's rib contributed to the perfection of his body. Therefore, when it was taken away, what remained was imperfect. But this seems wrong.

**Objection 3:** A rib cannot be separated from a man without pain. But there was no pain before the sin. Therefore, the rib should not have been separated from the man so that the woman might be formed from it.

**But contrary to this:** Genesis 2:22 says, "The Lord God built the rib which He had taken from Adam into a woman."

**I respond:** It was fitting for the woman (*mulier*) to be formed from the man's rib (*ex costa viri*).

It was fitting, first, in order to signify that there should be social union (*socialis coniunctio*) between the man and the woman. For instance, the woman should not dominate over the man, and so she was not formed from his head. But neither should she be looked down upon by the man as if she were under servile subjection (*tamquam serviliter subiecta*) (cf. a. 1), and so she was not formed from his feet.

Second, it was fitting because of a mystery [of the Faith] (*propter sacramentum*). For the sacraments—i.e., the blood and water by which the Church was instituted—flowed from the side of Christ in dormition on the cross.

**Reply to objection 1:** Some claim that the woman's body was formed by the multiplication of the matter without any other addition, in the way in which our Lord multiplied the five loaves.

But this is altogether impossible. For the multiplication of the loaves occurred either through a transformation of the substance of the matter itself or through a transformation of its dimensions. But it did not occur through a transformation of the substance of the matter itself, both because (a) matter, considered in itself, is wholly unable to change as long as it exists in potentiality and has only the character of a subject, and also because (b) multitude and magnitude lie outside of the essence of matter itself. And so the multiplication of matter is not in any way intelligible as long as the same matter remains without addition—unless the matter takes on bigger dimensions. But as the Philosopher explains in *Physics* 4, for the matter to be rarefied is just for it to take on bigger dimensions. Therefore, to claim that the matter is multiplied without rarefaction is to posit contradictories simultaneously, viz., the definition without the thing defined.

Hence, since rarefaction does not seem to be present in the multiplications under discussion, it is necessary to posit an *addition to* the matter, either through creation or (what is more probable) through conversion. Hence, in *Super Ioannem* Augustine says, "Christ satisfied the five thousand men with the five loaves in the way that from a few seeds He produces a field full of corn"—which happens through the conversion of nutrients (*per conversionem alimenti*).

Yet we still say, "He fed the five thousand *with five loaves*," or "He formed the woman *from the man's rib*," because the addition was made to the preexisting matter of the loaves or of the rib.

**Reply to objection 2:** The rib contributed to Adam's perfection not insofar as he was a certain *individual*, but insofar as he was the source of the *species*—in the same way that semen, which is released by a natural operation accompanied by pleasure, contributes to the perfection of the one that generates. Hence, *a fortiori*, by God's power the woman's body was able to be formed from the man's rib without pain.

**Reply to objection 3:** From this the reply to the third objection is clear.

#### Article 4

##### Was the woman formed directly by God?

It seems that the woman was not formed directly (*immediate*) by God:

**Objection 1:** No individual produced from something similar to it in species is made directly by God. But the woman was made from the man, who was of the same species as she was. Therefore, she was not made directly by God.

**Objection 2:** In *De Trinitate* 3 Augustine says that corporeal things are managed by God through the angels. But the woman's body was formed from corporeal matter. Therefore, it was made by the ministry of the angels and not directly by God.

**Objection 3:** Among creatures the things that preexist through their causal principles are produced by the power of another creature and not directly by God. But as Augustine says in *Super Genesim ad Litteram* 9, the woman's body was produced in its causal principles in the initial works. Therefore, the woman was not produced directly by God.

**But contrary to this:** In the same book Augustine says, "Only God, from whom all of nature subsists, was able to form or shape the rib in such a way that it would be a woman."

**I respond:** As was explained above (a. 2), natural generation in any given species is from a determinate matter. But the matter from which man is generated is the human seed of a male or a female (*semen humanum viri vel feminae*). Hence, an individual of the human species cannot be naturally generated from any other type of matter. Rather, only God, who institutes nature, can bring things into being outside of the order of nature. And so only God was able to form the man from the slime of the earth or the woman from the man's rib.

**Reply to objection 1:** This argument goes through for a case in which the individual is generated by a natural generation from something similar to it in species.

**Reply to objection 2:** As Augustine says in *Super Genesim ad Litteram* 9, we do not know whether angels provided service to God in the formation of the woman. However, it is certain that just as the man's body was not formed by angels from the slime of the earth, so neither was the woman's body formed by angels from the man's rib.

**Reply to objection 3:** As Augustine says in the same book, "The initial state of things was not such that the female was going to be formed wholly in this way, but it was only such that she *could* be formed in this way." And so with respect to its causal principles the woman's body preexisted in the initial works not in virtue of an active power, but only in virtue of a passive power ordered toward the creator's active power.

## QUESTION 93

### The End or Terminus of the Production of Man

The next thing we have to consider is the end or terminus of the production of man, insofar as man is said to be made to the image and likeness of God (*ad imaginem et similitudinem Dei*) (Genesis 1:26). On this topic there are nine questions: (1) Does the image of God exist in man? (2) Does the image of God exist in non-rational creatures? (3) Does the image of God exist more in an angel than in a man? (4) Does the image of God exist in every man? (5) Is the image of God in man related to [God's] essence, or to all the divine persons, or to just one of the divine persons? (6) Is the image of God found in man only with respect to man's mind? (7) Does the image of God exist in man because of man's powers, or because of his habits, or because of his acts? (8) Does the image of God exist in man in relation to all objects? (9) What is the difference between an image and a likeness?

#### Article 1

##### Does the image of God exist in man?

It seems that the image of God does not exist in man:

**Objection 1:** Isaiah 40:18 says, "To whom have you likened God? Or what image will you make for Him?"

**Objection 2:** Being an image of God is proper to the Firstborn, of whom the Apostle says in Colossians 1:15, "He is the Image of the invisible God, the Firstborn of every creature." Therefore, the image of God is not found in man.

**Objection 3:** In *De Synodis* Hilary says, "An image is not different in species (*species indifferens*) from the thing it is an image of." And, again, he says, "An image is an undivided and unified likeness of a thing, meant to equate that thing with another thing." But God and man do not share the same species (*non est species indifferens Dei et hominis*); nor can man have equality with God. Therefore, the image of God cannot exist in man.

**But contrary to this:** Genesis 1:26 says, "Let us make man to our image and likeness."

**I respond:** In *83 Quaestiones* Augustine says, "Where there is an image (*imago*), there is always a likeness (*similitudo*), but where there is a likeness, there is not always an image." From this it is clear that *likeness* is part of the concept *image*, and that *image* adds something beyond the concept *likeness*, viz., that an image is modeled after something else (*sit ex alio expressum*). For the word 'image' (*imago*) is derived from something's being done in imitation of another (*agitur ad imitationem alterius*). Hence, even if one egg is similar to and equal to a second egg, nonetheless, it is not called an image of that other egg, because it is not modeled after it.

Moreover, equality is not part of the concept *image*. For as Augustine says in the same place, "It does not follow that where there is an image, there is equality." This is clear in the case of the image of someone in a mirror (*in speculo relucente*). Still, equality is part of the concept *perfect image*, since a perfect image lacks nothing that exists in the thing after which it is modeled (*in perfecta imagine non deest aliquid imagini quod insit illi de quo expressa est*).

Now it is clear that in man there is some sort of likeness to God that is derived from God as its exemplar (*sicut ab exemplari*); however, it is not a likeness of equality, since in this case the exemplar infinitely exceeds that which it is the exemplar of. And so the image of God is said to exist in man not as a perfect image, but as an imperfect image. Scripture signifies this when it says that man was made "to the image of God (*ad imaginem Dei*)." For the preposition 'to' (*ad*) signifies the approach of something that is far off in the distance (*accessum quendam qui competit rei distant*).

**Reply to objection 1:** The prophet is talking about corporeal images fabricated by man, and this is why he expressly says, “What image will you make for Him?” But it is God Himself who has placed a spiritual image of Himself in man.

**Reply to objection 2:** The “Firstborn of every creature” is the perfect Image of God, perfectly matching (*perfecte implens*) that of which He is the Image (cf. q. 35). This is why He is said to be “the Image” and never “to the image” (*dicitur imago et numquam ad imagem*).

By contrast, man is called an image because of a likeness, and he is said to be made “to the image” because of the imperfection of the likeness. And since a perfect likeness of God cannot exist except by an identity of nature, the Image of God exists in His Firstborn Son in the way that the image of a king exists in his connatural son, whereas in man the image of God exists in a different nature, in the way that the king’s image exists on a silver coin. This is clear from Augustine in *De Decem Chordis*.

**Reply to objection 3:** Since *one* is [the same as] *undivided being*, a species is called ‘non-different’ (*indifferens*) in the same way that it is called ‘one’. But a thing is said to be *one* not only in number or in species or in genus, but also in accord with a certain analogy or proportion (*secundum analogical vel proportionem quandam*); and this is the sort of oneness or agreement that a creature has with respect to God.

On the other hand, what [Hilary] says about equating the one thing with the other has to do with the concept *perfect image*.

## Article 2

### Is the image of God found in non-rational creatures?

It seems that the image of God is found in non-rational creatures (*in irrationalibus creaturis*):

**Objection 1:** In *De Divinis Nominibus* Dionysius says, “Things that have causes bear contingent images of their causes.” But God is a cause not only of rational creatures, but also of non-rational creatures. Therefore, the image of God is found in non-rational creatures.

**Objection 2:** The more explicit (*expressior*) a likeness is in a thing, the closer it approaches the nature of an image. But in *De Divinis Nominibus*, chap. 4, Dionysius says that a solar ray has a maximal likeness to God’s goodness. Therefore, it is made to the image of God.

**Objection 3:** The more perfect a thing is in goodness, the more like God it is. But the universe as a whole is more perfect in goodness than man is, since even if each particular thing is good, all of them together are called “very good” in Genesis 1:31. Therefore, the whole universe—and not just man—is made to the image of God.

**Objection 4:** In *De Consolatione Philosophiae* Boethius says of God, “... holding the world in His mind and forming it in a like image.” Therefore the whole world—and not just the rational creature—is made to the image of God.

**But contrary to this:** In *Super Genesim ad Litteram* 6 Augustine says, “This reaches its peak in man, since God made man to His own image by giving him an intellectual mind by which he stands out from the beasts.” Therefore, things that do not have an intellect are not made to the image of God.

**I respond:** Not just any likeness, even if it is modeled after another, is enough for the concept *image*. For if the likeness corresponds only to a genus or to some common accident, the thing in question will not thereby be said to be made “to the image” of the other. For instance, one could not say that a worm which comes out of a man is an image of the man because of the likeness in genus. Nor, again, can one say that if something becomes white and so like another thing, it is thereby made to that thing’s

image; for whiteness is an accident common to many species.

What is required for the concept *image* is that the likeness be either (a) with respect to the species, in the way that the image of a king exists in his son, or (b) at least with respect to some accident that is proper to the species—especially its shape—in the way that an image of a man is said to exist in copper. This is why Hilary explicitly says, “An image is not different in species.” And it is clear that a likeness in species has to do with the last difference [contained in the definition].

Now first, and most generally, some things are like God insofar as they *exist*. Second, some are like Him insofar as they are *alive*. Third, some are like Him insofar as they *have knowledge or intellectual understanding (sapiunt vel intelligunt)*. These last ones are, as Augustine puts it in *83 Quaestiones*, “so close to God in likeness that nothing among creatures is closer.”

So, then, it is clear that, properly speaking, only intellectual beings are made to the image of God.

**Reply to objection 1:** Everything imperfect is a sort of participation (*quaedam participatio*) in what is perfect. And so even those things that fall short of the concept *image* still participate to some extent in the nature of an image insofar as they have some sort of likeness to God. This is why Dionysius says that things that have causes bear “contingent images” of their causes; that is, they bear the images not absolutely speaking, but to the extent that this is possible for them.

**Reply to objection 2:** Dionysius compares a solar ray to God’s goodness with regard to its causality, but not with respect to the dignity of its nature—which is what is required for the concept *image*.

**Reply to objection 3:** In the extensive and diffusive sense (*extensive et diffusiva*), the universe is more perfect in goodness than an intellectual creature is. However, in the intensive and concentrated sense (*intensive et collectiva*), the likeness of the divine perfection is found to a greater degree in an intellectual creature, which has a capacity for the highest good (*capax summi boni*).

An alternative reply is that a part is contrasted not with the whole, but with other parts. Hence, when one claims that intellectual natures alone are made to the image of God, this rules out other parts of the universe from being made to God’s image, but it does not rule out the universe’s being made to the image of God in some of its parts.

**Reply to objection 4:** Boethius is taking ‘image’ here as a kind of likeness by which an artifact imitates the pattern (*species*) of art that exists in the craftsman’s mind; and in this sense every creature is an ‘image’ of the exemplary conception that it has in God’s mind.

However, this is not the sense of ‘image’ that we are talking about in the present context. Instead, we are talking now about images that have a likeness in their nature. More specifically, all things are like the First Being insofar as they are beings, and some are like the First Life insofar as they are alive, and some are like the Highest Wisdom insofar as they have intellectual understanding.

### Article 3

#### Is an angel made to the image of God to a greater degree than a man is?

It seems that an angel is not made to the image of God to a greater degree than a man is:

**Objection 1:** In his sermon *De Imagine* Augustine says that God did not grant to any creature other than man that it should be made to His image. Therefore, it is not true that an angel is made to the image of God to a greater degree than a man is.

**Objection 2:** According to Augustine in *83 Quaestiones*, “Man is made to the image of God in such a way that he is formed by God without any other creature intervening. And so nothing is more

closely conjoined to God than he is.” But a creature is called an image of God to the extent that it is conjoined to God. Therefore, an angel is not made to the image of God to a greater degree than a man is.

**Objection 3:** A creature is made to the image of God insofar as it has an intellectual nature. But there is no such thing as more of an intellectual nature or less of an intellectual nature (*intellectualis natura non intenditur nec remittitur*), since *intellectual nature* is in the genus *substance* and does not belong to the genus *accident*. Therefore, an angel is not made to the image of God to a greater degree than a man is.

**But contrary to this:** In one of his homilies Gregory says, “An angel is called ‘a seal of likeness’, because in him the likeness of the divine image is imprinted more explicitly.”

**I respond:** There are two ways of talking about the image of God:

First, with respect to what the notion of an image is *primarily* thought of as existing in, viz., an intellectual nature. And in this sense the image of God exists to a greater degree in angels than in men, since, as is clear from what was said above (q. 58, a. 3), a more perfect intellectual nature exists in angels.

Second, the image of God in a man can be thought of with respect to what the image is *secondarily* thought of as existing in. More specifically, a certain imitation of God can be found in a man (a) insofar as man is from man in the way that God is from God, and (b) insofar as a man’s soul is a whole in his whole body and also a whole in each part of the body, in the same way that God is related to the world. As far as these and other such likenesses are concerned, the image of God is found to a greater degree in a man than in an angel. However, the nature of God’s image in man is associated with these likenesses *per se* only insofar as they presuppose the first sort of imitation, which has to do with the intellectual nature. Otherwise, brute animals would likewise be made to God’s image.

And so since as far as the intellectual nature itself is concerned, an angel is made to God’s image to a greater degree than a man is, one should grant that (a) absolutely speaking (*simpliciter*) an angel is made to God’s image to a greater degree than a man is, but that (b) in a certain respect (*secundum quid*) a man is made to God’s image to a greater degree than an angel is.

**Reply to objection 1:** Augustine is here excluding from God’s image other lower creatures that lack intellectual understanding. He is not, however, excluding the angels.

**Reply to objection 2:** The claim that nothing is more closely conjoined to God than the human mind is asserted with respect to the genus *intellectual nature*, in the same way that fire is, as a species, the most subtle of bodies, even though one instance of fire is more subtle than another. For as Augustine had said earlier, “Those who have knowledge bear such a close likeness to Him that there is nothing closer among creatures.” Hence, this does not rule out the claim that an angel is made to God’s image to a greater degree.

**Reply to objection 3:** The assertion, “A substance does not admit of more and less,” does not imply that one species of substance is not more perfect than another. Instead, it implies that (a) one and the same individual does not participate more in its own species at some times and less at other times, and also that (b) different individuals [of the same species] do not participate to greater and lesser degrees in that species of substance.

#### Article 4

##### Is the image of God found in every man?

It seems that the image of God is not found in every man (*in quolibet homine*):

**Objection 1:** In 1 Corinthians 11:7 the Apostle says, “The man (*vir*) is the image of God, while the woman (*mulier*) is the image of the man.” Therefore, since the woman is an individual of the human species, not every individual is an image of God.

**Objection 2:** In Romans 8:29 the Apostle says, “Those whom God foreknew, He also predestined to be conformed to the image of His Son.” But not all men have been predestined. Therefore, not all men are conformed to the image.

**Objection 3:** As was explained above (a. 1), *likeness (similitudo)* is part of the concept *image (imago)*. But through sin a man becomes unlike God (*Deo dissimilis*). Therefore, he loses the image of God.

**But contrary to this:** Psalm 38:7 says, “Surely man passes as an image.”

**I respond:** Since it is because of his intellectual nature that man is said to be made to the image of God, it follows that he is made to God’s image to the highest degree to the extent that his intellectual nature is able to imitate God to the highest degree. But it is with respect to God’s knowing and loving Himself that an intellectual nature especially imitates God. Hence, there are three possible ways to think of the image of God in man:

In the first way, a man has a natural capacity to understand and to love God, and this capacity resides in the *very nature of the mind (consistit in ipsa natura mentis)*, which is common to all men.

In the second way, a man actually or habitually understands and loves God, but still imperfectly; and this is the image associated with *the conformity of grace (imago per conformitatem gratiae)*.

In the third way, a man has actual and perfect understanding of and love for God, and the image so taken is associated with *the likeness of glory (imago secundum similitudinem gloriae)*.

This is why a Gloss on Psalm 4:7 (“The light of your countenance, O Lord, is signed upon us”) distinguishes three images: (a) the image of *creation*, (b) the image of *re-creation*, and (c) the image of *likeness*. The first image is found in all men, the second image is found only in the justified (*tantum in iustis*), and the third image is found only in the blessed in heaven (*solum in beatis*).

**Reply to objection 1:** The image of God is found in both the man and the woman with respect to what the character of an image primarily consists in, viz., an intellectual nature. Hence, after Genesis 1:27 had said, “He created him”—viz., man (*homo*)—“to the image of God,” it adds, “... male and female He created them.” And as Augustine explains, it says “them” in the plural, lest it be thought that both sexes had been joined in one individual.

On the other hand, there is a certain secondary sense in which the image of God is found in the man and not in the woman. For the man is the source and the end of the woman in the way that God is the source and the end of the whole creation. Hence, after the Apostle had said, “The man is the image and glory of God, while the woman is the glory of the man,” he explained why he had said this by adding, “For the man is not from the woman, but the woman is from the man; and the man is not created for the sake of the woman, but the woman is created for the sake of the man.”

**Reply to objection 2 and objection 3:** These arguments proceed from the type of image that has to do with the conformity of grace and glory.

## Article 5

### Does the image of God in man bear upon the Trinity of divine persons?

It seems that the image of God in man does not bear upon the Trinity of divine persons (*non sit quantum ad Trinitatem divinarum personarum*):

**Objection 1:** In *De Fide ad Petrum* Augustine says, “There is a unified divine essence of the Holy Trinity, and there is a unified image to which man was made.” And in *De Trinitate* 5 Hilary says, “Man is made to the common image of the Trinity.” Therefore, the image of God in man bears upon the divine essence and not upon the Trinity of persons.

**Objection 2:** *De Ecclesiasticis Dogmatibus* says that the image of God in man bears upon [God’s] eternity. Also, Damascene says, “Man’s being made to the image of God signifies *per se* the intellect, the free will, and the power.” Again, Gregory of Nyssa says that when Scripture said that man was made to God’s image, “this amounts to saying that human nature was made a participant in every good; for the divine nature (*divinitas*) is the plenitude of goodness.” But all of this pertains to the oneness of the essence and not to the distinction among the persons. Therefore, in man the image of God bears upon the oneness of the essence and not upon the Trinity of persons.

**Objection 3:** An image leads to the cognition of the one whose image it is. Therefore, if the image of God in man bore upon the Trinity of persons, then since man is able to know himself through his natural reason, it would follow that man could know the Trinity of divine persons through his natural reason. But as was shown above (q. 32, a. 1), this is false.

**Objection 4:** The name ‘image’ belongs only to the Son and not to each of the three Persons; for in *De Trinitate* 6 Augustine says, “The Son alone is the Image of the Father.” Therefore, if the image of God in man were associated with a [divine] person, there would be just an image of the Son in man and not an image of the whole Trinity.

**But contrary to this:** In *De Trinitate* 4 Hilary says, “Man’s being made to the image of God shows the plurality of the divine persons.”

**I respond:** As was established above (q. 40, a. 2), the distinctions among the divine persons stem only from origins or, better, from the relations of origin. But the mode of origin is not the same in all things; instead, each thing’s mode of origin is appropriate to its nature. For instance, living things are produced in one way and non-living things in another way; animals are produced in one way and plants in another way.

Hence, it is clear that the distinction among the divine persons is appropriate to the divine nature. Thus, being made to the image of God in imitation of the divine nature does not rule out being made to the image of God in a sense that represents the three persons. Instead, the one follows upon the other.

So, then, one should reply that the image of God exists in man in a way that bears upon both the divine nature and the Trinity of persons. For in God Himself the one nature exists in three persons (*in ipso Deo in tribus personis una existit natura*).

**Reply to objection 1 and objection 2:** The reply to the first two objections is clear from what has been said.

**Reply to objection 3:** This argument would go through if the image of God in man represented God perfectly. But as Augustine says in *De Trinitate* 15, there is a huge difference (*maxima est differentia*) between the trinity that exists in us and the divine Trinity. And so, as he says in the same place, “We see, rather than believe, the trinity that is in us, whereas we believe, rather than see, that God is a Trinity.”

**Reply to objection 4:** Some have claimed that only the image of the Son exists in man. But Augustine disproves this claim in *De Trinitate* 12.

First, since the Son is similar to the Father by an equality of essence, it is necessary that if man is made to the likeness of the Son, then he is made to the likeness of the Father.

Second, if man had been made only to the image of the Son, then the Father would have said, “Let us make man to *your* image and likeness,” and not “to *our* image and likeness.”

Therefore, when it says, “He made him to the image of God,” one should not, as some have,

interpret this to mean that the Father made man only to the image of the Son, who is God. Instead, it should be interpreted to mean that the Triune God (*Deus Trinitas*) made man to His own image, i.e., to the image of the whole Trinity.

Now there are two readings of the sentence, ‘God made man to His image (*Deus fecit hominem ad imaginem suam*)’.

On the first reading, the preposition ‘to’ (*ad*) designates the terminus of the act of making, so that the sentence has this meaning: “Let us make man in such a way that the image exists in him.”

On the second reading, the preposition ‘to’ can designate the exemplary cause, as when one says, “This book is made to [conform to] that book.” On this reading the image of God is the divine essence itself—improperly (*abusive*) called an ‘image’—insofar as ‘image’ is being used for ‘exemplar’. Alternatively, in keeping with what some have claimed, the divine essence is being called an ‘image’ because one [divine] person is like the other with respect to the divine essence.

## Article 6

### Does the image of God exist in man only because of his mind?

It seems not to be the case that the image of God exists in man only because of his mind (*non solum secundum mentem*):

**Objection 1:** In 1 Corinthians 11:7 the Apostle says, “The man (*vir*) is the image of God.” But the man is not only the mind. Therefore, the image of God is not associated only with the mind.

**Objection 2:** Genesis 1:27 says, “God created man to His own image. To the image of God He created him. Male and female He created them.” But the distinction of male from female has to do with the body. Therefore, the image of God in man is associated with the body and not just with the mind.

**Objection 3:** An image seems mainly to have to do with shape. But shape pertains to bodies. Therefore, the image of God in man is associated with the body, too, and not just with the mind.

**Objection 4:** According to Augustine in *Super Genesim ad Litteram* 12, we have three types of vision, viz., (a) corporeal, (b) spiritual or imaginative, and (c) intellectual. Therefore, if, because of our intellectual vision, which pertains to the mind, there is a ‘trinity’ (*aliqua trinitas*) in us by virtue of which we are made to the image of God, then by parity of reasoning the same should hold for the other types of vision as well.

**But contrary to this:** In Ephesians 4:23-24 the Apostle says, “Be renewed in the spirit of your mind and put on the new man.” From this we are given to understand that our renewal, which is effected by our putting on the new man, pertains to the mind. But Colossians 3:10 says, “... putting on the new man, who is renewed in the knowledge of God according to the image of Him who created him ....,” where he attributes the renewal which is effected by putting on the new man to the image of God. Therefore, being an image of God involves just the mind.

**I respond:** As was explained above (a. 2), even though there is some sort of likeness to God in all creatures, it is only in the rational creature that one finds a likeness to God in the manner of an *image*, whereas in other creatures there is a likeness in the manner of a *trace* (*vestigium*). But it is his intellect or mind (*intellectus sive mens*) in which the rational creature exceeds other creatures. Hence, it follows that the image of God is found in the rational creature himself only because of his mind (*non nisi secundum mentem*).

Moreover, if the rational creature in question has any other parts, then the likeness of a trace is found in those parts, just as it is in the other creatures that this rational creature is similar to in virtue of

those parts. The reason for this can be seen clearly if one looks carefully at the way in which a trace represents and the way in which an image represents. For as has been explained (a. 2), an image's representation involves a likeness of species. By contrast, a trace represents in the manner of an effect that represents its cause in such a way that it does not attain to a likeness of species; for instance, the footprints left behind by the movement of animals are called traces, and ash is likewise called the trace of a fire, and the desolation of the land is called the trace of a hostile army.

One can see a difference of this sort between rational creatures and other creatures—both with respect to how a likeness to the divine *nature* is represented in the creatures and also with respect to how a likeness of the uncreated *Trinity* is represented in creatures. For as far as the likeness to the divine nature is concerned, rational creatures seem in some sense to attain a representation of the species insofar as they imitate God not only in existing and in living but also in having intellectual understanding—as was explained above (a. 2). By contrast, the other creatures do not have intellectual understanding; instead, what appears in them is a certain trace of a productive intellect (*vestigium intellectus producentis*), if the way they are arranged is taken into account (*si earum dispositio consideretur*).

Similarly, since, as was established above (q. 28, a. 3), the uncreated Trinity is distinguished by the procession of the Word (*Verbum*) from the Speaker (*Dicens*) and by the procession of the Love (*Amor*) from the two of them, in the rational creature, in which there is a procession of a word stemming from (*secundum*) the intellect and a procession of love stemming from the will, one can say that there is an image of the uncreated Trinity through a certain representation of the species. By contrast, in the other creatures one does not find either a *source of a word*, or a *word*, or *love*; rather, what one finds is a certain trace, because the cause that produces these other creatures has within itself a Source of the Word, and the Word, and the Love. For the very fact that a creature has a limited and finite substance (*substantiam modificatam et finitam*) demonstrates that it comes from some Source, whereas a creature's species points to its Maker's Word in the same way that the form of a house points to the craftsman's conception; and the creature's being ordered points to its Maker's Love, by which the effect is ordered toward the good, in the same way that the use of a building points to the craftsman's will.

So, then, in man the likeness of God is found in the manner of an image because of his mind, whereas in his other parts the likeness of God is found in the manner of a trace.

**Reply to objection 1:** Man is called an image of God not because he is an image in his essence, but because the image of God is imprinted on him in virtue of his mind—in the way that a denarius is called an image of Caesar in virtue of bearing Caesar's image. Hence, it is not necessary that the image of God be received with respect to every part of a man.

**Reply to objection 2:** As Augustine reports in *De Trinitate* 12, some have claimed that the image of the Trinity in man is borne not by one individual man, but by several individuals together (*secundum plura*). They say that “a man (*vir*) intimates the person of the Father, whereas the person of the Son is intimated by one who proceeds from the man in such a way as to be generated from him (*de illo nasceretur*); and they claim that the third person, corresponding to the Holy Spirit, is the woman, who proceeds from the man in such a way that she is neither his son nor his daughter.”

On the surface, this seems absurd. First, it would follow that the Holy Spirit is a source of the Son in the way that the woman is a source of the child who is generated from the man. Second, a man (*homo*) would be the image of just one person. Third, on this view Scripture ought not to have mentioned the image of God in man until after offspring had been produced.

And so one should reply that after Scripture had said “He created him to the image of God,” it added “male and female He created them” not in order to associate the image of God with the distinction between the sexes, but because the image of God is common to both sexes, since it stems from the mind, in which there is no distinction between sexes. Hence, in Colossians 3:10, after the Apostle had said, “... according to the image of Him who created him,” he adds, “where there is neither male nor female.”

**Reply to objection 3:** Even though the image of God in man does not involve the shape of the body, still, as Augustine says in *83 Quaestiones*, “since man’s body, alone among the bodies of the land animals, does not lie face downward (*non prostratum est*), with its belly close to the ground, but is instead such that it is more suitable for contemplating the heavens, it can rightly seem to be made to the image and likeness of God to a greater degree than the other animal bodies.” However, this should be understood to mean not that there is an image of God in man’s body, but that the very shape of the human body represents, in the manner of a trace, the image of God in the soul.

**Reply to objection 4:** As Augustine says in *De Trinitate*, in both corporeal vision and imaginative vision there is a certain trinity.

For in corporeal vision there is first the *species* of the exterior body; second, the *act of seeing* itself, which is effected by the impression of a likeness of the species in question on the faculty of sight; and, third, the *will’s intention* in applying the faculty of sight to the act of seeing and keeping the act of seeing fixed on the thing seen.

Similarly, in the case of imaginative vision, one finds, first, a *species* reserved in memory; second, the *very act of imaginative seeing*, which stems from the fact that the soul’s glance, i.e., the very power of imagining, is informed by the species in question; and, third, there is the *will’s intention*, which joins the two.

However, both of these trinities fall short of the concept *image of God*.

For the species itself of the exterior body lies outside the nature of the soul, whereas even if the species that exists in memory does not exist outside the soul, it is nonetheless incidental to the soul. And so in both these cases the representation of the connaturality and coeternality of the divine persons is lacking.

Again, corporeal vision proceeds not only from the species of the exterior body but, along with this, from the sensory power of the one who sees; and, similarly, imaginative vision proceeds not only from the species that is conserved in the memory, but also from the power of imagining. And this does not appropriately represent the procession of the Son from the Father alone.

Again, the will’s intention, which connects the species and the power, does not proceed from them in the case of either corporeal vision or spiritual vision, and so it does not appropriately represent the procession of the Holy Spirit from the Father and Son.

## Article 7

### Is the image of God found in the soul’s acts?

It seems that the image of God is not found in the soul’s acts (*non inveniatur in anima secundum actus*):

**Objection 1:** In *De Civitate Dei* 11 Augustine says that man was made to the image of God “insofar as we exist, and know that we exist, and love our existence (*esse*) and our knowing (*nosse*).” But ‘existence’ (*esse*) does not signify an act. Therefore, the image of God in the soul is not associated with the soul’s acts.

**Objection 2:** In *De Trinitate* 9 Augustine assigns the image of God in the soul to three things, viz., mind (*mens*), knowledge (*notitia*), and love (*amor*). But ‘mind’ signifies not an act, but rather a power of—or even the essence of—the intellective soul. Therefore, the image of God is not associated with acts.

**Objection 3:** In *De Trinitate* 10 Augustine assigns the image of the Trinity in the soul to memory

(*memoria*), intellectual understanding (*intelligentia*), and will (*voluntas*). But as the Master says in *Sentences* 1, dist. 3, these are “natural powers of the soul.” Therefore, the image is associated with powers and not with acts.

**Objection 4:** The image of the Trinity remains in the soul continuously (*semper manet*). But the acts do not remain continuously. Therefore, the image of God in the soul is not associated with the acts.

**But contrary to this:** In *De Trinitate* 11 Augustine associates the trinity in the lower parts of the soul with the sentient *act* of seeing and the imaginative *act* of seeing (*secundum actualem visionem sensibilem et imaginariam*). Therefore, the trinity that exists in the mind, in accord with which man is made to the image of God, should likewise be associated with the *act* of seeing (*debet attendi secundum actualem visionem*).

**I respond:** As was explained above (a. 2), some type of representation of the species is part of the concept *image*. Therefore, if the image of the divine Trinity is going to be received in the soul, then it must be associated principally with what comes as close as possible to representing the species of the divine persons.

Now the divine persons are distinguished from one another by the procession of the Word from the Speaker and the procession of the Love that joins the two of them (*secundum processionem Verbi a Dicente et Amoris connectentis utrumque*). But as Augustine says in *De Trinitate* 14, the word in our soul cannot exist in the absence of actual thinking. Therefore, the image of the Trinity in our mind is primarily and principally associated with the *act*. More specifically, on the basis of the knowledge (*notitia*) we have, we form an interior word by thinking (*cogitando interius verbum formamus*) and from this we break out into love (*in amorem prorumpimus*).

However, since habits and powers are the principles of acts and since each thing exists virtually in its principles, there can be in the soul a secondary and, as it were, implied (*ex consequenti*) image of the Trinity that is associated with the soul’s powers and mainly with its habits, insofar as the acts exist virtually in the habits.

**Reply to objection 1:** Our existence (*esse*) pertains to the image of God because it is proper to us above and beyond the other animals; for *esse* belongs to us insofar as we have a mind. And so the trinity mentioned here is the same one that Augustine posits in *De Trinitate* 9, consisting of *mind, knowledge, and love*.

**Reply to objection 2:** Augustine at first finds in the mind the trinity mentioned in the objection. However, the mind is such that even if it in some sense knows itself as a whole, it is also in some sense ignorant of itself, viz., insofar as it is distinct from other things; and so it also seeks itself, as Augustine later shows in *De Trinitate* 10. Hence, given that *knowledge (notitia)* is not entirely the same as *mind (mens)*, he takes three things in the soul—viz., memory (*memoria*), intellectual understanding (*intelligentia*), and will (*voluntas*)—which are proper to the mind and which no one is ignorant of having. And it is to these three things that he then ascribes the image of the Trinity, given that his first ascription was in some sense deficient.

**Reply to objection 3:** As Augustine shows in *De Trinitate* 14, we are said to understand and to will (or love) certain things both when we are actually thinking of them and when we are not actually thinking of them. But when they exist in the absence of thought, they belong only to the memory, which in itself is nothing other than the habitual retention of knowledge and love. “But since,” as he himself puts it, “the word cannot exist there in the absence of thought (for we think everything that we say, at least by means of that interior word which does not belong to the language of any nation), the image in question is known instead in these three things, viz., memory, intellectual understanding, and will. I mean the intellectual understanding by which we understand when we are thinking; and I mean the will (or love (*amor*) or higher affection (*dilectio*)) which joins that parent and that offspring.” From this it is

clear that he locates the image of the Trinity in actual understanding and actual willing rather than in their habitual retention in memory—even though in habitual retention there is also a certain image of the Trinity in the soul, as he says in the same place. And so it is clear that ‘memory’, ‘intellective understanding’, and ‘will’ are not being used here for three powers, as they are in the *Sentences*.

**Reply to objection 4:** Someone could reply by citing the fact that in *De Trinitate* 14 Augustine says, “The mind always remembers itself, always understands itself, and always loves itself.” Some take this to mean that actual intellective understanding of itself and actual love for itself are [always] present in the soul.

However, Augustine undermines this interpretation when he adds, “[The mind] is not always thinking of itself as discrete from those things that are not what it itself is.” From this it is clear that the soul is always understanding and loving itself *habitually* and not *actually*—though one can also say that because it perceives its own act, it understands itself whenever it understands anything at all.

However, since the soul is not always actually engaged in intellective understanding, as is clear in the case of someone who is sleeping, one must say that even if its acts do not in themselves remain continuously, they nonetheless do always remain in their principles, viz., the powers and habits. Hence, in *De Trinitate* 14 Augustine says, “If the rational soul is made to the image of God because it is *able to* use reason and intellect to understand and contemplate God, then from the very beginning of its existence the image of God existed within it.”

## Article 8

### Does the image of the divine Trinity exist in the soul only in relation to the object which is God?

It seems that it is not the case that the image of the divine Trinity exists in the soul only in relation to the object which is God (*non solum per comparationem ad obiectum quod est Deus*):

**Objection 1:** As has been explained (a. 6-7), the image of the divine Trinity is found in the soul because the *word* in us proceeds from the *speaker* and the *love* in us proceeds from both the *speaker* and the *word*. But [these processions] are found in us with respect to every object whatsoever. Therefore, the image of the divine Trinity is found in our mind with respect to every object whatsoever.

**Objection 2:** In *De Trinitate* 12 Augustine says, “When we are looking for the Trinity in the soul, we look in the whole soul, not separating rational action in the realm of temporal things from the contemplation of eternal things.” Therefore, the image of the Trinity is found in the soul even with respect to temporal objects.

**Objection 3:** The fact that we understand and love God belongs to us by a gift of grace. Therefore, if the image of the Trinity in the soul is associated [only] with the memory of God, the understanding of God, and the willing (or loving) of God, then the image of God will exist in man only by grace and not by nature. Therefore, it will not be something common to all men.

**Objection 4:** The saints who dwell in heaven are maximally conformed to the image of God by the vision of glory (*secundum gloriae visionem*); this is why 2 Corinthians 3:18 says, “We are being transformed into the same image from glory to glory (*a claritate in claritatem*).” But temporal things are known through the vision of glory. Therefore, it is also in relation to temporal objects that the image of God exists in us.

**But contrary to this:** In *De Trinitate* 14 Augustine says, “It is not because the mind remembers itself and understands itself and loves itself that the image of God exists in it; rather, it is because the

mind is able to remember, understand, and love the God by whom it was made.” Therefore, even less is it the case that the image of God in the mind is associated with objects other [than God or the mind itself].

**I respond:** As was explained above (a. 2), *image* implies a likeness that somehow involves a representation of the species. Hence, the image of the divine Trinity in the soul must be associated with something that represents the divine persons by a representation of their species, insofar as this is possible for a creature. Now as has been said (a. 6-7), the divine persons are distinguished by the procession of the Word from the Speaker and the procession of the Love from the two of them. And the Word of God is begotten of God insofar as He knows Himself (*secundum notitiam sui ipsius*), and the Love proceeds from God insofar as He loves Himself. Now it is clear that it is the diversity of the objects that differentiates the species of words and the species of love. For instance, the word *rock* conceived in the human heart is not the same in species as the word *horse*; nor is the love of a rock the same in species as the love of a horse. Therefore, the divine image in man is associated with (a) the word that is conceived from knowledge about God and (b) the love that is derived from that word. And so the image of God is present in the soul insofar as the soul is drawn—or is capable of being drawn—toward God.

Now there are two ways in which the mind is drawn toward something: (a) *directly and immediately*, and (b) *indirectly and mediately*, as when someone looking at a man’s image in a mirror is said to be drawn toward the man himself. This is why, in *De Trinitate* 14 Augustine says, “The mind remembers itself, understands itself, and loves itself. If we discern this, we discern the Trinity—not yet God Himself, but even now an image of God.” This is not because the mind is drawn toward itself, absolutely speaking, but rather because by being drawn toward itself, it can be drawn further toward God. This is clear from the passage just quoted.

**Reply to objection 1:** As far as the concept *image* is concerned, one must attend not only to the fact that something proceeds from something, but also to what exactly proceeds from what, viz., that the word *God* proceeds from knowledge about God.

**Reply to objection 2:** There is a sort of trinity in the whole soul—not, to be sure, such that, in addition to action regarding temporal things and the contemplation of eternal things, “there is some third thing to look for by which the trinity is completed,” as Augustine adds in the same place. Instead, as he explains later, “Even if a trinity could be found in the part of reason that is derived from the side of temporal things, the image of God would still not be found there,” because this sort of knowledge of temporal things is incidental to the soul.

Moreover, the habits by which temporal things are known are not themselves always present in the soul; instead, they are sometimes there in the present and sometimes there only in memory, even after they have begun to be present. This is clear, for instance, in the case of faith, which comes to us temporally in the present life but which in the state of future beatitude will no longer be faith, but a memory of faith.

**Reply to objection 3:** The meritorious cognition and love of God occur only through grace. However, as was established above (q. 12, a. 12), there is such a thing as a natural cognition and love of God.

And it is likewise natural for the mind *to be able* to use reason to understand God, and because of this we have claimed that the image of God remains continuously (*permanere semper*) in the mind, regardless of whether (a) “this image of God is so thinned out”—clouded over, as it were—“as to amount to almost nothing,” as in those who do not have the use of reason, or whether (b) “it is darkened or deformed,” as in sinners, or whether (c) “it is bright and beautiful,” as in the justified—as Augustine says in *De Trinitate* 14.

**Reply to objection 4:** Through the vision of glory temporal things will be seen in God Himself, and so this sort of vision of temporal things will be relevant to the image of God. This is what Augustine is talking about in *De Trinitate* 14: “In the nature to which the mind will happily adhere, the mind will see as immutable everything that that nature sees. For the conceptions of all creatures exist in the uncreated Word Himself.”

## Article 9

### Is it appropriate to distinguish the likeness [of God] from the image [of God]?

It seems that it is not appropriate to distinguish the likeness [of God] from the image [of God] (*similitudo ab imagine non convenienter distinguatur*):

**Objection 1:** It is not appropriate to distinguish a genus from its species. But *likeness* is related to *image* in the way that a genus is related to its species, since “where there is an image, there is always a likeness, but not vice versa,” as *83 Quaestiones* puts it. Therefore, it is inappropriate to distinguish the likeness from the image.

**Objection 2:** The concept *image* involves not only a representation of the divine persons, but also a representation of the divine essence, where immortality and indivisibility are relevant to the latter. Therefore, it is not appropriate to claim that “the likeness exists in the essence [of the soul], since it is immortal and indivisible, whereas the image exists in other things” [*Sentences* 2, dist. 16].

**Objection 3:** As was established above (a. 4), there are three images of God in man, viz., the image of *nature*, the image of *grace*, and the image of *glory*. But innocence and justification pertain to grace. Therefore, it is not appropriate to say that “the image is associated with *memory*, *intellective understanding*, and *will*, whereas the likeness is associated with *innocence* and *justification*” [*Sentences* 2, dist. 16].

**Objection 4:** The cognition of truth belongs to intellective understanding, whereas the love of virtue belongs to the will—and these are two parts of the image. Therefore, it is not appropriate to say that “the image exists in the cognition of truth, whereas the likeness exists in the love of virtue” [*Sentences* 2, dist. 16].

**But contrary to this:** In *83 Quaestiones* Augustine says, “It is not in vain that some understand that two things are being spoken of in the phrase ‘to [our] image and likeness’ (Genesis 1:26); for if there were just one thing, then a single name could have sufficed.”

**I respond:** A likeness is a certain sort of oneness (*quaedam unitas*); for as *Metaphysics* 5 says, “Oneness (*unum*) is a cause of likeness in quality.” Now since *one* is a transcendental and common to all things, it can be adapted to each individual (*ad singula potest aptari*) in the same way that *good* and *true* can be.

Hence, just as *good* can be applied to a particular thing both (a) as preliminary to it (*ut praeambulum ad ipsam*) and also (b) as subsequent to it (*ut subsequens*), viz., insofar as *good* designates some perfection it has, so it is with the relation of *likeness* to *image*. For instance, *good* is preliminary to *man* insofar as a man is a certain particular good and, again, *good* is subsequent to *man* insofar as we say that some individual man is good within his species (*bonum specialiter*) because of the perfection of his virtue. Similarly, *likeness* is thought of as preliminary to *image* insofar as *likeness* is more general than *image*, as was explained above (a. 1); and *likeness* is thought of as subsequent to *image* insofar as *likeness* signifies a certain perfection in an image, in the sense in which we say that an image of someone is like or unlike the one whose image it is, depending on whether the image represents him more

perfectly or less perfectly.

So, then, there are two possible ways to distinguish *likeness* from *image*.

In the first way, *likeness* is preliminary to *image* and exists in more things. And in this sense, the likeness [of God] involves those things that are more general than the properties of the intellectual nature that *image* is properly associated with. Accordingly, 83 *Quaestiones* says, “No one doubts that spirit”—i.e., mind—“is made to the image of God, whereas, according to what some want to say, the rest of a man”—viz., those things that belong to the lower parts of the soul or even to the body itself—“are made to the likeness [of God].” It is also in keeping with this reading that *De Quantitate Animae* says that the likeness of God in the soul is associated with the soul’s being incorruptible, since *corruptible* and *incorruptible* are differences of *being-in-general*.

In the second way in which it can be thought of, *likeness* signifies the vividness (*expressio*) and perfection of an image. It is in accord with this reading that Damascene says, “What is relevant to the *image* signifies an intellectual power and a power that is *per se* free because of choice, whereas what is relevant to the *likeness* is a likeness of virtue, to the extent that it is possible for virtue to exist in a man.” And this is equivalent to saying that the likeness pertains to the love of virtue; for there is no virtue without a love of virtue.

**Reply to objection 1:** A likeness is distinguished from an image not with respect to the general concept *likeness* (for this concept is included within the concept *image* itself), but rather insofar as a given likeness either (a) falls short of the concept *image* or (b) is perfective of an image.

**Reply to objection 2:** The soul’s essence is relevant to the image to the extent that the image represents the divine essence in what is proper to an intellectual nature, e.g., being simple and being indissoluble—though not in the conditions that follow upon being in general (*conditiones consequentes ens in communi*).

**Reply to objection 3:** Certain virtues exist in the soul naturally, at least as far as their seeds are concerned, and a natural likeness could be associated with these virtues. However, it is not inappropriate for something that is called an image by one criterion (*secundum assignationem unam*) to be called a likeness by some other criterion.

**Reply to objection 4:** Love for the Word (*dilectio verbi*), i.e., knowledge that is loved (*amata notitia*), pertains to the concept *image*, but the love of virtue pertains to the concept *likeness*, as does virtue as well.

## QUESTION 94

### The State of the First Man with respect to His Intellect

The next thing we have to consider is the state or condition of the first man, first with respect to his soul (questions 94-96) and then with respect to his body (question 97-101). On the first point there are two things to be considered: first, the condition of man with respect to his intellect (question 94) and second, the condition of man with respect to his will (questions 95-96).

On the first topic there are four questions: (1) Did the first man see God through His essence? (2) Was he able to see the separated substances, i.e., the angels? (3) Did he have knowledge (*scientia*) of all things? (4) Was he able to be mistaken or to be deceived?

### Article 1

#### Did the first man see God through His essence?

It seems that the first man saw God through His essence:

**Objection 1:** Man's beatitude consists in the vision of the divine essence. But as Damascene says in *De Fide Orthodoxa* 2, "When the first man was living in Paradise, he had a life that was happy and rich in all things." And in *De Civitate Dei* 14 Augustine says, "If men had affections of the sort we have now, then how were they happy in that place of ineffable happiness, i.e., Paradise?" Therefore, in Paradise the first man saw God through His essence.

**Objection 2:** In *De Civitate Dei* 14 Augustine says, "The first man did not lack anything that a good will desires." But a good will can desire nothing better than the vision of God's essence. Therefore, the man saw God through His essence.

**Objection 3:** The vision of God through His essence is a vision by which God is seen directly and without any enigma (*sine medio et sine aenigmate*). But as the Master says in *Sentences* 4, dist. 1, man in the state of innocence "saw God directly." He also saw Him without any enigma, since 'enigma' implies obscurity and, as Augustine says in *De Trinitate* 15, obscurity was introduced through sin. Therefore, in his initial state man saw God through His essence.

**But contrary to this:** In 1 Corinthians 15:46 the Apostle says, "It is not what is spiritual that is first, but what is animal." But to see God through His essence is maximally spiritual. Therefore, in the initial state of animal life the first man did not see God through His essence.

**I respond:** The first man did not see God through His essence, given the general state of his life—unless, perhaps, one claims that he saw God in a rapture when "God cast a deep sleep over Adam" (Genesis 2:21). The reason for this is that since God's essence is beatitude itself, the intellect of one who sees the divine essence is related to God in the same way that every man is related to beatitude. But it is clear that no man can voluntarily (*per voluntatem*) turn away from beatitude, since he naturally and necessarily wills beatitude and flees from unhappiness. Hence, no one who sees God through His essence can voluntarily (*voluntate*) turn away from God, i.e., sin. Because of this, everyone who sees God through His essence is so stable in his love for God that he is unable to sin for all eternity. Therefore, since Adam sinned, it is clear that he did not see God through His essence.

However, he did have a certain higher cognition of God than we ourselves have, and so in a way his cognition stood midway between the cognition associated with our present state and the cognition associated with heaven, by which God is seen through His essence.

To see this clearly, note that the vision of God through His essence is distinct from the vision of God through a creature. Now the higher a creature is and the more like God, the more clearly God is seen through that creature—just as a man is more perfectly seen in a mirror in which his image is

reflected more distinctly. And so it is clear that God is seen much more prominently through His intelligible effects than through His sensible and corporeal effects. In his present state, man is kept from the full and lucid consideration of intelligible effects by the fact that he is distracted by sensible things and occupies himself with them. But as Ecclesiastes 7:30 says, “God made man upright (*rectus*).” And the rectitude of man, as he was instituted by God, consists in the fact that his lower powers were subject to his higher powers and that his higher powers were not impeded by his lower powers. Hence, the first man was not impeded by exterior things from a clear and firm contemplation of God’s intelligible effects, which he perceived by the illumination (*irradiatio*) of the First Truth, whether by natural cognition or graced cognition (*sive naturali cognitione sive gratuita*). Thus, in *Super Genesim ad Litteram* 11 Augustine says, “Perhaps God earlier spoke with the first men in the way that He speaks with the angels, illuminating their minds with the unalterable truth itself, though not with so great a participation in the divine essence as the angels have.” So, then, through these intelligible effects of God’s, man had a clearer cognition of God than we now have.

**Reply to objection 1:** Man was happy in Paradise, but not with that perfect beatitude to which he was going to be transported and which consists in the vision of the divine essence. Yet, as Augustine points out in *Super Genesim ad Litteram* 11, he had “a particular type of happy life” insofar as he had a certain natural integrity and perfection.

**Reply to objection 2:** A good will is a well-ordered will (*ordinata voluntas*). But the first man’s will would not have been well-ordered if he had willed to have in the state of merit what was promised to him as a reward.

**Reply to objection 3:** There are two types of medium (*duplex est medium*):

One of them is such that what is said to be seen through the medium is seen at the very same time in the medium, as when a man is seen through a mirror and is seen at the very same time as the mirror itself is seen.

The other type of medium is such that through our knowledge of it we arrive at something unknown, as is the case with the medium [or middle term] of a demonstration.

God was seen without this latter sort of medium, but not without the former sort of medium. For the first man did not have to arrive at a cognition of God through a demonstration taken from some effect, as we ourselves have to. Instead, in his own way he had a cognition of God immediately in His effects, especially in His intelligible effects.

Similarly, one should note that there are two possible ways to understand the obscurity implied by the name ‘enigma’.

In one sense, each creature is somewhat obscure if it is compared with the immensity of God’s splendor (*ad immensitatem divinae claritatis*). And in this sense Adam saw God “in an enigma” (*in aenigmate*) because he saw God through a created effect.

In the second sense, one can mean the obscurity that follows upon sin; more specifically, man is impeded from the consideration of intelligible things by his occupation with sensible things. On this reading, it is not the case that [Adam] saw God “in an enigma.”

## Article 2

### Did Adam in the state of innocence see angels through their essence?

It seems that Adam in the state of innocence saw angels through their essence:

**Objection 1:** In *Dialogi* 4 Gregory says, “In Paradise man used to enjoy God’s words and, with cleanness of heart and loftiness of vision, to have commerce with the spirits of the holy angels.”

**Objection 2:** In its present state the soul is impeded from a cognition of separated substances by the fact that it is united to a corruptible body that “weighs down the soul,” as Wisdom 9:15 puts it. This is why, as was explained above (q. 89, a. 2), a separated soul is able to see separated substances. But the soul of the first man was not weighed down by his body, since his body was not corruptible. Therefore, he was able to see separated substances.

**Objection 3:** As it says in the *Liber de Causis*, one separated substance has cognition of another separated substance by having cognition of itself. But the first man’s soul had cognition of itself. Therefore, it had cognition of the separated substances.

**But contrary to this:** Adam’s soul was of the same nature as our souls. But our souls cannot now have intellective understanding of the separated substances. Therefore, neither could the first man’s soul.

**I respond:** The state of the human soul can be thought of in two ways:

(a) In one way, with respect to the *diverse modes of its natural esse*, and on this score the state of a separated soul is distinct from the state of a soul conjoined to a body.

(b) In the second way, the state of the soul is thought of in terms of *integrity and corruption*, while keeping its mode of natural *esse* fixed; and on this score the state of innocence is distinct from man’s state after the sin.

In the state of innocence, man’s soul was applied to perfecting and directing the body, just as it is now, and this is why the first man is said to have been made “a living soul” (Genesis 2:7), i.e., a soul giving life to a body and, more specifically, an animal soul. But as was explained above (q. 89, a. 1), [the first man] had integrity of life in the sense that his body was totally subject to his soul and in no way impeded it. And it is clear from what has gone before (q. 84, a. 7 and q. 85, a. 1) that because the soul is applied to directing and perfecting the body in its animal life, what belongs to our soul is a mode of intellective understanding that involves turning toward phantasms. Hence, this mode of intellective understanding likewise belonged to the soul of the first man.

Now given this mode of intellective understanding, there are, as Dionysius says in *De Divinis Nominibus*, chap. 4, three levels of movement in the soul: In the *first* of them “the soul is gathered into itself and away from exterior things.” The *second* level occurs when the soul ascends to the point of “being united with the united higher powers,” viz., the angels. In the *third* level the soul “is led to the good that surpasses all goods, viz., God.”

Therefore, with the first movement of the soul, which is away from exterior things and toward itself, our cognition of the soul is brought to perfection. For as was explained above (q. 87, a. 3), the soul’s intellective operation has a natural ordering toward those things that lie outside itself, and so through the cognition of those things we can have a perfect cognition of our own intellectual operation, since an act is known through its object. And through the intellectual operation itself we can have a perfect cognition of the human intellect, since a power is known through its proper act.

By contrast, no perfect cognition is found in the second movement, since, as was explained above (q. 55, a. 2), an angel has intellective understanding not by turning toward phantasms, but in a far more eminent way. So the mode of cognition just explained, by which the soul has cognition of itself, is not sufficient to lead to the cognition of an angel.

*A fortiori*, the third movement does not lead to perfect knowledge, since even the angels themselves are not able, by having cognition of themselves, to attain to the cognition of the divine substance—and this because of its surpassing nature (*propter eius excessum*).

So, then, the first man’s soul could not have seen the angels through their essence. However, it nonetheless had cognition of them in a more excellent mode than we ourselves have. For its cognition was more certain and more fixed with respect to interior intelligible things than our cognition is. And it is because of this great eminence that Gregory says that the first man’s soul “had commerce with the spirits of the angels.”

**Reply to objection 1:** The reply to the first objection is clear from what was just said.

**Reply to objection 2:** The fact that the first man's soul fell short of an intellective understanding of the separated substances stemmed not from the body's weighing it down, but instead from the fact that its connatural object fell short of the excellence of the separated substances. We ourselves, on the other hand, fall short for both these reasons.

**Reply to objection 3:** As was just explained, the first man's soul was not able through its cognition of itself to attain to a cognition of the separated substances. For even in the case of the separated substances, each has a cognition of other separated substances in a mode peculiar to itself (*per modum sui ipsius*).

### Article 3

#### Did the first man have scientific knowledge of all things?

It seems that the first man did not have scientific knowledge of all things (*non habuerit scientiam omnium*):

**Objection 1:** Either (a) he had such knowledge through acquired [intelligible] species or (b) he had it through connatural species or (c) he had it through infused species. But not through acquired species, since, as *Metaphysics* 1 says, cognition of the sort in question is caused by experience, whereas he had not at that time experienced all things. Again, not through connatural species, since he had the same nature that we have and, as *De Anima* 3 says, our soul is "like a tablet on which nothing has been written." On the other hand, if he had such knowledge through infused species, then the knowledge he had of things was not of the same nature as our scientific knowledge, which we acquire from things.

**Objection 2:** The same mode of reaching perfection is present in all individuals of the same species. But other men do not at their inception have scientific knowledge of all things; instead, they acquire it in their own way over a period of time (*per temporis successionem*). Therefore, neither did Adam, immediately upon being formed, have scientific knowledge of all things.

**Objection 3:** The state of the present life is granted to man in order that his soul might make progress both with respect to cognition and with respect to merit; for this seems to be the reason why the soul is united to the body. But in that [initial] state man would have been making progress with respect to merit. Therefore, he would likewise have been making progress with respect to the cognition of things. Therefore, he did not have scientific knowledge of all things.

**But contrary to this:** He himself imposed names on the animals, as Genesis 2:20 says. But names have to fit the natures of things. Therefore, Adam knew the natures of all the animals and, by parity of reasoning, he had scientific knowledge of all other things.

**I respond:** In the order of nature, the perfect precedes the imperfect in the sense that actuality precedes potentiality; for what exists in potentiality is not led into actuality except by some actual being. And since things were originally instituted by God not only as they exist in themselves, but also as principles of other things, it follows that they were produced in a perfect state, in which they were able to be principles of other things.

Now man can be a principle of another not only through corporeal generation but also through instructing and governing (*per instructionem et gubernationem*). And so just as the first man was instituted in a perfect state with respect to his body, so that he could immediately generate, so also he was instituted in a perfect state with respect to his soul, so that he could immediately instruct and direct others. But no one can instruct unless he has scientific knowledge. And so the first man was instituted

by God in such a way that he had scientific knowledge of all the things in which a man is apt to be instructed. And these are all the things which exist virtually in the first principles that are known *per se*—in other words, whatever a man can have natural cognition of.

Now what is required for governing his own life and the lives of others is not only cognition of those things that can be naturally known, but also cognition of things that exceed natural cognition. For man's life is ordered toward a supernatural end. Similarly, in our own case, in order to govern our lives we must have cognition of what belongs to the Faith. Hence, the first man received cognition of these supernatural matters to the extent that this was necessary to direct human life in his state.

However, the first man did not have cognition of other things which cannot be known by man's natural efforts and which are not necessary for governing human life, e.g., the thoughts of men, future contingents, and singular facts such as, for instance, how many pebbles there are in a stream, and other things of this sort.

**Reply to objection 1:** The first man had scientific knowledge of all things through species that were infused by God. And yet his knowledge was not different in nature from our knowledge—just as the eyes that Christ gave to the man born blind were not different in nature from the eyes which nature produced.

**Reply to objection 2:** As is clear from what has been said, since Adam was the first man—something not true of the rest of men—it was fitting for him to have a modicum of perfection (*aliquid perfectionis*).

**Reply to objection 3:** In his scientific knowledge of naturally knowable things Adam made progress not with respect to the number of things known, but with respect to his mode of knowing them. For what he knew intellectually, he later came to know through experience.

On the other hand, as regards the supernatural things he had cognition of, he made progress, through new revelations, with respect to the number of things known, just as the angels make progress through new instances of enlightenment. However, progress in merit is unlike progress in knowledge, since it is not the case that one man is a principle of meriting for another man, whereas it is the case that one man is a principle of knowing for another man.

#### Article 4

##### Was man in his initial state able to be deceived?

It seems that man in his initial state was able to be deceived (*decipi potuisset*):

**Objection 1:** In 1 Timothy 2:14 the Apostle says, “The woman, having been deceived, was in sin.”

**Objection 2:** In *Sentences* 2, dist. 21, the Master says, “The woman was not afraid of the serpent who was speaking to her, because she thought that he had received from God the role of speaking.” But this was false. Therefore, the woman was deceived before the sin.

**Objection 3:** It is natural that the farther away something seems, the smaller it seems. But the nature of the eye is not changed because of sin, and so the same thing would have been true in the state of innocence. Therefore, a man would have been deceived about the size of something he saw, just as happens even now.

**Objection 4:** In *Super Genesim ad Litteram* 12 Augustine says that in a dream the soul clings to a likeness as if it were something real. But in the state of innocence man ate and, as a result, slept and had dreams. Therefore, he was deceived by clinging to likenesses as if they were real things.

**Objection 5:** As was explained above (a. 3), the first man did not know men's thoughts or future

contingents. Therefore, if someone had spoken falsely to him about these matters, he would have been deceived.

**But contrary to this:** Augustine says, “It is not the nature of man as instituted, but the punishment of the damned, to take truths for falsehoods.”

**I respond:** Some have claimed that there are two things that can be understood in the name ‘deception’: (a) a sort of cursory judgment (*qualiscumque existimatio levis*) by which someone clings to something false as if it were true, but without assent to the false belief (*sine assensu credulitatis*), and (b) a firm false belief (*firma credulitas*). Thus, with respect to things Adam had scientific knowledge of, man could not, before the sin, be deceived in either of these ways. But with respect to those things he did not have scientific knowledge of, he was able to be deceived, taking ‘deception’ in the broad sense for a sort of judgment that does not involve assent to a false belief (*pro existimatione qualicumque sine assensu credulitatis*). They make this claim because judging falsely in such matters is not harmful to a man; nor is it culpable, since assent is not rashly given.

However, this position is not consonant with the integrity of the initial state; for as Augustine says in *De Civitate Dei* 14, in that state “there was a tranquil avoidance of sin such that, while the state remained, no evil at all could exist.” But it is clear that, as *Ethics* 6 explains, what is false is an evil for the intellect in the same way that what is true is its good. Hence, for as long as the state of innocence remained, it could not have been the case that man’s intellect should acquiesce in something false as if it were true. For just as there was a lack of a certain perfection, e.g., splendor (*claritas*), in the first man’s bodily parts and yet no evil could exist in him, so too in his intellect it was possible for there to be a lack of some sort of knowledge and yet there could not be any false judgment there (*nulla tamen poterat ibi esse existimatio falsi*).

The same point is also clear from the rectitude of the initial state. In accord with this rectitude, as long as the soul remained subject to God, man’s lower powers were subject to his higher powers and the higher powers were not impeded by the lower powers. But it is clear from what was said above (q. 85, a. 6) that the intellect always has truth with respect to its proper object. Hence, the intellect is never deceived in its own right; instead, every deception in the intellect stems from some lower power, viz., the imagination or some other such power. Hence, we see that as long as the power of natural judgment (*naturale iudicatorium*) is not rendered inoperative, we are not deceived by appearances; rather, we are deceived only when that power is rendered inoperative, as is clear in the case of those who are asleep. Hence, it is clear that the rectitude of the initial state is not compatible with any deception in the intellect.

**Reply to objection 1:** Even though the seduction of the woman preceded the sin of deed (*peccatum operis*), it was subsequent to a sin of interior elation. For in *Super Genesim ad Litteram* 11 Augustine says, “The woman would not have believed the serpent’s words if she had not already had in her mind a love for her own power and a proud presumptuousness regarding that power.”

**Reply to objection 2:** What the woman believed was that the serpent had received the role of speaking (*officium loquendi*) not through its own nature, but by some supernatural act.

In any case, it is not necessary to follow the Master’s authority on this point.

**Reply to objection 3:** If something had been represented to the first man’s sensory power or imagination otherwise than it was in reality, he would not thereby have been deceived; for he would have discerned the truth through his reason.

**Reply to objection 4:** What happens in a dream is not imputed to a man, since he does not at that time have the use of reason, which is man’s proper operation.

**Reply to objection 5:** When someone told a falsehood about future contingents or the thoughts of the heart, a man in the state of innocence would not have believed that it was so; instead, he would have believed that it was possible—and this would not have been to make a false judgment.

An alternative reply is that he was divinely assisted, lest he be deceived in matters that he did not have scientific knowledge of. Nor does it count against this, as some have asserted, that in the temptation he was not assisted in not being deceived, even though he especially needed to be assisted at that point. For a sin had already taken place in his mind, and he did not have recourse to God's assistance.

## QUESTION 95

### Things Relevant to the First Man's Will, viz., Grace and Justice

The next thing we have to consider is what pertains to the first man's will. On this point there are two topics: first, concerning the grace and justice or moral rectitude of the first man (*de gratia et iustitia primi hominis*) (question 95) and, second, concerning the use of justice in his dominion over other things (question 96).

On the first topic there are four questions: (1) Was the first man created in grace? (2) Did the soul have passions in the state of innocence? (3) Did the soul have all virtues in the state of innocence? (4) Were the first man's works as efficacious for meriting as our works are now?

### Article 1

#### Was the first man created in grace?

It seems that the first man was not created in grace (*creatus in gratia*):

**Objection 1:** In 1 Corinthians 15:45 the Apostle, distinguishing Adam from Christ, says, "The first Adam was made a living soul; the last Adam was made a life-giving spirit." But the spirit's life-giving occurs through grace. Therefore, it is peculiar to Christ that he was made in grace.

**Objection 2:** In *Quaestiones Veteris et Novi Testamenti* Augustine says, "Adam did not have the Holy Spirit." But whoever has grace has the Holy Spirit. Therefore, Adam was not created in grace.

**Objection 3:** In *De Correptione et Gratia* Augustine says, "God ordered the lives of angels and men in such a way that He demonstrated in them, first, what their free choice was capable of and, second, what the gift of grace and the judgment of justice were capable of." Therefore, He first established men and angels with only their natural freedom of choice, and afterwards He conferred grace on them.

**Objection 4:** In *Sentences 2*, dist. 24 the Master says, "In creation man was given assistance through which he was able to hold his own but was not able to make progress (*datum est auxilium per quod stare poterat sed non poterat proficere*)." But whoever has grace is able to make progress through merit. Therefore, the first man was not created in grace.

**Objection 5:** In order for someone to receive grace, consent is required on the part of the recipient, since a sort of spiritual marriage is thereby consummated between God and the soul. But the consent to grace can belong only to someone who already exists. Therefore, man did not receive grace at the first instant of his creation.

**Objection 6:** Nature is more distant from grace than grace is from glory, which is nothing other than consummated grace. But in man grace preceded glory. Therefore, *a fortiori*, nature preceded grace.

**But contrary to this:** Men and angels are equally ordered toward grace. But angels were created in grace; for in *De Civitate Dei* 12 Augustine says, "God was in them, simultaneously creating them and giving them grace." Therefore, man was likewise created in grace.

**I respond:** Some claim that the first man was not created in grace, but that instead grace was conferred on him later—though before he sinned, since many passages from the saints attest that man had grace in the state of innocence.

However, as others claim, the very rectitude of the initial state in which God made man seems to require that man was created in grace—this according to Ecclesiastes 7:30 ("God made man upright"). For this rectitude involved reason's being subject to God, the lower powers' being subject to reason, and the body's being subject to the soul, where the first sort of subordination (*subjectio*) was a cause of both the second and the third. For, as Augustine says, as long as reason remained subject to God, the lower powers were subject to reason.

However, it is obvious that the subjection of the body to the soul and of the lower powers to reason was not natural; otherwise, it would have remained after the sin, since even among the demons their natural gifts remained after their sin, as Dionysius points out in *De Divinis Nominibus*, chap. 4. Hence, it is clear that the first sort of subjection, by which reason was subject to God, likewise did not stem from nature, but stemmed instead from the supernatural gift of grace, since it is impossible for an effect to be more potent than its cause. Thus, in *De Civitate Dei* 13 Augustine says, “After they had committed the transgression against the precept, and after God’s grace had deserted them, they were ashamed of the nakedness of their bodies; for they sensed the urges of their disobedient flesh as a punishment that corresponded to their own disobedience.” From this we can see that if the flesh’s obedience to the soul was lost when grace deserted them, then it was through the presence of grace in their soul that the lower powers had been subject to the soul.

**Reply to objection 1:** The Apostle adduces these words in order to show that there is a spiritual body if there is an animal body, since the life of the spiritual body began in Christ, who is “the firstborn from the dead” (Colossians 1:18), just as the life of the animal body began in Adam. Therefore, the Apostle’s words imply not that Adam was not spiritual with respect to his soul, but rather that he was not spiritual with respect to his body.

**Reply to objection 2:** As Augustine points out in the same place, it is not being denied that the Holy Spirit was in Adam in some way, just as He is in the rest of those who are justified. Rather, the claim is that the Holy Spirit “was not in Adam in the same way that He is now in the faithful,” who are admitted to the reception of their eternal inheritance immediately after death.

**Reply to objection 3:** On the basis of this passage from Augustine one may conclude not that angels or men were created in a natural freedom of choice before they had grace, but that He made manifest in them (a) what free choice was capable of before their confirmation [in the good] and (b) what they would attain afterwards through the assistance of confirming grace.

**Reply to objection 4:** The Master is speaking in accord with the opinion of those who claimed that man was created in a natural state only (*in naturalibus tantum*) and not in grace.

An alternative reply is that even if man was created in grace, he still had his ability to make progress through merit from additional grace (*ex superadditione gratiae*) and not from the creation of his nature.

**Reply to objection 5:** Since the will’s movement is not continuous, nothing prevents it from being the case that the first man consented to grace at the very first instant of his creation.

**Reply to objection 6:** We merit glory through an act of grace, but we do not merit grace through an act of nature. Therefore, the cases are not parallel.

## Article 2

### Did the passions of the soul exist in the first man?

It seems that the passions of the soul did not exist in the first man:

**Objection 1:** It is because of the passions of the soul that “the flesh lusts against the spirit” (Galatians 5:17). But this did not occur in the state of innocence. Therefore, in the state of innocence there were no passions of the soul.

**Objection 2:** Adam’s soul was more noble than his body. But Adam’s body was impassible. Therefore, there were no passions in his soul, either.

**Objection 3:** The passions of the soul are suppressed (*comprimuntur*) by moral virtue. But in

Adam there was perfect moral virtue. Therefore, the passions were totally excluded from him.

**But contrary to this:** In *De Civitate Dei* 14 Augustine says that [our first parents] had “an untroubled love for God” and certain other passions of the soul.

**I respond:** The passions of the soul exist in the sentient appetite (*in appetitu sensuali*), the object of which is the good and the bad. Hence, among all the passions of the soul, some, e.g., love (*amor*) and joy (*gaudium*), are related to what is good, and some, e.g., fear (*timor*) and sorrow (*dolor*), are related to what is bad. And since, as is clear from Augustine in *De Civitate Dei* 14, in the initial state (a) there was nothing bad that was either present or threatening and (b) there was nothing good which was absent and which a good will would at that time have desired to possess, none of the passions that are related to what is bad, e.g., fear, sorrow, and others of this kind, existed in Adam, and, similarly, neither did those passions which are related to something good that is not had and yet should be had at present, e.g., an urgent desire (*cupiditas aestuans*).

However, those passions that can relate to a present good, e.g., joy and love, or to a future good to be had in its own time, e.g., a non-distressed desire or hope, did exist in the state of innocence—though otherwise than they exist in us. For in us the sentient appetite, in which the passions exist, is not totally subject to reason. And so the passions sometimes exist in us in a way that precedes reason’s judgment and impedes it, whereas sometimes they follow upon reason’s judgment, so that the sentient appetite obeys reason in some way. By contrast, in the state of innocence the lower appetite was totally subject to reason, and so the only passions in it were ones that follow upon the judgment of reason.

**Reply to objection 1:** The flesh “lusts against the spirit” in the sense that the passions fight against reason—something that did not occur in the state of innocence.

**Reply to objection 2:** In the state of innocence the human body was impassible with respect to those passions that undermine its natural disposition (*removent dispositionem naturalem*); this will be explained below (q. 97, a. 2). Similarly, the soul was impassible with respect to those passions that impede reason.

**Reply to objection 3:** Perfect moral virtue does not totally eliminate the passions, but instead orders them. For instance, as *Ethics* 3 says, “It belongs to the temperate man to desire what is necessary as is necessary.”

### Article 3

#### Did Adam have all the virtues?

It seems that Adam did not have all the virtues:

**Objection 1:** Certain virtues are ordered toward constraining immoderation in the passions, in the way that immoderate desire (*immoderata concupiscentia*) is constrained by temperance (*temperantia*) and immoderate fear (*immoderatus timor*) is constrained by fortitude (*fortitudo*). But in the state of innocence immoderation in the passions did not exist. Therefore, neither did the aforementioned virtues exist.

**Objection 2:** Certain virtues have to do with passions that are related to what is bad—for instance, mildness (*mansuetudo*) has to do with instances of anger (*irae*) and fortitude has to do with instances of fear. But as has been explained (a. 2), such passions did not exist in the state of innocence. Therefore, neither did virtues of this type.

**Objection 3:** Repentance (*poenitentia*) is a virtue having to do with a previously committed sin; likewise, mercy (*miser cordia*) is a virtue having to do with unhappiness (*miseria*). But in the state of

innocence there was neither sin nor unhappiness. Therefore, neither were there virtues of this sort.

**Objection 4:** Perseverance (*perseverantia*) is a virtue. But as his later sin demonstrated, Adam did not have this virtue. Therefore, it is not the case that he had all the virtues.

**Objection 5:** Faith (*fides*) is a virtue. But it did not exist in the state of innocence; for it implies an enigmatic cognition (*importat aenigmaticam cognitionem*), which seems to be incompatible with the perfection of the initial state.

**But contrary to this:** In one of his homilies Augustine says, “The prince of vices conquered Adam, who had been made to God’s image from the slime of the earth and who was armed with modesty (*pudicitia armatum*), restrained by temperance (*temperantia compositum*), and refulgent with splendor (*claritate splendidum*).”

**I respond:** There is a certain sense in which man had all the virtues in the state of innocence. This can be made clear from what has already been said. For it was explained above (a. 1) that the rectitude of the initial state was such that reason was subject to God and the lower powers were subject to reason. But the virtues are nothing other than certain perfections by which reason is ordered to God and by which the lower powers are disposed to following the rule of reason; this will become clearer when we discuss the virtues (*ST* 1-2, qq. 55-70). Hence, the rectitude of the initial state required that man in some sense have all the virtues.

However, note that certain virtues, e.g., *charity* and *justice*, are such that by their nature they involve no imperfection. Virtues of this sort existed absolutely speaking in the state of innocence, both with respect to their habits and with respect to their acts.

By contrast, there are some virtues that involve imperfection by their very nature, either on the part of their act or on the part of their matter. If the imperfection in question is not incompatible with the perfection of the initial state, then virtues of this sort could still have existed in the initial state. Examples are *faith*, which is directed toward things that are not seen, and *hope*, which is directed toward things that are not had. For the perfection of the first state did not extend to seeing God through His essence or to having Him with the enjoyment of final beatitude, and so faith and hope were able to have existed in the initial state, both with respect to their habits and with respect to their acts.

But if the imperfection that has to do with the nature of a given virtue is incompatible with the perfection of the initial state, then that virtue was able to have existed in the initial state with respect to its habit but not with respect to its act. This is clear, for instance, in the case of *repentance*, which is sorrow (*dolor*) for a sin that has been committed, and in the case of *mercy*, which is sorrow at the unhappiness of another; for sorrow, along with guilt and unhappiness, are incompatible with the perfection of the initial state. Hence, virtues of this sort existed in the first man with respect to their habits, but not with respect to their acts. For the first man was disposed in such a way that if he had previously sinned, he would be sorrowful, and, similarly, if he were to see unhappiness in another, he would dispel it as far as he was able to. For as the Philosopher says in *Ethics* 4, “Shame”—which has to do with one’s own bad deeds—“occurs in a virtuous man only conditionally. For he is so disposed that he would feel shame if he were to commit some bad deed.”

**Reply to objection 1:** It is incidental to temperance and fortitude to *repel* excessive passions; this occurs [only] to the extent that there are excessive passions in their subject. By contrast, what belongs *per se* to virtues of this sort is to *moderate* the passions.

**Reply to objection 2:** The passions directed toward what is bad are incompatible with the perfection of the initial state if, like fear and sorrow, they are directed toward something bad that exists in the one having the passion.

By contrast, passions that have a relation to something bad that exists in someone else are not incompatible with the perfection of the initial state; for instance, in the initial state man was able to have

hated the malice of the demons in the same way that he loved the goodness of God. Hence, the virtues that have to do with such passions were able to have existed in the initial state, both with respect to their habit and with respect to their act.

However, virtues having to do with the passions that are directed toward what is bad in the same subject are such that, if they have to do only with passions of the sort in question, then they were able to have existed in the initial state only with respect to their habit and not with respect to their act—as has been explained concerning repentance and mercy.

On the other hand, there are certain virtues that have to do not only with these passions but also with other passions—e.g., temperance, which has to do not only with types of sadness (*circa tristitias*), but also with pleasures (*circa delectationes*), and fortitude, which has to do not only with types of fear (*circa timores*), but also with audacity and hope (*circa audaciam et spem*). Hence, an act of temperance could have existed in the initial state insofar as it was moderating pleasures; and the same holds for fortitude insofar as it was moderating audacity or hope, though not insofar as it was moderating sadness or fear.

**Reply to objection 3:** The reply to the third objection is clear from what has been said.

**Reply to objection 4:** ‘Perseverance’ is taken in two ways:

In one way, insofar as it is a *virtue*, and in this sense it signifies a habit by which someone chooses to persevere in the good. On this reading, Adam had perseverance.

In the second way, insofar as it is a *circumstance modifying a virtue*, and in this sense it signifies a certain continuity of virtue without interruption. On this reading, Adam did not have perseverance.

**Reply to objection 5:** The reply to the fifth objection is clear from what has been said.

#### Article 4

##### Were the first man’s works less efficacious for meriting than our works are?

It seems that the first man’s work were less efficacious for meriting than our works are:

**Objection 1:** Grace is given out of God’s mercy, which grants more help to those who are more needy. But we ourselves need grace more than the first man did in the state of innocence. Therefore, grace is poured into us more copiously. Since grace is the root of merit, our works are rendered more efficacious for meriting.

**Objection 2:** A certain struggle and difficulty is required for merit. For 2 Timothy 2:5 says, “He who does not legitimately struggle will not be crowned,” and in *Ethics 2* the Philosopher says, “Virtue has to do with the difficult and the good.” But there is more struggle and difficulty now. Therefore, there is also more efficacy for meriting now.

**Objection 3:** In *Sentences 2*, dist. 24 the Master says, “Man would not have merited by resisting temptation, but now one who resists temptation merits.” Therefore, our works are more efficacious for meriting than were works in the initial state.

**But contrary to this:** On this view, man would be in a better condition after the sin.

**I respond:** The quantity of merit can be thought of in two ways:

In one way, in terms of its *root* in charity and grace (*ex radice caritatis et gratiae*). And on this reading, the quantity of merit corresponds to the *essential* reward (*praemio essentiali*), which consists in the enjoyment of God; for someone who does something out of greater charity enjoys God more perfectly.

In the second way, the quantity of merit can be thought of in terms of the quantity of the *work* (*ex*

*quantitate operis*); and this is twofold, viz., *absolute* quantity and *proportional* quantity (*quantitas absoluta et proportionalis*). For the widow who put two mites into the treasury did a lesser work in terms of absolute quantity than those who put in large sums, but in terms of proportional quantity the widow did more in our Lord's view, because she exceeded her means to a greater degree (Mark 12:41, Luke 21:1). Still, both of these sorts of quantity of merit correspond to an *incidental* reward (*praemio accidentali*), viz., joy with respect to a created good.

So, then, one should say that the works of man were more efficacious for meriting in the state of innocence than after the sin, if what is meant is the quantity of merit on the part of grace; for grace was more copious at that time, when no obstacle to it existed in human nature. The same thing holds if one considers the *absolute quantity* of the work. For since man had greater virtue, he did greater works.

However, if one considers *proportional quantity*, then more of the character of merit is found after the sin because of man's weakness. For a small work exceeds the power of someone who does it with difficulty to a greater degree than a great work exceeds the power of someone who does it without difficulty.

**Reply to objection 1:** After the sin man needed grace for more works than before the sin, but he did not have more of a need for grace. For even before the sin man needed grace to attain eternal life, which is the main reason why grace is necessary. But beyond this, after the sin man also needs grace for the remission of his sins and for support in his weakness.

**Reply to objection 2:** As has been explained, difficulty and struggle have to do with the quantity of merit in the sense of the proportional quantity of the works. For it is a sign of the will's promptitude that it tries to do what is difficult for itself, and the will's promptitude is caused by the magnitude of its charity. However, it can happen that, because someone is prepared to do even something that is difficult for himself, he does an easy work with as prompt a will as someone else does a difficult work. Still, to the extent that the actual difficulty has the character of punishment, it also has the character of satisfying for sin (*inquantum est poenalis habet etiam quod sit satisfactoria pro peccato*).

**Reply to objection 3:** According to the opinion of those who hold that the first man did not have grace, it would not have been meritorious for him to resist temptation, just as this is not now meritorious for someone who does not have grace. But there is a difference here, since in the initial state there was nothing interior that impelled man toward what is bad, as there now is. Hence, man would have been able to resist temptation more easily without grace at that time than he is now.

## QUESTION 96

### The Sort of Dominion That Belonged to the First Man in the State of Innocence

The next thing we have to consider is the sort of dominion that belonged to man in the state of innocence. And on this topic there are four questions: (1) Did man in the state of innocence have dominion over the animals? (2) Did he have dominion over every creature? (3) Would all men have been equal in the state of innocence? (4) Did one man have dominion over another in the state of innocence?

#### Article 1

##### Did Adam in the state of innocence have dominion over the animals?

It seems that in the state of innocence Adam did not have dominion over the animals (*Adam in statu innocentiae animalibus non dominabatur*):

**Objection 1:** In *Super Genesim ad Litteram* 9 Augustine says that it was by the ministry of the angels that the animals were brought to Adam, so that he might impose names on them. But the ministry of the angels would not have been necessary in this case if man had had dominion over the animals in his own right. Therefore, in the state of innocence man did not have dominion over the other animals.

**Objection 2:** It is not right to bring together under one dominion things that are in conflict with one another (*discordant ad invicem*). But many animals, e.g. the sheep and the wolf, are naturally in conflict with one another. Therefore, it is not the case that all the animals were included under man's dominion.

**Objection 3:** Jerome says, "God gave man dominion over the animals before the sin even though man did not need it, because He foreknew that after the Fall man would be helped by the support of the animals." Therefore, before the sin it was at least the case that man did not make use of his dominion over the animals.

**Objection 4:** It seems proper to a master (*dominus*) to rule (*praecipere*). But rule (*praeceptum*) is appropriately exercised only over those who have reason. Therefore, man did not have dominion over the non-rational animals.

**But contrary to this:** Genesis 1:26 says of man, "Let him have dominion over the fish of the sea, and over the birds of the air and over the beasts of the earth."

**I respond:** As was explained above (q. 95, a. 1), disobedience against man on the part of those things that should be subject to him followed as his punishment for his own disobedience against God. And so in the state of innocence, before this act of disobedience, nothing that should naturally be subject to man put up any opposition against him. But all the animals were naturally subject to man.

This is made clear in three ways:

First, from *the very manner in which nature proceeds*. For just as in the generation of things one sees a certain order by which nature proceeds from the imperfect to the perfect (since matter exists for the sake of form, and a less perfect form exists for the sake of a more perfect form), so too this holds with respect to the use that is made of natural things; more specifically, the less perfect are made use of by the more perfect. For instance, for their nourishment plants make use of the earth, and animals make use of plants, and men make use of both plants and animals. Hence, man by nature has dominion over the animals. Thus, the Philosopher says in *Politics* 1 that it is just and natural to hunt wild animals, because man thereby lays claim to what is naturally his.

Second, the same point is clear from *the order of God's providence*, which always governs lower things by means of higher things. Hence, since man is higher than the rest of the animals, given that he is

made to the image of God, it is appropriate for the other animals to be subject to his governance.

Third, the same point is clear from *the properties of man and the other animals*. For in the other animals what one finds, in accord with their natural judgment, is a certain participation in prudence with respect to some particular acts, whereas in man one finds general prudence, i.e., reason with respect to all actions (*ratio omnium agibilium*). But whatever is such-and-such by participation is subject to that which is such-and-such through its essence and in a general way.

Hence, it is clear that the subjection of the other animals to man is something natural.

**Reply to objection 1:** A higher power can do many things to his subjects that a lower power cannot do. But an angel is naturally higher than a man. Hence, some effect with respect to animals that was not able to be brought about by human power was able to be brought about by angelic power, viz., that all the animals should be brought together at once.

**Reply to objection 2:** Some claim that the animals that are now ferocious and kill other animals were tame in that initial state not only with respect to men but also with respect to the other animals.

However, this claim is wholly unreasonable. For the nature of the animals was not changed through man's sin in such a way that certain animals, e.g., lions and falcons, for whom it is now natural to eat the flesh of other animals, lived off of plants at that time. Moreover, Bede's gloss on Genesis 1:30 says that trees and plants were given not to *all* the animals and birds as food, but to *some* of them. Therefore, there would have been natural conflict among certain animals.

However, the animals were not thereby removed from man's dominion, just as they are not now thereby removed from the dominion of God, by whose providence all of this is arranged. Moreover, man executed this providence, even as is now obvious in the case of domestic animals. For men give hens as food to domesticated falcons.

**Reply to objection 3:** In the state of innocence men did not need animals (a) for bodily necessities, or (b) for clothing, since they were naked and unashamed and untroubled by any movement of disordered desire, or (c) for food, since they fed on the trees of Paradise, or (d) for transportation, because of their own bodily strength.

However, they did need the animals in order to gain experiential cognition of the animals' natures. This is indicated by the fact that God brought the animals to Adam, so that he might impose upon them names that designate their natures.

**Reply to objection 4:** The other animals have a certain participation in prudence and reason because of their natural judgment (*secundum aestimationem naturalem*), by which cranes follow their leader and bees obey their ruler. And they obeyed man at that time in the same way that certain domestic animals obey him now.

## Article 2

### Did man have dominion over all other creatures?

It seems that man did not have dominion over all other creatures:

**Objection 1:** Angels are naturally more powerful than men. But as Augustine says in *De Trinitate* 3, "Corporeal matter did not obey even the holy angels at their will." Therefore, *a fortiori*, it did not obey man in the state of innocence.

**Objection 2:** The only powers of the soul had by plants are the nutritive power, the augmentative power, and the generative power. But these powers are not apt by nature to obey reason, as is clear within one and the same man. Therefore, since dominion belongs to man because of his reason, it seems

that in the state of innocence man did not have dominion over plants.

**Objection 3:** Whoever has dominion over a thing can change that thing. But man was not able to change the course of the celestial bodies, since this belongs to God alone, as Dionysius says in his letter to Polycarp. Therefore, he did not have dominion over them.

**But contrary to this:** Genesis 1:26 says of man, "... that he might have dominion over every creature."

**I respond:** In a certain sense all things exist within man, and so he has dominion over other things in the sense that he has dominion over what exists within himself.

Now there are four things to take account of within man, viz., *reason*, in accord with which he is like the angels; *the sentient powers*, in accord with which he is like the animals; *the natural powers*, in accord with which he is like the plants; and *the body itself*, in accord with which he is like inanimate things.

Now within man reason plays the role of that which has dominion and is not subject to any dominion. Hence, in his initial state man did not have dominion over the angels; and when it says "every creature," what this means is "every creature that is not made to God's image."

On the other hand, the soul, by commanding, has dominion over the sentient powers, such as the irascible and concupiscible powers, which in some sense obey reason. Hence, in the state of innocence man likewise had dominion over the other animals through his command.

Again, man has dominion over the natural powers, and the body itself, by making use of them rather than by commanding them. And so in the state of innocence man likewise had dominion over plants and inanimate things in this way—not by commanding them or changing them, but by using their help without impediment.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

### Article 3

#### Would all men have been equal in the state of innocence?

It seems that all men would have been equal in the state of innocence (*homines omnes fuissent aequales*):

**Objection 1:** Gregory says, "When we do not commit crimes (*ubi non delinquimus*), we are all equal (*pares*)."<sup>1</sup> But there was no crime in the state of innocence. Therefore, everyone was equal.

**Objection 2:** Likeness and equality are the reason for mutual love (*ratio mutuae dilectionis*)—this according to Ecclesiasticus 13:19 ("Every animal loves what is like itself, and so too every man loves his neighbor"). But love among men, which is a bond of peace, abounded in the state of innocence. Therefore, everyone would have been equal in the state of innocence.

**Objection 3:** When a cause ceases, its effect ceases. But the cause of inequality among men at present seems to be (a) from the side of *God*, given that He rewards some for merits and punishes others, and (b) from the side of *nature*, given that some are born disabled or deprived because of a natural defect, while some are born strong and perfect. These things would not have occurred in the initial state.

**But contrary to this:** Romans 13:1 says, "What is from God is ordered toward God."<sup>2</sup> But order seems to consist especially in inequality; for in *De Civitate Dei* 19 Augustine says, "Order is an arrangement of equal and unequal things, assigning places to each."<sup>3</sup> Therefore, in the initial state, which would have been the most orderly, there was inequality.

**I respond:** One must claim that there would have been some inequality in the initial state, at least with respect to sex, since without diversity of sex there would have been no generation. Likewise, there would have been inequality with respect to age, since some would have been born from others; nor would those who had sexual relations have been sterile.

But there would also have been diversity in the soul, both with respect to moral rectitude (*quantum ad iustitiam*) and with respect to knowledge. For man would have acted by free choice and not by necessity, and because of this men would have been able to apply themselves in greater or lesser degrees to doing or willing or knowing something. Hence, some would have made more progress than others in moral rectitude and knowledge.

Again, there could have been inequality on the part of the body. For the human body was not wholly exempt from the laws of nature in the sense that it would not receive greater or lesser help or assistance from exterior agents, since the life of men would likewise have been sustained by food. So nothing prevents one from saying that, given the diverse climatic conditions and the diverse arrangements of the stars, some would have been born more robust and bigger and more beautiful and more attractive in body than others. Yet in those who were surpassed in such things, there would have been no defect or flaw (*defectus sive peccatum*), either with respect to the soul or with respect to the body.

**Reply to objection 1:** With these words Gregory intends to rule out an inequality that stems from differences in moral rectitude and sin, on the basis of which some have to be subjected to others as a punishment.

**Reply to objection 2:** Equality is the reason why mutual love is equal. However, it is possible for there to be greater love among unequals than among equals, even though this sort of love does not come from both parties equally. For instance, a father naturally loves his child more than a brother loves his brother—even though a child does not love his father to the same degree that he is loved by him.

**Reply to objection 3:** The reason for the inequality could have been from the side of God, not in the sense that He punished some and rewarded others, but in the sense that He elevated some to a greater degree and some to a lesser degree, so that the beauty of order would better shine through among men. And the inequality could also have been caused in the way explained above from the side of nature—and this without any defect of nature.

#### Article 4

##### Did one man have dominion over another in the state of innocence?

It seems that one man did not have dominion over another in the state of innocence (*homo homini non dominabatur*):

**Objection 1:** In *De Civitate Dei* 19 Augustine says, “God wanted rational man, made to His own image, to have dominion only over non-rational beings; He wanted man to have dominion over the beasts and not over man.”

**Objection 2:** Anything introduced as a punishment for sin would not have existed in the state of innocence. But man’s being subject to man was introduced as a punishment for sin; for instance, after the sin the woman was told, “You will be under the man’s power” (Genesis 3:16). Therefore, in the state of innocence it was not the case that one man was subject to another.

**Objection 3:** Subordination is opposed to freedom. But freedom is one of the principal goods that was not lacking in the state of innocence, where “nothing was lacking that a good will could desire,” as Augustine puts it in *De Civitate Dei* 14. Therefore, it is not the case that one man had dominion over

another in the state of innocence.

**But contrary to this:** The condition of men in the state of innocence was not more dignified than the condition of the angels. But among the angels there are some who have dominion over others; thus, one order of angels is even called Dominations. Therefore, it is not contrary to the dignity of the state of innocence that one man should have dominion over another.

**I respond:** ‘Dominion’ (*dominium*) is taken in two senses:

(a) In one sense, dominion is opposed to servitude, and in this sense a lord (*dominus*) is one to whom someone is subject as a servant (*servus*).

(b) In the second sense, dominion is related in general to any kind of subject at all, and in this sense even someone who has the role of governing and directing free men (*liberi*) can be called a lord.

Thus, if we take ‘dominion’ in the first sense, then it is not the case that one man had dominion over another in the state of innocence, whereas if we take ‘dominion’ in the second sense, then it was possible for one man to have dominion over another in the state of innocence. The reason for this is that a servant differs from a free man in that “a free man is a cause of himself (*causa sui*),” as it says at the beginning of the *Metaphysics*, whereas a servant is ordered toward another.

Thus, someone has dominion over another *as a servant* when the one who has dominion looks to the one over whom he has dominion for his usefulness to himself, i.e., to the one who has dominion. And since everyone desires his own good and consequently finds it deplorable to have to give exclusively to someone else a good that ought to have been his own, it follows that this sort of dominion cannot exist without suffering on the part of the subjects (*sine poena subiectorum*). Consequently, this sort of dominion of one man over another would not have existed in the state of innocence.

On the other hand, someone has dominion over another *as a free man* when he directs him either to the proper good of the one who is being directed or to the common good. And this sort of dominion of one man over another would have existed in the state of innocence—and this for two reasons.

First, man is naturally a social animal, and so in the state of innocence men would have lived in society (*vixissent socialiter*). But it would not be possible for a multitude to live in society unless there were someone in charge who looked toward the common good (*nisi aliquis praesideret qui ad bonum commune intenderet*); for the many necessarily look toward many goods, while the one looks toward one good. This is why the Philosopher says at the beginning of the *Politics* that whenever the many are ordered toward one thing, that one thing will always be found to be central and directive (*unum ut principale et dirigens*).

Second, if one man had preeminence over another in knowledge and moral rectitude, then it would not have been fitting for him not to act for the benefit of the others—this according to 1 Peter 4:10 (“As every man has received grace, ministering the same one to another”). Thus, in *De Civitate Dei* 19 Augustine says, “Those who are just rule not out of a desire to dominate, but because it is their duty to give counsel (*officio consulendi*). The natural order of things prescribes this, and thus did God make man.”

**Reply to objection 1 and objection 2 and objection 3:** From what has been said it is clear how to reply to all the objections, which are based on the first sense of ‘dominion’.

## QUESTION 97

### The Conservation of the Individual in the First State

The next thing we have to consider is what pertains to the state of the first man with respect to the body: first, as regards the conservation of the individual (question 97); and, second, as regards the conservation of the species (questions 98-101).

On the first topic there are four questions: (1) Was man immortal in the state of innocence? (2) Was man impassible in the state of innocence? (3) Did man need food in the state of innocence? (4) Did he attain immortality through the tree of life?

#### Article 1

##### Was man immortal in the state of innocence?

It seems that man was not immortal in the state of innocence:

**Objection 1:** *Mortal* is part of the definition of man. But when a definition is denied, the thing defined is denied. Therefore, if he was a man, then he could not have been immortal.

**Objection 2:** As *Metaphysics* 10 says, “What is corruptible differs in genus from what is incorruptible.” But there is no transmutation of things differing in genus into one another. Therefore, if the first man was incorruptible, then man would not be able to be corruptible in the present state (*in statu isto*).

**Objection 3:** If man was immortal in the state of innocence, this was so either by nature or by grace. But it was not by nature; for since nature remains the same in species, he would also be immortal now. Similarly, it was not by grace, since the first man recovered grace through repentance—this according to Wisdom 10:2 (“He brought him out of his sins”). Therefore, he would have recovered his immortality, too. But this is obviously false. Therefore, man was not immortal in the state of innocence.

**Objection 4:** Immortality is promised to man as a reward—this according to Apocalypse 21:4 (“Death will be no more”). But man was not created in a state of reward; rather, he was created in order to merit a reward. Therefore, man was not immortal in the state of innocence.

**But contrary to this:** Romans 5:12 says, “Through sin death entered into the world.” Therefore, before the sin man was immortal.

**I respond:** There are three senses in which a thing can be said to be incorruptible:

(a) First, *because of matter (ex parte materiae)*, viz., either because it does not have matter, as in the case of the angels, or because it has matter that is in potentiality only to a single [substantial] form, as in the case of the celestial bodies. This is called *being incorruptible by nature*.

(b) Second, a thing is said to be incorruptible *because of a form (ex parte formae)*, viz., when a thing corruptible by nature has a disposition by which it is absolutely prevented from being corrupted (*dispositio per quam totaliter a corruptione prohibetur*). This is called *being incorruptible by glory*, since as Augustine says in his letter *Ad Dioscorum*, “God made the soul so powerful by nature that the fullness of its health, i.e., the vigor of its incorruption, spills over from its beatitude into its body.”

(c) Third, a thing is said to be incorruptible *because of an efficient cause (ex parte causae efficientis)*. This is the sense in which man was incorruptible and immortal in the state of innocence. For as Augustine says in *Quaestiones Veteris et Novi Testamenti*, “God made man to live immortally as long as he did not sin, so that he would be the source of life or death for himself.” For his body was not incorruptible (*indissolubile*) through any sort of vigor of immortality that existed within it; instead, his soul had a certain power, given supernaturally by God, through which, as long as it remained subject to God, it was able to preserve the body from all corruption. This made good sense. For since, as was

explained above (q. 76, a. 1), the rational soul exceeds the proportion of corporeal matter, it was fitting that at the beginning a power should be given to it by which it was able to conserve the body in a way that exceeded the nature of corporeal matter.

**Reply to objection 1 and objection 2:** These arguments go through in the case of what is incorruptible and immortal by nature.

**Reply to objection 3:** The power of preserving the body from corruption was not natural to the human soul, but stemmed from a gift of grace. And even though the soul would regain grace with respect to having its sins remitted and meriting glory, it would nonetheless not regain it with respect to the effect of its lost immortality. For this effect was reserved for Christ, through whom, as will be explained below (*ST 3*, q. 14, a. 4), the defect of nature was to be remade into something better (*naturae defectus in melius reparandus erat*).

**Reply to objection 4:** The immortality of glory, which is promised as a reward, is different from the immortality which was given to man in the state of innocence.

## Article 2

### Was man passible in the state of innocence?

It seems that man was passible in the state of innocence:

**Objection 1:** To sense something is a sort of being acted upon (*pati quoddam*). But in the state of innocence man was able to have sensation. Therefore, he was passible.

**Objection 2:** Sleeping is a sort of being acted upon (*passio quaedam*). But man slept in the state of innocence—this according to Genesis 2:21 (“God cast a deep sleep upon Adam”). Therefore, he was passible.

**Objection 3:** In the same place it adds, “He took one of his ribs.” Therefore, he was passible even to the point of the having part of his body removed.

**Objection 4:** Man’s body was soft. But what is soft is naturally passive in relation to what is hard. Therefore, if a hard body had struck the first man’s body, he would have been acted upon by it. And so the first man was passible.

**But contrary to this:** If he was passible, then he was also corruptible, since being acted upon, if amplified, brings a substance to ruin (*passio magis facta abiicit a substantia*).

**I respond:** There are two senses of ‘being acted upon’ (*passio*):

(a) The first sense is the proper one, and in this sense ‘is acted upon’ is said of something that is taken out of its natural disposition (*a sua naturali dispositione removetur*). For a passion is the effect of an action, and among natural things contraries act on one another and are acted upon by one another, and one takes another out of its natural disposition.

(b) In the second sense, ‘is acted upon’ is taken in a general way for any sort of change, even if it contributes to the perfection of the nature. It is in this sense that an act of intellectual understanding or an act of sensing is said to be an instance of being acted upon.

Therefore, in the second sense, man was passible in the state of innocence, and he was acted upon, both with respect to his body and with respect to his soul. By contrast, in the first sense of ‘being acted upon’, he was impassible both with respect to his body and with respect to his soul, just as he was immortal. For he was able to prevent his being acted upon—just as he was likewise able to prevent his death—as long as he persisted without sin.

**Reply to objection 1 and objection 2:** This makes clear the reply to objections one and two. For

sensing and sleeping do not take a man out of his natural disposition, but instead order him toward the good of nature.

**Reply to objection 3:** As was explained above (q. 92, a. 3), the rib existed in Adam insofar as he was the source of the human race, just as semen exists in a man insofar as he is a source through generation. Therefore, just as the release of semen is not accompanied by an instance of being acted upon which takes a man out of his natural disposition, so one should say the same thing about the removal of the rib in question.

**Reply to objection 4:** In the state of innocence man's body was able to persist without suffering injury from anything hard—partly because of man's own reason, through which he was able to avoid dangers, and partly because of God's providence, which protected him in such a way that nothing unexpected would happen to him by which he might be injured.

### Article 3

#### Did man need food in the state of innocence?

It seems that man did not need food in the state of innocence (*non indigebat cibis*):

**Objection 1:** Man needs food in order to restore what has been lost. But in Adam's body, it seems, there was no loss, since he was incorruptible. Therefore, he did not need food.

**Objection 2:** Food is necessary for nutrition. But nutrition does not occur without one's being acted upon. Therefore, since man's body was impassible, food was not, it seems, necessary for him.

**Objection 3:** For us food is necessary for the conservation of our life. But there was another way in which Adam was able to conserve his life, since he was not going to die as long as he did not sin. Therefore, food was not necessary for him.

**Objection 4:** The discharge of excess materials (*emissio superfluitatum*) follows upon the consumption of food; but this excess material has a foulness that does not befit the dignity of the initial state. Therefore, it seems that in the initial state man did not make use of food.

**But contrary to this:** Genesis 2:16 says, "You shall eat of every tree that is in Paradise."

**I respond:** In the state of innocence man had an animal life in need of food, whereas after the resurrection he will have a spiritual life that is not in need of food.

To see this clearly, note that the rational soul is both a *soul (anima)* and a *spirit (spiritus)*. It is called a *soul* with respect to what is common to it and the other souls, viz., giving life to a body; hence Genesis 2:7 says, "Man was made into a living soul," i.e., a soul giving life to a body. On the other hand, it is called a *spirit* with respect to what is proper to itself and not to the other souls, viz., that it has an immaterial intellectual power.

Therefore, in the initial state the rational soul communicated to the body what belonged to the soul insofar as it is a *soul*, and so the body was called an animal insofar as it had life from the soul. But as the *De Anima* says, among the lower things here below the first source of life is the vegetative soul, whose operations are to make use of food and to generate and to grow. And hence these works belonged to man in the initial state.

However, in the last state, after the resurrection, the soul will in some way communicate to the body those things that are proper to the soul insofar as it is a *spirit*—immortality for everyone, but also impassibility, glory, and power for the blessed (*quantum ad bonos*), whose bodies will be called 'spiritual'.

Hence, after the resurrection men will not need food, but in the state of innocence they did need

food.

**Reply to objection 1:** As Augustine put it in *Quaestiones Veteris et Novi Testamenti*, “How is it that an immortal body was sustained by food? For what is immortal does not need food or drink.”

Now it was explained above (a. 1) that the immortality that belonged to the initial state stemmed from a certain supernatural power residing in the soul—and not from any disposition inhering in the body. Hence, some of the body’s moisture was able to be lost through the action of heat; and so it was necessary for man to help himself by taking food, lest the moisture be totally consumed.

**Reply to objection 2:** In the act of nutrition there is an alteration and an instance of being acted upon, viz., on the part of the food, which is converted into the substance of the one that is nourished. Hence, one can infer from this not that the man’s body was passible, but rather that the food that was taken was passible—though it is also true that such an instance of being acted upon contributed to the perfection of the nature.

**Reply to objection 3:** If the man had not helped himself to food, he would have sinned—just as he did sin by taking the forbidden food. For at one and the same time he was commanded both to abstain from the tree of the knowledge of good and evil and to eat from every other tree in Paradise.

**Reply to objection 4:** Some claim that in the state of innocence man took only as much food as was necessary for him, so that there was no emission of excess material.

But it seems hard to believe that in the food that was consumed there was no excess material that was unable to be converted into human nourishment. Hence, it was necessary for the waste excess to be emitted. However, God saw to it (*divinitus provisum*) that this did not involve anything foul.

#### Article 4

##### Could the tree of life have been a cause of immortality?

It seems that the tree of life could not have been a cause of immortality:

**Objection 1:** Nothing is able to act beyond its own species, since an effect does not exceed its cause. But the tree of life was corruptible; otherwise it could not have been taken in nourishment, since, as has been explained (a. 3), food is converted into the substance of the one that is nourished. Therefore, the tree of life could not have conferred incorruptibility or immortality.

**Objection 2:** Effects that are caused by the powers of plants and other natural things are natural. Therefore, if the tree of life had caused immortality, the immortality in question would have been natural.

**Objection 3:** This seems to go back to the fables of the ancients, who claimed that the gods who ate of a certain food became immortal; but the Philosopher ridicules these ancients in *Metaphysics* 3.

**But contrary to this:**

1. Genesis 3:22 says, “..... lest perhaps he put forth his hand, and take also of the tree of life, and eat, and live for ever.”

2. In *Quaestiones Veteris et Novi Testamenti* Augustine says, “Tasting of the tree of life held back the corruption of the body, and even then, after the sin, he would have been able to remain uncorrupted if he had been permitted to eat of the tree of life.”

**I respond:** The tree of life caused immortality in a certain way, but not absolutely speaking.

To see this clearly, note that in the initial state man had two remedies, directed against two defects, for conserving his life.

The first defect is the loss of moisture due to the action of natural heat, which is an instrument of the soul. And against this defect man helped himself by eating of the other trees in Paradise, in the same

way that we now help ourselves by the food we eat.

However, the second defect is that, as the Philosopher puts it in *De Generatione Animalium* 1, whatever is generated from what is extraneous and is added to what was previously moist diminishes the active power of the species. For instance, water added to wine is at first converted into the taste of the wine, but as more and more water is added, it weakens the strength of the wine, and finally the wine becomes watery. So, then, we see that at the beginning the active power of the species is so strong that it can convert food in a way that is sufficient not only to restore what was lost but also to add to it. However, afterwards, what is assimilated is sufficient not for an increase, but only for restoring what was lost. And, finally, in the state of old age, it is not even sufficient for this, and so a loss of size follows, and, finally, the natural dissolution of the body.

Man was helped by the tree of life against this defect, since the tree of life had the power to fortify the power of the species against the sort of weakness that stems from the admixture of what is extraneous. Hence, in *De Civitate Dei* 14 Augustine says, "Food was there for man, lest he get hungry; drink was there, lest he get thirsty; and the tree of life was there, lest old age destroy him." And in *Quaestiones Veteris et Novi Testamenti* he says, "In the manner of medicine the tree of life prevented men from dying."

However, it was not a cause of immortality absolutely speaking. For the power that existed in the soul to conserve the body was not caused by the tree of life. Nor was the tree of life able to confer on the body even the disposition for immortality, so that it might never be destroyed. This is clear from the fact that the power of a body is finite. Hence, the power of the tree of life was able to reach as far as to give the body the power to endure up to some determinate time, but not for an infinitely long time. For it is clear that the greater the power, the more durable the effect it imparts. Hence, since its power was finite, once the tree of life was eaten from, it preserved the body from corruption up to some determinate time. And when that time ended, either the man would be transferred to a spiritual life or he would need to eat from the tree of life once again.

**Reply to objection 1 and objection 2 and objection 3 and argument to the contrary 1 and argument to the contrary 2:** The replies to the objections are clear from what has been said. For the first set of arguments reach the conclusion that the tree of life did not cause incorruptibility absolutely speaking, whereas the other arguments reach the conclusion that it did cause incorruptibility by impeding corruption in the way explained above.

## QUESTION 98

### The Conservation of the Species in the Initial State: Generation

The next thing to consider is what pertains to the conservation of the species: first, with respect to generation itself (question 98) and, second, with respect to the condition of the generated offspring (questions 99-101).

On the first topic are two questions: (1) Would there have been generation in the state of innocence? (2) Would the generation have been through sexual union?

#### Article 1

##### Would there have been generation in the state of innocence?

It seems that in the state of innocence there would not have been generation:

**Objection 1:** As *Physics* 5 says, “Corruption is contrary to generation.” But contraries have to do with the same thing, and in the state of innocence there would not have been corruption. Therefore, there would not have been generation, either.

**Objection 2:** Generation is ordered toward conserving within the species what cannot be conserved with respect to the individual; hence, generation is not found among those individuals that last forever. But in the state of innocence man would have lived forever without death. Therefore, generation would not have existed in the state of innocence.

**Objection 3:** It is through generation that men are multiplied. But when owners are multiplied (*multiplicatis dominis*), there has to be a division of possessions in order to avoid confusion about ownership (*ad evitandam confusionem domini*). Therefore, since man was set up as the owner of the animals, if a multiplication of the human race had been made through generation, then a division of ownership would have ensued. But this seems contrary to the natural law, according to which all things are held in common, as Isidore says. Therefore, there would not have been generation in the state of innocence.

**But contrary to this:** Genesis 1:28 says, “Grow and multiply, and fill the earth.” But multiplication of the sort in question here could not have occurred without new generation, since only two human beings were made at the beginning. Therefore, there would have been generation in the initial state.

**I respond:** In the state of innocence there would have been generation for the multiplication of the human race. Otherwise, man’s sin would have been absolutely necessary in order that such a great good might follow from it.

Therefore, note that man by nature is constituted as a sort of middle ground between corruptible creatures and incorruptible creatures. For his soul is naturally incorruptible, whereas his body is naturally corruptible. But notice that what nature intends (*intentio naturae*) relates to corruptible creatures in a way different from the way it relates to incorruptible creatures. For it seems that it is what exists always and forever that belongs *per se* to nature’s intention. By contrast, what exists only for some temporal interval does not seem to stem chiefly from what nature intends, but is instead ordered toward something else; otherwise, when it is corrupted, nature’s intention would cease. Therefore, since among corruptible things the only thing that remains forever or is everlasting is the species, what nature principally intends has to do with the good of the species, whose conservation natural generation is ordered toward. By contrast, incorruptible substances remain forever not only with respect to the species but also with respect to the individuals, and so what nature principally intends has to do with the individuals themselves as well.

So, then, generation belongs to man with respect to his body, which is corruptible by its nature. But on the part of the soul, which is incorruptible, what belongs to man is that a multitude of individuals is intended *per se* by nature—or, better, by the author of nature, who alone is the creator of human souls. And so for the multiplication of the human race He established generation within the human race—even in the state of innocence.

**Reply to objection 1:** In the state of innocence man’s body, taken just by itself, was corruptible, but it was able to be preserved from corruption by the soul. And this is why generation, which is appropriate for corruptible things, was not to be taken away from man.

**Reply to objection 2:** Even if generation in the state of innocence was not for the sake of the conservation of the species, it was nonetheless for the sake of the multiplication of the individuals.

**Reply to objection 3:** In our present state, it is necessary for there to be a division of possessions when the owners are multiplied. For as the Philosopher says in *Politics* 2, the holding of possessions in common (*communitas possessionis*) is an occasion for discord.

However, in the state of innocence men’s wills were ordered in such a way that, without any danger of discord, they would have had, to the extent appropriate for each, common use (*communiter usi fuissent*) of the goods that fell under their ownership. For this practice is observed even now among many good men.

## Article 2

### Would there have been generation through sexual union in the state of innocence?

It seems that in the state of innocence there would not have been generation through sexual union (*per coitum*):

**Objection 1:** As Damascene says, in the earthly paradise man was “like an angel.” But in the future state of resurrection, when men will be similar to angels, “they will neither marry nor be given in marriage,” as Matthew 22:30 says. Therefore, neither would there have been generation through sexual union in paradise.

**Objection 2:** The first men were created at a perfect age. Therefore, if among them there had been generation through sexual union before the sin, then they would have been carnally joined even in paradise—which is clearly false according to Scripture.

**Objection 3:** In carnal union (*in coniunctione carnali*) man becomes especially like the beasts, because of the vehemence of the pleasure; this is why there is praise for celibacy (*continentia*), through which men abstain from pleasures of this sort. But it is because of sin that man is compared to the beasts—this according to Psalm 48:21 (“Man, when he was in honor, did not understand; he is compared to senseless beasts, and is become like to them”). Therefore, before the sin there would have been no carnal union between male and female.

**Objection 4:** In the state of innocence there would have been no corruption. But virginal integrity is corrupted through sexual union. Therefore, there would not have been sexual union in the state of innocence.

#### But contrary to this:

1. According to Genesis 1:27 and 2:22, it was before the sin that God made them male and female. But nothing in the works of God is in vain. Therefore, even if man had not sinned, there would have been sexual union, which the difference between the sexes is ordered toward.

2. Genesis 2:18-20 says that the woman was made to help the man—but not for anything if not for

the generation that is effected through sexual union, since for any other sort of work the man could be helped more fittingly by a man rather than by a woman. Therefore, even in the state of innocence there would have been generation through sexual union.

**I respond:** Some ancient doctors, reflecting on the shamefulness of the concupiscence associated with sexual union in our present state (*considerantes concupiscentiae foeditatem quae invenitur in coitu in isto statu*), claimed that in the state of innocence there would not have been generation through sexual union. Hence, in his book *De Homine* Gregory of Nyssa says that in paradise the human race would have been multiplied in some other way—just as the angels are multiplied without sexual intercourse (*absque concubitu*) through the operation of God’s power. Furthermore, he claims that God made them male and female before the sin with an eye toward the mode of generation that would exist after the sin, which God had foreknowledge of.

But this is unreasonable. For what is natural to man is neither taken away from nor added to man because of sin. But it is clear that because of his animal life—which, as was explained above (q. 97, a. 3), he had even before the sin—it is natural to man to generate through sexual union, just as it is natural to the other perfect animals as well. And this is made clear by the natural members of the body deputed for this use. So just as with the other bodily members, one should not claim that the use of these natural members did not exist before the sin.

Thus, there are two things to take into account concerning sexual union in our present state:

The first is what belongs to *nature*, viz., the union of the male and the female in order to generate. For every instance of generation requires an active power and a passive power. Hence, since in all the animals in which there is a distinction between the sexes, the active power exists in the male and the passive power in the female, the order of nature requires that the male and the female come together through sexual union in order to generate.

The other thing that can be taken into account is the *deformity of unbridled concupiscence* (*quaedam deformitas immoderatae concupiscentiae*). This did not exist in the state of innocence, wherein the lower powers were altogether subject to reason. Hence, in *De Civitate Dei* 14 Augustine says, “Far be it from us to suspect that offspring could not have been brought forth without the sickness of disordered desire (*sine libidinis morbo*). Instead, the members in question were moved at will just like the other members—and this without burning desire or seductive stimulation, but with tranquility of mind and body.”

**Reply to objection 1:** In paradise man was like the angels because of his spiritual mind, even though he had an animal life with respect to his body. However, after the resurrection man will be a spiritual effect like the angels, both with respect to his soul and with respect to his body. Hence, the arguments are not parallel.

**Reply to objection 2:** As Augustine says in *Super Genesim ad Litteram* 9, the reason why the first parents did not have sexual intercourse in paradise was either (a) that, because of their sin, they were ejected from Paradise shortly after the woman was formed, or (b) that they were waiting for God’s authority, from which they had received the general command [to multiply], to specify a determinate time for sexual intercourse (*ad determinatum tempus commixtionis*).

**Reply to objection 3:** The beasts lack reason. Hence, man becomes bestial in sexual union to the extent that he cannot by means of his reason moderate the pleasure of sexual union and the fervor of sensual desire.

However, in the state of innocence there was nothing of this sort that was not moderated by reason. This was not, as some claim, because there was less sensual pleasure. (For the sensual pleasure would have been greater to the extent that the nature was purer and the body more sensitive.) Instead, it was because the concupiscible power would not have indulged in pleasure of this sort in a disordered way, given that it was regulated by reason—which implies not that there is less pleasure in the senses, but

rather that the concupiscible power does not cling (*inhaeret*) to the pleasure in an unbridled way (*immoderate*). (By ‘unbridled’ I mean ‘beyond the measure of reason’.) In like manner, one who is temperate with respect to food taken in moderation (*sobrius in cibo moderate assumpto*) does not have less pleasure than a glutton; instead, his concupiscible power lingers less over this sort of pleasure (*minus super delectatione huiusmodi requiescit*).

This is consonant with the passage from Augustine, which does not rule out a great deal of pleasure (*magnitudinem delectationis*) in the state of innocence, but instead rules out feverish disordered desire (*ardorem libidinis*) and disquietude of mind. And so in the state of innocence celibacy (*continentia*) would not have been praiseworthy—even though in our times it is praised not because of its lack of fecundity, but because of its exclusion of disordered desire. For in the state of innocence fecundity would have existed without disordered desire.

**Reply to objection 4:** As Augustine says in *De Civitate Dei* 14, in the state of innocence “there was no corruption of virginal integrity involved in sexual intercourse (*nulla corruptione integritatis infunderetur gremio maritus uxoris*). For the man’s seed was able to be emitted into his wife’s uterus in such a way that the integrity of the female genitalia was preserved—just as, even now, a menstrual flow can be emitted from a virgin’s uterus while that same integrity is preserved. For just as it is not the groan of pain but the sense of completion (*impulsus maturitatis*) that relaxes a woman’s viscera in order for her to give birth, so too it was not lustful desire (*libidinis appetitus*) but the voluntary use [of the organs] (*voluntarius usus*) that united the two natures in order for them to conceive.”

## QUESTION 99

### The Condition of the Generated Offspring with respect to their Body

The next thing to consider is the condition of the offspring that are generated: first, with respect to their body (question 99); second, with respect to their justice or moral rectitude (*quantum ad iustitiam*) (question 100); and, third, with respect to their knowledge (question 101).

On the first topic there are two questions: (1) In the state of innocence, would children have had full corporeal power immediately upon birth? (2) Would all children have been born males?

#### Article 1

### In the state of innocence, would children have had full power over the movement of their limbs immediately upon birth?

It seems that in the state of innocence children would have had full power over the movement of their limbs (*virtutem perfectam ad motum membrorum*) immediately upon birth:

**Objection 1:** In *De Baptismo Pavulorum* Augustine says, “To the weakness of mind corresponds that weakness of body”—viz., the weakness of body that is apparent in children. But in the state of innocence there would have been no weakness of mind. Therefore, neither would there have been weakness of body in little children.

**Objection 2:** Certain animals are such that they have enough power to use their limbs immediately upon being born. But man is more noble than the other animals. Therefore, *a fortiori*, it is natural for man to have the power to use his limbs immediately upon birth. And so [the lack of such power] seems to be a punishment that followed upon sin.

**Objection 3:** The inability to attain something pleasant presented to one is a source of affliction. But if children had not had the power to move their limbs, then oftentimes they would have been unable to attain something pleasant presented to them. Therefore, they would have been afflicted. But this could not have been the case before sin. Therefore, in the state of innocence children would not have lacked the power to move their limbs.

