

# *Summa Theologiae*

## Table of Contents: Part 1

<b>PROLOGUE</b> .....	1
<b>Question 1: The Nature and Extent of Sacred Doctrine</b> .....	1
Article 1: Is it necessary to have a doctrine over and beyond the philosophical disciplines? ...	1
Article 2: Is sacred doctrine a science? .....	2
Article 3: Is sacred doctrine a single science? .....	3
Article 4: Is sacred doctrine a practical science? .....	4
Article 5: Is sacred doctrine more noble than the other sciences? .....	4
Article 6: Does sacred doctrine constitute wisdom? .....	5
Article 7: Is God the subject of the science of sacred doctrine? .....	7
Article 8: Does sacred doctrine make use of arguments? .....	7
Article 9: Should Sacred Scripture make use of metaphors? .....	9
Article 10: Does Sacred Scripture have multiple senses underlying a single passage? .....	10
<b>Question 2: The Existence of God</b> .....	12
Article 1: Is it known <i>per se</i> that there is a God? .....	12
Article 2: Can it be demonstrated that there is a God? .....	13
Article 3: Is there a God? .....	14
<b>Question 3: God's Simplicity</b> .....	17
Article 1: Is God a body? .....	17
Article 2: Is there a composition of form and matter in God? .....	19
Article 3: Is God the same as His essence or nature? .....	20
Article 4: Is God's essence the same as His <i>esse</i> ? .....	21
Article 5: Is God in a genus? .....	22
Article 6: Are there any accidents in God? .....	23
Article 7: Is God altogether simple? .....	24
Article 8: Does God enter into composition with other things? .....	25
<b>Question 4: God's Perfection</b> .....	27
Article 1: Is God perfect? .....	27
Article 2: Do the perfections of all things exist in God? .....	28
Article 3: Can a creature be similar to God? .....	29
<b>Question 5: The Good in General</b> .....	31
Article 1: Does <i>good</i> differ in reality from <i>being</i> ? .....	31
Article 2: Is <i>good</i> conceptually prior to <i>being</i> ? .....	32
Article 3: Is every being good? .....	33
Article 4: Does <i>good</i> have the nature of a final cause? .....	34
Article 5: Does the nature of the good consist in mode, species, and order? .....	35
Article 6: Is the good appropriately divided into the noble, the useful, and the pleasant? .....	37
<b>Question 6: God's Goodness</b> .....	39
Article 1: Does it befit God to be good? .....	39
Article 2: Is God the greatest good? .....	39
Article 3: Is it proper to God alone to be good through His essence? .....	40
Article 4: Are all things good by God's goodness .....	42

<b>Question 7: God's Infinity</b> .....	43
Article 1: Is God infinite? .....	43
Article 2: Can anything other than God be infinite through its essence? .....	44
Article 3: Can anything be actually infinite in magnitude? .....	45
Article 4: Can there be an actual infinite multitude of things? .....	46
<b>Question 8: God's Existence in Things</b> .....	49
Article 1: Does God exist in all things? .....	49
Article 2: Is God everywhere? .....	50
Article 3: Is God everywhere by His essence, presence, and power? .....	51
Article 4: Is it peculiar to God to be everywhere? .....	53
<b>Question 9: God's Immutability</b> .....	55
Article 1: Is God altogether immutable? .....	55
Article 2: Is it peculiar to God to be immutable? .....	56
<b>Question 10: God's Eternity</b> .....	58
Article 1: What is eternity? .....	58
Article 2: Is God eternal? .....	59
Article 3: Is it proper to God alone to be eternal? .....	60
Article 4: Does eternity differ from time? .....	61
Article 5: Is aeviternity different from time? .....	62
Article 6: Is there a single aeviternity? .....	64
<b>Question 11: God's Oneness</b> .....	66
Article 1: Does <i>one</i> add anything to <i>being</i> ? .....	66
Article 2: Are <i>one</i> and <i>many</i> opposed to each other? .....	67
Article 3: Is God one? .....	69
Article 4: Is God maximally one? .....	70
<b>Question 12: How We Know God</b> .....	71
Article 1: Can any created intellect see God's essence? .....	71
Article 2: Does a created intellect see God's essence by means of some likeness? .....	72
Article 3: Can God's essence be seen by a bodily eye? .....	74
Article 4: Can a created intellect see God's essence by its own natural powers? .....	75
Article 5: Does a created intellect need some created light in order to see God's essence? ...	76
Article 6: Among those who see God's essence, does one see it more perfectly than another? ..77	
Article 7: Do those who see God through His essence comprehend Him? .....	79
Article 8: Do those who see God through His essence see all things in God? .....	80
Article 9: Do those who see God's essence see the things they see in God by means of likenesses? .....	81
Article 10: Do those who see God through His essence see all the things they see in Him simultaneously? .....	83
Article 11: Is it possible for someone to see God's essence in this life? .....	84
Article 12: Can we know God in this life through natural reason? .....	85
Article 13: Is a deeper cognition of God had through grace than is had through natural reason?86	
<b>Question 13: The Names of God</b> .....	88
Article 1: Does any name befit God? .....	88
Article 2: Is any name said of God substantivally? .....	89

Article 3: Are some names said of God properly, or are all names attributed to Him metaphorically? . . . . .	91
Article 4: Are the names said of God synonyms? . . . . .	92
Article 5: Are the names said of both God and creatures said of them univocally? . . . . .	93
Article 6: Are names said in the primary sense ( <i>per prius</i> ) of creatures rather than of God? ..	95
Article 7: Are names that imply a relation to creatures said of God from a given point in time? .97	
Article 8: Is the name ‘God’ the name of a nature or an operation? . . . . .	99
Article 9: Is the name ‘God’ a shareable name? . . . . .	100
Article 10: Is the name ‘God’ taken univocally or equivocally when ‘God’ is predicated through His nature, according to participation, and according to opinion? . . . . .	102
Article 11: Is the name ‘He Who Is’ an especially proper name of God? . . . . .	104
Article 12: Is it possible to formulate affirmative propositions about God? . . . . .	105
<b>Question 14: God’s Knowledge . . . . .</b>	<b>107</b>
Article 1: Is there knowledge in God? . . . . .	107
Article 2: Does God understand Himself? . . . . .	108
Article 3: Does God comprehend Himself? . . . . .	110
Article 4: Is God’s very act of understanding His substance? . . . . .	111
Article 5: Does God understand things that are distinct from Himself? . . . . .	112
Article 6: Does God know things that are distinct from Himself by means of a proper cognition? . . . . .	113
Article 7: Is God’s knowledge discursive? . . . . .	115
Article 8: Is God’s knowledge a cause of things? . . . . .	116
Article 9: Does God have knowledge of non-beings? . . . . .	117
Article 10: Does God have cognition of evils? . . . . .	118
Article 11: Does God have cognition of singular things [as singular]? . . . . .	119
Article 12: Does God have cognition of infinities? . . . . .	121
Article 13: Does God have knowledge of future contingents? . . . . .	122
Article 14: Does God have cognition of propositions? . . . . .	125
Article 15: Is God’s knowledge variable? . . . . .	126
Article 16: Is God’s knowledge of things speculative? . . . . .	127
<b>Question 15: God’s Ideas . . . . .</b>	<b>129</b>
Article 1: Are there divine ideas? . . . . .	129
Article 2: Is there more than one divine idea? . . . . .	130
Article 3: Are there ideas in God of all the things that are known by Him? . . . . .	131
<b>Question 16: Truth . . . . .</b>	<b>134</b>
Article 1: Does truth exist in things or only in the intellect? . . . . .	134
Article 2: Does truth exist in the intellect only insofar as the intellect composes and divides? .	136
Article 3: Is <i>true</i> convertible with <i>being</i> ? . . . . .	137
Article 4: Is <i>good</i> conceptually prior to <i>true</i> ? . . . . .	138
Article 5: Is God truth? . . . . .	139
Article 6: Is there just one truth according to which all things are true? . . . . .	139
Article 7: Is created truth eternal? . . . . .	140
Article 8: Is truth immutable? . . . . .	142
<b>Question 17: Falsity . . . . .</b>	<b>144</b>
Article 1: Does falsity exist in things? . . . . .	144
Article 2: Does falsity exist in the senses? . . . . .	145
Article 3: Does falsity exist in the intellect? . . . . .	146
Article 4: Are the true and the false contraries? . . . . .	148

<b>Question 18: God's Life</b> .....	150
Article 1: Do all natural things have life? .....	150
Article 2: Is life an operation? .....	151
Article 3: Does God have life? .....	152
Article 4: Are all things the life in God? .....	154
<b>Question 19: God's Will</b> .....	156
Article 1: Is there a will in God? .....	156
Article 2: Does God will things distinct from Himself? .....	157
Article 3: Does God will whatever He wills by necessity? .....	158
Article 4: Is God's will a cause of things? .....	160
Article 5: Can a cause be assigned for God's act of willing? .....	161
Article 6: Is God's will always fulfilled? .....	163
Article 7: Is God's will mutable? .....	164
Article 8: Does God's will impose necessity on the things willed? .....	166
Article 9: Does God will evils? .....	167
Article 10: Does God have free choice? .....	168
Article 11: Should God's will be distinguished by signs? .....	169
Article 12: Is it appropriate to posit these five signs with respect to God's will: <i>prohibition, command, counsel, operation, and permission</i> ? .....	170
<b>Question 20: God's Love</b> .....	172
Article 1: Is there love in God? .....	172
Article 2: Does God love all things? .....	173
Article 3: Does God love one thing more than another? .....	175
Article 4: Does God love better things more? .....	175
<b>Question 21: God's Justice and Mercy</b> .....	178
Article 1: Is there justice in God? .....	178
Article 2: Can God's justice be called truth? .....	179
Article 3: Is there mercy in God? .....	180
Article 4: Do both mercy and justice both exist in every work of God? .....	181
<b>Question 22: God's Providence</b> .....	183
Article 1: Does providence exist in God? .....	183
Article 2: Are all things subject to God's providence? .....	184
Article 3: Is God's providence immediate with respect to all things? .....	187
Article 4: Does God's providence impose necessity on the things it provides for? .....	188
<b>Question 23: Predestination</b> .....	190
Article 1: Are men predestined by God? .....	190
Article 2: Is predestination an entity that exists in the one who is predestined? .....	191
Article 3: Does God reprobate some men? .....	193
Article 4: Are the predestined elected by God? .....	194
Article 5: Is the foreknowledge of merits a cause of predestination? .....	195
Article 6: Is predestination certain? .....	197
Article 7: Is the number of the predestined fixed? .....	199
Article 8: Can the prayers of the holy contribute to predestination? .....	200

<b>Question 24: The Book of Life</b> .....	203
Article 1: Is the book of life the same as predestination? .....	203
Article 2: Is the book of life only about the life of glory had by the predestined? .....	204
Article 3: Is anyone erased from the book of life? .....	205
<b>Question 25: God's Power</b> .....	207
Article 1: Is there power in God? .....	207
Article 2: Is God's power infinite? .....	208
Article 3: Is God omnipotent? .....	209
Article 4: Can God bring it about that past things have never existed? .....	211
Article 5: Is God able to effect what He does not in fact effect? .....	212
Article 6: Is God able to make the things that He makes better? .....	214
<b>Question 26: God's Beatitude</b> .....	216
Article 1: Does beatitude belong to God? .....	216
Article 2: Is it with respect to His act of intellect that God is said to have beatitude? .....	216
Article 3: Is God the beatitude of everyone who is beatified? .....	217
Article 4: Does God's beatitude include every beatitude? .....	218
<b>Question 27: The Procession of the Divine Persons</b> .....	219
Article 1: Are there any processions in God? .....	219
Article 2: Can any procession in God be called a generation? .....	220
Article 3: Is there a procession in God other than the generation of the Word? .....	222
Article 4: Is the procession of the Love in God a generation? .....	223
Article 5: Are there more than two processions in God? .....	224
<b>Question 28: The Divine Relations</b> .....	226
Article 1: Are there any real relations in God? .....	226
Article 2: Is a relation in God the same as His essence? .....	227
Article 3: Are the relations that exist in God distinct in reality from one another? .....	229
Article 4: Are there just four real relations in God, viz., the Paternity, the Filiation, the Spiration, and the Procession? .....	230
<b>Question 29: The Divine Persons</b> .....	233
Article 1: What is the definition of 'person'? .....	233
Article 2: Is a person the same as a hypostasis, a subsistent, and an essence? .....	235
Article 3: Should the name 'person' be used in the case of God? .....	236
Article 4: Does the name 'person' signify a relation in God? .....	238
<b>Question 30: The Plurality of Persons in God</b> .....	241
Article 1: Is there a plurality of persons in God? .....	241
Article 2: Are there more than three persons in God? .....	242
Article 3: Do numerical terms posit some reality in God? .....	244
Article 4: Can the name 'person' be common to the three persons? .....	246
<b>Question 31: Things Pertaining to the Oneness or to the Plurality in God</b> .....	248
Article 1: Is there a Trinity in God? .....	248
Article 2: Is the Son other than the Father? .....	249
Article 3: Can the exclusive expression 'alone' be used to modify a term pertaining to God's essence? .....	251
Article 4: Can the exclusive expression 'alone' be used to modify a term pertaining to a person? .....	252

<b>Question 32: Our Cognition of the Divine Persons</b> .....	255
Article 1: Can the Trinity of divine persons be known by natural reason? .....	255
Article 2: Should notions be posited in God? .....	258
Article 3: Are there five notions? .....	260
Article 4: Are contrary opinions about the notions permissible? .....	261
<b>Question 33: The Person of the Father</b> .....	263
Article 1: Can the Father be called a principle of the Son or the Holy Spirit? .....	263
Article 2: Is the name ‘Father’ properly speaking the name of a divine person? .....	264
Article 3: Is the name ‘Father’ said of God in the first place with respect to a person? .....	265
Article 4: Is it proper to the Father to be unbegotten? .....	267
<b>Question 34: The Person of the Son: The Name ‘Word’</b> .....	270
Article 1: Is ‘Word’ the name of a person in God? .....	270
Article 2: Is ‘Word’ a proper name of the Son? .....	273
Article 3: Does the name ‘Word’ imply a relation to creatures? .....	274
<b>Question 35: The Person of the Son: The Name ‘Image’</b> .....	276
Article 1: Is the name ‘Image’ said of God with respect to a person? .....	276
Article 2: Is ‘Image’ a proper name of the Son? .....	277
<b>Question 36: The Person of the Holy Spirit: The Name ‘Holy Spirit’</b> .....	279
Article 1: Is the name ‘Holy Spirit’ a proper name of a divine person? .....	279
Article 2: Does the Holy Spirit proceed from the Son? .....	280
Article 3: Does the Holy Spirit proceed from the Father <i>through</i> the Son? .....	283
Article 4: Are the Father and the Son a single principle of the Holy Spirit? .....	285
<b>Question 37: The Person of the Holy Spirit: The Name ‘Love’</b> .....	288
Article 1: Is ‘Love’ a proper name of the Holy Spirit? .....	288
Article 2: Do the Father and the Son love one another by the Holy Spirit? .....	290
<b>Question 38: The Person of the Holy Spirit: The Name ‘Gift’</b> .....	293
Article 1: Is ‘Gift’ the name of a person? .....	293
Article 2: Is ‘Gift’ a proper name of the Holy Spirit? .....	294
<b>Question 39: The Persons in Comparison to the Essence</b> .....	296
Article 1: Is the essence in God the same as a person? .....	296
Article 2: Should one say that the three persons are ‘of one essence’? .....	297
Article 3: May the names of the essence be predicated in the singular of the three persons? ..	299
Article 4: Can the concrete names of the essence supposit for a person? .....	300
Article 5: Can the names of the essence, taken in their abstract forms, supposit for a person? ..	302
Article 6: Can the names of the persons be predicated of the names of the essence in their concrete forms? .....	304
Article 7: Should the names of the essence be appropriated to the persons? .....	305
Article 8: Have the holy doctors correctly assigned the attributes of the essence to the persons? .....	306
<b>Question 40: The Persons in Comparison to the Relations or Properties</b> .....	311
Article 1: Is a relation the same as a person? .....	311
Article 2: Do the relations constitute the persons and make them distinct? .....	312
Article 3: If the properties or relations are intellectually abstracted from the persons, do distinct hypostases still remain? .....	314
Article 4: Are the notional acts presupposed by the relations? .....	316

<b>Question 41: The Persons in Comparison to the Notional Acts</b> .....	318
Article 1: Should the notional acts be attributed to the persons? .....	318
Article 2: Are the notional acts voluntary? .....	319
Article 3: In the notional acts, do the persons proceed from something or from nothing? ...	321
Article 4: Is there power in God with respect to the notional acts? .....	323
Article 5: Do ‘power to generate’ and ‘power to spirate’ signify a real relation or instead God’s essence? .....	324
Article 6: Could a notional act terminate in more than one person? .....	326
<b>Question 42: The Equality and Likeness of the Divine Persons in Comparison to One Another.</b>	328
Article 1: Does equality belong to the divine persons? .....	328
Article 2: Is a person who proceeds coeternal with His principle? .....	330
Article 3: Is there a natural ordering among the divine persons? .....	331
Article 4: Is the Son equal to the Father in greatness? .....	332
Article 5: Is the Son in the Father, and vice versa? .....	334
Article 6: Is the Son equal to the Father in power? .....	335
<b>Question 43: The Missions of the Divine Persons</b> .....	337
Article 1: Is it fitting for a divine person to be sent on mission? .....	337
Article 2: Can a mission be eternal? .....	338
Article 3: Is a divine person sent on mission invisibly only through the gift of sanctifying grace? .....	339
Article 4: Is it fitting for the Father to be sent on mission? .....	340
Article 5: Does it belong to the Son to be sent on mission invisibly? .....	341
Article 6: Is an invisible mission made to everyone who participates in grace? .....	342
Article 7: Does it belong to the Holy Spirit to be sent on mission visibly? .....	343
Article 8: Is a divine person sent on mission only by a person from whom He eternally proceeds? .....	346
<b>Question 44: The Procession of Creatures from God, and the First Cause of All Beings</b> .....	348
Article 1: Is it necessary for every being to be created by God? .....	348
Article 2: Is primary matter created by God? .....	349
Article 3: Is the exemplar cause of creatures something other than God? .....	350
Article 4: Is God a final cause of all things? .....	352
<b>Question 45: The Mode of the Emanation of Things from the First Principle</b> .....	353
Article 1: Is creating the same as making something from nothing ( <i>ex nihilo</i> )? .....	353
Article 2: Can God create anything? .....	354
Article 3: Is the act of creation an entity that exists in the creature? .....	356
Article 4: Is <i>being created</i> proper to composite things and subsistent things? .....	357
Article 5: Does it belong to God alone to create? .....	358
Article 6: Is creating proper to some divine person? .....	360
Article 7: Must a trace of the Trinity be found in creatures? .....	361
Article 8: Is creation involved in the works of nature and art? .....	363
<b>Question 46: The Beginning of Duration for Created Things</b> .....	364
Article 1: Has the universe of creatures always existed? .....	364
Article 2: Is it an article of the Faith that the world began to exist? .....	367
Article 3: Did the creation of things occur at the beginning of time? .....	370

<b>Question 47: The Diversity among Things in General.</b>	372
Article 1: Is God the source of the multiplicity and diversity among things?.....	372
Article 2: Is God the source of the inequality among things?.....	373
Article 3: Is there just one world?.....	375
<b>Question 48: The Distinction between Good and Evil.</b>	377
Article 1: Is evil a sort of nature?.....	377
Article 2: Is evil found in things?.....	379
Article 3: Does evil have what is good as its subject?.....	380
Article 4: Does evil totally corrupt the good?.....	381
Article 5: Is evil adequately divided into the evil of punishment and the evil of sin?.....	382
Article 6: Does punishment have more of the character of evil than sin does?.....	384
<b>Question 49: The Cause of Evil.</b>	386
Article 1: Can what is good be a cause of evil?.....	386
Article 2: Is the greatest good, viz., God, a cause of evil?.....	387
Article 3: Is there one greatest evil which is a cause of every evil?.....	388
<b>Question 50: The Substance of Angels Considered Absolutely.</b>	391
Article 1: Is an angel wholly incorporeal?.....	391
Article 2: Is an angel composed of matter and form?.....	392
Article 3: Do angels exist in great numbers?.....	394
Article 4: Do angels differ from one another in species?.....	396
Article 5: Are angels incorruptible?.....	397
<b>Question 51: The Relation of Angels to Bodies.</b>	399
Article 1: Do angels have bodies that are naturally united to them?.....	399
Article 2: Do angels assume bodies?.....	400
Article 3: Do angels exercise life functions in their assumed bodies?.....	401
<b>Question 52: The Relation of an Angel to Places.</b>	404
Article 1: Does an angel exist in a place?.....	404
Article 2: Can an angel be in more than one place at the same time?.....	405
Article 3: Can more than one angel be in the same place at the same time?.....	406
<b>Question 53: An Angel's Local Motion.</b>	407
Article 1: Can an angel have local motion?.....	407
Article 2: Does an angel pass through the middle in moving from one place to another?....	408
Article 3: Is an angel's movement instantaneous?.....	410
<b>Question 54: An Angel's Cognition.</b>	413
Article 1: Is an angel's act of understanding the same as his substance?.....	413
Article 2: Is an angel's act of understanding the same as his esse?.....	414
Article 3: Is an angel's intellective power or potentiality distinct from his essence?.....	415
Article 4: Is an angel's intellect both active and passive?.....	416
Article 5: Is there just intellective cognition in angels?.....	417
<b>Question 55: The Medium of Angelic Cognition.</b>	419
Article 1: Do angels know all things through their own substance?.....	419
Article 2: Do angels understand things through intelligible species received from the things themselves?.....	420
Article 3: Do higher angels understand things through intelligible species that are more universal than those had by lower angels?.....	422

<b>Question 56: An Angel's Cognition of Immaterial Things.</b> . . . . .	424
Article 1: Does an angel know himself? . . . . .	424
Article 2: Does one angel know another? . . . . .	425
Article 3: Can angels know God by their natural powers? . . . . .	427
<b>Question 57: An Angel's Cognition of Material Things.</b> . . . . .	429
Article 1: Do angels know material things? . . . . .	429
Article 2: Does an angel know singulars? . . . . .	430
Article 3: Do angels know future things? . . . . .	432
Article 4: Do angels know the thoughts of hearts? . . . . .	433
Article 5: Do angels know the mysteries of grace? . . . . .	434
<b>Question 58: The Mode of an Angel's Cognition.</b> . . . . .	437
Article 1: Is an angel's intellect sometimes in a state of potentiality? . . . . .	437
Article 2: Can an angel understand many things at once? . . . . .	438
Article 3: Does an angel gain knowledge through discursive reasoning? . . . . .	439
Article 4: Do angels understand by composing and dividing? . . . . .	440
Article 5: Can there be falsity in an angel's understanding? . . . . .	441
Article 6: Does an angel have both evening knowledge and morning knowledge? . . . . .	442
Article 7: Is evening knowledge the same as morning knowledge? . . . . .	444
<b>Question 59: An Angel's Will.</b> . . . . .	446
Article 1: Do angels have a will? . . . . .	446
Article 2: Does an angel's will differ from his intellect or his nature? . . . . .	447
Article 3: Do angels have free choice? . . . . .	448
Article 4: Do angels have an irascible appetite and a concupiscible appetite? . . . . .	449
<b>Question 60: An Angel's Love or Affection.</b> . . . . .	452
Article 1: Do angels have natural love or affection? . . . . .	452
Article 2: Do angels have elective love? . . . . .	453
Article 3: Does an angel love himself with both natural love and elective love? . . . . .	454
Article 4: Does an angel love another angel as himself with natural love? . . . . .	455
Article 5: Does an angel love God more than himself with natural love? . . . . .	456
<b>Question 61: The Production of Angels with Their Natural <i>Esse</i>.</b> . . . . .	459
Article 1: Do angels have a cause of their <i>esse</i> ? . . . . .	459
Article 2: Were the angels produced by God from eternity? . . . . .	460
Article 3: Were the angels created before the corporeal world? . . . . .	460
Article 4: Were the angels created in the empyrean heaven? . . . . .	461
<b>Question 62: The Perfection of Angels in the <i>Esse</i> of Grace and Glory.</b> . . . . .	463
Article 1: Were the angels created in beatitude? . . . . .	463
Article 2: Did an angel need grace in order to turn toward God? . . . . .	464
Article 3: Were the angels created in grace? . . . . .	466
Article 4: Did a beatified angel merit his own beatitude? . . . . .	467
Article 5: Did an angel have beatitude immediately after just one meritorious act? . . . . .	468
Article 6: Do angels receive grace and glory in a quantity proportionate to their natural gifts? . . . . .	469
Article 7: Do natural cognition and love remain in the beatified angels? . . . . .	470
Article 8: Is a beatified angel able to sin? . . . . .	471
Article 9: Are the beatified angels able to make progress in beatitude? . . . . .	472

<b>Question 63: The Sinful Wickedness of the Angels.</b> . . . . .	474
Article 1: Can the evil of sin exist in angels? . . . . .	474
Article 2: Are pride and envy the only sins that can exist in angels? . . . . .	475
Article 3: Did the devil desire to be like God? . . . . .	477
Article 4: Are any demons naturally bad? . . . . .	478
Article 5: Was the devil bad through the fault of his own will at the very first instant of his creation? . . . . .	479
Article 6: Was there an interval between the creation of an angel and his fall? . . . . .	481
Article 7: Was the highest angel among those who sinned the highest among all the angels? . . . . .	482
Article 8: Was the sin of the first angel who sinned a cause of the sin of the others? . . . . .	483
Article 9: Did as many angels sin as remained faithful? . . . . .	485
 <b>Question 64: The Punishment of the Demons.</b> . . . . .	 486
Article 1: Is a demon's intellect darkened by being deprived of the cognition of all truth? . . . . .	486
Article 2: Is the will of the demons obstinate in evil? . . . . .	488
Article 3: Is there sorrow in the demons? . . . . .	490
Article 4: Is the air the demons' place of punishment? . . . . .	491
 <b>Question 65: The Work of Creating Corporeal Creatures</b> . . . . .	 493
Article 1: Are corporeal creatures from God? . . . . .	493
Article 2: Were corporeal creatures made for the sake of God's goodness? . . . . .	494
Article 3: Were corporeal creatures produced by God through the mediation of angels? . . . . .	496
Article 4: Are the forms of bodies derived from angels? . . . . .	497
 <b>Question 66: The Order of Creation with respect to Division.</b> . . . . .	 499
Article 1: Was matter unformed temporally prior its being formed? . . . . .	499
Article 2: Is there a single type of unformed matter for all corporeal things? . . . . .	501
Article 3: Was the empyrean heaven co-created with unformed matter? . . . . .	503
Article 4: Was time co-created with unformed matter? . . . . .	505
 <b>Question 67: The Work of Division: The First Day.</b> . . . . .	 507
Article 1: Is 'light' properly predicated in the case of spiritual things? . . . . .	507
Article 2: Is light a body? . . . . .	508
Article 3: Is light a quality? . . . . .	509
Article 4: Was it appropriate for the production of light to be put on the first day? . . . . .	510
 <b>Question 68: The Work of the Second Day.</b> . . . . .	 513
Article 1: Was the firmament made on the second day? . . . . .	513
Article 2: Are there waters above the firmament? . . . . .	515
Article 3: Does the firmament divide waters from waters? . . . . .	517
Article 4: Is there just one heaven? . . . . .	518
 <b>Question 69: The Work of the Third Day.</b> . . . . .	 520
Article 1: Was the gathering together of the waters fittingly said to have been done on the third day? . . . . .	520
Article 2: Is it inappropriate that the production of plants is said to have been effected on the third day? . . . . .	522
 <b>Question 70: The Work of Adornment: The Fourth Day.</b> . . . . .	 524
Article 1: Should the [celestial] lights have been produced on the fourth day? . . . . .	524
Article 2: Is the reason for the production of the lights appropriately ascribed? . . . . .	526
Article 3: Are the celestial lights living beings? . . . . .	527

<b>Question 71: The Work of the Fifth Day.</b> .....	530
The Only Article: Is the Work of the Fifth Day Appropriately Described?.....	530
<b>Question 72: The Work of the Sixth Day.</b> .....	532
The Only Article: Is the Work of the Sixth Day Appropriately Described?.....	532
<b>Question 73: The Seventh Day</b> .....	534
Article 1: Should the completion of God’s works be ascribed to the seventh day?.....	534
Article 2: Did God rest from all His work on the seventh day?.....	535
Article 3: Do blessing and sanctification befit the seventh day?.....	536
<b>Question 74: All Seven Days in General</b> .....	538
Article 1: Are these days adequately enumerated?.....	538
Article 2: Are all the days a single day?.....	539
Article 3: Does Scripture use appropriate language to express the works of the six days?..	541
<b>Question 75: The Essence of the Human Soul</b> .....	544
Article 1: Is a soul a body?.....	544
Article 2: Is a human soul something subsistent?.....	545
Article 3: Are the souls of brute animals subsistent?.....	547
Article 4: Is the [human] soul the man?.....	548
Article 5: Is a [human] soul composed of matter and form?.....	549
Article 6: Is the human soul corruptible?.....	551
Article 7: Is a [human] soul the same in species as an angel?.....	553
<b>Question 76: The Union of the Soul with the Body</b> .....	555
Article 1: Is the intellective principle united to the body as its form?.....	555
Article 2: Is the intellective principle multiplied as the bodies are multiplied?.....	558
Article 3: Are there, in addition to the intellective soul, other souls in a man that differ from it in their essence, viz., a sentient soul and a nutritive soul?.....	562
Article 4: Is there in man any other form besides the intellective soul?.....	564
Article 5: Is it fitting for an intellective soul to be united to the sort of body in question?..	566
Article 6: Is the intellective soul united to the body through the mediation of certain accidental dispositions?.....	568
Article 7: Is the soul united to the animal body by the mediation of some other body?.....	569
Article 8: Does the soul exist as a whole in each part of the body?.....	571
<b>Question 77: The Powers of the Soul in General</b> .....	574
Article 1: Is the essence of the soul itself the soul’s power?.....	574
Article 2: Does the soul have more than one power?.....	576
Article 3: Are the powers distinguished from one another by their acts and objects?.....	577
Article 4: Is there any order among the powers of the soul?.....	579
Article 5: Are all the soul’s powers in the soul as in a subject?.....	580
Article 6: Do the powers of the soul flow from its essence?.....	581
Article 7: Does one power arise from another?.....	582
Article 8: Do all the powers of the soul remain in a soul that is separated from its body?....	583

<b>Question 78: The Specific Powers of the Soul</b> .....	585
Article 1: Are there five kinds of power that belong to the soul?.....	585
Article 2: Are the parts of the vegetative soul aptly enumerated as the nutritive, the augmentative and the generative?.....	587
Article 3: Are the five exterior sensory powers appropriately distinguished?.....	589
Article 4: Are the interior sensory powers appropriately distinguished?.....	591
<b>Question 79: The Intellective Powers</b> .....	595
Article 1: Is the intellect a power of the soul, or is it instead the soul's essence?.....	595
Article 2: Is the intellect a passive power?.....	596
Article 3: Is it appropriate to posit an active (or agent) intellect?.....	598
Article 4: Is the active intellect something that belongs to our soul?.....	599
Article 5: Is there a single active intellect for everyone?.....	601
Article 6: Does memory exist in the intellective part of the soul?.....	602
Article 7: Is intellective memory a power distinct from the intellect?.....	604
Article 8: Is reason a power distinct from intellect?.....	605
Article 9: Are higher reason and lower reason diverse powers?.....	607
Article 10: Is intellective understanding a power distinct from the intellect?.....	608
Article 11: Are speculative reason and practical reason diverse powers?.....	610
Article 12: Is synderesis a special power distinct from the others?.....	611
Article 13: Is conscience a power?.....	612
<b>Question 80: The Appetitive Powers in General</b> .....	614
Article 1: Is appetite a special power of the soul?.....	614
Article 2: Are the sentient appetite and the intellective appetite diverse powers?.....	615
<b>Question 81: The Sentient Appetite</b> .....	617
Article 1: Is sensuality a purely appetitive power?.....	617
Article 2: Is the sentient appetite divided into the irascible and the concupiscible as into diverse powers?.....	618
Article 3: Do the irascible and concupiscible powers obey reason?.....	619
<b>Question 82: The Will</b> .....	621
Article 1: Is there anything the will desires by necessity?.....	621
Article 2: Does the will will by necessity everything it wills?.....	622
Article 3: Is the will a higher power than the intellect?.....	623
Article 4: Does the will move the intellect?.....	625
Article 5: Should the irascible and the concupiscible be distinguished in the higher appetite, i.e., the will?.....	626
<b>Question 83: Free Choice</b> .....	629
Article 1: Is the intellect a power of the soul, or is it instead the soul's essence?.....	629
Article 2: Is free choice a power?.....	631
Article 3: Is free choice an appetitive power?.....	632
Article 4: Is free choice a power distinct from the will?.....	633

<b>Question 84: How the Conjoined Soul Understands Corporeal Things That are Below Itself. .</b>	635
Article 1: Does the soul have cognition of bodies through the intellect? . . . . .	635
Article 2: Does the soul have intellectual understanding of corporeal things through its own essence? . . . . .	637
Article 3: Does the soul have intellectual understanding of all things through species that it is naturally endowed with? . . . . .	639
Article 4: Do the intelligible species flow into the soul from separated forms? . . . . .	641
Article 5: Does the intellectual soul have cognition of material things in the eternal conceptions? . . . . .	643
Article 6: Is intellectual cognition taken from sensible things? . . . . .	644
Article 7: Can the intellect have actual intellectual understanding through the intelligible species it has within itself, without turning itself to phantasms? . . . . .	646
Article 8: Is the intellect's judgment impeded when the sensory power is inoperative? . . . .	648
<b>Question 85: The Mode and Order of Intellectual Understanding. . . . .</b>	650
Article 1: Does our intellect have intellectual understanding of corporeal and material things through abstraction from phantasms? . . . . .	650
Article 2: Are the intelligible species abstracted from the phantasms related to our intellect as that which is understood intellectually? . . . . .	653
Article 3: Is what is more universal prior in our intellectual cognition? . . . . .	655
Article 4: Can we have an intellectual understanding of many things at once? . . . . .	658
Article 5: Does our intellect engage in intellectual understanding by composing and dividing? . . . . .	659
Article 6: Is there falsity in the intellect? . . . . .	661
Article 7: Can someone understand one and the same thing better than someone else does? . . . . .	662
Article 8: Does our intellect have cognition of what is indivisible prior to what is divisible? . . . . .	663
<b>Question 86: What our Intellect Has Cognition of in Material Things. . . . .</b>	666
Article 1: Does our intellect have cognition of singulars? . . . . .	666
Article 2: Can our intellect have cognition of infinities? . . . . .	667
Article 3: Does our intellect have cognition of contingent things? . . . . .	668
Article 4: Does our intellect have cognition of future things? . . . . .	669
<b>Question 87: How our Intellect has Cognition of Itself and of What Exists within It. . . . .</b>	672
Article 1: Does the intellectual soul have cognition of itself through its own essence? . . . . .	672
Article 2: Does our intellect have cognition of the soul's habits through their essence? . . . . .	674
Article 3: Does the intellect have cognition of its own act? . . . . .	675
Article 4: Does the intellect have intellectual understanding of acts of the will? . . . . .	677
<b>Question 88: How the Human Soul Understands Things That are Above It. . . . .</b>	679
Article 1: Can the human soul, in the state of the present life, have intellectual understanding of immaterial substances through themselves? . . . . .	679
Article 2: Can our intellect arrive at an intellectual understanding of immaterial substances through its cognition of material things? . . . . .	682
Article 3: Is God the first thing that the human mind has cognition of? . . . . .	683

<b>Question 89: A Separated Soul's Cognition.</b> . . . . .	685
Article 1: Can a separated soul have intellective understanding of anything at all? . . . . .	685
Article 2: Does a separated soul have intellective understanding of separated substances? . . . . .	687
Article 3: Does a separated soul have cognition of all natural things? . . . . .	688
Article 4: Does a separated soul have cognition of singulars? . . . . .	689
Article 5: Does a habit of scientific knowledge acquired here remain in a separated soul? . . . . .	690
Article 6: Does an act of scientific knowledge acquired here remain in a separated soul? . . . . .	692
Article 7: Does spatial distance impede a separated soul's cognition? . . . . .	693
Article 8: Do separated souls have cognition of what is happening here? . . . . .	694
<b>Question 90: The Initial Production of Man with respect to His Soul.</b> . . . . .	696
Article 1: Is a [human] soul made, or is it part of God's substance? . . . . .	696
Article 2: Is a [human] soul brought into being through creation? . . . . .	697
Article 3: Is a rational soul produced directly by God, or is it produced through the mediation of angels? . . . . .	698
Article 4: Was the human soul produced before the human body? . . . . .	699
<b>Question 91: The Production of the First Man's Body.</b> . . . . .	701
Article 1: Was the first man's body made from the slime of the earth? . . . . .	701
Article 2: Was the human body produced directly by God? . . . . .	702
Article 3: Is the human body appropriately constituted? . . . . .	704
Article 4: Is the production of the human body appropriately described in Scripture? . . . . .	706
<b>Question 92: The Production of the Woman.</b> . . . . .	708
Article 1: Was it fitting for the woman to be produced in the initial production of things? . . . . .	708
Article 2: Was it fitting for the woman to be made from the man? . . . . .	709
Article 3: Was it fitting for the woman to be formed from the man's rib? . . . . .	710
Article 4: Was the woman formed directly by God? . . . . .	712
<b>Question 93: The End or Terminus of the Production of Man.</b> . . . . .	713
Article 1: Does the image of God exist in man? . . . . .	713
Article 2: Is the image of God found in non-rational creatures? . . . . .	714
Article 3: Is an angel made to the image of God to a greater degree than a man is? . . . . .	715
Article 4: Is the image of God found in every man? . . . . .	716
Article 5: Does the image of God in man bear upon the Trinity of divine Persons? . . . . .	717
Article 6: Does the image of God exist in man only because of his mind? . . . . .	719
Article 7: Is the image of God found in the soul's acts? . . . . .	721
Article 8: Does the image of the divine Trinity exist in the soul only in relation to the object which is God? . . . . .	723
Article 9: Is it appropriate to distinguish the likeness [of God] from the image [of God]? . . . . .	725
<b>Question 94: The State of the First Man with respect to His Intellect.</b> . . . . .	727
Article 1: Did the first man see God through His essence? . . . . .	727
Article 2: Did Adam in the state of innocence see angels through their essence? . . . . .	728
Article 3: Did the first man have scientific knowledge of all things? . . . . .	730
Article 4: Was man in his initial state able to be deceived? . . . . .	731

<b>Question 95: Things Relevant to the First Man's Will, viz., Grace and Justice.</b> . . . . .	734
Article 1: Was the first man created in grace? . . . . .	734
Article 2: Did the passions of the soul exist in the first man? . . . . .	735
Article 3: Did Adam have all the virtues? . . . . .	736
Article 4: Were the first man's works less efficacious for meriting than our works are? . . . . .	738
<b>Question 96: The Sort of Dominion That Belonged to the First Man in the State of Innocence.</b> . . . . .	740
Article 1: Did Adam in the state of innocence have dominion over the animals? . . . . .	740
Article 2: Did man have dominion over all other creatures? . . . . .	741
Article 3: Would all men have been equal in the state of innocence? . . . . .	742
Article 4: Did one man have dominion over another in the state of innocence? . . . . .	743
<b>Question 97: The Conservation of the Individual in the First State.</b> . . . . .	745
Article 1: Was man immortal in the state of innocence? . . . . .	745
Article 2: Was man passible in the state of innocence? . . . . .	746
Article 3: Did man need food in the state of innocence? . . . . .	747
Article 4: Could the tree of life have been a cause of immortality? . . . . .	748
<b>Question 98: The Conservation of the Species in the Initial State: Generation.</b> . . . . .	750
Article 1: Would there have been generation in the state of innocence? . . . . .	750
Article 2: Would there have been generation through sexual union in the state of innocence? . . . . .	751
<b>Question 99: The Condition of the Generated Offspring with respect to their Body.</b> . . . . .	754
Article 1: In the state of innocence, would children have had full power over the movement of their limbs immediately upon birth? . . . . .	754
Article 2: In the state of innocence would any females have been born? . . . . .	755
<b>Question 100: The Condition of the Generated Offspring with respect to Justice.</b> . . . . .	757
Article 1: Would men have been born with justice? . . . . .	757
Article 2: In the state of innocence, would the children have been born confirmed in justice? . . . . .	758
<b>Question 101: The Condition of the Generated Offspring with respect to Knowledge.</b> . . . . .	760
Article 1: In the state of innocence, would the children have been born perfect in knowledge? . . . . .	760
Article 2: In the state of innocence, would the children have had the full use of reason immediately upon birth? . . . . .	761
<b>Question 102: Man's Location, i.e., Paradise.</b> . . . . .	762
Article 1: Is paradise a corporeal place? . . . . .	762
Article 2: Was paradise a place fit for human habitation? . . . . .	763
Article 3: Was man put into paradise to work in it and to guard it? . . . . .	765
Article 4: Was man made in paradise? . . . . .	766

<b>Question 103: The Governance of Things in General.</b> .....	767
Article 1: Is the world governed by anyone?.....	767
Article 2: Is the end of the governance of the world something that exists outside the world?.....	768
Article 3: Is the world governed by a single being?.....	769
Article 4: Is there just a single effect of the governance of the world, or are there many effects?.....	770
Article 5: Are all things subject to God's governance?.....	771
Article 6: Are all things governed directly by God?.....	772
Article 7: Is it possible for anything to occur outside the order of God's governance?.....	774
Article 8: Can anything resist the order of God's governance?.....	775
<b>Question 104: The Specific Effects of Divine Governance</b> .....	776
Article 1: Do creatures need to be conserved in being by God?.....	776
Article 2: Does God directly conserve every creature?.....	778
Article 3: Is God able reduce a thing to nothingness?.....	780
Article 4: Is anything in fact reduced to nothingness?.....	781
<b>Question 105: How God Moves Creatures.</b> .....	783
Article 1: Can God directly change matter with respect to its form?.....	783
Article 2: Can God directly move a body?.....	784
Article 3: Does God directly move a created intellect?.....	785
Article 4: Can God move a created will?.....	786
Article 5: Does God act in everything that is acting?.....	787
Article 6: Can God do anything outside of the order instilled in things?.....	789
Article 7: Is everything that God does outside of the natural order of things a miracle?.....	790
Article 8: Is one miracle greater than another?.....	791
<b>Question 106: How One Angel Illuminates Another</b> .....	793
Article 1: Does one angel illuminate another?.....	793
Article 2: Can one angel move the will of another?.....	794
Article 3: Can a lower angel illuminate a higher angel?.....	796
Article 4: Does a higher angel illuminate a lower angel about everything he knows?.....	797
<b>Question 107: The Speech of Angels</b> .....	799
Article 1: Does one angel speak to another?.....	799
Article 2: Does a lower angel speak to a higher angel?.....	800
Article 3: Does an angel speak to God?.....	801
Article 4: Does spatial distance play a role in angelic speech?.....	802
Article 5: Do all the angels know what one angel says to another angel?.....	803
<b>Question 108: The Arrangement of Angels according to Hierarchies and Orders.</b> .....	804
Article 1: Do all angels belong to a single hierarchy?.....	804
Article 2: Is there more than one order in a single hierarchy?.....	805
Article 3: Does more than one angel belong to a single order?.....	806
Article 4: Does the distinction among the hierarchies and orders of angels stem from nature?.....	808
Article 5: Are the orders of angels appropriately named?.....	808
Article 6: Are the grades of the orders appropriately assigned?.....	812
Article 7: Will the orders of angels remain after judgment day?.....	814
Article 8: Are men assumed into the angelic orders?.....	815

<b>Question 109: The Ordering of the Bad Angels.</b> . . . . .	817
Article 1: Are there orders among the demons? . . . . .	817
Article 2: Is there an order of precedence among the demons? . . . . .	818
Article 3: Is there illumination among the demons? . . . . .	819
Article 4: Do the good angels preside over the bad angels? . . . . .	819
<b>Question 110: How Angels Preside over Corporeal Creatures.</b> . . . . .	820
Article 1: Are corporeal creatures administered by the angels? . . . . .	820
Article 2: Is corporeal matter obedient to the angels at will? . . . . .	821
Article 3: Do bodies obey angels with respect to local motion? . . . . .	823
Article 4: Can angels work miracles? . . . . .	824
<b>Question 111: The Action of Angels on Men.</b> . . . . .	826
Article 1: Can an angel illuminate a man? . . . . .	826
Article 2: Is an angel able to affect a man's will? . . . . .	827
Article 3: Is an angel able to affect a man's imagination? . . . . .	828
Article 4: Can an angel affect the human senses? . . . . .	830
<b>Question 112: The Mission of the Angels.</b> . . . . .	831
Article 1: Are angels sent on mission to minister? . . . . .	831
Article 2: Are all the angels sent on mission to minister? . . . . .	832
Article 3: Do the angels who are sent on mission also stand before God? . . . . .	834
Article 4: Are all the angels of the second hierarchy sent on mission? . . . . .	835
<b>Question 113: The Guardianship of the Good Angels.</b> . . . . .	837
Article 1: Are men guarded by angels? . . . . .	837
Article 2: Are individual men guarded by individual angels? . . . . .	838
Article 3: Is it just angels of the lowest order who guard men? . . . . .	839
Article 4: Does every man have an angel assigned to guard him? . . . . .	840
Article 5: Is an angel assigned to guard a man from his birth? . . . . .	841
Article 6: Does a guardian angel ever desert the man whom he is assigned to guard? . . . . .	842
Article 7: Do angels grieve over the evils of those whom they are guarding? . . . . .	843
Article 8: Can there be conflict or discord among the angels? . . . . .	844
<b>Question 114: The Attacks of the Bad Angels.</b> . . . . .	846
Article 1: Are men attacked by demons? . . . . .	846
Article 2: Is testing, i.e., tempting, peculiar to the devil? . . . . .	847
Article 3: Do all sins stem from the temptations of the devil? . . . . .	848
Article 4: Can demons seduce men by means of genuine miracles? . . . . .	849
Article 5: Is a demon who is conquered by someone restrained for that reason from further attacks? . . . . .	850

<b>Question 115: The Action of a Corporeal Creature.</b> .....	852
Article 1: Are there active bodies?.....	852
Article 2: Are there any seminal natures [or ideas] in corporeal matter?.....	854
Article 3: Are the celestial bodies a cause of what is effected here below in lower bodies?..	856
Article 4: Are the celestial bodies a cause of human acts?.....	857
Article 5: Can the celestial bodies have an effect on the demons themselves?.....	858
Article 6: Do the celestial bodies impose necessity on the things that are subject to their action?.....	860
 <b>Question 116: Fate.</b> .....	 862
Article 1: Is there such a thing as fate?.....	862
Article 2: Does fate exist in created things?.....	863
Article 3: Is fate unchangeable?.....	864
Article 4: Are all things subject to fate?.....	865
 <b>Question 117: Things Relevant to Human Action.</b> .....	 867
Article 1: Can one man teach another?.....	867
Article 2: Can men teach angels?.....	869
Article 3: Can a man affect corporeal matter through the power of his soul?.....	871
Article 4: Can a separated soul affect bodies at least with respect to place?.....	872
 <b>Question 118: The Descent of Man from Man with respect to the Soul.</b> .....	 873
Article 1: Is the sentient soul passed down with the semen, or does it exist through being created by God?.....	873
Article 2: Is the intellective soul caused by the semen?.....	875
Article 3: Were all human souls created together at the beginning of the world?.....	877
 <b>Question 119: The Propagation of Man with respect to the Body.</b> .....	 880
Article 1: Does anything of the food change into the very reality of human nature?.....	880
Article 2: Does the semen come from what is left over in the food?.....	884

## Table of Contents: Part 1-2

<b>PROLOGUE TO PART 1-2</b> .....	1
<b>Question 1: Man's Ultimate End</b> .....	1
Article 1: Does a man act for the sake of an end? .....	1
Article 2: Is acting for the sake of an end peculiar to a rational nature? .....	2
Article 3: Do human acts take their species from their end? .....	3
Article 4: Is there some ultimate end of a human life, or is there an infinite procession of ends? .....	5
Article 5: Can one man's will be simultaneously directed to many things as ultimate ends? ...	6
Article 6: Is everything a man wills such that he wills it for the sake of his ultimate end? ...	7
Article 7: Is there a single ultimate end for all men?.....	8
Article 8: Do all other things share in man's ultimate end? .....	9
<b>Question 2: The Things That Man's Beatitude Lies In</b> .....	10
Article 1: Does man's beatitude lie in riches? .....	10
Article 2: Does man's good lie in honors? .....	11
Article 3: Does man's beatitude lie in glory or fame? .....	12
Article 4: Does man's beatitude lie in power? .....	13
Article 5: Does man's beatitude lie in any bodily good? .....	14
Article 6: Does man's beatitude lie in delight or pleasure? .....	15
Article 7: Does man's beatitude lie in a good of the soul?.....	17
Article 8: Does man's beatitude lie in a created good?.....	18
<b>Question 3: What Beatitude Is</b> .....	20
Article 1: Is beatitude something uncreated? .....	20
Article 2: Is beatitude an operation [i.e., an action]? .....	21
Article 3: Does beatitude consist in an operation of the sentient part of the soul or only in an operation of the intellective part?? .....	22
Article 4: Does beatitude consist in an act of the will? .....	23
Article 5: Does beatitude consist in an operation of the speculative intellective or of the practical intellect? .....	25
Article 6: Does man's beatitude consist in the sort of thinking that belongs to the speculative sciences? .....	26
Article 7: Does man's beatitude consist in the cognition of the separated substances, i.e., the angels?.....	28
Article 8: Does man's beatitude lie in his seeing God's very essence? .....	29
<b>Question 4: What is Required for Beatitude</b> .....	31
Article 1: Is delight required for beatitude? .....	31
Article 2: Is the act of delighting more central to beatitude than the act of seeing? .....	32
Article 3: Is comprehending required for beatitude? .....	33
Article 4: Is rectitude of will required for beatitude? .....	34
Article 5: Is the body required for beatitude? .....	35
Article 6: Is the perfection of the body required for beatitude? .....	37
Article 7: Are exterior goods required for beatitude? .....	38
Article 8: Are friends necessary for beatitude?.....	39

<b>Question 5: The Attainment of Beatitude</b> .....	41
Article 1: Can a man acquire beatitude? .....	41
Article 2: Can one man be more blessed than another? .....	42
Article 3: Can beatitude be had in this life? .....	43
Article 4: Can beatitude be lost? .....	44
Article 5: Is a man able to attain beatitude by his own natural powers? .....	45
Article 6: Can a man be made blessed through the action of a higher creature, viz., an angel? ..	47
Article 7: Are any human works required in order to obtain beatitude from God?.....	48
Article 8: Does everyone desire beatitude?.....	49
<b>Question 6: The Voluntary and the Involuntary</b> .....	51
Article 1: Is voluntariness found in human acts? .....	51
Article 2: Does voluntariness exist in brute animals? .....	53
Article 3: Can there be voluntariness in the absence of an act? .....	54
Article 4: Can violence be done to the will? .....	55
Article 5: Is violence a cause of involuntariness? .....	56
Article 6: Is fear a cause of involuntariness absolutely speaking? .....	57
Article 7: Is concupiscence a cause of involuntariness?.....	59
Article 8: Is ignorance a cause of involuntariness?.....	60
<b>Question 7: The Circumstances of Human Acts</b> .....	62
Article 1: Is a circumstance an accident of a human act? .....	62
Article 2: Should the theologian consider the circumstances of human acts? .....	63
Article 3: Are the circumstances correctly enumerated in Ethics 3? .....	64
Article 4: Is it the case, as Ethics 3 asserts, that the principal circumstances are <i>why?</i> and the things in which the operation exists? .....	65
<b>Question 8: The Objects of the Will</b> .....	67
Article 1: Is the will directed only toward the good? .....	67
Article 2: Is will (or willing) directed only toward the end or also toward the means to the end? .....	68
Article 3: Is it by the very same act that the will is directed both toward the end and toward the means to the end?? .....	70
<b>Question 9: What Moves the Will</b> .....	72
Article 1: Is the will moved by the intellect? .....	72
Article 2: Can the will be moved by the sentient appetite? .....	73
Article 3: Does the will move itself? .....	74
Article 4: Is the will moved by anything exterior to it? .....	75
Article 5: Is the human will moved by any celestial body? .....	76
Article 6: Is the will moved by God alone as an exterior principle? .....	77
<b>Question 10: The Modality with Which the Will is Moved</b> .....	79
Article 1: Is the will moved naturally toward anything? .....	79
Article 2: Is the will moved with necessity by its object? .....	80
Article 3: Is the will moved with necessity by the passions of the lower appetite? .....	81
Article 4: Is the will moved with necessity by God? .....	83