**Objection 4:** The weakness of old age (*defectus senectutis*) seems to correspond to the weakness of childhood (*defectus pueritiae*). But in the state of innocence there would not have been any weakness of old age. Therefore, there would not have been any weakness of childhood, either.

**But contrary to this:** Every generated thing is imperfect before it becomes perfect. But in the state of innocence children would have been produced through generation. Therefore, at the beginning they would have been imperfect both in size and in bodily power.

**I respond:** Truths that are supernatural (*ea quae super naturam*) we hold by faith alone, and what we hold on faith (*credimus*) we owe to some authority. Hence, in all our assertions we ought to be guided by (*sequi debemus*) the nature of things, except with respect to what is handed down to us by God’s authority and lies beyond nature.

Now it is clearly natural—in the sense of belonging to the principles of human nature—for children not to have enough power to move their limbs immediately upon birth. For man has by nature a brain that is larger in size, relative to his body, than the other animals do. Hence, it is natural that because of the great moisture of the brain in children, the nerves, which are the instruments of movement, are not fit for moving the limbs.

From the other side, no Catholic doubts that it could happen by God’s power that children have the full power to move their limbs immediately upon birth. But it is clear from the authority of Scripture that “God made man upright” (Ecclesiastes 7:30) and that, as Augustine says, this uprightness consists in the

full subjection of the body to the soul. Therefore, just as there could not have been in the initial state anything in a man's limbs that conflicted with the man's well-ordered will, so too a man's limbs could not have failed to do the human will's bidding.

However, a well-ordered human will is one that tends toward acts that are appropriate for the man, and it is not the case that the very same acts are appropriate for a man at every age. Therefore, one should claim that immediately upon birth the children would have had enough power to move their limbs not for just any acts at all, but for the acts appropriate to a child, e.g., sucking at the breast and other acts of this sort.

**Reply to objection 1:** Augustine is talking about the sort of weakness that now appears in some children even with respect to those acts that are appropriate for children. This is clear from his previous remark that "even when they are hungry and close to the breast, they are more apt to cry than to suck."

**Reply to objection 2:** The fact that certain animals have the use of their limbs immediately upon birth does not stem from their nobility, since other animals more perfect than they are do not have such use of their limbs. Rather, this happens to them because of the dryness of their brains and because the acts proper to such animals are imperfect, so that even a little power is sufficient for them.

**Reply to objection 3:** The reply to this objection is clear from what was said in the body of this article.

An alternative reply is that the children would have desired nothing except what was appropriate for a well-ordered will in their particular state.

**Reply to objection 4:** In the state of innocence man would have been generated but would not have been corrupted. And so in that state it would have been possible for there to be some childhood weaknesses that followed upon generation, but there could not have been any weaknesses of old age that were ordered toward corruption.

## Article 2

### In the state of innocence would any females have been born?

It seems that in the state of innocence no female would have been born:

**Objection 1:** In *De Generatione Animalium* 2 the Philosopher says, "A female is an inadvertent male"—in the sense that a female is produced outside of the intention of nature. But in the state of innocence nothing unnatural (*innaturale*) would have occurred in human generation. Therefore, no females would have been born.

**Objection 2:** Every agent generates what is similar to itself, unless it is impeded either because of a defect in its power or because the matter is not well disposed, as when a small fire is unable to ignite green wood. But in generation the active power resides in the male. Therefore, since in the state of innocence the male's power would not have been defective and the female's matter would not have been indisposed, it seems that males would always have been born.

**Objection 3:** In the state of innocence generation was ordered toward the multiplication of men (*ad multiplicationem hominum*). But men could have been multiplied to a sufficient degree through the first man and the first woman, since they were going to live forever. Therefore, in the state of innocence it would have been unnecessary for females to be born.

**But contrary to this:** Nature would have proceeded in generation in the way that God had instituted it. But as Genesis 1:27 and 2:22 say, within human nature God made them male and female. Therefore, in the state of innocence males and females would likewise have been generated.

**I respond:** Nothing relevant to the fullness of human nature (*ad complementum humanae naturae*) would have been lacking in the state of innocence. But just as diverse grades of things contribute to the perfection of the universe, so too the difference between the sexes contributes to the perfection of human nature. And so in the state of innocence both sexes would have been produced through generation.

**Reply to objection 1:** The female is called an ‘inadvertent male’ because she lies outside the intention of a *particular* nature. But, as was explained above (q. 92, a. 1), the female does not lie outside the intention of nature *as a whole* (*non praeter intentionem naturae universalis*).

**Reply to objection 2:** The generation of a female does not occur just because of a defect in the active power or because of the matter’s indisposition, as the objection implies. Rather, it sometimes occurs because of an extrinsic accident; for instance, in *De Animalibus* the Philosopher says, “The northern wind (*ventus septentrionalis*) favors the generation of males, and the southern wind (*ventus australis*) the generation of females.”

Moreover, the generation of a female sometimes occurs because of a thought on the part of the soul (*ex conceptione animae*) at which the body is readily changed. This could have happened especially in the state of innocence, when the body was more subject to the soul, so that the sex of the offspring might be determined by the will of the one generating.

**Reply to objection 3:** The offspring would have been generated with an animal life (*vivens vita animali*), which involves generating as well as making use of food. Hence, it was appropriate for all of them to generate, and not just the first parents. It seems to follow from this that as many females would have been generated as males.

## QUESTION 100

### The Condition of the Generated Offspring with respect to Justice

The next thing to consider is the condition of the offspring with respect to justice or moral rectitude (*quantum ad justitiam*). On this topic there are two questions: (1) Would men have been born with justice? (2) Would they have been born confirmed in justice?

#### Article 1

##### Would men have been born with justice?

It seems that men would not have been born with justice or moral rectitude (*cum iustitia nati*):

**Objection 1:** Hugo of St. Victor says, “Before the sin the first man generated children who were without sin but who did not inherit their father’s justice.”

**Objection 2:** As the Apostle says in Romans 5:16 and 21, justice or justification comes through grace (*iustitia est per gratiam*). But grace is not bequeathed [by the parents to the children] (*non transfunditur*), since in that case it would be natural; instead, it is infused by God alone. Therefore, the children would not have been born with justice.

**Objection 3:** Justice exists in the soul. But the soul is not passed on [from the parents to the children] (*anima non est ex traduce*). Therefore, neither was justice passed on from the parents to the children.

**But contrary to this:** In *De Conceptu Virginali* Anselm says, “Along with having a rational soul, those whom the man would generate would be just if they did not sin.”

**I respond:** Man naturally generates what is similar to himself in species. Hence, any accidents that follow upon the nature of the species are such that the children must be similar in those accidents to the parents, unless there is some error in the operation of nature—which there would not have been in the state of innocence. But in individual accidents the children did not have to be similar to the parents.

Now original justice (*iustitia originalis*), in the rectitude of which the first man was made, was an accident belonging to the nature of the species—not in the sense that it was caused by the principles of the species, but in the sense that it was a special gift given by God to the nature as a whole. This is clear from the fact that opposites belong to a single genus, and original sin (*peccatum originale*), which is opposed to original justice, is called a sin of the nature. That is why it is passed down from the parents to their posterity. Because of this, the children would have been like the parents with respect to original justice as well.

**Reply to objection 1:** The passage from Hugo should be taken not to be about the habit of justice, but rather about the execution of the act of justice.

**Reply to objection 2:** Some claim that the children would have been born not with the justice of grace (*cum iustitia gratuita*), which is a principle of meriting, but rather with original justice.

However, the root of original justice, in the rectitude of which man was made, consists in the supernatural submission of reason to God (*in subiectione supernaturali rationis ad Deum*)—a submission which, as was explained above (q. 95, a. 1), is effected by habitual grace (*per gratiam gratum facientem*). Hence, one must claim that if the children had been born with original justice, then they would likewise have been born with grace—just as we explained above (q. 95, a. 1) that the first man was made with grace. Still, the grace would not for this reason have been natural, since it would not have been bequeathed by the power of the semen, but would instead have been conferred on man as soon as he had a rational soul—just as it is also the case that even though the rational soul is not passed on [from the parents to the children], it is nonetheless infused by God as soon as the body is disposed for it.

**Reply to objection 3:** The solution to the third objection is clear from what was just said.

## Article 2

### In the state of innocence, would the children have been born confirmed in justice?

It seems that in the state of innocence the children would have been born confirmed in justice (*in iustitia confirmati*):

**Objection 1:** In *Moralia* 4, commenting on Job 3:13 (“For now I should have been asleep, etc.”), Gregory says, “If none of the rottenness of sin (*putredo peccati*) had corrupted the first parent, then he would in no way have generated of himself the children of Gehenna; but those who now have to be saved by the Redeemer would have been born of him only as the elect.” Therefore, all of them would have been born confirmed in justice.

**Objection 2:** In *Cur Deus Homo* Anselm says, “If the first parents had lived in such a way that, though tempted, they did not sin, then they, along with all their progeny, would have been confirmed in the sense that they would no longer have been able to sin.” Therefore, the children would have been born confirmed in justice.

**Objection 3:** Good is more powerful than evil. But from the sin of the first man there followed a necessity of sinning on the part of those who were born of him. Therefore, if the first man had persisted in justice, the necessity of preserving justice would have redounded to his posterity.

**Objection 4:** An angel who adheres to God while others are sinning is immediately confirmed in justice, so that he is no longer able to sin. Therefore, if man had resisted the temptation, he too would have been confirmed. But he would have generated others who were such as he was. Therefore, his children would likewise have been born confirmed in justice.

**But contrary to this:** In *De Civitate Dei* 14 Augustine says, “Human society would have been happy as a whole if they”—viz., the first parents—“had not committed the evil that they passed on to their descendants, and if none of their posterity had perpetrated the iniquity that merited condemnation.” From this one is given to understand that even if the first parents had not sinned, some of their posterity would have been able to perpetrate iniquity. Therefore, they would not have been born confirmed in justice.

**I respond:** It does not seem possible that in the state of innocence children should have been born confirmed in justice. For it is clear that at their birth the children would not have had more perfection than their parents had in the state of generating them. But for as long as the parents were generating, they would not have been confirmed in justice. For a rational creature is confirmed in justice by the fact that he is beatified (*efficitur beata*) through the clear vision of God, who is such that one is unable not to inhere in Him when He is seen; for He is the very essence of goodness, from which no one can turn away, since nothing is desired and loved except under the notion of the good. (I say this as a general rule, since it can happen otherwise by a special privilege, as we believe happened in the case of the virgin mother of God (*sicut creditur de virgine matre Dei*.) But as soon as Adam had arrived at that beatitude by which he saw God through His essence, he would have been made spiritual in both mind and body, and his animal life, in which alone he would have made use of generation, would have ceased. Hence, it is clear that the children would not have been born confirmed in justice.

**Reply to objection 1:** If Adam had not sinned, he would not have generated from himself children of Gehenna, i.e., children who would have contracted from him the sin that is the cause of Gehenna. Yet they would have been able to become children of Gehenna by sinning through their own free choice. Or,

if they did not become children of Gehenna through sin, this would not have been because they were confirmed in justice. Instead, it would have been because of divine providence, through which they would have been preserved immune from sin.

**Reply to objection 2:** Anselm said this not by way of assertion (*asserendo*), but by way of conjecture (*opinando*). This is clear from his very mode of speaking when he says, “It *seems that* if they had lived, etc.”

**Reply to objection 3:** This argument is not efficacious even though, as is apparent from his words, Anselm seems to have been moved by it. For through their sin the first parents did not impose on their descendants a *necessity of sinning* in the sense that they would have been unable to return to justice; for this holds only in the case of the damned. Hence, neither would they have transmitted to their descendants a *necessity of not sinning* in the sense that they would have been altogether unable to sin; for this holds only in the case of the blessed in heaven.

**Reply to objection 4:** There is no similarity here between men and angels. For men have a power of free choice that can turn either way (*vertibile*) both before an act of choice and after an act of choice; by contrast, as was explained above when we were discussing the angels (q. 64, a. 2), this is not the case with angels.

## QUESTION 101

### The Condition of the Generated Offspring with respect to Knowledge

The next thing to consider is the condition of the offspring with respect to knowledge (*quantum ad scientiam*). On this topic there are two questions: (1) Would the children have been born perfect in knowledge? (2) Would they have had the full use of reason immediately upon birth?

#### Article 1

##### In the state of innocence, would the children have been born perfect in knowledge?

It seems that in the state of innocence the children would have been born perfect in knowledge (*in scientia perfecti*):

**Objection 1:** Adam would have generated children who were like himself. But as was explained above (q. 99, a. 1), Adam was perfect in knowledge. Therefore, children would have been born from him perfect in knowledge.

**Objection 2:** As Bede says, ignorance is caused by sin. But ignorance is a privation of knowledge. Therefore, before sin the children would have had every sort of knowledge (*omnem scientiam*) immediately upon birth.

**Objection 3:** The children would have had justice at their birth. But knowledge, which directs actions (*dirigit in agendis*), is required for justice. Therefore, they would have had knowledge as well.

**But contrary to this:** As *De Anima* 3 says, our soul is by nature “like a blank slate on which nothing has been written.” But the nature of the soul is the same now as it would have been then. Therefore, the souls of the children would have lacked knowledge at the beginning.

**I respond:** As was explained above (q. 94, a. 3), what is supernatural is such that one has faith in it on authority alone (*soli auctoritate creditur*); hence, in a case where such authority is lacking, we ought to be guided by what is natural (*sequi debemus naturae conditionem*).

Now as was explained above (q. 84, a. 6), it is natural for man to acquire knowledge (*scientia*) through his senses, and so the soul is united to a body because it needs the body for its own proper operation. This would not be the case if right at the very beginning the soul had knowledge that was not acquired through the sentient powers.

So one should claim that in the state of innocence children would not have been born perfect in knowledge, but that instead they would have acquired knowledge without difficulty as time went on, by discovery or by being taught.

**Reply to objection 1:** Being perfect in knowledge was an *individual* accident of the first parent—more specifically, insofar as he was established as the father and instructor of the whole human race. And so it was not with respect to this accident that he generated children who were similar to him, but only with respect to the natural or grace-related accidents that belong to *the whole nature*.

**Reply to objection 2:** Ignorance (*ignorantia*) is a privation of the knowledge that ought to be had at a given time—which would not have been the case with the children immediately upon birth, since they would have had the knowledge that was appropriate for them at that time. Hence, it was not ignorance (*ignorantia*) that existed in them, but rather an absence of knowledge (*nescientia*) with respect to certain things—something that Dionysius likewise posits in the holy angels in *De Caelesti Hierarchia* 7.

**Reply to objection 3:** The children would have had enough knowledge to direct them in those works of justice in which men are directed by the universal principles of the law, and they would have had this knowledge much more fully at that time than we have it by nature now. The same thing holds

for other universal principles as well.

## Article 2

### In the state of innocence, would the children have had the full use of reason immediately upon birth?

It seems that in the state of innocence the children would have had the full use of reason (*usum perfectum rationis*) immediately upon birth:

**Objection 1:** Children now do not have the perfect use of reason because their soul is weighed down (*aggravatur*) by their body. But this would not have been the case at that time, since, as Wisdom 9:15 says, “The corruptible body is a load upon the soul.” Therefore, before the sin and the corruption that followed upon the sin, children would have had the full use of reason immediately upon birth.

**Objection 2:** Certain other animals have the use of their natural talents immediately upon birth; for instance, a lamb immediately flees from a wolf. Therefore, *a fortiori*, in the state of innocence men would have had the full use of reason immediately upon birth.

**But contrary to this:** Nature proceeds from the imperfect to the perfect in all generated things. Therefore, the children would not have had the full use of reason immediately from the beginning.

**I respond:** As is clear from what was said above (q. 84, a. 7), the use of reason depends in a certain sense on the use of the sentient powers; hence, when the sensory power is inoperative and the interior sensory powers are impeded, a man does not have the full use of reason, as is obvious in the case of those who are asleep (*in dormientibus*) and those who are delirious (*in phreneticis*). But the sentient powers are powers of corporeal organs, and so when their organs are impeded, their acts must likewise be impeded and, as a result, the use of reason is impeded.

Now in children these powers are impeded because of the brain’s excessive moisture. And so children do not have the full use of reason, just as they do not have the full use of their other bodily members.

So in the state of innocence the children would not have had the full use of reason in the way that they were going to have it at a mature age. However, they would have had a more perfect use of reason than children do now with regard to those things that were appropriate to them in their state—just as was claimed above (q. 99, a. 1) about the use of their limbs as well.

**Reply to objection 1:** ‘Weight’ is added by the corruption of the body in the sense that the use of reason is impeded even with respect to what is appropriate for a man at each particular age.

**Reply to objection 2:** The other animals likewise do not have as perfect a use of their natural talents immediately at the beginning as they will later on. This is clear from the fact that birds teach their young to fly; and similar examples are found among the other kinds of animals. Yet, as was explained above (q. 99, a. 1), in the case of man there is a special impediment because of the abundance of moisture in the brain.

## QUESTION 102

### Man's Location, i.e., Paradise

The next thing to consider is man's location, i.e., Paradise. On this topic there are four questions: (1) Is Paradise a corporeal place? (2) Is Paradise a place fit for human habitation? (3) What was man placed in Paradise for? (4) Was it fitting for man to be made in Paradise?

#### Article 1

##### Is Paradise a corporeal place?

It seems that Paradise is not a corporeal place:

**Objection 1:** Bede says, "Paradise reaches to the lunar circle." But no earthly place can be like that, both because (a) it is contrary to earth's nature that it should be so high up (*tantum elevaretur*), and also because (b) the region of fire, which consumes earth, lies under the lunar globe (*sub globo lunari*). Therefore, Paradise is not a corporeal place.

**Objection 2:** As is clear from Genesis 2:10-15, Scripture mentions that four rivers have their source in Paradise. But the rivers that are named in that passage have obvious sources in other places, as is likewise clear from the Philosopher in *Meteorologia*. Therefore, Paradise is not a corporeal place.

**Objection 3:** Some have very diligently inquired into all the places in the habitable regions of the earth (*omnia loca terrae habitabilis*), but they make no mention of the location of Paradise. Therefore, Paradise does not seem to be a corporeal place.

**Objection 4:** The tree of life is described as existing in Paradise. But the tree of life is something spiritual; for Proverbs 3:18 says of Wisdom, "She is a tree of life for those who lay hold of her." Therefore, Paradise is likewise a spiritual place and not a corporeal place.

**Objection 5:** If Paradise is a corporeal place, then the trees in Paradise must be corporeal. But this does not seem to be the case, since corporeal trees were produced on the third day, whereas Genesis 2:8-9 talks of the trees being planted in Paradise after the work of the six days. Therefore, Paradise is not a corporeal place.

**But contrary to this:** In *Super Genesim ad Litteram* 8 Augustine says, "There are three general opinions about Paradise: One is held by those who claim that Paradise is to be understood only corporeally; the second is held by those who claim that it is to be understood only spiritually; and the third is held by those who take Paradise in both ways. This last opinion, I acknowledge, seems right to me."

**I respond:** As Augustine says in *De Civitate Dei* 13, "Let no one silence what can plausibly be said by way of a spiritual understanding of Paradise—as long as there is a belief in the most faithful truthfulness, preserved by the narrative, of the history of the events." For what is said about Paradise in Sacred Scripture is proposed in the manner of a historical narrative (*per modum narrationis historicae*), and in everything that Scripture hands down in this way there is a historical truth (*veritas historiae*) which should be held on to as the foundation and upon which the spiritual interpretations are to be built.

Therefore, as Isidore says in *Etymologiae*, Paradise is "a place set up in the East, the word for which is from the Greek and is translated by the Latin for 'garden' (*hortus*)." Now the site is appropriately said to be in the East. For it is necessary to believe that Paradise was set up in the most noble part of the whole earth. And since, as the Philosopher makes clear in *De Caelo* 2, the East is the right side of the heavens, and since the right (*dextera*) is more noble than the left (*sinistra*), it was appropriate for God to situate the earthly Paradise in the East.

**Reply to objection 1:** Bede's words are not true if they are taken in their most obvious sense.

However, they could be taken to mean that Paradise rises up to the place of the lunar globe not in terms of its height, but according to a certain likeness. For in Paradise “the air is at a constant moderate temperature (*perpetua aeris temperies*),” as Isidore says, and in this it is like the celestial bodies, which are not subject to contrary extremes (*quae sunt absque contrarietate*). And the reason why the lunar globe is mentioned more often than the other spheres is that the lunar globe is the boundary of the celestial bodies closest to us (*versus nos*) and, in addition, of all the celestial bodies it is the moon that is most like the earth. It even has nebulous shadows, as if it were verging on opaqueness.

Now there are some who claim that Paradise was reaching up to the lunar globe in the sense that it reached up to the middle part of the atmosphere, where rain and wind and things of this sort are generated. For control over these evaporations is attributed especially to the moon.

However, if this were true, then the place would not be fit for human habitation, both because the weather is especially inclement there (*ibi est maxima intemperies*), and also because that place is not congenial to the human constitution, in the way that the lower atmosphere closer to the earth is.

**Reply to objection 2:** As Augustine says in *Super Genesim ad Litteram* 8, “One should hold that since the place of Paradise is very far removed from human cognition, the rivers whose sources are said to be known went underground at some point and after a long course through many regions came up to the surface in other places. For who is ignorant of the fact that this is what many streams commonly do?”

**Reply to objection 3:** The place in question was cut off from where we live by obstacles—such as mountains or oceans or some very hot region—which cannot be crossed. And this is why the writers of various regions made no mention of the place.

**Reply to objection 4:** The tree of life is a material tree that is so called because, as was explained above (q. 97, a. 4), its fruit had the power to conserve life. And yet it signified something spiritually, just as the rock in the desert was something material and yet signified Christ (see 1 Corinthians 10:4).

Similarly, the tree of the knowledge of good and evil was a material tree that was so named because of something that would happen in the future. For after man ate of it, he learned, through the experience of punishment, what the difference was between the good of obedience and the evil of disobedience. And yet, spiritually, the tree was also able to signify free choice, as some claim.

**Reply to objection 5:** According to Augustine, on the third day plants were produced not in actuality but only with respect to certain seminal natures (*rationes seminales*), and after the work of the six days both the plants in Paradise and the other plants were produced in actuality.

By contrast, according to the other saints, one must claim that all the plants were produced in actuality on the third day, including the trees of Paradise, and that what is said about the planting of the trees in Paradise after the work of the six days is to be understood as having been said by way of a recapitulation. This is why our text says, “And the Lord God *had planted* a Paradise of pleasure from the beginning” (Genesis 2:8).

## Article 2

### Was Paradise a place fit for human habitation?

It seems that Paradise was not a place fit for human habitation (*non fuerit locus conveniens habitationi humanae*):

**Objection 1:** Men and angels are both alike ordered toward beatitude. But angels were immediately, from the beginning, made inhabitants of the place of the blessed, viz., the empyrean heaven.

Therefore, that is where man's place to live should have been set up as well.

**Objection 2:** If a place is fitting for man (*debetur homini*), then it is fitting for him either by reason of his soul or by reason of his body. If by reason of his soul, then the place that is fitting for him is heaven, which seems to be the soul's natural place, since the desire for heaven is instilled into everyone. On the other hand, if by reason of his body, then the place that is fitting for him is no different from the place that is fitting for the other animals. Therefore, there is no way in which Paradise was a place fit for human habitation.

**Objection 3:** A place that contains nothing located within it is senseless. But after the sin Paradise was not a place of human habitation. Therefore, if it is a place fit for human habitation, then it seems that it has been made by God for nothing.

**Objection 4:** A place with a temperate climate (*locus temperatus*) is fitting for man because he has a temperate constitution. But the place of Paradise did not have a temperate climate. For it is said to be located on the equator (*sub aequinoctiali circulo*), which seems to be a very hot place, since twice a year the sun passes over the tops of the heads of those who live there. Therefore, Paradise is not a place fit for human habitation.

**But contrary to this:** Damascene says of Paradise, "It was a Godly region, and it was a worthy dwelling place for the one who was made in God's image (*secundum imaginem Dei*)."

**I respond:** As was explained above (q. 97, a. 1), man was incorruptible and immortal not because his body had a disposition for incorruptibility, but because he had a power of the soul for preserving the body from corruption. Now the human body can be corrupted both from within and from without. As was explained above (q. 97, a. 4), it is corrupted from within by the loss of moisture through old age, and the first man was able to counteract this sort of corruption by taking nutrition. Among the things that corrupt the body from without, the main one seems to be an extreme air temperature (*distemperatus aer*), and so this sort of corruption is counteracted mainly by the temperateness of the air.

Now in Paradise both these types of counteraction are found, since, as Damascene says, Paradise "is a place shining through with very temperate, very fine, and very pure air, always decorated with flowering plants." Hence, it is clear that Paradise is a place fit for human habitation, in keeping with the state of initial immortality.

**Reply to objection 1:** The empyrean heaven (a) is the highest of all corporeal places and (b) lies beyond all mutability.

Given the first of these features, it is a place congenial to the angelic nature, since, as Augustine says in *De Trinitate* 3, "God governs the corporeal creature through the spiritual creature." Hence, it is fitting that the spiritual nature should be set up above everything corporeal, as if presiding over it.

On the other hand, given the second of these features, it is a place appropriate for the state of beatitude, which is grounded in maximal stability. So, then, the place of beatitude is fit for angels according to their nature, and that is why they were created there.

However, the place of beatitude does not befit man according to his *nature*, since he does not preside over all corporeal creatures in the sense of governing them; instead, it befits him only by reason of *beatitude*. Hence, he was not put into the empyrean heaven at the beginning, but instead he was to be transported there in the state of ultimate beatitude.

**Reply to objection 2:** It is ridiculous to claim that there is a natural place for the soul or for any spiritual substance. However, a special place may be attributed to an incorporeal creature because of some sort of fittingness (*per congruentiam quandam*).

Thus, the earthly Paradise is a place that is fit for man both with respect to his soul and with respect to his body, viz., insofar as his soul had a power for preserving the human body from corruption—something that did not belong to the other animals. And so, as Damascene says, "Nothing

non-rational lived in Paradise,” even though by a certain dispensation the animals were brought there to Adam by God, and even though the serpent entered there by an act of the devil.

**Reply to objection 3:** It is not the case that this place is senseless because men do not live there after the sin—just as it is likewise not senseless for man to have been given a certain sort of immortality that was not going to be preserved. For things of this sort make God’s kindness manifest to man, and they also make manifest what man lost by sinning.

Still, it is said that Enoch and Elijah are now living in that Paradise.

**Reply to objection 4:** Those who claim that Paradise is located on the equator are of the opinion that a place on the equator has a thoroughly temperate climate, because day and night are equal all of the time, and because the sun is never so far from the inhabitants that they would have an abundance of cold weather. Neither—so the claim goes—do they have an excess of hot weather, since even if the sun passes directly overhead, it nonetheless does not stay in that position for a long time.

However, in *Meteorologia* Aristotle explicitly claims that the region in question is uninhabitable because of its heat. This seems more likely, since some lands in which the sun is never directly overhead are intemperately hot just because of their closeness to the sun.

But whatever the truth might be about this, one should believe that Paradise was set up in a place with a very temperate climate, either on the equator or somewhere else.

### Article 3

#### Was man put into Paradise to cultivate it and to guard it?

It seems that man was not put into Paradise to cultivate it and to guard it (*ut operaretur et custodiret illum*):

**Objection 1:** What was introduced as a punishment for sin would not have existed in Paradise in the state of innocence. But as Genesis 3:17 says, the cultivation of the soil (*agricultura*) was introduced as a punishment for sin. Therefore, man was not put into Paradise to cultivate it.

**Objection 2:** Guarding is unnecessary where there is no fear of a violent invader. But in Paradise there was no fear of a violent invader. Therefore, it was unnecessary to guard Paradise.

**Objection 3:** If man was put into Paradise to cultivate it and to guard it, then it seems to follow that man was made for the sake of Paradise, and not vice versa—which seems false. Therefore, man was not put into Paradise to work in it and to guard it.

**But contrary to this:** Genesis 2:15 says, “The Lord God took the man, and put him into the Paradise of pleasure as something to cultivate and guard (*posuit illum in Paradiso voluptatis ut operaretur et custodiret illum*).”

**I respond:** As Augustine points out in *Super Genesim ad Litteram* 8, there are two ways to understand this passage from Genesis.

On one interpretation, God put man into Paradise in order for God Himself to cultivate and to guard man—to cultivate him, I repeat, by justifying man, in order that He might guard man against every sort of corruption and evil. For if God’s operation withdraws from man, then man is continually in the dark (*continuo obtenebratur*), just as the air becomes dark if the influx of light ceases.

The second possible interpretation is that man is the one who is to cultivate Paradise and guard it. Nor would this work have been laborious, as it was to be after the sin. Rather, it would have been pleasant, because of the experience of the nature of virtue. Moreover, the sort of guarding in question would not have been against invaders, but would instead have been for the purpose of man’s guarding

Paradise for himself, lest he lose it by sinning. And all of this redounded to man's good, and in this sense Paradise is ordered to the good of man, and not vice versa.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

#### Article 4

##### Was the man made in Paradise?

It seems that the man was made in Paradise (*homo factus est in Paradiso*):

**Objection 1:** The angels were created in the place of their habitation, viz., the empyrean heaven. But before the sin Paradise was a place fit for human habitation. Therefore, it seems that the man ought to have been made in Paradise.

**Objection 2:** The other animals are conserved in the place of their generation, e.g., fish in water and walking animals on the earth, from which they were produced. But as has been explained (q. 97, a. 4), man would have been conserved in Paradise. Therefore, he ought to have been made in Paradise.

**Objection 3:** The woman was made in Paradise. But the man has more dignity than the woman. Therefore, *a fortiori*, the man ought to have been made in Paradise (*multo magis vir debuit fieri in Paradiso*).

**But contrary to this:** Genesis 2:15 says, "God took the man, and put him into Paradise."

**I respond:** Paradise was a place fit for human habitation, given the lack of corruption in the initial state. But this lack of corruption belonged to man not by his nature, but by a supernatural gift from God. Therefore, in order that this gift might be imputed to God's grace and not to human nature, God made man outside of Paradise and afterwards put him into Paradise, in order that he might live there for the whole time of his animal life. Afterwards, when he had attained his spiritual life, he was to be transported to heaven.

**Reply to objection 1:** The empyrean heaven is a place fit for the angels even with respect to their nature, and that is why they were created there.

**Reply to objection 2:** The same thing should be said in reply to the second objection. For the places in question were fit for the animals with respect to their nature.

**Reply to objection 3:** The woman was made in Paradise not because of her own dignity, but because of the dignity of the principle from which her body was formed. The children likewise would have been born in Paradise, because the parents had already been put there.

## QUESTION 103

### The Governance of Things in General

After the preceding treatments of (a) the creation of things (questions 44-49) and of (b) the distinctions among them (questions 50-102), what remains is to consider, in the third place, (c) the governance of things. We will consider this, first, in general (question 103) and then with respect to the specific effects of governance (questions 104-119).

On the first topic there are eight questions: (1) Is the world governed by anyone? (2) What is the end of governance itself? (3) Is the world governed by a single being? (4) What are the effects of governance? (5) Are all things subject to God's governance? (6) Are all things directly governed by God? (7) Are there cases in which God's governance is frustrated (*cassetur*)? (8) Is there anything contrary to (*aliquid contranitur*) God's providence?

#### Article 1

##### Is the world governed by anyone?

It seems that the world is not governed by anyone:

**Objection 1:** Being governed belongs to those things that act or are moved for the sake of an end. But natural things, which are a large part of the world, do not act and are not moved for the sake of an end, since they have no cognition of an end. Therefore, the world is not governed.

**Objection 2:** Being governed belongs properly to those things that are moved toward something. But the world does not seem to be moved toward anything, but instead has stability within itself. Therefore, it is not governed.

**Objection 3:** That which has a necessity by which it is determined to a single outcome does not need an exterior governor. But the principal parts of the world are determined by necessity to a single outcome in their acts and movements. Therefore, the world does not need governance.

**But contrary to this:** Wisdom 14:3 says, "You, Father, govern all things by your providence." And in *De Consolatione Philosophiae* Boethius says, "You who govern the world by your everlasting plan (*perpetua ratione*)."

**I respond:** Some ancient philosophers denied governance to the world, claiming that everything occurs by chance (*fortuito agi*). But there are two ways to show that this position is impossible:

First, from what is apparent in *the things themselves*. For we see among natural things that what is better occurs either always or for the most part (*semper aut in pluribus*). But this would not happen if natural things were not directed by some sort of providence toward the good as an end (*ad finem boni*)—which is what it is to govern. Hence, the fixed order of things itself clearly demonstrates the governance of the world. As Tully, quoting Aristotle, says in *De Natura Deorum*, if someone entered a well-ordered house, he would, because of the very order within the house, arrive at the idea of someone responsible for the order (*ordinatoris rationem perpenderet*).

Second, the same point is apparent from a consideration of *God's goodness*, through which, as is clear from what was said above (q. 44, a. 4 and q. 65, a. 2), things were brought into being. For since it belongs to the best to produce the best, it would not befit God's surpassing goodness not to bring the things He produced to perfection. But the ultimate perfection of each thing lies in its attaining its end. Hence, it pertains to God's goodness that just as He has brought things into being, so too He will lead them to their end—which is what it is to govern them.

**Reply to objection 1:** There are two senses in which something acts or is moved for the sake of an end:

In one sense, the thing moves itself to an end, in the way that men and other rational creatures do, and it belongs to such beings to have cognition of the nature of the end and of the means to that end.

However, some things are said to act or to be moved for the sake of an end in the sense that they are acted upon or directed to their end by another, in the way that an arrow moves toward the target because it is directed by the archer, who has a cognition of the end even though the arrow does not. Hence, just as the arrow's motion to a determinate end clearly demonstrates that the arrow is directed by someone who knows the end, so too the fixed course of natural things that lack cognition clearly demonstrates that the world is governed according to some plan (*ratione aliqua gubernari*).

**Reply to objection 2:** In all created things there is something stable—at least primary matter—and something else that involves movement (*motus*), where we are also including operation under 'movement'. And a thing needs governance in both respects. For the very feature that is stable in things would fall into nothingness (since it comes from nothing) if it were not preserved by the hand of the one who exercises governance. This will become clear below (q. 104, a. 1).

**Reply to objection 3:** The natural necessity inherent in things that are determined to a single outcome is a certain impression that comes from God insofar as He is directing things to their end—just as the necessity by which an arrow acts in tending toward a fixed target is an impression that comes from the archer and not from the arrow itself. However, the two cases differ in this: What a creature receives from God is its nature, whereas what a man impresses on natural things over and beyond their natures involves violence. Hence, just as the necessity of violence in the arrow's motion demonstrates that an archer is directing the arrow, so the natural necessity that belongs to creatures displays the governance of divine providence.

## Article 2

### Is the end of the governance of the world something that exists outside the world?

It seems that the end of the governance of the world is not something that exists outside the world:

**Objection 1:** The end of the governance of a thing is what the thing is led to. But what a thing is led to is some good within the thing itself; for instance, a sick man is led to health, which is a good that exists within him. Therefore, the end of the governance of things is not any extrinsic good, but is instead a good that exists within the things themselves.

**Objection 2:** In *Ethics* 1 the Philosopher says, "Among ends, some are doings (*operationes*) and some are things that are done (*operata*)." But nothing extrinsic can be something that is done by the whole universe, and a doing exists in the things that are done. Therefore, nothing extrinsic can be the end of the governance of things.

**Objection 3:** The good of a multitude seems to be order and peace, which is itself "a tranquility of order," as Augustine says in *De Civitate Dei* 19. But the world consists in a certain multitude of things. Therefore, the end of the governance of the world is a peaceful order, which exists among the things themselves. Therefore, the end of the governance of things is not anything extrinsic.

**But contrary to this:** Proverbs 16:4 says, "The Lord has made all things for Himself." But He Himself exists outside the entire order of the universe. Therefore, the end of things is a certain extrinsic good.

**I respond:** Since the end corresponds to the source (*principium*), it cannot happen that the end of things remains unknown, given that the source is known. Therefore, since, as is apparent from what was said above (q. 44, aa. 1 and 2), the source of things is something extrinsic to the whole universe, viz.,

God, the end of things must likewise be a certain extrinsic good.

This is clear from reason. For it is manifest that the good has the character of an end. Hence, the end of any given particular thing is a certain particular good, whereas the universal end of all things is a certain universal good. But a universal good is that which is good *per se* and through its essence; that is, it is the very essence of goodness, whereas a particular good is a good by participation (*est participative bonum*). Now it is clear that within the whole universe of creatures there is no good which is not a good by participation. Hence, the good that is the end of the whole universe must be extrinsic to the whole universe.

**Reply to objection 1:** There are many ways in which we attain a good: (a) as a form that exists within us, such as health or knowledge; (b) as something done by us, in the way that a builder attains his end by making a house; (c) as a good that is had or possessed, in the way that someone who buys a field attains his end by possessing the field. Hence, nothing prevents it from being the case that what the universe is led to is some extrinsic good.

**Reply to objection 2:** The Philosopher is talking about the ends of crafts, some of which have the doings themselves as their ends, in the way that a harpist's end is the playing of the harp. By contrast, other crafts have something that is done as their end, in the way that a builder's end is not the act of building, but the house.

Now it is possible for something extrinsic to be the end not only as something that is done, but also as something that is possessed or had—or even as something that is represented, as when we say that Hercules is the end of an image that is made in order to represent him. So, then, it can be said that a good that is extrinsic to the whole universe is the end of the governance of things as something that is possessed or represented, since each thing tends toward participating in this good and toward being like it to the extent that it can be.

**Reply to objection 3:** To be sure, one end of the universe is a good that exists within it, viz., the order of the universe itself. But this good is not the ultimate end; instead, it is itself ordered to an extrinsic good as its ultimate end—in the same way that, as *Metaphysics* 12 says, the order of an army is itself ordered toward the general.

### Article 3

#### Is the world governed by a single being?

It seems that the world is not governed by a single being:

**Objection 1:** We judge a cause by its effects. But in the governance of things it appears that there is no uniformity in the way that things act and are moved. For some of them act and are moved contingently and others necessarily, and there are other types of differences as well. Therefore, the world is not governed by a single being.

**Objection 2:** Things that are governed by a single being conflict with one another only because of a lack of knowledge or a lack of power on the part of the governor—both of which are far removed from God. But as is apparent in the case of contraries, created things conflict with one another and struggle against one another. Therefore, the world is not governed by a single being.

**Objection 3:** In nature one always finds what is for the better. But as Ecclesiastes 4:9 says, “It is better that two should be together than one.” Therefore, the world is governed by many beings and not just one.

**But contrary to this:** We confess a single God and a single Lord; for as 1 Corinthians 8:6 says,

“To us there is one God, the Father, and one Lord.” But both of these names involve governance, since the governance of subjects pertains to a lord (*dominus*), and, as was explained above (q. 13, a. 8), the name ‘God’ (*Deus*) is taken from providence. Therefore, the world is governed by a single being.

**I respond:** One must claim that the world is governed by a single being. For since the end of the governance of the world is something that is good through its essence (*essentialiter bonum*), i.e., the very best thing, the governance of the world must be the best. But the best governance is governance carried out by a single governor. The reason for this is that to govern is nothing other than to direct the things governed to their end, which is a good. But oneness (*unitas*) is relevant to the notion of goodness, as Boethius proves in *De Consolatione Philosophiae* 3 by appeal to the fact that just as all things desire the good, so too they desire oneness, without which they cannot exist. For each thing exists to the extent that it is one; hence, we see that things resist being divided as much as they can, and that the dissolution of any given thing stems from some defect in that thing. And so oneness or peace is what the intention of one who governs a multitude aims for. But a *per se* cause of oneness is itself a single thing. For it is clear that unless a plurality of beings are themselves united in some way, they cannot unite a multitude of things and bring them together in harmony. But that which is one *per se* can be a cause of oneness in a better and more fitting way than many united beings can be. Hence, a multitude is better governed by a single being than by many beings. Therefore, it follows that the best sort of governance of the world is governance by a single governor. And this is what the Philosopher asserts in *Metaphysics* 12: “Things refuse to be ill governed; and a multiplicity of authorities is not a good thing; therefore, there should be a single ruler.”

**Reply to objection 1:** Motion is an act of the thing moved that comes from the mover. Therefore, deformity in the motions stems not from a diversity of governors but instead from the diversity of the things moved—a diversity that, as was explained above (q. 47, aa. 1-2 and q. 48, a. 2), is required for the perfection of the universe.

**Reply to objection 2:** Even if contraries conflict with one another with respect to certain proximate ends, nonetheless, with respect to the ultimate end they agree with one another in the sense that they are included within the single order of the universe.

**Reply to objection 3:** Among particular goods two are better than one, but no addition of goodness can be made to that which is good through its essence (*bonum essentialiter*).

#### Article 4

##### Is there just a single effect of the governance of the world, or are there many effects?

It seems that there is just a single effect of the governance of the world, and not many effects:

**Objection 1:** The effect of governance seems to be that which is caused by the governance in the things that are governed. But this is a single thing, viz., the good of order; this is clear in the case of an army. Therefore, there is a single effect of the governance of the world.

**Objection 2:** Just a single thing is apt to proceed from a single thing. But as has been shown (a. 3), the world is governed by a single being. Therefore, there is likewise just a single effect of governance.

**Objection 3:** If it is not the case that because of the oneness of the governor there is just a single effect of governance, then the effect will have to be multiplied in accord with the multitude of the things that are governed. But the things are uncountable to us. Therefore, the effects of governance will not be able to be comprehended under any fixed number.

**But contrary to this:** Dionysius says, “God includes all things and fulfills all things by His perfect providence and goodness.” But governance pertains to providence. Therefore, there are certain determinate effects of divine governance.

**I respond:** The effect of each action can be gathered from its end, since it is through an operation that the end is attained. Now the end of the one who governs the universe is something that is good through its essence, and all things tend toward participating in this good and being like it. Therefore, ‘effect of governance’ can be understood in three ways:

First, on the part of the end itself, and in this sense there is a single effect of governance, viz., being like the highest good.

Second, the effect of governance can be considered with respect to those things by which a creature is led to be like God. And in this sense there are two general effects of governance. For a creature becomes like God in two respects, viz., (a) with respect to God’s being good, insofar as the creature is good, and (b) with respect to God’s being a cause of goodness for others, insofar as one creature moves another to goodness. Hence, on this score there are two effects of governance, viz., the conservation of things in goodness and the movement of things toward goodness.

Third, the effect of governance can be considered in particular, and in this sense the effects are uncountable to us.

**Reply to objection 1:** The order of the universe includes within itself both (a) the conservation of the diverse things that have been made by God and also (b) their motion, since it is in these two things that the order among entities is found, viz., insofar as one is better than another and insofar as one is moved by another.

**Reply to objection 2 and objection 3:** The replies to the other two objections are clear from what has been said.

## Article 5

### Are all things subject to God’s governance?

It seems that not all things are subject to God’s governance:

**Objection 1:** Ecclesiastes 9:11 says, “I saw that under the sun the race is not to the swift, nor the battle to the strong, nor bread to the wise, nor riches to the learned, nor favor to the skillful, but time and chance in all.” But what is subject to someone’s governance does not occur by chance. Therefore, things under the sun are not subject to God’s governance.

**Objection 2:** In 1 Corinthians 9:9 the Apostle says, “God has no care for oxen.” But everyone has care for those things that are governed by him. Therefore, not all things are subject to God’s governance.

**Objection 3:** That which can govern itself does not seem to need the governance of another. But a rational creature is able to govern himself, since he has dominion over his acts and acts on his own (*agat per se*); again, he is not just acted upon by another—a feature that seems to belong to those things that are governed. Therefore, not all things are subject to God’s governance.

**But contrary to this:** In *De Civitate Dei* 5 Augustine says, “It is not just heaven and earth, or men and angels, but even the bowels of the lowest and most contemptible animal, the wing of the bird, the flower of the plant, and the leaf of the tree, that God has not left without agreement among their parts.” Therefore, all things are subject to His governance.

**I respond:** The argument for God’s being a governor of things is the same as the argument for His being their cause, since it belongs to the same being to produce a thing and to give it perfection, where

the latter pertains to a governor. But as was shown above (q. 44, aa. 1 and 2), God is a cause not of one particular genus of things, but of the universal whole of being. Hence, just as nothing can exist unless it is created by God, so too nothing can exist which is not subject to His governance.

This same point is also clear from the notion of an end. For the governance of any particular thing extends as far as the end of governance can extend. But as was shown above (a. 2), the end of God's governance is His own goodness itself. So since, as is clear from what was said above (q. 44, a. 4 and q. 65, a.2), there cannot be anything that is not ordered to God's goodness as an end, it is impossible that any beings should be withdrawn from God's governance.

Therefore, it was stupid to hold the opinion of those who claim that lower corruptible things, or even singular things, or even human affairs, are not governed by God. It is into the mouths of such people that Ezechiel 9:9 puts the words, "The Lord has abandoned the earth."

**Reply to objection 1:** What are said to be "under the sun" are those things that are generated and corrupted in accord with the sun's motion. In all such things there is chance—not in the sense that everything that happens in them occurs by chance, but in the sense that something fortuitous is found in each of them. And the very fact that something fortuitous is found in things of this sort demonstrates that they are subject to some sort of governance. For if corruptible things of this sort were not governed by some superior, then they—especially the ones that lack cognition—would not tend toward anything at all, and so nothing that 'lies outside of their tendencies' (*praeter intentionem*) would occur in them—which is what makes for the notion of chance. Hence, in order that he might show that chance events stem from the order of a higher cause, the author does not say simply that he sees *chance* in all things; rather, he says that he sees *time and chance*, since chance defects are found in these things in accord with some temporal ordering.

**Reply to objection 2:** Governance is a certain change (*mutatio*) in the things governed that comes from the governor. But as *Physics* 3 says, motion is "an act of the thing moved that comes from the mover." Now every act is proportioned to the thing whose act it is. And so diverse things that are moved must be moved in diverse ways, even in relation to the movement caused by a single mover. So, then, in accord with the single craft of God the governor, things are governed in diverse ways which correspond to their diversity.

For there are some things that act *per se* by their own nature, in the sense of having dominion over their acts, and these things are governed by God not only by being moved by God Himself operating within them, but also by being induced by Him toward what is good and being held back from what is evil, through His precepts and prohibitions and through rewards and punishments.

On the other hand, non-rational creatures, which do not act but are only acted upon, are not governed in this way by God. So, then, when the Apostle says that God does not care about oxen, he is not totally removing oxen from the care of the divine governor; rather, he is removing them only with respect to that mode of governance that belongs properly to rational creatures.

**Reply to objection 3:** A rational creature governs himself by his intellect and will, both of which need to be guided and perfected by God's intellect and will. And so in addition to the governance by which a rational creature governs himself as the master of his own acts, he needs to be governed by God.

## Article 6

### Are all things governed directly by God?

It seems that all things are governed directly (*immediate*) by God:

**Objection 1:** Gregory of Nyssa rejects the opinion of Plato, who divided providence into three

parts: The first providence belongs to the highest God, who provides for all celestial affairs and all universals; the second providence he claimed to belong to the secondary gods, who travel around the heavens, with respect to what occurs in the realm of generation and corruption; and the third providence he claimed to belong to certain daimons, who are the guardians of human actions around the earth. Therefore, it seems that all things are governed directly by God.

**Objection 2:** As *Physics* 8 says, it is better, if possible, for something to be done by a single agent rather than by many. But God is able to govern all things by Himself and without any mediating causes. Therefore, it seems that He governs all things directly.

**Objection 3:** There is nothing defective or imperfect in God. But it seems to involve a defect on the part of a governor that he should govern by mediators; for instance, an earthly governor has to have ministers of his governance because he himself is not sufficient to do everything and because he is not present everywhere in his kingdom. Therefore, God governs all things directly.

**But contrary to this:** In *De Trinitate* 3 Augustine says, “In some sense the crasser lower bodies are ruled with a certain order by the more subtle and powerful bodies; in the same way, all bodies are ruled by the rational spirit of life, and the one who sins and deserts the rational spirit of life is ruled by the pious and just rational spirit of life, and the latter is ruled by God.”

**I respond:** There are two things to consider in governance, viz., *the plan of governance (ratio gubernationis)*, which is providence itself, and *the execution of the plan (executio)*. Therefore, as regards the plan of governance, God governs all things directly, while as regards the execution of governance, God governs certain things by the mediation of other things.

The reason for this is that since God is the very essence of goodness, everything must be attributed to God in accord with what is best for it. But the best in every type of practical reasoning or practical cognition (which includes plans of governance) consists in having cognition of the particulars that have actuality; for instance, the best physician is not the one who takes only universals into account, but the one who can likewise take into account the minutest particulars. And the same is clear in other cases.

Hence, one must claim that God has a plan for governing all things, even the most minute particulars. But since through governance the things which are governed are led to perfection, the governance will be better to the extent that more perfection is communicated by the governor to the things governed. But it is a greater perfection for something to be good in itself and also to be a cause of goodness for others than if it were only good in itself. And so God governs things in such a way that He sets up certain things as causes of others in governing—just as if a teacher were to make his students not only knowers but also teachers of others.

**Reply to objection 1:** Plato’s opinion is rejected because he claimed that God did not directly govern all things even with respect to the *plan* of governance. This is clear from the fact that he divided *providence*, which is the plan of governance, into three parts.

**Reply to objection 2:** If God governed alone, then causal perfection would be denied to things. Hence, it is not the case that everything that is done by many could be done by one.

**Reply to objection 3:** In the case of an earthly king, having executors of his governance does not bespeak imperfection alone. It also bespeaks the king’s dignity, since his regal power is rendered more excellent (*praeclarior*) by the order of his ministers.

### Article 7

#### Is it possible for anything to occur outside the order of God's governance?

It seems that it is possible for something to occur outside the order of God's governance:

**Objection 1:** In *De Consolatione Philosophiae* 3 Boethius says, "God disposes all things for the good (*per bonum*).” Therefore, if nothing among the things occurred outside the order of divine governance, then it would follow that there is no evil among things.

**Objection 2:** Nothing that occurs in accord with a governor's preordination occurs by chance. Therefore, if nothing among the things occurs outside the order of God's governance, then it follows that nothing among the things occurs fortuitously or by chance.

**Objection 3:** The order of God's governance is fixed and immutable, since it is in keeping with an eternal plan. Therefore, if nothing among the things could occur outside the order of God's governance, it would follow that all things occur by necessity and that there is nothing contingent among the things—which is absurd. Therefore, it is possible that among the things something happens outside the order of God's governance.

**But contrary to this:** Esther 13:9 says, "O Lord, God, almighty king, for all things are in your power, and there is no one who can resist your will."

**I respond:** It is possible for an effect to occur outside the order of a particular cause, but not outside the order of the universal cause. The reason for this is that nothing occurs outside the order of a particular cause except because of some other impeding cause that has to be traced back to the first universal cause. For instance, indigestion occurs outside the order of the nutritive power because of some impediment—e.g., the thickness of a piece of food—that has to be traced back to some other cause, and so on back to the first universal cause.

Therefore, since God is the first *universal* cause—not just the first cause within some genus, but the cause in general of *all* being—it is impossible for anything to occur outside the order of God's governance. Instead, by the very fact that something seems in some respect to depart from the order of God's providence when it is considered relative to some particular cause, it must be the case that it falls back under that same order relative to some other cause.

**Reply to objection 1:** There is nothing in the world that is totally evil, since, as was explained above (q. 48, a. 3), evil is always grounded in what is good. And so a thing is called evil because it departs from the order of some particular good. However, if it totally departed from the order of God's providence, then it would be absolutely nothing.

**Reply to objection 2:** Some occurrences among things are said to happen by chance because of their relation to particular causes, outside of whose order they occur. But as far as God's providence is concerned, "nothing happens by chance in the world," as Augustine puts it in *83 Quaestiones*.

**Reply to objection 3:** Some effects are called contingent because of their relation to proximate causes, which are able to fail in their effects—and not because something can happen outside the whole order of God's governance. For the very fact that something happens outside the order of a given proximate cause stems from a cause that is subject to God's governance.

## Article 8

### Can anything resist the order of God's governance?

It seems that something can resist the order of God's governance:

**Objection 1:** Isaiah 3:8 says, "Their tongue and their devices are against the Lord."

**Objection 2:** No king justly punishes those who do not resist his ordinances. Therefore, if there were nothing opposed to God's ordinances, then no one would be justly punished by God.

**Objection 3:** Each thing is subject to the order of God's governance. But one thing does violence to another. Therefore, some things are opposed to God's governance.

**But contrary to this:** In *De Consolatione Philosophiae* 3 Boethius says, "There is nothing that wants to or is able to resist this highest good. Therefore, it is the highest good that 'rules over all things with power and disposes things agreeably'"—as Wisdom 8:1 says of God's wisdom.

**I respond:** There are two ways to think about the order of God's providence: (a) first, *in general*, viz., in accord with what proceeds from the governing cause of the whole, and (b) second, *in its specifics*, viz., in accord with what proceeds from a particular cause that is executing God's providence.

In the first sense, nothing is contrary to the order of God's governance. This is clear from two considerations. First, it is clear from the fact that the order of God's governance tends as a whole toward the good, and each thing, in its operations and inclinations, tends only toward the good, since, as Dionysius puts it, "No one acts with an eye toward evil (*respicens malum*)."<sup>2</sup> Second, the same point is apparent from the fact that, as was explained above (aa. 1 and 5), every inclination of a natural or voluntary being is nothing other than a certain impression that comes from the first mover, just as an arrow's inclination toward a determinate target is nothing other than a certain impression that comes from the archer. Hence, all things that act, whether naturally or voluntarily, attain to what is divinely ordained as if by their own accord. This is why God is said to "dispose all things agreeably."<sup>3</sup>

**Reply to objection 1:** Some are said to think or speak or act against God not because they totally resist the order of God's governance, since even sinners intend some good, but rather because they are opposed to some determinate good that is appropriate for them, given their nature or status. And this is why they are justly punished by God.

**Reply to objection 2:** From this the reply to the second objection is clear.

**Reply to objection 3:** The fact that one thing does violence to another shows that something can resist the order that stems from some particular cause, but not the order that depends on the universal cause of the whole.

## QUESTION 104

### The Specific Effects of Divine Governance

Next we have to consider the specific effects of God's governance. And on this topic there are four questions: (1) Do creatures need to be conserved in being (*in esse*) by God? (2) Are creatures conserved by God directly (*immediate*)? (3) Is God able to reduce a thing to nothingness? (4) Is anything in fact reduced to nothingness?

#### Article 1

##### Do creatures need to be conserved in being by God?

It seems that creatures do not need to be conserved in being (*conserventur in esse*) by God:

**Objection 1:** What is not able not to exist does not need to be conserved in being, just as what is not able to disappear does not need to be kept from disappearing. But there are some creatures that are by their nature not able not to exist. Therefore, not all creatures need to be conserved in being by God.

Proof of the second premise (*probatio mediae*): What exists in something *per se* is such that (a) it exists in it necessarily and (b) it is impossible for its opposite to exist in it; for instance, it is necessary for the number two to be even, and it is impossible for it to be odd. Now *esse* follows *per se* upon a form, since each entity has being in actuality because it has a form. But there are some creatures that are subsistent forms, as has been explained for the case of the angels (q. 50, a. 2), and so *esse* is in them *per se*. And the same line of reasoning holds for those creatures whose matter is in potentiality to only a single [substantial] form, as was explained above for the case of the celestial bodies (q. 66, a. 2). Therefore, creatures of this sort exist by necessity in accord with their nature, and they are not able not to exist; for a potentiality for non-existence cannot be grounded either (a) in their form, which *esse* follows upon *per se*, or (b) in their matter, which exists as the subject of a form that it cannot lose, since it is not in potentiality to any other form.

**Objection 2:** God is more powerful than any created agent. But there are created agents that can bring it about that their effects are conserved in being even after the agent's own action ceases. For instance, the house remains after the builder's action ceases, and the water remains hot for a time after the fire's action ceases. Therefore, *a fortiori*, God can bring it about that His creatures are conserved in being when His own operation ceases.

**Objection 3:** Nothing violent can occur in the absence of an agent cause. But to tend toward non-being is unnatural and violent for any creature, since every creature naturally tends toward existing (*naturaliter appetit esse*). Therefore, a creature can tend toward non-being only because of some corrupting agent (*nisi aliquo agente ad corruptionem*). But some entities, e.g., spiritual substances and celestial bodies, are such that it is impossible to do anything to corrupt them. Therefore, creatures of this sort cannot tend toward non-being, even if God's action ceases.

**Objection 4:** If God conserves things in being, then this will be through some action. But any action of an agent is such that, if it is efficacious, something comes to exist in the effect. Therefore, something would have to come to exist in the creature through God's action in conserving it. But this does not seem to be the case. For it is not the case that the very *esse* of the creature is effected by an action of this sort, since what already exists does not come to exist. Nor, again, is there anything else added to the creature, since if there were, then either (a) God would not be continuously conserving the creature in being or else (b) it would continually be the case that something is being added to the creature—which is absurd. Therefore, creatures are not conserved in being by God.

**But contrary to this:** Hebrews 1:3 says, "Upholding all things by the word of His power."

**I respond:** One must claim, in accord with both faith and reason, that creatures are conserved in being by God.

To make this clear, notice that there are two ways in which one thing is conserved by another:

First, *indirectly and per accidens*, in the sense in which someone is said to conserve a thing when he removes a corrupting agent. For instance, if someone keeps a child from falling into a fire, he is said to conserve the child. And God is likewise said to conserve some things in this sense—though not all things, since some things do not have corrupting agents that must be removed in order for them to be conserved.

In the second way, something is said to conserve a thing *per se and directly*, viz., insofar as that which is conserved depends on the conserving agent in such a way that it could not exist without it. And in this sense all creatures need God's conserving action (*indigent divina conservatione*). For the *esse* of each creature depends on God in such a way that the creature could not subsist for even a moment—but would instead, as Gregory says, fall into nothingness—if it were not conserved in *esse* by the action of God's power.

This can be looked at as follows. Every effect depends on its cause to the extent that it is its cause. But notice that in some cases an agent is a cause of its effect only with respect to effect's being-made (*secundum fieri tantum*) and not directly with respect to its *esse* (*non directe secundum esse eius*). This happens both in the case of artifacts and in the case of natural beings.

For instance, a builder is a cause of a house as far as its being-made is concerned, but not directly as far as its *esse* is concerned. For it is clear that the house's *esse* follows upon its form, and that the house's form is its composition and order, and that this form follows upon the natural powers of certain things. For just as a cook cooks the food by making use of a certain active natural power, viz., that of the fire, so too a builder makes a house by using cement, stones, and wood, which are capable of receiving and conserving the relevant composition and order. Hence, the house's *esse* depends on the natures of these things, just as the house's being-made depends on the builder's action.

And we have to think about natural things in like manner. For if an agent is not a cause of a form insofar as it is a form of a given sort, then that agent will not be a *per se* cause of the *esse* that follows upon that form, but will instead be a cause of the effect only with respect to its being-made.

Now it is clear that if two things belong to the same species, then the one cannot be a *per se* cause of the form of the other insofar as it is a form of that sort, since otherwise it would be a cause of its own form, given that the same line of reasoning holds in both cases. However, it can be a cause of the form's existing in matter, i.e., it can be a cause of *this* matter's acquiring *this* form. And this is what it is for it to be a cause with respect to the thing's being-made, as when a man generates a man or a fire generates a fire. And so whenever a natural effect is apt to receive an agent's action (*impressio*) with respect to the same nature that exists in the agent, then that effect depends on the agent for its being-made, but not for its *esse*.

However, in some cases the effect is not apt to receive the agent's action with respect to the same nature that exists in the agent. This is clear in the case of all agents that do not effect what is similar in species to themselves; for instance, the celestial bodies are a cause of generation for lower bodies, which are dissimilar to the celestial bodies in species. An agent of this sort can be a cause of a form with respect to the nature of that sort of form and not just a cause of such a form's being acquired in *this* matter—and in such a case it is a cause not only of the form's being-made but also of its *esse*. Therefore, just as a thing's being-made is not able to remain after the cessation of the action of an agent that is a cause of the effect with respect to its being-made, so too a thing's *esse* cannot remain after the cessation of the action of an agent that is a cause of the effect not only with respect to its being-made, but also with respect to its *esse*.

This is the reason why heated water retains heat after the fire's action ceases, whereas air does not

remain illuminated even for a moment once the sun's action ceases. For the water's matter is receptive to the fire's heat with respect to the same nature by which heat exists in the fire; hence, if the water attained completely to the form of fire, then it would retain heat forever, whereas if it participates incompletely in the form of fire in a sort of incipient way (*secundum quandam inchoationem*), then heat will remain in it only temporarily and not forever—and this because of its weak participation in the source of heat. By contrast, air is not in any way receptive to light with respect to the same nature with which light exists in the sun—that is, in such a way as to receive the sun's form, which is the principle of light—and so, since light is not rooted in the air (*non habet radicem in aere*), it immediately ceases when the sun's action ceases.

Now every creature is related to God in the way that air is related to the sun as an illuminator. For just as the sun illuminates by its nature, whereas the air becomes luminous by participating in light from the sun but not by participating in the sun's nature, so too God alone is a being through His essence, since His essence is His *esse*, whereas every creature is a being by participation (*est ens participative*) and not such that its essence is its *esse*. This is why, as Augustine puts it in *Super Genesim ad Litteram* 4, “If God's power ever ceased to rule the things that have been created, their kind would simultaneously cease, and all of nature would perish.” And in book 8 of the same book he says, “Just as the air is luminous when light is present, so man is illuminated when God is present to him and continuously darkened when God is absent.”

**Reply to objection 1:** *Esse* follows *per se* upon the form of a creature, but only if God's influence is presupposed—just as light follows upon air's transparency (*diaphanum aeris*), but only if the sun's influence is presupposed. Hence, the potentiality for non-being in spiritual creatures and celestial bodies lies in God, who is able to withdraw His influence, rather than in the form or the matter of such creatures.

**Reply to objection 2:** God is unable to bring it about that a creature is conserved in being when His own operation has ceased, in just the same way that He is unable to bring it about that He is not a cause of the creature's *esse*. For a creature needs to be conserved by God in the way that an effect's *esse* depends on the cause of its *esse*. Hence, there is no parallel to a case involving an agent that is only a cause of being-made and not a cause of *esse*.

**Reply to objection 3:** This argument goes through for the sort of conservation that occurs through the removal of a corrupting agent—a type of conservation that, as has been explained, not all creatures need.

**Reply to objection 4:** The conservation of a thing by God does not occur through any new action; instead, it occurs through the continuation of the action by which God confers *esse*—an action that exists without motion or time. It is like the conservation of light in the air by the sun's continuous influence.

## Article 2

### Does God directly conserve every creature?

It seems that God directly (*immediate*) conserves every creature:

**Objection 1:** As has been explained (a. 1), God is the conserver of things by the same action by which He is also the creator of things. But God is directly the creator of all things. Therefore, He is likewise directly the conserver of all things.

**Objection 2:** Each thing is closer to itself than it is to another thing. But it cannot be imparted to any creature that it should conserve itself. Therefore, *a fortiori*, it cannot be imparted to any creature that it should conserve another. Therefore, God conserves all things without any mediating conserving cause.

**Objection 3:** An effect is conserved in being by a cause that is a cause of *esse* and not just a cause of being-made. But, it seems, every created cause is a cause of its effects only with respect to their being-made, since, as was established above (q. 45, a. 3), a created cause acts as a cause only by effecting change (*movendo*). Therefore, created causes are not causes that conserve their effects in being.

**But contrary to this:** A thing is conserved in the same way that it has *esse*. But God grants *esse* to things by means of certain mediating causes. Therefore, He likewise conserves things in being by means of certain mediating causes.

**I respond:** As has been explained (a. 1), there are two ways in which something conserves a thing in being: (a) indirectly and *per accidens*, by removing or impeding the action of a corrupting agent, and (b) directly and *per se*, in the sense that the other thing's *esse* depends on it in the way that an effect's *esse* depends on its cause. Now it is in both of these ways that some created things conserve others.

For it is clear that even among corporeal things there are many that impede the actions of corrupting agents and for this reason are said to conserve things. For instance, salt keeps meat from putrefying, and something similar holds in many other cases.

Again, one finds that some effects depend on a creature with respect to their *esse*. For when many causes are ordered to one another, the effect depends primarily and principally on the first cause and secondarily on all the intermediate causes. And so the first cause principally conserves the effect, whereas the mediating causes conserve it secondarily; and the higher and closer to the first cause a given mediating cause is, the more it conserves the thing in question. Hence, even among corporeal entities the conservation and permanence of things is attributed to higher causes. As the Philosopher says in *Metaphysics* 12, the first motion, viz., the diurnal motion, is a cause of the continuity of generation, whereas the second motion, which is motion through the zodiac, is a cause of the diversity that occurs in generation and corruption. Similarly, astronomers (*astrologi*) attribute the fixed and permanent entities to Saturn, which is the highest planet.

So, then, one should claim that God conserves some things in being by means of certain mediating causes.

**Reply to objection 1:** God created all things directly, but in the very creation of things He instituted an order, so that some would depend on others through which they would be secondarily conserved in being—yet presupposing the principal conservation, which is from Him.

**Reply to objection 2:** Since a proper cause conserves an effect that depends on it, it follows that just as one cannot arrive at any effect that is a cause of itself, even though one can arrive at an effect that is a cause of another, so too one cannot arrive at any effect that conserves itself, even though one can arrive at a cause that conserves another.

**Reply to objection 3:** It is only by means of some change (*nisi per modum alicuius mutationis*) that a creature can be a cause of another with respect to its acquiring a new form or disposition; for a creature always acts on a presupposed subject. However, after it has induced the form or disposition in the effect, it conserves this form or disposition without any other change in the effect. For instance, in the case of air, a certain change is understood to occur when the air is illuminated *de novo*, but the conservation of the light stems from the presence of the illuminating agent alone, without any change in the air.

### Article 3

#### Is God able reduce a thing to nothingness?

It seems that God is not able to reduce a thing to nothingness (*aliquid redigere in nihilum*):

**Objection 1:** In 83 *Quaestiones* Augustine says, “God is not a cause of anything’s tending toward non-being.” But this would be the case if He reduced some creature to nothingness. Therefore, God is not able to reduce anything to nothingness.

**Objection 2:** God is a cause of the existence of things because of His goodness, since, as Augustine says in *De Doctrina Christiana*, “We exist insofar as God is good.” But God is not able not to be good. Therefore, He is not able to bring it about that things do not exist. But He would do this if He reduced them to nothingness.

**Objection 3:** If God were to reduce certain things to nothingness, this would have to be effected through some action. But this is impossible, since every action terminates in some entity; thus, even the action of a corrupting agent terminates in something that is generated, since the generation of one thing is the corruption of another. Therefore, God is not able to reduce anything to nothingness.

**But contrary to this:** Jeremiah 10:24 says, “Correct me, O Lord, but yet with judgment: and not in your fury, lest you bring me to nothing.”

**I respond:** Some have claimed that God brought things into being by acting out of a necessity of nature. If that were true, then God would not be able to reduce anything to nothingness, just as He is not able to change His own nature.

However, as was established above (q. 19, a. 4), this position is false and completely alien to the Catholic Faith, which confesses that God brought things into being by His free will—this according to Psalm 134:6 (“All the things the Lord willed, He did”). Therefore, the fact that God communicates *esse* to things depends on God’s will.

Moreover, as has been explained (a. 1), He does not conserve things in being in any way other than by continuously giving them *esse* (*nisi in quantum eis continue influit esse*). Therefore, just as before things existed, He was able not to communicate *esse* to them and so able not to make them, so too after they have already been made, He is able not to give them *esse*, in which case they would cease to exist. And this is what it is to reduce them to nothingness.

**Reply to objection 1:** Non-being does not have a *per se* cause, since nothing can be a cause except insofar as it is a being, and a being, speaking *per se*, is a cause of being. So, then, God is not able to be a cause of a tendency toward non-being. Rather, a creature has this tendency from itself, insofar as it comes from nothing. However, God can be a *per accidens* cause of a thing’s being reduced to nothingness, viz., by withdrawing his action from that thing.

**Reply to objection 2:** God’s goodness is not a cause of things by a necessity of nature, since God’s goodness does not depend on created things; instead, He is a cause of things by His free will. Hence, just as He was able, without prejudice to His goodness, not to bring things into being, so too He is able, without detriment to His goodness, not to conserve things in being.

**Reply to objection 3:** If God reduced a thing to nothingness, this would occur not by any action, but by His ceasing to act.

#### Article 4

##### Is anything in fact reduced to nothingness?

It seems that something is in fact reduced to nothingness:

**Objection 1:** The ending (*finis*) corresponds to the beginning (*principium*). But in the beginning there was nothing except God. Therefore, things will be brought to this ending: that nothing will exist except God. And so creatures will be reduced to nothingness.

**Objection 2:** Every creature has finite power. But no finite power extends to what is infinite; hence, *Physics* 8 proves that a finite power cannot effect motion for an infinitely long time. Therefore, no creature can endure for an infinitely long time. And so at some time it will be reduced to nothingness.

**Objection 3:** Forms and accidents do not have matter as part of themselves. But at some point they cease to exist. Therefore, they are reduced to nothingness.

**But contrary to this:** Ecclesiastes 3:14 says, “I have learned that all the works which God has made continue for ever.”

**I respond:** Of those things that are done by God with respect to a creature, some stem from the natural course of things, while, as will be explained below (q. 105, a. 6), others are done miraculously outside the natural order instilled in creatures. Now what God is going to do in accord with the natural order instilled in things can be seen from the very natures of the things, whereas what is done miraculously is ordered toward the manifestation of grace—this according to the Apostle in 1 Corinthians 12:7, “The manifestation of the Spirit is given to every man unto profit,” where he then goes on to talk about miraculous acts, among other things..

Now the natures of creatures show that none of them is reduced to nothingness, either because (a) they are immaterial and so do not have within themselves a potentiality for non-being, or because (b) they are material and so remain forever at least with respect to their matter, which is incorruptible inasmuch as it serves as the subject of generation and corruption.

Moreover, reducing something to nothingness has nothing to do with the manifestation of grace, since God’s power and goodness are manifested instead in a thing’s being conserved in being.

Hence, one should say without qualification that nothing at all will be reduced to nothingness.

**Reply to objection 1:** The fact that things were brought into being after not having existed makes manifest the power of the one who produced them. But their being reduced to nothingness would impede the manifestation of this power, since God’s power is made manifest to the highest degree in His conserving things in being—this according to the Apostle in Hebrews 1:3 (“Upholding all things by the word of His power”).

**Reply to objection 2:** A creature’s power to exist is a merely receptive power, whereas the corresponding active power belongs to God Himself, from whom the outpouring of *esse* comes forth. Hence, the fact that things endure for an infinitely long time follows from the unlimitedness of God’s power.

However, the power to endure is limited in the case of certain things to a determinate temporal interval, because they are prevented from receiving God’s outpouring of *esse* by some contrary agent that their finite power can resist only for a limited time and not for an infinitely long time. This is why things that do not have a contrary persevere forever, despite the fact that the power they have is finite.

**Reply to objection 3:** Forms and accidents are not complete entities, since they do not subsist; instead, each of them is something that *belongs to* some being (*quodlibet eorum est aliquid entis*); for each is called a being because it is that *by which* something exists.

And yet, even given the sense in which they exist, they are not altogether reduced to

nothingness—not because some part of them remains, but rather because they remain either in the potentiality of matter or in the potentiality of the subject.

## QUESTION 105

### How God Moves Creatures

Next we have to consider the second effect of God's governance, which is change among creatures: first, the changes effected by God among creatures (question 105) and, second, the changes effected by one creature in another (questions 106-119).

On the first topic there are eight questions: (1) Can God directly change matter with respect to its form? (2) Can God directly move a body? (3) Can God move an intellect? (4) Can God move a will? (5) Does God act in everything that acts? (6) Can God do anything outside the order instilled in things? (7) Are all the things that God does in this way miracles? (8) What are the different types of miracles?

#### Article 1

##### Can God directly change matter with respect to its form?

It seems that God cannot directly change (*non possit immediate movere*) matter with respect to its form:

**Objection 1:** As the Philosopher proves in *Metaphysics* 7, nothing can effect a form in *this* matter except a form that itself exists in matter, since a thing effects what is similar to itself. But God is not a form in matter. Therefore, He cannot cause a form in matter.

**Objection 2:** If an agent is related to many [possible effects], then it will not produce any of them unless it is channelled to that particular one by something else; for as *De Anima* 3 says, a general opinion (*universalis opinio*) moves someone only by the mediation of some particular apprehension. But God's power is a universal cause (*universalis causa*) of all things. Therefore, it cannot produce any particular form except by the mediation of some particular agent.

**Objection 3:** As was established above (q. 104, a. 2), just as being-in-general (*esse commune*) depends on the first universal cause, so determinate being (*esse determinatum*) depends on determinate particular causes. But a thing's determinate being stems from its proper form. Therefore, the proper forms of things are not produced by God except by the mediation of particular causes.

**But contrary to this:** Genesis 2:7 says, "God formed man from the slime of the earth."

**I respond:** God can move matter directly (*immediate*) with respect to its form. For something that exists in passive potentiality can be brought into actuality by an active power that contains that passive potentiality under its own power. Therefore, since matter is contained under God's power insofar as it is produced by God, it can be brought into actuality by God's power. And this is what it is for matter to be moved with respect to its form. For the form is nothing other than the matter's actuality.

**Reply to objection 1:** There are two ways in which an effect is similar to its agent cause:

In one way, it is similar in that it has the *same species*, as when a man is generated by a man and a fire is generated by a fire.

In the second way, it is similar because of *virtual containment*, insofar as the effect's form is virtually contained in the cause. It is in this way that animals generated from putrefaction, along with plants and corporeal minerals, are similar to the sun and stars by whose power they are generated. In this way, then, an effect is similar to its agent cause because it is part of the totality to which the agent's power extends.

Now as was explained above (q. 44, a. 2), God's power extends to both form and matter. Hence, a composite that is generated is similar to God because of virtual containment, just as it is similar to its composite generating cause because of a likeness to its species. Hence, just as a composite generating cause can move matter with respect to a form by generating a composite similar to itself, so too can God.

However, no other form that does not exist in matter can do this, since matter is not contained in the power of any other separated substance. And this is why demons and angels act on visible things here below not by impressing forms on them, but by employing corporeal seeds [via local motion] (cf. q. 110, a. 4).

**Reply to objection 2:** This argument would go through if God acted by a necessity of nature. But since He acts through His will and intellect, which has cognition of the proper notions (*rationes proprias*) of all forms and not just of their universal notions (*non solum universales*), it follows that He can determinately impress *this* form or *that* form on matter.

**Reply to objection 3:** The very fact that secondary causes are ordered to determinate effects is something they have from God. Hence, given that God is able to order other causes toward determinate effects, He is likewise able to produce determinate effects by Himself.

## Article 2

### Can God directly move a body?

It seems that God cannot directly move a body:

**Objection 1:** Since, as is proved in *Physics 7*, the mover and what is moved have to exist together (*oportet esse simul*), there must be some sort of contact (*contactus*) between the mover and what is moved. But there cannot be contact between God and a body, since in *De Divinis Nominibus*, chap. 1, Dionysius says, “With God there is no touch” (*Dei non est aliquis tactus*). Therefore, God cannot directly move a body.

**Objection 2:** God is a mover that is not moved. But this is what an apprehended desirable thing is. Therefore, God effects movement insofar as He is desired and apprehended. But He is apprehended only by an intellect, which is neither a body nor a corporeal power. Therefore, God cannot directly move a body.

**Objection 3:** In *Physics 8* the Philosopher proves that an infinite power effects instantaneous motion (*movet in instanti*). But it is impossible for a body to be moved with an instantaneous motion (*in instanti moveri*); for since every movement is from one opposite to another, it would follow that two opposites exist in the same thing at the same time—which is impossible. Therefore, a body cannot be directly moved by an infinite power. But as was proved above (q. 25, a. 2), God’s power is infinite. Therefore, God cannot directly move a body.

**But contrary to this:** God effected the work of the six days directly, and this work included the movement of bodies, as is clear from the fact that Genesis 1:9 says, “Let the waters be gathered together in one place.” Therefore, God can directly move a body.

**I respond:** It is a mistake to claim that God cannot effect by Himself all of the determinate effects that are brought about by any created cause. Hence, since bodies are moved directly by created causes, there should be no doubt at all that God can directly move any given body.

Indeed, this is a consequence of the things explained above (a. 1). For every movement of any given body either (a) follows upon some form, in the ways that the local motion of heavy bodies and lightweight bodies follows upon the form given them by what generates them (which is why what generates them is called a mover), or (b) is a path to some form, in the way that the action of effecting heat is a path to the form of fire. But it is one and the same thing that (a) impresses the form and (b) disposes [the patient] for the form and (c) gives the movement that follows upon the form; for instance, fire not only (a) generates another fire, but also (b) gives warmth and (c) effects upward movement.

Therefore, since God can directly impress a form on matter, it follows that He can move any given body with respect to any given movement.

**Reply to objection 1:** There are two sorts of touching (*tactus*), viz., *corporeal*, as when two bodies touch one another, and *virtual*, in the sense that something sad touches one who is saddened. Thus, as regards the first sort of contact, God, since He is incorporeal, neither touches nor is touched. However, as regards virtual contact, He touches creatures by moving them, but He is not touched by them because no natural power had by any creature can get through to Him (*ipsum pertingere*). And this is the sense in which Dionysius meant that “with God there is no touch,” viz., that He is not touched.

**Reply to objection 2:** God moves as something desired and understood. But it is not necessary for Him in all cases to move as something that is desired and understood by what is moved. Rather, He must always move as something desired and known by *Himself*, since He does all things for the sake of His own goodness.

**Reply to objection 3:** In *Physics* 8 the Philosopher tries to prove with the following argument that the first mover’s power is not a power that exists in a magnitude:

The first mover’s power is infinite (which he proves by appeal to the fact that the first mover can effect motion for an infinitely long time); but if an infinite power existed in a magnitude, it would effect motion in no time at all, which is impossible; therefore, it must be the case that the first mover’s infinite power does not exist in a magnitude.

From this it is clear that a body’s being moved in no time at all follows only upon an infinite power that exists in a magnitude. The reason for this is that every power that exists in a magnitude effects motion with all of itself (*secundum se totam*), since it effects motion by a necessity of nature. But an infinite power exceeds any finite power incommensurably (*improportionabiliter*). Now a motion has a greater velocity to the extent that the power of the mover is greater. Therefore, since a finite power effects motion for a determinate time, it follows that an infinite power effects motion in no time at all. For there is some proportion that any given temporal interval bears to any other temporal interval.

By contrast, a power that does not exist in a magnitude is the power of an intelligent being who acts in his effects in a way that befits them. And so, since it is impossible for a body to be moved in no time at all, it does not follow that this being effects motion in no time at all.

### Article 3

#### Does God directly move a created intellect?

It seems that God does not directly move a created intellect:

**Objection 1:** An intellect’s action stems from what it exists in, since, as *Metaphysics* 9 says, this action does not pass into any external matter. But the action of a thing that is moved by another stems not from what it exists in, but instead from the mover. Therefore, an intellect is not moved by another. And so it seems that God cannot move an intellect.

**Objection 2:** That which has within itself a principle sufficient for its own movement is not moved by another. But an intellect’s movement is the very act of intellectual understanding itself—in the sense in which, according to the Philosopher in *De Anima* 3, acts of intellectual understanding and of sensing are called ‘movements’. But the intelligible light instilled in an intellect is a sufficient principle of an act of intellectual understanding. Therefore, an intellect is not moved by another.

**Objection 3:** Just as a sensory power is moved by a sensible thing, so too an intellect is moved by an intelligible thing. But God is not intelligible to us; instead, He exceeds our intellect. Therefore, God

cannot move our intellect.

**But contrary to this:** The teacher moves the intellect of the student. But as Psalm 93:10 says, “God teaches man knowledge.” Therefore, God moves man’s intellect.

**I respond:** Just as in the case of corporeal movements the mover is defined as what gives a form that is a principle of the movement, so, too, what is said to move an intellect is what causes a form that is a principle of the intellectual operation which is called a movement of the intellect.

Now an intellect’s operation has two principles in the one who is engaged in intellectual understanding, viz., (a) the intellectual power itself, which is a principle even in the one who is [only] potentially engaged in intellectual understanding, and (b) the principle of actual intellectual understanding, viz., the likeness of the thing understood within the one understanding it. Therefore, when something is said to move an intellect, either (a) it is giving the power to understand to the one engaged in intellectual understanding, or (b) it is impressing on it a likeness of the thing understood.

Now God moves a created intellect in both of these ways.

For He is the first immaterial being. And since intellectuality follows upon immateriality, it follows that He is the first being having intellectual understanding. Hence, since the first in any ordering is a cause of those that follow, it follows that any power of intellectual understanding is from Him.

Similarly, since He is the first being and since all things preexist in Him as in their first cause, they must exist in Him as intelligible in accord with His mode. For just as all the intelligible conceptions of things exist first in God and flow from Him into other intellects, in order that those other intellects might have actual intellectual understanding, so, too, these conceptions flow into creatures, in order that those creatures might subsist.

So, then, God moves a created intellect (a) insofar as He gives it its power of intellectual understanding—whether its natural power or some additional power—and (b) insofar as He imprints intelligible species on it. And in both cases, He keeps and preserves these things in being.

**Reply to objection 1:** The intellectual operation is, to be sure, from the intellect in which it exists as from a secondary cause, but it is from God as from a first cause. For the fact that the one who is engaged in intellectual understanding is able to understand is itself given to him by God.

**Reply to objection 2:** The intellectual light is, taken together with the likeness of the thing understood, a sufficient principle of an act of intellectual understanding. However, it is a secondary principle and depends on the first principle.

**Reply to objection 3:** What is intelligible moves our intellect insofar as it in some way imprints upon the intellect a likeness of itself through which it can be understood intellectually. But, as was shown above (q. 12, a. 2 and q. 56, a. 3), the likenesses that God imprints on a created intellect are not sufficient for understanding God Himself through His essence. Hence, as has been explained (q. 12, a. 4), He moves a created intellect and yet is not intelligible to that intellect.

#### Article 4

##### Can God move a created will?

It seems that God cannot move a created will:

**Objection 1:** Everything that is moved by something extrinsic is coerced. But a will cannot be coerced. Therefore, it is not moved by anything extrinsic. And so it cannot be moved by God.

**Objection 2:** God cannot bring it about that contradictories are simultaneously true. But this would follow if He moved a will, since to be moved voluntarily is to be moved by oneself and not by

another. Therefore, God cannot move a will.

**Objection 3:** Movement is attributed more to the mover than to the thing moved; hence, homicide is attributed not to the rock, but to the one who throws it. Therefore, if God moves a will, it follows that voluntary works would not be attributed to the man as merit or demerit. But this is false. Therefore, God does not move any will.

**But contrary to this:** Philippians 2:13 says, “It is God who works in us, both to will and to accomplish.”

**I respond:** Just as an intellect, as was explained above (a. 3), is moved both (a) by its object and (b) by the one who gave it the power of intellectual understanding, so too a will is moved both (a) by its object, which is the good, and (b) by the one who creates the power of willing.

Now as regards its being moved by its object, a will can be moved by any good whatsoever, even though it is moved sufficiently and efficaciously only by God. For nothing can move a movable thing sufficiently unless the active power of the mover exceeds or is at least equal to the passive power of the movable thing. But a will’s passive power extends to the good in general (*ad bonum in universali*); for its object is the universal good just as the intellect’s object is universal being. But every created good is a certain particular good, whereas God alone is the universal good. Hence, God alone fulfills a will (*implet voluntatem*) and sufficiently moves it as an object.

Similarly, the power of willing is caused by God alone. For an act of willing (*velle*) is nothing other than a certain inclination toward the will’s object, which is the universal good. But to incline something toward the universal good is the role of the first mover, to whom the ultimate end is proportioned—just as, in human affairs, to direct something toward the common good is the role of one who presides over the multitude.

Hence, it is proper to God to move the will in both of these ways—but especially in the second way, i.e., by inclining it from within (*interius eam inclinando*).

**Reply to objection 1:** That which is moved by another is said to be coerced if it is moved contrary to its proper inclination; however, if it is moved by another thing that gives it its proper inclination, then it is not said to be coerced. For instance, a heavy thing is not coerced when it is moved downward by the thing that generates it. So, then, God, in moving the will, does not coerce it, since He gives it its proper inclination.

**Reply to objection 2:** To be moved voluntarily is to move oneself (*moveri ex se*), i.e., to be moved by an intrinsic principle. But that intrinsic principle can itself come from some other extrinsic principle. And so to move oneself is not incompatible with being moved by another.

**Reply to objection 3:** If a will were moved by another in such a way that it in no way moved itself, then the will’s works would not count for merit or demerit. However, since, as has been explained, being moved by another does not rule out moving oneself, it follows that the nature of merit and demerit is not undermined.

## Article 5

### Does God act in everything that is acting?

It seems that God does not act in everything that is acting:

**Objection 1:** Nothing that is insufficient should be attributed to God. Therefore, if God acts in everything that is acting, then He acts sufficiently in each thing. Therefore, it would be superfluous for a created agent to do anything (*superfluum esset quod agens creatum aliquid operaretur*).

**Objection 2:** A single action does not belong to two agents at once (*una operatio non est simul a duobus operantibus*), just as two things that are being moved cannot have numerically one motion. Therefore, if a creature's action is from God operating in the creature, then that action cannot simultaneously belong to the creature. And so no creature does anything.

**Objection 3:** A thing's maker is said to be a cause of the thing's action, insofar as the maker gives the thing the form by which it acts. Therefore, if God is a cause of the action of the things made by Him, then this will be so because He gives them the power to act. But this occurs at the beginning, when He makes the thing. Therefore, it seems that He no longer acts in a creature that is acting.

**But contrary to this:** Isaiah 26:12 says, "You have done all our works in us, O Lord."

**I respond:** The claim that God acts in everything that is acting has been understood by some in such a way that no created power does anything, but instead God alone does all things directly. For instance, it is not the fire that gives heat, but instead God gives heat in the fire, and likewise for all other cases.

However, this is impossible.

First of all, on this view the ordering of causes and effects (*ordo causae et causati*) would be removed from created things. This involves a lack of power on the part of the creator. For it is part of an agent's power that it should endow its effect with the power to act.

Second, it would make no sense to attribute to things the operative powers that are found in them, if they never acted through those powers. To the contrary, all created things would seem in some way senseless, if they were stripped of their proper operations, since each thing exists for the sake of its own action. For the imperfect always exists for the sake of the more perfect. Thus, just as matter exists for the sake of form, so form, i.e., *first* act, exists for the sake of its own operation, i.e., *second* act. And so a created thing's end is its operation.

So, then, one should understand that (a) God acts in things and yet that (b) the things themselves have their own proper action. To see this clearly, note that even though there are four kinds of causes, the material cause is not a principle of action, but instead serves as a subject that receives the effect of an action. By contrast, the end and the agent and the form all serve as principles of action, but in a certain order. For the first principle of action is the end, which moves the agent; the second principle is the agent; and the third is the form of that which is applied to acting by the agent (though the agent itself acts through its own form as well). This is clear in the case of artifacts. For the craftsman is moved to act by the end, which is the thing made, e.g., a chest or a bed; and he applies to his action the hatchet, which cuts by means of its sharpness.

So, then, it is in accord with these three principles that God acts in every agent that is acting:

First, in accord with the nature of an end. For every action is for the sake of some real or apparent good. But nothing is or appears good except insofar as it participates in a likeness of the highest good, which is God. It follows that God Himself is a cause, in the sense of an end, of every action.

Again, note that if there are many ordered agents, it is always the case that the second agent *acts in the power* of the first agent (*secundum agens agit in virtute primi*). For the first agent moves the second agent to act (*primum agens movet secundum ad agendum*). Accordingly, all things act in the power of God Himself, and so He is a cause of the actions of all agents.

Third, note that it is not just the case that God moves things to act in the sense of applying their forms and powers to action, in the way that a craftsman applies a hatchet to cutting even though he sometimes does not give the hatchet its form; rather, God also endows created agents with their form and preserves them in being. Hence, He is a cause of actions not only insofar as He gives the form that is a principle of the action, in the way that the thing that generates is a cause of the movement of heavy and lightweight bodies, but also insofar as He conserves the forms and powers of things, in the way that the sun is said to be a cause of the manifestation of colors insofar as it gives and conserves light, by which

colors are made manifest. And since a thing's form exists within the thing and to that extent is considered prior and more universal, and since God is properly the universal cause in all things of *esse* itself, which is more intimate to things than anything else, it follows that God acts intimately within all things. And this is why in Sacred Scripture the actions of nature are attributed to God as acting in nature—this according to Job 10:11 (“You have clothed me with skin and flesh; You have put me together with bones and sinews”).

**Reply to objection 1:** God acts sufficiently in things in the manner of a first agent; nor is it the case because of this that the action of secondary agents is superfluous.

**Reply to objection 2:** A single action does not proceed from two agents of a single order. But nothing prevents one and the same action from proceeding from a first agent and a secondary agent.

**Reply to objection 3:** God not only gives forms to things, but also, as has been explained, conserves them in being, applies them to action, and serves as the end of all actions.

## Article 6

### Can God do anything outside of the order instilled in things?

It seems that God cannot do anything outside of the order instilled in things:

**Objection 1:** In *Contra Faustum* 26 Augustine says, “God, the founder and creator of all natures, does nothing contrary to nature.” But what lies outside of the order naturally instilled in things seems to be contrary to nature. Therefore, God cannot do anything outside of the order instilled in things.

**Objection 2:** The order of nature is from God in the same way that the order of justice is. But God cannot do anything outside of the order of justice, since in that case He would be doing something unjust. Therefore, He cannot do anything outside of the order of nature.

**Objection 3:** God instituted the order of nature. Therefore, if God did anything outside of the order of nature, it seems that He is mutable—which is absurd.

**But contrary to this:** In *Contra Faustum* 26 Augustine says, “God on occasion does something contrary to the usual course of nature.”

**I respond:** Every cause is such that some sort of ordering flows from it into its effects, since every cause has the nature of a principle. And so when the causes are multiplied, so are the orderings, one of which is contained under another in the same way that one cause is contained under another cause. Hence, a higher cause is not contained under the ordering of a lower cause, but just the opposite. There is a clear example of this in human affairs. For the ordering of a home depends on the father of the family, and this ordering is contained under the ordering of the city, which proceeds from its leader (*rector*), and this ordering is contained under the ordering that proceeds from the king, by whom the whole kingdom is ordered.

Therefore, if the ordering of things is thought of insofar as it depends on the *first* cause, then in this sense God cannot do anything contrary to the order of things, since if He did so, then He would be acting contrary to His own foreknowledge or will or goodness. By contrast, if the order of things is thought of insofar as it depends on one of the *secondary* causes, then in this sense God can act outside of the order of things. For He is not subject to any ordering of secondary causes, but instead any such ordering is subject to Him in the sense that it proceeds from Him through the choice of His will and not by a necessity of nature. For He could have instituted some other ordering of things. Hence, when He wants to, He can act outside of the order that has been instituted—for instance, by bringing about the effects of secondary causes without them, or by producing effects that the secondary causes do not extend to. This

is why, in *Contra Faustum* 26, Augustine says, “God acts contrary to the usual course of nature, but He does not act in any way against the highest law, since He does not act against Himself.”

**Reply to objection 1:** There are two ways in which it can happen that something occurs outside of the nature instilled in natural things:

In one way, through the action of an agent that did not confer the relevant natural inclination—as, for instance, when a man moves a heavy body upwards; for the heavy body does not get from the man its inclination toward downward movement. This is something contrary to nature.

In the second way, through the action of that agent on which the thing’s natural action depends. And this is not contrary to nature, as is clear in the case of the ebb and flow of the sea, which is not contrary to nature even though it lies outside of the natural motion of water, which moves downward. For this [tidal movement] comes from the influence of a celestial body, which the natural inclinations of lower bodies depend on.

Therefore, since the order of nature was instilled in things by God, it is not contrary to nature if He does something outside of that order. Hence, in *Contra Faustus* 26 Augustine says, “Whatever He does—He who is the source of every mode, number, and ordering of nature—is natural to each thing.”

**Reply to objection 2:** The order of justice involves a relation to the *first* cause, which is the rule of all justice. And so God can do nothing outside of this order.

**Reply to objection 3:** God instilled a fixed order in things in such a way that He nonetheless reserved to Himself whatever He would on occasion do in a different way for His own good reasons (*aliter ex causa*). Hence, when He acts outside of this order, He does not change.

## Article 7

### Is everything that God does outside of the natural order of things a miracle?

It seems that not everything God does outside of the natural order of things is a miracle:

**Objection 1:** The creation of the world, as well as of souls, and the justification of the wicked are accomplished by God outside of the natural order, since they are not done by means of the action of any natural cause. And yet these are not called miracles. Therefore, not everything that God does outside of the natural order of things is a miracle.

**Objection 2:** A miracle is said to be “something difficult and unusual that occurs beyond the power of nature and beyond the hope of those who marvel at it.” But there are some things done outside of the order of nature that are not difficult, since they involve small matters, such as the recovery of precious stones or the healing of the sick. Nor, again, are they unusual, since they occur frequently, as when sick people were placed in the streets in order to be healed under Peter’s shadow (Acts 5:15). Nor, again, are they beyond the power of nature, as when people are cured of fevers. Nor, again, are they beyond hope, since we all hope for the resurrection of the dead, which is accomplished outside of the order of nature. Therefore, not everything that is done outside of the order of nature is a miracle.

**Objection 3:** The name ‘miracle’ (*miraculum*) is taken from ‘wonder’ (*admiratio*). But wonder is directed at things that are manifest to the sensory power, and sometimes things happen outside of the natural order in things that are not manifest to the senses, as when the apostles became knowledgeable without either discovering anything or learning anything. Therefore, not everything that is done outside of the order of nature is a miracle.

**But contrary to this:** In *Contra Faustum* 26 Augustine says, “When God does something contrary to the course of nature that is normal and known to us, such things are called great deeds or marvels

(*magnalia vel mirabilia*).”

**I respond:** The name ‘miracle’ (*miraculum*) is taken from ‘wonder’ (*admiratio*).

Now wonder arises when the effects are obvious and the cause is hidden; for instance, as it says at the beginning of the *Metaphysics*, someone is filled with wonder when he sees an eclipse of the sun and is ignorant of its cause. But it can happen that the cause of some obvious effect is known to someone even though it is not known to others. Hence, something is surprising (*mirum*) to one man, but not to others; for instance, an uneducated man is surprised at (*miratur*) an eclipse of the sun, but an astronomer (*astrologus*) is not.

By contrast, ‘miracle’ means something that is full of wonder in the sense that it has a cause that is hidden absolutely speaking and from everyone. But this cause is God. Hence, it is those things that are done by God outside of the causes known to us that are called miracles.

**Reply to objection 1:** Even though creation and the justification of the wicked are done by God alone, they are not properly speaking called miracles. For they are not apt to be done by other causes, and so they do not occur ‘outside of the order of nature’ because they have nothing to do with the order of nature.

**Reply to objection 2:** A miracle is called difficult not because of the dignity of the matter in which it is done, but because it exceeds the power of nature. Similarly, a miracle is called unusual not because it does not occur frequently, but because it lies outside of the normal course of nature (*praeter naturalem consuetudinem*). Again, a miracle is said to be beyond the power of nature not only because of the substance of the thing that is done, but also because of the mode and order of doing it. And a miracle is said to be beyond the hope of nature, but not beyond that hope of grace that stems from the faith by which we believe in a future resurrection.

**Reply to objection 3:** Even though the apostles’ knowledge was not manifest in itself, it was nonetheless manifest in its effects, and because of these effects it appeared wondrous (*mirabilis*).

## Article 8

### Is one miracle greater than another?

It seems not to be the case that one miracle is greater than another:

**Objection 1:** In *Epistola ad Volusianum* Augustine says, “In things that are done miraculously (*in rebus mirabiliter factis*), the whole reason for what is done is the power of the one doing it.” But it is the same power, viz., God’s power, that brings about all miracles. Therefore, it is not the case that one miracle is greater than another.

**Objection 2:** God’s power is infinite. But what is infinite exceeds everything finite incommensurably (*improportionabiliter*). Therefore, an infinite power’s doing *this* thing is no more to be marvelled at than its doing *that* thing. Therefore, it is not the case that one miracle is greater than another.

**But contrary to this:** In John 14:12 our Lord, talking about miraculous works, says, “The works that I do, He also shall do; and greater than these shall He do.”

**I respond:** Nothing is called a miracle by comparing it to God’s power, since anything that is done is minimal when compared to God’s power—this according to Isaiah 40:15 (“Behold the Gentiles are as a drop of a bucket, and are counted as the smallest grain of a balance”). Instead, something is called a miracle by comparing it to the power of nature, which a miracle exceeds. And so a miracle is said to be greater insofar as it exceeds the power of nature to a greater degree.

Now there are three ways in which something exceeds the power of nature:

In one way, with respect to *the substance of the thing that is done*, e.g., that two bodies should be in the same place at the same time (*duo corpora sint simul*), or that the sun should travel backwards, or that a human body should be glorified—which nature cannot do in any way at all. These occupy the highest grade among miracles.

Second, something exceeds the power of nature not with respect to *what* is done, but with respect to *that in which* it is done, as with the resuscitation of the dead or the giving of sight to the blind, and so on. For nature can cause life, but not in someone who is dead; and nature can bestow sight, but not to someone who is blind. These works occupy the second place among the miracles.

In the third way, something exceeds the power of nature with respect to *the mode and order of doing it*, as when someone is suddenly cured of a fever by God's power in the absence of medical care and of the normal process of nature in such matters (*absque curatione et consueto processu naturae in talibus*), or as when the air is instantaneously filled with heavy rains by God's power in the absence of natural causes, as happened in reply to the prayers of Samuel (1 Kings 12:18) and of Elijah (3 Kings 18:44-45). Works of this sort occupy the lowest place among miracles. Yet all of these works themselves have different grades, depending on the different ways in which they exceed the power of nature.

**Reply to objection 1 and objection 2:** This makes it clear how to reply to the objections, which go through in regard to God's power.

## QUESTION 106

### How One Angel Illuminates Another

The next thing we have to consider is how one creature moves another. This consideration will have three parts: first, we will consider how angels, who are purely spiritual creatures, effect movement (questions 106-114); second, we will consider how corporeal things effect movement (questions 115-116); and, third, we will consider how men, who are composed of a spiritual and corporeal nature, effect movement (questions 117-119).

On the first topic there are three things to be considered: first, how an angel acts on another angel (questions 106-109); second, how an angel acts on corporeal creatures (question 110); and, third, how an angel acts on men (questions 111-114).

On the first topic, we must consider the illumination (question 106) and speech (question 107) of angels, along with their ordering with respect to one another, both among the good angels (question 108) and among the bad angels (question 109).

As for illumination, there are four questions: (1) Does one angel move the intellect of another angel by illuminating him? (2) Does one angel move the will of another angel? (3) Can a lower angel illuminate a higher angel? (4) Does a higher angel illuminate a lower angel about all the things he knows?

### Article 1

#### Does one angel illuminate another?

It seems that it is not the case that one angel illuminates another:

**Objection 1:** Angels now possess the same beatitude that we ourselves hope for in the future. But according to Jeremiah 31:34 (“A man will no longer teach his neighbor, and a man will no longer teach his brother”), at that time it will not be the case that one man illuminates another. Therefore, it is likewise not now the case that one angel illuminates another.

**Objection 2:** In angels there are three kinds of light (*lumen*): the light of *nature*, the light of *grace*, and the light of *glory*. But it is the creator who illuminates an angel by the light of nature; and it is the one who justifies him who illuminates an angel by the light of grace; and it is the one who beatifies him who illuminates an angel by the light of glory—and in each case this is God. Therefore, it is not the case that one angel illuminates another.

**Objection 3:** Light is a certain form in the mind. But as Augustine says in *83 Quaestiones*, the rational mind is formed by God alone, without a mediating creature. Therefore, it is not the case that one angel illuminates the mind of another.

**But contrary to this:** In *De Caelesti Hierarchia*, chap. 8, Dionysius says, “The angels of the second hierarchy are cleansed, illuminated, and perfected by the angels of the first hierarchy.”

**I respond:** One angel illuminates another. To see this clearly, note that light, as applied to the intellect, is nothing other than a certain manifestation of the truth—this according to Ephesians 5:13 (“All that is made manifest is light”). Hence, to illuminate is nothing other than to pass on to another the manifestation of a truth that one knows. It is in this sense that at Ephesians 3:8-9 the Apostle says, “To me, the least of all the saints, is given this grace, to illuminate all men about the dispensation of the mystery which has been hidden from the ages in God.” So, then, one angel is said to illuminate another insofar as he makes manifest to him a truth that he himself knows. Hence, in *De Caelesti Hierarchia*, chap. 7, Dionysius says, “Theologians demonstrate plainly that the orders of heavenly substances are taught the deifying sciences by the highest minds.”

Now as was explained above (q. 105, a. 3), two things must come together in order for understanding to occur, viz., (a) *the intellectual power* and (b) *a likeness of the thing that is understood*. And it is in these two respects that one angel is able to make known to another a truth that he himself knows.

He does this, first, by fortifying the other's intellectual power. For just as the power of a less perfect body is strengthened because of the spatial proximity of a more perfect body—e.g., a body that is less hot increases in heat because of the presence of a body that is more hot—so too the intellectual power of a lower angel is strengthened because a higher angel turns toward him. For the order of 'turning toward one another' (*ordo conversionis*) plays the role among spiritual beings that the order of spatial proximity plays among corporeal things.

Second, one angel manifests a truth to another with respect to the likeness of the thing that he himself understands. For the higher angel receives his knowledge of the truth in a type of universal conception that the lower angel's intellect would not be capable of grasping, since it is natural for the lower angel to receive truth in a more particularized way. Therefore, the higher angel somehow draws distinctions within the truth that he conceives of in a universal way in order for the lower angel to be able to grasp it, and this is the way in which he presents to the lower angel that which the latter comes to know—just as, in our own case, teachers make many distinctions within what they know in a unified way in order to accommodate it to the capacity of others. This is how Dionysius puts it in *De Caelesti Hierarchia*, chap. 15: "Each intellectual substance, by his provident power, divides and multiplies the uniform understanding given to him by a substance closer to God (*a diviniore*) in order to fashion a comparison that leads the lower substance upward."

**Reply to objection 1:** All the angels, both higher and lower, see God's essence directly, and it is not the case that one teaches another in this respect. This is the sort of teaching that the prophet is talking about, and that is why he says, "A man will not teach his brother, saying, 'Know the Lord'. For all shall know me, from the least of them even to the greatest."

However, the reasons behind God's works, which are known in God as in the cause of those works, are such that God knows them all in Himself, because He comprehends Himself, whereas everyone else who sees God knows more of these reasons to the extent that he sees God more perfectly. Hence, a higher angel knows more of the reasons behind God's works than a lower angel does, and he illuminates the lower angel about them. This is how Dionysius puts it in *De Divinis Nominibus*, chap. 4, "The angels are illuminated with the reasons for the things that exist."

**Reply to objection 2:** One angel illuminates another not by giving him the light of nature or the light of grace or the light of glory, but rather, as has been explained, by strengthening his natural light and by making manifest to him the truth concerning things that pertain to the state of nature, the state of grace, and the state of glory.

**Reply to objection 3:** The rational mind is formed directly by God either (a) as an image from an exemplar, since it is made to no other image than the image of God, or (b) as a subject completed by an ultimate form, since a created mind is always thought of as unformed unless it adheres to the First Truth itself. By contrast, other kinds of illumination, which are from a man or an angel, are, as it were, dispositions with respect to the last form.

## Article 2

### Can one angel move the will of another?

It seems that one angel can move the will of another:

**Objection 1:** According to Dionysius, as is clear from the passage quoted above (a. 1), just as one angel illuminates another, so one angel cleanses and perfects another. But cleansing and perfecting seem to involve the will; for cleansing seems to be a cleansing from the filth of sin, which pertains to the will, whereas perfecting seems to occur through the acquisition of an end, which is the object of the will. Therefore, one angel can move the will of another.

**Objection 2:** In *De Caelesti Hierarchia*, chap. 7, Dionysius says, “The names of the angels designate their properties.” But the Seraphim are so called because they are ‘fiery’ or ‘ardent’, and they are this way through love, which pertains to the will. Therefore, one angel moves the will of another.

**Objection 3:** In *De Anima* 3 the Philosopher says that a higher appetite moves a lower appetite. But just as a higher angel’s intellect is higher, so also his appetite is higher. Therefore, it seems that a higher angel can alter the will of another.

**But contrary to this:** Altering the will belongs to the one who justifies, since justice is rectitude of the will. But it is only God who justifies. Therefore, one angel cannot alter the will of another.

**I respond:** As was explained above (q. 105, a. 4), there are two ways in which the will is altered: first, on the part of the object, and, second, on the part of the power of willing itself.

Now on the part of the *object*, the will is moved both by (a) the good itself, which is the object of the will and moves the will in the way that what is desirable moves an appetite, and (b) by the one who exhibits the object—as, for instance, by showing that something is good. But as was explained above (q. 105, a. 4), while other goods may incline the will in some way, nothing moves the will with necessity (*sufficienter*) except the universal good, viz., God. And this is the good which He alone exhibits in order to be seen through His essence by those who are beatified; and as we read in Exodus 33:18-19, it is He alone who, when Moses says, “Show me your glory,” replies, “I will show you all good.” Therefore, an angel does not move the will with necessity (*sufficienter*), either as an object or as someone exhibiting an object. However, an angel does incline the will both as (a) a certain lovable object and as (b) one who manifests certain created goods that are ordered toward God’s goodness. And in this way he is able to incline the will of another, by means of persuasion, toward the love of a creature or the love of God.

On the other hand, as far as the *power* itself is concerned, the will cannot be moved in any way except by God. For the will’s operation is a certain inclination toward what is willed on the part of the one who wills, and this inclination can be altered only by the one who conferred the power of willing on the creature—just as a natural inclination can likewise be altered only by an agent who can give the power that the natural inclination follows upon. But it is God alone who confers the power of willing on a creature, since He alone is the author of an intellectual nature. Hence, one angel cannot move the will of another.

**Reply to objection 1:** ‘Cleansing’ and ‘perfecting’ are to be taken here in a sense that goes along with ‘illuminating’. Since God illuminates both the intellect and will by altering them, He cleanses both the intellect and the will of defects and perfects both the intellect and the will with respect to their ends. By contrast, as has been explained (a. 1), illumination by an angel has to do [only] with the intellect. And so *cleansing* by an angel means cleansing the intellect of a defect, viz., ignorance, whereas *perfecting* by an angel means bringing to fulfillment the intellect’s end, viz., to know the truth. This is why in *De Ecclesiastica Hierarchia*, chap. 6, Dionysius says, “In the heavenly hierarchy, the cleansing of lower essences is an illumination with respect to unknown things which leads them to a more perfect knowledge.” In the same way, we say that bodily sight is cleansed insofar as darkness is removed, whereas it is illuminated insofar as it is suffused with light, and it is perfected insofar as it is led to the cognition of what is colored.

**Reply to objection 2:** As has been explained, it is by means of persuasion that one angel can induce another toward loving God.

**Reply to objection 3:** The Philosopher is talking here about the lower, i.e., sentient, appetite, which can be moved by the higher, i.e., intellectual, appetite. For the higher appetite belongs to the same nature of the soul, and the lower appetite is a power that exists in a corporeal organ—something that has no place in angels.

### Article 3

#### Can a lower angel illuminate a higher angel?

It seems that a lower angel can illuminate a higher angel:

**Objection 1:** The Church's hierarchy is derived from and represents the heavenly hierarchy; hence, the heavenly Jerusalem is called "our mother" in Galatians 4:26. But according to what the Apostle says at 1 Corinthians 14:31 ("You are all able to prophesy, one by one, that all may learn and all may be exhorted"), in the Church those who are higher are illuminated and taught by those who are lower. Therefore, in the heavenly hierarchy those who are higher can likewise be illuminated by those who are lower.

**Objection 2:** Just as the order of corporeal substances depends on God's will, so too does the order of spiritual substances. But as has been explained (q. 105, a. 6), God sometimes operates outside the order of corporeal substances. Therefore, He likewise sometimes operates outside the order of spiritual substances by illuminating those who are lower without the mediation of those who are higher. Therefore, the lower angels who are illuminated in this way by God can illuminate those who are higher.

**Objection 3:** As has been explained (a. 1), one angel illuminates another by turning toward him. But since this 'turning toward another' is voluntary, the highest angel can turn toward the lowest angel while skipping over the ones in between. Therefore, the highest angel can illuminate the lowest angel directly, and so the latter can in turn illuminate those who are higher than himself.

**But contrary to this:** Dionysius says, "It is a divine law, fixed immovably, that lower things are led back to God through the mediation of higher things."

**I respond:** Lower angels never illuminate higher angels, but instead are always illuminated by them. The reason for this is that, as was explained above (q. 105, a. 6), one order is contained under another in the same way that one cause is contained under another. Hence, one order is ordered to another in the same way that one cause is ordered to another.

So it is not unfitting if something is sometimes done outside the order of lower causes in order to direct things to a higher cause—as happens, for instance, when in human affairs someone preempts a governor's precept in order to obey the prince. And so it happens that God sometimes operates miraculously outside the order of corporeal nature in order to direct men toward knowing Him.

However, the preemption of the order that should obtain among spiritual substances has nothing to do with directing men to God, since the operations of angels are not manifest to us in the way that the operations of visible bodies are. And so the order that is fitting among spiritual substances is never preempted by God and, as a result, the lower angels are always moved by the higher angels, and not vice versa.

**Reply to objection 1:** The Church's hierarchy imitates the heavenly hierarchy in some respects, but does not attain a perfect likeness of it. For in the heavenly hierarchy the whole reason for the ordering is based on closeness to God. And so those who are closer to God belong to a more sublime grade [of angel] and have clearer knowledge, and because of this the higher angels are never illuminated by the lower ones. By contrast, in the ecclesiastical hierarchy it sometimes happens that (a) those who

are closer to God because of their sanctity belong to the lowest grade and are not eminent in knowledge, and that (b) some who are eminent in knowledge in one area are deficient in knowledge in another area. And because of this the higher can be taught by the lower.

**Reply to objection 2:** As has been explained, there is no parallel in the arguments regarding God's acting outside the order of corporeal nature and His acting outside the order of spiritual nature. Hence, the conclusion does not follow.

**Reply to objection 3:** An angel voluntarily turns toward another angel in order to illuminate him, but an angel's will is always regulated by God's law, which instituted the ordering among angels.

#### Article 4

##### Does a higher angel illuminate a lower angel about everything that the higher angel knows?

It seems that a higher angel does not illuminate a lower angel about everything that the higher angel knows:

**Objection 1:** In *De Caelesti Hierarchia*, chap. 12, Dionysius says that the higher angels have a knowledge that is more universal, whereas lower angels have knowledge that is more particularized and subordinate. But there are more things contained under universal knowledge than under particularized knowledge. Therefore, in being illuminated by the higher angels, the lower angels do not know everything that the higher angels know.

**Objection 2:** In *2 Sentences*, dist. 11, the Master says that the higher angels knew the mystery of the Incarnation from the beginning, whereas this mystery was unknown to the lower angels up to the time that it was accomplished. This is evident from the fact that, as Dionysius explains in *De Caelesti Hierarchia*, chap. 7, when certain angels asked as if they did *not* know, "Who is this king of glory?"—other angels, as if they *did* know, responded, "The Lord of hosts, He is the king of glory." But this would not be the case if the higher angels illuminated the lower angels about everything that they know. Therefore, they do not illuminate them about all the things that are known to them.

**Objection 3:** If the higher angels make known to the lower angels everything that they know, then nothing that the higher angels know remains unknown to the lower angels. Therefore, there is nothing left about which the higher angels are able to illuminate the lower angels. But this seems absurd. Therefore, the higher angels do not illuminate the lower angels about everything.

**But contrary to this:** Gregory says, "In that heavenly homeland, even though some are more excellently gifted, nonetheless, nothing is possessed in a unique way." And in *De Caelesti Hierarchia*, chap. 15, Dionysius says that each heavenly essence, having been given knowledge by a higher essence, communicates it to a lower essence. This is clear from the passage cited above (a. 1).

**I respond:** All creatures participate in God's goodness in order to diffuse to others the good that they have within themselves, since it is part of the notion of goodness that it communicates itself to others. This is why even corporeal agents pass on to others a likeness of themselves as far as this is possible. Therefore, the greater the participation in God's goodness that given agents have, the greater is their inclination to diffuse their own perfections to others as far as this is possible. Thus, in 1 Peter 4:10 St. Peter warns those who participate in God's goodness through grace, "As each has received grace, administer it one to another as good stewards of the manifold grace of God."

*A fortiori*, the holy angels, who have the most complete participation in God's goodness, impart to those below them whatever they receive from God. Still, the lower angels do not receive it in as excellent a way as it exists in the higher angels. And so the higher angels always remain in their higher

order and always have a more perfect knowledge—just as the very same thing is understood more completely by a teacher than by the student who is learning from him.

**Reply to objection 1:** The knowledge that belongs to the higher angels is called ‘more universal’ to indicate a more eminent mode of understanding (cf. q. 55, a. 3) .

**Reply to objection 2:** The Master’s words should be understood to imply not that the lower angels were completely ignorant of the mystery of the Incarnation, but that they did not understand it as completely as the higher angels did and that their cognition of it increased later on when the mystery was accomplished.

**Reply to objection 3:** Until judgment day new things are being continually revealed by God to the higher angels concerning what pertains to the condition of the world and especially to the salvation of the elect. Hence, until then, there will always be something about which the higher angels are illuminating the lower angels.

## QUESTION 107

### The Speech of Angels

The next thing we have to consider is the speech of angels. On this topic, there are five questions: (1) Does one angel speak to another? (2) Does a lower angel speak to a higher angel? (3) Does an angel speak to God? (4) Does spatial distance play a role in an angel's speech? (5) Do all the angels know what one angel says to another angel?

#### Article 1

##### Does one angel speak to another?

It seems that it is not the case that one angel speaks to another (*angelus alteri non loquatur*):

**Objection 1:** In *Moralia* 18 Gregory says that in the resurrected state “the corporeality of the parts of the body does not hide anyone’s mind from the eyes of another.” Therefore, *a fortiori*, one angel’s mind is not hidden from another. But speech has the purpose of making manifest to another what is hidden in one’s own mind. Therefore, there is no need for one angel to speak to another.

**Objection 2:** There are two kinds of speech: (a) *interior* speech, by which one speaks to himself, and (b) *exterior* speech, by which one speaks to another. But exterior speech is effected through a sensible sign, e.g., by the spoken word or by a gesture or by some part of the body such as the tongue or a finger—none of which can apply to angels. Therefore, it is not the case that one angel speaks to another.

**Objection 3:** When someone speaks, he stimulates the hearer to pay attention to what he is saying. But there does not seem to be any way for one angel to stimulate another angel to pay attention to him, since in our own case this is accomplished by a sensible sign. Therefore, it is not the case that one angel speaks to another.

**But contrary to this:** 1 Corinthians 13:1 says, “If I speak with the tongues of men or of angels ...”

**I respond:** There is some sort of speech among angels. For as Gregory points out in *Moralia* 2, “It is fitting that our own mind, which exceeds the character of corporeal speech, should be elevated to sublime and unknown modes of intimate speech.” Therefore, to understand the way in which one angel speaks to another, note that, as we explained above when we were discussing the soul’s acts and powers (q. 82, a. 4), the will moves the intellect to its operation.

Now an intelligible thing exists in the intellect in three ways: first, *habitually* or, as Augustine puts it, in memory; second, *as actually being considered or conceived*; and, third, *as related to another*. It is clearly by the command of the will that an intelligible thing moves from the first of these stages to the second. This is why the definition of a habit includes the phrase ‘which someone uses when he wills to’. Similarly, it is through the will that an intelligible thing moves from the second stage to the third. For it is by the will’s command that the mind’s conception (*conceptus*) is directed toward another, either (a) in order to do something or (b) in order to manifest something to someone else.

Now when the mind turns itself to the actual consideration of what it possesses habitually, one is speaking to himself, since the mind’s conception is itself called an interior word (*interius verbum*). But one angel’s mental conception is made known to another angel in virtue of the fact that the first angel’s mental conception is directed, by the will of the angel himself, toward being manifested to the second angel. And this is the way in which one angel speaks to another. For to say something to someone else is nothing other than to manifest the conception of one’s mind to someone else.

**Reply to objection 1:** In our own case, the mind’s interior conception is, as it were, closed off to others by two obstacles.

The first is the will itself, which can either keep the intellect’s conception inside or else direct it

toward the outside. In this regard, no one else can see one's mind, with the sole exception of God—this according to 1 Corinthians 2:11 (“No one knows the things of a man, but the spirit of a man that is in him”).

Second, a man's mind is closed off from other men by the body's thickness. Hence, even when the will does direct the mental conception toward being manifested to another, the latter does not know it directly; rather, it is necessary to use some sensible sign. This is what Gregory is talking about in *Moralia* 2 when he says, “In the eyes of others, we stand within the solitude of our mind, behind the wall of our body; but when we want to manifest ourselves, we go out, as it were, through the door of the tongue in order to show externally what we are like.”

However, an angel does not have this second sort of obstacle. And so as soon as he wills to manifest his own conception, the other angel grasps it immediately.

**Reply to objection 2:** Exterior speech that is effected through spoken words is necessary in our case because of the obstacle posed by the body. Hence, an angel has only interior speech and not exterior speech. However, his interior speech involves not only what he says to himself by conceiving something interiorly, but also what he directs by his own will to be manifested to another. And so the phrase ‘tongues of angels’ is used metaphorically to express the power by which an angel manifests his conception.

**Reply to objection 3:** As regards the good angels, who always see one another in the Word, it would not be necessary to posit anything that gets the attention of another. For just as one angel always sees another, so too he always sees anything in the other that is directed toward him.

But given that the angels were likewise able to speak to one another when they were created in the state of nature, and given that the bad angels even now speak to one another, one should say that the intellect is moved by an intelligible thing in the same way that the senses are moved by a sensible thing. Therefore, just as the senses are stimulated by a sensible sign, so too an angel's mind can be stimulated by an intelligible power to pay attention.

## Article 2

### Does a lower angel speak to a higher angel?

It seems that a lower angel does not speak to a higher angel:

**Objection 1:** A Gloss on 1 Corinthians 13:1 (“If I speak with the tongues of men or of angels ...”) says that every instance of angelic speech is an illumination by which a higher angel illuminates a lower angel. But as was explained above (q. 106, a. 3), lower angels never illuminate higher angels. Therefore, lower angels do not speak to higher angels, either.