<b>Question 11: Enjoying as an Act of the Will</b> . . . . .	84
Article 1: Does the act of enjoying belong only to an appetitive power? . . . . .	84
Article 2: Does the act of enjoying belong only to men? . . . . .	85
Article 3: Is the act of enjoying directed only toward the ultimate end? . . . . .	86
Article 4: Is the act of enjoying directed only toward an end that is possessed? . . . . .	87
<b>Question 12: Intending</b> . . . . .	89
Article 1: Is intending an act of the intellect or an act of the will? . . . . .	89
Article 2: Is intending directed only toward the ultimate end? . . . . .	90
Article 3: Can someone intend more than one thing at the same time? . . . . .	90
Article 4: Is intending an end one and the same movement as intending the means to that end? . . . . .	92
Article 5: Do brute animals intend an end? . . . . .	93
<b>Question 13: Choosing</b> . . . . .	94
Article 1: Is choosing an act of the will or an act of reason? . . . . .	94
Article 2: Does the act of choosing belong to brute animals? . . . . .	95
Article 3: Is an act of choosing directed only toward the means to an end? . . . . .	96
Article 4: Is it only with respect to human acts that there is an act of choosing? . . . . .	97
Article 5: Is an act of choosing directed only toward what is possible? . . . . .	98
Article 6: Does a man choose with necessity? . . . . .	99
<b>Question 14: Deliberating or Taking Counsel, Which Precedes Choosing</b> . . . . .	101
Article 1: Does deliberating or taking counsel count as inquiry? . . . . .	101
Article 2: Does deliberating concern the end or just the means to an end? . . . . .	102
Article 3: Does deliberating or taking counsel concern only things that are done by us? . . . . .	103
Article 4: Is there deliberating or taking counsel with respect to everything that is done by us? . . . . .	104
Article 5: Does deliberating proceed by way of analysis? . . . . .	105
Article 6: Does deliberation's inquiry go on ad infinitum? . . . . .	105
<b>Question 15: Consenting, Which is an Act of The Will concerning the Means to an End</b> . . . . .	107
Article 1: Does consenting belong only to the apprehensive part of the soul? . . . . .	107
Article 2: Does consenting belong to brute animals? . . . . .	108
Article 3: Does consenting concern the end? . . . . .	108
Article 4: Does consenting to an act always belong to higher reason? . . . . .	110
<b>Question 16: Using, Which is an Act of the Will concerning the Means to an End</b> . . . . .	111
Article 1: Is using an act of the will? . . . . .	111
Article 2: Does using belong to brute animals? . . . . .	112
Article 3: Can using concern even the ultimate end? . . . . .	112
Article 4: Does using precede choosing? . . . . .	113
<b>Question 17: Acts Commanded by the Will</b> . . . . .	115
Article 1: Is commanding an act of the will or an act of reason? . . . . .	115
Article 2: Does commanding belong to brute animals? . . . . .	116
Article 3: Does using precede commanding? . . . . .	117
Article 4: Is the commanded act the same act as the very act of commanding? . . . . .	118
Article 5: Are acts of the will commanded? . . . . .	119
Article 6: Are acts of reason commanded? . . . . .	120
Article 7: Are acts of the sentient appetite commanded? . . . . .	121
Article 8: Are acts of the vegetative soul subject to reason's command? . . . . .	122
Article 9: Do the members of the body obey reason in their acts? . . . . .	123

<b>Question 18: The Goodness and Badness of Human Acts in General</b> .....	125
Article 1: Is every human action good, or are some actions bad? .....	125
Article 2: Does an action have goodness or badness from its object? .....	126
Article 3: Does an action have goodness or badness from its circumstances? .....	127
Article 4: Does a human act have goodness or badness from its end? .....	128
Article 5: Do moral acts differ in species because of their goodness and badness? .....	129
Article 6: Do the goodness and badness derived from the end make for diverse species among acts? .....	130
Article 7: Is the species of goodness derived from the end contained under the species of goodness derived from the object in the way that a species is contained under a genus? .....	131
Article 8: Is any act indifferent by its species? .....	133
Article 9: Is any act indifferent as an individual? .....	134
Article 10: Can a circumstance constitute a species of good or bad act? .....	135
Article 11: Does every circumstance relevant to goodness and badness give an act its species? .....	136
 <b>Question 19: The Goodness and Badness of the Interior Act of Willing</b> .....	 138
Article 1: Does the goodness of an act of willing depend on its object? .....	138
Article 2: Does the goodness of an act of willing depend solely on its object? .....	139
Article 3: Does the goodness of an act of willing depend on reason? .....	140
Article 4: Does the goodness of a human act of willing depend on the eternal law? .....	141
Article 5: Is an act of willing bad if it disagrees with reason when reason is mistaken? ....	141
Article 6: Is an act of willing good if it agrees with reason when reason is mistaken? ....	143
Article 7: Does the goodness of an act of willing depend on the act of intending the end? ..	145
Article 8: Does the quantity or amount of goodness in an act of willing depend on the amount of goodness in the act of intending? .....	146
Article 9: Does the goodness of a human will or act of willing depend on its being conformed to God's will? .....	147
Article 10: Should a human act of willing always be conformed to God's will with respect to what is willed? .....	148
 <b>Question 20: The Goodness and Badness of the Exterior Act</b> .....	 151
Article 1: Do goodness and badness exist in the exterior act before they exist in the act of willing? .....	151
Article 2: Do the entire goodness and badness of exterior acts depend on the act of willing? ..	152
Article 3: Is the goodness or badness of the interior act of willing the same as the goodness or badness of the exterior act? .....	153
Article 4: Does the exterior act add any goodness or badness beyond that of the interior act? ..	154
Article 5: Do subsequent events add to an act's goodness or badness? .....	155
Article 6: Can a single act be both good and bad? .....	157
 <b>Question 21: What Accrues to Human Acts by Reason of their Goodness or Badness</b> .....	 158
Article 1: Does a human act have the character of being upright or deviant insofar as it is good or bad? .....	158
Article 2: Does a human act have the character of being praiseworthy or blameworthy from the fact that it is good or bad? .....	159
Article 3: Does a human act have the character of being meritorious or demeritorious because of its goodness or badness? .....	161
Article 4: Does a good or bad human act have the character of being meritorious or demeritorious in relation to God? .....	162

<b>Question 22: The Subject of the Passions of the Soul</b> .....	164
Article 1: Are there passions in the soul? .....	164
Article 2: Are the passions in the apprehensive part of the soul more than in the appetitive part? .....	165
Article 3: Are the passions in the sentient appetite more than in the intellective appetite? ..	167
 <b>Question 23: The Differences among the Passions</b> .....	168
Article 1: Do the same passions exist in the irascible and concupiscible powers? .....	168
Article 2: Is the contrariety among the passions of the irascible power based only on the contrariety between the good and the bad? .....	169
Article 3: Does every passion of the soul have a contrary? .....	171
Article 4: Is it possible for passions that differ in species and are not contrary to one another to exist in the same power? .....	171
 <b>Question 24: Goodness and Badness in the Passions of the Soul</b> .....	174
Article 1: Is any passion morally good or morally bad? .....	174
Article 2: Is every passion of the soul morally bad? .....	175
Article 3: Does a passion always diminish a moral act's goodness? .....	176
Article 4: Is any passion of the soul morally good or bad by its species? .....	177
 <b>Question 25: The Ordering of the Passions with respect to One Another</b> .....	179
Article 1: Are the passions of the irascible power prior to the passions of the concupiscible power? .....	179
Article 2: Is love the first among the passions of the concupiscible power? .....	180
Article 3: Is hope the first among the passions of the irascible power? .....	181
Article 4: Are the four principal passions joy and sadness, hope and fear? .....	183
 <b>Question 26: Love</b> .....	185
Article 1: Does love exist in the concupiscible power? .....	185
Article 2: Is love a passion? .....	186
Article 3: Is love ( <i>amor</i> ) the same as elective love ( <i>dilectio</i> )? .....	187
Article 4: Is love appropriately divided into love of friendship and love of concupiscence? .	188
 <b>Question 27: The Causes of Love</b> .....	190
Article 1: Is the good the only cause of love? .....	190
Article 2: Is cognition a cause of love? .....	191
Article 3: Is likeness a cause of love? .....	192
Article 4: Can any of the other passions be a cause of love? .....	193
 <b>Question 28: The Effects of Love</b> .....	194
Article 1: Is union an effect of love? .....	194
Article 2: Is love a cause of mutual indwelling in the sense that the lover exists in what is loved and vice versa? .....	195
Article 3: Is ecstasy an effect of love? .....	196
Article 4: Is jealousy an effect of love? .....	197
Article 5: Is love a harmful passion? .....	198
Article 6: Does a lover do everything out of love? .....	200

<b>Question 29: Hatred</b> .....	201
Article 1: Is the cause and object of hatred the bad ? .....	201
Article 2: Is love a cause of hatred? .....	202
Article 3: Is hatred stronger than love? .....	203
Article 4: Can someone hate himself? .....	204
Article 5: Can someone hate the truth? .....	205
Article 6: Can there be hatred of something in general? .....	206
<b>Question 30: Concupiscence</b> .....	208
Article 1: Does concupiscence or sentient desire exist just in the sentient appetite? .....	208
Article 2: Is concupiscence a specific passion of the concupiscible power? .....	209
Article 3: Are some instances of concupiscence natural and others non-natural? .....	210
Article 4: Is concupiscence infinite or unlimited? .....	211
<b>Question 31: Pleasure in Itself</b> .....	213
Article 1: Is pleasure a passion? .....	213
Article 2: Does pleasure exist in time? .....	214
Article 3: Is joy altogether the same thing as pleasure? .....	215
Article 4: Does pleasure exist in the intellective appetite? .....	216
Article 5: Are corporeal and sensible pleasures greater than intelligible spiritual pleasures? ..	217
Article 6: Are the pleasures associated with touch greater than the pleasures associated with the other senses? .....	219
Article 7: Are any pleasures non-natural? .....	220
Article 8: Is one pleasure contrary to another? .....	221
<b>Question 32: The Causes of Pleasure</b> .....	222
Article 1: Is operation a cause of pleasure? .....	222
Article 2: Is movement a cause of pleasure? .....	223
Article 3: Are hope and memory causes of pleasure? .....	224
Article 4: Is sadness a cause of pleasure? .....	225
Article 5: Are the actions of others a cause of pleasure for us? .....	226
Article 6: Is doing good for another a cause of pleasure? .....	227
Article 7: Is likeness a cause of pleasure? .....	228
Article 8: Is wonder a cause of pleasure? .....	229
<b>Question 33: The Effects of Pleasure</b> .....	231
Article 1: Is being widened an effect of pleasure? .....	231
Article 2: Is pleasure a cause of a desire for pleasure itself? .....	232
Article 3: Does pleasure impede the use of reason? .....	233
Article 4: Does pleasure perfect an operation? .....	234
<b>Question 34: The Goodness and Badness of Pleasures</b> .....	236
Article 1: Is every pleasure bad? .....	236
Article 2: Is every pleasure good? .....	237
Article 3: Is any pleasure the best thing? .....	238
Article 4: Is pleasure the measure or rule of moral goodness and badness? .....	240

<b>Question 35: Pain or Sadness in Itself</b> .....	241
Article 1: Is pain a passion of the soul? .....	241
Article 2: Is sadness or sorrow the same as pain? .....	242
Article 3: Is sadness or pain contrary to pleasure? .....	243
Article 4: Is every instance of sadness contrary to every instance of pleasure? .....	244
Article 5: Is there a sadness that is contrary to the pleasure of contemplation? .....	245
Article 6: Is sadness to be avoided more than pleasure is to be desired? .....	247
Article 7: Is exterior pain greater than the interior pain of the heart?.....	249
Article 8: Is Damascene's division of sadness into four species correct?.....	250
 <b>Question 36: The Causes of Sadness or Pain</b> .....	 253
Article 1: Is it a lost good that is a cause of pain rather than a conjoined evil? .....	253
Article 2: Is concupiscence a cause of pain or sadness? .....	254
Article 3: Is a desire for oneness a cause of pain? .....	255
Article 4: Should a greater power be posited as a cause of pain? .....	256
 <b>Question 37: The Effects of Pain or Sadness</b> .....	 258
Article 1: Does pain remove the ability to learn something new? .....	258
Article 2: Is the mind's being weighed down an effect of sadness? .....	259
Article 3: Does sadness impede every operation? .....	260
Article 4: Is it sadness that inflicts the most harm on the body? .....	261
 <b>Question 38: The Remedies for Pain or Sadness</b> .....	 263
Article 1: Is pain or sadness lessened by every instance of pleasure ? .....	263
Article 2: Does weeping lessen sadness? .....	264
Article 3: Does the pain of a compassionate friend lessen sadness? .....	265
Article 4: Does contemplating the truth lessen pain? .....	265
Article 5: Do sleeping and bathing lessen sadness? .....	266
 <b>Question 39: The Goodness and Badness of Sadness or Pain</b> .....	 268
Article 1: Is every instance of sadness bad? .....	268
Article 2: Does sadness have the character of an upright good? .....	269
Article 3: Can sadness be a useful good? .....	270
Article 4: Is sadness the greatest evil? .....	271
 <b>Question 40: Hope and Despair</b> .....	 273
Article 1: Is hope the same thing as desire or avid desire? .....	273
Article 2: Does hope belong to the cognitive power? .....	274
Article 3: Does hope exist in brute animals? .....	275
Article 4: Is despair contrary to hope? .....	276
Article 5: Is experience a cause of hope? .....	277
Article 6: Are youthfulness and inebriation causes of hope? .....	278
Article 7: Is hope a cause of love?.....	279
Article 8: Does hope facilitate action?.....	279
 <b>Question 41: Fear in Itself</b> .....	 281
Article 1: Is fear a passion of the soul? .....	281
Article 2: Is fear a specific passion or a generic passion? .....	282
Article 3: Is there such a thing as natural fear? .....	283
Article 4: Does Damascene correctly assign the species of fear? .....	284

<b>Question 42: The Objects of Fear</b> .....	286
Article 1: Is the object of fear something good or something bad? .....	286
Article 2: Is there fear of evils of nature? .....	287
Article 3: Is there fear of evils of sin? .....	288
Article 4: Can fear be feared? .....	289
Article 5: Are unfamiliar and sudden things more to be feared? .....	290
Article 6: Are evils for which there is no remedy more to be feared? .....	291
<b>Question 43: The Causes of Fear</b> .....	292
Article 1: Is love a cause of fear? .....	292
Article 2: Is weakness a cause of fear? .....	293
<b>Question 44: The Effects of Fear</b> .....	295
Article 1: Does fear make one to be drawn inward? .....	295
Article 2: Does fear make one deliberative? .....	296
Article 3: Is quivering an effect of fear? .....	297
Article 4: Does fear impede an operation? .....	298
<b>Question 45: Daring</b> .....	300
Article 1: Is daring contrary to fear? .....	300
Article 2: Does daring follow upon hope? .....	300
Article 3: Is some defect a cause of daring? .....	302
Article 4: Are those who are daring more eager at the beginning than in the midst of the dangers themselves? .....	303
<b>Question 46: Anger in Itself</b> .....	305
Article 1: Is anger a specific passion? .....	305
Article 2: Is the object of anger something bad? .....	306
Article 3: Does anger exist in the concupiscible part of the soul? .....	307
Article 4: Does anger involve an act of reason? .....	308
Article 5: Is anger more natural than concupiscence? .....	309
Article 6: Is anger more grave than hatred? .....	310
Article 7: Is anger directed only toward individuals with respect to whom there is justice? ..	312
Article 8: Does Damascene correctly enumerate the species of anger? .....	313
<b>Question 47: The Causes of Anger, and its Remedies</b> .....	315
Article 1: Is it always because of something done to himself that someone gets angry? ....	315
Article 2: Is disdain or contempt the only moving cause of anger? .....	316
Article 3: Is an individual's excellence a cause of his getting angry more easily? .....	317
Article 4: Is an individual's defectiveness a cause of his being such that we more easily get angry with him? .....	318
<b>Question 48: The Effects of Anger</b> .....	320
Article 1: Is anger a cause of pleasure? .....	320
Article 2: Is fervor an effect especially of anger? .....	321
Article 3: Does anger impede reason? .....	322
Article 4: Does anger cause speechlessness? .....	323

<b>Question 49: The Substance of Habits</b> .....	325
Article 1: Is a habit a quality? .....	325
Article 2: Is <i>habit</i> a determinate species of quality? .....	326
Article 3: Does <i>habit</i> imply an ordering toward an act? .....	329
Article 4: Is it necessary for there to be habits? .....	330
<b>Question 50: The Subject of Habits</b> .....	332
Article 1: Are there any habits in the body? .....	332
Article 2: Are habits in the soul with respect to its essence rather than with respect to its power? .....	333
Article 3: Can there be a habit in the powers of the sentient part of the soul? .....	334
Article 4: Are there any habits in the intellect? .....	336
Article 5: Are there any habits in the will? .....	337
Article 6: Are there habits in angels? .....	338
<b>Question 51: The Causes of Habits</b> .....	340
Article 1: Are there any habits from nature ? .....	340
Article 2: Can a habit be caused by an act? .....	342
Article 3: Can a habit be generated by just a single act? .....	343
Article 4: Are any habits infused into men by God? .....	344
<b>Question 52: The Growth of Habits</b> .....	345
Article 1: Can habits grow? .....	345
Article 2: Is the growth of a habit effected by addition? .....	347
Article 3: Does each act make a habit grow? .....	349
<b>Question 53: The Corruption and Diminution of Habits</b> .....	351
Article 1: Can a habit be corrupted? .....	351
Article 2: Can a habit be diminished? .....	352
Article 3: Is a habit corrupted or diminished just by a cessation from its acts? .....	354
<b>Question 54: The Distinctions among Habits</b> .....	356
Article 1: Can there be many habits in a single power? .....	356
Article 2: Are habits distinguished by their objects? .....	357
Article 3: Are habits distinguished by <i>good</i> and <i>bad</i> ? .....	358
Article 4: Is one habit constituted from many habits? .....	359
<b>Question 55: The Essence of a Virtue</b> .....	361
Article 1: Is a human virtue a habit? .....	361
Article 2: Is it part of the concept of a human virtue that it is a habit ordered toward operation? .....	362
Article 3: Is it part of the concept of a virtue that it is a good habit? .....	363
Article 4: Is the customary definition of virtue correct? .....	364
<b>Question 56: The Subject of Virtue</b> .....	367
Article 1: Does a virtue exist in a power of the soul as in its subject? .....	367
Article 2: Can a single virtue exist in two powers? .....	368
Article 3: Is the intellect the subject of any virtue? .....	368
Article 4: Can the irascible and concupiscible powers be the subject of any virtue? .....	370
Article 5: Can any virtue exist in the interior sentient apprehensive powers? .....	372
Article 6: Is the will the subject of any virtue? .....	373

<b>Question 57: The Distinctions Among the Intellectual Virtues</b> .....	374
Article 1: Are the speculative intellectual habits virtues? .....	374
Article 2: Is it appropriate to distinguish three speculative intellectual virtues, viz., wisdom, scientific knowledge, and understanding? .....	375
Article 3: Is an art or craft an intellectual virtue? .....	377
Article 4: Is prudence a virtue distinct from an art? .....	378
Article 5: Is prudence a virtue that is necessary for living well? .....	379
Article 6: Are good deliberation ( <i>eubulia</i> ), and two sorts of good judgment ( <i>synesis</i> and <i>gnome</i> ) appropriately joined to prudence? .....	381
 <b>Question 58: The Distinction between the Moral Virtues and the Intellectual Virtues</b> .....	 383
Article 1: Is every virtue a moral virtue? .....	383
Article 2: Is a moral virtue distinguished from an intellectual virtue? .....	384
Article 3: Is <i>human virtue</i> adequately divided into <i>moral virtue</i> and <i>intellectual virtue</i> ? . . .	385
Article 4: Can moral virtue exist without intellectual virtue? .....	386
Article 5: Can intellectual virtue exist without moral virtue? .....	388
 <b>Question 59: The Relation of the Moral Virtues to the Passions</b> .....	 390
Article 1: Is a moral virtue a passion? .....	390
Article 2: Can moral virtue exist along with a passion? .....	391
Article 3: Can virtue exist along with sadness? .....	392
Article 4: Does every moral virtue have to do with the passions? .....	394
Article 5: Can a moral virtue exist without any passion? .....	394
 <b>Question 60: The Distinctions among the Moral Virtues</b> .....	 396
Article 1: Is there just a single moral virtue? .....	396
Article 2: Are moral virtues distinguished from one another by the fact that some have to do with actions or operations, while others have to do with the passions? .....	397
Article 3: Is there just a single moral virtue with respect to operations? .....	398
Article 4: Are there diverse moral virtues with respect to diverse passions? .....	399
Article 5: Are the moral virtues distinguished in a way that corresponds to the objects of the passions? .....	401
 <b>Question 61: The Cardinal Virtues</b> .....	 404
Article 1: Is it moral virtues that should be called cardinal, i.e., principal, virtues? .....	404
Article 2: Are there four cardinal virtues? .....	405
Article 3: Should any other virtues be called more principal than these? .....	406
Article 4: Are the four virtues under discussion diverse virtues and distinct from one another? .....	407
Article 5: Are the four virtues under discussion appropriately classified as exemplary virtues, virtues of a purified mind, purifying virtues, and political virtues? .....	408
 <b>Question 62: The Theological Virtues</b> .....	 411
Article 1: Are there any theological virtues? .....	411
Article 2: Are the theological virtues distinct from the moral and intellectual virtues? .....	412
Article 3: Is it appropriate to posit three theological virtues? .....	413
Article 4: Is the order of the theological virtues such that faith is prior to hope and hope is prior to charity? .....	414

<b>Question 63: The Cause of Virtue</b> .....	416
Article 1: Does virtue exist in us by nature? .....	416
Article 2: Can virtues be caused in us by the habituation of actions? .....	417
Article 3: Are there other virtues infused in us by God besides the theological virtues? ....	418
Article 4: Do the infused virtues differ in species from the acquired virtues? .....	419
<b>Question 64: The Mean of the Virtues</b> .....	421
Article 1: Do the moral virtues consist in a mean? .....	421
Article 2: Is the mean of a moral virtue a mean that belongs to the things or a mean of reason? .....	422
Article 3: Do the intellectual virtues consist in a mean? .....	423
Article 4: Does a theological virtue consist in a mean? .....	424
<b>Question 64: The Connectedness of the Virtues</b> .....	426
Article 1: Are the moral virtues necessarily connected with one another? .....	426
Article 2: Can the moral virtues exist without charity? .....	428
Article 3: Can charity be had without the other moral virtues? .....	429
Article 4: Do faith and hope ever exist without charity? .....	430
Article 5: Can charity exist without faith and hope? .....	431
<b>Question 66: The Equality of the Virtues</b> .....	433
Article 1: Can a virtue be greater or lesser? .....	433
Article 2: Are all the virtues in one and the same individual equally intense? .....	434
Article 3: Are the moral virtues preeminent over the intellectual virtues? .....	436
Article 4: Is justice the principal moral virtue? .....	437
Article 5: Is wisdom the greatest of the intellectual virtues? .....	438
Article 6: Is charity the greatest of the theological virtues? .....	440
<b>Question 67: The Duration of the Virtues after this Life</b> .....	442
Article 1: Do the moral virtues remain after this life? .....	442
Article 2: Do the intellectual virtues remain after this life? .....	443
Article 3: Does faith remain after this life? .....	444
Article 4: Does hope remain after death in the state of glory? .....	446
Article 5: Does anything of faith or hope remain in the state of glory? .....	447
Article 6: Does charity remain after this life in the state of glory? .....	449
<b>Question 68: The Gifts of the Holy Spirit</b> .....	450
Article 1: Do the gifts differ from the virtues? .....	450
Article 2: Are the gifts necessary for human salvation? .....	452
Article 3: Are the gifts of the Holy Spirit habits? .....	454
Article 4: Are the seven gifts of the Holy Spirit appropriately enumerated? .....	455
Article 5: Are the gifts of the Holy Spirit connected? .....	456
Article 6: Do the gifts of the Holy Spirit remain in heaven? .....	457
Article 7: Is the dignity of the gifts preserved by the way they are enumerated in Isaiah 2? .	459
Article 8: Should the virtues take precedence over the gifts? .....	460

<b>Question 69: The Beatitudes</b> . . . . .	462
Article 1: Do the beatitudes differ from the virtues and the gifts? . . . . .	462
Article 2: Do the rewards attributed to the beatitudes belong to this life? . . . . .	463
Article 3: Are the beatitudes appropriately enumerated? . . . . .	464
Article 4: Are the rewards of the beatitudes appropriately enumerated? . . . . .	467
<b>Question 70: The Fruits of the Holy Spirit</b> . . . . .	469
Article 1: Are the fruits of the Holy Spirit named by the Apostle in Galatians 5 acts? . . . . .	469
Article 2: Do the fruits of the Holy Spirit differ from the beatitudes? . . . . .	470
Article 3: Did the Apostle correctly enumerate the fruits in Galatians 5? . . . . .	471
Article 4: Are the fruits contrary to the works of the flesh enumerated by the Apostle? . . . . .	473
<b>Question 71: Vices and Sins in Themselves</b> . . . . .	475
Article 1: Is vice contrary to virtue? . . . . .	475
Article 2: Are vices contrary to nature? . . . . .	476
Article 3: Is a vice, i.e., a bad habit, worse than a sin, i.e., a bad act? . . . . .	478
Article 4: Can a vicious act, i.e., a sin, exist together with a contrary virtue? . . . . .	479
Article 5: Does every sin involve an act? . . . . .	480
Article 6: Is it correct to define a sin as "a word or deed or desire contrary to the eternal law"? . . . . .	481
<b>Question 72: The Distinctions among Sins</b> . . . . .	484
Article 1: Do sins differ in species according to their objects? . . . . .	484
Article 2: Is it appropriate to distinguish spiritual sins from carnal sins? . . . . .	485
Article 3: Are sins distinguished in species according to their causes? . . . . .	486
Article 4: Is it appropriate to divide sin into sins against God, sins against one's neighbor, and sins against oneself? . . . . .	488
Article 5: Does the division of sins according to the degree of guilt—as, e.g., when sin is divided into mortal sin and venial sin—make for a diversity of species? . . . . .	489
Article 6: Do sins of commission differ in species from sins of omission? . . . . .	490
Article 7: Is it appropriate to divide sins into sins of the heart, sins of the mouth, and sinful deeds? . . . . .	492
Article 8: Do excess and defect make for diverse species of sin? . . . . .	493
Article 9: Are vices and sins diversified in species by diverse circumstances? . . . . .	494
<b>Question 73: The Relation of Sins to One Another</b> . . . . .	496
Article 1: Are all sins connected? . . . . .	496
Article 2: Are all sins equal? . . . . .	497
Article 3: Does the gravity of sins vary according to their objects? . . . . .	499
Article 4: Does the gravity of sins differ according to the dignity of the virtues to which the sins are opposed, in the sense that a graver sin is opposed to a greater virtue? . . . . .	500
Article 5: Are carnal sins lesser faults than spiritual sins? . . . . .	501
Article 6: Does the gravity of a sin have to do with the cause of the sin? . . . . .	502
Article 7: Do the circumstances aggravate a sin? . . . . .	503
Article 8: Is a sin's gravity increased by its doing greater harm? . . . . .	504
Article 9: Is a sin aggravated by the status of the person who is sinned against? . . . . .	506
Article 10: Does the greatness of the person who commits a sin aggravate the sin? . . . . .	507

<b>Question 74: The Subject of Sins</b> .....	509
Article 1: Can the will be the subject of sin? .....	509
Article 2: Is the will alone a subject of sin? .....	510
Article 3: Can sin exist in the sentient appetite? .....	511
Article 4: Can a mortal sin exist in the sentient appetite? .....	512
Article 5: Can sin exist in reason? .....	513
Article 6: Does the sin of lingering pleasure exist in reason? .....	514
Article 7: Does the sin of consenting to an act exist in higher reason?.....	514
Article 8: Is the act of consenting to the pleasure a mortal sin? .....	516
Article 9: Can there be a venial sin in higher reason insofar as it directs the lower powers?..	518
Article 10: Can a venial sin exist in higher reason with respect to itself, i.e., insofar as it examines the eternal conceptions ?.....	519
 <b>Question 75: The Causes of Sin in General</b> .....	 521
Article 1: Does sin have a cause? .....	521
Article 2: Does sin have an interior cause? .....	522
Article 3: Does sin have an exterior cause? .....	523
Article 4: Is sin a cause of sin? .....	524
 <b>Question 76: Ignorance as a Cause of Sin</b> .....	 526
Article 1: Can ignorance be a cause of sin? .....	526
Article 2: Is ignorance a sin? .....	527
Article 3: Does ignorance excuse one totally from sin? .....	528
Article 4: Does ignorance diminish a sin? .....	530
 <b>Question 77: The Sentient Appetite as a Cause of Sin</b> .....	 532
Article 1: Is the will moved by a passion of the sentient appetite? .....	532
Article 2: Can reason be overcome by a passion against its own knowledge? .....	533
Article 3: Should a sin of passion be called a sin of weakness? .....	535
Article 4: Is love of self a source of every sin? .....	536
Article 5: Are ‘concupiscence of the flesh’, ‘concupiscence of the eyes’, and ‘pride of life’ appropriately posited as causes of sins? .....	537
Article 6: Is a sin lessened by passion? .....	539
Article 7: Does passion totally excuse one from sin? .....	540
Article 8: Can a sin of passion be mortal?.....	541
 <b>Question 78: Malice as a Cause of Sin</b> .....	 543
Article 1: Does anyone sin purposefully or from fixed malice? .....	543
Article 2: Does everyone who sins from a habit sin from fixed malice? .....	544
Article 3: Does everyone who sins from fixed malice sin from a habit? .....	545
Article 4: Does one who sins from fixed malice sin more gravely than one who sins from passion? .....	547
 <b>Question 79: God as a Cause of Sin</b> .....	 549
Article 1: Is God a cause of sin? .....	549
Article 2: Is the act of sinning from God? .....	550
Article 3: Is God a cause of spiritual blindness and hardness of heart? .....	551
Article 4: Are spiritual blindness and hardness of heart always ordered toward the salvation of the one who is blinded or whose heart is hardened? .....	552

<b>Question 80: The Devil as a Cause of Sin</b> .....	554
Article 1: Is the devil a direct cause of a man's sinning? .....	554
Article 2: Can the devil induce a man to sin by instigating him interiorly? .....	555
Article 3: Can the devil impose a necessity for sinning? .....	556
Article 4: Do all of men's sins come at the devil's suggestion? .....	557
<b>Question 81: Man as a Cause of Sin: The Transmission of Original Sin</b> .....	559
Article 1: Is the first sin of the first parent transmitted to the others by way of origin? .....	559
Article 2: Are other sins of the first parent himself or of close ancestors likewise transmitted to their descendants? .....	561
Article 3: Does the sin of the first parent pass by way of origin to all men? .....	562
Article 4: Would someone who was miraculously formed out of human flesh contract original sin? .....	563
Article 5: If Adam had not sinned after Eve sinned, would their children have contracted original sin? .....	564
<b>Question 82: The Essence of Original Sin</b> .....	566
Article 1: Is original sin a habit? .....	566
Article 2: Are there many original sins in a single man? .....	567
Article 3: Is original sin concupiscence or disordered desire? .....	568
Article 4: Does original sin exist equally in everyone? .....	569
<b>Question 83: The Subject of Original Sin</b> .....	571
Article 1: Does original sin exist more in the flesh than in the soul? .....	571
Article 2: Does original sin exist in the soul's essence prior to existing in its powers? .....	572
Article 3: Does original sin infect the will prior to infecting the other powers? .....	573
Article 4: Are the powers mentioned in the introduction, [viz., the generative power, the concupiscible power, and the sense of touch], more infected than the other powers? .....	574
<b>Question 84: One Sin as a Cause of Another Sin</b> .....	576
Article 1: Is avid desire or covetousness the root of all sins? .....	576
Article 2: Is pride the beginning of every sin? .....	577
Article 3: Besides pride and avarice, are there any other sins that might be called capital sins? .....	578
Article 4: Should one claim that there are seven capital vices, viz., vainglory, envy, anger, sadness, avarice, gluttony, and lust? .....	579
<b>Question 85: The Corruption of the Good of the Nature as an Effect of Sin</b> .....	582
Article 1: Does sin diminish the good of the nature? .....	582
Article 2: Can the whole of the good of human nature be destroyed by sin? .....	583
Article 3: Is it appropriate to claim that there are wounds of the nature that follow from sin, viz., weakness, ignorance, malice, and concupiscence? .....	585
Article 4: Is the privation of mode, species, and order an effect of sin? .....	586
Article 5: Are death and other bodily defects the effects of sin? .....	587
Article 6: Are death and other bodily defects natural to man? .....	588
<b>Question 86: The Stain of Sin as an Effect of Sin</b> .....	590
Article 1: Does sin cause a stain in the soul? .....	590
Article 2: Does the stain remain in the soul after the sinful act? .....	591

<b>Question 87: Being Deserving of Punishment as an Effect of Sin</b> .....	592
Article 1: Is it an effect of sin to be deserving of punishment? .....	592
Article 2: Can a sin be the punishment for a sin? .....	593
Article 3: Does any sin make one deserving of an eternal punishment? .....	594
Article 4: Should the punishment for sin be infinite with respect to quantity? .....	595
Article 5: Does every sin make one deserving of an eternal punishment? .....	596
Article 6: Does one's being deserving of punishment remain after the sin? .....	597
Article 7: Is every punishment because of some sin? .....	599
Article 8: Is anyone punished for someone else's sin? .....	600
<b>Question 88: Mortal Sin and Venial Sin</b> .....	602
Article 1: Is it appropriate for venial sin to be divided off against mortal sin? .....	602
Article 2: Do venial sin and mortal sin differ in genus in the sense that some sins are mortal by their genus and some sins are venial by their genus? .....	603
Article 3: Is a venial sin a disposition toward a mortal sin? .....	605
Article 4: Can a venial sin become a mortal sin? .....	606
Article 5: Can some circumstance surrounding a venial sin make it a mortal sin? .....	607
Article 6: Can a mortal sin become a venial sin? .....	609
<b>Question 89: Venial Sin in its own Right</b> .....	611
Article 1: Does a venial sin cause a stain in the soul? .....	611
Article 2: Are venial sins appropriately designated as "wood, hay, and straw"? .....	612
Article 3: Was man in the state of innocence able to commit a venial sin? .....	613
Article 4: Can a good angel or bad angel commit a venial sin? .....	615
Article 5: Are the first movements of the sentient appetite in non-believers mortal sins? ...	616
Article 6: Can venial sin exist in someone who has original sin alone? .....	617
<b>Question 90: The Essence of Law</b> .....	619
Article 1: Is law something that belongs to reason? .....	619
Article 2: Is law always ordered toward the common good as its end? .....	620
Article 3: Whose reason is it that makes law? .....	621
Article 4: Is promulgation part of the nature of law? .....	622
<b>Question 91: The Different Kinds of Law</b> .....	624
Article 1: Is there such a thing as eternal law? .....	624
Article 2: Is there any such thing as natural law in us? .....	625
Article 3: Is there any such thing as human law? .....	626
Article 4: Was it necessary for there to be such a thing as divine law? .....	627
Article 5: Is there just a single divine law? .....	628
Article 6: Is there such a thing as a 'law of the stimulant [to sin]'? .....	630
<b>Question 92: The Effects of Law</b> .....	632
Article 1: Is it the role of law to make men good? .....	632
Article 2: Are the acts of law correctly enumerated when one says that the acts of law are to command, to forbid, to permit, and to punish? .....	633

<b>Question 93: The Eternal Law</b> .....	635
Article 1: Is the eternal law the highest conception or plan existing in God? .....	635
Article 2: Is the eternal law known to everyone? .....	636
Article 3: Does every law stem from the eternal law? .....	637
Article 4: Are necessary and eternal things subject to the eternal law? .....	638
Article 5: Are natural contingent things subject to the eternal law? .....	639
Article 6: Are all human affairs subject to the eternal law? .....	641
<b>Question 94: The Natural Law.</b> .....	643
Article 1: Is the natural law a habit? .....	643
Article 2: Does the natural law contain many precepts or just one precept? .....	644
Article 3: Do all the acts of the virtues belong to the law of nature? .....	645
Article 4: Is there a single law of nature for everyone? .....	646
Article 5: Can the law of nature be changed? .....	648
Article 6: Can the natural law be wiped out of a man's heart? .....	650
<b>Question 95: Human Law</b> .....	651
Article 1: Was it useful for laws to be made by men? .....	651
Article 2: Does every humanly made law stem from the natural law? .....	652
Article 3: Does Isidore appropriately describe the characteristics of positive law? .....	653
Article 4: Is Isidore's division of human laws appropriate? .....	655
<b>Question 96: The Force of Human Law</b> .....	657
Article 1: Should human law be made in a general way or for particular cases instead? .....	657
Article 2: Should human law suppress all vices? .....	658
Article 3: Does human law command the acts of all the virtues? .....	659
Article 4: Does human law impose an obligation in conscience on a man? .....	660
Article 5: Is everyone subject to human law? .....	661
Article 6: Is one who is subject to the law permitted to act outside the letter of the law? .....	663
<b>Question 97: Changes in Human Law</b> .....	665
Article 1: Should human law in any way be changed? .....	665
Article 2: Should human law always be changed when something better comes along? .....	666
Article 3: Can custom acquire the force of law or nullify a law? .....	667
Article 4: Can the rulers of the people give dispensations from human laws? .....	668
<b>Question 98: The Old Law</b> .....	670
Article 1: Was the Old Law good? .....	670
Article 2: Was the Old Law from God? .....	671
Article 3: Was the Old Law given through the mediation of angels or was it given directly by God? .....	673
Article 4: Was it fitting for the Old Law to have been given only to the Jewish people? .....	674
Article 5: Were all men obliged to observe the Old Law? .....	675
Article 6: Was it appropriate for the Old Law to have been given at the time of Moses? .....	677

<b>Question 99: The Precepts of the Old Law</b> .....	679
Article 1: Does the Old Law contain just one precept ? .....	679
Article 2: Does the Old Law contain moral precepts? .....	680
Article 3: Does the Old Law contain ceremonial precepts in addition to the moral precepts?.....	681
Article 4: Does the Old Law contain judicial precepts in addition to the moral and ceremonial precepts? .....	682
Article 5: Are there any precepts contained in the Old Law in addition to the moral, ceremonial, and judicial precepts? .....	683
Article 6: Was it right for the Old Law to have induced the observance of its precepts by temporal promises and threats? .....	685
 <b>Question 100: The Moral Precepts of the Old Law</b> .....	 687
Article 1: Do all the moral precepts of the Old Law belong to the law of nature? . . . . .	687
Article 2: Do the moral precepts of the Law have to do with all the acts of the virtues? . . . .	688
Article 3: Are all the moral precepts of the Old Law traced back to the ten precepts of the Decalogue? .....	689
Article 4: Are the precepts of the Decalogue correctly distinguished from one another? . . . .	691
Article 5: Is there an appropriate number of precepts in the Decalogue? . . . . .	692
Article 6: Are the precepts of the Decalogue correctly ordered? .....	695
Article 7: Are the precepts of the Decalogue set down in an appropriate way? .....	697
Article 8: Can dispensations be granted from the precepts of the Decalogue? .....	699
Article 9: Does the mode of virtue fall under a precept of the Law? .....	700
Article 10: Does the mode of charity fall under a precept of divine law? .....	702
Article 11: Is it correct to mark out moral precepts of the Law in addition to the Decalogue? .....	703
Article 12: Did the moral precepts of the Old Law give justification [before God]? .....	705
 <b>Question 101: The Ceremonial Precepts of the Old Law in Themselves</b> .....	 708
Article 1: Does the reason for the ceremonial precepts lie in their having to do with the worship of God? .....	708
Article 2: Are the ceremonial precepts figurative .....	709
Article 3: Was it right for there to be a multiplicity of ceremonial precepts? .....	711
Article 4: Are the ceremonies of the Old Law correctly divided into sacrifices, sacred things, sacraments, and observances? .....	712
 <b>Question 102: The Causes of the Ceremonial Precepts</b> .....	 715
Article 1: Are there reasons for the ceremonial precepts? .....	715
Article 2: Do the ceremonial precepts have literal reasons or only figurative reasons? . . . .	716
Article 3: Can appropriate reasons be assigned for the ceremonies that involve sacrifices? ..	717
Article 4: Can appropriate reasons be assigned for the ceremonies that involve the sacred things? .....	723
Article 5: Can appropriate reasons be assigned for the sacraments of the Old Law? . . . . .	731
Article 6: Are there reasoned causes for the ceremonial observances? .....	742

<b>Question 103: The Duration of the Ceremonial Precepts</b> .....	749
Article 1: Did the ceremonies of the Law exist before the Law existed? .....	749
Article 2: Did the ceremonies of the Old Law have the power to confer justification at the time of the Law? .....	750
Article 3: Did the ceremonies of the Old Law cease with the coming of Christ? .....	752
Article 4: Can the ceremonial precepts be observed without mortal sin after Christ's passion? .....	754
<b>Question 104: The Judicial Precepts of the Old Law</b> .....	757
Article 1: Does the nature of the judicial precepts consist in their directing a man in his relations with his neighbor? .....	757
Article 2: Are the judicial precepts figures of anything? .....	758
Article 3: Do the judicial precepts of the Old Law have perpetual binding force? .....	759
Article 4: Can the judicial precepts be divided into set kinds? .....	760
<b>Question 105: The Reasons for the Judicial Precepts</b> .....	762
Article 1: Did the Old Law give appropriate direction concerning the rulers? .....	762
Article 2: Were appropriate judicial precepts given with respect to the common life of the people? .....	764
Article 3: Were appropriate judicial precepts given with respect to outsiders? .....	772
Article 4: Did the Old Law issue appropriate precepts with respect to household members? ..	775
<b>Question 106: The Law of the Gospel, called the New Law, in Itself</b> .....	779
Article 1: Is the New Law a written law? .....	779
Article 2: Does the New Law confer justification? .....	780
Article 3: Should the New Law have been given from the beginning? .....	781
Article 4: Will the New Law last until the end of the world? .....	782
<b>Question 107: The Relation between the Old Law and the New Law</b> .....	785
Article 1: Is the New Law different from the Old Law? .....	785
Article 2: Does the New Law bring the Old Law to fulfillment? .....	787
Article 3: Is the New Law contained within the Old Law? .....	789
Article 4: Is the New Law more burdensome than the Old Law? .....	790
<b>Question 108: The Contents of the New Law</b> .....	793
Article 1: Should the New Law command or prohibit any exterior acts? .....	793
Article 2: Does the New Law give adequate direction to exterior acts? .....	794
Article 3: Does the New Law give man adequate direction with respect to interior acts? ...	797
Article 4: Is it appropriate for certain determinate counsels to be proposed in the New Law? .....	800

<b>Question 109: The Necessity for Grace</b> .....	802
Article 1: Can a man have cognition of any truth without grace? .....	802
Article 2: Is a man able to will and do good without grace? .....	803
Article 3: Can a man love God above all things by just his natural power and without grace? .....	805
Article 4: Can a man without grace fulfill the precepts of the Law by his own natural power? .....	806
Article 5: Can a man merit eternal life without grace? .....	807
Article 6: Can a man prepare himself for grace on his own without the exterior assistance of grace? .....	808
Article 7: Can a man rise up from sin without the assistance of grace? .....	809
Article 8: Is a man without grace able not to sin? .....	811
Article 9: Is someone who has already received grace able on his own to do good and avoid evil without any further assistance of grace? .....	812
Article 10: Does a man in the state of grace need the assistance of grace in order to persevere? .....	814

Article 16: Can prudence be lost through forgetfulness? . . . . .	339
<b>Question 48: The Parts of Prudence in General . . . . .</b>	<b>340</b>
The Only Article: Are the parts of prudence appropriately assigned? . . . . .	340
<b>Question 49: The Integral Parts of Prudence . . . . .</b>	<b>343</b>
Article 1: Is memory a part of prudence? . . . . .	343
Article 2: Is understanding a part of prudence? . . . . .	344
Article 3: Should docility be posited as a part of prudence? . . . . .	345
Article 4: Is shrewdness a part of prudence? . . . . .	346
Article 5: Is reason (or good reasoning) a part of prudence? . . . . .	347
Article 6: Should foresight be posited as a part of prudence? . . . . .	348
Article 7: Can circumspection be a part of prudence? . . . . .	349
Article 8: Should caution be posited as a part of prudence? . . . . .	349
<b>Question 50: The Subjective Parts of Prudence . . . . .</b>	<b>351</b>
Article 1: Should <i>kingly</i> be posited as a species of prudence? . . . . .	351
Article 2: Is <i>political</i> appropriately posited as a part of prudence? . . . . .	352
Article 3: Should <i>economic</i> be posited as a species of prudence? . . . . .	353
Article 4: Should <i>military</i> be posited as a species of prudence? . . . . .	353
<b>Question 51: The Potential Parts of Prudence . . . . .</b>	<b>355</b>
Article 1: Is good deliberating ( <i>eubulia</i> ) a virtue? . . . . .	355
Article 2: Is good deliberating a virtue distinct from prudence? . . . . .	356
Article 3: Is good judging [in ordinary cases] ( <i>synesis</i> ) a virtue? . . . . .	357
Article 4: Is good judging in exceptional cases ( <i>gnome</i> ) a special virtue? . . . . .	358
<b>Question 52: The Gift of Counsel . . . . .</b>	<b>360</b>
Article 1: Should counsel be posited among the gifts of the Holy Spirit? . . . . .	360
Article 2: Does counsel fittingly correspond to the virtue of prudence? . . . . .	361
Article 3: Does the gift of counsel remain in heaven? . . . . .	362
Article 4: Does the fifth beatitude, which is about mercy, correspond to the gift of counsel? . . . . .	363
<b>Question 53: Imprudence . . . . .</b>	<b>365</b>
Article 1: Is imprudence a sin? . . . . .	365
Article 2: Is imprudence a special sin? . . . . .	366
Article 3: Is precipitateness ( <i>praecipitatio</i> ) a sin contained under imprudence? . . . . .	367
Article 4: Is not taking account of things ( <i>inconsideratio</i> ) a special sin contained under imprudence? . . . . .	368
Article 5: Is inconstancy ( <i>inconstantia</i> ) a vice contained under imprudence? . . . . .	369
Article 6: Do the vices just discussed arise from lust? . . . . .	370
<b>Question 54: Negligence . . . . .</b>	<b>372</b>
Article 1: Is negligence a special sin? . . . . .	372
Article 2: Is negligence opposed to prudence? . . . . .	373
Article 3: Is it possible for negligence to be a mortal sin? . . . . .	374

<b>Question 55: The Vices opposed to Prudence that are Similar to it</b> .....	375
Article 1: Is prudence of the flesh a sin? .....	375
Article 2: Is prudence of the flesh a mortal sin? .....	376
Article 3: Is craftiness a special sin? .....	377
Article 4: Is guile a sin that belongs to craftiness? .....	378
Article 5: Does fraud belong to craftiness? .....	379
Article 6: Is it permissible to have solicitude for temporal things? .....	379
Article 7: Should one be solicitous about the future? .....	380
Article 8: Do vices of this sort arise from avarice? .....	381
<b>Question 56: The Precepts that Pertain to Prudence</b> .....	383
Article 1: Should there have been precepts about prudence among the precepts of the Decalogue? .....	383
Article 2: Were prohibitive precepts about the vices opposed to prudence proposed in the Old Law in an appropriate way? .....	384
<b>Question 57: The Right</b> .....	385
Article 1: Is the right the object of justice? .....	385
Article 2: Is it appropriate for the right to be divided into the natural right and the positive right? .....	386
Article 3: Is the right of nations the same as the natural right? .....	387
Article 4: Should the paternal right and the right of dominion be viewed as distinct species [of the right]? .....	388
<b>Question 58: Justice</b> .....	390
Article 1: Is justice appropriately defined by jurists as “the steadfast and perpetual will to give to each individual what is the right for him”? .....	390
Article 2: Does justice always have to do others? .....	391
Article 3: Is justice a virtue? .....	392
Article 4: Does justice have the will as the subject in which it exists? .....	393
Article 5: Is justice a general virtue? .....	394
Article 6: Is justice, insofar as it is a general virtue, the same by its essence as every virtue? .....	395
Article 7: Is there particular justice over and beyond general justice? .....	397
Article 8: Does particular justice have its own specific subject matter? .....	398
Article 9: Does justice have to do with the passions? .....	399
Article 10: Is the mean of justice the mean of the thing itself? .....	400
Article 11: Is the act of justice to render to each individual what is his own? .....	401
Article 12: Is justice preeminent over all the moral virtues? .....	402
<b>Question 59: Injustice</b> .....	403
Article 1: Is injustice a special vice? .....	403
Article 2: Is someone called unjust by reason of the fact that he does what is unjust? .....	404
Article 3: Can anyone willingly suffer what is unjust? .....	405
Article 4: Does everyone who does what is unjust commit a mortal sin? .....	406
<b>Question 60: Judgment</b> .....	408
Article 1: Is judgment an act of justice? .....	408
Article 2: Is it permissible to judge? .....	409
Article 3: Is a judgment that proceeds on the basis of suspicions impermissible? .....	410

Article 4: Should doubtful matters be construed in the best light? . . . . .	412
Article 5: Should one always judge in accord with written laws? . . . . .	413
Article 6: Is a judgment rendered perverse by being usurped? . . . . .	414
<b>Question 61: The Parts of Justice</b> . . . . .	416
Article 1: Is it appropriate to posit two species of justice, viz., distributive justice and commutative justice? . . . . .	416
Article 2: Is the mean taken in the same way in distributive justice and commutative justice? . . . . .	417
Article 3: Are the subject matters of the two types of justice diverse? . . . . .	418
Article 4: Is the just the same thing absolutely speaking as reciprocity? . . . . .	420
<b>Question 62: Restitution</b> . . . . .	422
Article 1: Is restitution an act of commutative justice? . . . . .	422
Article 2: Is it necessary for salvation to make restitution for what has been taken? . . . . .	423
Article 3: Is it sufficient to restore the exact amount that was unjustly taken? . . . . .	424
Article 4: Does anyone have to make restitution for what he has not taken? . . . . .	425
Article 5: Must restitution always be made to the one from whom something has been gotten? . . . . .	426
Article 6: Is it always the case that the one who has gotten the thing is obligated to make restitution? . . . . .	428
Article 7: Is anyone who did not get the thing obligated to make restitution? . . . . .	429
Article 8: Is one obligated to make restitution immediately? . . . . .	431
<b>Question 63: Regard for Persons</b> . . . . .	433
Article 1: Is regard for persons a sin? . . . . .	433
Article 2: Does regard for persons have a place in the dispensing of spiritual benefits? . . . . .	434
Article 3: Does the sin of regard for persons have a place in shows of honor and respect? . . . . .	436
Article 4: Does regard for persons have a place in judicial determinations? . . . . .	437
<b>Question 64: Homicide</b> . . . . .	438
Article 1: Is it licit to kill any living thing whatsoever? . . . . .	438
Article 2: Is it licit to kill men who are sinners? . . . . .	439
Article 3: Is a private person permitted to kill a man who is a sinner? . . . . .	440
Article 4: Are clerics permitted to kill evildoers? . . . . .	441
Article 5: Is anyone permitted to kill himself? . . . . .	442
Article 6: Are there cases in which one is permitted to kill the innocent? . . . . .	444
Article 7: Is one permitted to kill someone in defending himself? . . . . .	445
Article 8: Does one who accidentally kills a man incur the guilt of homicide? . . . . .	446
<b>Question 65: Other Injuries Committed Against One's Person</b> . . . . .	448
Article 1: Is there any case in which it can be licit to mutilate parts of someone's body? . . . . .	448
Article 2: Are fathers permitted to strike or beat their children or masters their servants? . . . . .	449
Article 3: Is it licit to incarcerate a man? . . . . .	450
Article 4: Is the sin made worse by the fact that harms of the sort just discussed above are inflicted on persons who are connected to others? . . . . .	451

<b>Question 66: Theft and Robbery</b> .....	453
Article 1: Is the possession of exterior things natural to man? .....	453
Article 2: Is one permitted to possess a thing as his own? .....	454
Article 3: Is it the nature of theft to take furtively a thing that belongs to someone else? ...	455
Article 4: Are theft and robbery sins that differ in species? .....	456
Article 5: Is theft always a sin? .....	457
Article 6: Is theft a mortal sin? .....	458
Article 7: Is one permitted to steal out of neediness? .....	459
Article 8: Can a robbery be carried out without sin? .....	460
Article 9: Is theft a more serious sin than robbery? .....	461
<b>Question 67: Injustice on the part of a Judge in Judging</b> .....	462
Article 1: Can someone judge justly an individual who is not subject to him? .....	462
Article 2: Is a judge permitted, because of what is presented before him, to deliver a judgment that runs contrary to a truth that he knows? .....	463
Article 3: Can a judge pass judgment on someone even if there is no other accuser? .....	464
Article 4: Can a judge licitly soften a punishment? .....	465
<b>Question 68: Injustice on the part of an Accuser in Accusing</b> .....	467
Article 1: Is a man obligated to make an accusation? .....	467
Article 2: Must an accusation be made in writing? .....	468
Article 3: Is an accusation rendered unjust by calumny, prevarication, or evasion? .....	469
Article 4: Is an accuser who fails to prove his accusation held to the punishment of retaliation? .....	470
<b>Question 69: Injustice on the part of the Accused in his own Defense</b> .....	472
Article 1: Can one who has been accused deny without mortal sin the truth through which he would be condemned? .....	472
Article 2: Is the accused permitted to defend himself by chicanery? .....	473
Article 3: Is a defendant permitted to turn aside a judgment by appealing it? .....	474
Article 4: Is one who is condemned to death permitted to defend himself if he is able to? ..	475
<b>Question 70: Injustice on the part of a Witness in Testifying</b> .....	477
Article 1: Is a man obligated to give testimony? .....	477
Article 2: Is the testimony of two or three witnesses sufficient? .....	478
Article 3: Should someone's testimony be disallowed only because of a fault on his part? ..	480
Article 4: Is false testimony always a mortal sin? .....	481
<b>Question 71: Injustice on the part of Advocates</b> .....	483
Article 1: Is an advocate obligated to defend the cause of the poor? .....	483
Article 2: Is it inappropriate for anyone to be excluded by law from the role of advocate? ..	484
Article 3: Does an advocate sin if he defends an unjust cause? .....	485
Article 4: Is an advocate permitted to take money in return for his defense? .....	486
<b>Question 72: Vilification</b> .....	488
Article 1: Does vilification consist in words? .....	488
Article 2: Is vilifying or reproaching a mortal sin? .....	489
Article 3: Should one put up with being vilified? .....	490
Article 4: Does vilification arise from anger? .....	492

<b>Question 73: Detraction</b> .....	493
Article 1: Is detraction the denigration of someone else’s reputation by furtive words? .....	493
Article 2: Is detraction a mortal sin? .....	494
Article 3: Is detraction more serious than all the other sins that are committed against one’s neighbor? .....	495
Article 4: Does a listener who puts up with someone engaging in detraction commit a serious sin? .....	497
<b>Question 74: Gossiping</b> .....	499
Article 1: Is gossiping or invidious whispering a sin distinct from detraction? .....	499
Article 2: Is detraction a more serious sin than gossiping? .....	500
<b>Question 75: Derision</b> .....	501
Article 1: Is derision a special sin distinct from the other sins just discussed? .....	501
Article 2: Is derision a mortal sin? .....	502
<b>Question 76: Malediction</b> .....	504
Article 1: Is it licit to engage in malediction against anyone? .....	504
Article 2: Is it licit to engage in malediction against a non-rational creature? .....	505
Article 3: Is malediction a mortal sin? .....	506
Article 4: Is malediction a more serious sin than detraction? .....	507
<b>Question 77: Fraud in Buying and Selling</b> .....	509
Article 1: Can someone licitly sell an item for more than it is worth? .....	509
Article 2: Is a sale rendered unjust and illicit by a defect in the item sold? .....	511
Article 3: Is a seller obligated to reveal the defects of an item he sells? .....	512
Article 4: Is one permitted, by trading, to sell something for more than he bought it for? ...	514
<b>Question 78: Usury, or Interest on Money Lent</b> .....	516
Article 1: Is it a sin to receive usury, i.e., interest or a user’s fee, for money lent? .....	516
Article 2: Can one request some other commodity for money lent? .....	518
Article 3: Is one obligated to return whatever profit he has made from money obtained by charging interest? .....	520
Article 4: Is it licit to accept money by a loan made subject to a user’s fee? .....	521
<b>Question 79: The integral parts of justice</b> .....	523
Article 1: Are turning away from evil and doing good parts of justice? .....	523
Article 2: Is transgression a specific sin? .....	524
Article 3: Is omission a specific sin? .....	525
Article 4: Is the sin of omission more serious than the sin of transgression? .....	526
<b>Question 80: The Potential Parts of Justice</b> .....	528
The Only Article: Are the virtues annexed to justice suitably enumerated? .....	528
<b>Question 81: Religion</b> .....	531
Article 1: Does religion order a man only toward God? .....	531
Article 2: Is religion a virtue? .....	533
Article 3: Is religion a single virtue? .....	533
Article 4: Is religion a specific virtue distinct from other virtues? .....	534

Article 5: Is religion a theological virtue? . . . . .	535
Article 6: Is religion preeminent over the other moral virtues? . . . . .	536
Article 7: Does adoration (latria) have any exterior act? . . . . .	537
Article 8: Is religion the same as holiness? . . . . .	538
<b>Question 82: Devotion</b> . . . . .	540
Article 1: Is devotion a specific act? . . . . .	540
Article 2: Is devotion an act of religion? . . . . .	541
Article 3: Is contemplation, or meditation, a cause of devotion? . . . . .	541
Article 4: Is joy an effect of devotion? . . . . .	543
<b>Question 83: Prayer</b> . . . . .	544
Article 1: Is prayer an act of an appetitive power? . . . . .	544
Article 2: Is it appropriate to pray? . . . . .	545
Article 3: Is prayer an act of [the virtue of] religion? . . . . .	546
Article 4: Is it God alone who should be prayed to? . . . . .	547
Article 5: Should we ask God for anything determinate in our prayer? . . . . .	548
Article 6: Should a man ask God for temporal things in his prayer? . . . . .	549
Article 7: Should we pray for others? . . . . .	550
Article 8: Should we pray for our enemies? . . . . .	551
Article 9: Is it appropriate to enumerate seven petitions in the Lord's prayer? . . . . .	552
Article 10: Is praying proper to rational creatures? . . . . .	554
Article 11: Do the saints in heaven pray for us? . . . . .	555
Article 12: Should prayer be vocal? . . . . .	556
Article 13: Is it necessary for prayer to be done attentively? . . . . .	557
Article 14: Should prayer last for a long time? . . . . .	559
Article 15: Is praying meritorious? . . . . .	560
Article 16: Do sinners obtain anything from God by praying? . . . . .	561
Article 17: Is it appropriate to enumerate the parts of prayer as acts of supplication, acts of praying, acts of intercession, and acts of thanksgiving? . . . . .	562
<b>Question 84: Adoration</b> . . . . .	565
Article 1: Is adoration an act of worship, i.e., an act of [the virtue of] religion? . . . . .	565
Article 2: Does adoration involve a corporeal act? . . . . .	566
Article 3: Does adoration require a fixed place? . . . . .	567
<b>Question 85: Sacrifice</b> . . . . .	568
Article 1: Is the offering of sacrifice to God part of the law of nature? . . . . .	568
Article 2: Should sacrifice be offered only to the most high God? . . . . .	569
Article 3: Is the offering of sacrifice a specific act of virtue? . . . . .	570
Article 4: Is everyone obligated to offer sacrifices? . . . . .	571
<b>Question 86: Oblations and First-fruits</b> . . . . .	573
Article 1: Are men obligated to offer oblations by a necessity of precept? . . . . .	573
Article 2: Are oblations owed to priests alone? . . . . .	574
Article 3: Can a man make oblations of whatever he licitly possesses? . . . . .	575
Article 4: Are men obligated to hand over first-fruits? . . . . .	576

<b>Question 87: Tithes</b> .....	578
Article 1: Are men obligated to give tithes by a necessity of precept? .....	578
Article 2: Are men obligated to give tithes of everything? .....	580
Article 3: Are tithes to be given to clerics? .....	582
Article 4: Are clerics likewise obligated to give tithes? .....	583
<b>Question 88: Vows</b> .....	585
Article 1: Does a vow consist just in a resolution of the will? .....	585
Article 2: Does a vow always have to be made with respect to a better good? .....	586
Article 3: Does a vow always obligate one to fulfill it? .....	588
Article 4: Is it expedient to make a vow? .....	589
Article 5: Is a vow an act of worship (latria), i.e., an act of the virtue of religion? .....	590
Article 6: Is it more laudable and meritorious to do something without a vow than with a vow? .....	591
Article 7: Is a vow solemnized by the reception of Holy Orders and by the profession of a particular Rule? .....	592
Article 8: Are those who are subject to someone else's power impeded from making a vow? .....	594
Article 9: Can children, by making a vow, obligate themselves to enter religious life? .....	595
Article 10: Can a dispensation be granted in the case of a vow? .....	596
Article 11: Can a dispensation be granted in the case of a solemn vow of [sexual] continence? .....	597
Article 12: Is the authority of a prelate required for changing a vow or granting a dispensation from a vow? .....	600

## PROLOGUE TO PART 1

Since, according to the Apostle in 1 Corinthians 3:1-2 (“As unto little ones in Christ, I gave you milk to drink, not meat”), a teacher of Catholic truth not only ought to instruct those who are advanced, but is also charged with teaching beginners, our intention in the present work is to propound the things belonging to the Christian religion in a way consonant with the education of beginners. For we have noticed that newcomers to this study are commonly hampered by the writings of different authors—partly because of the proliferation of superfluous questions, articles, and arguments; partly because the things they need to know are taught not according to the order of learning, but instead as is required for the exposition of texts or as opportunities for disputing certain questions present themselves; and partly because frequent repetition in these same writings generates both antipathy and confusion in the minds of the listeners. In an effort to avoid these and other such problems, we will try, with trust in God’s help, to set forth what belongs to sacred doctrine as briefly and clearly as the subject matter allows.

### QUESTION 1

#### The Nature and Extent of Sacred Doctrine

In order to situate our goal within certain set limits, we must first inquire into what sacred doctrine (*sacra doctrina*) is and how far it extends.

On this matter there are ten questions to be asked: (1) Is this doctrine necessary? (2) Is it a science? (3) Is it a single science or more than one science? (4) Is it a speculative science or a practical science? (5) How does it compare to the other sciences? (6) Does it constitute wisdom? (7) What is its subject? (8) Does it make use of arguments? (9) Is it appropriate for it to make use of metaphorical or symbolic locutions? (10) Should the Sacred Scripture relevant to this doctrine be expounded by means of multiple senses?

#### Article 1

##### Is it necessary to have a doctrine over and beyond the philosophical disciplines?

It seems unnecessary to have any doctrine over and beyond the philosophical disciplines:

**Objection 1:** According to Ecclesiasticus 3:22 (“Seek not the things that are too high for you”), man should not strive for things that lie beyond reason. But the things that fall under reason are adequately treated in the philosophical disciplines. Therefore, it seems superfluous to have a doctrine over and beyond the philosophical disciplines.

**Objection 2:** There cannot be a doctrine that is not about some being, since nothing is known except the true, which is convertible with *being*. But all beings are treated in the philosophical disciplines, even God—this is why one part of philosophy is called theology or divine science, as is clear from the Philosopher in *Metaphysics* 6. Therefore, it was unnecessary to have another doctrine over and beyond the philosophical disciplines.

**But contrary to this:** 2 Timothy 3:16 says: “All scripture, inspired of God, is profitable to teach, to reprove, to correct, to instruct in justice.” But divinely inspired Scripture is not pertinent to the philosophical disciplines, which have been devised according to human reason. Therefore, it is advantageous that, over and beyond the philosophical disciplines, there should be another science that is divinely inspired.

**I respond:** It was necessary for human salvation that, over and beyond the philosophical disciplines devised by human reason, there should be a doctrine conformable with divine revelation.

For, first of all, according to Isaiah 64:4 (“The eye has not seen, O God, apart from You, what things You have prepared for them that wait for You”), man is ordered toward God as an end who exceeds the comprehension of reason. But the end must first be known to men, since they have to order their intentions and actions toward the end. Hence, it was necessary for man’s salvation that certain things exceeding human reason should be made known to him through divine revelation.

In addition, it was necessary for man to be instructed by divine revelation even with respect to those things about God that can be discovered by human reason. For the truth about God that is discovered by reason would come to man only from a few, and after a long time, and mixed in with many errors. But the whole of man’s salvation, which lies in God, depends on the cognition of this truth. Therefore, in order that salvation should come to men more suitably and more surely, it was necessary for them to be instructed in divine things through divine revelation.

Therefore, over and beyond the philosophical disciplines discovered by human reason, it was necessary that a sacred doctrine be had through revelation.

**Reply to objection 1:** Even if man should not inquire through human reason into things that are too high for human cognition, such things should nonetheless be accepted through faith when they are revealed by God. This is why in the same place it is added, “For many things are shown to you above the understanding of men.” Sacred doctrine consists in things of this sort.

**Reply to objection 2:** Diverse conceptual characteristics (*ratio cognoscibilis*) make for diverse sciences. For instance, the astronomer and the natural philosopher demonstrate the same conclusion, viz., that the earth is round. But the astronomer does this through a mathematical middle term—i.e., a middle term abstracted from matter—whereas the natural philosopher does it through a middle term considered materially. Hence, nothing prevents it from being the case that the same things that the philosophical disciplines treat insofar as they are knowable by the light of natural reason should be treated by another science insofar as they are known by the light of divine revelation. Hence, the theology associated with sacred doctrine differs in kind from the theology that is posited as a part of philosophy.

## Article 2

### Is sacred doctrine a science?

It seems that sacred doctrine is not a science:

**Objection 1:** Every science proceeds from first principles that are known *per se*. But sacred doctrine proceeds from the articles of the Faith, which are not known *per se*, since they are not conceded by everyone; for as 2 Thessalonians 3:2 puts it, “Not everyone has faith.” Therefore sacred doctrine is not a science.

**Objection 2:** A science is not about singular things. But sacred doctrine treats of singular things—e.g., the deeds of Abraham, Isaac, Jacob, etc. Therefore, sacred doctrine is not a science.

**But contrary to this:** In *De Trinitate* 14 Augustine says: “Only this science has the means by which saving faith is begotten, nourished, defended, and strengthened.” But this pertains to no science except sacred doctrine. Therefore, sacred doctrine is a science.

**I respond:** Sacred doctrine is a science. But notice that there are two kinds of science. Some sciences, e.g., arithmetic, geometry, etc., proceed from first principles known by the natural light of the intellect. By contrast, other sciences proceed from first principles known by the light of a higher science.

For instance, the science of perspective proceeds from first principles made known through geometry, and the science of music proceeds from first principles made known through arithmetic.

It is in this second way that sacred doctrine is a science. For it proceeds from first principles known by the light of a higher science, viz., the science had by God and the blessed in heaven. So just as music takes on faith the principles handed down to it by arithmetic, so too sacred doctrine takes on faith the principles revealed to it by God.

**Reply to objection 1:** The first principles of a science are either known *per se* or else traced back to the knowledge that belongs to a higher science. As was just explained, the first principles of sacred doctrine are of the latter type.

**Reply to objection 2:** Sacred doctrine treats singular things not because it deals with them principally, but because they are introduced as examples for living, as in the moral sciences, and also because they make clear the authority of those men through whom the divine revelation that grounds Sacred Scripture and sacred doctrine has come down to us.

### Article 3

#### Is sacred doctrine a single science?

It seems that sacred doctrine is not a single science:

**Objection 1:** According to the Philosopher in *Posterior Analytics* 1, a single science has just one type of subject. But creator and creature, with which sacred doctrine deals, are not contained under a single type of subject. Therefore, sacred doctrine is not a single science.

**Objection 2:** Sacred doctrine deals with angels, corporeal creatures, and human morals. But these things pertain to different philosophical sciences. Therefore, sacred doctrine is not a single science.

**But contrary to this:** Sacred Scripture speaks of it as a single science. For Wisdom 10:10 says, “She gave him the knowledge (*scientia*) of holy things.”

**I respond:** Sacred doctrine is a single science. For the unity of a power or a habit must be thought of as following from its object—not from its object taken materially, but rather from some formal characteristic of its object. For instance, a man, a donkey, and a rock agree in the formal characteristic of being colored, which constitutes the object of vision.

Since, as was explained above (a.1), sacred doctrine considers certain things insofar as they have been divinely revealed, everything that can be divinely revealed shares in the one formal characteristic of the object of this science. And so all such things are included under sacred doctrine as a single science.

**Reply to objection 1:** Sacred doctrine does not deal with God and creatures on an equal basis. Rather, it deals with God principally and with creatures insofar as they are related to God as their origin or their end. Hence, the unity of the science is not obstructed.

**Reply to objection 2:** Nothing prevents lower powers or habits from being differentiated by subject matters that all fall under a single higher power or habit, since the higher power or habit treats its object under a more general formal characteristic. For instance, the object of the common sensory power is the sensible, which includes both the visible and the audible. Hence, even though the common sensory power is a single power, it extends to all the objects of the five senses.

In the same way, things that are treated in diverse philosophical sciences can be dealt with by sacred doctrine—even while it remains a single science—under a single characteristic, viz., the characteristic of being divinely revealed. In this sense, sacred doctrine is, as it were, a sort of image of God’s own knowledge (*scientia*), which is a unified and simple knowledge of all things.

#### Article 4

##### Is sacred doctrine a practical science?

It seems that sacred doctrine is a practical science:

**Objection 1:** According to the Philosopher in *Metaphysics* 2, the end of a practical science is operation. But according to James 1:22 (“Be you doers of the word, and not hearers only”), sacred doctrine is ordered to operation. Therefore, sacred doctrine is a practical science.

**Objection 2:** Sacred doctrine is divided into the Old Law and the New Law. But law pertains to moral science, which is a practical science. Therefore, sacred doctrine is a practical science.

**But contrary to this:** Every practical science is about things that can be done by man. For instance, moral science is about the acts of men, and the science of building is about buildings. But sacred doctrine is principally about God, and it is men who are rather the works of God. Therefore, sacred doctrine is not a practical science but instead a speculative science.

**I respond:** As was explained above (a. 3), sacred doctrine, while remaining a single science, extends to things that pertain to different philosophical sciences, and this because of the formal characteristic that it considers in the different things, viz., their being knowable by the divine light. Hence, even though some of the philosophical sciences are speculative and others are practical, sacred doctrine includes both types within itself—just as it is by the same knowledge that God knows both Himself and the things that He does.

Still, sacred doctrine is more speculative than practical, since it deals more principally with divine things than with human acts. For it deals with human acts insofar as it is through those acts that a man is ordered toward that perfect knowledge of God in which eternal beatitude consists.

**Reply to Objection 1 and Objection 2:** The reply to the objections is clear from what has been said.

#### Article 5

##### Is sacred doctrine more noble than the other sciences?

It seems that sacred doctrine is not more noble than the other sciences:

**Objection 1:** Certitude is relevant to a science’s nobility. But the other sciences, whose first principles cannot be doubted, seem to be more certain than sacred doctrine, whose first principles—viz., the articles of the Faith—are open to doubt. Therefore, the other sciences seem to be more noble than sacred doctrine.

**Objection 2:** A lower science borrows from a higher science; for instance, music borrows from arithmetic. But sacred doctrine borrows something from the philosophical sciences. For in the letter *Ad Magnum Oratorem Urbis Romae* Jerome says that the ancient doctors “sprinkled their books with the teachings and opinions of the philosophers to such an extent that you do not know what to admire more in them, their worldly learning or their knowledge of the Scriptures.” Therefore, sacred doctrine is inferior to the other sciences.

**But contrary to this:** In Proverbs 9:3 (“Wisdom has sent her handmaidens to issue an invitation to the tower”) the other sciences are called the handmaidens of sacred doctrine.

**I respond:** Since the science of sacred doctrine is in some respects speculative and in other

respects practical, it transcends all the other sciences, both speculative and practical.

Among the speculative sciences, one is more noble than another both because of its certitude and because of the proper nobility of its subject matter. The science of sacred doctrine exceeds the other speculative sciences in both regards. It exceeds them in certitude, because the other sciences have their certitude from the natural light of human reason, which is able to make mistakes, whereas sacred doctrine has its certitude from the light of God's knowledge, which cannot be deceived. And it exceeds them in the nobility of its subject matter, since this science is principally about things that transcend reason in their loftiness, whereas the other sciences consider only those things that fall under reason.

Among the practical sciences, on the other hand, the more noble is that which is ordered toward a more ultimate end. For instance, the science of government is more noble than military science because the good of the army is ordered to the good of the state. But the end of sacred doctrine as a practical science is eternal beatitude, and this is the ultimate end to which all the other ends of the practical sciences are ordered.

Hence, it is clear that sacred doctrine is in every way more noble than the other sciences.

**Reply to objection 1:** Nothing prevents it from being the case that what is more certain by its nature (*secundum naturam*) is less certain to us, and this because of the weakness of our intellect, which, according to *Metaphysics* 2, "is related to the things that are most manifest by nature as the eye of an owl is related to the light of the sun." So the doubt that occurs in some with regard to the articles of the Faith is due not to a lack of certitude on the part of the things themselves, but rather to the weakness of the human intellect. And yet, according to *De Animalibus* 11, the least cognition that can be had of the highest things is more desirable than the most firm cognition that is had of the lowest things.

**Reply to objection 2:** Sacred doctrine can borrow something from the philosophical disciplines not because it needs these disciplines out of necessity, but in order to make clearer the matters that are dealt with in this science. For sacred doctrine takes its first principles not from the other sciences, but directly from God through revelation. And so it does not borrow from the other sciences as from its superiors, but rather uses them as its inferiors and handmaidens, in the way that architectonic sciences make use of the sciences that minister to them—as, for instance, the science of government makes use of military science. Furthermore, the fact that sacred doctrine uses the other sciences in this way is due not to its own defectiveness or inadequacy, but rather to the defectiveness of our intellect, which is more easily led toward things that lie beyond reason (the subject matter of sacred doctrine) by things that are known through natural reason (from which the other sciences take their starting points).

## Article 6

### Does sacred doctrine constitute wisdom?

It seems that sacred doctrine does not constitute wisdom:

**Objection 1:** No doctrine that takes its first principles from elsewhere is worthy of the name 'wisdom'; for according to *Metaphysics* 1, "it belongs to wisdom to order and not to be ordered." But as is clear from what was said above (a. 2), sacred doctrine takes its first principles from elsewhere. Therefore, this doctrine does not constitute wisdom.

**Objection 2:** It is the task of wisdom to prove the first principles of the other sciences; this is why wisdom is said to be like the head of the sciences, as is clear from *Ethics* 6. But sacred doctrine does not prove the first principles of the other sciences. Therefore, it does not constitute wisdom.

**Objection 3:** Sacred doctrine is acquired through study. But wisdom is had by being infused; this is

why it is numbered among the seven gifts of the Holy Spirit, as is clear from Isaiah 11:2. Therefore, sacred doctrine does not constitute wisdom.

**But contrary to this:** Deuteronomy 4:6, at the beginning of the law, says, “This is our wisdom and understanding in the sight of the nations.”

**I respond:** Among all human wisdoms, sacred doctrine constitutes wisdom in the highest sense—not just wisdom in some genus, but wisdom absolutely speaking. For since it is the function of the wise man to order and to judge, and since judgment is made about lower things in light of a higher cause, the wise man with respect to any given genus is the one who carefully considers the highest cause in that genus. For instance, in the genus of building, the craftsman who plans the form of a house is called the architect and is said to be wise in relation to the lower craftsmen who cut the wood or prepare the stones; hence, 1 Corinthians 3:10 says, “As a wise architect I have laid the foundation.” Again, in the genus of the whole of human life, the prudent man is called wise insofar as he orders human acts to their due end; hence, Proverbs 10:23 says, “Wisdom is prudence to a man.” Therefore, the one who considers the absolutely highest cause of the entire universe, viz., God, is called wise in the highest sense. Hence, wisdom is said to be “the cognition of divine things,” as is clear from Augustine in *De Trinitate* 12.

Now it is sacred doctrine that most properly makes determinations about God insofar as He is the highest cause. For it does so not only with respect to that which is knowable through creatures—this the philosophers have discovered, as it says in Romans 1:9 (“That which is known of God is manifest to them”)—but also with respect to that which He alone knows about Himself and which has been communicated to others by revelation. Hence, sacred doctrine is called wisdom in the highest sense.

**Reply to objection 1:** Sacred doctrine takes its first principles not from any human science but from God’s knowledge, by which all of our cognition is ordered as by the highest wisdom.

**Reply to objection 2:** The first principles of other sciences are either known *per se*, in which case they cannot be proved, or they are proved by natural arguments in some other science. In contrast, the cognition proper to sacred doctrine comes through revelation and not through natural reason. And so the function of sacred doctrine is not to prove the first principles of the other sciences, but only to pass judgment on those principles. That is, anything in the other sciences that is found to be contrary to the truth of sacred doctrine is condemned as altogether false. Hence, 2 Corinthians 10:4-5 says, “The weapons of our warfare . . . destroy counsels and every height that exalts itself against the knowledge of God.”

**Reply to objection 3:** Since the function of wisdom is judgment, ‘wisdom’ is understood in two ways, corresponding to the two ways of judging.

One way in which someone can judge is by *inclination*. For instance, someone with a virtuous habit makes correct judgments about the things to be done in accord with that virtue insofar as he is inclined toward those things. This is why *Ethics* 10 says that the virtuous person is the measure and rule of human acts.

The other way in which someone can judge is by *cognition*. For instance, one who is versed in moral science could make judgments about the acts of a given virtue even if he did not have that virtue.

The first way of judging belongs to the wisdom that is posited as a gift of the Holy Spirit—this according to 1 Corinthians 2:15 (“The spiritual man judges all things”) and according to Dionysius in *De Divinis Nominibus*, chap. 2 (“Hierotheus became learned not only by studying but by experiencing divine things”). The second way of judging, on the other hand, is pertinent to sacred doctrine insofar as it is had through study, even though its first principles are had from revelation.

## Article 7

### Is God the subject of the science of sacred doctrine?

It seems that God is not the subject of the science of sacred doctrine:

**Objection 1:** According to the Philosopher in *Posterior Analytics* 1, every science must presuppose a real definition (*quid est*) of its subject. But the science of sacred doctrine does not presuppose a real definition of God; for Damascene says, “In the case of God, it is impossible to say what He is.” Therefore, God is not the subject of sacred doctrine.

**Objection 2:** Everything that is determined by a science is included in the subject of that science. But in Sacred Scripture determinations are made about many things other than God, e.g., about creatures and human morals. Therefore, God is not the subject of sacred doctrine.

**But contrary to this:** The subject of a science is what that science talks about. But in the science of sacred doctrine it is God who is talked about; for sacred doctrine is called theology, i.e., discourse about God. Therefore, God is the subject of sacred doctrine.

**I respond:** God is the subject of the science of sacred doctrine. For the subject of a science is related to that science in the way that the object of a power or habit is related to that power or habit. But that which is properly designated as the object of a power or habit is such that everything is related to the power or habit under the formal characteristic (*ratio*) of that object. For instance, a man and a rock are related to sight insofar as they are colored, and so *being colored* is the proper object of sight.

In sacred doctrine everything is treated under the formal characteristic *God*, either because the things in question are God Himself or because they are ordered to God as their origin and their end. Hence, it follows that God is indeed the subject of this science.

This is also clear from the fact that the first principles of this science—viz., the articles of the Faith—are about God. But the subject of the first principles of a science is the same as the subject of the science as a whole, since the entire science is contained virtually in its first principles.

However, some authors, focusing on the things that are dealt with in the science of sacred doctrine and not on the formal characteristic under which they are considered, have assigned other subjects to this science—either things and signs, or the works of redemption, or the whole of Christ, both head and members. And, to be sure, all these things are dealt with in the science of sacred doctrine, but only insofar as they are ordered to God.

**Reply to objection 1:** Even though we cannot know the real definition (*quid est*) of God, nonetheless, in the science of sacred doctrine we use His effects, whether effects of nature or effects of grace, in place of a definition in regard to the things that are considered about God in this doctrine—just as in the other philosophical sciences, too, something is demonstrated about a cause through its effect, where the effect takes the place of a definition of the cause.

**Reply to objection 2:** All the other things that are determined in sacred doctrine are included under God—not as parts or species or accidents of God, but as things ordered to Him in some way.

## Article 8

### Does sacred doctrine make use of arguments?

It seems that sacred doctrine does not make use of arguments:

**Objection 1:** In *De Fide Catholica* 1 Ambrose says, “Do away with arguments when seeking faith.” But in sacred doctrine it is principally faith that is sought; hence, John 20:31 says, “These things have been written in order that you might believe.” Therefore, sacred doctrine does not make use of arguments.

**Objection 2:** If sacred doctrine made use of arguments, it would argue either from authority or from reason. If it argued from authority, this would seem to conflict with its nobility; for, according to Boethius, proofs derived from authority are the weakest. Likewise, if it argued from reason, this would conflict with its purpose; for according to Gregory in his homily, “Faith is without merit when human reason provides its own test.” Therefore, sacred doctrine does not make use of arguments.

**But contrary to this:** Titus 1:9 says this about a bishop: “He must embrace that faithful word which is according to doctrine, that he may be able to exhort in sound doctrine and to convince the gainsayers.”

**I respond:** The other sciences do not argue in order to prove (*ad probanda*) their first principles, but rather argue from those first principles in order to prove (*ad ostendendum*) other things within the sciences themselves. So, too, sacred doctrine does not argue in order to prove its first principles, which are the articles of the Faith, but instead proceeds on the basis of those principles in order to prove something else. For instance, in 1 Corinthians 15:12ff. the Apostle argues from the resurrection of Christ in order to prove the general resurrection.

Notice, however, that among the philosophical sciences the lower sciences neither prove their own first principles nor dispute with anyone who denies those principles; instead, they leave this to a higher science. In contrast, the highest science among them, viz., metaphysics, does dispute with someone who denies its first principles, as long as that adversary concedes something or other. But if he concedes nothing, it is impossible to dispute with him—though it is still possible to refute his arguments.

Therefore, since sacred doctrine has no science higher than itself, it disputes with someone who denies its first principles—and this by employing arguments—as long as that adversary concedes some of the things that are had by divine revelation. For example, with heretics we dispute by appealing to passages from Sacred Scripture, and against those who deny one article of the Faith we argue by appealing to another article. However, if our adversary believes nothing that has been divinely revealed, then there is no further way to prove the articles of the Faith by arguments—though there is room for answering his objections to the Faith if he offers any. For since the Faith is based on infallible truth, and since it is impossible to demonstrate the contrary of a truth, it is obvious that proofs brought against the Faith do not constitute demonstrations, but are instead answerable arguments.

**Reply to objection 1:** As noted above, even though the arguments of human reason play no role in proving things that belong to the Faith, sacred doctrine nonetheless does argue from the articles of the Faith to other things.

**Reply to objection 2:** It is especially appropriate for sacred doctrine to argue from authority. For the first principles of sacred doctrine are had by revelation, and so we must trust the authority of those to whom this revelation has been made. Nor does this detract from the nobility of sacred doctrine. For even though an argument from an authority founded on human reason is the weakest of arguments, an argument from an authority founded on divine revelation is the most efficacious of arguments.

Nonetheless, sacred doctrine uses human reason as well—not, to be sure, in order to prove the Faith, since this would destroy the meritoriousness of faith, but rather to make clear certain other things that are dealt with in this doctrine. For since grace perfects nature and does not destroy it, natural reason must serve the Faith, just as the natural inclination of the will likewise serves charity. This is why in 2 Corinthians 10:5 the Apostle says, “. . . bringing into captivity every understanding unto the obedience of Christ.” This is also why sacred doctrine uses citations from the philosophers in those instances in

which the philosophers have been able to discern the truth through natural reason. For instance, in Acts 17:28 Paul cites the saying of Aratos in these words: “As one of your own poets said: ‘For we are also His offspring’.”

Still, even though sacred doctrine uses citations of the sort in question as extraneous and probable arguments, it properly uses citations from the canonical Scriptures when arguing from necessity, whereas it uses citations from other doctors of the Church as if arguing from what is properly its own, though with probability. For our Faith is based on the revelation made to the Apostles and Prophets who wrote the canonical books and not on any revelation that might have been made to the other doctors. Thus, in a letter to Jerome, Augustine says, “It is only to those books of the Scriptures called canonical that I have learned to give the honor of believing with utter confidence that none of their authors has erred in anything. In contrast, I read other authors in such a way that no matter how distinguished they might be in holiness and learning, I do not think something true simply because they have thought it or written it.”

## Article 9

### Should Sacred Scripture make use of metaphors?

It seems that Sacred Scripture should not make use of metaphors:

**Objection 1:** That which is proper to the lowest doctrine does not seem to be suitable for the science of sacred doctrine, which, as already noted, holds the highest place among the other sciences. But to proceed by means of various likenesses and representations is proper to poetics, which is the lowest among all doctrines. Therefore, using likenesses of this sort is not appropriate for the science of sacred doctrine.

**Objection 2:** Sacred doctrine seems to be ordered to the manifestation of truth; thus it is that according to Ecclesiasticus 24:31 (“They that explain me shall have life everlasting”), a reward is promised to those who make the truth manifest. But the truth is obscured by likenesses of the sort in question. Therefore, it is inappropriate for sacred doctrine to teach divine things by means of likenesses drawn from corporeal things.

**Objection 3:** Creatures are more sublime to the extent that they are more similar to God. So if any creatures are to be likened to God, the similes should be drawn especially from the more sublime creatures and not from the lowliest. Yet this latter sort of simile is often found in Sacred Scripture.

**But contrary to this:** Osee 12:10 says, “I have multiplied visions, and I have used likenesses by the ministry of the prophets.” But to teach something by means of a likeness is metaphorical. Therefore, making use of metaphors pertains to sacred doctrine.

**I respond:** It is appropriate for Sacred Scripture to teach about divine and spiritual things by means of likenesses drawn from corporeal things.

For God provides for all things in a way that is suitable to their nature. But it is natural for man to approach intelligible things through sensible things, since all our cognition takes its origin from the senses. Hence, it is appropriate for Sacred Scripture to teach us spiritual things by way of metaphors drawn from corporeal things. Dionysius makes this point in *De Caelesti Hierarchia*, chap. 1: “It is impossible for the divine ray to illumine us unless it is enshrouded by a variety of sacred veils.”

In addition, since Sacred Scripture is proposed generally to everyone (as Romans 1:14 puts it, “To the wise and to the unwise I am a debtor”), it is appropriate for spiritual things to be proposed by means of likenesses drawn from corporeal things, in order that Scripture might be grasped even by those who are so untutored as to be incapable of grasping what is intelligible in itself.

**Reply to objection 1:** A poet uses metaphors for the sake of representation itself, since representation is naturally delightful to man. But, as noted above, sacred doctrine uses metaphors out of necessity and because of their usefulness.

**Reply to objection 2:** As Dionysius says, the light of divine revelation is not destroyed by the sensible figures in which it is veiled. Rather, it remains in its truth, so that it does not allow the minds to which the revelation is made to persist in the likenesses, but instead raises them to the cognition of intelligible things—and through these minds to which the revelation has been made others are also instructed about those intelligible things. This is why things that in one passage of Scripture are related by means of metaphors are expounded more explicitly in other passages. Indeed, the very obscurity of the figures is useful for exercising more diligent minds, and it is also useful for countering the ridicule of non-believers of which Matthew 7:6 speaks (“Give not that which is holy to dogs”).

**Reply to objection 3:** As Dionysius teaches in *De Caelesti Hierarchia*, chap. 2, it is more fitting for divine things to be transmitted in the Scriptures by figures of speech drawn from lower bodies than by figures of speech drawn from more noble bodies—and this for three reasons.

First, in this way the mind is rendered more free from error. For it is obvious that the figures in question are not being predicated properly of divine things, whereas there could be some doubt about this if divine things were described by figures drawn from the more noble bodies—especially in the eyes of those who did not know how to conceive of anything more noble than bodies.

Second, this mode of expression is more appropriate for the cognition that we have of God in this life. For as far as God is concerned, what He is not is clearer to us than what He is. And so likenesses drawn from things that are further removed from God produce in us the more accurate impression that God is beyond what we say or think about Him.

Third, this mode of expression is better at hiding divine things from those who are unworthy of them.

## Article 10

### Does Sacred Scripture have multiple senses underlying a single passage?

It seems that Sacred Scripture does not have more than one sense underlying a single passage, viz., the *historical* or *literal* sense, the *allegorical* sense, the *tropological* or *moral* sense, and the *anagogical* sense.

**Objection 1:** A multiplicity of senses for a single passage of Scripture produces confusion and deception, and it undermines the firmness of the arguments; thus, an argument that proceeds from propositions with many senses is not sound, but instead has one or another fallacy ascribed to it. But Sacred Scripture ought to be effective at exhibiting the truth without any fallacy at all. Therefore, in Sacred Scripture there should not be multiple senses underlying a single passage.

**Objection 2:** In *De Utilitate Credendi* Augustine says, “The Scripture that is called the Old Testament is fourfold, including history, aetiology, analogy, and allegory.” But these four senses seem altogether different from the four enumerated above. Therefore, it does not seem fitting for the same passage of Sacred Scripture to be expounded according to the four senses enumerated above.

**Objection 3:** In addition to the senses enumerated above there is the parabolic sense, which is not included among those senses.

**But contrary to this:** In *Moralia* 20 Gregory says, “By its very manner of speech Sacred Scripture transcends all the sciences. For in one and the same passage it makes known a mystery even as it narrates

a deed.”

**I respond:** The author of Sacred Scripture is God, who has it in His power to use not only *words* for signifying (which even a man can do), but also the *very things themselves*. And so even though words are used to signify in all the sciences, it is peculiar to the science of sacred doctrine that the things signified by its words likewise signify something themselves.

Thus, the first type of signification, by which words signify things, pertains to the first sense, which is the *historical* or *literal* sense. On the other hand, the type of signification by which the things signified by words in turn signify other things, is called the *spiritual* sense, which is built upon the literal sense and presupposes it.

Now this spiritual sense is divided into three. For as the Apostle says at Hebrews 7:19, the Old Law is a figure of the New Law, and the New Law is, as Dionysius puts it in *De Ecclesiastica Hierarchia*, a figure of future glory; again, in the New Law those things that were done at the beginning are signs of the things that we ourselves ought to do. Thus, insofar as the things belonging to the Old Law signify things that belong to the New Law, there is the *allegorical* sense. Insofar as the things that were done in Christ (or in those Scriptures that signify Christ) are signs of things that we ourselves ought to do, there is the *moral* sense. And insofar as they signify things pertaining to eternal glory, there is the *anagogical* sense.

Moreover, since the literal sense is the sense intended by the author, and since the author of Sacred Scripture is God, who comprehends all things at once by His intellect, it follows that, as Augustine says in *Confessiones* 12, it is not inappropriate for a single Scriptural passage to have more than one sense even with respect to the literal sense.

**Reply to objection 1:** The multiplicity of these senses does not make for equivocation or any other type of ambivalence. For, as was just explained, these senses are multiplied not because a single word signifies many things, but because the very things signified by the words are capable of being signs of other things. Likewise, no confusion results in Sacred Scripture, since all the senses are built upon one sense, viz., the literal sense; and, as Augustine explains in *Contra Vincentium Donatistam*, it is from the literal sense alone that an argument can be drawn, and not from those things that are said allegorically. Yet nothing is thereby lost from Sacred Scripture, since everything necessary to the Faith that is contained under a spiritual sense is such that Scripture teaches it explicitly through the literal sense in some other place.

**Reply to objection 2:** Three of the items in question—history, aetiology, and analogy—all pertain to one sense, viz., the literal sense. For, as Augustine himself explains, there is *history* when something is simply set forth; there is *aetiology* when a cause is assigned to something that has been said, as when Our Lord explained the reason why Moses had given them license to put their wives away, viz., because of the hardness of their hearts (Matthew 19:8); and there is *analogy* when the truth of one Scriptural passage is shown not to conflict with the truth of another passage.

Of the four things mentioned in the objection, *allegory* is the only one posited for the three spiritual senses—just as, in *Summa Sententiarum* 3 Hugo of St. Victor also includes the anagogical sense under the allegorical, positing just three senses, viz., the *historical*, the *allegorical*, and the *tropological*.

**Reply to objection 3:** The *parabolic* sense is included under the literal sense. For in a parable something is properly signified by the words and something is figuratively signified; and the literal sense is not the figure itself, but rather that which the figure is a figure of. For instance, when Scripture speaks of the arm of God, the literal sense is not that God has a bodily part of the sort in question; rather, the literal sense is that God has what is signified by this bodily part, viz., operative power. This makes clear how it is that nothing false can ever lie at the basis of the literal sense of Sacred Scripture.

## QUESTION 2

### The Existence of God

As is clear from what was said above, the main purpose of sacred doctrine is to propound our cognition of God—not just our cognition of God as He is in Himself, but also our cognition of Him insofar as He is the origin of things and their end, and especially insofar as He is the origin and end of the rational creature. Therefore, since our intention is to lay out this doctrine, we will deal first with God (Part 1); second, with the rational creature's movement toward God (Part 2); and third, with Christ, who, insofar as He is a man, is our way of going to God (Part 3).

Our treatment of God will be divided into three parts. We will deal, first, with those things that pertain to the divine essence (questions 2-26); second, with those things that pertain to the distinction among the divine Persons (questions 27-43); and, third, with those things that pertain to the procession of creatures from God (questions 44-119).

As far as the divine essence is concerned, we must first inquire into whether there is a God (question 2); second, we must inquire into what His mode of being is or, rather, what it is not (questions 3-13); and, third, we must inquire into those things that pertain to His operation, viz., His knowledge and His will and power (questions 14-26).

As for the first point, there are three questions: (1) Is it known *per se* that there is a God? (2) Is it demonstrable that there is a God? (3) Is there a God?

#### Article 1

##### Is it known *per se* that there is a God?

It seems to be known *per se* that there is a God:

**Objection 1:** The things said to be known to us *per se* are such that the cognition of them is in us by nature, as is clear in the case of first principles. But, as Damascene puts it at the beginning of his book, “The cognition of God’s existence is naturally instilled in everyone.” Therefore, it is known *per se* that there is a God.

**Objection 2:** The things said to be known *per se* are such that, once their terms are understood, they are immediately known; in *Posterior Analytics* 1 the Philosopher ascribes this status to first principles—for instance, once someone knows what a whole is and what a part is, he immediately knows that every whole is greater than a part of itself. But once someone understands what the name ‘God’ signifies, he immediately has it that there is a God. For what is signified by this name is that than which a greater cannot be signified; but what exists in reality and in the understanding is greater than what exists only in the understanding; since, then, God immediately exists in the understanding when the name ‘God’ is understood, it follows that He also exists in reality. Therefore, it is known *per se* that there is a God.

**Objection 3:** It is known *per se* that truth exists, since anyone who denies that truth exists is admitting that truth does exist—for if truth does not exist, then it is true that truth does not exist, and if something is true, then it must be the case that truth exists. But according to John 14:6 (“I am the way, the truth, and the life”), God is truth itself. Therefore, it is known *per se* that there is a God.

**But contrary to this:** As is clear from what the Philosopher says in *Metaphysics* 4 and *Posterior Analytics* 1 about the first principles of demonstration, no one can think the opposite of something that is known *per se*. But according to Psalm 52:1 (“The fool said in his heart: There is no God”), someone can think the opposite of the proposition that there is a God. Therefore, it is not known *per se* that there is a

God.

**I respond:** There are two ways in which something can be known *per se*: in one way, in its own right (*secundum se*) but not to us (*quoad nos*); in the second way, both in its own right and to us.

For a proposition is known *per se* because the predicate is included in the definition (*ratio*) of the subject. For instance, *Man is an animal* is known *per se* because *animal* is part of the definition of *man*. So if the real definitions (*quid est*) of the predicate and of the subject are known to everyone, then the relevant proposition will be known *per se* to everyone. This is clearly the case with the first principles of demonstration, whose terms are certain common notions that no one is unacquainted with, e.g., *being* and *non-being*, *whole* and *part*, etc.

However, if there are some who are ignorant of the real definitions of the predicate and of the subject, the proposition in question will, to be sure, be known *per se* as far as it itself is concerned, but it will not be known *per se* to those who are unacquainted with the predicate and the subject of the proposition. And so, as Boethius says in *De Hebdomadibus*, some mental conceptions are such that it is only to the wise that they are common and known *per se*—as, for instance, that incorporeal beings do not exist in a place.

I claim that the proposition ‘There is a God’ is known *per se* as far as it itself is concerned, since the predicate is the same as the subject. For as will become clear below (q. 3, a. 4), God is His own *esse*. But because we do not know the real definition of God, this proposition is not known *per se* to us. Instead, it has to be demonstrated by means of things that are more known to us and less known by their nature, viz., God’s effects.

**Reply to objection 1:** The cognition that there is a God is naturally instilled in us in a certain general and indistinct way—viz., insofar as God is man’s beatitude. For man by nature desires beatitude, and what man desires by nature is such that it is known to him by nature.

But this is not to know, without qualification, that there is a God—just as knowing that someone is approaching is not the same as knowing that Peter is approaching, even if it is Peter who is approaching. For there are many who think that man’s complete good, i.e., his beatitude, is wealth, whereas others think it is pleasure, and still others something else.

**Reply to objection 2:** It might be that someone who hears the name ‘God’ does not take it that what is being signified is that than which a greater cannot be thought. For some have believed that God is a corporeal being.

However, even granted that someone thinks that what is signified by the name ‘God’ is what was just said—viz., that than which a greater cannot be thought—it still does not thereby follow that he thinks that what is signified by the name exists in reality rather than just in the intellect’s apprehension. Nor can one argue that it does exist in reality, unless it is granted that there exists in reality something such that a greater cannot be thought. But this is not granted by those who claim that there is no God.

**Reply to objection 3:** It is known *per se* that truth in general exists, but it is not known to us *per se* that there is a First Truth.

## Article 2

### Can it be demonstrated that there is a God?

It seems that it cannot be demonstrated that there is a God:

**Objection 1:** It is an article of the faith that there is a God. But those things that belong to the faith are not demonstrable; for a demonstration makes it the case that one knows (*scire*), but, as is clear

from the Apostle in Hebrews 11:1, faith is about things that are not apparent. Therefore, it cannot be demonstrated that there is a God.

**Objection 2:** The middle term of a demonstration is a real definition (*quid est*). But as Damascene says, in the case of God we cannot know His real definition; rather, we can know only what He is not. Therefore, we cannot demonstrate that there is a God.

**Objection 3:** If one were to demonstrate that there is a God, this could only be by means of His effects. But God's effects are not proportionate to Him; for He is infinite and His effects are finite, and there is no ratio of the finite to the infinite. Given, then, that a cause cannot be demonstrated by means of an effect that is not proportionate to it, it seems that it cannot be demonstrated that there is a God.

**But contrary to this:** In Romans 1:20 the Apostle says, "The invisible things of God . . . are clearly seen, being understood through the things that are made." But this would not be so if were it not the case that it can be demonstrated that there is a God. For the first thing that has to be understood of something is whether it exists.

**I respond:** There are two kinds of demonstration. One kind is through a cause and is called a demonstration *propter quid*—and this sort of demonstration is through things that are prior, absolutely speaking. The second kind is through an effect and is called a demonstration *quia*—and this sort of demonstration is through things that are prior with respect to us. For since an effect is more apparent to us than its cause, we proceed through the effect to a cognition of the cause.

Now from any effect it can be demonstrated that a cause proper to it exists—as long as its effects are more known to us. For since effects depend on a cause, it follows that once an effect is posited, it must be that its cause exists prior to it. Hence, insofar as it is not known to us *per se* there is a God, this is demonstrable through effects that are known to us.

**Reply to objection 1:** 'There is a God' and other things of this sort that, according to Romans 1:19, are known through natural reason are not articles of the faith but are instead preambles to the articles. For faith presupposes natural cognition in the way that grace presupposes nature and in the way that perfection presupposes the perfectible. But nothing prevents what is demonstrable and knowable in its own right from being accepted as an object of faith by someone who does not grasp the demonstration.

**Reply to objection 2:** When a cause is being demonstrated through an effect, the effect has to be used in place of a real definition of the cause in order to prove that the cause exists. This is especially so in the case of God. For in order to prove that something exists, one must take a nominal definition (*quid significat nomen*)—and not a real definition (*quid est*)—as the middle term, since the question "What is it?" is posterior to the question "Is there such a thing?". But as will be shown below (q. 13, a. 1), the names of God are imposed on the basis of His effects. Hence, when we are demonstrating that there is a God on the basis of His effects, we can use a nominal definition of the name 'God' as the middle term.

**Reply to objection 3:** The perfect cognition of a cause cannot be had through effects that are not proportionate to the cause. However, as was said above, from any effect it can be clearly demonstrated to us that the cause exists. And so from God's effects it can be demonstrated that there is a God, even though we cannot, through those causes, know Him perfectly with respect to His essence.

### Article 3

#### Is there a God?

It seems that there is no God:

**Objection 1:** If one of a pair of contraries were infinite, it would totally destroy the other contrary. But by the name ‘God’ one means a certain infinite good. Therefore, if there were a God, there would be no evil. But there is evil in the world. Therefore, there is no God.

**Objection 2:** What can be accomplished with fewer principles is not done through more principles. But it seems that everything that happens in the world could have been accomplished through other principles, even if there were no God; for things that are natural are traced back to nature as a principle, whereas things that are purposeful are traced back to human reason or will as a principle. Therefore, there is no need to claim that there is a God.

**But contrary to this:** Exodus 1:14 says under the personage of God, “I am Who am.”

**I respond:** There are five ways to prove that there is a God.

The *first* and clearest way is that taken from movement or change (*ex parte motus*):

It is certain, and obvious to the senses, that in this world some things are moved.

But everything that is moved is moved by another. For nothing is moved except insofar as it is in potentiality with respect to that actuality toward which it is moved, whereas something effects movement insofar as it is in actuality in a relevant respect. After all, to effect movement (*movere*) is just to lead something from potentiality into actuality. But a thing cannot be led from potentiality into actuality except through some being that is in actuality in a relevant respect; for example, something that is hot in actuality—say, a fire—makes a piece of wood, which is hot in potentiality, to be hot in actuality, and it thereby moves and alters the piece of wood. But it is impossible for something to be simultaneously in potentiality and in actuality with respect to same thing; rather, it can be in potentiality and in actuality only with respect to different things. For what is hot in actuality cannot simultaneously be hot in potentiality; rather, it is cold in potentiality. Therefore, it is impossible that something should be both mover and moved in the same way and with respect to the same thing, or, in other words, that something should move itself. Therefore, everything that is moved must be moved by another.

If, then, that by which something is moved is itself moved, then it, too, must be moved by another, and that other by still another. But this does not go on to infinity. For if it did, then there would not be any first mover and, as a result, none of the others would effect movement, either. For secondary movers effect movement only because they are being moved by a first mover, just as a stick does not effect movement except because it is being moved by a hand. Therefore, one has to arrive at some first mover that is not being moved by anything. And this is what everyone takes to be a God.

The *second* way is based on the notion of an efficient cause:

We find that among sensible things there is an ordering of efficient causes, and yet we do not find—nor is it possible to find—anything that is an efficient cause of its own self. For if something were an efficient cause of itself, then it would be prior to itself—which is impossible.

But it is impossible to go on to infinity among efficient causes. For in every case of ordered efficient causes, the first is a cause of the intermediate and the intermediate is a cause of the last—and this regardless of whether the intermediate is constituted by many causes or by just one. But when a cause is removed, its effect is removed. Therefore, if there were no first among the efficient causes, then neither would there be a last or an intermediate. But if the efficient causes went on to infinity, there would not be a first efficient cause, and so there would not be a last effect or any intermediate efficient causes, either—which is obviously false. Therefore, one must posit some first efficient cause—which everyone calls a God.

The *third* way is taken from the possible and the necessary, and it goes like this:

Certain of the things we find in the world are able to exist and able not to exist (*quaedam quae sunt possibilis esse et non esse*); for some things are found to be generated and corrupted and, as a result, they are able to exist and able not to exist.

But it is impossible that everything that exists should be like this; for that which is able not to exist

is such that at some time it does not exist. Therefore, if everything is such that it is able not to exist, then at some time nothing existed in the world. But if this were true, then nothing would exist even now. For what does not exist begins to exist only through something that does exist; therefore, if there were no beings, then it was impossible that anything should have begun to exist, and so nothing would exist now—which is obviously false. Therefore, not all beings are able to exist [and able not to exist]; rather, it must be that there is something necessary in the world.

Now every necessary being either has a cause of its necessity from outside itself or it does not. But it is impossible to go on to infinity among necessary beings that have a cause of their necessity—in the same way, as was proved above, that it is impossible to go on to infinity among efficient causes. Therefore, one must posit something that is necessary *per se*, which does not have a cause of its necessity from outside itself but is instead a cause of necessity for the other [necessary] things. But this everyone calls a God.

The *fourth* way is taken from the gradations that are found in the world:

In the world some things are found to be more and less good, more and less true, more and less noble, etc. But *more* and *less* are predicated of diverse things insofar as they approach in diverse ways that which is maximal in a given respect. For instance, the hotter something is, the closer it approaches that which is maximally hot. Therefore, there is something that is maximally true, maximally good, and maximally noble, and, as a result, is a maximal being; for according to the Philosopher in *Metaphysics 2*, things that are maximally true are maximally beings.

But, as is claimed in the same book, that which is maximal in a given genus is a cause of all the things that belong to that genus; for instance, fire, which is maximally hot, is a cause of all hot things. Therefore, there is something that is a cause for all beings of their *esse*, their goodness, and each of their perfections—and this we call a God.

The *fifth* way is taken from the governance of things:

We see that some things lacking cognition, viz., natural bodies, act for the sake of an end. This is apparent from the fact that they always or very frequently act in the same way in order to bring about what is best, and from this it is clear that it is not by chance (*non a casu*), but as the result of a tendency (*ex intentione*), that they attain the end.