**Objection 2:** As was explained above (q. 106, a. 1), to illuminate is nothing other than to make manifest to another what is already manifest to oneself. But this is the same as speaking. Therefore, to illuminate and to speak are the same thing, and so the same conclusion follows as above.

**Objection 3:** In *Moralia* 2 Gregory says, “God speaks to the angels by the very fact that He reveals His own hidden and invisible things to their hearts.” But this is just to illuminate them. Therefore, all of God's locutions are illuminations. Therefore, by parity of reasoning, all of an angel's locutions are illuminations. Therefore, there is no way in which a lower angel can speak to a higher angel.

**But contrary to this:** As Dionysius explains in *De Caelesti Hierarchia* 7, it was the lower angels who asked the higher angels, “Who is this king of glory?” (Psalm 23:10).

**I respond:** Lower angels can speak to higher angels. To see this clearly, note that among the

angels every illumination is an instance of speaking, but not every instance of speaking is an illumination. For as has been explained (a. 1), for one angel to speak to another is nothing other than for the first, by his own will, to direct his conception toward being made known to the second. Now what is mentally conceived can be related to one of two sources (*duplex principium*), viz., (a) to *God Himself*, who is the First Truth, or (b) to the conceiver's act of *will*, in virtue of which we are actually conceiving of something.

Now since truth is the light of the intellect, and since the standard (*regula*) of all truth is God Himself, it follows that insofar as what is mentally conceived depends on the First Truth, its manifestation is both an instance of speaking and an illumination—as, for instance, when one man says to another, ‘The heavens are created by God’ or ‘A man is an animal’.

By contrast, the manifestation of what depends on the conceiver's will is merely an instance of speaking and cannot be called an illumination—as, for instance, if someone says to another, “I want to learn this” or “I want to do this” or “I want to do that.” The reason for this is that a created will is not a light or a standard of truth, but instead participates in the light. Hence, to communicate what stems from a created will *qua* created will is not to illuminate. For it is irrelevant to the perfection of my intellect to know what you want, or to know what you are conceiving of; rather, all that is relevant to the perfection of my intellect is what the truth about the world (*rei veritas*) is.

Now it is clear that angels are said to be higher or lower in relation to the source which is *God*. And so illumination, which depends on the source which is God, passes only through higher angels to lower angels.

However, in relation to the source which is the *will*, the one who is doing the willing is himself the first and highest source. And so the manifestation of what pertains to the will passes through the angel who does the willing to whomever else he wishes. And as far as this sort of manifestation is concerned, it is true both that higher angels speak to lower angels and that lower angels speak to higher angels.

**Reply to objection 1 and objection 2:** The replies to the first and second objections are clear from what been said.

**Reply to objection 3:** Every instance of God's speaking to the angels is an illumination. For since God's will is a standard of truth, it is likewise relevant to the perfection and illumination of a created mind to know what God wills. But as has been explained, the same line of reasoning does not apply to an angel's will.

### Article 3

#### Does an angel speak to God?

It seems that it is not the case that an angel speaks to God:

**Objection 1:** Speaking has the purpose of making something known to another. But an angel cannot make anything known to God, who already knows all things. Therefore, an angel does not speak to God.

**Objection 2:** As has been explained (a. 1), to speak is to direct the intellect's conception toward another. But an angel always directs the conceptions of his mind toward God. Therefore, if there is any time at which an angel is speaking to God, then he is always speaking to God—which might strike someone as absurd, since sometimes an angel is speaking to another angel. Therefore, it seems that an angel is never speaking to God.

**But contrary to this:** Zachariah 1:12 says, “The angel of the Lord answered, and said, ‘O Lord of

hosts, how long will you not have mercy on Jerusalem?” Therefore, an angel speaks to God.

**I respond:** As has been explained (aa. 1 and 2), an angel speaks by directing the conception of his mind toward another. But there are two ways in which something might be directed toward another.

First, it might be directed toward another in order to communicate something to the other—in the way that an agent is ordered toward a patient among natural things, and in the way that a teacher is ordered toward his student in the case of human speech. And as far as this sort of speech is concerned, an angel does not in any sense speak to God, either about what pertains to the truth or about what depends on his created will. For God is the principle and source of all truth and of all acts of will.

Second, something is directed to another in order to receive something from the other—in the way that a patient is directed toward an agent among natural things, and in the way that a student is directed toward his teacher in the case of human speech. This is the way in which an angel speaks to God, either by consulting God’s will about what he should do or by admiring God’s excellence, which he never fully comprehends. As Gregory puts it in *Moralia 2*, “Angels speak to God when, because they look at what is beyond themselves, they rise up in a movement of admiration.”

**Reply to objection 1:** Speech does not always have the purpose of manifesting something to another; rather, it is sometimes directed toward the end of having something made manifest to the speaker, as when a student asks his teacher a question.

**Reply to objection 2:** The angels are always speaking to God with the sort of speech by which angels speak to God by praising and admiring Him. However, as regards the sort of speech by which angels consult God’s wisdom about what they should do, they speak to Him when they have something new to do about which they desire to be illuminated.

#### Article 4

##### Does spatial distance play a role in angelic speech?

It seems that spatial distance plays a role (*localis distantia operetur aliquid*) in angelic speech:

**Objection 1:** As Damascene says, an angel is located where he is operating. But speech is a certain operation that belongs to an angel. Therefore, since an angel exists in a determinate place, it seems that an angel can speak only out to a determinate spatial distance.

**Objection 2:** Someone speaks loudly because of his distance from the hearer. But Isaiah 6:3 says of the Seraphim that “they cried out to one another.” Therefore, it seems that spatial distance plays a role in the speech of the angels.

**But contrary to this:** As Luke 16:24 has it, the rich man in hell was speaking to Abraham despite the spatial distance. Therefore, *a fortiori*, spatial distance cannot impede one angel’s speaking to another.

**I respond:** As is clear from what has been said (aa. 1 and 2 and 3), angelic speech consists in an intellectual operation. But an angel’s intellectual operation is altogether abstracted from time and place; for even our own intellective operation occurs through an abstraction from the here and now—except incidentally because of phantasms, which do not exist in the angels. But neither temporal difference nor spatial distance plays a role in what is altogether abstracted from place and time. Hence, spatial distance poses no obstacle in the case of angelic speech.

**Reply to objection 1:** As has been explained (a. 1), angelic speech is an interior locution that is nonetheless perceived by another; and so angelic speech exists within the angel who is speaking and, as a result, exists where the angel who is speaking exists. But just as spatial distance does not prevent one

angel from being able to see another angel, so also it does not prevent him from perceiving what is directed to him from within that other angel—which is what it is to perceive that other angel’s speech.

**Reply to objection 2:** The loudness being referred to here is not the sort of loudness which belongs to a bodily voice and which exists because of spatial distance. Rather, ‘loudness’ here signifies the greatness of what was being said, or else the intensity of the affection. Accordingly, in *Moralia* 2 Gregory says, “Each cries out less loudly to the extent that he has less desire.”

## Article 5

### Do all the angels know what one angel says to another angel?

It seems that all the angels know what one angel says to another angel:

**Objection 1:** Unequal spatial distances are responsible for the fact that not everyone hears what a given man is saying. But as has been explained (a. 4), spatial distance plays no role in angelic speech. Therefore, all the angels perceive what one angel is saying to another.

**Objection 2:** The angels communicate by their power of understanding. Therefore, if the conception of one angel’s mind that is directed toward another angel is known by that other angel, then by parity of reasoning it is known by the others as well.

**Objection 3:** Illumination is a certain kind of speech. But the illumination of one angel by another reaches all the angels, since, as Dionysius says in *De Caelesti Hierarchia*, chap. 15, “Each celestial essence communicates to the others the understanding that has been handed down to him.” Therefore, the speech of one angel to another angel reaches all the angels.

**But contrary to this:** It is possible for one man to speak to just one other man. Therefore, *a fortiori*, this can happen in the case of angels.

**I respond:** As was explained above (aa. 1 and 2), the conception of one’s angel mind can be perceived by another angel in virtue of the fact that the one whose conception it is directs that conception toward the other by his own will. Now something can, for whatever reason, be directed toward one angel and not toward another. And so the conception of one angel can be known by a second angel without being known by other angels. And it is in this way that it is possible for an angel’s speech to another to be perceived by one angel and not by the others—not, to be sure, because of an obstacle posed by spatial distance, but rather, as has been explained, because the angel who is speaking directs his conception voluntarily.

**Reply to objection 1 and objection 2:** The response makes clear the replies to the first two objections.

**Reply to objection 3:** Illumination has to do with things that emanate from the first standard of truth, which is a principle common to all the angels, and so the illuminations are common to them all. But speech can also deal with things that are ordered toward the principle of a created will, which is proper to each angel. And so it is not necessary for speech of this kind to be common to all the angels.

## QUESTION 108

### The Arrangement of Angels according to Hierarchies and Orders

The next thing we have to consider is the arrangement of angels according to hierarchies and orders. For it was explained above (q. 106, a. 3) that higher angels illuminate lower angels, and not vice versa.

On this topic there are eight questions: (1) Do all angels belong to a single hierarchy? (2) Is there just a single ordering within each hierarchy? (3) Does more than one angel belong to each order? (4) Does the distinction among the hierarchies and orders stem from nature? (5) What are the names and properties of each order? (6) How are the orders related to one another? (7) Will the orders endure beyond judgment day? (8) Are men assumed into the orders of angels?

#### Article 1

##### Do all angels belong to a single hierarchy?

It seems that all angels belong to a single hierarchy:

**Objection 1:** Since angels are the highest of creatures, one must claim that they are arranged in the best way. But as is clear from the Philosopher in *Metaphysics* 12 and *Politics* 3, the best arrangement of a multitude is for it to be contained under a single principality (*principatus*). Therefore, since a hierarchy is nothing other than a sacred principality, it seems that all angels belong to a single hierarchy.

**Objection 2:** In *De Caelesti Hierarchia*, chap. 3, Dionysius says, “A hierarchy consists in order, knowledge, and action.” But all the angels share a single ordering with respect to God, whom they know and by whom they are ruled in their actions. Therefore, all angels belong to a single hierarchy.

**Objection 3:** The sacred principality called a hierarchy is found among men and among angels. But all men belong to a single hierarchy. Therefore, all angels likewise belong to a single hierarchy.

**But contrary to this:** In *De Caelesti Hierarchia*, chap. 6, Dionysius distinguishes three hierarchies of angels.

**I respond:** As has just been pointed out, a hierarchy is a sacred principality. Now two things are understood in the name ‘principality’, viz., (a) the ruler (*princeps*) himself and (b) the multitude that is ordered under the ruler.

Thus, since God is the single ruler not only of all angels but also of men and of every creature, it follows that there is a single hierarchy consisting not only of all angels but of every rational creature that is capable of participating in sacred things. Accordingly, in *De Civitate Dei* 12 Augustine says, “There are two cities, i.e., societies, one consisting of good angels and good men, and the other consisting of bad angels and bad men.”

On the other hand, if ‘principality’ is understood with reference to the multitude that is ordered under the ruler, then a principality is called one to the extent that a given multitude can be governed by the ruler in one and the same manner. By contrast, multitudes that the ruler cannot govern in the same manner belong to diverse principalities—as when, for instance, under a single king there are diverse cities ruled by diverse laws and ministers.

Now it is clear that men receive divine illuminations in a way different from angels. For as Dionysius puts it in *De Caelesti Hierarchia*, chap. 1, angels receive such illuminations in their intelligible purity, whereas men receive them under sensible likenesses. And so the human hierarchy must be distinguished from the angelic hierarchy.

And in this same way, three hierarchies are distinguished among the angels. For as was explained above when we were discussing angelic cognition (q. 55, a. 3), the higher angels have a more universal

cognition of the truth than the lower angels do. Now among the angels one can distinguish three levels of this sort of universal cognitive reception. For the reasons behind the things that the angels are illuminated about can be considered in three ways.

First of all, these reasons can be considered insofar as they proceed from the *first universal principle*, viz., God. This mode of cognitive reception belongs to the first hierarchy, which reaches directly to God and, as Dionysius puts it in *De Caelesti Hierarchia*, chap. 7, “is located in God’s vestibule, as it were.”

Second, the reasons in question can be considered insofar as they depend on *universal created causes*, which at this point are multiplied in a certain way. This mode of cognitive reception belongs to the second hierarchy.

Third, these reasons can be considered insofar as they are applied to individual things and depend on *proper causes*. This mode of cognitive reception belongs to the lowest hierarchy.

All of this will become clearer below (a. 6), when we discuss each order of angels individually.

This, then, is the way in which hierarchies are distinguished within a multitude of subjects. Hence, it is clear that those who posit a hierarchy among the divine persons, which they call a ‘super-celestial hierarchy’, are mistaken, and that their claim goes against Dionysius’s intention. For even though there is a certain order of nature among the divine persons, there is no hierarchy, since, as Dionysius says in *De Caelesti Hierarchia*, chap. 3, “The ordering of a hierarchy is such that there are some who are cleansed, illuminated, and perfected, whereas there are others who do the cleansing and illuminating and perfecting.” We hold that this sort of thing is entirely absent among the divine persons.

**Reply to objection 1:** This objection is about a principality with reference to the ruler, since, as the Philosopher says in the cited passages, a multitude is best ruled by a single ruler.

**Reply to objection 2:** The angels are not distinguished into hierarchies as regards their cognition of God Himself, whom they all see in the same way, viz., through His essence. Rather, as has been explained, the angels are distinguished into hierarchies by [their mode of understanding] the reasons for created things.

**Reply to objection 3:** All men belong to a single species, and a single mode of understanding is connatural to all of them. But it is not this way with the angels. Therefore, the arguments are not parallel.

## Article 2

### Is there more than one order in a single hierarchy?

It seems that there is not more than one order in a single hierarchy:

**Objection 1:** When definitions are multiplied, the things defined are multiplied. But as Dionysius says, a hierarchy is an order. Therefore, if there are many orders, then there will be many hierarchies and not just a single hierarchy.

**Objection 2:** Diverse orders are diverse grades. Now among spiritual things, grades are constituted by diverse spiritual gifts. But among the angels all spiritual gifts are common, since “nothing is possessed in a unique way.” Therefore, it is not the case that there are diverse orders of angels.

**Objection 3:** Within the Church’s hierarchy, orders are distinguished with respect to cleansing (*purgare*), illuminating (*illuminare*), and perfecting (*perficere*). For as Dionysius says in *De Ecclesiastica Hierarchia*, chap. 5, the order of deacons is purgative, the order of priests is illuminative, and the order of bishops is perfective. But every angel cleanses, illuminates, and perfects. Therefore,

there is no distinction of orders among the angels.

**But contrary to this:** In Ephesians 1:21 the Apostle says that God has set the man Christ “above every Principality and Power and Virtue and Domination.” But these are diverse orders of angels, and some of them belong to the same hierarchy, as will become clear below (a. 6).

**I respond:** As has been explained (a. 1), a hierarchy is a principality, i.e., a multitude ordered in a unified way under the governance of a ruler. However, a multitude would be disorderly (*confusa*), and not orderly, if there were not diverse orders within the multitude. Therefore, the very notion of a hierarchy requires a diversity of orders, and this diversity of orders involves diverse roles (*officia*) and activities (*actus*). For instance, it is clear that in a city there are diverse orders that involve diverse activities. For there is one order of those who judge, another order of those who fight, another order of those who work in the fields, and so on for the others. But even though there are many orders in a single city, they can nonetheless be reduced to three, since every complete multitude has a beginning, a middle, and an end. Hence, in cities there are three orders of men. For some are the highest, viz., the aristocrats (*optimates*), whereas others are the lowest, viz., the common people (*vilis populus*), and still others are in the middle, viz., the ‘respectable’ people (*populus honorabilis*).

So, then, in each angelic hierarchy there are orders distinguished with respect to diverse activities and roles, and all of this diversity is reduced to three orders, viz. the highest, the middle, and the lowest. This is why Dionysius posits three orders in each of the hierarchies.

**Reply to objection 1:** ‘Order’ has two meanings. First, it means the very ordering that includes within itself the diverse grades, and this is the sense in which a hierarchy is called an order. Second, ‘order’ means one particular grade, and this is the sense in which there are said to be many orders within a single hierarchy.

**Reply to objection 2:** Within the society of angels all things are possessed in common, but some of them are possessed in a more excellent way by certain angels than by other angels. Now each thing is had more perfectly by someone who is able to communicate it to another than by someone who is not able to communicate it. For instance, something that is able to give heat is more perfectly hot than something that is unable to give it; and someone who is able to teach has a more perfect knowledge than someone who is unable to teach. And the more perfect the gift that one is able to communicate, the more perfect the grade he belongs to. For instance, someone who can teach a higher science belongs to a more perfect grade of teacher. The diversity of grades or orders among the angels should be thought of along similar lines, in accord with their diverse roles and activities.

**Reply to objection 3:** The lowest angel is higher than the highest man in our own hierarchy. For according to Matthew 11:11, “One who is least in the kingdom of heaven is greater than he,” viz., John the Baptist, “than whom none greater has arisen from those born of women.” Hence, a lesser angel of the heavenly hierarchy is able not only to cleanse, but also to illuminate and to perfect, in a way that exceeds the orders of our own hierarchy. And so it is not a distinction among these three actions that makes for a distinction among the heavenly orders; rather, it is a difference among other sorts of actions.

### Article 3

#### Does more than one angel belong to a single order?

It seems that it is not the case that more than one angel belongs to a single order:

**Objection 1:** It was explained above (q. 50, a. 4) that all the angels are unequal to one another. But it is things that are equal that are said to belong to a single order. Therefore, it is not the case that

more than one angel belongs to a single order.

**Objection 2:** What can be adequately done through one thing is such that it is superfluous for it to be done through many. But whatever is involved in a single angelic role is adequately done by a single angel—even more so than the fact that what pertains to the sun’s role is adequately done by a single sun, since an angel is more perfect than a celestial body. Therefore, if, as was explained above (a. 2), the orders of angels are distinguished by their roles, then it is superfluous for there to be more than one angel in a single order.

**Objection 3:** It was explained above (q. 50, a. 4) that all angels are unequal. Therefore, if more than one angel—say, three or four—belonged to an order, then the lowest angel from the next highest order would have more in common with the highest angel from the next lowest order than he would with the highest angel of his own order. And so, it seems, he would not belong to the same order as the latter more than he belonged to the same order as the former. Therefore, it is not the case that more than one angel belongs to a single order.

**But contrary to this:** Isaiah 6:3 says that the Seraphim “cried out to one another.” Therefore, there is more than one angel in the order of the Seraphim.

**I respond:** Someone who knows a given group of entities perfectly can distinguish their acts and powers and natures down to the smallest details, whereas someone who knows them imperfectly is able to draw only general distinctions (*distinguere in universali*) among them, where a general distinction is made through fewer distinguishing marks. For instance, someone who knows natural things imperfectly makes general distinctions among the orders of natural things, placing celestial bodies in one order, and lower inanimate bodies in another order, and plants in another order, and animals in another order. By contrast, someone who knew natural things perfectly would be able to distinguish diverse orders within the celestial bodies themselves and within each of the other orders.

Now as Dionysius points out in *De Caelesti Hierarchia*, chap. 6, we ourselves know angels and their roles imperfectly. Hence, we are able to draw only general distinctions among the roles and orders of angels, and it is in this sense that many angels are contained within a single order. However, if we knew the roles of the angels and the distinctions among them perfectly, then we would know perfectly that each angel has his own proper role and his own proper order among things—to an even greater extent than each celestial body (*stella*) does—even though this is now hidden from us.

**Reply to objection 1:** All the angels belonging to a single order are equal in the sense that they share the common likeness by which they are constituted in a single order; however, they are not equal to one another absolutely speaking. Hence, in *De Caelesti Hierarchia*, chap. 10, Dionysius says that within one and the same order it is possible to designate those angels who are first, those who are in the middle, and those who are last.

**Reply to objection 2:** We do not know the detailed division of orders and roles according to which each angel has his own proper role and order.

**Reply to objection 3:** On a surface that is partly white and partly black, two parts located at the border of the white and the black agree more with respect to place than do some pairs of white parts (*quam aliquae duae partes albae*), even though they agree less with respect to [sensible] quality. In the same way, two angels who are located at the limits of two orders agree more with one another in closeness of nature than either one of them agrees with certain other angels belonging to their own respective orders. However, they agree less in their fitness for similar roles, where this sort of fitness extends up to some set limit.

#### Article 4

##### Does the distinction among the hierarchies and orders of angels stem from nature?

It seems that the distinction among the hierarchies and orders of angels does not stem from nature:

**Objection 1:** A hierarchy is a sacred principality, and in defining a hierarchy, Dionysius claims that a hierarchy simulates godlikeness as much as possible. But holiness and godlikeness exist in the angels through grace and not by nature. Therefore, the distinctions among the hierarchies and orders of angels stem from grace and not from nature.

**Objection 2:** As Dionysius says in *De Caelesti Hierarchia*, chap. 7, the Seraphim are so called because they are ‘ardent’ or ‘on fire’. But this seems to involve charity, which comes from grace and not from nature. For as Romans 5:5 says, charity “is poured forth in our hearts by the Holy Spirit, who is given to us.” And as Augustine points out in *De Civitate Dei* 12, this has to do not just with holy men, but can also be applied to the holy angels. Therefore, the orders of the angels stem from grace and not from nature.

**Objection 3:** The Church’s hierarchy is modeled after the heavenly hierarchy. But among men, [holy] orders stem from a gift of grace and not from nature. For it is not by nature that one man is a bishop, another a priest, and another a deacon. Therefore, the orders of angels stem from grace alone and not from nature.

**But contrary to this:** In 2 *Sentences*, dist. 9, the Master says that an order of angels is a multitude of heavenly spirits that are like one another in a certain gift of grace, just as they agree with one another in their participation in natural gifts. Therefore, the distinctions among the orders of angels stem not only from their gifts of grace, but also from their natural gifts.

**I respond:** The order of governance, which is the order of a multitude that exists under an authority (*sub principatu*), has to do with the relation to an end. Now an angel’s end can be thought of in two ways:

First, it can be thought of in relation to what the angelic nature has the ability to do, viz., to know God and to love God with natural cognition and natural love. And in relation to this end, the orders of angels are distinguished by the natural gifts had by the angels.

Second, the end of the angelic multitude can be thought of in relation to their supernatural ability, which consists in seeing God’s essence and in enjoying God’s goodness unshakably. This end they can attain only through grace. Hence, in relation to this end the orders of angels are completely distinguished by their gifts of grace, though dispositively by their natural gifts—for, as was explained above (q. 62, a. 6), angels, unlike men, are given gifts of grace in proportion to the degree of their natural gifts. Hence, in the case of men, the orders are distinguished only by the gifts of grace and not by natural gifts.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

#### Article 5

##### Are the orders of angels appropriately named?

It seems that the orders of angels are not appropriately named:

**Objection 1:** All of the heavenly spirits are called both angels and heavenly virtues. But names that are common to all are not appropriately applied just to some. Therefore, it is inappropriate to name

one order ‘Angels’ and another order ‘Virtues’.

**Objection 2:** According to Psalm 99:3 (“Know that the Lord Himself is God”), it is proper to God to be the Lord (*Dominus*). Therefore, it is inappropriate for an order of heavenly spirits to be called ‘Dominations’ (*Dominationes*).

**Objection 3:** The name ‘Dominations’ has to do, it seems, with governance. But so do the name ‘Principalities’ and the name ‘Powers’. Therefore, it is inappropriate to impose these three names on three different orders.

**Objection 4:** Archangels are so called because they are, as it were, the rulers (*principes*) of Angels. Therefore, the name ‘Archangels’ should not be imposed on any order other than the order of Principalities (*principatus*).

**Objection 5:** The name ‘Seraphim’ is imposed because of the ardor that belongs to charity, whereas the name ‘Cherubim’ is imposed because of knowledge. But charity and knowledge are gifts that are common to all the angels. Therefore, ‘Cherubim’ and ‘Seraphim’ should not be the names of specific orders.

**Objection 6:** ‘Thrones’ means seats. But God is said to be ‘seated’ in a rational creature in virtue of the fact that the creature knows and loves Him. Therefore, the order of Thrones should not be separate from the order of Seraphim and the order of Cherubim. And so it seems that the orders of angels are not appropriately named.

**But contrary to this:** It is the authority of Sacred Scripture that names the orders in this way. For the name ‘Seraphim’ is used in Isaiah 6:2; the name ‘Cherubim’ is used in Ezechiel 1; the name ‘Thrones’ is used in Colossians 1:16; the names ‘Dominations’, ‘Virtues’, ‘Powers’, and ‘Principalities’ are used in Ephesians 1:21; the name ‘Archangels’ is used in the canonical letter of Jude, verse 9; and the name ‘Angels’ is used in many places in Scripture.

**I respond:** In naming the angelic orders, we should notice that, as Dionysius says in *De Caelesti Hierarchia*, chap. 7, the proper names of each order designate the properties of that order.

Now in order to discern the properties that belong to each order, we should note that there are three ways in which something can exist in the ordered entities, viz., (a) by way of *propriety* (*per proprietatem*), (b) by way of *eminence* (*per excessum*), and (c) by way of *participation* (*per participationem*). Something is said to exist in a given entity by way of *propriety* when it is equal to and proportionate to the entity’s nature. On the other hand, something is said to exist in an entity by way of *eminence* when what is attributed to the entity falls short of the entity to which it is attributed and yet belongs to it with a certain preeminence (*per quendam excessum*)—as has been explained in the case of all the names that are attributed to God (q. 13, a. 2). Finally, something is said to exist in an entity by way of *participation* when what is attributed to the entity is found in it in an incomplete way and not fully—in the way that saintly men are called ‘gods’ by participation.

Therefore, if something is to be named by a name designating what it has by way of *propriety*, then it should not be named either by reference to what it participates in imperfectly or by reference to what it has by way of eminence; instead, it should be named by reference to what is, as it were, equal to it. For instance, if someone wishes to give a proper designation of a man, he should say that a man is a *rational substance* and not that he is an *intellectual substance*, where ‘intellectual substance’ is the proper designation of an angel, since simple understanding (*simplex intelligentia*) belongs to an angel as a property, whereas it belongs to a man through participation; nor should he say that a man is a *sentient substance*, where ‘sentient substance’ is the proper designation of a brute animal, since sensation falls short of what is proper to a man and belongs to a man in a way that is preeminent over the other animals (*convenit homini excedenter prae aliis animalibus*).

So, then, in the case of the orders of angels, note that all the spiritual perfections are common to all

the angels and that all the perfections exist more abundantly in the higher angels than in the lower angels. However, since there is a certain gradation even among the perfections themselves, a higher perfection is attributed to a higher order by way of *propriety* and to a lower order by way of *participation*, whereas, conversely, a lower perfection is attributed to a lower order by way of *propriety* and to a higher order by way of *eminence*. And so a higher order is named by reference to a higher perfection. Thus, Dionysius explains the names of the orders by their agreement with the spiritual perfections of the orders.

By contrast, Gregory, in his own explanation of the names, seems to pay more attention to the exterior ministries of the orders. For he says, “Those who announce small matters are called Angels; those who announce great matters are called Archangels; those through whom miracles are done are called Virtues; those by whom opposed powers are repelled are called Powers; and those who preside over the good spirits themselves are called Principalities.”

**Reply to objection 1:** ‘Angel’ means a messenger. Therefore, all the heavenly spirits, insofar as they make divine things manifest, are called angels. But the higher angels have a certain excellence in this manifestation by reference to which the higher orders are named. On the other hand, the lowest order of angels does not add any excellence over and beyond the common sort of manifestation, and so they are named Angels by reference to simple manifestation. And so, as Dionysius says in *De Caelesti Hierarchia*, chap. 5, the common name remains proper for the lowest order.

An alternative reply is that the lowest order is specifically called the order of Angels because they are the ones who make direct announcements to us.

Now ‘virtue’ can have two meanings. First, it can have a common meaning, according to which a virtue lies midway between an essence and its operation; and in this sense all the heavenly spirits are called heavenly virtues in the same way that they are called heavenly essences. Second, ‘virtue’ can have a meaning according to which it implies a certain excellence with respect to strength, and this is the sense in which it is the proper name of an order. Hence, in *De Caelesti Hierarchia*, chap. 8, Dionysius says, “The name ‘Virtues’ signifies a certain manly and unshakeable strength”—which is appropriate, first of all, for all the divine operations that belong to them, and, second, for receiving divine gifts. And so the name ‘Virtues’ signifies that they fearlessly undertake the divine tasks that belong to them, and this seems to involve a strength of spirit.

**Reply to objection 2:** As Dionysius says in *De Divinis Nominibus*, chap. 12, “Domination (*dominatio*) is praised in God uniquely by way of a certain excellence. However, by way of participation, the divine writings use the name ‘lords’ (*dominos*) for distinguished leaders through whom the lower angels receive God’s gifts.” Hence, in *De Caelesti Hierarchia*, chap. 8, Dionysius says that the name ‘Dominations’ signifies, in the first place, “a certain freedom from a servile condition and from common subjection, such as that of the common people, along with a freedom from tyrannical oppression,” which sometimes even great men suffer from. Second, ‘Dominations’ signifies “a certain unyielding and unbending governance, not inclined toward any servile act or any act of the sort characteristic of those subjected to or oppressed by tyrants.” Third, ‘Dominations’ signifies “the desire for and participation in the true dominion that exists in God.”

In the same way, the name of each of the orders signifies a participation in that which exists in God. For instance, the name ‘Virtues’ signifies a participation in God’s strength, and so on for the others.

**Reply to objection 3:** The names ‘Domination’, ‘Power’, and ‘Principality’ all involve governance in one way or another.

For it belongs to the lord alone to prescribe what is to be done. And so Gregory says, “Because the others are subject in obedience to them, certain companies of angels are called ‘Dominations.’”

On the other hand, the name ‘Power’ designates a type of ordinance, according to the Apostle in Romans 13:2 (“He who resists the power resists the ordinance of God”). And so Dionysius claims that the name ‘Power’ signifies certain ordinances having to do with the reception of divine gifts and with the

divine actions that higher angels perform on lower angels in order to lead them upward. Therefore, it belongs to the order of Powers to ordain what is to be done by those subject to them.

Finally, as Gregory says, to rule (*principari*) is to be prior among the others in the sense that the Principalities (*principatus*) are the first ones involved in the execution of what is commanded. And so in *De Caelesti Hierarchia*, chap. 9, Dionysius says that the name ‘Principalities’ signifies “one who leads with a sacred ordinance.” For those who lead others and are first among them are properly called ‘princes’ (*principes*) according to Psalm 67:26 (“Princes went before joined with singers”).

**Reply to objection 4:** According to Dionysius, the Archangels lie midway between the Principalities and the Angels. Now when what lies in the middle is compared to one of the endpoints, it seems like the other endpoint, since it participates in the nature of both. For instance, what is tepid is cold compared to what is hot, but it is hot compared to what is cold. So, too, the Archangels are called the ‘angel princes’ because they are rulers when compared to the Angels, though they are Angels when compared to the Principalities.

On the other hand, according to Gregory, the Archangels are so named from the fact that they rule only over the order of Angels, announcing great things to them, whereas the Principalities are so named from the fact that they rule over all the heavenly powers who carry out God’s decrees.

**Reply to objection 5:** The name ‘Seraphim’ is imposed not only on the basis of charity, but on the basis of a surpassing degree of charity, which is implied by the name ‘ardent’ or ‘on fire’. Hence, in *De Caelesti Hierarchia*, chap. 7, Dionysius explains the name ‘Seraphim’ in terms of the properties of fire, in which there is a surpassing degree of heat. Now there are three things we can consider in fire. The first thing to consider is fire’s motion, which is upward and continuous. This signifies that the Seraphim move unswervingly toward God. The second thing to consider is fire’s active power, which is heat. It is found in fire not just simply speaking, but with a certain sharpness, since it penetrates the action to the greatest degree and reaches to the smallest things; again, heat is found in fire with a certain surpassing fervor. This signifies the action, exercised with great power on those below them, by which angels of this type excite the lower angels to a similar fervor and fully cleanse them by their flame. The third thing to consider in fire is its brightness. This signifies that angels of this sort have within themselves an inextinguishable light and that they illuminate others perfectly.

Similarly, the name ‘Cherubim’ is imposed on the basis of a certain excellence in knowledge, which is interpreted as a fullness of knowledge. Dionysius explains this in terms of four points: first, in terms of the perfect vision of God; second, in terms of the full reception of divine light; third, in terms of the fact that the Cherubim contemplate within God Himself the beauty in the order of the things derived from God; and, fourth, in terms of the fact that, filled with this type of cognition, they pour it out copiously upon the other angels.

**Reply to objection 6:** The order of the Thrones exceeds the lower orders in the fact that the Thrones can discern directly in God the reasons behind God’s works, whereas the Cherubim have an excellence in knowledge and the Seraphim have an excellence in ardor. And though the third excellence is included in these latter two excellences, still, the other two are not included in the excellence that belongs to the Thrones. And this is the way in which the order of the Thrones is distinguished from the order of the Seraphim and the order of the Cherubim. For it is generally true of all the orders that the excellence had by a lower order is contained in the excellence had by a higher order, but not vice versa.

Now Dionysius explains the name ‘Thrones’ by the likeness of the Thrones to material chairs. There are four things to consider in chairs. The first is their position, since chairs are elevated above the ground. And so the angels who are called Thrones are elevated to the point that they know directly in God the reasons behind things. The second thing to consider in material chairs is their firmness, since one sits firmly on them. Here, however, we have the converse, since these angels are themselves firmed up by God. The third thing to consider is that a seat receives the one who sits on it, and he can be carried

on it. So, too, these angels receive God into themselves and in a certain sense carry Him to the lower angels. The fourth thing to consider is the shape of the chair, since a chair is open on one side to receive the one who sits on it. So, too, these angels are, through their promptitude, open to receiving God and serving Him.

## Article 6

### Are the grades of the orders appropriately assigned?

It seems that the grades of the orders are not appropriately assigned:

**Objection 1:** The order of prelates seems to be the highest. But the Dominations, Principalities, and Powers imply a certain order of precedence (*praelationem*) by their very names. Therefore, these orders ought to be the highest of all.

**Objection 2:** The closer an order is to God, the higher it is. But the order of Thrones seems to be closest to God, since nothing is joined more closely to the one who sits than his chair is. Therefore, the order of Thrones is the highest.

**Objection 3:** Knowledge is prior to love, and the intellect seems to be higher than the will. Therefore, it seems that the order of Cherubim is higher than the order of Seraphim.

**Objection 4:** Gregory puts the Principalities above the Powers. Therefore, they are not, as Dionysius claims, immediately above the Archangels.

**But contrary to this:** In the first hierarchy Dionysius places the Seraphim first, the Cherubim in the middle, and the Thrones last. In the middle hierarchy, he places the Dominations first, the Virtues in the middle, and the Powers last. And in the last hierarchy, he places the Principalities first, the Archangels in the middle, and the Angels last.

**I respond:** In assigning the grades of the angelic orders, Gregory and Dionysius agree on all the others but differ with respect to the Virtues and the Principalities. For Dionysius places the Virtues under the Dominations and above the Powers, and he places the Principalities under the Powers and above the Archangels. Gregory, on the other hand, places the Principalities between the Dominations and the Powers, and he places the Virtues between the Powers and the Archangels.

Both of these assignments can draw support from the authority of the Apostle. In Ephesians 1:20-21, while enumerating the middle orders of angels in ascending order, the Apostle says, "God set [Christ] at His right hand in the heavenly places, above every Principality and Power and Virtue and Domination," and so here he places the Virtues between the Powers and the Dominations, in keeping with Dionysius's assignment. However, in Colossians 1:16, enumerating the same orders in descending order, he says, "Through Him were all things created in heaven and on earth, visible and invisible, whether Thrones, or Dominations, or Principalities, or Powers," where he places the Principalities between the Dominations and the Powers, in keeping with Gregory's assignment.

Let us look first at the reasons behind Dionysius's assignment. Notice that, as was explained above (a. 1), the first hierarchy grasps the reasons behind things in God Himself, whereas the second hierarchy grasps them in their universal causes, and the third hierarchy grasps them insofar they are narrowed down to specific effects. And since God is the end not only of the angelic ministries but of the totality of creatures, the consideration of *the end* belongs to the first hierarchy, *the general arrangement of works to be done* pertains to the second hierarchy, and *the application of this arrangement to specific effects*, i.e., the execution of the works, belongs to the last hierarchy. For it is clear that these three components are found in every operation. So Dionysius, taking into account the properties of the orders suggested by

their names, placed in the first hierarchy those orders whose names are imposed with respect to God Himself, viz., the Seraphim, the Cherubim, and the Thrones. Then he placed in the middle hierarchy those orders whose names designate a certain sort of general governance or planning, viz., the Dominations, the Virtues, and the Powers. Finally, he placed in the third hierarchy those orders whose names designate the execution of a work, viz., the Principalities, the Angels, and the Archangels.

Now there are three things that can be considered in relation to the *end*: first, someone thinks about the end; second, he acquires a complete cognition of the end; and, third, he fixes his intention on the end. The second of these points adds to the first, and the third adds to the first two. Since God is the end of creatures in the way that, as *Metaphysics* 12 says, a leader is the end of his army, an example of this order can be found in human affairs. For there are some who rank highly enough to be able to approach the king or leader by themselves with familiarity, whereas, beyond this, there are others who rank highly enough to know his secrets, and again, beyond this, there are still others who always accompany him as if attached to him. By keeping this example in mind, we can grasp the arrangement of the orders in the first hierarchy. For the Thrones are elevated to the point of receiving God within themselves in a familiar way, insofar as they are able to discern the reasons behind things directly in Him—an ability which is proper to the whole first hierarchy. On the other hand, the Cherubim know divine secrets in a preeminent way, whereas the Seraphim excel in the highest of all things, viz., being united to God Himself. So, then, the order of Thrones is named on the basis of what is common to the whole first hierarchy, in the same way that the order of Angels is named on the basis of what is common to all the heavenly spirits.

Next, there are three things that belong to the notion of *governance*. The first is to decree the works that are to be done, and this is proper to the Dominations. The second is to bestow the power to carry out those works, and this pertains to the Virtues. The third is to determine how the works that are commanded or decreed can be carried out in the sense of someone's executing them, and this pertains to the Powers.

Finally, the *execution* of angelic ministries consists in announcing divine things. Now in the execution of any act, there are some who initiate the action and lead the others—e.g., cantors in the case of singing, and those who lead and direct others in the case of war—and this pertains to the Principalities. On the other hand, there are some who simply carry out the commands, and this pertains to the Angels. And as was explained above (a. 5), those are others who stand in the middle, and this pertains to the Archangels.

Now this assignment of the orders is fitting. For in every case the highest member of a lower order has an affinity with the last member of the next higher order, just as the lowest animals are very close to plants. The first order is that of the divine persons and it is terminated with the Holy Spirit, who is the Love who proceeds and with whom the highest order of the first hierarchy of angels has an affinity, since it is named from the ardor of love (*ab incendio amoris*). But the lowest order of the first hierarchy is the Thrones, who, given their name, have an affinity with the Dominations, since, according to Gregory, it is through the Thrones that God exercises His judgments. For the Thrones receive divine illuminations in a way that makes it appropriate for them to directly illuminate the second hierarchy, which has the role of arranging the divine ministries. Moreover, the order of Powers has an affinity with the order of Principalities. For given that the Powers impose ordinances on those subject to them, these ordinances are directly assigned in the name of the Principalities, who are first in the execution of the divine ministries—presiding, for instance, over the governance of nations and kingdoms, which is the first and principal domain in the divine ministries, since the good of a nation is more divine than the good of an individual man. Hence, Daniel 10:13 says, “The prince of the kingdom of the Persians resisted me ...”

The arrangement of the orders posited by Gregory also has a sort of fittingness. For since the Dominations are the ones who decree and prescribe what pertains to the divine ministries, the orders subject to them are deployed according to the arrangement of those on whom the divine ministries are

exercised. For as Augustine says in *De Trinitate* 3, “Corporeal things are ruled in a certain order, the lower by the higher and all of them by spiritual creatures; and the bad spirits are ruled by the good spirits.” Therefore, the first order after the Dominations is called the Principalities, who also rule over the good spirits. Then come the Powers, through whom the bad spirits are warded off, just as, according to Romans 13:3-4, evildoers are warded off by earthly powers. After the Powers come the Virtues, which have power over corporeal nature in the working of miracles. And after the Virtues come the Archangels and Angels, who announce to men either great things, i.e., things that are beyond reason, or small things, which reason can grasp.

**Reply to objection 1:** Among the angels, the fact that they are subject to God is more significant than the fact that they preside over lower creatures, and the latter is derived from the former. And so the orders that take their names from an order of presiding are not the highest orders; instead, the highest orders are the ones that take their names from their turning toward God.

**Reply to objection 2:** As has been explained, the closeness to God that is designated by the name of the Thrones belongs also to the Cherubim and the Seraphim, and in a more excellent way.

**Reply to objection 3:** As was explained above (q. 27, a. 3), cognition occurs insofar as the things that are known exist in the knower, whereas love occurs insofar as the lover is united to the thing loved. Now higher things exist in themselves in a more noble way than they do in lower things, whereas lower things exist in a more noble way in higher things than they do in themselves. And so knowing lower things is better than loving them, whereas loving higher things, and principally God, is better than knowing them.

**Reply to objection 4:** If the arrangements of the orders given by Dionysius and Gregory are carefully considered, they differ very little or not at all as far as the reality is concerned. For Gregory takes the name ‘Principalities’ to refer to those who preside over the good spirits, and this meaning belongs to the Virtues to the extent that the name ‘Virtues’ implies a strength that gives efficacy to the lower spirits in carrying out their divine ministries. Again, Gregory’s understanding of the Virtues seems to be the same as Dionysius’s understanding of the Principalities. For the first among the divine ministries is the working of miracles, since it is through the working of miracles that the way is prepared for the announcements made by the Archangels and Angels.

## Article 7

### Will the orders of angels remain after judgment day?

It seems that the orders of angels will not remain after judgment day:

**Objection 1:** In 1 Corinthians 15:24 the Apostle says that Christ “will bring to naught every Principality and Power and Virtue, when He will have handed over the kingdom to God and the Father”—which will occur in the final consummation of things. Therefore, by parity of reasoning, in that state all the other orders will be brought to naught as well.

**Objection 2:** The role of the angels is to cleanse, to illuminate, and to perfect. But after judgment day it is not the case that one angel will be cleansing, illuminating, or perfecting another, since none of them will make any further progress in knowledge. Therefore, it would be pointless for the angelic orders to remain.

**Objection 3:** In Hebrews 1:14 the Apostle says of the angels, “Are they not all ministering spirits, sent to minister for the sake of those who receive the inheritance of salvation?” It is clear from this that the roles of the angels are ordered toward leading men to salvation. But all of the elect pursue salvation

up to and before judgment day. Therefore, the roles of angels and their orders will not remain after judgment day.

**But contrary to this:** Judges 5:20 says, “The stars, remaining in their order and course ...”—and this is interpreted as being about the angels. Therefore, the angels will always remain in their orders.

**I respond:** There are two things to consider in the angelic orders, viz., (a) the distinction among the grades and (b) the execution of their roles.

As was explained above (a. 4), the distinction among the grades derives from differences in grace and nature. And both of these sorts of differences will always remain in the angels. For the differences among the natures could not be removed from them without their being corrupted, whereas the differences in glory will always remain in them in a way corresponding to the differences in their prior merit.

On the other hand, after judgment day the execution of the angelic roles will remain in some ways and cease in other ways. The execution of the roles will cease to the extent that the roles of the angels are ordered toward leading certain men to their end, but it will remain to the extent that it is consonant with the ultimate attainment of the end—just as the roles of the military orders in battle differ from their roles in victory.

**Reply to objection 1:** The Principalities and Powers will be brought to naught in the final consummation as far as their leading others to their end is concerned. For once the end has already been attained, it is no longer necessary to tend toward the end. This meaning can be gleaned from the very words of the Apostle, who says, “..... when He will have handed over the kingdom to God and the Father,”—that is, when He will have led the faithful to the enjoyment of God Himself.

**Reply to objection 2:** The actions of the angels with respect to other angels should be thought of along the lines of the intelligible actions that exist in us.

For in our case there are many intelligible actions that are ordered in the manner of a cause and what is caused—as, for instance, when we reach a conclusion by going step by step through a series of middle terms. Now it is clear that the cognition of the conclusion depends on all the preceding middle terms—and not just with respect to the new *acquisition* of knowledge, but also with respect to the *conservation* of the knowledge. An indication of this is that if someone forgot one of the preceding middle terms, he would be able to have an opinion (*opinio*) about the conclusion or to have faith (*fides*) with respect to it, but he would not be able to have knowledge (*scientia*) of it, since he would not know the order of the causes.

So, then, since the lower angels know the reasons behind God’s works through the light of the higher angels, their cognition of those reasons depends upon the light of the higher angels not only with respect to the *acquisition* of new knowledge but also with respect to the *conservation* of their knowledge. Therefore, even though the lower angels do not make progress in the knowledge of anything after the judgment, this does not rule out their being illuminated by the higher angels.

**Reply to objection 3:** Even though, after judgment day, men are no longer going to be led to salvation through the ministry of the angels, nonetheless, those who have already attained salvation will have some illumination through the roles of the angels.

## Article 8

### Are men assumed into the angelic orders?

It seems that men are not assumed into the angelic orders:

**Objection 1:** The human hierarchy is located under the lowest of the heavenly hierarchies, just as the lowest heavenly hierarchy is located under the middle hierarchy and the middle hierarchy under the first hierarchy. But the angels of the lowest hierarchy are never transferred to the middle or first hierarchy. Therefore, neither are men transferred into the orders of the angels.

**Objection 2:** Certain roles—e.g., guarding, working miracles, warding off demons, etc.—belong to the orders of angels. But these roles do not seem appropriate for the souls of the saints. Therefore, the saints are not transferred into the orders of angels.

**Objection 3:** Demons induce men to evil in the same way that the good angels induce them to good. But it is erroneous to claim that the souls of bad men are converted into demons; for Chrysostom rejects this claim in his commentary on Matthew. Therefore, it does not seem that the souls of the saints are transferred into the orders of angels.

**But contrary to this:** In Matthew 22:30 our Lord says of the saints that “they will be like the angels of God in heaven.”

**I respond:** As was explained above (a. 4), the orders of angels are distinguished both by their natural condition and by the gifts of grace. Thus, if we think of the orders of angels only in terms of the grade of nature, then there is no way that men can be assumed into the orders of angels, since the distinction between their natures will always remain.

Some, taking this into account, have claimed that there is no sense in which men can be transferred to an equality with the angels. But this claim is erroneous and conflicts with the promise of Christ, who says at Luke 20:36 that the children of the resurrection will be equal to the angels in heaven. For what stems from nature is, as it were, the material element in the definition of an order of angels, while what stems from the gift of grace—which depends on God’s generosity and not on the order of nature—perfects the material element. And so through the gift of grace men can merit glory in such a way as to be equal to each of the grades of angels, and this is what it is for men to be assumed into the orders of angels.

However, some claim that not all who are saved are assumed into the orders of angels, but only virgins or those who are perfect, whereas the others constitute their own order, which is, as it were, divided off from the whole society of angels. But this is contrary to Augustine, who says in *De Civitate Dei* 12 that there will not be two societies, one of men and one of angels, but one society, “since the beatitude of all of them is to cling to the one God.”

**Reply to objection 1:** Grace is given to the angels in proportion to their natural gifts, but, as was explained above (a. 4), this is not the way it is with men. And so just as the lower angels cannot be transferred to the natural grade of the higher angels, so neither can they be transferred to the level of grace had by the higher angels. By contrast, men can ascend to the level of grace had by the angels, but not to their grade of nature.

**Reply to objection 2:** According to the order of nature, the angels lie between us and God. And so, as a general rule, the angels administer not only human affairs but all corporeal affairs. Now saintly men share the same nature with us even after this life. Hence, as a general rule, they do not administer human affairs and they do not preside over the affairs of living things, as Augustine points out in *De Cura Pro Mortuis Agenda*. Yet by a certain special dispensation certain holy people, whether living or dead, are sometimes given roles of this type to exercise—either by working miracles or by warding off demons or something else of this sort, as Augustine says in the same book.

**Reply to objection 3:** It is not erroneous to claim that men are transferred to the punishment of the demons. However, some have claimed erroneously that the demons are nothing other than the souls of the dead. This is the position Chrysostom was rejecting.

## QUESTION 109

### The Ordering of the Bad Angels

The next thing we have to consider is the ordering of the bad angels. On this topic there are four questions: (1) Are there orders among the demons? (2) Is there an order of precedence (*praelatio*) among the demons? (3) Does one demon illuminate another? (4) Are the demons presided over by the good angels?

#### Article 1

##### Are there orders among the demons?

It seems that there are no orders among the demons:

**Objection 1:** As Augustine points out in *De Natura Boni*, *order* has to do with the notion of goodness, just as *mode* and *species* do; and, conversely, *disorder* has to do with the notion of evil. But there is nothing disordered among the good angels. Therefore, there are no orders among the bad angels.

**Objection 2:** The angelic orders are contained under hierarchies. But the demons are not under any hierarchy, i.e., sacred principality, since the demons are devoid of all holiness. Therefore, there are no orders among the demons.

**Objection 3:** As is commonly held, demons fell from each of the orders of angels. Therefore, if demons are said to belong to a given order in virtue of the fact that they fell from that order, then it seems that the names of each one of the orders should be attributed to them. But we never find the demons called Seraphim or Thrones or Dominations. Therefore, by parity of reasoning, the demons are not in any of the orders.

**But contrary to this:** In Ephesians 6:12 the Apostle says, “Our struggle is against Principalities and Powers, against the rulers of the world of this darkness.”

**I respond:** As has already been explained (q. 108, a. 4), an angelic order may be thought of both in relation to the grade of *nature* and in relation to the grade of *grace*.

Now grace has two states, viz., an *imperfect* state, which is the state of meriting, and a *perfect* state, which is the state of consummate glory. Thus, if the orders of angels are thought of as having the perfection of glory, then the demons are not now and never were in the orders of angels. However, if the orders of angels are thought of as being in the state of imperfect grace, then the demons were once in the angelic orders, but then fell from those orders. This is in keeping with the claim, made above (q. 62, a. 3), that all the angels were created in grace.

On the other hand, if the orders of angels are thought of in relation to nature, then the demons are even now in the orders; for, as Dionysius says, they did not lose their natural gifts.

**Reply to objection 1:** As was shown above (q. 49, a. 3), good can be found without evil, but evil cannot be found without good. And so the demons are ordered to the extent that they have a good nature.

**Reply to objection 2:** If the ordering of the demons is thought of from the perspective of God, who orders them, then their order is sacred, since God uses the demons for His own sake. However, if the ordering is thought of from the perspective of the will of the demons themselves, then it is not sacred, since they abuse their own nature for evil purposes.

**Reply to objection 3:** The name ‘Seraphim’ is imposed because of the ardor of charity, the name ‘Thrones’ is imposed because of God’s indwelling, and the name ‘Dominations’ implies a certain sort of freedom—all of which are opposed to sin. That is why these names are not attributed to the angels who sin.

## Article 2

### Is there an order of precedence among the demons?

It seems that among the demons there is no order of precedence (*praelatio*):

**Objection 1:** Every order of precedence corresponds to an order of justice. But the demons fell completely away from justice. Therefore, there is no order of precedence among them.

**Objection 2:** There is no order of precedence where there is no obedience or subjection. But there is no obedience or subjection without concord, and, according to Proverbs 13:10 (“Among the proud there are always contentions”), there is no concord at all among the demons. Therefore, there is no order of precedence among the demons.

**Objection 3:** If there is an order of precedence among the demons, then it stems either (a) from their nature or (b) from their sin or punishment. But it does not stem from their nature, since subjection and servitude do not arise from nature but instead follow upon sin. Nor does it stem from sin or punishment, since in that case the higher demons, whose sin was greater, would be subject to the lower demons. Therefore, there is no order of precedence among the demons.

**But contrary to this:** A Gloss on 1 Corinthians 15:24 says, “As long as the world endures, angels will preside over angels, men over men, and demons over demons.”

**I respond:** Since an entity’s action follows upon its nature, if the natures of any given entities are ordered, then their actions must also be ordered to one another. This is clear in the case of corporeal things. For since lower bodies lie below the celestial bodies in the order of nature, their actions and movements are subordinated to the actions and movements of the celestial bodies. Now it is clear from what has been said (a. 1) that some demons are situated below others in the order of nature. Hence, their actions are subordinate to the actions of the higher demons. And this is just what the notion of an order of precedence demands, viz., that the action of the one who is subjected be subordinate to the action of the one who is in charge. So, then, the natural arrangement of the demons itself requires that there be an order of precedence among them. This point is also consonant with God’s wisdom, which leaves nothing in the universe unordered and which, as Wisdom 8:1 says, “reaches from end to end mightily, and orders all things agreeably.”

**Reply to objection 1:** The order of precedence among the demons is based not on their own justice but on the justice of God, who orders all things.

**Reply to objection 2:** The concord among the demons, by which some obey others, stems not from any friendship they have with one another, but from the common wickedness by which they hate men and fight against God’s justice. After all, it is proper to impious men that they should join with, and subject themselves to, those whom they see as stronger in order that they might live out their wickedness.

**Reply to objection 3:** The demons are not equal to one another according to nature, and so there is a natural order of precedence among them. This does not happen with men, who are equal by nature.

Now the fact that the lower demons are subject to the higher demons stems not from the goodness of the higher demons, but rather from their evil. For since doing evil is especially relevant to unhappiness, to be preeminent in evil is to be more unhappy.

### Article 3

#### Is there illumination among the demons?

It seems that there is illumination among the demons:

**Objection 1:** Illumination consists in the manifestation of truth. But a demon can make a truth manifest to another demon, since the higher demons enjoy a greater insightfulness in natural knowledge. Therefore, the higher demons can illuminate the lower demons.

**Objection 2:** A body that abounds in light can illuminate a body that is weak in light, in the way that the sun illuminates the moon. But the higher demons abound in participation in the natural light. Therefore, it seems that the higher demons are able to illuminate the lower demons.

**But contrary to this:** As was explained above (q. 106, a. 1), illumination goes along with cleansing and perfecting. But according to Ecclesiasticus 34:4 (“What can be made clean by the unclean?”), cleansing does not befit the demons. Therefore, neither does illumination.

**I respond:** There is no illumination, properly speaking, among the demons. For it was explained above (q. 107, a. 2) that illumination is, properly speaking, a manifestation of the truth insofar as this truth is ordered toward God, who illuminates every intellect.

However, there can be another sort of manifestation of truth, viz., speaking (*locutio*), as when one angel manifests his own conception to another.

Now the perversity of the demons is such that one demon does not intend to order another demon toward God, but instead intends to lead him away from being ordered toward God. And so it is not the case that one demon illuminates another. However, a demon can, by speaking, intimate his own conception to another.

**Reply to objection 1:** Not every sort of manifestation of truth satisfies the notion of illumination, but only the sort described above.

**Reply to objection 2:** As far as things pertaining to natural cognition are concerned, the manifestation of truth is not necessary either in angels or in demons. For, as was explained above (q. 55, a. 2 and q. 79, a. 2), they know all the things pertaining to natural cognition from the very beginning of their creation. And so the greater fullness of natural light which exists in the higher demons cannot be any sort of illumination.

### Article 4

#### Do the good angels preside over the bad angels?

It seems that the good angels do not preside (*non habeant praelationem*) over the bad angels:

**Objection 1:** The order of precedence among the angels has to do mainly with illumination. But since the bad angels are darkness, they are not illuminated by the good angels. Therefore, the good angels do not preside over the bad angels.

**Objection 2:** When things are done badly by those subject to someone who presides over them, this seems to involve negligence on his part. But the demons do many bad things. Therefore, if they are subject to good angels who preside over them, then it seems that there is negligence among the good angels. But this is absurd.

**Objection 3:** As was explained above (a. 2), the order of precedence among the angels follows the order of nature. But if, as is commonly held, demons fell from each one of the orders of angels, then

many demons are higher in the order of nature than many of the good angels. Therefore, it is not the case that good angels preside over all of the bad angels.

**But contrary to this:** In *De Trinitate* 3 Augustine says, “A spirit of life who is a deserter or a sinner is ruled by a spirit of life who is reasonable, pious, and just.” And Gregory says, “The Powers are those angels whose dictate the adverse powers are subjected to.”

**I respond:** The entire order of precedence exists primarily and originally in God, and it is participated in by creatures to the extent that they are closer to God. For the creatures that have influence over other creatures are those that are more perfect and closer to God. Now the highest perfection, through which one comes closest to God, belongs to those who, like the holy angels, enjoy God—a sort of perfection that the demons are deprived of. And so the good angels preside over the bad angels and the bad angels are ruled by them.

**Reply to objection 1:** Many of the divine mysteries are revealed to the demons by the holy angels, since God’s judgment demands that certain things be done by the demons either in order to punish evildoers or to test those who are good—just as in human affairs a judge’s assistants make his sentence known to the executioners. Now if revelations of this sort are thought of in relation to the revealing angels, then they are illuminations, since the angels order them toward God. However, they are not illuminations in relation to the demons, since the demons do not order them toward God, but instead order them toward the exercise of their own wickedness.

**Reply to objection 2:** The holy angels are the ministers of God’s wisdom. Hence, just as God’s wisdom allows certain evils to be done by bad angels or bad men for the sake of the goods that He elicits from them, so too the good angels do not totally prevent the bad angels from doing harm.

**Reply to objection 3:** An angel who is lower in the order of nature presides over demons, even if the demons are higher than he is in the order of nature. For the power of God’s justice, which the good angels adhere to, is greater than the natural powers had by the angels. Hence, even among men, “the spiritual man passes judgment on everyone,” according to 1 Corinthians 2:15. And in the *Ethics* the Philosopher says, “The virtuous man is the rule and measure of all human acts.”

## QUESTION 110

### How Angels Preside over Corporeal Creatures

The next thing we have to consider is how angels preside over corporeal creatures. On this topic there are four questions: (1) Are corporeal creatures administered by the angels? (2) Does a corporeal creature obey angels at will? (3) Can angels by their power directly move bodies with respect to place? (4) Are good or bad angels able to work miracles?

#### Article 1

##### Are corporeal creatures administered by the angels?

It seems that corporeal creatures are not administered by the angels:

**Objection 1:** An entity that has a determinate mode of operating does not need to be governed by someone presiding over it, since the reason why we ourselves need to be governed is in order that we not act otherwise than we should. But corporeal entities have determinate actions that stem from the natures given them by God. Therefore, they do not need the governance of the angels.

**Objection 2:** Lower entities are governed by higher entities. But among corporeal entities some are called lower and some higher. Therefore, the lower ones are governed by the higher ones. Therefore, it is not necessary for the lower bodies to be governed by the angels.

**Objection 3:** The different orders of angels are distinguished by their different roles. But if corporeal creatures are administered by the angels, then there are as many angelic roles as there are species of things. Therefore, there are likewise as many orders of angels as there are species of things. But this is contrary to what was asserted above (q. 108, a. 2). Therefore, corporeal creatures are not administered by the angels.

**But contrary to this:** In *De Trinitate* 3 Augustine says, “All bodies are ruled by reasonable spirits of life.” And in *Dialogi* 4 Gregory says, “Nothing can take place in this visible world except through invisible creatures.”

**I respond:** In the case of both human affairs and natural entities one generally finds that a particularized power is governed and ruled by a universal power. For instance, the power of the magistrate (*ballivus*) is governed by the power of the king. In addition, it has already been explained (q. 55, a. 3 and q. 108, a. 1) that among the angels the higher angels, who preside over the lower angels, have a more universal knowledge.

Now it is clear that a body’s power is more particularized than a spiritual substance’s power, since every corporeal form is individuated by matter and is determined to the here and now, whereas immaterial forms are absolute and intelligible. And so just as the lower angels, who have forms that are less universal, are ruled by the higher angels, so too all corporeal entities are ruled by the angels. This claim is made not only by the holy doctors, but also by all those philosophers who have posited incorporeal substances.

**Reply to objection 1:** Corporeal entities have determinate actions but they do not exercise these actions except insofar as they are moved, since it is proper to a body not to act unless it is moved. And so it is necessary for corporeal creatures to be moved by spiritual creatures.

**Reply to objection 2:** This argument presupposes the opinion of Aristotle, who claimed that the celestial bodies are moved by spiritual substances, and who ventured to assign a number to the spiritual substances that corresponds to the number of movements that appear among the celestial bodies. But he did not claim that there are spiritual substances—except, perhaps, human souls—who preside directly over lower bodies. The reason for this is that the only operations exercised by lower bodies that he took

into account were natural operations, for which the movement of the celestial bodies was sufficient.

But since we ourselves claim that many things are effected among the lower bodies besides their natural actions and that the powers of the celestial bodies are not sufficient for these things, it is necessary from our perspective to hold that the angels preside directly not only over the celestial bodies but over lower bodies as well.

**Reply to objection 3:** Philosophers have spoken in diverse ways about immaterial substances.

Plato held that immaterial substances are the ideas and species of sensible bodies, and that some are more universal than others. And so he claimed that immaterial substances preside directly over all sensible bodies, and that different immaterial substances preside over different sensible bodies.

Aristotle, by contrast, claimed that immaterial substances are not the species of sensible bodies but are instead something higher and more universal. And so he attributed to them a direct governance not over individual bodies, but only over the universal agents, viz., the celestial bodies.

Avicenna, on the other hand, followed a middle way. For with Plato he claimed that some spiritual substances preside directly over the sphere of active and passive things—in that, just as Plato claimed that the forms of sensible things are derived from immaterial substances, so Avicenna also made this claim. But he differs from Plato in holding that there is just a single immaterial substance that presides over all the lower bodies, and he called this substance the Agent Intelligence.

Now the holy doctors held, with the Platonists, that different spiritual substances have been put in charge of different corporeal entities. For instance, in *83 Quaestiones* Augustine says, “Each visible entity in this world has an angelic power in charge of it.” And Damascene says, “The devil came from among those angelic powers that were in charge of the earthly order.” And in commenting on Numbers 22:23 (“When the donkey saw the angel ...”), Origen says, “The world needs angels to preside over the beasts and to preside over the birth of animals and trees and plants and over the increase of other things.”

However, the reason for making this claim should not be that a given angel is by his very nature more fit to preside over animals than over plants; for each angel, even the least one, has a higher and more universal power than does any genus of corporeal things. Rather, the reason has to do with the order of God’s wisdom, which places different rulers over different things.

Nor does it follow from this that there are more than nine orders of angels; for, as was explained above (q. 108, a. 2), the orders are distinguished by their general roles. Hence, just as, according to Gregory, the order of Powers includes all the angels who properly preside over the demons, so too the order of Virtues includes all the angels who preside over purely corporeal entities, since sometimes miracles are worked in connection with their ministry.

## Article 2

### Is corporeal matter obedient to the angels at will?

It seems that corporeal matter is obedient to the angels at will (*obediat angelis ad nutum*):

**Objection 1:** An angel’s power is greater than a soul’s power. But corporeal matter obeys the soul’s conception, since a man’s body changes to being hot or cold, and sometimes even to being healthy or sick, because of the soul’s conception. Therefore, *a fortiori*, corporeal matter is transformed in accord with an angel’s conception.

**Objection 2:** A higher power can do whatever a lower power can do, and an angel’s power is higher than a corporeal power. But a body is able by its power to change corporeal matter with respect to its [substantial] form, as when a fire generates a fire. Therefore, *a fortiori*, angels are able by their power

to transmute corporeal matter with respect to its [substantial] form.

**Objection 3:** As has been explained (a. 1), all of corporeal nature is administered by the angels, and so it seems that bodies are related to the angels as instruments; for it is the nature of an instrument to be a moved mover. But within a given effect we find something which both (a) stems from the principal agent's power and (b) cannot stem from the instrument's power; and this is the most important aspect of the effect. For instance, the digestion of food occurs by means of the power of natural heat, which is the nutritive soul's instrument, but the fact that living flesh is generated from that food stems from the soul's power. Similarly, the fact that this wood is cut pertains to the saw, but the fact that this wood ends up shaped into a bed stems from the nature of the [carpenter's] craft. Therefore, a substantial form, which is the most important aspect within corporeal effects, stems from the power of the angels. Therefore, matter obeys the angels as far as its being formed is concerned.

**But contrary to this:** In *De Trinitate* 3 Augustine says, "One should not think that this matter of visible things serves the sinful angels at will; rather, it serves God alone."

**I respond:** The Platonists claimed that the forms which exist in matter are caused by immaterial forms, since they held that material forms are certain participations in immaterial forms. And in some respects their position was adopted by Avicenna, who held that (a) all the forms which exist in matter proceed from the conception of an intelligence and that (b) corporeal agents merely dispose matter for the forms. They made this mistake, it seems, because they believed that a form is something which is made in its own right (*per se*) and that, as such, it proceeds from a formal principle. However, as the Philosopher proves in *Metaphysics* 7, it is the *composite* which is made, properly speaking, because it is the composite which subsists, properly speaking. By contrast, the form is called a being not in the sense that it itself exists, but in the sense that it is that *by which* something exists; and, as a result, the form is not made, properly speaking. For *being-made* belongs to that which exists, since *being-made* is nothing other than a path to existing.

Now it is clear that what is made is similar to what makes it, since every agent effects what is similar to itself. And so the agent which makes natural things bears a likeness to the composite, either because (a) the agent itself is a composite, as when a fire generates a fire, or (b) because the whole composite, both matter and form, lies within power of the agent—and this is proper to God alone.

So, then, every instance of matter's being formed comes directly either from God or from some corporeal agent, and it does not come directly from an angel.

**Reply to objection 1:** Our soul is united to the body as the form of the body, and so it is no wonder that the body is changed formally as a result of the soul's conception—especially since the movement of the sentient appetite, which is effected along with a certain corporeal change, is subject to the command of reason.

By contrast, an angel is not related in this way to natural bodies. Hence, the argument does not go through.

**Reply to objection 2:** That which a lower power can effect is such that a higher power can effect it in a more excellent way, but not in exactly the same way. For instance, the intellect knows sensible things in a more excellent way than the senses do. So, too, an angel changes corporeal matter in a more excellent way than corporeal agents do, viz., by moving the corporeal agents themselves as a higher cause.

**Reply to objection 3:** Nothing prevents it from being the case that certain effects in natural things that stem from the power of angels are such that corporeal agents are not sufficient for them. But this is not what it is for matter to obey the angels at will—just as it is not the case that matter obeys chefs at will merely because, by using fire in the way prescribed by their craft, they concoct a dish that the fire would not make on its own.

Now it does not exceed the power of a corporeal agent to lead matter to the act of a substantial form, since a corporeal agent is apt by its nature to effect what is similar to itself.

### Article 3

#### Do bodies obey angels with respect to local motion?

It seems that bodies do not obey angels with respect to local motion:

**Objection 1:** The local motion of natural bodies follows upon their [substantial] forms. But as has been explained (a. 2), angels do not effect the [substantial] forms of natural bodies. Therefore, neither can they cause local motion in those bodies.

**Objection 2:** *Physics* 8 proves that local motion is the first among movements. But angels cannot cause the other sorts of movements by transmuting matter with respect to its [substantial] form. Therefore, neither can they cause local motion.

**Objection 3:** The members of the body obey the soul's conception with respect to local motion insofar as they have a principle of life within themselves. But in natural bodies there is no principle of life. Therefore, natural bodies do not obey the angels with respect to local motion.

**But contrary to this:** In *De Trinitate* 3 Augustine says that the angels use 'corporeal seeds' (*semina coporalia*) to produce effects. But they cannot do this except by moving them with respect to place. Therefore, bodies obey the angels with respect to local motion.

**I respond:** As Dionysius says in *De Divinis Nominibus*, chap. 7, "God's wisdom joins the ends of the primary things to the beginnings of the secondary things." From this it is clear that a lower nature is touched at its highest point by a higher nature. Now corporeal nature stands below spiritual nature and, as *Physics* 8 proves, local motion is the most perfect of all corporeal movements. The reason is that something that is movable with respect to place is not, as such, in potentiality with respect to anything intrinsic, but is in potentiality only with respect to something extrinsic, viz., place. And so a corporeal natural is apt to be moved directly by a spiritual nature with respect to place.

Thus, the philosophers, too, have held that the highest bodies are moved with respect to place by spiritual substances. And we ourselves see that the soul moves the body primarily and principally by local motion.

**Reply to objection 1:** In bodies there are local motions other than those that follow upon their [substantial] forms. For instance, the ebb and flow of the sea does not follow upon the substantial form of water, but instead follows from the power of the moon. *A fortiori*, certain local motions can follow upon the power of spiritual substances.

**Reply to objection 2:** By causing local motion in the first instance, angels can cause other movements through this local motion, viz., by applying corporeal agents to the production of their own effects—in the way that a blacksmith uses fire to soften iron.

**Reply to objection 3:** Angels have a power that is less restricted than the power had by souls. Hence, the moving power of a soul is limited to the body that is united to it and made alive by it, and it is through this movement that it can move other things. By contrast, an angel's power is not limited to a particular body. Hence, an angel can move a non-conjoined body with respect to place.

#### Article 4

##### Can angels work miracles?

It seems that angels can work miracles:

**Objection 1:** Gregory says, “The spirits called Virtues are those through whom signs and miracles are most often worked.”

**Objection 2:** In *83 Quaestiones* Augustine says, “Magicians work miracles through private contracts (*per privatos contractus*), good Christians work them through public justice, and bad Christians work them through the signs of public justice.” But magicians work miracles “because they are listened to by demons,” as Augustine says in another place in the same book. Therefore, demons are able to work miracles. Therefore, *a fortiori*, the good angels are able to work miracles.

**Objection 3:** In the same book Augustine says, “All things that are made visibly are plausibly believed to be such that they can also be made by the lower powers of this part of the air.” But when an effect of natural causes is produced outside the order of natural causes, we say that this is a miracle—as, for instance, when someone is cured of a fever but not through any operation of nature. Therefore, angels and demons can work miracles.

**Objection 4:** A higher power is not subordinated to the order of a lower cause. But a natural body is lower than an angel. Therefore, an angel can operate outside the order of corporeal agents—which is what it is to work a miracle.

**But contrary to this:** Psalm 135:4 says of God that “He alone works great wonders.”

**I respond:** Properly speaking, a miracle occurs when something is done outside the order of nature. However, it is not sufficient for the notion of a miracle that something should be done outside the order of the nature of some *particular* thing; for, otherwise, when someone threw a rock up in the air, he would be working a miracle, since this lies beyond the order of a rock’s nature. Something is called a miracle, then, from the fact that it is done outside the order of the *whole* of created nature.

No one except God can work a miracle, since whatever an angel (or any other creature) does by his own power is done within the order of created nature and so is not a miracle. Hence, it follows that only God is able to work miracles.

**Reply to objection 1:** Certain angels are said to work miracles either because (a) God works a miracle when they desire it, in the same way that holy men are said to work miracles, or because (b) they play some role in the miracles that are being worked, such as gathering up dust at the time of the general resurrection or doing something of this sort.

**Reply to objection 2:** As has been explained, miracles occur, simply speaking, when something is done outside the order of the whole of created nature. But since not every power in created nature is known to us, when something is done outside the order of created nature as it is known to us and through a created power that is unknown to us, then there is a miracle as far as we are concerned (*miraculum quoad nos*). So, then, when demons do something by their own natural power, these are not called miracles simply speaking, but are instead called miracles as far as we are concerned. This is the sense in which magicians work miracles through demons.

These miracles are said to be worked “through private contracts” because every created power in the universe is like the power of a private person in a city. Hence, when a magician does something through a pact entered into with a demon, the deed is done, as it were, through a sort of private contract.

By contrast, God’s justice is to the whole universe what public law is to a city, and so insofar as good Christians are said to work miracles through God’s justice, they are said to work the miracles “through public justice.”

On the other hand, bad Christians work miracles “through the signs of public justice”—for instance, by invoking the name of Christ or by making use of certain sacred signs (*sacramenta*).

**Reply to objection 3:** Things which are done visibly in this world are such that spiritual powers can do them by employing ‘corporeal seeds’ via local motion.

**Reply to objection 4:** Even though angels can do something outside the order of corporeal nature, they nonetheless cannot do anything outside the order of the whole of creation—which, as has been explained, is what is required by the notion of a miracle.

## QUESTION 111

### The Action of Angels on Men

The next thing we have to consider is the action of angels on men. We will consider, first, the action of angels insofar as they are able by their own natural power to affect men (question 111); second, the sense in which they are sent by God to minister to men (question 112); and, third, the sense in which they guard men (question 113).

On the first topic there are four questions: (1) Can an angel illuminate a man's intellect? (2) Can an angel alter a man's affections? (3) Can an angel affect a man's imagination? (4) Can an angel affect a man's senses?

#### Article 1

##### Can an angel illuminate a man?

It seems that an angel cannot illuminate a man:

**Objection 1:** A man is illuminated by faith; hence, in *De Ecclesiastica Hierarchia* Dionysius attributes illumination to Baptism, which is the sacrament of faith. But according to Ephesians 2:8 ("By grace you are saved through faith, and not from yourselves; for it is a gift of God"), faith comes directly from God. Therefore, a man is illuminated not by an angel, but directly by God.

**Objection 2:** The Gloss on Romans 1:19 ("God made it known to them") says, "It was not only natural reason that was useful for making divine things known to men; in addition, God made these things known through His own work, i.e., through creatures." But both of these, viz., natural reason and creatures, are directly from God. Therefore, God directly illuminates a man.

**Objection 3:** If someone is illuminated, then he knows that he is being illuminated. But men do not perceive that they are being illuminated by angels. Therefore, they are not illuminated by angels.

**But contrary to this:** In *De Caelesti Hierarchia*, chap. 4, Dionysius proves that revelations of divine things come to men by the mediation of the angels. But, as was explained above (q. 106, a. 1), revelations of this sort are illuminations. Therefore, men are illuminated by the angels.

**I respond:** Since, as was explained above (q. 109, a. 2), the order of divine providence is such that lower creatures are subject to the actions of higher creatures, it follows that just as the lower angels are illuminated by the higher angels, so too men, who are lower than the angels, are illuminated by the angels.

Now these two types of illumination are in some sense similar and in some sense diverse. For it was explained above (q. 106, a. 1) that the type of illumination that is a manifestation of divine truth involves two aspects, viz., (a) the lower intellect is strengthened by the action of the higher intellect, and (b) the intelligible species that exist in the higher intellect are proposed to the lower intellect in such a way that they can be grasped by the lower intellect.

Now, as was explained above (*ibid.*), this second aspect occurs in the case of angels insofar as the higher angel, in keeping with the capacity of the lower angel, makes distinctions within the universal truth he conceives. However, the human intellect is incapable of grasping sheer intelligible truth itself, since, as has been explained (q. 84, a. 7), it is connatural to the human intellect to exercise its understanding by turning to phantasms. And so the angels propose intelligible truth to men under the likenesses of sensible things. Accordingly in *De Caelesti Hierarchia*, chap. 1, Dionysius says, "It is impossible for the divine ray to illumine us unless it is enshrouded by a variety of sacred veils."

As for the other aspect, the human intellect, as a lower intellect, is fortified by the action of an angelic intellect.

And so these two aspects are involved in the illumination through which a man is illuminated by an angel.

**Reply to objection 1:** Two things must come together for faith.

The first is a habit of the intellect by which the intellect is disposed to obey the will insofar as it tends toward divine truth. For the intellect assents to the truth of the Faith not because it is convinced by reason, but because it is impelled (*imperatus*) by the will, since, as Augustine says, no one believes unless he wills to. And on this score, faith is from God alone.

The second thing required for faith is that what is to be believed should be proposed to the believer. And this, to be sure, comes from men, insofar as “faith comes from hearing,” as Romans 10:17 puts it, but principally it comes from the angels, through whom divine things are revealed to men. Hence, the angels contribute something to the illumination of faith. And yet men are illuminated by the angels not only with respect to what is to be believed, but also with respect to what is to be done.

**Reply to objection 2:** As has been explained, natural reason, which comes directly from God, can be strengthened by an angel. And as in the case of species received from creatures, the stronger a human intellect is, the deeper the intelligible truth that is elicited. And so a man is helped by an angel in such a way that he comes to a more perfect cognition of God on the basis of creatures.

**Reply to objection 3:** Intellectual operations—including illumination itself—can be thought of in two ways.

First, they can be thought of in terms of *the thing that is understood*, and, on this score, if someone is understanding something or is being illuminated, then he knows that he is understanding something or that he is being illuminated. For he knows that something is being made manifest to him.

Second, these operations can be thought in terms of *their principle*, and, on this score, not everyone who is understanding a given truth knows what his intellect, i.e., the principle of his intellectual operation, is. And, similarly, not everyone who is being illuminated by an angel knows that he is being illuminated by an angel.

## Article 2

### Is an angel able to affect a man’s will?

It seems that an angel is able to affect a man’s will (*immutare voluntatem hominis*):

**Objection 1:** The Gloss on Hebrews 1:7 (“He who makes His angels spirits and His ministers a flame of fire”) says, “They are fire when they flame up in spirit and burn away our vices.” But this would not be the case if they did not affect our will. Therefore, angels are able to affect a man’s will.

**Objection 2:** Bede says, “The devil enkindles evil thoughts but does not send them.” However, Damascene says further that the devil sends evil thoughts as well; for in *De Fide Orthodoxa* 2 he says, “All malice and all unclean passions are thought up by the demons, and they undertake to send them to a man.” And, by parity of reasoning, the good angels send and enkindle good thoughts. But they would not be able to do this if they did not affect the will. Therefore, they affect a man’s will.

**Objection 3:** As has been explained (a. 1), an angel illuminates a man’s intellect by the mediation of phantasms. But just as the imagination, which serves the intellect, can be affected by an angel, so too the sentient appetite, which serves the will, can be affected by an angel, since the sentient appetite is likewise a power that uses a corporeal organ. Therefore, an angel can affect the will in the same way that he illuminates the intellect.

**But contrary to this:** According to Proverbs 21:1 (“The king’s heart is in the hand of the Lord; He

turns it whichever way He wills”), it is proper to God to affect the will.

**I respond:** The will can be affected in two ways.

First, it can be affected from within (*ab interiori*). And since the will’s movement is nothing other its inclination toward the thing that is willed, only God can change the will, since only God gives an intellectual nature the power for such an inclination. For just as a natural inclination is exclusively from God, who gives the nature, so too a voluntary inclination is exclusively from God, who causes the will.

Second, the will is moved from without (*ab exteriori*). And in an angel this is effected in just one way, viz., by a good apprehended by the intellect. Hence, someone moves the will to the extent that he is a cause of something’s being apprehended as a good to be desired. And on this score, too, only God can move the will with necessity (*efficaciter*), whereas, in keeping with what was said above (q. 106, a. 2), an angel or a man can move the will only by way of persuasion.

Now in addition to this mode, there is another mode in which a man’s will can be moved from without, viz., by a passion that exists in the sentient appetite. For instance, a man’s will is moved to will something by sense desire or by anger. And so, too, insofar as angels are able to incite passions of this sort, they are able to move the will—not, however, with necessity, since the will always remains free to consent to or to resist a passion.

**Reply to objection 1:** It is by way of persuasion that God’s ministers, whether angels or men, are said to burn away vices and inflame us toward the virtues.

**Reply to objection 2:** Demons cannot ‘send thoughts’ by causing them from within, since the use of the cogitative power is subject to our will. Still, the devil is said to ‘enkindle thoughts’ insofar as he incites us to think of certain things or to desire the things thought of, either by way of persuasion or by way of exciting a passion. And it is this sort of ‘enkindling’ that Damascene is calling ‘sending’, since such an operation is effected from within. On the other hand, good thoughts are attributed to a higher principle, viz., God, even if they are procured by the ministry of the angels.

**Reply to objection 3:** Given our present state, the human intellect cannot exercise understanding except by turning toward phantasms. But the human will can will something on the basis of reason’s judgments without following the passions of the sentient appetite. Hence, the two cases are not parallel.

### Article 3

#### Is an angel able to affect a man’s imagination?

It seems that an angel is not able to affect a man’s imagination (*imaginatio*):

**Objection 1:** As is explained in *De Anima*, an act of imagining (*phantasia*) “is a movement effected by the senses as actually operating.” But if an act of imagining were effected by an angel’s influence, then it would not be effected by the senses as actually operating. Therefore, it is contrary to the nature of an act of imagining, i.e., an act of the imaginative power, that it should exist because of angel’s influence.

**Objection 2:** Since the forms that exist in the imagination are spiritual, they are more noble than the forms that exist in sensible matter. But, as has been explained (q. 110, a. 2), an angel cannot impress forms on sensible matter. Therefore, an angel cannot impress forms on the imagination. And so an angel cannot affect the imagination.

**Objection 3:** According to Augustine in *Super Genesim ad Litteram* 12, “By intermingling with another spirit you can, it happens, show the one with whom you are commingling the things that you know through images of the sort in question, so that either he understands them or else accepts them as

understood by another.” But it does not seem that an angel can intermingle with the human imagination, or that the imagination can grasp the intelligible things that an angel knows. Therefore, it seems that an angel cannot alter the imagination.

**Objection 4:** In an imaginative vision a man adheres to likenesses as if they were the things themselves. But in this there is a kind of deception. Therefore, since a good angel cannot be a cause of deception, it seems that he cannot cause an imaginative vision by altering the imagination.

**But contrary to this:** Things which appear in dreams are seen by an imaginative vision. But angels reveal certain things in dreams, as is clear from Matthew 1-2 in the case of the angel who appeared to Joseph in his dreams. Therefore, an angel can move the imagination.

**I respond:** Angels, both good and evil, are by their power able to move a man’s imagination. This can be thought of in the following way:

It was explained above (q. 110, a. 3) that a corporeal nature obeys an angel with respect to local motion. Therefore, things that can be caused by the local motion of bodies are subject to the natural power of angels. Now it is clear that imaginative appearances are sometimes caused in us by the local motion of bodily spirits and humors. Hence, in *De Somno et Vigilia* Aristotle, in specifying the cause of dreamers’ visions, says, “When an animal is sleeping and a lot of blood descends to the sentient principle, movements descend at the same time,” i.e., impressions left over from sensible motions, which are conserved in the sensory spirits and which move the sentient principle, so that a certain type of vision occurs, just as if the sentient principle were at that very time being affected by exterior things themselves. And the movement of the spirits and humors can be so strong that visions of this sort can occur even to those who are awake, as is clear in the case of madmen (*in phreneticis*) and others like them. Therefore, just as this can be brought about by the natural movement of the humors—and sometimes even by a man’s will when he voluntarily imagines what he has previously sensed—so too it can be brought about by the power of a good or bad angel, sometimes in separation from the corporeal senses and sometimes without such separation.

**Reply to objection 1:** The first principle of an act of imagining comes from the senses as actually operating. For we cannot imagine things that we have not sensed in any way at all, either wholly or partially. For instance, someone who is born blind cannot imagine colors. However, as has been explained, sometimes the imagination is formed in such a way that an actual movement of imagining arises from impressions that have been conserved interiorly.

**Reply to objection 2:** An angel does not influence the imagination by impressing an imaginative form that has not in any way been previously received through the senses (for instance, an angel cannot bring it about that a blind man imagines colors); rather, as has been explained, he does this through the local motion of the spirits and humors.

**Reply to objection 3:** The commingling of the angelic spirit with the human imagination is not through the angel’s essence, but rather through an effect which the angel brings about in the imagination in the way explained above. The angel shows the imagination what he knows, yet not in the way in which he knows it.

**Reply to objection 4:** In some cases, an angel who causes an imaginative vision illuminates the intellect at the same time, so that the intellect simultaneously comes to know what is being signified by likenesses of the sort in question. In such a case there is no deception.

On the other hand, in some cases the only result of the angel’s operation is that likenesses of things appear in the imagination. However, in such a case the deception is caused not by the angel, but by the weakness of the intellect of the one to whom such things appear—just as Christ was not a cause of deception when he proposed many things to the crowds in parables without explaining the parables to them.

#### Article 4

##### Can an angel affect the human senses?

It seems that an angel cannot affect the human senses:

**Objection 1:** A sentient operation is a vital operation. But an operation of this sort does not stem from an extrinsic principle. Therefore, a sentient operation cannot be caused by an angel.

**Objection 2:** The sentient power is more noble than the nutritive power. But an angel, it seems, cannot affect the nutritive power, just as he cannot affect other natural forms. Therefore, neither can an angel affect the sentient power.

**Objection 3:** The senses are naturally moved by a sensible thing. But as was explained above (q. 110, a. 4), an angel cannot alter the order of nature. Therefore, an angel cannot affect the senses; instead, the senses are always affected by a sensible thing.

**But contrary to this:** According to Genesis 19:11, the angels who destroyed Sodom “struck the Sodomites with blindness (or *aorasia*), so that they could not find the door of the house.” And 4 Kings 6:18 says the same of the Syrians whom Elisha led into Samaria.

**I respond:** The senses are affected in two ways:

First, they are affected by something exterior, as when they are affected by a sensible thing.

Second, they are affected by something interior; for we see that the senses are affected by perturbed spirits and humors. For instance, a sick man’s tongue, full of choleric humor, senses everything as bitter; and something similar happens with the other senses.

An angel can, by his natural power, affect a man’s senses in both ways. For an angel can present some exterior sensible thing to the senses, either by presenting something already formed by nature or, as was explained above (q. 51, a. 2), by forming something himself *de novo*, as he does when he assumes a body. Similarly, as was explained above (a. 3), an angel can also move from within the spirits and humors by which the senses are affected in various ways.

**Reply to objection 1:** The principle of a sentient operation cannot exist without an interior principle, viz., the sentient power, but, as has been explained, this interior principle can be moved in various ways by an exterior principle.

**Reply to objection 2:** By moving the spirits and humors from within, an angel can even affect the act of the nutritive power—as well as the act of the appetitive power or of the sentient power or of any power that uses a corporeal organ.

**Reply to objection 3:** An angel cannot do anything outside the order of the whole of creation, but he can do something outside the order of some particular nature, since he is not subject to such an order. And so he can affect the senses in a unique mode that lies beyond the common mode.

## QUESTION 112

### The Mission of the Angels

The next thing we have to consider is the mission of the angels. On this topic there are four questions: (1) Are some angels sent on mission to minister? (2) Are all angels sent on mission? (3) Do those who are sent on mission also stand before God? (4) Which orders of angels are sent on mission?

#### Article 1

##### Are angels sent on mission to minister?

It seems that angels are not sent on mission to minister (*mittantur in ministerium*):

**Objection 1:** Every mission is to some determinate place. But intellectual actions do not fix any determinate place, since the intellect abstracts from the here and now. Therefore, since angelic actions are intellectual actions, it seems that angels are not sent on mission to perform their actions.

**Objection 2:** The empyrean heaven is a place that suits the dignity of the angels. Therefore, if they are sent on mission to us, then it seems that something of their dignity is lost. But this is absurd.

**Objection 3:** Being occupied with something exterior impedes the contemplation of wisdom; hence, Ecclesiasticus 38:25 says, "He who is less involved in action shall receive wisdom." Therefore, if some of the angels are sent on mission for exterior ministries, then it seems that they are held back from contemplation. But the whole of their beatitude consists in contemplating God. Therefore, if they were sent on mission, their beatitude would be decreased. But this is absurd.

**Objection 4:** To minister is the role of someone lowly; hence, Luke 22:27 says, "Who is greater, he who reclines at table or he who serves? Is it not he who reclines at table?" But the angels are greater than we are in the order of nature. Therefore, they are not sent on mission to minister to us.

**But contrary to this:** Exodus 23:20 says, "Behold, I will send my angel who shall go before you."

**I respond:** On the basis of what was said above (q. 108, a. 6), it is possible to make clear that some of the angels are sent on mission by God in order to minister.

For as was explained above when we were discussing the missions of the divine persons (q. 43, a. 1), someone is sent on mission when he proceeds in some way from another in order to begin to exist where he had not previously existed, or to exist where he had previously existed, but in a different way.

Now the Son (or the Holy Spirit) is said to be sent on mission insofar as He (a) proceeds from the Father through origin and (b) begins to exist in a new way, viz., through His assumed nature (or through grace), in a place where He previously existed through the presence of the divine nature. For it is proper to God to exist everywhere, since given that He is a *universal* agent, His power touches all entities and thus, as was explained above (q. 8, a. 1), He exists in all things.

By contrast, since an angel is a *particularized* agent, his power does not touch the whole universe; instead, it touches one thing in such a way that it does not touch another. And so an angel exists here in such a way that he does not exist elsewhere. Now it is clear from what was said above (q. 110, a. 1) that corporeal creatures are administered by the angels. Therefore, when something is to be done by an angel with respect to some creature, the angel is applied *de novo* to the body in question by his power; and so the angel begins exist there *de novo*. And all of this stems from God's command. Hence, it follows, given these premises, that an angel is sent on mission by God.

Now the action exercised by an angel who has been sent on mission proceeds from God as the first principle by whose will and authority the angel is acting; and so the action is traced back to God as its ultimate end. This satisfies the notion of a *ministry*. For a minister is, as it were, an intelligent instrument; but an instrument is such that it is moved by another and such that its action is ordered

toward that other. This is why the actions of the angels are called ministries, and for this reason they are said to be sent on mission in order to minister.

**Reply to objection 1:** There are two senses in which an operation can be called an ‘intellectual operation’:

First, the operation can be thought of as consisting in the act of understanding itself, e.g., the act of contemplating. And an intellectual operation, taken in this sense, does not fix a determinate place for itself. Indeed, in *De Trinitate* 4 Augustine says, “Even we ourselves, insofar as we mentally understand something eternal, are not located here in this world.”

Second, an operation can be called ‘intellectual’ because it is regulated and commanded by an act of understanding. And given this sense, it is clear that intellectual operations sometimes fix determinate places for themselves.

**Reply to objection 2:** The empyrean heaven pertains to an angel’s dignity with a sort of fittingness, since it is fitting that the highest location of bodies should be attributed to a nature that is above all bodies. However, an angel does not receive any dignity from the empyrean heaven. And so when he is not actually in the empyrean heaven, he does not lose any dignity—just as a king does not lose any dignity when he is not actually sitting on the royal throne that befits his dignity.

**Reply to objection 3:** In our own case, being occupied exteriorly impedes the purity of contemplation because we enter into an action with our sentient powers, whose acts are such that when they are intense, they retard the acts of the intellective power. But an angel regulates his exterior actions solely by an intellectual operation. Hence, his exterior actions do not in any way impede his contemplation; for because one of the two actions is a rule and measure of the other, the one does not impede the other, but instead aids the other. Hence, in *Moralia* 2 Gregory says, “The angels do not go forth in such a way that they are deprived of the joys of interior contemplation.”

**Reply to objection 4:** In their exterior actions the angels minister principally to God and secondarily to us. This is not because we are superior to them, simply speaking. Rather, every man or angel, insofar as he becomes one spirit with God by clinging to God, is superior to every creature. Hence, in Philippians 2:3 the Apostle says, “... regarding one another as superior.”

## Article 2

### Are all the angels sent on mission to minister?

It seems that all the angels are sent on mission to minister:

**Objection 1:** In Hebrews 1:14 the Apostle says, “Are they not all administering spirits, sent on mission to minister?”

**Objection 2:** As is clear from what was said above (q. 108, a. 6), among the orders of angels the order of Seraphim is the highest. But as Isaiah 6:6-7 has it, a Seraph was sent to cleanse the lips of the prophet. Therefore, *a fortiori*, the lower angels are sent as well.

**Objection 3:** The divine persons infinitely exceed all the orders of angels. But as was explained above (q. 43, a. 1), divine persons are sent on mission. Therefore, *a fortiori*, so are all of the highest angels.

**Objection 4:** If the higher angels are not sent on mission for an exterior ministry, this is only because the higher angels are executing divine ministries through the lower angels. But since, as has been explained (q. 50, a. 4), all the angels are unequal, each angel other than the lowest has an angel lower than himself. Therefore, only a single angel would be sent on mission to minister. But this is

contrary to Daniel 7:10 (“Thousands of thousands were ministering to Him”).

**But contrary to this:** Referring to Dionysius’s opinion, Gregory says, “The higher ranks do not in any way have a role in exterior ministry.”

**I respond:** As is clear from what was said above (q. 106, a. 3 and q. 110, a. 1), the order of divine providence is such that—not only among the angels, but in the whole universe as well—lower creatures are administered by higher creatures. However, sometimes in the case of corporeal things, there is, by divine dispensation, a departure from this order for the sake of a higher order, viz., because the departure expedites the manifestation of grace. For instance, God brought it about directly, without any action on the part of the celestial bodies, that the man born blind was given sight and that Lazarus was raised from the dead. Now the angels, too, both good and bad, are capable of acting on lower bodies outside of the action of the celestial bodies—for instance, by condensing the clouds into rain or by doing other such things. And no one should doubt that God could reveal things directly to men without the mediation of the angels, or that the higher angels could do this without the mediation of the lower angels.

Taking these considerations into account, some have claimed that as a general rule it is only the lower angels who are sent on mission and not the higher angels, but that by divine dispensation the higher angels are also sometimes sent on mission.

However, this claim does not seem plausible. For the order among the angels involves the gifts of grace. But the order of grace has no order higher than itself for the sake of which it might be set aside in the way that the order of nature is set aside for the sake of the order of grace.

Notice, in addition, that the reason why the order of nature is set aside in the working of miracles is to strengthen our faith. But it would do no good for the angelic order to be set aside, since we would be unable to perceive this.

Again, among the divine ministries there is no task so great that it could not be executed by the lower orders. Hence, Gregory says, “The archangels are called upon to announce the greatest things. This is why the Archangel Gabriel is sent to the Virgin Mary.” But as Gregory adds in the same place, this was the highest of all the divine ministries.

And so one should simply claim, with Dionysius, that the higher angels are never sent on mission for an exterior ministry.

**Reply to objection 1:** In the missions of the divine persons there is (a) a *visible* mission that involves a corporeal creature and (b) an *invisible* mission that involves a spiritual effect. Likewise, in the missions of the angels there is (a) something called an *exterior* mission, which involves carrying out a ministry to corporeal things, and not all the angels are sent on this sort of mission, and (b) something called an *interior* mission, which involves intellectual effects—as when one angel illuminates another—and all the angels are sent on this sort of mission.

An alternative reply is that the Apostle says this in order to prove that Christ is greater than the angels through whom the law was given, so that he might show the excellence of the New Law in comparison to the Old Law. Hence, what he says need not be taken to apply to angels other than the ministering angels through whom the law was given.

**Reply to objection 2:** According to Dionysius, the angel who was sent to cleanse the prophet’s lips was one of the lower angels, but he is equivocally called a Seraph, i.e., one who is on fire, because he came to burn the prophet’s lips.

An alternative reply is that the higher angels communicate their proper gifts, on the basis of which they are named, through the mediation of the lower angels. So, then, one of the Seraphim is said to have cleansed the prophet’s lips with fire, not because he himself did it directly, but because a lower angel did it by his power—just as the Pope is said to absolve someone even when he gives absolution through another.

**Reply to objection 3:** As is clear from what has been said, the divine persons are sent on mission in an equivocal sense, and they are not sent on mission in order to minister.

**Reply to objection 4:** There are many levels within the divine ministries. Hence, nothing prevents even unequal angels from being sent directly on mission in order to minister—though in such a way that higher angels are sent for higher ministries, and lower angels for lower ministries.

### Article 3

#### Do the angels who are sent on mission also stand before God?

It seems that the angels who are sent on mission (*mittuntur*) also stand before God (*assistant*):

**Objection 1:** In *Homilia* Gregory says, “Therefore, it is the case both that the angels are sent on mission and that they stand before God. For even if an angelic spirit is limited to a particular place (*circumscriptus*), the highest spirit Himself, viz., God, is not so limited.”

**Objection 2:** Tobias’s angel was sent on mission to minister. But according to Tobit 12:15, he himself said, “I am the angel Raphael, one of the seven who stand before God.” Therefore, the angels who are sent on mission also stand before God.

**Objection 3:** Each beatified angel is closer to God than Satan is. But according to Job 1:6 (“When the sons of God came to stand before the Lord, Satan also was present among them”), Satan stands before God. Therefore, *a fortiori*, the angels who are sent on mission to minister also stand before God.

**Objection 4:** If the lower angels do not stand before God, then this is because they receive divine illuminations through the higher angels and not directly. But every angel, except the one who is highest of all, receives divine illuminations from higher angels. Therefore, only the highest angel would stand before God. But this is contrary to Daniel 7:10 (“Ten thousand times a hundred thousand stood before Him”). Therefore, even those who minister stand before God.

**But contrary to this:** In *Moralia* 17, commenting on Job 25:3 (“Is there any numbering of His soldiers?”), Gregory says, “Those Powers stand before God (*assistant*) who do not leave to announce things to men.” Therefore, those who are sent on mission to minister do not stand before God.

**I respond:** The angels who stand before God and the angels who minister are spoken of by appeal to their similarity with those who serve under a king. There are some who always stand before the king and listen directly to his commands, while there are others—for instance, those in charge of administering the cities—to whom the royal commands are announced by those who stand before the king. The latter are said to administer, but not to stand before the king.

Therefore, notice that all the angels see God’s essence directly and, on this score, even those who minister are said to stand before Him. Hence, in *Moralia* 2 Gregory says, “Those who are sent to minister exteriorly for our salvation are always able to stand before the Father, i.e., to see His face.”

However, not all the angels can perceive the secrets of the divine mysteries in the very splendor of the divine essence; the only ones who can are the highest angels, through whom these secrets are made known to the lower angels. And on this score, the only angels who are said to stand before God are the highest angels, who belong to the first hierarchy, the property of which, according to Dionysius, is to be illuminated directly by God.

**Reply to objection 1 and objection 2:** The replies to the first and second objections are clear from what has been said, since these objections are talking about the first mode of standing before God.

**Reply to objection 3:** Satan is not said to have stood before God, but is instead described as having been present among those who stand before God. For as Gregory says in *Moralia* 2, “Even

though Satan lost beatitude, he did not lose his nature, which is similar to the angels.”

**Reply to objection 4:** All those who stand before God see certain things directly in the splendor of God’s essence, and so it is said to be proper to the whole first hierarchy to be illuminated directly by God. However, the highest among them see more than the lower ones do, and the former illuminate the latter about these things—just as, among those who stand before a king, one knows more than another about the king’s secrets.

#### Article 4

##### Are all the angels of the second hierarchy sent on mission?

It seems that all the angels of the second hierarchy are sent on mission:

**Objection 1:** According to Daniel 7:10, all the angels either stand before God or minister to God. But the angels of the second hierarchy do not stand before God, since, as Dionysius says in *De Caelesti Hierarchia*, chap. 8, they are illuminated by the angels of the first hierarchy. Therefore, all the angels of the second hierarchy are sent on mission to minister.

**Objection 2:** In *Moralia* 17 Gregory says, “There are more who minister than who stand before God.” But this would not be the case if the angels of the second hierarchy were not sent on mission to minister. Therefore, all the angels of the second hierarchy are sent on mission to minister.

**But contrary to this:** Dionysius says, “The Dominations are beyond all subjection.” But it involves subjection to be sent on mission to minister. Therefore, the Dominations are not sent on mission to minister.

**I respond:** As was explained above (a. 1), to be sent on mission for an exterior ministry is proper to an angel to the extent that he acts by God’s command on some corporeal creature, and this is what is involved in the execution of a divine ministry. But as Dionysius says in *De Caelesti Hierarchia*, chap. 7, the properties of the angels are made clear by their names. Therefore, the angels who are sent on mission for an exterior ministry belong to those orders whose names imply some sort of execution.

Now the name ‘Dominations’ does not imply any sort of execution, but implies only arranging and commanding what is to be executed. However, some sort of execution is implied by the names of the lower orders. For the names ‘Angels’ and ‘Archangels’ come from announcing, and the names ‘Virtues’ and ‘Powers’ are predicated in relation to some action, and, as Gregory says, a Principality is in charge of those who operate. Hence, it belongs to these five orders to be sent on mission for exterior ministries, but not to the four higher orders.

**Reply to objection 1:** The Dominations are here counted among the angels who minister not because they execute a ministry, but rather because they arrange and mandate what is to be done by the others—just as architects do not do any manual labor in their trade, but only arrange and direct what others have to do.

**Reply to objection 2:** There are two possible explanations concerning the number of those who stand before God and the number of those who minister.

Gregory claims that more of them minister than stand before God. For he understands the phrase ‘thousands of thousands were ministering to Him’ (Daniel 7:10) as partitive rather than multiplicative, so that the meaning is ‘thousands from among the number of the thousands’. And so the number of those who minister is posited as indefinite, in order to signify excess, whereas the number of those who stand before God is posited as finite, since the passage adds that “ten thousand times a hundred thousand were standing before Him.” This follows the line of the argument proposed by the Platonists, who claimed

that the closer things are to the unitary first principle, the smaller they are in number—just as the closer a number is to the number *one*, the smaller the multitude it numbers.

This opinion is salvageable as far as the number of orders is concerned, since six orders minister and three stand before God.

By contrast, in *De Caelesti Hierarchia*, chap. 14, Dionysius claims that the multitude of angels exceeds every material multitude, so that just as the higher bodies exceed the lower bodies in magnitude, i.e., in immensity, so too the higher incorporeal natures exceed all corporeal natures in multitude. For that which is better is such that God intends it more and multiplies it more. Accordingly, since those who stand before God are higher than those who minister, there will be more who stand before God than who minister. Hence, on this view the phrase ‘thousands of thousands’ is interpreted multiplicatively, so that it means ‘a thousand times a thousand’. And because ten times a hundred is a thousand, if the text said, ‘ten times a hundred thousand’, then that would mean that there are just as many standing before God as ministering. However, because it says, ‘ten thousand times a hundred thousand’, it follows that many more are being said to stand before God than to minister. However, it does not say this in order to indicate that this is the precise number of angels there are. Rather, there are many more angels than this, since their number exceeds every material multitude—something which, as Dionysius points out in the same place, is signified by the multiplication of large round numbers by one another, viz., ten, a hundred, and a thousand.

## QUESTION 113

### The Guardianship of the Good Angels

Next we have to consider the guardianship of the good angels (question 113) and the attacks of the bad angels (question 114).

On the first topic there are eight questions: (1) Are men guarded by angels? (2) Are individual angels assigned to guard individual men? (3) Does this guardianship involve only the lowest order of angels? (4) Does every man have a guardian angel? (5) When does an angel's guardianship of a man begin? (6) Does the angel always guard the man? (7) Does an angel grieve over the loss of the man he is guarding? (8) Is there conflict among the angels by reason of their guardianship?

#### Article 1

##### Are men guarded by angels?

It seems that men are not guarded by angels:

**Objection 1:** Guardians are assigned to someone either because he does not know how to guard himself or because he is unable to guard himself—as is the case, for instance, with children and the sick. But a man is able to guard himself because of his power of free choice, and he knows how to guard himself because of his natural cognition of the natural law. Therefore, a man is not guarded by an angel.

**Objection 2:** When a stronger guardian is present, a weaker guardian seems superfluous. But according to Psalm 120:4 (“He who guards Israel will not slumber or sleep”), men are guarded by God. Therefore, it is not necessary for a man to be guarded by an angel.

**Objection 3:** If the one who is being guarded is lost, this goes back to the negligence of the guardian; hence, 3 Kings 20:39 says, “Guard this man, and if he slips away, your life will be exchanged for his life.” But many men are lost every day by falling into sin, and the angels could have helped them by appearing visibly to them, or by working miracles, or in some other such way. Therefore, the angels would be negligent if men had been entrusted to their guardianship. But this is clearly false. Therefore, it is not the case that angels are the guardians of men.

**But contrary to this:** Psalm 90:11 says, “He has given His angels charge over you, to guard you in all your ways.”

**I respond:** In accord with the nature of divine providence, a feature found among all things is that what is movable and variable is moved and regulated by what is immovable and invariable. For instance, all corporeal things are moved and regulated by immovable spiritual substances, and all lower bodies are moved and regulated by those higher bodies that are invariable with respect to their substance. In fact, with respect to those conclusions about which we can come to have different opinions, we ourselves are regulated by principles that we hold invariably.

Now it is clear that in matters of action a man's cognition and affection can vary and fall short of the good in many ways. And so it was necessary that men be assigned guardian angels through whom they might be regulated and moved toward the good.

**Reply to objection 1:** Through free choice a man can avoid evil in some ways, but not adequately, since his affection for the good is weakened by the many passions of the soul. Similarly, the general cognition of the natural law that is naturally present in a man directs the man in some ways toward the good, but not adequately, since in applying the universal principles of the law to particular actions, a man can fail in many ways. Hence, Wisdom 9:14 says, “The thoughts of mortals are fearful and our counsels uncertain.” This is why the guardianship of the angels was necessary for a man.

**Reply to objection 2:** Two things are required for acting well. First, it is required that our

affections be inclined toward the good, and this happens in us through the habit of a moral virtue. Second, it is required that reason discover fitting ways to perfect the good of virtue, and this the Philosopher attributes to prudence.

As far as the first point is concerned, God guards a man directly by infusing grace and virtues into him. But as far as the second point is concerned, God guards man like a universal teacher (*instructor*) whose instruction, as has been explained (q. 111, a. 1), comes to a man through the mediation of the angels.

**Reply to objection 3:** Just as a man departs from his natural tendency toward the good because of the passions associated with sin, so too he departs from a good angel's incitement toward the good, which is effected invisibly by the angel's illuminating the man with respect to acting well. Hence, the fact that men are lost should be blamed not on the negligence of the angels, but on the wickedness of the men themselves.

Now the fact that, outside the general rule, angels sometimes appear visibly to men stems from a special grace of God, just like the fact that miracles are worked outside the order of nature.

## Article 2

### Are individual men guarded by individual angels?

It seems that individual men are not guarded by individual angels:

**Objection 1:** An angel is more powerful than a man. But one man is enough to guard many men. Therefore, *a fortiori*, one angel can guard many men.

**Objection 2:** As Dionysius says, lower things are led back to God through the mediation of higher things. But since all the angels are unequal to one another, there is only one angel who is such that there is no angel between him and men. Therefore, there is just one angel who directly guards all men.

**Objection 3:** Greater angels are assigned more important roles. But guarding any one man is not a more important role than guarding any other man, since all men are equal by nature. Therefore, since, according to Dionysius, the angels are such that no two of them are equal in greatness, it seems not to be the case that different men are guarded by different angels.

**But contrary to this:** In commenting on Matthew 18:10 ("Their angels in heaven ..."), Jerome says, "It is the great dignity of souls that each one has from birth an angel assigned to guard it."

**I respond:** Individual angels are assigned to guard individual men. The reason for this is that the guardianship of the angels is an execution of God's providence with respect to men. Now God's providence is related to men in a way different from the way it is related to other corruptible creatures, since men and other corruptible creatures are related in different ways to incorruptibility. For men are incorruptible not just with respect to their common species, but also with respect to the proper forms of each individual, viz., their rational souls, and this cannot be said of other corruptible entities.

Now it is clear that God's providence has to do principally with entities that endure forever, whereas there is divine providence with respect to transient things insofar as God orders such things toward the everlasting things. So, then, God's providence is related to *individual* men in the way it is related to the individual *genera* or *species* of corruptible things. But according to Gregory, different orders of angels are assigned to different genera of things; for instance, the Powers are assigned to restrain the demons, and the Virtues are assigned to work miracles among corporeal things. And it is plausible to think that different angels of a given order are put in charge of the different species of things. Hence, it is likewise reasonable to think that different angels are assigned to guard different men.

**Reply to objection 1:** There are two ways in which a guardian is assigned to a given man. In the first way, he is assigned insofar as the man is an *individual* man; on this score, there is normally one guardian for one man, though in some cases more than one guardian is assigned to guard a single man. In the second way, a guardian is assigned to a man insofar as the man is part of some *social group* (*collegium*); on this score, one guardian is put in charge of guarding the whole group, and his role is to oversee those things that pertain to an individual man in his relation to the whole group, e.g., external actions by which the others are edified or scandalized.

Now guardianship over men is entrusted to the angels with respect to invisible and hidden things that have to do with the salvation of individual men in their own right. This is why individual angels are assigned to guard individual men.

**Reply to objection 2:** As has been explained (q. 112, a. 3), angels of the first hierarchy are all illuminated directly by God about certain things; however, there are other things about which only the highest angels are illuminated directly by God, and these things they reveal to the lower angels.

This same point must be taken into account within the lower orders of angels as well. For an angel at the lower end of a given order is illuminated about some things by an angel at the higher end, and he is illuminated about other things by the angel who is immediately above him. And so it is likewise possible for a man to be directly illuminated by an angel having other angels below him who are illuminated by him.

**Reply to objection 3:** Even though men are equal by nature, inequalities are nonetheless found among them to the extent that some have been ordered by divine providence toward more important things and others toward less important things—this in accord with Ecclesiasticus 33:11-12, “With much knowledge the Lord has divided them. Some of them He has blessed and exalted, and some of them He has cursed and brought low.” And in this way guarding one man can be a more important role than guarding some other man.

### Article 3

#### Is it just angels of the lowest order who guard men?

It seems that it is not just angels of the lowest order who guard men:

**Objection 1:** Chrysostom claims that what is said in Matthew 18:10 (“Their angels in heaven ...”) “refers not to just any angels, but to the very highest.” Therefore, it is the very highest angels who guard men.

**Objection 2:** In Hebrews 1:14 the Apostle says that the angels have been “sent to minister for those who shall receive the inheritance of salvation,” and so it seems that the mission of the angels is ordered toward guarding men. But as was explained above (q. 112, a. 4), five orders of angels are sent exteriorly on mission to minister. Therefore, all the angels of those five orders are assigned to guard men.

**Objection 3:** In order to guard men, it seems especially necessary (a) to restrain the demons, which, according to Gregory, pertains to the Powers, and (b) to work miracles, which pertains to the Virtues. Therefore, these two orders are also assigned to guard men, and not just the lowest order.

**But contrary to this:** In Psalm 90:11 guardianship of men is assigned to the Angels, whose order is the lowest according to Dionysius.

**I respond:** As was explained above (a. 2), there are two ways in which guardianship is assigned over a man.

In the first way, the guardianship is *particular*, insofar as individual angels are assigned to guard individual men. And this sort of guardianship belongs to the lowest order of angels, whose role, according to Gregory, is to announce the smallest things, and what seems to be smallest among the angelic roles is to take care of what pertains to the salvation of just one man.

The second sort of guardianship is *universal*, and this sort of guardianship is spread out over different orders of angels, since the more universally an agent acts, the higher it is. So, then, guardianship over the whole human race belongs to the order of Principalities or, perhaps better, to the order of Archangels, who are called ‘angel princes’—thus Michael, whom we call an Archangel, is called one of the princes in Daniel 10:13. Again, the Virtues have guardianship over all corporeal natures, and the Powers keep guard over the demons. And, lastly, according to Gregory, the Principalities have guardianship over the good spirits.

**Reply to objection 1:** The passage from Chrysostom can be understood in such a way that he is talking about the highest angels within the lowest order of angels. For as Dionysius says, in each order there are some who are first, some who are in the middle, and some who are last.

However, it is plausible to think that the greater angels are assigned to guard those who have been chosen by God for a higher degree of glory.

**Reply to objection 2:** Not all the angels who are sent on mission have particular guardianship over individual men. Instead, as has been explained, some of the orders have a more or less universal guardianship.

**Reply to objection 3:** The lower angels also exercise the roles of the higher angels to the extent that they participate to some degree in the gift of the higher angels, and to the extent that they execute the power of the higher angels. And it is in this sense that the lowest angels can also restrain the demons and work miracles.

#### Article 4

##### Does every man have an angel assigned to guard him?

It seems that not every man has an angel assigned to guard him:

**Objection 1:** Philippians 2:7 says of Christ that he is “made in the likeness of men, and in appearance (*habitus*) found as a man.” Therefore, if every man is such that an angel is assigned to guard him, then even Christ had a guardian angel. But this seems absurd, since Christ is greater than all the angels. Therefore, not every man has an angel assigned to guard him.

**Objection 2:** The first of all men was Adam. But it was not appropriate for him to have a guardian angel, at least in the state of innocence, since in that state he was not threatened by any dangers. Therefore, not every man is such that an angel is appointed to guard him.

**Objection 3:** Angels are assigned to guard men in order to lead them to eternal life, and to incite them to act well, and to protect them against the attacks of the demons. But men who are foreknown to be damned never attain eternal life. For instance, non-believers, even if they sometimes do good works, do not do them well, since they do not do them with the right intention; for as Augustine says, “It is faith that sets one’s intention aright.” In addition, as 2 Thessalonians 2:9 says, the coming of the Antichrist will be “in keeping with the work of Satan.” Therefore, not every man has an angel assigned to guard him.

**But contrary to this:** In the passage from Jerome alluded to above (a. 2), he says, “Each soul has an angel assigned to guard it.”

**I respond:** A man in the state of the present life is, as it were, on a road (*via*) by which he ought to travel to heaven (*ad patriam*). On this road many dangers threaten a man, both from within and from without—this according to Psalm 141:4: “In this way wherein I walked, they have hidden a snare for me.” And so just as guardians are provided for men who are walking along an unsafe road, so a guardian angel is assigned to each man for as long as he is a wayfarer (*viator*). But once he reaches the end of the road, he will no longer have a guardian angel. Instead, he will have either an angel to reign with him in heaven or a demon to punish him in hell.

**Reply to objection 1:** Christ, insofar as He is a man, was directly regulated by the Word of God, and so he did not need a guardian angel. Again, as far as His soul is concerned, He was a comprehender of the divine essence (*comprehensor*), whereas by reason of the passibility of His body, He was a wayfarer (*viator*).

Accordingly, it was not appropriate for Him to have a guardian angel as a superior, but it was appropriate for Him to have a ministering angel as an inferior. Hence, Matthew 4:11 says, “Angels came and ministered to Him.”

**Reply to objection 2:** In the state of innocence man was not subject to any danger from within, since, as was explained above (q. 95, aa. 1 and 3), everything interior was well-ordered. However, he was threatened with danger from without, because of the snares of the demons—as is proved by how things turned out. And so the man needed angels to guard him.

**Reply to objection 3:** Just as non-believers and those foreknown to be damned—and even the Antichrist—are not deprived of the interior assistance of natural reason, so they are not deprived of the exterior assistance given by God to the whole human race, viz., the guardianship of the angels. Even if they are not helped by this guardianship to merit eternal life by good works, they are nonetheless helped in being held back from certain evils by which they can harm themselves and others. For even the demons themselves are restrained by the good angels from doing as much harm as they want to. Similarly, the Antichrist will not do as much harm as he will want to.

## Article 5

### Is an angel assigned to guard a man from his birth?

It seems that an angel is not assigned to guard a man from his birth:

**Objection 1:** Angels are sent on mission to minister “for those who shall receive the inheritance of salvation,” as the Apostle says in Hebrews 1:14. But men begin to receive the inheritance of salvation when they are baptized. Therefore, an angel is assigned to guard a man from the time of his baptism and not from the time of his birth.

**Objection 2:** Men are guarded by angels in the sense that the angels illuminate them in the manner of a teacher. But right after their birth, children are not capable of learning, since they do not have the use of reason. Therefore, angels are not assigned to children right after birth.

**Objection 3:** Children who are in their mother’s womb have a rational soul at some time, just as they do after being born. But when these children are in their mother’s womb, the angels are not, it seems, assigned to guard them, given that the ministers of the Church do not at that time give them the sacraments. Therefore, angels are not assigned to guard men immediately upon their birth.

**But contrary to this:** Jerome says, “Each soul has from birth an angel assigned to guard it.”

**I respond:** As Origen points out in *Super Matthaëum*, there are two opinions about this matter. Some have claimed that an angel is assigned to guard a man from the time of his baptism, while others

have claimed that this happens at the time of his birth.

The second opinion is the one favored by Jerome, and with good reason. For the gifts that God gives a man in virtue of his being a Christian, e.g., receiving the Eucharist and other such gifts, begin at the time of his baptism. But the gifts that God provides to a man insofar as he has a rational nature are bestowed on him at the time he receives that nature by being born. And as is clear from what has been said already (aa. 1 and 4), one such gift is the guardianship of the angels. Hence, immediately upon his birth a man has an angel assigned to guard him.

**Reply to objection 1:** If we consider the ultimate effect of the guardianship of the angels, viz., the reception of the inheritance of salvation, then the angels are, to be sure, *efficaciously* sent to minister only for the sake of those who receive that inheritance. Nonetheless, the ministry of the angels is not withdrawn from the others, even though it does not have efficacy in them in the sense of their being led to salvation. Yet the angels' ministry to them is efficacious to the extent that they are drawn back from many evils.

**Reply to objection 2:** The role of guardianship is ordered toward illumination through teaching as its ultimate and principal effect. Nonetheless, it has many other effects that are appropriate for children, e.g., restraining the demons and preventing other sorts of harm, both corporeal and spiritual.

**Reply to objection 3:** For as long as a child is in his mother's womb he is not totally separate from his mother, but still belongs to her in a certain sense because they are attached to one another—in the same way that a fruit hanging from a tree belongs to the tree. And so it is plausible to claim that the angel who guards the mother also guards the offspring in the mother's womb. But as Jerome says, when the child is separated from the mother at birth, an angel is assigned to guard him.

## Article 6

### Does a guardian angel ever desert the man whom he is assigned to guard?

It seems that a guardian angel sometimes deserts the man whom he is assigned to guard:

**Objection 1:** Jeremiah 51:9 says in the person of the angels, "We would have cured Babylon, but she is not healed. Let us forsake her." And Isaiah 5:5 says, "I will take away the hedge thereof, and it shall be wasted," and a Gloss says, "The hedge, i.e., the guardianship of the angels."

**Objection 2:** God is a more principal guardian than an angel. But according to Psalm 21:2 ("My God, my God, look upon me. Why have you forsaken me?"), God sometimes forsakes a man. Therefore, *a fortiori*, a guardian angel forsakes a man.

**Objection 3:** As Damascene says, when the angels are here with us, they are not in heaven. But they are sometimes in heaven. Therefore, sometimes they forsake us.

**But contrary to this:** According to 1 Peter 5:8 ("Your adversary the devil, as a roaring lion, goes about seeking whom he may devour"), the demons are always assailing us. Therefore, *a fortiori*, the good angels are always guarding us.

**I respond:** As is clear from what was said above (a. 2), the guardianship of the angels is an execution of divine providence effected with respect to men. Now it is clear that neither a man nor any other entity is completely withdrawn from divine providence, since to the extent that something participates in *esse*, it is subject to God's universal providence over beings. However, God is said to forsake a man, in a way consonant with the order of His providence, to the extent that He permits the man to suffer from some defect of either punishment or sin.

Similarly, one should claim that a guardian angel never completely leaves a man, but that he does

sometimes leave him in some respect or other—as when he does not prevent him from undergoing some tribulation or even from falling into sin, in keeping with the order of God’s judgments. This is the sense in which Babylon and the house of Israel are said to have been forsaken by the angels; for their guardian angels did not prevent them from undergoing tribulations.

**Reply to objection 1 and objection 2:** The replies to the first and second objections are clear from what has been said.

**Reply to objection 3:** Even if an angel sometimes leaves a man with respect to place, he does not leave him with respect to the effect of guardianship. For even when he is in heaven, he knows what is going on with the man; and he does not need a length of time for his local motion, but can instead make himself present immediately.

## Article 7

### Do angels grieve over the evils of those whom they are guarding?

It seems that angels grieve over the evils of those whom they are guarding:

**Objection 1:** Isaiah 33:7 says, “The angels of peace shall weep bitterly.” But weeping is a sign of sorrow and sadness. Therefore, the angels are saddened by the evils of the men they are guarding.

**Objection 2:** As Augustine says, sadness “is directed at those things that happen to us against our will.” But the loss of a man whom he is guarding is contrary to the will of a guardian angel. Therefore, the angels are saddened when men are lost.

**Objection 3:** Just as sadness is opposed to joy, so sin is opposed to repentance. But as Luke 15:7 says, the angels rejoice over a sinner who repents. Therefore, they grieve over a just man who falls into sin.

**Objection 4:** Origen’s gloss on Numbers 18:12 (“Whatever first fruits they offer ...”) says, “The angels are called to judgment about whether it is because of their own negligence that men have sinned, or whether it is because of the men’s weakness.” But it is reasonable for someone to be saddened by evils in light of which he is called to judgment. Therefore, the angels grieve over the sins of men.

**But contrary to this:** Where there are sadness and sorrow, there is no perfect happiness; hence, Apocalypse 21:4 says, “Death shall be no more, nor mourning, nor crying, nor any sorrow.” But the angels are perfectly happy. Therefore, they do not grieve over anything.

**I respond:** The angels do not grieve over either the sins or the punishments of men. For according to Augustine, sadness and sorrow are directed only at things that are contrary to one’s will. But nothing that happens in the world is contrary to the will of the angels or the will of the others who are beatified, since their will adheres completely to the order of God’s justice, and nothing happens in the world except what is either effected or permitted by God’s justice. And so, absolutely speaking, nothing that happens in the world is contrary to the will of those who are beatified. For as the Philosopher says in *Ethics* 3, what is voluntary, absolutely speaking, is what someone wills *in the particular case*, insofar as it is done with all the circumstances taken into consideration—even if it would not be voluntary if it were considered *in general*. For instance, a sailor does not will to throw his cargo into the sea when this is considered by itself and in general; but he does will to do it when a danger to safety threatens. Hence, as the Philosopher says in the same place, the act is voluntary rather than involuntary.

So, then, angels do not will the sins and punishments of men, when these are considered by themselves and in general; but they do will that the order of God’s justice should be preserved concerning such matters, and according to the order of God’s justice some men are subject to

punishments and are permitted to sin.

**Reply to objection 1:** This passage from Isaiah can be understood of Hezekiah's angels, i.e., Hezekiah's messengers, who wept because of the words of the Rabshakeh of which Isaiah 37:2ff. speaks. This is according to the literal sense.

As for the allegorical sense, the angels of peace are the apostles and other preachers, who weep over the sins of men.

On the other hand, if the passage is understood in the anagogical sense to be about the beatified angels, then the locution in question is metaphorical, and the meaning is that the angels will the salvation of men in general. For this is the sense in which these sorts of passions are attributed to God and the angels.

**Reply to objection 2:** The answer to this objection is clear from what was said above.

**Reply to objection 3:** With respect to both the repentance of men and their sin, the explanation of joy remains the same in the angels, viz., the fulfillment of the order of God's providence.

**Reply to objection 4:** The angels are called to judgment for the sins of men not as defendants but as witnesses, in order to convict men of their weakness.

## Article 8

### Can there be conflict or discord among the angels?

It seems that there cannot be conflict or discord among the angels:

**Objection 1:** Job 25:2 says, "... who makes concord in His high places." But conflict is opposed to concord. Therefore, there is no conflict among the sublime angels.

**Objection 2:** Where there is perfect charity and just rule, there can be no conflict. But all this exists among the angels. Therefore, there is no conflict among the angels.

**Objection 3:** If the angels are said to be in conflict over those whom they are guarding, then it must be that one angel takes one side and another angel takes the other side. But if the one side is just, then, conversely, the other side is unjust. Therefore, it follows that a good angel is a promoter of injustice—which is absurd. Therefore, there is no conflict among the good angels.

**But contrary to this:** Daniel 10:13 says in the person of Gabriel, "The prince of the kingdom of the Persians resisted me one and twenty days." But this prince of the Persians was the angel assigned to guard the kingdom of the Persians. Therefore, one good angel resisted another, and so there was a conflict between them.

**I respond:** This question is occasioned by the words just cited from Daniel.

Jerome explains them by saying that the prince of the kingdom of the Persians is an angel who had set himself in opposition to the liberation of the people of Israel, on whose behalf Daniel was praying, with Gabriel presenting his prayers to God.

Now it could be that this resistance was being put up because some prince of the demons had led the Jews taken to Persia into sin, and this posed an obstacle to the prayer of Daniel, who was praying on the behalf of these same people. However, according to Gregory in *Moralia* 17, the prince of the kingdom of the Persians was a good angel assigned to guard that kingdom.

Thus, to see how one angel is said to resist another, notice that God's judgments concerning different kingdoms and different men are executed by the angels, and in their actions the angels are regulated by God's decrees. However, it sometimes happens that among different kingdoms (or different men) there are contrary merits and demerits, so that the one kingdom (or man) is made subject to, or put

in charge of, the other. But without a revelation on God's part, the angels cannot know what the order of God's wisdom has decreed concerning a given case, and so they must consult God's wisdom about it. So, then, insofar as the angels consult God's will about contrary and mutually incompatible merits, they are said to resist one another—not because their wills are opposed to one another, since they all agree that God's decree should be fulfilled, but because the things about which they are consulting are opposed to one another.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

## QUESTION 114

### The Attacks of the Bad Angels

Next we have to consider the attacks of the bad angels. On this topic there are five questions: (1) Are men attacked by demons? (2) Is it proper to the devil to test, i.e., to tempt? (3) Do all the sins of men stem from the attacks or temptations of the demons? (4) Can the demons work genuine miracles in order to seduce men? (5) Are the demons who are conquered by men restrained from further attacking men?

#### Article 1

##### Are men attacked by demons?

It seems that men are not attacked by demons:

**Objection 1:** The angels assigned to guard men are sent by God. But demons are not sent by God, since the demons' intention is to make souls perish, whereas God's intention is to save them. Therefore, demons are not assigned to attack men.

**Objection 2:** It is not a fair fight (*non est aequa conditio pugnae*) when someone weak is exposed to battle against someone strong, or when someone ignorant is exposed to battle against someone clever. But men are weak and ignorant, whereas demons are powerful and clever. Therefore, God, who is the author of all justice, should not permit men to be attacked by demons.

**Objection 3:** The attacks of the flesh and of the world are enough to test men. But God permits His chosen ones to be attacked for the sake of testing them. Therefore, it does not seem necessary for them to be attacked by demons.

**But contrary to this:** In Ephesians 6:12 the Apostle says, "For our wrestling is not against flesh and blood, but against Principalities and Powers, against the rulers of the world of this darkness, against the spirits of wickedness in high places."

**I respond:** As far as the attacks of the demons are concerned, there are two things to take into consideration, viz., (a) the attacks themselves and (b) what the attacks are ordered toward.

An attack itself proceeds from the wickedness of the demons, who out of envy try to prevent a man's progress and out of pride arrogate to themselves a likeness of God's power, assigning determinate servants to attack men in the same way that the angels serve God in determinate roles for the sake of saving men.

On the other hand, the way in which the attacks are ordered itself stems from God, who knows how to use evils in an orderly way by directing them toward goods.

By contrast, as far as the good angels are concerned, both the guardianship itself and the way in which the guardianship is ordered are traced back to God as their first author.

**Reply to objection 1:** The bad angels attack men in two ways.

First, they prompt (*instigant*) them to sin. And in this sense they are not sent by God to attack men, though they are sometimes permitted to attack men according to God's just judgments.

Sometimes, however, they attack men by punishing them. And in this sense they are sent by God, in the way that, according to 3 Kings 22:22, a deceitful spirit was sent to punish Ahab the king of Israel. For punishment is traced back to God as its first source. And yet the demons who are sent to punish men carry out the punishment with an intention different from the intention with which they are sent. For they themselves punish out of hatred or envy, whereas they are sent by God because of His justice.

**Reply to objection 2:** In order that the fight might not be unfair, the balance is restored on man's

side—principally through the help of divine grace and, secondarily, through the guardianship of the angels. Hence, in 4 Kings 6:16 Elisha said to his servant, “Do not fear. There are more with us than there are with them.”

**Reply to objection 3:** Attacks that come from the flesh and the world would be enough to test human weakness, but they are not enough for the demons’ wickedness, which makes use of both the flesh and the world to attack men. Still, by God’s plan this redounds to the glory of the elect.

## Article 2

### Is testing, i.e., tempting, peculiar to the devil?

It seems that testing, i.e., tempting (*tentare*), is not peculiar to the devil:

**Objection 1:** According to Genesis 22:1 (“God tempted Abraham”), God is said to tempt. Also, the flesh tempts, and so does the world. And man is likewise said to tempt both God and man. Therefore, tempting is not peculiar to a demon.

**Objection 2:** Testing is done by one who does not know something. But the demons know what is going on with men. Therefore, the demons do not test them.

**Objection 3:** Temptation is a path to sin. But sin consists in an act of will. Therefore, since, as is clear from what was said above (q. 111, a. 2), the demons cannot affect a man’s will, it seems that it does not belong to them to tempt men.

**But contrary to this:** 1 Thessalonians 3:5 says, “Lest perhaps he that tempts should have tempted you,” and a Gloss adds, “that is, the devil, whose role it is to tempt.”

**I respond:** To test or tempt is, properly speaking, to make a trial of a thing.

Now a trial is made of a thing in order to find out something about it. And so knowledge is the proximate end of someone who tests.

However, sometimes a further end is sought from this knowledge, and this end may be either good or bad—good, as when one wants to know how someone stands with respect to knowledge or virtue in order to help him advance (*promoveat*), and bad, as when someone wants to find this out in order to deceive or subvert him.

Given this, we can understand how testing or tempting is attributed to different individuals in different ways:

A *man* is sometimes said to tempt or test someone just in order to find something out, and it is in this sense that tempting God is said to be a sin. For a man who is uncertain, as it were, presumes to test God’s power. On the other hand, a man tests or tempts another man sometimes in order to help him and sometimes in order to harm him.

Now the *devil* always tests or tempts in order to do harm by urging a man to sin. And it is in this sense that tempting is called his peculiar role. For even if one man sometimes tempts another man in this way, he does so insofar as he is a servant of the devil.

By contrast, God is said to test or tempt someone in order to find something out, in that manner of speaking in which He is said to ‘find out’ what He causes others to know. Hence, Deuteronomy 13:3 says, “The Lord your God tempts you, in order that it might be made public whether you love Him.”

Now the flesh and the world are said to tempt instrumentally or materially, viz., insofar as it is possible to know what sort of man someone is by the fact that he succumbs to or resists the desires of the flesh or by the fact that he shows disdain for the fortunes and adversities of the world. In addition, the devil uses the world and the flesh in order to tempt men.

**Reply to objection 1:** The reply to the first objection is clear from what has been said.

**Reply to objection 2:** The demons know what is going on with a man exteriorly; but only God, who is “the weigher of spirits” (Proverbs 16:2), knows men’s interior condition, on the basis of which some are more prone to one vice than to another. And so the devil tempts a man in order to discover his interior condition, so that he can tempt him toward a vice to which the man is more prone.

**Reply to objection 3:** Even if a demon cannot affect the will, nonetheless, as was explained above (q. 111, aa. 3 and 4), he can in some way affect a man’s lower powers, by which the man’s will, though not coerced, is nonetheless inclined.

### Article 3

#### Do all sins stem from the temptations of the devil?

It seems that all sins stem from the temptations of the devil:

**Objection 1:** In *De Divinis Nominibus*, chap. 4, Dionysius says, “The multitude of demons is the cause of all evils for both themselves and others.” And Damascene says, “All malice and impurity have been devised by the devil.”

**Objection 2:** One can say of every sinner what our Lord said of the Jews in John 8:44, “You come from your father, the devil.” But this is true insofar as they sinned at the devil’s prompting. Therefore, every sin stems from the devil’s prompting.

**Objection 3:** Just as angels are assigned to guard men, so demons are assigned to attack men. But all the good things we do stem from the prompting of the good angels, since divine gifts are delivered to us by the mediation of the angels. Therefore, all the evil things we do likewise stem from the devil’s prompting.

**But contrary to this:** *De Ecclesiasticis Dogmatibus* says, “Not all of our evil designs are prompted by the devil; rather, often they emerge from the movement of our free choice.”

**I respond:** There are two ways in which something can be called a cause of an effect: first, *indirectly*, and second, *directly*.

An agent is said to be a cause of an effect *indirectly* when it causes a disposition for that effect. In such a case the agent is said to be an *occasional* or *indirect* cause of the effect—as, for instance, when the one who chops the wood is said to be a cause of its being burned. And in this sense one should say that the devil is a cause of all our sins, since he himself prompted the first man to sin, and that sin resulted in a proneness to all sins within the whole human race. This is also the sense in which to understand the passages from Dionysius and Damascene.

By contrast, something is said to be a cause of an effect *directly* when it acts directly to bring about that effect. Given this sense, the devil is not a cause of every sin, since not every sin is committed at the devil’s prompting; instead, some sins are committed because of our freedom of choice and because of the corruption of the flesh. For as Origen says, even if the devil did not exist, men would still have a desire for food and sexual pleasure and other such things, and there can be many disorders with respect to these desires if they are not curbed by reason—especially given that our nature has been corrupted. But it is within the power of free choice to curb these desires and to bring order to them. So, then, it is not necessary that every sin should stem from the devil’s prompting.

However, if any sins do stem from the devil’s instigation, then, as Isidore says, “men are now deceived into committing those sins by the same blandishments by which our first parents were deceived.”

**Reply to objection 1:** The reply to the first objection is clear from what has been said.

**Reply to objection 2:** Even if certain sins are perpetrated without the devil's instigation, men still become the children of the devil through those sins in the sense that they are imitating the one who committed the first sin.

**Reply to objection 3:** A man is able to fall into sin on his own, but a man cannot make progress in merit without God's help, which is given to him by the mediation of the ministry of the angels. And so the angels cooperate in all our good works, whereas it is not the case that all our sins proceed from the prompting of the devil. However, there is no genus of sin that is not at some time or other committed at the prompting of the devil.

#### Article 4

##### Can demons seduce men by means of genuine miracles?

It seems that demons cannot seduce men by means of genuine miracles:

**Objection 1:** The action of the demons is especially evident in the works of the Antichrist. But as the Apostle says in 2 Thessalonians 2:9, the Antichrist's "coming is according to the working of Satan, in all power and signs and false wonders." Therefore, *a fortiori*, at other times it is only false miracles that are worked by the demons.

**Objection 2:** Genuine miracles are effected through a certain change in bodies. But demons cannot change a body into another nature, since, as Augustine says in *De Civitate Dei* 18, "Nor do I believe that the human body can in any way be converted by the art or power of the demons into the members of a beast." Therefore, the demons cannot work genuine miracles.

**Objection 3:** An argument is not efficacious if it is open to opposite conclusions. Therefore, if genuine miracles can be worked by the demons in order to promote falsehood, then genuine miracles will not be efficacious for confirming the truth of the Faith. But this is absurd, since Mark 16:20 says, "... the Lord working with them and confirming their word with the signs that followed."

**But contrary to this:** In 83 *Quaestiones* Augustine says, "It often happens that miracles worked by means of the magical arts are similar to the miracles worked through the servants of God."

**I respond:** As is clear from what was said above (q. 110, a. 4), if 'miracle' is taken in the proper sense, then neither demons nor any other creature can work miracles—only God can, since a miracle, properly speaking, is something done outside the entire order of created nature, and every power belonging to a creature is contained within that order.

However, 'miracle' is sometimes used in a broad sense for something that exceeds human power and understanding. And given this sense, demons can perform 'miracles', i.e., works that astonish men insofar as they exceed their power and understanding. For even a man, to the extent that he does something that lies beyond the power and understanding of another man, inspires in that other man admiration at what he does, so that it seems that in some sense a miracle has been performed.

Notice, however, that even though demonic works of this sort, which seem like miracles to us, do not satisfy the true notion of a miracle, they are nonetheless real entities in certain cases. For instance, through the power of demons the Pharaoh's magicians made genuine snakes and frogs (Exodus 7:12 and 8:7). And as Augustine says in *De Civitate Dei* 20, "When the fire fell from heaven and consumed Job's household at one blow along with his herds of cattle, and when because of a storm the house collapsed and killed his children, all of which were works of Satan, these things were not imaginary."

**Reply to objection 1:** As Augustine says in the same place, the works of the Antichrist can be

called ‘lying signs’ “either (a) because the mortal senses are going to be deceived by imaginary apparitions, so that the Antichrist will seem to do what he does not in fact do, or (b) because even if they are genuine wonders, they will still draw those who believe them into falsehoods.”

**Reply to objection 2:** As was explained above (q. 110, a. 2), corporeal matter does not obey good or bad angels at will in such a way that demons might be able by their power to transmute matter from one [substantial] form into another; however, as Augustine says in *De Trinitate* 3, the demons can use certain seminal principles that are found in the world’s elements in order to bring about effects of this sort.

And so one should say that all the transmutations of corporeal things that can be effected by natural powers, to which the aforementioned seminal principles are relevant, are such that they can be effected by the operation of the demons, using seminal principles of this sort—as, for instance, when certain things are transmuted into serpents or frogs, which can be generated through putrefaction. By contrast, those transmutations of corporeal things that cannot be effected by the power of nature cannot in any way be brought about in reality by the operation of the demons—as, for instance, that a human body should be changed into the body of a beast, or that the dead body of a man should come to life again. And if some such thing should seem to be done by a demon’s action, then it is not a reality but a mere appearance.

This sort of appearance can occur in two ways.

First, it can occur *from within*, insofar as the demon is able to affect a man’s imagination or even his corporeal senses in such a way that, as was explained above (q. 111, aa. 3 and 4), something appears to be otherwise than it really is. (In fact, this is also sometimes done, it is said, by the power of certain corporeal bodies.)

The second way is *from without*. For given that a demon can make a body of any shape and form out of elemental air in order to assume that body and appear visibly in it, he can for that same reason place any corporeal form around a given corporeal body so that the body appears to belong to the species of that form. This is the point that Augustine makes in *De Civitate Dei* 18, “A man has a phantom, which in his imagining or dreaming takes on the form of innumerable kinds of things, and this phantom is presented to the senses of other men as if embodied in the likeness of an animal.” This should not be understood to mean that the man’s imaginative power, or the image it has, is itself presented as numerically the same embodied thing to the senses of others. Rather, it should be understood to mean that a demon who forms a likeness in the imagination of one man is also able to present a similar likeness to the senses of another man.

**Reply to objection 3:** As Augustine says in *83 Quaestiones*, “When magicians do things such as the saints do, they are done for a different end and by a different law. For the magicians do them seeking their own glory, whereas the saints do them seeking the glory of God. And the magicians act through certain private arrangements (*per quaedam privata commercia*), whereas the saints act by way of public administration and by the order of God, to whom all creatures are subject.”

## Article 5

### Is a demon who is conquered by someone restrained for that reason from further attacks?

It seems that a demon who is conquered by someone is not for that reason restrained from further attacks:

**Objection 1:** Christ conquered His tempter in the most efficacious way. Yet afterwards his tempter attacked Him again by inciting the Jews to kill Him. Therefore, it is not true that the devil, once

conquered, ceases to attack.

**Objection 2:** To inflict punishment on someone for losing a battle is to incite him to fight more fiercely. But such incitement conflicts with God's mercy. Therefore, conquered demons are not restrained.

**But contrary to this:** Matthew 4:11 says, "Then the devil left Him," i.e., he left Christ, who had conquered him.

**I respond:** Some claim that a demon, once conquered, cannot tempt any other man with respect to the same sin or any other sin. By contrast, others claim that he can tempt other men, but not the same man.

The latter view is more plausible, but only if one adds 'for a certain period of time'. Hence, Luke 4:13 says, "All the temptation being ended, the devil departed from Him for a time." There are two reasons for this:

The first stems from God's mercy. For as Chrysostom says in *Super Matthaicum*, "The devil tempts men not for as long as he wants to, but for as long as God permits him to. For even if God permits him to tempt a man for a short time, He drives him away because of our weak nature."

The second reason stems from the devil's cleverness. Hence, in *Super Lucam* Ambrose says, "The devil is afraid to persist, since he shrinks from being defeated more frequently."

Yet it is clear from what is said in Matthew 12:44 ("I will return into my house from whence I came out") that the devil sometimes returns to someone he has left.

**Reply to objection 1 and objection 2:** The reply to the objections is clear from what has been said.

## QUESTION 115

### The Action of a Corporeal Creature

Next we have to consider the action of a corporeal creature (question 115) and fate, which is attributed to certain bodies (question 116).

There are six questions concerning corporeal actions: (1) Are there active bodies? (2) Are there any seminal natures [or ideas] (*seminales rationes*) among bodies? (3) Are the celestial bodies a cause of things that are done here below through lower bodies? (4) Are celestial bodies a cause of human acts? (5) Are the demons subject to the actions of the celestial bodies? (6) Do the celestial bodies impose necessity on those things that are subject to their actions?

### Article 1

#### Are there active bodies?

It seems that no bodies are active:

**Objection 1:** Augustine says, “Among things there is something that is acted upon and does not act, viz., bodies, and something that acts and is not acted upon, viz., God, and something that acts and is acted upon, viz., spiritual substances.”

**Objection 2:** Every agent except the first agent requires for its action a subject that is susceptible to its action. But a corporeal substance has no substance lower than itself that might be susceptible to its action, since this sort of substance occupies the lowest grade among beings. Therefore, a corporeal substance is not active.

**Objection 3:** Every corporeal substance is enclosed by quantity. But quantity impedes a substance’s acting or effecting motion (*impedit substantiam a motu et actione*), since it surrounds the substance and the substance is immersed in it—just as a cloudy atmosphere impedes the reception of light. An indication of this is that the more a body’s quantity grows, the more ponderous and heavy it is to move. Therefore, no corporeal substance is active.

**Objection 4:** Every agent has its power to act from its proximity to the first agent. But bodies, which are maximally composite, are as remote as possible from the first agent, which is maximally simple. Therefore, bodies are not agents.

**Objection 5:** If there is a body that is an agent, then it actively contributes to either a substantial form or an accidental form (*agit ad formam substantialem aut formam accidentalem*). Not a substantial form, since in bodies there is no principle of action except an active quality, which is an accident, and an accident cannot be a cause of a substantial form; for a cause is more powerful than its effect. Similarly, not an accidental form, since, as Augustine says in *De Trinitate* 9, “An accident does not extend further than its own subject.” Therefore, there are no active bodies.

**But contrary to this:** In *De Caelesti Hierarchia*, chap. 15 Dionysius says that among the other properties of corporeal fire, “it shows its greatness as something active and powerful on the materials that it lays hold of.”

**I respond:** It is apparent to the senses that some bodies are active. But there are three sorts of mistakes that have been made with respect to the actions of bodies:

There have been some who have completely removed actions from bodies. This is Avicbron’s opinion in *Fons Vitae*, where by means of the arguments touched on [in the objections] he tries to prove that no body acts, but that instead all the actions which seem to belong to bodies are the actions of a spiritual power that penetrates all bodies—so that, according to him, it is not the fire that produces

warmth, but rather the spiritual power that penetrates it. This opinion seems to have been derived from an opinion of Plato's. For Plato asserted that all the forms that exist in corporeal matter are participated forms and have been determined and contracted to *this* matter, whereas the absolute and, as it were, universal forms are separated; and so he claimed that these separated forms are causes of the forms that exist in matter. Thus, because a form existing in corporeal matter is determined to *this* matter which is individuated by quantity, Avicenna claimed that a corporeal form is contained and limited by quantity, as a principle of individuation, so that the form cannot extend itself by its action to any other matter. Instead, only a spiritual and immaterial form, which is not limited by quantity, can by its action have an effect on another.

However, this argument does not show that a corporeal form is not an agent; rather, it shows that a corporeal form is not a *universal* agent. For to the extent that a corporeal form participates in something, it must participate in what is proper to that thing; for instance, something participates in light to the extent that it participates in the nature of the visible. But to act (*agere*), which is nothing other than to make something actual (*facere aliquid actu*), is a *per se* property of an actuality insofar as it is an actuality (*est per se proprium actus in quantum est actus*), and this is why every agent effects what is similar to itself. So, then, from the fact that something is a form not determined by matter that is subject to quantity, it follows that it is an undetermined and universal agent; on the other hand, from the fact that something is determined to *this* matter, it follows that it is a contracted and particular agent. Hence, if, as the Platonists claimed, the form of fire were separated, then it would in some sense be a cause of every action of igniting (*causa omnis ignitionis*). But *this* form of fire, which exists in *this* corporeal matter, is a cause of *this* action of igniting, which passes from *this* body into *that* body; hence, this sort of action occurs through contact between the two bodies.

Still, Avicenna's opinion goes far beyond Plato's opinion (*superexcedit opinionem Platonis*). For the only substantial forms that Plato posited were separated, whereas he reduced accidents to material principles, viz., the large and the small, which he claimed to be the primary contraries, just as others had claimed that the primary contraries were the rare and the dense. And so both Plato and Avicenna, who followed him to a certain degree, claimed that (a) corporeal agents act through accidental forms to dispose matter for a substantial form, but that (b) the ultimate perfection, which occurs through the introduction of the substantial form, comes from an immaterial principle. And this is the second opinion concerning the action of bodies; we spoke about it above when we were discussing creation (q. 45, a. 8).

The third opinion was that of Democritus, who claimed that (a) acting occurs through the emission of atoms from a corporeal agent and that (b) being acted upon occurs through the reception of those same atoms in the pores of a corporeal patient. Aristotle disproves this position in *De Generatione et Corruptione* 1. For it would follow that (a) a body does not receive an action as a whole, and that (b) a corporeal agent's quantity would decrease by the very fact that it acts—both of which are manifestly false.

Therefore, one should claim that a body acts insofar as it is actual, and that it acts on another body insofar as the latter is in potentiality.

**Reply to objection 1:** The passage from Augustine should be understood to be about the whole of corporeal nature taken together, which does not have any lower nature below it on which it might act in the way that spiritual nature acts on corporeal nature and that uncreated nature acts on created nature. But it is nonetheless the case that one body is lower than another in the sense that it is in potentiality with respect to what the other body has in actuality.

**Reply to objection 2:** This makes clear the reply to the second objection. Note, however, that when Avicenna argues as follows, the argument should be conceded: 'There is something that effects motion without being moved, viz., the first maker of things; therefore, conversely, there is something that is only moved and acted upon'. But this is primary matter, which is pure potentiality in the way that God

is pure actuality. A body, however, is composed of potentiality and actuality, and so it both acts and is acted upon.

**Reply to objection 3:** As has already been explained, quantity does not altogether prevent a corporeal form from acting; rather, it keeps the form from being a universal agent, because the form is individuated insofar as it exists in a matter that is subject to quantity.

Moreover, the point introduced in the argument concerning the ponderousness of bodies is irrelevant. For, first of all, as is shown in *De Caelo et Mundo* 4, the addition of quantity is not a cause of heaviness. Second, it is false that ponderousness makes for slower movement; to the contrary, the heavier something is, the more it moves by its own proper movement. Third, an action does not occur through local motion in the way Democritus claimed; rather, it occurs through something's being brought from potentiality into actuality.

**Reply to objection 4:** It is not bodies that are maximally distant from God, since a body has some participation in a likeness of God's *esse* because of the form that it has (*secundum formam quam habet*). Rather, what is maximally distant from God is primary matter, which is in no way an agent, since it exists only in potentiality.

**Reply to objection 5:** A body actively contributes to both accidental forms and substantial forms.

For even if an active quality, such as heat, is an accident, it nonetheless acts in the power of the substantial form as the substantial form's instrument. And so it can actively contribute to a substantial form (*potest agere ad formam substantialem*), just as natural heat actively contributes, as an instrument of the soul, to the generation of flesh [in nutrition].

On the other hand, a body actively contributes to an accident by its own power.

Nor is it contrary to the nature of an accident that it should extend beyond its own subject *in its acting* (*in agendo*); rather, what is contrary to the nature of an accident is that it should extend beyond its own subject *in its being* (*in essendo*)—unless, perhaps, someone were to imagine that numerically the same accident flows from the agent into the patient, in the way that Democritus claimed that action occurs through the outward flow of atoms.

## Article 2

### Are there any seminal natures [or ideas] in corporeal matter?

It seems that there are no seminal natures [or ideas] (*rationes seminales*) in corporeal matter:

**Objection 1:** Idea (*ratio*) implies something with spiritual *esse*. But it is not the case that something exists spiritually in corporeal matter; instead, it is only the case that something exists materially in corporeal matter, i.e., in accord with the mode of that in which it exists. Therefore, there are no seminal ideas in corporeal matter.

**Objection 2:** In *De Trinitate* 3 Augustine says that the demons perform certain works by means of hidden movements by making use of certain seeds which they recognize in the elements. But what is employed by means of local motion are bodies and not ideas. Therefore, it is incorrect to claim that there are seminal ideas in corporeal matter.

**Objection 3:** A seed (*semen*) is an active principle. But there are no active principles in corporeal matter, since, as has been explained (a. 1), it is not the role of matter to act. Therefore, there are no seminal natures in matter.

**Objection 4:** In corporeal matter there are said to be "causal natures" (*rationes causales*), which seem sufficient for the production of things. But seminal natures are different from causal natures, since

miracles are effected outside of seminal natures but not outside of causal natures. Therefore, it is incorrect to claim that there are seminal natures in corporeal matter.

**But contrary to this:** In *De Trinitate* 3 Augustine says, “All the things that come into being corporeally and visibly have certain hidden seeds (*occulta semina*) which are latent in the corporeal elements of this world.”

**I respond:** As *De Anima* 2 says, denominations are normally made from the more perfect thing. Now in all of corporeal nature the more perfect things are living bodies, and so even the name ‘nature’ itself is transferred from living things to all natural things. For as the Philosopher says in *Metaphysics* 5, the name ‘nature’ (*natura*) was first imposed to signify the generation of living things, which is called a nativity (*nativitas*); and since living things are generated from a principle that is conjoined to them—e.g., the fruit from the tree, and the fetus from the mother, to whom it is tied—the name ‘nature’ was afterwards transferred to every principle of motion that exists within a thing which is moved.

Now it is obvious that the active and passive principles of the generation of living things are the seeds from which the living things are generated. And so Augustine appropriately labels as ‘seminal natures’ all the active and passive powers that are principles of generation and natural motion.

Now active and passive powers of this sort can be thought of according to a multiple ordering. For, first of all, as Augustine explains in *Super Genesim ad Litteram* 6, they exist principally and originally in the very Word of God as ideal natures (*rationes ideales*). Second, they exist in the elements of the world, where they were produced together at the beginning, as in universal causes. In a third way, they exist in the things that are produced from the universal causes in temporal sequence; for instance, they exist in *this* plant and in *that* animal as in particular causes. In a fourth way, they exist in the seeds that are produced by animals and plants. Again, the latter are related to other particular effects in the way that the primordial universal causes are related to the first effects they produce.

**Reply to objection 1:** Even if the active and passive powers of natural things cannot be called ‘ideas’ insofar as they exist in corporeal matter, they can nonetheless be called ‘ideas’ relative to their origin, insofar as they are derived from the ideal reasons.

**Reply to objection 2:** Active and passive powers of the sort in question exist in certain corporeal parts, and when these parts are employed by means of local motion to bring about certain effects, the seeds are said to be used by the demons.

**Reply to objection 3:** The male’s seed is an active principle in the generation of an animal. But what comes from the female, which is a passive principle, can also be called a ‘seed’. And so both active and passive powers can be included under ‘seed’.

**Reply to objection 4:** When Augustine speaks of seminal natures of the sort in question, one can plausibly infer from what he says that the seminal natures are themselves causal natures, just as a seed is likewise a certain cause. For in *De Trinitate* 3 he says, “Just as mothers are pregnant with their fetuses, so the world itself is pregnant with the causes of the things that are being brought forth.”

On the other hand, the ideal natures can be called ‘causal’—though not properly speaking ‘seminal’, since a seed is not a separated principle—and miracles are not effected outside of natures of this sort. Similarly, miracles are not effected outside of the passive powers instilled in a creature, with the result that whatever God has commanded can be effected from that creature. By contrast, when one claims that miracles are effected outside of the seminal natures, the miracles are being said to be effected outside of the active natural powers and outside of the passive powers that are ordered to those active powers.

### Article 3

#### Are the celestial bodies a cause of what is effected here below in lower bodies?

It seems that the celestial bodies are not a cause of what is effected here below in lower bodies:

**Objection 1:** Damascene says, “But we claim that they [read: the celestial bodies] are not a cause of any of the things that are done or of the corruption of the things that are corrupted; rather, they are instead signs of storms and of atmospheric changes.”

**Objection 2:** An agent and a matter are sufficient for effecting something. But among lower bodies there is matter to be acted upon and there are contrary agents, viz., the hot and the cold and so on. Therefore, in order to cause the things that are effected here below, it is unnecessary to attribute causality to the celestial bodies.

**Objection 3:** An agent effects what is similar to itself. But we see that everything that is effected here below is effected through things being heated and cooled, and being moistened and dried, and altered by other qualities of this sort, which do not exist in the celestial bodies. Therefore, the celestial bodies are not a cause of what is effected here below.

**Objection 4:** In *De Civitate Dei* 5 Augustine says, “Nothing is more corporeal than a body’s sex.” But a body’s sex is not caused by the celestial bodies. An indication of this is that of two twins born under the same stellar configuration (*sub una constellatione*), one is male and the other female. Therefore, the celestial bodies are not a cause of corporeal things here below.

**But contrary to this:** In *De Trinitate* 3 Augustine says, “Crasser and inferior bodies are ruled with a certain order by more subtle and powerful bodies.” And in *De Divinis Nominibus*, chap. 4, Dionysius says, “The sun’s light contributes to the generation of sensible bodies, and it moves them to life and nourishes them and makes them grow and perfects them.”

**I respond:** Notice that since (a) every multitude proceeds from oneness, and since (b) what is unchangeable (*immobilis*) remains the same, whereas what is changed has many forms, every change in all of nature proceeds from what is unchanged. And so to the extent that certain things are more unchangeable, they are more a cause of what is more changeable. But the celestial bodies are more unchangeable than other bodies, since they are changed only by local motion. And so the changes among lower bodies here below, which are varied and multiform, are traced back to the motion of a celestial body as a cause.

**Reply to objection 1:** What Damascene says should be understood to mean that the celestial bodies are not a first cause of the generation and corruption of things that are made here below, in the way asserted by those who claimed that the celestial bodies are gods.

**Reply to objection 2:** The only active principles in bodies here below are the active qualities of the elements, viz., the hot and the cold and the others of this sort. And if it were the case that the substantial forms of lower bodies were diversified only with respect to accidents of this sort, whose principles the ancient natural philosophers claimed to be the rare and the dense, then it would be unnecessary to posit an active principle in addition to the bodies here below; instead, they would themselves be sufficient for action.

However, to those who consider the matter correctly, it is apparent that accidents of this sort behave as material dispositions for the substantial forms of natural bodies. But matter is not sufficient for action. And so, in addition to these material dispositions, one must posit some active principle.

Hence, the Platonists posited separated species, by participation in which lower bodies acquire substantial forms.

But this does not seem adequate. For separated species are always in the same condition, since they

are posited as unchangeable, and so it would follow that there would not be any variation with respect to the generation and corruption of lower bodies—which is patently false.

Hence, according to the Philosopher in *De Generatione et Corruptione* 2, it is necessary to posit some active changeable principle that by its presence and absence is a cause of variety with respect to the generation and corruption of lower bodies. And the celestial bodies are things of this sort. And so whatever effects generation among lower bodies moves its subject toward the species as an instrument of a celestial body. Accordingly, *Physics* 2 says that a man and the sun generate a man.

**Reply to objection 3:** The celestial bodies are similar to lower bodies not by a likeness of species, but rather insofar as they contain within themselves, by their universal power, whatever is generated among lower bodies—in a way similar to that in which we say that all things are similar to God.

**Reply to objection 4:** The actions of celestial bodies are received in diverse ways in lower bodies in accord with the diverse material dispositions. However, it sometimes happens that the matter of a human conceptus (*materia conceptus humani*) is not completely disposed toward the masculine sex, and so part of it is formed into a male and part into a female (*partim formatur in masculum, partim in feminam*). Hence, the case in question is introduced by Augustine in order to refute divination that is made through the stars; for the effects of the stars likewise vary among corporeal things in accord with the diverse dispositions of the matter.

#### Article 4

##### Are the celestial bodies a cause of human acts?

It seems that the celestial bodies are a cause of human acts:

**Objection 1:** Since, as was explained above (q. 110, a. 3), the celestial bodies are moved by spiritual substances, they act in the power of those spiritual substances as their instruments. But those spiritual substances are higher than our souls. Therefore, it seems that they can affect our souls and in this way be a cause of human acts (*possint imprimere in animas nostras et sic causare actus humanos*).

**Objection 2:** Everything that is multiform is traced back to some uniform principle. But human acts are varied and multiform. Therefore, it seems that they are traced back to the uniform motions of the celestial bodies as their principles.

**Objection 3:** Astronomers (*astrologi*) frequently make true pronouncements about wars and other human acts, the principles of which are the intellect and the will. But they would not be able to do this by appeal to the celestial bodies if the celestial bodies were not a cause of human acts. Therefore, the celestial bodies are a cause of human acts.

**But contrary to this:** Damascene says, “The celestial bodies are in no way a cause of human acts.”

**I respond:** As has already been explained (a. 3), celestial bodies have an effect on bodies *directly and per se*. Moreover, they have an effect *directly and per accidens* on those powers of the soul that are acts of corporeal organs. For the acts of these powers are necessarily obstructed by impediments to their organs; for instance, an irritated eye does not see well. Hence, if the intellect and will were powers tied to corporeal organs—as some have claimed, asserting that the intellect does not differ from the sensory power—then it would necessarily follow that the celestial bodies are causes of human choices and actions. And from this it would follow that man is driven by natural instinct in his actions in the same way as the other animals, in which there exist only powers of the soul that are tied to corporeal organs. For what happens in these lower bodies through the influence of the celestial bodies happens naturally.

And so it would follow that man does not have free choice, but instead has actions that are determined, just as other natural things do. But these claims are manifestly false and contrary to the human way of life (*conversacioni humanae contraria*).

However, note that the influence of the celestial bodies can affect the intellect and the will *indirectly and per accidens*, viz., insofar as both the intellect and the will are in some way receptive to the lower powers that are tied to corporeal organs. But on this score the intellect and the will behave in different ways. For the intellect receives necessarily what it receives from the lower apprehensive powers, and so when the cogitative power or the power of imagination or the power of memory are disrupted, the intellect's action is necessarily disrupted (*ex necessitate turbatur*). The will, on the other hand, does not necessarily follow the inclination of the lower appetite. For even though the passions that are in the irascible and concupiscible parts of the soul have a certain power to incline the will, it nevertheless remains within the will's power either to follow the passions or to resist them. And so to the extent that the celestial bodies are able to affect the lower powers, their influence touches the will, which is the proximate cause of human acts, to a lesser degree than it does the intellect.

Thus, the claim that the celestial bodies are a cause of human acts is characteristic of those who assert that the intellect does not differ from the sensory power. Hence, some of them asserted that "the will in men is like the day brought on by the father of men and gods."

Therefore, since it is clear that intellectual understanding and willing are not acts of corporeal organs, it is impossible that the celestial bodies should be a cause of human acts.

**Reply to objection 1:** The spiritual substances that move the celestial bodies act on corporeal things by the mediation of the celestial bodies, but they act directly on the human intellect by illuminating it. However, as was explained above (q. 111, a. 2), they cannot affect the will.

**Reply to objection 2:** Just as corporeal motions in their multiformity are traced back to the uniform motions of the heavens as to their cause, so too the multiform acts that proceed from the intellect and the will are traced back to that uniform principle which is God's intellect and will.

**Reply to objection 3:** The majority of men follow their passions, which are movements of the sentient appetite with which the celestial bodies can cooperate, whereas a few wise men resist passions of this sort. And so in many cases (*in pluribus*) the astronomers can make true predictions, especially general predictions (*possunt praedicere et maxime in communi*). However, they cannot make specific predictions, because nothing prevents a man from resisting his passions through free choice. Hence, even the astronomers themselves admit that "a wise man dominates the stars," viz., to the extent that he dominates his own passions.

## Article 5

### Can the celestial bodies have an effect on the demons themselves?

It seems that the celestial bodies can have an effect on the demons themselves (*possint imprimere in ipsos daemones*):

**Objection 1:** As is clear from Matthew 4:24 and 17:14, the demons vex certain men, who are thereby called 'lunatics', according to the fixed phases of the moon (*secundum certa augmenta lunae*). But this would not be the case if the demons were not subject to the celestial bodies. Therefore, the demons are subject to the actions of the celestial bodies.

**Objection 2:** Necromancers make observations of the fixed constellations in order to invoke the demons. But the demons would not be invoked through the celestial bodies if they were not subject to

them. Therefore, the demons are subject to the actions of the celestial bodies.

**Objection 3:** The celestial bodies are more powerful (*virtuosiora*) than the lower bodies. But according to Porphyry, as quoted by Augustine in *De Civitate Dei* 10, the demons are restricted to certain lower bodies, viz., “to herbs, rocks, and living things, and to certain sounds, words, figures, and forms.” Therefore, *a fortiori* the demons are subject to the action of the celestial bodies.

**But contrary to this:** The demons are higher in the order of nature than the celestial bodies. But as Augustine says in *Super Genesim ad Litteram* 12, “an agent is higher than what it acts upon.” Therefore, the demons are not subject to the action of the celestial bodies.

**I respond:** There have been three opinions about the demons:

The first is that of the Peripatetics, who claimed that the demons do not exist. Instead, the things attributed to the demons according to the art of necromancy are effected by the power of the celestial bodies. And on this score Augustine quotes Porphyry in *De Civitate Dei* 10 as saying that “men manufacture on earth those powers of the stars that are suitable for producing various effects.”

However, this position is manifestly false. For there are many things which are known by experience to be done by the demons and for which the power of the celestial bodies is insufficient, e.g., that delirious men should speak unknown languages, that they should recite verses and passages of which they have no prior knowledge, that necromancers should make statues speak and move, and so on.

The Platonists were moved by these considerations to claim that the demons are animals with an ethereal body and a passive mind (*corpore aerea, animo passiva*); in *De Civitate Dei* 8, Augustine cites Apuleius as having made this claim. This is the second opinion, in accord with which one could say that the demons are subject to the celestial bodies in the same way that has already been explained (a. 4) for the case of men.

However, given what was said above (q. 51, a. 1), this opinion is clearly false. For we explained that the demons are intellectual substances not united to bodies.

Hence, it is clear that the demons are not subject to the action of the celestial bodies either *per se* or *per accidens*, either directly or indirectly.

**Reply to objection 1:** There are two reasons why the demons vex men according to the fixed phases of the moon.

First, in order to “dishonor a creature of God’s,” viz., the moon, as Jerome and Chrysostom explain.

Second, because, as was explained above (q. 114, a. 4), since they are unable to operate except by the mediation of natural powers, in their actions they take into account the aptitude of bodies for their intended effects. Now as Aristotle points out, it is obvious that “the brain is the most moist of all the parts of the body,” and hence the brain is especially subject to the action of the moon, which has the property of effecting motion in what is wet. But the animal powers are brought to perfection in the brain, and this is why the demons perturb a man’s imagination according to the fixed phases of the moon, when they take the brain to be disposed for this.

**Reply to objection 2:** There are two reasons why the demons come when they are summoned in certain constellations.

First, in order to lead men into the error of believing that the stars have some divine power (*aliquod numen*).

Second, because they think that in conjunction with certain constellations corporeal matter is more disposed toward the effects for which they are summoned.

**Reply to objection 3:** As Augustine puts it in *De Civitate Dei* 21, “The demons are lured through various kinds of rocks, herbs, trees, animals, songs and rites, not in the way that animals are lured by food, but in the way that spirits are lured by signs”—viz., insofar as these things are offered to them as a sign of divine honor, which they themselves are desirous of.

## Article 6

### Do the celestial bodies impose necessity on the things that are subject to their action?

It seems that the celestial bodies impose necessity on the things that are subject to their action:

**Objection 1:** When a sufficient cause is posited, it is necessary for the effect to be posited. But the celestial bodies are a sufficient cause of their effects. Therefore, since the celestial bodies, along with their movements and dispositions, are posited as necessary beings (*ponantur sicut ex necessitate entia*), it seems that their effects follow by necessity.

**Objection 2:** An agent's effect in matter follows by necessity when the agent's power is so great that it can totally subject the matter to itself. But all the matter of lower bodies is subject to the power of the celestial bodies as to something more excellent than it. Therefore, the effect of the celestial bodies is received by necessity in corporeal matter.

**Objection 3:** If a celestial body's effect does not occur by necessity, this is because of some impeding cause. But any corporeal cause that can impede a celestial body's effect must be traced back to some celestial principle, since the celestial bodies are a cause of everything that occurs here below (*causa omnium quae hic fiunt*). Therefore, since this celestial principle would likewise be necessary, it follows that it is by necessity that the effect of the other celestial body is impeded. And so everything that occurs here below happens by necessity.

**But contrary to this:** In *De Somno et Vigilia* the Philosopher says, "It is not strange that among the signs found in bodies of celestial events such as rain and wind, many are not fulfilled." So, then, not all the effects of the celestial bodies occur by necessity.

**I respond:** This question has been solved in part by what has already been said, but in part it presents a difficulty.

For it has been shown (a. 4) that even though certain inclinations come to exist in corporeal nature because of the influence of the celestial bodies, the will does not follow these inclinations by necessity. And so nothing prevents an effect of the celestial bodies from being impeded through voluntary action, not only in the man himself but also in the other things to which human action extends.

However, no such principle that has the freedom to follow or not to follow celestial influences is found in natural things. Hence, it seems that at least among these kinds of things everything occurs by necessity—this according to the ancient argument of those who, having assumed that (a) everything which exists has a cause and that (b) once a cause is posited, its effect is posited by necessity, concluded that everything happens by necessity.

In *Metaphysics* 6 Aristotle refutes this opinion with respect to the two points that they assume.

First, it is not true that once any given cause is posited, it is necessary for its effect to be posited. For there are some causes that are ordered to their effects not by necessity but in the greater number of cases (*in pluribus*), and that at times fail in a minority of cases (*deficiunt in minore parte*). However, since they fail in a minority of cases only because of some impeding cause, the aforementioned incongruity is still not avoided, since even the impediment posed by such a cause occurs by necessity.

And so, second, one must claim that everything that exists in its own right (*quod est per se*) has a cause, but that what exists incidentally (*quod est per accidens*) does not have a cause, since it is not truly a being (*non est vere ens*), given that it is not truly unified (*non sit vere unum*). For instance, the white has a cause (*album causam habet*), and so does the musical (*similiter et musicum*); but the white-and-musical does not have a cause (*album musicum non habet causam*), since it is not truly a being or truly unified. Now it is clear that a cause which impedes the action of some other cause that is ordered

in the greater number of cases toward its own effect sometimes acts with that other cause incidentally (*concurrit ei interdum per accidens*). Hence, to the extent that this sort of concurrence is incidental, it itself does not have a cause. For this reason, what flows from such a concurrence is not traced back to any preexisting cause from which it would follow by necessity. For instance, the fact that a certain fiery body made of the element earth (*aliquod corpus terrestre ignitum*) is generated in the higher part of the atmosphere and falls downward has some celestial power as a cause; similarly, the fact that there is a certain piece of combustible matter on the surface of the earth can be traced back to some celestial principle. However, the fact that the falling fire strikes this particular matter and incinerates it does not have any celestial body as a cause, but is instead incidental (*per accidens*).

And so it is clear that not all the effects of the celestial bodies occur by necessity.

**Reply to objection 1:** The celestial bodies are causes of lower effects by the mediation of particular lower causes, which are able to fail in a minority of cases.

**Reply to objection 2:** A celestial body's power is not infinite. Hence, it requires a determinate disposition in the matter in order to induce its effect, both with respect to the distance from the place and with respect to the other conditions. And so just as the distance from a place impedes the effect of a celestial body—for instance, the sun does not have the same heating effect in Dacia that it does in Ethiopia—so too the bulkiness of the matter (*grossities materiae*), or its cold or hot temperature, or some other disposition of this sort can impede a celestial body's effect.

**Reply to objection 3:** As has been explained, even though a cause that impedes another cause's effect is traced back to some celestial body as its own cause, nonetheless, since the concurrence of the two causes is incidental, it itself is not traced back to any celestial cause.

## QUESTION 116

### Fate

Next we have to consider fate, which is attributed to certain bodies (question 116). On this topic there are four questions: (1) Is there such a thing as fate? (2) What does it exist in? (3) Is it unchangeable? (4) Are all things subject to fate?

### Article 1

#### Is there such a thing as fate?

It seems that there is no such thing as fate (*fatum nihil sit*):

**Objection 1:** In his homily for the Epiphany Gregory says, “It is far from the hearts of the faithful to claim that there is such a thing as fate.”

**Objection 2:** What is brought about by fate is not unprovided for, since, as Augustine puts it in *De Civitate Dei* 5, “We see that ‘fate’ (*fatum*) comes from ‘utter’ (*dictum a fando*), i.e., from ‘speak’”—so that those things are said to occur by fate which have been ‘spoken beforehand’ by someone’s decree (*a aliquo determinante*). But things that are provided for are neither fortuitous nor accidental (*non sunt fortuita neque casualia*). Therefore, if things are brought about by fate, then chance and fortune are excluded from things.

**But contrary to this:** What does not exist is not defined. But in *De Consolatione Philosophiae* 4 Boethius defines fate as follows: “Fate is a disposition which inheres in movable things and through which providence connects all things to their orderings.” Therefore, there is such a thing as fate.

**I respond:** Among lower entities, some things seem to occur by fortune or chance (*provenire a fortuna vel casu*). However, it sometimes happens that what occurs by fortune or chance (*est fortuitum vel casuale*) insofar as it is related to lower causes is nonetheless found to be intended *per se* insofar as it is related to some higher cause. For instance, if two servants of the same master are sent by him to the same place, without either knowing about the other, then the meeting of the two servants is (a) a chance occurrence (*casualis*) insofar as it is related to the servants themselves, since it occurs outside the intention of either of them, but is (b) intended *per se* and not a chance occurrence insofar as it is related to their master, who preordained the meeting.

Thus, as regards occurrences here below that happen by chance or fortune in this way, there were those who did not want to trace them back to any higher cause. And these thinkers denied that there is such a thing as fate or providence, as Augustine reports about Tully in *De Civitate Dei* 5.

This opinion is contrary to what was said above (q. 22, a. 2) about providence.

On the other hand, there were some who wanted to trace everything that happens by fortune or chance among lower things—whether in natural matters or in human affairs—back to a higher cause, viz., to the celestial bodies. According to them, fate is nothing other than “the disposition of the stars under which each one is conceived or born.”

But this position cannot stand, and for two reasons.

First, with respect to human affairs. It has already been shown (q. 115, a. 4) that human acts are not subject to the action of the celestial bodies, except incidentally and indirectly (*nisi per accidens et indirecte*). But since a fatalistic cause (*causa fatalis*) regulates (*habet ordinationem super*) what is brought about by fate, it has to be a direct and *per se* cause of what is brought about.

Second, with respect to everything that is brought about incidentally (*omnia quae per accidens aguntur*). For it was explained above (q. 115, a. 6) that what exists *per accidens* is not properly speaking

either a being or a unity (*non est proprie ens neque unum*). But every one of a nature's actions is terminated in something that has unity (*terminatur ad aliquid unum*). Hence, it is impossible for something that exists *per accidens* to be a *per se* effect of any natural active principle. Therefore, no nature can bring it about *per se* that someone who intends to dig a grave should find a treasure. Now it is obvious that a celestial body acts in the manner of a natural principle, and so its effects in this world are natural. Therefore, it is impossible for an active power belonging to a celestial body to be a cause of those things that are done incidentally, whether by chance or by fortune.

Therefore, one should reply that things that are effected incidentally in this world, whether in natural matters or in human affairs, are traced back to that preordaining cause which is divine providence. For nothing prevents what is incidental from being taken as a unity by some intellect or other; otherwise, an intellect would be unable to form the proposition, 'The one who was digging a grave found a treasure'. And just as an intellect can *apprehend* this, so too it can *effect* it—as, for instance, if someone who knew where the treasure was buried were to prompt a simple person who did not know this to dig a grave in that place. And so nothing prevents things that occur incidentally here below (*hic per accidens aguntur*), i.e., by fortune or chance, from being traced back to an ordering cause that acts through an intellect—and, principally, through the divine intellect. For as was established above (q. 105, a. 4), only God is able to affect the will. As a result, the ordering of human acts, the principle of which is the will, should be attributed only to God.

So, then, we can posit fate to the extent that all the things that occur here below are subject to divine providence, in the sense that they are preordained and, as it were, spoken beforehand by providence—even though the holy doctors refrain from using the name 'fate' because of those people who refer this name to a power associated with the position of the constellations. Hence, in *De Civitate Dei* 5 Augustine says, "If someone attributes human affairs to fate by reason of the fact that the name 'fate' refers the very will or power of God, then let him hold on to his position but correct his language." And this is likewise the sense in which Gregory denies that there is such a thing fate.

**Reply to objection 1:** This makes it clear how to reply to the first objection.

**Reply to objection 2:** Nothing prevents certain things from occurring by fortune or chance in relation to their proximate causes, and yet not in relation to divine providence. This is the sense in which "nothing in the world occurs randomly (*temere*)," as Augustine puts it in *83 Quaestiones*.

## Article 2

### Does fate exist in created things?

It seems that fate does not exist in created things:

**Objection 1:** In *De Civitate Dei* 5 Augustine says, "It is the very will or power of God that is signified by the name 'fate'." But God's will and power exist not in creatures but in God. Therefore, fate exists in God and not in created things.

**Objection 2:** As the very mode of speech indicates, fate is related as a cause to the things that occur by fate. But as was explained above (a. 1), God alone is a universal *per se* cause of those things that occur *per accidens* here below. Therefore, fate exists in God and not in created things.

**Objection 3:** If fate exists in creatures, then it is either a substance or an accident. And whichever of these answers is given, fate would have to be multiplied in accord with the number of creatures. Therefore, since fate seems to be just a single thing, it seems that fate exists in God and not in creatures.

**But contrary to this:** In *De Consolatione Philosophiae* 4 Boethius says, "Fate is a disposition

inhering in changeable things.”

**I respond:** As is clear from what was said above (q. 103, a. 6), divine providence executes its effects through mediating causes. Therefore, there are two ways to think about the ordering of the effects.

First, insofar as this ordering exists in God Himself. So considered, the very ordering of the effects is itself called *providence*.

However, insofar as the ordering in question is thought about in the mediating causes that are ordered by God to produce certain effects, this ordering has the nature of *fate*.

This is how Boethius puts it in *De Consolatione Philosophiae* 4: “Fate is executed by powers (*spiritibus*) that serve divine providence—whether the soul, or the whole of obedient nature, or the celestial movements of the stars, or angelic power, or the shrewdness of the demons; the course of fate (*series fatalis*) is woven from some or all of these”—each of which have been explained individually in what has been said above (q. 104, a. 2 and q. 110, a. 1 and qq. 113-114).

So, then, it is clear that fate exists in created causes themselves to the extent that they are ordered by God to produce effects.

**Reply to objection 1:** The very ordering of secondary causes, which Augustine calls “the series of causes (*series causarum*),” has the nature of fate only insofar as it depends on God. And so God’s power or will can be called ‘fate’ as regards its cause (*causaliter*). However, as regards its essence (*essentialiter*), fate is the very arrangement or series, i.e., ordering, of secondary causes (*ipsa dispositio seu series, idest ordo, causarum secundarum*).

**Reply to objection 2:** Fate has the nature of a cause to the extent that the nature of a cause is had by the secondary causes whose ordering is called fate.

**Reply to objection 3:** Fate is called a disposition (*dispositio*) not in the sense of a disposition that is in the genus *quality*, but rather insofar as ‘disposition’ designates an ordering; and this is a relation and not a substance. To be sure, if this ordering is thought of in relation to its principle, then it is a single thing, and in this sense it is called ‘fate’ in the singular (*sic dicitur unum fatum*). However, if it is thought of in relation to its effects, or in relation to the mediating causes themselves, then it is multiplied; and it is in this sense that the poet says, “Your fates are drawing you forth (*te tua fata trahunt*).”

### Article 3

#### Is fate unchangeable?

It seems that fate is not unchangeable (*non immobile*):

**Objection 1:** In *De Consolatione Philosophiae* 4 Boethius says, “In the way that reasoning is related to the intellect as to that which gives rise to it, and in the way that time is related to eternity and a circle to its middle point, so is the changeable course of fate related to simple and stable providence.”

**Objection 2:** As the Philosopher says in *Topics* 2, “When we are changed, that which exists in us is changed.” But as Boethius says, fate is “a disposition that inheres in changeable things.” Therefore, fate is changeable.

**Objection 3:** If fate is unchangeable, then the things subject to fate happen unchangeably and by necessity. But the things that are attributed to fate seem especially to be contingent. Therefore, there will be nothing contingent among things, but instead everything will happen by necessity.

**But contrary to this:** Boethius says, “Fate is an unchangeable disposition.”

**I respond:** There are two ways to think about the arrangement of secondary causes that we call

fate: (a) with respect to the causes themselves that are arranged or ordered in the way in question, and (b) in relation to the first principle by whom they are ordered, viz., God.

Hence, some have claimed that the series or arrangement of causes is necessary in its own right (*secundum se*), with the result that everything would happen by necessity by reason of the fact that each effect has a cause and that once the cause is posited, the effect has to be posited.

But this is clearly false in light of what was said above (q. 115, a. 6).

Others have claimed to the contrary that fate is changeable even insofar as it depends on God's providence. Thus, as Gregory of Nyssa reports, the Egyptians claimed that fate could be changed by certain sacrifices.

But this was ruled out above (q. 23, a. 8) because it conflicts with the unchangeableness of God's providence.

And so one should reply that if we are considering the secondary causes, then fate is changeable, whereas to the extent that it is subject to God's providence, it has unchangeability—not, to be sure, an unchangeability of absolute necessity, but rather an unchangeability of conditional necessity, insofar as we claim that the conditional 'If God foreknew that this will occur, then it will occur' is true or necessary. Hence, after Boethius had claimed that the progression of fate is changeable, a few lines later he added, "To the extent that the progression proceeds from the sources of unchangeable providence, it must itself likewise be immutable."

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

#### Article 4

##### Are all things subject to fate?

It seems that all things are subject to fate:

**Objection 1:** In *De Consolatione Philosophiae* 4 Boethius says, "The progression of fate moves the heavens and the stars, moderates the elements in themselves with respect to one another and forms them by alternating transmutations. This same fate renews all things that are born and that perish by similar progressions of offspring and seeds. It constrains the acts and fortunes of men with an indissoluble chain of causes." Therefore, there seem to be no exceptions to what is contained under the progression of fate.

**Objection 2:** In *De Civitate Dei* 5 Augustine says, "There is such a thing as fate, insofar as it is referred back to God's will and power." But as Augustine says in *De Trinitate* 3, God's will is a cause of all things that come to be." Therefore, all things are subject to fate.

**Objection 3:** According to Boethius, fate is a disposition that inheres in changeable things. But as has been explained (q. 9, a. 2), all creatures are mutable and God alone is truly immutable. Therefore, fate exists in all creatures.

**But contrary to this:** In *De Consolatione Philosophiae* 4 Boethius says, "Some things that are situated under providence lie beyond the progression of fate."

**I respond:** As was explained above (a. 2), fate is the ordering of secondary causes toward divinely foreseen effects. Therefore, whatever is subject to secondary causes is likewise subject to fate. On the other hand, anything that is done directly by God—e.g., the creation of things, the glorification of spiritual substances, and other things of this sort—is not subject to fate, since it is not subject to secondary causes. And this is what Boethius says, viz., that "those things that are close to the primary

divinity are stably fixed and exceed the order of changeable fate.” From this it is likewise clear that “the further a thing is from the First Mind, the greater the ties by which it is implicated with fate,” since it is more subject to the necessity of the secondary causes.

**Reply to objection 1:** All the things mentioned in the objection are done by God through the mediation of secondary causes, and so they are contained under the progression of fate. But as has been explained, it is not the case that the same line of reasoning applies to all other things.

**Reply to objection 2:** Fate is traced back to God’s power and will as its first principle. Hence, as has been explained, it does not have to be the case that whatever is subject to God’s will or power is subject to fate.

**Reply to objection 3:** Even though all creatures are in some sense mutable, some of them do not proceed from mutable created causes and so, as has been explained, they are not subject to fate.

## QUESTION 117

### Things Relevant to Human Action

Next we have to consider those things that are relevant to the action of man, who is composed of a spiritual creature and a corporeal creature. We have to consider, first, man's action (question 117) and, second, the propagation of man from man (questions 118-119).

On the first topic there are four questions: (1) Can one man teach another by causing knowledge in him? (2) Can a man teach an angel? (3) Can a man affect corporeal matter by the power of his soul? (4) Can the separated soul of a man move bodies by local motion?

### Article 1

#### Can one man teach another?

It seems that one man cannot teach another:

**Objection 1:** Matthew 23:8 says, "Do not be called Rabbi," where Jerome's gloss says, "Lest God's honor be given to men." Therefore, being a teacher (*esse magister*) pertains properly to God's honor. But to teach (*docere*) is proper to a teacher. Therefore, a man cannot teach, but this is instead proper to God.

**Objection 2:** If one man teaches another, this is only insofar as he acts by his own knowledge (*per scientiam suam*) to be a cause of knowledge in the other man. But the quality by which someone acts to effect something similar to himself is an active quality. Therefore, it follows that knowledge is an active quality, like heat is.

**Objection 3:** What is required for knowledge are (a) the intelligible light (*lumen intelligibile*) and (b) the species of the thing that is understood (*species rei intellectae*). But one man cannot be a cause of either of these in another man. Therefore, it is impossible for one man to be a cause of knowledge in another man by teaching him.

**Objection 4:** A teacher (*doctor*) does not act on his student except by proposing certain signs to him, signifying something through either words or gestures. But no one can teach another by proposing signs to him and by thereby causing knowledge in him. For he will propose either signs of things that are known to the other man or signs of things that are not known to him. If he proposes signs of things that are known to him, then the one to whom the signs are proposed already has the knowledge and does not acquire it from the teacher (*a magistro*). On the other hand, if he proposes signs of things that are not known to him, then he will not learn anything through such signs—in the same way that if one man were to propose Greek words to another man who spoke Latin and did not know the meaning of the Greek words, then the first man would not be able to teach the second man anything in this manner. Therefore, there is no way in which one man can be a cause of knowledge in another man by teaching him.

**But contrary to this:** In 1 Timothy 2:7 the Apostle says, "In this I have been appointed preacher and apostle, a teacher of the Gentiles in the faith and in the truth."

**I respond:** On this matter there have been different opinions.

As was explained above (q. 76, a. 2), in his commentary on *De Anima* 3 Averroes claimed that there is a single passive intellect for all men. And from this it followed that all men have the same intelligible species. Accordingly, he claims that it is not the case that in teaching one man is a cause in another man of a knowledge distinct from the knowledge that he himself has; instead, he communicates to the other man the very same knowledge that he himself has by moving him to order the phantasms in his own soul in such a way that they are appropriately disposed to an intellectual apprehension.

This opinion is true to the extent that the same knowledge does indeed exist in the student and the teacher, if we are thinking of an identity with respect to the oneness of the thing known. For it is the same real truth (*rei veritas*) that both the student (*discipulus*) and the teacher (*magister*) know. However, as was shown above (q. 76, a. 2), Averroes's opinion is false to the extent that he claims that there is a single passive intellect for all men and that the intelligible species are the same, differing only in their relations to the diverse phantasms.

A second opinion is that of the Platonists, who, as has been explained (q. 84, aa. 3-4), claimed that knowledge exists in our souls from the beginning through participation in the separated forms, but that because of its union with the body the soul is prevented from being able to freely consider the things of which it has knowledge. On this opinion, the student does not acquire knowledge *de novo* from the teacher, but is instead stimulated by the teacher to consider the things that he has knowledge of, so that learning is nothing other than remembering—just as they likewise claimed that natural agents are merely disposing causes (*solummodo disponunt*) for the reception of the forms that corporeal matter acquires through participation in the separated species.

But against this opinion it was shown above (q. 79, a. 2 and q. 84, a. 3) that, in accord with what Aristotle says in *De Anima* 3, the human soul's passive intellect is in *pure* potentiality with respect to intelligible things.

So one must respond in a different way by claiming that the one who teaches causes knowledge in the learner (*in addiscente*) by leading him from potentiality to actuality, as *Physics* 8 puts it.

To see this clearly, notice that among the effects that come from an exterior principle, some come only from an exterior principle; for instance, the form of a house is caused in the matter only by the relevant craft (*ars*). On the other hand, there are some effects that come sometimes from an exterior principle and sometimes from an interior principle; for instance, health is caused in the sick sometimes by an exterior principle, viz., the art of medicine, and sometimes by an interior principle, as when someone is cured by the power of nature.

In effects of this latter sort, there are two things to be noted. First, in its own operation art imitates nature. For instance, just as nature cures by altering, digesting, and expelling the matter that causes a sickness, so too does the art of medicine. The second thing to be noted is that the exterior principle, viz., the art, does not operate as a principal agent, but instead operates insofar as it assists the principal agent, which is the interior principle, by strengthening it and providing it with instruments and aids that it uses in producing its effect. For instance, a physician strengthens nature and provides it with foods and medicines that nature uses for the sake of its intended end.

Now a man acquires knowledge both (a) from an interior principle, as is clear in the case of one who acquires his own knowledge through discovery, and also (b) from an exterior principle, as is clear in the case of one who learns by being taught (*qui addiscit*). For within every man there is a principle of knowledge, viz., the light of the active intellect, and through this principle there is—naturally and right from the beginning—a cognition of certain universal principles of all knowledge. And when someone applies general principles of this sort to the particulars that he has memory and experience of through the sensory power, it is by his own discovery that he acquires knowledge of things he was previously ignorant of, proceeding from what is known to what is unknown. Hence, it is likewise the case that a teacher (*docens*) leads his student (*discipulus*) from things that the student knows to a cognition of things that he did not previously know—this according to *Posterior Analytics* 1 (“Every instance of teaching and learning (*omnis doctrina et disciplina*) comes from a preexistent cognition”).

Now there are two ways in which a teacher leads a student to a cognition of what is unknown from what was previously known:

First, by proposing to him certain aids or instruments that his intellect uses to acquire knowledge—as, for instance, when he proposes to him certain less general propositions that the student

can judge on the basis of what he knew beforehand, or when he proposes to him certain sensible examples, either similar things or opposites or something of this sort, from which the learner's intellect can be led step by step to the cognition of an unknown truth.

Second, he does this when he strengthens the student's intellect. He does not, to be sure, do this by an active power of a higher nature—as was described above (q. 106, a. 1 and q. 111, a. 1) in the case of an angel who illuminates another angel—since all human intellects occupy the same grade in the order of nature. Rather, he does it insofar as he proposes to his student the ordering of principles to conclusions when the student might not have on his own enough reasoning ability to be able to deduce the conclusions from the principles. And this is why *Posterior Analytics* 1 says that “a demonstration is a syllogism that gives knowledge.” It is in this way that one who presents a demonstration makes his listener have knowledge.

**Reply to objection 1:** As has already been explained, a man who teaches, like a physician who heals, exercises only an exterior function. By contrast, just as the interior nature is the principal cause of healing, so too the interior light of the intellect is the principal cause of knowledge. Now both of these principal causes are from God. And so just as it is said of God that “He heals all your infirmities” (Psalm 102:3), so it is said of Him that “He teaches man knowledge” (Psalm 93:10) insofar as “the light of His countenance,” through which all things are shown to us, “is signed upon us” (Psalm 4:7).

**Reply to objection 2:** The teacher does not, as Averroes claims, cause knowledge in his student in the manner of a natural agent. Hence, his knowledge does not have to be an active quality. Instead, his knowledge is a principle by which he is directed in his teaching, in the way that an art is a principle by which someone is directed in his acting.

**Reply to objection 3:** A teacher does not cause the intelligible light in his student, nor does he directly cause the intelligible species. Rather, through his teaching (*per suam doctrinam*) the teacher moves his student to fashion, through the power of the latter's own intellect, the intelligible conceptions whose signs the teacher proposes to him exteriorly.

**Reply to objection 4:** The signs that a teacher proposes to his student are signs of things that (a) are known in general and with some vagueness (*sub quadam confusione*), but that (b) are not known in particular and with distinctness (*sub quadam distinctione*). And so when someone acquires knowledge on his own, he cannot be said to teach himself or to be his own teacher, since the sort of complete knowledge required in a teacher does not preexist in him.

## Article 2

### Can men teach angels?

It seems that men can teach angels:

**Objection 1:** In Ephesians 3:10 the Apostle says, “... that the manifold wisdom of God may be made known to the Principalities and Powers in heaven through the Church.” But the Church is a congregation of faithful men. Therefore, some things are made known to the angels by men.

**Objection 2:** As was explained above (q. 106, a. 1 and q. 112, a. 3), the higher angels, who are directly illuminated by God regarding divine matters, are able to instruct the lower angels. But some men have been directly instructed by the Word of God regarding divine matters; this is especially obvious in the case of the apostles—this according to Hebrews 1:2 (“Last of all, in these days He has spoken to us in his Son”). Therefore, some men were able to have taught some angels.

**Objection 3:** The lower angels are instructed by the higher angels. But some men are higher than

some angels, since as Gregory says in one his homilies, some men are assumed into the highest orders of angels (cf. q. 108, a. 8). Therefore, some lower angels can be instructed by some men regarding divine matters.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says that God's illuminations are conveyed to men by the mediation of the angels. Therefore, it is not the case that the angels are instructed by men regarding divine matters.

**I respond:** As was explained above (q. 107, a. 2), the lower angels are able to speak to the higher angels by making known their own thoughts to them, but the higher angels are never illuminated by the lower angels regarding divine matters.

Now it is obvious that the highest men are subordinated to even the lowest angels in the way that the lower angels are subordinated to the higher angels. This is clear from what our Lord says in Matthew 11:11: "There has not risen among them that are born of women a greater than John the Baptist; yet he that is the lesser in the kingdom of heaven is greater than he."

So, then, the angels are never illuminated by men regarding divine matters. However, men are able, in the mode of speaking, to make known to the angels the thoughts of their own hearts, since it belongs to God alone to know the secrets of the heart.

**Reply to objection 1:** Augustine explains this passage from the Apostle in *Super Genesim ad Litteram* 5. The Apostle had prefaced the passage with these words: "To me, the least of all the saints, is given this grace ... to enlighten all men, that they may see what is the dispensation of the mystery which has been hidden from eternity in God." Augustine says, "The manifold wisdom of God was 'hidden', and yet in such a way that it was made known to the Principalities and Powers in heaven, viz., through the Church. It is as if he were saying, 'This mystery was hidden from men, and yet in such a way that to the heavenly Church, which is contained in the Principalities and Powers, it was made known *from* the ages (*a saeculis*)—though not *before* the ages (*ante saecula*), since the Church first existed in heaven (*ibi primitus ecclesia fuit*), and the present Church of men was to be brought together after the resurrection."

But there can also be an alternative reply, viz., that, as Augustine adds in the same place, "What was hidden is not only made known to the angels in God, but also becomes apparent to them when it is brought about and made public." And so when the mysteries of Christ and the Church were being fulfilled by the apostles, certain aspects of these mysteries which had previously been hidden from the angels became clear to them. And in this way one can understand what Jerome says, viz., that when the apostles preached, the angels learned certain mysteries in the sense that through the preaching of the apostles the mysteries were fulfilled in the things themselves—for instance, when Paul preached, the Gentiles were converted. This is what the Apostle is talking about in the passage in question.

**Reply to objection 2:** The apostles were directly instructed by the Word of God not through His divine nature, but rather insofar as His human nature was speaking. Hence, the argument does not go through.

**Reply to objection 3:** Even in the state of the present life, some men are greater than some angels—not, to be sure, in actuality, but rather virtually (*non quidem actu, sed virtute*), viz., insofar as they have charity of a such great force (*caritatem tantae virtutis*) that they are able to merit a greater degree of beatitude than some angels have—just as we might say that the seed of some large tree is virtually greater than some small tree, even though it is much smaller than that tree in actuality.

### Article 3

#### Can a man affect corporeal matter through the power of his soul?

It seems that a man can affect corporeal matter through the power of his soul:

**Objection 1:** In *Dialogi* 2 Gregory says, “The saints work miracles sometimes by their prayers and sometimes by their power. For instance, Peter resuscitated the deceased Tabitha by praying, whereas it was by reproving the liars Ananias and Saphira that he delivered them to death.” But in the working of a miracle some change is effected in corporeal matter. Therefore, men can by the power of their soul affect corporeal matter.

**Objection 2:** The Gloss on Galatians 3:1 (“Who has bewitched you that you should not obey the truth?”) says, “Some have blazing eyes that bewitch others, especially children, by a single glance.” But this would not be the case unless the power of the soul were able to affect corporeal matter. Therefore, through the power of his soul a man can affect corporeal matter.

**Objection 3:** The human body is more noble than other lower bodies. But through the human soul’s apprehension the human body is affected with respect to hot and cold, as is clear in the case of those who become angry or afraid; and in some cases a change of this sort leads even to sickness and death. Therefore, *a fortiori*, man’s soul is able by its power to affect corporeal matter.

**But contrary to this:** In *De Trinitate* 3 Augustine says, “It belongs to God alone to have corporeal matter obey Him at will.”

**I respond:** As was explained above (q. 110, a. 2), corporeal matter is changed with respect to its form only by either (a) an agent composed of form and matter or (b) God Himself, in whom both matter and form virtually preexist as in the primordial cause of them both. Accordingly, it was explained above (*ibid.*) that the angels can affect corporeal matter with their natural power only by applying corporeal agents to the production of certain effects. Therefore, *a fortiori*, the soul by its natural power cannot affect corporeal matter except by the mediation of certain bodies.

**Reply to objection 1:** The saints are said to work miracles by the power of grace and not by the power of nature. This is clear from what Gregory says in the same place, “Those who are sons of God in power, as John puts it—what wonder is it if they perform signs by their power?”

**Reply to objection 2:** Avicenna assigns as a cause of bewitchment that corporeal matter is more apt to obey a spiritual substance than it is to obey contrary agents in nature. And so when a soul has a strong imagination (*quando anima fuerit fortis in sua imaginatione*), corporeal matter is affected by it. And this, he claims, is the cause of the bewitching glance (*causa oculi fascinantis*).

However, it was shown above (q. 110, a. 2) that corporeal matter does not obey a spiritual substance at will, except for the creator alone. And so it is better to reply that the bodily spirits of the conjoined body (*spiritus corporis coniuncti*) are affected by a strong imagination on the part of the soul. This effect in the bodily spirits occurs especially in the eyes, which the more subtle bodily spirits reach. Now the eyes infect the surrounding air to a set distance—in the same way that new and pure mirrors contract a certain impurity from the gaze of a menstruating woman, as Aristotle says in *De Somno et Vigilia*. So, then, when a soul is vehemently moved to malice, as happens especially in the case of little old women (*in vetulabus*), what is effected in the way described above is a gaze that is poisonous and noxious especially to children, who have a body that is tender and readily receptive to impressions. It is also possible that by God’s permission, or even because of some occult work, the wickedness of the demons with whom the soothsayers have a pact also cooperates in this.

**Reply to objection 3:** The soul is united to the human body as its form, and, as was explained above (q. 81, a. 3), the sentient appetite, which in some sense obeys reason, is the act of a corporeal

organ. And so for an apprehension of the human soul the sentient appetite has to be moved in conjunction with some corporeal operation (*oportet quod commoveatur appetitus sensitivus cum aliqua operatione coporali*). But, as has been explained, the human soul's apprehension is not sufficient for affecting exterior bodies except through the mediation of a change in its own body.

#### Article 4

##### Can a separated soul affect bodies at least with respect to place?

It seems that a separated soul can affect bodies at least with respect to place:

**Objection 1:** As was explained above (q. 110, a. 3), with respect to its local motion a body naturally obeys a spiritual substance. But a separated soul is a spiritual substance. Therefore, it can move exterior bodies at its command.

**Objection 2:** In *Itinerarium Clementis*, Niceta's narrative to Peter reports that through his magical arts Simon the magician held on to the soul of a child he had killed and worked magical acts through it. But this could not have been the case without changes, at least local motions, in certain bodies. Therefore, a separated soul has the power to move bodies with respect to place.

**But contrary to this:** In *De Anima* the Philosopher says that the soul can move only its own body and not all bodies.

**I respond:** A separated soul is not by its natural power able to move a body. For it is clear that when a soul is united to its body, it moves its body only insofar as that body is vivified. Hence, if some member of its body dies, that member does not obey the soul with respect to local motion. But it is obvious that there is no body vivified by a separated soul. Hence, with respect to local motion there is no body that obeys a separated soul, as regards the power of its own nature—over and beyond which something can be conferred on it by God's power.

**Reply to objection 1:** There are some spiritual substances, viz., the angels, who are naturally free of bodies and whose powers are not limited (*determinatur*) to particular bodies. And so diverse bodies can obey them with respect to motion.

However, if a separated substance's moving power were naturally limited to effecting motion in some particular body, then that substance would be able to effect motion in a smaller body but not a bigger body—just as, according to the Philosopher, the mover of a lower celestial body would not be able to effect motion in a higher celestial body.

Hence, since a soul by its nature is limited to effecting motion in a body of which it is the form, it cannot by its natural power effect motion in any other body.

**Reply to objection 2:** As Augustine says in *De Civitate Dei* 10 and as Chrysostom says in *Super Matthaicum*, the demons often pretend to be souls of the dead in order to confirm the error of the Gentiles, who believed this. And so it is plausible to think that Simon the magician was tricked by some demon who was pretending to be the soul of a child whom he had killed.

## QUESTION 118

### The Descent of Man from Man with respect to the Soul

Next we have to consider the descent (*traductio*) of man from man, first with respect to the soul (question 118) and then with respect to the body (question 119).

On the first topic there are three questions: (1) Is the sentient soul passed down (*traducatur*) with the semen? (2) Is the intellective soul passed down with the semen? (3) Were all souls created together?

#### Article 1

##### Is the sentient soul passed down with the semen, or does it exist through being created by God?

It seems that the sentient soul is not passed down with the semen, but instead exists through being created by God:

**Objection 1:** Every perfect substance (*substantia perfecta*) that is not composed of matter and form is such that if it begins to exist, this is through creation and not through generation; for something is generated only from matter. But the sentient soul is a perfect substance; otherwise, it would not be able to effect motion in the body. And since it is the form of a body, it is not itself composed of matter and form. Therefore, it begins to exist through creation and not through generation.

**Objection 2:** The principle of generation in living things is the generative power, which, since it is numbered among the powers of the vegetative soul, is lower than (*infra*) the sentient soul. But nothing acts beyond (*ultra*) its own species. Therefore, the sentient soul cannot be caused by the generative power of an animal.

**Objection 3:** That which generates generates something similar to itself, and so the form of what is generated must be actual within that which causes the generation. But the sentient soul is not actual within the semen; nor is any part of the sentient soul actual in the semen, since no part of it exists except in some part of the body, whereas in the semen there is not even a small part (*particula*) of the body, since there is no small part of the body that does not come from the semen and the semen's power. Therefore, the sentient soul is not caused by the semen.

**Objection 4:** If in the semen there is some active principle with respect to the sentient soul, then that principle either remains or does not remain once the animal has been generated. But it is impossible for it to remain. For either (a) it is the same as the sentient soul of the generated animal—but this is impossible, since in that case what generates would be the same as what is generated, and what does the making would be the same as what is made—or else (b) it is something else—and this is likewise impossible, since it was shown above (q. 76, a. 4) that in a single animal there is just a single formal principle, which is the one soul. On the other hand, if it does not remain, this likewise seems impossible, since in that case some agent would be actively contributing to the corruption of its very self (*ageret ad corruptionem sui ipsius*)—which is impossible. Therefore, the sentient soul cannot be generated from the semen.

**But contrary to this:** The power that exists in the semen is related to the animal generated from the semen in the same way that the power that exists in the world's elements is related to those animals that are produced from the world's elements, e.g., the animals produced from putrefaction. But in animals of this sort the souls are produced from the power that exists in the elements—this according to Genesis 1:20 (“Let the waters bring forth the creeping creatures having life”). Therefore, it is likewise the case that the souls of the animals that are generated from semen are produced by the power that exists in the semen.

**I respond:** Some have claimed that the sentient souls of animals are created by God. This position

would be acceptable if the sentient soul were a subsistent entity that has its *esse* and operation in its own right (*per se*). For in that case, just as it would have its *esse* and operation in its own right, so too its *being made* (*fieri*) would belong to it in its own right (*ita per se deberetur ei fieri*). And since a simple and subsistent entity can be made only through creation, it would follow that the sentient soul comes into being through creation.

But the root of this position is false, viz., the claim that the sentient soul has its *esse* and operation in its own right. For as is clear from what was said above (q. 75, a. 3), if that were so, then the sentient soul would not be corrupted when the body is corrupted. And so, since the sentient soul is not a subsistent form, it exists (*habet se in essendo*) in the same way that other corporeal forms do. *Esse* does not belong properly to these forms in their own right (*quibus per se non debetur esse*), but instead they are said to exist insofar as subsistent composites exist through them (*per ea*). Hence, *being made* likewise belongs properly to the composites themselves. And since what generates is similar to what is generated, it must be the case that the sentient soul and other forms of this sort are naturally brought into being by corporeal agents that transform matter from potentiality to actuality (*transmutantibus materiam de potentia in actum*) through a corporeal power that exists within them.

Now the more powerful an agent is, the greater the distance to which it is able to diffuse its action; for instance, the hotter a body is, the more remote are the places at which it produces warmth. Therefore, non-living bodies, which are lower in the order of nature, generate what is similar to themselves through their very selves and not through any mediating thing; for instance, fire generates fire through itself. By contrast, living bodies, since they are more powerful, act to generate what is similar to themselves both through something that mediates and also in the absence of anything that mediates: (a) in the absence of anything mediating, as in the work of nutrition, in which flesh generates flesh, and (b) along with something that mediates, as in the act of generation, given that an active power flows from the soul of the generating thing into the animal or plant seed (*semen*), in the way that a power that effects motion flows from a principal agent into its instrument. And just as it makes no difference whether one says that a thing is moved by the instrument or that it is moved by the principal agent, so too it makes no difference whether one says that the soul of what is generated is caused by the soul of what generates or that the soul of what is generated is caused by a power which is derived from the generating thing and which exists in the semen.

**Reply to objection 1:** The sentient soul is not itself a perfect substance that subsists in its own right (*per se subsistens*). This was explained above (q. 75, a. 3), and it is not necessary to repeat the explanation here.

**Reply to objection 2:** The generative power does the generating not only with its own proper power (*non solum in virtute propria*), but also with the power of the whole soul of which it is a power (*in virtute totius animae, cuius est potentia*). And this is why a plant's generative power generates a plant, whereas an animal's generative power generates an animal. For the more perfect a soul is, the more perfect is the effect toward which its generative power is ordered.

**Reply to objection 3:** The active power which exists in the semen and which is derived from the generating animal is, as it were, a certain motion of the generating animal itself. And this power is neither the soul nor a part of the soul, except virtually—just as what exists in the saw or the axe is not the form of the bed, but instead a certain motion that tends toward a form of that sort. And so the active power in question need not have any actual organ (*aliquod organum in actu*); instead, it is grounded in the very animal spirits (*in spiritu ipso*) included in the semen, which is frothy, as is clear from its whiteness.

These spirits also contain a certain heat that is derived from the power of the celestial bodies, by whose power the lower agents act with respect to their species—as was explained above (q. 115, a. 3). And it is because it is in spirits of this sort that the soul's power comes together with a celestial power

that one says that “a man and the sun generate a man.” And as is explained in *De Anima 2*, this elemental heat is related as an instrument to the soul’s [generative] power as well as to its nutritive power.

**Reply to objection 4:** In perfect animals, which are generated by sexual intercourse (*ex coitu*), the active power exists in the male’s semen—this according to the Philosopher in *De Generatione Animalium*—whereas the fetus’s matter is what is provided by the female. Within this matter there is a vegetative soul from the very beginning—i.e., a vegetative soul not in second act but in first act, in the way that the sentient soul exists in animals that are sleeping. And as soon as it begins to attract food, it is already actually operating. Thus, matter of this sort is transmuted by the power that exists in the male’s semen until it is brought to the actuality of a sentient soul—though not in such a way that the very power that previously existed in the semen becomes the sentient soul, since if that were so, then what generates would be the same entity as is generated, and, as the Philosopher points out, this would be more like nutrition and growth than like generation. Afterwards, when, through the power of the active principle that had existed in the semen, the sentient soul is produced in the generated animal with respect to one of its principal parts, then the child’s sentient soul is already beginning to act to complete the child’s own body through nutrition and growth. But the active power that had existed in the semen ceases to exist once the semen is dissolved and the animal spirits that were in it vanish. This is not problematic, since that power was an instrumental agent and not a principal agent, and an instrument’s action ceases once its effect has been brought into existence.

## Article 2

### Is the intellectual soul caused by the semen?

It seems that the intellectual soul is caused by the semen:

**Objection 1:** Genesis 46:26 says, “... all the souls that came out from Jacob’s loins (*de femore Jacob*), sixty-six.” But nothing comes out from a man’s loins except insofar as it is caused by the semen. Therefore, the intellectual soul is caused by the semen.

**Objection 2:** As was shown above (q. 76, a. 3), in man the intellectual soul, the sentient soul, and the nutritive soul are one and the same soul in substance. But the sentient soul in man is generated from the semen, as it is in the other animals; thus, in *De Generatione Animalium* the Philosopher says that the animal and the man are not made at the same time, but that instead the animal having a sentient soul comes first. Therefore, the intellectual soul is likewise caused by the semen.

**Objection 3:** It is one and the same agent whose action is terminated in the form and in the matter; otherwise, the form and the matter would not be a unified entity absolutely speaking. But the intellectual soul is the form of the human body, and the human body is formed through the power of the semen. Therefore, the intellectual soul is likewise caused through the power of the semen.

**Objection 4:** A man generates something similar to himself in species. But the human species is constituted by the rational soul. Therefore, the rational soul is from the one who generates.

**Objection 5:** It is ridiculous to claim that God cooperates with those who are sinning. But if rational souls were created by God, then God would sometimes be cooperating with adulterers, from whose illicit sexual union (*de quorum illicito coitu*) a child is sometimes generated. Therefore, it is not the case that rational souls are created by God.

**But contrary to this:** In *De Ecclesiasticis Dogmatibus* it says, “Rational souls are not produced through sexual intercourse (*non seminantur per coitum*).”

**I respond:** It is impossible for an active power that exists in matter to extend its action to the

production of an immaterial effect. But it is clear that the intellectual principle in man is a principle that transcends matter, since it has an operation that the body does not share in. And so it is impossible for the active power that exists in the semen to produce an intellectual principle.

Likewise, it is also the case that the power existing in the semen acts in the power of the soul of the one who generates insofar as the soul of the one who generates is the actuality of a body, using the body itself in its operation. But the body does not share in the act of the intellect. Hence, the power of the intellectual principle, insofar as it is intellectual, cannot reach to the semen. This is why in *De Generatione Animalium* the Philosopher says, “It follows that the intellect alone comes from the outside.”

Again, as was established above (q. 75, a. 2), since the intellectual soul has an operation without the body, it is subsistent, and so *esse* and *being-made* belong properly to it (*sibi debetur esse et fieri*). And since it is an immaterial substance, it cannot be caused through generation, but can instead be caused only through being created by God.

Therefore, to claim that the intellectual soul is caused by the one who generates is nothing other than to claim that it is not subsistent and that, as a result, it is corrupted along with the body. This is why it is heretical to say that the intellectual soul is passed down with the semen.

**Reply to objection 1:** In this passage, through synecdoche, a part is being posited for the whole, i.e., the soul for the whole man.

**Reply to objection 2:** Some have claimed that the vital operations that are apparent in the embryo do not come from its own soul, but instead come either from the mother’s soul or from the formative power that exists in the semen.

Both of these alternatives are false, because works of life such as sensing, being nourished, and growing cannot come from an extrinsic principle.

Therefore, one should claim that the nutritive soul exists in the embryo from the beginning, and later the sentient soul, and, last of all, the intellectual soul.

Thus, some claim that a second soul, viz., the sentient soul, is added to (*supervenit supra*) the vegetative soul which first existed in the embryo, and that, once again, a third soul, viz., the intellectual soul, is added to the sentient soul. And so in a man there are three souls, one of which is in potentiality to another.

But this was disproved above (q. 76, a. 3).

And so others have replied that the very same soul which at first was merely vegetative is afterwards, through the action of the power that exists in the semen, brought to the point of becoming sentient, and, finally, is brought to the point that the very same soul becomes intellectual—not, to be sure, through the semen’s active power, but through the power of a higher agent, viz., God, who illuminates it from without (*Dei de foris illustrantis*). And this is why that Philosopher claims that the intellect comes from outside.

But this position cannot stand.

First of all, no substantial form admits of more and less; instead, the addition of greater perfection makes for a different species, in the way that the addition of a unit (*additio unitatis*) makes for a different species among numbers. But it is impossible for numerically one and the same form to belong to diverse species.

Second, it would follow that the generation of an animal is a continuous movement, proceeding little by little from the imperfect to the perfect, as happens in the case of an alteration.

Third, it would follow that the generation of an animal or a man is not a generation absolutely speaking, since its subject would be an actual entity. For if a vegetative soul exists in the offspring’s matter at the beginning and then is brought little by little to the status of a perfect entity, there will always be a subsequent addition of perfection without any corruption of the preceding perfection. But

this is contrary to the notion of generation in the absolute sense.

Fourth, either (a) what is caused by God's action is something subsistent, and in that case it would have to be something different in essence from the preceding form, which was not subsistent, and so we are back to the opinion of those who posit more than one soul in the body; or else (b) what is caused by God's action is not something subsistent, but instead a certain perfecting of the preexistent soul, and in that case it necessarily follows that the intellective soul is corrupted when the body is corrupted—which is impossible.

There is yet another way of replying, in accord with those who posit a single intellect in everyone. But this was disproved above (q. 76, a. 2).

And so one should reply that since the generation of one thing is always the corruption of another, it must be claimed that, both in man and in the other animals, when a more perfect form arrives, there is a corruption of the prior form, yet in such a way that the subsequent form has whatever the first form had, and still more. And so it is through many generations and corruptions that one arrives at the ultimate substantial form, both in man and in the other animals. This is evident to the senses in the case of animals that are generated from putrefaction.

So, then, one should claim that the intellective soul, which is simultaneously sentient and nutritive, is created by God at the end of human generation, and that the preexistent forms are corrupted.

**Reply to objection 3:** This argument is relevant in the case of diverse agents that are not ordered to one another. But if there are many agents that are ordered to one another, then nothing prevents the power of the higher agent from attaining to the ultimate form while the powers of the lower agents attain only to some disposition on the part of the matter. For instance, in the generation of an animal the semen's power disposes the matter, whereas the soul's power gives the form.

Now it is clear from what was said above (q. 105, a. 3 and q. 110, a. 1) that a complete corporeal nature acts as the instrument of a spiritual power, especially God's power. And so nothing prevents it from being the case that the formation of the body is from a corporeal power, whereas the intellective soul is from God alone.

**Reply to objection 4:** A man generates what is similar to himself insofar as through the power of his semen the matter is disposed for the reception of the relevant form.

**Reply to objection 5:** What belongs to nature in the action of the adulterers is good, and God cooperates with this. But what belongs to the disordered desire is evil, and God does not cooperate with that.

### Article 3

#### Were all human souls created together at the beginning of the world?

It seems that all human souls were created together at the beginning of the world:

**Objection 1:** Genesis 2:2 says, "God rested from all the work that He had done." But this would not have been the case if He were to create new souls every day. Therefore, all the souls were created together.

**Objection 2:** Spiritual substances are especially relevant to the perfection of the universe. Therefore, if the souls were created with their bodies, then every day innumerable spiritual substances would be added to the perfection of the universe, and so the universe would have been incomplete (*imperfectum*) at the beginning. But this is contrary to what Genesis 2:2 says, viz., that God had completed all His work.

**Objection 3:** An entity's end corresponds to its beginning. But the intellectual soul remains after the body has been corrupted. Therefore, it began to exist before the body.

**But contrary to this:** In *De Ecclesiasticis Dogmatibus* it says, "The soul is created with the body."

**I respond:** Some have asserted that the intellectual soul is accidentally united to the body (*accidat uniri corpori*), asserting that it has the same status as spiritual substances that are not united to matter. And so they have claimed that the souls of men were created at the beginning along with the angels.

But this opinion is false.

First of all, it is false at its root. For if being united to its body were accidental to a soul, then it would follow either that (a) the man who is constituted by this union is a being *per accidens* or that (b) the soul is the man—which, as was shown above (q. 75, a. 4), is false. Moreover, as was shown above (q. 55, a. 2 and q. 85, a. 1), the fact that the soul is not of the same nature as the angels is proved by its diverse mode of understanding. For as was explained above (q. 84, aa. 6-7), a man has intellectual understanding by receiving from the senses and turning himself toward phantasms. And so the human soul needs to be united to a body, which it needs for the operation of its sentient part—something that cannot be said of an angel.

Second, there is an evident falsity in the position itself.

For if it is natural for the soul to be united to its body, then existing without a body is contrary to its nature, and the soul does not have the perfection of its own nature when it exists without a body. But it would not have been appropriate for God to begin His work with imperfect things and with things that lie beyond nature. For He did not make man without hands or feet, which are natural parts of a man. *A fortiori*, then, He did not make the soul without the body.

On the other hand, if someone asserts that it is not natural for souls to be united to a body, then one must ask for the reason why souls are in fact united to bodies. And it is necessary to reply either that (a) this occurs by the soul's will or that (b) it occurs for some other reason.

If it occurs by the soul's will, then this seems ridiculous:

First, the volition in question would be unreasonable if the soul did not need the body and yet willed to be united to it. For if the soul did need the body, then it would be natural for it to be united to the body, since nature does not lack in what is necessary.

Second, there would be no explanation for why a soul that had been created at the beginning of the world would after so long a time will to be united to a body now. For a spiritual substance is beyond time, since it lies outside the revolutions of the heavens.

Third, it would, it seems, be by chance that *this* soul should be united to *this* body. For this union would require the concurrence of two wills, viz., the will of the soul coming to the body and the will of the man who is doing the generating.

On the other hand, if a soul is united to its body in a way that lies beyond both its will and its nature, then the union must result from a cause that does violence to the soul, and so the union will be a source of pain and sadness for the soul (*erit ei poenale et triste*). This opinion follows the error of Origen, who claimed that souls are embodied as a punishment for sin.

Hence, since all these claims are ridiculous, one should reply simply that the souls were not created before the bodies were, but were instead created simultaneously with being infused into their bodies.

**Reply to objection 1:** God is said to have stopped on the seventh day, but not from all work; for John 5:17 says, "My Father is working even until now." Rather, He is said to have stopped making new genera and species of things that did not in some sense preexist in His first works. For the souls that are now created preexisted by way of a likeness of species in the first works, which contained the creation of

Adam's soul.

**Reply to objection 2:** As regards the perfection of the universe, something can be added every day to the number of individuals, but not to the number of species.

**Reply to objection 3:** The fact that the soul remains without the body is due to the corruption of the body, which is a consequence of sin. Hence, it was not appropriate for God's works to begin with this. For as is written in Wisdom 1:13 and 1:16, "God did not make death ... but the wicked have called it upon themselves with works and words."

## QUESTION 119

### The Propagation of Man with respect to the Body

Next we have to consider the propagation of man with respect to the body. And on this topic there are two questions: (1) Is anything in the food converted into the very reality of human nature (*convertatur in veritatem humanae naturae*)? (2) Does semen, which is the principle of human generation, come from what is left over in the food (*sit de superfluo alimenti*)?

#### Article 1

##### Does anything of the food change into the very reality of human nature?

It seems that nothing of the food changes into the very reality of human nature (*transeat in veritatem humanae naturae*):

**Objection 1:** Matthew 15:17 says, “What enters the mouth goes to the belly and is expelled into the latrine.” But what is expelled does not change into the very reality of human nature. Therefore, nothing of the food changes into the very reality of human nature.

**Objection 2:** In *De Generatione and Corruptione* 1 the Philosopher distinguishes flesh according to its species (*caro secundum speciem*) from flesh according to its matter (*caro secundum materiam*), and he says that flesh according to its matter comes and goes. But what is generated from food comes and goes. Therefore, what food is converted into is flesh according to its matter and not flesh according to its species. But what pertains to the very reality of human nature is what pertains to its species. Therefore, food does not change into the very reality of human nature.

**Objection 3:** What pertains to the very reality of human nature seems to be “root moisture (*humidum radicale*),” which, as the physicians (*medici*) claim, is such that once it is lost, it cannot be restored. But this sort of moisture would itself be able to be restored if food were converted into it. Therefore, nutrients (*nutrimentum*) are not converted into the very reality of human nature.

**Objection 4:** If food changed into the very reality of human nature, then whatever is lost in a man could be restored. But man’s death occurs only through the loss of something. Therefore, a man could be guarded against death forever by the consumption of food.

**Objection 5:** If food changed into the very reality of human nature, then there would be nothing in a man that is not able to pass away and be replaced (*recedere et reparari*), since what is generated in a man from food is able both to pass away and to be replaced. Therefore, if a man lived for a long time, it would follow that nothing that was in him materially at the beginning of his generation remains in him at the end. And so he would not be numerically the same man throughout his whole life, since identity of matter is required in order for something to be numerically the same. But this seems absurd. Therefore, food does not change into the very reality of human nature.

**But contrary to this:** In *De Vera Religione* Augustine says, “When the flesh’s nourishment is corrupted, i.e., when it loses its own form, it changes into the stuff of the members of the body.” But “the stuff of the members of the body” has to do with the very reality of human nature. Therefore, food changes into the very reality of human nature.

**I respond:** According to the Philosopher in *Metaphysics* 2, each thing is related to true reality (*ad veritatem*) in the same way that it is related to *esse*. Therefore, what pertains to the very reality of any given nature is what enters into the constitution of the nature itself.

However, there are two possible ways to think about a nature: (a) *in general (in communi)*, in accord with the notion of its species, and (b) *insofar as it exists in this individual (in hoc individuo)*. Therefore, it is a nature’s form and matter taken in general that are relevant to the very reality of the

nature thought of in general, whereas it is the individual designated matter (*materia individualis signata*) and the form individuated by this sort of matter that are relevant to the very reality of the nature insofar as it is thought of as existing in *this* particular thing. For instance, what belongs to the very reality of human nature in general are a human soul and a human body, whereas what belongs to the very reality of human nature in Peter or Martin are *this* soul and *this* body.

Now there are some things whose forms cannot be preserved except in a singular designated matter (*nisi in una materia signata*); for instance, the sun's form cannot be preserved except in the matter that is actually contained under it. In this same way, some have claimed that the human form can be preserved only in a certain designated matter, viz., that matter which was informed from the beginning by such a form in the first man. The result is that whatever else has been added beyond that which flowed from the first parent to his descendants has nothing to do with the very reality of human nature and does not truly, as it were, receive the form of human nature. But the matter that was subject to the human form in the first man is increased within itself (*multiplicata in seipsa*), and it is in this way that a multitude of human bodies is derived from the body of the first man. According to these thinkers, food is not converted into the very reality of human nature. They claim instead that food is received as a sort of kindling wood (*fomentum*) for the nature in order that the nature might resist the action of natural heat, so that its radical moisture is not consumed—in the way that lead or an alloy is added to silver in order that the silver might not be consumed by fire.

However, this position is unreasonable in several ways.

First, a form's being able to come to exist in a different matter (*feri in alia materia*) is equivalent to (*est eiusdem rationis*) its being able to withdraw from its own matter (*deserere propriam materiam*); and this is why all generable entities are corruptible, and vice versa. But it is clear that the human form is able to withdraw from that matter which is subject to it (*deficere ab hac materia quae ei subiicitur*); otherwise, the human body would not be corruptible. Hence, it follows that the human form is likewise able to come to a different matter (*advenire alii materiae*), so that something else changes into the very reality of human nature.

Second, in all those things whose matter is found as a whole in a single individual, there is just a single individual in the relevant species; this is clear in the case of the sun and the moon and other things of this sort. So, then, there would be only a single individual in the human species.

Third, an increase of matter (*multiplicatio materiae*) is impossible except either (a) merely with respect to quantity, as happens in the case of things that are rarified and whose matter takes on bigger dimensions, or (b) with respect to the substance of matter as well. Now as long as the very same substance of matter remains, one cannot claim that the matter is increased; for the same thing does not constitute a multitude with respect to itself, since all multiplicity must be caused by some sort of division. Hence, some other substance of matter must come into play, either through creation or through the conversion of something else into the substance of matter. Hence, it follows that matter cannot be increased except either (a) through *rarefaction*, as when air comes to be from water, or (b) through the *conversion* of some other thing into the matter, as when a fire is increased through the addition of pieces of wood, or (c) through the *creation* of matter. But it is clear that the increase of matter in human bodies does not occur through rarefaction, since if that were so, then the bodies of men who have reached a full age would be more imperfect than the bodies of children. Nor, again, does it occur through the creation of new matter, since, according to Gregory, all things were created together with respect to the substance of matter, even if not with respect to the species of form. Hence, what follows is that the increase of the human body occurs only through food being converted into the very reality of the human body.

Fourth, since man does not differ from animals and plants as far as the vegetative soul is concerned, it would follow that the bodies of animals and plants likewise increase not through the conversion of food into the nourished body, but through some sort of increase that cannot be natural, since matter by its

nature extends only to some set quantity. Nor, again, does anything increase naturally except through rarefaction or through the conversion of something else into it. And so all the work of the generative and nutritive powers, which are called natural powers, would be miraculous. But this is altogether ridiculous.

Hence, others have claimed that the human form can come to exist *de novo* in some other matter, as long as human nature is considered in general, but not if it is considered insofar as it exists in *this* individual, in which the human form remains fixed in a certain determinate matter on which it was first impressed in the generation of *this* individual—with the result that the form never leaves that particular matter until the ultimate corruption of the individual. And they claim that it is this matter that pertains *principally* to the very reality of human nature. However, since matter of this sort is not enough for the right quantity, it is required that a distinct matter come into play through the conversion of food into the substance of the thing that is nourished, as much as is required for the right amount of increase. This matter, they claim, pertains *in a secondary sense* to the very reality of human nature, since it is required for the individual's quantity but not for his primary *esse*. And if anything else comes from the food, it does not pertain to the very reality of human nature, properly speaking.

However, this is likewise absurd.

First, this opinion thinks of the matter of living bodies along the same lines as the matter of non-living bodies, which are such that even if they have the power to generate something similar to themselves in species, they nonetheless do not have the power to generate something similar to themselves within the individual (*secundum individuum*)—which is the sort of power that the nutritive power is within living things. Therefore, nothing would be added to living bodies through the nutritive power if food were not converted into the very reality of their nature.

Second, as was explained above (q. 118, a. 1), the active power that exists in the semen is a certain impression derived from the soul of that which generates. Hence, semen cannot have a greater power to act than does the very soul from which it is derived. Therefore, if by the power of the semen some matter truly assumes the form of human nature, then *a fortiori* the soul would be able through its nutritive power to impress the very form of human nature on a conjoined nutriment.

Third, nutrition is needed not only for growth (since otherwise it would not be necessary once growth ends), but also for the restoration of what is lost through the action of natural heat. But there would be no such restoration if that which is generated from food did not take the place of what has been lost. Therefore, just as that which first existed belongs to the very reality of human nature, so too does that which is generated from food.

And so, according to others, one should reply that food is truly converted into the very reality of human nature insofar as it truly receives the species of flesh and of bone and of the other parts of the body. And this is why the Philosopher says in *De Anima 2* that food nourishes insofar as it is flesh in potentiality.

**Reply to objection 1:** Our Lord does not say that *the entirety of (totum)* what enters the mouth is expelled into the latrine, but rather *each thing (omne)* that enters the mouth. For in every sort of food there is something impure that is expelled into the latrine.

An alternative reply is that, as Jerome explains, if anything is generated from food, it can likewise be dissolved by natural heat and emitted through certain hidden pores.

**Reply to objection 2:** By 'flesh according to its species' some have understood that which first receives the human species that is taken from the one who generates it, and this, they claim, always remains for as long as the individual endures. On the other hand, they claim that it is 'flesh according to its matter' which is generated from food, and this, they claim, does not remain forever but instead goes just as it comes.

However, this reply is contrary to what Aristotle means. For in the place in question he says that just as in everything that has a species in matter, e.g., wood or stone, so too in flesh there is something

according to its species and something according to its matter. But it is clear that the distinction mentioned above [in the previous paragraph] has no application in the case of inanimate things, which are neither generated from seed nor nourished. And, again, since that which is generated from food is adjoined to the nourished body in the manner of a mixture, in the way that water is mixed with wine—the example that the Philosopher uses in the same place—the nature of that which comes cannot be different from the nature of that to which it comes, since it has already been made one with it through a genuine mixture. Hence there is no reason why the one should be consumed by natural heat and the other should remain.

And so one should reply that this distinction of the Philosopher's has nothing to do with diverse kinds of flesh. Rather, it is a distinction within the same flesh according to the different ways of considering it. For if flesh is considered according to its species, i.e., with respect to what is formal in it, then it always remains the same, since the nature of flesh always remains, along with its natural disposition. On the other hand, if the flesh is considered according to its matter, then it does not as such remain, but is gradually consumed and restored—as is clear in the case of a fire in a furnace, the form of which always remains, even though its matter is gradually consumed and another matter is substituted in its place.

**Reply to objection 3:** *Root moisture* is thought of as having to do with the entirety of what the power of the species is grounded in. If it is taken away, then it cannot be restored, just as if a hand or a foot or something of that sort were amputated.

On the other hand, *nutrimental moisture* is that which has not yet reached the point of receiving the nature of the species perfectly, but is on its way toward this, in the way that blood and other things of that sort are. Hence, if such things are taken away, the power of the species still remains in its root, which is not destroyed.

**Reply to objection 4:** Every power in a passible body is weakened by continual action, since agents of this sort are also acted upon. And thus the power of conversion is at the beginning so strong that it can convert not only what is sufficient to restore what has been lost, but also what is sufficient for growth. But afterwards it is able to convert only what is sufficient for replacing what is lost, and at that point growth ceases. In the end, it cannot do either of these, and then diminution occurs. Then, when a power of this sort is totally lacking, the animal dies. Similarly, to use the Philosopher's example in *De Generatione et Corruptione* 1, the power of wine to convert water mixed with it is weakened little by little by the wine's being mixed with more water, until in the end the whole becomes watery.

**Reply to objection 5:** As the Philosopher says in *De Generatione et Corruptione* 1, when a given matter is converted by itself (*per se*) into a fire, then the fire is said to be generated *de novo*, but when a given matter is converted into a preexistent fire, then the fire is said to be 'nourished'. Hence, if the whole matter loses the species of fire all at once, and another matter is converted into fire, then the latter will be a numerically distinct fire.

On the other hand, if, while one piece of wood is being gradually consumed by a fire, another piece is added, and so on until the all of the first piece of wood is consumed, then numerically the same fire will always remain, since it is always the case that what is being added changes into the preexistent fire. Something similar should be understood to occur in the case of living things, in which what is restored by nourishment is what has been consumed by natural heat.

## Article 2

### Does the semen come from what is left over in the food?

It seems that the semen comes not from what is left over in the food, but rather from the substance of the one who generates:

**Objection 1:** Damascene says, “Generation is a work of nature which produces what is generated from the substance of the one who generates.” But what is generated is generated from the semen. Therefore, the semen comes from the substance of the one who generates.

**Objection 2:** A son is similar to his father because he receives something from him. But if the semen from which something is generated came from what is left over in the food, then a man would receive nothing from his grandfather or his more distant ancestors, in whom this food did not in any way exist. Therefore, a man would not be more similar to his grandfather or to his more distant ancestors than he is to other men.

**Objection 3:** The food of a man who generates sometimes comes from the flesh of cows or pigs or other animals of this sort. Therefore, if the semen came from what is left over in the food, a man generated from that semen would have more affinity to a cow or a pig than to his father or other blood relatives.

**Objection 4:** In *Super Genesim ad Litteram* 10, Augustine says, “We existed in Adam not only with respect to the seminal idea (*secundum seminalem rationem*), but also with respect to the corpulent substance.” But this would not be the case if the semen came from what is left over in the food. Therefore, the semen does not come from what is left over in the food.

**But contrary to this:** In *De Generatione Animalium* the Philosopher proves in many ways that the semen is what is left over in the food.

**I respond:** This question depends in some sense on what has gone before (a. 1 and q. 118, a. 1). For if there exists in a human nature a power to communicate its own form to another matter not only within some distinct being but also within itself, then it is clear that food, which is in the beginning dissimilar to human nature, becomes in the end similar to it through the communicated form. But the order of nature is such that a thing is brought gradually from potentiality to actuality, and so in those things that are generated we find that each is at first imperfect and afterwards is brought to perfection.

Now it is clear that what is general is related to what is proper and determinate as the imperfect is related to the perfect. And so we see that in the generation of an animal, the animal is generated before the man or the horse (cf. q. 118, a. 2). So, then, food itself likewise receives at first a certain general power with respect to all the parts of the body, and afterwards is channelled (*determinatur*) to this part or that part.

Now it is impossible that what has already been converted into the substance of members of the body should then be used for the semen through some sort of decomposition (*per quandam resolutionem*). For if what is decomposed did not retain the nature from which it was decomposing, then it would already be withdrawing from the nature of the generating thing and would be on a path to corruption, so to speak; and so it would not have the power to convert a distinct thing into a similar nature. On the other hand, if it retained the nature from which it was decomposing, then, since it would have been channelled (*esset contractum*) to a determinate part [of the body], it would have the power to effect movement only toward the nature of that part and not toward the nature of the whole. Perhaps someone might claim, though, that it would be decomposed from *all* the parts of the body and that it would retain the nature of every part. In that case the semen would be like a sort of small animal in actuality (*quasi quoddam parvum animal in actu*), and the generation of an animal from an animal would

occur only through division—in the way that mud is generated from mud, and as happens in the case of animals that live after having been divided. But this is absurd.

Therefore, it follows that the semen is not separated off from anything that was an actual whole; instead, as was explained above (a. 1 and q. 108, a. 1), it is a whole in potentiality, having the power to produce the whole of the body that is derived from the soul of the one who generates. But what is in potentiality to the whole is what is generated from food before it is converted into the substance of the members of the body. And so this is what the semen is taken from. And the nutritive power is said to serve the generative power because what is converted through the nutritive power is received as semen by the generative power. The Philosopher posits, as an indication of this, the fact that animals with large bodies, which need a lot of nourishment, have little semen in proportion to the quantity of their bodies and few instances of generation—and, similarly, fat men have little semen, and for the same reason.

**Reply to objection 1:** In plants and animals generation comes from the substance of that which generates, because the semen has its power from the form of that which generates and because it is in potentiality with respect to the substance of that thing.

**Reply to objection 2:** The similarity between what generates and what is generated does not come about because of the matter; rather, it comes about because of the form of the agent, which generates something similar to itself. Hence, for someone to be similar to his grandfather, it is not necessary that the corporeal matter of the semen should have existed in the grandfather. Instead, what is necessary is that the semen have a power derived from the soul of the grandfather, through the mediation of the father.

**Reply to objection 3:** The reply to the third objection is the same. For affinity is thought of not with respect to the matter, but rather with respect to the derivation of the form.

**Reply to objection 4:** This passage from Augustine should not be understood to be saying that there actually existed in Adam either (a) a seminal idea related to *this* man or (b) *this* man's bodily substance. Instead, both of these existed in Adam as in their origin (*secundum originem*). For corporeal matter, which is supplied by the mother and which is what Augustine is calling "the corpulent substance," is derived from Adam as its origin. And the same thing holds for the active power which exists in the father's semen and which is the proximate seminal idea of *this* man.

However, Christ is said to have existed in Adam with respect to His corpulent substance and not with respect to His seminal idea. For the matter of His body, which was supplied by His virgin mother, is derived from Adam, but the active power was not derived from Adam, since His body was formed not by the power of a man's semen, but by the operation of the Holy Spirit. For "such a birth was becoming to Him," who is the blessed God over all things, forever and ever. Amen.

## PROLOGUE TO PART 1-2

Since, as Damascene puts it, man is said to be made to the image of God insofar as ‘image’ signifies “what is intellectual and free in choosing and has power in its own right (*intellectuale et arbitrio liberum et per se potestativum*),” now that we have talked about the exemplar, viz., God (*ST* 1, questions 1-43), and about the things that proceed from God’s power in accord with His will (*ST* 1, questions 44-119), it remains for us to consider His image, i.e., man, insofar as he himself is a principle of his own works in the sense of having free choice and power with respect to those works.

### QUESTION 1

#### Man’s Ultimate End

Here we must consider first the ultimate end of human life (questions 1-5) and then the things through which man is able to arrive at that end or to deviate from it (questions 6-114); for it is on the basis of the end that one must ascertain the character of what is ordered toward that end. And since the ultimate end of human life is beatitude, it is necessary first to consider the ultimate end in general (question 1) and then to consider beatitude (questions 2-5).

On the first topic there are eight questions: (1) Does a man act for the sake of an end? (2) Is this peculiar to a rational nature? (3) Do a man’s actions take their species from the end? (4) Is there an ultimate end of human life? (5) Can one man have many ultimate ends? (6) Does a man order everything to his ultimate end? (7) Is the ultimate end the same for all men? (8) Do all other creatures share in that ultimate end?

#### Article 1

##### Does a man act for the sake of an end?

It seems that a man does not act for the sake of an end (*propter finem*):

**Objection 1:** A cause is something that is naturally prior. But an end has the character of what is last (*rationem ultimi*), as the name ‘end’ itself suggests. Therefore, an end does not have the character of a cause. But what a man acts because of (*propter illud*) is such that it is a cause of his action, since the preposition ‘because of’ (*propter*) designates a relation to a cause. Therefore, a man does not act for the sake of an end (*propter finem*).

**Objection 2:** That which is an ultimate end is not itself for the sake of an end. But as is clear from the Philosopher in *Ethics* 1, in some cases actions are the ultimate end. Therefore, it is not the case that a man does all his actions (*omnia agit*) for the sake of an end.

**Objection 3:** It is when a man deliberates that he seems to be acting for the sake of an end. But there are many things a man does without deliberation; in fact, in some cases he does not think about them at all, as when he moves his hand or foot or strokes his beard while thinking intently about something else. Therefore, it is not the case that a man does all his actions for the sake of an end.

**But contrary to this:** Everything that is in a genus flows from the principle of that genus. But as is clear from the Philosopher in *Physics* 2, the end is the principle in actions done by a man (*in operabilibus a homine*). Therefore, a man does all his actions for the sake of an end.

**I respond:** Among the actions done by a man, the only ones that are properly called *human actions* (*actiones humanae*) are those that belong to a man insofar as he is a man. Now man differs from the non-rational animals in that he is the master of his own acts (*suorum actorum dominus*). Hence, the only actions that are properly called human actions are those that a man is the master of. But a man is the master of his acts through his reason and will; this is why free choice (*liberum arbitrium*) is called a power (*facultas*) of the will and of reason. Therefore, the actions that are properly called human actions

are those that proceed from a deliberate act of willing (*ex voluntate deliberata*). By contrast, if there are other actions that belong to a man, then they can be called the *acts of a man* (*hominis actiones*) but not properly human acts, since they do not belong to the man insofar as he is a man.

Now it is clear that all the actions that proceed from a given power are caused by it in accord with the nature of its object. But the object of the will is the end and the good. Hence, all human actions must be for the sake of an end.

**Reply to objection 1:** Even if the end is the last thing to be executed (*sit postremus in executione*), it is the first thing to be intended by the agent (*primus in intentione agentis*). And it is in this sense that it has the character of a cause.

**Reply to objection 2:** If any human action is itself an ultimate end, then it must be voluntary; otherwise, as has been explained, it would not be a human action.

Now there are two senses in which an action is said to be voluntary: first, because it is *commanded* by the will, e.g. to walk or to speak; second, because it is *elicited* by the will, e.g., the act of willing itself. It is impossible that an act elicited by the will should be an ultimate end. For the end is an object of an act of willing (*obiectum voluntatis*), in the same way that color is an object of an act of seeing. Hence, just as the first thing to be seen (*primum visibile*) cannot be the very act of seeing, since every act of seeing is an act of seeing some visible object, so too the first thing to be desired (*primum appetibile*), which is the end, cannot be the very act of willing. Hence, it follows that if any human action is an ultimate end, then that action must be *commanded* by the will; and so in that case there is some action of the man's, at least the very act of willing, that is for the sake of an end. Therefore, whatever a man does, it is true to say that the man acts for the sake of an end, even when he does an action that is an ultimate end.