But things lacking cognition tend toward an end only if they are directed by something that has cognition and intellective understanding (*non tendunt in finem nisi directa ab aliquo cognoscente et intelligente*), in the way that an arrow is directed by an archer. Therefore, there is something with intellective understanding by which all natural things are ordered toward an end—and this we call a God.

**Reply to objection 1:** As Augustine says in the *Enchiridion*, “Since God is maximally good, He would not allow any evil to exist in His works if He were not powerful enough and good enough to draw good even from evil.” Therefore, it is part of God’s infinite goodness that He should permit evils and elicit goods from them.

**Reply to objection 2:** Since it is by the direction of a higher agent that nature acts for the sake of a determinate end, those things that are done by nature must also be traced back to God as a first cause. Similarly, even things that are done by design must be traced back to a higher cause and not to human reason and will. For human reason and will are changeable and subject to failure, but, as was shown above, all things that can change and fail must be traced back to a first principle that is unmoved and necessary *per se*.

## QUESTION 3

### God's Simplicity

Once we have ascertained that a given thing exists, we then have to inquire into its mode of being in order to come to know its real definition (*quid est*). However, in the case of God we cannot know His real definition, but can know only what He is not; and so we are unable to examine God's mode of being, but instead can examine only what His mode of being is not. Therefore, we have to consider, first, what His mode of being is not (questions 3-11); second, how we apprehend Him (question 12); and, third, how He is named (question 13).

By excluding from God certain things that do not befit Him, e.g., composition, change, and other things of this sort, it is possible to show what His mode of being is not. So, first of all, we will inquire into His simplicity, by which composition is excluded from Him (question 3). And because among corporeal things the simple ones are imperfect and mere parts, we will inquire, second, into His perfection (questions 4-6); third, into His infinity (questions 7-8); fourth, into His immutability (questions 9-10); and fifth, into His oneness (question 11).

As for the first point, there are eight questions: (1) Is God a body? (2) Is there a composition of form and matter in Him? (3) Is there a composition of 'what-ness' (*quidditas*), i.e., essence or nature, and subject in Him? (4) Is there a composition of essence and *esse* in Him? (5) Is there a composition of genus and difference in Him? (6) Is there a composition of substance and accident in Him? (7) Is there any type of composition at all in Him, or is He utterly simple? (8) Does He enter into composition with other things?

### Article 1

#### Is God a body?

It seems that God is a body:

**Objection 1:** A body is that which has three dimensions. But Sacred Scripture attributes three dimensions to God; for Job 11:8 says: "He is higher than heaven, and what will you do? He is deeper than hell, and how will you know? The measure of him is longer than the earth, and broader than the sea." Therefore, God is a body.

**Objection 2:** Everything that has a shape (*figura*) is a body, since shape is a quality that involves quantity. But God seems to have a shape; for in Genesis 1:26 it is written, "Let us make man to our image and likeness," and, according to Hebrews 1:3, shape is called an image ("For He is the brightness of his glory, and the figure (*figura*) [*read: the image*] of his substance." Therefore, God is a body.

**Objection 3:** Everything that has bodily parts is a body. But Scripture attributes bodily parts to God; for Job 40:4 says, "And have you an arm like God?," and Psalm 33:16 says, "The eyes of the Lord are upon the just," and Psalm 117:16 says, "The right hand of the Lord has wrought strength." Therefore, God is a body.

**Objection 4:** Posture (*situs*) belongs only to a body. But in the Scriptures things pertaining to posture are said of God; for Isaiah 6:1 says, "I saw the Lord sitting," and Isaiah 3:13 says, "The Lord stands up to judge." Therefore, God is a body.

**Objection 5:** Nothing can be a spatial terminus *a quo* or terminus *ad quem* unless it is a body or something corporeal. But in Scripture God is said to be a spatial terminus *ad quem* (Psalm 33:6: "Come to Him and be enlightened") and a spatial terminus *a quo* (Jeremiah 17:13: "They that depart from You shall be written in the earth"). Therefore, God is a body.

**But contrary to this:** John 4:24 says, “God is a spirit.”

**I respond:** One should assert without qualification that God is not a body. This can be shown in three ways.

First, as is clear from an induction over singulars, no body effects movement without itself being moved (*nullum corpus movet non motum*). But it was shown above (q. 2, a. 3) that God is the first unmoved mover. Hence, it is clear that God is not a body.

Second, the first being must be fully actual and in no way in potentiality. For even though in one and the same thing that goes from potentiality to actuality, the potentiality is temporally prior to the actuality, nonetheless, absolutely speaking, actuality is prior to potentiality—because what is in potentiality is led into actuality only by a being that is in actuality in a relevant respect. But it was shown above (q. 2, a. 3) that God is the first being. Therefore, in God there cannot be anything in potentiality. But all bodies are in potentiality, since a continuous thing, as such, is infinitely divisible. Therefore, it is impossible for God to be a body.

Third, as is clear from what was said above (q. 2, a. 3), God is the most noble of beings. But it is impossible for a body to be the most noble of beings. For a body is either living or non-living, and a living body is clearly more noble than a non-living body. Yet it is not by virtue of being a body that a living body is living, since otherwise all bodies would be living. Therefore, it must be the case that a living body is living because of something else; for instance, our body is alive by virtue of its soul. But that by virtue of which a body is living is more noble than that body. Therefore, it is impossible for God to be a body.

**Reply to objection 1:** As was explained above (q. 1, a. 9), Sacred Scripture teaches about spiritual and divine things by means of likenesses drawn from corporeal things. Hence, when it attributes three dimensions to God by a likeness drawn from corporeal quantity, it is signifying the quantitative extent of His power—so that by depth it signifies His power to know what is hidden; by height it signifies the preeminence of His power over all things; by length it signifies the duration of His being; and by width it signifies the affection of His love toward all things. Or, alternatively, as Dionysius says in *De Divinis Nominibus*, chap. 9, by God’s depth is meant the incomprehensibility of His essence; by His length is meant the outpouring of His power, which penetrates all things; and by His breadth is meant His reaching out to all things, viz., insofar as all things are taken up under His protection.

**Reply to objection 2:** Man is said to be made to God’s image not because of his body, but because of that by which man surpasses the other animals. This is why in Genesis 1:26, after it says, “Let us make man to our image and likeness,” it adds, “so that he might have dominion over the fishes of the sea, etc.” But man surpasses the other animals because of his reason and intellect. Hence, it is by virtue of his intellect and reason, which are incorporeal, that man is made to God’s image.

**Reply to objection 3:** It is because of His acts that bodily parts are attributed to God in the Scriptures by a certain likeness. For since the act of an eye is to see, ‘eye’, when said of God, signifies His power to see in an intelligent, rather than sentient, way. And the same holds for other bodily parts.

**Reply to objection 4:** Similarly, things that pertain to posture are attributed to God only by a certain likeness. For instance, He is said to be sitting because of His immovability and authority, and He is said to be standing because of His power to vanquish everything that is opposed to Him.

**Reply to objection 5:** Since God is everywhere, He is approached not by bodily footsteps but by the affections of the mind, and it is in this same way that one departs from Him. And so by a likeness drawn from local movement, ‘approach’ and ‘departure’ signify spiritual affections.

## Article 2

### Is there a composition of form and matter in God?

It seems that in God there is a composition of form and matter:

**Objection 1:** Everything that has a soul is composed of matter and form, since a soul is the form of a body. But Scripture attributes a soul to God; for in Hebrews 10:38 God says, “But my just man lives by faith; but if he withdraws himself, he shall not please my soul.” Therefore, God is composed of matter and form.

**Objection 2:** According to *De Anima* 1, anger, joy, etc., are passions of a conjoined being. But passions of this sort are attributed to God in Scripture; for instance, Psalm 105:40 says, “The Lord was exceedingly angry with His people.” Therefore, God is composed of matter and form.

**Objection 3:** Matter is the principle of individuation. But God seems to be an individual, since He is not predicated of many. Therefore, He is composed of matter and form.

**But contrary to this:** Everything composed of matter and form is a body, since dimensional quantity is the first thing that inheres in matter. But, as was shown above (a. 1), God is not a body. Therefore, God is not composed of matter and form.

**I respond:** It is impossible for there to be matter in God.

First of all, matter is that which is in potentiality. But it has already been shown (a. 1) that God is pure actuality, with no element at all of potentiality. Hence, it is impossible that God should be composed of matter and form.

Second, everything composed of matter and form is perfect and good through its form; hence, it has to be good by participation, i.e., it is good insofar as its matter participates in form. But the first good and optimal being, viz., God, is not good by participation, since being good through one’s essence is prior to being good by participation. Hence, it is impossible that God should be composed of matter and form.

Third, every agent acts through its form, and so a thing is related to its own acting in the way it is related to its form. So in order for something to be a first and *per se* agent, it must be *per se* and primarily a form. But God is a first agent, because, as was shown above (q. 2, a. 3), He is the first efficient cause. Therefore, He is a form through His essence and is not composed of matter and form.

**Reply to objection 1:** A soul is attributed to God by a likeness drawn from the acts of a soul. For, in our own case, it is by means of our soul that we will something. Hence, what is said to be pleasing to the soul of God is that which is pleasing to His will.

**Reply to objection 2:** Anger and other passions of this sort are attributed to God by a likeness drawn from their effects. For instance, someone who is angry characteristically inflicts punishment, and so the punishment inflicted by God is metaphorically called His anger.

**Reply to objection 3:** Forms that can be received in matter are individuated by the matter; for the matter cannot exist in another, since it is the first underlying subject. In contrast, the form, taken by itself (i.e., unless something other than itself prevents this), can be received by any number of matters.

However, if the form in question cannot be received in matter but instead subsists *per se*, then it is individuated by the very fact that it cannot be received in another—and this is the sort of form that God is. Hence, it does not follow that God has matter.

### Article 3

#### Is God the same as His essence or nature?

It seems that God is not the same as His essence or nature:

**Objection 1:** Nothing exists within itself. But the essence or nature of God—viz., His divinity (*deitas*)—is said to be ‘in’ God. Therefore, it seems that God is not the same as His essence or nature.

**Objection 2:** An effect is similar to its cause, since every agent effects what is similar to itself. But in created things the suppositum is not the same as the nature; for instance, a man is not the same as his human-ness. Therefore, God is likewise not the same as His divinity.

**But contrary to this:** As is clear from John 14:6 (“I am the way, and the truth, and the life”), it is said of God that He is life and not just that He is living. But divinity is related to God as life is related to the living. Therefore, God is His very divinity.

**I respond:** God is the same as His essence or nature. To understand this, notice that in things composed of matter and form the nature or essence has to be different from the suppositum. For the essence or nature includes within itself only those things that are found in the definition of the species. For instance, human-ness (*humanitas*) includes within itself those things that are found in the definition of man; for it is by those things that a man is a man—and this is just what ‘human-ness’ signifies, viz., that by which a man is a man. In contrast, the individual matter, along with all the accidents that individuate it, is not found in the definition of the species. For instance, the definition of man does not include this flesh and these bones, or whiteness or blackness, or anything of this sort—and thus *this* flesh and *these* bones and the accidents that designate *this* matter are not included in human-ness. And yet they are included in that which is a man; thus, that which is a man has something within itself that human-ness does not include. For this reason, a man and human-ness are not completely the same. Instead, human-ness is signified as a formal part of a man, since the defining principles are related as a form to the individuating matter.

Thus, in things which are not composed of matter and form and in which individuation is not due to a material individual—i.e., is not due to *this* matter—but in which the forms themselves are individuated *per se*, the very forms themselves have to be subsisting supposita. Hence, in such things the suppositum and the nature do not differ from one another. And so, since, as has been proved (a. 2), God is not composed of matter and form, God must be His own divinity, His own life, and whatever else is predicated of God in this way.

**Reply to objection 1:** We ourselves are unable to talk about simple entities except in the way we talk about the composite entities from which we take our cognition. And so, when speaking of God, we use concrete names to signify His subsistence (since by our lights it is only composites that subsist), and we use abstract names to signify His simplicity. So the fact that divinity, life, and other things of this sort are said to be ‘in’ God should be traced back to a duality (*diversitas*) that occurs in our intellect’s grasp of the thing and not to any duality within the thing itself.

**Reply to objection 2:** God’s effects do not imitate Him perfectly, but rather imitate Him to the extent that they are able to. And their falling short in their imitation stems from the fact that what is simple and unified can be exhibited only through a multiplicity. This is why composition occurs in God’s effects, and it is because of this that in those effects the suppositum is not the same as the nature.

## Article 4

### Is God's essence the same as His *esse*?

It seems that God's essence is not the same as His *esse*:

**Objection 1:** If this were so, then nothing would be added to God's *esse*. But *esse* to which nothing is added is *esse*-in-general (*esse commune*), which is predicated of all things. It would thus follow that God is a common being predicable of all things. But this is false according to Wisdom 14:21 ("Men gave the incommunicable name to stones and wood"). Therefore, God's *esse* is not the same as His essence.

**Objection 2:** As was explained above (q. 2, a. 2), we can know with respect to God whether He exists. But we cannot know what He is (*quid sit*). Therefore, God's *esse* is not the same as what-it-is-to-be-God (*eius quod quid est*), i.e., not the same as His 'what-ness' (*quidditas*) or nature.

**But contrary to this:** In *De Trinitate* 7 Hilary says, "In God the *esse* is not an accident, but rather subsisting truth." Therefore, that which subsists in God is His own *esse*.

**I respond:** God is not only His own essence, as has been shown (a. 3), but also His own *esse*. This can be proved in a number of ways.

First of all, whatever there is in a thing beyond its essence must be caused either (a) by the principles of its essence, as with the proper accidents that follow from the species—for instance, being capable of laughter follows from the species *man* and is caused by the essential principles of the species—or (b) by some cause outside itself—in the way that, say, heat is caused in water by a fire. Therefore, if a thing's *esse* is distinct from its essence, then the *esse* of the thing must be caused either by something outside itself or by the essential principles of the thing itself. But it is impossible for the *esse* to be caused solely by the essential principles of the thing, since nothing is sufficient to be a cause of its own *esse* if it has *esse* that is caused. Therefore, it must be the case that a thing whose *esse* is distinct from its essence has *esse* that is caused by another. But this cannot be said of God, since what we call 'God' is the first efficient cause. Therefore, it is impossible that in God the *esse* should be one thing and His essence another thing.

Second, the *esse* is the actuality of any form or nature; for goodness or human-ness is signified in actuality only insofar as we signify that it exists. Therefore, the *esse* itself is related to an essence that is distinct from it in the way that actuality is related to potentiality. Therefore, since, as was shown above (a.1), there is no potentiality in God, it follows that in Him the essence is not distinct from His *esse*. Therefore, His essence is His *esse*.

Third, just as that which has fire and is not itself fire is on fire through participation, so too that which has *esse* and is not itself *esse* is a being through participation. But, as was shown above (a. 3), God is His own essence. Therefore, if He is not His own *esse*, He will be a being through participation and not through His essence. Therefore, He will not be the first being—which is absurd. Therefore, God is His own *esse* and not just His own essence.

**Reply to objection 1:** The phrase 'a thing to which nothing is added' can be taken in two ways. In the first way, it is part of the notion of the thing that the addition *should not* be made to it (*non fiat ei additio*). For instance, it is part of the notion of a non-rational animal that it is without reason. In the second way, the thing is understood as something that the addition *is not* made to (*non fit additio*), since it is not part of its nature that the addition should be made to it. For instance, *animal*, taken in general, is without reason, since it is not part of the notion of an animal in general that it have reason—but neither is it part of its definition that it should lack reason. Hence, it is in the first way that the divine *esse* is *esse* without addition, while it is in the second way that *esse* in general is without addition.

**Reply to objection 2:** ‘*Esse*’ is said in two ways: in one way, it signifies the act of being, while in the second way it signifies the propositional composition that the mind forms by joining a predicate to a subject. If we take *esse* in the first way, then we cannot know God’s *esse* any more than we can know His essence. It is only if we take *esse* in the second way that we can know God’s *esse*. For we know that the proposition we form about God when we say ‘There is a God’ is true. And, as was explained above (q. 2, a. 2), we know this from His effects.

## Article 5

### Is God in a genus?

It seems that God is in a genus:

**Objection 1:** A substance is a being that subsists *per se*. But this is especially true of God. Therefore, God is in the genus of substance.

**Objection 2:** Each thing is measured by something in its own genus; for instance, lengths are measured by length and numbers are measured by number. But as is clear from the Commentator in *Metaphysics* 10, God is the measure of all substances. Therefore, God is in the genus of substance.

**But contrary to this:** A genus is prior in the understanding to that which is contained in the genus. But nothing is prior to God either in reality or in the understanding. Therefore, God is not in any genus.

**I respond:** Something is in a genus in one of two ways. In the first way, it is in a genus simply and properly, as in the case of the species that are included under the genus. In the second way, something is in a genus by reduction, as in the case of principles and privations; for instance, *point* and *unit* are reduced to the genus of quantity as principles of quantity, whereas blindness and all other privations are reduced to the genus of the corresponding habit. But God is not in a genus in either of these ways.

There are three ways to prove that God cannot be a species of any genus.

First, the species is constituted from the genus and the difference. But that from which the difference constituting the species is taken is always related to that from which the genus is taken as actuality to potentiality. For instance, the genus *animal* is taken in a concrete mode from a sentient nature, since that which is called an animal has a sentient nature; the difference *rational*, on the other hand, is taken from an intellective nature, since the rational is that which has an intellective nature. But the intellective is related to the sentient as actuality to potentiality. And the same thing is clear in other cases. Since, then, in God there is no potentiality joined to actuality, it is impossible for Him to be in a genus in the way that a species is.

Second, since, as was shown above (a. 4), God’s *esse* is His essence, it follows that if God were in a genus, His genus would have to be *being*. For the genus signifies the essence of the thing, since it is predicated as part of the thing’s real definition (*in eo quod quid est*). But in *Metaphysics* 3 the Philosopher shows that *being* cannot be the genus of anything. For every genus has differences that fall outside the essence of the genus, whereas no difference can fall outside of *being*, since a non-being cannot be a difference. Hence, it follows that God is not in a genus.

Third, all the things that are in a given genus share in the ‘what-ness’ (*quidditas*) or essence of the genus, which is predicated of them as part of their real definition. But these things differ in their *esse*, since the *esse* of a man is not the same as the *esse* of a horse, and the *esse* of *this* man is not the same as the *esse* of *that* man. And so in each of the things in a given genus the *esse* differs from “what-it-is-to-be-that-thing,” i.e., from the essence. But, as was shown above (a. 4), in God the *esse* does not differ from the essence. Hence, it is clear that God is not in a genus in the way that a species is.

And from this it is clear that God does not have a genus or differences; nor is there a definition of Him or a demonstration of Him, except through His effects. For a definition is composed of genus and difference, and the middle term of a demonstration is a definition.

Moreover, the claim that God is not in a genus by reduction, in the manner of a principle, is clear from the fact that a principle that is reduced to a given genus does not extend beyond that genus. For instance, *point* is a principle only of continuous quantity, and *unit* is a principle only of discrete quantity. But, as will be shown below (q. 44, a. 1), God is a principle of the totality of *esse*. Hence, he is not contained in any genus as a principle of that genus.

**Reply to objection 1:** The term ‘substance’ does not signify just *per se* existence, since *being* cannot itself be a genus, as has been shown. Rather, the term ‘substance’ signifies an essence that exists in a certain way, viz., *per se*, even though *esse* is not its very essence. Thus, it is clear that God is not in the genus of substance.

**Reply to objection 2:** This objection presupposes a proportionate measure, since this measure must be homogeneous with what is measured. But there is nothing with respect to which God is a proportionate measure. Still, God is said to be the measure of all things in the sense that each thing has *esse* only to the degree that it approaches Him.

## Article 6

### Are there any accidents in God?

It seems that there are some accidents in God:

**Objection 1:** As *Physics* 1 says, a substance is not an accident to anything. So that which is an accident in one thing cannot be a substance in another thing; for instance, one proves that heat is not the substantial form of fire from the fact that it is an accident in other things. But wisdom, power, and other things of this sort, which are accidents in us, are attributed to God. Therefore, they are accidents in God, too.

**Objection 2:** In every genus there is one first thing. But there are many genera of accidents. Therefore, if the first things in those genera do not exist in God, there will be many first things in addition to God—which is absurd.

**But contrary to this:** Every accident is in a subject. But God cannot be a subject, since, as Boethius puts it in his *De Trinitate*, “A simple form cannot be a subject.” Therefore, there can be no accidents in God.

**I respond:** From what has already been said, it is clear that there cannot be any accidents in God.

For, first of all, a subject is related to its accident as potentiality to actuality; for the subject is actual in some way because of the accident. But *being in potentiality* is altogether denied of God, as is clear from what was said above (a. 1).

Second, God is His own *esse*, and as Boethius says in *De Hebdomadibus*, “Even though that which exists can have something else adjoined to it, nonetheless, the *esse* itself cannot have anything else adjoined to it.” In the same way, that which is hot can have something extraneous to heat, e.g., whiteness, but the heat itself has nothing besides heat.

Third, everything that exists *per se* is prior to what exists *per accidens*. Therefore, since God is the absolutely first being, nothing can be in Him *per accidens*. But neither can there be *per se* accidents in Him, in the way that *being capable of laughter* is a *per se* accident of a man. For accidents of this sort are caused by the principles of the subject, whereas in God there is nothing that is caused, since He is the

first cause. Hence, there are no accidents in God.

**Reply to Objection 1:** Power and wisdom are not predicated univocally of God and us, as will become clear below (q. 13, a. 5). Thus, it does not follow that accidents exist in God in the same way they exist in us.

**Reply to Objection 2:** Since substance is prior to accidents, the principles of accidents are traced back to the principles of substance as something prior. And even though God is not the first being contained under the genus of substance, He is still—outside of every genus—first with respect to all being.

## Article 7

### Is God altogether simple?

It seems that God is not altogether simple:

**Objection 1:** The things that come from God imitate Him. Hence, all beings come from the first being, and all good things come from the first good thing. But among the things that come from God, none is absolutely simple. Therefore, God is not absolutely simple.

**Objection 2:** Everything that is better should be attributed to God. But from our perspective, composite things are better than simple things; for instance, mixed bodies are better than the elements, and the elements are better than their parts. Therefore, one should not say that God is altogether simple.

**But contrary to this:** According to Augustine in *De Trinitate* 7, God is truly and supremely simple.

**I respond:** It can be made clear in a number of ways that God is altogether simple.

First of all, through what has been said above (aa. 1-6): There is no composition in God of quantitative parts, since He is not a body. Nor is there in God a composition of form and matter. Again, in God the nature is not different from the suppositum, and the essence is not different from the *esse*. Nor is there in God a composition of genus and difference or of subject and accident. Hence, it is clear that there is no way in which God is composite; instead, He is altogether simple.

Second, every composite thing is posterior to its components and dependent on them. But, as was shown above (q. 2, a.3), God is the first being.

Third, every composite thing has a cause, since things that are diverse, taken in themselves, do not come together into a unified thing unless some cause joins them to one another. But, as was shown above (q. 2, a 3), God does not have a cause, since he is the first efficient cause.

Fourth, in every composite thing there must be both potentiality and actuality, since either (a) one of the parts is actuality with respect to another, or at least (b) all the parts are in potentiality with respect to the whole. But it is not the case [that there is both potentiality and actuality] in God.

Fifth, no composite thing is predicated of any one of its parts. This is obvious in the case of wholes that are composed of dissimilar parts; for instance, no part of a man is itself a man, and no part of a foot is itself a foot. On the other hand, in the case of wholes composed of similar parts, even though something predicated of the whole is also predicated of a part—for instance, a part of [a volume of] air is air and a part of [a volume of] water is water—there is still something said of the whole that does not belong to any of the parts. For instance, it is not the case that if the whole [volume] of water is two cubits, then a part of it is also two cubits. Therefore, in every composite thing there is something that is not the composite itself. Yet even if it can be said of something having a form that it has something which is not itself (for instance, in a white thing there is something that does not pertain to the nature

*white*), still, in the form itself there is nothing that is not the form itself. Hence, since God is a form—or, better, *esse* itself—he can in no way be composite. In *De Trinitate* 7 Hilary touches on this when he says, “God, who is power, is not composed of weak things; nor is He who is light made up of dim things.”

**Reply to Objection 1:** The things that come from God imitate God the first cause insofar as they are caused. But it is part of the concept of a thing that is caused that it is in some way composite, since, as will be shown below (q. 50, a. 2), it is at least the case that its *esse* is different from what it is.

**Reply to Objection 2:** Composite things are better from our perspective than simple things because the perfection of a creature’s goodness is found in many things rather than one simple thing. In contrast, as will be shown below (q. 4, a. 2), the perfection of God’s goodness is found in one simple thing.

## Article 8

### Does God enter into composition with other things?

It seems that God enters into composition with other things:

**Objection 1:** In *De Caelesti Hierarchia*, chap. 4, Dionysius says, “The *esse* of all things is that which lies beyond *esse*, the divine nature.” But the *esse* of all things enters into composition with everything. Therefore, God enters into composition with other things.

**Objection 2:** God is a form; for in *De Verbis Domini* Augustine says that the Word of God—which is God—is a form that has not been formed. But a form is part of a composite. Therefore, God is part of some composite.

**Objection 3:** Things that exist and in no way differ from one another are the same. But God and primary matter exist and do not differ from one another. Therefore, they are entirely the same. But primary matter enters into the composition of things. Therefore, God does, too.

Proof of the minor: Things that differ from one another differ by virtue of certain differences, and so they must be composite. But God and primary matter are altogether simple. Therefore, they do not differ from one another in any way.

**But contrary to this:** In *De Divinis Nominibus*, chap. 2, Dionysius says, “Neither does anything touch Him (i.e., God) nor is there any other sort of union with Him through a mixing of parts.” Furthermore, in the *Liber de Causis* it says, “The first cause rules all things without being mixed in with them.”

**I respond:** On this matter there have been three errors.

As is clear from Augustine in *De Civitate Dei* 7, some have claimed that God is the soul of the world and, what amounts to the same thing, some have claimed that God is the soul of the first heaven. Others have claimed that God is the formal principle of all things; this is said to have been the opinion of the Almaricians. The third error is that of David of Dinant, who very stupidly claimed that God is primary matter.

All of these positions are patently false. It is impossible for God to enter into composition with anything in any way, either as a formal principle or as a material principle.

First of all, we said above (q. 2, a. 3) that God is the first efficient cause. But an efficient cause is not numerically the same with the form of the thing that is made, but only the same in species; for example, a man generates a man. On the other hand, the matter is neither numerically the same nor the same in species with the efficient cause, since the matter is in potentiality, whereas the efficient cause is

in act.

Second, since God is the first efficient cause, it belongs to Him to act primarily and *per se*. But that which enters into composition with another is not primarily and *per se* an agent. Instead, it is the composite thing that is primarily and *per se* an agent. For it is not the hand that acts, but the man who acts through the hand; and fire gives warmth through its heat. Hence, God cannot be a part of any composite.

Third, no part of a composite thing can be absolutely the first among beings. And neither can the matter or the form, which are the first parts of composite things, be the first among beings. For, as is clear from what has been said (a. 1), the matter is in potentiality, and potentiality is absolutely posterior to actuality. On the other hand, a form that is part of a composite thing is a participated form; and just as that which participates in such-and-such is posterior to that which is such-and-such through its essence, so too the participated entity itself is posterior to that which is such-and-such through its essence. For instance, fire in things that are on fire is posterior to that which is fire through its essence. But it has been shown (q. 2, a. 3) that God is the first being, absolutely speaking.

**Reply to Objection 1:** The divine nature is said to be all things as an efficient cause and an exemplar, but not through its essence.

**Reply to Objection 2:** The Word is an exemplar form, but not the sort of form that is part of a composite thing.

**Reply to Objection 3:** Simple things do not differ by virtue of any other differences, since this feature belongs to composites. For instance, a man and a horse differ by virtue of the differences *rational* and *non-rational*, but these differences themselves do not further differ from one another by virtue of any other differences. Hence, if we attend to the meaning of the terms, such things are properly said not 'to differ' but 'to be diverse'. For according to the Philosopher in *Metaphysics* 10, the term 'diverse' is said in an unqualified way, whereas everything that differs differs in some respect. Hence, if we attend to the meaning of the terms, primary matter and God do not 'differ' from one another but are instead 'diverse' in themselves. Hence, it does not follow that they are the same.

## QUESTION 4

### God's Perfection

Now that we have examined God's simplicity, we must consider the perfection of God Himself. And since each thing is called good to the extent that it is perfect, we must first talk about God's perfection and then about His goodness. On the first topic there are three questions: (1) Is God perfect? (2) Is God totally perfect, having within Himself the perfections of all things? (3) Can creatures be said to be similar to God?

#### Article 1

##### Is God perfect?

It seems that being perfect does not befit God:

**Objection 1:** That which is perfect is said to be made, as it were, to completion. But *being made* is not compatible with God. Therefore, neither is *being perfect*.

**Objection 2:** God is the first principle of things. But the principles of things seem to be imperfect; for example, the seed (*semen*) is a principle of animals and plants. Therefore, God is not perfect.

**Objection 3:** It was shown above (q. 3, a. 4) that God's essence is *esse* itself. But *esse* itself seems to be the least perfect thing, since it is the most common and receives all other things as additions. Therefore, God is not perfect.

**But contrary to this:** Matthew 5:48 says: "Be you therefore perfect, as also your heavenly Father is perfect."

**I respond:** As the Philosopher tells us in *Metaphysics* 12, certain ancient philosophers—viz., the Pythagoreans and Speusippus—did not attribute *best* and *most perfect* to the first principle. The reason is that the ancient philosophers were thinking of the material principle alone, and the first material principle is the least perfect. For since matter as such is in potentiality, the first material principle must have maximal potentiality and thus be maximally imperfect.

However, God is posited not as the first *material* principle, but as the first principle in the genus of *efficient* causes; and the first efficient principle has to be absolutely perfect. For just as matter as such is in potentiality, so an agent as such has actuality. Hence, the first acting principle must have maximal actuality and, as a result, must be maximally perfect. For something is said to be perfect to the extent that it has actuality, since what is called perfect is that which lacks nothing according to the mode of its perfection.

**Reply to Objection 1:** As Gregory says: "In stammering to the extent we can, we re-echo the high things of God. For that which is not made cannot properly be called complete (*perfectum*)."

However, because among the things that are made something is called perfect when it is brought from potentiality into actuality, the term 'perfect' is transferred to signify anything that is not lacking in actuality, whether or not it has this condition by virtue of having been made.

**Reply to Objection 2:** Material principles, which we find to be imperfect, cannot be first absolutely speaking, but instead are preceded by another principle that is perfect. Thus, even though the seed (*semen*) is a principle of an animal generated out of semen, it is nonetheless preceded by the animal or plant from which it is derived. For prior to anything that exists in potentiality, there must be something in actuality, since a being in potentiality is not brought into actuality except by some being that is already in actuality.

**Reply to Objection 3:** *Esse* itself is the most perfect of all things, since it is related to all things as their actuality. For nothing has actuality except insofar as it exists; hence, *esse* itself is the actuality of

all things and especially of their forms. For this reason, *esse* is related to other things not in the way that what receives is related to what is received, but rather in the way that what is received is related to what receives. For when I talk about the *esse* of a man or the *esse* of a horse or the *esse* of anything else, it is the *esse* itself that is being thought of as something formal and received, and not that to which the *esse* belongs.

## Article 2

### Do the perfections of all things exist in God?

It seems that it is not the case that the perfections of all things exist in God:

**Objection 1:** As has been shown (q. 3, a. 7), God is simple. But the perfections of things are many and diverse. Therefore, it is not the case that all the perfections of things exist in God.

**Objection 2:** Opposites cannot exist in the same thing. But the perfections of things are opposites, since each species is perfected through its specific difference, and the differences by which the genus is divided and the species constituted are opposites. Therefore, since opposites cannot simultaneously exist in the same thing, it seems that it is not the case that all the perfections of things exist in God.

**Objection 3:** A living thing is more perfect than a [mere] being, and one who is wise is more perfect than one who is merely alive. Therefore, it is likewise the case that *living* is more perfect than *being* and that *being wise* is more perfect than *living*. But God's essence is simply to be (*esse*). Therefore, He does not have within himself the perfection of being alive or the perfection of being wise or other perfections of this sort.

**But contrary to this:** In *De Divinis Nominibus*, chap. 5, Dionysius says that God in His oneness already has all things.

**I respond:** The perfections of all things exist in God. And He is said to be totally perfect because, as the Commentator puts it in *Metaphysics* 5, He does not lack any type of nobility that is found in any genus.

This can be thought of in two ways:

First of all, the same perfection that is found in an effect must be found in the efficient cause either (a) according to the same nature when the agent is a *univocal* cause, as when a man generates a man, or (b) in a more eminent mode when the agent is an *equivocal* cause—for example, in the sun there is a likeness of the things that are generated through the sun's power. For it is clear that the effect preexists virtually in its agent cause, and that to preexist in the agent cause's power is to preexist in a more perfect, rather than less perfect, mode—even though to preexist in the potentiality of a *material* cause is to preexist in a less perfect mode, given that matter as such is imperfect. In contrast, an agent as such is perfect. Therefore, since God is the first efficient cause of things, the perfections of all things must preexist in God in a more eminent mode. Dionysius touches on this line of reasoning in *De Divinis Nominibus*, chap. 5, when he says of God, "It is not that He is this thing and not that thing; rather, He is all things as the cause of all."

Second, given what was shown above (q. 3, a. 4), viz., that God is *esse* itself subsisting *per se*, it must be the case that He contains within Himself the total perfection of being. For it is clear that if a hot thing does not have the whole perfection of a hot thing, this is because its heat is not participated to a perfect degree; but if the heat subsisted *per se*, it would not be able to lack any of the power of heat. Hence, since God is subsistent *esse* itself, he cannot lack any of the perfection of *esse*. But the perfections of all things are pertinent to the perfection of *esse*, since they are perfect to the extent that

they have *esse* in some mode or other. So it follows that there is no entity whose perfection God lacks. Dionysius touches on this line of reasoning as well in *De Divinis Nominibus*, chap. 5, when he says, “God does not exist in any particular way; instead, He already has within Himself, simply and without qualification, the whole of *esse* in a uniform way.” And later he adds, “He is *esse* for all subsistent things.”

**Reply to Objection 1:** As Dionysius puts it in *De Divinis Nominibus*, chap. 5, “Just as the sun, while itself existing as a unity and shining uniformly, has within itself in a uniform way many different sensible substances and qualities, so too, *a fortiori*, all things must preexist by a sort of natural union in the cause of all things.” And so things that in themselves are diverse and opposite preexist as one in God without any detriment to His simplicity.

**Reply to Objection 2:** The same answer applies to this objection.

**Reply to Objection 3:** As Dionysius says in the same chapter, even though, when they are considered as distinct in nature from one another (*secundum quod distinguuntur ratione*), *esse* itself is more perfect than life and life itself is more perfect than wisdom itself, nonetheless, a living thing is more perfect than a mere being, since a living thing is also a being; and someone who is wise is both a being and a living thing. Therefore, even if some being does not include either *living* or *wise* within itself—for that which participates in *esse* need not participate in every mode of being—nonetheless, God’s very *esse* does include within itself both life and wisdom. For no perfection of being can be lacking in one who is subsistent *esse* itself.

### Article 3

#### Can a creature be similar to God?

It seems that no creature can be similar to God:

**Objection 1:** Psalm 85:8 says, “There is none among the gods like unto You, O Lord.” But it is the more excellent of all creatures that are being called gods here by a kind of participation. Therefore, it is even less the case that other creatures can be called similar to God.

**Objection 2:** Similarity is a relation. But there is no relation among things that belong to diverse genera. Therefore, there is no similarity among them; for instance, we do not say that sweetness is similar to whiteness. But no creature belongs to the same genus as God, since, as was shown above (q. 3, a. 5), God is not in a genus. Therefore, no creature is similar to God.

**Objection 3:** It is things that agree in form that are called similar. But nothing agrees in form with God, since nothing except God is such that its essence is its very *esse*. Therefore, no creature can be similar to God.

**Objection 4:** In things that are similar, the similarity is mutual. For what is similar is similar to what is similar to it. Therefore, if a creature is similar to God, then God will be similar to some creature. But this is contrary to Isaiah 40:18: “To whom then have you likened God?”

**But contrary to this:** Genesis 1:26 says, “Let us make man to our image and likeness,” and 1 John 3:2 says: “When He shall appear we shall be like to Him.”

**I respond:** Since similarity has to do with agreement or commonality in form, there are many kinds of similarity corresponding to the many ways of sharing in a form.

Some things are called similar because they share in the same form according to the same nature and the same mode. These things are called not just similar but equal in their similarity. For instance, two equally white things are called similar in whiteness. This is *perfect similarity*.

In a second way, things are called similar because they share a form according to the same nature but not according to the same mode, with one having more and the other less. For example, a thing that is less white is called similar to a thing that is more white. This is *imperfect similarity*.

In a third way, things are called similar when they share in the same form, but not according to the same nature. This is clear in the case of non-univocal agents. For since every agent, as an agent, effects what is similar to itself while effecting each thing in accord with its own form, it must be the case that in the effect there is some likeness of the agent's form. Therefore, if the agent is contained in the same species as its effect, there will be a similarity in form according to the same nature of the species between the maker and what is made, as when a man generates a man. But if the agent is not contained in the same species, then there will be a similarity, but not a similarity according to the same nature of the species. For instance, the things generated by the sun's power bear some similarity to the sun, but only to the extent that they receive the form of the sun according to a similarity of genus and not according to a similarity of species. Therefore, if there is an agent that is not contained in any genus, its effects will bear a still more remote similarity to the form of the agent—not in such a way that they participate in a similarity to the form of the agent according to the nature of either the genus or the species, but in such a way that they participate in a similarity to the form of the agent according to some sort of analogy (*secundum aliquam analogiam*), in the way that *esse* itself is common to all things. And this is the way in which the things that come from God, insofar as they are beings, are assimilated to Him as the first and universal principle of all being.

**Reply to Objection 1:** As Dionysius says in *De Divinis Nominibus*, chap. 9, when Sacred Scripture says that something is not similar to God, “this is not contrary to something's being assimilated to Him. For the same things are both similar and dissimilar to God—similar insofar as they imitate Him to the extent that it is possible to imitate Him who is not perfectly imitable, but dissimilar insofar as they fall short of their cause.” And they do not fall short just with respect to intensity and remission, in the way that a less white thing falls short of something that is more white; rather, they fall short because there is no agreement either according to species or according to genus.

**Reply to Objection 2:** God stands to creatures not as a thing of a diverse genus stands to another, but rather as that which is outside of every genus and the principle of all genera.

**Reply to Objection 3:** A creature is said to be similar to God not because they share in a form according to the same nature of genus or species, but only because of an analogy, viz., insofar as God is a being through His essence and the others are beings through participation.

**Reply to Objection 4:** Even though there is a sense in which it may be conceded that a creature is similar to God, one must in no way concede that God is similar to a creature. For, as Dionysius points out in *De Divinis Nominibus*, chap. 9, “Things that belong to the same order are susceptible to a mutual similarity, but not a cause and that which is caused.” For instance, we say that an image is similar to a man, but not conversely. Likewise, it can be said in some sense that a creature is similar to God, but not that God is similar to a creature.

## QUESTION 5

### The Good in General

Next we will ask about the good—first about the good in general (*bonum in communi*) (question 5) and then about the goodness of God (question 6).

On the first point there are six questions: (1) Are *good* and *being* the same in reality? (2) Assuming that they differ only conceptually, which of the two, *good* or *being*, is conceptually prior? (3) Assuming that *being* is prior, is every being good? (4) To what cause is the notion *good* traced back? (5) Does the nature of good consist in mode, species, and order? (6) In what sense is the good divided into the noble, the useful, and the pleasant?

#### Article 1

##### Does *good* differ in reality from *being*?

It seems that *good* (*bonum*) differs in reality from *being* (*ens*):

**Objection 1:** In *De Hebdomadibus* Boethius says, “Among entities I see that it is one thing for them to be good and another for them to exist.” Therefore, *good* and *being* differ in reality.

**Objection 2:** Nothing has itself as a form. But, as a comment on the *Liber de Causis* puts it, *good* is predicated of a being as a form. Therefore, *good* differs in reality from *being*.

**Objection 3:** *Good* admits of more and less. But *being* does not admit of more and less. Therefore, *good* differs in reality from *being*.

**But contrary to this:** In *De Doctrina Christiana* Augustine says, “To the extent that we exist, we are good.”

**I respond:** *Good* and *being* are the same in reality and differ only conceptually.

This is clear from the following line of reasoning: The nature of the good consists in something’s being desirable; thus, in *Ethics* 1 the Philosopher says, “The good is what all things desire.” But it is obvious that each thing is desirable to the extent that it is perfect, since all things desire their own perfection. But each thing is perfect to the extent that it has actuality. Hence, it is clear that something is good to the extent that it is a being, since, as is obvious from what was said above (q. 3, a. 4 and q. 4, a. 1), being (*esse*) is the actuality of each thing. Hence, it is clear that *good* and *being* are the same in reality, but that *good* expresses the nature of being desirable, whereas *being* does not.

**Reply to Objection 1:** Even though *good* and *being* are the same in reality, the fact that they nonetheless differ conceptually explains why something is not called unqualifiedly good in the same way that it is called unqualifiedly a being.

For since *being* expresses that something properly has actuality, and since actuality is properly ordered toward potentiality, something is unqualifiedly called a being insofar as it is set off in the first instance from that which is merely in potentiality. Now this is the substantial *esse* of each thing, and so it is because of its substantial *esse* that each thing is called a being unqualifiedly. In contrast, it is through additional acts that something is said to exist in a qualified way. For example, *being white* signifies existing in a qualified way. For a thing’s being white does not bring to an end that thing’s existing merely in potentiality, since being white accrues to a thing that already exists in actuality.

In contrast, *good* expresses the nature of the perfect, i.e., the desirable, and thus expresses the nature of an ultimate point. Hence, it is what is ultimately perfect that is called good in an unqualified way. And if something does not have the ultimate perfection that it ought to have, then even though it

has some perfection insofar as it is actual, it is not called perfect in an unqualified way or good in an unqualified way, but is instead called perfect or good only in a qualified way.

So, then, by virtue of its first *esse*, which is its substantial *esse*, a thing is called a being in an unqualified way and good in a qualified way, i.e., good insofar as it is a being. In contrast, by virtue of its ultimate act it is called a being in a qualified way and good in an unqualified way.

Thus, when Boethius says that “among entities . . . it is one thing for them to be good and another for them to exist,” this should be taken to mean unqualified goodness and unqualified being. For it is by virtue of its first act that something is unqualifiedly a being, and it is by virtue of its ultimate act that it is unqualifiedly good. On the other hand, by virtue of its first act it is good in a qualified way, and by virtue of its ultimate act it is a being in a qualified way.

**Reply to Objection 2:** *Good* is predicated as a form insofar as it means *unqualifiedly good*, by virtue of its ultimate act.

**Reply to Objection 3:** Similarly, it is because of some supervening actuality such as scientific knowledge or virtue that *good* is predicated according to a greater or lesser degree.

## Article 2

### Is *good* conceptually prior to *being*?

It seems that *good* is conceptually prior to *being*:

**Objection 1:** The order of names mirrors the order of the things signified by the names. But as is clear in *De Divinibus Nominibus*, chap. 3, Dionysius puts *good* before *being* among the names of God. Therefore, *good* is conceptually prior to *being*.

**Objection 2:** That which is conceptually prior extends to more things. But *good* extends to more things than *being*, since, as Dionysius says in *De Divinibus Nominibus*, chap. 5, “*Good* extends both to things that exist and to things that do not exist, whereas *being* extends only to things that exist.” Therefore, *good* is conceptually prior to *being*.

**Objection 3:** That which is more universal is conceptually prior. But *good* seems to be more universal than *being*, since the good has the nature of being desirable, and non-being is itself desirable for certain things. For instance, Matthew 26:24 says of Judas that “it were better for him, if that man had not been born”—and there are other such examples. Therefore, *good* is conceptually prior to *being*.

**Objection 4:** It is not just being that is desirable, but also life and wisdom and many other such things. And so it seems that being is one particular desirable thing, whereas the good is something universally desirable. Therefore, *good* is conceptually prior to *being*.

**But contrary to this:** The *Liber De Causis* says, “Being (*esse*) is the first among creatures.”

**I respond:** *Being (ens)* is conceptually prior to *good (bonum)*. For the nature signified by a term is that which the intellect conceives with respect to an entity and signifies through the spoken term. Therefore, it is that which comes first in the intellect’s conception that is conceptually prior. But *being* comes first in the intellect’s conception, since, as *Metaphysics* 9 says, each thing is susceptible to cognition insofar as it is actual. Hence, *being* is the proper object of the intellect and so is the first intelligible thing, in the same way that sound is the first audible thing. Therefore, *being* is conceptually prior to *good*.

**Reply to Objection 1:** Dionysius orders the divine names according to how they express God’s status as a cause. For, as he says, we name God from creatures, as a cause from its effects.

Since *good* has the nature of the desirable, it expresses the status of a final cause. Now the

causality of the final cause is first, since an agent acts only for the sake of an end, and the matter is moved toward the form by the agent. This is why the end is called the cause of causes. And so, as far as causality is concerned, *good* is prior to *being*, in the sense that the end is prior to the form. For this reason, among the names signifying God's causality, *good* is prior to *being*.

Likewise, according to the Platonists—who, not distinguishing the matter from the privation, claimed that the matter is a non-being—participation in the good extends to more things than does participation in being. For primary matter participates in the good—since it desires the good, and nothing desires what is not similar to itself—but it does not participate in being, given that it is claimed to be a non-being. This is why Dionysius says that “the good extends itself to things that do not exist.”

**Reply to Objection 2:** The answer to this objection is clear from what has just been said.

An alternative reply is that one could claim that *good* extends to both existents and non-existents not by predication but by causality—as long as ‘non-existent’ does not mean things which simply do not exist at all, but rather things that exist in potentiality and not in actuality. For the good has the nature of an end, and an end is not only such that things with actuality come to rest in it, but also such that things existing only in potentiality and not in actuality move toward it. By contrast, *being (ens)* implies only the condition of a formal cause, be it inherent or exemplary, the causality of which extends only to things that are actual.

**Reply to Objection 3:** Non-being is not desirable taken in itself, but is desirable only *per accidens*, viz., insofar as the removal of some evil is desirable and the evil is removed through non-being. But the removal of an evil is desirable only insofar as one is deprived of some being because of the evil. Therefore, that which is desirable *per se* is being, whereas non-being is desirable only *per accidens*, viz., insofar as some [other] being is desired which a man does not tolerate being deprived of. It is in this way, too, that non-being is said to be good *per accidens*.

**Reply to Objection 4:** Life and knowledge and other things of this sort are desired to the extent that they are actual. Hence, in all cases some being is desired. And so nothing is desired except being, and, consequently, nothing is good except a being.

### Article 3

#### Is every being good?

It seems that not every being is good:

**Objection 1:** As is clear from what has been said (a. 1), *good* adds something to *being*. But those things that add something to *being*—for instance, *substance*, *quantity*, *quality*, etc.—limit it. Therefore, *good* limits *being*. Therefore, not every being is good.

**Objection 2:** Nothing evil is good, according to Isaiah 5:20 (“Woe to you that call evil good, and good evil”). But some beings are called bad. Therefore, not every being is good.

**Objection 3:** The good has the nature of the desirable. But primary matter does not have the nature of something desirable; instead, it only has the nature of something that desires. Therefore, primary matter does not have the nature of the good. Therefore, not every being is good.

**Objection 4:** In *Metaphysics* 3 the Philosopher says that among mathematical entities there is no such thing as the good. But mathematical entities are certain beings—otherwise, there would be no science with respect to them. Therefore, not every being is good.

**But contrary to this:** Every being that is not God is a creature of God. But, as 1 Timothy 4:4 says, every creature of God is good, while God is maximally good. Therefore, every being is good.

**I respond:** Every being, insofar as it is a being, is good. For every being, insofar as it is a being, has actuality and is in some sense perfect, since every actuality is a certain perfection. But, as is clear from what has been said (a. 1), what is perfect has the nature of something desirable and good. Hence, it follows that every being, as such, is good.

**Reply to Objection 1:** *Substance, quantity, quality*, and the things contained under them limit *being* by applying *being* to some ‘what-ness’ (*quidditas*) or nature. However, this is not the way in which *good* adds something to *being*; instead, it adds only the notion of desirability and perfection, which belong to being itself (*ipsi esse*) no matter what nature it is in. Hence, *good* does not limit *being*.

**Reply to Objection 2:** No being is called bad insofar as it is a being. Rather, it is called bad insofar as it lacks some sort of being. For instance, a man is called bad insofar as he lacks the being of virtue, and an eye is called bad insofar as it lacks keenness of sight.

**Reply to Objection 3:** Just as primary matter is a being only in potentiality, so too it is good only in potentiality. And even though, according to the Platonists, one could claim that matter is a non-being because of the privation connected with it, it nonetheless has some participation in the good because of its very ordering or inclination toward the good. This is why primary matter is appropriately said to desire rather than to be desirable.

**Reply to Objection 4:** Mathematical entities do not subsist as separate entities with their own *esse*. For if they did so subsist, there would be goodness in them, viz., their very *esse* itself. Rather, mathematical entities are separate only conceptually, insofar as they are abstracted from movement and matter and thus abstracted from the notion of an end, which has the nature of a mover. But there is nothing problematic about a conceptual entity not having the good or the nature of the good, since, as was said above (a. 2), the concept of being is prior to the concept of good.

#### Article 4

##### Does *good* have the nature of a final cause?

It seems that *good* does not have the nature of a final cause, but that it instead has the nature of one of the other causes:

**Objection 1:** As Dionysius says in *De Divinis Nominibus*, chap. 4, “The good is praised as beautiful.” But *beautiful* expresses the nature of a formal cause. Therefore, *good* has the nature of a formal cause.

**Objection 2:** The good is diffusive of its own *esse*, according to one interpretation of the words of Dionysius when he says that “the good is that by which all things subsist and have their being.” But *to be diffusive* expresses the nature of an efficient cause. Therefore, *good* has the nature of an efficient cause.

**Objection 3:** In *De Doctrina Christiana* 1 Augustine says, “We exist because God is good.” But our existence is from God as an efficient cause. Therefore, *good* expresses the nature of an efficient cause.

**But contrary to this:** In *Physics* 2 the Philosopher says, “That for the sake of which something exists is, as it were, the end and the good of other things.” Therefore, *good* has the nature of a final cause.

**I respond:** Since the good is that which everything desires, and since [being desired] has the character of an end, it is clear that *good* expresses the nature of an end.

Still, the concept of the good presupposes the concept of an efficient cause as well as the concept of a formal cause. For we notice that what is first in causing is last in being caused. For example, fire gives

heat before inducing the form of fire, and yet the heat in the [caused] fire follows upon the substantial form of fire.

Now in causing, the first thing we find is the good and the end, which moves the efficient cause; next is the action of the efficient cause, moving [the patient] toward the form; and third is the appearance of the form. Thus, the converse must be the case in the thing caused: First comes the form itself, through which there is being; next we see the form's effective power, by virtue of which it has perfection in being (since, as the Philosopher says in *Meteorologia* 4, a thing is perfect when it can make something similar to itself); and third follows the nature of the good, through which the perfection is grounded in the entity.

**Reply to Objection 1:** *Good* and *beautiful* are the same in the subject, since they are grounded in the same reality, viz., the form, and it is for this reason that the good is praised as beautiful. However, they differ conceptually.

For *good* has to do properly with desire, since everything desires the good. And because of this it has the nature of an end, since desire is, as it were, a sort of movement toward a thing.

*Beautiful*, on the other hand, has to do with the cognitive power. For things are called beautiful because they are pleasing to look at. Hence, the beautiful consists in due proportion, since the sensory power delights in things that are duly proportioned, because they are similar to it. For the sensory power, like every cognitive power, involves a kind of proportion. And because cognition is accomplished through assimilation, and because similarity has to do with form, the beautiful properly pertains to the nature of a formal cause.

**Reply to Objection 2:** *Good* is said to be diffusive of itself in the sense that the end is said to cause movement.

**Reply to Objection 3:** Whoever has a will is called good insofar as he has a good will, since it is through the will that we make use of all that is in us. Hence, a man is called good not because he has a good intellect, but because he has a good will. Now the will has the end as its proper object, and so what Augustine says—viz., that we exist because God is good—has to do with final causality.

## Article 5

### Does the nature of the good consist in mode, species, and order?

It seems that the nature of the good does not consist in mode, species, and order:

**Objection 1:** As was said above (a. 1), *good* and *being* differ conceptually. But mode, species, and order seem to pertain to the concept *being*, since Wisdom 11:21 says, “You have ordered all things in measure, and number, and weight,” and these three are traced back to species, mode, and order. For, as Augustine puts it in *Super Genesim ad Litteram* 4, “Measure fixes the mode for every being, and number gives a species for every being, and weight is what draws each being to rest and stability.” Therefore, the nature of the good does not consist in mode, species, and order.