**Reply to objection 3:** Actions of the sort in question are not properly human actions, since they do not proceed from the deliberation of reason, which is the proper principle of human acts. And so these actions have, as it were, a sort of imagined end (*finem imaginatum*), but not an end predetermined by reason.

## Article 2

### Is acting for the sake of an end peculiar to a rational nature?

It seems that acting for the sake of an end is peculiar to a rational nature (*proprium rationalis naturae*):

**Objection 1:** Man, who acts for the sake of an end, never acts for the sake of an end that is unknown. But there are many things that have no cognition of an end—either because they lack cognition altogether, as in the case of non-sentient creatures, or because they do not apprehend the concept of an end, as in the case of brute animals. Therefore, acting for the sake of an end seems peculiar to a rational nature.

**Objection 2:** To act for the sake of an end is to order one's action toward that end. But this is the work of reason. Therefore, it does not belong to things that lack reason.

**Objection 3:** The good and the end are the object of the will. But as *De Anima* 3 says, the will exists in reason. Therefore, to act for the sake of an end belongs only to a rational nature.

**But contrary to this:** In *Physics* 2 the Philosopher proves that not only an intellect, but nature as well, acts for the sake of an end.

**I respond:** It must be the case that all agents act for the sake of an end. For if, among causes that are ordered to one another, the first is taken away, then the others must be taken away. But the first among all causes is the final cause. The reason for this is that matter attains a form only insofar as it is

moved by an agent, since nothing brings itself from potentiality into actuality; but an agent effects movement only because of its tendency toward an end (*non nisi ex intentione finis*). For if an agent were not fixed on some effect, then it would not do *this* rather than *that*. Therefore, in order for it to produce a determinate effect, it must be fixed on something specific (*determinetur ad aliquid certum*) that has the character of an end. Now just as this specification, when it occurs in a rational nature through a *rational appetite* (*per rationalem appetitum*), is called a *willing* (*voluntas*), so when it occurs in other things through a *natural inclination* (*per inclinationem naturalem*), it is called a *natural appetite* (*appetitus naturalis*).

However, notice that there are two ways in which something tends toward an end in its action or movement: (a) insofar as it *moves itself* toward the end, as a man does, and (b) insofar as it *is moved by something else* toward its end, in the way that an arrow tends toward a determinate target (*ad determinatum finem*) because it is moved by the archer, who directs its action toward the target. Thus, things that have reason move themselves toward an end, since they have dominion over their own acts through free choice, which is a power of will and reason (*facultas voluntatis et rationis*). By contrast, things that lack reason tend toward their end through a natural inclination, as if moved by something else and not by themselves; for they have no cognition of the concept of an end and so cannot order anything toward an end, but are instead ordered toward an end only by something else. For, as was explained above (*ST 1, q. 103, a. 1*), the totality of non-rational nature is related to God as an instrument is related to its principal agent.

And so (a) it is peculiar to a rational nature that it should tend toward an end in the sense of impelling or leading itself toward that end, whereas (b) it is proper to a non-rational nature that it should tend toward an end in the sense of being impelled or being led by something else—either toward an apprehended end, as in the case of brute animals, or toward a non-apprehended end, as in the case of those things that lack cognition altogether.

**Reply to objection 1:** When a man acts on his own (*per seipsum*) for the sake of an end, he has cognition of that end. However, when he is impelled or led by someone else—for instance, when he acts at someone else's command, or when he is moved by something else that impels him—he need not have cognition of the end. And this is the way it is with non-rational creatures.

**Reply to objection 2:** To order something toward an end belongs to one who impels himself toward that end. But what belongs to a thing that is impelled by something else toward an end is *to be ordered* toward that end; this is the condition that can belong to a non-rational nature, as long as it is ordered by something that has reason.

**Reply to objection 3:** The will's object is the good and the end *in general* (*finis et bonum in communi*). Hence, things that lack reason and understanding cannot have a will, since they cannot apprehend a universal; instead, what exists in them is either a natural appetite or a sentient appetite that is fixed upon some particular good.

However, it is clear that particular causes are moved by a universal cause, in the way that the ruler of a city, who intends the common good, effects by his commands all the particular functions within the city. And so everything that lacks reason must be moved toward particular ends by a rational will that stretches out toward the universal good (*se extendit in bonum universale*); and this is God's will.

### Article 3

#### Do human acts take their species from their end?

It seems that human acts do not take their species from their end:

**Objection 1:** The end is an extrinsic cause. But each thing has its species from an intrinsic

principle. Therefore, human acts do not take their species from their end.

**Objection 2:** That which confers the species must be prior. But the end is posterior in being. Therefore, human acts do not have their species from their end.

**Objection 3:** One and the same thing can exist only within a single species. But it is possible for numerically the same act to be ordered toward diverse ends. Therefore, the end does not confer the species on human acts.

**But contrary to this:** In *De Moribus Ecclesiae et Manichaeorum* Augustine says, “Our works are blameworthy or praiseworthy insofar as their ends are blameworthy or praiseworthy.”

**I respond:** Each thing receives its species in accord with its actuality and not its potentiality. Hence, things composed of form and matter are constituted in their species by their proper forms.

We have to think like this in the case of proper movements, too (*etiam in motibus propriis*). For given that a movement is in some sense divided into an instance of *acting* and an instance of *being acted upon* (*distinguitur per actionem et passionem*), both of these receive their species from an actuality (*ab actu*). The instance of *acting* receives its species from the actuality that is the *principle* of acting, while the instance of *being acted upon* receives its species from the actuality that is the *terminus* of the movement. Hence, the instance of *acting* involved in the giving of warmth (*actio calefactio*) is nothing other than a certain movement that proceeds *from* heat, whereas the instance of *being acted upon* involved in the giving of warmth (*calefactio passio*) is nothing other than a movement *toward* heat—where the definitions make clear the nature of the species.

Now human acts take their species from their end in both of these ways, i.e., regardless of whether they are thought of as instances of *acting* or as instances of *being acted upon*. For human acts can indeed be thought of in both of these ways, because a man both moves himself and is moved by himself. Moreover, it was explained above (a. 1) that acts are called human acts insofar as they proceed from a deliberate act of willing (*a voluntate deliberata*). Now the object of an act of willing is the good and the end, and so it is clear that the *principle* of human acts, insofar as they are human acts, is their end. Likewise, the *terminus* of human acts is their end. For what a human act terminates in is what the will intended as an end—just as, among natural agents, the form of what is generated matches (*est conformis*) the form of what generates it. And since, as Ambrose says in *Super Lucam*, “Morals are properly called human,” moral acts properly take their species from the end. For *moral acts* are the same as *human acts*.

**Reply to objection 1:** The end is not altogether extrinsic to the act, since it is related to the act as either its principle or its terminus, and it is of the very nature of an act that (a) it is *from* something insofar as it involves an instance of *acting* and that (b) it is *toward* something, insofar as it involves an instance of *being acted upon* (*quantum ad passionem*).

**Reply to objection 2:** As has been explained (a. 1), insofar as the end pertains to the act of willing, it is prior in intention. And it is in this way that it gives a human or moral act its species.

**Reply to objection 3:** Insofar as numerically the same act proceeds from an agent at any one time, it is ordered only toward a single *proximate* end, from which it has its species, even though it can be ordered toward a plurality of *remote* ends, one of which is the end of another.

However, it is possible for an act that is one as regards its natural species (*species naturae*) to be ordered toward diverse ends of the will. For instance, *killing a man*, which has a single *natural* species, can be ordered toward conserving justice as an end or toward satisfying anger as an end. Accordingly, the acts will be diverse as regards their *moral* species, since in the one case there will be an act of virtue and in the other an act of vice. For a movement takes its species only from what is a *per se* terminus (*terminus per se*) and not from what is an incidental terminus (*terminus per accidens*). But moral ends are incidental to a natural entity and, conversely, the natural character of an end is incidental to a moral entity. And so nothing prevents acts that are the same as regards their natural species from being diverse as regards their moral species, and vice versa.

#### Article 4

##### Is there some ultimate end of a human life, or is there an infinite procession of ends?

It seems that there is no ultimate end of a human life, but instead an infinite procession of ends:

**Objection 1:** As is clear from Dionysius in *De Divinis Nominibus*, chap. 4, the good is by its nature diffusive of itself. Therefore, if what proceeds from the good is itself likewise good, then that good must issue in another good, and so the procession of the good goes on to infinity. But the good has the character of an end. Therefore, there is an infinite procession among ends.

**Objection 2:** What belongs to reason can be multiplied to infinity; this is why mathematical quantities can be increased to infinity. There are likewise infinitely many species of number, because given any number, reason can think of another greater number. But the desire for an end follows reason's apprehension. Therefore, it seems that one may likewise proceed to infinity in the case of ends.

**Objection 3:** The good and the end are the object of the will. But the will can reflect upon itself infinitely many times; for I can will something, and will that I will that thing, and so on *ad infinitum*. Therefore, there is an infinite procession among the ends of a human will, and there is no ultimate end of a human will.

**But contrary to this:** In *Metaphysics* 2 the Philosopher says, "Those who maintain an infinity undermine the nature of the good." But the good is what has the nature of an end. Therefore, it is contrary to the nature of an end that there should be an infinite procession. Therefore, one must posit an ultimate end (*unum ultimum finem*).

**I respond:** Speaking *per se*, in the case of ends it is impossible to proceed to infinity from any perspective at all. For in all things that have a *per se* ordering with respect to one another, if the first is removed, then anything that is ordered toward the first must be removed. Hence, in *Physics* 8 the Philosopher proves that it is impossible to proceed to infinity in the case of moving causes, since otherwise there would not be a first mover, where a first mover is such that if it is removed, then the others cannot effect movement, since they effect movement only by being moved by the first mover.

Now there is a twofold ordering among ends, viz., the order of *intending* (*ordo intentionis*) and the order of *executing* (*ordo executionis*), and in each of these orderings something must be first. What is first in the order of intending is, as it were, the principle that *moves the appetite*, and so if this principle were removed, then the appetite would not be moved by anything. On the other hand, what is first in the order of executing is that with which the *operation* begins, and so if this principle were removed, then no one would begin to do anything.

Now the principle with respect to intending is the ultimate end, whereas the principle with respect to executing is the first of the means that are ordered toward that end (*primum eorum quae sunt ad finem*). So it is impossible to proceed to infinity in either case. For if there were no ultimate end, then nothing would be desired, no action would be terminated, and no intention of the agent's would be put to rest; and if nothing were first among the means ordered to an end, then no one would begin to do anything, and deliberation would proceed to infinity and never come to an end.

By contrast, there is nothing to prevent an infinity among things that do not have a *per se* ordering but are instead joined to one another incidentally (*coniunguntur per accidens*). For *per accidens* causes are indeterminate. And so in this way there can likewise be an infinity incidentally among ends and among means to an end (*infinitatem per accidens in finibus et in his quae sunt ad finem*).

**Reply to objection 1:** It is part of the nature of the good that something should flow from it, but not that it itself should proceed from something else. And so since the good has the nature of an end, and since the First Good is the ultimate end, the argument does not prove that there is no ultimate end, but instead proves that from a presupposed First End one may descend (*procedatur inferius*) to an infinity with respect to the means to that end.

And, indeed, this would hold if we were thinking just about the First Good's power, which is infinite. However, since the First Good has a diffusion that follows a plan (*habet diffusionem secundum intellectum*) according to which the good flows forth in a determinate way (*secundum aliquam certam formam*) into the things it causes, the outflow of goods from the First Good has a fixed mode in accord with which all the other goods participate in the diffusive power. And so the diffusion of goods does not proceed to infinity, but instead, as Wisdom 11:21 puts it, God disposed all things "in number, weight, and measure."

**Reply to objection 2:** Among those things that are *per se*, reason begins with naturally known principles and proceeds to some conclusion (*ad aliquem terminum*). Hence, in *Posterior Analytics* 1 the Philosopher proves that there is no infinite regress among demonstrations by appeal to the fact that among demonstrations there is an ordering of things that are connected to one another *per se* and not *per accidens*.

However, among things that are connected *per accidens*, nothing prevents reason from proceeding to infinity. For it is possible to add a quantity (or a unit) to some preexistent quantity (or number) as such. Hence, in cases of this sort nothing prevents reason from proceeding to infinity.

**Reply to objection 3:** The multiplication of acts of the will as it reflects upon itself is related *per accidens* to the ordering of the ends. This is clear from the fact that it is with respect to one and the same end that the will reflects upon itself one or more times indifferently.

## Article 5

### Can one man's will be simultaneously directed to many things as ultimate ends?

It seems that one man's will can be simultaneously directed to many things as ultimate ends:

**Objection 1:** In *De Civitate Dei* 19 Augustine says that some have proposed four things as man's ultimate end, viz., "pleasure (*voluptas*), tranquility (*quies*), primary natural blessings (*prima naturae*), and virtue (*virtus*)." But these four are manifestly more than a single thing. Therefore, one man can set up the ultimate end of his will in many things .

**Objection 2:** Things that are not opposed to one another do not exclude one another. But there are many things in the world (*multa in rebus*) that are not opposed to one another. Therefore, if one thing is posited as an ultimate end, then other things are not thereby excluded.

**Objection 3:** The will does not lose its power of freedom when it sets up something as its ultimate end. But before it set up one thing, e.g., pleasure, as its ultimate end, it was able to set up something else, e.g., riches, as its ultimate end. Therefore, even after someone has set up pleasure as an ultimate end of his will, he can simultaneously set up wealth as an ultimate end. Therefore, it is possible for a man's will to be simultaneously directed toward diverse things as ultimate ends.

**But contrary to this:** A man's affections are dominated (*dominatur*) by what he reposes in as an ultimate end; for it is from this end that he derives the rules for his whole life. Hence, Philippians 3:19 says of the gluttonous, "Their god is their belly," viz., because they set up the delights of their belly as their ultimate end. But as Matthew 6:24 says, "No one can serve two masters (*duobus dominis*)," i.e., two masters that are not ordered toward one another. Therefore, it is impossible for one man to have many ultimate ends that are not ordered toward one another.

**I respond:** One man's will cannot be simultaneously related to diverse things as ultimate ends. There are three possible ways to argue for this:

First, since each thing seeks (*appetat*) its own perfection, what someone desires as an ultimate end is what he wills as his own perfect and complete good. Hence, in *De Civitate Dei* 19 Augustine says, "We now call it the end of goodness, not because it is consumed so as not to exist, but because it is

perfected so as to exist to the full.” Therefore, the ultimate end must fulfill the whole of a man’s appetite in such a way that there is nothing outside of it that is left to be desired. But this cannot be the case if something extraneous to its fulfillment is required. Hence, it cannot be the case that there are two things an appetite tends toward in this way, i.e., as if each of them were its perfect good.

The second argument is that just as the principle in the process of reasoning is what there is a natural cognition of, so too the principle in the process of rational desiring, i.e., of willing, has to be what there is a natural desire for. But this must be a single thing, since nature tends only toward a single thing. Now the principle in the process of rational desiring is the ultimate end. Hence, what the will tends toward as an ultimate end (*sub ratione ultimi finis*) must be a single thing.

The third argument is that since, as was established above (a. 3), voluntary actions take their species from their end, they must take their genus from their ultimate end, which is common [to all of them]—just as natural entities are placed in a genus according to a formal general notion. Therefore, since everything desirable by the will belongs as such to a single genus, the ultimate end must be a single thing. This is so especially in light of the fact that in every genus there is some one first principle and, as has been explained, the ultimate end has the nature of a first principle. Now the ultimate end of *this* man is related to *this* man in the same way that the ultimate end absolutely speaking is related to the whole human race. Hence, this man’s will must be fixed upon a single ultimate end in the same way that there is by nature a single ultimate end that belongs to all men.

**Reply to objection 1:** The authors who posited the goods in question as the ultimate end took them all together as the single complete good that is composed of them.

**Reply to objection 2:** Even if one proposed many things that do not oppose one another, it would still be opposed to the perfect good that something of the entity’s perfection should lie outside it.

**Reply to objection 3:** The will’s power is not such that it can make opposites exist simultaneously. But, as is clear from what has been said, this would happen if the will tended toward many disparate things as ultimate ends.

## Article 6

### Is everything a man wills such that he wills it for the sake of his ultimate end?

It seems that it is not the case that everything a man wills is such that he wills it for the sake of his ultimate end:

**Objection 1:** The means that are ordered toward the ultimate end are said to be ‘very serious’ (*seriosa*) in the sense that they are advantageous (*utilia*). But what is in jest (*iocosa*) is opposed to what is serious. Therefore, the things a man does in jest are such that he does not order them toward his ultimate end.

**Objection 2:** At the beginning of the *Metaphysics* the Philosopher says that the speculative sciences are pursued for their own sake. And yet one cannot claim that each of them is an ultimate end. Therefore, it is not the case that everything a man desires is such that he desires it for the sake of an ultimate end.

**Objection 3:** If someone orders something toward an end, then he is thinking about that end. But it is not the case that a man is always thinking about his ultimate end in everything that he desires or does. Therefore, it is not the case that everything a man desires or does is such that he desires it or does it for the sake of his ultimate end.

**But contrary to this:** In *De Civitate Dei* 19 Augustine says, “The end of our good is such that other things are loved for its sake, whereas it itself is loved for its own sake.”

**I respond:** It is necessary that everything a man desires is such that he desires it for the sake of his

ultimate end. This is clear from two arguments:

First, everything that a man desires is such that he desires it under the concept of the good. What is not desired as a perfect good must be desired as tending toward a perfect good, i.e., an ultimate end, since the beginning of something is always ordered toward its consummation. This is clear both in what is done by nature and in what is done by art. And so every beginning of perfection is ordered toward consummated perfection, which occurs through the ultimate end.

Second, when it moves an appetite, the ultimate end functions in the way that a first mover functions in other movements. But it is clear that secondary moving causes effect movement only insofar as they are moved by the first mover. Hence, secondary desirable things move an appetite only insofar as they are ordered toward the first desirable thing (*non nisi in ordine ad primum appetibile*), i.e., the ultimate end.

**Reply to objection 1:** Diversions (*actiones ludicrae*) are not ordered toward any extrinsic end, and yet, insofar as they are pleasant or restful (*delectantes vel requiem praestantes*), they are ordered toward the good of the man himself who engages in them (*bonum ipsius ludentis*). But a man's consummate good is his ultimate end.

**Reply to objection 2:** The same reply holds for the second objection, concerning speculative science. Speculative science is desired as a certain good of the man who pursues it (*bonum quoddam speculantis*); and it is included under that complete and perfect good which is the ultimate end.

**Reply to objection 3:** One need not always be thinking about the ultimate end whenever he desires something or does something. Instead, the force (*virtus*) of the first intention, which has to do with the ultimate end, remains in any desire for anything whatsoever, even if the ultimate end is not being thought about. In the same way, one who is travelling along a path need not be thinking about his destination (*de fine*) with every step.

## Article 7

### Is there a single ultimate end for all men?

It seems not to be the case that there is a single ultimate end for all men (*omnium hominum unus finis ultimus*):

**Objection 1:** Man's ultimate end seems especially to be an immutable good (*incommutabile bonum*). But some men turn themselves away from the immutable good by sinning. Therefore, it is not the case that there is a single ultimate end for all men.

**Objection 2:** A man's whole life is regulated by his ultimate end. Therefore, if there were a single ultimate end for all men, then it would follow that there are not diverse ways of living (*diversa studia vivendi*) among men. But this is clearly false.

**Objection 3:** The end is the terminus of an action, and actions have to do with singular things. But even if men share in the nature of their species, they nonetheless differ in those things that pertain to the individuals. Therefore, it is not the case that there is a single ultimate end for all men.

**But contrary to this:** In *De Trinitate* 13 Augustine says that all men agree in desiring the ultimate end, which is beatitude (*beatitudo*).

**I respond:** There are two ways in which we can talk about an ultimate end: (a) with respect to the concept of an ultimate end (*secundum rationem ultimi finis*) and (b) with respect to the thing that the concept of an ultimate end is found in (*id in quo finis ultimi ratio invenitur*).

Thus, as regards the concept of the ultimate end, everyone agrees in desiring an ultimate end, since everyone desires that his own perfection be fulfilled—and this, as has been explained (a. 5), is the concept of an ultimate end.

But as regards that which the ultimate end is *found in*, it is not the case that all men agree in their ultimate end. For some desire riches as their consummate good, some desire pleasure, and some desire something else. In the same way, what is sweet is pleasurable to every sense of taste, but to some it is the sweetness of wine that is especially pleasurable, whereas to others it is the sweetness of honey or of some other such thing. Yet the sweet thing that is most pleasurable absolutely speaking must be that which someone with the best taste takes the most pleasure in. And, similarly, the good that is the most complete must be that which someone with well-disposed affections desires as his ultimate end.

**Reply to objection 1:** Those who sin turn themselves away from the thing which the concept of the ultimate end is truly realized in. However, they do not turn themselves away from intending their ultimate end, which they mistakenly seek in other things.

**Reply to objection 2:** Diverse ways of life are possible among men because of the diverse things in which the concept of the highest good is sought.

**Reply to objection 3:** Even if actions have to do with singulars, the first principle of acting within singular things is the nature, which, as has been explained (a. 5), tends toward a single thing.

## Article 8

### Do all other things share in man's ultimate end?

It seems that all other things share in man's ultimate end:

**Objection 1:** The end corresponds to the beginning (*finis respondet principio*). But that which is the principle of men, viz., God, is also the principle of all other things. Therefore, all things share in man's ultimate end.

**Objection 2:** In *De Divinis Nominibus* Dionysius says, "God turns all things toward Himself as their ultimate end." But He is also man's ultimate end, since, as Augustine puts it, He alone is to be enjoyed (*solo ipso fruendum est*). Therefore, other things share in man's ultimate end.

**Objection 3:** Man's ultimate end is the object of his will. But the object of the will is the universal good (*bonum universale*), which is the end of all things. Therefore, other things must share in man's ultimate end.

**But contrary to this:** Man's ultimate end is beatitude (*beatitudo*), which, as Augustine says, everyone desires. But as Augustine says in 83 *Quaestiones*, "It does not befit animals that lack reason to be blessed (*beata*)."

**I respond:** As the Philosopher says in *Physics* 2 and *Metaphysics* 5, there are two senses of 'end' (*finis*), viz., (a) *finis cuius* and (b) *finis quo*—i.e., (a) *the thing itself (ipsa res)* in which the concept of the good is found and (b) *attaining (adeptio) or possessing (usus)* that thing. For instance, we say that the end of a heavy body's motion is either (a) a lower place (the thing) or (b) being in a lower place (possessing the thing); and we say that a greedy man's end is either (a) money (the thing) or (b) having money (possessing the thing).

Therefore, if we are talking about man's ultimate end as regards *the thing itself* which is the end, then in this sense all other things share in man's ultimate end, since God is the ultimate end of man and of all other things.

By contrast, if we are talking about man's ultimate end as regards *attaining* the end, then in this sense non-rational creatures do not share in man's end. For man and other rational creatures attain the ultimate end by knowing and loving God—something that does not belong to other creatures, which attain their ultimate end by participating in a certain similarity to God insofar as they exist, or insofar as they are alive, or even insofar as they have [sentient] cognition.

**Reply to objection 1 and objection 2 and objection 3:** The reply to the objections is obvious from what has been said.

## QUESTION 2

### The Things That Man's Beatitude Lies In

Next we have to consider beatitude: first, what it lies in (question 2); second, what it is (questions 3-4); and third, how we can attain it (question 5).

On the first topic there are eight questions: (1) Does beatitude lie in riches? (2) Does beatitude lie in honors? (3) Does beatitude lie in fame or glory? (4) Does beatitude lie in power? (5) Does beatitude lie in a bodily good? (6) Does beatitude lie in pleasure? (7) Does beatitude lie in a good of the soul? (8) Does beatitude lie in a created good?

#### Article 1

##### Does man's beatitude lie in riches?

It seems that man's beatitude lies in riches (*consistit in divitiis*):

**Objection 1:** Since beatitude is man's ultimate end, it lies in what most dominates man's affections. But riches are like this, since Ecclesiastes 10:19 says, "All things obey money (*pecuniae obediunt omnia*).” Therefore, man's beatitude lies in riches.

**Objection 2:** According to Boethius in *De Consolatione Philosophiae* 3, "Beatitude is a state perfected by the aggregation of all goods." But it seems that in money (*in pecuniis*) all things are possessed, since, as the Philosopher says in *Ethics* 5, money (*nummus*) was invented in order to be a guarantee (*fideiussor*), as it were, that a man might have whatever he wanted in exchange for it. Therefore, beatitude lies in riches.

**Objection 3:** Since the desire for the highest good never goes away (*numquam deficiat*), it seems to be unlimited (*infinitum*). But this is what one finds especially in the case of riches, since, as Ecclesiastes 5:9 says, "An avaricious man (*avarus*) shall not be satisfied with money." Therefore, beatitude lies in riches.

**But contrary to this:** Man's good lies more in keeping (*in retinendo*) beatitude than in giving it away (*in emittendo*). But as Boethius says in *De Consolatione Philosophiae* 2, "Riches flourish more by being poured out than by being amassed; for avarice always creates loathsome men, while generosity creates illustrious men." Therefore, beatitude does not lie in riches.

**I respond:** It is impossible for man's beatitude to lie in riches. For as the Philosopher says in *Politics* 1, there are two kinds of riches, viz., *natural* riches and *artificial* riches. Natural riches—e.g., food (*cibus*), drink (*potus*), clothing (*vestimenta*), means of transportation (*vehicula*), housing (*habitacula*), and other things of this sort—are those by which a man is assisted in meeting his natural needs (*ad defectus naturales tollendos*). On the other hand, artificial riches are those such as money (*denarii*), which do not in their own right assist nature, but which human art has introduced to be, as it were, a measure of items for sale in order to facilitate buying and selling (*propter facilitatem commutationis*).

Now it is obvious that man's beatitude cannot lie in natural riches. For riches of this sort are sought for the sake of something else, viz., to sustain man's nature, and so they cannot be a man's ultimate end, but are instead ordered toward the man himself as an end. Hence, in the order of nature all things of this sort are lower than man and are made for the sake of man—this according to Psalm 8:8 ("You have subjected all things under his feet").

On the other hand, artificial riches are sought only for the sake of natural riches, since they would not be sought except that things necessary for one's way of life (*necessariae ad usum vitae*) are bought with them. Hence, artificial riches have even less of the character of an ultimate end.

Therefore, it is impossible that beatitude, which is a man's ultimate end, should lie in riches.

**Reply to objection 1:** All bodily things "obey money" in the eyes of the multitude of the foolish, who are acquainted only with the bodily goods that can be acquired with money. But one's judgment

about human goods should be taken from the wise and not from the foolish, just as one's judgment about tastes should be taken from those whose sense of taste is well-disposed.

**Reply to objection 2:** What can be had with money are all the things that are for sale, but not spiritual goods, which cannot be sold. Hence, Proverbs 17:16 says, "What good is it for a fool to have riches, seeing that he cannot buy wisdom?"

**Reply to objection 3:** The desire for natural riches is not unlimited, since at some fixed point they are sufficient for nature. But the desire for artificial riches is indeed unlimited, since, as is clear from the Philosopher in *Politics* 1, it is subject to a disordered concupiscence that knows no bounds.

However, the desire for the highest good is different from this unlimited desire for riches. For the more perfectly the highest good is possessed, the more it itself is loved and other things disdained. For the more it is had, the better it is known. This is why Ecclesiasticus 24:29 says, "They that eat me shall yet hunger."

By contrast, it is just the opposite with the desire for riches and for temporal goods in general. For once these goods are possessed, they are disdained, and other goods are desired. This is what is meant in John 4:13 when our Lord says, "Whoever drinks of this water [read: temporal goods] will thirst again." The reason for this is that their insufficiency is better understood once they are possessed. And so this very fact shows their imperfection, and it also shows that the highest good does not lie in them.

## Article 2

### Does man's good lie in honors?

It seems that man's good lies in honors:

**Objection 1:** As the Philosopher says in *Ethics* 1, beatitude (*beatitudo*), or happiness (*felicitas*), is a reward for virtue. But as the Philosopher says in *Ethics* 4, honor seems especially to be what the reward of virtue is. Therefore, beatitude lies especially in honor.

**Objection 2:** Beatitude, which is a perfect good, seems especially to be whatever belongs to God and to the most excellent beings. But as the Philosopher says in *Ethics* 4, honor is one of those things. Likewise, in 1 Timothy 1:17 the Apostle says, "To the only God be honor and glory." Therefore, beatitude lies in honor.

**Objection 3:** Beatitude is whatever is especially desired by men. But nothing seems to be more desirable to men than honor; for men suffer losses in all other things in order not to suffer any loss of honor. Therefore, beatitude lies in honor.

**But contrary to this:** Beatitude exists in the one who is blessed (*in beato*). However, as the Philosopher points out in *Ethics* 1, honor exists not in the one who is being honored, but rather in the one doing the honoring, who shows reverence for the one being honored. Therefore, beatitude does not lie in honor.

**I respond:** It is impossible for beatitude to lie in honor. For honor is shown to someone because of some excellence on his part. And so honor is a sign of and testimony to the excellence that exists in the one being honored. But it is a man's excellence that is especially involved in beatitude (*maxime attenditur secundum beatitudinem*), which is man's perfect good, and in the parts of beatitude, i.e., in those goods which participate in beatitude. And so honor can, to be sure, follow upon beatitude, but beatitude cannot lie principally in honor.

**Reply to objection 1:** As the Philosopher says in the same place, honor is not a reward for virtue in the sense that virtuous men act for the sake of honor; rather, it is in place of a reward that they receive honor from men—as if from men who have nothing greater to give them. Indeed, the real reward for virtue is beatitude itself, and it is for the sake of beatitude that virtuous men act. Moreover, if they did

act for the sake of honor, then this would no longer be virtue, but ambition instead.

**Reply to objection 2:** Honor is due to God and to the most excellent beings as a sign of or testimony to a preexistent excellence and not because the honor itself makes them excellent.

**Reply to objection 3:** As has been explained, it is out of a natural desire for beatitude, which gives rise to honor, that men happen especially to desire honor. This is why men seek to be honored especially by the wise, in light of whose judgment they come to believe themselves to be excellent or happy.

### Article 3

#### Does man's beatitude lie in glory or fame?

It seems that man's beatitude lies in glory [or fame]:

**Objection 1:** Beatitude seems to lie in what is rendered to the saints because of the tribulations they suffered in the world. But this is glory; for in Romans 8:18 the Apostle says, "The sufferings of this time are not worthy to be compared with the glory to come, that shall be revealed in us." Therefore, beatitude lies in glory.

**Objection 2:** As is clear from Dionysius in *De Divinis Nominibus*, chap. 4, the good is diffusive of itself. But it is through glory that man's good is especially diffused into the knowledge of others, since, as Ambrose says, glory is nothing other than "clear knowledge accompanied by praise (*clara notitia cum laude*)." Therefore, man's beatitude lies in glory.

**Objection 3:** Beatitude is the most stable of goods. But fame or glory seems to be like this, since it is through fame or glory that a man in some sense attains eternity. Hence, in *De Consolatione Philosophiae* Boethius says, "You seem to propagate immortality for yourselves when you consider your fame in times to come." Therefore, man's beatitude lies in fame or glory.

**But contrary to this:** Beatitude is man's true good. But it is possible for fame or glory to be false; for as Boethius says in *De Consolatione Philosophiae* 3, "Many men have acquired a great name from the false opinions of the crowd. Can anything be thought more shameful? For those who are falsely lauded must blush to hear their own praises." Therefore, it is not the case that man's beatitude lies in fame or glory.

**I respond:** It is impossible for man's beatitude to lie in fame or glory. For as Ambrose puts it, glory is nothing other than "clear knowledge accompanied by praise." Now a thing that is known is related in one way to human cognition and in a different way to God's cognition.

For human cognition is caused by the things known, whereas God's cognition is a cause of the things known. Hence, the perfection of the human good, which is called beatitude, cannot be caused by human knowledge; instead, it is human knowledge of someone's beatitude that proceeds from and is in some sense caused by human beatitude itself, either inchoative beatitude or perfect beatitude. And so man's beatitude cannot lie in fame or glory.

By contrast, a man's good depends on God's cognition as its cause. And so the cause which a man's beatitude depends on is the glory he has from God (*gloria quae est apud Deum*)—this according to Psalm 90:15-16 ("I will deliver him, and I will glorify him; I will fill him with length of days, and I will show him my salvation").

There is also another thing to take into consideration, viz., that human ideas (*humana notitia*) are often mistaken, especially with respect to singular contingent things like human acts. And, therefore, human glory is often fallacious. By contrast, since God cannot make a mistake, the glory that comes from Him (*eius gloria*) is always true. This is why 2 Corinthians 10:18 says, "He is approved whom God commends."

**Reply to objection 1:** The Apostle is speaking here of the glory that comes from God in the

presence of His angels and not about the glory that comes from men. Hence, Mark 8:38 [cf. Luke 12:8] says, “The Son of Man will acknowledge him in the glory of His Father in the presence of His angels.”

**Reply to objection 2:** The good of a man that exists in the cognition of the multitude through fame or glory must—if the cognition is indeed true—be derived from a good that exists within the man himself, and so it presupposes either perfect or inchoative beatitude.

On the other hand, if the cognition is false, then it does not agree with reality, and so there is no good that is found in him by reason of his popular acclaim (*cuius fama celebris habetur*).

Hence, it is clear that there is no way in which fame can make a man blessed (*beatum*).

**Reply to objection 3:** Fame lacks stability and is, in fact, easily destroyed by false rumors. And if it does at times persevere in a stable manner, this is incidental. By contrast, beatitude has stability in its own right and forever (*habet stabilitatem per se et semper*).

#### Article 4

##### Does man’s beatitude lie in power?

It seems that [man’s] beatitude lies in power:

**Objection 1:** All things tend toward being similar to God (*appetunt assimilari Deo*) insofar as He is their ultimate end and their first principle. But powerful men, because of the likeness of their power, seem to be especially conformed to God. Hence, they are called ‘gods’ even in Scripture, as is clear from Exodus 22:28 (“You shall not speak ill of the gods”). Therefore, beatitude lies in power.

**Objection 2:** Beatitude is a perfect good. But it is most perfect for a man to be able to rule others as well—a function that belongs to those who have been established in power. Therefore, beatitude lies in power.

**Objection 3:** Since beatitude is maximally desirable, what is opposed to it is by all means to be avoided. But what men especially flee from is servitude, which is counterposed to power. Therefore, beatitude lies in power.

**But contrary to this:** Beatitude is a perfect good. But power is especially imperfect. For as Boethius says in *De Consolatione Philosophiae* 3, “A man’s power cannot expel the bites of care or avoid the prickles of dread.” And later he adds, “Do you think a man is powerful when he is surrounded by men who are afraid of him but whom he himself fears even more?” Therefore, beatitude does not lie in power.

**I respond:** It is impossible for beatitude to lie in power, and this for two reasons:

First, as is clear from *Metaphysics* 5, power has the character of a principle, whereas beatitude has the character of an ultimate end.

Second, power is open both to what is good and to what is evil (*potestas se habet ad bonum et ad malum*), whereas beatitude is man’s proper and perfect good. Hence, some sort of beatitude would be more able to lie in the *good use* of power, which occurs through virtue, than in power itself.

Moreover, there are four general arguments that can be adduced to show that beatitude does not lie in any of the exterior goods discussed thus far:

The first of these arguments is that since beatitude is a man’s highest good, it is incompatible with any sort of evil. But all of the goods discussed thus far are found both in good men and in bad men.

The second argument is that since, as is clear from *Ethics* 1, beatitude is sufficient by its very nature (*per se sufficiens*), it must be the case that once beatitude is attained, no good which is necessary for a man is lacking. But after each of the goods discussed thus far has been attained, there are still many goods lacking that are necessary for a man, e.g., wisdom, bodily health, and others of this sort.

The third argument is that since beatitude is a perfect good, no evil can come to anyone because

of beatitude. But this does not apply to the goods discussed thus far; for Ecclesiastes 5:12 says that riches are sometimes kept “to the detriment of their owner.” And the same thing is obvious in the case of the other three goods.

The fourth argument is that a man is ordered toward beatitude by interior principles, since he is naturally ordered toward it. But the four goods discussed thus far come from exterior causes, and very often from fortune. This is why they are called ‘goods of fortune’.

Hence, it is clear that beatitude cannot in any way lie in the goods discussed thus far.

**Reply to objection 1:** God’s power is His goodness, and so He can use His power only in the right way (*non nisi bene*). But the same does not hold in the case of men. Hence, it is not enough for a man’s beatitude that he become similar to God with respect to power, unless he also becomes similar to Him with respect to goodness.

**Reply to objection 2:** Just as the best situation is for someone to use his power well in ruling a multitude, so the worst situation is for him is to use his power badly. And so power is open both to good and to evil.

**Reply to objection 3:** Servitude is an obstacle to the good use of power. This is why men naturally avoid it—and not because man’s highest good lies in power.

## Article 5

### Does man’s beatitude lie in any bodily good?

It seems that man’s beatitude lies in some bodily good:

**Objection 1:** Ecclesiasticus 30:16 says, “There are no riches above the riches of the health of the body.” But beatitude lies in what is the best. Therefore, it lies in the health of the body.

**Objection 2:** In *De Divinis Nominibus*, chap. 5, Dionysius says that to exist (*esse*) is better than to live (*vivere*), and to live is better than the other things that follow upon it. But a man needs bodily health in order to exist and to live. Therefore, since beatitude is man’s highest good, it seems that bodily health is especially pertinent to beatitude.

**Objection 3:** The more general (*communius*) something is, the higher the principle it depends upon, since the higher a cause is, the more things its power extends to. But just as an efficient cause’s causality is thought of as having to do with an inflowing (*secundum influentiam*), so an end’s causality has to do with an appetite (*secundum appetitum*). Therefore, just as the first efficient cause is a cause that flows into all things (*influit in omnia*), so an ultimate end is a cause that is sought after by all things (*desideratur ab omnibus*). But existence itself (*ipsum esse*) is what is most sought after by all things. Therefore, man’s beatitude consists especially in those things that pertain to his existence, e.g., bodily health.

**But contrary to this:** With respect to beatitude, man is more excellent than all the other animals. But with respect to bodily goods, he is surpassed by many animals; for instance, he is surpassed by the elephant in length of life, by the lion in strength, and by the deer in speed. Therefore, man’s beatitude does not lie in bodily goods.

**I respond:** There are two reasons why it is impossible for man’s beatitude to lie in bodily goods:

First, it is impossible for the ultimate end of a thing that is ordered toward something else as an end to be the conservation of that same thing in existence (*in esse*). Thus, a ship’s captain (*gubernator*) does not intend as an ultimate end the preservation of the ship that has been entrusted to him; for the ship is ordered toward something else as an end, viz., toward sailing. Now just as a ship is entrusted to the captain to direct, so man is entrusted to his own will and reason—this according to Ecclesiasticus 15:14 (“God made man from the beginning, and left him in the hand of his own counsel”). But it is obvious

that man is ordered toward something else as his end, given that man is not the highest good. Hence, it is impossible for the ultimate end of human reason and will to be the conservation of human existence (*conservatio humani esse*).

Second, even if it were granted that the end of human reason and will is the conservation of human existence, it would still not be possible to claim that man's end is a bodily good. For human existence lies in the soul and the body. And, as was shown above (*ST* 1, q. 75, a. 2), even though the body's existence depends on the soul, the human soul's existence does not depend on the body; and the body itself exists for the sake of the soul in the way that matter exists for the sake of form and in the way that instruments exist for the sake of the mover, in order that the mover might exercise its actions through them. Hence all bodily goods are ordered toward the goods of the soul as toward their end. Hence, it is impossible for beatitude, which is the ultimate end, to lie in the goods of the body.

**Reply to objection 1:** Just as the body is ordered toward the soul as its end, so exterior goods are ordered toward the body itself. And so it is reasonable to prefer the good of the body to exterior goods, which are signified in this passage by "riches"—just as it is reasonable to prefer the good of the soul to all the goods of the body.

**Reply to objection 2:** Existence (*esse*) taken absolutely—i.e., insofar as it includes within itself all the perfection of being—surpasses life and all the goods that follow upon it, since existence (*esse*) in this sense contains within itself all the ensuing goods (*sic ipsum esse praehabet in se omnia subsequencia*). And it is in this sense that Dionysius is speaking.

However, if *esse* itself is thought of as participating in this or in that thing, where these things do not capture the whole perfection of being (*non capiunt totam perfectionem essendi*) but instead have imperfect existence (*esse*), viz., the existence (*esse*) of some creature, then it is clear that existence (*esse*) itself in this sense is more eminent when taken with an added perfection. Hence, Dionysius himself says in the same place that living things are better than [merely] existing things, and intelligent things are better than [merely] living things.

**Reply to objection 3:** Given that the end corresponds to the principle, this argument proves that the ultimate end is the first principle of being, in whom exists every perfection of being and whose likeness [all things] seek in due proportion—some with respect just to *esse*; some with respect to living-*esse*; and some, a few, with respect to living-*esse* and intelligent-*esse* and beatified-*esse*.

## Article 6

### Does man's beatitude lie in delight or pleasure?

It seems that man's beatitude lies in delight (*delectatio*) or pleasure (*voluptas*):

**Objection 1:** Since beatitude is the ultimate end, it is not desired for the sake of anything else; instead, other things are desired for its sake. But this feature seems especially to belong to delight (*delectatio*); for, as *Ethics* 10 points out, "it is ridiculous to ask someone why he wants to be delighted (*propter quid velit delectari*).” Therefore, beatitude consists especially in pleasure and delight.

**Objection 2:** As the *Liber de Causis* says, "a first cause makes a stronger impression than a secondary cause." But the end's influence has to do with the desire for it. Therefore, that which especially moves one's appetite seems especially to have the character of an ultimate end. But this is pleasure (*voluptas*). An indication of this is that pleasure (*delectatio*) absorbs a man's will and reason to such an extent that it makes him disdain other goods. Therefore, it seems that the ultimate end, which is beatitude, consists especially in pleasure (*in voluptate*).

**Objection 3:** Since desire is for the good, that which all things desire seems to be the best thing. But all things desire delight (*delectatio*)—both the wise and the foolish, and even things that lack reason.

Therefore, delight (*delectatio*) is the best thing. Therefore, beatitude, which is the highest good, lies in pleasure (*voluptas*).

**But contrary to this:** In *De Consolatione Philosophiae* 3 Boethius says, “Anyone who chooses to look back on his past excesses will understand that pleasures have a sad ending. And if pleasures can make a man blessed, there is no reason not to say that even brute animals are blessed.”

**I respond:** As *Ethics* 3 says, “Because corporeal delights (*delectationes corporales*) are known to more people, they have taken the name ‘pleasures’ (*voluptates*) for themselves”—even though there are other, more powerful, delights. Nevertheless, beatitude does not principally lie in them.

For within each thing, what pertains to its essence is different from its proper accidents; for instance, in the case of man, his being a rational mortal animal is different from his being capable of laughing. Thus, one should notice that every delight is a sort of proper accident which follows upon beatitude or upon some part of beatitude. For someone delights in having a good which befits him—regardless of whether he has it in reality, or in his hopes, or at least in his memories. Now if the fitting good in question is a perfect good, then it is human beatitude itself, whereas if it is an imperfect good, then it is a certain participation in beatitude—either a proximate participation, or a remote one, or at least an apparent one. Hence, it is clear that not even the very delight which follows upon the perfect good is itself the essence of beatitude; instead, it is a certain consequence of beatitude, like a *per se* accident.

Moreover, corporeal pleasure cannot follow upon the perfect good even in the way just explained. For corporeal pleasure follows upon a good that is apprehended by the sensory power, which is a power of the soul insofar as it uses the body. But the good which pertains to the body and which is apprehended by the sensory power cannot be man’s perfect good. For since the rational soul exceeds the measure of corporeal matter, the part of the soul that is unrestricted by a corporeal organ (*ab organo corporeo absoluta*) has a sort of unlimitedness (*quaedam infinitas*) with respect to the body and with respect to the parts of the soul that are concretized with the body (*partium animae corpori concretarum*)—in the way that immaterial things are in a sense unlimited (*infinita*) in relation to material things by reason of the fact that form is in some sense contracted to and limited by matter. Thus, a form that is free of matter is in some sense unlimited (*infinita*). And so the sensory power, which is a corporeal power, has cognition of the singular, which is made determinate by matter, whereas the intellect, which is a power free of matter, has cognition of the universal, which is abstracted from matter and contains infinitely many singulars within itself. Hence, it is clear that a good which befits the body and which causes corporeal delight through the sensory power’s apprehension is not man’s perfect good, but is, as it were, minimal in comparison to the good of the soul. Hence, Wisdom 7:9 says, “All gold, in comparison to wisdom, is as a little sand.” So, then, corporeal pleasure is neither beatitude itself nor a *per se* accident of beatitude.

**Reply to objection 1:** The reason why delight is desired is the same as the reason why beatitude is desired—and this is nothing other than the repose of desire in the good (*quietatio appetitus in bono*). Similarly, the natural power by which a heavy thing is borne downward is the same as the power by which it comes to rest there. Hence, just as the good is desired for its own sake, so too delight is desired for its own sake and not for the sake of something else, if ‘for the sake of’ is expressing a final cause. However, if it is instead expressing a formal cause or, better, an efficient cause (*causam motivam*), then in that sense delight is desirable for the sake of something else, viz., for the sake of the good which is the object of delight and which, as a result, is its principle and gives it its form. For the reason why delight is sought after is that it is repose in a good that is desired.

**Reply to objection 2:** The strong desire for sensible delight occurs because the operations of the sensory power, since they are the beginnings of our cognition (*principia nostrae cognitionis*), are more perceptible. Hence, sensible delights are also desired by more people.

**Reply to objection 3:** All men desire delight in the same way that they desire the good. Yet, as has been explained, they desire delight by reason of the good, and not vice versa. Hence, it does not

follow that delight is the greatest good in its own right (*maximum et per se bonum*). Rather, each delight follows upon some good, and there is a delight that follows upon that which is the greatest good in its own right.

### Article 7

#### Does man's beatitude lie in a good of the soul?

It seems that beatitude lies in a good of the soul:

**Objection 1:** Beatitude is a certain human good. But man's good is divided into three, viz., exterior goods, goods of the body, and goods of the soul. But as has been shown above (aa. 4-5), beatitude does not lie in the exterior goods or in the goods of the body. Therefore, it lies in the goods of the soul.

**Objection 2:** The one for whom we desire a good is such that we love him more than the good we desire for him; for instance, we love the friend for whom we desire money more than the money. But each individual desires every good for himself. Therefore, he loves himself more than all other goods. But beatitude is what he especially loves; this is obvious from the fact that all other goods are loved and desired for its sake. Therefore, beatitude lies in some good that belongs to the man himself. But it does not lie in the goods of the body. Therefore, it lies in the goods of the soul.

**Objection 3:** Perfection is something that belongs to what is perfected. But beatitude is a certain perfection of a man. Therefore, beatitude is something that belongs to the man. But as has been shown, it is not something that belongs to the body. And so it lies in the goods of the soul.

**But contrary to this:** In *De Doctrina Christiana* Augustine says, "That in which the good life is constituted is to be loved for its own sake." But a man is not to be loved for his own sake; instead, whatever exists in a man is to be loved for the sake of God. Therefore, beatitude does not lie in any good of the soul.

**I respond:** As was explained above (q. 1, a. 8), 'end' has two senses, viz., (a) *the thing itself* that we desire to obtain, and (b) the *having*, i.e., the attaining or the possessing, of that thing (*usus seu adeptio aut possessio illius rei*).

Thus, if we are talking about man's ultimate end *as regards the thing itself* which we desire as our ultimate end, then it is impossible for man's ultimate end to be either the soul itself or anything that belongs to the soul.

For the soul, taken in itself, is like something that exists in potentiality, since it comes to be actually knowing from having been knowing in potentiality, and it becomes actually virtuous from having been virtuous in potentiality. But since the potentiality is for the sake of the actuality in the sense of being for the sake of what completes it, it is impossible that what is in potentiality in its own right should have the nature of an ultimate end. Hence, it is impossible for the soul itself to be its own ultimate end.

The same holds for anything that belongs to the soul, whether it be a power, a habit, or an act. For the good that is the ultimate end is a perfect good that satisfies the appetite (*bonum perfectum complens appetitum*). Now man's appetite, which is his will, is for a *universal* good. But any good that inheres in the soul itself is a participated good and, as a result, a *particularized* good. Hence, it is impossible that any of these goods should be man's ultimate end.

On the other hand, if we are talking about man's ultimate end *as regards the attaining or possessing of it*, i.e., as regards any sort of having of the very thing that is desired as an end, then something that belongs to a man's soul is pertinent to the ultimate end. For a man attains beatitude *through* his soul (*per animam*).

Therefore, the very thing that is desired as the end is what beatitude *lies in* and what *makes one blessed*, but it is the *attainment of that thing* which is called *beatitude*. Hence, one should say that

beatitude is something that belongs to the soul, but that what beatitude lies in is something outside of the soul.

**Reply to objection 1:** Insofar as the division in question includes all the goods that are desirable to a man, what is called ‘a good of the soul’ includes not only [the soul’s] powers, habits, and acts, but also its objects, which are extrinsic to it. And in this sense there is nothing to prevent one from saying that what beatitude lies in is a certain good of the soul.

**Reply to objection 2:** As regards what is proposed here, the relevant point is that beatitude is especially loved as a *desired good* (*bonum concupitum*), whereas a friend is loved as the *one for whom* the good is desired; and in this latter sense a man loves himself as well. Hence, the character of the love is not the same in the two cases.

Now when we treat charity below (*ST* 2-2, q. 26), there will be room to consider the question of whether a man might love something above himself (*supra se*) with a love of friendship.

**Reply to objection 3:** Since beatitude itself is a perfection of the soul, it is a certain good that inheres in the soul. But as has been explained, what beatitude lies in, i.e., what makes one blessed, is something outside the soul.

## Article 8

### Does man’s beatitude lie in a created good?

It seems that man’s beatitude lies in some created good:

**Objection 1:** In *De Divinis Nominibus*, chap. 7, Dionysius says that God’s wisdom “joins the ends of the first things to the principles of the secondary things.” This can be taken to mean that the high point for a lower nature is to attain the low point of a higher nature. But man’s highest good is beatitude. Therefore, since, as was established in the First Part (*ST* 1, q. 111, a. 1), an angel is higher than a man in the order of nature, a man’s beatitude seems to lie in his attaining in some way the status of an angel (*aliquo modo attingit ad angelum*).

**Objection 2:** The ultimate end of a thing lies in what is complete in relation to it (*in suo perfecto*); hence, a part exists for the sake of the whole as its end. But the whole universe of creatures, which is called the ‘greater world’, is related to a man, who in *Physics* 7 is called a ‘lesser world’, in the same way that what is complete is related to what is incomplete (*sicut perfectum ad imperfectum*). Therefore, man’s beatitude lies in the whole universe of creatures.

**Objection 3:** A man is made blessed (*beatus*) by the fact that his natural desire comes to rest. But man’s natural desire does not extend to a greater good than he himself is able to take possession of. Therefore, since man is not capable of a good that exceeds the limits of all of creation (*limites totius creaturae*), it seems that man can be made blessed by some created good. And so man’s beatitude lies in some created good.

**But contrary to this:** In *De Civitate Dei* 19 Augustine says, “Just as the soul is the life of the flesh, so God is man’s blessed life (*beata vita*)—God, of whom it is said, ‘Blessed the people whose God is the Lord’ (Psalm 143:15).”

**I respond:** It is impossible for man’s beatitude to lie in any created good. For beatitude is a perfect good that puts the appetite totally to rest—it would not be the ultimate end otherwise, i.e., if something remained to be desired. But the object of the will, which is man’s appetite, is the universal good, just as the object of the intellect is universal truth. From this it is clear that nothing can put man’s will to rest except the universal good. But the universal good is found only in God and not in any created good, since every creature has participated goodness. Hence, only God can satisfy man’s will—this according to Psalm 102:5 (“He satisfies your desire with good things”). Therefore, it is in God alone that man’s beatitude lies.

**Reply to objection 1:** The high point of man does indeed attain to the low point of angelic nature by a sort of likeness. Yet man does not rest there as in his ultimate end. Instead, he gets all the way to the universal source itself of goodness, i.e., to Him who is the universal object of beatitude for all the blessed insofar as He is the infinite and perfect good.

**Reply to objection 2:** If a given whole is not the ultimate end but is instead ordered toward a further end, then the ultimate end of a part of it is not the whole itself but something else. Now the universe of creatures, to which man is related as a part to a whole, is not the ultimate end. Instead, it is ordered toward God as its ultimate end. Hence, it is God Himself, and not the good of the universe, that is man's ultimate end.

**Reply to objection 3:** There is a created good, in the sense of something *intrinsic to and inherent in* man, that is not less than the good that man is capable of. Nevertheless, this created good is indeed less than some good, in the sense of an *object*, which man is capable of and which is infinite. Moreover, the participated good of an angel, or of the whole universe, is a finite and contracted good.

## QUESTION 3

### What Beatitude Is

Next we have to consider what beatitude is (question 3) and what is required for it (question 4).

On the first topic there are eight questions: (1) Is beatitude something uncreated? (2) If it is something created, is it an operation [i.e., an action]? (3) Is it an operation of the sentient part of the soul or of the intellective part? (4) If it is an operation of the intellective part of the soul, is it an operation of the intellect or of the will? (5) If it is an operation of the intellect, is it an operation of the speculative intellect or of the practical intellect? (6) If it is an operation of the speculative intellect, does it consist in a speculative act belonging to the speculative sciences? (7) Does it consist in a speculative act with respect to the separated substances, i.e., the angels? (8) Does it consist solely in a speculative act with respect to God by which He is seen through His essence?

#### Article 1

##### Is beatitude something uncreated?

It seems that beatitude is something uncreated:

**Objection 1:** In *De Consolatione Philosophiae* 3 Boethius says, “It is necessary to confess that God is beatitude itself.”

**Objection 2:** Beatitude is the highest good. But it belongs to God to be the highest good. Therefore, since there is no more than one highest good, it seems that beatitude is identical with God.

**Objection 3:** Beatitude is the ultimate end toward which the human will naturally tends. But the will ought to tend toward nothing other than God as an end. “He alone is to be enjoyed (*quo solo fruendum est*),” as Augustine puts it.

**But contrary to this:** Nothing that is made is uncreated. But man’s beatitude is something made, since, according to Augustine in *De Doctrina Christiana* 1, “Those things are to be enjoyed which make us blessed.” Therefore, beatitude is not something uncreated.

**I respond:** As was explained above (q. 1, a. 8 and q. 2, a. 7), ‘end’ has two senses: (a) *the thing itself* which we desire to attain, in the sense that *money* is an end to the avaricious man; and (b) attaining (*adeptio*) or possessing (*possessio*), i.e., having (*usus*) or enjoying (*fruitio*), that thing which is desired, in the sense that *having money* is said to be the avaricious man’s end, and *enjoying a pleasurable thing* is said to be the intemperate man’s end.

Therefore, in the first sense, man’s ultimate end is an uncreated good, viz., God, who alone is able to satisfy man’s will perfectly by His infinite goodness. But in the second sense, man’s ultimate end is something created which exists within him and which is nothing other than possessing or enjoying the ultimate end (cf. *ST* 1, q. 12, a. 5).

Therefore, if man’s beatitude is thought of with respect to its *cause or object*, then in this sense it is something uncreated, whereas if it is thought of with respect to the *very essence of beatitude*, then in this sense it is something created.

**Reply to objection 1:** God is beatitude through His essence, since He is blessed through His own essence and not by attaining, or participating in, something else. By contrast, as Boethius says in the same place, men are blessed through participation, just as they are said to be ‘gods’ through participation. And the participation in beatitude by virtue of which a man is called blessed is itself something created.

**Reply to objection 2:** The reason why beatitude is said to be man’s highest good is that it is an act of attaining or enjoying the highest good (*est adeptio vel fruitio summi boni*).

**Reply to objection 3:** Beatitude is called the ultimate end in the sense in which attaining an end is called the end.

## Article 2

### Is beatitude an operation [i.e., an action]?

It seems that beatitude is not an operation [or action]:

**Objection 1:** In Romans 6:22 the Apostle says, “You have your fruit unto sanctification, and as your end, life eternal.” But life is the very existence (*esse*) of living things and not an operation. Therefore, the ultimate end, i.e., beatitude, is not an operation.

**Objection 2:** In *De Consolatione Philosophiae* 3 Boethius says that beatitude is “a state made perfect by the aggregation of all goods.” But ‘state’ does not designate an operation. Therefore, beatitude is not an operation.

**Objection 3:** ‘Beatitude’ signifies something that exists within the one who is blessed, since it is a man’s ultimate perfection. But ‘operation’ does not signify a thing as *existing within* the one who operates; rather, it signifies it as *proceeding from* the one who operates. Therefore, beatitude is not an operation.

**Objection 4:** Beatitude remains permanently in the one who is blessed. But an operation is temporary and does not remain permanently (*non permanet sed transit*). Therefore, beatitude is not an operation.

**Objection 5:** A single beatitude belongs to a single man. But operations are multiple. Therefore, beatitude is not an operation.

**Objection 6:** Beatitude exists without interruption in the one who is blessed. But human operations are frequently interrupted, e.g., by sleep, or by some other occupation, or by rest. Therefore, beatitude is not an operation.

**But contrary to this:** In *Ethics* 1 the Philosopher says, “Happiness (*felicitas*) is an operation in accord with perfect virtue.”

**I respond:** In the sense in which a man’s beatitude is something created existing within him, one must claim that man’s beatitude is an operation.

For beatitude is a man’s ultimate perfection. But each thing is perfect to the extent that it is actual, since a potentiality is unperfected (*imperfecta*) in the absence of its [corresponding] actuality. Therefore, beatitude must consist in man’s ultimate actuality. But it is clear that an operation is the ultimate actuality of a thing that operates; this is why the operation is called “*second actuality*” by the Philosopher in *De Anima* 2. For it can be the case that what possesses a form is operating [only] in potentiality, in the way that someone who has knowledge might be thinking [only] in potentiality. Hence, in the case of other entities as well, each thing is said to exist *for the sake of* its operation, as *De Caelo* 2 says. Therefore, it must be the case that man’s beatitude is an operation.

**Reply to objection 1:** ‘Life’ has two senses.

In the first sense, what is called ‘life’ is the very existence (*esse*) of the living thing. In this sense, beatitude is not life. For it has been shown (q. 2, a. 5) that man’s *esse*, whatever it might be, is not man’s beatitude, since it is only God who is such that His beatitude is His *esse*.

In the second sense, what is called ‘life’ is an operation of a living thing by which a principle of life is made actual. It is in this sense that we talk about ‘the active life’ or ‘the contemplative life’ or ‘the pleasure-seeking life’. This is the sense in which the ultimate end is called ‘eternal life’. This is clear from what is said in John 17:3: “This is eternal life: that they may know you, the one true God.”

**Reply to objection 2:** In defining beatitude Boethius was thinking about the *general concept* of beatitude (*ipsam communem beatitudinis rationem*). For the general concept of beatitude is that it is a general and perfect good (*bonum commune perfectum*). And this is what he meant when he said that beatitude is “a state made perfect by the aggregation of all goods”—which means nothing other than that one who is blessed is in a state of the perfect good (*in statu boni perfecti*).

Aristotle, on the other hand, expressed the very *essence* of beatitude when he showed what it is through which a man is in such a state, viz., through a certain operation. And in *Ethics* 1 he himself also showed that beatitude is a perfect good.

**Reply to objection 3:** As *Metaphysics* 9 says, there are two sorts of actions.

The first sort, e.g., burning or cutting, proceeds from the thing that is operating into an exterior matter. Beatitude cannot be this sort of action, since, as it says in the same place, such an operation is more the action and perfection of the patient and not of the agent.

The second sort of action, e.g., sensing, intellectual understanding, or willing, is an action that remains within the agent itself. This sort of action is a perfection and act of the agent. This is the sort of operation that it is possible for beatitude to be.

**Reply to objection 4:** Since ‘beatitude’ expresses a certain ultimate perfection, ‘beatitude’ must have different senses because the diverse things capable of beatitude are able to attain diverse grades of perfection.

For instance, in God there is beatitude through His essence, since His very *esse* is His operation—an operation by which He has enjoyment of Himself and not of anything else.

On the other hand, in the beatified angels there is ultimate perfection through an operation by which they are joined to the uncreated good. And this operation is a single everlasting operation in them.

By contrast, in men who are in the state of the present life, the ultimate perfection is through an operation by which a man is joined to God, but this operation cannot be continuous and, as a result, it cannot be a single operation, either, since an operation is multiplied by being divided. For this reason, in the state of the present life a man cannot have perfect beatitude. Hence, in *Ethics* 1 the Philosopher, in positing beatitude for man in this life, says that it is imperfect, and after much discussion he concludes that “we call men blessed, but as men.”

However, God has promised us perfect beatitude, when we will be “like the angels in heaven,” as Matthew 22:30 says. Therefore, when applied to this perfect beatitude, the objection loses its force. For in this state of beatitude man’s mind will be joined to God by a single operation that is continuous and everlasting.

By contrast, in the present life we fall short of perfect beatitude to the extent that we fall short of the oneness and continuity of such an operation. Yet there is some participation in beatitude, and this participation is greater to the extent that the operation is able to be more continuous and unified. And so in the *active life*, which is occupied with many things, there is less of the character of beatitude than there is in the *contemplative life*, which is centered on one thing, viz., the contemplation of truth. And even if at times the man is not actually engaging in the sort of operation in question, still, because he is always ready to engage in it, and because he orders even the very cessation of the operation, e.g., sleep or some natural occupation, toward the operation in question, the operation seems like it is continuous.

**Reply to objection 5 and objection 6:** The replies to the fifth and sixth objections are clear from what has just been said.

### Article 3

#### Does beatitude consist in an operation of the sentient part of the soul or only in an operation of the intellectual part?

It seems that beatitude consists in an operation of the sentient part of the soul as well [as in an operation of the intellectual part]:

**Objection 1:** Outside of an intellectual operation, there is no operation in man more noble than a sentient operation. But in us an intellectual operation depends on a sentient operation, since, as *De*

*Anima* 3 says, “we are unable to have intellectual understanding without a phantasm.” Therefore, beatitude consists in a sentient operation as well.

**Objection 2:** In *De Consolatione Philosophiae* 3 Boethius says that beatitude is “a state made perfect by the aggregation of all goods.” But some goods are sensible goods, which we attain through the operation of the sensory power. Therefore, it seems that an operation of the sensory power is required for beatitude.

**Objection 3:** As is proved in *Ethics* 1, beatitude is a perfect good—which would not be the case if a man were not perfected by it with respect to all of his parts. But certain parts of the soul are perfected through sentient operations. Therefore, a sentient operation is required for beatitude.

**But contrary to this:** Sentient operations are common both to us and to brute animals, but beatitude is not common to us and to brute animals. Therefore, beatitude does not consist in a sentient operation.

**I respond:** There are three ways in which something can pertain to beatitude: (a) *essentially* (*essentialiter*), (b) *as an antecedent* (*antecedenter*), and (c) *as a consequence* (*consequenter*).

No operation of the sensory power can pertain *essentially* to beatitude. For man’s beatitude consists essentially in his being joined to an uncreated good, which, as was shown above (a. 1 and q. 2, a. 8), is the ultimate end and such that a man cannot be joined to it through an operation of the sensory power. Similarly, as has been shown (q. 2, a. 5), man’s beatitude does not lie in corporeal goods, which are all that we attain to through the operation of the sensory power.

However, the operations of the sensory power can pertain to beatitude both *as an antecedent* and *as a consequence*:

They pertain *as an antecedent* to the sort of imperfect beatitude that can be had in the present life. For the operation of the intellect has as a prerequisite (*praeexigit*) the operation of the sensory power.

They pertain *as a consequence* to the perfect beatitude that we await in heaven, because, after the resurrection, as Augustine says in his letter *Ad Dioscorum*, “from the very beatitude of the soul there will be a certain overflow (*refluentia*) into the body and into the bodily senses, in order that they might be perfected in their operations.” This will become clearer below, when we talk about the resurrection. However, the operation by which the human mind is joined to God will not in that state (*tunc*) depend on the sensory power.

**Reply to objection 1:** This objection proves that the operation of the sensory power is required as an antecedent for the sort of imperfect beatitude that can be had in this life.

**Reply to objection 2:** The sort of perfect beatitude that an angel has is such that it is an “aggregation of all goods” through his being joined to the font of all good—and not such that it requires every single particular good (*non quod indigeat singulis particularibus bonis*).

By contrast, in the imperfect beatitude of the present life (*in hac beatitudine imperfecta*), what is required is an aggregation of goods that are sufficient for the most perfect operation possible in this life.

**Reply to objection 3:** In perfect beatitude the whole man is perfected, but he is perfected in his lower part through an overflow (*per redundanitam*) from his higher part. By contrast, in the imperfect beatitude of the present life, it goes, conversely, from the perfection of the lower part to the perfection of the higher part.

#### Article 4

##### Does beatitude consist in an act of the will?

It seems that beatitude consists in an act of the will:

**Objection 1:** In *De Civitate Dei* 19 Augustine says that man’s beatitude lies in peace; hence,

Psalm 147:3 says, “He has placed peace within your borders.” But peace has to do with the will. Therefore, man’s beatitude consists in an act of will (*in voluntate*).

**Objection 2:** Beatitude is the highest good. But the good is the object of the will. Therefore, beatitude consists in an operation of the will.

**Objection 3:** The ultimate end corresponds to the first mover, in the way that the ultimate end of the army as a whole is victory, which is the end of the leader who moves everyone. But the first mover in the case of an operation is the will, since, as will be explained below (q. 9, a. 1), the will moves the other powers. Therefore, beatitude has to do with the will.

**Objection 4:** If beatitude is an operation, it must be man’s most noble operation. But as is clear from the Apostle in 1 Corinthians 13, loving God (*dilectio Dei*), which is an act of the will, is a more noble operation than knowing God (*cognitio Dei*), which is an operation of the intellect. Therefore, it seems that beatitude consists in an act of the will.

**Objection 5:** In *De Trinitate* 13 Augustine says, “The blessed man is such that (a) he has everything that he wills and (b) he wills nothing badly.” And a little later he adds, “Someone is close to being blessed if he wills well whatever he wills. For good things make him blessed, and he already has something of those goods, viz., a good will itself.” Therefore, beatitude consists in an act of the will.

**But contrary to this:** In John 17:3 our Lord says, “This is eternal life: that they know you, the one true God.” But as has been explained (a. 2), eternal life is the ultimate end. Therefore, man’s beatitude consists in a cognition of God, and this is an act of the intellect.

**I respond:** As was explained above (q. 2, a. 6), two things are required for beatitude: (a) the *essence* of beatitude and (b) its *per se accident*, as it were, viz., the delight adjoined to it.

Thus, I claim that as regards what beatitude is in its essence (*essentialiter*), it is impossible for it to consist in an act of the will. For it is clear from what was said above (aa. 1-2 and q. 2, a. 7) that beatitude is the attainment of the ultimate end. But attaining an end does not consist in an act of the will. For the will is directed toward the end—an *absent* end when the will *desires* it, and a *present* end when it *delights* while reposing in it. But it is clear that an act of desiring an end (*desiderium finis*) is not itself an act of attaining the end (*ipsum desiderium finis non est consecutio finis*); rather, it is a movement toward the end. Moreover, an act of delighting comes to the will because the end is present, whereas it is not the case, conversely, that something is present because the will delights in it. Therefore, there must be something other than the act of the will (*oportet aliquid aliud esse quam actum voluntatis*) such that through it the end itself becomes present to the one who wills.

This is manifestly obvious in the case of sensible ends. For if acquiring money (*consequi pecuniam*) occurred through an act of the will, then the covetous man would acquire the money right from the start, when he willed to have it. But, of course, it is absent from him at the beginning, and he acquires it by taking it with his hand or in some other such way; and it is *then* that he delights in the money now possessed.

Therefore, the same thing happens with an intelligible end, too. For at the beginning we will to attain some intelligible end. But we attain it by the fact that it becomes present to us through an act of the intellect. And then our delighted will comes to rest in the end now attained.

So, then, the essence of beatitude consists in an act of the intellect, whereas what pertains to the will is an act of delighting that is consequent to this beatitude. Accordingly, in *Confessiones* 10 Augustine says that beatitude is “rejoicing in the truth” (*gaudium de veritate*), because the act of rejoicing is the consummation of beatitude.

**Reply to objection 1:** Peace is relevant to man’s ultimate end not in the sense that it is beatitude itself in its essence, but in the sense that it is related to beatitude as an antecedent and as a consequence. *As an antecedent*, to the extent that all the troubles or obstacles (*perturbantia et impediencia*) associated with the ultimate end have already been removed; *as a consequence*, to the extent that a man, having attained his ultimate end, remains at peace (*remanet pacatus*) now that his desire has been put to rest.

**Reply to objection 2:** The will's first object is not its own act—just as the first object of the power of sight is not the act of seeing itself, but the visible thing. Hence, from the very fact that beatitude is the will's first object it follows that beatitude is not the will's very act.

**Reply to objection 3:** It is the intellect, rather than the will, that first apprehends an end, whereas the movement toward the end begins in the will. And so what is due to the will is what ultimately follows upon the attainment of the end, viz., an act of delighting or enjoying (*delectation vel fruitio*).

**Reply to objection 4:** Loving (*dilectio*) is preeminent over knowing (*cognitio*) as far as effecting movement [toward the end] is concerned, but knowing precedes loving in the attainment [of the end]. For as Augustine says in *De Trinitate* 10, "A thing is not loved unless it is known." And so we first attain an intelligible end through an action of the intellect, just as we first attain a sensible end through an action of the sensory power.

**Reply to objection 5:** He who has everything that he wills is blessed because he *has* the things that he wills—and this having is through something other than an act of the will.

On the other hand, to will nothing badly is a requirement for beatitude in the sense of being an appropriate disposition (*debita dispositio*) for beatitude.

Now a good will counts as one of the goods that make a man blessed insofar as it is a certain inclination in the will [toward beatitude]—just as a movement is assigned to the genus of its terminus, as, e.g., an alteration is assigned to the genus *quality*.

## Article 5

### Does beatitude consist in an operation of the speculative intellect or of the practical intellect?

It seems that beatitude consists in an operation of the practical intellect:

**Objection 1:** The ultimate end of any creature consists in its becoming similar to God (*in assimilatione ad Deum*). But man is more similar to God through his practical intellect, which is a cause of things that are understood intellectually, than through his speculative intellect, whose knowledge is taken from the things. Therefore, man's beatitude consists in an operation of the practical intellect rather than in an operation of the speculative intellect.

**Objection 2:** Beatitude is man's perfect good. But the practical intellect is more ordered toward the good than is the speculative intellect, which is ordered toward the true. Hence, it is because of the perfection of the practical intellect that we are called 'good', and not because of the perfection of the speculative intellect. Rather, we are called 'knowledgeable' or 'intelligent' because of the perfection of the speculative intellect. Therefore, man's beatitude consists in an act of the practical intellect rather than in an act of the speculative intellect.

**Objection 3:** Beatitude is a certain good that belongs to a man himself. But the speculative intellect is occupied more with things that lie outside of a man, whereas the practical intellect is occupied with things that belong to the man himself, such as his operations and his passions. Therefore, man's beatitude consists in an operation of the practical intellect rather than in an operation of the speculative intellect.

**But contrary to this:** In *De Trinitate* 1 Augustine says, "Contemplation is promised to us as the end of all our actions and the eternal perfection of our joys."

**I respond:** Beatitude consists in an operation of the speculative intellect rather than in an operation of the practical intellect. This is clear from three considerations:

First, if man's beatitude is an operation, it must be man's best operation. But man's best operation is the operation that belongs to the best power with respect to the best object. Now the best power is the intellect and its best object is the divine good, which is an object of the speculative intellect and not of

the practical intellect. Hence, beatitude consists especially in this operation, i.e., in an act of contemplating divine things (*in contemplatione divinorum*). And since, as *Ethics* 9 and 10 say, “Each thing seems to be that which is best in it,” this operation is especially proper to man and especially delightful to him.

The same point is clear from the fact that contemplation is especially sought after for its own sake. By contrast, an act of the practical intellect is sought after not for its own sake, but for the sake of an action. And the actions themselves are likewise ordered toward some end. This is why it is clear that the ultimate end cannot consist in the active life, which is associated with the practical intellect.

Third, the same point is clear from the fact that the contemplative life is common to both man and higher beings, viz., God and the angels, to whom man is assimilated through beatitude. By contrast, as regards those things that pertain to the active life, even the other animals in some sense have them in common with man, albeit imperfectly. And so the ultimate and perfect beatitude which we wait for in the future life consists as a whole in contemplation. By contrast, as *Ethics* 9 says, the sort of imperfect beatitude that can be had in this life (*qualis hic haberi potest*) consists first and principally in contemplation, but secondarily in the operation of the practical intellect, which orders human actions and passions.

**Reply to objection 1:** The proposed similarity of the practical intellect to God is a proportional likeness (*secundum proportionalitatem*); that is, the practical intellect is related to what it has cognition of (*ad suum cognitum*) in the way that God is related to what He has cognition of (*ad suum*). By contrast, the speculative intellect’s assimilation to God is through its being united to and informed by [Him] (*secundum unionem et informationem*)—which is a much greater similarity (cf. ST 1, q. 12, a. 5).

Still, one could also reply that with respect to the principal thing that He knows, viz., His own essence, God has only speculative cognition and not practical cognition.

**Reply to objection 2:** The practical intellect is ordered toward a good outside of itself, whereas the speculative intellect has its own good within itself, viz., the act of contemplating the truth. And if this good is perfect, then the whole man is perfected and made good by it. The practical intellect does not have this good, but instead orders things toward it.

**Reply to objection 3:** This argument would go through if a man himself were his own ultimate end, since in that case his beatitude would consist in his thinking about and ordering his actions and passions. But since man’s ultimate end is in fact an extrinsic good, viz., God, whom we attain through an operation of the speculative intellect, it follows that beatitude consists in an operation of the speculative intellect rather than in an operation of the practical intellect.

## Article 6

### Does man’s beatitude consist in the sort of thinking that belongs to the speculative sciences?

It seems that man’s beatitude consists in the sort of thinking that belongs to the speculative sciences (*in consideratione scientiarum speculativarum*):

**Objection 1:** In the *Ethics* the Philosopher says that happiness (*felicitas*) is an operation in accord with perfect virtue. And in distinguishing the virtues, he posits just three speculative virtues, viz., scientific knowledge (*scientia*), wisdom (*sapientia*), and understanding [of principles] (*intellectus*), all of which have to do with the sort of thinking that belongs to the speculative sciences. Therefore, man’s ultimate beatitude consists in the sort of thinking that belongs to the speculative sciences.

**Objection 2:** Ultimate human beatitude seems to be what is naturally desired for its own sake by everyone. But the sort of thinking that belongs to the speculative sciences is like this; for *Metaphysics* 1 says, “All men by nature desire to know,” and a little later it adds that the speculative sciences are sought

for their own sake. Therefore, beatitude consists in the sort of thinking that belongs to the speculative sciences.

**Objection 3:** Beatitude is ultimate human perfection, and each thing is perfected by being brought from potentiality to actuality. But the human intellect is brought to actuality by the sort of thinking that belongs to the speculative sciences. Therefore, it seems that man's ultimate beatitude consists in thinking of this sort.

**But contrary to this:** Jeremiah 9:23 says, "Let not the wise man glory in his wisdom," and it is speaking about the wisdom of the speculative sciences. Therefore, man's ultimate beatitude does not consist in the sort of thinking that belongs to these sciences.

**I respond:** As was explained above (a. 2), there are two types of human beatitude, the one *perfect* and the other *imperfect*. Perfect beatitude has to be thought of as attaining to the true nature of beatitude (*atingit ad veram beatitudinis rationem*), whereas imperfect beatitude has to be thought of as not attaining to the true nature of beatitude, but instead as participating in a certain particular likeness of beatitude—in the way that perfect prudence is found in man, who has reason with respect to his actions, whereas imperfect prudence exists in some brute animals in whom there are particular instincts for certain actions that are similar to acts of prudence.

Perfect beatitude cannot consist essentially in the sort of thinking that belongs to the speculative sciences. To see this clearly, note that the sort of thinking that belongs to a speculative science does not extend beyond the strength of that science's principles, since the whole of a science is virtually contained in the principles of that science. Now as is clear from the Philosopher at the beginning of the *Metaphysics* and at the end of the *Posterior Analytics*, the first principles of the speculative sciences are received through the sensory power. Hence, the sort of thinking that belongs to the speculative sciences cannot as a whole extend further than the cognition of sensible things can lead one. But man's ultimate beatitude, which is his ultimate perfection, cannot consist in the cognition of sensible things. For nothing is perfected by something lower than itself unless the lower thing has some participation in a higher thing. But it is clear that the form of a rock—or the form of any sensible thing—is lower than a man. Hence, the human intellect is perfected by the form of a rock not insofar as it is a form of that sort, but rather insofar as it participates in some likeness of what is above the human intellect, viz., the intelligible light or something of that sort. But whatever exists through another (*per aliud*) is traced back to something that exists in its own right (*per se*); hence, man's ultimate perfection must come through the cognition of something that lies beyond the human intellect. But it has been shown (*ST* 1, q. 88, a. 2) that one cannot arrive at the cognition of separated substances, which lie beyond the human intellect, through sensible things. Hence, it follows that man's ultimate beatitude cannot lie in the sort of thinking that belongs to the speculative sciences.

However, just as sensible forms have a participated likeness to higher substances, so the sort of thinking that belongs to the speculative sciences is a certain participation in true and perfect beatitude.

**Reply to objection 1:** As was explained above (a. 2), in the *Ethics* the Philosopher is talking about the sort of imperfect happiness (*de felicitate imperfecta*) that can be had in this life.

**Reply to objection 2:** What is desired naturally is not just perfect beatitude, but also any sort of likeness of it or participation in it.

**Reply to objection 3:** Through the sort of thinking that belongs to the speculative sciences our intellect is brought in some sense to actuality, but not to its ultimate and complete actuality.

## Article 7

### Does man's beatitude consist in the cognition of the separated substances, i.e., the angels?

It seems that man's beatitude consists in the cognition of the separated substances, i.e., angels:

**Objection 1:** In a homily Gregory says, "It does not at all avail us to take part in the feasts of men, if we fail to take part in the feasts of the angels"—by which he means final beatitude. But we can take part in the feasts of the angels by contemplating them. Therefore, it seems that man's ultimate beatitude consists in contemplating the angels.

**Objection 2:** Each thing's ultimate perfection lies in its being joined to its source (*coniungatur suo principio*); thus, the circle is said to be a perfect figure because its source is the same as its end. But as Dionysius says in *De Caelesti Hierarchia*, chap. 4, the source of human cognition is from the angels themselves, by whom men are illuminated. Therefore, the perfection of the human intellect lies in contemplating the angels.

**Objection 3:** Each nature is perfected when it is joined to a higher nature; for instance, a body's ultimate perfection is to be joined to a spiritual nature. But in the order of nature the angels are higher than the human intellect. Therefore, the ultimate perfection of the human intellect is to be joined to the angels themselves by means of contemplation.

**But contrary to this:** Jeremiah 9:24 says, "But let him who glories glory in this, that he understands and knows me." Therefore, man's ultimate glory or beatitude consists only in the cognition of God.

**I respond:** As has been explained (a. 6), man's perfect beatitude does not consist in the perfecting of his intellect through any sort of participation; rather, it lies in what is such-and-such through its essence (*est per essentiam tale*). But it is clear that to the extent that any given thing constitutes the perfection of a power, it is such that the concept of that power's proper object applies to it. But the proper object of the intellect is the true. Therefore, whatever has participated truth does not, when contemplated, make the intellect perfect with its ultimate perfection.

Now since, as *Metaphysics 2* says, entities have the same relation to *esse* that they have to truth, anything that is a being by participation is true by participation. But angels have participated being (*esse participatum*), since, as was shown in the First Part (*ST 1*, q. 44, a. 1), it is only in the case of God that His *esse* is His essence. Hence, it follows that God alone is truth through His essence, and that God alone is such that contemplating Him makes one perfectly blessed.

On the other hand, nothing prevents a sort of imperfect beatitude from accompanying the contemplation of the angels; and this is a beatitude even higher than that found in the sort of thinking that belongs to the speculative sciences.

**Reply to objection 1:** We "take part in the feasts of the angels" by contemplating not only the angels but God along with them.

**Reply to objection 2:** According to those who claim that human souls are created by the angels, it seems appropriate enough that man's beatitude should lie in contemplating the angels and in being joined in this way to his source. However, as was explained in the First Part (*ST 1*, q. 90, a. 3), this view is erroneous. Hence, man's ultimate perfection comes through his being joined to God, who is the first source (*principium*) both of the creation of the soul and of its illumination.

Now as was explained in the First Part (*ST 1*, q. 111, a. 2), an angel does illuminate as a minister. Hence, by his ministry an angel helps a man to reach beatitude, but he is not the object of human beatitude.

**Reply to objection 3:** There are two possible ways to understand what it is for a higher nature to be reached (*atingi*) by a lower nature.

The first sense has to do with reaching the level of a participated power, and in this sense a man's

ultimate perfection will lie in the man's reaching the point of contemplating in the way that the angels contemplate.

The second sense has to do with a power's reaching its object, and in this sense the ultimate perfection of any power is to reach the thing in which the nature of the power's object is fully realized (*in quo plene invenitur ratio sui obiecti*).

## Article 8

### Does man's beatitude lie in his seeing God's very essence?

It seems that man's beatitude does not lie in his seeing God's very essence (*in visione ipsius divinae essentiae*):

**Objection 1:** In *Mystica Theologia*, chap. 1, Dionysius says that through the highest possible understanding, man is joined to God as to something altogether unknown. But what is seen through its essence is not altogether unknown. Therefore, the ultimate perfection of the intellect, viz., beatitude, does not consist in God's being seen through His essence.

**Objection 2:** To a higher nature belongs a higher perfection. But to see His own essence is a perfection peculiar to God's intellect (*perfectio divini intellectus propria*). Therefore, the human intellect's highest perfection does not reach this point, but stops somewhere short of it (*sed infra subsistit*).

**But contrary to this:** 1 John 3:2 says, "When He appears, we shall be like Him, and we shall see Him as He is."

**I respond:** There cannot be ultimate and perfect beatitude except in seeing God's essence. To see this clearly, there are two points that must be taken into account: the first is that a man is not perfectly happy as long as something remains to be desired and sought after; the second is that the perfection of any given power is in accord with the nature of its object.

Now as *De Anima* 3 says, an intellect's object is the 'what-ness', i.e., the essence, of a thing (*quod quid est, idest essentia rei*). Hence, an intellect's perfection goes as far as does its cognition of the essence of a thing. Therefore, if some intellect has a cognition of the essence of some *effect* but cannot thereby have a cognition of that effect's *cause*—i.e., a cognition by which the cause's 'what-ness' might be known—then that intellect is not said to have attained to the cause absolutely speaking (*non dicitur attingere ad causam simpliciter*), even though it is able, through the effect, to have a cognition of the cause's existence (*cognoscere possit de causa an sit*). And so when a man has a cognition of an effect and knows that it has a cause, there remains in him by nature a desire to know the 'what-ness' of the cause as well. And as the beginning of the *Metaphysics* says, this desire has its source in wonder (*illud desiderium est admirationis*) and leads to inquiry. For instance, if someone has a cognition of an eclipse of the sun, he realizes that it proceeds from some cause, which he wonders about because he does not know what it is, and in his wonder he makes an inquiry. And this inquiry is not put to rest until he arrives at a cognition of the essence of the cause.

Therefore, if the human intellect, knowing the essence of some created effect, knows of God only that He exists, then the intellect's perfection has not yet, absolutely speaking, reached the first cause; instead, there still remains in it a natural desire to make an inquiry into that cause. Hence, that intellect is not yet perfectly blessed.

Therefore, what is required for perfect beatitude is that the intellect should reach the very essence of the first cause. And so it will have its perfection by being united to God as its object, and, as was explained above (q. 2, a. 8), this alone is what man's beatitude consists in.

**Reply to objection 1:** Dionysius is talking about the cognition had by those who are still in this

life (*qui sunt in via*) and tending toward beatitude.

**Reply to objection 2:** As was explained above (q. 1, a. 8), there are two possible senses of ‘end’.

One of them has to do with the very thing which is desired, and in this sense the end of the higher nature is the same as the end of the lower nature—and, indeed, of all things, as was said above.

The other sense has to do with attaining this thing, and in this sense the end of the higher nature is different from the end of the lower nature in light of their diverse relations to the sort of thing in question. In this sense, then, God’s beatitude in comprehending His own essence is higher than the beatitude of a man or an angel who sees God but does not comprehend Him (cf. q. 4, a. 3 and *ST* 1, q. 12, a. 7).

## QUESTION 4

### What is Required for Beatitude

Next we have to consider the things required for beatitude. And on this topic there are eight questions: (1) Is delight required for beatitude? (2) Is it the delighting or the seeing which is more central to beatitude? (3) Is comprehending required for beatitude? (4) Is rectitude of will required for beatitude? (5) Is the body required for man's beatitude? (6) Is the perfection of the body required for beatitude? (7) Are any exterior goods required for beatitude? (8) Is the company of friends required for beatitude?

#### Article 1

##### Is delight required for beatitude?

It seems that delight (*delectatio*) is not required for beatitude:

**Objection 1:** In *De Trinitate* 1 Augustine says, "The vision is faith's entire reward." But as is clear from the Philosopher in *Ethics* 1, it is beatitude that is the reward or payment for virtue. Therefore, nothing other than the vision alone is required for beatitude.

**Objection 2:** As the Philosopher says in *Ethics* 1, "Beatitude is a good that is sufficient by itself (*per se*)." But whatever stands in need of something else is not sufficient by itself. Therefore, since, as has been shown (q. 3, a. 8), the essence of beatitude consists in the act of seeing God, it seems that an act of delighting is not required for beatitude.

**Objection 3:** As *Ethics* 7 says, "The operation of happiness [read: beatitude] must be unimpeded." But as *Ethics* 6 says, delight impedes the intellect's action; for it undermines the judgment of prudence. Therefore, delight is not required for beatitude.

**But contrary to this:** In *Confessiones* 10 Augustine says that beatitude is "rejoicing in the truth (*gaudium de veritate*)."

**I respond:** There are four possible ways in which one thing is required for another:

In one way, it is required as a *precursor to* or *preparation for* (*praeambulum vel praeparatorium*) that thing, in the way that instruction (*disciplina*) is required for scientific knowledge.

In a second way, it is required in the sense that it *brings that thing to perfection* (*sicut perficiens aliquid*), in the way that a soul is required for a body's life.

In a third way, it is required as an *extrinsic aid*, in the way that friends are required for doing something.

In a fourth way, it is required as *something concomitant*, in the way that heat is said to be required for fire.

It is in this last way that delight is required for beatitude. For delight is caused by a desire's coming to rest in a good that has been attained. Hence, since beatitude is nothing other than the attaining of the highest good, beatitude cannot exist without a concomitant delight.

**Reply to objection 1:** By the very fact that a reward is given to someone, the will of the one who merits the reward comes to rest, and this is what it is to have delight. Thus, delight is included in the very notion of a reward's being given.

**Reply to objection 2:** The act of delighting is caused by the very act of seeing God. Therefore, he who sees God cannot 'stand in need' of delight.

**Reply to objection 3:** As *Ethics* 10 says, an act of delighting that is concomitant with an operation of the intellect strengthens that operation and does not impede it. For what we do with delight we do with more attentiveness and perseverance.

On the other hand, an extraneous act of delighting does impede the intellect's operation. It sometimes does this by distracting one's attention, since, as has been explained, we are more attentive to those things in which we take delight; and when we are intensely attentive to one thing, our attention is

necessarily withdrawn from anything else. But it also sometimes does this by contrariety, in the sense that a sensual delight that is contrary to reason impedes the judgment of prudence more than the judgment of the speculative intellect.

## Article 2

### Is the act of delighting more central to beatitude than the act of seeing?

It seems that the act of delighting (*delectatio*) is more central (*principalius*) to beatitude than the act of seeing (*visio*):

**Objection 1:** *Ethics* 10 says, “Delight is the perfection of an operation.” But the perfection is better than that which is perfected. Therefore, the act of delighting is more central (*potior*) than the intellect’s operation, i.e., the act of seeing.

**Objection 2:** What is more central (*potius*) is that for the sake of which something is desirable. But operations are desired for the sake of the delight they bring (*propter delectationem ipsarum*); hence, nature attaches delight to the operations necessary for conserving the individual and the species, so that these operations will not be neglected by animals. Therefore, in the case of beatitude the act of delighting is more central than the intellect’s operation, i.e., the act of seeing.

**Objection 3:** The act of seeing corresponds to faith, whereas the act of delighting (*delectatio*), i.e., the act of enjoying (*fruitio*), corresponds to charity. But as the Apostle says in 1 Corinthians 13:13, charity is greater than faith. Therefore, the act of delighting, i.e., the act of enjoying, is more central than the act of seeing.

**But contrary to this:** A cause is more central than its effect. But the act of seeing is a cause of the act of delighting. Therefore, the act of seeing is more central than the act of delighting.

**I respond:** The Philosopher poses this problem in *Ethics* 10 and leaves it unresolved.

However, if one considers the matter carefully, it must necessarily be the case that the intellect’s operation, which is the act of seeing, is more central than the act of delighting. For the act of delighting consists in the will’s coming to rest in a certain way (*consistit in quadam quietatione voluntatis*). But the will comes to rest in something only because of the goodness of the thing in which it comes to rest. Therefore, if the will comes to rest in some operation, then the will’s coming to rest proceeds from the operation’s goodness. But it is not the case that the will seeks the good for the sake of coming to rest; for if that were so, then the act of will itself would be the end—which is contrary to what was premised. Rather, the reason why it seeks to come to rest in the operation is that the operation is its good. Hence, it is clear that the very operation that the will comes to rest in is a more central good than is the will’s coming to rest therein.

**Reply to objection 1:** As the Philosopher says in the same place, “Delight perfects the operation in the way that comeliness perfects youth,” i.e., it follows upon youth. Hence, delight is a perfection that is concomitant with the act of seeing, and it is not a perfection in the sense that it makes the act of seeing to be perfect within its own species.

**Reply to objection 2:** Sentient apprehension does not attain to the general notion of the good; instead, it attains to some particular good that is pleasurable. And so in the case of the sentient appetite that exists in animals, operations are sought for the sake of pleasure (*propter delectationem*).

By contrast, the intellect apprehends the universal notion of the good, whose attainment is followed by delight. Hence, the intellect intends the good more centrally than the delight. And hence it is that God’s intellect, which instituted nature, attached the delights for the sake of the operations.

Now a thing should not be judged simply in accord with the order of the sentient appetite; instead, it should be judged in accord with the order of the intellectual appetite.

**Reply to objection 3:** Charity does not seek the good it loves for the sake of delight; instead, its taking delight in an acquired good that it loves is consequent to it. And so it is not the act of delighting that is related to charity as an end, but instead the act of seeing, through which the end first becomes present to it.

### Article 3

#### Is comprehending required for beatitude?

It seems that comprehending is not required for beatitude:

**Objection 1:** In *Ad Paulinum De Vivendo Deum* Augustine says, “To attain to God with the mind is great beatitude, but to comprehend Him is impossible.” Therefore, there is beatitude without comprehending.

**Objection 2:** Beatitude is a man’s perfection with respect to the intellective part [of his soul], in which, as was explained in the First Part (*ST* 1, qq. 79ff.), there are no powers other than the intellect and the will. But the intellect is sufficiently perfected by the act of seeing God (*per visionem Dei*), whereas the will is sufficiently perfected by the act of delighting in Him (*per delectationem in ipso*). Therefore, it is not the case that an act of comprehending is required as some sort of third thing.

**Objection 3:** Beatitude consists in an operation. But operations are specified by their objects. Now there are two general objects, viz., the true and the good, with the true corresponding to the act of seeing and the good corresponding to the act of delighting. Therefore, it is not the case that an act of comprehending is required as, so to speak, a third thing.

**But contrary to this:** In 1 Corinthians 9:24 the Apostle says, “Run in such a way as to comprehend (*ut comprehendatis*).” But spiritual running terminates in beatitude, as he himself says at the end of 2 Timothy (“I have fought the good fight, I have finished the course, I have kept the faith; as to the rest, there is laid up for me a crown of justice”). Therefore, comprehending is required for beatitude.

**I respond:** Since beatitude consists in attaining the ultimate end, what is required for beatitude has to be taken from man’s very ordering toward his end.

Now man is ordered toward his intelligible end partly through his intellect and partly through his will: through his *intellect*, insofar as there exists in the intellect beforehand an *imperfect cognition* of the end; and through his *will*, first through *love* (*per amorem*), which is the first mover of the will toward something, and, second, through a real relation of the lover to what is loved. There can be three such relations: (a) sometimes what is loved is present to the lover, and in that case what is loved is no longer sought after; (b) sometimes what is loved is not present but is impossible to attain, and in that case it is likewise not sought after; and (c) sometimes what is loved is possible to attain, but it is elevated beyond the ability of the one who seeks it (*est elevatum supra facultatem adipiscentis*), so that it cannot be had immediately—and this is the relation of *the one who hopes to what he hopes for*, which is the only relation that induces the seeking of the end (*sola habitudo facit finis inquisitionem*).

Now there are certain elements in beatitude itself answering to the three things just noted. For the *perfect cognition* of the end answers to the *imperfect cognition*; the *presence of the end itself* answers to the *relation of hope*; and, as was explained above (a. 2), the *act of delighting* in the already present end follows upon the *love* (*consequitur dilectionem*).

And so for beatitude it is necessary for these three things to come together, viz., *the act of seeing* (*visio*), which is the perfect cognition of the intelligible end; *comprehending* (*comprehensio*), which implies the presence of the end; and the act of *delighting* or *enjoying* (*delectatio vel fructio*), which implies the lover’s coming to rest in what is loved.

**Reply to objection 1:** There are two senses of ‘comprehending’:

The first sense is the inclusion of what is comprehended in that which comprehends it, and in this sense whatever is comprehended by something finite is itself finite. Hence, in this sense God cannot be comprehended by any created intellect.

In the second sense ‘comprehending’ names nothing other than embracing a thing that is now had with its presence (*tentionem alicuius rei iam praesentialiter habitae*), as when someone who attains a thing is said to comprehend it when he is embracing it. And it is in this sense that comprehending is required for beatitude.

**Reply to objection 2:** Just as hope and love involve the will because the same will loves something and tends toward it when it is not had, so too comprehending and delighting involve the will because the same will possesses something and comes to rest in it.

**Reply to objection 3:** The comprehending is not an operation in addition to the seeing, but is instead a certain relation to the end once it is had. Hence, the very act of seeing, or the thing seen insofar as it is there with its presence, is the object of the comprehending.

#### Article 4

##### Is rectitude of will required for beatitude?

It seems that rectitude of will is not required for beatitude:

**Objection 1:** As has been explained (q. 3, a. 4), beatitude consists essentially in an operation of the intellect. But rectitude of will, through which men are called ‘clean’, is not required for the perfect operation of the intellect; for in *Recontrationes* Augustine says, “I do not approve of what I said in the prayer, ‘God, who does not will any but the clean to know the truth ...’. For it can be replied that many who are not clean also know many truths.” Therefore, rectitude of will is not required for beatitude.

**Objection 2:** What is prior does not depend on what is posterior to it. But the intellect’s operation is prior to the will’s operation. Therefore, beatitude, which is the perfect operation of the intellect, does not depend on rectitude of will.

**Objection 3:** What is ordered toward something as toward an end is not necessary once the end has been attained, e.g., a ship after it has arrived at the port. But rectitude of will, which exists through virtue, is ordered toward beatitude as toward an end. Therefore, once beatitude has been attained, rectitude of will is unnecessary.

**But contrary to this:** Matthew 5:8 says, “Blessed are the clean of heart, for they shall see God.” And Hebrews 12:14 says, “Follow peace with all men, and holiness, without which no man shall see God.”

**I respond:** Rectitude of will is required for beatitude both as something antecedent to it and as something concomitant with it (*et antecedenter et concomitanter*).

Rectitude of will is required as *something antecedent* because it exists through an appropriate ordering toward the ultimate end. But the end is related to what is ordered toward the end in the way that form is related to matter. Hence, just as matter cannot attain to a form unless it is disposed in the right way for that form, so nothing attains an end unless it is ordered in the right way toward that end. And so no one can arrive at beatitude unless he has rectitude of will.

Rectitude of will is required as *something concomitant* because, as has been explained (q.3, a. 8), ultimate beatitude consists in seeing God’s essence, which is the very essence of goodness. And so the will of the one who is seeing God’s essence must love whatever he loves in relation to God (*sub ordine ad Deum*), just as the will of someone who is not seeing God must love whatever he loves in relation to the general notion he has of the good (*sub communi ratione boni quam novit*). And it is this very thing that gives the will rectitude (*quod facit voluntatem rectam*). Hence, it is clear that beatitude cannot exist

without a rectified will (*sine recta voluntate*).

**Reply to objection 1:** Augustine is talking about the cognition of a truth that is not the very essence of goodness.

**Reply to objection 2:** Every act of the will is preceded by some act of the intellect, and yet some acts of the will are prior to some acts of the intellect. For the will tends toward the final act of the intellect, which is beatitude. And so the right sort of inclination of the will is a prerequisite for beatitude in the way that the right sort of movement on the part of an arrow is a prerequisite for its striking the target.

**Reply to objection 3:** Not everything that is ordered toward an end ceases when the end is attained; rather, all that ceases is that which, like a movement, involves a notion of imperfection. Hence, the instruments of a movement are not necessary after it arrives at its end, but the right sort of ordering toward the end is necessary.

## Article 5

### Is the body required for beatitude?

It seems that the body is required for beatitude [or being blessed]:

**Objection 1:** The perfection of virtue and of grace presuppose the perfection of nature. But beatitude is the perfection of virtue and of grace. Now the soul without the body does not have the perfection of nature, since the body is by nature a part of a human nature, and every part is imperfect when separated from its whole. Therefore, the soul cannot be blessed (*beata*) without the body.

**Objection 2:** As was explained above (q. 3, a. 2), beatitude is a certain operation. But a perfect operation follows upon perfect *esse*, since nothing operates except insofar as it is a being in actuality. Therefore, since the soul does not have perfect *esse* when it is separated from the body—just as no part at all is perfect when it is separated from its whole—it seems that the soul cannot be blessed without the body.

**Objection 3:** Beatitude is man's perfection. But the soul is not a man without the body. Therefore, beatitude cannot exist in the soul without the body.

**Objection 4:** According to the Philosopher in *Ethics* 7, the operation of happiness that beatitude consists in is unimpeded. But a separated soul's operation is impeded, since, as Augustine says in *Super Genesim ad Litteram* 12, "There is in the soul a certain desire to rule the body, and it is in a sense held back by this desire from moving with full force (*tota intentione*) toward the highest heaven," that is, toward seeing God's essence. Therefore, the soul cannot be blessed without the body.

**Objection 5:** Beatitude is a sufficient good and so puts desire to rest. But this good cannot belong to a separated soul, since, as Augustine says, it still desires to be united to the body. Therefore, a soul that is separated from its body cannot be blessed.

**Objection 6:** A man is equal in beatitude to the angels. But as Augustine says, the soul without the body is not equal to the angels. Therefore, the soul without the body is not blessed.

**But contrary to this:** Apocalypse 14:13 says, "Blessed are the dead who die in the Lord."

**I respond:** There are two sorts of beatitude: the one, which is had in this life, is imperfect, and the other, which consists in the act of seeing God, is perfect.

Now it is clear that for the sort of beatitude that belongs to this life the body is necessarily required. For the beatitude that belongs to this life is an operation of the intellect, either the speculative intellect or the practical intellect. But in this life the intellect's operation cannot exist without phantasms, which, as was established in the First Part (*ST* 1, q. 84, aa. 6-7), exist only in a corporeal organ. And so the beatitude that can be had in this life depends in some way on the body.

But as regards the perfect beatitude that consists in the act of seeing God, some have claimed that this beatitude cannot come to the soul when it exists without the body, and they assert that the souls of the saints, which are separated from their bodies, do not arrive at this beatitude until Judgment Day, when they regain their bodies.

But it is clear both from authority and from reason that this claim is false.

It is clear from authority because in 2 Corinthians 5:6 the Apostle says, “As long as we remain in the body, we are wandering away from the Lord.” And he shows the reason for this wandering when he adds, “For we walk by faith and not by sight (*per fidem et non per speciem*).” From this it is clear that as long as someone walks by faith and not by sight, lacking the vision of God’s essence, he is not yet present to God. By contrast, the souls of the saints, separated from their bodies, are present to God; this is why he adds, “But we are confident and have a good intention to wander away from the body and to be present to the Lord.” Hence, it is clear that the souls of the saints, separated from their bodies, walk by sight and see God’s essence, wherein lies true beatitude.

This same point is also clear from reason. For the intellect needs the body for its operation only because of the phantasms, in which it perceives intelligible truth; this was explained in the First Part (*ST* 1, q. 84, a. 7). But as was also explained in the First Part (*ST* 1, q. 12, a. 3), it is obvious that God’s essence cannot be seen through phantasms. Hence, since man’s perfect beatitude consists in seeing God’s essence, man’s perfect beatitude does not depend on the body. Thus, the soul can be blessed without the body.

But notice that there are two ways in which something pertains to a thing’s perfection. The first way is by constituting that thing’s *essence*, in the way that the soul is required for man’s perfection. In a second way, what is required for a thing’s perfection is what pertains to its *well-being* (*ad bene esse eius*), in the way that bodily attractiveness or quickness of wit pertains to a man’s perfection.

Therefore, even though the body is irrelevant to the perfection of human beatitude in the first way, it is nonetheless relevant in the second way. For since a thing’s operation depends on its nature, when the soul is more perfect in its own nature, it will to that extent have more perfectly the proper operation in which happiness (*felicitas*) consists. Hence, in *Super Genesim ad Litteram* 12, having asked “whether this highest beatitude can be bestowed on the spirits of the dead without their bodies,” Augustine replies, “They cannot see the incommutable substance in the way that the holy angels do, either for some other more hidden reason or because they have a natural desire to rule their bodies.”

**Reply to objection 1:** Beatitude is the perfection of the soul on the part of its intellect, with respect to which the soul transcends the body’s organs, whereas beatitude is not the perfection of the soul insofar as the soul is the natural form of the body. And so the first sort of perfection of nature, in accord with which beatitude befits the soul, remains—even though the sort of perfection of nature it has insofar as it is the form of the body does not remain.

**Reply to objection 2:** The soul is related to its *esse* in a way different from the way in which other parts are related to their *esse*.

For the *esse* of a whole does not belong to any of its parts; hence, when a whole is destroyed, either (a) the parts cease to exist altogether, in the way that the parts of an animal cease to exist when the animal is destroyed, or (b) if the parts remain, then they have a different *esse* in actuality, in the way that a part of a line has an *esse* different from that of the line as a whole.

By contrast, the *esse* of the composite remains with the human soul after the destruction of the body—and this because the *esse* of the form is the same as the *esse* of the matter, and this *esse* is the *esse* of the composite. But as was shown in the First Part (*ST* 1, q. 75, a. 2), the soul subsists in its own *esse*. Hence, it follows that after its separation from the body it still has its complete (*perfectum*) *esse* and so it can have its perfect operation—even though it does not have the complete nature of the species (*licet non habeat perfectam naturam speciei*).

**Reply to objection 3:** Man’s beatitude has to do with the intellect, and so as long as the intellect

remains, beatitude can exist within it. Similarly, an Ethiopian's teeth, with respect to which the Ethiopian is said to be white, can be white even after they have been extracted.

**Reply to objection 4:** There are two ways in which one thing is impeded by another.

The first way is by *contrariety*, in the way that coldness impedes the action of heat, and this sort of impediment to an operation is incompatible with happiness.

The second way is in the manner of a *shortage* (*per modum cuiusdam defectus*), viz., when the impeded thing does not have everything that is required for its complete perfection (*ad omnimodam sui perfectionem*). This sort of impediment to an operation is not incompatible with happiness, though it is incompatible with its complete perfection. This is the sense in which being separated from the body is said to hold the soul back "from moving with full force" toward seeing God's essence. For the soul desires to enjoy God in such a way that the enjoyment itself, as is possible, also overflows into the body (*dirivetur ad corpus per redundantiam*). And so as long as the soul itself enjoys God in the absence of the body, its desire is put to rest in what it has, yet in such a way that it nonetheless still wants its own body to participate in it.

**Reply to objection 5:** The separated soul's desire is completely put to rest as regards what is desired, since it has that which suffices for its own desire. But it is not totally at rest as regards the one who has the desire, since it does not possess the relevant good in every way in which it wants to possess it. And so, when it regains its body, beatitude increases in its extent, though not in its intensity (*beatitudo crescit non intensive sed extensive*).

**Reply to objection 6:** What he says in that place, viz., that "the spirits of the dead do not see God in the way that the angels do," should not be taken to imply a *quantitative* inequality (*non est intelligendum secundum inaequalitatem quantitatis*), since even now some of the souls of the blessed have been assumed into the higher orders of angels and see God more clearly than the lower angels do (cf. *ST* 1, q. 108, a. 8). Rather, it implies a *proportional* inequality (*secundum inaequalitatem proportionis*), since the angels, even the lowest ones, have the entire perfection of beatitude that they are ever going to have, whereas this is not the case with the separated souls of the saints.

## Article 6

### Is the perfection of the body required for beatitude?

It seems that the perfection of the body is not required for man's perfect beatitude:

**Objection 1:** The perfection of the body is a certain corporeal good. But it was shown above (q. 2) that beatitude does not lie in corporeal goods. Therefore, it is not the case that some perfect disposition on the part of the body is required for man's beatitude.

**Objection 2:** As has been shown (q. 3, a. 8), man's beatitude consists in the act of seeing God's essence. But as has been explained (a. 5), the body does not contribute anything to this operation. Therefore, there is no sort of disposition on the part of the body that is required for beatitude.

**Objection 3:** The more abstracted the intellect is from the body, the more perfectly it understands. But beatitude consists in the most perfect possible operation of the intellect. Therefore, the soul has to be abstracted from the body in every way. Therefore, there is no sort of disposition on the part of the body that is in any sense required for beatitude.

**But contrary to this:** Beatitude is the reward for virtue; hence John 13:17 says, "You shall be blessed if you do these things." But what is promised to the saints as a reward is not just seeing God and delighting in Him, but also a certain good disposition on the part of the body. For the last chapter of Isaiah, verse 14, says, "You will see, and your heart will rejoice, and your bones will flourish like an herb." Therefore, a good disposition on the part of the body is required for beatitude.

**I respond:** If we are talking about the sort of human beatitude that can be had in this life, then it is clear that a good disposition on the part of the body is necessarily required for it. For according to the Philosopher, this sort of beatitude consists in the operation of perfect virtue. But it is obvious that a man can be impeded in every sort of virtuous operation by bodily infirmities (*per invaletudinem corporis*).

On the other hand, if we are talking about perfect beatitude, some have claimed that no particular disposition of the body is required for beatitude; in fact, they have claimed that what is required for beatitude is that the soul should be altogether separated from the body. Hence, in *De Civitate Dei* 22 Augustine quotes Porphyry as saying that “in order for the soul to be blessed, it must flee from all bodies.”

But this is wrong. For since it is natural for the soul to be united to its body, it cannot be the case that the soul’s perfection excludes the body’s natural perfection.

And so one should reply that for beatitude that is perfect in every way, a perfect disposition on the part of the body is required both as an antecedent and as a consequence.

It is required as an *antecedent* because, as Augustine says in *Super Genesim ad Litteram* 12, “If the body is such that it is difficult and burdensome to rule—e.g., flesh that is corrupting and burdening the soul—then the mind is turned away from the vision that belongs to the highest heaven.” Hence, he concludes that since the body will be a spiritual body and no longer an animal body, a man will at that point be equal to the angels, and what was a burden to him will be to his glory.

On the other hand, it is required as a *consequence* because there will be an overflow of the soul’s beatitude into the body, so that the body itself will have its own perfection. Hence, in the letter *Ad Dioscorum* Augustine says, “God made the soul with such a potent nature that the vigor of incorruption overflows from its fullness of beatitude into the lower nature.”

**Reply to objection 1:** Beatitude does not lie in a corporeal good in the sense that such a good is the object of beatitude. But a corporeal good can make for a certain embellishment and perfection of beatitude.

**Reply to objection 2:** Even if the body does not contribute anything to the operation of the intellect by which God’s essence is seen, it could nonetheless impede that operation. And so the body’s perfection is required in order that it not impede the mind from being elevated.

**Reply to objection 3:** What is required for a perfect operation on the part of the intellect is an abstraction from this corruptible body, which burdens the soul, but not from the spiritual body, which will be totally subject to the spirit. This will be discussed in the Third Part of this work.

## Article 7

### Are exterior goods required for beatitude?

It seems that even exterior goods are required for beatitude:

**Objection 1:** What is promised to the saints as a reward is relevant to beatitude. But the saints are promised exterior goods such as food and drink, riches and a kingdom (*regnum*); for Luke 22:30 says, “... that you may eat and drink at my table in my kingdom,” and Matthew 6:20 says, “Lay up treasures for yourselves in heaven,” and Matthew 25:34 says, “Come, blessed of my Father, possess the kingdom.” Therefore, exterior goods are required for beatitude.

**Objection 2:** According to Boethius in *De Consolatione Philosophiae* 3, beatitude is “a state made perfect by the aggregation of all goods.” But as Augustine says, exterior goods are human goods, even if they are the least among them. Therefore, even they are required for beatitude.

**Objection 3:** Matthew 5:12 says, “Your reward is great in heaven.” But ‘to be in heaven’ signifies being in a place. Therefore, at least an exterior place is required for beatitude.

**But contrary to this:** Psalm 72:25 says, “For what have I in heaven? And, besides You, what do I desire upon earth?”—as if to say, I desire nothing other than what follows [in verse 28]: “It is good for me to adhere to God.” Therefore, no other exterior thing is required for beatitude.

**I respond:** For the sort of imperfect beatitude that can be had in this life exterior goods are required, not in the sense that they are part of the essence of beatitude, but in the sense that they are instruments serving beatitude, which, as *Ethics* 1 says, consists in the operation of virtue. For in this life a man needs bodily necessities both for the operation of contemplative virtue and for the operation of active virtue. For the latter, many other things are required as well, by means of which a man might perform the works of active virtue.

However, goods of this sort are not required in any way for the perfect beatitude that consists in seeing God. The reason for this is that all exterior goods of the sort in question are either required for sustaining the animal body, or else they are required for certain operations which we carry out by means of the animal body and which are appropriate for human life. By contrast, the perfect beatitude that consists in seeing God will exist either in a soul without a body or else in a soul united to a body that is spiritual and no longer animal. And so exterior goods of the sort in question are not required in any way for this sort of beatitude, since such goods are ordered toward animal life.

Moreover, as is clear from what has been said (q. 3, a. 5), in this life it is contemplative happiness, rather than active happiness, that comes closer to a likeness of perfect beatitude, given that it is more similar to God. This is why, as *Ethics* 10 says, contemplative happiness stands in less need of bodily goods of this sort.

**Reply to objection 1:** All these corporeal promises that are contained in Sacred Scripture are to be understood metaphorically, since in the Scriptures spiritual things are usually designated through corporeal things, so that, as Gregory puts it in one of his homilies, “from the things we know, we rise up to desire what is unknown.” For instance, ‘food’ and ‘drink’ stand for the delight of beatitude, ‘riches’ stands for the sufficiency by which God will suffice for man, and ‘kingdom’ stands for a man’s being lifted up to union with God.

**Reply to objection 2:** The goods in question, which serve animal life, do not belong to the spiritual life in which perfect beatitude consists. And yet within that beatitude there will be a collection of all goods, since whatever good is found in those things is such that all of it will be had in the source of all goods.

**Reply to objection 3:** According to Augustine in *De Sermone Domini in Monte*, it is not being asserted that the reward of the saints exists in the corporeal heavens; rather, ‘heaven’ means the height of spiritual goods.

Still, a corporeal place, viz., the empyrean heaven, will be present to the blessed, not because beatitude demands it, but in keeping with a certain fittingness and suitability.

## Article 8

### Are friends necessary for beatitude?

It seems that friends are necessary for beatitude:

**Objection 1:** In the Scriptures our future beatitude is often designated by the name ‘glory’. But glory consists in a man’s good being brought to the attention of many. Therefore, the company of friends (*societas amicorum*) is required for beatitude.

**Objection 2:** Boethius says, “There is no good such that it is delightful (*iucunda*) to possess it without company (*sine consortio*).” But delight (*delectatio*) is required for beatitude. Therefore, the company of friends is likewise required.

**Objection 3:** Charity is perfected in beatitude. But charity extends to loving God and neighbor. Therefore, it seems that the company of friends is required for beatitude.

**But contrary to this:** Wisdom 7:11 says, “All good things have come to me together with her,” i.e., together with divine wisdom, which consists in contemplating God. And so nothing else is required for beatitude.

**I respond:** If we are talking about the happiness (*felicitas*) that belongs to the present life, then, as the Philosopher says in *Ethics* 9, the happy man needs friends—not, to be sure, for the sake of their usefulness, since he is self-sufficient (*sibi sufficiens*); nor for the sake of pleasure, since he has within himself perfect delight in the operation of virtue; but instead for the sake of good action, so that, namely, he might do good to them, delight in seeing them do good, and be aided by them in doing good. For a man needs the assistance of friends in order to do well, both in the works of the active life and in the works of the contemplative life.

On the other hand, if we are talking about the perfect beatitude that will exist in heaven (*in patria*), then the company of friends is not necessarily required for beatitude, since a man has the entire fullness of his perfection in God.

However, the company of friends does make for the well-being of beatitude. Hence, in *Super Genesim ad Litteram* 8 Augustine says, “In order to be blessed, spiritual creatures are aided intrinsically only by the creator’s eternity, truth, and charity. However, extrinsically—if they should be said to be aided—they are perhaps aided by just one thing, viz., by seeing one another and rejoicing over their fellowship in God.”

**Reply to objection 1:** The glory that is essential to beatitude is that which a man has in the eyes of God and not in the eyes of men.

**Reply to objection 2:** This passage applies when what one has in the relevant good is not fully sufficient. But this cannot be said in the case under discussion, since in God a man has enough of every good.

**Reply to objection 3:** The perfection of charity is essential to beatitude with respect to loving God, but not with respect to loving one’s neighbor. Hence, if there were just one soul enjoying God, then he would be blessed even without having a neighbor to love.

However, if one assumes that a neighbor is present, then love of that neighbor follows from loving God perfectly. Hence, friendship is related concomitantly, as it were, to perfect beatitude.

## QUESTION 5

### The Attainment of Beatitude

Next we have to consider the attainment itself of beatitude. And on this topic there are eight questions: (1) Can a man attain beatitude? (2) Can one man be more blessed than another? (3) Can a man have beatitude in this life? (4) Can beatitude once had be lost? (5) Can a man acquire beatitude by means of his natural powers? (6) Can a man attain beatitude through the action of some higher creature? (7) Are some works required of a man in order for the man to obtain beatitude from God? (8) Does every man desire beatitude?

#### Article 1

##### Can a man acquire beatitude?

It seems that a man cannot acquire beatitude:

**Objection 1:** As is clear from Dionysius in many places in *De Divinis Nominibus*, just as a rational nature is higher than a sentient nature, so an intellectual nature is higher than a rational nature. But brute animals, which have only a sentient nature, cannot arrive at a rational nature's end. Therefore, neither can man, who has a rational nature, arrive at an intellectual nature's end, i.e., beatitude.

**Objection 2:** Genuine beatitude consists in seeing God, who is pure truth. But it is connatural to a man to see truth in material things; hence, as *De Anima* 3 says, "He understands intelligible species in phantasms." Therefore, man cannot arrive at beatitude.

**Objection 3:** Beatitude consists in acquiring the highest good. But one cannot arrive at the highest point without passing through the middle. Therefore, since in the middle between God and human nature there is angelic nature, which man cannot transcend, it seems that man cannot acquire beatitude.

**But contrary to this:** Psalm 93:12 says, "Blessed the man whom you shall instruct, O Lord."

**I respond:** 'Beatitude' names the acquisition of the perfect good. Therefore, whoever has a capacity for the perfect good (*est capax perfecti boni*) can arrive at beatitude. But it is clear that a man has a capacity for the perfect good, since it is the case both that his intellect is able to apprehend a universal and perfect good and that his will is able to desire that good. And so a man is able to acquire beatitude.

The same thing is also clear from the fact, established in the First Part (*ST* 1, q. 12, a. 1), that a man has the capacity to see God's essence, and we have explained (q. 3, a. 8) that this vision is what man's perfect beatitude consists in.

**Reply to objection 1:** A rational nature exceeds a sentient nature in a way different from that in which an intellectual nature exceeds a rational nature.

For a rational nature exceeds a sentient nature with respect to *the object of cognition*, since there is no way in which a sensory power can have a cognition of a universal, which is what reason has cognition of.

By contrast, an intellectual nature exceeds a rational nature with respect to *the way it has a cognition* of the very same intelligible truth; for as is clear from what was said in the First Part (*ST* 1, q. 58, a. 3 and q. 79, a. 8), an intellectual nature apprehends immediately the truth which a rational nature attains to [only] through reason's inquiry. And so it is through a certain movement that reason attains to what the intellect apprehends. Hence, a rational nature is able to attain beatitude, which is the perfection of an intellectual nature, but in a way different from that in which the angels attain it. For the angels attained to beatitude immediately after the beginning of their existence (*statim post principium suae conditionis*), whereas men arrive at beatitude over time (*per tempus*). By contrast, a sentient nature cannot attain this end in any way at all.

**Reply to objection 2:** The mode of knowing intelligible truth through phantasms is connatural to man within the state of the present life. But as was explained in the First Part (*ST* 1, q. 89), after the

present life, man has a different connatural mode of cognition.

**Reply to objection 3:** Man cannot transcend the angels in the level of his nature, i.e., so as to be naturally higher than they are. Nevertheless, he is able to transcend them through the operation of his intellect, when he understands that there is something beyond the angels which beatifies man and which is such that when a man perfectly attains it, he will be perfectly blessed.

## Article 2

### Can one man be more blessed than another?

It seems that one man cannot be more blessed than another:

**Objection 1:** As the Philosopher says in *Ethics* 1, beatitude is “the reward for virtue.” But an equal reward is given to everyone for the works of virtue. For Matthew 20:10 says that all who worked in the vineyard “received every man a denarius,” since, as Gregory puts it, “They obtained the equal payment of eternal life.” Therefore, one will not be more blessed than another.