**Objection 2:** Mode, species, and order are themselves certain goods. Therefore, if the nature of the good consists in mode, species, and order, then it must be the case that mode likewise has mode, species, and order—and similarly for species and order. Therefore, there will be an infinite regress.

**Objection 3:** Evil is the privation of mode, species and order. But evil does not totally destroy the good. Therefore, the nature of the good does not consist in mode, species, and order.

**Objection 4:** That in which the nature of the good consists cannot be called bad. But some modes are called bad modes and some species bad species and some orders bad orders. Therefore, the nature of the good does not consist in mode, species, and order.

**Objection 5:** As the passage from Augustine cited above makes clear, mode, species, and order are caused by weight, number, and measure. But not all good things have weight, number, and measure. For in *Hexaemeron* Ambrose says that “the nature of light is such that it is not created either in number or in weight or in measure.” Therefore, it is not the case that the nature of the good consists in mode, species, and order.

**But contrary to this:** In *De Natura Boni* Augustine says: “These three—mode, species, and order—are general goods in the things made by God. And so where these three are great, there are great goods; and where they are small, there are small goods; and where they are absent, there is no good.” But this would not be the case if the nature of the good did not consist in these things. Therefore, the nature of the good consists in mode, species and order.

**I respond:** As was explained above (a. 1), each thing is called good to the extent that it is perfect; for it is in this sense that it is desirable. But what is called perfect is such that it lacks nothing with respect to the mode of its perfection. Now since each thing is what it is through its form, and since the form presupposes certain things and has other things necessarily consequent upon it, it follows that in order for something to be perfect and good, it must have (a) the form and (b) the things presupposed by the form and (c) the things consequent upon the form.

What is presupposed by the form is the determination or commensuration of its principles—either its material principles or the principles that effect it. This is signified by ‘mode’, and this is why measure is said to fix the mode.

The form itself, on the other hand, is signified by ‘species’, since it is through its form that each thing is constituted in a species. And the reason why number is said to give the species is that the definitions signifying the species are like numbers, according to the Philosopher in *Metaphysics* 8. For just as the addition or subtraction of a unit changes the species of a number, so too the addition or subtraction of a difference changes the definition.

What is consequent upon the form is its inclination to an end or to action or to something else of this sort. For each thing acts insofar as it is in actuality, and it tends toward that which befits it, given its form. And this pertains to weight and order.

Hence, the nature of the good, insofar as it consists in perfection, likewise consists in mode, species, and order.

**Reply to Objection 1:** These three things follow upon *being* only insofar as it is perfect and thus good.

**Reply to Objection 2:** Mode, species, and order are called goods—as well as beings—not because they are, as it were, subsistent things, but because other things are both beings and good because of them. Hence, they themselves do not need to have some other things by virtue of which they are good. For they are called good not because they are formally good by virtue of other things, but because certain things are formally good by virtue of them. In the same way, whiteness is called a being not because it itself exists in some way, but rather because by virtue of it something exists in a qualified way, viz., as a white thing.

**Reply to Objection 3:** Every *esse* corresponds to some form. Thus, it is by virtue of the *esse* of a thing that mode, species, and order follow upon it. For instance, a man has a species, a mode, and an order insofar as he is a man; and, similarly, insofar as he is white, he likewise has a mode, a species, and an order; and insofar as he is virtuous, and insofar as he has knowledge, and so on for all the other things that are predicated of him.

Evil, on the other hand, is the privation of some *esse* or other, in the way that, say, blindness is the privation of the *esse* of sight. Hence, it does not destroy every mode, species, and order, but rather destroys only the mode, species, and order that follow upon the *esse* of sight.

**Reply to Objection 4:** As Augustine says in *De Natura Boni*, “Every mode, insofar as it is a mode, is good” (and one can say the same of species and order), “but a mode or a species or an order is called bad either because it is less than it ought to be or because it is not proportioned to the things it should be proportioned to; hence, they are called bad when they are out of place and incongruous.”

**Reply to Objection 5:** The nature of light is said to be without number, weight, and measure not absolutely speaking, but rather by comparison to corporeal things. For the power of light extends to all corporeal things insofar as it is an active quality of the first body that is an agent of change, viz., a celestial body.

## Article 6

### Is the good appropriately divided into the noble, the useful, and the pleasant?

It seems that the good is not appropriately divided into the noble (*honestum*), the useful (*utile*), and the pleasant (*delectabile*):

**Objection 1:** In *Ethics* 1 the Philosopher says that *good* is divided into the ten categories. But the noble, the useful, and the pleasant are all found in just one category. Therefore, the good is not appropriately divided into them.

**Objection 2:** Every division is made by means of opposites. But the three things in question do not seem to be opposites. For noble things are pleasant; and, as Tully claims in *De Officiis*, nothing ignoble is useful (which would have to be the case if the division were being made by means of opposites in such a way that the noble and the useful were opposed). Therefore, the division in question is not appropriate.

**Objection 3:** Where one thing is for the sake of another, there is just a single thing. But the useful is good only for the sake of either the pleasant or the noble. Therefore, the useful should not be divided off from the pleasant and the noble.

**But contrary to this:** Ambrose uses this division of the good in *De Officiis*.

**I respond:** The division in question seems, properly speaking, to be a division of the human good. But even if we are considering a higher and more general notion of the good, this division seems to belong properly to the good insofar as it is good.

For something is good insofar as it is desirable and is the terminus of a movement of desire. The termination of such a movement can be thought of like the movement of a natural body. The movement of a natural body terminates, absolutely speaking, at the last point, but it also terminates, relatively speaking, at the middle point through which it passes on its way to the last point that terminates the movement. This middle point is called a terminus of the movement insofar as it terminates a part of the movement. And the last terminus of the movement can be understood in one of two ways: either (a) as the thing itself toward which the movement tends, e.g., a place or a form, or (b) as rest in that thing.

So, then, in a movement of desire, that which is desirable in such a way that it terminates the movement of desire, relatively speaking—that is, as a middle point through which it tends toward another—is called the *useful*.

On the other hand, that which is desired as the last point and wholly terminates the movement of desire as the thing toward which the desire tends *per se*, is called the *noble*. For what is called noble is that which is desired for its own sake (*per se*).

Lastly, that which terminates the movement of desire, in the sense of resting in the thing desired, is *pleasure*.

**Reply to Objection 1:** *Good* is divided into the ten categories insofar as it is identical in subject with *being*. However, the division under discussion belongs to it in accord with its proper nature.

**Reply to Objection 2:** The division in question is not by means of opposite things, but rather by means of opposed concepts. Still, the things that are properly called pleasant have no desirable character other than pleasure, since such things are sometimes harmful and ignoble. On the other hand, the things that are [properly] called useful have nothing desirable within themselves, but are desired only because they lead to other things—as, for example, ingesting bitter medicine. Lastly, the things that are [properly] called noble have within themselves something that is desirable.

**Reply to Objection 3:** The good is not divided into the three types in question as if it were something univocal predicated on a par of each of them. Rather, it is divided into them as something analogous that is predicated of them according to an ordering of the prior and the posterior. For the good is first predicated of the noble, then of the pleasant, and, thirdly, of the useful.

## QUESTION 6

### God's Goodness

Next we ask about God's goodness. And on this matter there are four questions: (1) Does it befit God to be good? (2) Is God the greatest good? (3) Is He alone good through His essence? (4) Are all things good by God's goodness?

#### Article 1

##### Does it befit God to be good?

It seems that it does not befit God to be good:

**Objection 1:** The nature of the good consists in mode, species, and order. But these do not seem to befit God. For God is immense and is not ordered to anything. Therefore, it does not befit God to be good.

**Objection 2:** The good is that which all things desire. But it is not the case that all things desire God; for not all things know Him, and nothing is desired unless it is known. Therefore, it does not befit God to be good.

**But contrary to this:** Lamentations 3:25 says: "The Lord is good to them that hope in Him, to the soul that seeks Him."

**I respond:** It especially befits God to be good. For something is good to the extent that it is desirable. But each thing desires its own perfection, and the perfection and form of an effect is a certain likeness of the agent, since every agent effects what is similar to itself. Hence, the agent itself is desirable and has the nature of the good; for what is desired of it is that its likeness should be participated in. Therefore, since God is the first efficient cause of all things, it is clear that the nature of the good and the desirable befits Him. This is why in *De Divinis Nominibus* Dionysius attributes goodness to God as the first efficient cause, claiming that God is called good "insofar as all things subsist because of Him."

**Reply to Objection 1:** Having mode, species, and order pertains to the nature of caused goodness. By contrast, God's goodness is, as it were, the goodness in a cause; hence, it is His role to impose mode, species, and order on other things. Hence, these three things are in God as a cause.

**Reply to Objection 2:** In desiring their own proper perfections, all things desire God Himself insofar as the perfections of all things are certain likenesses of the divine *esse*—as was made clear above (q. 4, a. 3). And so of those things that desire God, some know Him in Himself (this is proper to the rational creature); others know some types of participation in His goodness (this includes sentient cognition as well); and others have a natural desire without cognition insofar as they are inclined to their ends by a higher knower.

#### Article 2

##### Is God the greatest good?

It seems that God is not the greatest good:

**Objection 1:** *Greatest good* adds something to *good*—otherwise, it would belong to every good thing. But everything that has something by addition is composite. Therefore, the highest good is composite. But, as was shown above (q. 3), God is maximally simple. Therefore, God is not the greatest good.

**Objection 2:** As the Philosopher says, “The good is that which all things desire.” But nothing other than God, who is the end of all things, is such that all things desire it. Therefore, nothing other than God is good; this is also evident from Matthew 19:17 (“No one is good except God alone”). But ‘greatest’ is said in comparison with other things; for instance, something is said to have the greatest heat in comparison to other hot things. Therefore, God cannot be called the greatest good.

**Objection 3:** ‘Greatest’ implies a comparison. But things that do not belong to the same genus are not comparable; for example, it is not appropriate to say that sweetness is either greater or less than a line. Therefore, since, as was shown above (q. 3, a. 5), God does not belong to same genus as other good things, it seems that God cannot be called the greatest good in relation to them.

**But contrary to this:** In *De Trinitate* 1 Augustine says, “The Trinity of divine persons is the greatest good and is seen by the most purified minds.”

**I respond:** God is the greatest good, absolutely speaking, and not just the greatest good in some genus or order of things.

For, as has been explained (a. 1), *good* is attributed to God insofar as all desired perfections flow from Him as the first cause. But, as is clear from what was said above (q. 4, a. 3), these perfections flow from Him not as a univocal cause, but rather as an agent who does not agree with His effects either in the nature of their species or in the nature of their genus (*neque in ratione speciei nec in ratione generis*). Now the likeness in the effect is found in exactly the same way in a univocal cause, whereas in an equivocal cause it is found in a more excellent way—for instance, heat exists in a more excellent way in the sun than it does in a fire. So, then, since goodness exists in God as the non-univocal first cause of all things, it must exist in Him in the most excellent way. And because of this He is called the greatest good.

**Reply to Objection 1:** *Greatest good* adds to *good* not any absolute entity, but merely a relation. And a relation that is predicated of God relative to creatures is a real entity in the creature but not in God; rather, in God it exists only conceptually. In the same way, what is knowable is predicated relative to the knowledge of it, not because it is related [by a real entity] to the knowledge, but because the knowledge is related to it. And so it is not necessary that there be any composition in the greatest good; rather, all that is necessary is that the other things fall short of it [in goodness].

**Reply to Objection 2:** When we say, “The good is what all things desire,” this should be understood to mean not that there is some single good that is desired by all things, but rather that whatever is desired has the nature of a good. On the other hand, when it is said that “No one is good but God alone,” it means “good through His essence.” This will be explained below (a. 3).

**Reply to Objection 3:** Things that are not in the same genus—if, that is, each is contained in a different genus—are in no way comparable. However, in the case of God, it is denied that He is in the same genus with other goods, not because He is in some other genus, but rather because He is outside of any genus and the principle of every genus. And so He can be compared to other things by the fact that He exceeds them. It is a comparison of this sort that *greatest good* implies.

### Article 3

#### Is it proper to God alone to be good through His essence?

It seems that it is not proper to God alone to be good through His essence (*esse bonum per essentiam*):

**Objection 1:** As explained above (q. 5, a. 1), just as *one* is convertible with *being*, so too *good* is convertible with *being*. But, as is clear from the Philosopher in *Metaphysics* 4, every entity is one

through its essence. Therefore, every entity is good through its essence.

**Objection 2:** If the good is what all things desire, then since *esse* itself is desired by all things, the very *esse* of each entity is its good. But each entity is a being (*ens*) through its essence. Therefore, each entity is good through its essence.

**Objection 3:** Every entity is good through its own goodness. Therefore, if some entity is not good through its essence, then it will have to be the case that its goodness is not its essence. Therefore, since this goodness itself is an entity, it must be good, and if it is good by yet another goodness, then the same question will be asked about that goodness. So either there will be an infinite regress or we will come to some goodness that is not good through another goodness. For this reason, then, we should have stopped with the very first goodness. It follows that each thing is good through its essence.

**But contrary to this:** In *De Hebdomadibus* Boethius says that all things other than God are good through participation. Therefore, they are not good through their essence.

**I respond:** God alone is good through His essence.

For each thing is called good to the extent that it is perfect, and there are three types of perfection a given entity might have. It has the first type insofar as it is constituted in its own *esse*; it has the second type insofar as certain accidents required for its complete operation are added to it; and it has the third type of perfection by virtue of the fact that it attains to something other than itself as an end. For example, in the case of fire the first type of perfection consists in its *esse*, which it has through its substantial form; the second type of perfection consists in its hotness, weightlessness, dryness, etc.; and it has the third type of perfection insofar as it finds rest in its proper place.

Now these three types of perfection belong to no created entity through its essence, but only to God. For God alone is such that His essence is His *esse*. Again, no accidents are added to Him; instead, as is clear from what was said above (q. 3, a. 6), things predicated of other entities as accidents belong to Him essentially, e.g., being powerful, wise, etc. Moreover, He is not ordered to anything other than Himself as an end; rather, He Himself is the ultimate end of all things.

Hence, it is clear that God alone has every type of perfection by virtue of His essence. And so He alone is good through His essence.

**Reply to Objection 1:** *One* does not connote the nature of perfection, but only the nature of undividedness, which belongs to each thing by virtue of its essence. Now the essences of simple entities are undivided both in actuality and in potentiality, whereas the essences of composite entities are undivided only in actuality. And so each entity must be one through its essence, but, as has been shown, not good through its essence.

**Reply to Objection 2:** Even though each thing is good insofar as it has *esse*, the essence of a created entity is nevertheless not its very *esse*. And so it does not follow that a created entity is good through its essence.

**Reply to Objection 3:** The goodness of a created entity is not its very essence, but something added to its essence, viz., either (a) its very *esse*, or (b) some added perfection, or (c) its being ordered to an end.

And even though the goodness added in any of these ways is itself called good in the same way that it is called an entity, still, it is called an entity because it is something and not because it is something by some other thing. Hence, it is called good because it is something good and not because it has some other goodness by which it is good.

#### Article 4

##### Are all things good by God's goodness?

It seems that all things are good by God's goodness:

**Objection 1:** In *De Trinitate* 7 Augustine says, "This good and that good—take away the *this* and the *that* and look at the good itself, if you can. Then you will see God, who is not good by any other good, but is the good of all good." But each thing is good by its own goodness. Therefore, each thing is good by the very goodness that is God.

**Objection 2:** As Boethius says in *De Hebdomadibus*, all things are called good insofar as they are ordered to God, and this by reason of God's goodness. Therefore, all things are good by God's goodness.

**But contrary to this:** All things are good insofar as they exist. But every entity is called an entity through its own proper *esse* and not through God's *esse*. Therefore, every being is called good by its own proper goodness and not by God's goodness.

**I respond:** In the case of that which connotes a relation, nothing prevents a thing from being denominated extrinsically. For instance, a thing that is located in a given place is denominated by that place, and a thing that is measured is denominated by the measure.

By contrast, in the case of that which is predicated non-relationally (*absolute*), there are different opinions.

Plato claimed that the species of all entities are separate, and that the individuals are denominated by them in virtue of participating, as it were, in the separated species. So, for instance, Socrates is called a man by virtue of the separated idea *man*. And just as Plato posited the separated ideas *man* and *horse*, which he called 'man *per se*' and 'horse *per se*', so too he posited a separated idea *being* and a separated idea *one*, which he called 'being *per se*' and 'one *per se*', and each thing is called a being or one in virtue of its participation in those ideas. But that which is good *per se* and one *per se* he claimed to be the highest good. And since *good* is convertible with *being*, just as it is with *one*, he claimed that that which is *per se* good is God, in virtue of whom all things are called good by way of participation.

Now even though, as Aristotle proved in many ways, this view seems unreasonable in positing separated species, subsisting *per se*, for natural things, still, as is clear from what was said above (q. 2, a. 3), this much is absolutely true: There is some one thing that is good through its essence, which we call God. Even Aristotle agreed with this claim.

Therefore, as is clear from what was said above (q. 4, a. 3), each entity can be called good and a being in virtue of the first being—which is good and a being through its essence—insofar as the entity participates, even if remotely and deficiently, in that first being by way of some sort of assimilation. In this sense, then, each thing is called good by God's goodness insofar as He is the first exemplary, efficient, and final principle of all goodness.

Nonetheless, each thing is called good by a likeness of God's goodness that inheres in it and formally constitutes the goodness that denominates it.

And so it is the case both (a) that there is a single goodness of all things and also (b) that there are many goodnesses.

**Reply to Objections 1 and 2:** The reply to the objections is clear from what has been said.

## QUESTION 7

### God's Infinity

Having examined God's perfection, we must now examine His infinity (question 7) and His existence in all things (question 8). For it is insofar as God is uncircumscribable and infinite that it is attributed to Him that He is everywhere and in all things.

On the first topic there are four questions: (1) Is God infinite? (2) Is anything besides Him infinite in its essence (*infinitum secundum essentiam*)? (3) Can anything be infinite in magnitude? (4) Can there be an infinite multitude of things?

#### Article 1

##### Is God infinite?

It seems that God is not infinite:

**Objection 1:** Anything infinite is imperfect, since, as *Physics* 3 says, it has the nature of a part and of matter. But God is utterly perfect. Therefore, He is not infinite.

**Objection 2:** According to the Philosopher in *Physics* 1, *finite* and *infinite* belong to [the genus of] quantity. But there is no quantity in God, since, as was shown above (q. 3, a. 1), He is not a body. Therefore, being infinite does not belong to Him.

**Objection 3:** Whatever is *here* in such a way that it is not somewhere else is finite with respect to place. Therefore, whatever is *this* in such a way that it is not something else is finite with respect to substance. But God is *this* and not something else; for instance, He is not a rock or a piece of wood. Therefore, God is not infinite with respect to substance.

**But contrary to this:** Damascene says, "God is infinite and eternal and uncircumscribable."

**I respond:** According to *Physics* 3, all the ancient philosophers attribute infinity to the first principle—and reasonably so—arguing that entities flow from the first principle *ad infinitum*.

However, the fact that some of them were in error about the nature of the first principle led them to err about His infinity. For they thought that the first principle is matter, and as a result they attributed material infinity to the first principle, claiming that the first principle of things is an infinite body.

Note, therefore, that something is called infinite in virtue of the fact that it is not limited. But matter is in a certain way limited by form, and form is in a certain way limited by matter. Specifically, matter is limited by form in the sense that before it receives a form, matter is in potentiality with respect to many forms, whereas once it receives a single form, it is limited by that form. Form, on the other hand, is limited by matter in the sense that a form, considered in itself, is common to many things, but once it is received in matter, it becomes determinately the form of just this thing.

Now matter is perfected by the form through which it is limited, and so infinity, as attributed to matter, has the nature of an imperfection; for it is, as it were, matter without form.

By contrast, a form is not perfected by matter; instead, its scope is contracted by the matter. Hence, infinity, as attributed to a form not determined by matter, has the nature of perfection. But, as is clear from what was said above (q. 4, a. 1), that which is the most formal of all things is *esse* itself. Therefore, since God's *esse* is not received in anything, and since, as was shown above (q. 3, a. 4), He is His own subsistent *esse*, it is clear that God Himself is infinite and perfect.

**Reply to Objection 1:** The reply to this objection is clear from what has been said.

**Reply to Objection 2:** The terminus of a quantity is like a form of the quantity. A sign of this is that shape, which consists in the termination of a quantity, is a certain form with respect to quantity. Hence, the type of infinity that belongs to quantity is an infinity on the part of the matter and, as has been

explained, this type of infinity is not attributed to God.

**Reply to Objection 3:** God's *esse* is distinct from all other things, and all other things are distinct from it, by the very fact that it is subsistent *per se* and not received in anything (which is why it is called infinite). In the same way, if there were a subsistent whiteness, then by the very fact that it did not exist in another, it would differ from every whiteness that exists in a subject.

## Article 2

### Can anything other than God be infinite through its essence?

It seems that something other than God can be infinite through its essence (*infinitum per essentiam*):

**Objection 1:** The power of an entity is proportionate to its essence. Therefore, if God's essence is infinite, then His power must be infinite. Therefore, He can produce an infinite effect, since the quantity of an entity's power is known from its effect.

**Objection 2:** Whatever has infinite power has an infinite essence. But a created intellect has infinite power, since it apprehends the universal, which can extend to infinitely many singulars. Therefore, every created intellectual substance is infinite.

**Objection 3:** As was shown above (q. 3, a. 8), primary matter is distinct from God. But primary matter is infinite. Therefore, something besides God can be infinite.

**But contrary to this:** As *Physics* 3 explains, what is infinite cannot come from any principle. But everything that is distinct from God comes from God as a first principle. Therefore, nothing other than God can be infinite.

**I respond:** Something other than God can be infinite in a certain respect (*secundum quid*), but not absolutely speaking (*non simpliciter*).

For if we are speaking of infinity insofar as it belongs to matter, then it is clear that everything existing in actuality has some form or other, and so the matter is terminated through its form. But insofar as it exists under a substantial form, the matter remains in potentiality with respect to many accidental forms. For this reason, though it is finite, absolutely speaking, it can be infinite in a certain respect. For example, a piece of wood is finite by virtue of its form, but it is nonetheless infinite in a certain respect, since it is in potentiality with respect to infinitely many shapes.

On the other hand, if we are speaking of infinity insofar as it belongs to form, then it is clear that things whose forms exist in matter are finite, absolutely speaking, and not infinite in any way at all. However, if there are created forms that are not received in matter but instead subsist *per se*—as some believe with respect to angels—then they will indeed be infinite in a certain respect, insofar as forms of this sort are neither terminated nor limited by any matter. Still, because a created form that subsists in this way has *esse* and is not its own *esse*, its *esse* must be received in and limited to a determinate nature. Hence, it cannot be infinite absolutely speaking.

**Reply to Objection 1:** It is contrary to the nature of an entity that is produced that the entity's essence should be its very *esse*. For subsistent *esse* is not created *esse*. Hence, it is contrary to the nature of something that is produced that it should be infinite, absolutely speaking. So just as God, even though He has infinite power, cannot produce something that is not produced (for this would be for contradictories to be true at the same time), so too He cannot produce something that is absolutely infinite.

**Reply to Objection 2:** The fact that the intellect's power extends in some sense to infinitely many

things stems from the fact that the intellect is a form that does not exist in matter, but is either (a) totally separate from matter, as in the case of the substances of angels, or at least (b) an intellective power that is not the act of any [corporeal] organ, as in the case of an intellective soul that is conjoined to a body.

**Reply to Objection 3:** Primary matter does not exist in reality by itself, since it is not a being in actuality, but is instead a being merely in potentiality. Hence, it is something that is co-created (*aliquid concreatum*) rather than created. Still, even with respect to potentiality, primary matter is infinite only relatively speaking and not absolutely. For its potentiality extends only to natural forms.

### Article 3

#### Can anything be actually infinite in magnitude?

It seems that something can be actually infinite in magnitude (*infinitum actu secundum magnitudinem*):

**Objection 1:** In the mathematical sciences there is no falsity, since, as *Physics 2* says, “there is no falsehood among abstract things.” But the mathematical sciences make use of infinite magnitude; for instance, in his demonstrations the geometer says, “Let such-and-such a line be infinite.” Therefore, it is not impossible for something to be infinite in magnitude.

**Objection 2:** If something is not contrary to a given nature, then it is not impossible for it to belong to that nature. But to be infinite is not contrary to the nature of magnitude; to the contrary, *finite* and *infinite* seem to be properties of quantity. Therefore, it is not impossible for some magnitude to be infinite.

**Objection 3:** A magnitude is infinitely divisible, since, as is clear from *Physics 3*, a continuous thing is defined as that which is divisible *ad infinitum*. But contraries are apt to be effected with respect to the same thing. Therefore, since addition is opposed to division, and since increase is opposed to decrease, it seems that a magnitude can increase *ad infinitum*. Therefore, it is possible for there to be an infinite magnitude.

**Objection 4:** As *Physics 4* says, movement and time have quantity and continuity from the magnitude over which the movement passes. But it is not contrary to the nature of time and movement that they be infinite, since any designated indivisible contained in time or in a circular movement is both a beginning point and an endpoint. Therefore, neither will it be contrary to the nature of a magnitude that it be infinite.

**But contrary to this:** Each body has a surface. But each body that has a surface is finite, since a surface is the terminus of a finite body. Therefore, each body is finite. And the same thing that is said of a surface can also be said of a line. Therefore, nothing is infinite in magnitude.

**I respond:** Being infinite in essence (*infinitum secundum essentiam*) is different from being infinite in magnitude (*infinitum secundum magnitudinem*). For even if a body—say, fire or air—were infinite in magnitude, it would still not be infinite in essence, since its essence would be limited to some species by its form and to some individual by its matter.

And so, assuming on the basis of what has been said (a. 2) that no creature is infinite in essence, we still need to ask whether any creature might be infinite in magnitude.

Note that the notion of a body, i.e., a complete magnitude, can be taken in two ways—viz., (a) *mathematically*, in which case only its quantity is considered, or (b) *naturally*, in which case its matter and form are considered.

As far as a *natural* body is concerned, it is clear that no body can be actually infinite. For each

natural body has a determinate substantial form, and since its accidents follow upon its substantial form, it must be that determinate accidents follow upon a determinate form. And among these accidents is quantity. Hence, each natural body has a greater or lesser determinate quantity. Hence, it is impossible for any natural body to be infinite.

This is also clear from movement (*ex motu*). Each natural body has a natural movement. But an infinite body could not have any natural movement:

(a) It could not have natural movement along a straight line, since nothing moves naturally with a straight movement except when it goes beyond its own place. But this could not happen with an infinite body, since it would occupy all places, and so every place would equally be its own place.

(b) Nor, likewise, could an infinite body have a circular movement. For in a circular movement it has to be the case that one part of the body is transferred to a place where another part previously was. But if we posit an infinite circular body, then this would not be possible. For two lines protracted from the center [of the body] become more and more distant from each other as they are protracted farther and farther from the center. So if the body in question were infinite, the lines would be infinitely distant from one another and, as a result, the one line could never arrive at the place of the other.

The same argument holds in the case of a *mathematical* body as well. For if we are to imagine a mathematical body existing in actuality, then we must imagine it as existing under some form, since nothing is actual except through a form. Hence, since the form of a body with quantity (*forma quanti*) as such is a shape, the body will have to have some shape. And so it will be finite, since a shape is that which is circumscribed by a limit or limits.

**Reply to Objection 1:** The geometer does not need to assume that any line is actually infinite. Rather, what he needs to do is to posit some actually finite line from which he can take however much he requires. And this he calls an infinite line.

**Reply to Objection 2:** Even though *infinite* is not contrary to the general nature of magnitude, it is nonetheless contrary to the nature of each of the species of magnitude—that is, it is contrary to the nature of a two-cubit magnitude or a three-cubit magnitude, etc., whether that magnitude be circular or triangular, etc. But a genus cannot contain anything that is not contained in any of its species. Hence, it is impossible for there to be any infinite magnitude, since none of the species of magnitude is infinite.

**Reply to Objection 3:** As has been said (a. 1), *infinite* as applied to quantity is taken from the matter. By the division of a whole one ends up with matter, since the parts are related to one another in the nature of matter. Through addition, on the other hand, one ends up with [another actual] whole, which is related to the nature of form. And so the infinite is found not in the addition of magnitude, but only in its division.

**Reply to Objection 4:** Movement and time are actual not as wholes, but successively. Hence, they have potentiality mixed in with their actuality. By contrast, a magnitude is an actual whole. And so *infinite* as applied to quantity and taken from the matter is incompatible with a whole magnitude, but not with the whole composed of time or movement. For existing in potentiality belongs to matter.

#### Article 4

##### Can there be an actual infinite multitude of things?

It seems that it is possible for there to be an actual infinite multitude (*possibile sit esse multitudinem infinitam secundum actum*):

**Objection 1:** It is not impossible for that which exists in potentiality to be brought into actuality.

But number can be increased to infinity. Therefore, it is not impossible for there to be an actual infinite multitude.

**Objection 2:** Any given species is such that it is possible for there to be an actual individual [of that species]. But there are infinitely many species of shape. Therefore, it is possible for there to be infinitely many shapes existing in actuality.

**Objection 3:** Things that are not opposed to one another do not impede one another. But, given any fixed multitude of things, there can be still other things not opposed to them. Therefore, it is not impossible for some further things to exist simultaneously with them, and so on *ad infinitum*. Therefore, it is possible for there to be infinitely many actual things.

**But contrary to this:** Wisdom 11:21 says, “You have ordered all things in measure, and number, and weight.”

**I respond:** On this matter there have been two opinions.

Some, like Avicenna and Al-Ghazali, have claimed that it is impossible for there to be an actual infinite multitude of things *per se*, but that it is not impossible for there to be an infinite multitude *per accidens*.

A multitude is said to be infinite *per se* when something requires for its existence that there be an infinite multitude. And this is impossible, since if it were possible, then something would have to depend for its generation on infinitely many things, and thus the generation would never be completed, since it is impossible to traverse an infinite multitude.

On the other hand, a multitude is said to be infinite *per accidens* when an infinite multitude is not required for anything, but instead it is incidental that there should be such a multitude.

This can be made clear from a carpenter’s work, for which a certain multitude is required *per se*—e.g., the skill existing in the carpenter’s soul, the movement of his hands, and the hammer. If such things were multiplied to infinity, then the carpenter’s construction would never be completed, because it would depend on infinitely many causes. But the number of hammers that might result from one being broken and another being taken up is a *per accidens* multitude. For the carpenter could work with many different hammers, and it would make no difference whether he worked with one or two or more—or even infinitely many if he worked for an infinite stretch of time.

On the basis of this line of reasoning, then, they claimed that it is possible for there to be an actual infinite multitude of things *per accidens*.

But this is impossible. For every multitude must be contained under some species of multitude, and the species of multitude correspond to the species of number. But no species of number is infinite, since each number is such that it is a multitude measured by the unit. Hence, it is impossible for there to be an actual infinite multitude, whether it be *per se* or *per accidens*.

Likewise, the multitude of things existing in nature is created, and every created entity is included within some fixed intention of the creator, since an agent does nothing in vain. Hence, all created things are included under a set number (*sub certo numero omnia creata comprehendantur*). Therefore, it is impossible for there to be an actual infinite multitude, even *per accidens*.

However, it is indeed possible for there to be an infinite multitude in potentiality, since an increase in multitude is consequent upon the division of a magnitude. For the more something is divided, the greater the number of things that result. Hence, just as the infinite is found in potentiality in the division of a continuous thing—since, as was shown above (a. 3), such a division proceeds in the direction of the matter—so too for the same reason the infinite is found in potentiality in the addition of a multitude.

**Reply to Objection 1:** Each thing that exists in potentiality is brought into actuality in a way that accords with the mode of its being. For example, a day is brought into actuality not as a simultaneous whole, but instead successively; and, similarly, an infinite multitude is brought into actuality not as a

simultaneous whole, but successively. For given any multitude, another multitude can be added, *ad infinitum*.

**Reply to Objection 2:** The species of shape have infinity from the infinity of number. For the species of shape are the trilateral, the quadrilateral, and so on. Hence, just as a denumerable infinite multitude is not brought into actuality as a simultaneous whole, so neither is a multitude of shapes.

**Reply to Objection 3:** Even though, with certain things posited, the positing of other things is not opposed to them, still, for infinitely many things to be posited is in fact opposed to every species of multitude. Hence, it is not possible for there to be any actual infinite magnitude.

## QUESTION 8

### God's Existence in Things

Since it seems to belong to what is infinite that it should exist everywhere and in all things, we have to ask whether this is true of God. And on this topic there are four questions: (1) Does God exist in all things? (2) Is God everywhere? (3) Is God everywhere by His essence, power, and presence? (4) Is being everywhere proper to God alone?

#### Article 1

#### Does God exist in all things?

It seems that God does not exist in all things:

**Objection 1:** That which is above all things does not exist in all things. But according to Psalm 112:4 (“The Lord is high above all nations, etc.”), God is above all things. Therefore, God does not exist in all things.

**Objection 2:** That which exists in something is contained by that thing. But God is not contained by things; rather, He contains things. Therefore, God does not exist in things; rather, things exist in Him. This is why in 83 *Quaestiones* Augustine says, “[It is better to say that] all things are in Him than that He is everywhere.”

**Objection 3:** An agent is more powerful to the extent that its action reaches out to a greater distance. But God is the most powerful of agents. Therefore, His action can reach even to those things that are distant from Him, and so He does not have to exist in all things.

**Objection 4:** The demons are certain things. Yet God does not exist in the demons, since, as 2 Corinthians 6:14 says, light has no fellowship with darkness. Therefore, God does not exist in all things.

**But contrary to this:** A thing exists wherever it operates. But God operates in all things—this according to Isaiah 26:12 (“For You have wrought all our works in us, Lord”). Therefore God exists in all things.

**I respond:** God exists in all things—not, to be sure, as a part of their essence or as an accident, but in the way an agent is present in that which it acts on.

For every agent must be conjoined to that which it directly acts on, and it must touch that thing by its power. This is how *Physics* 7 proves that what moves and what is moved must exist together. Now since God is *esse* itself through His essence, created *esse* must be His proper effect, in the same way that fire’s proper effect is to ignite. And God causes this effect in things not only when they first begin to exist, but also for as long as they are conserved in *esse*—just as the sun causes light in the air for as long as the air remains illuminated. Therefore, for as long as a thing has *esse*, God must be present to it in a way befitting the *esse* it has. But *esse* is that which is most intimate to any given thing and that which is in all things most deeply (*illud quod est magis intimum cuilibet et quod profundius omnibus inest*). For, as is clear from what was said above (q. 4, a. 1), *esse* is formal with respect to everything that exists within a given entity. Hence, it must be the case that God exists within all things and intimately so.

**Reply to Objection 1:** God is above all things because of the excellence of His nature, and yet, as was just explained, He exists in all things insofar as He causes the *esse* of all things.

**Reply to Objection 2:** Even though corporeal entities are said to exist in something as that which contains them, spiritual entities contain those things in which they exist, in the way that the soul contains the body. Hence, God, too, exists in things as that which contains them. Still, by a certain analogy with corporeal entities, all things are said to exist in God insofar as they are contained by Him.

**Reply to Objection 3:** Regardless of how powerful an agent is, its action extends to a distant thing only insofar as it acts on that thing through some medium. But it pertains to God's maximal power that he acts immediately in all things. Hence, nothing is distant from Him in the sense that it does not have God within itself. Still, things are said to be distant from God because of a dissimilarity in nature or grace, just as He Himself is indeed above all things because of the excellence of His nature.

**Reply to Objection 4:** In the case of the demons, one may consider both their nature, which is from God, and the deformity of sin, which is not from Him. And so one should concede that God exists in the demons—not absolutely speaking, but with the qualification that He exists in them insofar as they are certain entities. By contrast, in the case of things which bespeak an undeformed nature, one should say that God exists in them absolutely speaking.

## Article 2

### Is God everywhere?

It seems that God is not everywhere (*non sit ubique*):

**Objection 1:** *To be everywhere* signifies being in every place. But it does not befit God to be in every place, since it does not befit Him to be in a place; for, as Boethius says in *De Hebdomadibus*, incorporeal beings do not exist in a place. Therefore, God is not everywhere.

**Objection 2:** Place is related to permanent entities as time is related to successive entities. But an indivisible unit of action or movement cannot exist at different times. Therefore, an indivisible unit in the genus of permanent things cannot exist in all places. But to be divine is to be a permanent entity and not a successive entity. Therefore, God cannot exist in more than one place. And so He is not everywhere.

**Objection 3:** That which exists as a whole in a given place is such that nothing of it exists outside that place. But if God exists in some given place, then He is wholly there, since He does not have parts. Therefore, nothing of Him exists outside that place. Therefore, God is not everywhere.

**But contrary to this:** Jeremiah 23:24 says, "Do not I fill heaven and earth?"

**I respond:** Since a place is a certain entity, there are two ways in which a thing can be understood to be in a place. Either (a) it is in a place in the manner of other things (i.e., corresponding to one of the ways in which one thing is said to exist in other things), as the accidents of a given place exist in that place; or (b) it is in a place in the mode proper to a place, as are the things that are located in the place.

Now in a certain sense it is in both of these ways that God is in every place—which is what it is to be everywhere.

In the first way, just as He is in all things insofar as He gives them their *esse*, power, and operation, so too He is in every place insofar as He gives that place its *esse* and locative power.

Second, things are located in a place insofar as they fill that place, and God fills every place. He does not do this in the way a body does, since a body is said to fill a place insofar as another body is incompatible with it in that place, whereas the fact that God is in a given place does not exclude other things from being there. Rather, God fills all places by the fact that He gives *esse* to all the located things that fill all the places.

**Reply to Objection 1:** Incorporeal things are in a place not through a contact of dimensional quantity, in the way that bodies are, but instead through a contact of power.

**Reply to Objection 2:** There are two kinds of indivisibles.

One kind is the terminus of a continuous thing, such as a point in the case of permanent entities and

a moment in the case of successive entities. And because, in the case of permanent entities, this sort of indivisible has a determinate position, it cannot be in many parts of a place or in many places. The same thing holds for an indivisible with respect to action or movement. Since it occurs within a determinate ordering in the movement or action, it cannot exist in more than one part of time.

On the other hand, the second type of indivisible is such that it is outside the whole genus of continuous things. And this is the sense in which incorporeal substances such as God, an angel, and a soul are said to be indivisible. This sort of indivisible is related to a continuous thing not as a part of it, but rather insofar as it touches it by its power. Hence, such an individual is in one place or many, and in a small place or a large one, insofar as its power can extend to one or many places and to a small place or a large one.

**Reply to Objection 3:** *Whole* is predicated relative to *part*. However, there are two types of parts: (a) parts of an *essence*, in the way that the form and the matter are called parts of a composite, and in the way that the genus and the difference are called parts of the species; and (b) parts of a *quantity*, viz., the parts into which a quantity is divided.

That which is a whole in a given place by a totality of quantity cannot [at the same time] be outside that place. For the quantity of a located body is commensurate with the quantity of the place, and so there is no totality of quantity unless there is a totality of place.

On the other hand, a totality of essence is not commensurate with the totality of the place. Hence, that which is a whole in a given place by a totality of essence is not such that it does not exist in any way outside that place.

This distinction is apparent in the case of those accidental forms that have quantity insofar as they are accidents. For if a whiteness is taken as a totality of essence, then it is a whole in each part of the surface, since the complete nature of its species is found in each part of the surface; on the other hand, if it is taken as a totality of quantity—which it is *per accidens*—then it is not a whole in each part of the surface.

In incorporeal substances, however, there is no totality—either *per se* or *per accidens*—except the complete nature of the essence. And so, in the same way that a soul exists as a whole in each part of a body, so too God exists as a whole in each and every place.

### Article 3

#### Is God everywhere by His essence, presence, and power?

It seems that when God is said to be in all things by His essence, presence, and power, the modes of God's existence in things are mistakenly designated:

**Objection 1:** That which is in something by its essence is essentially in it. But God is not in things essentially, since He is not part of the essence of any entity. Therefore, it should not be said that God is in things by His essence, presence, and power.

**Objection 2:** To be present to a given thing is to be not absent from it. But for God to be in things by His essence is precisely this, viz., that He is not absent from anything. Therefore, God's existing in all things by His essence is the same as His existing in all things by His presence. Therefore, it is redundant to say that God is in all things by His essence, presence, and power.

**Objection 3:** Just as God is a principle of all things by His power, so too He is a principle of all things by His knowledge and will. But God is not said to be in things by His knowledge and will. Therefore, He should not be said to be in all things by His power.

**Objection 4:** Just as grace is a certain perfection added to the substance of an entity, so too there are many other added perfections. Therefore, if God is said to be in certain things in a special way by grace, it seems that a special mode of God's existence in things should be assigned for every perfection whatsoever.

**But contrary to this:** In his commentary on the Cantic of Canticles, Gregory says, "While God is in all things in a general way by His presence, power, and substance, He is said to be in some entities in a more intimate way by grace."

**I respond:** There are two ways in which God is said to be in a given entity.

In the first way, He is in a thing as an agent cause, and in this way He is in all the things created by Him.

In the second way, He is in a thing in the way that an object of an operation exists in the one who is acting. This mode is proper to the operations of the soul, in the way that what is known exists in the knower and what is desired exists in the one who desires. In this second way God exists in a special sense in a rational creature who knows and loves Him either actually or habitually. And since, as will become clear below (q. 43, a. 3), a rational creature has this condition by grace, it is in this way that God is said to be in the saints by *grace*.

But the question of how it is with regard to the other things created by Him should be looked at by way of a comparison with what we say about human affairs. For a king is said to be in his entire kingdom by his power, even though he is not present everywhere. On the other hand, something is said to be in all things by its presence when those things are within its purview. For example, all the things in a given house are said to be present to someone, even though he is not in every part of the house by his substance. Again, something is said to be in a place by its substance or essence when its substance is there in that place.

Thus, there were some—viz., the Manicheans—who claimed that spiritual and incorporeal entities are subject to God's power, whereas they claimed that visible and corporeal things are subject to the power of a contrary principle. Against them, then, one should say that God is in all things by His *power*.

Again, there were others who, even though they believed that God is in all things by his power, nonetheless did not extend divine providence all the way to the lower bodies here below. Job 22:14 says on their behalf, "He walks about the poles of heaven, and He does not consider our things." And against these, one should claim that God is in all things by His *presence*.

There were still others who, even though they acknowledged that God's providence extends to all things, nonetheless held that not all things are immediately created by God, but that instead He immediately created the first creatures and that these first creatures created the others. And against these one should say that He is in all things by His *essence*.

So, then, He is in all things by His power insofar as all things are subject to His power. He is in all things by His presence insofar as all things are bare and open to His eyes. He is in all things by His essence insofar as He is the cause of being for all things, as has been explained (a. 1).

**Reply to Objection 1:** God is said to be in all things by essence—not, to be sure, by the essence of the things, as if He were part of the essence of the things, but by *His own* essence, since, as has been explained (a. 1), His substance is present to all things as the cause of their being.

**Reply to Objection 2:** One thing is said to be present to another to the extent that the latter falls within its purview, even if, as has been explained, it is far removed from that thing according to its substance [or essence]. Therefore, it is necessary to posit two modes, viz., by essence and by presence.

**Reply to Objection 3:** The nature of knowing and willing are such that what is known exists in the one who knows and what is willed exists in the one who wills. Hence, when it comes to knowing and willing, things exist in God rather than God in things. By contrast, the nature of power is such that it is a

principle of acting on another. Hence, when it comes to power, the agent is related and applied to an exterior thing. And this is why the agent can be said to be in the other by its power.

**Reply to Objection 4:** Other than grace, there is no perfection added to a substance that makes God exist in another as an object that is known and loved. And so grace alone effects a special mode of God's existing in things. However, there is yet another special mode, by which God exists in a man through *union*. This mode will be discussed in its own place (*ST* 3, q. 2).

#### Article 4

##### Is it peculiar to God to be everywhere?

It seems that it is not peculiar to God to be everywhere:

**Objection 1:** According to the Philosopher, a universal is everywhere and always, and primary matter is likewise everywhere, since it exists in all bodies. Neither of these is God, as is clear from what has been said (q. 3, aa. 5 and 8). Therefore, it is not peculiar to God to be everywhere.

**Objection 2:** Number exists in the things that are numbered. But, as is clear from Wisdom 11:21, the whole universe is constituted in number. Therefore, there is some number that exists in the whole universe and thus is everywhere.

**Objection 3:** According to *On the Heavens and the World* 1, the entire universe is a sort of whole and complete body. But the entire universe is everywhere, since there is no place outside of it. Therefore, it is not the case that God alone is everywhere.

**Objection 4:** If there were an infinite body, there would be no place outside of it. Therefore, it would be everywhere. So it does not seem peculiar to God to be everywhere.

**Objection 5:** As Augustine says in *De Trinitate* 6, "the soul is a whole in the whole body and a whole in each part of it." Therefore, if there were nothing in the world except a single animal, then the soul of that animal would be everywhere. And so it is not peculiar to God to be everywhere.

**Objection 6:** As Augustine says in his letter *Ad Volusianum*, "Wherever the soul sees, there it senses; and wherever it senses, there it lives; and wherever it lives, there it exists." But the soul sees everywhere, as it were, since it sees in succession the whole of the heavens. Therefore, the soul is everywhere.

**But contrary to this:** In *De Spiritu Sancto* Ambrose says, "Who would dare call the Holy Spirit a creature, given that He exists in all things and everywhere and always—which is peculiar to the divine nature?"

**I respond:** It is peculiar to God to be everywhere primarily and *per se*.

When I say "to be everywhere primarily," I mean that He is everywhere according to Himself as a whole. If something were everywhere in such a way that diverse parts of it existed in different places, then it would not be everywhere primarily. For being everywhere would belong to it by reason of its parts and not primarily. In the same way, if a man is white with respect to his teeth, the whiteness does not belong primarily to the man, but instead belongs primarily to his teeth.

When I say "to be everywhere *per se*," I mean that being everywhere does not belong to Him *per accidens*, in light of some assumption that is being made. For in this latter sense a millet grain would be everywhere on the assumption that no other body existed. Therefore, being everywhere *per se* belongs to something when that thing is such that, given any assumption whatsoever, it exists everywhere. And this belongs solely to God. For no matter how many places are posited—even if one posited infinitely many places over and beyond those that in fact exist—God would have to exist in all of them, since nothing

can exist except through Him.

So, then, it belongs to God to be everywhere primarily and *per se*, and this belongs to Him alone. For no matter how many places are posited, God has to exist in each of them, not with some part of Himself, but according to Himself [as a whole].

**Reply to Objection 1:** Universals and primary matter are, to be sure, everywhere, but they are not everywhere with the same *esse*.

**Reply to Objection 2:** Since number is an accident, it is in a place *per accidens* and not *per se*. Nor is it a whole in each of the things that is numbered; rather, number is in them through its parts. And so it does not follow that it is everywhere *per se* and primarily.

**Reply to Objection 3:** The whole body of the universe is everywhere, but not everywhere primarily, since it is not a whole in each place; rather, it exists in each place through its parts. Again, it is not everywhere *per se*, since if other places were posited, it would not exist in them.

**Reply to Objection 4:** If there were an infinite body, it would exist everywhere, but it would do so through its parts.

**Reply to Objection 5:** If there were just a single animal, its soul would indeed be everywhere primarily, but *per accidens*.

**Reply to Objection 6:** When the soul is said to see somewhere, this can be understood in two ways:

In one way, insofar as the adverb ‘somewhere’ determines the act of seeing as an object. And in this sense it is true that when one looks at the heavens one sees ‘in’ the heavens and likewise senses ‘in’ the heavens. But it does not follow that one lives or exists in the heavens, since to live or to exist does not involve a *transeunt* action on an exterior object.

In the second way, it can be understood insofar as the adverb determines the act of the one who sees in the sense that it goes forth from the one who sees. Accordingly, it is true that the soul exists and lives where it senses and sees, given that way of speaking. And so it does not follow that it exists everywhere.

## QUESTION 9

### God's Immutability

The next things to consider are God's immutability (question 9) and His eternity, which follows from His immutability (question 10).

As for immutability, there are two questions to be asked: (1) Is God altogether immutable? (2) Is it peculiar to God to be immutable?

#### Article 1

##### Is God altogether immutable?

It seems that God is not altogether immutable (*omnino immutabilis*):

**Objection 1:** Whatever moves itself is in some sense mutable. But, as Augustine says in *Super Genesim ad Litteram* 8, "The Spirit creator moves Himself, but neither through time nor through space." Therefore, God is in some sense mutable.

**Objection 2:** Wisdom 7:24 says of wisdom that it is "more active than all active things." But God is wisdom itself. Therefore, God is moveable.

**Objection 3:** 'To come closer' and 'to go farther away' signify movement. But things of this sort are said of God in Scripture (James 4:8: "Draw near to God, and He will draw near to you"). Therefore, God is mutable.

**But contrary to this:** Malachy 3:6 says, "I am the Lord, and I change not."

**I respond:** On the basis of what has already been said, it can be shown that God is altogether immutable.

First, it was shown above (q. 2, a. 3 and q. 3, a. 1) that there is a first being that we call God, and that a first being of this sort must be pure actuality without the admixture of any potentiality, since potentiality is posterior in an absolute sense to actuality. But anything that changes in any way is in some sense in potentiality. From this it is clear that it is impossible for God to be changed in any way.

Second, everything that is moved is such that it stays the same with respect to something and undergoes a transition with respect to something else. For instance, that which is moved from whiteness to blackness stays the same with respect to its substance. And so in each thing that is moved some sort of composition is present. However, it was shown above (q. 3, a. 7) that there is no composition in God, but that instead He is altogether simple. Hence, it is clear that He cannot be moved.

Third, everything that is moved acquires something by its movement, and it attains to something that it did not attain to beforehand. But since God is infinite, including within Himself the fullness of the perfection of all being, He cannot acquire anything or attain to anything that He did not attain to beforehand. Hence, there is no way in which movement befits God.

And so it is that certain of the ancients—compelled, as it were, by the truth itself—held that the first principle of being is unmoveable (*immobile*).

**Reply to objection 1:** Augustine is here speaking in the manner of Plato, who claimed that the first mover moves itself because he was calling every operation a 'movement'. In this manner of speaking, even understanding and willing and loving are themselves movements. Thus, since God understands and loves Himself, they claimed accordingly that God moves Himself, but not in the sense in which movement and change belong to something that exists in potentiality—as we ourselves are now speaking of change and movement.

**Reply to objection 2:** Wisdom is called moveable metaphorically because it diffuses its likeness even to the least of things. For there cannot be anything that does not proceed, through a certain

imitation, from God's wisdom as a first effective and formal principle—in the way that artifacts proceed from the wisdom of the craftsman.

So, then, because the likeness of God's wisdom proceeds in degrees from the highest things, which have a greater participation in His likeness, all the way to the lowest things, which have a lesser participation, God's wisdom is said to have a 'procession' and 'movement' toward those things—just as if we were to say that the sun proceeds toward the earth because the rays of its light reach all the way to the earth. This is how Dionysius explains it in *De Caelesti Hierarchia*, chap. 1, when he says, "Every procession of God's manifestation comes to us from the movement of the Father of lights."

**Reply to objection 3:** Things of this sort are metaphorically predicated of God in the Scriptures. For just as the sun is said to enter a house or leave it to the extent that its rays reach the house, so, too, God is said to approach us or recede from us to the extent that we perceive the influence of His goodness or withdraw from Him.

## Article 2

### Is it peculiar to God to be immutable?

It seems that it is not peculiar to God to be immutable:

**Objection 1:** In *Metaphysics 2* the Philosopher says that there is matter in everything that is moved. But, as is evident to some, certain created substances, such as angels and souls, do not have matter. Therefore, it is not peculiar to God to be immutable.

**Objection 2:** Everything that is moved is moved for the sake of some end, and so if it has already attained its final end, it is no longer moved. But some creatures, e.g., all the blessed in heaven, have already attained their ultimate end. Therefore, some creatures are unmoveable.

**Objection 3:** Everything that is mutable is variable. But forms are invariable; for the book *Sex Principia* says, "A form consists in a simple and invariable essence." Therefore, it is not peculiar to God alone to be immutable.

**But contrary to this:** In *De Natura Boni* Augustine says, "Only God is immutable, whereas the things He has made are mutable because they come from nothing."

**I respond:** Only God is altogether immutable, whereas every creature is mutable in some way or other. Now notice that something can be called 'mutable' in one of two ways: first, because of a potentiality (*potentia*) that exists in its very self; second, because of a power (*potentia*) that exists in something else.

Before any creatures existed, they were not possible through any created power, since nothing created was eternal; rather, they were possible only because of God's power, i.e., only because God was able to bring them into being. But just as God's bringing things into being depends on His will, so too His conserving them in being depends on His will; for He conserves them in being precisely by always giving them being. Hence, as Augustine says in *Super Genesim ad Litteram* 4, if God were to withhold His action from them, all things would fall back into nothingness. Therefore, just as, before things existed in themselves, their existence depended on the creator's power, so too, after they exist in themselves, their non-existence depends on the creator's power. So, then, creatures are mutable through a power that exists in another, viz., in God, because they were able to be produced by Him from nothing and because they are able to be reduced by Him to non-being.

If, on the other hand, something is being called mutable because of a potentiality (*potentia*) that exists in its very self, then it is likewise the case that every creature is mutable in some way or other. For

in every creature there are two types of potentiality, viz., active and passive. Now I call a potentiality passive insofar as the thing in question is capable of attaining its own perfection, either in *being* or in *attaining its end*.

If we are talking about a thing's mutability with respect to potentiality for *being*, then this sort of mutability is not found in every creature, but only in those creatures in which what is possible in them is compatible with their non-being.

Thus, in lower bodies there is mutability both (a) with respect to *substantial* being, given that their matter can exist along with a privation of their substantial form, and (b) with respect to *accidental* being, as long as the subject is compatible with the privation of a given accident, in the way that the subject *man* is compatible with non-whiteness and so can change from being white to not being white. On the other hand, if the accident in question follows upon the subject's essential principles, then the privation of that accident is not compatible with the subject, and so the subject is not mutable with respect to that accident—in the way that snow cannot become black.

By contrast, in celestial bodies the matter is not compatible with the privation of their form, since their form perfects the whole potentiality of their matter, and so they are not mutable with respect to their substantial being. However, they are mutable with respect to their local being, since the subject is compatible with the privation of this or that place.

On the other hand, since incorporeal substances are themselves subsistent forms (which are nonetheless related to their *esse* as potentiality to actuality), they are not compatible with the privation of this act [of being]. For *esse* follows upon form, and nothing is corrupted except by losing a form. Hence, in the form itself there is no potentiality for non-being, and so substances of this sort are immutable and invariable with respect to their being. This point is made by Dionysius in *De Divinis Nominibus*, chap. 4: "Created intellectual substances are free from generation and from every variation, since they are incorporeal and immaterial." However, there are still two types of mutability in such creatures. For, first, they are in potentiality with respect to their *end*, and because of this, as Damascene says, they can change from goodness to badness by their own choice. Second, they are mutable with respect to *place*, because by their finite power they can affect places that they had not previously affected—something that cannot be said of God, who, as was explained above (q. 8, a. 2), fills all places by His infinity.

So, then, in every creature there is some potentiality for change, either (a) with respect to *substantial being*, as in the case of corruptible bodies; or (b) just with respect to *local being*, as in the case of the celestial bodies; or (c) with respect to *their being ordered to their end* or with respect to *the application of their power to diverse things*, as in the case of the angels. Moreover, all creatures in general share a common mutability because of the power of their creator, given that their being and non-being fall within His power.

Hence, since God is not mutable in any of these ways, it is peculiar to Him to be altogether immutable.

**Reply to objection 1:** This objection concerns things that are mutable with respect to both substantial being and accidental being, since these are the types of changes the philosophers had talked about.

**Reply to objection 2:** In addition to the immutability of being, which belongs to them by nature, the good angels have an immutability of choice by God's power. Yet mutability with respect to place still remains in them.

**Reply to objection 3:** Forms are called invariable because they themselves cannot be the subject of a variation. Yet they are subject to variation in the sense that their subjects are variable with respect to them. Hence, it is clear that they vary in a sense that accords with what they are. For they are called beings not because they themselves are the subject of being, but because something exists by virtue of them.

## QUESTION 10

### God's Eternity

Next we ask about eternity. On this topic there are six questions: (1) What is eternity? (2) Is God eternal? (3) Is it peculiar to God to be eternal? (4) Does eternity differ from time? (5) What is the difference between aeviternity (*aevum*) and time? (6) Is there a single aeviternity in the same way that there is a single time and a single eternity?

#### Article 1

##### Is eternity correctly defined as ‘the simultaneously whole and complete possession of interminable life’?

It seems that in *De Consolatione Philosophiae* 5 Boethius gives an incorrect definition of eternity when he says, “Eternity is the simultaneously whole and complete possession of interminable life (*aeternitas est interminabilis vitae tota simul et perfecta possessio*)”:

**Objection 1:** ‘Interminable’ is a negative term. But a negation is part of the definition only of things that are defective—which is not true of eternity. Therefore, ‘interminable’ should not be used in the definition of eternity.

**Objection 2:** ‘Eternity’ signifies a certain duration. But duration has to do with *esse* more than with life. Therefore, ‘life’ should not be used in the definition of eternity; instead, ‘*esse*’ should be.

**Objection 3:** Whatever is called a whole has parts. But this is not true of eternity, since eternity is simple. Therefore, it is wrong to call it a whole.

**Objection 4:** It is impossible for more than one day, or more than one time, to exist simultaneously. But [in the Scriptures] days and times are ascribed to eternity in the plural; for Micah 5:2 says, “His going forth is from the beginning, from the days of eternity,” and Romans 16:25 says, “. . . according to the revelation of the mystery which was kept secret from eternal times.” Therefore, eternity is not a simultaneous whole.

**Objection 5:** ‘Whole’ and ‘complete’ are the same. Thus, once eternity is said to be a whole, it is redundant to add that it is complete.

**Objection 6:** Possession is irrelevant to duration. But eternity is a certain duration. Therefore, eternity is not a possession.

**I respond:** Just as it is through composite things that we have to approach the cognition of simple things, so too it is through time, which is just the numbering of movement with respect to *before* and *after*, that we have to approach the cognition of eternity. For since in every movement there is a succession, with one part coming after another, it is by numbering the *before* and *after* in movement that we apprehend time, which is just the numbering of what is prior and posterior in movement. However, in that which lacks movement and always remains the same, there is no room for prior and posterior. Therefore, just as the concept of time consists in the numbering of prior and posterior in movement, so the concept of eternity consists in the apprehension of the uniformity of that which lies completely outside of movement.

Again, as *Physics* 4 says, the things that are said to be measured by time have a beginning and an end in time, and this is because in everything that is moved one can designate some beginning and some end. But just as that which is altogether immutable can have no succession, so neither can it have a beginning or an end.

Eternity, then, is characterized by two things: first, by the fact that what exists in eternity is interminable, i.e., lacking a beginning and an end (since ‘terminus’ refers to both); second, by the fact

that eternity itself lacks succession and is a simultaneous whole.

**Reply to objection 1:** Simple things are normally defined by means of a negation—e.g., a point is that which has no parts. This is not because the negation is part of their essence, but rather because our intellect, which primarily apprehends composite things, cannot arrive at the cognition of simple things except by way of ruling out composition.

**Reply to objection 2:** That which is truly eternal is not only a being but a living being, and ‘to live’, though not ‘to be’, itself includes operation in some way. But the protraction of duration seems to pertain more to operation than it does to being. This is why time is the numbering of movement.

**Reply to objection 3:** Eternity is called a whole not because it has parts, but rather in the sense that it lacks nothing.

**Reply to objection 4:** Just as God, given that He is incorporeal, is denominated metaphorically by the names of corporeal things in the Scriptures, so too eternity, which exists as a simultaneous whole, is denominated by the names of successive temporal entities.

**Reply to objection 5:** In the case of time there are two things to consider: (a) time itself, which is a successive entity, and (b) the temporal *now*, which is incomplete. Therefore, one says ‘simultaneous whole’ in order to rule out time, and one says ‘complete’ in order to exclude the temporal *now*.

**Reply to objection 6:** That which is possessed is had firmly and steadily. Therefore, to designate the immutable and unfailing nature of eternity, one uses the term ‘possession’.

## Article 2

### Is God eternal?

It seems that God is not eternal:

**Objection 1:** Nothing that is made can be said of God. But eternity is something made; for Boethius says, “The flowing *now* makes time, the abiding *now* makes eternity,” and in 83 *Quaestiones* Augustine says that God is the author of eternity. Therefore, God is not eternal.

**Objection 2:** That which exists both before eternity and after eternity is not measured by eternity. But God exists before eternity, as the *Liber de Causis* says, and He exists after eternity, since Exodus 15:18 says, “The Lord shall reign for eternity and beyond.” Therefore, it is not fitting for God to be eternal.

**Objection 3:** Eternity is a certain measure. But it does not befit God to be measured. Therefore, it does not belong to Him to be eternal.

**Objection 4:** Since, as has been explained (a. 1), eternity is a simultaneous whole, there is no present, past, or future in it. But present-tense, past-tense, and future-tense verbs are predicated of God in the Scriptures. Therefore, God is not eternal.

**But contrary to this:** The Athanasian creed says, “The Father is eternal, the Son is eternal, the Holy Spirit is eternal.”

**I respond:** As is clear from what was said above (a. 1), the nature of eternity follows upon immutability, just as the nature of time follows upon movement. Hence, since God is maximally immutable, it belongs to Him especially to be eternal. And not only is He eternal, but He is His own eternity—even though no other thing is its own duration, since no other thing is its own *esse*. But God is His own *esse* in all respects; so just as He is His own essence, so too He is His own eternity.

**Reply to objection 1:** The abiding *now* is said to ‘make eternity’ according to our apprehension. For just as the apprehension of time is caused in us by the fact that we apprehend the flowing of the

temporal *now*, so too the apprehension of eternity is caused in us insofar as we apprehend an abiding *now*.

Moreover, when Augustine says that God is the author of eternity, he is talking about participated eternity. For God communicates His eternity to some beings, just as He communicates His immutability as well.

**Reply to objection 2:** The answer to this objection is clear from what has just been said. For God is said to exist ‘before eternity’ to the extent that His eternity is participated in by immaterial substances. Hence, the same passage says, “An intelligence is likened to eternity.”

As for the passage from Exodus, “The Lord shall reign for eternity and beyond,” note that ‘eternity’ is taken here for ‘the ages’ (*saeculum*), as another translation has it. So, then, it is said that He will reign ‘beyond eternity’ because He endures beyond every age, i.e., beyond any given duration. For, as *De Caelo* 1 says, an age is nothing other than the period of each thing.

An alternative reply is that He is said to reign ‘beyond eternity’ because even if something other [than God] always existed (e.g., the movement of the heavens according to some philosophers), God would still reign ‘beyond’ it in the sense that His reign is a simultaneous whole.

**Reply to objection 3:** Eternity is nothing other than God Himself. Hence, God is not said to be eternal in the sense that He is measured in some way. Rather, the notion of a measure is understood here only according to our apprehension.

**Reply to objection 4:** Verbs of different tenses are attributed to God insofar as His eternity includes all times and not because He Himself varies over the present, past, and future.

### Article 3

#### Is it proper to God alone to be eternal?

It seems not to be the case that it is proper to God alone to be eternal.

**Objection 1:** Daniel 12:3 says, “They that instruct many to justice are as stars for everlasting eternities.” But there would not be more than one eternity if God alone were eternal. Therefore, it is not the case that God alone is eternal.

**Objection 2:** Matthew 25:41 says, “Depart from me, you cursed, into the eternal fire.” Therefore, it is not the case that God alone is eternal.

**Objection 3:** Everything necessary is eternal. But many things are necessary, e.g., all the principles of demonstration, and all the demonstrated propositions. Therefore, it is not the case that God alone is eternal.

**But contrary to this:** In *Ad Marcellum* Jerome says, “God alone does not have a beginning.” But whatever has a beginning is not eternal. Therefore, God alone is eternal.

**I respond:** Eternity is truly and properly found in God alone. For as is clear from what has been said (a. 1), eternity follows upon immutability. But, as was shown above (q. 9, a. 2), God alone is altogether immutable.

However, to the extent that certain things receive immutability from God, they participate in His eternity.

For some things receive immutability from God insofar as they never cease to exist; accordingly, Ecclesiastes 1:4 says of the earth that it remains for eternity.

Again, in the Scriptures other things are called eternal because of the great length of their duration, even though they are corruptible; for instance, in Psalm 75:5 the mountains are called eternal, and

Deuteronomy 33:15 speaks of the “fruits of the eternal hills.”

Still other things participate in the nature of eternity insofar as they have untransmutability (*intransmutabilitas*) with respect to *esse* or, even further, with respect to operation, as in the case of the angels and the blessed in heaven, who take joy in the Word. For, as Augustine says in *De Trinitate* 15, the saints have no changeable thoughts with respect to their vision of the Word. That is why those who see God are said to have eternal life, in accord with John 17:3 (“This is eternal life, that they may know . . .”).

**Reply to objection 1:** Many eternities are spoken of because there are many who participate in eternity by contemplating God.

**Reply to objection 2:** The fire of hell is called eternal only because of its interminability. However, there are changes in their punishments, according to Job 24:19 (“They will pass from the waters of snow to excessive heat.”) Hence, in hell there is no genuine eternity, but instead time—in keeping with Psalm 80:16 (“Their time shall be for ever”).

**Reply to objection 3:** ‘Necessary’ signifies a certain mode of truth. But according to the Philosopher in *Metaphysics* 6, the true exists in the intellect. Therefore, the true and the necessary are eternal because they exist in an eternal intellect, which is God’s intellect alone. Hence, it does not follow that anything outside of God is eternal.

#### Article 4

##### Does eternity differ from time?

It seems that eternity is not different from time:

**Objection 1:** There cannot be two simultaneous measures of duration unless one is a part of the other; for no two days or two hours are simultaneous, whereas a day and an hour are simultaneous because the hour is part of the day. But eternity and time, both of which involve a measure of duration, are simultaneous. Therefore, since eternity is not a part of time, given that it exceeds time and includes it, it seems that time is a part of eternity and thus not distinct from eternity.

**Objection 2:** According to the Philosopher in *Physics* 4, the temporal *now* remains the same throughout the whole of time. But the nature of eternity seems to be constituted by the fact that it remains indivisibly the same throughout the whole course of time. Therefore, eternity is the temporal *now*. But the temporal *now* does not differ in substance from time. Therefore, eternity does not differ in substance from time.

**Objection 3:** Just as the measure of the first movement is, as *Physics* 4 says, the measure of all movements, so too it seems that the measure of the first *esse* is the measure of all *esse*. But eternity is the measure of the first *esse*, which is the divine *esse*. Therefore, eternity is the measure of all *esse*. But the *esse* of corruptible things is measured by time. Therefore, time is either eternity or some part of eternity.

**But contrary to this:** Eternity is a simultaneous whole, whereas in time there is a *before* and an *after*. Therefore, time and eternity are not the same.

**I respond:** It is clear that time and eternity are not the same.

However, some have given as an explanation for this difference the fact that eternity lacks a beginning and an end, whereas time has a beginning and an end. But this difference is *per accidens* and not *per se*. For even if time has always existed and always will exist—the position of those who posit a sempiternal movement of the heavens—there will still be a difference between eternity and time, just as Boethius explains in *De Consolatione Philosophiae*. The reason is that eternity is a simultaneous

whole—something that does not befit time—because eternity is a measure of permanent *esse*, whereas time is the measure of movement.

However, if the explanation just cited is applied to the things that are measured rather than to the measures, then it has some plausibility. For, as *Physics* 4 says, the only things measured by time are those which have a beginning and an end in time. Hence, if the movement of the heavens endured forever, then time would not measure that movement with respect to its whole duration, since the infinite is not measurable; instead, it would measure any given revolution, which has a beginning and an end in time.

However, there is another possible explanation having to do with the things measured, if the end and the beginning are thought of as potential. For even given that time lasts forever, it is possible to designate a beginning and an end in time by focusing on some part of time. For instance, we speak of the beginning and the end of a day or of a year—something that is not possible in the case of eternity.

Still, these differences follow upon the primary and *per se* difference, viz., that eternity, but not time, is a simultaneous whole.

**Reply to objection 1:** This argument proceeds on the assumption that time and eternity are measures that belong to a single genus. The falsity of this assumption is clear from the things of which time and eternity are the measures.

**Reply to objection 2:** The temporal *now* is the same in subject (*idem subiecto*) throughout the whole of time, but differs in concept (*differens ratione*). The reason is that the temporal *now* stands to the thing that is moving in just the way that time stands to the movement. The thing moving is the same in subject throughout the whole course of the time, but it differs in concept insofar as it is *here* and *there*, and this alternation [of places] is just the movement. Similarly, the flow of this *now*, insofar as it alternates in concept, is just time. But eternity remains the same both in subject and in concept. Hence, eternity is not the same as the temporal *now*.

**Reply to objection 3:** Just as eternity is the proper measure of *esse* itself, so time is the proper measure of movement. Hence, to the extent that some *esse* falls short of permanence of being and is subject to transmutation, it falls short of eternity and is subject to time. Therefore, since the *esse* of corruptible things is transmutable, it is measured not by eternity, but by time. For time measures not only those things that actually undergo transmutation, but also those things that are able to undergo transmutation. Hence, it measures not only movement, but also rest, which belongs to that which is apt to be moved and yet is not [actually] being moved.

## Article 5

### Is aeviternity different from time?

It seems that aeviternity (*aevum*) does not differ from time:

**Objection 1:** In *Super Genesim ad Litteram* 8, Augustine says, “God moves the spiritual creature through time.” But the measure of spiritual substances is called aeviternity. Therefore, time does not differ from aeviternity.

**Objection 2:** It is the nature of time to have a *before* and an *after*, whereas it is the nature of eternity to be a simultaneous whole, as has been explained (a. 1). But aeviternity is not eternity, since according to Ecclesiasticus 1:1, eternal wisdom precedes aeviternity. Therefore, aeviternity is not a simultaneous whole, but instead has a *before* and an *after*, and so is the same as time.

**Objection 3:** If there were no *before* or *after* in aeviternity, then it would follow that in aeviternity *exists*, *existed*, and *will exist* do not differ from one another. Therefore, since it is impossible for

aeviternal entities not to have existed, it would follow that it is impossible for them not to exist in the future. But this is false, since God could reduce them to nothingness.

**Objection 4:** Given that the duration of aeviternal entities is infinite with respect to the future (*ex parte post*), if aeviternity is a simultaneous whole, then it follows that some created thing is actually infinite—which is impossible. Therefore, aeviternity does not differ from time.

**But contrary to this:** Boethius says, “He commands time to go forth from aeviternity.”

**I respond:** Aeviternity differs from time and eternity as something midway between them.

Now some characterize the difference among them by claiming that (a) *eternity* lacks a beginning and an end, (b) *aeviternity* has a beginning but no end, and (c) *time* has both a beginning and an end. But, as was explained above (a. 4), this difference is *per accidens*. For even if, as some claim, aeviternal things were such that they always have existed and always will exist—or even if aeviternal things ceased to exist at some future time, which would be possible for God to bring about (*Deo possibile esset*)—aeviternity would still be distinct from eternity and from time.

By contrast, others claim that the difference among the three is that (a) *eternity* does not have a *before* or an *after*, (b) *time* has a *before* and an *after* along with newness and oldness, and (c) *aeviternity* has a *before* and an *after* without any newness or oldness. But this position entails a contradiction. This is manifestly obvious if newness and oldness are taken to apply to the measure itself. For given that a duration’s *before* and *after* cannot exist simultaneously, if aeviternity has a *before* and an *after*, then when an earlier part of aeviternity recedes, a later part must newly arrive, and so there will be newness in aeviternity itself, just as there is in time. But even if newness and oldness are taken to apply to the things that are measured, it is still the case that an absurdity follows. For a temporal entity grows old with time because it has transmutable *esse*, and, as is clear from *Physics* 4, the *before* and *after* in the measure derive from the transmutability of the thing being measured. So if an aeviternal entity is itself incapable of either newness or oldness, this will be because it has untransmutable *esse*. Therefore, its measure will not have a *before* or an *after*.

So, then, one should respond as follows:

Since eternity is a measure of permanent *esse*, to the extent that something falls short of permanence of *esse*, it falls short of eternity.

Some things fall short of permanence of *esse* in such a way that their *esse* is either the subject of transmutation or consists in transmutation, and things of this sort are measured by time—e.g., every movement as well as the *esse* of all corruptible things.

On the other hand, some things fall short of permanence of *esse* to a lesser degree, since their *esse* neither consists in transmutation nor is the subject of transmutation, though they have transmutation adjoined to them either in actuality or in potentiality. This is clear in the case of the celestial bodies, which have untransmutable substantial *esse*, but have this untransmutable substantial *esse* along with a transmutability with respect to place. Likewise, in the case of the angels it is clear that they have untransmutable [substantial] *esse* along with a transmutability with respect to choice, as it pertains to their nature, as well as a transmutability with respect to acts of understanding and affection and (in their own way) with respect to place. And so entities of this sort are measured by aeviternity, which falls midway between eternity and time.

By contrast, the *esse* that is measured by eternity is neither mutable nor adjoined to any mutability.

So then, (a) time has a *before* and an *after*, (b) aeviternity does not have a *before* or an *after* in its own right (*in se*), but can have a *before* and *after* conjoined to it, and (c) eternity does not have a *before* or an *after* and is incompatible with them.

**Reply to objection 1:** With respect to their acts of affection and understanding, which involve succession, spiritual creatures are measured by time. Hence, in the same place Augustine says that to be moved through time is to be moved through acts of affection. On the other hand, with respect to their

natural *esse* they are measured by aeviternity, whereas with respect to the vision of glory, they participate in eternity.

**Reply to objection 2:** Aeviternity is a simultaneous whole, but it is not eternity because it is compatible with a *before* and an *after*.

**Reply to objection 3:** There is no difference between past and future in the very *esse* of an angel, considered in itself; instead, this difference arises solely because of the adjoined mutations.

Moreover, when we say that an angel exists or existed or will exist, the difference stems from the apprehension of our intellect, which apprehends the *esse* of an angel by relating it to different parts of time. And when the objection says that an angel exists or existed, it makes an assumption, the opposite of which is not [now] subject to God's power, whereas when it says that the angel will exist, it is not yet positing any assumption. For because the *esse* and non-*esse* of an angel fall under God's power, absolutely considered, God can make it the case that the angel's *esse* will not be; and yet God cannot make it the case either that (a) the angel, while he exists, does not exist or that (b) the angel, after he has existed, has not existed.

**Reply to objection 4:** The duration of aeviternity is infinite because it is not limited by time. However, there is nothing problematic about some created thing being infinite in the sense that it is not limited by some other created thing.

## Article 6

### Is there a single aeviternity?

It seems that there is not just a single aeviternity (*non sit tantum unum aevum*):

**Objection 1:** The apocryphal Esdra (3 Esdra 4:40) says, "The majesty and power of all the aeviternities stands before You, Lord."

**Objection 2:** There are different measures for different genera. But some aeviternal things are in the genus of corporeal things, viz., the celestial bodies, whereas others are spiritual substances, viz., the angels. Therefore, there is not just a single aeviternity.

**Objection 3:** Since 'aeviternity' is the name of a duration, things that have a single aeviternity have a single duration. But there is not just one duration for all aeviternal things, since some of them begin to exist after others, as is especially clear in the case of human souls. Therefore, there is not just a single aeviternity.

**Objection 4:** Things that do not depend on one another do not seem to have a single measure of duration. For it seems that the reason why there is a single time for all temporal things is that the first movement, which is prior to time, is in some sense a cause of all movements. By contrast, aeviternal things do not depend on one another, since it is not the case that one angel is a cause of another. Therefore, there is not just a single aeviternity.

**But contrary to this:** Aeviternity is more simple than time, and it is closer to eternity than time is. But there is just a single time. Therefore, *a fortiori* there is just a single aeviternity.

**I respond:** On this question there are two opinions. Some claim that there is just a single aeviternity, whereas others claim that there are many. To determine which of these opinions is closer to the truth, we have to inquire into the reason for the oneness of time, since we arrive at the cognition of spiritual things through corporeal things.

Now some claim that there is a single time for all temporal things because there is a single numbering for all the things that are numbered; for according to the Philosopher, time is a numbering. But this does not suffice, since time is not a numbering that is abstracted from what is being numbered.

Rather, it exists in the thing being numbered; otherwise, the numbering would not be continuous. For tenells of cloth have continuity not because of the numbering, but because of the thing numbered. However, the numbering that exists in the thing numbered is not the same for all things, but is instead diverse in diverse things.

Others explain the oneness of time by appealing to the oneness of eternity, which is the principle of every duration; on this view, all durations are one if their principle is considered, whereas they are many if we consider the diversity of things that receive their duration from the influence of the first principle. Still others explain the oneness of time by appealing to primary matter, which is the first subject of movement, the measure of which is time. However, neither of these explanations seems sufficient, since things that are one because of a principle or a subject—especially a remote principle or remote subject—are not one absolutely speaking, but one only in a certain respect (*secundum quid*).

So, then, the reason for the oneness of time is the oneness of the first movement. Since this movement is the simplest, all the other movements are measured by it, as *Metaphysics* 10 says. Thus, time is related to this particular movement not only as a measure to what is measured, but also as an accident to its subject; and so time receives its oneness from this movement. Moreover, this movement is related to other movements only as a measure to what is measured. Hence, time is not multiplied according the multiplicity of those movements, since the many separate things can be measured by a single measure.

Given this, we should note that there are two opinions about spiritual things. Some have claimed that all spiritual substances proceeded from God with a certain equality, as Origen maintained, or at least that many of them did, as others have maintained. By contrast, others have claimed that spiritual substances proceeded from God according to a certain gradation and ordering. This is what Dionysius seems to think, since in *De Caelesti Hierarchia*, chap. 10, he says that among spiritual substances some are first, some are in the middle, and some are last—even within a single order of angels.

Thus, in keeping with the first opinion, one has to claim that there are many aeviternities, insofar as there are many first equals among aeviternal things.

On the other hand, in keeping with the second opinion, one has to claim that there is just a single aeviternity. For since, as *Metaphysics* 10 says, each thing is measured by what is most simple in its genus, it must be the case that the *esse* of all aeviternal things is measured by the *esse* of the first aeviternal thing. For the more simple a thing is, the more priority it has. And since, as will be shown below (q. 50, a. 4), this second opinion is closer to the truth, we will concede for now that there is just a single aeviternity.

**Reply to objection 1:** ‘Aeviternity’ is sometimes taken for ‘age’ (*saeculum*), which is a given entity’s period of duration. And so the term ‘many aeviternities’ means ‘many ages’.

**Reply to objection 2:** Even though celestial bodies and spiritual substances differ in their natural genus, they nonetheless agree in having untransmutable *esse*. And that is why they are measured by aeviternity.

**Reply to objection 3:** It is likewise not the case that all temporal things begin simultaneously; and yet there is a single time for all of them because of the first thing that is measured by time. So, too, all aeviternal things have a single aeviternity because of the first aeviternal thing, even if they do not all begin to exist simultaneously.

**Reply to objection 4:** In order for it to be the case that certain things are measured by a single thing, that single thing does not have to be a cause of all the others. Rather, what is required is that it be more simple than the others.

## QUESTION 11

### God's Oneness

Given what has gone before, the next thing to consider is God's oneness. On this topic there are four questions: (1) Does *one* add anything to *being*? (2) Are *one* and *many* opposed to each other? (3) Is God one? (4) Is God maximally one?

#### Article 1

##### Does *one* add anything to *being*?

It seems that *one* adds something to *being*:

**Objection 1:** Everything that belongs to a determinate genus is related by addition to *being*, since *being* encompasses every genus. But *one* belongs to a determinate genus, since it is the principle of number, which is a species of quantity. Therefore, *one* adds something to *being*.

**Objection 2:** That which divides something common is related by addition to that thing. But *being* is divided by *one* and *many*. Therefore, *one* adds something to *being*.

**Objection 3:** If *one* added nothing to *being*, then to call something one would be the same as calling it a being. But it is trivial to say that a being is a being. Therefore, it would be trivial to say that a being is one. But this is false. Therefore, *one* adds something to *being*.

**But contrary to this:** In the last chapter of *De Divinis Nominibus* Dionysius says, "There is nothing among the things that exist that does not participate in *one*." But this would not be the case if *one* added to *being* something which contracted it. Therefore, *one* is not related to *being* by addition.

**I respond:** *One* does not add any entity to *being*, but instead adds just the negation of division. For *one* signifies the same thing as *undivided being*.

From this it is clear that *one* is convertible with *being*. For every being is either simple or composite. A simple being is undivided both in actuality and in potentiality, whereas a composite being does not have *esse* as long as its parts are divided, but has it once the parts constitute and compose the composite being itself. Hence, it is clear that the *esse* of any given thing consists in undividedness. And so it is that each thing is such that insofar as it maintains its own *esse*, it also preserves its own oneness.

**Reply to objection 1:** Those who thought that the *one* which is convertible with *being* is the same as the *one* which is the principle of number were divided into contrary positions.

Pythagoras and Plato, noticing that the *one* which is convertible with *being* does not add any entity to *being* but instead signifies the substance of a being insofar as it is undivided, thought that this was also true of the *one* which is the principle of number. And since a number is composed of unities, they believed that numbers were the substances of all things.

Contrary to this, Avicenna, noting that the *one* which is the principle of number adds some entity to the substance of a being (otherwise, number as composed of unities would not be a species of quantity), believed that the *one* which is convertible with *being* adds some entity to the substance of a being, in the way that *white* adds an entity to *man*. But this is manifestly false, since each entity is one by its own substance. For if each entity were one through some other entity, then since the latter would again be one, if it were again one through some other entity, there would be an infinite regress. Hence, one should stop the regress at the first step.

Accordingly, one should say that the *one* which is convertible with *being* does not add any entity to a being, whereas the *one* which is the principle of number does add a further being that belongs to the genus of quantity.

**Reply to objection 2:** Nothing prevents what is divided in one way from being undivided in

another way; for instance, that which is divided in number is undivided in species. And so it is possible for something to be one in one way and many in another way.

Still, if something is undivided absolutely speaking—either (a) because it is undivided with respect to what pertains to its essence, even though it is divided with respect to things that lie outside its essence, as, e.g., that which is one in subject and many with respect to accidents, or (b) because it is undivided in actuality and divided in potentiality, as, e.g., that which is one as a whole and many with respect to its parts—then an entity of this sort will be one absolutely speaking and many in a certain respect.

If, by contrast, something is undivided in a certain respect and divided absolutely speaking—because, say, it is divided with respect to essence and undivided in concept or with respect to some principle or cause—then it will be many absolutely speaking and one in a certain respect. This is the case, for instance, with things that are many in number and one in species or one with respect to some principle.

Now *being* is divided by *one* and *many* in such a way that it is, as it were, one absolutely speaking and many in a certain respect, since a multitude would not itself be contained under *being* unless it were contained in some way under *one*. For in the last chapter of *De Divinis Nominibus*, Dionysius says, “There is no multitude that does not participate in *one*. For things that are many in their parts are one as a whole; and things that are many in their accidents are one in subject; and things that are many in number are one in species; and things that are many in species, are one in genus; and things that are many in their emanations are one in their principle.”

**Reply to objection 3:** The reason that it is not trivial for a being to be called one is that *one* adds something conceptually to *being*.

## Article 2

### Are *one* and *many* opposed to each other?

It seems that *one* and *many* are not opposed to each other:

**Objection 1:** No opposite is predicated of its opposite. But every multitude is in some sense one, as is clear from what has been said (a. 1). Therefore, *one* is not opposed to *multitude*.

**Objection 2:** No opposite is constituted out of its opposite. But a multitude is constituted out of ones. Therefore, *one* is not opposed to *multitude*.

**Objection 3:** A given thing has only one opposite. But *few* is opposed to *many*. Therefore, it is not the case that *one* is opposed to *many*.

**Objection 4:** If *one* were opposed to *multitude*, then it would be opposed to it as *undivided* is opposed to *divided*, and so it would be opposed to it as a privation to a disposition. But this seems absurd, since it would follow that *one* is posterior to *multitude* and defined in terms of it, even though *multitude* is defined in terms of *one*. Hence, there would be a circularity in the definitions, which is absurd. Therefore, it is not the case that *one* and *many* are opposites.

**But contrary to this:** If the definitions are opposed, then the things themselves are opposed. But the definition of *one* consists in *indivisibility*, whereas the definition of *multitude* contains *division*. Therefore, *one* and *many* are opposites.

**I respond:** *One* is opposed to *many*, but in various ways.

The *one* which is a principle of number is opposed to the *multitude* which is a number in the way that a measure is opposed to what it measures. For *one* has the nature of a first measure, and number is a multitude measured by *one*, as is clear from *Metaphysics* 10.

By contrast, the *one* which is convertible with *being* is opposed to *multitude* in the manner of a privation, in the way that *undivided* is opposed to *divided*.

**Reply to objection 1:** No privation negates *esse* completely, since, according to the Philosopher, a privation is a negation within a subject. But every privation does negate some *esse* or other. And so in the case of *being*, because of its commonality, it happens that any privation of *being* is grounded in *being*—something that does not occur with the privations of specific forms such as vision or whiteness, or other forms of this sort.

And what holds for *being* also holds for *one* and *good* insofar as they are convertible with *being*. For a privation of goodness is grounded in something that is good, and, similarly, a negation of unity is grounded in something that is one. Because of this, it happens that a multitude is in some sense one, and a thing that is evil is in some sense good, and a thing that is a non-being is in some sense a being. Still, it is not the case here that an opposite is being predicated of its opposite, since one of the two opposites is being predicated absolutely speaking and the other is being predicated in a certain respect. For example, something that is a being in a certain respect—as, e.g., a being in potentiality—is not a being absolutely speaking, i.e., a being in actuality. Again, something that is a being absolutely speaking in the genus of substance is not a being in a certain respect, i.e., something with accidental *esse*. Similarly, something that is good in a certain respect is evil absolutely speaking, or vice versa. And, likewise, something that is one absolutely speaking is many in a certain respect, and vice versa.

**Reply to objection 2:** There are two sorts of wholes. One sort of whole is homogeneous, i.e., composed of similar parts, whereas another sort of whole is heterogeneous, i.e., composed of dissimilar parts. In any homogeneous whole, the whole is constituted out of parts that have the same form as the whole. For instance, every part of a quantity of water is itself water; and the composition of a continuous thing out of its parts is also like this. On the other hand, in any heterogeneous whole, each part lacks the form of the whole. For instance, no part of a house is itself a house, and no part of a man is itself a man.

A multitude is a whole of the latter sort. Given that its parts do not have the form of the multitude, a multitude is composed of unities, as a house is composed of non-houses. However, the unities do not constitute the multitude in virtue of having the characteristic *undividedness* by which they are opposed to multitude. Rather, the unities constitute the multitude in virtue of having the nature of *being*—just as the parts of a house constitute the house in virtue of being certain corporeal beings, not in virtue of the fact that they are not themselves houses.

**Reply to objection 3:** *Many* is taken in two ways: (a) in one way, absolutely, and this is the sense in which it is opposed to *one*; (b) in a second way, insofar as it implies a certain excess, and this is the sense in which it is opposed to *few*. Thus, in the first sense, two things are many, but not in the second sense.

**Reply to objection 4:** *One* is opposed privatively to *many* insofar as part of the concept *many* is that the many things are divided. Hence, the division has to be prior to the unity—not absolutely speaking, but rather according to the nature of our apprehension. For we apprehend simple things through composite things. This is why we define a point as that which has no parts, or as the beginning of a line.

But *multitude*, even in concept, is consequent to *one*, since we do not grasp the divided things as having the nature of a multitude unless we attribute unity to the two things that have been divided. Hence, *one* is posited in the definition of *multitude*, but *multitude* is not posited in the definition of *one*. Rather, *division* falls under our understanding by the very negation of *being*. Thus, *being* is the first thing that falls under our understanding; second is the fact that *this* being is not *that* being, and so the second thing we apprehend is *division*; the third thing is *one*; and the fourth is *many*.

### Article 3

#### Is God one?

It seems that God is not one:

**Objection 1:** 1 Corinthians 8:5 says, “For there are gods many and lords many.”

**Objection 2:** The *one* which is the principle of number cannot be predicated of God, since no quantity is predicated of God. Likewise, the *one* which is convertible with *being* cannot be predicated of God, either. For it implies a privation, and every privation is an imperfection that cannot belong to God. Therefore, we should not say that God is one.

**But contrary to this:** Deuteronomy 6:4 says, “Hear, O Israel, the Lord our God is one.”

**I respond:** There are three ways to demonstrate that God is one.

First, from *His simplicity*: That in virtue of which a singular thing is a *this-something* cannot, it is clear, be communicated in any way to many. For instance, that in virtue of which Socrates is a man can be communicated to many, but that in virtue of which he is *this* man can be communicated only to one thing. Therefore, if Socrates were a man in virtue of that by which he is *this* man, then just as there cannot be more than one Socrates, so there could not be more than one man. But this very thing is true of God, since, as was shown above (q. 3, a. 3), God Himself is His own nature. Accordingly, then, *God* is the same as *this God*. Therefore, it is impossible for there to be more than one God.

Second, from *the unlimitedness of His perfection*: It was shown above (q. 4, a. 2) that God includes within Himself the total perfection of being. Now if there were more than one God, then they would have to differ from one another. Therefore, something would belong to the one that did not belong to the other. If this something were a privation, then the first God would not be absolutely perfect, whereas if it were a perfection, then the other God would not have it. Therefore, it is impossible for there to be more than one God. Hence, compelled, as it were, by the truth itself, the ancient philosophers, when they posited an infinite principle, posited just one such principle.

Third, from *the unity of the world*: All the things that exist are ordered to one another, with some subject to others. But diverse things do not belong to the same ordering unless they are ordered by some one thing. For it is better that many things be brought into a single ordering by one thing than by many, since one thing is a cause of one thing *per se*, whereas many things are a cause of one thing only *per accidens*, viz., insofar as they are in some sense one. Therefore, since that which is first is the most perfect and a *per se* (and not *per accidens*) [principle], there must be just one first being that brings all things into a single ordering. And this is God.

**Reply to objection 1:** The gods are called many in light of the error of those who worshiped many gods, thinking the planets and other stars to be gods, or even particular parts of the world. Hence, he adds, “Yet to us there is but one God . . .”

**Reply to objection 2:** The *one* which is the principle of number is not predicated of God, but is instead predicated only of those things that have their *esse* in matter. For the *one* which is the principle of number belongs to the genus of mathematical entities, which have *esse* in matter but are abstracted from matter conceptually.

On the other hand, the *one* which is convertible with *being* is metaphysical in the sense that it does not depend on matter with respect to its *esse*.

And even though there is no privation in God, nonetheless, according to the mode of our apprehension, we have cognition of Him only by way of privation and negation. And so there is nothing to prevent certain ‘that’-clauses (*dicta*) from being predicated privatively of God, e.g., that He is incorporeal or that He is infinite. And in the same way it is said of God that He is one.

## Article 4

### Is God maximally one?

It seems that God is not maximally one:

**Objection 1:** *One* is predicated in virtue of a privation of division. But a privation does not admit of *more* and *less*. Therefore, God is not called one to a greater degree than the other things that are one.

**Objection 2:** Nothing seems to be more indivisible than that which is indivisible in both actuality and potentiality, e.g., a point, or oneness itself. But something is called one to a greater degree insofar as it is more indivisible. Therefore, God is not one to a greater degree than is oneness or a point.

**Objection 3:** That which is good through its essence is maximally good; therefore, that which is one through its essence is maximally one. But, as the Philosopher makes clear in *Metaphysics* 4, every being is one through its essence. Therefore, every being is maximally one. Therefore, God is not one to a greater degree than other beings.

**But contrary to this:** Bernard says, “Among all the things that are called one, the unity of the divine Trinity stands at the summit.”

**I respond:** Since *one* is *undivided being*, in order for something to be maximally one, it must be both maximally a being and maximally undivided. But both of these belong to God.

God is maximally a being insofar as He does not have any *esse* that is limited by some nature which receives it. Instead, He is subsistent *esse* itself, unlimited in any way.

Moreover, He is maximally undivided insofar as He is divided neither in actuality nor in potentiality according to any mode of division whatsoever. For, as was shown above (q. 3, a. 7), He is simple in every way.

Hence, it is clear that God is maximally one.

**Reply to objection 1:** Even though a privation, taken in itself, does not admit of *more* and *less*, still, to the extent that its opposite admits of *more* and *less*, the privative terms themselves are predicated to greater and lesser degrees. So, then, to the extent that something is divided (or divisible) either more or less or in no way at all, it is called less or more or maximally one.

**Reply to objection 2:** A point and the oneness which is the principle of number are not maximally beings, since they do not have *esse* except in some subject. Hence, neither of them is maximally one. For just as, because of the difference between a subject and its accident, the subject is not maximally one, so neither is the accident maximally one.

**Reply to objection 3:** Even though every being is one through its substance, still, not every substance is equal at making for unity. For the substance of some things is composed of many things, whereas the substance of other things is not.

## QUESTION 12

### How We Know God

Since in what has gone before we have investigated how it stands with God in Himself, we must now investigate how it stands with Him in our cognition, i.e., how God is known by creatures. And on this topic there are thirteen questions: (1) Can any created intellect see God's essence? (2) Does the intellect see God's essence by means of a created species? (3) Can God's essence be seen by a bodily eye? (4) Does any created intellectual substance have enough natural power to see God's essence? (5) In order to see God's essence, does a created intellect stand in need of some created light? (6) Among those who see God's essence, does one see it more perfectly than another? (7) Can any created intellect comprehend God's essence? (8) Does a created intellect that sees God's essence know all things in that essence? (9) Does a created intellect that sees God's essence know by means of likenesses the things that it knows in God's essence? (10) Does a created intellect that sees God's essence know all the things it sees in God simultaneously? (11) Can any man see God's essence in this life? (12) Can we know God through natural reason in this life? (13) In addition to the cognition of natural reason, is there in the present life any cognition of God through grace?

#### Article 1

##### Can any created intellect see God's essence?

It seems that no created intellect can see God through His essence:

**Objection 1:** In *Super Ioannem* Chrysostom, in commenting on John 1:18 ("No one has seen God at any time"), says, "Not just the prophets, but even the angels and archangels have not seen Him who is God. For how could that which has a creatable nature see that which is uncreatable?" Likewise, in *De Divinis Nominibus*, chap. 1, Dionysius, in speaking of God, says, "Of Him there is no sensation (*sensus*) or imagination (*phantasia*) or opinion (*opinio*) or definition (*ratio*) or scientific knowledge (*scientia*)."

**Objection 2:** Everything infinite is, as such, unknown. But, as was shown above (q. 7, a. 1), God is infinite. Therefore, God in Himself is unknown.

**Objection 3:** A created intellect has cognition only of things that exist; for the first thing that falls under the intellect's apprehension is *being*. However, according to Dionysius, God is not an existent thing, but instead lies beyond existent things. Therefore, He is not intelligible, but lies beyond all understanding.

**Objection 4:** A knower must have some proportion to what is known, since the thing known is the perfection of the knower (*cognitum sit perfectio cognoscentis*). But a created intellect is not proportioned to God, since they are infinitely distant from one another. Therefore, a created intellect cannot see God's essence.

**But contrary to this:** 1 John 3:2 says, "We shall see Him as He is."

**I respond:** Each thing is knowable to the extent that it has actuality, and so God, who is pure actuality without any admixture of potentiality, is in Himself maximally knowable (*maxime cognoscibilis*). But what is maximally knowable in its own right may not be knowable to some intellect because its intelligibility is too great for that intellect—just as the sun, which is maximally visible, cannot be seen by a bat because its light is too great. Taking note of this fact, some have claimed that no created intellect can see God's essence.

However, it is wrong to say this. For man's ultimate beatitude consists in his highest operation, which is an operation of the intellect, and so if a created intellect can never see God's essence, then either it will never attain beatitude or else its beatitude will lie in something other than God—which is

contrary to the Faith. For the ultimate perfection of a rational creature lies in God, since He is the rational creature's principle of being, and each thing is perfect to the extent that it attains to its own principle.

The claim in question is likewise opposed to reason. For man has a natural desire to know the cause when he perceives an effect; and it is from this desire that wonder originates in men. Therefore, if the rational creature's intellect were unable to attain to the first cause of things, this natural desire would remain unfulfilled.

Hence, one should simply grant that the blessed in heaven see God's essence.

**Reply to objection 1:** Both of these passages are talking about a vision that involves comprehension. Thus, just before the quoted words Dionysius says, "He is incomprehensible to everyone in His totality, and of Him there is no sensation, etc." And Chrysostom, a little after the cited passage, adds, "Here he is speaking of the absolutely certain vision of the Father—as great a contemplation and comprehension as the Father has of the Son."

**Reply to objection 2:** What is unknown in itself is the infinity had by matter that has not been perfected by form; for every type of cognition is through form. By contrast, the infinity had by a form that is not limited by matter is in itself maximally known. But as is clear from what was said above (q. 7., a. 1), it is in the second way, and not the first, that God is infinite.

**Reply to objection 3:** God is said not to be an existent thing, not because He does not in any way exist, but rather because He is above every existing thing insofar as He is His own *esse*. Hence, from this it does not follow that He cannot be known in any way; all that follows is that He exceeds every cognition, i.e., that He is not comprehended.

**Reply to objection 4:** There are two senses of 'proportion':

The first sense is the fixed relation of one quantity to another, and in this sense *double*, *triple*, and *equal* are species of proportion.

In the second sense, any relation of one thing to another is called a proportion. And in this sense a creature can be proportioned to God insofar as it is related to Him as an effect to a cause, or as potentiality to actuality. And this is the sense in which a created intellect can be proportioned to knowing God.

## Article 2

### Does a created intellect see God's essence by means of some likeness?

It seems that a created intellect sees God's essence by means of some likeness:

**Objection 1:** 1 John 3:2 says: "We know that when He shall appear we shall be like Him, and we shall see Him as He is."

**Objection 2:** In *De Trinitate* 9 Augustine says, "When we know God, some likeness of God comes to exist in us."

**Objection 3:** An act of intellectual understanding is the intelligible thing in act (*intellectus in actu est intelligibile in actu*), just as an act of a sensory power is the sensible thing in act. But this is so only insofar as the sensory power is informed by a likeness of the thing that is sensed, and only insofar as the intellect is informed by a likeness of the thing that is understood. Therefore, if God is seen by an act of a created intellect, then He must be seen by means of some likeness.

**But contrary to this:** In *De Trinitate* 15 Augustine says, "When the Apostle says, 'We see now through a mirror and dimly' (1 Corinthians 13:12), by the terms 'mirror' and 'dimly' he can be taken to

be referring to any likenesses that are accommodated to understanding God.” However, seeing God through His essence is not a dim or mirror-like vision, but is instead contrasted with such a vision. Therefore, it is not the case that the divine essence is seen by means of likenesses.

**I respond:** Two things are required for an act of seeing (*ad visionem*), whether it be a sensory act of seeing or an intellectual act of seeing, viz., (a) the visual power and (b) the union of the thing seen with the visual power. For there is no act of seeing unless the thing that is seen exists in some way in the one who is seeing.

In the case of corporeal things, it is clear that the thing seen cannot exist *through its essence* in the one who is seeing, but rather can exist in him only *by means of a likeness*. For example, what exists in the eye is not the very substance of a stone, but rather a likeness of the stone by means of which the act of seeing comes to be. However, if one and the same thing were both the principle of the visual power and also the thing that is seen, then the one who sees would have to have from that thing both the visual power and the form by means of which he sees.

Now it is clear that God is the author of the intellectual power and is also able to be seen by the intellect.

Since a creature’s *intellective power* is not itself God’s essence, it follows that it is some sort of participated likeness of Him who is the first intellect. This is why a creature’s intellectual power is said to be a certain intelligible light—derived, as it were, from the first source of light—regardless of whether this is taken to mean its natural power or some added perfection of grace or glory. Therefore, in order to see God, what is required on the part of the seeing power is some likeness of God by means of which the intellect is capable of seeing God.

However, on the part of the *thing seen*, which must in some way be united to the one who sees, God’s essence cannot be seen by means of any created likeness.

For, first of all, as Dionysius says in *De Divinis Nominibus*, chap. 1, higher things can in no way be cognized by means of likenesses of things of a lower order; for instance, the essence of an incorporeal thing can in no way be known by means of the species of a body. Therefore, *a fortiori*, God’s essence cannot be seen by means of any created species.

Second, as was shown above (q. 3, a. 4), God’s essence is His *esse* itself—something that cannot be true of any created form. Therefore, it is impossible for any created form to be the representing likeness (*similitudo repraesentans*) for one who is seeing God’s essence.

Third, the divine essence is uncircumscribed and eminently contains within itself whatever can be signified or understood by a created intellect. And this can in no way be represented by means of any created species. For every created form is determinate with respect to some nature (*secundum aliquam rationem*), whether *wisdom* or *power* or *esse* itself or something of this sort.

Hence, to claim that God is seen through a likeness is to claim that the divine essence is not seen—which is erroneous.

Therefore, one should say that in order to see God’s essence what is required on the part of the visual power is a certain likeness, viz., *the light of glory*, which empowers the intellect to see God. This is spoken of in Psalm 35:10: “In Your light we shall see light.” However, God’s essence cannot be seen by means of any created likeness that represents God’s essence as it is in itself.

**Reply to objection 1:** This passage is talking about a likeness that exists by participation in the light of glory.

**Reply to objection 2:** Augustine is here talking about the cognition of God that is had in this life.

**Reply to objection 3:** The divine essence is *esse* itself. Hence, just as other intelligible forms that are not their own *esse* are united to the intellect with some *esse* by means of which they inform the intellect itself and make it to be in act, so the divine essence is united to the created intellect as something actually understood and through its very self makes the intellect to be in act.

### Article 3

#### Can God's essence be seen by a bodily eye?

It seems that God's essence can be seen by a bodily eye:

**Objection 1:** Job 19:26 says: "In my flesh I shall see God . . ." And Job 42:5 says: "With the hearing of the ear, I have heard You, but now my eye sees You."

**Objection 2:** In the last book of *De Civitate Dei*, chap. 29, Augustine says, "And so their eyes (*read*: the eyes of those who are glorified) will have a remarkable power of sight—not that they will see more sharply than certain serpents or eagles are reputed to see (for however great the sharpness of vision these creatures are blessed with, they can see nothing other than corporeal things), but rather that they will see even incorporeal things." But anyone who can see incorporeal things can be elevated to see God. Therefore, the glorified eye can see God.

**Objection 3:** God can be seen by a man in an imaginative vision; for Isaiah 6:1 says: "I saw the Lord sitting upon a throne . . ." But an imaginative vision has its origins in the senses; for, as *De Anima* 3, chap. 3, says: "The imagination is a movement brought to actuality by the senses." Therefore, God can be seen by a sentient act of vision.

**But contrary to this:** In *De Videndo Deum ad Paulinam* Augustine says: "No one, either in this life or in the life of the angels, has ever seen God as He is in the manner in which visible things are discerned by bodily vision."

**I respond:** It is impossible for God to be seen with the sense of sight or with any other sense or power that belongs to the sentient part [of the soul]. For, as will be explained below (a. 4), every power of this sort is the act of a bodily organ. But an act is proportioned to that of which it is the act. Hence, no power of the sort in question can extend itself beyond corporeal things. But, as was shown above (q. 3, a. 1), God is incorporeal. Therefore, He can be seen neither by the senses nor by the imagination, but only by the intellect.

**Reply to objection 1:** When it is said, "In my flesh I shall see God, my savior," this does not mean that God will be seen with an eye of flesh. Instead, it means that someone who exists in the flesh after the resurrection will see God. Similarly, when it is said, "Now my eye sees You," this refers to the eye of the mind—just as the Apostle says at Ephesians 1:17-18: "May He give to you the spirit of wisdom . . . in the knowledge of Him, the eyes of your heart enlightened . . ."

**Reply to objection 2:** In this passage Augustine is speaking in an exploratory and conditional manner. This is clear from the fact that he prefaces the passage with these words: "They [*read*: glorified eyes] will have a far different power, if that incorporeal nature will be seen through them." But shortly afterwards he explains the matter as follows: "It is entirely believable that we will then see the mundane bodies of the new heaven and the new earth in such a way as to see God with utter clarity as present everywhere and governing all those corporeal things—not in the way that the invisible things of God are now seen by understanding the things that have been made, but rather in the way that we now look upon the men with whom we live as they live and exercise the functions of life. We do not *believe* that they are alive; rather, we *see* that they are."

From this it is clear that what he means is that glorified eyes will see God in the way that our eyes now see that someone is alive. But a corporeal eye sees life not as visible *per se*, but rather as sensible *per accidens*. That is, life is not cognized by the senses, but is instead immediately cognized by some other cognitive power in conjunction with the senses.

Now the fact that God's presence will be immediately known by the intellect when corporeal things

are seen depends on two things, viz., the perspicacity of the intellect and the reflection of the divine brightness in the renewed corporeal things.

**Reply to objection 3:** God's essence is not seen in an imaginative vision. Rather, a form that represents God in some manner of likeness is effected in the imagination—just as in the divine Scriptures divine things are described metaphorically through sensible things.

#### Article 4

##### Can a created intellect see God's essence by its own natural powers?

It seems that a created intellect can see God's essence by its own natural powers:

**Objection 1:** In *De Divinis Nominibus*, chap. 4, Dionysius says that an angel is a pure and absolutely clear mirror-image (*speculum purum, clarissimum*) that “receives, if one may say so, the full beauty of God.” But a thing is seen when its mirror-image is seen. Therefore, since an angel understands himself by his own natural powers, it seems that he also understands God's essence by his own natural powers.

**Objection 2:** What is maximally visible is less visible to us because of a deficiency in either our bodily vision or our intellectual vision. But an angel's intellect does not suffer from any deficiency. Therefore, since God, taken in Himself, is maximally intelligible, it seems that He is maximally intelligible to an angel. Therefore, if an angel is able by his own natural powers to understand other intelligible things, then *a fortiori* he is able to understand God.