**Objection 2:** Beatitude is the highest good. But there cannot be anything greater (*maius*) than what is highest. Therefore, any one man’s beatitude is such that there cannot be a beatitude greater than it.

**Objection 3:** Since beatitude is a perfect and sufficient good, it puts a man’s desire to rest. But a desire is not put to rest if there is some good lacking that could be supplied. But if there is nothing lacking that could be supplied, then there could not be any other good that is greater. Therefore, either the man is not blessed or, if he is blessed, then there cannot be another greater beatitude.

**But contrary to this:** John 14:2 says, “In my Father’s house there are many mansions”—by which, as Augustine puts it, “we are to understand different values of merit (*diversae meritorum dignitates*) in eternal life.” But the value of eternal life that is given for merits is beatitude itself. Therefore, there are different levels of beatitude and not an equal beatitude for everyone.

**I respond:** As was explained above (q. 1, a. 8 and q. 2, a. 7), there are two things included in the concept of beatitude, viz., (a) the ultimate end itself, which is the highest good, and (b) the acquisition or enjoyment of that good.

Thus, as regards the good itself that is the object and the cause of beatitude, one beatitude cannot be greater than another, since there is only one highest good, viz., God, who is such that men are blessed in enjoying Him.

However, as regards the acquisition or enjoyment of this good, one man can be more blessed than another, since one is more blessed to the extent that this good is enjoyed more. Now someone is able to enjoy God more perfectly than another by the fact that he is better disposed or ordered toward enjoying Him; accordingly, the one can be more blessed than the other.

**Reply to objection 1:** The sameness of the denarius (*unitas denarii*) signifies the oneness of beatitude on the part of the object. On the other hand, the diversity of the mansions signifies the diversity of beatitude in accord with the different levels of enjoyment.

**Reply to objection 2:** Beatitude is called the highest good insofar as it is the perfect possession of or enjoyment of the highest good.

**Reply to objection 3:** No one who is blessed is lacking in any good that is to be desired, since he has the infinite good itself, which, as Augustine puts it, is “the good of every good.” But someone is said to be more blessed than another because of the diverse ways of participating in that same good.

Moreover, the addition of other goods does not increase beatitude; hence, in *Confessiones* 5 Augustine says, “He who knows you and other things as well is not more blessed because of those other things, but is blessed because of you alone.”

### Article 3

#### Can beatitude be had in this life?

It seems that beatitude can be had in this life:

**Objection 1:** Psalm 118:1 says, “Blessed are the undefiled on the way (*immaculati in via*), who walk in the law of the Lord.” But this is something that happens in the present life. Therefore, someone can be blessed in this life.

**Objection 2:** An imperfect participation in the highest good does not rule out beatitude; otherwise, it would not be the case that one man can be more blessed than another. But in this life men are able to participate in the highest good by knowing and loving God, albeit imperfectly. Therefore, a man can be blessed in this life.

**Objection 3:** What is asserted by the many (*a pluribus*) cannot be totally false; for what occurs in most cases appears to be natural, and nature does not totally fail. But there are many who claim that there is beatitude in this life, as is clear from Psalm 143:15, “They have called the people blessed who have these things,” viz, the goods of the present life. Therefore, someone can be blessed in this life.

**But contrary to this:** Job 14:1 says, “Man born of woman, living a short time, is filled with many miseries.” But beatitude excludes misery. Therefore, a man cannot be blessed in this life.

**I respond:** A sort of participation in beatitude can be had in this life, but perfect and genuine beatitude cannot be had in this life.

There are two possible ways to think about this:

The first way is derived from *the general concept of beatitude*. For since beatitude is “a perfect and sufficient good,” it excludes every evil and fulfills every desire.

But in this life it is impossible for every evil to be excluded. For as Augustine diligently discusses in detail in *De Civitate Dei* 19, the present life is subject to many evils that cannot be avoided: ignorance on the part of the intellect, disordered affection on the part of the appetite, and numerous afflictions (*multiplicibus poenalitibus*) on the part of the body.

Similarly, in this life the desire for the good cannot be fully satisfied. For a man naturally desires that the good he possesses should be permanent. But the goods of the present life are transitory, since even life itself passes away, despite the fact that we naturally desire it and want it to endure forever; for man naturally recoils from death.

Therefore, it is impossible that genuine beatitude should be had in this life.

The second way considers *what beatitude consists in specifically*, viz., seeing God’s essence, which, as was shown in the First Part (*ST* 1, q. 12, a. 2), cannot come to a man in this life.

From these considerations it is clear that no one can acquire genuine and perfect beatitude in this life.

**Reply to objection 1:** Some are called blessed in this life either (a) because of their hope of attaining beatitude in a future life—this according to Romans 8:24 (“We are saved by hope”)—or (b) because of a participation in beatitude that comes from some sort of enjoyment of the highest good.

**Reply to objection 2:** There are two ways in which a participation in beatitude can be imperfect:

In one way, on the part of the *object of beatitude*, which is not seen with respect to its essence; and this sort of participation undermines the concept of genuine beatitude.

In the second way, the participation can be imperfect on the part of *the one participating*, who indeed attains the very object of beatitude in Himself, viz. God, but does so imperfectly in comparison with the mode in which God enjoys Himself. This sort of imperfection does not destroy the true concept of beatitude. For since, as was explained above (q. 3, a. 2), beatitude is a certain operation, the true concept of beatitude is taken from the object, which gives the act its species, and not from the subject.

**Reply to objection 3:** It is because of a likeness to genuine beatitude that men think there is some sort of beatitude in this life. And so they are not completely mistaken in thinking this.

#### Article 4

##### Can beatitude be lost?

It seems that beatitude can be lost:

**Objection 1:** Beatitude is a certain perfection. But every perfection exists in the perfectible thing in accord with the mode of that thing (*secundum modum ipsius*). Therefore, since man is mutable by his nature, it seems that beatitude is participated in by a man in a mutable way. And so it seems that a man can lose beatitude.

**Objection 2:** Beatitude consists in an action of the intellect, and the intellect is subject to the will. But the will is open to opposites (*se habet ad opposita*). Therefore, it seems that the will could desist from the operation by which a man is beatified, and in this way the man would cease to be blessed.

**Objection 3:** Corresponding to a beginning (*principium*) there is an ending (*finis*). But a man's beatitude has a beginning, since the man has not always been blessed. Therefore, it seems that his beatitude has an ending.

**But contrary to this:** Matthew 25:46 says of the just that "they shall go into life everlasting"—which, as has been explained (a. 2), is the beatitude of the saints. But what is eternal does not end (*non deficit*). Therefore, beatitude cannot be lost.

**I respond:** If we are talking about imperfect beatitude of the sort that can be had in this life, then in this sense beatitude can be lost.

This is obvious in the case of *contemplative* happiness, which is lost either (a) through forgetfulness, as when one's knowledge is corrupted by an illness, or (b) because of certain occupations by which someone is totally distracted from contemplation.

The same thing is also clear in the case of *active* happiness. For a man's will can change, so that he degenerates from virtue, in the operation of which happiness principally consists, into vice. On the other hand, even if virtue remains uncorrupted (*integra*), exterior changes can disturb this sort of beatitude insofar as they pose obstacles to many acts of the virtues. However, exterior changes cannot totally destroy this sort of beatitude, since the operation of a virtue still remains as long as a man withstands these adversities in a praiseworthy way.

Moreover, it is because the beatitude of this life can be lost—something which seems contrary to the concept of beatitude—that in *Ethics* 1 the Philosopher says that in this life some are blessed, not absolutely speaking, but "as men" whose nature is subject to change.

By contrast, if we are talking about the perfect beatitude which one looks forward to after this life, then notice that Origen, following the error of certain Platonists, claimed that a man can become unhappy after having had ultimate beatitude.

But there are two ways in which to see that this is obviously false.

First, from *the general concept of beatitude (ex ipsa communi ratione beatitudinis)*. For since beatitude itself is a perfect and sufficient good, it must put a man's desire to rest and exclude all evil. But a man naturally desires to hold on to the good that he has and to have a guarantee that he will keep it (*eius retinendi obtineat securitatem*); otherwise, he will necessarily be troubled by the fear of losing it or by sadness at the certainty that he will lose it. Therefore, what is required for genuine beatitude is that a man have the fixed opinion that he will never lose the good that he has. If this opinion is true, it follows that he will never lose beatitude. On the other hand, if it is false, then this very fact is an evil, viz., to have a false opinion, since, as *Ethics* 6 says, falsehood is bad for the intellect in the same way that truth is

its good. Therefore, he will not have been truly blessed (*beatus*) if some evil exists in him.

Second, the same point is clear from a consideration of *the specific concept of beatitude (ratio beatitudinis in speciali)*. For it was shown above (q. 3, a.8) that a man's perfect beatitude consists in seeing God's essence. But it is impossible for anyone who is seeing God's essence to will not to see it. For every good that someone wills not to have is such that either (a) it is insufficient and something more sufficient is being sought after in its place, or (b) there is something unwelcome (*incommodum*) connected with it and because of this it comes to be disliked (*propter quod in fastidium venit*). But the vision of God's essence fills the soul with every good, since it unites the soul to the font of all goodness; hence, Psalm 16:15 says, "I shall be satisfied when Your glory appears," and Wisdom 7:11 says, "All good things came to me together with her," viz., with the contemplation of wisdom. Similarly, the vision of God does not have anything unwelcome adjoined to it; for Wisdom 8:16 says of the contemplation of wisdom, "Her conversation has no bitterness, nor does her company have any tedium."

So, then, it is clear that someone who is blessed cannot give up beatitude by his own will (*propria voluntate non potest beatitudinem deserere*).

Similarly, he cannot lose it by having God take it away from him (*Deo subtrahente*). For since taking away beatitude would constitute a punishment, it could not come from God, the just judge, except for some sin; but someone who is seeing God's essence cannot fall into sin, since, as was shown above (q. 4, a. 4), rectitude of will necessarily follows upon seeing God's essence.

Again, neither could any other agent take away beatitude. For a mind conjoined to God is elevated above all other things, and so no other agent can cut it off from that union.

Hence, it is clearly absurd that a man should pass from beatitude to misery, or from misery back to beatitude, over the changing course of time (*per quasdam alternationes temporum*). For there cannot be temporal changes of this sort except with respect to things that are subject to time and change (*nisi circa ea quae subiacent tempori et motui*).

**Reply to objection 1:** Beatitude is a consummate perfection which excludes every defect from the one who is blessed. And so beatitude comes without mutability to the one who has it, once it is brought about by God's power, which lifts a man up to participation in an eternity that transcends all change.

**Reply to objection 2:** The will is open to opposites in the case of those things that are ordered toward an end, but it is ordered toward its ultimate end by natural necessity. This is clear from the fact that a man is not able not to will to be blessed (*homo not potest non velle esse beatus*).

**Reply to objection 3:** Beatitude has a beginning because of the nature (*conditio*) of the one who participates in it; but it lacks an ending because of the nature of the good which is such that participation in it makes one blessed. Hence, the beginning of beatitude derives from one thing, and that fact that it lacks an ending derives from something else.

## Article 5

### Is a man able to attain beatitude by his own natural powers?

It seems that a man able is to attain beatitude by his own natural powers (*per sua naturalia*):

**Objection 1:** Nature is not deficient when it comes to necessities. But nothing is more necessary to a man than that by means of which he attains his ultimate end. Therefore, this is not lacking to human nature. Therefore, a man is able to attain beatitude by his own natural powers.

**Objection 2:** Since man is more noble than the non-rational creatures, he seems to be more self-sufficient (*sufficiantior*). But non-rational creatures are able to attain their own ends by their own natural powers. Therefore, *a fortiori*, a man is able to attain beatitude through his own natural powers.

**Objection 3:** According to the Philosopher, beatitude is a perfect operation. But that which

initiates a thing is the same as that which brings it to perfection. Therefore, since the imperfect operation, which is, as it were, the beginning (*principium*) in the case of human operations, is subject to a man's natural power, by means of which he is the master of his own acts, it seems that he is able to attain the perfect operation, i.e., beatitude, through his own natural power.

**But contrary to this:** A man is naturally the principle of his own acts through his intellect and his will. But the ultimate beatitude prepared for the saints exceeds the human intellect and will; for 1 Corinthians 2:9 says, "Eye has not seen, nor ear heard, nor has it entered into the heart of man, what things God has prepared for those who love Him." Therefore, a man cannot attain beatitude by his own natural powers.

**I respond:** Through his own natural powers a man can acquire the imperfect beatitude that can be had in this life, in the sense that through his own natural powers he can likewise acquire virtue, the operation of which this beatitude consists in. This will be explained below (q. 63).

However, as was explained above (q. 3, a. 8), man's perfect beatitude consists in seeing God's essence. And as was shown in the First Part (*ST* 1, q. 12, a. 4), seeing God through His essence lies not only beyond human nature, but also beyond every creature's nature. For any creature's natural cognition is in accord with the mode of its substance (*secundum modum substantiae suae*), in the sense in which the *Liber de Causis* says of an intelligence that "it has cognition of what is above it, and of what is below it, in accord with the mode of its substance (*secundum modum substantiae suae*)." But every cognition that is in accord with the mode of a created substance falls short of seeing God's essence, which infinitely surpasses every created substance. Hence, neither man nor any other creature can attain ultimate beatitude through his own natural powers.

**Reply to objection 1:** Just as nature has not failed man when it comes to necessities even though it has not given him weapons and hides as it has to other animals—for nature has given man reason and hands, by which he is able to provide these things for himself—so, too, nature has not failed man when it comes to necessities even though it has not given him any principle by which he can attain beatitude. For this was impossible. However, it did give him free choice, by which he would be able to turn toward God, who would make him blessed. For as *Ethics* 3 says, what we can do through our friends is such that we can in some sense do it through ourselves.

**Reply to objection 2:** As the Philosopher says in *De Caelo* 2, a nature that can attain the perfect good, even though it needs exterior help to do this, is more noble than a nature that cannot attain the perfect good, but instead attains some imperfect good, even though it does not need exterior help to do this. In the same way, someone who is able to attain perfect health, even though this is through the help of medicine, is better disposed toward health than is someone who is able only to attain imperfect health without the help of medicine. And so a rational creature, who is able to attain the perfect good of beatitude, though he needs God's help to do this, is more perfect than a non-rational creature, which does not have a capacity for this sort of good, but instead attains some imperfect good by the power of its own nature.

**Reply to objection 3:** When what is imperfect and what is perfect belong to the same species, they can be caused by the same power. However, this is not necessary if they belong to different species; for it is not the case that whatever can cause a given disposition in matter can confer the ultimate perfection. But the imperfect operation that is subject to man's natural power does not belong to the same species as the perfect operation that constitutes man's beatitude, since the species of the operation depends on the object. Hence, the argument does not go through (*ratio non sequitur*).

## Article 6

### Can a man be made blessed through the action of a higher creature, viz., an angel?

It seems that a man can be made blessed through the action of a higher creature, viz., an angel:

**Objection 1:** There are two orderings found among things: (a) the ordering of the parts of the universe to one another, and (b) the ordering of the universe as a whole to a good that lies outside the universe. As *Metaphysics* 12 says, the first of these orderings is itself ordered to the second as to its end, in the way that the ordering of the parts of an army to one another is for the sake of the ordering of the whole army to its leader. But as was explained in the First Part (*ST* 1, 109, a. 2), the ordering of the parts of the universe to one another involves higher creatures acting on lower creatures, whereas beatitude consists in man's being ordered to a good that lies outside the universe, viz., God. Therefore, it is through the action of a higher creature, viz., an angel, on a man that the man is made blessed.

**Objection 2:** What is such-and-such in potentiality can be brought to actuality through that which is such-and-such in actuality; for instance, what is hot in potentiality is made hot in actuality through that which is hot in actuality. But man is blessed in potentiality. Therefore, he can be made blessed in actuality by an angel who is blessed in actuality.

**Objection 3:** As was explained above (q. 3, a. 4), beatitude consists in an operation of the intellect. But as was established in the First Part (*ST* 1, q. 111, a. 1), an angel can illuminate a man's intellect. Therefore, an angel can make a man blessed.

**But contrary to this:** Psalm 83:12 says, "The Lord will give grace and glory."

**I respond:** Since every creature is subject to the laws of nature in the sense of having limited power and action, what exceeds created nature cannot be brought about by the power of any creature. And so if something that lies beyond nature (*est super naturam*) has to be brought about, this is done immediately by God—e.g., resuscitating the dead, giving sight to the blind, and other things of this sort. But it has been shown (a. 5) that beatitude is a good that exceeds created nature. Hence, it is impossible for beatitude to be conferred through the action of any creature; instead, if we are talking about perfect beatitude, a man is made blessed by God acting alone.

On the other hand, if we are talking about imperfect beatitude, then the explanation that applies to it is the same as the explanation that applies to virtue, the action of which imperfect beatitude consists in.

**Reply to objection 1:** What happens in most of the cases involving ordered active powers is that it is the highest power's role to bring a thing to its ultimate end, whereas the lower powers assist in the attainment of this ultimate end by conferring dispositions (*disponendo*); for instance, the use of a ship, for the sake of which the ship itself is made, pertains to the art of navigation, which presides over the art of shipbuilding. So, then, likewise in the case of the ordering of the universe, in attaining to beatitude a man is aided by the angels with respect to certain preliminaries by which he is disposed toward attaining to beatitude. But he attains the ultimate end itself through the first agent Himself, viz., God.

**Reply to objection 2:** When a form exists in something in actuality with perfect and natural *esse*, then it can be a principle for acting on another; for instance, a hot thing gives warmth through its heat. But if a form exists in something imperfectly and not with natural *esse*, then it cannot be a principle for communicating itself to another. For instance, the likeness of a color (*intentio coloris*) that exists in the pupil cannot make anything white. Again, not everything that is illuminated or heated can illuminate other things or make other things warm; otherwise, illuminating and heating would go on *ad infinitum*.

Now the light of glory through which God is seen exists in God perfectly with its natural *esse*, but in a creature it exists imperfectly and with assimilated or participated *esse*. Hence, no creature who is blessed can communicate his beatitude to another.

**Reply to objection 3:** As was explained in the First Part (*ST* 1, q. 106, a. 1), a beatified angel illuminates man's intellect, or even the intellect of a lower angel, with respect to certain ideas about

God's works, but not with respect to seeing God's essence. For in seeing His essence, all beatified creatures are illuminated directly by God.

### Article 7

#### Are any human works required in order to obtain beatitude from God?

It seems that no human works are required in order to obtain beatitude from God:

**Objection 1:** Since God is an agent of infinite power, neither matter nor any disposition on the part of the matter is a prerequisite for His acting; instead, He can produce the whole immediately. But since, as has been explained (a. 6), a man's works are not required as an efficient cause of his own beatitude, they cannot be required for beatitude except as dispositions. Therefore, God, who does not need any dispositions for His acting, confers beatitude without any antecedent works.

**Objection 2:** Just as God is the direct source of beatitude (*auctor beatitudinis immediate*), so too He immediately establishes nature. But in the first establishment of nature, He produced creatures in the absence of any antecedent disposition or action on the part of any creature; instead, He instantly (*statim*) made each thing perfect in its species. Therefore, it seems that He confers beatitude on a man without any antecedent operations.

**Objection 3:** In Romans 4:6 the Apostle says that beatitude belongs to the man "on whom God confers justification without works." Therefore, no human works are required in order to obtain beatitude.

**But contrary to this:** John 13:17 says, "If you know these things, you will be blessed if you do them." Therefore, one arrives at beatitude through action.

**I respond:** As was explained above (q. 4, a. 4), rectitude of will is required for beatitude. For rectitude of will is nothing other than the will's being rightly ordered toward its ultimate end, and this is required for attaining to the ultimate end in the same way that the right sort of disposition on the part of the matter is required for its attaining to a form.

However, this does not show that some human operation has to precede a man's beatitude; for God could simultaneously (a) make a will tend in the right way toward the end and (b) make it attain that end—just as He sometimes simultaneously disposes the matter and induces the form.

Nevertheless, the order of God's wisdom dictates that it not happen this way. For as *De Caelo 2* says, "Of those things that have a perfect good, some have it with no movement, some have it with a single movement, and some have it with many movements."

Now to have the perfect good without movement is something that belongs to what has that good by nature (*naturaliter*). But to have beatitude naturally belongs solely to God. Hence, it is proper to God alone not to move toward beatitude through some antecedent operation.

On the other hand, since beatitude exceeds every created nature, no mere creature attains beatitude fittingly except by means of movement via an operation through which it tends toward beatitude. Now as was explained in the First Part (*ST 1*, q. 62, a. 5), an angel, who is higher in the order of nature than a man is, attained to beatitude in the order of God's wisdom with the single movement of a meritorious operation. Men, on the other hand, attain beatitude by means of many operational movements that are called *merits*. Hence, even according to the Philosopher, beatitude is the reward for virtuous operations.

**Reply to objection 1:** A man's operation is required antecedently for obtaining beatitude not because God's power to beatify someone is not sufficient, but so that the order among things might be preserved.

**Reply to objection 2:** The reason why God immediately produced the first creatures as perfect, without any antecedent disposition or operation on the part of a creature, was that He instituted the first

individuals of the various species in such a way that their natures would be propagated through them to their descendants. Similarly, it was because beatitude was to flow through Christ, who is God and man, to others—this according to Hebrews 2:10 (“... who had brought many children into glory”)—that His soul was made blessed immediately from the beginning of His conception without any antecedent meritorious operation.

However, this is peculiar to Christ. For His merit is what enables baptized children to obtain beatitude, even if they lack their own proper merits; for through baptism they have been made members of Christ.

**Reply to objection 3:** The Apostle is speaking here of the ‘beatitude of hope’, which is had through justifying grace and which is indeed not given because of antecedent works. For, unlike beatitude, it does not have nature of a terminus of movement, but is instead the beginning of a movement that tends toward beatitude.

## Article 8

### Does everyone desire beatitude?

It seems that not everyone desires beatitude:

**Objection 1:** No one can desire what he is ignorant of, since, as *De Anima* 3 says, it is an apprehended good that is the object of desire. But there are many who do not know what beatitude is—which, as Augustine explains in *De Trinitate* 13, is obvious from the fact that some have thought beatitude to lie in bodily pleasure, some in the mind’s virtue, and some in other things. Therefore, not everyone desires beatitude.

**Objection 2:** As has been explained (q. 3, a. 8), the essence of beatitude is seeing God’s essence. But some are of the opinion that it is impossible for God to be seen through His essence by a man, and so they do not desire it. Therefore, not all men desire beatitude.

**Objection 3:** In *De Trinitate* 13 Augustine says, “The blessed man is the one who has everything that he wills and who wills nothing badly.” But not everyone wills this very thing, since some men will certain things badly and yet will that they should will those things. Therefore, not everyone wills beatitude.

**But contrary to this:** In *De Trinitate* 13 Augustine says, “If he had said, ‘You all wish to be blessed, you do not wish to be wretched,’ then he would have said something that no one would fail to acknowledge in his own will.” Therefore, everyone desires to be blessed.

**I respond:** There are two possible ways to think of beatitude:

One way is in accord with *the general concept of beatitude (secundum communem rationem beatitudinis)*. Given this sense, it is necessary that every man should will beatitude. Now, as has been explained (aa. 3 and 4), the general concept of beatitude is that it is a perfect good. But since the good is the object of the will, someone’s perfect good is such that it totally satisfies his will. Hence, to desire beatitude is nothing other than to desire that one’s will should be satisfied—which everyone wants.

In the second way, we can speak of beatitude in accord with its *specific concept (secundum specialem rationem)*, i.e., with respect to what beatitude consists in. And given this sense, not everyone has a cognition of beatitude, since not everyone knows which thing is such that the general concept of beatitude applies to it. And, in this regard, consequently, not everyone wills beatitude.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** Since the act of will (*voluntas*) follows upon the intellect’s (i.e., reason’s) apprehension, it follows that just as it is possible for something to be the same in reality and yet diverse according to reason’s consideration of it, so too it is possible for something to be the same in reality and

yet to be desired in one way and not desired in another.

Thus, beatitude can be thought of under the concept of an ultimate and perfect good, which is the general concept of beatitude, and, as has been explained, given this sense, the will tends toward it naturally and by necessity. Beatitude can also be thought of in such a way as to include other specific considerations, either on the part of the operation itself, or on the part of the operative power, or on the part of the object. And when it is so considered, it is not necessarily the case that the will tends toward it.

**Reply to objection 3:** If the definition of beatitude that some have posited—viz., that the blessed man is he who has everything that he desires, or that the blessed man is he who is such that everything he hoped for has come true—is understood in a certain way, then it is a good and sufficient definition. But if it is understood in another way, then it is imperfect.

For if it is understood simply of all those things that a man wills *by a natural desire*, then it is true that he who has everything that he wills is blessed. For nothing except a perfect good, i.e., beatitude, satisfies a man's natural appetite.

By contrast, if the definition is understood of those things that a man wills *according to reason's apprehension*, then, in this sense, to have the things that the man wills pertains not to beatitude but more to wretchedness, to the extent that having things of this sort keeps a man from having everything that he naturally wills. In the same way, reason sometimes accepts as truths things that impede its cognition of the truth. And it is because of this consideration that Augustine adds to beatitude's perfection the idea that the man "wills nothing badly"—even though the first part of the definition, viz., that the blessed man is he who has everything that he wills, could suffice by itself if it were understood correctly,.

## QUESTION 6

### The Voluntary and the Involuntary

Since, therefore, one has to arrive at beatitude through certain acts, we must next inquire about human acts, so that we might know the acts by which one arrives at beatitude or by which the journey toward beatitude is impeded. But because operations and acts have to do with singulars, every practical science (*operativa scientia*) is brought to completion in the consideration of particulars (*in particulari consideratione*). Therefore, since moral theory (*moralis consideratio*) concerns human acts, it has to deal with them first in general (qq. 6-114) and then in particular (*ST 2-2*).

As regards the general consideration of human acts, what comes up first for consideration are the human acts themselves (qq. 6-48) and, second, their principles (qq. 49-114).

Among human acts some are proper to man, and some are common to man and the other animals. Since beatitude is proper to man, the acts that are properly human are more closely related to beatitude than are the acts that are common to man and the other animals. Therefore, we must first consider the acts which are proper to man (qq. 6-21) and, second, the acts which are common to man and the other animals and which are called the passions of the soul (qq. 22-48).

As regards the first topic, there are two things that come up for consideration: first, the nature of human acts (*de conditione humanorum actorum*) (qq. 6-17) and, second, the distinctions among them (*de distinctione eorum*) (qq. 18-21).

Now since what are properly called human acts are those acts that are voluntary—for the will is a rational appetite and is proper to man—we must consider human acts insofar as they are voluntary. Therefore, what needs to be considered first is the voluntary and the involuntary (qq. 6-7); second, the acts that are voluntary in the sense of being elicited by the will itself in such a way that they belong immediately to the will (qq. 8-16); and, third, the acts which are voluntary in the sense of being commanded by the will and which belong to the will through the mediation of other powers (q. 17).

And since voluntary acts have certain circumstances according to which they are judged, what needs to be considered first is the voluntary and the involuntary (q.6) and, after that, the circumstances of the acts in which the voluntary and the involuntary are found (q. 7)

On the first topic there are there are eight questions: (1) Is voluntariness found in human acts? (2) Is voluntariness found in brute animals? (3) Can there be voluntariness in the absence of any act? (4) Can violence be done to the will? (5) Is violence a cause of involuntariness? (6) Is fear a cause of involuntariness? (7) Is concupiscence a cause of involuntariness? (8) Is ignorance a cause of involuntariness?

### Article 1

#### Is voluntariness found in human acts?

It seems that voluntariness (*voluntarium*) is not found in human acts:

**Objection 1:** As is clear from Gregory of Nyssa, Damascene, and Aristotle, the voluntary is that “whose principle exists within the thing itself (*in ipso*).” But the principle of human acts exists outside of a man and not within the man himself; for as *De Anima* 3 explains, a man’s appetite is moved to act by something desirable which exists outside of him and which is like an unmoved mover. Therefore, in human acts there is no voluntariness.

**Objection 2:** In *Physics* 8 the Philosopher proves that within animals there is no new movement that does not come from another movement that is exterior. But all of a man’s acts are new in the sense that no human act is eternal. Therefore, the principle of all human acts is from without (*ab extra*). Therefore, voluntariness is not found in human acts.

**Objection 3:** Someone who acts voluntarily is able to act on his own (*per se agere potest*). But this does not apply to men; for John 15:5 says, “Without me you can do nothing.” Therefore,

voluntariness is not found in human acts.

**But contrary to this:** In *De Fide Orthodoxa* 2 Damascene says, “The voluntary is an act that is a rational operation.” But human acts are like that. Therefore, voluntariness is found in human acts.

**I respond:** Voluntariness has to exist in human acts.

To see this clearly, consider that some acts or movements are such that their principle exists within the agent, i.e., within that which is moved (*seu in eo quod movetur*), whereas other movements or acts are such that their principle lies outside the agent. For instance, when a rock moves upward, the principle of the motion lies outside the rock, but when it moves downward, the principle of the motion exists within the rock itself.

Now among the things that are moved by an intrinsic principle, some move themselves while others do not. For since, as was established above (q. 1, a. 2), every agent effects movement or is moved (*seu motum agat seu moveatur*) for the sake of an end, what is perfectly moved by an intrinsic principle is that in which there exists some intrinsic principle not only of the thing’s being moved, but also of its being moved toward an end.

Now in order for something to be done for the sake of an end, some sort of cognition (*cognitio*) of the end is required. Therefore, if a thing acts or is moved by an intrinsic principle in such a way that it has some sort of cognition (*notitia*) of the end, then it has within itself the principle of its own act not only insofar as it acts, but also insofar as it acts for the sake of an end. On the other hand, if a thing has no cognition (*notitia*) of the end, then even if the principle of its action or movement exists within it, nonetheless, its principle of acting or being moved *for the sake of an end* does not exist within it, but instead exists in something else by which the principle of its moving toward the end is imprinted upon it. Hence, things of this sort are not said to move themselves, but are instead said to be moved by other things. By contrast, the things that have cognition (*notitia*) of the end are said to move themselves, since there exists within them a principle not only of their acting, but also of their acting for the sake of an end. And so since both things—viz., acting and acting for the sake of an end—come from an intrinsic principle, their acts and movements are called ‘voluntary’; for the name ‘voluntary’ signifies that the movement and the act come from the thing’s own inclination (*sit a propria inclinatione*).

And so it is that, according to the definition given by Aristotle, Gregory of Nyssa, and Damascene, what is said to be voluntary is not only “that whose principle is intrinsic” (*cuius principium est intra*), but also includes knowledge (*cum additione scientiae*).

Hence, since man especially has cognition of the end of his action and moves himself, voluntariness is found especially in his acts.

**Reply to objection 1:** Not every principle is a *first* principle. Therefore, even though it is part of the concept of the voluntary that its principle be intrinsic, it is nonetheless not contrary to the concept of the voluntary that this intrinsic principle be caused or moved by an exterior principle. For it is not part of the concept of the voluntary that the intrinsic principle should be a *first* principle.

Still, notice that it is possible for a given principle of movement to be first in a genus and yet not first absolutely speaking. For instance, in the genus of things that can undergo alteration (*in genere alterabilium*), the first altering being is a celestial body, and yet it is not the first mover absolutely speaking; instead, it is moved by a higher mover with respect to its local motion. So, then, a voluntary act’s intrinsic principle, which is a power that is cognitive and appetitive, is a first principle in the genus of appetitive movement, even though it is moved by some exterior being with respect to other species of movement.

**Reply to objection 2:** There are two ways in which a new animal movement is preceded by some exterior movement:

First, insofar as it is through an exterior movement that something sensible, which when sensed moves the appetite, is presented to the animal’s sensory power. For instance, a lion sees a stag because of the stag’s approaching movement and begins to be moved with respect to it.

Second, insofar as it is through an exterior movement that the animal's body begins to be changed in some way by a natural change, e.g. through cold or heat, and when the body is thus changed through the movement of an exterior body, the animal's sentient appetite, which is a power belonging to a corporeal organ, is also changed incidentally (*immutatur etiam per accidens*)—as, for instance, when because of some bodily alteration the appetite is moved to desire a given thing. However, this is not contrary to the concept of the voluntary, since, as has been explained, motions of this sort from an exterior principle belong to a different genus.

**Reply to objection 3:** God moves a man to act not only by proposing something to his sensory power or by affecting his body, but also by moving his will itself. For every movement of both the will and nature proceeds from Him as the first mover. And just as it is not contrary to the concept of a nature that the nature's movement proceeds from God as the first mover, given that a nature is a sort of instrument of God as a mover, so too it is not contrary to the concept of a voluntary act that it proceed from God insofar as the will is moved by God.

Nonetheless, what is common to the concept of a natural movement and to the concept of a voluntary movement is that these movements proceed from an intrinsic principle.

## Article 2

### Does voluntariness exist in brute animals?

It seems that voluntariness does not exist in brute animals:

**Objection 1:** 'Voluntariness' (*voluntarium*) comes from 'will' (*voluntas*). But since, as *De Anima* 3 says, the will exists in reason, there can be no will in brute animals. Therefore, neither is voluntariness found in them.

**Objection 2:** It is because human acts are voluntary that a man is said to be the master of his own acts. But brute animals do not have dominion over their own acts; for as Damascene says, "they do not act but are rather acted upon." Therefore, voluntariness does not exist in them.

**Objection 3:** Damascene says, "Praise and blame follow upon voluntary acts." But neither praise nor blame is appropriate for the acts of brute animals. Therefore, voluntariness does not exist in brute animals.

**But contrary to this:** In *Ethics* 3 the Philosopher says, "Young children and brute animals share in voluntariness." Moreover, Damascene and Gregory of Nyssa say the same thing.

**I respond:** As has been explained (a. 1), what is required for the concept of voluntariness is (a) that the principle of the act should be intrinsic (*sit intra*), along with (b) some sort of cognition of the end.

Now there are two sorts of cognition of the end, viz., *perfect* and *imperfect*.

A *perfect* cognition of the end occurs when there is not only (a) an apprehension of the thing that is the end, but also (b) a cognition of the concept of an end and (c) a cognition of the relation between the means ordered to an end (*quod ordinatur in finem*) and the end itself. And this sort of cognition of an end belongs only to a rational creature.

On the other hand, an *imperfect* cognition of an end is one that consists solely in an apprehension of the end, without a cognition of the concept of an end or a cognition of the act's relation to the end. This sort of cognition of an end is found in brute animals and occurs through the sensory power and the natural estimative power (*per sensum et aestimationem naturalem*) (cf. *ST* 1, q. 78).

Therefore, a perfect cognition of the end is followed by voluntariness in accord with its perfect concept—so that, namely, once the end has been apprehended, someone is able, in deliberating about the end and about the means to the end (*deliberans de fine et de his quae sunt ad finem*), either to move

himself toward the end or not to move himself toward it (*aliquis potest moveri in finem vel non moveri*).

By contrast, an imperfect cognition of the end is followed by voluntariness in accord with its imperfect concept—so that, namely, in apprehending the end one does not deliberate, but is immediately moved toward the end.

Hence, voluntariness in accord with its perfect concept belongs only to a rational nature, but voluntariness in accord with its imperfect concept belongs to brute animals as well.

**Reply to objection 1:** ‘Will’ (*voluntas*) names the rational appetite, and so it cannot exist in things that lack reason. On the other hand, ‘voluntary’ (*voluntarium*) is predicated denominatively of the will, and it can be extended to include things (*potest trahi ad ea*) in which there is some sort of participation in will, through some likeness to an act of will (*secundum convenientiam ad voluntatem*). And this is the way in which voluntariness is attributed to brute animals, viz., insofar as they are moved toward the end through some sort of cognition.

**Reply to objection 2:** A man’s being the master of his own acts stems from the fact that he has deliberation about his acts. For it is from the fact that reason, in deliberating, is open to opposites (*deliberans se habet ad opposita*) that the will has a capacity for both opposites (*in utrumque potest*). But, as has been explained, this is a respect in which voluntariness does not exist in brute animals.

**Reply to objection 3:** Praise and blame follow upon a voluntary act in accord with the perfect concept of voluntariness. This sort of voluntariness is not found in brute animals.

### Article 3

#### Can there be voluntariness in the absence of an act?

It seems that there cannot be voluntariness in the absence of an act:

**Objection 1:** The voluntary (*voluntarium*) is what is from the will (*voluntas*). But nothing can be ‘from the will’ except through an act, at least an act of the will itself. Therefore, there cannot be voluntariness in the absence of an act.

**Objection 2:** Just as someone is said ‘to will’ because of the will’s act, so too, when the act of will ceases, he is said ‘not to will’. But *not to will* (*non velle*) is a cause of involuntariness, which is opposed to voluntariness. Therefore, voluntariness cannot exist once the will’s act ceases.

**Objection 3:** As has been explained (aa. 1-2), cognition is part of the concept of voluntariness. But cognition occurs through an act. Therefore, there cannot be voluntariness in the absence of any act.

**But contrary to this:** The voluntary is said to be that of which we are the masters. But we are the masters of both acting and not acting, of both willing and not willing. Therefore, just as acting and willing are voluntary, so too are not acting and not willing.

**I respond:** The voluntary is what is from the will. But there are two ways in which something is said to be ‘from something’: (a) *directly*, so that, namely, it proceeds from something insofar as that thing is an agent, in the way that giving warmth proceeds from heat; and (b) *indirectly*, from the very fact that the thing does not act, in the way that a ship’s sinking is said to be from the pilot (*a gubernatore*) because he stops steering the ship.

But note that it is not always the case that what follows upon the absence of an act (*ad defectum actionis*) is traced back causally (*sicut in causam*) to the agent’s not acting; this occurs only when the agent is able to act and ought to act. For if the pilot were unable to steer the ship, or if piloting the ship had not been entrusted to him, then the ship’s sinking, which happened because of the absence of steering, would not be imputed to him.

Therefore, since the will is able, by willing and by acting, to prevent its own not willing and its own not acting, and since it sometimes ought to prevent them, this not-willing and not-acting is imputed to the

will as if it were something that proceeded from the will.

And so there can be voluntariness in the absence of an act—sometimes in the absence of an exterior act but with an interior act, as when someone wills not to act, and sometimes in the absence of an interior act as well, as when he does not will anything.

**Reply to objection 1:** ‘Voluntary’ expresses not only what proceeds directly from the will as from an agent, but also what proceeds indirectly from the will as from a non-agent.

**Reply to objection 2:** ‘Not to will’ (*non velle*) has two senses:

In one sense, it is taken with the force of a single word, and in this sense it is the infinitive of the verb ‘to will-against’ (*infinitivum huius verbi nolo*). In this sense, just as when I say, ‘I will against reading’ (*nolo legere*), the sense is ‘I will not to read’ (*volo non legere*), so too ‘I do not will to read’ (*non volo legere*) signifies that I will not to read. And ‘not to will’, taken in this sense, is a cause of involuntariness.

In a second sense, ‘not to will’ is taken with the force of a phrase. And in this sense it is not the case that an act of the will is affirmed. And ‘not to will’, taken in this sense, is not a cause of involuntariness.

**Reply to objection 3:** An act of cognition is required for voluntariness in the same sense in which an act of will is required—namely, that it be in someone’s power to think about something and to will it and to do it. And in this sense just as not willing it and not doing it are, when the time comes, voluntary, so too is not thinking about it.

#### Article 4

##### Can violence be done to the will?

It seems that violence can be done to the will (*voluntati possit violentia inferri*):

**Objection 1:** Each thing is such that it can be coerced by something more powerful than it. But there is something more powerful than the human will, viz., God. Therefore, the will can be coerced at least by Him.

**Objection 2:** Everything passive is coerced by its active counterpart when it is changed by it. But the will is a passive power; for as *De Anima* 3 says, it is “a moved mover.” Therefore, since it is sometimes moved by its active counterpart, it seems that it is sometimes coerced.

**Objection 3:** A violent movement is one that is contrary to nature. But the will’s movement is sometimes contrary to nature; this is clear in the case of the will’s movement toward sinning, since, as Damascene says, sinning is contrary to nature.

**But contrary to this:** In *De Civitate Dei* 5 Augustine says that if something is effected by the will, it is not effected by necessity. But anything that is coerced is effected by necessity. Therefore, what is effected by the will cannot be coerced. Therefore, the will cannot be forced to act.

**I respond:** There are two sorts of acts of the will: (a) the one is an act that belongs directly to the will (*qui est eius immediate*) in the sense that it is *elicited* by the will, viz., to will; (b) the other is an act of the will that is *commanded* by the will and exercised by the mediation of some other power, e.g., to walk or to talk, which are commanded by the will by means of the power to effect local motion (*mediante potentia motiva*).

With respect to acts that are commanded by the will, the will is able to suffer violence, since the exterior members of the body can be prevented from executing the will’s command.

However, with respect to the will’s own proper act itself, violence cannot be done to the will. The reason for this is that the will’s act is nothing other than a certain inclination that proceeds from a cognitive interior principle (*ab interiori principio cognoscente*), in the same way that a natural appetite is

a certain inclination that proceeds from an interior principle and without cognition. Hence, it is contrary to the concept of the will's act that it should be coerced or violent, in the same way that this is also contrary to the concept of a natural inclination or movement. For instance, a rock can be borne upward through violence, but this violent movement cannot proceed from the rock's natural inclination. Similarly, a man can be dragged along by force, but it is incompatible with the concept of violence that this movement should proceed from his will.

**Reply to objection 1:** God, who is more powerful than the human will, is able to move the human will—this according to Proverbs 21:1 (“The heart of the king is in the hand of the Lord, and He shall turn it wherever He wills”). But if this occurred through violence, then it would by that very fact not occur with an act of the will, and the will itself would not be moved. Instead, it would be something contrary to the will.

**Reply to objection 2:** When what is passive is moved by something active, it is not always the case that the movement is violent. Violence occurs when the movement is effected in a way contrary to the passive thing's interior inclination. Otherwise, all the alterations and generations of simple bodies would be unnatural and violent; and yet they are natural because of the natural interior aptitude of the matter or the subject for the relevant disposition. Similarly, when the will is moved in accord with its proper inclination by a desirable thing, then this movement is voluntary and not violent.

**Reply to objection 3:** Even if what the will tends toward in sinning is bad and contrary to its rational nature as a matter of fact (*secundum rei veritatem*), it is nonetheless something that is apprehended as good and as in conformity with its nature (*conveniens naturae*); for it is pleasing to the man because of some sensory passion or because of some corrupt habit.

## Article 5

### Is violence a cause of involuntariness?

It seems that violence is not a cause of involuntariness:

**Objection 1:** ‘Voluntary’ (*voluntarium*) and ‘involuntary’ (*involuntarium*) have to do with the will (*voluntas*). But as has been shown (a. 4), violence cannot be done to the will. Therefore, violence cannot be a cause of involuntariness.

**Objection 2:** As Damascene and the Philosopher point out, what is involuntary occurs with sadness. But it sometimes happens that someone suffers violence and yet is not thereby saddened. Therefore, violence is not a cause of involuntariness.

**Objection 3:** What proceeds from the will cannot be involuntary. But some sorts of violence proceed from the will, as when someone with a heavy body climbs upward, or as when someone twists his limbs in a way contrary to their natural flexibility. Therefore, violence is not a cause of involuntariness.

**But contrary to this:** The Philosopher and Damascene say, “Something is involuntary because of violence.”

**I respond:** Violence is directly opposed to the voluntary, just as it is likewise directly opposed to the natural. For it is common to the voluntary and the natural that both proceed from an intrinsic principle, whereas the violent proceeds from an extrinsic principle. Because of this, just as in the case of things that lack cognition, violence effects something contrary to nature, so in the case of things with cognition, violence brings it about that something is contrary to the will.

Now what is contrary to nature is said to be unnatural (*innaturale*), and, similarly, what is contrary to the will is said to be involuntary. Hence, violence is a cause of involuntariness.

**Reply to objection 1:** The involuntary is opposed to the voluntary. But it was explained above

(a. 4) that 'voluntary' is said not only of acts that belong to the will immediately, but also of acts that are commanded by the will. Thus, as was explained above (a. 4), with respect to acts that belong to the will itself immediately, violence cannot be done to the will, and so violence cannot make such acts involuntary. By contrast, with respect to acts commanded by the will, the will can suffer violence. And as regards such acts, violence renders them involuntary.

**Reply to objection 2:** Just as what occurs in accord with a nature's inclination is called natural, so what occurs in accord with the will's inclination is called voluntary.

Now there are two ways in which something is said to be *natural*: (a) first, because it proceeds from the nature as from an *active principle*, in the way that giving warmth is natural to a fire; (b) second, in accord with a *passive principle*, i.e., because there exists in the nature an inclination to receive an action from an extrinsic principle, in the way that the movement of a celestial body is said to be natural because of the celestial body's natural readiness (*propter aptitudinem naturalem*) for such a motion, even if what effects the motion is voluntary.

Similarly, there are two possible ways in which something is said to be *voluntary*: (a) in one way, *with respect to an action*, e.g., when some one wills to do something; (b) in the second way, *with respect to being acted upon*, viz., when someone wills to be acted upon by another.

Hence, when an action is done to someone by something exterior, then as long as the volition to undergo the action remains in the will of the one who undergoes the action (*manente in eo qui patitur voluntate patiendi*), there is no violence absolutely speaking. For even though the one who is undergoing the action does not contribute by acting, he nonetheless contributes by his willing to undergo the action. Hence, this cannot be called involuntary.

**Reply to objection 3:** As the Philosopher says in *Physics* 8, even if the movement of an animal by which the animal sometimes moves against the body's natural inclination is not natural to the body, it is nonetheless in some sense natural to the animal, since it is natural to the animal to be moved by desire. And so this movement is violent in a certain respect but not absolutely speaking.

And one should reply along the same lines for the case in which someone twists his limbs against their natural disposition. For this is violent in a certain respect, viz., with respect to the particular limbs, but not violent absolutely speaking, i.e., with respect to the man himself.

## Article 6

### Is fear a cause of involuntariness absolutely speaking?

It seems that fear (*metus*) is a cause of involuntariness absolutely speaking (*involuntarium simpliciter*):

**Objection 1:** Just as violence has to do with what is presently contrary to the will, so fear has to do with a future evil that is repugnant to the will. But violence is a cause of involuntariness absolutely speaking. Therefore, fear is likewise a cause of involuntariness absolutely speaking.

**Objection 2:** Whatever is such-and-such in its own right (*tale secundum se*) remains that way no matter what is added to it; for instance, what is hot in its own right is such that as long as it itself remains, it is hot regardless of what it is joined to. But what is done out of fear (*per metum*) is involuntary in its own right. Therefore, whatever fear is added to is likewise involuntary.

**Objection 3:** Whatever is such-and-such on some condition (*tale sub conditione*) is such-and-such in a certain respect (*secundum quid tale*), whereas what is such-and-such unconditionally (*absque conditione tale*) is such-and-such absolutely speaking (*simpliciter tale*). For instance, what is necessary on a condition is necessary in a certain respect, whereas what is necessary unconditionally (*absolute*) is necessary absolutely speaking (*simpliciter*). But what is done out of fear is unconditionally involuntary,

whereas it is voluntary only on a condition, viz., in order that the feared evil might be avoided. Therefore, what is done out of fear is involuntary absolutely speaking (*simpliciter involuntarium*).

**But contrary to this:** Gregory of Nyssa says, and the Philosopher likewise, that things done out of fear “are more voluntary than involuntary.”

**I respond:** As the Philosopher says in *Ethics* 3—and Gregory of Nyssa says the same thing in *De Homine*—things that are done out of fear are a mixture of the voluntary and the involuntary. For what is done out of fear, considered just in itself, is not voluntary, but it becomes voluntary in the given case, viz., in order to avoid the evil that is feared.

However, if one thinks about this matter correctly, actions of the sort in question are voluntary more than involuntary (*magis voluntaria quam involuntaria*), since they are voluntary absolutely speaking (*voluntaria simpliciter*), whereas they are involuntary in a certain respect (*involuntaria secundum quid*). For each thing is said to exist absolutely speaking insofar as it is actual, whereas insofar as it exists only in one’s apprehension, it exists in a certain respect and not absolutely speaking. Now what is done out of fear is actual insofar as it is done; for since acts are numbered among singular things and since a singular thing as such exists *here* and *now*, what is done actually exists insofar as it exists *here* and *now* and with other *individual conditions*. But what is done in this sense out of fear is voluntary insofar as it exists *here* and *now*, since in *this* case there is the obstacle of a greater evil that was feared; for instance, to throw the cargo into the sea during a storm becomes voluntary because of the fear of danger. Hence, it is clear that this action is voluntary absolutely speaking. The concept of the voluntary also applies to it because its principle is internal..

On the other hand, that fact that what is done out of fear is taken to be repugnant to the will when existing outside of this particular case has to do only with our thought. And so the action is involuntary in a certain respect, i.e., insofar as it is thought of as existing outside of this particular case.

**Reply to objection 1:** Things done out of fear (*per metum*) and things done through coercion (*per vim*) differ from one another not only with respect to the present and the future, but also in the fact that what is done through coercion is altogether contrary to the will’s movement and such that the will does not consent to it, whereas what is done out of fear is voluntary by reason of the fact that the will is directed toward it (*fertur ad id*)—not, to be sure, for its own sake but for the sake of something else, viz., to ward off the evil that is feared. For an action’s being voluntary for the sake of something else is sufficient for the concept of the voluntary, since the voluntary is not only that which we will for the sake of itself as an end, but also that which we will for the sake of something else as an end. Therefore, it is clear that in the case of what is done through force, the interior will does nothing, whereas in the case of what is done out of fear, the will does do something. And this is why, in order to exclude what is done out of fear from the definition of the violent, Gregory of Nyssa not only says, “The violent is that whose principle is external,” but also adds, “while what is being acted upon contributes nothing (*nihil conferente vim passo*).” For the will of the one who fears does contribute something to what is done out of fear.

**Reply to objection 2:** Things that are predicated absolutely (*ea quae absolute dicuntur*) are those, e.g., ‘white’ and ‘hot’, which remain regardless of what is added to them. On the other hand, things that are predicated relatively (*ea quae relative dicuntur*) vary according to their relations to different things. For instance, what is large in comparison to *this* thing is small in comparison to *that* thing.

Now something is said to be voluntary not only because of itself and, as it were, absolutely, but also because of another and, as it were, relatively. And so nothing prevents something that would not be voluntary relative to one thing from becoming voluntary relative to something else.

**Reply to objection 3:** What is done out of fear is unconditionally voluntary (*voluntarium absque conditione*), i.e., voluntary with respect to what is actually done. But it is conditionally involuntary (*involuntarium sub conditione*), i.e., involuntary if this fear were not present. Hence, given the argument contained in the objection, the opposite conclusion could rather be drawn.

## Article 7

### Is concupiscence a cause of involuntariness?

It seems that concupiscence [or sentient desire] (*concupiscentia*) is a cause of involuntariness:

**Objection 1:** Just as fear is a certain passion, so too is concupiscence. But fear is a cause of what is in some sense involuntary. Therefore, so is concupiscence.

**Objection 2:** Just as, because of his fear, the fearful man does something contrary to what he had intended (*contra id quod proponebat*), so does the incontinent man because of his concupiscence. But fear is in some sense a cause of involuntariness. Therefore, so is concupiscence.

**Objection 3:** Cognition is required for voluntariness. But concupiscence corrupts cognition; for as the Philosopher says in *Ethics* 6, “Pleasure”—or the desire for pleasure—“corrupts the judgment of prudence.” Therefore, concupiscence is a cause of involuntariness.

**But contrary to this:** Damascene says, “What is involuntary deserves mercy or indulgence (*miseriordia vel indulgentia*) and is done with sadness (*cum tristia agitur*).” But neither of these characteristics applies to what is done out of concupiscence. Therefore, concupiscence is not a cause of involuntariness.

**I respond:** Concupiscence is not a cause of involuntariness but instead makes something voluntary. For something is said to be voluntary from the fact that the will is directed (*fertur*) toward it. But the will is inclined by concupiscence toward willing what is desired. And so concupiscence makes it the case that something is voluntary rather than that it is involuntary.

**Reply to objection 1:** Fear (*timor*) is directed at what is bad, whereas concupiscence is related to what is good. Now what is bad in its own right (*malum secundum se*) is contrary to the will, whereas what is good is consonant with the will. Hence, fear acts as a cause of involuntariness more than concupiscence does.

**Reply to objection 2:** In the case of something done out of fear, the will retains a repugnance to what is done, considered in itself. By contrast, in the case of something done out of concupiscence, e.g., something incontinent, there is no remaining prior volition by which the will repudiated what is now desired; instead, the will changes in such a way as to will now what it previously repudiated. And this is why what is done out of fear is in some sense involuntary, whereas what is done out of concupiscence is in no sense involuntary. For the incontinent man who cannot control his concupiscence acts contrary to what he previously intended, but not contrary to what he now wills, whereas the fearful man acts contrary to what he even now wills in its own right.

**Reply to objection 3:** If concupiscence totally undermined cognition, as happens in the case of those who go out of their minds (*fit amentes*) because of concupiscence, then it would follow that concupiscence destroys voluntariness. And yet in such a case there would not, properly speaking, be involuntariness, either, since neither the voluntary nor the involuntary exist in things that do not have the use of reason.

However, sometimes in the case of actions done out of concupiscence cognition is not totally removed, since the cognitive power is not undermined; rather, what is undermined is just the actual thinking about *this* particular possible action (*consideratio actualis in particulari agibili*). And yet this very undermining is itself voluntary to the extent that what is voluntary is said to be within the will’s power—including not acting, not willing something, or, similarly, even not thinking about something. For as will be explained below (q. 10, a. 3 and q. 77, a. 7), the will is able to resist the passions.

## Article 8

### Is ignorance a cause of involuntariness?

It seems that ignorance is not a cause of involuntariness:

**Objection 1:** As Damascene says, “Involuntariness deserves leniency (*meretur veniam*).” But sometimes what is done out of ignorance (*per ignorantia*) does not deserve leniency—this according to 1 Corinthians 14:38 (“If anyone does not know, he shall not be known”). Therefore, ignorance is not a cause of involuntariness.

**Objection 2:** Every sin is accompanied by ignorance—this according to Proverbs 14:22 (“They are mistaken who do evil”). Therefore, if ignorance were a cause of involuntariness, then it would follow that every sin is involuntary. But this is contrary to Augustine, who says that every sin is voluntary.

**Objection 3:** As Damascene says, “What is involuntary is accompanied by sadness.” But some actions are done out of ignorance and yet without sadness—as, for instance, if someone, thinking that he is killing a stag, kills an enemy whom he wanted to kill. Therefore, ignorance is not a cause of involuntariness.

**But contrary to this:** Damascene and the Philosopher claim that a certain sort of involuntariness occurs because of ignorance.

**I respond:** Ignorance has to be a cause of involuntariness by reason of the fact that it is a privation of the cognition (*privat cognitionem*) which, as was explained above (a. 1), is a prerequisite for voluntariness. Yet not every instance of ignorance is a privation of this sort of cognition. And so notice that there are three ways in which ignorance might be related to an act of the will: (a) as something *concomitant* (*concomitanter*), (b) as something *consequent* (*consequenter*), and (c) as something *antecedent* (*antecedenter*).

It is related as something *concomitant* when the ignorance has to do with something which (a) is being done and yet which (b) would still be done even if the knowledge were present (*etiam si sciretur*). For in such a case the ignorance does not lead one to will that this thing be done; instead, it just happens that what is done is simultaneous with the ignorance—as in the example posited above, where someone wills to kill his enemy but kills him unknowingly, thinking that he is killing a stag. As the Philosopher points out, ignorance of this sort does not make for *involuntariness*, since it is not a cause of anything that is repugnant to the will, but it does make for *non-voluntariness*, since what one is ignorant of cannot be actually willed [here and now].

Ignorance is related to the will as something *consequent* insofar as the ignorance itself is voluntary. There are two ways in which this can happen, corresponding to the two modes of voluntariness posited above (a. 3):

In the first way, an act of will is directed toward the ignorance (*actus voluntatis fertur in ignorantiam*), as when someone wills to be ignorant so that he might be excused from his sin or so that he might not withdraw from sinning—this according to Job 21:14 (“We do not want knowledge of Your ways”). This is called *affected ignorance*.

In the second way, what is called voluntary is an ignorance of what one can and should know in the sense, explained above (a. 3), in which not acting and not willing are called voluntary. Ignorance in this sense occurs either (a) when someone does not actually think about what he can and ought to think about, and this is *ignorance by bad choice* (*ignorantia malae electionis*), which arises either from passion or from a habit, or (b) when someone does not take care to acquire knowledge (*notitiam*) that he ought to have, and, accordingly, this *ignorance of general principles of law* that everyone is obliged to know is voluntary and arises from a sort of negligence.

Now when the ignorance is itself voluntary in one of these ways, it cannot be a cause of involuntariness absolutely speaking. Yet it is a cause of involuntariness in a certain respect, viz., insofar

as it precedes the will's movement toward doing something that would not be done if the knowledge were present.

Ignorance is related to the will as something *antecedent* when the ignorance is not voluntary and yet is a cause of willing what the man would not otherwise will, as when a man is ignorant of some circumstance of an act which he is not obliged to know, and because of this he does something that he would not do if the knowledge were present. For instance, suppose that someone, having exercised due diligence and not knowing that someone is crossing a path, shoots an arrow with which he kills the one crossing the path. This sort of ignorance is a cause of involuntariness absolutely speaking.

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the replies to the objections. For the first objection has to do with ignorance of things that one is obliged to know. The second objection has to do with ignorance by choice, which, as has been explained, is voluntary in a certain way. The third objection has to do with ignorance that is related to the will as something concomitant.

## QUESTION 7

### The Circumstances of Human Acts

Next, we have to consider the circumstances of human acts. On this topic there are four questions: (1) What is a circumstance? (2) Should a theologian take into account the circumstances surrounding human acts? (3) How many sorts of circumstances are there? (4) Which are the most important among them?

#### Article 1

##### Is a circumstance an accident of a human act?

It seems that a circumstance (*circumstantia*) is not an accident of a human act:

**Objection 1:** In *Rhetorica* Tully says that a circumstance is “that by which an oration adds authority and strength to its argumentation.” But an oration gives strength to its argumentation mainly by appeal to what has to do with a thing’s substance—e.g., the definition, the genus, the species, etc.—on the basis of which Tully teaches orators how to argue. Therefore, a circumstance is not an accident of a human act.

**Objection 2:** It is proper to an accident to *exist in* something (*accidentis proprium est inesse*). But what surrounds (*circumstat*) a thing exists outside of it and not in it. Therefore, circumstances are not accidents of human acts.

**Objection 3:** An accident does not itself have accidents (*accidentis non est accidens*). But human acts are themselves certain sorts of accidents. Therefore, it is not the case that circumstances are accidents of acts.

**But contrary to this:** The particular conditions of a singular thing are called the accidents that individuate it (*accidentia individuantia ipsam*). But in *Ethics* 3 the Philosopher calls the circumstances *particulars*, i.e., particular conditions of singular acts. Therefore, circumstances are the individual accidents of human acts.

**I respond:** Since, according to the Philosopher, names are “signs of understandings” (*signa intellectuum*), in addition to the process of intellective cognition there has to be a corresponding process of naming as well. Now our intellective cognition proceeds from what is better known to what is less known. And so among us names are transferred from what is better known to signify things that are less known. And so it is, as *Metaphysics* 10 points out, that the name ‘distance’ is extended (*processit*) from things having to do with place to all sorts of contraries. Similarly, we use names pertaining to local motion to signify other movements, since bodies, which are circumscribed by their place, are the things best known to us. And so it is that the name ‘circumstance’ is extended from things existing in a place to human acts.

Now in matters of place, what is said to surround (*circumstare*) a thing is extrinsic to it and yet touches it or is close to it in place. And so what are called ‘circumstances’ are conditions that lie outside the substance of a human act and yet touch on the act in some sense.

Now anything that exists outside the substance of a thing and yet belongs to the thing itself is called an accident of that thing. Hence, the circumstances of human acts should be called their accidents.

**Reply to objection 1:** An oration does indeed give strength to its argumentation in the first place by appeal to the substance of an act, but it also gives strength to its argumentation secondarily by appeal to what surrounds the act. For instance, someone is rendered blameworthy (*accusabilis*) in the first instance by the fact that he committed homicide, but he is rendered blameworthy secondarily by the fact that he did it with evil intent (*dolo fecit*), or for the sake of money, or at a sacred time, or in a sacred place, or something else of this sort. And so Tully expressly claims that it is by appeal to the circumstances that an oration secondarily, as it were, adds strength to its argumentation.

**Reply to objection 2:** There are two ways in which something is said to be an accident of a thing:

(a) because it *exists in that thing*, in the sense in which *white* is said to be an accident of Socrates, or (b) because it *exists together with that thing in the same subject*, in the sense in which *white* is said to be accidental to *musical* insofar as they come together in a single subject and in some sense touch one another. It is in this second way that circumstances are called accidents of acts.

**Reply to objection 3:** As has been explained, an accident is said to be accidental to an accident because of their coming together in a subject. But there are two ways in which this can happen: (a) insofar as the two accidents are related to the single subject without any ordering, in the way that *white* and *musical* are related to Socrates, and (b) with some ordering, i.e., because the subject receives the one accident by the mediation of the other, in the way that a body receives its color by the mediation of its surface. In this latter sense one accident is even said to exist in the other; for example, we say that the color exists in the surface.

Now circumstances are related to acts in both of these ways. For some circumstances that are ordered to the act, e.g., place and the person's condition, have to do with the agent but are not mediated by the act, whereas other circumstances, e.g., the manner of acting, have to do with the agent and are mediated by the act itself.

## Article 2

### Should the theologian consider the circumstances of human acts?

It seems that the theologian (*theologus*) need not consider the circumstances of human acts:

**Objection 1:** A theologian considers human acts only insofar as they are of a certain sort, viz., good or bad. But it does not seem possible for the circumstances to make a human act to be of a certain sort, since a thing is qualified by what exists within it, and nothing is qualified, formally speaking, by what exists outside of itself. Therefore a theologian need not consider the circumstances of human acts.

**Objection 2:** The circumstances are accidents of acts. But "there are infinitely many things that are accidental to any given thing." This is why, as *Metaphysics* 6 says, "there is no art or science, except a sophisticated one, with respect to a *per accidens* entity (*circa ens per accidens*)." Therefore, theologians do not have to consider the circumstances of human acts.

**Objection 3:** Consideration of the circumstances belongs to the rhetorician. But rhetoric is not a part of theology. Therefore, the consideration of circumstances is irrelevant to the theologian.

**But contrary to this:** As Damascene and Gregory of Nyssa point out, ignorance of the circumstances is a cause of involuntariness. But involuntariness excuses one from sin (*excusat a culpa*), the consideration of which pertains to the theologian. Therefore, the consideration of circumstances likewise pertains to the theologian.

**I respond:** There are three reasons why the circumstances pertain to the theologian's inquiry:

First, the theologian considers human acts insofar as through them a man is ordered toward beatitude. Now everything that is ordered toward an end must be proportioned to that end. But acts are proportioned to an end in accord with a certain measure, which is brought about through the right circumstances. Hence, a consideration of circumstances pertains to the theologian.

Second, the theologian considers human acts insofar as they are good or evil, and better or worse, and, as will become clear below (q. 18, aa. 10-11), this diversification involves the circumstances.

Third, the theologian considers human acts insofar as they are meritorious or demeritorious, features which belong to human acts and for which it is required that the acts be voluntary. But as has been explained (q. 6, a. 8), a human act is judged to be voluntary or involuntary according to one's knowledge of the circumstances or ignorance of them.

And so a consideration of the circumstances pertains to the theologian.

**Reply to objection 1:** A good that is ordered to an end is called a *useful good* (*bonum utile*). This implies a certain relation, which is why the Philosopher says in *Ethics* 1, “It is with respect to something that a good is useful.” However, in those things that are predicated relatively (*quae ad aliquid dicuntur*) something is denominated not only from that which exists within it, but also from that which touches on it extrinsically, as is clear with *right* and *left*, *equal* and *unequal*, and other similar cases. And so since the goodness of acts exists insofar as they are useful for the end, nothing prevents them from being called *good* or *bad* because of a relation to certain things that touch on them from the outside.

**Reply to objection 2:** Accidents that behave altogether accidentally (*quae omnino per accidens se habent*) are left aside by every art because they are unstable and infinite in number (*propter eorum incertitudinem et infinitatem*). But such accidents do not have the nature of a circumstance (*non habent rationem circumstantiae*), since, as has been explained, circumstances lie outside of the act in such a way that they nonetheless touch on the act in some sense and are ordered toward it; and *per se* accidents do fall under an art.

**Reply to objection 3:** The consideration of circumstances pertains to the moralist and the statesman as well as to the rhetorician (*pertinet ad moralem et politicum et ad rhetorem*).

The circumstances pertain to the moralist insofar as the mean of virtue in human acts and human passions is either found or missed in relation to them.

They pertain to the statesman and the rhetorician insofar as acts are rendered praiseworthy or blameworthy, excusable or inexcusable (*laudabiles vel vituperabiles, excusabiles vel accusabiles*) by their circumstances. Yet the circumstances pertain to the statesman and the rhetorician in different ways. For the rhetorician makes a persuasive argument for what the statesman passes judgment on (*quod rhetor persuadet, politicus diiudicat*).

Now the circumstances pertain to the theologian, to whom all the other arts are subordinated, in *all* of the ways just mentioned. For the theologian, along with the moralist, conducts inquiry into virtuous acts and vicious acts. And along with the rhetorician and the statesman, he considers acts insofar as they merit punishment or reward.

### Article 3

#### Are the circumstances correctly enumerated in *Ethics* 3?

It seems that the circumstances are incorrectly enumerated in *Ethics* 3:

**Objection 1:** What is called a circumstance of an act is related externally to the act. Time and place are circumstances of this sort. Therefore, *when?* and *where?* are the only two sorts of circumstances.

**Objection 2:** That something is done well or done badly is taken from the circumstances. But something’s being done well or done badly has to do with the mode [or manner] of an act (*pertinet ad modum actus*). Therefore, all the circumstances are included under a single circumstance, viz., *the manner of acting* (*modus agendi*).

**Objection 3:** Circumstances do not belong to the substance of an act. But it seems that the causes of the act itself have to do with the substance of the act. Therefore, no circumstance should be taken from the causes of the act itself. So, then, *who?* and *why?* and *what?* are not circumstances; for *who?* has to do with the efficient cause, *why?* with the final cause, and *what?* with the material cause.

**But contrary to this** is the relevant passage (*auctoritas*) from the Philosopher in *Ethics* 3.

**I respond:** In *Rhetorica* Tully enumerates seven sorts of circumstances that are contained in the following verse: “*Who? (quis), what? (quid), where? (ubi), by what means? (quibus auxiliis), why? (cur), in what manner? (quomodo), when? (quando).*” For in the case of an act, one has to take account

of *who* did it, *by what means or instruments* he did it, *what* he did, *where* he did it, *why* he did it, *in what manner (quomodo)* he did it, and *when* he did it. In *Ethics 3* Aristotle adds another, viz., *with respect to what? (circa quid)*, which Tully includes under *what?*

The explanation for this enumeration can be thought of as follows:

A circumstance is something that, while existing outside the substance of an act, touches on the act in some way. There are three ways in which this happens: (a) the circumstance touches on *the act itself*; (b) it touches on a *cause* of the act; or (c) it touches on an *effect* of the act.

Now it touches on *the act itself* either (a) as a measure, as with *time* and *place*, or (b) as a quality of the act, as with the *manner of acting*.

It touches on an *effect* as in the consideration of *what* someone has done.

It touches on a *cause* as follows: as regards the final cause, *why? (propter quid)*; as regards the material cause (or object), *with respect to what? (circa quid)*; as regards a principal agent cause, *who did it?*; and with respect to an instrumental agent cause, *by what means?*

**Reply to objection 1:** *Time* and *place* are ‘surround’ (*circumstat*) the act as measures, but the other circumstances are such that, while existing outside the substance of the act, they touch on the act itself in some other way.

**Reply to objection 2:** The particular mode or manner *done well* (or *done badly*) is posited not as a circumstance, but as something that follows upon all the circumstances. By contrast, *the manner [of acting]* that is posited as a special circumstance has to do with a quality of the act, e.g., that someone is walking *quickly* or *slowly*, or that someone struck another *forcefully* or *lightly*, and so on.

**Reply to objection 3:** It is a conjoined condition—and not the condition of a cause on which the act’s substance depends—that is a circumstance. For instance, in the case of the object, it is not a circumstance of theft that the item belongs to someone else, since this has to do with the substance of theft; rather, a circumstance would be that the object is of great value or of small value (*magnum vel parvum*).

The same holds for other circumstances that are taken from the other causes. For it is a conjoined end—and not the end that gives an act its species (*dat speciem actus*)—that is a circumstance. For instance, it is not a circumstance that a brave man acts bravely for the sake of the good of courage; instead, it is a circumstance that he acts bravely for the sake of freeing his city, or for the sake of the Christian people, or for something else of this sort.

The same holds for *what?*. For instance, it is not a circumstance of someone’s pouring water on another that he makes him wet; but it is a circumstance that, in pouring the water, he makes him cold or hot, or heals him or harms him.

#### Article 4

##### Is it the case, as *Ethics 3* asserts, that the principal circumstances are *why?* and the things in which the operation exists?

It seems that it is not the case, as *Ethics 3* asserts, that the principal circumstances are “*why?*” (*propter quid*) and the “things in which the operation exists”:

**Objection 1:** The things in which the operation exists seem to be place and time, which do not seem the most important among the circumstances, since they are especially extrinsic to the act. Therefore, the things in which the operation exists are not the most important circumstances.

**Objection 2:** The end is extrinsic to a thing. Therefore, it does not seem to be the most important circumstance.

**Objection 3:** The most important element in any given thing is its cause and its form. But the

cause of the act itself is the person who is the agent, whereas the form is the manner of acting (*modus actus*). Therefore, these are the two circumstances that seem to be the most important.

**But contrary to this:** Gregory of Nyssa says, “The most important circumstances are *that for the sake of which* the act is done and *what* it is that is done.”

**I respond:** As was explained above (q. 1, a. 1), acts are properly called human insofar as they are voluntary. But the will’s motive and object is the end. And so the most important of all the circumstances is that which touches on the act from the side of the end, viz., *that for the sake of which*, and, secondarily, that which touches on the substance of the act, i.e., *what* the agent did. The other circumstances are more or less important to the extent that they are more or less close to these.

**Reply to objection 1:** By “things in which the operation consists” the Philosopher means those things that are adjoined to the act itself and not time or place. Hence, Gregory of Nyssa, in explaining, as it were, what the Philosopher says, puts “what is done” in place of “things in which the operation exists.”

**Reply to objection 2:** Even if the end does not belong to the substance of the act, it is nonetheless the most important cause of the act insofar as it moves the agent to act. Hence, a moral act has its species especially from the end.

**Reply to objection 3:** The person is the agent cause of an act insofar as he is moved by the end, and it is mainly in this respect that he is ordered toward the act. By contrast, the other conditions of the person are not as principally ordered toward the act.

Also, the manner of acting is not the act’s substantial form, since it is, as it were, a certain quality of the act, whereas the substantial form in an act has to do with the object and with the terminus or end.

## QUESTION 8

### The Objects of the Will

Next, we have to consider voluntary acts themselves in particular. First, we have to consider the acts that belong immediately to the will in the sense that they are elicited by the will itself (questions 8-16), and, second, the acts that are commanded by the will (question 17).

Now the will is moved both toward the end and toward the means to the end (*in ea quae sunt ad finem*). Therefore, we first have to consider acts of the will by which it is moved toward the end (questions 8-12), and then acts of the will by which it is moved toward the means to the end (questions 13-16).

There seem to be three acts of the will with respect to the end, viz., to will (*velle*), to enjoy (*frui*), and to intend (*intendere*). Therefore, we will first consider the will (*voluntas*) (questions 8-10); second, the act of enjoying (*fruitio*) (question 11); and, third, the act of intending (*intentio*) (question 12).

Concerning the first point, there are three things to consider: (a) what the objects of the will are (*quorum voluntas sit*) (question 8), (b) what the will is moved by (*a quo moveatur*) (question 9), and (c) the manner in which the will is moved (*quomodo moveatur*) (question 10).

On the first topic there are three questions: (1) Is the will directed only toward the good? (*utrum voluntas sit tantum boni*) (2) Is the will directed only toward the end, or is it also directed toward the means to the end? (3) If the will is in some sense directed toward the means to the end, is it moved with a single movement toward both the end and the means to the end?

### Article 1

#### Is the will directed only toward the good?

It seems that the will is not directed only toward the good:

**Objection 1:** The same power is directed toward opposites (*est oppositorum*), in the way that the power of seeing is directed toward the white and the black. But the good and the bad are opposites. Therefore, the will is directed not only toward good but also toward the bad.

**Objection 2:** According to the Philosopher, rational powers behave in such a way as to pursue opposites. But the will is a rational power, since, as *De Anima* 3 says, it exists “in reason.” Therefore, the will is directed to opposites (*se habet ad opposita*). Therefore, it is directed not only toward willing the good, but also toward willing the bad.

**Objection 3:** *Being* and *good* are convertible. But the will is directed not only toward beings, but also toward non-beings; for instance, we sometimes will not to walk and not to speak. We also sometimes will certain future things, which are not actual beings. Therefore, the will is not directed only toward the good.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says, “The bad lies beyond the will,” and “All things desire the good.”

**I respond:** The will is a certain rational appetite (*appetitus rationalis*). But every appetite is directed only toward the good. The reason for this is that an appetite is nothing other than an inclination toward something on the part of the thing that has the appetite (*inclinatio appetentis in aliquid*). But nothing has an inclination except toward something similar to and appropriate for itself. Therefore, since every entity, insofar as it is a being and a substance, is a certain good, it must be the case that every inclination is toward the good. And so it is that in *Ethics* 1 the Philosopher says that the good is “what all things desire” (*quod omnia appetunt*).

But note that since every inclination follows upon some form, a natural appetite follows upon a form that exists in *nature*, whereas a sentient appetite, as well as an intellective or rational appetite (which is called ‘will’), follows upon an *apprehended* form. Therefore, just as what a natural appetite tends toward is a *good that exists in reality*, so an animal or voluntary appetite tends toward an

*apprehended good*. Therefore, in order for the will to tend toward something, it is required not that the thing be good in reality, but rather that it be apprehended under the concept of the good (*quod apprehendatur in ratione boni*). It is for this reason that in *Physics 2* the Philosopher says, “The end is a good, or an apparent good.”

**Reply to objection 1:** The same power is directed to opposites, but it is not related to both of them in the same way. Thus, the will is related to both the good and the bad, but it is related to the good in the sense of desiring it (*appetendo ipsum*), whereas it is related to the bad in the sense of avoiding it (*fugiendo illud*). Therefore, an actual desire for the good is called ‘willing’ (*voluntas*) insofar as ‘willing’ names an act of the will; for this is the sense in which we are now speaking of the will. By contrast, avoiding the bad (*fuga mali*) would better be called ‘willing-against’ (*noluntas*). Hence, just as willing is directed toward the good, so willing-against is directed toward the bad.

**Reply to objection 2:** A rational power does not behave in such a way as to pursue all opposites whatsoever; rather, it pursues those opposites that are contained under its appropriate object. For no power pursues anything except its appropriate object. But the will’s object is the good. Hence, the will behaves in such a way as to pursue those opposites that are included under *good*, e.g., to be moved and to rest, to speak and to remain silent, and others of this sort. For the will is directed to both opposites under the concept *good*.

**Reply to objection 3:** What is not a being in reality (*ens in rerum natura*) is taken as a being in reason (*ens in ratione*); it is in this sense that negations and privations are called ‘beings of reason’ (*entia rationis*). It is in this sense, too, that future things, insofar as they are apprehended, are beings. Therefore, insofar as there are beings of this sort, they are apprehended under the concept *good*, and in this way the will tends toward them. Hence, in *Ethics 5* the Philosopher says that “a lack of badness (*carere malum*) has the nature of a good.”

## Article 2

### Is will (or willing) directed only toward the end or also toward the means to the end?

It seems that will (or willing) (*voluntas*) is directed only toward the end and not toward the means to the end:

**Objection 1:** In *Ethics 3* the Philosopher says, “Willing (*voluntas*) is directed toward the end, whereas choosing (*electio*) is directed toward the means to the end (*est eorum quae sunt ad finem*).”

**Objection 2:** As *Ethics 6* says, “Diverse powers of the soul are ordered toward things that are diverse in genus.” But the end is in a different genus of *good* from the means to the end; for as *Ethics 1* says, the end, which is a noble good (*bonum honestum*) or a pleasant good (*bonum delectabile*), is in the genus of quality (or of action or passion), whereas a means to the end is called a useful good (*bonum utile*) and is in the category of relation (*in ad aliquid*). Therefore, if will (*voluntas*) is directed toward the end, then it will not be directed toward the means to the end.

**Objection 3:** Habits are proportionate to their corresponding powers, since a habit is the perfection of its power. But among the habits that are called operative arts, the end pertains to one art, while the means to the end pertains to a different art. For instance, the use of a ship, which is the ship’s end, belongs to the navigator, while the construction of the ship, which is a means to the end, belongs to the art of shipbuilding. Therefore, since will (*voluntas*) is directed toward the end, it will not be directed toward the means to the end.

**But contrary to this:** Among natural things, it is by the same power that a thing passes through the medium and reaches the terminus. But the means to an end are, as it were, the medium through

which one reaches the end as a terminus. Therefore, if willing (*voluntas*) is directed toward the end, then it is likewise directed toward the means to the end.

**I respond:** Sometimes it is the very *power* by which we will that is called ‘will’ (*voluntas*), and sometimes it is the will’s *act* itself that is called ‘will’ (*voluntas*).

Thus, if we are talking about will insofar as ‘will’ names the *power*, then the will tends (*se extendit*) both toward the end and toward the means to the end. For each power tends toward those things in which the nature of its object (*ratio sui obiecto*) is found in some way; for instance, the power of seeing tends toward whatever in some way participates in color. But the nature of the good, which is the object of the *power* that is the will, is found not only in the end, but also in the means to the end.

On the other hand, if we are talking about will insofar as ‘will’ properly names the will’s *act*, then, properly speaking, it is directed only toward the end. For every act that is denominated from its power names the simple act of that power, in the way that ‘to understand intellectually’ (*intelligere*) names the simple act of intellectual understanding (*simplicem actum intellectus*). Now the simple act of a power is directed toward that which is in its own right the object of that power. But it is the end which is good for its own sake and willed for its own sake (*propter se bonum et volitum*). Hence, an act of willing (*voluntas*) is properly directed toward the end itself.

By contrast, a means to an end is good or willed not for its own sake but because it is ordered toward the end (*ex ordine ad finem*). Hence, an act of willing (*voluntas*) is directed toward the means only to the extent that it is directed toward the end, and so the very thing that it wills in the means is the end. Similarly, intellectual understanding is properly directed toward what is known in its own right (*secundum se cognoscuntur*), viz., the principles, whereas there is no intellectual understanding (*intelligentia*) with respect to those things that are known through the principles except to the extent that the principles are being thought of in them. For as *Ethics 7* says, “Among desirable things the end plays the same role that the principle plays among intelligible things.”

**Reply to objection 1:** The Philosopher is here speaking about will insofar as ‘will’ names the simple *act* of willing (*simplicem actum voluntatis*), and not insofar as it names the *power*.

**Reply to objection 2:** Diverse powers are ordered toward things that are diverse in genus and related as equals; for instance, *sound* and *color* are diverse genera among things that can be sensed, and the power of hearing and the power of seeing are ordered toward them (*ad quae ordinantur auditus et visus*). However, *useful* and *noble* are not related as equals, but are instead related as what is such-and-such in its own right and what is such-and-such because of another. And things of this sort are always referred back to the same power, in the way that both color and light, through which color is seen, are sensed through the power of seeing.

**Reply to objection 3:** It is not the case that whatever makes the habits diverse also makes the powers diverse, since habits channel their powers to certain specific acts (*habitus sunt determinationes potentiarum ad aliquos speciales actus*).

Yet every operative art considers both the end and the means to the end. For instance, the art of navigation takes account of the end as something that it *does* and takes account of the means to the end as something that it *commands*. Conversely, the art of shipbuilding takes account of the means to the end as something that it *does*, whereas it takes account of the end as that toward which what it does *is ordered*.

Again, in each operative art there is some proper end, along with something which is a means to the end and which properly pertains to that art.

### Article 3

#### Is it by the very same act that the will is directed both toward the end and toward the means to the end?

It seems that it is by the very same act that the will is directed both toward the end and toward the means to the end:

**Objection 1:** According to the Philosopher, “In a case where one thing is for the sake of another, there is just a single thing (*unum tantum*).” But the will does not will the means to an end except for the sake of the end. Therefore, it is by the same act that it is moved toward both of them.

**Objection 2:** The end is the explanation (*ratio*) for willing the means to the end, in the way that light is the explanation for seeing colors. But it is by the same act that both light and color are seen. Therefore, the movement of the will by which it wills the end is the same as the movement by which it wills the means to the end.

**Objection 3:** It is numerically the same natural motion which goes through the medium all the way to the endpoint (*per media tendit ad ultimum*). But the means to an end are related to the end in the way that the medium is related to the endpoint. Therefore, the movement by which the will is directed toward the end is the same as the movement by which it is directed toward the means to the end.

**But contrary to this:** Acts are made diverse by their objects. But the end belongs to one species of the good and the means to the end, which is a useful good, belongs to a different species. Therefore, it is not by the same act that the will is directed toward both of them.

**I respond:** Since an end is willed in its own right (*secundum se volitus*), whereas a means to the end is, as such, willed only for the sake of the end, it is clear that the will can be directed toward an end without being directed toward the means to the end. By contrast, the will cannot be directed toward the means to an end, as such, without being directed toward the end.

So, then, there are two ways for the will to be directed toward the end itself: (a) it may be directed toward the end absolutely in its own right (*absolute secundum se*), or (b) it may be directed toward the end as a reason for willing the means to the end.

Therefore, it is clear that the movement of the will by which it is directed toward the end insofar as the end is a reason for willing the means to the end is the same as the movement by which it is directed toward the means themselves to the end.

However, the act by which it is directed to the end absolutely speaking is a different act. Sometimes this act temporally precedes the other one—as, for instance, when someone first wills health and later on, when deliberating about how he can be cured, wills to engage a physician in order to be cured. The same thing also occurs with respect to intellectual understanding; for someone first has an intellectual understanding of the principles in their own right, and then later on understands them in the conclusions themselves insofar as he assents to the conclusions because of the principles.

**Reply to objection 1:** This argument goes through for the case in which (*secundum quod*) the will is directed toward the end insofar as the end is a reason for willing the means to the end.

**Reply to objection 2:** Whenever color is seen, light is seen by the same act; and yet it is possible for light to be seen without color being seen. Similarly, whenever someone wills the means to an end, he wills the end by the same act—but not vice versa.

**Reply to objection 3:** In the *execution* of a work, the means to the end are like the medium and the end is like the terminus. Hence, just as a natural movement sometimes stops in the medium without reaching the terminus, so too sometimes one does something ordered toward the end and yet does not attain to the end.

But in the case of *willing*, the opposite holds true. For it is through the end that the will arrives at willing the means to the end, just as it is through the principles, which are called ‘means’, that the

intellect arrives at the conclusions. Hence, the intellect sometimes understands the ‘means’ without proceeding from there to the conclusion. Similarly, the will sometimes wills the end and yet does not proceed forward to willing the means to the end.

**Reply to argument for the contrary:** The answer to this argument is clear from what has been said above. For *useful* and the *noble* are not species of the good that are divided off from one another as equals. Rather, they are related as what is [good] because of itself (*propter se*) and what is [good] because of something else (*propter alterum*). Hence, an act of will can be directed toward the first without being directed toward the second, but not vice versa.

## QUESTION 9

### What Moves the Will

Next, we have to consider what moves the will (*de motivo voluntatis*). On this topic there are six questions: (1) Is the will moved by the intellect? (2) Is the will moved by the sentient appetite? (3) Does the will move itself? (4) Is the will moved by any principle exterior to it? (5) Is the will moved by a celestial body? (6) Is the will moved by God alone as an exterior principle?

#### Article 1

##### Is the will moved by the intellect?

It seems that the will is not moved by the intellect:

**Objection 1:** In commenting on Psalm 118:20 (“My soul has longed to desire your justifications”), Augustine says, “The intellect flies ahead, the desire (*affectus*) is late or non-existent; we know the good, but we do not desire to act.” But this would not be the case if the will were moved by the intellect; for a moveable thing’s movement follows upon the mover’s motion. Therefore, the intellect does not move the will.

**Objection 2:** The intellect is related to the will as that which exhibits what is desirable (*demonstrans appetibile*), in the way that the imagination exhibits what is desirable to the sentient appetite. But in exhibiting what is desirable, the imagination does not move the sentient appetite; in fact, sometimes we are related to what we imagine in the way that we are related to things that are shown to us in a picture and which, as *De Anima* says, we are not moved by. Therefore, neither does the intellect move the will.

**Objection 3:** It is not the case that the same thing is both mover and moved with respect to the same thing. But the will moves the intellect; for we engage in intellectual understanding when we will to. Therefore, the intellect does not move the will.

**But contrary to this:** In *De Anima* 3 the Philosopher says, “An apprehended desirable thing is an unmoved mover, whereas the will is a moved mover.”

**I respond:** To the extent that a thing needs to be moved by something, it is in potentiality with respect to more than one thing. For what is in potentiality has to be brought to actuality by something that is actual (*quod est actu*), and this is what it is to effect movement (*hoc est movere*).

Now there are two ways in which a given power of the soul is in potentiality to diverse things: (a) with respect to *acting* and *not acting*, and (b) with respect to *doing this* or *doing that*. For instance, sometimes the power of sight is actually seeing, and sometimes it is not seeing; and sometimes it sees something white, and sometimes it sees something black. Therefore, such a power needs a mover (*indiget movente*) in two ways, viz., (a) with respect to the *exercise* or *employment* of its act (*quantum ad exercitium vel usum actus*), and (b) with respect to the *specification* of its act (*quantum ad determinationem actus*). The former concerns the *subject*, which is sometimes acting and sometimes not acting, while the latter concerns the *object* by which the act is specified.

Now the motion of the *subject* itself arises from some *agent*. And since, as was shown above (q.1, a. 2), every agent acts for the sake of an end, the principle of this motion comes from the end; this is why an art directed toward the end (*ars ad quam pertinet finis*) effects movement by its command in an art directed toward the means to the end (*movet suo imperio artem ad quam pertinet id quod est ad finem*), in the way that, as *Physics* 2 says, the navigational art commands the shipbuilding art. Now the good in general (*bonum in communi*), which has the nature of an end, is the will’s object. And so in this regard the will moves the other powers of the soul to their acts, since we use the other powers when we will to. For the ends and perfections of all the other powers are included as particular goods under the will’s object, and it is always the case that an art or power that is directed toward a universal end presses into action (*movet ad agendum*) an art or power that is directed toward a particular end included under that

universal end. For instance, the general of an army, who intends the common good (*qui intendit bonum commune*)—viz., the ordering of the whole army—effects movement by his command in one of the tribunes, who intends the good of a particular battalion.

By contrast, in giving the act its species (*determinando actum*), the *object* gives movement in the manner of a *formal* principle like that by which an action is given its species among natural things—in the way, for instance, that the act of giving warmth (*calefactio*) is given its species by heat (*a calore*). Now the first formal principle is being and truth in general (*ens et verum universale*), which is the object of the intellect. And so it is in this sense of ‘motion’ that the intellect moves the will by presenting to the will its object.

**Reply to objection 1:** This passage shows not that the intellect does not move the will, but that the intellect does not move the will with necessity.

**Reply to objection 2:** Just as imagining a form without judging whether it is fitting or harmful does not move the sentient appetite, so neither does an apprehension of what is true without thinking about whether it is good and desirable (*sine ratione boni et appetibilis*). Hence, as *De Anima* 3 says, it is not the speculative intellect that effects movement, but rather the practical intellect.

**Reply to objection 3:** The will moves the intellect with respect to the *exercise* of the intellect’s act, since the true, which is the perfection of the intellect, is itself contained under the universal good as a certain particular good.

But as regards the *specification* of the act, which involves the object, the intellect moves the will, since the good is itself apprehended as a certain special concept included under the universal concept of the true.

And so it is clear that it is not the case that the same thing is both moved and mover with respect to the same thing.

## Article 2

### Can the will be moved by the sentient appetite?

It seems that the will cannot be moved by the sentient appetite:

**Objection 1:** As Augustine says in *Super Genesim ad Litteram* 7, “The mover and agent is more preeminent than that which is acted upon (*praestantius patiente*). But just as the sensory power is lower than the intellect, so the sentient appetite is lower than the will, which is an intellective appetite. Therefore, the sentient appetite does not move the will.

**Objection 2:** No particularized power (*nulla virtus particularis*) can produce a universal effect. But the sentient appetite is a particularized power, since it follows upon the sensory power’s particularized apprehension. Therefore, it cannot be a cause of the movement of the will, which is universal in the sense that it follows upon the intellect’s universal apprehension.

**Objection 3:** As *Physics* 8 proves, a mover is not moved by what it moves in such a way that the motion would be reciprocal. But the will moves the sentient appetite insofar as the sentient appetite obeys reason. Therefore, the sentient appetite does not move the will.

**But contrary to this:** James 1:14 says, “Everyone is tempted by his own sentient desire (*a concupiscentia*), being drawn away and allured.” But no one would be drawn away by sentient desire unless his will were moved by the sentient appetite, in which sentient desire exists. Therefore, the sentient appetite moves the will.

**I respond:** As was explained above (a. 1), what is apprehended under the concept of the good and the fitting moves the will in the manner of an *object*. But something’s being seen as good and fitting depends on two things, viz., (a) the condition of the thing that is proposed and (b) the condition of the

one to whom it is proposed. For ‘fitting’ is a relational predicate (*secundum relationem dicitur*), and it depends on both relata (*ex utroque extremo*). So it is that as the sense of taste is differently disposed, it does not receive something as fitting or as not fitting in the same way. Hence, as the Philosopher says in *Ethics* 3, “According as someone is, thus does the end seem to him.”

Now it is clear that a man is altered in his disposition by the passions of the sentient appetite. Hence, to the extent that a man is subject to some passion (*est in passione*), something will seem fitting to him that would not seem fitting to someone who was not subject to that passion; for instance, something will seem good to an angry man that would not seem good to a calm man. It is in this way, on the part of the object, that the sentient appetite moves the will.

**Reply to objection 1:** Nothing prevents that which is preeminent absolutely speaking and in its own right from being inferior in some respect. Thus, the will is preeminent over the sentient appetite absolutely speaking, but the sentient appetite is preeminent in the case of someone whom the passions dominate insofar as he is subject to some passion.

**Reply to objection 2:** Men’s acts and choices have to do with singular things. Hence, by the very fact that the sentient appetite is a power that deals with particulars (*virtus particularis*), it has a great ability (*habet magnam virtutem*) to dispose a man in such a way that something regarding singulars seems one way or another to him.

**Reply to objection 3:** As the Philosopher says in *Politics* 1, reason, in which the will resides, moves the irascible and concupiscible [appetites] by its command—not, to be sure, with a despotic rule, in the way that a servant is moved by his master, but rather with a regal or political rule, in the way that free men are directed by a governor, even though they are able to move in a contrary direction. Hence, the irascible and concupiscible appetites are likewise able to effect movement in a way contrary to the will. And so nothing prevents the will from sometimes being moved by them.

### Article 3

#### Does the will move itself?

It seems that the will does not move itself:

**Objection 1:** Every mover, as such, is actual (*est in actu*), whereas what is moved is in potentiality (*est in potentia*); for “a movement is the act of something that is in potentiality insofar as it is in potentiality.” But it is not the case that the same thing is both actual and in potentiality with respect to the same thing. Therefore, nothing moves itself. Therefore, the will cannot move itself, either.

**Objection 2:** A movable thing is moved in the presence of the mover. But the will is always present to itself. Therefore, if the will moved itself, it would never stop being moved (*semper moveretur*). But this is clearly false.

**Objection 3:** As has been explained (a. 1), the will is moved by the intellect. Therefore, if the will moved itself, it would follow that the same thing is being moved directly by two movers at the same time—which seems absurd. Therefore, it is not the case that the will moves itself.

**But contrary to this:** Since the will is the master of its own activity, it is capable both of willing and of not willing. But this would not be the case if it did not have it within its power to move itself to will. Therefore, it moves itself.

**I respond:** As was explained above (a. 1), the will’s role is to move the other powers in light of the end, which is the will’s object. But as has been said (q. 8, a. 2), the end plays the same role among desirable things that a principle plays among intelligible things.

Now it is obvious that through its cognition of principles the intellect brings itself from potentiality to actuality with respect to its cognition of the conclusions, and in this way it moves itself. Similarly,

through its willing of an end the will moves itself to will the means to that end.

**Reply to objection 1:** It is not the case that the will is mover and moved with respect to the same thing, and so it is not the case that the will is both actual and in potentiality with respect to the same thing. Rather, insofar as it actually wills the end, it brings itself from potentiality to actuality with respect to the means to the end, so that it actually wills those means.

**Reply to objection 2:** The will's power is always actually present to it, but the will's act, by which it wills an end, does not always exist in the will. Now it is through this act that it moves itself. Hence, it does not follow that it is always moving itself.

**Reply to objection 3:** The way in which the will is moved by the intellect is not the same as the way in which it is moved by itself. Rather, it is moved by the intellect by reason of the *object* of the act, (*secundum rationem obiecti*), whereas in light of an end it is moved by itself as far the *exercise* of the act is concerned.

#### Article 4

##### Is the will moved by anything exterior to it?

It seems that the will is not moved by anything exterior to it (*non moveatur ab aliquo exteriori*):

**Objection 1:** The will's movement is voluntary. But it is part of the concept of the voluntary that what is voluntary is from an intrinsic principle, just as this is part of the concept of the natural. Therefore, it is not the case that the will's movement is from anything exterior to it.

**Objection 2:** As was shown above (q. 6, a. 4), the will cannot suffer violence. But the violent is that whose principle is exterior. Therefore, the will cannot be moved by anything exterior.

**Objection 3:** What is moved sufficiently by one mover does not need to be moved by any other mover. But the will moves itself sufficiently. Therefore, it is not moved by anything exterior to it.

**But contrary to this:** As has been explained (a. 1), the will is moved by its object. But the object of the will can be any exterior thing proposed to the sensory power. Therefore, the will can be moved by something exterior.

**I respond:** Insofar as the will is moved by its *object*, it is obvious that it can be moved by something exterior to it.

But even in the mode in which it is moved with respect to the *exercise* of its act, one must likewise affirm that the will is moved by some exterior principle. For everything that is sometimes an actual agent and sometimes [merely] a potential agent needs to be moved by some mover. Now it is obvious that the will begins to will something after not having previously willed it. Therefore, it has to be moved to will it by something. And to be sure, as has been explained (a. 3), the will moves itself to the extent that by willing an end, it brings itself to will the means to that end. But it cannot do this except by the mediation of deliberation. For instance, when someone wills to be made healthy, he begins to think about how to accomplish this, and through this deliberation he arrives at the conclusion that he can be made healthy by a physician, and then he wills this. But because he had not been actually willing health at every previous moment (*quia non semper sanitatem actu voluit*), he must have begun, via some mover, to will to be made healthy. And if the will moved itself to will this, then it must have done it by the mediation of a deliberation following upon some previously posited act of will (*ex aliqua voluntate praesupposita*). But this cannot go on *ad infinitum*. Therefore, as Aristotle concludes in one of the chapters of the *Eudemian Ethics*, it is necessary to claim that for the will's first movement, the act of willing (*voluntas*) proceeds from the impulse of an exterior mover (*ex instinctu alicuius exterioris moventis*).

**Reply to objection 1:** It is part of the concept of the voluntary that its principle is intrinsic, but it need not be the case that this intrinsic principle is a first principle not moved by another. Hence, even if

a voluntary movement has a proximate intrinsic principle, its first principle may nonetheless be external—just as the first principle of a natural movement is likewise external, viz., the thing that moves the nature.

**Reply to objection 2:** It is not sufficient for the concept of the violent that its principle be external; rather, it is necessary to add that the thing acted upon contributes nothing. But this does not happen when the will is moved by something exterior to it; for it itself is what does the willing, even though it is being moved by another.

Now this movement would be violent if it were contrary to the will's movement. But this is impossible in the case under discussion, since if it were contrary, then the will would be both willing and not willing the same thing.

**Reply to objection 3:** The will is a sufficient mover of itself in a certain respect and within its own order, viz., as a proximate cause. But as has been shown, it cannot move itself with respect to everything. Hence, it needs to be moved by another as by a first mover.

## Article 5

### Is the human will moved by any celestial body?

It seems that the human will is moved by a celestial body:

**Objection 1:** All varied and multifaceted movements (*motus varii et multiformes*) are traced back to a uniform movement as their cause, and, as is proved in *Physics* 8, this is the movement of a celestial body. But human movements are varied and multifaceted, and they begin after not having previously existed. Therefore, they are traced back to the movement of a celestial body as their cause, and this movement is uniform by nature.

**Objection 2:** According to Augustine in *De Trinitate* 3, “Lower bodies are moved by higher bodies.” But the movements of the human body that are caused by the will could not be traced back to the movement of a celestial body as their cause unless the will were likewise moved by a celestial body. Therefore, a celestial body moves the human will.

**Objection 3:** Through their observation of the celestial bodies astrologers (*astrologi*) make some true predictions (*quaedam vera prenuntiant*) about future human acts that proceed from the will. But this would not be the case if celestial bodies were unable to move the human will. Therefore, the human will is moved by celestial bodies.

**But contrary to this:** In *De Fide Orthodoxa* 2 Damascene says, “Celestial bodies are not causes of our acts.” But they would be causes of our acts if the will, which is a principle of human acts, were moved by celestial bodies. Therefore, it is not the case that the will is moved by celestial bodies.

**I respond:** In the sense in which the will is moved by an exterior *object*, it is clear that the will can be moved by celestial bodies, viz., insofar as exterior bodies, which move the will when proposed to the sensory power, as well as the very organs of the sentient powers, are subject to the movements of celestial bodies.

But even in the sense in which the will is moved by some exterior agent with respect to the *exercise* of its act, there are some who have claimed that celestial bodies directly affect the human will.

However, this is impossible. For as *De Anima* 3 says, “The will exists in reason.” But reason is a power of the soul that is not tied to a corporeal organ. Hence, it follows that the will is a power that is altogether immaterial and incorporeal. Now it is obvious that a body cannot act on something incorporeal; instead, the opposite is true, since things that are incorporeal and immaterial have a more formal and universal power than any corporeal thing. Hence, it is impossible for a celestial body to directly affect either the intellect or the will. For this reason, it is to those who claimed that the intellect

does not differ from the sensory power that Aristotle in the *De Anima* attributes the opinion that “the will in men is like the day which the father of men and of gods bring on”—referring to Jupiter, by whom they mean the whole of the heavens. For since all the sentient powers are the acts of corporeal organs, they can be moved incidentally (*per accidens*) by celestial bodies, viz., when the bodies of which they are the acts are moved.

However, since it has already been explained (a. 2) that the intellective appetite is moved in a certain way by the sentient appetite, the movements of the celestial bodies redound upon the will indirectly, viz., insofar as the passions of the sentient appetite are able to move the will.

**Reply to objection 1:** The multifaceted movements of the human will are traced back to a certain uniform cause; and yet it is a cause that is higher than the intellect and the will—which cannot be said of any corporeal thing, but is instead true of a higher immaterial substance. Hence, the will’s movements need not be traced back to the movement of the heavens as their cause.

**Reply to objection 2:** Human corporeal movements are traced back to the movement of a celestial body as their cause insofar as (a) the disposition of the organs that is conformed to the movement is itself something that derives in some sense from the influence of the celestial bodies, and insofar as (b) the sentient appetite is likewise moved by the influence of celestial bodies, and, further, insofar as (c) exterior bodies are moved in accord with the movement of the celestial bodies and at the occurrence of this movement the will begins to will something or not to will it—in the way that when it gets cold, someone begins to will to make a fire. But this sort of movement on the will’s part derives from an object which is presented from the outside and not from an interior impulse.

**Reply to objection 3:** As has been explained (*ST* 1, q. 84, aa. 6-7), the sentient appetite is an act of a corporeal organ. Hence, nothing prevents someone from being made liable to anger or sentient desire, or liable to some other passion, because of the influence of celestial bodies—just as this also happens because of some natural condition. Now most men follow their passions, whereas only a few wise men resist them. And so in most cases what is predicted about human acts through a study of the celestial bodies comes true. Yet as Ptolemy says in *Centiloquium*, “The wise man dominates the stars”—viz., because in resisting the passions and not being subject in any way to celestial movements, he impedes this sort of effect on the part of the celestial bodies.

An alternative reply is that, as Augustine says in *Super Genesim ad Litteram* 2, “One must claim that when truths are foretold by astrologers, this is attributed to a certain hidden inspiration that human minds are subject to unknowingly. And since this is done to deceive men, it is an operation of seductive spirits.”

## Article 6

### Is the will moved by God alone as an exterior principle?

It seems that the will is not moved by God alone as an exterior principle:

**Objection 1:** A lower thing is apt to be moved by something higher than it, in the way that lower bodies are moved by the celestial bodies. But man’s will has something higher in addition to God, viz., the angels. Therefore, man’s will can also be moved by an angel as an exterior principle.

**Objection 2:** The will’s act follows upon an act of the intellect. But as Dionysius says, man’s intellect is brought to its own act not only by God but also by the angels through illuminations. Therefore, the same line of reasoning applies to the will.

**Objection 3:** God is a cause only of the good—this according to Genesis 1:31 (“God saw all that He had done, and it was very good”). Therefore, if man’s will were moved by God alone, then it would never move toward evil—even though, as Augustine puts it, “it is the will by which one sins or lives

uprightly.”

**But contrary to this:** In Philippians 2:13 the Apostle says, “For it is God who works in us, to will and to accomplish.”

**I respond:** The will’s movement, just like natural movements, is from within. But even though it is possible for a natural thing to be moved by something that is not a cause of the nature of the thing moved, still, this mover cannot cause a *natural* movement unless it is in some sense a cause of the nature. For instance, a rock is moved upward by a man, who is not a cause of the rock’s nature, but this movement is not natural to the rock; rather, the rock’s natural movement is caused only by what causes its nature. Hence, according to *Physics* 8, what moves heavy and lightweight bodies with respect to place is that which generates them.

So, then, it is possible for a man who has a will to be moved by some extrinsic principle that is not a cause of him, but it is impossible that any *voluntary* act of his should be caused by an extrinsic principle that is not a cause of his will.

Now the cause of a will can be nothing other than God. There are two ways in which this is clear.

First, it is clear from the fact that the will is a power of the rational soul, which, as was established in the First Part (*ST* 1, q. 90, aa. 2-3), is caused by God alone.

Second, it is clear from the fact that the will is ordered toward the universal good. Hence, nothing can be a cause of the will except God Himself, who is the universal good. Every other thing is called good by participation and is a certain particular good; but a particular cause does not bestow a universal inclination. Hence, primary matter, which is in potentiality with respect to all forms, cannot be caused by any particular agent, either.

**Reply to objection 1:** An angel is not higher than a man in the sense that he is a cause of a man’s will in the way that the celestial bodies are causes of the natural forms that the natural movements of natural bodies follow upon.

**Reply to objection 2:** Man’s intellect is moved by an angel with respect to the *object*, which is proposed for cognition by the power of the angelic light. And in this sense, as has been explained (a. 4), a man’s will can likewise be moved by a creature exterior to it.

**Reply to objection 3:** God moves a man’s will as a universal mover with respect to a universal object, i.e., the good. Without this universal motion a man would be unable to will anything. On the other hand, through his reason a man determines himself to willing *this* or *that*, which is either a real good or an apparent good.

However, God sometimes moves certain men in a special way to will some good determinately, as in the case of those whom He moves through grace. This will be explained below (q. 109, a. 2).

## QUESTION 10

### The Modality with Which the Will is Moved

Next, we have to consider the modality with which (*de modo quo*) the will is moved. On this topic there are four questions: (1) Is the will moved naturally toward anything? (2) Is the will moved with necessity by its object? (3) Is the will moved with necessity by the lower appetite? (4) Is the will moved with necessity by its exterior mover, i.e., God?

#### Article 1

##### Is the will moved naturally toward anything?

It seems that the will is not moved naturally toward anything:

**Objection 1:** As is clear from *Physics* 2, natural agents are divided off against voluntary agents. Therefore, it is not the case that the will is moved naturally toward anything.

**Objection 2:** What is natural to a thing always exists in it, in the way that being hot exists in a fire. But there is no movement that always exists in the will. Therefore, there is no movement that is natural to the will.

**Objection 3:** A nature is determined to a single effect (*determinata ad unum*). But the will is open to opposites (*se habet ad opposita*). Therefore, the will does not will anything naturally.

**But contrary to this:** The will's movement follows upon an act of the intellect. But there are certain things that the intellect naturally understands. Therefore, there are likewise certain things that the will naturally wills.

**I respond:** As Boethius says in *De Duabus Naturis* and the Philosopher in *Metaphysics* 5, 'nature' is said in many ways.

Sometimes it means an intrinsic principle in moveable things. And as is clear from *Physics* 2, nature in this sense is either matter or a material form.

In a second sense, a nature is any substance, or even any being. And in this sense what is said to be 'natural' to a thing is what belongs to it by reason of its substance (*secundum suam substantiam*); and this is what belongs to a thing *per se*. Now in the case of each thing, what does not exist in it *per se* is traced back to something that does exist in it *per se* as a principle. And so if we take 'nature' in this sense, then the principle of whatever belongs to a thing must always be natural.

This is manifestly clear in the case of the intellect. For the principles of intellectual cognition are naturally known.

Similarly, the principle of voluntary movements must likewise be something that is naturally willed. Now this is (a) the good in general (*bonum in commune*), which the will naturally tends toward in the way that every power likewise naturally tends toward its own object, and also (b) the ultimate end itself, which plays the role among desirable things that the first principles of demonstration play among intelligible things, and, in general, (c) all the things that are fitting by nature for the one who wills them (*omnia illa quae conveniunt volenti secundam suam naturam*). For by our will we desire not only what has to do with the power of willing, but also what has to do with each of our powers and with the whole man. Hence, a man naturally wills not only the object of the will, but also the other objects that belong to the other powers, e.g., the cognition of truth, which belongs to the intellect; and existing and living and other things of this sort, which relate to natural existence. All of these things are included under the will's object as certain particular goods.

**Reply to objection 1:** The will is divided off against nature in the way that one cause is divided off against another; for some things come to be naturally and some come to be voluntarily.

Now there is another mode of causing that (a) is proper to the will, which is the master of its own act, and that (b) goes beyond the mode that belongs to nature and that is determined to a single effect. But since the will is grounded in a certain nature (*fundatur in aliqua natura*), that nature's proper

movement must in some respect be shared by the will (*quantum ad aliquid participetur in voluntate*), in the sense that what belongs to a prior cause is shared by a posterior cause. For in each thing the *esse* itself, which is had through the nature, is prior to the act of willing, which is had through the will. And so it is that the will naturally wills something.

**Reply to objection 2:** In the case of natural things, what is natural in the sense of following just upon the *form* is always actual in the thing, in the way that being hot is natural to a fire. However, what is natural in the sense of following upon the *matter* is not always actual but sometimes exists only in potentiality. For a form is actuality, whereas matter is potentiality.

Now a movement is the act of something that exists in potentiality. And so in the case of natural things, what pertains to a movement or follows upon a movement does not always exist in the thing; for instance, fire is not always moving upward, but moves upward [only] when it exists outside its proper place (*quando est extra locum suum*).

Similarly, the will, which is brought from potentiality to actuality when it wills something, does not have to be willing something at all times, but rather only when it exists in some determinate disposition.

However, God's will, which is pure actuality, is always actually willing.

**Reply to objection 3:** A nature always has a single corresponding effect, but it is an effect that is proportioned to the nature. For instance, something that is one in genus corresponds to the nature in its genus, and something that is one in species corresponds to the nature taken in its species, and some one individual corresponds to the nature as individuated.

Therefore, since the will, like the intellect, is an immaterial power, what corresponds to it naturally is something that is one and general, viz., *the good*—just as something that is one and general, viz., *the true* or *being* or 'what-ness' (*quid est*) corresponds to the intellect. But under the good in general (*sub bono communi*) there are many particular goods, and the will is not determined to any of them.

## Article 2

### Is the will moved with necessity by its object?

It seems that the will is moved with necessity by its object:

**Objection 1:** As is clear from *De Anima* 3, the will's object is related to the will in the way that a mover is related to what it moves. But if a mover is a sufficient mover, then it moves the movable thing with necessity. Therefore, the will can be moved with necessity by its object.

**Objection 2:** Just as the will is an immaterial power, so too is the intellect, and, as has been explained (a. 1), both of these powers are ordered toward a universal object. But the intellect is moved with necessity by its object. Therefore, the will is likewise moved with necessity by its object.

**Objection 3:** Everything that someone wills is either an end or something ordered toward an end. But, it seems, one wills an end with necessity, since an end is like a principle among speculative things and we assent to principles with necessity. But an end is a reason for willing the means to that end, and so it seems that we likewise will the means to the end with necessity. Therefore, the will is moved with necessity by its object.

**But contrary to this:** According to the Philosopher, rational powers are open to opposites. But the will is a rational power, since, as *De Anima* 3 says, it exists "in reason." Therefore, the will is open to opposites. Therefore, it is not the case that it is moved with necessity to one of the opposites.

**I respond:** There are two ways in which the will is moved: (a) with respect to the *exercise* of its act, and (b) with respect to the *specification* of its act, which stems from the *object*.

As regards the first way, the will is not moved with necessity by any object, since in the case of any object, one is able not to be thinking about that object and, as a result, is likewise able not to be actually

willing it.

However, as regards the second sort of movement, the will is moved with necessity by some objects and not by others. For when a power is moved by its object, the aspect by which (*ratio per quam*) the object moves the power must be taken into account. For instance, what is visible moves the visual power under the aspect of an actually visible color. Hence, if a color is proposed to the visual power, it moves the visual power with necessity—unless the man averts his sight, which has to do with the *exercise* of the act. On the other hand, if what is proposed to the visual power were not actually colored in every respect, but only in some respects and not in others, then the visual power would not see such an object with necessity. For it would be possible to focus on a part of the object that was not actually colored and thus not see the object.

Now the good is the will's object in the same way that what is actually colored is the visual power's object. Hence, if an object that is good in every respect and according to every way of thinking about it (*bonum universaliter et secundum omnem considerationem*) is proposed to the will, then the will tends toward it with necessity if it wills anything at all—for it will not be able to will the opposite. On the other hand, if an object that is not good in every respect is proposed to the will, then the will does not tend toward it with necessity. And since a lack of any good has the character of something not good (*habet rationem non boni*), only a good that is perfect and lacking in nothing, viz., beatitude, is a good of the sort that the will is not able not to will. Every other particular good, insofar as it is lacking in some good, is able to be thought of as not good, and in this respect it can be either rejected or accepted by the will, which is able to tend toward the same thing according to the different ways of thinking about it (*secundum diversas considerationes*).

**Reply to objection 1:** The only sufficient mover of a given power is an object that has the character of a mover in every respect (*totaliter habet rationem motivi*). But, as has been explained, if it is lacking in anything, then it will not effect movement with necessity.

**Reply to objection 2:** The intellect is moved with necessity by an object such that it is always true and true by necessity, but not by an object that is able to be true and able to be false, i.e., by a contingent object—as has likewise been explained for the case of the good.

**Reply to objection 3:** The ultimate end moves the will with necessity, since it is a complete good (*bonum perfectum*). The same holds for what is ordered toward this end and such that the end cannot be had without it, e.g., existing and living and things of this sort. By contrast, the will does not will with necessity those other things without which the end can be had—just as someone who believes the principles does not believe with necessity those conclusions without which the principles can still be true.

### Article 3

#### Is the will moved with necessity by the passions of the lower appetite?

It seems that the will is moved with necessity by the passions of the lower appetite:

**Objection 1:** In Romans 7:15 the Apostle says, “The good which I will I do not; but the evil which I will not, that I do”—which he says because of sentient desire (*propter concupiscentiam*), which is a passion. Therefore, the will is moved with necessity by the passions.

**Objection 2:** As *Ethics* 3 says, “According as someone is, thus does the end seem to him.” But it is not within the will's power to immediately toss away a passion. Therefore, it is not within the will's power not to will what the passion inclines it toward.

**Objection 3:** A universal cause is applied to a particular effect only through the mediation of some particular cause; hence, as *De Anima* 3 says, even universal reason does not effect movement except by

the mediation of a particular estimative judgment. But universal reason is related to a particular estimative judgment in the same way that the will is related to the sentient appetite. Therefore, the will is never moved to will something particular except by the mediation of the sentient appetite. Therefore, if the sentient appetite is disposed toward something by a passion, then the will is not able to move in a contrary direction.

**But contrary to this:** Genesis 4:7 says, “Your lust shall be under you, and you shall have dominion over it.” Therefore, it is not the case that man’s will is moved with necessity by the lower appetite.

**I respond:** As was explained above (q. 9, a. 2), a passion of the sentient appetite moves the will in that way in which the will is moved by an *object*, i.e., insofar as a man who is in some way disposed by the passion judges something to be fitting and good which he would not judge to be fitting and good if he were without the passion.

Now there are two ways in which this sort of effect on a man is had through a passion:

In one way, the man’s reason is *totally bound* in such a way that he does not have the use of reason, as happens in the case of those men who become furious or demented (*furiosi vel amentes fiunt*) because of vehement anger or sentient desire, in the same way that this might happen because of some other bodily disorder. For passions of this sort do not occur without bodily transmutations. And in such cases the argument is the same as in the case of brute animals, which follow the impetus of the passion with necessity. For in these animals there is no movement of reason and, as a result, no movement of the will, either.

However, sometimes reason is not totally absorbed by the passion, but instead the free judgment of reason remains in some respect. Therefore, to the extent that reason remains free and not subject to the passion, any remaining movement of the will does not tend with necessity toward what the passion inclines the man to.

So either (a) no movement on the part of the will remains in a man, but the passion alone dominates, or (b) if there is a movement of the will, it does not follow the passion with necessity.

**Reply to objection 1:** Even if the will is unable to prevent the movement of sentient desire (*motus concupiscentiae*) from arising—this is what the Apostle is speaking of in Romans 7:15 when he says, “The evil which I will not, that I do,” i.e., that I desire—the will is still able to will not to have the desire or still able not to consent to the desire. And so it is not the case that the will follows the movement of sentient desire with necessity.

**Reply to objection 2:** Even though there are two sorts of nature in man, viz., intellective and sentient, it is sometimes the case that a man is uniformly such in his soul that either (a) the sentient part is totally subject to reason, as happens in the case of virtuous men, or, conversely, (b) reason is totally absorbed by a passion, as happens in those who are out of their minds. But sometimes, even if reason is clouded by a passion, something in reason remains free; and, accordingly, someone is able either to repel the passion altogether or, at least, to hold on to himself in such a way as not to follow the passion. For since, in this sort of disposition, the man is disposed differently in the diverse parts of the soul, things seem one way to him in accord with reason and another way in accord with the passion.

**Reply to objection 3:** The will is moved not only by the universal good that is apprehended through reason, but also by the good that is apprehended through the sensory power. And so the will can be moved toward some particular good without any passion of the sentient appetite. For we will many things without passion, through choice alone, as is especially clear in those in whom reason resists the passions.

#### Article 4

##### Is the will moved with necessity by God?

It seems that the will is moved with necessity by God:

**Objection 1:** Every agent that cannot be resisted effects movement with necessity. But since God is infinite in power, He cannot be resisted; hence, Romans 9:19 says, “Who resists His will?” Therefore, God moves the will with necessity.

**Objection 2:** As has been explained (a. 2), the will is moved necessarily toward what it naturally wills. But as Augustine says in *Contra Faustum* 26, “It is natural to each thing that God operates in it.” Therefore, the will necessarily wills everything toward which it is moved by God.

**Objection 3:** The possible is such that if it is posited, then the impossible does not follow. But the impossible follows if it is posited that the will does not will what God moves it toward; for if this were so, then God’s action would be inefficacious. Therefore, it is not possible that the will should not will what God moves it toward. Therefore, it is necessary that it will it.

**But contrary to this:** Ecclesiasticus 15:14 says, “God made man from the beginning, and left him in the hand of his own counsel.” Therefore, it is not the case that God moves man’s will with necessity.

**I respond:** As Dionysius says in *De Divinis Nominibus*, chap. 4, “It is the role of divine providence to preserve the nature of things and not to corrupt it.” Hence, all things effect movement in accord with their condition, so that through God’s motion effects follow with necessity from necessary causes and effects follow contingently from contingent causes. Therefore, since the will is an active principle that is not determined to a single effect but is instead open to many effects indifferently (*indifferenter se habens ad multa*), God moves it in such a way that (a) He does not determine it with necessity to one effect and that (b) its movement remains contingent and not necessary—except in regard to those things which it is naturally moved toward.

**Reply to objection 1:** God’s will extends outward not only in such a way that something is done through the thing which He moves, but also in such a way that it is done in a mode that fits the thing’s nature. And so it would be more repugnant to God’s motion if the will were moved with necessity, which does not belong to its nature, than if it were moved freely in the way that does belong to its nature.

**Reply to objection 2:** It is natural to each thing that God operates in it in a way that is natural to it. For something belongs to each thing in the way that God wills that it should belong to it. But He does not will that whatever He does in things should be natural to them; for instance, He does not will that it should be natural to them that they rise from the dead. Instead, He wills it to be natural to each thing that it should be subject to the divine power.

**Reply to objection 3:** If God moves a will to something, then it is not compossible with this assumption that the will not be moved toward that thing. But this is not impossible absolutely speaking. Hence, it does not follow that the will is moved by God with necessity.

## QUESTION 11

### Enjoying as an Act of the Will

Next, we have to consider the act of enjoying (*fruitio*). On this topic there are four questions: (1) Is enjoying an act of an appetitive power? (2) Does the act of enjoying belong only to rational creatures, or does it belong to brute animals as well? (3) Is the act of enjoying directed only toward the ultimate end? (4) Is the act of enjoying directed only toward an end that is possessed?