**Objection 3:** The corporeal senses cannot be elevated so as to understand an incorporeal substance, since such a substance lies beyond their nature. Therefore, if seeing God through His essence lies beyond the nature of every created intellect, then it seems that no created intellect can reach the act of seeing God's essence—which, as was made clear above (a. 1), is erroneous. Therefore, it seems that seeing God's essence is natural to a created intellect.

**But contrary to this:** Romans 6:23 says: “The grace of God is eternal life.” But eternal life consists in seeing God's essence, according to John 17:3 (“This is eternal life: that they may know You, the only true God”). Therefore, seeing God's essence belongs to a created intellect by grace and not by nature.

**I respond:** It is impossible for any created intellect to see God's essence by its own natural powers. For cognition occurs insofar as what is known exists in the knower. But what is known exists in the knower according to the mode of the knower. Hence, every knower's cognition accords with the mode of its own nature. Therefore, if the thing known is such that its mode of being exceeds the mode of a given knower's nature, then the cognition of that thing must lie beyond the nature of that knower.

Now there are several modes of being found among things (*est multiplex modus essendi rerum*). There are some things whose nature has *esse* only in *this* individual matter. All corporeal things are of this sort. Again, there are some things whose natures subsist *per se* and not in any matter, even though they are not their own *esse*, but are instead things that have *esse*. The incorporeal substances we call angels are of this sort. On the other hand, there is the mode of being peculiar to God alone, insofar as He is His own subsistent *esse*.

Thus, it is connatural for us to know those things that have *esse* only in individual matter. For our soul, through which we have cognition, is the form of a certain matter and has two cognitive powers. One of them is the act of a corporeal organ, and it is connatural to this power to have cognition of things insofar as they exist in individual matter. Thus, the senses have cognition only of singular things. The

second of the soul's cognitive powers is the intellect, which is not the act of any corporeal organ. Hence, through the intellect it is connatural for us to have cognition of natures that have *esse* only in individual matter, yet to have cognition of them not insofar as they exist in individual matter, but rather insofar as they are abstracted from it by the intellect's consideration. Hence, by means of the intellect we are able to know things of this sort in a universal way (*in universali*)—something that lies beyond the faculty of sense.

On the other hand, it is connatural to an angel's intellect to know natures that do not exist in matter—something that lies beyond the natural power of the intellect had by the human soul in this life, during which the soul is united to the body.

It follows, then, that to know subsistent *esse* itself is connatural only to the divine intellect, and that this lies beyond the natural power of every created intellect. For no creature is its own *esse*; instead, every creature has participated *esse*. Therefore, no created intellect can see God through His essence except insofar as God, through His grace, conjoins Himself to the created intellect as something that can be understood by it (*se intellectui creato coniungit ut intelligibile ab ipso*).

**Reply to objection 1:** The mode of knowing God that is connatural to an angel is to know Him through the likeness of Him that shines forth in the angel himself. But, as was shown above (a. 2), to know God by means of a created likeness is not to know God's essence. Hence, it does not follow that an angel can know God's essence through his natural powers.

**Reply to objection 2:** An angel's intellect has no deficiency, as long as 'deficiency' is taken *privatively*, i.e., as implying that the angel lacks something that he ought to have. On the other hand, if 'deficiency' is taken *negatively*, then every creature is deficient in comparison to God, since no creature has the excellence which is found in God.

**Reply to objection 3:** Since the sense of sight is completely material, it cannot in any way be elevated [so as to understand] anything immaterial. But because the intellect—whether ours or an angel's—is by its nature elevated beyond matter in a certain way, it is capable of being further elevated beyond its nature to something higher through grace.

An indication of this is that the sense of sight cannot in any way know in abstraction that which it knows in the concrete, since it cannot perceive a nature in any way other than as *this* nature. Our intellect, by contrast, can consider in abstraction what it knows in the concrete. For even though it knows things that have forms in matter, it nonetheless resolves the composite thing into the two of them, and it considers the form itself *per se*. Similarly, even though it is connatural to an angelic intellect to know concrete *esse* in some nature, an angel can nonetheless through his intellect isolate the *esse* itself (*potest ipsum esse discernere*), because he knows that he himself is one thing and his own *esse* is something else.

And so since a created intellect can by its nature apprehend a concrete form and concrete *esse* in abstraction through some type of resolution, it can be elevated by grace to know a separated subsistent substance and a separated subsistent *esse*.

## Article 5

### Does a created intellect need some created light in order to see God's essence?

It seems that a created intellect does not need any created light in order to see God's essence:

**Objection 1:** In the case of sensible things, what is luminous in itself does not need any other light in order to be seen; therefore, neither is there such a need in the case of intelligible things. But God is the intelligible source of light. Therefore, He is not seen by means of any created light.

**Objection 2:** When God is seen through a medium, He is not seen through His essence. But when He is seen by means of a created light, He is seen through a medium. Therefore, He is not seen through His essence.

**Objection 3:** If a thing is created, then nothing prevents that thing from being natural to some creature. Therefore, if God's essence is seen by means of a created light, that light will be able to be natural to some creature. And so the creature in question will not need any further light in order to see God—which is impossible. Therefore, it is not necessary that every creature should need some additional light in order to see God's essence.

**But contrary to this:** Psalm 35:10 says: “In Your light we shall see light.”

**I respond:** When anything is elevated to a condition that exceeds its own nature, it has to be disposed by some disposition that lies beyond its nature. For instance, if air is to receive the form of fire, it must be disposed to that form by some disposition.

Now when a created intellect sees God through His essence, God's very essence is the intelligible form of the intellect. Hence, it is necessary for some supernatural disposition to be added to the intellect in order for it to be elevated to such great sublimity. Therefore, since, as has been shown (a. 4), a created intellect's natural power is not sufficient for seeing God's essence, a power of intellective understanding has to be added to it by God's grace. This addition of intellective power is what we call the illumination of the intellect, just as the intelligible thing itself is called light or a source of light. This illumination is the light of which Apocalypse 21:23 says, “The glory of God will illuminate it [*read*: the society of the blessed who see God].” And by this light the blessed are made godlike, i.e., similar to God—this according to 1 John 3:2: “When He shall appear we shall be like to Him, and we shall see Him as He is.”

**Reply to objection 1:** A created light is necessary for seeing God's essence, but not because God's essence, which is intelligible in itself, becomes intelligible by this light. Rather, the created light is necessary in order for the intellect to become capable of understanding God's essence—in the way that a habit makes a power better able to operate, or again, in the way that corporeal light is necessary for exterior vision insofar as it makes the medium actually transparent, so that it can be moved by color.

**Reply to objection 2:** This light is required for seeing God's essence, not as a likeness in which God is seen, but rather as a certain perfection of the intellect that empowers the intellect to see God. And so one can say that the light is not a medium *in which* God is seen, but rather a medium *subject to which* He is seen. And this sort of medium does not destroy the immediacy of the vision of God.

**Reply to objection 3:** A disposition to the form of fire can be natural only to something that has the form of fire. Hence, the light of glory could not be natural to a creature unless it were a creature with a divine nature—which is impossible. For, as was just claimed, by this light the rational creature becomes godlike.

## Article 6

### Among those who see God's essence, does one see it more perfectly than another?

It seems that it is not the case that, among those who see God's essence, one sees it more perfectly than another:

**Objection 1:** 1 John 3:2 says: “We shall see Him as He is.” But He is just one way. Therefore, He will be seen in one way by everyone. Therefore, He will not be seen more and less perfectly.

**Objection 2:** In *83 Quaestiones* Augustine says that a single entity cannot be understood more by one person than by another. But everyone who sees God through His essence understands the essence of God; for, as was established above (a. 3), God is seen by the intellect and not by the senses. Therefore, it

is not the case that among those who see God's essence, one sees more clearly than another.

**Objection 3:** The fact that one thing is seen more perfectly than another can be traced back to one of two things: either (a) to the visible object or (b) to the seer's visual power.

On the part of the object, this happens because the object is received more perfectly in the one who sees; that is, it happens because of a more perfect likeness. But this does not apply in the present case, since it is not by means of a likeness, but through His essence, that God is present to the intellect of one who sees His essence.

It must be the case, then, that if one person sees Him more perfectly than another does, this is because of a difference in intellective power. And so it follows that the someone whose intellective power is naturally more imposing will see Him more clearly. But this is wrong, since men have been promised equality with the angels in beatitude.

**But contrary to this:** According to John 17:3 ("This is eternal life . . ."), eternal life consists in seeing God. Therefore, if everyone sees God's essence equally, then in eternal life everyone will be equal. But the Apostle says just the opposite of this in 1 Corinthians 15:41: "Star differs from star in glory."

**I respond:** Among those who see God through His essence, one will see Him more perfectly than another. To be sure, this will not be because there is a more perfect likeness of God in the one than in the other, since, as has been shown (a. 2), this vision will not occur by means of any likeness. Rather, it will be because the intellect of the one has a greater power or capacity to see God than the intellect of the other does.

Now the capacity to see God belongs to a created intellect not by its nature, but rather through the light of glory, which, as is clear from what was said above (a. 5), gives the intellect a certain godlikeness. Hence, an intellect that has a greater share in the light of glory will see God more perfectly. But the one who will have a greater share in the light of glory is the one who has greater charity. For where there is greater charity, there is greater desire, and it is the desire that in some sense makes the one who desires disposed and prepared to receive that which is desired. Hence, it is the one who has greater charity who will see God more perfectly and be more beatified.

**Reply to objection 1:** When it is said that we shall see Him as He is, the particle 'as' determines the mode of the act of seeing on the part of the thing that is seen, so that the sense of the phrase is this: "We shall see Him to be such as He is." For we will see His very *esse*, which is His essence.

However, 'as' does not determine the mode of the act of seeing on the part of the one who is seeing, as if this were the sense of the phrase: "The mode of seeing will be as perfect as God's mode of being is."

**Reply to objection 2:** The answer to this objection is clear from what has just been said. For when it is claimed that a single entity cannot be more understood by one person than by another, this is true if it is referring to the mode of the *thing that is understood*. For if anyone understands a thing to be otherwise than it is, he does not truly understand it. However, the claim is not true if it is referring to the mode of the *act of understanding*. For one person's act of intellective understanding is more perfect than another's act of intellective understanding.

**Reply to objection 3:** The differences in seeing will not stem from the object, since the same object, viz., God's essence, will be presented to everyone. Nor will the differences stem from diverse likenesses leading to different degrees of participation in the object. Rather, they will stem from diverse capacities on the part of the intellects—not diverse natural capacities, but diverse glorified capacities, as has been explained.

## Article 7

### Do those who see God through His essence comprehend Him?

It seems that those who see God through His essence comprehend Him:

**Objection 1:** In Philippians 3:12 the Apostle says: “I follow after, if I may in any way comprehend.” But he did not follow in vain; for as he himself says in 1 Corinthians 9:26, “I therefore so run, not as at an uncertainty.” Therefore, he comprehended, and so, too, the others whom he invites to do the same, saying: “So run that you may comprehend.”

**Objection 2:** As Augustine says in *De Videndo Deum ad Paulinam*, “Something is comprehended when it is seen as a whole in such a way that nothing of it lies hidden from the seer.” But if God is seen through His essence, then He is seen as a whole and nothing of Him lies hidden from the seer; for God is simple. Therefore, He is comprehended by anyone who sees Him through His essence.

**Objection 3:** Someone might reply that He is seen as a whole, but not totally.

Against this: ‘Totally’ expresses either a mode of the seer or a mode of the thing seen. But one who sees God through His essence sees him totally, if ‘totally’ signifies a mode of the thing seen. For, as was noted above (a. 6), he sees Him as He is. Similarly, he sees Him totally, if ‘totally’ signifies a mode of the seer. For the intellect will see God’s essence with all its might. Therefore, anyone who sees God through His essence will see Him totally. Therefore, he will comprehend Him.

**But contrary to this:** Jeremiah 32:18-19 says: “O most mighty, great, and powerful, the Lord of hosts is Your name. Great in counsel, and incomprehensible in thought.” Therefore, He cannot be comprehended.

**I respond:** Comprehending God is impossible for any created intellect, “but to attain to God with the mind in any way is great beatitude,” as Augustine says.

To see this clearly, note that something is comprehended when it is known perfectly, and something is known perfectly when it is known to the full extent that it is knowable. Hence, if something that is knowable through demonstrative scientific knowledge (*cognoscibile per scientiam demonstrativam*) is held by mere opinion (*opinio*) stemming from a probable argument, then it is not comprehended. For instance, if someone knows through a demonstration that a triangle has three angles equal to two right angles, then he comprehends this. By contrast, if someone accepts this proposition as a probable opinion because it is asserted by many people or by the wise, then he does not comprehend it, since he has not reached that perfect mode of cognition by which the proposition is knowable.

Now no created intellect can reach the perfect mode of cognition by which God’s essence is knowable. This is clear as follows: Each thing is knowable to the extent that it is a being in actuality. Therefore, God, whose *esse*, as was shown above (q. 7, a. 1), is infinite, is infinitely knowable. But no created intellect can know God in an infinite way. For a created intellect knows the divine essence more or less perfectly to the extent that it is imbued with a greater or lesser light of glory. Therefore, since the created light of glory received in a created intellect cannot be infinite, it is impossible for any created intellect to know God in an infinite way. Hence, it is impossible for it to comprehend God.

**Reply to objection 1:** ‘Comprehension’ has two senses.

In the first sense, the strict and proper one, something is enclosed within the comprehending thing. Given this sense, there is no way in which God is comprehended, whether by an intellect or anything else. For since He is infinite, He cannot be enclosed in anything finite in the sense that something finite should grasp Him in an infinite way that corresponds to the infinite way in which He exists. And this is the sense of ‘comprehension’ that we are asking about here.

In a second sense, ‘comprehension’ is taken more broadly in such a way that comprehending is opposed to simply pursuing. For whoever catches up with someone is said to comprehend him when

once he grabs hold of him. In this sense God is comprehended by the blessed in heaven, according to Canticles 3:4 (“I held him, and I will not let him go.”). And this is how to interpret the passages from the Apostle that have to do with comprehension.

In this sense, comprehension is one of the three ‘gifts of the soul’, and it corresponds to hope, just as the act of seeing corresponds to faith and act of enjoying corresponds to charity. For us it is not the case that everything that is seen is already had or possessed, since we sometimes see things that are distant or things that are not within our power. Again, we do not enjoy all the things that we have, either because we do not delight in them or because they are not the ultimate end of our desire in the sense of fulfilling and quieting our desire. But the blessed in heaven have these three gifts in God. For they see Him; and seeing Him, they hold Him present, having it within their power to see Him always; and holding on to Him, they enjoy Him as the ultimate end that fulfills their desire.

**Reply to objection 2:** God is said to be incomprehensible not because there is something of Him that is not seen, but because He is not seen in as perfect a way as He is visible. Similarly, when a demonstrable proposition is known [only] through some probable argument, it is not the case that there is something of it—say, a subject or predicate or the composition of the two—that is not known. Rather, the whole is not known in as perfect a way as it is knowable. Hence, Augustine, in defining comprehension, says, “A whole is comprehended by sight when it is seen in such a way that nothing of it lies hidden from the seer or in such a way that its limits can be surveyed.” For the limits of a thing are surveyed when one reaches the limit in the way that thing is known.

**Reply to objection 3:** ‘Totally’ expresses a mode of the object—not, to be sure, in the sense that the whole mode of the object does not fall under our cognition, but rather in the sense that the mode of the object is not the mode of the knower. Therefore, one who sees God through His essence sees in Him that He exists in an infinite way and is knowable in an infinite way, but he also sees that this infinite way does not belong to him in the sense that he himself knows God in an infinite way. Similarly, someone can have probable knowledge that a given proposition is demonstrable, even if he himself does not know it demonstratively.

## Article 8

### Do those who see God through His essence see all things in God?

It seems that those who see God through His essence see all things in God:

**Objection 1:** In *Dialogorum Libri 4* Gregory asks, “What is there they do not see who see the one who sees all things?” But God is the one who sees all things. Therefore, those who see God see all things.

**Objection 2:** Anyone who sees a mirror sees the things that are reflected in the mirror. But everything that has been made or can be made is reflected in God as in a mirror; for He knows all things in Himself. Therefore, whoever sees God sees all the things that exist and all the things that can be made.

**Objection 3:** As *De Anima 3* says, someone who understands that which is greater can understand the things that are least. But all the things that God effects or can effect are less than His essence. Therefore, whoever understands God is able to understand all the things that God effects or can effect.

**Objection 4:** A rational creature desires by nature to know all things. Therefore, if he does not know all things in seeing God, his natural desire will not be quieted, and in seeing God he will not be beatified—which is absurd. Therefore, in seeing God he knows all things.

**But contrary to this:** The angels see God through His essence and yet do not know all things. For

as Dionysius says in *De Caelesti Hierarchia*, chap. 7, the lower angels are cleansed of their ignorance by the higher angels. Moreover, even the higher angels themselves do not know future contingents or the inmost thoughts of hearts, since this belongs to God alone. Therefore, it is not the case that whoever sees God's essence sees all things.

**I respond:** A created intellect, in seeing God's essence, does not see in it all the things that God effects or can effect. For it is clear that some things are seen in God insofar as they exist in Him. But all the other things exist in Him in the way that effects exist virtually in their cause. Therefore, these other things are seen in God in the way that effects are seen in their cause.

But it is clear that the more perfectly a cause is seen, the more of its effects can be seen in it. For instance, someone with high intelligence is such that, once a demonstrative principle has been proposed, he immediately recognizes many of the conclusions that follow from it. This does not happen with someone of lesser intelligence; instead, the conclusions have to be explained to him one by one. Therefore, it is the intellect that totally comprehends a cause that is able to know in the cause all of its effects and all the aspects of its effects.

However, as has been shown (a. 7), no created intellect can totally comprehend God. Therefore, no created intellect, in seeing God, can know all the things that God effects or can effect—for this would be to comprehend His power. Rather, an intellect knows more of the things that God effects or can effect to the extent that it sees God more perfectly.

**Reply to objection 1:** Gregory is speaking about the sufficiency of the object, viz., God, and claiming that, taken in Himself, He sufficiently contains and manifests all things. However, it does not follow that one who sees God knows all things; for he does not perfectly comprehend Him.

**Reply to objection 2:** One who looks in a mirror does not necessarily see all the things in the mirror unless he comprehends the mirror by his vision.

**Reply to objection 3:** Even though it is greater to see God than to see all other things, nonetheless, it is greater to see God in such a way that all things are known in Him than to see Him in such a way that not all things, but just more or fewer things, are known in Him. For it has already been shown that the number of things known in God depends on whether one's mode of seeing Him is more perfect or less perfect.

**Reply to objection 4:** A rational creature has a natural desire to know all those things that pertain to the perfection of the intellect. These include the species and genera of things and their natures. Everyone who sees the divine essence will see all these things in God.

However, it is not part of a created intellect's perfection to know other singular things and their thoughts and deeds. The intellect's natural desire does not tend toward this; nor, again, does it tend toward knowing things that do not yet exist but can be effected by God.

Still, if a created intellect were to see just God, who is the font and principle of all being and truth, He would satisfy its natural desire for knowing in such a way that nothing else would be sought, and the intellect would be beatified. This is why Augustine says in *Confessiones* 5, "A man is unhappy if he knows all those things [*read*: creatures] but does not know You, whereas he is happy if he knows You, even if he does not know those things. And even if he knows You and those things, he is not happier because of them, but is happy solely because of You."

## Article 9

### Do those who see God's essence see the things they see in God by means of likenesses?

It seems that those who see God's essence see the things they see in God by means of likenesses:

**Objection 1:** Every cognition takes place through the assimilation of the knower to what is known. For in this way the act of the intellect becomes the actuality of what is understood. And the act of the senses becomes the actuality of what is sensed insofar as the senses are informed by a likeness of that thing, in the way that the pupil is informed by a likeness of color. Therefore, if the intellect of one who sees God through His essence is to understand creatures in God, it has to be informed by likenesses of those creatures.

**Objection 2:** We hold in memory things that we have previously seen. But as Augustine points out in *Super Genesim ad Litteram* 12, Paul, who saw God's essence in a rapture, remembered, after he ceased to see God's essence, many of the things he had seen in that rapture. Thus, in 2 Corinthians 12:4 he says that he "heard secret words which it is not granted to man to utter." Therefore, one has to concede that certain likenesses of the things he remembered had remained in his intellect. And, for the same reason, while he was actually seeing God's essence, he had likenesses or species of the things that he saw in that essence.

**But contrary to this:** A mirror and the things that appear in the mirror are seen by means of a single species. But all things are seen in God as in a kind of intelligible mirror. Therefore, if God Himself is seen through His essence and not by means of a likeness, then the things that are seen in Him are likewise not seen by means of any likenesses or species.

**I respond:** Those who see God through His essence do not see the things they see in God's essence by means of any species. Rather, they see those things through the divine essence itself united to their intellect.

Each thing is known insofar as its likeness exists in the knower. But this can happen in one of two ways; for since things that are similar to one and the same thing are similar to each other, there are two ways in which a cognitive power can be assimilated to a given knowable thing. In the first way, it is assimilated to the knowable thing in its own right when it is directly informed by a likeness of that thing, and in such a case the thing is known in itself. In the second way, it is assimilated to the knowable thing insofar as it is informed by a species of something that is similar to that thing, and in such a case the thing is not said to be known in its very self, but is instead said to be known in what is similar to it. For instance, a cognition by which some man is known in himself is different from a cognition by which he is known in a picture of him.

So, then, to know things through likenesses of them that exist in the knower is to know them in themselves, i.e., in their proper natures. But to know them insofar as their likenesses preexist in God is to see them in God. And these two cognitions differ from one another.

Hence, in the sort of cognition by which things are known in God Himself by those who see God through His essence, those things are not seen by means of any other likenesses. Rather, they are seen through the divine essence itself insofar as it is present to the intellect, and it is through this essence that God is likewise seen.

**Reply to objection 1:** The intellect of one who sees God is assimilated to the things that are seen in God insofar as it is united to God's essence, in which likenesses of all things preexist.

**Reply to objection 2:** There are some cognitive powers that can form new species from species that have already been first conceived. For example, from the previously conceived species of a mountain and of gold, the imagination can form the species of a golden mountain; and from the previously conceived species of a genus and a difference, the intellect can form the definition of a species. Similarly, from the likeness of a picture we are able to form within us a likeness of the thing whose picture it is.

Thus, Paul (or anyone else who sees God) can, on the basis of the very vision of God's essence, form within himself likenesses of the things that are seen in the divine essence. And these likenesses remained in Paul even after he had ceased to see God's essence. Still, the vision by which things are

seen by means of species conceived in this way is different from the vision by which things are seen in God.

### Article 10

#### Do those who see God through His essence see all the things they see in Him simultaneously?

It seems that those who see God through His essence do not see all the things they see in Him simultaneously:

**Objection 1:** According to the Philosopher, it is possible to know (*scire*) many things, but to have an occurrent act of intellective understanding (*intelligere*) with respect to just one thing [at a time]. But the things which are seen in God are understood, since it is by intellective understanding (*intellectus*) that God is seen. Therefore, it is not possible for those who see God to see many things in God all at once.

**Objection 2:** In *Super Genesim ad Litteram* 8 Augustine says, “God moves the spiritual creature through time,” that is, He moves the spiritual creature through acts of intellective understanding and affection. But an angel is a spiritual creature who sees God. Therefore, those who see God have acts of understanding and affection one after another; for time implies succession.

**But contrary to this:** In the last book of *De Trinitate* Augustine says, “Our cognitions will not be changeable, going and returning from one to another. Instead, we will see all our knowledge at once in a single vision.”

**I respond:** The things that are seen in the Word will be seen all at once and not successively.

To see this clearly, note that the reason why we cannot understand many things all at once is that we understand the many things by means of different species. And a single intellect cannot be actually informed by many species all at once in such a way as to understand by means of them—just as a single body cannot be configured by different shapes simultaneously.

Hence, it happens that when some multitude of things can be understood by means of a single species, they are understood all at once. Take, for example, the different parts of a given whole. If each part is understood by means of its own proper species, then the parts are understood successively and not simultaneously, whereas if they are all understood by means of the single species of the whole, then they are understood simultaneously.

Now it has been shown (a. 9) that the things which are seen in God are not seen one by one by means of their own likenesses. Rather, they are seen through the single essence of God. Therefore, they are seen all at once and not successively.

**Reply to objection 1:** We understand just one thing in the sense that we understand it by means of a single species. But when many things are understood by means of a single species, they are understood simultaneously. For instance, in the species *man* we understand *animal* and *rational*, and in the species *house* we understand *wall* and *roof*.

**Reply to objection 2:** As regards the natural cognition by which angels know things through the different species infused in them, they do not know them all simultaneously, and this is the sense in which they are moved through time with respect to intellective understanding. But insofar as they see things in God, they see them all at once.

## Article 11

### Is it possible for someone to see God's essence in this life?

It seems possible for someone to see God's essence in this life:

**Objection 1:** In Genesis 32:30 Jacob says, "I have seen God face to face." But to see God face to face is to see God through His essence—as is clear from 1 Corinthians 13:12 ("We see now through a glass and dimly, but then face to face"). Therefore, God can be seen through His essence in this life.

**Objection 2:** In Numbers 12:8 the Lord says of Moses: "I speak to him mouth to mouth and plainly, and not by riddles and figures does he see God." But this is to see God through His essence. Therefore, it is possible for someone in this life to see God through His essence.

**Objection 3:** That in which we know all things and that by which we judge other things is known to us in itself.

But even now we know all things in God. For in *Confessiones* 12 Augustine says, "If both of us see that what you say is true, and if both of us see that what I say is true, then where, I ask, do we see this? I do not see it in you, nor do you see it in me, but rather both of us see it in that unchangeable truth which lies beyond our minds."

Likewise, in *De Vera Religione* Augustine says that we judge all things by God's truth. And in *De Trinitate* 12 he says, "It belongs to reason to judge these corporeal things by incorporeal and eternal standards, which would not be really unchangeable if they did not lie beyond our minds."

Therefore, even in this life we see God Himself.

**Objection 4:** According to Augustine in *Super Genesim ad Litteram* 12, the things which exist in the soul through their essence are seen by an intellectual vision. But, as he says in the same place, it is through their essences, and not through likenesses, that intelligible things are seen in an intellectual vision. Therefore, since God exists through His essence in our soul, He is seen by us through His essence.

**But contrary to this:** Exodus 33:20 says, "Man shall not see me and live." A Gloss adds: "As long as one is in this mortal life, God can be seen through certain images, but He cannot be seen through the very likeness of His nature."

**I respond:** A mere man cannot see God through His essence unless he is cut off from this mortal life. The reason is that, as was explained above (a. 4), the mode of cognition is consequent upon the mode of the nature of the thing that knows. But as long as our soul is living in this life, it has *esse* in a material body, and thus it does not naturally know things unless they have a form in matter or can be known through things of this sort. But it is clear that God's essence cannot be known through the natures of material things. For it was shown above (a. 2) that a cognition of God by means of any sort of created likeness is not a vision of His essence. Hence, it is impossible for the soul of a man living in this life to see God's essence.

One indication of this is that the more our soul is abstracted from matter, the more fit it becomes for abstract intelligibles. Hence, it is in dreams and withdrawals from the bodily senses that divine revelations and precognitions of the future are perceived. Therefore, the elevation of the soul to the highest intelligible thing, viz., God's essence, cannot occur as long as the soul partakes of this mortal life.

**Reply to objection 1:** According to Dionysius in *De Caelesti Hierarchia*, chap. 4, the Scriptures say that someone has seen God in the sense that sensible or imaginary figures representing something divine are fashioned according to a certain likeness. Therefore, Jacob's statement, "I have seen God face to face," should be interpreted as referring not to God's essence itself, but to a figure in which God was represented. As will become clear below when we discuss the degrees of prophecy (*ST* 2-2, q. 174, a. 3), it is itself indicative of a certain high degree of prophecy that the personage of God should be seen

speaking, even if in an imaginary vision.

An alternative reply is that Jacob is saying this in order to signify a certain high level of intelligible contemplation, beyond the normal degree.

**Reply to objection 2:** Just as God does something miraculous supernaturally in the case of corporeal things, so too he has likewise elevated—supernaturally and beyond the common order—the minds of certain people living in the flesh (but not using their bodily senses) all the way up to the vision of His essence. This is what Augustine says in *Super Genesim ad Litteram* 12 and in *De Videndo Deum* about Moses, who was the teacher of the Jews, and about Paul, who was the teacher of the gentiles. More will be said about this when we talk about rapture (*ST* 2-2, q. 175, a. 3).

**Reply to objection 3:** We are said to see all things in God and to judge all things by Him insofar as we know and judge all things through a participation in His light, since the natural light of reason is itself a certain participation in the divine light. And this is like the way in which we are said to see and judge all sensible things in the sun, i.e., by the light of the sun. Hence, in *Soliloquia* 1 Augustine says, “Proofs in the academic disciplines cannot be seen unless they are, as it were, illuminated by a sun of their own, viz., God.” Therefore, just as it is not necessary to see the substance of the sun in order to see something sensibly, so, too, it is not necessary to see God’s essence in order to see something intelligibly.

**Reply to objection 4:** Intellectual vision is had of those things which exist in the soul through their essence in the way that intelligible things exist in the intellect. This is the way in which God exists in the soul of the blessed in heaven, but not in our soul. Rather, He exists in our soul by His presence, essence, and power (q. 8, a. 3).

## Article 12

### Can we know God in this life through natural reason?

It seems that we cannot know God in this life through natural reason:

**Objection 1:** In *De Consolatione Philosophiae* Boethius says, “Reason does not grasp a simple form.” But as was shown above (q. 3, a. 7), God is a maximally simple form. Therefore, natural reason cannot attain to a cognition of Him.

**Objection 2:** As *De Anima* 3 says, without images the soul does not understand anything through natural reason. But there cannot exist in us a phantasm with respect to God, since He is incorporeal. Therefore, He cannot be known by us through a natural cognition.

**Objection 3:** Cognition through natural reason is common to both good men and bad men, just as [human] nature is common to them both. But a cognition of God belongs only to those who are good; for as Augustine says in *De Trinitate* 1, “The human mind’s acuteness is not fixed in such an excellent light unless it is cleansed by the righteousness of faith.” Therefore, God cannot be known through natural reason.

**But contrary to this:** Romans 1:19 says, “That which is known about God is manifest in them,” i.e., that which can be known about God through natural reason.

**I respond:** Our natural cognition takes its origin from the senses, and so our natural cognition can extend only as far as it can be led by sensible things. But from sensible things our intellect cannot reach the vision of God’s essence, since sensible creatures are effects of God’s that are not equal to the power of their cause. Therefore, on the basis of the cognition of sensible things we cannot know the whole power of God nor, as a result, see His essence.

However, since His effects are dependent upon their cause, we can be led by those effects to know of Him whether He exists, and to know of Him what must belong to Him as the first cause of all things,

exceeding all the things He causes. Hence, we know His relationship to creatures, viz., that He is a cause of all of them; and we know how creatures differ from Him, viz., that He is not any of the things that are caused by Him; and we know that these things are denied of Him not because of any defect on His part, but rather because He exceeds the things He causes.

**Reply to objection 1:** Reason cannot attain to a simple form in such a way as to know of it what it is (*quid est*), but it can have a cognition of it such that it knows whether it exists.

**Reply to objection 2:** God is known through natural reason by means of phantasms of His effects.

**Reply to objection 3:** Since the cognition of God through His essence occurs by means of grace, it belongs only to those who are good. But the cognition of Him that occurs through natural reason can belong both to the good and to the bad. This is why, in *Retractationes*, Augustine says, “I do not approve of something I once said in a prayer, viz., ‘O God, who wills that only the clean should know the truth’, since one can reply that many who are not clean also know many truths”—viz., through natural reason.

### Article 13

#### Is a deeper cognition of God had through grace than is had through natural reason?

It seems that it is not the case that a deeper cognition of God is had through grace than is had through natural reason:

**Objection 1:** In *De Mystica Theologia* Dionysius says that the one who is more closely united to God in this life is united to Him as to something altogether unknown; he says this even of Moses, who had a certain excellence in the cognition effected by grace. But it is likewise possible through natural reason to be conjoined to God while not knowing His real definition (*quid est*). Therefore, God is not better known to us through grace than He is through natural reason.

**Objection 2:** One cannot reach the cognition of divine things through natural reason except by means of phantasms. But the same thing also holds for the cognition of divine things had through grace; for in *De Caelesti Hierarchia*, chap. 1, Dionysius says, “It is impossible for the divine ray to illumine us unless it is enshrouded by a variety of sacred veils.” Therefore, we do not know God more fully through grace than through natural reason.

**Objection 3:** Our intellect adheres to God through the grace of faith. But faith does not seem to be a kind of cognition; for in *Homilia* Gregory says that there is faith (*fides*) and not cognition (*agnitio*) for those things that are not seen. Therefore, grace does not give us a more excellent cognition of God.

**But contrary to this:** In 1 Corinthians 2:10 the Apostle says, “To us God has revealed them by His Spirit,” viz., those things which “none of the princes of this world knew,” i.e., those things which, as a Gloss explains, none of the philosophers knew.

**I respond:** Through grace we have a more perfect cognition of God than we do through natural reason. This is clear from the following:

The cognition we have through natural reason requires two things, viz., (a) images taken from sensible things and (b) a natural intelligible light by virtue of which we abstract intelligible conceptions from them. And with respect to both of these, human cognition is aided by the revelation of grace.

For the natural light of the intellect is strengthened through the infusion of the light of grace. And as is clear in the case of prophetic visions, sometimes even the phantasms in a man’s imagination are divinely fashioned in order to better express divine matters than do the images that we naturally receive from sensible things. Again, sometimes sensible things, or even voices, are divinely fashioned to express something divine. For instance, at the [Lord’s] baptism the Holy Spirit was seen in the likeness of a dove and the voice of the Father was heard saying, “This is my beloved Son.”

**Reply to objection 1:** Through the revelation of grace in this life we do not know the real definition (*quid est*) of God and so are conjoined to Him as, so to speak, something unknown. Still, we know Him more fully because (a) more of His effects, and more excellent effects, are shown to us and because (b) on the basis of divine revelation we attribute to Him certain things that natural reason does not attain to, e.g., that God is both three and one.

**Reply to objection 2:** On the basis of phantasms—either phantasms received from the senses according to the natural order or phantasms divinely fashioned in the imagination—a more excellent intellective cognition is had to the extent that the intelligible light in a man is made stronger. And so through revelation a fuller cognition is received from the phantasms because of the infusion of divine light.

**Reply to objection 3:** Faith is a kind of cognition insofar as the intellect is determined through faith to something knowable. But this determination to one thing proceeds not from an act of seeing on the part of the believer (*non ex visione credentis*) but rather from an act of seeing on the part of the one who is believed. And so, insofar as there is no act of seeing (*inquantum deest visio*), faith falls short of the type of cognition that is found in scientific knowledge (*scientia*). For scientific knowledge determines the intellect to one thing through an act of seeing and understanding first principles.

## QUESTION 13

### The Names of God

Now that we have considered what pertains to our cognition of God, we must proceed to a consideration of the names of God. For each thing is named by us insofar as we know it. On this topic there are twelve questions: (1) Can God be named by us? (2) Are some of the names said of God predicated of him substantivally? (3) Are some of the names said of God said of Him properly, or are all the names attributed to Him metaphorically? (4) Are the many names said of God synonyms? (5) Are some names said univocally of God and creatures, or are they all said equivocally? (6) Assuming that the names are said analogously, are they said in the primary sense (*per prius*) of God or of creatures? (7) Are some names said of God from a given point in time? (8) Is the name 'God' the name of a nature or of an operation? (9) Is the name 'God' a shareable name? (10) Is the name 'God' taken univocally or equivocally in signifying God through nature, according to participation, and according to opinion? (11) Is the name 'He Who Is' ('*Qui est*') an especially proper name of God? (12) Can affirmative propositions be formulated about God?

### Article 1

#### Does any name befit God?

It seems that no name befits God:

**Objection 1:** In *De Divinis Nominibus*, chap. 1, Dionysius says, "There is no name for Him, or even a conjecture." And Proverbs 30:4 says: "What is His name, and what is the name of His son, if you know?"

**Objection 2:** Every name is predicated either abstractly (*in abstracto*) or concretely (*in concreto*). But names that signify concretely do not belong to God because He is simple; and names that signify abstractly do not belong to Him because they do not signify anything that is a complete subsistent being. Therefore, no name can be said of God.

**Objection 3:** Names signify a substance with a quality, whereas verbs and participles signify temporally, and pronouns signify either demonstratively or relatively. But none of these belong to God. For He exists without qualities and, indeed, without any accident; and He exists without time; and He cannot be sensed, so that He might be pointed at; nor can He be signified relatively, since relative [pronouns] refer back to antecedents that are names or participles or demonstrative pronouns. Therefore, God cannot be named by us in any way.

**But contrary to this:** Exodus 15:3 says, "The Lord is as a man of war, Almighty is His name."

**I respond:** According to the Philosopher, spoken words are signs of acts of intellectual understanding (*signa intellectuum*), and acts of intellectual understanding are likenesses of things (*rerum similitudines*). And so it is clear that spoken words are used to signify things by the mediation of the intellect's conception (*mediante conceptione intellectus*). Therefore, insofar as we can have a cognition of a thing through an act of intellectual understanding, it can be named by us.

Now it was shown above (q. 12, a. 12) that in this life we cannot see God through His essence, but that instead we have cognition of Him from creatures (a) in His status as a principle, (b) through the way of preeminence, and (c) through the way of negation (*secundum habitudinem principii et per modum excellentiae et remotionis*). Therefore, God can be named by us from creatures, but not in such a way that the name signifying Him expresses what the divine essence is—i.e., not in the way that the name 'man' expresses by its signification the essence of man as such. For 'man' signifies the definition of a man, thus making clear his essence, since the conception (*ratio*) that the name signifies is the definition.

**Reply to objection 1:** The reason that God is said not to have a name, or to be beyond naming, is that His essence is beyond that which we understand intellectually about God and which we signify by spoken words.

**Reply to objection 2:** Since we come to the cognition of God from creatures and on this basis name Him, the names that we attribute to God signify in a mode that belongs to material creatures, the cognition of which is connatural to us, as was explained above (q. 12, a. 4).

Among creatures of this sort, the ones that are complete and subsistent are composite, whereas in their case form is not a complete subsistent thing, but is instead that by which something is such-and-such. Because of this, all the names that we impose to signify something complete (*completum*) and subsistent signify concretely (*in concretione*), since they belong to composite things. On the other hand, the names that are imposed to signify simple forms signify something not as subsistent but as that by which something is such-and-such; for instance, ‘whiteness’ signifies that by which something is white.

Therefore, since God is both simple and subsistent, we attribute to him both (a) *abstract* names, in order to signify His simplicity, and (b) *concrete* names, in order to signify His subsistence and completeness (*perfectionem*), even though both sorts of names fall short of His mode of being—just as, in this life, our intellect does not know Him as He is.

**Reply to objection 3:** To signify “a substance with a quality” is to signify a suppositum with a determinate nature or form in which it subsists. Hence, since, as has just been explained, some names are said of God concretely (*in concretione*) in order to signify His subsistence and completeness, it follows that some names that signify “a substance with a quality” are said of God.

On the other hand, verbs and participles that co-signify a time are said of Him because eternity includes all of time. For just as we are to able to apprehend and signify simple subsistent things only in the mode of composite things, so we can understand and verbally express eternity only in the mode of temporal things. This is because our intellectual understanding is connatural with composite and temporal things.

Pronouns are said of God insofar as they refer demonstratively to that which is understood, not to that which is sensed. For to the extent that something is understood by us, it falls under demonstrative reference.

And just as it is in this way that names and participles and demonstrative pronouns are said of God, so too it is in this way that God can be signified by relative pronouns.

## Article 2

### Is any name said of God substantively?

It seems that no name is said of God substantively (*substantialiter*):

**Objection 1:** Damascene says, “It must be the case that each of the things said of God does not signify what He is according to His substance, but rather expresses either what He is not, or some relation, or something that follows from His nature or operation.”

**Objection 2:** In *De Divinis Nominibus*, chap. 1, Dionysius says, “You will find all the hymns of the holy theologians dividing the names of God in a clear and praiseworthy manner according to the beneficent processions of the supreme deity.” His meaning is that the names that the holy doctors use in praise of God are distinguished in accord with what proceeds from God Himself (*secundum processus ipsius Dei*). But that which signifies what proceeds from a given thing does not signify anything

pertaining to its essence. Therefore, the names said of God are not said of Him substantively.

**Objection 3:** A thing is named by us insofar as it is understood. But in this life we cannot understand God according to His substance. Therefore, neither can any name imposed by us be said of God according to His substance.

**But contrary to this:** In *De Trinitate* 6 Augustine says, “But in the case of God, to be is the same as to be powerful or to be wise or whatever else you might say of that simplicity, by which His substance is signified.” Therefore, all names of this sort signify the divine substance.

**I respond:** As regards those names which are said of God *negatively* or which signify His *relation to creatures*, it is clear that they do not signify His substance in any way. Rather, they signify either (a) the denial of something of Him or (b) His relation to another (or, better, another’s relation to Him).

However, as regards the names that are said of God *affirmatively* and *non-relationally* (*absolute*)—such as ‘good’, ‘wise’, and others of this sort—there are differing opinions.

Some have claimed that even though all these names are said affirmatively of God, we nonetheless find that they deny something of God rather than posit something in Him. Thus, they claim that when we say that God is living, what we signify is that God does not exist in the way that non-living things do; and all the other cases should be dealt with in a similar way. This is the position of Rabbi Moses.

Others claim that these names are imposed to signify a relation of God to created things. For instance, when we say that God is good, the meaning is that God is a cause of goodness in things. And the same line of reasoning holds in the other cases.

But both of these positions seem wrong, and for three reasons:

First, neither of these positions can explain why certain names are said of God rather than others. For example, He is a cause of bodies in the same way that He is a cause of good things. So if, when God is called good, nothing is signified other than that He is a cause of good things, one could likewise claim that God is a body because He is a cause of bodies. Again, in saying that He is a body, one would be denying that He is merely a being in potentiality, like primary matter.

Second, it follows that all the names said of God would be said of Him in a derived sense (*per posterius*), in the way that ‘healthy’ is said in a derived sense of medicine by virtue of the fact that it signifies merely that medicine is a cause of health in an animal, which is called ‘healthy’ in the primary sense (*per prius*).

Third, the positions in question are contrary to the intention of those who speak about God. For when they say that God is living, they mean something other than that He is a cause of our life or that He differs from non-living bodies.

And so we must respond in another way by claiming that (a) names of this sort do indeed signify the divine substance and are predicated of God substantively, but that (b) they fall short in their representation of Him (*deficiunt a repraesentatione ipsius*). This is clear as follows:

Names signify God according to the way in which our intellect has cognition of Him. But when our intellect has a cognition of God from creatures, it has a cognition of Him in accord with the way in which creatures represent Him. Now it was shown above (q. 4, a. 2) that God, as a being who is perfect absolutely speaking and in all respects, contains within Himself all the perfections of creatures. Hence, each creature represents Him, and is similar to Him, to the extent that it has some perfection—not in the sense that it represents Him as something of the same species or genus, but rather in the sense that it represents Him as a supreme principle whose effects fall short of His form, but to whom His effects nonetheless bear some sort of similarity in the way that the forms of lower bodies represent the power of the sun. This was explained above (q. 4, a. 3) when we were discussing God’s perfection. So, then, the names mentioned above signify God’s substance, albeit imperfectly, in the same way that creatures represent God’s substance. Thus, when God is said to be good, the meaning is not that God is a cause of goodness or that God is not evil; rather, the meaning is that what we call goodness in creatures preexists

in God and does so in some higher mode. Hence, from this it follows not that ‘good’ belongs to God insofar as He causes goodness, but rather, just the opposite, that because God is good, He diffuses His goodness to things—in accord with Augustine’s claim in *De Doctrina Christiana* that “because He is good, we exist.”

**Reply to objection 1:** Damascene is claiming that these names do not signify what God is because none of them expresses perfectly what God is; instead, each signifies Him imperfectly, just as creatures represent Him imperfectly.

**Reply to objection 2:** In the signification of names, it is sometimes the case that *that because of which* a name is imposed to signify differs from *what* the name is imposed to signify. For instance, the name ‘rock’ (*lapis*) is imposed *because* a rock hurts the foot (*laedit pedem*). However, it is imposed not to signify what ‘hurts the foot’ signifies, but instead to signify a certain species of corporeal thing; otherwise, everything that hurts the foot would be a rock.

Therefore, one should claim that divine names of the sort in question are, to be sure, imposed because of what proceeds from God. For just as creatures represent God, though imperfectly, according to the diverse processions of perfections [from God], so too our intellect has cognition of God and names God with respect to each of these processions. Yet these names are not imposed to signify the processions themselves—as if it were the case that when God is said to be living, the meaning is that life proceeds from Him. Rather, they are imposed to signify the very principle of things insofar as life preexists in Him, though in a more eminent way than is understood or signified by us.

**Reply to objection 3:** In this life we cannot have a cognition of God’s essence as it is in itself. Rather, we have a cognition of it insofar as it is represented in the perfections had by creatures. And this is how the names imposed by us signify God’s essence.

### Article 3

#### Are some names said of God properly, or are all names attributed to Him metaphorically?

It seems that no name is said of God properly:

**Objection 1:** As has been explained (a. 1), all the names that we say of God are taken from creatures. But the names of creatures are said metaphorically of God, as when God is said to be a rock or a lion or something of that sort. Therefore, all the names said of God are said metaphorically.

**Objection 2:** No name is properly said of a thing that is such that the name is more truly denied of it than predicated of it. But according to Dionysius in *De Coelesti Hierarchia*, chap. 2, all names such as ‘good’, ‘wise’, etc., are more truly denied of God than predicated of Him. Therefore, none of these names is said of God properly.

**Objection 3:** The names of corporeal things are said only metaphorically of God, since He is incorporeal. But all names of the sort in question imply certain corporeal conditions, since they signify temporally and with composition and with other things of this sort, which are conditions of corporeal things. Therefore, all names of this sort are said of God metaphorically.

**But contrary to this:** In *De Fide* 2 Ambrose says, “There are some names that point clearly to what is proper to God, and there are some that express the clear truth about God’s majesty. By contrast, there are other names that are transferred to God because of some likeness.” Therefore, not all names are said of God metaphorically; instead, some are said properly.

**I respond:** As has been explained (a. 2), we have cognition of God from the perfections that

proceed from Him to creatures. To be sure, these perfections exist in God in a more eminent manner than in creatures. However, our intellect apprehends them in the way in which they exist in creatures, and it signifies them by names in accord with how it apprehends them.

Therefore, there are two things to consider regarding the names we attribute to God, viz., (a) the perfections that are signified, e.g., goodness, life, etc., and (b) the mode of signifying.

With regard to *what is signified* by names of this sort, these perfections belong properly to God—indeed, they belong more properly to Him than to the creatures themselves, and they are said of God in the primary sense (*per prius*).

On the other hand, as regards *the mode of signifying*, these names are not said of God properly, since they have a mode of signifying that belongs to creatures.

**Reply to objection 1:** Perfections that proceed from God to creatures are signified by some of these names in such a way that the imperfect way in which the creature participates in the divine perfection is itself included in what the name signifies. For instance, ‘rock’ signifies something that exists materially. Names of this sort can be predicated of God only metaphorically.

On the other hand, some names signify the perfections themselves absolutely speaking, without including in their signification any mode of participation. Examples are ‘being’, ‘good’, ‘living’, and others of this sort. Such names are said of God properly.

**Reply to objection 2:** Dionysius is claiming that names of this sort are denied of God because what is signified by the name belongs to Him not in the mode by which the name signifies it, but instead in a more excellent mode. Hence, in the same place Dionysius says that God lies beyond every substance and every life.

**Reply to objection 3:** The names that are said of God properly do not imply corporeal conditions in the very thing signified by the name; rather, they imply corporeal conditions with respect to their mode of signifying. By contrast, the names that are said of God metaphorically imply a corporeal condition in the very thing that they signify.

#### Article 4

##### Are the names said of God synonyms?

It seems that the names said of God are synonymous names (*nomina synonyma*):

**Objection 1:** Names are called synonyms when they signify exactly the same thing. But the names said of God signify exactly the same thing in God, since God’s goodness is His essence, and so is His wisdom. Therefore, these names are exact synonyms (*omnino synonyma*).

**Objection 2:** Someone might reply that these names signify the same reality, but do it according to diverse concepts (*secundum rationes diversas*).

Against this: A concept is empty when nothing in reality corresponds to it. Therefore, if these concepts are many and the reality is one, it seems that the concepts are empty.

**Objection 3:** A thing which is one both in reality and in concept (*unum re et ratione*) is one to a greater degree than a thing which is one in reality and many in concept. But God is maximally one. Therefore, it seems that He is not one in reality and many in concept. And thus the names said of God do not signify diverse concepts, and so they are synonyms.

**But contrary to this:** All synonyms, when strung together, produce something silly—as, e.g., if someone were to say, “Clothes garments.” Therefore, if all the names said of God were synonyms, then it could not be fitting to say “good God” or anything else of this sort. Yet in Jeremiah 32:18 it is written,

“Most mighty, great, and powerful, Lord of hosts is Your name.”

**I respond:** Names of the sort in question, when said of God, are not synonyms.

This would be easy to see if we were claiming that names of this sort are used to deny something of God or to designate His status as a cause with respect to creatures. For in that case there would be diverse concepts associated with those names corresponding to the diverse things that were being denied or to the diverse effects that were being connoted.

But even given that it has already been explained (a. 2) that names of this sort signify the divine substance, albeit imperfectly, it is still obvious, on the basis of what was said above (aa. 1-2), that these names have diverse concepts. For the concept signified by a name is the intellect’s conception of the reality signified by the name. But since our intellect has cognition of God from creatures, in order to understand God it forms concepts proportioned to the perfections that proceed from God to creatures. These perfections preexist in God in a simple and unified way, whereas they are received in creatures in a fragmented and diversified way. Therefore, corresponding to the diverse perfections of creatures there is a simple unified principle, represented in various and multiple ways by the diverse perfections of the creatures; and in the very same way, corresponding to the various and multiple concepts of our intellect there is a unified and altogether simple being that is imperfectly understood by means of conceptions of the sort in question.

So even though the names attributed to God signify a single reality, they are nonetheless not synonyms; for they signify that reality under many and diverse concepts.

**Reply to objection 1:** The answer to the first objection is clear from what has been said. For names are called synonyms when they signify a single thing under a single concept (*significant unum secundum unam rationem*). Names that signify diverse concepts of a single thing do not signify that one thing *per se* and primarily, since, as has been explained (a. 1), a name signifies a thing only through the mediation of a conception of the intellect.

**Reply to objection 2:** The many concepts associated with these names are not hollow and empty, because corresponding to all of them there is some one simple thing, represented by all of them in a diversified and imperfect way.

**Reply to objection 3:** The very fact that what exists in a diversified and multiplied way in other things exists in a simple and unified way in God attests to God’s perfect oneness. And the fact that He is one in reality and many in concept stems from the fact that our intellect apprehends Him in a multiplicity of ways, just as things represent Him in a multiplicity of ways.

## Article 5

### Are the names said of both God and creatures said of them univocally?

It seems that what is said of both God and creatures is said of them univocally:

**Objection 1:** Whatever is equivocal is traced back to something univocal, in the same way that what is many is traced back to what is one. For instance, if the name ‘dog’ is said equivocally of something that barks and of a fish, then it must be said of some things univocally, viz., of everything that barks. Otherwise, there would be an infinite regress.

Now some agents are univocal, agreeing with their effects in both name and definition, e.g., a man generates a man, whereas other agents are equivocal, e.g., the sun generates something that is hot, even though it itself is hot only equivocally.

Therefore, it seems that the first agent, to which all other agents are traced back, is a univocal

agent. And so what is said of both God and creatures is predicated univocally.

**Objection 2:** No likeness is found among equivocals. Therefore, since, according to Genesis 1:26 (“Let us make man to our image and likeness”), God has some likeness with a creature, it seems that something is said univocally of God and creatures.

**Objection 3:** As *Metaphysics* 10 says, a measure is homogenous with that which is measured by it. But, as it says in the same place, God is the first measure of all beings. Therefore, God is homogenous with creatures. And so something can be said univocally of God and creatures.

**But contrary to this:**

1. Whatever is predicated of given things according to the same name but not the same concept is predicated of them equivocally. But no name belongs to God according to the same concept by which it is said of a creature. For instance, wisdom in creatures is a quality, but not in God; and when the genus is varied, it changes the concept, since the genus is part of the definition. Moreover, the same line of reasoning holds for the other cases. Therefore, whatever is said of both God and creatures is said equivocally.

2. God is more distant from creatures than any creatures are from one another. But because of the distance between certain creatures, it turns out that nothing can be predicated univocally of them; for instance, nothing can be predicated univocally of things that do not agree in some genus. Therefore, *a fortiori*, nothing is predicated univocally of God and creatures; instead, everything is predicated equivocally.