#### Article 1

##### Does the act of enjoying belong only to an appetitive power?

It seems that act of enjoying (*frui*) does not belong only to an appetitive power:

**Objection 1:** To enjoy seems to be nothing other than to partake of the fruit (*fructum capere*). But as was shown above (q. 3, a. 4), the fruit of human life, i.e., beatitude, is partaken of by the intellect, an act of which beatitude consists in. Therefore, the act of enjoying belongs to the intellect and not to an appetitive power.

**Objection 2:** Every power has its proper end, viz., its own perfection; for instance, the end of the visual power is to have cognition of the visible, and the end of the auditory power is to perceive sounds, and so on for the others. But a thing's end is its 'fruit'. Therefore, the act of enjoying belongs to every power and not just to an appetitive power.

**Objection 3:** The act of enjoying implies a certain delight (*delectatio*). But sentient delight belongs to the senses, which take delight in their object; and, for the same reason, intellectual delight belongs to the intellect. Therefore, the act of enjoying belongs to an apprehensive power and not to an appetitive power.

**But contrary to this:** In *De Doctrina Christiana* 1 and in *De Trinitate* 10 Augustine says, "To enjoy is to adhere to a thing with love for its own sake." But love involves an appetitive power. Therefore, enjoying is likewise an act of an appetitive power.

**I respond:** The act of enjoying (*fruitio*) and the fruit (*fructus*) have to do, it seems, with the same thing, and the one is derived from the other. For our present purposes, it makes no difference which is derived from which—except that it seems likely that the one that is more manifest was also the one that was named first.

Now what is manifest to us in the first place are things that are more able to be sensed. Hence, the name '*fruitio*' seems to have been derived from sensible fruits (*a sensibilibus fructibus*). But a sensible fruit is the ultimate thing that one looks forward to from a tree, and it is perceived with a certain gratification (*quadam suavitate*). Hence, the act of enjoying (*fruitio*) has to do, it seems, with someone's love for, or delight in, the ultimate thing that he looks forward to, viz., the end. But the end or the good is the object of an appetitive power. Hence, it is clear that the act of enjoying is an act of an appetitive power.

**Reply to objection 1:** Nothing prevents one and the same thing, thought of in different ways (*secundum diversas rationes*), from belonging to different powers. Thus, the very vision of God, insofar as it is a vision, is an act of the intellect. But insofar as it is a good and an end, it is an object of the will, and it is in this respect that there is enjoyment of it. And so the intellect attains to this end as an active power (*tamquam potentia agens*), whereas the will pursues it as a power that (a) effects movement toward the end and that (b) enjoys the end once it is attained.

**Reply to objection 2:** As was explained above (q. 9, a. 1), the perfection and end of every other power is included in the end of the appetitive power, in the way that what is particular (*proprium*) is included in what is general (*commune*). Hence, insofar as the perfection and end of any power is a certain good, it pertains to the appetitive power. This is why the appetitive power moves the other powers to their own ends, and the appetitive power itself attains to its end when all the other powers

reach their end.

**Reply to objection 3:** There are two elements in delight, viz., (a) the perception of what is fitting, which belongs to an apprehensive power, and (b) being pleased with that which is proposed as fitting (*complacentia eius quod offerter ut conveniens*). The latter belongs to an appetitive power, in which the nature of delight is brought to completion.

## Article 2

### Does the act of enjoying belong only to men?

It seems that the act of enjoying belongs only to men:

**Objection 1:** In *De Doctrina Christiana* 1 Augustine says, “It is we men who enjoy and use.” Therefore, it is not the case that other animals are capable of the act of enjoying.

**Objection 2:** The act of enjoying is directed toward the ultimate end. But brute animals are unable to reach the ultimate end. Therefore, the act of enjoying does not belong to them.

**Objection 3:** A natural appetite is subordinate to a sentient appetite in the same way that a sentient appetite is subordinate to an intellective appetite. Therefore, if the act of enjoying belongs to a sentient appetite, then it seems, by parity of reasoning, that it can belong to a natural appetite. But this is clearly false, since the act of delight does not belong to a natural appetite.

**But contrary to this:** In 83 *Quaestiones* Augustine says, “It is not absurd to think that even beasts enjoy food and bodily pleasure.”

**I respond:** As is established by what has already been said (a. 1), the act of enjoying is not the act of a power that reaches the end in the sense of *executing* it (*sicut exequentis*), but is instead the act of a power that *commands* this execution (*imperantis executionem*); for it has been explained that the power in question is an appetitive power.

Now in things that lack cognition there is a power that arrives at the end by way of *executing* it, e.g., the power by which something heavy tends downward, and the power by which something lightweight tends upward. But the power that reaches the end in the sense of *commanding* it (*potentia ad quam pertinet finis per modum imperantis*) is found not in these things themselves, but instead in a higher nature that by its command moves their whole nature in the way that, in things with cognition, the appetite moves the other powers to their acts. Hence, it is clear that in the case of things that lack cognition, even though they might attain their end, there is no act of enjoying the end; instead, the act of enjoying is found only in things that have cognition.

However, there are two sorts of cognition of the end, *perfect* and *imperfect*. *Perfect* cognition is that by which there is a cognition not only of that which is the end and the good, but of the *universal* notion of the end and the good; this sort of cognition belongs only to a rational nature. By contrast, *imperfect* cognition is that by which there is a *particularized* cognition of the end and the good (*qua cognoscitur particulariter finis et bonum*); and this is the sort of cognition that exists in brute animals. In addition, the appetitive powers (*virtutes appetitivae*) in brute animals are not powers that command *freely*, but are instead powers that are moved by *natural instinct* toward the things that are apprehended.

Hence, a rational nature has the act of enjoying in the *perfect* sense (*secundum rationem perfectam*), whereas brute animals have it in an *imperfect* sense, and other creatures do not have it in any way at all.

**Reply to objection 1:** Augustine is talking here about a perfect act of enjoying.

**Reply to objection 2:** The act of enjoying need not be directed toward the ultimate end absolutely speaking, but is instead directed toward what each thing has as its ultimate end (*eius quod habetur ab unoquoque pro ultimo fine*).

**Reply to objection 3:** Sentient appetite follows upon some sort of cognition, but natural appetite does not, especially as it exists in things that lack cognition.

**Reply to the argument for the contrary:** Augustine is here talking about an act of enjoying in the imperfect sense (*de fruitione imperfecta*). This is clear from his manner of speaking. For he says, “It is not all that absurd (*non adeo absurde*) to think that even beasts enjoy .....”—in the way that it *would* be altogether absurd (*absurdissime*) to say that they have the act of using (cf. q. 16, a. 2 below).

### Article 3

#### Is the act of enjoying directed only toward the ultimate end?

It seems that the act of enjoying is not directed only toward the ultimate end:

**Objection 1:** In *Philemon*, verse 20, the Apostle says, “Brother, I so enjoy you in the Lord.” But it is manifest that Paul had not placed his ultimate end in a man. Therefore, the act of enjoying is not directed only toward the ultimate end.

**Objection 2:** A fruit (*fructus*) is what someone enjoys. But in Galatians 5:22 the Apostle says, “The fruits of the Spirit are love, joy, peace, etc.”—which do not have the character of an ultimate end. Therefore, it is not the case that the act of enjoying is directed only toward the ultimate end.

**Objection 3:** Acts of will are self-reflective; for example, I will that I will, and I love that I love. But to enjoy is an act of the will, since, as Augustine puts it in *De Trinitate* 10, “It is the will through which we enjoy.” Therefore, someone enjoys his own act of enjoying. But it is not an act of enjoying that is man’s ultimate end; instead, it is an uncreated good alone, viz., God. Therefore, the act of enjoying is not directed only toward the ultimate end.

**But contrary to this:** In *De Trinitate* 10 Augustine says, “There is no act of enjoying if it is for the sake of something else that one desires what he takes into the faculty of the will.” But it is the ultimate end alone which is not desired for the sake of something else. Therefore, it is the ultimate end alone that the act of enjoying is directed toward.

**I respond:** As has been explained (a. 1), two things are relevant to the notion of a fruit, viz., (a) that it be something ultimate and (b) that it put the appetite to rest with a certain sweetness or delight (*quadam dulcedine vel delectatione*).

Now something is ultimate either *absolutely speaking* or *relatively speaking*. A thing is ultimate absolutely speaking when it is not referred to anything further (*ad aliud non refertur*), whereas a thing is ultimate relatively speaking when it is the last with respect to certain things (*ultimum aliquorum*).

Thus, what is ultimate absolutely speaking is such that someone takes delight in it as in an ultimate end; and this is what is properly called a ‘fruit’ and what someone is properly said to enjoy.

By contrast, what is not delightful in itself, but is desired only in relation to something else, e.g., a bitter drink for the sake of health, can in no way be called a fruit.

On the other hand, what has a certain delight in itself and is such that certain preceding things are referred to it can in some sense be called a fruit—even if not properly speaking or in accord with the perfect notion of a fruit (*secundum completam rationem fructus*)—and we are said to enjoy it. Hence, in *De Trinitate* 10 Augustine says, “We enjoy things which we have cognition of and in which the delighted will finds rest.” To be sure, the will does not rest in anything absolutely speaking except the ultimate end, since as long as there is still something to look forward to, the will’s movement remains uncertain (*in suspensa*), even if it has already arrived at something. It is like a case of local motion: Even though a point in the middle of a magnitude is a beginning and an end, it is nonetheless not taken as an *actual* end except when the thing comes to rest in it.

**Reply to objection 1:** As Augustine says in *De Doctrina Christiana* 1, “If he had said ‘I enjoy

you' and had not added 'in the Lord', then he would have seemed to place the end of love in him. But because he added that phrase, he signified that he was placing his end in the Lord and that it was Him whom he was enjoying." So he was saying that he enjoyed his brother not as a terminus, but as an intermediate.

**Reply to objection 2:** A fruit is related in one way to the tree that produces it and in another way to the man who enjoys it. It is related to the tree that produces it as an effect to a cause, whereas it is related to the man who enjoys it in the way that the ultimate thing looked forward to is related to the one who delights in it. Therefore, the things that the Apostle enumerates in this passage are called fruits because they are certain effects of the Holy Spirit in us; hence, they are called "the fruits of the Spirit," but not in such a way that we enjoy them as the ultimate end.

An alternative reply is that, according to Ambrose, they are called fruits "because they are sought for their own sake"—not, to be sure, in the sense that they are not referred to beatitude, but in the sense that they possess in themselves something that should please us.

**Reply to objection 3:** As was explained above (q. 1, a. 8 and q. 2, a. 7), there are two senses of 'end', viz., (a) the thing itself and (b) our attainment of it. These are not two ends, but rather a single end that is (a) thought of in itself and (b) applied to something else.

Therefore, God is the ultimate end in the sense of the thing that is ultimately sought, whereas the act of enjoying is like the attainment of this ultimate end. Therefore, just as God is not an end different from the enjoyment of God, so it is the same notion of enjoyment by which we enjoy God and by which we enjoy our enjoying God. And the same line of reasoning applies to created beatitude, which consists in the act of enjoying.

#### Article 4

##### Is the act of enjoying directed only toward an end that is possessed?

It seems that the act of enjoying is directed only toward an end that is possessed (*non sit nisi finis habiti*):

**Objection 1:** In *De Trinitate* 10 Augustine says, "To enjoy is to make use of with joy (*frui est cum gaudio uti*)—no longer with the joy of hope, but now with the joy of the thing itself." But as long as the thing is not possessed, there is the "joy of hope" and not "the joy of the thing itself." Therefore, the act of enjoying is directed only toward an end that is possessed.

**Objection 2:** As has been explained (a. 3), the act of enjoying is directed, properly speaking, only toward the ultimate end, since the ultimate end alone brings the appetite to rest. But the appetite is brought to rest only in an end that is already possessed. Therefore, the act of enjoying is directed, properly speaking, only toward an end that is possessed.

**Objection 3:** To enjoy is to partake of the fruit (*fructum capere*). But the fruit is partaken of only when the end is already possessed. Therefore, the act of enjoying is directed only toward an end that is possessed.

**But contrary to this:** As Augustine says, "To enjoy is to adhere to a thing with love for its own sake." But this can be done even with respect to an end that is not possessed. Therefore, the act of enjoying can be directed even toward an end that is not possessed.

**I respond:** 'To enjoy' implies a certain relation of the will to an ultimate end insofar as the will has something as its ultimate end.

Now there are two ways in which an end is possessed: (a) *perfectly* and (b) *imperfectly*. The end is *perfectly* possessed when it is had not only in one's thought (*in intentione*) but also in reality (*in re*), whereas it is *imperfectly* possessed when it is had only in one's thought.

Therefore, there is a *perfect* act of enjoying an end which is already possessed in reality. But there is also an *imperfect* act of enjoying an end which is possessed only in thought and not in reality.

**Reply to objection 1:** Augustine is talking about a perfect act of enjoying.

**Reply to objection 2:** There are two ways in which the will's rest is impeded: (a) on the part of the object, viz., because it is not the ultimate end but is ordered toward something else; and (b) on the part of the one who desires the end but who has not yet attained to the end.

Now the *object* is what gives an act its *species*, whereas the *manner of acting* depends on the agent, with the result that the act is *perfect* or *imperfect* depending on the agent's condition. And so when the end in question is not the ultimate end, the act of enjoying is *improper* in the sense of falling short of the species *enjoyment*. And when the ultimate end is not possessed, then there is a *proper* act of enjoying but an *imperfect* one, because of the imperfect mode of possessing the ultimate end.

**Reply to objection 3:** As has been explained, someone is said to receive or possess an end not only in reality but also in thought.

## QUESTION 12

### Intending

Next, we have to consider the act of intending (*intentio*). On this topic there are five questions: (1) Is intending an act of the intellect or an act of the will? (2) Is an act of intending directed only toward the ultimate end? (3) Can someone intend two things simultaneously? (4) Is intending an end the same act as willing the means to that end? (5) Does the act of intending belong to brute animals?

### Article 1

#### Is intending an act of the intellect or an act of the will?

It seems that intending is an act of the intellect and not of the will:

**Objection 1:** Matthew 6:22 says, “If your eye is simple, then your whole body will be light,” where, as Augustine says in *De Sermone Domini in Monte*, ‘eye’ signifies the act of intending. But since the eye is the instrument of the visual power, it signifies an apprehensive power. Therefore, intending is an act of an apprehensive power and not of an appetitive power.

**Objection 2:** In the same work Augustine says that the act of intending is being called ‘light’ by our Lord when He says, “If the light that is in you is darkness ....” [Matthew 6:23]. But light pertains to cognition. Therefore, so does the act of intending.

**Objection 3:** ‘Intending’ designates a certain ordering toward an end. But it is reason’s role to do the ordering. Therefore, the act of intending belongs to reason and not to the will.

**Objection 4:** An act of the will is directed only to either an end or the means to an end. But an act of the will with respect to an end is called ‘willing’ (*voluntas*) or ‘enjoying’ (*fruitio*), whereas an act of the will with respect to the means to an end is called ‘choosing’ (*electio*). An act of intending differs from these acts. Therefore, intending is not an act of the will.

**But contrary to this:** In *De Trinitate* 11 Augustine says, “The will’s intending joins a body that is seen to the visual power and, similarly, it joins the species that exists in memory to the gaze of the mind’s interior thought.” Therefore, intending is an act of the will.

**I respond:** ‘Intending’, as the name itself suggests, signifies a tending toward something. Now both the mover’s action and the moveable thing’s movement tend toward something. But the fact that the moveable thing’s movement tends toward something stems from the mover’s action. Hence, intending pertains primarily and chiefly to that which *effects* movement toward the end; hence, we say that an architect, or anyone who is in charge, moves others by his command toward what he intends. But as was established above (q. 9, a. 1), it is the will that moves the other powers of the soul toward their end. Hence, it is clear that intending is, properly speaking, an act of the will.

**Reply to objection 1:** Intending is metaphorically called an ‘eye’ not because it has to do with cognition, but rather because it presupposes the cognition that proposes to the will the end toward which the will effects movement—in the same way that with the eye we see ahead to where we should tend with our bodies.

**Reply to objection 2:** Intending is called ‘light’ because it is manifest to the one who is doing the intending. Hence, the works are called darkness because, as Augustine explains in the same place, a man knows what he intends, but does not know what follows from his works.

**Reply to objection 3:** The will, to be sure, does not do the ordering, but it does tend toward something in accord with the order prescribed by reason (*secundum ordinem rationis*). Hence, the name ‘intending’ names an act of the will and presupposes the order by which reason orders something toward the end.

**Reply to objection 4:** Intending is an act of the will with respect to an end. However, there are three ways in which the will is related to an end:

First, it is ordered to an end absolutely speaking, and in this sense it is called *willing* (*voluntas*), as when we will health (or something else of this sort) absolutely speaking.

Second, the end is thought of insofar as one comes to rest in it, and in this sense it is the act of *enjoying* that is related to the end.

Third, the end is considered insofar as it is the terminus of something that is ordered toward it, and it is in this way that *intending* is related to the end. For we are said to intend health not only because we will it, but because we will to reach it through something else.

## Article 2

### Is intending directed only toward the ultimate end?

It seems that intending is directed only toward the ultimate end:

**Objection 1:** In *Sententiae* Prosperus says, “The heart’s intention is a cry to God.” But God is the ultimate end of the human heart. Therefore, intending always has to do with the ultimate end.

**Objection 2:** As has been explained (a. 1), the act of intending relates to an end insofar as the end is a terminus. But a terminus has the character of something ultimate. Therefore, the act of intending always relates to the ultimate end.

**Objection 3:** An act of enjoying relates to the end just as an act of intending does. But an act of enjoying is always directed toward the ultimate end. Therefore, so is an act of intending.

**But contrary to this:** As was explained above (q. 1, a. 7), there is a single ultimate end of human acts of will, viz., beatitude. Therefore, if an act of intending were always directed toward the ultimate end, then there would not be diverse human intentions. But this is clearly false.

**I respond:** As was explained above (a. 1), intending has to do with an end insofar as the end is a terminus of the will’s movement. Now in the case of a movement, ‘terminus’ can be taken in one of two ways, viz., (a) for the *ultimate terminus* itself, in which there is rest and which is the terminus of the entire movement, or (b) for some *point in between* that is the beginning of one part of the movement and the end or terminus of another part. For instance, in a movement that goes from *A* to *C* through *B*, *B* is a terminus, though not the ultimate terminus. And with respect to each of *B* and *C* there can be an act of intending. Hence, even if intending is always directed toward an end, it does not always have to be directed toward the ultimate end.

**Reply to objection 1:** The heart’s intention is called “a cry to God” not in the sense that God is always the object of an act of intending, but because He knows the intention.

An alternative reply is that the heart’s intention is called “a cry to God” because when we pray, we direct our act of intending toward God and this act of intending has the force of a cry.

**Reply to objection 2:** A terminus has the character of something ultimate, but it is not always ultimate with respect to the whole; instead, it is sometimes ultimate with respect to some part.

**Reply to objection 3:** Enjoying implies resting in an end, and this pertains solely to the ultimate end. But intending implies movement toward an end and not rest. Hence, the two arguments are not similar to one another.

## Article 3

### Can someone intend more than one thing at the same time?

It seems that one cannot intend more than one thing at the same time:

**Objection 1:** In *De Sermone Domini in Monte* Augustine says that a man cannot intend both God and bodily comfort (*commodum corporale*). Therefore, by parity of reasoning, neither can a man intend any other two things.

**Objection 2:** ‘Intending’ names a movement of the will toward a terminus. But one movement cannot have more than one terminus in a given direction (*ex una parte*). Therefore, the will cannot intend many things at the same time.

**Objection 3:** An act of intending presupposes an act of the intellect or reason. But according to the Philosopher, it is impossible to have intellectual understanding of more than one thing at the same time. Therefore, it is likewise impossible to intend more than one thing at the same time.

**But contrary to this:** Art imitates nature. But nature intends two uses for a single instrument; for instance, as *De Anima* 2 says, the tongue is ordered both toward tasting and toward speaking. Therefore, by parity of reasoning, art or reason can order a single thing toward two ends at the same time. And so someone can intend more than one thing at the same time.

**I respond:** A given pair of things (*aliqua duo*) can be taken in two ways, viz., either (a) as ordered to one another or (b) as not ordered to one another.

If they are ordered to one another, then it is clear from what has been said that a man is able to intend many things at the same time. For as has been explained (a. 2), the act of intending is directed not only toward the ultimate end, but also toward intermediate ends. But one intends a proximate end and its ultimate end at the same time, e.g., the preparation of medicine and health.

But a man can likewise intend more than one thing at the same time if the two things in question are not ordered to one another. This is clear from the fact that a man prefers one thing to another because it is better than the other. But among the criteria according to which one thing is better than another, one is that it is good for more than one thing (*ad plura valet*). And so it is possible for some one thing to be preferred to another by the fact that it is good for more than one thing.

And so a man clearly intends more than one thing at the same time.

**Reply to objection 1:** Augustine means that a man cannot simultaneously intend God and temporal comfort as ultimate ends, since, as was shown above (q. 1, a. 5), one man cannot have more than one ultimate end.

**Reply to objection 2:** A single movement can have several termini in a given direction if one is ordered to another, but a single movement cannot have two termini in a given direction if they are not ordered to one another.

Still, notice that what is not a single thing in reality can be taken as a single thing in thought. Now as has been explained (a. 1), the act of intending is a movement of the will toward something that has already been ordered by reason (*in ratione*). And so things that are many in reality can be taken as a single terminus of an act of intending insofar as they are one thing in thought—either because (a) the two things come together to form something that is an integrated single thing, in the way that a balance of hot and cold comes together for health, or because (b) the two things are included under some one general thing that can be intended. For instance, the acquisition of wine and of clothes is contained under the general heading of wealth (*sub lucro sicut sub quodam communi*); hence, nothing prevents someone who intends wealth from simultaneously intending these two things.

**Reply to objection 3:** As was explained in the First Part (*ST* 1, q. 12, a. 10 and q. 58, a. 2 and q. 85, a. 4), it is possible to have intellectual understanding of more than one thing simultaneously, as long as those things are in some sense one.

#### Article 4

##### Is intending an end one and the same movement as intending the means to that end?

It seems that intending an end is not one and the same movement as intending a means to that end:

**Objection 1:** In *De Trinitate* 11 Augustine says, “Willing to look at a window has seeing the window as its end, and that is different from willing to see passersby through the window.” But my willing to see passersby through the window involves an the act of intending, whereas my willing to see the window involves an act of willing the means to that end. Therefore, the act of intending an end is a movement of the will different from willing the means to that end.

**Objection 2:** Acts are distinguished by their objects. But the end is an object different from the means to that end. Therefore, intending an end is a movement different from willing the means to that end.

**Objection 3:** An act of willing the means to an end is called ‘choosing’. But choosing and intending are not the same thing. Therefore, intending an end is not the same movement as willing the means to that end.

**But contrary to this:** A means to an end is related to the end in the way that an intermediate point is related to the terminus. But among natural things, it is the same movement that passes through the intermediate point to the terminus. Therefore, it is likewise the case among voluntary things that intending an end is the same movement as willing the means to that end.

**I respond:** There are two ways to think of the will’s movement toward an end and toward a means to that end.

The first way is to think of the will’s being directed toward each of them absolutely and in its own right (*absolute et secundum se*); and in this sense there are, absolutely speaking (*simpliciter*), two movements of the will toward the two of them.

In the second way one can think of the will’s being directed toward the means to the end for the sake of the end. And in this sense a movement of the will that is one and the same in subject is tending both toward the end and toward the means to that end. For instance, when I say, ‘I will the medicine for the sake of health’, I am describing (*designo*) only a single movement of the will. The explanation for this is that the end is the reason for willing the means to the end. But it is the same act that covers both the object and the reason for the object—in the way that, as was explained above (q. 8, a. 3), it is the same act of seeing that is directed at both color and light. This is like the case of intellectual understanding. For if one considers the principle and the conclusion absolutely speaking, then thinking of the one is different from thinking of the other; but when one assents to the conclusion because of the principles, then there is just one act of intellectual understanding.

**Reply to objection 1:** Augustine is talking about seeing the window and seeing the passersby through the window insofar as the will is directed toward each of them absolutely.

**Reply to objection 2:** Insofar as an end is a certain thing, it is an object of the will different from the means to that end. But insofar as an end is the reason for willing the means to that end, it is one and same object.

**Reply to objection 3:** A movement that is one in subject can, as *Physics* 3 points out, differ in thought with respect to its beginning and end, as in the case of the ascent and the descent. So, then, insofar as the will’s movement is directed toward the means to the end as ordered to the end, it is called an act of *choosing*. On the other hand, the movement of the will that is directed toward the end insofar the end is acquired by the means to that end is called an act of *intending*. An indication of this is that there can be an act of intending the end even when the means—the object of the act of choosing—has not yet been determined.

## Article 5

### Do brute animals intend an end?

It seems that brute animals intend an end:

**Objection 1:** Nature in things that lack cognition is more distant from rational nature than is sentient nature, which is found in brute animals. But as is proved in *Physics 2*, nature intends an end even in those things that lack cognition. Therefore, *a fortiori*, brute animals intend an end.

**Objection 2:** The act of enjoying is directed to the end in the same way that the act of intending is. But as has been explained (q. 11, a. 2), the act of enjoying belongs to brute animals. Therefore, so does the act of intending.

**Objection 3:** The act of intending an end belongs to a thing that acts for the sake of an end, since intending is just tending toward another. But brute animals act for the sake of an end; for instance, an animal is moved to seek food or something else of this sort. Therefore, brute animals intend an end.

**But contrary to this:** Intending an end implies the ordering of something to that end, and this is the role of reason. Therefore, since brute animals do not have reason, it seems that they do not intend an end.

**I respond:** As was explained above (a. 1), intending is tending toward another, and this belongs both to *the mover* and to *what is moved*.

Thus, insofar as *what is moved* toward an end by another is said to ‘intend the end’, nature is said to intend its end in the sense that it is moved to its own end by God, in the way that an arrow is moved by an archer. And in this sense brute animals, too, intend an end insofar as they are moved toward something by natural instinct.

In the other sense, intending an end belongs to *the mover*, viz., insofar as the mover orders something’s movement—either its own movement or that of another—toward the end. This belongs only to reason. Hence, in this sense, which is the proper and principal sense of ‘intend’, brute animals do not intend an end.

**Reply to objection 1:** This argument goes through to the extent that intending belongs to *what is moved* toward an end.

**Reply to objection 2:** Enjoying does not imply an ordering of one thing to another in the way that intending does. Instead, enjoying implies an absolute rest in the end.

**Reply to objection 3:** Brute animals are moved to their end, not in the sense that they think that they are able to attain the end through their own movement—something that is proper to one who intends—but rather in the sense that, desiring the end by a natural instinct, they are moved to the end as if moved by another, just like the other things that are moved naturally.

## QUESTION 13

### Choosing

Next, we have to consider acts of the will that are related to the means to an end. There are three such acts: choosing, consenting, and using. And deliberating precedes choosing. So we must first consider the act of choosing (question 13); second, the act of deliberating (question 14); third, the act of consenting (question 15); and, fourth, the act of using (question 16).

As regards the act of choosing, there are six questions: (1) Which power does this act belong to, the will or reason? (2) Does the act of choosing belong to brute animals? (3) Is the act of choosing directed only toward a means to an end, or is it sometimes directed toward an end as well? (4) Is the act of choosing directed only toward what we do? (5) Is the act of choosing directed only toward what is possible? (6) Does a man choose freely or with necessity?

### Article 1

#### Is choosing an act of the will or an act of reason?

It seems that choosing is an act of reason and not of the will:

**Objection 1:** Choosing implies a certain comparison in which one thing is preferred to another. But it is reason's role to compare. Therefore, the act of choosing belongs to reason.

**Objection 2:** The same power that reasons syllogistically is the one that comes to conclusions. But it is reason's role to reason syllogistically in matters of action (*in operabilibus*). Therefore, since, as *Ethics* 6 says, the act of choosing is, in matters of action, something like a conclusion, it seems that the act of choosing is an act that belongs to reason.

**Objection 3:** Ignorance belongs to a cognitive power and not to the will. But as *Ethics* 3 says, there is a certain "ignorance involved in choosing" (*ignorantia electionis*). Therefore, it seems that the act of choosing belongs to reason and not to the will.

**But contrary to this:** In *Ethics* 3 the Philosopher says that the act of choosing "is a desire for things that are within our power" (*desiderium eorum quae sunt in nobis*). But desiring is an act of the will. Therefore, so is choosing.

**I respond:** The name 'act of choosing' (*electio*) implies something having to do with reason or intellect and something having to do with the will. For as the Philosopher says in *Ethics* 6, "Choosing is an appetitive understanding or an intellectual appetite (*appetitivus intellectus vel appetitus intellectivus*)."

Now whenever two things come together to constitute some one thing, the one of them is like a form with respect to the other (*est ut formale respectu alterius*). Hence, Gregory of Nyssa says that choosing "is neither an act of desiring in its own right, nor just an act of deliberating, but is instead something composed of them. For just as we say that an animal is composed of a soul and a body, and that it is not the body by itself or just the soul, but both, so too with the act of choosing." Notice, however, that among the acts of the soul, an act that belongs essentially to one power or habit receives its form and species from a higher power or habit to the extent that the lower power or habit is ordered by the higher one. For instance, if someone exercises an act of courage because of his love for God, the act is, to be sure, materially an act of courage, but it is formally an act of charity.

Now it is clear that reason in some sense precedes the will and orders its act, viz., insofar as the will tends toward its object in accord with the order prescribed by reason (*secundum ordinem rationis*), given that the apprehensive power presents the appetitive power with its object. So, then, because the act by which the will tends toward something proposed to it as a good is ordered by reason toward the good, it is materially an act of the will, but formally an act of reason.

However, in this sort of thing the substance of the act is related as matter (*materialiter se habet*) to

the order imposed by the higher power. And so an act of choosing is in substance (*substantialiter*) an act of the will and not of reason. For an act of choosing is brought to completion in a movement of the soul toward the good that is being chosen. Hence, it is clear that it is an act of the appetitive power.

**Reply to objection 1:** ‘Choosing’ implies a comparison that precedes it, but it is not itself essentially the comparison.

**Reply to objection 2:** The conclusion of a syllogism that has to do with actions also belongs to reason and is called a ‘determination’ or ‘judgment’ (*dicitur sententia vel iudicium*), which the act of choosing follows upon. And it is because of this that the conclusion itself seems to belong to the act of choosing as to something that follows upon it.

**Reply to objection 3:** Choosing is said to involve ignorance not because the act of choosing is itself an act of knowing, but because it is not known what will be chosen.

## Article 2

### Does the act of choosing belong to brute animals?

It seems that the act of choosing belongs to brute animals:

**Objection 1:** As *Ethics* 3 says, an act of choosing is “desiring something for the sake of an end.” But brute animals desire things for the sake of an end, since they act for the sake of an end and out of desire. Therefore, the act of choosing exists in brute animals.

**Objection 2:** The name ‘choosing’ seems to signify that something is taken in preference to other things. But brute animals take certain things in preference to others, as is manifestly clear when a sheep eats one plant and rejects another. Therefore, the act of choosing exists in animals.

**Objection 3:** As *Ethics* 6 says, “Prudence involves someone’s choosing in the right way a means to an end.” But prudence belongs to brute animals; hence, at the beginning of the *Metaphysics* it says, “All of the animals that cannot hear sounds, e.g., bees, are prudent without having learned it.” And this same point also seems evident to the senses, since marvelous instances of wisdom (*mirabiles sagacitates*) appear in the works of animals such as bees and spiders and dogs. For if a dog that is tracking a stag comes to a three-pronged crossroads (*ad trivium*), it explores by smelling to determine if the stag has taken the first path or the second path, and if it discovers that the stag has not taken either of them, it immediately starts off confidently along the third path without exploring; it is as if the dog were using a disjunctive syllogism so as to be able to conclude that the stag has taken the third path from the premise that it has not taken either of the other two paths, given that there are no more paths. Therefore, it seems that the act of choosing belongs to brute animals.

**But contrary to this:** Gregory of Nyssa says, “Children and non-rational animals do things voluntarily, but not by choosing.” Therefore, the act of choosing does not exist in brute animals.

**I respond:** Since the act of choosing involves taking one thing in preference to another, it must be the case that choosing is related to more than one thing that can be chosen. And so choosing has no place in matters that are completely determined to a single outcome.

Now the difference between the sentient appetite and the will is that, as is clear from what was said above (q. 1, a. 2), the sentient appetite is determined to a single *particular* thing in accord with the order of nature, whereas the will is determined to a single *general* thing, viz., the good, in accord with the order of nature, but is indeterminate with respect to *particular* goods. And so choosing belongs properly to the will, but not to the sentient appetite, which is the only appetite found in brute animals. Because of this, the act of choosing does not belong to brute animals.

**Reply to objection 1:** Not every case of desiring something for the sake of an end is called an act of choosing, but only those cases that involve discriminating one thing from another. But there is no

place for this except where the appetite can be directed toward more than one thing.

**Reply to objection 2:** A brute animal takes one thing in preference to another because its appetite is naturally determined to that very thing. Hence, as soon as something toward which its appetite is naturally inclined is presented to it through its sensory power or imagination, it is moved toward that thing alone without any act of choosing—just as fire moves upward rather than downward without an act of choosing.

**Reply to objection 3:** As *Physics* 3 says, movement is an act of a movable thing that has its source in the mover (*motus est actus mobilis a movente*). And so it is the mover's power that is apparent in a movable thing's movement. Because of this, the order of the mover's reason is apparent in all things that are moved by reason, even if the things themselves do not have reason. For instance, it is because of the archer's motion that the arrow tends directly toward the target as if it itself possessed directive reason.

Again, the same thing is apparent in the movements of clocks and all other human inventions that are made by art. But in the way that artifacts are related to human art, so all natural things are related to God's art. And so as *Physics* 2 says, an order appears in things that are moved in accord with nature, just as it does in things that are moved by reason. And the reason why it is possible for instances of wisdom to appear in the works of brute animals is that they have a natural inclination toward well-ordered processes of the sort ordained by the highest art. It is because of this, and not because they have reason or choice, that certain animals are even called 'prudent' or 'wise'—something that is apparent from the fact that all the animals which share the same nature operate in a similar way.

### Article 3

#### Is an act of choosing directed only toward the means to an end?

It seems that an act of choosing is not directed only toward the means to an end:

**Objection 1:** In *Ethics* 6 the Philosopher says, "Virtue brings about a correct act of choosing, but if anything is apt to be done for the sake of that virtue (*illius gratia*), then it comes not from the virtue but from some other power." But that for the sake of which something is done is an end. Therefore, an act of choosing is directed toward the end.

**Objection 2:** 'Choosing' implies preferring one thing to another. But just as one means to an end can be preferred to another, so too one of a number of diverse ends can be preferred to the others. Therefore, an act of choosing can be directed toward an end as well as toward a means to an end.

**But contrary to this:** In *Ethics* 3 the Philosopher says, "Willing is directed toward the end, whereas choosing is directed toward the means to an end."

**I respond:** As has already been explained (a. 1), an act of choosing follows upon a determination or judgment that is like the conclusion of a practical syllogism (*sicut conclusio syllogismi operativi*). Hence, what falls under an act of choosing is like the conclusion in a syllogism about actions (*ut conclusio in syllogismo operabilium*). But as *Physics* 2 says, in the case of actions, the end is like a principle and not like a conclusion. Hence, the end as such does not fall under an act of choosing.

However, just as, in the case of speculative matters, nothing prevents something that is a principle in one demonstration or science from being a conclusion in some other demonstration or science, so too it is possible for what serves as an end in the case of one action to be ordered toward something else as its own end. And it is in this sense that an end falls under an act of choosing. For instance, in a physician's act, health is the end, and so it does not fall under the physician's act of choosing; instead, his act of choosing presupposes that end as a principle. However, bodily health is ordered toward the good of the soul, and so in the eyes of someone who looks after the health of the soul, being healthy or being sick can fall under an act of choosing. For as the Apostle says in 2 Corinthians 12:10, "When I am

weak, then I am strong.”

By contrast, the ultimate end does not in any way fall under an act of choosing.

**Reply to objection 1:** The proper ends of the virtues are ordered toward beatitude as their ultimate end. And it is in this way that an act of choosing can be directed toward those ends.

**Reply to objection 2:** As was established above (q. 1, a. 5), there is just one ultimate end. Hence, whenever there is more than one end, there can be an act of choosing from among them insofar as they are ordered toward the ultimate end.

#### Article 4

##### Is it only with respect to human acts that there is an act of choosing?

It seems that it is not only with respect to human acts that there is an act of choosing:

**Objection 1:** An act of choosing is directed toward the means to an end. But as *Physics* 2 points out, the means to an end include not only acts but also instruments (*organa*). Therefore, it is not only with respect to human acts that there are acts of choosing.

**Objection 2:** Acting is distinct from contemplating. But choosing has a place even within contemplating, viz., insofar as one opinion is preferred to another. Therefore, it is not only with respect to human acts that there is an act of choosing.

**Objection 3:** Men are chosen to certain offices, whether secular or ecclesiastical, by those who do nothing with respect to them. Therefore, it is not only with respect to human acts that there is an act of choosing.

**But contrary to this:** In *Ethics* 3 the Philosopher says, “No one chooses anything other than what he thinks will be done by him.”

**I respond:** Just as an act of intending is directed toward an end, so an act of choosing is directed toward a means to that end.

Now the end is either an action or a thing (*aliqua res*). When the end is a thing, then some human action must intervene either (a) in the sense that the man effects the thing which is the end (hence the physician’s end is to effect health), or (b) in the sense that the man in some way uses or enjoys the thing that is the end, as in the case in which money, or possessing money, is the greedy man’s end.

We should say the same thing about a means to an end. For a means to an end must be either (a) an action or (b) a thing along with an intervening action through which one either effects this means to the end or uses it. And this is the sense in which an act of choosing is always directed toward human acts.

**Reply to objection 1:** The instruments are ordered toward the end insofar as a man uses them for the sake of the end.

**Reply to objection 2:** Contemplating includes within itself the act of the intellect’s assenting to this or that opinion. It is instead *exterior* action that is divided off from contemplation.

**Reply to objection 3:** A man who chooses a bishop or a prince for a city chooses to name him to such an office (*eligit nominare ipsum in talem dignitatem*). Otherwise, if there were no action on his part that established someone as the bishop or the prince, then the choice would not belong to him. Similarly, one should claim that whenever one thing is said to be chosen in preference to another, some further operation on the part of the chooser is involved there (*adiungitur ibi aliqua operatio eligentis*).

## Article 5

### Is an act of choosing directed only toward what is possible?

It seems that an act of choosing is not directed only toward what is possible (*non sit solum possibilium*):

**Objection 1:** As has been explained (a. 1), choosing is an act of the will. But *Ethics 3* says, “Willing (*voluntas*) is directed toward what is impossible.” Therefore, so is choosing.

**Objection 2:** As has been explained (a. 4), choosing is directed toward things that are done by us. Therefore, as far as choosing is concerned, it makes no difference whether what is chosen is impossible absolutely speaking or whether instead it is impossible for the one who is doing the choosing. But we often choose what we cannot bring to completion and is thus impossible for us. Therefore, an act of choosing can be directed toward what is impossible.

**Objection 3:** A man does not attempt to do anything except by choosing. But St. Benedict says that if a prelate commands something impossible, then it should be attempted. Therefore, an act of choosing can be directed toward what is impossible.

**But contrary to this:** In *Ethics 3* the Philosopher says that an act of choosing is not directed toward what is impossible.

**I respond:** As has been explained (a. 4), our acts of choosing are always directed toward our actions. But the things done by us are always possible for us. Hence, one must claim that an act of choosing is directed only toward what is possible.

Similarly, the reason for choosing something is that it leads to an end. But no one can attain an end by means of what is impossible. An indication of this is that when in their deliberations men arrive at what is impossible for them, they desist as if unable to proceed any further.

The same point is also manifestly apparent from the reasoning process (*ex processu rationis*) that precedes an act of choosing. For a means to an end, toward which an act of choosing is directed, is related to that end in the way that a conclusion is related to a principle. But it is clear that an impossible conclusion does not follow from a possible principle. Hence, an end cannot be possible unless some means to the end is possible. But no one is moved toward what is impossible. Hence, no one would tend toward an end unless it appeared to him that some means to that end were possible.

Hence, what is impossible does not fall under an act of choosing.

**Reply to objection 1:** The will stands between (*media est*) the intellect and the exterior operation, since the intellect proposes the will’s object to it, and the will itself is a cause of the exterior action.

So, then, the beginning of the will’s movement is thought of as coming from the intellect, which apprehends something as good in general; but the terminus of the will’s movement, i.e., the completion of the will’s act, involves its being ordered toward the operation by which one tends toward the attainment of the thing. For the will’s movement is from the soul toward the thing. And so the completion of the will’s act involves there being something good for someone to do. But this sort of thing is possible. And so a *complete* act of will is directed only toward something possible that is a good for the one willing it.

However, there is an *incomplete* act of willing that is directed toward a thing that is impossible; some call it a ‘quasi-willing’ (*velleitas*) because the thing in question would be willed if it were possible.

By contrast, ‘choosing’ names an act of the will that is already determinate with respect to what is to be done. And so an act of choosing is not directed in any sense toward what is not possible.

**Reply to objection 2:** Since the will’s object is an apprehended good, one has to judge the will’s object according to the way in which it falls under apprehension. And so just as an act of willing is sometimes directed toward something that is apprehended as good and yet is not truly good, so too sometimes there is an act of choosing that is directed toward what is apprehended as possible for the

chooser and yet is not in fact possible for him.

**Reply to objection 3:** St. Benedict says this because a subordinate should not decide by his own judgement whether or not something is possible; instead, in every case he should abide by his superior's judgment.

## Article 6

### Does a man choose with necessity?

It seems that a man chooses with necessity:

**Objection 1:** As is clear from *Ethics* 7, the end is related to what can be chosen in the way that principles are related to what follows from those principles. But conclusions are deduced from principles with necessity. Therefore, it is with necessity that someone is moved to choose on the basis of the end.

**Objection 2:** As has been explained (a. 1), an act of choosing follows upon a judgment of reason about things to be done. But reason judges with necessity concerning certain things because the premises are necessary. Therefore, it seems that an act of choosing likewise follows with necessity.

**Objection 3:** If any two things are absolutely equal, then a man is moved toward the one no more than toward the other. For instance, if a starving man (*famelicus*) has two equally desirable portions of food at an equal distance from him in different directions, he is not moved toward the one more than toward the other. (Plato made this claim and gave as the reason for it the immobility of the earth at the center of the universe, as *De Caelo* 2 reports.) But, *a fortiori*, something that is taken to be less good can no more be chosen than something that is taken to be equally good. Therefore, if two or more things are proposed and one of them appears better (*maius*) than the others, then it is impossible to choose any of the others. Therefore, what appears to be the most excellent (*eminentius*) is chosen with necessity. But every act of choosing has to do with something that seems better in some way. Therefore, every act of choosing occurs with necessity.

**But contrary to this:** Choosing is the act of a rational power and, according to the Philosopher, a rational power is open to opposites.

**I respond:** A man does not choose with necessity.

This is because what is possibly not such-and-such is not necessarily such-and-such. But the reason why it is possible either not to choose or to choose can be taken from a man's twofold power. For a man is able to will and able not to will, able to act and able not to act, and he is likewise able to will *this* or to will *that* and able to do *this* or to do *that*.

The explanation for this is taken from the very power of reason. For the will is able to tend toward whatever reason is able to apprehend as a good. But reason is able to apprehend as a good not only willing or doing such-and-such, but also not willing or not doing such-and-such. Again, in the case of all *particular* goods, reason is able to think of an aspect of goodness or of a lack of goodness (i.e., an aspect of badness), and accordingly it can apprehend each good of this sort either as something able to be chosen or as something able to be avoided (*non potest unumquodque huiusmodi bonorum apprehendere ut eligibile vel fugibile*).

By contrast, it is only the *perfect* good, viz., beatitude, that reason is unable to apprehend as something bad or defective (*non potest ratio apprehendere sub ratione mali aut alicuius defectus*). And so a man wills beatitude with necessity and is not able to will not to be blessed (*beatus*), i.e., not able to will to be non-blessed (*miser*). But since, as has already been explained (a. 3), an act of choosing is directed toward a means to an end and not toward the end, it is not directed toward the perfect good, viz., beatitude, but is instead directed toward other, particular, goods. And so a man chooses freely and not with necessity.

**Reply to objection 1:** A conclusion does not always proceed with necessity from its principles, but does so only when the principles cannot be true if the conclusion is not true. Similarly, it need not always be the case that because of the end there is a necessity for a man's choosing a given means to the end. For not every means to an end is such that the end cannot be had without it—or, if it is that way, it is not always being thought of in that way (*aut, si tale sit, non semper sub tali ratione consideratur*).

**Reply to objection 2:** Reason's determination or judgment about things to be done has to do with contingent things which can be done by us and in which the conclusions do not necessarily follow from principles that are necessary with absolute necessity; instead, the conclusions follow from principles that are necessary only with a conditional necessity, as in 'If something is running, then it is moving'.

**Reply to objection 3:** If two things are proposed that are equal when thought of in one way, nothing prevents it from being the case that (a) some condition might be thought of in the one by which it is better than the other and that (b) the will should be turned toward that one rather than the other.

## QUESTION 14

### Deliberating or Taking Counsel, Which Precedes Choosing

Next, we have to consider the act of deliberating or taking counsel (*consilium*). On this topic there are six questions: (1) Does deliberating count as inquiry? (2) Does deliberating concern the end or only the means to an end? (3) Does deliberating concern only things that we do? (4) Is there deliberating about everything that we do? (5) Does deliberating proceed by way of analysis (*ordine resolutorio*)? (6) Does deliberating proceed *ad infinitum*?

#### Article 1

##### Does deliberating or taking counsel count as inquiry?

It seems that deliberating or taking counsel (*consilium*) does not count as inquiry (*inquisitio*):

**Objection 1:** Damascene says, “Deliberating (*consilium*) is desiring (*appetitus*).” But inquiring (*inquirere*) does not have anything to do with desiring. Therefore, deliberating does not count as inquiry.

**Objection 2:** Inquiring belongs to a discursive intellect (*intellectus discurrentis est*), and this is why it does not befit God, whose cognition is not discursive, as was established in the First Part (*ST* 1, q. 14, a. 7). But taking counsel (*consilium*) is attributed to God; for Ephesians 1:11 says, “He does all things according to the counsel (*consilium*) of His will.” Therefore, deliberating (*consilium*) does not count as inquiry.

**Objection 3:** Inquiry (*inquisitio*) concerns things about which there is uncertainty (*de rebus dubiis*). But there is deliberation (*consilium*) about things that are undoubtedly goods (*certa bona*)—this according to the Apostle in 1 Corinthians 7:25 (“Now concerning virgins I have no commandment of the Lord, but instead I am giving counsel (*consilium*)”). Therefore, deliberating does not count as inquiry.

**But contrary to this:** Gregory of Nyssa says, “Every instance of deliberating (*omne consilium*) is an instance of inquiring (*quaestio*), but not every instance of inquiring is an instance of deliberating.”

**I respond:** As has been explained (q. 13, aa. 1 and 3), an act of choosing follows upon reason’s judgment (*iudicium rationis*) concerning things to be done. But in the case of things to be done there are many uncertainties, since actions involve contingent singular things, which are uncertain because of their variability. Now in matters that are doubtful and uncertain (*in rebus dubiis et incertis*) reason does not propose a judgment without having previously inquired (*absque inquisitione praevia*). And so there must be an inquiry on reason’s part before any judgment about things to be chosen, and this inquiry is called ‘deliberating’ or ‘taking counsel’ (*haec inquisitio consilium vocatur*). This is why, in *Ethics* 3, the Philosopher says that the act of choosing is “the desire for what has been deliberated about beforehand” (*appetitus praeconsiliati*).

**Reply to objection 1:** When acts belonging to two powers are ordered to one another, then in each of the acts there is something that belongs to the other power, and so both of the acts can have names taken from both powers (*uterque actus ab utraque potentia denominari potest*).

Now it is clear that (a) an act of directive reason (*actus rationis dirigentis*) with respect to the means to an end and (b) an act of the will that tends toward the means in accord with reason’s guidance (*secundum regimen rationis*) are ordered to one another. Hence, in the will’s act, i.e., the act of choosing, there is something that belongs to reason, viz., an ordering; and in the act of deliberating, which is reason’s act, there is something that belongs to the will—both (a) something that plays the role of the matter (*sicut materia*), since deliberating concerns what a man wills to do, and also (b) something that plays the role of a mover (*etiam sicut motivum*), since it is by reason of the fact that a man wills an end that he is moved to deliberate about the means to that end.

And so just as in *Ethics* 6 the Philosopher says, “Choosing is an appetitive understanding,” in order to show that both the intellect and the appetite come together for an act of choosing, so too Damascene

says, “Deliberating is an inquiring appetite,” in order to show that deliberating in some sense belongs both to the will, concerning which and because of which there is inquiry, and to inquiring reason.

**Reply to objection 2:** What is predicated of God must be understood without any of the defects that are found in us. For instance, it is by reasoning from causes to effects that we have scientific knowledge of conclusions, but ‘scientific knowledge’ as predicated of God signifies the certitude that the first cause has about all effects without any discursive reasoning.

Similarly, counsel (*consilium*) is attributed to God as regards the certitude of His determination or judgment. In us this certitude comes from deliberation’s inquiry (*ex inquisitione consilii*). But inquiry of this sort has no place in God, and so deliberating (*consilium*) is not attributed to God in this sense. Accordingly Damascene says, “God does not take counsel; instead, taking counsel (*consiliari*) is for those who are unsure.”

**Reply to objection 3:** Nothing prevents some things from being absolutely indubitable goods (*certissima bona*) in the judgment of wise and spiritual men and yet uncertain goods in the judgment of the many or of carnal men. And this is why counsels (*consilia*) are given concerning such things.

## Article 2

### Does deliberating concern the end or just the means to an end?

It seems that deliberating concerns the end as well as the means to an end:

**Objection 1:** Whatever involves uncertainty (*dubitationem habet*) is such that there can be inquiry concerning it. But as regards human actions, the end, and not just the means to an end, can involve uncertainty. Therefore, since deliberating is inquiry concerning actions, it seems that one can deliberate concerning the end (*consilium possit esse de fine*).

**Objection 2:** Human operations constitute the subject matter for deliberating. But as *Ethics* 1 points out, certain human operations are ends. Therefore, one can deliberate concerning the end.

**But contrary to this:** Gregory of Nyssa says, “Deliberating concerns the means to the end and not the end.”

**I respond:** In actions (*in operabilibus*) the end has the character of a principle, since ideas about the means to an end are taken from the end. Now a principle is not put into question (*non cadit sub quaestione*); instead, principles must be presupposed in every inquiry. Hence, since deliberating counts as inquiry (*cum consilium sit consilium*), deliberating concerns only the means to an end and not the end.

However, what serves as an end with respect to some things can itself be ordered toward some other end, in the same way that what serves as a principle in one demonstration can be a conclusion in another demonstration. And so what is taken as the end in one inquiry can be taken as a means to the end in some other inquiry. And in this way one will deliberate concerning it.

**Reply to objection 1:** What is taken as an end is already fixed (*determinata*). Hence, as long as something involves uncertainty, it is not being taken as an end. And so if one deliberates concerning it, he will be deliberating about a means to an end and not about an end.

**Reply to objection 2:** Deliberating concerns actions insofar as those actions are ordered toward an end. Hence, if some human operation is itself an end, then one will not deliberate concerning it as an end.

### Article 3

#### Does deliberating or taking counsel concern only things that are done by us?

It seems that deliberating or taking counsel (*consilium*) does not concern only things that are done by us:

**Objection 1:** ‘Taking counsel’ (*consilium*) implies a certain sort of consultation (*collationem quandam importat*). But a consultation involving many individuals can also be made concerning immutable things that are not done by us, e.g., the natures of things. Therefore, taking counsel does not concern only things that are done by us.

**Objection 2:** Men sometimes take counsel about things that are ordained by law, and thus these men are called ‘legal counselors’. And yet it is not the role of those who take counsel in this way to make laws. Therefore, taking counsel does not concern only things that are done by us.

**Objection 3:** Some are said to make consultations about future events, and yet those future events are not within our power. Therefore, taking counsel does not concern only things that are done by us.

**Objection 4:** If taking counsel concerned only things that are done by us, then no one would take counsel about things that are to be done by someone else. But this is obviously false. Therefore, taking counsel does not concern only things that are done by us.

**But contrary to this:** Gregory of Nyssa says, “We take counsel about things that are within our power and that can be done by us.”

**I respond:** ‘Taking counsel’ (*consilium*) properly implies a consultation (*collatio*) that is made by several men. This is what the very name ‘counsel’ designates, since it is called ‘counsel’ in the sense of a ‘sitting down with’ (*considium*), because many men sit down together to confer at one time (*multi consistent ad simul conferendum*).

Now notice that in the case of particular contingent matters, in order for something to be grasped with certitude, it is necessary to take into account many conditions or circumstances which are not easily thought of by just one individual, but are seen with more certainty by many; for what the one thinks of does not occur to another. By contrast, in the case of necessary and universal matters, the consideration is more absolute and more simple, so that a single individual is more able to be sufficient by himself for a consideration of this sort. And the inquiry associated with taking counsel properly pertains to contingent singular matters.

Now in such matters the cognition of the truth does not have anything great that makes it desirable in itself, like the cognition of universal and necessary matters does. Instead, it is desired to the extent that it is useful for action, since actions have to do with singular contingent things. And so one should reply that taking counsel, properly speaking, concerns things that are done by us.

**Reply to objection 1:** For the reason already explained, ‘taking counsel’ implies not just any sort of consultation, but one that concerns things to be done,.

**Reply to objection 2:** Even if what has been laid down by law does not have its source in the action of someone who is taking counsel, it nonetheless directs him in his action, since one reason for doing something is that it has been mandated by law.

**Reply to objection 3:** Taking counsel concerns not only things to be done, but also things that are ordered toward operations. Because of this, it is called a consultation concerning things that will occur in the future, since a man is directed in doing or avoiding things by what he thinks will happen in the future.

**Reply to objection 4:** We take counsel concerning the works of others to the extent that those others are in some way united with us—either (a) through an affective union, as when a friend is solicitous about affairs that concern his friend just as he is about his own affairs, or (b) in the manner of an instrument, since a principal agent and an instrumental agent are like a single cause, given that the one acts through the other. It is in this latter sense that a master takes counsel about the things to be done by his servant.

#### Article 4

##### Is there deliberating or taking counsel with respect to everything that is done by us?

It seems that there is deliberating or taking counsel (*consilium*) with respect to everything that is done by us:

**Objection 1:** As has been explained (a. 1), an act of choosing is “a desire for what has been deliberated about beforehand.” But there is an act of choosing with respect to everything that is done by us. Therefore, there is an act of deliberating, too.

**Objection 2:** ‘Deliberating’ implies an inquiry on the part of reason. But whenever we do something without doing it through an impulse of passion, we proceed from reason’s inquiry. Therefore, there is deliberating with respect to everything that is done by us.

**Objection 3:** In *Ethics* 3 the Philosopher says, “If something can be done by more than one means, one takes counsel by inquiring into how it might be done most easily and optimally; but if it can be accomplished by just one means, then one takes counsel by inquiring how it should be done via that means.” But everything that is done [can be] done either through just one means or through many. Therefore, there is deliberating with respect to everything that is done by us.

**But contrary to this:** Gregory of Nyssa says, “There is no deliberating about things that are done by rote or by art (*secundum disciplinam vel artem*).”

**I respond:** As has been explained (a. 1), deliberating is a sort of inquiry. Now we normally inquire into things that involve uncertainty (*quae in dubium veniunt*), and thus inquiring reason (*ratio inquisitiva*), which is called ‘clarification’ (*argumentum*), “makes for faith in what is uncertain.”

Now in the case of human acts there are two possible ways for something not to be uncertain:

The first is when one proceeds by fixed means to fixed ends (*per determinatas vias proceditur ad determinatos fines*), as happens in the arts that have set ways of operating. For instance, someone who is writing does not deliberate about how he ought to make the letters, since this is determined by the art [of writing].

The second is when it does not matter much whether a given thing is done in this way or that way. And these are trivial matters (*minima*) that do not much help or hinder the attainment of the end, since reason counts as nothing what is of little importance.

And so, as the Philosopher points out, there are two sorts of things that we do not deliberate about even though they are ordered toward the end, viz., (a) trivial things and (b) things that are such that how they are to be done is fixed, as happens with works of the arts—“except in the case of those arts that involve conjecture,” as Gregory of Nyssa says, “for instance, the medicinal arts, business practices, etc.”

**Reply to objection 1:** Choosing presupposes deliberation because of deliberation’s judgment or determination (*ratione iudicii vel sententiae*). Hence, when the judgment or determination in question is clear without inquiry, then deliberation’s inquiry is not needed.

**Reply to objection 2:** Reason does not inquire into matters that are obvious; instead, it judges immediately in such matters. And so deliberation’s inquiry is not necessary for each thing that is done by means of reason.

**Reply to objection 3:** When something can be done by one means but in diverse ways, then there can be uncertainty in the same way that there is uncertainty when something can be done by more than one means. And so in such a case it is necessary to deliberate. But when both the thing itself and the mode are fixed, then there is no need to deliberate.

## Article 5

### Does deliberating proceed by way of analysis?

It seems that deliberating does not proceed by way of analysis (*non procedat modo resolutorio*):

**Objection 1:** Deliberating concerns things that are done by us. But our actions proceed not by way of analysis but rather by way of composition, i.e., from simple elements to composites. Therefore, deliberating does not always proceed by way of analysis.

**Objection 2:** Deliberating is reason's inquiry. But reason begins with what is prior and arrives at what is posterior, in accord with the more appropriate ordering. Therefore, since (a) what is past is prior to what is present and (b) what is present is prior to what is future, it seems that in deliberating one ought to proceed from the present and the past to the future—which is not the order of analysis (*quod non pertinet ad ordinem resolutorium*). Therefore, the order of analysis is not preserved in deliberating.

**Objection 3:** As *Ethics* 3 says, deliberating concerns only what is possible for us. But whether something is possible for us depends on whether we are [now] capable or incapable of bringing it about that we attain to that thing. Therefore, in deliberation's inquiry one ought to begin from what is present.

**But contrary to this:** In *Ethics* 3 the Philosopher says, "One who deliberates seems to inquire and to analyze (*videtur quaerere et resolvere*)."

**I respond:** In every inquiry it is necessary to begin with some principle. If this principle is prior in being (*prius in esse*) as well as prior in cognition (*prius in cognitione*), then the process is *compositional* rather than analytic (*non est processus resolutorius sed magis compositivus*). For proceeding from causes to effects is a compositional process, since causes are more simple than their effects.

On the other hand, if what is prior in cognition is posterior in being, then the process is *analytic*, since we make judgments about manifest effects by analyzing them into their simple causes.

Now in the case of deliberation's inquiry, the principle is the end, which is prior in thought but posterior in being (*prius in intentione, posterior tamen in esse*). Accordingly, deliberation's inquiry has to be analytic, beginning from what is intended in the future and proceeding until it arrives at what is to be done right now.

**Reply to objection 1:** Deliberating does, to be sure, concern actions. But the nature of an action is taken from its end, and so the ordering involved in reasoning about actions is the opposite of the ordering involved in acting.

**Reply to objection 2:** Reason begins from what is prior in thought (*prius secundum rationem*), but not always from what is prior in time.

**Reply to objection 3:** As regards what is to be done for the sake of an end, we do not seek to know whether something is possible if it is not congruous with the end. And so prior to considering whether the thing in question is possible, we must first inquire whether it appropriately leads to the end.

## Article 6

### Does deliberation's inquiry go on *ad infinitum*?

It seems that deliberation's inquiry proceeds *ad infinitum*:

**Objection 1:** Deliberating is inquiry concerning the particulars, among which are actions. But there are infinitely many singulars. Therefore, deliberation's inquiry is infinite.

**Objection 2:** Deliberation's inquiry includes consideration not only of what is to be done, but also of how obstacles are to be removed. But every human action is able to be impeded, and any obstacle is able to be removed through some sort of human reasoning. Therefore, inquiry concerning the removal of obstacles goes on *ad infinitum*.

**Objection 3:** Demonstrative science's inquiry does not go on *ad infinitum* because it arrives at principles which are known *per se* (*per se nota*) and which have absolute certitude (*quae omnimodam certitudinem habent*). But this sort of certitude cannot be found in singular contingent matters, which are variable and uncertain. Therefore, deliberation's inquiry goes on *ad infinitum*.

**But contrary to this:** As *De Caelo* 1 says, "No one is moved to attain what is impossible." But it is impossible to traverse something infinite. Therefore, if deliberation's inquiry were infinite, then no one would begin to deliberate. But this is clearly false.

**I respond:** Deliberation's inquiry is finite in actuality and on both sides, viz., (a) with respect to its beginning (*ex parte principii*) and (b) with respect to its terminus (*ex parte termini*). For there are two sorts of principles involved in deliberation's inquiry.

The one sort of principle is proper to deliberation's inquiry and is derived from the very genus of actions, and this is *the end*. As has been explained (a. 2), there is no deliberation concerning the end, but it is presupposed as a principle in deliberation.

The other sort of principle is taken, as it were, from a different genus—just as in the demonstrative sciences, where one science presupposes something which comes from another science and which it itself does not inquire into. Principles of this sort that are presupposed in deliberation's inquiry include (a) whatever is received through the sensory power, e.g., that this is bread or iron, and (b) whatever is generally known (*in universali cognita*) through some speculative or practical science, e.g., that committing adultery is forbidden by God, or that man cannot live without being nourished by the right sort of food. Someone who takes counsel does not deliberate about these things.

Now the terminus of inquiry is that which is *immediately* within our power to do. For just as the end has the character of a principle, so too what is done for the sake of the end has the character of a conclusion. Hence, what turns out to be the first thing to be done has the character of an ultimate conclusion, and inquiry terminates with it.

However, nothing prevents deliberation from being *potentially* infinite, in the sense that the number of things that can come up for consideration in deliberation is infinite.

**Reply to objection 1:** It is only in potentiality, and not in actuality, that there are infinitely many singulars.

**Reply to objection 2:** Even though a human action can be impeded, it is nonetheless not always the case that the action in question has an imminent obstacle (*impedimentum paratum*). And so it is not always necessary to deliberate about removing obstacles.

**Reply to objection 3:** In the case of contingent singular things, there can be something taken as fixed *for now* because it is being assumed in the action, even if it is not fixed *absolutely speaking*. For instance, it is not necessary that Socrates is sitting, but it is necessary that he is sitting for as long as he is sitting. And his sitting can be taken as fixed (*per certitudinem*).

## QUESTION 15

### Consenting, Which is an Act of The Will concerning the Means to an End

Next we have to consider the act of consenting (*consensus*). On this topic there are four questions: (1) Is consenting an act of an appetitive power or an apprehensive power? (2) Does consenting belong to brute animals? (3) Does consenting concern the end or a means to the end? (4) Does consenting to an act belong only to the higher part of the soul?

#### Article 1

##### Does consenting belong only to the apprehensive part of the soul?

It seems that consenting (*consentire*) belongs only to the apprehensive part of the soul:

**Objection 1:** In *De Trinitate* 12 Augustine says that consenting is attributed to higher reason (cf. *ST* 1, q. 79, a. 9). But ‘reason’ names an apprehensive power. Therefore, consenting belongs to an apprehensive power.

**Objection 2:** Consenting (*consentire*) is ‘sensing or feeling together with’ (*simul sentire*). But sensing belongs to an apprehensive power (*apprehensiva potentia*). Therefore, so does consenting.

**Objection 3:** Just as ‘assenting’ (*assentire*) expresses the intellect’s being applied to something, so too does ‘consenting’ (*consentire*). But assenting belongs to the intellect, which is an apprehensive power. Therefore, consenting likewise belongs to an apprehensive power.

**But contrary to this:** In *De Fide* 2 Damascene says, “If someone makes a judgment and does not love [what he judges], then there is no determination,” i.e., consent (*non est sententia, idest consensus*). But loving belongs to an appetitive power (*vis apprehensiva*). Therefore, so does consenting.

**I respond:** ‘Consenting’ (*consentire*) implies the *application* of the sensory power to something. Now it is proper to the *sensory power* to have cognition of present things; for the *power of imagining* apprehends the likenesses of bodies even in the absence of the things which they are likenesses of, whereas the *intellect* apprehends universal concepts (*universales rationes*), which it can apprehend indifferently both when the singular things are present and when they are absent. And since the act of an appetitive power is a certain inclination toward the thing itself, the very application of the appetitive power to the thing, so that it cleaves to that thing, receives the name ‘sensing’ or ‘feeling’ (*sensus*) in virtue of a certain likeness—in the sense that it has a certain experience of the thing it cleaves to by being pleased with that thing (*inquantum complacet sibi in ea*). Hence, Wisdom 1:1 says, “Feel the Lord in goodness” (*sentite de domino in bonitate*). Accordingly, consenting is the act of an appetitive power.

**Reply to objection 1:** As *De Anima* 3 says, “The will exists in reason.” Hence, when Augustine attributes consenting to reason, he is taking ‘reason’ in the sense in which it includes the will.

**Reply to objection 2:** Sensing or feeling belongs, properly speaking, to an apprehensive power, but, as has been explained, it belongs to the appetitive power because of its likeness to a certain experience.

**Reply to objection 3:** Assenting (*assentire*) is, as it were, ‘sensing or feeling with respect to something else’ (*ad aliud sentire*), and so it implies a certain distance from what is being assented to. But consenting is ‘sensing or feeling together with’, and so it implies a certain connection with what is consented to (*quandam coniunctionem ad id cui consentitur*). And so the will, whose role is to tend toward the thing itself, is more properly said to *consent*, whereas, as was explained in the First Part (*ST* 1, q. 59, a. 2), the intellect, whose operation is not accompanied by a movement toward the thing, but just the opposite, is more properly said to *assent*—even though the one word is often used in place of the other.

One can also reply that the intellect assents insofar as it is moved by the will.

## Article 2

### Does consenting belong to brute animals?

It seems that consenting belongs to brute animals:

**Objection 1:** ‘Consenting’ implies a channeling of the appetite to a single thing. But the appetites of brute animals are channeled to a single thing. Therefore, consenting exists in brute animals.

**Objection 2:** When what is prior is removed, what is posterior is removed. But consenting precedes the execution of an act. Therefore, if consenting did not exist in brute animals, then there would be no execution of acts in them. But this is clearly false.

**Objection 3:** Men are sometimes said to consent to doing something out of some passion, e.g., out of sentient desire (*concupiscentia*) or anger. But brute animals act out of passion. Therefore, consenting exists in them.

**But contrary to this:** Damascene says, “After the judgment, a man disposes and loves what has been judged on the basis of deliberating (*disponit et amat quod ex consilio iudicatum est*), and this is called determining (*sententia*), i.e., consenting.” But deliberating does not exist in brute animals. Therefore, neither does consenting.

**I respond:** Properly speaking, consenting does not exist in brute animals. The reason is that ‘consenting’ implies applying an appetitive movement to doing something. But *applying* an appetitive movement toward doing something belongs to a thing that has the appetitive movement within its power (*in cuius potestate est appetitivus motus*); for instance, touching the rock belongs to the staff, but *applying* the staff to touching the rock belongs to someone who has it within his power to move the staff.

However, brute animals do not have appetitive movements within their power; instead, in them such movements proceed from an instinct of nature. Hence, a brute animal does, to be sure, have an appetitive movement (*brutum animal appetit quidem*), but it does not *apply* its appetitive movement to anything. And because of this a brute animal is not properly said to consent; rather, the only sort of nature that is properly said to consent is a rational nature, which has its appetitive movement within its own power and is able to apply it or not to apply it to this or that thing.

**Reply to objection 1:** In brute animals the channeling of the appetite to something occurs only passively. By contrast, ‘consenting’ implies that the channeling of the appetite is not just passive but instead active.

**Reply to objection 2:** When what is prior is removed, the only posterior thing that is removed is that which properly follows from what is prior. However, if something is able to follow from more than one prior thing, then it is not because one of the prior things is removed that the posterior thing is removed. For instance, if hardening can be effected by both heat and cold (for bricks are hardened by fire, and frozen water is hardened by cold), then it is not the case that if heat is removed, hardening is removed.

Now the execution of an act follows not only from consenting but also from a forceful appetite of the sort that is found in brute animals.

**Reply to objection 3:** Men who act out of passion are able not to follow their passions. But this is not the case with brute animals. Therefore, the arguments are not parallel.

## Article 3

### Does consenting concern the end?

It seems that consenting concerns the end:

**Objection 1:** That for the sake of which a thing is such-and-such is itself all the more such-and-such (*propter quod unumquodque, illud magis*). But it is for the sake of the end that we consent to the means to that end. Therefore, we consent all the more to the end.

**Objection 2:** An intemperate man's action is his end, just as a virtuous man's action is his end. But an intemperate man consents to his own action. Therefore, it is possible for consenting to concern the end.

**Objection 3:** As was explained above (q. 13, a. 1), desire concerning the means to an end is choosing. Therefore, if consenting concerned only the means to an end, it would seem to differ in no way from choosing. But this is clearly false according to Damascene, who says, "After disposing"—which he had previously called 'determining' (*sententia*)—"comes the act of choosing." Therefore, it is not the case that consenting concerns only the means to an end.

**But contrary to this:** In the same place Damascene says, "Determining (*sententia*) [read: consenting (*consensus*)] is when a man disposes and loves what has been judged on the basis of deliberating." But deliberating concerns only the means to an end. Therefore, so does consenting.

**I respond:** 'Consenting' names the application of an appetitive movement to something that is in the power of the one doing the applying. Now in the order of actions, one must take into account (a) apprehending an end, then (b) desiring the end, then (c) deliberating about the means to the end, and then (d) desiring a means to the end.

Now our appetite naturally tends toward the ultimate end, and thus the application of an appetitive movement to an apprehended end has the character of *simple willing* (*habet rationem simplicis voluntatis*) and not the character of *consenting* (*non rationem consensus*).

On the other hand, the things that come after the ultimate end, insofar as they are ordered toward the end, fall under deliberation, and so consenting can concern them, insofar as an appetitive movement is applied to what has been judged on the basis of deliberation. But the appetitive movement toward the end is not applied to deliberating; rather deliberating is applied to it, since deliberating presupposes desiring the end. But desiring the means to the end presupposes deliberation's determination (*praesupponit determinationem consilii*). And so consenting is, properly speaking, applying an appetitive movement to deliberation's determination. Hence, since deliberating concerns only the means to the end, consenting, properly speaking, concerns only the means to the end.

**Reply to objection 1:** Just as we know conclusions through principles even though there is no scientific knowledge (*scientia*) of the principles, but something greater, viz., understanding (*intellectus*), so too we consent to the means to an end for the sake of the end even though there is no consenting to the end, but something greater, viz., willing (*voluntas*).

**Reply to objection 2:** The intemperate man has for his end the action's pleasure, and it is for the sake of the pleasure, rather than for the sake of the action itself, that he consents to the action.

**Reply to objection 3:** Choosing adds to consenting a certain relation to that which is such that something else is preferred to it, and so after consenting, there is still choosing.

For it can happen that through deliberation one finds several means that lead to the end, and as long as each of them is pleasing, each of them is consented to. But out of the many means that please us, we give one preference by choosing it.

On the other hand, if there is just one means that is pleasing, then consenting and choosing differ only conceptually (*in ratione*) and not in reality—so that it is called 'consenting' to the extent that acting in the way in question is pleasing, whereas it is called 'choosing' to the extent that the act in question is preferred to those acts that are not pleasing.

#### Article 4

##### Does consenting to an act always belong to higher reason?

It seems that consenting to an act does not always belong to higher reason (*ratio superior*):

**Objection 1:** As *Ethics* 10 says, “Pleasure (*delectatio*) follows upon an action and brings it to completion (*perficit eam*), in the way the beauty brings youth to completion.” But as Augustine says in *De Trinitate* 12, consenting to pleasure belongs to lower reason. Therefore, consenting to an act does not belong only to higher reason.

**Objection 2:** An action to which we consent is said to be voluntary. But many powers have the role of producing voluntary actions. Therefore, it is not just higher reason that consents to an act.

**Objection 3:** As Augustine says in *De Trinitate* 12, “Higher reason is intent on inspecting and consulting eternal realities.” But oftentimes a man consents to an act not because of the eternal conceptions (*propter rationes aeternas*), but because of certain temporal conceptions—or even because of the passions of the soul. Therefore, it is not the case that consenting to an act belongs only to higher reason.

**But contrary to this:** In *De Trinitate* 12 Augustine says, “The mind cannot efficaciously decide to perpetrate a sin unless the mind’s intention, which is the highest power for moving the bodily members to an action or restraining them from an action, yields to and complies with a bad action.”

**I respond:** The final determination (*finalis sententia*) always belongs to the superior (*ad eum qui est superior*), whose role it is to pass judgment on the others. For as long as the judgment still remains to be made, there is as yet no final determination. But it is clear that it is higher reason that has to pass judgment on all things, since we judge sensible things by means of reason, whereas we pass judgment on things that pertain to human conceptions (*ad rationes humanas*) in accord with God’s conceptions (*secundum rationes divinas*), which belong to higher reason. And so as long as it is uncertain whether or not something is to be resisted in accord with God’s conceptions, no judgment of reason has the character of a final determination.

Now consenting to an act is the final determination concerning things to be done. And so consenting to an act belongs to higher reason—though this, as was explained above (a. 1), is in the sense in which the will is included in reason.

**Reply to objection 1:** Consenting to an action’s pleasure belongs to higher reason in the same way that consenting to the action does.

However, consenting to the pleasure of the *thought* of an action belongs to lower reason in the same way that thinking about the action belongs to lower reason. And yet higher reason has judgment (a) concerning the thinking or not thinking itself, insofar as it is considered as an action [in its own right], and, similarly, (b) concerning the pleasure that follows from the thinking.

But insofar as the thinking is taken as ordered toward another action, it belongs to lower reason. For what is ordered toward something else belongs to an art or power that is lower than the end toward which it is ordered; hence, the art that concerns the end is called an architectonic— i.e., principal—art.

**Reply to objection 2:** Since actions are called voluntary by reason of the fact that we consent to them, it is not necessary that consenting should belong to any power except the will (*voluntas*), from which they are called voluntary (*voluntarium*). And, as has been explained (a. 1), the will exists in reason.

**Reply to objection 3:** Higher reason is said to consent not only because it always moves one to act in accord with eternal conceptions, but also because it [sometimes] fails to dissent in a way that accords with eternal conceptions (*secundum rationes aeternas non dissentit*).

## QUESTION 16

### Using, Which is an Act of the Will concerning the Means to an End

Next we have to consider the act of using (*usus*). On this topic there are four questions: (1) Is using an act of the will? (2) Does using belong to brute animals? (3) Does using concern a means to an end or the end as well? (4) How is using related to choosing?

#### Article 1

##### Is using an act of the will?

It seems that using (*uti*) is not an act of the will:

**Objection 1:** In *De Doctrina Christiana* 1 Augustine says, “Using is directing what comes into use toward the acquisition of something else (*id quod venerit in usum ad aliud obtinendum referre*).” But directing something toward something else belongs to reason, whose role it is to collate and to order. Therefore, using is an act of reason. Therefore, it is not an act of the will.

**Objection 2:** Damascene says, “A man makes an impulse (*facit impetum*) toward acting, and this is called ‘an impulse’ (*impetus*), and then he uses [his powers], and this is called ‘using’ (*usus*).” But acting belongs to the executing power (*ad potentiam executivam*). And no act of the will follows the act of the executing power; instead, the execution is the last thing. Therefore, using is not an act of the will.

**Objection 3:** In *83 Quaestiones* Augustine says, “All the things that have been made have been made for man’s use, since the reason that has been given to man makes use of all things by judging them.” But judging the things created by God belongs to speculative reason, and speculative reason seems to be altogether separate from the will, which is a principle of human acts. Therefore, using is not an act of the will.

**But contrary to this:** In *De Trinitate* 10 Augustine says, “Using is taking something up into the power of the will (*assumens aliquid in facultatem voluntatis*).”

**I respond:** Using a thing implies applying that thing to some operation; this is why the operation to which we apply a thing is called ‘using it’. For instance, horseback riding is ‘using a horse’, and striking is ‘using a staff’.

Now we apply to an operation both (a) *interior principles* of acting, viz., the powers of the soul themselves along with the bodily members, e.g., the intellect to acts of understanding and the eye to acts of seeing, and also (b) *exterior things*, e.g., a staff to an act of striking. But it is clear that we apply exterior things to an operation only by means of intrinsic principles, viz., the powers of the soul, or habits of those powers, or organs, which are members of the body.

Now it was shown above (q. 9, a. 1) that it is the will that moves the powers of the soul to their own acts, and this is what it is to apply those powers to an operation. Hence, the act of using belongs (a) first and principally to the *will* as a first mover, then (b) to *reason* as directing, and (c) to the *other powers* as executing—where these other powers are related to the will, by which they are applied to an action, as instruments are related to the principal agent. But an action is properly attributed to the principal agent and not to the instrument; for instance, the act of building is attributed to the builder and not to his instruments. Hence, it is clear that using is properly an act of the will.

**Reply to objection 1:** Reason does, to be sure, direct one toward something else, but the will tends toward that which is directed by reason toward something else. This is the sense in which one says that to use is to direct something toward something else.

**Reply to objection 2:** Damascene is talking about the act of using insofar as it belongs to the executing powers.

**Reply to objection 3:** Even speculative reason itself is applied by the will to its work of understanding or judging. And so speculative reason is said to use something insofar as it is moved by

the will in the way that the other executing powers are.

## Article 2

### Does using belong to brute animals?

It seems that using belongs to brute animals:

**Objection 1:** Enjoying is more noble than using, since, as Augustine says in *De Trinitate* 10, “We use those things which we direct toward something else that is to be enjoyed.” But as was explained above (q. 11, a. 2), enjoying belongs to brute animals. Therefore, *a fortiori*, using belongs to them as well.

**Objection 2:** To apply our bodily members to acting is to use those members. But brute animals apply their members to doing things; for instance, they apply their feet to walking and their horns to striking. Therefore, using belongs to brute animals.

**But contrary to this:** In 83 *Quaestiones* Augustine says, “Only an animal that participates in reason can use a thing.”

**I respond:** As has been explained (a. 1), *using* is applying a principle of action to an action, in the same way that, as has been explained (q. 15, aa. 1-3), *consenting* is applying an appetitive movement to desiring something. Now applying something to something else belongs only to that which has control (*arbitrium*) over it, and this belongs only to that which knows how to direct something toward something else, viz., reason. And so consenting and using belong only to a rational animal.

**Reply to objection 1:** ‘Enjoying’ implies an absolute movement of the appetite toward a desirable thing, whereas ‘using’ implies a movement of the appetite toward something that is ordered toward something else (*motum appetitus ad aliquid in ordine ad alterum*).

Thus, if using and enjoying are compared with respect to their *objects*, then enjoying is more noble than using, since what is desirable absolutely speaking is better than what is desirable solely insofar as it is ordered toward something else. On the other hand, if they are compared with respect to the apprehensive power that precedes them, then more nobility is required for using, since it belongs to reason to order one thing toward another, whereas even the sensory power is able to apprehend something absolutely speaking.

**Reply to objection 2:** It is by an instinct of nature that animals do things by means of their bodily members—and not because they understand the relation of those members to the operations in question. Hence, animals are not properly said either to apply their members to an act or to use their members.

## Article 3

### Can using concern even the ultimate end?

It seems that using can concern even the ultimate end:

**Objection 1:** In *De Trinitate* 10 Augustine says, “Everyone who enjoys something uses it.” But one enjoys the ultimate end. Therefore, one uses the ultimate end.

**Objection 2:** As Augustine says in the same place, “Using is taking something up into the power of the will.” But nothing is taken up by the will more than the ultimate end. Therefore, using can concern the ultimate end.

**Objection 3:** In *De Trinitate* 2 Hilary says, “*Eternity* exists in the Father, *likeness* exists in the Image, i.e., in the Son, and *using* exists in the Gift, i.e., in the Holy Spirit. But since the Holy Spirit is God, He is the ultimate end. Therefore, it is possible to use the ultimate end.

**But contrary to this:** In *83 Quaestiones* Augustine says, “One rightly enjoys God, but no one rightly uses God.” But God alone is the ultimate end. Therefore, the ultimate end is not to be used (*non est utendum*).

**I respond:** As has been explained (a. 1), ‘using’ implies applying one thing to another. But what is applied to another has the character of a means to an end (*se habet in ratione eius quod est ad finem*). And so using always concerns the means to an end. It is for this reason that things which are appropriate as means to an end are called *useful*, and this very usefulness is itself sometimes called their *use*.

But notice that there are two senses of ‘the ultimate end’, viz., (a) the ultimate end absolutely speaking and (b) the ultimate end with respect to someone. For as was explained above (q. 1, a. 8 and q. 2, a. 7), sometimes it is a certain thing and sometimes it is the attainment or possession of that thing that is called the end; for instance, an avaricious man’s end is either money or possessing money. It is clear that, simply speaking, the ultimate end is the thing itself, since possessing money is good only because of the goodness of money. But in relation to this man, the ultimate end is the acquisition of money, since an avaricious man would not seek after money except in order to have it. Therefore, properly and simply speaking, the man *enjoys* the money, since he has set up money as his ultimate end; but to the extent that he directs the money toward his possessing it, he is said to *use* the money.

**Reply to objection 1:** Augustine is speaking here in a general way of *using*, insofar as ‘using’ implies the ordering of an end to the very *enjoyment* of the end that someone looks for in that end.

**Reply to objection 2:** The end “is taken up into the power of the will” in order that the will might come to rest in it. Hence, resting in the end, i.e., *enjoying* the end, is being called ‘*using* the end’ in a certain sense.

However, a means to an end “is taken up into the power of the will” not only in relation to using the means to the end, but also in relation to that other thing in which the will comes to rest.

**Reply to objection 3:** In the passage from Hilary, ‘using’ is being understood for resting in the ultimate end, in the sense in which, as has been explained, someone is commonly said to ‘use’ an end in order to possess it. Hence, In *De Trinitate* 6 Augustine explains, “The love or delight or happiness or beatitude in question is called ‘using’ by [Hilary].”

#### Article 4

##### Does using precede choosing?

It seems that using precedes choosing:

**Objection 1:** The only thing that follows after choosing is executing. But since using belongs to the will, it precedes executing. Therefore, it also precedes choosing.

**Objection 2:** The absolute is prior to the relational (*absolutum est ante relatam*); therefore, the less relational is prior to the more relational. But ‘choosing’ implies two relations, viz., one to the means that is chosen, and the other to that which the chosen means is preferred to. ‘Using’, on the other hand, implies only a relation to the end. Therefore, using is prior to choosing.

**Objection 3:** The will uses the other powers insofar as it moves them. But as has been explained (q. 9, a. 3), the will moves even itself. Therefore, it also uses itself by applying itself to acting. But it does this when it consents. Therefore, there is an act of using in the very act of consenting. But as has been explained (q. 15, a. 3), consenting precedes choosing. Therefore, so does using.

**But contrary to this:** Damascene says, “After choosing, the will makes an impulse toward acting, and after that it uses.” Therefore, using follows upon choosing.

**I respond:** The will has a twofold relation to what is willed:

The *first* relation stems from the fact that in some sense what is willed exists within the one who

wills it insofar as he is proportioned to or ordered toward what is willed (*per quamdam proportionem vel ordinem ad volitum*). Hence, even things that are naturally proportioned to a given end are said to desire that end naturally. However, to possess an end in this way is to possess it imperfectly.

Now everything that is imperfect tends toward perfection. And both natural desire and voluntary desire tend toward possessing the end itself in reality, which is to possess it perfectly. And this is the *second* relation that the will has to what is willed.

Now what is willed includes not only the end, but the means to the end. And with respect to the means to the end, the last thing that belongs to the will's *first* relation is choosing. For the will's proportion to the end is completed in choosing, so that it completely wills a means to the end.

By contrast, using already belongs to the will's *second* relation, by which it tends toward attaining to the thing that it wills. Hence, it is clear that using follows choosing, as long as 'using' is being taken to designate the will's using the executing powers by moving them.

However, since in some sense the will also moves reason and uses it, 'using the means to the end' can be understood as it exists within reason's thought when reason directs the means toward the end. And 'using' in this sense precedes choosing.

**Reply to objection 1:** The very execution of the act is preceded by the movement by which the will effects movement toward the execution, but this movement follows upon choosing. And so since using belongs to this movement of the will, it lies between choosing and executing.

**Reply to objection 2:** What is relational by its essence is posterior to what is absolute, but that to which relations are attributed need not be posterior. In fact, to the extent that a cause is prior, it has a relation to many effects.

**Reply to objection 3:** Choosing precedes using if they are both referred to the same thing. But nothing prevents the using of one thing from preceding the choosing of something else.

Also, since the will's acts are self-reflective (*reflectuntur supra seipsos*), consenting and choosing and using can be understood to exist in each of the will's acts, so that one might say that the will consents to its choosing, and consents to its consenting, and uses itself to consent and to choose. And it is always the case that these acts, which are ordered toward what is prior, are themselves prior.

## QUESTION 17

### Acts Commanded by the Will

Next we have to consider acts that are commanded by the will (*de actibus imperatis a voluntate*). On this topic there are eight questions: (1) Is commanding an act of the will or an act of reason? (2) Does commanding belong to brute animals? (3) What is the order between commanding and using? (4) Are act of commanding and the commanded act a single act or different acts? (5) Are acts of the will commanded? (6) Are acts of reason commanded? (7) Are acts of the sentient appetite commanded? (8) Are acts of the vegetative soul commanded? (9) Are acts of the body's exterior members commanded?

#### Article 1

##### Is commanding an act of the will or an act of reason?

It seems that commanding (*imperare*) is an act of the will and not an act of reason:

**Objection 1:** To command to is to effect movement in something (*movere quoddam*); for Avicenna says that there are four sorts of movers, viz., “perfecting, disposing, commanding, and advising.” But as was explained above (q. 9, a. 1), it is the will's role to effect movement in all the other powers of the soul. Therefore, commanding is an act of the will.

**Objection 2:** Just as being commanded belongs to that which is subordinate (*subiectum*), so commanding seems to belong to that which is maximally free. But the root of freedom lies especially in the will. Therefore, the act of commanding belongs to the will.

**Objection 3:** A command (*imperium*) is immediately followed by an act. But an act of reason is not immediately followed by an act, since it is not the case that one who judges that something is to be done does it immediately. Therefore, commanding is an act of the will and not an act of reason.

**But contrary to this:** Gregory of Nyssa, along with the Philosopher, claims that “the appetite (*appetitivum*) obeys reason.” Therefore, the act of commanding belongs to reason.

**I respond:** Commanding is an act of reason, but one that presupposes an act of the will.

To see this clearly, notice that since acts of the will and acts of reason can be directed toward one another—for reason reasons about willing and the will wills to reason—it is possible for an act of the will to be preceded by an act of reason, and vice versa. And since the force of the prior act remains in the subsequent act, it is sometimes possible—as was explained above in the case of using (q. 16, a. 1) and choosing (q. 13, a. 1)—for an act to be an act of the will insofar as something of an act of reason remains virtually within it, and, conversely, it is possible for an act to be an act of reason insofar as something of an act of will remains virtually within it.

Now commanding is by its essence (*essentialiter*) an act of reason, since, by intimation or declaration (*intimando vel denuntiando*), the one who commands orders the one whom he commands to do something, and it is reason's role to order another in the manner of an intimation.

Now there are two possible ways in which reason intimates or declares something. In the first way, reason intimates or declares something *absolutely*, and this intimation is expressed by a verb in the indicative mode—as when someone says to another, “This is what you should do” (*hoc est tibi faciendum*). On the other hand, sometimes reason intimates something to someone *by moving him toward it*, and this sort of intimation is expressed by a verb in the imperative mode—as when someone says to another, “Do this!” (*fac hoc*).

Now as was explained above (q. 9, a. 1), among the powers of the soul it is the will that is the first mover with respect to the exercise of an act. Therefore, since a secondary mover effects movement only in the power of the first mover (*secundum movens non moveat nisi in virtute primi moventis*), it follows that the very fact that reason effects movement by its command accrues to reason from the will's power. Hence, it follows that commanding is an act of reason that presupposes an act of the will, in the power of

which reason effects movement by its command toward the exercise of an act.

**Reply to objection 1:** Commanding is not effecting movement in just any way at all; instead, it is effecting movement with a certain sort of intimation that declares something to another. This belongs to reason.

**Reply to objection 2:** The root of freedom has the will as its subject, but reason as its cause. For it is because reason is able to have diverse conceptions of the good (*diversas conceptiones boni*) that the will is able to be directed toward diverse things. And so philosophers define free choice (*liberum arbitrium*) as reason's free judgment (*liberum de ratione iudicium*), in the sense that reason is a cause of freedom (*quasi ratio sit causa libertatis*).

**Reply to objection 3:** This argument reaches the conclusion that, as has been explained, commanding is not an act of reason absolutely speaking, but an act of reason along with a certain motion (*non sit actus rationis absolute sed cum quadam motione*).

## Article 2

### Does commanding belong to brute animals?

It seems that commanding belongs to brute animals:

**Objection 1:** According to Avicenna, "The power to command a movement is an appetitive power, as is the power to execute a movement in the muscles and nerves." But both of these powers are found in brute animals. Therefore, commanding is found in brute animals.

**Objection 2:** It is part of the concept of a servant that he receives commands (*quod ei imperetur*). But as *Politics* 1 says, the body is related to the soul as a servant is related to his master. Therefore, the body receives commands from the soul even in brute animals, which are composed of a body and a soul.

**Objection 3:** In giving a command a man effects an impulse toward acting (*facit impetum ad opus*). But as Damascene says, "An impulse toward acting is found in brute animals." Therefore, commanding is found in brute animals.

**But contrary to this:** As has been explained (a. 1), commanding is an act of reason. But reason is not found in brute animals. Therefore, neither is commanding.

**I respond:** Commanding is nothing other than ordering someone to do something, along with a certain intimating motion. But ordering is an act proper to reason. Hence, it is impossible for commanding to exist in any way in brute animals, given that they do not have reason.

**Reply to objection 1:** The appetitive power is said to command an action in the sense that it moves reason-as-commanding (*inquantum movet rationem imperantem*). But this occurs only in men. In brute animals, by contrast, the appetitive power does not properly command (*non est proprie imperativa*), unless 'to command' is taken in a broad sense for 'to effect movement' (*nisi imperativum sumatur large pro motivo*).

**Reply to objection 2:** In brute animals the body does, to be sure, have the wherewithal to obey, but the soul does not have the wherewithal to command, since it does not have the wherewithal to order. And so there is no such thing as commanding and being commanded in brute animals (*non est ibi ratio imperantis and imperati*); rather, there is only effecting movement and being moved.

**Reply to objection 3:** The 'impulse toward acting' occurs in one way in brute animals and in another way in men. For men 'effect an impulse toward acting' through reason's ordering, and so in men the impulse toward acting has the character of a command. By contrast, in brute animals the 'impulse toward acting' is effected by an instinct of nature in the sense that as soon as something pleasing or unpleasing is apprehended, their appetite is naturally moved toward pursuing it or fleeing from it. Hence, they are ordered by another toward acting, and they do not order themselves toward an action. And so in

brute animals there is an impulse, but no command.

### Article 3

#### Does using precede commanding?

It seems that using precedes commanding:

**Objection 1:** As was explained above (a. 1), commanding is an act of reason that presupposes an act of the will. But as was said above (q. 16, a. 1), using is an act of the will. Therefore, using precedes commanding.

**Objection 2:** An act of commanding is one of the means that are ordered toward the end (*imperium est aliquid eorum quae ad finem ordinantur*). But an act of using is directed toward the means to the end (*eorum quae sunt ad finem est usus*). Therefore, it seems that using is prior to commanding.

**Objection 3:** Every act of a power that is moved by the will is called an act of using, since, as was explained above (q. 16, a. 1), the will uses the other powers. But as has been explained (a. 1), commanding is an act of reason insofar as it is moved by the will. Therefore, commanding is a certain sort of using. But what is general is prior to what is particular (*commune est prius proprio*). Therefore, using is prior to commanding.

**But contrary to this:** Damascene says, “The impulse toward acting precedes using. But the impulse toward acting is effected by the command. Therefore, commanding precedes using.

**I respond:** As was explained above (q. 16, a. 4), insofar as an act of using the means to an end exists in reason, which is directing that act toward the end, that act of using precedes the act of choosing. Hence, *a fortiori*, it precedes the act of commanding.

However, insofar as an act of using the means to the end is in the executing power, it follows the act of commanding, since the user’s using is conjoined with the act of that which he is using. For instance, it is not the case that someone uses a staff before he in some way acts through the staff.

By contrast, an act of commanding is not simultaneous with the act of that which receives the command; instead, the act of commanding is naturally prior, and sometimes also temporally prior, to the command’s being obeyed. Hence, it is clear that commanding precedes using.

**Reply to objection 1:** Not every sort of act of the will precedes that act of reason which is commanding. Some acts of the will, e.g., choosing, precede commanding and some, e.g., using, follow it. For after deliberation’s determination, i.e., after reason’s judgment, the will chooses; and after the choosing, reason commands that through which what is chosen is to be done; and then, finally, someone’s will begins the act of using by executing reason’s command. Sometimes the relevant will is that of another, as when someone issues a command to someone else; and sometimes it is the will of the one who issues the command, as when someone issues a command to himself.

**Reply to objection 2:** Just as acts are prior to powers, so too objects are prior to acts. Now the object of an act of using is the means to the end. Therefore, from the premise that the act of commanding is itself a means to the end one should conclude that the act of commanding is prior to the act of using rather than that it is posterior to the act of using.

**Reply to objection 3:** Just as the act of the will when it uses reason to issue a command precedes the act of commanding, so too one can claim that this act of using on the part of the will is preceded by some act of commanding on the part of reason, since the acts of these powers always reflect back on one another.

#### Article 4

##### Is the commanded act the same act as the very act of commanding?

It seems that the commanded act is not the same act (*not sit unus actus*) as the very act of commanding:

**Objection 1:** The acts of diverse powers are themselves diverse. But the commanded act belongs to one power and the act of commanding belongs to another power, since the power that commands is different from the power that receives the command. Therefore, the commanded act is not the same as the act of commanding.

**Objection 2:** If any two things can be separated from one another, then they are diverse, since nothing is separated from itself. But sometimes the commanded act is separated from the act of commanding, since sometimes the act of commanding comes first and is not followed by the commanded act. Therefore, the act of commanding is different from the commanded act.

**Objection 3:** If any two things are related as prior and posterior, then they are diverse from one another. But the act of commanding is naturally prior to the commanded act. Therefore, they are diverse from one another.

**But contrary to this:** The Philosopher says, “Where there is one thing because of another, there is only one thing.” But the commanded act exists only because of the act of commanding. Therefore, they are one.

**I respond:** Nothing prevents things from being many in a certain respect and one in a certain respect. To the contrary, as Dionysius says in the last chapter of *De Divinis Nominibus*, all the many things are one in a certain respect. However, there is a difference that must be attended to, viz., that some things are many absolutely speaking and one in a certain respect, whereas other things are one absolutely speaking and many in a certain respect.

Now ‘one’ (*unum*) is said in the same way that ‘being’ (*ens*) is. But a being absolutely speaking (*ens simpliciter*) is a substance, whereas a being in a certain respect (*ens secundum quid*) is an accident, or even a being of reason. And so if the things in question are one in substance, then they are one absolutely speaking and many in a certain respect. For instance, a whole in the genus of substance, composed of its integral or essential parts, is one absolutely speaking, since the whole is a being and a substance *absolutely speaking*; the parts, on the other hand, are beings and substances *within the whole*. By contrast, things that are diverse in substance and one in accident are diverse *absolutely speaking*—in the way that many men are one people and many rocks are one pile, i.e., with a oneness of *composition* or of *order*. Similarly, many individuals that are one in genus or one in species are many *absolutely speaking* and one in a certain respect, since to be one in genus or one in species is to be one *in thought* (*unum secundum rationem*).

Now just as, in the case of a genus of natural things, a whole is composed of matter and form, in the way that a man is composed of soul and body, and yet is *one natural being* even though it has *many parts*, so too, in the case of human acts, the act of a lower power is related as matter to the act of a higher power because the lower power acts in virtue of the higher power’s moving it; for the act of the first mover is related as a form to the act of its instrument. Hence, it is clear that the act of commanding and the commanded act are *one human act*, in the way that a given whole is *one*, but *many in its parts* (*sicut quoddam totum est unum sed est secundum partes multa*).

**Reply to objection 1:** If the powers in question were diverse powers not ordered to one another, then their acts would be diverse absolutely speaking. But when one of the powers moves the other, then their acts are in some sense one, since, as *Physics* 3 says, “The act of the mover is the same as the act of what is moved.”

**Reply to objection 2:** From the fact that the act of commanding and the commanded act can be

separated from one another, it follows that they are many in the parts (*multa partibus*). For a man's parts can be separated from one another and yet they are one as a whole (*unum toto*).

**Reply to objection 3:** Nothing prevents things that are many as parts and one as a whole from being such that the one is prior to the other. For instance, the soul is in some sense prior to the body, and the heart is prior to the other members of the body.

## Article 5

### Are acts of the will commanded?

It seems that acts of the will are not commanded:

**Objection 1:** In *Confessiones* 8 Augustine says, "The mind commands that the mind will, and yet it does not do it." But to will is an act of the will. Therefore, acts of the will are not commanded.

**Objection 2:** Being commanded is fitting for that which understands the command. But it is not the will's role to understand commands, since the will differs from the intellect and it is the intellect's role to understand. Therefore, acts of the will are not commanded.

**Objection 3:** If some act of the will is commanded, then by parity of reasoning all of them are commanded. But if all the acts of the will are commanded, then there must be an infinite regress. For, as has been explained (a. 1), an act of the will precedes the act of reason when reason commands, and, once again, if this act of the will is commanded, then the relevant act of commanding is preceded by yet another act of the\* will\*, and so on *ad infinitum*. But it is impossible to proceed *ad infinitum*. Therefore, acts of the will are not commanded.

**But contrary to this:** Everything that is within our power is subject to our command. But acts of the will are maximally within our power, since all our acts are said to be within our power to the extent that they are voluntary. Therefore, acts of the will are commanded by us.

**I respond:** As has been explained (a. 1), an act of commanding (*imperium*) is nothing other than an act of reason ordering that something be done, along with a certain movement. But it is clear that reason is able to give an order concerning an act of the will. For just as it is possible to judge it to be good to will a certain thing, so too it is possible to give an order by commanding that the man will that thing. From this it is clear that acts of the will can be commanded.

**Reply to objection 1:** As Augustine says in the same place, when the mind *perfectly* commands itself to will, then it is already willing, whereas the fact that it sometimes commands and does not will stems from the fact it does not perfectly command. Now an imperfect command stems from the fact that reason is moved in conflicting directions to command or not to command. Hence, it fluctuates between the two and does not have a perfect act of commanding.

**Reply to objection 2:** Just as, with the members of the body, each member operates for the whole body and not for itself alone—for instance, the eye sees for the whole body—so too with the powers of the soul. For the intellect engages in intellectual understanding not only for itself but for all the powers, and the will wills not only for itself but for all the powers. And so a man commands an act of willing for himself insofar as he understands and wills.

**Reply to objection 3:** Since commanding is an act of reason, an act that is commanded is one that is subject to reason. But as was explained above (q. 9, a. 4), the first act of the will comes not from reason's ordering but from an instinct of nature or of a higher cause. And so it is not necessary to proceed *ad infinitum*.

## Article 6

### Are acts of reason commanded?

It seems that acts of reason cannot be commanded:

**Objection 1:** It seems absurd for something to command itself. But as has been explained (a. 1), it is reason that commands. Therefore, acts of reason cannot be commanded.

**Objection 2:** What is such-and-such by its essence is distinct from what is such-and-such by participation. But as *Ethics* 1 says, a power whose act is commanded by reason is itself reason by participation. Therefore, the power that is reason is by its essence such that its act cannot be commanded.

**Objection 3:** A commanded act is one that is within our power. But knowing and judging what is true, which is an act of reason, is not always within our power. Therefore, it is not the case that acts of reason can be commanded.

**But contrary to this:** What we do by free choice is such that it can be done at our command. But acts of reason are exercised through free choice; for as Damascene says, “It is by free choice that a man investigates and scrutinizes and judges and disposes.” Therefore, acts of reason can be commanded.

**I respond:** Since reason is self-reflective (*quia ratio super seipsam reflectitur*), it is able to order its own acts in the same way that it orders the acts of the other powers.

However, notice that there are two possible ways to think about an act of reason:

The first way is to think about the *exercise* of the act. And in this sense an act of reason can always be commanded—as, for instance, when someone is asked to pay attention and to use his reason.

The second way is to think about the *object* of the act, and on this score there are two sorts of acts of reason to be attended to:

The first sort of act is *apprehending the truth about something*. This sort of act is not within our power, since it occurs by either a natural or supernatural light. And so on this score, an act of reason is not within our power and cannot be commanded.

The second sort of act of reason is *assenting to what is apprehended*. Thus, if the things apprehended are such that, as in the case of first principles, the intellect naturally assents to them, then assent to or dissent from such things is not within our power but is instead part of the order of nature, and so, properly speaking, is not subject to our command. By contrast, there are other apprehended things that are not so intellectually compelling as to rule out the possibility of assenting or dissenting or at least of suspending assent and dissent for some reason (*non adeo convincunt intellectum quin possit assentire vel dissentire vel saltem assensum vel dissensum suspendere propter aliquam causam*), and in such cases the assent or dissent is itself within our power and is subject to our command.

**Reply to objection 1:** Reason issues commands to itself in the same way that, as was explained above (q. 9, a. 3), the will moves itself—viz., insofar as both powers reflect back on their own acts and on the basis of one act tend toward another.

**Reply to objection 2:** Because of the diversity of the objects that are subject to an act of reason, nothing prevents reason from participating in itself—in the way, for instance, that the cognition of the principles participates in the cognition of the conclusion.

**Reply to objection 3:** The reply to this objection is clear from what has been said.

## Article 7

### Are acts of the sentient appetite commanded?

It seems that acts of the sentient appetite are not commanded:

**Objection 1:** In Romans 7:15 the Apostle says, “The good which I will I do not,” and a Gloss explains that a man wills not to have sentient desire (*non concupiscere*) and yet has it. But sentient desire is an act of the sentient appetite. Therefore, acts of the sentient appetite are not subject to our command.

**Objection 2:** As was established in the First Part (*ST* 1, q. 110, a. 2), corporeal matter obeys only God as far as its formal transmutation is concerned. But an act of the sentient appetite involves a certain formal transmutation of the body, viz., becoming hot or cold. Therefore, an act of the sentient appetite is not subject to human command.

**Objection 3:** The proper mover of the sentient appetite is something apprehended by the sensory power or by the imagination. But apprehending something by the sensory power or by the imagination is not always within our power. Therefore, acts of the sentient appetite are not subject to our command.

**But contrary to this:** Gregory of Nyssa says, “That which is obedient to reason is divided into two, the desirous and the irascible” (*desiderativum et irascitivum*)—and these belong to the sentient appetite. Therefore, acts of the sentient appetite are subject to the command of reason.

**I respond:** As was explained above (a. 5), an act is subject to our command insofar as it is within our power. And so to understand how an act of the sentient appetite might be subject to reason’s command, we have to think about how it might be within our power.

Now note that the sentient appetite differs from the intellective appetite, which we call ‘the will’, in that the sentient appetite, but not the will, is a power of a corporeal organ. But every act of a power that uses a corporeal organ depends not only on the soul’s power but also on the disposition of the corporeal organ, in the way that an act of seeing depends both on the visual power and also on the condition of the eyes (*ex qualitate oculi*), by which it is either aided or impeded. Hence, an act of the sentient appetite depends not only on the appetitive power but also on a bodily disposition.

Now that which depends on the appetitive power follows upon apprehension. But since the imagination’s apprehension is of the particular, it is regulated by reason’s apprehension, which is of the universal, in the way that an active particular power is regulated by an active universal power. And so, on the one hand, an act of the sentient appetite is subject to reason’s command. However, the condition and disposition of the body (*qualitas et dispositio corporis*) is not subject to reason’s command. And so this, on the other hand, prevents the movement of the sentient appetite from being *totally* subject to reason’s command.

It can also sometimes happen that the sentient appetite’s movement is suddenly aroused at an apprehension by the imagination or sensory power. And in such a case the movement is beyond reason’s command—even though it could have been stopped by reason if reason had foreseen it. This is why the Philosopher says in *Politics* 1 that reason presides over the irascible and concupiscible appetites not by “despotic rule” of the sort that a master has over his servant, but by “political or kingly rule” of the sort that a ruler has over free men who are not totally subject to his command.

**Reply to objection 1:** The fact that a man wills not to have a sentient desire for something and yet nonetheless desires that thing stems from a bodily disposition through which the sentient appetite is prevented from totally following reason’s command. That is why the Apostle adds in the same place (Romans 7:23), “I see another law in my members, fighting against the law of my mind.” As has been explained, this likewise happens because of a sudden movement of sentient desire.

**Reply to objection 2:** The body’s condition (*qualitas corporis*) is related in two ways to an act of the sentient appetite: (a) insofar as it *precedes* the act, as when someone is in some sense disposed

because of his body to this or that passion, and (b) insofar as it *is subsequent to* the act, as when someone becomes heated up by anger.

Thus, a preceding condition is not subject to reason's command, since it stems either from nature or from a previous motion that cannot be put to rest immediately. By contrast, a subsequent condition follows reason's command, since it follows upon the local motion of the heart, which is moved in different ways by the different acts of the sentient appetite.

**Reply to objection 3:** Since an apprehension by the sensory power requires an exterior sensible thing, it is not within our power to apprehend something by the sensory power unless that sensible thing is present; but its presence is not always within our power. For if its presence is within our power, then a man can use his sensory power when he wills to, unless there is some obstacle on the part of the relevant organ.

On the other hand, an apprehension by the imaginative power is subject to reason's command, depending on the imaginative power's strength or weakness. For the fact that a man cannot imagine what reason considers stems either (a) from the fact that the things in question are not imaginable, as in the case of incorporeal things, or (b) from a weakness in the imaginative power that derives from some indisposition on the part of the organ.

## Article 8

### Are acts of the vegetative soul subject to reason's command?

It seems that acts of the vegetative soul are subject to reason's command:

**Objection 1:** The sentient powers are more noble than the powers of the vegetative soul. But the sentient powers of the soul are subject to reason's command. Therefore, *a fortiori*, so are the powers of the vegetative soul.

**Objection 2:** A man is called "a miniature world" (*minor mundus*), since the soul in the body is like God in the world. But God is in the world in such a way that all the things that exist in the world obey His command. Therefore, all the things that exist in a man likewise obey reason, even the powers of the vegetative soul.

**Objection 3:** Praise and blame are possible only in the case of acts that are subject to reason's command. But praise and blame, as well as virtue and vice, are possible in acts of the nutritive and generative powers, as is clear from gluttony and lust and from their opposed virtues. Therefore, acts of these powers are subject to reason's command.

**But contrary to this:** Gregory of Nyssa says, "The nutritive and the generative are not subject to persuasion by reason."

**I respond:** Some acts proceed from natural appetite, whereas others proceed from animal appetite or intellectual appetite. For every agent in some way desires an end.

Now natural appetite does not follow upon any sort of apprehension in the way that animal appetite and intellectual appetite do. But reason commands in the manner of an apprehensive power. And those acts that proceed from either intellectual appetite or animal appetite can be commanded by reason, but not those acts that proceed from natural desire. The acts of the vegetative soul are of this latter sort, and this is why Gregory of Nyssa says that the nutritive and the generative are called 'natural'. Because of this, acts of the vegetative soul are not subject to reason's command.

**Reply to objection 1:** An act is more noble and more subject to reason to the extent that it is more immaterial. Hence, from the very fact that the powers of the vegetative soul do not obey reason, it is clear that they are very low-level powers (*apparet has vires infimas esse*).

**Reply to objection 2:** The likeness in question is likeness in a certain respect, viz., that the soul

moves the body in the way that God moves the world. But it is not a likeness that holds in all respects. For instance, it is not the case that the soul created the body *ex nihilo* in the way that God created the world; yet it is because of this that the world is totally subject to His command.

**Reply to objection 3:** Virtue and vice, and praise and blame, are not appropriate in the case of the very acts of the nutritive and generative powers that constitute digestion or the formation of the human body. Instead, they are appropriate in the case of acts of the sentient part of the soul that are ordered toward those acts of the generative and nutritive powers, viz., acts of desiring the pleasures of food and sexual intercourse, and acts of using those powers either in a way that they ought to be used or in a way that they ought not to be used.

## Article 9

### Do the members of the body obey reason in their acts?

It seems that the members of the body do not obey reason in their acts:

**Objection 1:** It is clear that the members of the body are more distant from reason than are the powers of the vegetative soul. But as has been explained (a. 8), the powers of the vegetative soul do not obey reason. Therefore, *a fortiori*, neither do the members of the body.

**Objection 2:** The heart is the principle of animal movement. But the heart's movement is not subject to reason's command; for Gregory of Nyssa says, "What pulses is not subject to reason's persuasion." Therefore, the movement of the members of the body is not subject to reason's command.

**Objection 3:** In *De Civitate Dei* 14 Augustine says, "The movement of the genital members is sometimes inopportune and undesired, whereas sometimes it fails the one who desires it, and even though desire glows in the mind, the body remains frigid." Therefore, the movements of the members do not obey reason.

**But contrary to this:** In *Confessiones* 8 Augustine says, "The mind commands that the hand be moved, and the hand has such readiness that one can scarcely distinguish the command from the obedience."

**I respond:** The members of the body are certain instruments (*organa*) of the powers of the soul. Hence, the members of the body are related to obeying reason in the same way that the powers of the soul are. Therefore, since the powers of the sentient soul are subject to reason's command whereas the natural powers are not, all the movements of the members of the body that are moved by the sentient powers are subject to reason's command, whereas the movements of the members that follow the natural powers are not subject to reason's command.

**Reply to objection 1:** The members do not move themselves but are instead moved through the powers of the soul, some of which are closer to reason than are the powers of the vegetative soul.

**Reply to objection 2:** In cases that involve the intellect and will, one first finds that which comes from nature (*id quod est secundum naturam*) and from which other things are derived—in the way that the cognition of conclusions is derived from the cognition of naturally known principles, and in the way that the choice of the means to an end is derived from the willing of a naturally desired end. So, too, in the case of corporeal movements, the principle comes from nature (*principium est secundum naturam*).

Now the principle of the body's movements lies in the movement of the heart. Hence, the heart's movement comes from nature and not from the will, since it follows as a *per se* accident upon life, which itself arises from the union of the soul and the body. (In the same way, the movement of heavy and lightweight things follows upon their substantial form, and this is why, according to the Philosopher in *Physics* 8, they are said to be moved by what generates them.) And it is because of this that the heart's movement is called a 'vital' movement.

Hence, Gregory of Nyssa says that just as the generative and the nutritive do not obey reason, so neither does the pulsating, i.e., the vital. Now ‘pulsating’ names the heart’s movement, which manifests itself through the pulsating veins.

**Reply to objection 3:** As Augustine says in *De Civitate Dei* 14, the fact that the movement of the genital members does not obey reason stems from the punishment for sin—so that, namely, for its disobedience to God the soul suffers the penalty of disobedience in that specific member through which original sin is handed down to posterity.

But since, as will be explained below (q. 85, a. 1), because of the sin of the first parent nature was left to itself (*natura est sibi relicta*) once the supernatural gift that had been conferred on man by God was taken away, one has come up with a natural explanation (*consideranda est ratio naturalis*) for why the movements of these specific members do not obey reason.

Aristotle gives a reason for this in *De Causis Motus Animalium*, when he claims that the movements of the heart and of the genital members are involuntary because these members are co-moved by some sort of apprehension; more specifically, they are moved insofar as the intellect and imagination make representations of certain things that give rise to those passions of the soul that are followed by the movements of these members. On the other hand, these members are not moved by the command of reason or of the intellect, because the movement of these members requires a natural alteration involving heat and cold, and this sort of alteration is not subject to reason’s command.

Now this happens in a special way with these two members because each of them is, as it were, a sort of separate animal (*quasi quoddam animal separatum*) to the extent that it is a principle of life, given that a principle is a ‘virtual whole’ (*virtute totum*). For the heart is the principle of the sensory powers, and the genital member is such that the seminal power, which is virtually the whole animal, comes forth from it. And so they have their own proper movements by nature (*naturaliter*), because, as was just explained, the principles have to come from nature (*principia oportet esse naturalia*).

## QUESTION 18

### The Goodness and Badness of Human Acts in General

Next we have to consider the goodness and badness of human acts: first, the way in which a human action is good or bad (questions 18-20) and, second, what follows from the goodness or badness of human acts, viz., merit and demerit, sin and guilt (question 21).

On the first point, there are three topics to consider: first, the goodness and badness of human acts in general (question 18); second, the goodness and badness of interior acts (question 19); and, third, the goodness and badness of exterior acts (question 20).

On the first topic there are eleven questions: (1) Is every action good, or are some actions bad? (2) Does a man's action have goodness or badness from its object? (3) Does it have goodness or badness from its circumstances? (4) Does it have goodness or badness from its end? (5) Are some human actions good or bad by their species? (6) Does an act have its species of goodness or badness from its end? (7) Is the species derived from the end contained under—as under a genus—the species derived from the object, or vice versa? (8) Is any act indifferent by its species? (9) Is any act indifferent as an individual? (10) Does a circumstance confer on a moral act its species of goodness or badness? (11) Does every circumstance that adds to a moral act's goodness or badness confer on it its species of goodness or badness?

#### Article 1

##### Is every human action good, or are some actions bad?

It seems that every human action is good and that none is bad:

**Objection 1:** In *De Divinis Nominibus*, chap. 4, Dionysius says that what is bad does not act except by the power of what is good (*nisi virtute boni*). But what is bad is not effected by the power of what is good. Therefore, no action is bad.

**Objection 2:** Nothing acts except insofar as it is actual. But a thing is bad not insofar as it is actual, but insofar as a potentiality is deprived of actuality—while, as *Metaphysics* 9 says, what is good exists insofar as a potentiality is perfected by actuality. Therefore, nothing acts insofar as it is bad; rather, it acts only insofar as it is good. Therefore, every action is good, and none is bad.

**Objection 3:** As is clear from Dionysius in *De Divinis Nominibus*, chap. 4, what is bad can be a cause only *per accidens*. But every action has a *per se* effect. Therefore, no action is bad, but instead every action is good.

**But contrary to this:** In John 3:20 our Lord says, “Everyone who acts badly hates the light.” Therefore, some human actions are bad.

**I respond:** It is necessary to speak about good and evil in actions in the same way that one speaks of good and evil in things, since each thing produces actions that are such as it itself is. Now in the case of things, each thing has as much goodness as it has *esse*, since, as was explained in the First Part (*ST* 1, q. 5, aa. 1 and 3), ‘good’ and ‘being’ are convertible.

God alone has the whole fullness of His *esse* as something one and simple, whereas every other thing has a fullness of *esse* that belongs to it through diverse aspects (*secundum diversa*). Hence, with some things it happens that they have *esse* in certain respects and yet they lack something of the fullness of *esse* that is appropriate for them. For instance, the fullness of human *esse* requires that a man be a certain sort of composite of soul and body and that he have all the powers and instruments for cognition and movement. Hence, if a particular man lacks some of these things, then he is lacking in something of the fullness of his *esse*. Therefore, he has as much goodness as he has *esse*, whereas to the extent that he lacks something of the fullness of *esse*, he is lacking in goodness and is called bad. For instance, a blind man has goodness in the fact that he is alive, and it is bad for him that he lacks sight. By contrast, if he

had no being or goodness at all, then he would not be able to be called either bad or good. But because the very fullness of *esse* belongs to the notion of the good (*de ratione boni est ipsa plentiudo essendi*), if a thing lacks something of the fullness of *esse* that it ought to have (*aliquid defuerit de debita essendi plenitudine*), then it will not be called *good absolutely speaking*, but will instead be called *good in a certain respect* (*non dicitur simpliciter bonum sed secundum quid*), insofar as it is a being—though, as was explained in the First Part (*ST* 1, q. 5, a. 1), it can be called a *being* absolutely speaking and a *non-being* in a certain respect.

So, then, one should reply that every action is such that (a) to the extent that it has something of *esse*, it has something of goodness, but such that (b) to the extent that it lacks something of the fullness of *esse* that a human action ought to have, it lacks something of goodness and so is called ‘bad’—as, e.g., when it lacks either the determinate quantity prescribed by reason, or the right place, or something else of this sort.

**Reply to objection 1:** What is bad acts in the power of a good thing that is defective (*in virtute boni deficientis*). For if there were nothing there of goodness, then the thing in question would not be a being and would be unable to act. On the other hand, if it were not defective, it would not be bad. Hence, the action caused is a certain defective good that is good in a certain respect, but bad absolutely speaking.

**Reply to objection 2:** Nothing prevents a thing from (a) being actual in a certain respect and so able to act, and yet (b) being deprived of actuality in some other respect and so the cause of a defective action. For instance, a blind man has in actuality the ambulatory power by which he is able to walk, but because he lacks vision, which directs one in walking, he suffers a defect in his walking when he walks by stumbling around.

**Reply to objection 3:** A bad action can have a *per se* effect insofar as it has something of goodness and being. For instance, an act of adultery is a cause of human generation insofar as it involves the sexual union of a man and a woman, though not insofar as it lacks the order prescribed by reason (*non in quantum caret ordine rationis*).

## Article 2

### Does an action have goodness or badness from its object?

It seems that an action does not have goodness or badness from its object:

**Objection 1:** The object of an action is a thing (*res*). But as Augustine says in *De Doctrina Christiana* 3, “Evil lies not in things, but in the use sinners make of them.” Therefore, a human action does not have goodness or badness from its object.

**Objection 2:** The object is related as matter to the action. However, a thing’s goodness comes not from its matter but rather from its form, which is its actuality. Therefore, it is not the case that goodness and badness exist in acts because of the object.

**Objection 3:** The object of an active power is related to its action in the way that an effect is related to its cause. But a cause’s goodness does not depend on its effect; rather, it is just the opposite. Therefore, a human action does not have goodness or badness from its object.

**But contrary to this:** Hosea 9:10 says, “They became abominable, just like the things that they loved.” But a man becomes abominable to God because of the badness of his actions. Therefore, the badness of an action stems from the bad objects that a man loves. And the same explanation holds for the goodness of an action.

**I respond:** As has been explained (a. 1), an action’s goodness or badness, just like the goodness or badness of other things as well, depends on its fullness of being or lack of being. Now what seems

relevant in the first place to a thing's fullness of being is that which gives the thing its species. And just as a natural thing has its species from its form, so an action has its species from its object, in the way that a movement has its species from its terminus.

And so just as a natural thing's first goodness (*prima bonitas*) comes from its form, which gives it its species, so a moral act's first goodness comes from an appropriate object. Hence, some call this sort of action one that is 'good of its kind' (*bonum ex genere*), e.g., making use of what is one's own.

And just as in natural things the first badness occurs if a generated thing does not attain to the form of the species—for instance, if what is generated is not a man but something instead of a man—so too the first badness in moral actions is something that comes from the object, e.g., taking what belongs to another. And this sort of action is called 'bad of its kind' (*malum ex genere*)—where 'kind' (*genus*) is being taken for the species, in the manner of speaking in which we call the whole human species 'mankind'.

**Reply to objection 1:** Even though exterior things are good in themselves, they still do not always have the right sort of relation to this or that action. And so insofar as they are thought of as objects of the actions in question, these things do not have the character of goodness.

**Reply to objection 2:** The object of an action is not a matter *out of which* (*materia ex qua*) but a *matter with respect to which* (*materia circum quam*), and so insofar as the object gives an act its species, it has the character in some sense of a form.

**Reply to objection 3:** It is not always the case that the object of a human action is the object of an active power. For an appetitive power is in some sense passive, insofar as it is moved by something desirable, and yet it is a principle of human acts.

Nor is it the case that the objects of active powers always have the character of an effect. This is so only when they have already been transformed. For instance, transformed food (*alimentum nondum transmutatum*) is the effect of the nutritive power, but it is food that has not yet been transformed that is related to the nutritive power as the matter with respect to which it operates (*sicut materia circa quam operatur*).

On the other hand, from the fact that an object is in some sense the effect of an active power it follows that it is the terminus of that action and, as a result, that it gives the action its form and species. For a movement has its species from its termini. And even though the actions's goodness is not caused by its effect's goodness, the action is called a good action from the fact that it is able to induce a good effect. And so the action's proportion to the effect is itself the reason for the action's goodness.

### Article 3

#### Does an action have goodness or badness from its circumstances?

It seems that an action does not have goodness or badness from its circumstances (*actio non sit bona vel mala ex circumstantia*):

**Objection 1:** As has been explained (q. 7. a. 1), the circumstances 'surround' an act in the sense of existing outside of it. But as *Metaphysics* 6 says, "Good and bad exist within the things themselves." Therefore, it is not the case that an action has goodness or badness because of its circumstances.

**Objection 2:** The goodness or badness of acts is considered especially in moral theory (*in doctrina morum*). But since the circumstances are certain accidents of acts, they seem to lie outside the consideration of art, since, as *Metaphysics* 4 says, "No art takes account of what exists *per accidens*." Therefore, the goodness or badness of an action is not from its circumstances.

**Objection 3:** What belongs to something with respect to its substance is not attributed to it through an accident. But *good* and *bad* belong to an action with respect to its substance, since, as has been

explained (a. 2), an action can be good or bad of its kind (*ex suo genere potest esse bona vel mala*). Therefore, it does not belong to an action to be good or bad because of its circumstances.

**But contrary to this:** In the *Ethics* the Philosopher says that the virtuous man acts “in the way he should, and when he should, and so on for the other circumstances.” Therefore, conversely, the vicious man acts, in the case of each vice, when he should not, and where he should not, and so on for the other circumstances. Therefore, human actions are good or bad according to their circumstances.

**I respond:** Among natural things the fullness of perfection that the thing should have does not come from the substantial form that confers the species; instead, much is added by the supervening accidents, e.g., in the case of man, the shape and color and others of this sort, which are such that badness results if they are not present in the right proportion.

The same thing holds for an action as well. For an action’s fullness of goodness does not consist wholly in its species; instead, something is added to the goodness by things that accrue to the action as accidents. And appropriate circumstances are accidents of this sort. Hence, if something required for appropriate circumstances is lacking, then the action will be bad.

**Reply to objection 1:** The circumstances exist outside of an action to the extent that they are not part of the action’s essence, but they exist within the action itself as certain of its accidents. The accidents that exist in natural things likewise exist outside their essences in this same sense.

**Reply to objection 2:** Not all accidents are related *per accidens* to their subjects; instead, some of them are the *per se* accidents, and *per se* accidents are studied in each art. This is the way in which the circumstances of acts are considered in moral theory.

**Reply to objection 3:** Since ‘good’ and ‘being’ are convertible, it follows that just as ‘being’ is said with respect to substance and with respect to accident, so too ‘good’ is likewise attributed to something both with respect to its essential *esse* and with respect to its accidental *esse*—and this holds for both natural things and moral actions.

#### Article 4

##### Does a human act have goodness or badness from its end?

It seems that a human act does not have goodness or badness from its end:

**Objection 1:** In *De Divinis Nominibus*, chap. 4, Dionysius says, “Nothing acts with a view toward evil.” Therefore, if an act’s goodness or badness were derived from its end, then no actions would be bad. But this is clearly false.

**Objection 2:** An act’s goodness is something that exists within the act. But the end is an extrinsic cause. Therefore, it is not because of its end that an action is called good or bad.

**Objection 3:** It is possible for a good act to be ordered toward a bad end—as, for instance, when someone gives alms out of vainglory. And, conversely, it is possible for a bad action to be ordered toward a good end—as when someone steals something in order to give it to a poor man. Therefore, an action is not good or bad because of its end.

**But contrary to this:** In *Topica* Boethius says, “If something’s end is good, then it itself is likewise good; and if something’s end is bad, then it itself is likewise bad.”

**I respond:** The disposition of things in goodness is the same as their disposition in *esse*. For instance, there are some things whose *esse* does not depend on another, and in the case of such things it is enough to consider their *esse* itself, absolutely speaking. However, there are other things whose *esse* does depend on another, and they have to be studied by considering the cause on which they depend.

Now just as a thing’s *esse* depends on its agent and its form, so too a thing’s goodness depends on its end. Hence, in the case of the divine Persons, who do not have a goodness that depends on another,

no explanation of their goodness is taken from the end. By contrast, human actions and other things whose goodness depends on another have a reason for their goodness in the end on which they depend, and this reason goes beyond the absolute goodness that exists in them.

So, then, there can be four sort of goodness that exist in a human action:

(a) *being good with respect to its kind (bonitas secundum genus)*, i.e., being good insofar as it is an action, since, as has been explained (a. 1), it has as much goodness as it has action and being;

(b) *being good by its species (bonitas secundum species)*, which is taken from an appropriate object;

(c) *being good with respect to its circumstances (bonitas secundum circumstantias)* in the sense of being good with respect to certain accidents;

(d) *being good with respect to its end (bonitas secundum finem)* in the sense of being good with respect to its relation to a cause of goodness.

**Reply to objection 1:** The good that someone looks to in acting is not always a genuine good. Rather, sometimes it is a genuine good and sometimes it is an apparent good. And in the latter case, a bad action follows from the end.

**Reply to objection 2:** Even though the end is an extrinsic cause, it is nonetheless the case that the right sort of proportion to and relation to the end inhere in the action.

**Reply to objection 3:** Nothing prevents an action from having one of the sorts goodness listed above while lacking another. Accordingly, it is possible for an action that is good by its species or with respect to its circumstances to be ordered toward a bad end, and vice versa. But an action is not good absolutely speaking unless *all* these sorts of goodness come together in it. For as Dionysius says in *De Divinis Nominibus*, chap. 4, “Any single defect is a cause of badness, whereas goodness results from the whole cause.”

## Article 5

### Do moral acts differ in species because of their goodness and badness?

It seems that moral acts do not differ in species because of their goodness and badness:

**Objection 1:** As has been explained (a. 1), goodness and badness in acts are like goodness and badness among things. But goodness and badness do not make for a diversity of species among things; for instance, a good man and a bad man are the same in species. Therefore, neither do goodness and badness in acts make for a diversity of species.

**Objection 2:** Since badness is a privation, it is a certain sort of non-being (*quoddam non ens*). But according to the Philosopher in *Metaphysics* 3, *non-being* cannot be a specific difference. Therefore, since it is the specific difference that constitutes a species, it seems that an act is not constituted in a species by the fact that it is bad. And so goodness and badness do not make for a diversity of species among human acts.

**Objection 3:** Acts that are diverse in species have diverse effects. But effects that are the same in species can follow from a good act and from a bad act. For instance, a man is generated from adultery and from marital intercourse. Therefore, a good act and a bad act do not differ in species.

**Objection 4:** As has been explained (a. 3), goodness and badness sometimes exist in acts because of a circumstance. But since a circumstance is an accident, it does not give an act its species. Therefore, human acts do not differ in species because of their goodness and badness.

**But contrary to this:** According to the Philosopher in *Ethics* 2, similar habits result in similar acts. But a good habit and a bad habit, e.g., generosity (*liberalitas*) and prodigality (*prodigalitas*), differ in species. Therefore, a good act and a bad act likewise differ in species.

**I respond:** As was explained above (a. 2), every act has its species from its object. Hence, it must be the case that some difference on the part of the object makes for a diversity of species among acts.

Notice, however, that a difference on the part of an object that makes for a difference of species among acts insofar as these acts are related to *one* active principle does not make for a difference of species among the acts insofar as they are related to *another* principle. For only something that is *per se*, and nothing that is *per accidens*, constitutes a species. But it is possible for a given difference on the part of the object to be *per se* in relation to one active principle and *per accidens* in relation to another; for instance, having a cognition of color and having a cognition of sound differ *per se* in relation to the sensory power, but not in relation to the intellect.

Now in the case of human acts, ‘good’ and ‘bad’ are predicated in relation to reason, since, as Dionysius says in *De Divinis Nominibus*, chap. 4, a man’s good is “to be in conformity to reason” (*secundum rationem esse*), whereas the bad is what lies “outside of reason” (*praeter rationem*). For each thing is such that (a) the good for it is what is appropriate for it given its form, and (b) the bad for it is that which lies outside what is prescribed by its form (*praeter ordinem suae formae*). Therefore, it is clear that the differences *good* and *bad*, thought of in regard to the object, are related *per se* to reason, viz., insofar as the object either conforms to or does not conform to reason (*secundum quod obiectum est rationi conveniens vel non conveniens*).

Now acts are called ‘human’ or ‘moral’ insofar as they come from reason. Hence, it is clear that goodness and badness make for diverse species among moral acts, since specific differences make for diverse species *per se*.

**Reply to objection 1:** Even in the case of natural things goodness and badness, i.e., being consonant with nature (*secundum naturam*) and being contrary to nature (*contra naturam*), make for diverse natural species. For instance, a dead body and a living body do not belong to the same species. Similarly, goodness, i.e., being in accord with reason, and badness, i.e., being outside of reason, make for diverse moral species.

**Reply to objection 2:** ‘Bad’ does not imply an absolute privation, but instead implies a privation that affects such-and-such a potentiality. For instance, an act is called bad by its species not because it has no object, but because it has an object that is not in accord with reason, e.g., taking what belongs to another. Hence, insofar as the object is something positively speaking, it can constitute a species of bad acts.

**Reply to objection 3:** Insofar as a conjugal act and an act of adultery are related to reason, they differ in species and have effects that differ in species, since the one deserves praise and reward, whereas the other deserves blame and punishment.

However, insofar as they are related to the generative power, they do not differ in species. So taken, they have the same effect in species.

**Reply to objection 4:** Sometimes a circumstance is taken as an *essential difference* on the part of the object insofar as the object is related to reason, and in such a case that circumstance can confer a species on a moral act. This has to be the case whenever the circumstance in question changes the act from goodness to badness. For a circumstance would not make an act bad except by being opposed to reason.

## Article 6

### Do the goodness and badness derived from the end make for diverse species among acts?

It seems that the goodness and badness derived from the end do not make for diverse species among acts:

**Objection 1:** Acts have their species from their object. But the end lies outside the notion of the object (*praeter rationem obiecti*). Therefore, the goodness and badness derived from the end do not make for diverse species of acts.

**Objection 2:** As has been explained (a. 5), what is *per accidens* does not constitute a species. But it is accidental to an act that it is ordered toward a given end; for instance, it is accidental that someone should give alms for the sake of vainglory. Therefore, acts are not diverse in species because of the goodness and badness derived from the end.

**Objection 3:** Acts that are diverse in species can be ordered toward a single end; for instance, acts of diverse virtues and of diverse vices can be ordered toward the end of vainglory. Therefore, it is not the case that the goodness and badness taken from the end make for diverse species of acts.

**But contrary to this:** It was shown above (q. 1, a. 3) that human acts have their species from their end. Therefore, the goodness and badness taken from the end make for diverse species of acts.

**I respond:** As was explained above (q. 1, a. 1), acts are called human insofar as they are voluntary. But among voluntary acts, there are two sorts of acts, viz., (a) an *interior act* of willing and (b) an *exterior act*, and each of these acts has its own object.

Now the end is, properly speaking, the object of the interior voluntary act, whereas the object of the exterior action is what that action has to do with (*circa quod est actio exterior est obiectum eius*). Therefore, just as the exterior act takes its species from the object that it has to do with, so the interior act of willing takes its species from the end as from its proper object. The result is that what exists on the side of the will is like a form (*se habet ut formale*) with respect to what exists on the side of the exterior act, since the will uses the members of the body as instruments in order to act. Nor do the exterior acts have the nature of moral acts (*neque actus exteriores habent rationem moralitatis*) except insofar as they are voluntary.

And so the species of a human act is thought of *formally* in accord with *the end* and *materially* in accord with *the object of the exterior act*. Hence, in *Ethics* 6 the Philosopher says, “Someone who steals in order to commit adultery is, speaking *per se*, more an adulterer than a thief.”

**Reply to objection 1:** As has been explained, the end also has the character of an object.

**Reply to objection 2:** Even if being ordered toward the sort of end in question is accidental to the exterior act, it is nonetheless not accidental to the interior act of willing, which is related to the exterior act in the way that what is formal is related to what is material.

**Reply to objection 3:** When many acts that differ from one another in species are ordered toward a single end, there is, to be sure, a diversity of species among the exterior acts, but there is a oneness of species on the part of the interior act.

## Article 7

### Is the species of goodness derived from the end contained under the species of goodness derived from the object in the way that a species is contained under a genus?

It seems that the species of goodness derived from the end is contained under the species of goodness derived from the object in the way that a species is contained under a genus, as, for instance, when someone steals in order to give alms:

**Objection 1:** As has been explained (aa. 2 and 6), an act has its species from its object. But it is impossible for something to be contained under a second species that is not itself contained under the act’s proper species, since the same thing cannot be in diverse non-subordinated species (*in diversis speciebus non subalternis*). Therefore, the species derived from the end is contained under the species derived from the object.

**Objection 2:** The ultimate difference (*ultima differentia*) constitutes the lowest-level species (*constituit speciem specialissimam*). But the difference derived from the end seems to come later (*videtur esse posterior*) than the difference derived from the object, since the end has the character of something ultimate (*habet rationem ultimi*). Therefore, the species derived from the end is contained as a lowest-level species under the species derived from the object.

**Objection 3:** To the extent that a specific difference is more formal, it is more specific, since the difference is related to the genus as a form is related to matter. But as has been explained (a. 6), the species derived from the end is more formal than the species derived from the object. Therefore, the species derived from the end is contained under the species derived from the object in the way that a species is contained under a genus.

**But contrary to this:** For every genus there are determinate specific differences. But acts of the same species, where the species is derived from the object, can be ordered toward infinitely many ends; for instance, theft can be ordered toward infinitely many good or bad ends. Therefore, the species derived from the end is not contained under the species derived from the object in the way that a species is contained under a genus.

**I respond:** There are two ways in which the object of the exterior act can be related to the will's end: (a) the object can be ordered *per se* toward the end, in the way that fighting well is ordered *per se* toward victory, or (b) the object can be ordered *per accidens* toward the end, in the way that taking what belongs to another is ordered *per accidens* toward giving alms.

Now as the Philosopher says in *Metaphysics 7*, the differences that divide a genus and constitute the species of that genus have to divide the genus *per se*. By contrast, if they divide the genus *per accidens*, then the division does not proceed in the right way—as, for instance, if someone were to say: “Rational animal and non-rational animal; non-rational animal with wings and non-rational animal without wings.” For *with wings* and *without wings* are not determinative *per se* of *non-rational*. Rather, one has to make the division as follows: “..... animal with feet and animal without feet; animal with two feet and animal with four feet and animal with many feet.” For these latter differences determine the prior difference *per se*.

So, then, when the object is not ordered *per se* toward the end, then the specific difference derived from the object is not *per se* determinative of what is derived from the end, and vice versa. Hence, it is not the case that one of the species is contained under the other; instead in this sort of case the moral act falls under two disparate species, as it were. Hence, we say that someone who steals in order to commit adultery commits two evils in one act (*committit duas malitias in uno actu*).

By contrast, if the object is ordered *per se* toward the end, then one of the differences in question is *per se* determinative of the other. Hence, one of the species will be contained under the other. What remains to be considered is which species falls under which. To make this issue clearer, notice, first, that the more particular the form is from which a given difference is taken, the more specific it is. Second, notice that the more universal the agent is, the more universal the form that comes from that agent. Third, notice that the more remote (*posterior*) an end is, the more universal the agent it corresponds to; for instance, victory, which is the ultimate end of an army, is the end intended by the highest leader, whereas the disposition of this or that line of battle is the end intended by some lower leader.

From these premises it follows that (a) the specific difference derived from the end is more general, and that (b) the difference derived from an object that is ordered *per se* toward such an end is a specific difference in relation to that end. For the act of willing (*voluntas*), whose proper object is the end, is a universal mover with respect to all the soul's powers, whose proper objects are the objects of particular acts.

**Reply to objection 1:** As regards its substance, nothing can be in two species that are such that it is not the case that one of them falls under the other. But as regards what accrues to a thing, that thing can be contained under diverse species. For instance, as regards its color, this piece of fruit is contained

under one species, viz., *white thing*, and as regards its odor, it is contained under the species *good-smelling thing*. Similarly, as was explained above (q. 1, a. 3), an act which, as regards its substance, is in a given natural species (*est in una specie naturae*) can, given the supervening moral conditions, be in two species.

**Reply to objection 2:** The end is the last thing in execution, but it is the first thing in reason's thought (*primum in intentione rationis*), and it is from the latter that the species of moral acts are taken.

**Reply to objection 3:** The specific difference is related to the genus as a form is related to matter, insofar as it makes the genus exist in actuality.

On the other hand, there is also a sense in which the genus is thought of as being more formal than the species, viz., because the genus is more unconditioned and less contracted (*absolutius et minus contractum*). Hence, as the *Physics* says, the parts of a definition are traced back to the genus of the formal cause. On this score, the genus is a formal cause of the species, and the more general it is, the more formal it is.

## Article 8

### Is any act indifferent by its species?

It seems that no act is indifferent by its species:

**Objection 1:** According to Augustine, evil is "a privation of good." But according to the Philosopher, a privation and the corresponding disposition (*privation et habitus*) are direct opposites (*opposita immediata*). Therefore, there is no act that is indifferent by its species in the sense of being in between goodness and badness.

**Objection 2:** As has been explained (a. 6), human acts derive their species from the end or from the object. But every object and every end has the character of goodness or the character of badness. Therefore, every human act is either good by its species or bad by its species. Therefore, no human act is indifferent by its species.

**Objection 3:** As has been explained (a. 1), an act is called good because it has the right sort of perfection of goodness, and an act is called bad because it lacks something of this goodness. But it is necessary for every act either (a) to have the entire fullness of its goodness or (b) to lack something of the entire fullness of its goodness. Therefore, it is necessary that every act be either good by its species or bad by its species, and that no act be indifferent.

**But contrary to this:** In *De Sermone Domini in Monte* Augustine says, "There are certain acts in between that can be done with a good intention or with a bad intention, and about these it would be rash to pass judgment." Therefore, there are some acts that are indifferent by their species.

**I respond:** As has been explained (aa. 2 and 5), every act has a species from its object, and every human act that is called moral has a species from an object related to the principle of human acts, viz., reason. Hence, if an act's object contains something that belongs to the order of reason, then it will be an act that is good by its species, e.g., giving alms to a poor man. On the other hand, if it contains something that is opposed to the order of reason, then it will be an act that is bad by its species, e.g., stealing, i.e., taking what belongs to someone else.

However, it is possible for an act's object not to contain anything that is relevant to the order of reason, e.g., picking up a leaf from the ground, or taking a walk, etc.; and acts such as these are indifferent by their species.

**Reply to objection 1:** There are two sorts of privations:

One sort of privation consists in *having already been deprived* (*consistit in privatum esse*), and this sort of privation leaves nothing behind, but instead removes everything—in the way that blindness totally

removes sight, and darkness totally removes light, and death totally removes life. Between this sort of privation and the opposed disposition there cannot be any middle ground for a property that might be received (*circa proprium susceptibile*).

However, there is another sort of privation that consists in *being in the process of being deprived* (*privari*), in the way that sickness is a privation of health—where health is not totally removed, but instead the privation is, as it were, a path toward the total removal of health (*quasi quaedam via ad totalem ablationem sanitatis*) that would come with death. And so since this sort of privation leaves something behind, it is not always such that it leaves no middle ground in relation to the opposed disposition (*non semper est immediata cum opposito habitu*). And this is the sense in which evil is a privation of good, as Simplicius points out in his commentary on the *Categories*. For evil does not remove the totality of goodness, but leaves something behind. It is in this way that there can be a middle ground between good and evil.

**Reply to objection 2:** Every object or end has some goodness or some badness, at least natural goodness or badness, but it does not always imply *moral* goodness or *moral* badness, which, as has been explained, are thought of in relation to reason. And this is the sort of goodness and badness that we are talking about here.

**Reply to objection 3:** Not everything had by an act is relevant to its species. Hence, even if the concept of an act's species does not contain everything that pertains to the fullness of the act's goodness, it is not because of this that the act is bad by its species, or even good by its species—in the same way that a man is not by his species either virtuous or vicious.

## Article 9

### Is any act indifferent as an individual?

It seems that some acts are indifferent as individuals:

**Objection 1:** Every species is such that it contains or can contain an individual under itself. But as has been explained (a. 8), some acts are indifferent by their species. Therefore, some individual acts can be indifferent.

**Objection 2:** As *Ethics 2* says, individual acts are a cause of habits conformed to those acts. But some habits are indifferent. For instance, in *Ethics 4* the Philosopher says of those who are easy-going and extravagant (*de placidis et prodigis*) that they are not bad; and yet it is clear that they are not good, since they are moving away from virtue. And so they are indifferent in their habits. Therefore, some individual acts are indifferent.

**Objection 3:** Moral good pertains to virtue, whereas moral badness pertains to vice. But it sometimes happens that a man does not order an act that is indifferent by its species toward any end of either virtue or vice. Therefore, it is possible for an individual act to be indifferent.

**But contrary to this:** In a certain homily Gregory says, “Idle conversation (*otiosum verbum*) lacks the usefulness of rectitude, or the rationale of upright necessity, or pious usefulness.” But idle conversation is bad, because, as Matthew 12:36 says, a man shall render an account of it on the day of judgment. Therefore, every instance of speech (*omne verbum*) is either good or bad. Therefore, by parity of reasoning, every other act is either good or bad. Therefore, no individual act is indifferent.

**I respond:** It sometimes happens that an act is indifferent in its *species* and yet is good or bad when thought of as an *individual* act. This is because, as has been explained (a. 3), a moral act has its goodness not only from its object, from which it has its species, but also from its circumstances, which are, as it were, certain accidents—just as something belongs to an individual man because of his individual accidents that does not belong to him because of the essence of his species. And it is

necessary for each individual act to have some circumstance through which it is drawn toward goodness or badness, at least on the part of the act of intending the end. For since reason's role is to order, if an act that proceeds from deliberative reason is not ordered toward the right sort of end, then by this very fact it has the character of badness. On the other hand, if it is ordered toward the right sort of end, then it is consonant with the order of reason and thus has the character of goodness.

Hence, it is necessary that every one of a man's acts that proceeds from deliberative reason is, considered as an individual, either good or bad. On the other hand, if an act proceeds not from deliberative reason but instead from some act of imagining, as when someone scratches his beard or moves his hand or foot, then such an act is not, properly speaking, a moral or human act, since an act has the character of being moral or human from reason. And so an act of this sort will be indifferent in the sense of falling outside the genus of moral acts.

**Reply to objection 1:** There is more than one possible way for an act to be indifferent by its species (*secundum suam speciem*).

In one way, it is such that, given its species (*ex sua species*), the act *has to be* indifferent. And it is on this interpretation that the objection goes through.

However, there is no act that is indifferent by its species in this sense. For there is no object of a human act that cannot be ordered toward goodness or badness through some end or circumstance.

In a second sense, an act can be called indifferent by its species because it does not have goodness or badness by its species. Hence, it can become good or bad through something else. In the same way, a man does not by his species have whiteness or blackness, and he does not by his species have it that he is not white or not black. For whiteness or blackness can supervene on a man from somewhere other than from the principles of his species.

**Reply to objection 2:** The Philosopher is claiming that it is someone who is dangerous to other men who is, properly speaking, called 'bad'. Accordingly, he says that one who is extravagant is not bad because he harms no one other than himself. And the same thing holds for all others who are not dangerous to their neighbors.

We ourselves, however, are here calling 'bad' everything that is opposed to right reason (*omne quod est rationi rectae repugnans*). And in this sense, as has been explained, every individual act is either good or bad.

**Reply to objection 3:** Every end intended by deliberative reason is relevant to the goodness of some virtue or the badness of some vice. For instance, the very fact that someone acts in an well-ordered way to give his body sustenance or rest is ordered toward the good of virtue in one who orders his body to the good of virtue. And the same thing is clear in other cases as well.

## Article 10

### Can a circumstance constitute a species of good or bad act?

It seems that a circumstance cannot constitute a species of good or bad act:

**Objection 1:** An act's species comes from its object. But the circumstances differ from the object. Therefore, the circumstances do not give an act its species.

**Objection 2:** As has been explained (q. 7, a. 1), the circumstances are related to a moral act as its accidents. But an accident does not constitute the species. Therefore, a circumstance does not establish a moral act in a species of goodness or badness.

**Objection 3:** A single thing cannot have more than one species. But a single thing has more than one circumstance. Therefore, a circumstance does not constitute a species of goodness or badness.

**But contrary to this:** Place is a circumstance. But there are certain species of badness in which

place constitutes moral acts; for instance, to steal something from a sacred place is a sacrilege. Therefore, a circumstance establishes a moral act in a species of goodness or badness.

**I respond:** Just as the species of natural things are constituted by natural forms, so, as is clear from what has been said above (a. 5), the species of moral acts are constituted by forms as conceived by reason. But since nature is delimited to a single outcome and since there cannot be an infinite natural process, one must arrive at some ultimate form from which the specific difference is taken and after which there cannot be any other specific difference. And so it is that among natural things, what is accidental to a thing cannot be taken as the difference that constitutes the species.

By contrast, reason's process is not delimited to some one outcome; instead, given any outcome, one is able to proceed further. And so, in the case of a particular act, what is taken as a circumstance and so as an addition to the object determining the act's species is such that reason in its ordering function can consider it yet again as a principal aspect (*principalis conditio*) of the object determining the act's species. For instance, an act of taking what belongs to someone else has its species from the concept *belonging to someone else*, and from this it is constituted in the species *theft*; and if one thinks beyond this to the notion of time or place, then time or place will have the character of a circumstance. But because reason can give prescriptions (*ratio ordinare potest*) concerning time and place and other things of this sort, it is possible for the aspect of place to be assumed into the object as something that is contrary to the order of reason; for instance, reason ordains that one should do no harm to a sacred place. Hence, an act of taking something belonging to someone else *from a sacred place* adds a special opposition to the order of reason. And so place, which before was thought of as a circumstance, is now being thought of as a principal aspect of an object that is opposed to reason.

In this way, whenever some circumstance has to do with—either for or against—some special prescription of reason, the circumstance has to give the species to a moral act, whether a good one or a bad one.

**Reply to objection 1:** As has been explained, insofar as a circumstance gives an act its species, it is being thought of as an aspect of the object and, as it were, a certain specific difference of the object.

**Reply to objection 2:** Since a circumstance that retains the character of a circumstance has the character of an accident, it does not give the act its species. But insofar a circumstance is changed into a principal aspect of the object, it does give the species.

**Reply to objection 3:** Not every circumstance constitutes a moral act in some species of goodness or badness, since not every circumstance implies an agreement or disagreement with reason. Hence, even though a single act has many circumstances, it is not necessary for a single act to have many species—though, as has been explained (a. 7), it is not absurd for a single moral act to be in several moral species, even disparate species.

## Article 11

### Does every circumstance relevant to goodness and badness give an act its species?

It seems that every circumstance relevant to goodness and badness gives an act its species:

**Objection 1:** *Good* and *bad* are specific differences of *moral acts*. Therefore, what makes for a difference in the goodness or badness of a moral act makes for a difference in the specific difference, and this is just what it is to differ in species. But that which adds to the goodness or badness of an act makes for a difference with respect to goodness and badness. Therefore, it makes for a difference in species. Therefore, every circumstance that adds to the goodness or badness of an act constitutes a species.

**Objection 2:** An adjoined circumstance (*circumstantia adveniens*) either does or does not have within itself some element of goodness or badness (*habet in se aliquam rationem bonitatis vel malitiae*

*aut non*). If it does not, then it cannot add to an act's goodness or badness, since what is not good cannot make an act better and what is not bad cannot make an act worse. But if it does have within itself an element of goodness or badness, then by that very fact it has a certain species of goodness or badness. Therefore, every circumstance that increases an act's goodness or badness constitutes a new species of good acts or of bad acts.

**Objection 3:** According to Dionysius in *De Divinis Nominibus*, chap. 4, "What is bad is caused by single defects." But every circumstance that aggravates an act's badness has a specific defect. Therefore, each circumstance adds a new species of sin. And for the same reason, every circumstance that increases an act's goodness seems to add a new species of good act—in the same way that a unit, when added to a number, makes for a new species of number. For the good consists "in number, weight, and measure."

**But contrary to this:** *More* and *less* do not make for diverse species. But *more* and *less* are circumstances that add to goodness and to badness. Therefore, not every circumstance that adds goodness or badness establishes a moral act in a species of goodness or badness.

**I respond:** As has been explained (a. 10), a circumstance confers a species of good or bad acts insofar as it relates to some special prescription on the part of reason (*inquantum respicit specialem ordinem rationis*).

Now sometimes it happens that a circumstance relates to a special prescription of reason with respect to goodness and badness only if some other circumstance, from which the moral act has its species of goodness or badness, is presupposed. For instance, taking something in a large or small quantity relates to reason's prescription concerning goodness and badness only if one presupposes another condition through which the act has goodness or badness, e.g., the condition, opposed to reason, that the thing in question belongs to someone else. Hence, taking what belongs to another in a large or small quantity does not itself make for a diversity of species—even though it can still aggravate or diminish the sin. And the same thing holds for other cases of bad or good acts.

Hence, not every circumstance that adds goodness or badness makes for a variation in the species of a moral act.

**Reply to objection 1:** In things that are subject to intensification and remission, the differences *intense* and *remiss* do not make for a diversity of species; for instance, things that differ with respect to more whiteness and less whiteness do not differ in their species of color. Similarly, what makes for a diversity with respect to more intense goodness or badness or more remiss goodness or badness does not make for difference in species among moral acts.

**Reply to objection 2:** As has been explained, in some cases a circumstance that aggravates a sin or increases an act's goodness does not have goodness or badness in its own right (*secundum se*), but has it in relation to another of the act's conditions. And so such a circumstance does not confer a new species, but instead augments the goodness or badness that belongs to the act because of some other condition.

**Reply to objection 3:** Not every circumstance introduces a special defect in its own right, but sometimes it induces a defect only in relation to something else. And, similarly, a circumstance does not always add a new perfection, except in relation to something else. And even if it does increase the goodness or badness, it does not always make for a different species of goodness or badness.

## QUESTION 19

### The Goodness and Badness of the Interior Act of Willing

Next we have to consider the goodness of the interior act of willing. And on this topic there are ten questions: (1) Does the goodness of an act of willing depend on its object? (2) Does it depend solely on its object? (3) Does it depend on reason? (4) Does it depend on the eternal law? (5) Does reason oblige when it is mistaken? (6) Is an act of willing bad if it is opposed to God's law but is following mistaken reason? (7) Does the goodness of an act of willing directed toward the means to an end depend on the act of intending the end? (8) Does the amount of goodness or badness in an act of willing track the amount of goodness or badness in the act of intending? (9) Does the goodness of an act of willing depend on its being conformed to God's will? (10) In order for an act of willing to be good, must it be conformed to God's will with respect to what is willed?

#### Article 1

##### Does the goodness of an act of willing depend on its object?

It seems that the goodness of an act of willing does not depend on its object (*bonitas voluntatis non dependeat ex obiecto*):

**Objection 1:** An act of willing is not directed at anything except what is good (*voluntas non potest esse nisi boni*), since, as Dionysius says in *De Divinis Nominibus*, chap. 4, evil lies "outside of the will." Therefore, if the goodness of an act of willing were judged by its object, then it would follow that every act of willing is good and that no act of the willing is bad.

**Objection 2:** Goodness is found, first of all, in the end. Hence, the end's goodness does not as such depend on anything else. But according to the Philosopher in *Ethics* 6, "Good *acting* is the end, whereas good *making* is never the end." For good making is always ordered toward the thing that is made as its end. Therefore, the goodness of an act of willing does not depend on any object.

**Objection 3:** Each thing is like what it makes. But the object of an act of willing is what is good by a goodness of *nature*. Therefore, this object cannot give *moral* goodness to an act of willing. Therefore, the moral goodness of an act of willing does not depend on its object.

**But contrary to this:** In *Ethics* 5 the Philosopher says that justice is that in accord with which someone wills just things and, for the same reason, virtue is that in accord with which someone wills good things. But a good act of willing is an act in accord with virtue. Therefore, the goodness of an act of willing derives from the fact that someone wills what is good.

**I respond:** *Good* and *bad* are *per se* specific differences of acts of willing. For *good* and *bad* belong to the will *per se*, in the way that *true* and *false* belong to reason, whose acts are distinguished *per se* by the differences *true* and *false*, in the sense in which we say that an opinion is true or false. Hence, a good act of willing and a bad act of willing are acts that differ in species from one another. But as has been explained (q. 18, a. 5), diversity of species among acts follows from their objects (*est secundum obiecta*). And so the goodness and badness of acts of willing is attendant upon their objects (*proprie attenditur secundum obiecta*).

**Reply to objection 1:** Acts of willing are not always directed toward a genuine good; rather, they are sometimes directed at an apparent good, which, to be sure, has some aspect of goodness but not a goodness that it is right to desire absolutely speaking. And for this reason acts of willing are not always good, but are sometimes bad.

**Reply to objection 2:** As was explained above (q. 1, a. 1), even though man's ultimate end can in some sense be an act, that act is not an act of willing.

**Reply to objection 3:** A good is presented by reason to the will as an object (*bonum per rationem repraesentatur voluntati ut obiectum*); and insofar as that good falls under reason's prescription (*cadit*

*sub ordine rationis*), it belongs to the genus *moral* and is a cause of moral goodness in the act of willing. For as was explained above (q. 18, a. 5), reason is the principle of acts that are human and moral.

## Article 2

### Does the goodness of an act of willing depend solely on its object?

It seems that the goodness of an act of willing does not depend solely on its object:

**Objection 1:** An end has more affinity to the will than to any other power. But as is clear from what was said above (q. 18, a. 4), the acts of the other powers receive their goodness not only from their object, but also from their end. Therefore, an act of willing likewise receives its goodness not only from its object, but also from its end.

**Objection 2:** As was explained above (q. 18, a. 3), an act's goodness comes not only from its object, but also from its circumstances. But a diversity of goodness and badness in acts of willing can come from diverse circumstances—e.g., that someone wills when he should and where he should and as much as he should and how he should, or that he wills in a way he should not. Therefore, the goodness of an act of willing depends not only on the object, but also on the circumstances.

**Objection 3:** As was established above (q. 6, a. 8), ignorance of the circumstances excuses the badness of an act of willing. But this would not be the case if the goodness and badness of acts of willing did not depend on the circumstances. Therefore, the goodness and badness of acts of willing depends on the circumstances and not on the object alone.

**But contrary to this:** As was explained above (q. 18, a. 10), an act does not have its species from its circumstances as such. But as has been explained (a. 1), *good* and *bad* are specific differences of acts of willing. Therefore, the goodness and badness of acts of willing depends on the object alone and not on the circumstances.

**I respond:** The closer something is to being first in a given genus (*quanto aliquid est prius*), the simpler it is and the fewer things it consists in; for instance, the first bodies are simple. And so we find that the things that are first in any given genus are in some sense simple and consist in just one thing. But the beginning (*principium*) of the goodness and badness of human acts is from an act of willing. And so the goodness and badness of acts of willing are attendant upon some one thing, whereas the goodness and badness of other acts can be attendant on diverse things.

Now this one thing which is the beginning in a given genus is *per se* and not *per accidens*, since what is *per accidens* is traced back to what is *per se* as to its principle. And so the goodness of an act of willing depends on just this one thing that makes for goodness in an act *per se*, viz., the object, and it does not depend on the circumstances, which are accidents of the act.

**Reply to objection 1:** The end is an object of an act of willing, but not of the acts of the other powers. Hence, as far as an act of willing is concerned, the goodness that derives from the object does not differ, as it does with the acts of the other powers, from the goodness that derives from the end—except perhaps *per accidens*, given that one end depends on another and given that one act of willing depends on another.

**Reply to objection 2:** On the assumption that an act of willing is directed toward what is good, no circumstance can make that act bad. Therefore, there are two possible ways to understand the claim that someone wills something good when he should not or where he should not:

(a) He wills something in such a way that the circumstance in question is ascribed to *what is willed* (*referatur ad volitum*). And in such a case the act of willing is not after all directed toward what is good, since an act of willing *to-do-something-when-it-should-not-be-done* is not an act of willing what is good.

(b) He wills something in such a way that the circumstance in question is ascribed to *the act of*

*willing*. And on this understanding it is impossible for someone to will a good when he ought not to, since it is always the case that a man should will the good—except perhaps *per accidens*, insofar as someone, by willing this good, is prevented from then willing some other good that he should will. And in such a case badness occurs not because the individual wills the first good, but because he does not will the second good.

The same reply should be given for other types of circumstance as well.

**Reply to objection 3:** Ignorance of the circumstances excuses the badness of an act of willing to the extent that the circumstances are relevant to what is willed (*secundum quod circumstantiae se tenent ex parte voliti*), i.e., to the extent that the agent does not know the circumstances of the act that he wills.

### Article 3

#### Does the goodness of an act of willing depend on reason?

It seems that the goodness of an act of willing does not depend on reason:

**Objection 1:** What is prior does not depend on what is posterior. But as is clear from what was said above (q. 9, a. 1), the good pertains to the will prior to pertaining to reason. Therefore, the goodness of an act of willing does not depend on reason.

**Objection 2:** In *Ethics* 6 the Philosopher says that the goodness of the practical intellect is “the true conformed to upright desire” (*verum conforme appetitui recto*). But upright desire is a good act of willing. Therefore, the goodness of practical reason depends on the goodness of the act of willing rather than vice versa.

**Objection 3:** It is not the mover that depends on what is moved, but vice versa. But as was explained above (q. 9, a. 1), the will moves reason and the other powers. Therefore, the goodness of an act of willing does not depend on reason.

**But contrary to this:** In *De Trinitate* 10 Hilary says, “All persistence in acts of willing that are undertaken is immoderate when the will is not subject to reason.” But the goodness of an act of willing consists in its not being immoderate. Therefore, the goodness of an act of willing depends on its being subject to reason.

**I respond:** As has been explained (aa. 1 and 2), the goodness of an act of willing depends, properly speaking, on its object. But the object of an act of willing is proposed to the will by reason. For an intellectually understood good is an object of the will that is proportioned to it, whereas a sensible or imagined good is proportioned to the sentient appetite and not to the will, since the will is able to tend toward a universal good that is apprehended by reason, whereas the sentient appetite tends only toward a particular good that is apprehended by the sensory power. And so the goodness of an act of willing depends on reason in the sense that it depends on its object.

**Reply to objection 1:** It is the good under the concept *good*, i.e., the concept *desirable*, that pertains to the will prior to pertaining to the intellect. However, the good under the concept *true* pertains to reason prior to the good under the concept *desirable* pertaining to the will. For the will’s desire cannot be a desire for the good unless the good is first apprehended by reason.

**Reply to objection 2:** In the place in question the Philosopher is talking about the practical intellect insofar as it is deliberating and reasoning about the means to an end, since it is in this context that it is perfected by prudence. And in the case of the means to an end, the rectitude of reason consists in its conformity to the desire for the right sort of end. But this very desire for the right sort of end presupposes a correct apprehension of the end, and this apprehension occurs through reason.

**Reply to objection 3:** As was explained above (q. 9, a. 1), there is a sense in which the will moves reason, and there is another sense in which reason moves the will, viz., by means of the object.

#### Article 4

##### Does the goodness of a human act of willing depend on the eternal law?

It seems that the goodness of a human act of willing does not depend on the eternal law:

**Objection 1:** There is a single rule and measure for a single thing. But the rule for a human act of willing, on which its goodness depends, is right or correct reason (*ratio recta*). Therefore, the goodness of an act of willing does not depend on the eternal law.

**Objection 2:** As *Metaphysics* 10 says, “A measure is homogeneous with what it measures.” But the eternal law is not homogeneous with a human act of willing. Therefore, the eternal law cannot be a measure of a human act of willing in the sense that the act of willing depends on it for its goodness.

**Objection 3:** A measure should be absolutely certain (*certissima*). But the eternal law is not known to us. Therefore, it cannot be the measure of our acts of willing in the sense that the goodness of our acts of willing depends on it.

**But contrary to this:** In *Contra Faustum* 22 Augustine says, “A sin is something done, said, or desired contrary to the eternal law.” But the badness of an act of willing is the root of sin. Therefore, since badness is opposed to goodness, the goodness of an act of willing depends on the eternal law.

**I respond:** In the case of all ordered causes, the effect depends more on the first cause than on a secondary cause, since a secondary cause acts only in the power of the first cause. Now the fact that human reason is a rule for human acts of willing and that by which their goodness is measured is something reason has from the eternal law, which is God’s reason. Hence, Psalm 4:6-7 says, “Many say, ‘Who shows us good things?’ The light of your countenance, O Lord, is signed upon us”—as if to say, “The light of your reason, which exists in us, can show us good things and regulate our will to the extent that it is the light of your countenance, i.e., the light derived from your countenance.”

Hence, it is clear that the goodness of human acts of willing depends much more on the eternal law than it does on human reason; and when human reason fails, it is necessary to have recourse to eternal reason.

**Reply to objection 1:** There is not more than one *proximate* measure of a single thing, but there can be more than one measure, one of which is subordinate to another.

**Reply to objection 2:** It is a proximate measure, not a remote measure, that is homogeneous with what it measures.

**Reply to objection 3:** Even though the eternal law is not known to us as it exists in God’s mind, it is nonetheless known to us in some way either (a) through natural reason, which is derived from the eternal law as its proper image, or (b) through some sort of supplementary revelation (*per aliqualem revelationem superadditam*).

#### Article 5

##### Is an act of willing bad if it disagrees with reason when reason is mistaken?

It seems that an act of willing is not bad if it disagrees with reason when reason is mistaken:

**Objection 1:** As has been explained (a. 4), it is insofar as it is derived from the eternal law that reason is a rule for human acts of willing. But when reason is mistaken, it is not derived from the eternal law. Therefore, when reason is mistaken, it is not a rule for human acts of willing. Therefore, an act of willing is not bad if it disagrees with reason when reason is mistaken.

**Objection 2:** According to Augustine, the precept of a lower power does not impose an obligation

(*non obligat*) if it is contrary to the precept of a higher power—as, for instance, if a proconsul commands something that the emperor forbids. But when reason is mistaken, it sometimes proposes something that is contrary to the precept of someone higher, viz., God, whose power is the highest. Therefore, when reason is mistaken, its dictate does not impose an obligation. Therefore, it is not the case that an act of willing is bad if it disagrees with reason when reason is mistaken.

**Objection 3:** Every bad act of willing is traced back to some species of badness. But if an act of willing disagrees with reason when reason is mistaken, then that act cannot be traced back to any species of badness. For instance, if reason makes a mistake by dictating that one ought to fornicate, then the act of willing of someone who does not will to fornicate cannot be traced back to any sort of badness. Therefore, an act of willing is not bad if it disagrees with reason when reason is mistaken.

**But contrary to this:** As was explained in the First Part (*ST* 1, q. 79, a. 13), conscience is nothing other than an application of knowledge to some act. But knowledge exists in reason. Therefore, an act of willing that disagrees with mistaken reason is contrary to conscience. But every such act of willing is bad; for Romans 14:23 says, “Everything that is not of faith is a sin”—that is, everything that is contrary to conscience. Therefore, an act of willing is bad if it disagrees with reason when reason is mistaken.

**I respond:** Since conscience is in some sense a dictate of reason (for, as was explained in the First Part (*ST* 1, q. 79, a. 13), conscience is a certain sort of application of knowledge to an act), it follows that asking whether an act of willing is bad if it disagrees with reason when reason is mistaken is the same as asking whether a mistaken conscience imposes an obligation.

On this matter, there are those who have distinguished three types of acts: (a) some acts are *good of their kind* (*boni ex genere*), (b) some acts are *indifferent* (*indifferentes*), and (c) some are *bad of their kind* (*mali ex genere*).

Then they claim that if reason or conscience dictates that something which is good of its kind should be done, then there is no mistake in such a case. The same holds if reason or conscience says that something which is evil of its kind should not be done; for good things are prescribed for the same reason that bad things are forbidden.

However, if reason or conscience dictates to a man that (a) he is obligated by precept to do things that are in their own right bad, or that (b) things that are in their own right good are prohibited, then reason or conscience will be mistaken. And, similarly, if reason or conscience dictates to someone that what is in its own right indifferent, e.g., picking up a leaf from the ground, is forbidden or commanded, then reason or conscience will be mistaken.

Thus, they claim that when reason or conscience is mistaken about something indifferent, either by commanding it or by forbidding it, then it imposes an obligation, with the result that an act of willing that disagrees with reason in such a case will be bad or a sin. By contrast, when reason or conscience is mistaken because it commands what is *per se* bad or because it forbids what is *per se* good and necessary for salvation, then it does not impose an obligation. Hence, in such case an act of willing is not bad if it disagrees with reason or conscience when reason or conscience is mistaken.

But it is implausible to make these claims. For in the case of indifferent acts, if an act of willing disagrees with reason or conscience when reason or conscience is mistaken, then the act is, to be sure, in some sense bad because of its object, on which the goodness or badness of an act of willing depend. However, the act is bad not because of *the object's own nature* (*non propter obiectum secundam sui naturam*), but rather because reason apprehends the object *per accidens* as something bad to do or avoid. And since, as has been explained (a. 3), the object of an act of willing is what is proposed by reason, by the very fact that something is proposed by reason as bad, an act of willing takes on the character of something bad when it is directed toward that thing.

Moreover, this happens not only in the case of indifferent acts, but also in the case of acts that are *per se* good or *per se* bad. For it is not only what is indifferent that can take on the character of goodness or badness *per accidens*; it is likewise the case that, because of reason's apprehension, what is good can

take on the character of badness and what is bad can take on the character of goodness. For instance, abstaining from fornication is a certain good, and yet the will is not directed toward this good except insofar as it is proposed by reason. Therefore, if it is proposed as something bad by reason when reason is mistaken, then an act of willing will be directed toward it under the notion of badness. Hence, the act of willing will be bad, since it wills something bad—not, to be sure, something that is bad *per se*, but something that is bad *per accidens* because of reason's apprehension. Similarly, believing in Christ is *per se* good and necessary for salvation, but an act of willing is directed toward this good only insofar as it is proposed by reason. Hence, if believing in Christ is proposed as something bad, then an act of willing will be directed toward it as something bad—not because it is bad in its own right, but because it is bad *per accidens* in light of reason's apprehension.

This is why, in *Ethics* 7, the Philosopher says, "Speaking *per se*, the incontinent man is one who does not follow correct reason; however, speaking *per accidens*, he is one who does not follow even incorrect reason." Hence, one should claim that, absolutely speaking, every act of willing that disagrees with reason—regardless of whether reason is correct or mistaken—is invariably bad.

**Reply to objection 1:** Even though, when reason is mistaken, its judgment is not derived from God, nonetheless, reason, though mistaken, proposes its judgment as true and, consequently, as derived from God, from whom all truth comes.

**Reply to objection 2:** Augustine's claim has a place when the lower power is known to be prescribing something contrary to the higher power's precept. But if someone believed that the proconsul's precept were the emperor's precept, then by disdaining the proconsul's precept he would be disdaining the emperor's precept. Similarly, if a man knew that human reason were dictating something contrary to God's precept, he would not be obligated to follow reason, but in that case reason would not be totally mistaken. On the other hand, if, though it is mistaken, reason proposes something as God's precept, then disdaining reason's dictate is the same as disdaining God's precept.

**Reply to objection 3:** When reason apprehends something as bad, it always apprehends it under some type of badness—for instance, its being contrary to God's precept, or its being scandalous, or for some other such reason. And in such a case it is to this species of badness that the bad act of willing is traced back.

## Article 6

### Is an act of willing good if it agrees with reason when reason is mistaken?

It seems that an act of willing is good if it agrees with reason when reason is mistaken:

**Objection 1:** Just as an act of willing that disagrees with reason tends toward what reason judges to be bad, so an act of willing that agrees with reason tends toward what reason judges to be good. But an act of willing that disagrees with reason is bad, even when reason is mistaken. Therefore, an act of willing that agrees with reason is good, even when reason is mistaken.

**Objection 2:** It is always the case that an act of willing that agrees with God's precept and with the natural law is good. But the eternal law and God's precept are proposed to us through reason's apprehension, even when reason is mistaken. Therefore, an act of willing that agrees with reason is good, even when reason is mistaken.

**Objection 3:** An act of willing is bad if it disagrees with reason when reason is mistaken. Therefore, if an act of willing is likewise bad if it agrees with reason when reason is mistaken, then it seems that every act of willing that belongs to a man whose reason is mistaken is invariably bad. And so the man in question will be in a dilemma (*erit perplexus*) and will of necessity sin—which seems wrong. Therefore, an act of willing is good if it agrees with reason when reason is mistaken.

**But contrary to this:** The act of willing that belonged to those who killed the Apostles was bad. But it nonetheless agreed with their mistaken reason—this according to John 16:2 (“The hour will come when everyone who kills you will think that he is rendering a service to God”). Therefore, an act of willing can be bad if it agrees with reason when reason is mistaken.

**I respond:** Just as the previous question was the same as the question of whether a mistaken conscience imposes an obligation, so the present question is the same as the question of whether a mistaken conscience excuses.

Now this question depends on what was said above in the question on ignorance (q. 6, a. 8). For it was explained above that ignorance is sometimes a cause of involuntariness and sometimes not. And since, as is clear from what has gone before (a. 2), moral goodness and moral badness (*bonum et malum morale*) are found in an act insofar as it is voluntary, it is obvious that the sort of ignorance which is a cause of involuntariness removes the character of moral goodness and moral badness, whereas the sort of ignorance which is not a cause of involuntariness does not. It was also explained above (q. 6, a. 8) that ignorance which is in any sense willed, whether directly or indirectly, is not a cause of involuntariness. I call ignorance *directly voluntary* when an act of willing is directed toward it, whereas I call ignorance *indirectly voluntary* when, because of negligence, someone does not will to know what he is obligated to know—this was explained above (q. 6, a. 8).

Thus, if reason or conscience is mistaken because of a voluntary error, either directly or because of negligence, then since this involves a mistake about what one is obligated to know, it follows that such a mistake on the part of reason or conscience does not excuse an act of willing from being bad if it agrees with reason or conscience when they are mistaken in this way.

On the other hand, if the mistake in question is the sort of mistake that is a cause of involuntariness and that arises from ignorance of a circumstance without any negligence, then such a mistake on the part of reason or conscience does excuse, so that the act of willing is not bad if it agrees with reason when reason is mistaken. For instance, if reason mistakenly dictates that a man is obligated to have intercourse with another man’s wife, an act of willing is bad if it agrees with reason when reason is mistaken in this way; for this mistake arises from not knowing God’s law, which one is obligated to know. On the other hand, if reason is mistaken in such a way that a man believes that a certain woman who submits to him is his own wife, and if he has intercourse with her when she seeks it, then his act of willing is excused as not bad, because the mistake in question arose from ignorance of a circumstance, and this sort of ignorance excuses and is a cause of involuntariness.

**Reply to objection 1:** As Dionysius says in *De Divinis Nominibus*, chap. 4, “Goodness results from the whole cause, whereas evil is caused by any single defect.” And so in order for what the will is directed toward to be called bad, it is sufficient that it be bad by its nature or that it be apprehended as bad. But in order for it to be good, it is necessary for it to be good in both ways.

**Reply to objection 2:** The eternal law cannot be mistaken, but human reason can be mistaken. And so an act of willing that agrees with human reason is not always correct and does not always agree with the eternal law.

**Reply to objection 3:** Just as, in syllogistic reasoning, when one incongruity is granted, other incongruities necessarily follow, so too, in moral matters, when one incongruity is posited, others follow by necessity. For instance, on the assumption that someone is seeking empty glory, he will sin regardless of whether what he is obligated to do is such that (a) he does it because of vainglory or (b) he fails to do it. Yet he is not in a dilemma, since he can abandon his bad intention.

Similarly, on the assumption that there is a mistake on the part of reason or conscience because of the sort of ignorance that does not excuse, badness will necessarily follow in the act of willing. And yet the man in question is not in a dilemma, since he can draw back from the mistake, given that his ignorance is vincible and voluntary.

## Article 7

### Does the goodness of an act of willing depend on the act of intending the end?

It seems that the goodness of an act of willing does not depend on the act of intending the end:

**Objection 1:** It was explained above (a. 2) that the goodness of an act of willing depends on its object alone. But in the case of the means to an end, the object of the act of willing is one thing and the intended end is another. Therefore, in such cases the goodness of an act of willing does not depend on the act of intending the end.

**Objection 2:** To will to follow God's command is a good act of willing. But this act can be directed toward a bad end, e.g., to the end of vainglory or greed, when someone wills to obey God for the sake of gaining temporal things. Therefore, the goodness of an act of willing does not depend on the act of intending the end.

**Objection 3:** Just as *good* and *bad* make for diverse acts of will, so too they make for diverse ends. But the badness of an act of willing does not depend on the badness of the intended end; for instance, someone who steals in order to give alms has a bad act of willing, even though he intends a good end. Therefore, the goodness of an act of willing likewise does not depend on the goodness of the intended end.

**But contrary to this:** In *Confessiones* 9 Augustine says that one's act of intending is rewarded by God. But something is rewarded by God because it is good. Therefore, the goodness of an act of willing depends on the act of intending the end.

**I respond:** The act of intending the end can be related in two ways to an act of willing: (a) as *preceding* it and (b) as *being consequent* to it.

An act of intending the end causally *precedes* an act of willing when we will something because we intend a certain end (*quando volumus propter intentionem alicuius finis*). And in such a case the act's being ordered toward the end is thought of as a certain reason for the goodness of what is willed—as, for instance, when someone wills to fast for the sake of God. For the fasting has an aspect of goodness from the very fact it is done for the sake of God. Hence, since, as was explained above (aa. 1 and 2), the goodness of an act of willing depends on the goodness of what is willed, it necessarily depends on the act of intending the end.

On the other hand, the act of intending the end is *consequent* to the act of willing when it is appended to a preexisting act of willing—as, for instance, when someone wills to do something and then afterwards directs this thing to God. In such a case the goodness of the first act of willing does not depend on the subsequent act of intending except insofar as the act of willing is reiterated with that subsequent act of intending.

**Reply to objection 1:** As has been explained, when the act of intending is a cause of the act of willing, then the ordering toward the end is taken as a reason for the goodness that exists in the object.

**Reply to objection 2:** An act of willing cannot be called good if a bad act of intending is a cause of the act of willing. For instance, someone who gives alms for the sake of attaining empty glory wills something that is good taken by itself (*de se bonum*) under the conception of what is bad, and so, insofar as it is willed by him, it is bad. Hence, his act of willing is bad.

On the other hand, if the act of intending is consequent, then the act of willing was able to have been good, and that prior act of willing is not made bad by the consequent act of intending—though the act of willing that is reiterated with the consequent act of intending is made bad by that act of intending.

**Reply to objection 3:** As has already been explained (a. 6), “badness occurs because of any single defect, whereas goodness occurs because of the total and whole cause.” Hence, regardless of whether (a) an act of willing is directed toward something bad in its own right, even under the conception of what is good, or whether (b) it is directed toward something good under the conception of what is bad,

the act of willing will always be bad. By contrast, in order for an act of willing to be good, it is required that it be directed toward something good under the conception of what is good. That is, it is required that one will something good and for the sake of something good.

### Article 8

#### Does the quantity or amount of goodness in an act of willing depend on the amount of goodness in the act of intending?

It seems that the quantity or amount of goodness in an act of willing (*quantitas bonitatis in voluntate*) depends on the amount of goodness in the act of intending:

**Objection 1:** A Gloss on Matthew 12:35 (“A good man brings forth good things out of the good treasure of his heart”) says, “Someone does good to the extent that he intends good” (*tantum boni quis facit quantum intendit*). But as has been explained (a. 7), the act of intending bestows goodness not only on the exterior act but also on the act of willing. Therefore, one has an act of willing that is as good as his act of intending (*tantum habet bonam voluntatem quantum intendit*).

**Objection 2:** If a cause is augmented, then its effect is augmented. But the goodness of an act of intending is a cause of a good act of willing. Therefore, one’s act of willing is as good as the amount of goodness had by his act of intending (*quantum quis intendit de bono, tantum voluntas est bona*).

**Objection 3:** In the case of bad acts, one’s sin is as great as [the evil] that he intends; for instance, if someone throwing a rock intended to commit homicide, then he would be guilty of homicide. Therefore, by parity of reasoning, in the case of good acts, one’s act of willing is as good as the good that he intends.

**But contrary to this:** It is possible for the act of intending to be good and the act of willing to be bad. Therefore, by parity of reasoning, it is possible for the act of intending to have more goodness and the act of willing to have less goodness.

**I respond:** There are two sorts of quantity that can be thought of with respect to the act of willing and the act of intending the end (*circa actum et intentionem finis*): (a) *quantity on the part of the object*, in the sense that one wills or effects a greater good (*maius bonum*), and (b) *quantity in the intensity of the act*, in the sense that one wills or does something intensely, and this is a greater quantity on the part of the *agent*.

Thus, if we are talking about the quantity of each of the acts as far as its *object* is concerned, then it is clear that the quantity of the act of willing diverges from the quantity of the act of intending (*non sequitur quantitatem intentionis*).

There are two ways in which this can happen in the case of an *exterior act*:

(a) It happens in the first way because the object that is ordered toward an intended end is not proportionate to that end. For instance, if someone offered to pay ten dollars (*daret decem libras*), then he would not be able to fulfill his intention if he had intended to buy something that costs a hundred dollars.

(b) It happens in the second way because of obstacles that can affect the exterior act and are not within our power to overcome. For instance, someone intends to go all the way to Rome, and certain obstacles prevent him from doing this.

In the case of an *interior act of willing*, there is just one way in which this can happen, since interior acts of willing are within our power, even if the exterior acts are not. However, the will is able to will an object that is not proportionate to the intended end, and in this way an act of willing that is directed toward that object, considered absolutely, is not as good as the act of intending. (Yet because the act of intending is itself in some sense relevant to the act of willing, given that it is the reason for that

act, the quantity of a good act of intending spills over into the act of willing (*redundat quantitas bonae intentionis in voluntatem*) to the extent that the will wills a great good as its end—even if the means by which it wills to attain this great good is not appropriate for that good.)

On the other hand, if one is considering the quantity of the act of intending and the act of willing as regards their *intensity*, then the intensity of the act of intending spills over into the interior and exterior acts of willing (*redundat in actum interiorem et exteriorem voluntatis*). For as is clear from what was said above (q. 12, a. 4 and q. 18, a. 6), the act of intending is itself in some sense related as a form to the other two. However, even if, materially speaking, there is an intense act of intending, there can be an interior or exterior act that is not as intense, materially speaking—as, for instance, when someone wills to take medicine, but not as intensely as he wills health. Yet the very fact that he intends health intensely spills over, formally speaking, into his willing the medicine intensely.

But there is still this to consider: The intensity of an interior or exterior act can be referred back to the act of intending as an *object*—as, for instance, when someone intends to will with intensity or to do something with intensity. And yet he does not for this reason will or act with intensity, since, as has been explained, the goodness of the interior or exterior act does not conform to the quantity of the intended good. And this is why someone does not merit as much as he intends to merit. For as will be explained below (q. 20, a. 4 and q. 114, a. 4), the amount of merit has to do with the intensity of the act.

**Reply to objection 1:** This Gloss is talking about *God's* way of thinking (*loquitur quantum ad reputationem Dei*), since God mainly considers the act of intending the end. Hence, another Gloss in the same place says that the “treasure of the heart” is the intention, on the basis of which God judges our works. For, as has been explained, the goodness of the act of intending in some sense spills over into the goodness of the act of willing, and this goodness makes even the exterior act meritorious in the sight of God.

**Reply to objection 2:** The goodness of an act of intending is not the total cause of a good act of willing. Hence, the argument does not go through.

**Reply to objection 3:** The badness of an act of intending is by itself sufficient for the badness of the act of willing, and so it is also the case that the act of willing is as bad as the act of intending is. But as has been explained, the same reasoning does not hold for goodness.

## Article 9

### Does the goodness of a human will or act of willing depend on its being conformed to God's will?

It seems that the goodness of a human will or act of willing (*bonitas voluntatis humanae*) does not depend on its being conformed to God's will (*non dependeat ex conformitate ad voluntatem Dei*):

**Objection 1:** It is impossible for a man's act of willing to be conformed to God's will, as is clear from Isaiah 55:9: “As the heavens are exalted above the earth, so are my ways exalted above your ways, and my thoughts above your thoughts.” Therefore, if being conformed to God's will were required for the goodness of our act of willing, then it would follow that it is impossible for a man's act of willing to be good. But this is absurd.

**Objection 2:** Just as our will is derived from God's will, so too our knowledge is derived from God's knowledge. But it is not required that our knowledge be conformed to God's knowledge; for God knows many things of which we are ignorant. Therefore, it is not required that our will should be conformed to God's will.

**Objection 3:** The will is a principle of action. But our action cannot be conformed to God's action. Therefore, neither can our will be conformed to God's will.

**But contrary to this:** Matthew 26:39 says, “Not as I will, but as you will”—which our Lord

says because He is an upright man and is directed toward God, as Augustine explains in *Enchiridion*. But the will's rectitude is its goodness. Therefore, the goodness of our will or act of willing depends on its being conformed to God's will.

**I respond:** As has been explained (a. 7), the goodness of an act of willing depends on the act of intending the end. Now as was explained above (q. 1, a. 8 and q. 3, a. 1), the ultimate end of the human will is the highest good, viz., God. Hence, for the goodness of a human act of willing, it is required that it be ordered toward the highest good, viz., God. But this goodness is *per se* and primarily related to God's will as its proper object. And that which is first in any given genus is the measure of and rationale for all the things that belong to that genus. But each thing is upright and good insofar as it attains to its proper measure. Therefore, in order for a human act of willing to be good, it must be conformed to God's will.

**Reply to objection 1:** A man's will cannot be conformed to God's will by equality, but it can be conformed to God's will by imitation. Similarly, a man's knowledge is conformed to God's knowledge to the extent that it has cognition of the truth. And a man's act is conformed to God's action to the extent that it is fitting for the agent. And all this is by way of *imitation* and not by way of *equality*.

**Reply to objection 2 and objection 3:** The replies to the second and third objections are clear from what was just said.

## Article 10

### Should a human act of willing always be conformed to God's will with respect to what is willed?

It seems that a human act of willing need not always be conformed to God's will with respect to what is willed (*in voluto*):

**Objection 1:** We are unable to will what we do not know; for it is an apprehended good that is the object of an act of willing. But, for the most part, we do not know what God wills. Therefore, a human act of willing cannot be conformed to God's will with respect to what is willed.

**Objection 2:** God wills to damn a man whom He foreknows will die in mortal sin. Therefore, if the man were obligated to conform his own will to God's will with respect to what is willed, it would follow that the man is obligated to will his own damnation. But this is absurd.

**Objection 3:** No one is obligated to will anything that is contrary to piety. But if a man willed what God wills, then this would sometimes be contrary to piety. For instance, when God wills that someone's father should die, if the son were to will this same thing, it would be contrary to piety. Therefore, a man is not obligated to conform his own act of willing to God's will with respect to what is willed.

#### But contrary to this:

1. Psalm 32:1 says, "Praise is fitting for the upright," and a Gloss on this verse says, "An upright heart is had by one who wills what God wills." But everyone is obligated to have an upright heart. Therefore, everyone is obligated to will what God wills.

2. The form of an act of willing comes from its object, as it does for any sort of act. Therefore, if a man is obligated to conform his act of willing to God's will, then it follows that he is obligated to conform his act of willing to God's will with respect to what is willed.

3. An opposition of wills consists in men willing diverse things. But if anyone has an act of willing opposed to God's will, then he has a bad act of willing. Therefore, if anyone does not conform his own will to God's will with respect to what is willed, then he has a bad act of willing.

**I respond:** As is clear from what has been said above (aa. 3 and 5), an act of willing is directed

toward its object insofar as that object is proposed by reason. Now it is possible for a thing to be thought of in various ways by reason, so that it is good under one conception and not good under another conception. And so if someone's will wills that such-and-such a thing exist insofar as that thing has the character of goodness, then this act of willing will be good; and if someone else wills that the very same thing not exist insofar as that thing has the character of badness, then that act of willing will likewise be good. For instance, a judge has a good act of willing when he wills that the highwayman be put to death (*vult occisionem latronis*), since this act is just, whereas someone else's act of willing—say, that of the highwayman's wife or child—who wills that he not be put to death, insofar as being put to death is by its nature bad (*inquantum est secundam naturam occisio*), is likewise good.

Now since an act of willing follows upon an apprehension by reason or the intellect, it follows that the more general the notion of the apprehended good is, the more general is the good that the act of willing is directed toward—just as in the proposed example. For the judge has care for the common good, i.e., for justice, and so he wills the highwayman's death, which has the nature of a good in its relation to the common social condition (*quae habet rationem boni secundum relationem ad statum communem*). By contrast, the highwayman's wife has to consider the private good of her family, and accordingly she wills that her husband, the highwayman, not be put to death.

Now it is the good of the whole universe that is apprehended by God, who makes and governs the universe. Hence, He wills whatever He wills under the notion of the common good, i.e., His own goodness, which is the good of the whole universe. By contrast, a creature's apprehension is by its nature directed toward some particular good that is proportionate to its own nature. But, as has been explained, it is possible for something to be good in accord with a particular conception and not to be good in accord with a more universal conception, and vice versa. And so it is possible for an act of willing to be such that (a) it is good when it wills something thought of in accord with a particular conception, and yet (b) God does not will it in accord with His universal conception, and vice versa. And because of this it is also the case that diverse acts of willing with respect to opposite things on the part of diverse men can both be good, insofar as they will that a given thing exist or not exist under diverse particular conceptions.

However, when a man wills some particular good, his act of willing is upright only if it refers that good to the common good as its end, since the natural appetite of each part is ordered toward the common good of the whole. Now it is from the end that one takes the formal notion, as it were, of willing the means to the end. Hence, in order for someone to will a particular good by an upright act, it must be that (a) this particular good is willed *materially* and that (b) God's common good is willed *formally*. Therefore, a human act of willing has to be conformed to God's will *formally* with respect to what is willed, since it has to will the divine and common good, but it does not have to will the divine and common good *materially*, for the reason already explained.

Yet a human act of willing in some sense is conformed to God's will with respect to *both* objects. For insofar as it is conformed to God's will with respect to the *general* conception of what is willed, it is conformed to it with respect to the ultimate end. On the other hand, insofar as it is not conformed to God's will with respect to what is willed *materially*, it is conformed to it in accord with the conception of an efficient cause, since a thing has, from God as an efficient cause, *this* proper inclination that follows from its nature or from the particular apprehension of *this* thing. Hence, it used to be said that a man's act of willing is conformed to God's will in the sense that he wills what God wills that he will.

In addition, there is another mode of conformity corresponding to the nature of a *formal* cause—in the sense, namely, that a man wills something out of charity, in the way that God wills. And this mode of conformity is likewise traced back to the formal conformity which stems from the act's being ordered toward the ultimate end, which is the proper object of charity.

**Reply to objection 1:** We can know with a general conception what sort of thing God wills. For we know that whatever God wills, He wills under the notion of the good. And so if anyone wills

something under some notion of the good, then he has an act of willing that is conformed to God's will with respect to the nature of what is willed (*quantum ad rationem voliti*).

However, we do not know what God wills in particular. And in this regard, we are not obligated to conform our act of willing to God's will.

Yet in the state of glory all will see, in each particular thing that they will, how it was ordered toward what God wills concerning that thing. And so then they will conform their wills to God in all things not only formally but also materially.

**Reply to objection 2:** God does not will the damnation of anyone under the conception of damnation, and He does not will death insofar as it is death, since "He wills that all men be saved" (1 Timothy 2:4). Instead, He wills these things under the conception of justice. Hence, with regard to such things, it is enough for a man to will that God's justice and the order of nature be preserved.

**Reply to objection 3:** The answer to the third objection is clear from what was just said.

**Reply to argument 1 for the contrary:** One wills more of what God wills when he conforms his own act of willing to God's will with respect to the conception *what God wills* (*quantum ad rationem voliti*) than when he conforms his act of willing to God's will with respect to the very thing willed. For an act of willing is directed toward the end more principally than toward the means to the end.

**Reply to argument 2 for the contrary:** An act's species and form have more to do with nature of the object than with what is material in the object.

**Reply to argument 3 for the contrary:** There is no opposition of wills when the different individuals do not will under the same conception.

On the other hand, if it were under the very same conception that something was willed by one of them and willed against by the other, then this would induce an opposition of wills. However, this is not what happens in the case under discussion.

## QUESTION 20

### The Goodness and Badness of the Exterior Act

Next we have to consider goodness and badness with respect to exterior acts. And on this topic there are six questions: (1) Do goodness and badness first exist in the act of willing or in the exterior act? (2) Does the entire goodness or badness of the exterior act depend on the goodness [or badness] of the act of willing? (3) Are the goodness and badness of the interior acts the same as the goodness and badness of the exterior acts? (4) Does the exterior act add any goodness or badness beyond that of the interior act? (5) Do subsequent events add any goodness or badness to the exterior act? (6) Can the same exterior act be both good and bad?

#### Article 1

##### Do goodness and badness exist in the exterior act before they exist in the act of willing?

It seems that goodness and badness exist in the exterior act before they exist in the act of willing:

**Objection 1:** As was explained above (q. 19, aa. 1-2), an act of willing has its goodness from its object. But the exterior act is the object of the interior act of willing; for instance, we are said to will theft or to will to give alms. Therefore, badness and goodness exist in the exterior act before they exist in the act of willing.

**Objection 2:** Goodness belongs first to the end, because the means to the end have the character of goodness from their being ordered toward the end. But as was explained above (q. 1, a. 1), an act of willing cannot be the end, whereas an act of some other power can be the end. Therefore, goodness exists in the act of some other power before it exists in the act of willing.

**Objection 3:** As was explained above (q. 18, a. 6), the act of willing is related as a form to the exterior act. But what is formal is posterior, since the form comes to the matter. Therefore, goodness and badness exist in the exterior act before they exist in the act of willing.

**But contrary to this:** In *Retractationes* Augustine says, “The act of willing is that by which one sins and that by which one lives uprightly.” Therefore, moral goodness and badness exist first in the act of willing.

**I respond:** There are two possible ways in which exterior acts can be called good or bad:

First, they are called good or bad with respect to their *kind* and with respect to the *circumstances* considered in them, in the way that giving alms in the right sort of circumstances (*dare eleemosynam servatis debitis circumstantiis*) is said to be good.

Second, something is said to be good or bad from its relationship to the *end* (*ex ordine ad finem*), in the way that giving alms out of vainglory is said to be bad.

Now since the end is the proper object of the act of willing, it is clear that the sort of goodness or badness that the exterior act has from its relationship to the end is first found in the act of willing and flows from that act into the exterior act. By contrast, the goodness or badness that the exterior act has in its own right (*secundum se*)—because of the right sort of matter and circumstances (*propter debitam materiam et debitas circumstantias*)—is derived not from the will but rather from reason.

Hence, if one thinks of the exterior act’s goodness insofar as it exists in reason’s ordering and apprehension, then this goodness is prior to the goodness of the act of willing, whereas if one thinks of the exterior act’s goodness insofar as it exists in the execution of the act (*in executione operis*), then this goodness is posterior to the goodness of the act of willing, which is its principle.

**Reply to objection 1:** The exterior act is the object of the act of willing insofar as it is proposed to the will by reason as a certain good that is apprehended and ordered by reason, and in this sense it is prior to the goodness of the act of willing. However, insofar as it exists in the execution of the act, it is an effect of the act of willing and is posterior to the act of willing.

**Reply to objection 2:** The end is prior in intention, but it is posterior in the execution.

**Reply to objection 3:** Insofar as a form is received into matter, it is posterior to the matter in the process of generation—even though it is prior in nature. However, insofar as the form exists in the agent cause, it is prior in every way.

Now the act of willing is related to the exterior act as its efficient cause. Hence, the goodness of the act of willing is the form of the exterior act in the sense that it exists in the agent cause.

## Article 2

### Do the entire goodness and badness of exterior acts depend on the act of willing?

It seems that the entire goodness and badness (*tota bonitas et malitia*) of exterior acts depend on the act of willing:

**Objection 1:** Matthew 7:18 says, “A good tree cannot bear bad fruit; nor can a bad tree bear good fruit.” Now according to a Gloss, ‘tree’ means the act of willing, and ‘fruit’ means the exterior act (*opus*). Therefore, it is impossible for the interior act of willing to be good and the exterior act bad, or vice versa.

**Objection 2:** In *Retractationes* Augustine says that one sins only by an act of willing. Therefore, if sin does not exist in the act of willing, then there will be no sin in the exterior act. And so the entire good or badness of the exterior act depends on the act of willing.

**Objection 3:** The goodness and badness of which we are now speaking are specific differences of moral acts (*differentiae moralis actus*). But according to the Philosopher in *Metaphysics* 7, specific differences divide a genus *per se*. Therefore, since an act is a moral act because it is voluntary (*voluntaria*), it seems that goodness and badness are received in an act solely on the part of the act of willing (*solum ex parte voluntatis*).

**But contrary to this:** In *Contra Mendacium* Augustine says, “There are certain things that cannot be done well for any good end or by a good act of willing.”

**I respond:** As has already been explained (a. 1), it is possible to think of two kinds of goodness and badness in the exterior act: (a) goodness and badness that stem from the right sort of matter and circumstances (*secundum debitam materiam et circumstantias*) and (b) goodness and badness that stem from the relationship to the end.

The goodness and badness that stem from the relationship to the end depend entirely on the act of willing. By contrast, the goodness and badness that come from the right sort of matter and circumstances depend on reason, and the goodness of the act of willing depends on this sort of goodness to the extent that the act of willing is directed toward it.

However, one should note that, as was explained above (q. 19, a. 6), just a single defect is sufficient for something’s being bad, whereas a single good aspect is not sufficient for its being good absolutely speaking; instead, what is required is *complete* goodness (*integritas bonitatis*). Therefore, if the act of willing is good and has a proper object and end, then it follows that the exterior act is good. But the goodness of the act of willing, which comes from the act of intending the end, is not sufficient for the exterior act’s being good. Rather, if the act of willing is bad *either* because of the act of intending the end *or* because of the act that is willed, the result is that the exterior act is bad.

**Reply to objection 1:** Insofar as it is a good act of willing that is signified by ‘good fruit’, the act must be understood in such a way that it has goodness *both* from the act that is willed *and* from the intended end.

**Reply to objection 2:** One sins by the act of willing not only when he wills a bad *end*, but also when he wills a bad *act*.

**Reply to objection 3:** What is said to be voluntary is not just the interior act of the will, but also the exterior acts insofar as they proceed from the will and reason. And so the specific differences *good* and *bad* can apply to *both* interior and exterior acts (*circa utrosque actus potest esse differentia boni et mali*).

### Article 3

#### Is the goodness or badness of the interior act of willing the same as the goodness or badness of the exterior act?

It seems that the goodness or badness of the interior act of the willing is not the same as the goodness or badness of the exterior act:

**Objection 1:** The principle of the interior act is an interior power of the soul, either apprehensive or appetitive, whereas the principle of the exterior act is a power that executes a movement. But where there are diverse principles of action, there are diverse acts. Now it is an act that is the subject of goodness or badness. But it is impossible for the same accident to exist in diverse subjects. Therefore, the goodness of the interior act cannot be the same as the goodness of the exterior act.

**Objection 2:** As *Ethics 2* says, “A virtue is what makes the one who has it good and renders his action good.” But as is clear from *Ethics 6*, an intellectual virtue in a power that commands is different from a moral virtue in a power that is commanded. Therefore, the goodness of the interior act, which is the act of a power that commands, is different from the goodness of the exterior act, which is the act of a power that is commanded.

**Objection 3:** A cause and its effect cannot be the same thing, since nothing is a cause of itself. But as has been explained (aa. 1-2), either the goodness of the interior act is a cause of the goodness of the exterior act, or vice versa. Therefore, it is impossible for the same goodness to belong to both acts.

**But contrary to this:** It was shown above (q. 18, a. 6) that the act of willing is like the form of the exterior act. But something unified (*unum*) is effected from the formal and the material. Therefore, the goodness of the interior act is the same as the goodness of the exterior act.

**I respond:** As was explained above (q. 17, a. 4), to the extent that the interior act of willing and the exterior act are thought of as being in the genus of morals, they are a single act. However, sometimes it happens that an act which is one in subject has more than one type of goodness or badness (*plures rationes bonitatis vel malitiae*), and sometimes it happens that it has just one type (*unam tantum*).

So, then, one should reply that sometimes the goodness or badness of the interior act is the same as the goodness or badness of the exterior act, and sometimes they are different from one another. For as has already been explained (aa. 1-2), the two aforementioned instances of goodness, viz., the goodness of the interior act and the goodness of the exterior act, are ordered toward one another.

Now in things that are ordered toward something else, it is possible for something to be good solely because it is ordered toward that other thing, in the way that a bitter-tasting medicine is good solely because it effects health (*potio amara ex hoc solo est bona quod est sanativa*). Hence, the goodness of health and the goodness of the medicine are not different from one another, but one and the same. On the other hand, sometimes what is ordered toward something else has within itself (*in se*) some type of goodness, even beyond its being ordered toward that other good; for instance, a good-tasting medicine has a type of pleasurable goodness over and beyond the fact that it is a cause of health.

So, then, one should reply that when the exterior act is good or bad solely because it is ordered toward the end, then the goodness or badness of the act of willing, which is related *per se* to the end, is altogether the same as the goodness or badness of the exterior act, which is related to the end by the mediation of the act of willing. On the other hand, when the exterior act has goodness or badness in its

own right (*secundum se*), either because of its matter or because of the circumstances, then the goodness of the exterior act is one thing and the goodness of the act of willing, which comes from the end, is another thing—yet, as has already been explained (aa. 1-2), in such a way that (a) the goodness of the end spills over from the act of willing into the exterior act and that (b) the goodness of the matter and the circumstances spills over into the act of willing.

**Reply to objection 1:** This argument shows that the interior act and the exterior act are diverse in their natural genera (*diversi secundum genus naturae*). However, as was explained above (q. 17, a. 4), acts that are diverse in this way constitute a single act in the genus of morals.

**Reply to objection 2:** As is explained in *Ethics* 6, the moral virtues are ordered toward the very acts of the virtues, which are, as it were, their ends, whereas prudence, which exists in reason, is ordered toward the means to the end. And this is why diverse virtues are required. But correct reason concerning the end of the virtues does not have a goodness that is different from the goodness of the virtue, since reason's goodness participates in every virtue.

**Reply to objection 3:** When one thing is derived from another and the latter is a *univocal agent cause*, then what exists in each of them is different; for instance, when a hot thing effects heat, the heat of that which effects heat is different from the heat in the thing that is heated, even though they are the same in species.

However, when one thing is derived from another *by virtue of an analogy or proportion* (*secundum analogiam vel proportionem*), then there is only one thing numerically; for instance, health with respect to urine and medicine (*sanum ad medicinam et urinam*) is derived from health that exists in an animal's body (*sanum quod est in corpore animalis*); nor is health as it belongs to the medicine and the urine (*sanitas medicinae et urinae*) different from the animal's health (*sanitas animalis*), which the medicine effects and which the urine is a sign of. And it is in this latter sense that the goodness of the act of willing spills over into the exterior act, and vice versa, viz., because the one is ordered toward the other.

#### Article 4

##### Does the exterior act add any goodness or badness beyond that of the interior act?

It seems that the exterior act does not add any goodness or badness beyond that of the interior act (*non addat in bonitate vel malitia supra actum interiorem*):

**Objection 1:** In *Super Mattheum* Chrysostom says, "The act of willing is what is rewarded for its goodness or condemned for its badness." Works, by contrast, are a testimony to acts of willing (*opera testimonia sunt voluntatis*). Therefore, God does not want works for His own sake, so that He might know how to judge them; rather, He wants them for the sake of others, so that all might understand that He is a just God. But goodness or badness is to be thought of in accord with God's judgment rather than in accord with the judgment of men. Therefore, the exterior act adds nothing to goodness or badness beyond that of the interior act.

**Objection 2:** As has been explained (a. 3), the interior act's goodness is one and the same as the exterior act's goodness. But an increase is accomplished through the addition of one thing to something else (*per additionem unius ad alterum*). Therefore, the exterior act does not add any goodness or badness beyond that of the interior act.

**Objection 3:** The entirety of a creature's goodness does not add anything to God's goodness, since the entirety of a creature's goodness flows from God's goodness. But as has been explained (aa. 1-2), sometimes the entirety of the exterior act's goodness flows from the interior act's goodness, and sometimes vice versa. Therefore, it is not the case that the one act adds goodness or badness to the other.

**But contrary to this:** Every agent intends to attain good and to avoid evil. Therefore, if no

goodness or badness is added by the exterior act, then it will be useless for anyone who has a good or bad act of willing to do a good work or to desist from a bad work. But this is absurd.

**I respond:** If we are talking about the goodness that an exterior act has *from the act of willing the end*, then the exterior act adds no goodness—unless it happens that the act of willing is in its own right made better in the case of good acts or worse in the case of bad acts. There seem to be three ways in which this can happen:

(a) The act of willing is made better or worse *in number (secundum numerum)*. For instance, someone wills to do something with a good or bad end, then does not do it, but later wills it and does it. Here the act of willing is duplicated, and so there is a twofold goodness or twofold badness.

(b) The act of willing is made better or worse *by being extended (secundum extensionem)*. For instance, one individual wills to do something with a good or bad end and desists because of some obstacle, whereas another individual prolongs the movement of his will up to the point of bringing that movement to completion by means of the work. It is clear that an act of willing of this latter sort lasts longer in goodness or badness and is accordingly worse or better.

(c) The act of willing is made better or worse *by its intensity (secundum intensionem)*. There are some exterior acts which, to the extent that they are pleasurable or painful, are apt to make the act of willing more intense or less intense (*nati sunt intendere voluntatem vel remittere*). Now it is clear that the more intensely the will tends toward something good or bad, the better or worse it is.

On the other hand, if we are talking about the goodness an exterior act has *because of its matter and due circumstances*, then the exterior act is related to the act of willing as its terminus and end. And in this sense it adds to the goodness or badness of the act of willing, since every inclination or movement is perfected in attaining its end or reaching its terminus. Hence, it is not a perfect act of willing unless it is such that, given the opportunity, it issues forth in a work (*nisi sit talis quae opportunitate data operetur*).

However, if the opportunity is lacking (*si vero possibilitas desit*), even though there is a perfect act of willing—so that the individual would do the work if he were able to—then the lack of perfection associated with the exterior act is involuntary, absolutely speaking. But just as what is involuntary does not merit a punishment or reward in the doing of what is good or bad, so too neither is any of the reward or punishment removed if a man desists involuntarily, absolutely speaking, from doing something good or evil.

**Reply to objection 1:** Chrysostom is talking about a case in which (a) the man's act of willing has already been completed (*consummata*) and in which (b) he has desisted from the act only because he lacks the power to do it.

**Reply to objection 2:** This argument goes through as regards the goodness that an exterior act has from the act of willing the end. However, the goodness that the exterior act has because of its matter and circumstances is different from the goodness that the act of willing has from its end—though, as was explained above (aa. 1-2), it is not different from the goodness that the act of willing has from the very act that is willed, but is instead related to that goodness as its reason and cause.

**Reply to objection 3:** This makes clear the reply to the third objection.

## Article 5

### Do subsequent events add to an act's goodness or badness?

It seems that subsequent events add to an act's goodness or badness:

**Objection 1:** An effect preexists virtually in its cause. But subsequent events follow acts in the way the effects follow causes. Therefore, they preexist virtually in those acts. But each thing is judged to be good or bad according to its virtue, since, as *Ethics 2* says, "Virtue is what makes the one who has it

good.” Therefore, subsequent events add to an act’s goodness or badness.

**Objection 2:** The good things that the listeners do are certain effects that follow from the teacher’s preaching (*quidam consequentes praedicatione doctoris*). But good things of this sort redound to the preacher’s merit, as is clear from what is said in Philippians 4:1 (“My dearly beloved and longed for brothers, my joy and my crown”). Therefore, subsequent events add to the goodness and badness of acts.

**Objection 3:** One does not add to the punishment unless the guilt increases; hence, Deuteronomy 25:2 says, “According to the measure of the sin shall the measure also of the stripes be.” But the punishment is increased because of subsequent events; for Exodus 21:3 says, “But if the ox was wont to push with his horn yesterday and the day before, and they warned his master, and he did not shut him up, and he shall kill a man or a woman, then the ox shall be stoned, and his owner also shall be put to death.” But he would not have been put to death unless the ox—even if not shut up—had not killed a human being. Therefore, subsequent events add to an act’s goodness or badness.

**Objection 4:** If one does something that may cause death—say, by striking someone or passing sentence on him—but death does not ensue, then no [sacramental] irregularity is contracted. But it would be contracted if death were to follow. Therefore, subsequent events add to an act’s goodness or badness.

**But contrary to this:** Subsequent events do not make an act that was good bad, or an act that was bad good. For instance, if someone gives alms to a poor man and the poor man makes bad use of the alms in order to sin, nothing is lost to the one who gave the alms; and, similarly, if someone patiently bears an injury done to him, the one who inflicted the injury is not on that account excused. Therefore, subsequent events do not add to an act’s goodness or badness.

**I respond:** A subsequent event is either foreseen or not foreseen (*praecogitatus aut non*).

If it is foreseen, then it is clear that it adds to goodness and badness. For when someone who knows that many bad things can follow from his action does not for that reason desist, his act of willing appears to be more disordered.

On the other hand, if the subsequent event is not foreseen, then we have to draw a distinction.

For if the subsequent event follows *per se* and in most cases from the act in question, then the subsequent event accordingly adds to the act’s goodness or badness. For it is clear that an act is better of its kind if more good things are able to follow from it, and it is worse of its kind if more bad things are apt to follow from it.

On the other hand, if the subsequent event follows *per accidens* and in a fewer number of cases, then the subsequent event does not add to the act’s goodness or badness. For it is only insofar as something is *per se*, and not insofar as it is *per accidens*, that judgment is passed on it.

**Reply to objection 1:** A cause’s power is measured in accord with its *per se* effects and not according to its *per accidens* effects.

**Reply to objection 2:** The good things that the listeners do follow from the teacher’s preaching as *per se* effects. Hence, they redound to the reward of the preacher and especially when they are intended ahead of time by the preacher.

**Reply to objection 3:** The event for which it is commanded that punishment be inflicted is such that both (a) it follows *per se* from the cause in question and (b) it is posited as foreknown. And this is why it is imputed for punishment.

**Reply to objection 4:** This argument would go through if the [sacramental] irregularity followed from the sin. However, it does not follow from the sin, but instead follows from the deed that is done, because it causes a sacramental defect (*non sequitur culpam sed factum propter defectum sacramenti*).

## Article 6

### Can a single act be both good and bad?

It seems that a single act can be both good and bad:

**Objection 1:** As *Physics* 5 says, “A movement that is one is continuous.” But a single continuous movement can be both good and bad, e.g., if someone, while walking continuously to church, first intends to seek empty glory and later intends to serve God. Therefore, a single act can be both good and bad.

**Objection 2:** According to the Philosopher in *Physics* 3, an action and [corresponding] passion are a single act. But it is possible (a) for the passion, e.g., Christ’s passion, to be good and (b) for the action, e.g., that of the Jews, to be bad. Therefore, a single act can be both good and bad.

**Objection 3:** Since a servant is, as it were, his master’s instrument, the servant’s action is the master’s action in the way that a tool’s action is the craftsman’s action. But it can happen that the servant’s action (a) proceeds from the master’s good act of willing and so is good, and (b) proceeds from the servant’s bad act of willing and so is bad. Therefore, the same act can be both good and bad.

**But contrary to this:** Contraries cannot exist in the same thing. But *good* and *bad* are contraries. Therefore, a single act cannot be both good and bad.

**I respond:** Nothing prevents something from being both (a) a single thing insofar as it is in one genus and (b) more than one thing (*multiplex*) insofar as it is referred to some other genus. For instance, a continuous surface is a single thing insofar as it is thought of as being in the genus of quantity, and yet, given that it is partly white and partly black, it is many things insofar as it is referred to the genus of color.

Accordingly, as has been explained (q. 3, a. 1 and q. 18, a. 7), nothing prevents some act from being a single act insofar as it is referred to the genus of nature, and yet not a single act insofar as it is referred to the genus of morals, or vice versa. For instance, walking is a single continuous act within the genus of nature, and yet it can happen that it is many acts within the genus of morals, given that the walker’s act of willing, which is the principle of moral acts, keeps changing.

Therefore, if one takes an act which is a single act insofar as it is in the genus of morals, then it is impossible for that act to be both good and bad with moral goodness and badness. Yet, if it is a single act by a oneness of nature and not by a oneness of morals (*unus unitate naturae et non unitate moris*), then it can be both good and bad.

**Reply to objection 1:** Even though the continuous movement in question, which proceeds from diverse intentions, is a single act by a oneness of nature, it is nonetheless not a single act by a oneness of morals.

**Reply to objection 2:** Action and passion belong to the genus of morals insofar as they have the character of voluntariness. And so to the extent that they are called voluntary because of diverse acts of willing, they are two acts morally speaking, and so it is possible for goodness to be in one part and for badness to be in the other part.

**Reply to objection 3:** Insofar as the servant’s act proceeds from the servant’s act of willing, it is not the master’s act; rather, the servant’s act is the master’s act only insofar as it proceeds from the master’s command. Hence, in this sense the servant’s bad act of willing does not make the master’s act bad.

## QUESTION 21

### What Accrues to Human Acts by Reason of their Goodness or Badness

Next we have to consider what accrues to human acts by reason of their goodness or badness. And on this topic there are four questions: (1) Does a human act have the character of being upright or deviant (*habeat rationem rectitudinis vel peccati*) insofar as it is good or bad? (2) Does a human act have the character of being praiseworthy or blameworthy (*habeat rationem laudabilis vel culpabilis*) insofar as it is good or bad? (3) Does a human act have the character of being meritorious or demeritorious (*habeat rationem meriti vel demeriti*) insofar as it is good or bad? (4) Does a human act have the character of being meritorious or demeritorious in the sight of God (*apud Deum*) insofar as it is good or bad?

#### Article 1

##### Does a human act have the character of being upright or deviant insofar as it is good or bad?

It seems that it is not the case that a human act has the character of being upright or deviant (*non habeat rationem rectitudinis vel peccati*) insofar as it is good or bad:

**Objection 1:** As *Physics 2* says, “In nature, deviations (*peccata*) are monstrosities.” However, monstrosities are not *acts*, but are instead certain *things* that are generated outside of the order of nature. But as it says in the same place, what exists by art and reason (*secundum artem et rationem*) imitates what exists by nature. Therefore, it is not the case that an *act* has the character of being a deviation (*rationem peccati*) because it is disordered and bad (*inordinatus et malus*).

**Objection 2:** As *Physics 2* says, a deviation (*peccatum*) occurs in nature or in a craft (*in arte*) when the intended end is not attained by nature or by the craft. But a human act’s goodness or badness exists especially in the act of intending the end and in the act of attaining the end. Therefore, it seems that an act’s badness does not bring with it the character of being a deviation.

**Objection 3:** If an act’s badness brought with it the character of being a deviation, then it would follow that whenever something bad exists, a deviation exists. But this is false, since even though punishment has the character of something bad, it does not have the character of being a deviation. Therefore, it is not the case that an act has the character of being a deviation because it is bad.

**But contrary to this:** As was shown above (q. 19, a. 4), a human act’s goodness depends principally on the eternal law and, as a result, its badness consists in its disagreement with the eternal law. But this is what grounds the character of being a deviation (*facit rationem peccati*), since in *Contra Faustum 22* Augustine says, “What is deviant (or sinful) (*peccatum*) is something said, done, or desired against the eternal law.” Therefore, a human act has the character of being a deviation from the fact that it is bad.

**I respond:** *Being bad (malum)* is more general (*in plus est*) than *being a deviation (peccatum)* just as *being good (bonum)* is more general than *being upright (rectum)*. For any privation of a good in any given thing brings with it the character of badness, whereas a deviation (*peccatum*) is, properly speaking, an act done for the sake of some end, where the act does not have the right sort of ordering toward that end (*cum non habet debitum ordinem ad finem illum*).

Now the right sort of ordering toward an end is measured by some rule. In things that act according to nature, this rule is nature’s power itself (*ipsa virtus naturae*), which inclines them toward such-and-such an end. Therefore, when the act proceeds toward that end from a natural power in accord with a natural inclination, uprightness (or straightness) (*rectitudo*) is preserved in the act, since what is in the middle does not deviate from the endpoints, i.e., the act does not deviate from the active principle’s being ordered toward the end. On the other hand, when an act departs from this sort of uprightness, then the character of a deviation emerges.

By contrast, in things that act through their will, the proximate rule is human reason, whereas the highest rule is the eternal law. Therefore, when a man's act proceeds toward the end in accord with the order of reason and the eternal law, then the act is upright (or straight), whereas when it deviates from such uprightness, it is called a deviation (or sin) (*peccatum*).

Now it is clear from what has been said (q. 19, aa. 3-4) that every bad voluntary act is bad because it departs from the order of reason and the order of the eternal law, and every good act agrees with reason and with the eternal law. Hence, it follows that a human act has the character of being upright or being a deviation (or sin) from the fact that it is good or bad.

**Reply to objection 1:** Monstrosities are said to be deviations insofar as they are produced because of a deviation that exists in an *act* of nature.

**Reply to objection 2:** There are two sorts of ends, an *ultimate* end and a *proximate* end (*ultimus et propinquus*).

Now in a deviation in nature (*in peccato naturae*), the act fails with respect to the ultimate end, viz., the perfection of generation, but it is not the case that it fails with respect to every proximate end, since nature works by forming something.

Similarly, in a deviation (or sin) in the will (*in peccato voluntatis*), there is always a failure with respect to the intended ultimate end, since no bad voluntary act can be ordered toward beatitude, which is the ultimate end—even if the act does not fail with respect to some proximate end that the will intends and attains to. Hence, since the very act of intending this proximate end is ordered toward the ultimate end, it is in the very act of intending such an end that one can find the character of being upright or being a deviation (or sin).

**Reply to objection 3:** Each thing is ordered toward an end through its own act, and so the character of being a deviation, which consists in a deviation from this ordering toward the end, properly exists in the *act*. By contrast, as was explained in the First Part (*ST* 1, q. 48, aa. 5-6), punishment has to do with the *person* who deviates (or sins) (*poena respicit personam peccantem*).

## Article 2

### Does a human act have the character of being praiseworthy or blameworthy from the fact that it is good or bad?

It seems that a human act does not have the character of being praiseworthy or blameworthy (*laudabilis vel culpabilis*) from the fact that it is good or bad:

**Objection 1:** As *Physics* 2 explains, “Deviations (*peccati*) occur in what is done by nature.” But as *Ethics* 3 says, what is natural is not praiseworthy or blameworthy. Therefore, it is not the case that a human act has the character of blameworthiness (or sinfulness) (*non habet rationem culpae*) from the fact that it is bad or a deviation (*ex hoc quod est malus vel peccatum*); and, consequently, it does not have the character of being praiseworthy from the fact that it is good.

**Objection 2:** Just as deviations occur in moral acts, so too they occur in the acts of a craft; for as *Physics* 2 says, “A grammarian deviates in writing incorrectly, as does a physician in dispensing medicine incorrectly.” But it is not the case that a craftsman is blamed for making something bad, since it part of a craftsman's skill that he is able make both good and bad works when he wants to. Therefore, it seems likewise not to be the case that a moral act has the character of being blameworthy from the fact that it is bad.

**Objection 3:** In *De Divinis Nominibus*, chap. 4, Dionysius says that evil is “weak and powerless.” But weakness and powerlessness either destroy or diminish the character of blameworthiness. Therefore, it is not the case that a human act is blameworthy because it is bad.

**But contrary to this:** The Philosopher says, “The works of the virtues are praiseworthy, whereas the contrary works deserve censure and blame.” But as *Ethics 2* says, the acts of a virtue are good acts, since “virtue is what makes the one who has it good and renders his works good.” Hence, the opposed acts are bad acts. Therefore, a human act has the character of being praiseworthy or blameworthy from the fact that it is good or bad.

**I respond:** Just as *being bad* is more general (*est in plus*) than *being a deviation (peccatum)*, so too *being a deviation* is more general than *being blameworthy (or being sinful) (culpa)*. For an act is said to be blameworthy or praiseworthy from the fact that it is imputed to the agent, since someone’s being praised or blamed is nothing other than his having the goodness or badness of his act imputed to him.

Now an act is imputed to an agent when it lies within his power, with the result that he has dominion over his act. But this is the case with all voluntary acts, since, as is clear from what was said above (q. 1, aa. 1-2), it is through a man’s will that he has dominion over his acts. Hence, it follows that (a) it is only in the case of voluntary acts that goodness or badness brings with it the character of praise or blame, and that (b) *being bad (malum)*, *being a deviation (or sin) (peccatum)*, and *being blameworthy (or a sin) (culpa)* are the same thing in the case of voluntary acts.

**Reply to objection 1:** Natural acts are not within the power of their natural agents, since nature is determined to one effect. And so even if there is deviation (*peccatum*) in natural acts, there is nonetheless no such thing as blame (or sin) (*culpa*) in them.

**Reply to objection 2:** Reason has one role in the case of artifacts and a different role in the case of morals (*ratio aliter se habet in artificialibus et aliter in moralibus*). In the case of artifacts, reason is ordered toward a particular end, which is something thought up by reason. By contrast, in the case of morals, reason is ordered toward the general end of the entirety of a human life (*ad finem communem totius humanae vitae*).

Now a particular end is ordered toward the general end. Therefore, since, as has been explained (a. 1), a deviation occurs because of a departure from the ordering toward the end, there are two possible ways in which a deviation can occur in the act of a craft:

(a) as a deviation from the *particular end* intended by the craftsman, and this sort of deviation is proper to the craft—as, for instance, when a craftsman who intends to make a good work instead makes a bad one, or when a craftsman who intends to make a bad work instead makes a good one;

(b) as a deviation from *the general end of human life*, and in this sense the craftsman will be said to deviate if he intends to make, and does make, a bad work through which someone else is defrauded. However, this sort of deviation is proper to the craftsman insofar as he is a man and not insofar as he is a craftsman.

Hence, the craftsman is blamed as a craftsman for the first sort of deviation, whereas a man is blamed as a man for the second sort of deviation

By contrast, in the case of morals, where reason is ordered toward the general end of a human life, deviation and badness always involve a departure from reason’s ordering toward the general end of human life. And a man is blamed for such a deviation both insofar as he is a man and insofar as he is a moral being. Hence, in *Ethics 6* the Philosopher says, “In the case of a craft, someone who deviates willingly is preferable, whereas someone who deviates is not preferable in the case of prudence or of the moral virtues directed by prudence.”

**Reply to objection 3:** The sort of weakness that exists in bad voluntary acts is subject to a man’s power. And so it neither removes nor diminishes blame.

### Article 3

#### Does a human act have the character of being meritorious or demeritorious because of its goodness or badness?

It seems that a human act does not have the character of being meritorious or demeritorious because of its goodness or badness:

**Objection 1:** ‘Merit’ and ‘demerit’ are said in relation to recompense (*in ordine ad retributionem*), which has a place only in matters that have to do with others (*in his quae ad alterum sunt*). But not every good or bad human act is directed toward someone else; instead, some are directed toward oneself. Therefore, not every good or bad human act has the character of being meritorious or demeritorious.

**Objection 2:** No one merits a punishment or a reward by the fact that he does what he wants to with what he has dominion over; for instance, a man is not punished if he destroys his own property, as he would be punished if he destroyed someone else’s property. But a man has dominion over his own acts. Therefore, he does not merit punishment or reward by reason of the fact that he does well or badly with his own acts.

**Objection 3:** No one merits being treated well by another by reason of the fact that he acquires a good for himself; and the same line of reasoning holds for evils as well. But a good act is itself a certain good and perfection of the agent, whereas a disordered act is a certain evil for him. Therefore, a man does not merit or demerit by reason of the fact that he does a bad act or a good act.

**But contrary to this:** Isaiah 3:10-11 says, “Say to the just man that it is well; for he shall eat the fruit of his doings. Woe to the wicked unto evil; for the reward of his hands shall be given him.”

**I respond:** ‘Merit’ and ‘demerit’ are said in connection with the recompense that is made in accord with justice (*in ordine ad retributionem quae fit secundum iustitiam*). But recompense in accord with justice is made to someone because he acts for the benefit or harm of someone else (*ex eo quod agit in profectum vel nocumentum alterius*).

Now notice that each individual who lives in a society is in some sense a part of, and member of, the whole society. Therefore, if an individual does something that is good or bad for someone who lives in that society, then this redounds upon the whole society—just as someone who inflicts injury on a hand inflicts injury on the man as a result.

Thus, when someone does something that is good or bad for some other individual person, there are two ways in which the character of merit or demerit applies: (a) insofar as recompense is owed to him by the individual person whom he helps or offends, and (b) insofar as recompense is owed to him by the whole community (*a toto collegio*).

On the other hand, when someone orders his act directly toward what is good or bad for the whole community, recompense is owed to him first and mainly by the whole community and secondarily by all the parts of the community.

And when someone does something that is good or bad for himself, then he is likewise owed recompense to the extent that this also has an effect on the community, given that he himself is part of the community—even if he is not owed recompense insofar it is good or bad for the individual person who is the same as the agent (unless perhaps he is owed recompense by himself according to a sort of analogy, insofar as there is such a thing as a man’s being just to himself).

So, then, it is clear that a good or bad act has the character of being praiseworthy or blameworthy insofar as it lies within the will’s power, whereas it has the character of being upright or a deviation insofar as it is ordered toward an end, and it has the character of being meritorious or demeritorious in accord with the recompense of justice with respect to someone else.

**Reply to objection 1:** Even if in some cases the acts of a good or bad man are not ordered toward what is good or bad for some other individual person, they are nonetheless ordered toward what is good

or bad for that other which is the community itself.

**Reply to objection 2:** Insofar as he does well or badly with his own acts, a man, having dominion over his own acts, merits or demerits because he also belongs to another, viz., the community of which he is a part—just as if he were doing well or badly with other things of his own concerning which he owes service to the community.

**Reply to objection 3:** As has been explained, the very good or evil which someone does to himself through his own act redounds upon the community.

#### Article 4

##### Does a good or bad human act have the character of being meritorious or demeritorious in relation to God?

It seems that a good or bad human act does not have the character of being meritorious or demeritorious in relation to God (*non habeat rationem meriti vel demeriti per comparationem ad Deum*):

**Objection 1:** As has been explained (a. 3), ‘merit’ and ‘demerit’ imply an ordering toward compensation for benefits or harms done to someone else (*importat ordinem ad recompensationem profectus vel damni ad alterum illati*). But a man’s good or bad act does not result in any benefit or harm to God Himself; for Job 35:6-7 says, “If you sin, what harm will you do to Him? And if you act justly, what good will you do Him?” Therefore, a man’s good or bad act does not have the character of being meritorious or demeritorious in the sight of God (*apud Deum*).

**Objection 2:** No instrument has merit or demerit in the sight of the one who uses the instrument, since the instrument’s entire action belongs to the user himself. But when a man acts, he is an instrument of God’s power, which moves him as a principal cause (*principaliter*); hence, Isaiah 10:15 says, “Shall the ax boast against him that cuts with it? Or shall the saw exalt itself against him by whom it is drawn”—a passage that clearly compares an acting man to an instrument. Therefore, in acting well or badly, a man neither merits nor demerits anything in the sight of God.

**Objection 3:** A human act has the character of being meritorious or demeritorious insofar as it is ordered toward someone else. But not every human act is ordered toward God. Therefore, not every good or bad act has the character of being meritorious or demeritorious in the sight of God.

**But contrary to this:** Ecclesiastes 12:14 says, “God will bring into judgment all things that are done, whether good or bad.” But judgment implies recompense, and it is with respect to recompense that ‘merit’ and ‘demerit’ are predicated. Therefore, every good or bad human act has the character of being meritorious or demeritorious in the sight of God.

**I respond:** As has been explained (a. 3), a man’s act has the character of being meritorious or demeritorious insofar as it is ordered toward someone else, either by reason of that individual or by reason of the community. Now it is in both ways that our good and bad acts have the character of being meritorious or demeritorious in the sight of God:

(a) *by reason of the individual Himself*, insofar as He is man’s ultimate end. For it is fitting, as was explained above (q. 19, a. 10), for all our acts to be referred to the ultimate end. Hence, if one does an act that cannot be referred to God, then he does not preserve God’s honor, which is owed to the ultimate end.

(b) *by reason of the entire universal community*. For in every community the one who governs the community takes care mainly of the common good, and so it is his role to give recompense for what is done well or badly in the community. But as was established in the First Part (*ST* 1, q. 103, a. 5), God is the governor and ruler of the whole universe and especially of rational creatures.

Hence, it is clear that human acts have the character of being meritorious and demeritorious in

relation to God. Otherwise, it would follow that He does not care about human acts.

**Reply to objection 1:** Nothing can accrue to God or be lost to Him in His own right through man's action. And yet a man, from his own side (*quantum in se est*), takes something away from God, or gives Him something, when he observes or fails to observe the order that God has instituted.

**Reply to objection 2:** A man is moved as an instrument by God in such a way that, as was explained above (q. 9, a. 6), it does not exclude his moving himself through free choice. And so it is through his own act that he merits or demerits in the sight of God.

**Reply to objection 3:** It is not the case that a man is ordered toward the political community in his entire self or in all that is his (*secundum se totum et secundum omnia sua*), and so it is unnecessary for each of his acts to be meritorious or demeritorious in light of his ordering toward the political community. By contrast, the entirety of what a man is and of what he has and can do must be ordered toward God, and so every one of a man's good or bad acts, as far as the very nature of the act is concerned, has the character of being meritorious or demeritorious in the sight of God.

## QUESTION 22

### The Subject of the Passions of the Soul

After this we have to consider the passions of the soul, first in general (questions 22-25) and then in particular (questions 26-48).

In the general treatment, there are four things to consider about the passions: first, their subject (question 22); second, the differences among them (question 23); third, their relation to one another (question 24); and, fourth, their badness and goodness (question 25).

On the first topic there are three questions: (1) Are there passions in the soul? (2) Does a passion exist in the appetitive part of the soul rather than in the apprehensive part? (3) Does a passion exist in the sentient appetite rather than in the intellective appetite, which is called the will?

#### Article 1

##### Are there passions in the soul?

It seems that there are no passions in the soul (*nulla passio sit in anima*):

**Objection 1:** To be acted upon (*pati*) is proper to matter. But as was established in the First Part (*ST* 1, q. 75, a. 5), the soul is not composed of matter and form. Therefore, there are no passions in the soul.

**Objection 2:** As *Physics* 3 says, a passion is a movement. But as is proved in *De Anima* 1, the soul does not undergo movement (*anima non movetur*). Therefore, there are no passions in the soul.

**Objection 3:** A passion is a path toward corruption, since, as *Topics* says, “Every passion, when made stronger, takes away from the substance (*abicit a substantia*).” But the soul is incorruptible. Therefore, there are no passions in the soul.

**But contrary to this:** In Romans 7:5 the Apostle says, “When we were in the flesh, the passions of the sins which were by the law were working in our members.” But sins properly speaking exist in the soul. Therefore, the passions, which are here said to belong to the sins, likewise exist in the soul.

**I respond:** There are three ways in which something is said to be acted upon (*pati dicitur tripliciter*).

In one way, ‘to be acted upon’ is used generally, insofar as every instance of receiving something is an instance of being acted upon, even if nothing is taken away from the thing in question; in this sense the air is said to be acted upon when it is illuminated. However, properly speaking, this is to be *perfected* rather than *acted upon*.

In a second sense, something is said to be acted upon, properly speaking, when one thing is received along with the loss of something else. But there are two ways in which this happens:

(a) Sometimes what is taken away is not agreeable to the thing. For instance, when an animal’s body is healed, it is said to be acted upon, since it receives health while losing sickness.

(b) Sometimes the reverse happens. For instance, getting sick is said to be an instance of being acted upon, since infirmity is received while health is lost. And this is the most proper sense of ‘passion’ or ‘to be acted upon’ (*hic est propriissimus modus passionis*). For ‘to be acted upon’ is taken from the fact that something is drawn toward the agent, and that which withdraws from what is agreeable to it seems especially to be drawn toward something else. Similarly, *De Generatione et Corruptione* 1 says that when what is more noble is generated from what is less noble there is a generation absolutely speaking (*generatio simpliciter*), but when what is less noble is generated from what is more noble there is, conversely, a generation in a certain respect (*generatio secundum quid*).

These are the three ways in which passions can exist in the soul. For in the sense of just receiving, sensing and intellective understanding are a certain sort of being acted upon (*sentire et intelligere est quoddam pati*). On the other hand, a passion with a loss occurs only through a bodily change (*secundum*

*transmutationem coporalem*), and so a passion properly speaking belongs to the soul only *per accidens*—viz., insofar as the composite is acted upon. But even here there is a difference, since the sort of change in question has the character of a passion more properly when it is a change for the worse than when it is a change for the better. Hence, sadness (*tristitia*) is more properly a passion than joy (*laetitia*) is.

**Reply to objection 1:** Insofar as being acted upon comes with a loss and a change, it is proper to matter and so is found only in things composed of matter and form. But insofar as being acted upon implies just the reception of something, it does not have to belong just to matter, but is instead able to belong to whatever is in potentiality.

Now even though the soul is not composed of matter and form, it nonetheless does have some potentiality, and accordingly it is suited for receiving and being acted upon. This is the sense in which, as *De Anima* 3 says, to understand intellectually is to be acted upon (*intelligere pati est*).

**Reply to objection 2:** Even if being acted upon and undergoing movement do not belong to the soul *per se*, they do belong to it *per accidens*, as *De Anima* 1 points out.

**Reply to objection 3:** This argument goes through with respect to passions that are accompanied by a change for the worse. This sort of passion belongs to the soul only *per accidens*, whereas it belongs *per se* to the composite, which is indeed corruptible.

## Article 2

### Are the passions in the apprehensive part of the soul more than in the appetitive part?

It seems that the passions are in the apprehensive part of the soul more than in the appetitive part:

**Objection 1:** As *Metaphysics* 2 says, what is first in a genus seems to be the greatest of the things belonging to that genus and to be a cause of the others. But the passions are in the apprehensive part before being in the appetitive part; for the appetitive part is not acted upon except when the apprehensive part has previously been acted upon (*non patitur pars appetitiva nisi passione praecedente in parte apprehensiva*). Therefore, the passions exist more in the apprehensive part than in the appetitive part.

**Objection 2:** What is more active seems to be less passive, since acting is opposed to being acted upon (*actio passioni opponitur*). But the appetitive part is more active than the apprehensive part. Therefore, it seems that the passions exist more in the apprehensive part.

**Objection 3:** Just as the sentient appetite is a power in a corporeal organ, so too is the sentient apprehensive power. But the passions of the soul come to exist, properly speaking, through a bodily change (*secundum transmutationem corporalem*). Therefore, it is not the case that they exist in the sentient appetitive part more than in the sentient apprehensive part.

**But contrary to this:** In *De Civitate Dei* 9 Augustine says, “The movements of our mind—πάθη in the Greek—are such that some, like Cicero, call them perturbations (*perturbationes*), and some call them affections (*affectiones*) or affects (*affectus*), while others call them—more clearly, as in the Greek—passions (*passiones*).” From this it is clear that the passions of the soul are the same as affections. But affections clearly belong to the appetitive part and not to the apprehensive part. Therefore, the passions are likewise in the appetitive part rather than in the apprehensive part.

**I respond:** As has already been explained (a. 1), the name ‘passion’ implies that the thing being acted upon (*patiens*) is drawn toward something that belongs to the agent.

Now the soul is drawn toward a thing through its appetitive power rather than through its apprehensive power. For it is through its appetitive power that the soul is ordered toward the things themselves insofar as they exist in themselves (*ad ipsas res prout in seipsis sunt*). Hence, in *Metaphysics* 6 the Philosopher says that “the good and the bad”—i.e., the objects of the appetitive

power—“exist in the things themselves.”

By contrast, the apprehensive power is not drawn to things insofar as they exist in themselves; rather, it has cognition of a thing in accord with the thing’s intention (*secundum intentionem rei*), which it has or receives within itself in its own mode. Hence, in the same place the Philosopher says that “the true and the false”—which pertain to cognition—“exist in the mind and not in the things.”

Hence, it is clear that the character of a passion is found in the appetitive part more than in the apprehensive part.

**Reply to objection 1:** What pertains to perfection behaves in a way contrary to what pertains to defectiveness (*e contrario se habet in his quae pertinent ad perfectionem et in his quae pertinent ad defectum*).

In the case of what pertains to perfection, intensity is associated with an approach toward a single first principle (*attenditur per accessum ad unum primum principium*), so that the closer something is to that principle, the more intense it is. For instance, the intensity of light is associated with its approach toward something that is maximally bright, so that the closer it gets to that thing, the brighter it is.

By contrast, in what pertains to defectiveness, intensity is associated not with an approach toward some highest thing, but instead with a movement away from the perfect, since this is what the character of privation and defectiveness consists in. And so the less remote a defect is from the first thing, the less intense it is; and, for this reason, at the beginning a defect is always small, and then later, as it proceeds further, it becomes greater (*postea procedendo magis multiplicatur*).

Now the passions have to do with defectiveness, since a passion belongs to something insofar as it is in potentiality. Hence, in things that are close to the first perfect thing, viz., God, there is hardly anything of the character of potentiality and passion, whereas in the other things that come after them, there is more potentiality and passion. And so it is likewise the case that there is less of the character of a passion in that prior power of the soul, viz., the apprehensive power.

**Reply to objection 2:** The appetitive power is said to be more active because it is more of a source (*principium*) for the exterior act. It has this feature from the very fact in virtue of which it is more passive, viz., that it has an ordering toward a thing insofar as that thing exists in itself. For it is through the exterior act that we arrive at the attainment of things.

**Reply to objection 3:** As was explained in the First Part (*ST 1, q. 78, a. 3*), there are two ways in which an organ of the soul can be changed:

(a) *by a spiritual change (transmutatione spirituali)*, insofar as it receives the intention of a thing (*recipit intentionem rei*). This sort of change exists *per se* in the act of the sentient apprehensive power; for instance, the eye is changed by the visible thing not in such a way that it becomes colored, but in such a way that it receives the intention of color.

(b) *by a separate natural change in the organ*, insofar as the organ is changed with respect to its natural condition—e.g., becoming hot or cold or being changed in some similar way. This sort of change is related *per accidens* to the act of the sentient apprehensive power—as, for instance, when the eye is fatigued by an intent gaze or weakened by the intensity of a visible thing. However, a change of this sort is ordered *per se* toward an act of the sentient appetite. This is why a natural change in an organ is posited materially in the definition of movements of the appetitive part—as, for instance, when it is said that anger is the heating of the blood around the heart.

Hence, it is clear that the character of a passion is found more in the act of sentient appetitive power than in the act of the sentient apprehensive power, even though both are acts of a corporeal organ.

### Article 3

#### Are the passions in the sentient appetite more than in the intellective appetite?

It seems that the passions are not in the sentient appetite rather than in the intellective appetite:

**Objection 1:** In *De Divinis Nominibus*, chap. 2, Dionysius says that Hierotheus “was taught by a more divine inspiration, not only learning divine things, but also undergoing them (*non solum discens sed etiam patiens divina*).” But the undergoing of divine things (*passio divinorum*) cannot belong to the sentient appetite, the object of which is the sensible good. Therefore, the passions exist in the intellective appetite as well as in the sentient appetite.

**Objection 2:** The more powerful the agent (*activum*) is, the stronger the passion. But the intellective appetite’s object, viz., the good in general (*bonum universale*), is a more powerful agent than the sentient appetite’s object, viz., a particular good. Therefore, the character of being a passion is found more in the intellective appetite than in the sentient appetite.

**Objection 3:** Joy and love are said to be passions. But they are found in the intellective appetite and not just in the sentient appetite; otherwise, they would not be attributed in the Scriptures to God and the angels. Therefore, it is not the case that the passions exist more in the sentient appetite than in the intellective appetite.