**I respond:** It is impossible for anything to be predicated univocally of God and creatures. For any effect that does not measure up to the full power of its agent cause receives a likeness of the agent that is not of the same nature as the agent, but falls short of it. The result is that what exists in the effects in a fragmented and diversified way exists in the cause in a simple and unified way. For instance, by its unified power the sun produces many and varied forms in lower bodies. In the same way, as was explained above (a. 4), all the perfections that exist in created things in a fragmented and diversified way preexist in God in a unified way.

So, then, when a name pertaining to a perfection is said of a creature, it signifies that perfection as something distinct in definition from other perfections. For instance, when the name ‘wise’ is said of a man, we signify a perfection distinct from the man’s essence and from his power and from his *esse*, etc. By contrast, when we predicate this name of God, we do not mean to signify anything distinct from His essence or from His power or from His *esse*. And so when the name ‘wise’ is said of a man, it in some sense circumscribes and comprehends the thing that is signified. But this is not the case when ‘wise’ is said of God; instead, the thing signified is left as something that is uncomprehended and that exceeds the signification of the name. From this it is clear that the name ‘wise’ is not said of both God and the man according to same concept. Moreover, this line of reasoning applies to all other such cases. Hence, no name is predicated univocally of God and creatures.

But neither are such names predicated in a purely equivocal way, as some have claimed. For if this were so, then it would be impossible to know or demonstrate anything about God from creatures; instead, there would always be a fallacy of equivocation. And this is contrary to the philosophers, who prove many things demonstratively about God, and also contrary to the Apostle, who says in Romans 1:20, “The invisible things of God . . . are clearly seen, being understood by the things that are made.”

Therefore, one should say that names of the sort in question are said of God and creatures according to an analogy, i.e., a proportion. This can occur in two ways among names: either (a) because many things have a proportion to one thing, as when ‘healthy’ is said of medicine and of urine insofar as both are ordered and proportioned to the health of an animal, the latter as a sign of health and the former as a cause of health; or (b) because the one thing has a proportion to the other, as when ‘healthy’ is said

of medicine and of an animal, insofar as medicine is a cause of the health that exists in the animal. It is in this latter way that certain things are said analogously—and neither univocally nor purely equivocally—of God and creatures. For, as was explained above (a. 1), we cannot name God except from creatures. And so whatever is said of God and creatures is said insofar as the creature is ordered toward God as toward a principle and cause in which the perfections of all things preexist in a most excellent way.

This mode of commonality falls between pure equivocation and simple univocity. For in things that are said analogously there is not just one concept, as there is in the case of univocals. Nor are the concepts totally diverse, as in the case of equivocals. Rather, the name is said in many ways, so that it signifies diverse relations to some one thing—just as ‘healthy’, when said of urine, signifies a sign of the health of an animal, whereas, when said of medicine, it signifies a cause of that same health.

**Reply to objection 1:** Even though the equivocal is traced back to the univocal in the case of predications, nonetheless, in the case of actions a non-univocal agent necessarily precedes a univocal agent. For a non-univocal agent is a universal cause of a whole species, in the way that the sun is a cause of the generation of all men. By contrast, a univocal agent is not a universal agent cause of a whole species (otherwise, it would be a cause of itself, since it itself is contained in the species); rather, it is a particular cause with respect to *this* individual, which it constitutes as something that participates in the species. Therefore, a universal cause of a whole species is not a univocal agent. But a universal cause is prior to a particular cause.

However, even though this universal agent is not a univocal agent, it is nonetheless not altogether equivocal, since if it were, it would not effect anything that is similar to itself. Rather, it can be called an analogous agent—just as, in the case of predication, all univocal things are traced back to one primary thing which is not univocal but analogous, viz., *being*.

**Reply to objection 2:** The likeness of a creature to God is imperfect, because, as was said above (q. 4, a. 3), a creature does not represent God as being the same in genus with itself.

**Reply to objection 3:** God is not a measure that is proportioned to the things that are measured. Hence, God and creatures do not have to be contained in a single genus.

**Reply to argument 1 and argument 2 for the contrary:** The arguments on behalf of the contrary position show only that names of the sort in question are not predicated univocally of God and creatures. They do not, however, show that these names are predicated equivocally.

## Article 6

### Are names said in the primary sense of creatures rather than of God?

It seems that names are said in the primary sense (*per prius*) of creatures rather than of God:

**Objection 1:** We name a thing according to the way in which we have cognition of it; for, according to the Philosopher, names are signs of acts of understanding. But we have cognition of creatures prior to cognition of God. Therefore, the names imposed by us apply in the primary sense to creatures rather than to God.

**Objection 2:** According to Dionysius in *De Divinis Nominibus*, we name God from creatures. But names transferred from creatures to God—e.g., ‘lion’, ‘rock’, etc.—are said in the primary sense of creatures rather than of God. Therefore, all the names that are said of both God and creatures are said in the primary sense of creatures rather than of God.

**Objection 3:** As Dionysius says, all names that are said in common of God and creatures are

said of God as a cause of all things. But what is said of something because it is a cause is said of that thing in a derived sense. For example, ‘healthy’ is said in the primary sense of an animal rather than of medicine, which is a cause of health. Therefore, names of this sort are said in the primary sense of creatures rather than of God.

**But contrary to this:** Ephesians 3:14-15 says, “I bend my knees to the Father of our Lord Jesus Christ, from whom all paternity in heaven and on earth is named.” And the same line of reasoning seems to hold for the other names that are said of God and creatures. Therefore, these names are said in the primary sense of God rather than of creatures.

**I respond:** In the case of all names that are said of many things analogously, there must be some one thing with respect to which they are all said, and so that one thing must be posited in the definition of all of them. And since, as *Metaphysics* 4 says, the concept signified by the name is the definition, the name is said in the primary sense of that which is posited in the definition of the others, and it is said in a derived sense of the others in accord with the ordering by which they approach that first thing to greater or lesser degrees. For instance, ‘healthy’ as said of an animal is found both (a) in the definition of ‘healthy’ as said of medicine, which is called healthy because it causes health in an animal, and (b) in the definition of ‘healthy’ as said of urine, which is called healthy because it is a sign of an animal’s health.

So, then, all the names that are said metaphorically of God are said in the primary sense of creatures rather than of God. For as said of God, they signify only likenesses to such creatures. In the same way, ‘smiling’, as said of a meadow, signifies—according to a likeness of proportion—nothing other than that when a meadow is blossoming, it is attractive like a man is when he is smiling. So, too, the name ‘lion’, as said of God, signifies only that God operates in His works as powerfully as a lion does in its works. And so it is clear that when such names are said of God, their signification can be defined only by reference to what is said of creatures.

Now as regards those other names, which are not said of God metaphorically, the same line of reasoning would also hold for them if, as some have claimed, they were said of God only insofar as He is a cause. For on such a view, when God is said to be good, this would mean only that God is a cause of goodness in creatures, and so the name ‘good’, as said of God, would include in its meaning the goodness of creatures. In that case, ‘good’ would be said in the primary sense of creatures rather than of God.

However, it was shown above (a. 2) that names of this sort are said of God with respect to His essence and not of God simply as a cause. For when it is said that God is good or wise, what is signified is not only that He is a cause of wisdom or goodness, but that these perfections preexist in Him in a more eminent way.

Accordingly, one should claim that as regards *the reality that is signified* by such names, these names are said in the primary sense of God rather than of creatures. For perfections of this sort emanate from God to creatures. On the other hand, as regards the imposition of the names, they are imposed by us in the first place (*per prius*) on creatures, which we have cognition of first. Hence, as was explained above (a. 3), they have a *mode of signifying* that belongs to creatures.

**Reply to objection 1:** This objection has to do with the imposition of the name.

**Reply to objection 2:** As has been explained, it is not the case that the same line of reasoning holds both for names that are said metaphorically of God and for the other names.

**Reply to objection 3:** This objection takes for granted that these names are said of God only as a cause—in the way that ‘healthy’ is said of medicine—and not with respect to His essence.

## Article 7

### Are names that imply a relation to creatures said of God from a given point in time?

It seems that names implying a relation to creatures are not said of God from a given point in time:

**Objection 1:** As is commonly claimed, all names of the sort in question signify the divine substance; thus, Ambrose says that the name ‘Lord’ is a name of power, which is God’s substance, and that the name ‘Creator’ signifies God’s action, which is His essence. But the divine essence is eternal and not temporal. Therefore, names of this sort are said of God from eternity and not from a given point in time.

**Objection 2:** Anything to which something belongs from a given point in time can be said to become such-and-such; for instance, that which is white from a given point in time becomes white. But it does not befit God to become such-and-such. Therefore, nothing is predicated of God from a given point in time.

**Objection 3:** If some names are said of God from a given point in time because they imply a relation to creatures, then, it seems, the same account will hold for all names that imply a relation to creatures. But some names that imply a relation to creatures are said of God from eternity; for example, according to Jeremiah 31:3 (“I have loved you with an everlasting love”), He knew and loved a creature from eternity. Therefore, the other names that imply a relation to creatures, e.g., ‘Lord’ and ‘Creator’, are likewise said of God from eternity.

**Objection 4:** Names of the sort in question signify a relation. Therefore, that relation must be either something in God or something just in the creature. But it is impossible for it to exist only in the creature. For if this were so, then God would be called ‘Lord’ because of the [corresponding] opposite relation that exists in the creature. But nothing is denominated from its own opposite. Therefore, it follows that the relation is also something in God. But nothing can exist in God from a given point in time, since He Himself is beyond time. Therefore, it seems that names of this sort are not said of God from a given point in time.

**Objection 5:** Something is predicated relationally because of a relation; for instance, ‘lord’ is predicated because of lordship, just as ‘white’ is predicated because of whiteness. Therefore, if the relation of lordship exists in God not as a real being but only as a being of reason (*non secundum rem sed solum secundum rationem*), then it follows that God is not really a lord—which is patently false.

**Objection 6:** In relatives that are not simultaneous in nature, the one can exist without the other existing; for instance, according to the *Categories*, what is knowable exists even when knowledge of it does not exist. But relatives that are said of God and creatures are not simultaneous in nature. Therefore, it is possible for something to be predicated relationally of God with respect to a creature even when no creatures exist. And so names of this sort, such as ‘Lord’ and ‘Creator’, are said of God from eternity and not from a given point in time.

**But contrary to this:** In *De Trinitate* 5 Augustine says that the relational name ‘Lord’ belongs to God from a given point in time.

**I respond:** Some names implying a relation to a creature are said of God from a given point in time and not from eternity.

To see this clearly, note that some have claimed that relations are not real beings but only beings of reason. This seems false, because things themselves have a natural ordering to and connection with one another. Still, notice that because a relation requires two terms or extremes (*extrema*), there are three possible cases in which a relation might be either a real being (*res naturae*) or a being of reason (*res*

*rationis*):

Sometimes a relation is only a being of reason on the part of both extremes, viz., when the ordering or connection can exist between them only because of reason's apprehension—as, e.g., when we say that the same thing is the same as itself. For insofar as reason apprehends some one thing twice, it counts it as two and in this way apprehends a certain relation of the thing to itself. The same holds for all relations between a being and a non-being; such relations are formed by reason insofar as it apprehends a non-being as a kind of extreme. Again, the same holds for all relations that follow upon an act of reason, e.g., *genus* and *species*, etc.

By contrast, some relations are real beings on the part of both extremes, viz., when there is a connection between two things insofar as something belongs to both of them in reality. This is clear, for instance, in the case of all relations that follow upon quantity, e.g., *large* and *small*, *double* and *half*, etc.; for quantity exists in both of the extremes. The same holds for relations that follow upon action and passion, e.g., *mover* and *moveable*, *father* and *son*, etc.

Sometimes, however, the relation is a real being in one of the extremes and only a being of reason in the other extreme. This happens whenever the two extremes do not belong to the same order. For instance, sensation and knowledge are related to the sensible thing and the knowable thing, which, insofar as they are entities with natural *esse*, lie outside the order of sensible *esse* and intelligible *esse*. And so there is a real relation in the knowledge and sensation, insofar as they are ordered toward knowing or sensing real entities. However, these real entities, considered just in themselves, lie outside the order of knowing and sensing, and so in them there is no real relation to the knowledge and sensation; instead, there is only a relation of reason, insofar as the intellect apprehends them as the extremes of the relations of knowledge and sensation. This is why, in *Metaphysics 5*, the Philosopher claims that these entities receive the predication of the relational names ['sensible' and 'knowable'] not because they themselves are related to the others, but rather because the others are related to them. In the same way, 'to the right' is said of a column only because it is positioned to the right of the animal. Hence, a relation of this sort is a real relation not in the column, but in the animal.

Therefore, because God lies outside the whole order of creatures, and because all creatures are ordered toward Him and not vice versa, it is clear that creatures have real relations to God, whereas in God there are no real relations of Him to creatures, but only relations of reason, insofar as the creatures are related to Him. And so nothing prevents names of the sort in question, which imply a relation to a creature, from being predicated of God from a given point in time, not because of any change in Him, but because of a change in the creature—just as the column is to the right of the animal not because of a change that involves the column, but because the animal has moved.

**Reply to objection 1:** Some relational names—e.g., 'lord', and 'servant', 'father' and 'son', etc.—are imposed to signify the relations themselves (*ipsas habitudines relativas*), and these are called relatives *secundum esse*. On the other hand, some relational names—e.g., 'mover' and 'moved', 'head' and 'having a head', etc.—are imposed to signify things that certain relations follow upon, and these are called relatives *secundum dici*.

This distinction, then, must be taken into account in the case of God's names, too. For some of them, e.g., 'Lord', signify the relation itself to a creature. And names of this sort signify God's substance indirectly rather than directly, because they presuppose it. For instance, lordship presupposes the power that is the divine substance. On the other hand, some of these names signify the divine essence directly. For instance, 'Savior', 'Creator' and others of this sort signify God's action, which is His essence, and derivatively imply a relation (*ex consequenti important habitudinem*).

Both sorts of names are said of God from a given point in time as regards the relations they imply either principally or as a consequence, but not insofar as they signify His essence, whether directly or indirectly.

**Reply to objection 2:** Relations that are said of God from a given point in time exist in God only as beings of reason, and so it is not being said of God either that He becomes such-and-such or that He is made such-and-such—except according to reason and without any change existing in Him, as, e.g., “Lord, you have become our refuge.”

**Reply to objection 3:** Operations of the intellect and will exist within the one who is operating, and names signifying relations following upon an act of intellect or will are said of God from eternity. However, names such as ‘Savior’ and ‘Creator’, which follow upon these acts as they proceed (in our way of understanding it) to outward effects are said of God from a given point in time.

**Reply to objection 4:** Relations signified by names that are said of God from a given point in time exist in God only according to reason, whereas the opposite relations exist in reality in the creatures. And it is not inappropriate that God should be denominated from relations which really exist in the creature, insofar as our intellect understands along with them the opposed relations in God. For God receives the predication of relational names with respect to a creature because the creature is related to Him—just as the Philosopher claims in *Metaphysics* 5 that an intelligible thing receives the predication of a relational name because the knowledge is related to it.

**Reply to objection 5:** God is related to a creature in virtue of the fact that the creature is related to Him. Since the relation of subjection to God really exists in the creature, it follows that God is a Lord not only according to reason, but in reality. For He is called ‘Lord’ in the sense that the creature is subject to Him.

**Reply to objection 6:** To determine whether or not relatives are simultaneous in nature, one must consider the signification of the relational names themselves rather than the ordering of the things of which the relational names are said. For if the one name includes the other within its conception and vice versa, then they are simultaneous in nature—e.g., ‘double’ and ‘half’, ‘father’ and ‘son’, and others of this sort. On the other hand, if the one includes the other within its conception but not vice versa, then they are not simultaneous in nature. This is the way in which ‘knowledge’ and ‘knowable’ are related. For ‘knowable’ is said according to potentiality, whereas ‘knowledge’ is said according to habit or act. Hence, the knowable, given the way in which it is signified, exists before the knowledge of it. However, if ‘knowable’ is taken according to act, it is simultaneous with ‘knowledge’ taken according to act; for nothing is [actually] known unless there is [actual] knowledge of it.

Thus, even though God is prior to creatures, nonetheless, because the signification of ‘lord’ includes having a servant and vice versa, the two relational names ‘lord’ and ‘servant’ are simultaneous in nature. Hence, God was not a Lord before He had a creature subject to Him.

## Article 8

### Is the name ‘God’ the name of a nature or an operation?

It seems that the name ‘God’ is not the name of a nature:

**Objection 1:** In [*De Fide Orthodoxa*] 1 Damascene says, “‘God’ (*théos*) is taken either from *théin*, i.e., to course through and nurture all things, or from *aithein*, i.e., to burn (for God is our fire who consumes all malice), or from *theásthai*, i.e., to consider all things.” But all of these pertain to operation. Therefore, the name ‘God’ signifies an operation and not a nature.

**Objection 2:** A thing is named by us insofar as it is known. But God’s nature is unknown to us. Therefore, the name ‘God’ does not signify God’s nature.

**But contrary to this:** In *De Fide* 1 Ambrose says that ‘God’ is the name of a nature.

**I respond:** *What* a name is imposed to signify is not always the same as *that because of which* the name is imposed to signify. For just as we know the substance of a thing from its properties or operations, so sometimes we denominate the substance of the thing from some operation or property of it. For instance, we denominate the substance of a rock (*lapis*) from one of its actions, viz., that it hurts the foot (*laedit pedem*); still, the name ‘rock’ is imposed to signify the substance of the rock and not this action.

On the other hand, if the things in question are known to us in themselves—e.g., cold, heat, whiteness, etc.—then we do not denominate them from other things. Hence, in such cases what a name signifies is the same as that because of which it is imposed to signify.

Therefore, since God is not known to us in His nature, but is instead known to us from His operations and effects, it is possible for us to name Him from these operations and effects, as was explained above (a. 1). Hence, as regards that because of which the name is imposed to signify, the name ‘God’ is the name of an operation. For this name is imposed because of His universal providence over things, since everyone who talks about God intends to name God from the fact that He has universal providence over things. Thus, in *De Divinis Nominibus*, chap. 12, Dionysius says, “The deity is the one who oversees all things with perfect providence and goodness.” Nonetheless, the name ‘God’, having been taken from this operation, is imposed to signify God’s nature.

**Reply to objection 1:** All the things Damascene posited pertain to the providence because of which the name ‘God’ is imposed to signify.

**Reply to objection 2:** Insofar as we can have cognition of the nature of a given thing from its properties and effects, we are able to signify it by a name. Hence, because from its properties we can have cognition of the substance of a rock in itself, by knowing what (*quid est*) a rock is, the name ‘rock’ signifies the very nature of a rock as it is in itself. For it signifies the definition of a rock, through which we know what a rock is. For, as *Metaphysics* 4 says, the concept that the name signifies is the definition (*ratio quam significat nomen est definitio*).

However, from God’s effects we cannot have cognition of God’s nature as it is in itself, i.e., we cannot have cognition of it in such a way as to know of it what it is; instead, as was explained above (q. 12, a. 12), we know it through the ways of preeminence and causality and negation (*per modum eminentiae et causalitatis et negationis*). And so the name ‘God’ signifies God’s nature. For the name is imposed to signify something which exists above all things, which is a principle of all things, and which is denied of all things. For this is what those who name God intend to signify.

## Article 9

### Is the name ‘God’ a shareable name?

It seems that the name God is shareable (*communicabilis*):

**Objection 1:** If the thing signified by a name is shared, then the name itself is shared. But, as has been explained (a. 8), the name ‘God’ signifies God’s nature, which can be shared by others, according to 2 Peter 1:4 (“He has given us great and precious promises: that by these we may be made partakers of the divine nature”). Therefore, the name ‘God’ is shareable.

**Objection 2:** It is only proper names that cannot be shared. But the name ‘God’ is an appellative name and not a proper name; this is clear from the fact that it has a plural form, according to Psalm 81:6 (“I have said: you are gods”). Therefore, the name ‘God’ is shareable.

**Objection 3:** As has been explained (a. 8), the name ‘God’ is imposed because of an operation.

But other names imposed on God because of His operations or effects are shareable, e.g., ‘good’, ‘wise’, etc. Therefore, the name ‘God’ is shareable as well.

**But contrary to this:** In speaking of the name ‘God’, Wisdom 14:21 says, “They gave the incommunicable name to stones and wood.” Therefore, the name ‘God’ is unshareable.

**I respond:** A name can be shareable in two ways: (a) *properly (proprie)* and (b) *through a likeness (per similitudinem)*. A name is *properly* shareable insofar as the entire signification of the name is shareable by many, whereas a name is shareable *through a likeness* insofar as it is shareable with respect to some of the things included in the name’s signification. For instance, the name ‘lion’ is properly shareable by all those things in which the nature signified by the name ‘lion’ is found, whereas it is shareable through a likeness by things that participate in some feature of lions—say, audacity or courage—and that are called lions metaphorically.

Now to determine which names are properly shareable, we must take into account that every form that exists in a singular suppositum that individuates it is shareable by many, either in reality or at least conceivably (*vel secundum rem vel secundum rationem saltem*). For instance, human nature is common to many both in reality and conceivably, whereas the nature of the sun is common to many not in reality, but only conceivably; for the nature of the sun can be conceived of as existing in many supposita. This is because the intellect understands the nature of a given species by abstraction from the singular. Hence, the question of whether the nature actually exists in just one suppositum or in many supposita lies beyond our conception (*intellectus*) of the nature of the species. So if we keep the conception of the nature of the species fixed, that nature can be conceived of as existing in many.

However, a singular thing, by the very fact that it is singular, is divided off from all other things. Hence, every name imposed to signify a singular thing as such is unshareable both in reality and conceivably; for it is impossible for us even to conceive of more than one of *this* individual. Hence, no name that signifies an individual as such is properly shareable by many; rather, it is shareable only through a likeness—in the way, for instance, that someone can be called an Achilles metaphorically because he has one of Achilles’s properties, e.g., courage.

On the other hand, in the case of forms that are individuated not by some suppositum but by themselves (because they are subsistent forms), if they are conceived of as they exist in themselves, then they cannot be shared either in reality or conceivably—though perhaps they can be shared through a likeness, in the way just explained for individuals. However, because simple forms that subsist *per se* cannot be understood by us as they exist in themselves, but are instead understood by us in the manner of composite entities that have forms in matter, it follows that, as was explained above (a. 1), we impose on them concrete names that signify a nature in some suppositum. Hence, as far as the nature of the names is concerned (*quantum pertinet ad rationem nominum*), the same explanation holds both for the names that we impose to signify the natures of composite entities and for the names that we impose to signify simple subsistent natures.

So since, as has been said (a. 8), the name ‘God’ is imposed to signify God’s nature, and since, as was shown above (q. 11, a. 3), God’s nature is not multipliable, it follows that the name ‘God’ is not shareable in reality, though it is shareable according to opinion—in the way that the name ‘sun’ would be shareable according to the opinion of someone who claimed that there were many suns. This is why Galatians 4:8 says, “You served them who, by nature, are not gods”; and a Gloss adds, “They were gods not by nature, but in the opinion of men.”

Still, the name ‘God’ is shareable through a sort of likeness— not according to its entire signification, but according to some part of it. For instance, they are called gods who participate in something divine through a likeness, in keeping with the verse “I have said: you are gods” (Psalm 81:6).

However, if there were a name imposed to signify God not on the part of the nature but on the part of the suppositum—i.e., insofar as He is thought of as a *this-something (hoc aliquid)*—then that

name would not be shareable in any way at all, as perhaps is the case with God's four-letter name (*tetragrammaton*) among the Hebrews. The same thing would hold if someone were to impose on the sun a name that designated just *this* individual.

**Reply to objection 1:** The divine nature is shareable only through participation in a likeness.

**Reply to objection 2:** The reason that the name 'God' is an appellative name, and not a proper name, is that it signifies the divine nature as existing in one who has that nature—even though God Himself is in reality neither universal nor particular. For names correspond not to the mode of being that is found in things, but rather to the mode of being insofar it is found in our cognition.

Nonetheless, according to the truth of the matter, the name 'God' is unshareable in the sense explained for the case of the name 'sun'.

**Reply to objection 3:** The names 'good', 'wise', etc. are imposed because of the perfections that proceed from God to creatures, but they are not imposed to signify God's nature. Rather, they are imposed to signify the perfections themselves absolutely speaking. And so, according to the truth of the matter, they are shareable by many. The name 'God', however, is imposed to signify God's nature because of an operation proper to God that we continually experience.

## Article 10

### Is the name 'God' taken univocally or equivocally when 'God' is predicated through His nature, according to participation, and according to opinion?

It seems that the name 'God' is said univocally of God when it is predicated through His nature, according to participation, and according to opinion (*dicatur per naturam et per participationem et secundum opinionem*):

**Objection 1:** Where there is diversity of signification, there is no contradiction between affirming and denying, since equivocation obstructs the contradiction. But a Catholic who claims that an idol is not God contradicts a Pagan who claims that the idol is God. Therefore, the name 'God' is being taken univocally in the two claims.

**Objection 2:** Just as an idol is God according to opinion but not according to the truth, so too the enjoyment of carnal pleasures is called happiness according to opinion but not according to the truth. But the name 'happiness' is predicated univocally of happiness according to opinion and happiness according to the truth. Therefore, the name 'God' is likewise predicated univocally of God according to the truth and God according to opinion.

**Objection 3:** Univocal names have a single concept (*ratio una*). But when a Catholic claims that there is one God, he means by the name 'God' an omnipotent being who is to be venerated above all things; and a Gentile has the same thing in mind when he claims that an idol is God. Therefore, the name 'God' is predicated univocally in the two claims.

#### But contrary to this:

1. As *Perihermenias* 1 says, what exists in the intellect is a likeness of what exists in reality. But 'animal' is predicated equivocally of a real animal and a picture of an animal. Therefore, the name 'God' is predicated equivocally of God according to the truth and God according to opinion.

2. No one can signify what he does not have a cognition of. But a Gentile does not have a cognition of the divine nature. Therefore, when he claims that an idol is God, he does not signify the true divine nature. But this nature is what the Catholic signifies when he claims that there is one God. Therefore, the name 'God' is predicated equivocally, and not univocally, of God according to the truth

and God according to opinion.

**I respond:** As regards the three significations mentioned above, the name ‘God’ is taken neither univocally nor equivocally, but analogously. This is clear as follows:

Univocal names have altogether the same concept, and equivocal names have altogether diverse concepts, whereas in the case of analogous names what is required is that the name taken with one signification be used in the definition of the same name taken with the other significations. For instance, ‘being’ as said of a substance is used in the definition of ‘being’ as said of an accident. Likewise, ‘healthy’ as said of an animal is used in the definition of ‘healthy’ as said of urine and medicine; for urine is a sign, and medicine a cause, of the health that exists in the animal.

So, too, in the present case. The name ‘God’, insofar as it is taken for the true God, is used in the definition of ‘God’ insofar as ‘God’ is predicated according to opinion or participation. For when we call someone God according to participation, we mean by the name ‘God’ something that has a likeness of the true God. Likewise, when we call an idol God, by the name ‘God’ we mean to signify something which men think to be God.

And so it is clear that the significations of the name differ from one another, but that one of the significations is included in the other significations. Hence, it is manifest that the name ‘God’ is predicated analogously.

**Reply to objection 1:** The multiplicity of names has to do not with the *predication* of a given name but rather with its *signification*. For instance, whatever the name ‘man’ is predicated of, whether truly or falsely, it is said with one sense. But the name ‘man’ would be predicated with multiple senses if we intended to signify diverse things by it—say, if someone intended to signify by the name ‘man’ that which is truly a man and someone else intended to signify by the same name a rock or something else.

Hence, it is clear that a Catholic who claims that an idol is not God contradicts a pagan who asserts this, since both of them are using the name ‘God’ to signify the true God. For when the pagan says that the idol is God, he is not using this name to signify God according to opinion; if he were, then he would be asserting a truth, since even Catholics sometimes use the name with this signification, as when it is said [in Psalm 95:51], “All the gods of the Gentiles are demons.”

**Reply to objection 2 and objection 3:** Something similar should be said in reply to the second and third objections. For these arguments are premised on a diversity of *predications* of the name and not on a diversity of its *significations*.

**Reply to argument 1 for the contrary:** ‘Animal’ as predicated of a true animal and a picture of an animal is not predicated wholly equivocally. Rather, the Philosopher is taking ‘equivocal’ in a broad sense that includes ‘analogous’. For he sometimes says even of ‘being’, which is predicated analogously, that is predicated equivocally of the different categories.

**Reply to argument 2 for the contrary:** Neither the Catholic nor the pagan knows the very nature of God as it exists in itself. Rather, as was explained above (q. 12, a. 12), both of them know Him according to some notion of causality or preeminence or negation. Accordingly, it is possible that when the Gentile claims that an idol is God, he is taking the name ‘God’ with the same signification that the Catholic is taking it with when he claims that the idol is not God. However, if there were someone who did not know God according to any notion at all, then he would not be naming God—unless, perhaps, he were doing so in the way that we utter names whose signification we do not know.

## Article 11

### Is the name ‘He Who Is’ an especially proper name of God?

It seems that the name ‘He Who Is’ (*Qui est*) is not an especially proper name of God:

**Objection 1:** As has been explained (a. 9), the name ‘God’ is an unshareable name. But the name ‘He Who Is’ is not an unshareable name. Therefore, the name ‘He Who Is’ is not an especially proper name of God.

**Objection 2:** In *De Divinis Nominibus*, chap. 3, Dionysius says, “The name ‘good’ makes manifest everything that proceeds from God.” But it belongs especially to God to be a universal principle of things. Therefore, it is the name ‘good’, and not the name ‘He Who Is’, that is especially proper to God.

**Objection 3:** Every divine name seems to imply a relation to creatures, since we have cognition of God only through creatures. But the name ‘He Who Is’ implies no relation to creatures. Therefore, the name ‘He Who Is’ is not especially proper to God.

**But contrary to this:** In Exodus 3:13-14, Moses asks, “If they shall say to me: ‘What is His name?’, what shall I say to them?” And the Lord answers him, “Thus shall you say to them: ‘He Who Is has sent me to you.’” Therefore, the name ‘He Who Is’ is a maximally proper name of God.

**I respond:** There are three reasons why the name ‘He Who Is’ is an especially proper name of God:

First, because of its *signification*. For it does not signify any particular form, but instead signifies *esse* itself. Hence, since, as was shown above (q. 3, a. 4), God’s *esse* is His very essence—something that is true of nothing else—it is clear that of all names, this name denominates God in an especially proper way. For each thing is denominates from its form.

Second, because of its *universality*. For all other names are such that either (a) they are less common than it, or (b) if they are convertible with it, they still add something conceptual to it and thus in some way inform it and make it more determinate. Now in this life our intellect cannot have cognition of the very essence of God as it is in itself; instead, whatever determinations our intellect makes regarding what it understands about God, it falls short of the way that God exists in Himself. And so names are predicated of God by us in a more proper way to the extent that they are less determinate and more common and absolute. Hence, Damascene says, “‘He Who Is’ is more central than all the names that are said of God. For since it includes everything within itself, it signifies the *esse* itself as a certain infinite and uncircumscribed sea of substance.” For every other name determines some particular mode of the substance of a thing, whereas the name ‘He Who Is’ does not determine any mode of being, but is related indeterminately to all modes of being. And so it names “an infinite sea of substance.”

Third, because of its *cosignification*. For it signifies *esse* in the present, and this is said in an especially proper way of God, whose *esse*, as Augustine puts it in *De Trinitate* 5, knows no past or future.

**Reply to objection 1:** The name ‘He Who is’ is a more proper name than the name ‘God’ both with respect to that because of which it is imposed, viz., *esse*, and also with respect to its mode of signifying and co-signifying, as has been explained. But with respect to *what* it is imposed to signify, the name ‘God’ is more proper, because it is imposed to signify God’s nature. A still more proper name is the four-letter name (*tetragrammaton*), which is imposed to signify the unshareable and, if one may say it, singular substance of God

**Reply to objection 2:** The name ‘good’ is the principal name of God insofar as He is a cause, but it is not the principal name of God absolutely speaking. For, absolutely speaking, *esse* is

conceptually prior to *cause*.

**Reply to objection 3:** It is not necessary that all the divine names should imply a relation to creatures. Rather, it suffices that all the divine names should be imposed because of some perfection that proceeds from God to creatures. But the first among these perfections is *esse* itself, from which the name ‘He Who Is’ is taken.

## Article 12

### Is it possible to formulate affirmative propositions about God?

It seems that affirmative propositions cannot be formulated about God:

**Objection 1:** In *De Caelesti Hierarchia*, chap. 2, Dionysius says, “Negations are true of God, but affirmations are incongruous.”

**Objection 2:** In *De Trinitate* Boethius says, “A simple form cannot be a subject.” But, as was shown above (q. 3, a. 7), God is a maximally simple form. Therefore, He cannot be a subject. But anything about which an affirmative proposition is formulated is taken as a subject. Therefore, it is impossible for an affirmative proposition to be formulated about God.

**Objection 3:** Every act of intellective understanding is false that understands a thing otherwise than it is. But, as was proved above (q. 3, a. 7), God has *esse* without any composition. Therefore, since every affirmative act of the intellect understands something involving composition, it seems that a true affirmative proposition cannot be formulated about God.

**But contrary to this:** What is false does not underlie the Faith. But some affirmative propositions are part of the Faith, e.g., that God is three and one, and that He is omnipotent. Therefore, true affirmative propositions can be formulated about God.

**I respond:** True affirmative propositions can be formulated about God.

To see this clearly, note that in every true affirmative proposition the predicate and the subject must signify something that is in some sense the same in reality and diverse in concept. This is clear both in the case of propositions that have an accidental predicate and propositions that have a substantial predicate. For it is clear that a man and a white thing are the same in subject and differ in concept, since the concept *man* is different from the concept *white*. And the same holds when I say, ‘A man is an animal’, since the very thing that is a man is truly an animal. For in the same suppositum there exists a sentient nature, by virtue of which he is called an animal, and a rational nature, by virtue of which he is called a man. Hence, the predicate ‘animal’ and the subject ‘man’ are the same in suppositum but conceptually diverse.

But this holds in a certain sense even in the case of propositions in which the same thing is predicated of itself. For that which the intellect posits as the subject points to a suppositum, whereas that which it posits as the predicate points to the nature of a form that exists in the suppositum. Accordingly, predicates are said to be taken formally and the subjects are said to be taken materially. And the plurality of subject and predicate corresponds to this conceptual diversity, whereas the intellect signifies the identity of the thing through the very composition of subject and predicate.

Now God, considered in Himself, is altogether one and simple. But our intellect has cognition of Him by means of diverse conceptions, because it is unable to see Him as He is in Himself. Still, even though it understands Him under diverse conceptions, it nonetheless knows that one and same reality, absolutely speaking, corresponds to all these conceptions. Therefore, the intellect represents the conceptual plurality (*pluralitatem quae est secundum rationem*) by means of the plurality of predicate

and subject, whereas it represents the unity by means of the composition of predicate and subject.

**Reply to objection 1:** Dionysius says that affirmations about God are ‘incongruous’ (or ‘inappropriate’, according to an alternative translation) because, as was explained above (a. 3), no name belongs to God with respect to its mode of signifying.

**Reply to objection 2:** Our intellect cannot apprehend simple subsistent forms as they exist in themselves; instead, it apprehends them according to the mode of composite things, in which there is something that is a subject and something that exists in the subject. And so it apprehends a simple form in the manner of a subject and then attributes something to it.

**Reply to objection 3:** The proposition, ‘An act of intellective understanding is false that understands a thing otherwise than it is’ has two meanings, because the adverb ‘otherwise’ can modify the verb ‘understands’ either with respect to the thing that is understood or with respect to the one who understands.

If it modifies the verb with respect to the thing that is understood, then the proposition is true and its meaning is that if any act of intellect understanding understands a thing to be otherwise than it is, then it is false. But this reading is not relevant to the present case, since our intellect, in formulating a proposition about God, does not assert that He is composite, but asserts that He is simple.

On the other hand, if ‘otherwise’ modifies the one who understands, then the proposition is false, since the mode of the act of intellect in understanding is different from the mode of the thing in being. For it is clear that our intellect understands the material things that are lower than it in an immaterial mode—not that it understands them to be immaterial, but rather that it has an immaterial mode in understanding them. And, similarly, when it understands simple things that are higher than it, it understands them according to its own mode, viz., in a composite way—yet not in such a way that it understands them to be composite. And so our act of understanding is not false when it formulates a [propositional] composition about God.

## QUESTION 14

### God's Knowledge

Having considered the things that pertain to God's substance, we must now consider the things that pertain to His operation (questions 14-25).

Since some operations remain within the one who is operating and others proceed to an outward effect, we will first discuss God's knowledge (*scientia*) (questions 14-18) and His will (*voluntas*) (questions 19-24)—for understanding exists within the knower, and willing exists within the one who wills—and after that His power (question 25), which is thought of as a principle of God's operation as it proceeds to an outward effect.

Now since to understand is to be alive in a certain way, after considering the divine knowledge (question 14), we will have to consider God's life (question 18). And since knowledge is of truths, we will also have to consider truth (question 16) and falsity (question 17). Again, since whatever is known exists in the knower, and since the natures of things as they exist in God as a knower are called ideas, a consideration of God's ideas (question 15) will have to be adjoined to the consideration of His knowledge.

On the topic of God's knowledge there are sixteen questions: (1) Is there knowledge in God? (2) Does God understand Himself? (3) Does God comprehend Himself? (4) Is God's act of understanding His substance? (5) Does God understand things that are distinct from Himself? (6) Does God have a proper cognition of those things? (7) Is God's knowledge discursive? (8) Is God's knowledge a cause of things? (9) Does God have knowledge of things that do not exist? (10) Does God have knowledge of evils? (11) Does God have knowledge of singular things? (12) Does God have knowledge of infinities? (13) Does God have knowledge of future contingents? (14) Does God know propositions (*enuntiabilia*)? (15) Is God's knowledge variable? (16) Is God's knowledge of things speculative or practical?

### Article 1

#### Is there knowledge in God?

It seems that there is no knowledge (*non sit scientia*) in God:

**Objection 1:** Scientific knowledge (*scientia*) is a habit. But habits do not belong to God, since they fall in between potentiality and actuality. Therefore, there is no knowledge in God.

**Objection 2:** Since scientific knowledge is of conclusions, it is a type of cognition that is caused by something else, viz., by the cognition of the principles. But there is nothing caused in God. Therefore, there is no knowledge in God.

**Objection 3:** Every instance of knowledge is either universal or particular. But, as was shown above (q. 13, a. 9), the universal and the particular do not exist in God. Therefore, there is no knowledge in God.

**But contrary to this:** In Romans 11:33 the Apostle says, "O the depth of the riches of the wisdom and of the knowledge of God!"

**I respond:** Knowledge exists in God in the most perfect way.

To see this clearly, notice that things with cognition differ from things that lack cognition by the fact that things that lack cognition have nothing except their own form alone, whereas things with cognition are capable of having the form of another thing as well, since a species of a thing of which there is cognition exists in the thing that has the cognition. Hence, it is clear that the nature of a thing that lacks cognition is more contracted and limited, whereas the nature of a thing with cognition is more expansive and extensive. This is why, in *De Anima* 3, the Philosopher says, "The soul is in a certain way

all things.”

Now form is contracted by matter. That is why we said above (q. 7, aa. 1-2) that the more immaterial a form is, the closer it comes to being in some sense infinite. Therefore, it is clear that the immateriality of a given thing is the reason that it is capable of cognition, and its mode of cognition corresponds to its mode of immateriality. Hence, *De Anima 2* says that it is because of their materiality that plants do not have cognition. On the other hand, the senses are capable of cognition because they are receptive of species without matter, and the intellect is even more capable of cognition because, as *De Anima 3* says, it is more separated from matter and unmixed with it.

So because, as is clear from what was said above (q. 7, a. 1), God is at the summit of immateriality, it follows that He is at the summit of cognition.

**Reply to objection 1:** Since, as was explained above (q. 4, a. 2), the perfections that proceed from God to creatures exist in a higher mode in God Himself, it follows that whenever a name taken from some perfection of a creature is attributed to God, it is necessary to exclude from its signification anything that pertains to the imperfect mode which belongs to the creature. Hence, knowledge is not a quality or habit in God, but is instead His substance and pure actuality.

**Reply to objection 2:** As was explained above (q. 13, a. 4), things that are fragmented and multiplied in creatures exist in God in a simple and unified way. Now a man has diverse cognitions corresponding to the diverse things that he has cognition of. Insofar as he has cognition of principles, he is said to have *understanding (intelligentia)*; insofar as he has cognition of conclusions, he is said to have *scientific knowledge (scientia)*; insofar as he has cognition of the highest cause, he is said to have *wisdom (sapientia)*; and insofar as he has cognition of things to be done, he is said to have *counsel (consilium)* or *prudence (prudentia)*.

Now, as will be explained below (a. 7), God has cognition of all these things by a unified and simple cognition. Hence, God’s simple cognition can be called by all of the above names, but in such a way that when these names are used in predications about God, whatever involves imperfection is excluded from them and whatever involves perfection is held on to. And this is in accord with Job 12:13, “With Him is wisdom and strength, He has counsel and understanding.”

**Reply to objection 3:** Knowledge exists according to the mode of the knower, since what is known exists in the knower according to the mode of the knower. And so because the mode of God’s essence is higher than the mode with which creatures exist, God’s knowledge does not have the mode of created knowledge; more specifically, it does not have the mode of being universal or particular, or of existing as a habit or in potentiality, or of being disposed in accord with any other such mode.

## Article 2

### Does God understand Himself?

It seems that God does not understand Himself (*non intelligat se*):

**Objection 1:** The *Liber De Causis* says, “Every knower who knows his own essence returns to his essence with a complete return.” But God does not exit from His essence; nor is He in any way moved. And so it does not belong to Him to return to His essence. Therefore, He does not know His own essence.

**Objection 2:** As *De Anima 3* says, to understand is to be acted upon and moved in a certain way; again, knowledge is an assimilation to the thing that is known; yet again, the knower is perfected by what is known. But nothing is moved or acted upon or perfected by itself; and, as Hilary puts it, “nothing is a

likeness of itself.” Therefore, God does not know Himself.

**Objection 3:** We ourselves are similar to God principally because of our intellect, since, as Augustine says, it is because of our minds that we are in the image of God. But, as *De Anima* 3 says, our intellect does not understand itself except insofar as it understands other things. Therefore, neither does God understand Himself—except, perhaps, by understanding other things.

**But contrary to this:** 1 Corinthians 2:11 says, “The things that are of God, no man knows, but the Spirit of God.”

**I respond:** God understands Himself through Himself (*se per seipsum intelligit*).

To see this clearly, notice that in actions that pass to an outward effect, the object of the action, which is signified as its terminus, is something outside of the thing that is acting; by contrast, in actions that exist within the thing that is acting, the object signified as the terminus of the action exists within the very thing that is acting. And it is just insofar as this object exists within the thing that is acting that the action exists in actuality. This is why *De Anima* says that the sensible thing in actuality is an act of the sensory power, and that the intelligible thing in actuality is an act of intellectual understanding. For we are actually sensing or actually understanding something by virtue of the fact that our intellect or sensory power is being actually informed by an intelligible or sensible species. Accordingly, the sensory powers or the intellect are distinct from the thing sensed or the thing understood only insofar as they are in potentiality [with respect to the act of sensing or the act of intellectual understanding].

Therefore, since God has nothing at all of potentiality, but is instead pure actuality, in Him the act of intellectual understanding and the thing understood are the same in every way. More specifically, He does not lack an intelligible species in the way our intellect does when it is understanding only in potentiality; nor is the intelligible species distinct from the substance of God’s intellect, as happens with our intellect when it is understanding in actuality. Rather, in the case of God, the intelligible species itself is the divine intellect itself. And so God understands Himself through Himself.

**Reply to objection 1:** ‘To return to its own essence’ is nothing other than for the thing to subsist in its very self. For insofar as a form perfects matter by giving it *esse*, it is in a sense poured out upon it, whereas insofar as it has *esse* in itself, it returns to itself. Therefore, those cognitive powers that are not subsistent, but are instead acts of certain organs, do not know themselves, as is clear in the case of the particular sensory powers. But cognitive powers that are subsistent *per se* do know themselves. This is why the *Liber de Causis* says that “one who knows his own essence returns to his own essence.”

Now subsisting *per se* belongs especially to God. Hence, using this manner of speaking, it is especially true of God that He ‘returns to His own essence’ and knows Himself.

**Reply to objection 2:** As *De Anima* 3 says, ‘moved’ and ‘acted upon’ are being taken equivocally when one says that to understand is to be moved or acted upon in a certain way. For an act of intellectual understanding (*intelligere*) is not a movement, i.e., an act of something incomplete that exists in one thing because of something else. Rather, an act of intellectual understanding is an act of something complete, i.e., an act that exists within the agent itself.

Likewise, it is [only] in the case of an intellect that is sometimes in potentiality [with respect to an act of understanding] that the intellect is perfected by, or assimilated to, the intelligible thing. For the reason it is in potentiality is that it differs from the intelligible thing and is assimilated to it by means of an intelligible species, which is a likeness of the thing that is understood. And the intellect is perfected by the intelligible species in the way that potentiality is perfected by actuality.

By contrast, God’s intellect, which is not in potentiality in any way, is neither perfected by nor assimilated to the intelligible thing, but is instead its own perfection and its own intelligible thing.

**Reply to objection 3:** Natural *esse* does not belong to primary matter, which exists in potentiality, except insofar as it is brought into actuality by a form. Now our passive intellect (*intellectus noster*

*possibilis*) has the same status in the order of intelligible things that primary matter has in the order of natural things, since it is in potentiality with respect to intelligible things in the same way that primary matter is in potentiality with respect to natural things.. Hence, our passive intellect cannot have an act of understanding except insofar as it is perfected by the intelligible species of some entity. And so it understands itself, just as it understands other things, by means of an intelligible species. For it is clear that by having a cognition of an intelligible thing, it understands its very own self as engaged in understanding, and through the act of understanding it knows the intellectual power.

By contrast, God is pure actuality both in the order of existing things and in the order of intelligible things. And so He understands Himself through Himself.

### Article 3

#### Does God comprehend Himself?

It seems that God does not comprehend Himself (*non compehendat seipsum*):

**Objection 1:** In 83 *Quaestiones* Augustine says, “That which comprehends itself is finite with respect to itself.” But God is infinite in all respects. Therefore, He does not comprehend Himself.

**Objection 2:** Someone might reply that He is infinite with respect to us, but finite with respect to Himself.

Against this: Each thing is more true as it appears to God than as it appears to us. Therefore, if God is finite with respect to Himself but infinite with respect to us, then it is more true that God is finite than that He is infinite. But this is contrary to what was proved above (q. 7, a. 1). Therefore, God does not comprehend Himself.

**But contrary to this:** In the same place Augustine says, “Everything that understands itself comprehends itself.” But God understands Himself. Therefore, God comprehends Himself.

**I respond:** God comprehends Himself perfectly. This is clear as follows:

Something is said to be comprehended when the limit of the cognition of that thing is reached, and this occurs when the thing is known as perfectly as it can be known. For instance, a demonstrable proposition is comprehended when it is known through a demonstration, but not when it is known through some probable argument.

Now it is clear that God knows Himself as perfectly as He can be perfectly known. For each thing is knowable according to the degree of its actuality, since, as *Metaphysics* 9 says, something is known insofar as it exists in actuality and not insofar as it exists in potentiality. But God’s power in knowing is as great as His actuality in existing. For, as was shown above (a. 1), God has cognition because He is actual and separated from any matter or potentiality. Hence, it is clear that He knows Himself to the full extent that He can be known, and because of this He perfectly comprehends Himself.

**Reply to objection 1:** If ‘comprehend’ is taken properly, then it signifies something that possesses and includes another. And in this sense anything that is comprehended must be finite, just as everything that is included in another is finite. But this is not the sense in which God is said to be comprehended by Himself—as if His intellect were distinct from Himself, and captured and included Him.

Instead, locutions of this sort have to be explained in terms of negation. For just as God is said to exist in Himself because He is not contained by anything external, so, too, He is said to be comprehended by Himself because there is nothing of Him that lies hidden from Him (*nihil est sui quod lateat ipsum*). For as Augustine says in *De Videndo Deum*, “A whole is comprehended by sight when it is seen in such a way that nothing of it lies hidden from the seer.”

**Reply to objection 2:** When one says ‘God is finite with respect to Himself’, this should be interpreted according to a proportional similarity. For in not exceeding His own intellect, He is like something finite in not exceeding a finite intellect. However, God is not called ‘finite with respect to Himself’ in the sense that He understands Himself to be something finite.

#### Article 4

##### Is God’s very act of understanding His substance?

It seems that God’s very act of understanding is not His substance:

**Objection 1:** Understanding is a certain action. But ‘action’ signifies something that proceeds from the one who is acting. Therefore, God’s act of understanding is not itself God’s very substance.

**Objection 2:** When someone understands that he understands, this is not to understand anything great or central, but is instead to understand something secondary and subordinate. Therefore, if God is His very act of understanding, then to understand God will be, as it were, understanding an act of understanding. And so it will be no great thing to understand God.

**Objection 3:** Every act of understanding is an act of understanding something or other. Therefore, if, when God understands Himself, He Himself is not distinct from His own act of understanding, then He understands that He understands, and He understands that He understands that He understands—and so on *ad infinitum*. Therefore, it is not the case that God’s very act of understanding is His substance.

**But contrary to this:** In *De Trinitate* 7 Augustine says, “For God, to be is the same as to be wise.” But to be wise is to understand. Therefore, for God to be (*esse*) is the same as to understand (*intelligere*). But, as was shown above (q. 3, a. 4), God’s *esse* is His substance. Therefore, God’s act of understanding is His substance.

**I respond:** It is necessary to say that God’s act of understanding is His essence. For if God’s act of understanding were distinct from His essence, then, as the Philosopher says in *Metaphysics* 12, the actuality and perfection of God’s substance would have to be some distinct thing to which God’s substance would be related as potentiality to actuality—which is altogether impossible. For an act of understanding is the perfection and actuality of the one who understands.

But we have to consider how this is so. For, as was explained above (a. 2), to understand is not an action that proceeds toward something extrinsic, but instead it remains within the agent as his actuality and perfection, in the way that *esse* is the perfection of a thing that exists. For just as *esse* follows upon a form, so an act of understanding follows upon an intelligible species. But, as was shown above (q. 3, a. 4), in God there is no form that is other than His *esse*. So because, as was explained above (a. 2), His very essence is also an intelligible species, it necessarily follows that His very act of understanding is His essence and His *esse*.

So from everything that has been said so far, it is clear that in God the following are altogether one and the same thing: (a) the intellect, (b) that which is understood, (c) the intelligible species, and (d) the very act of understanding. Hence, it is clear that when God is claimed to be an intelligent being, no multiplicity is being posited within His substance.

**Reply to objection 1:** An act of understanding is not an action that goes forth from the who is acting, but rather remains in him.

**Reply to objection 2:** When an act of understanding that is not subsistent is understood, then what is understood is no great thing—as when we understand our own act of understanding. And so there is no comparison with God’s act of understanding, which is subsistent.

**Reply to objection 3:** The reply to this objection is clear from the reply to the second objection.

For God's act of understanding, which subsists in itself, is an understanding of His very self—and not of anything distinct from Him, which is what would be necessary in order to generate an infinite regress.

## Article 5

### Does God understand things that are distinct from Himself?

It seems that God does not understand things that are distinct from Himself:

**Objection 1:** Anything that is distinct from God exists outside of Him. But in *83 Quaestiones* Augustine says, “God does not see anything outside of Himself.” Therefore, God does not know things that are distinct from Himself.

**Objection 2:** The thing that is understood is a perfection of the one who understands. Therefore, if God understands things that are distinct from Himself, then something distinct from God will be God's perfection and more noble than Him—which is impossible.

**Objection 3:** An act of understanding takes its species from the intelligible thing, just as every other kind of action takes its species from its object; hence, an act of understanding is itself more noble to the extent that the thing understood is more noble. But, as explained above (a. 4), God is His very own act of understanding. Therefore, if God understands something distinct from Himself, then God Himself will take His species from something distinct from Himself—which is impossible. Therefore, God does not understand things distinct from Himself.

**But contrary to this:** Hebrews 4:13 says, “All things are naked and open to His eyes.”

**I respond:** It must be the case that God knows things that are distinct from Himself. For it is clear that He understands Himself perfectly; otherwise, His *esse* would not be perfect, since His *esse* is His act of understanding. But if something is known perfectly, then its power must be known perfectly; and something's power cannot be known perfectly unless the things to which that power extends are known. Hence, since God's power extends to things distinct from Himself in virtue of the fact that, as is clear from what was said above (q. 2, a. 3), He is the first efficient cause of all beings, it must be the case that God knows things that are distinct from Himself.

This becomes even more evident if we add that the very *esse* of the first efficient cause, i.e., God, is His act of understanding. Hence, if all effects preexist in God as in a first cause, then they must exist in His very act of understanding, and all of them must exist in Him according to an intelligible mode. For everything that exists in another exists in it according to the mode of that in which it exists.

Now in order to determine the way in which God knows things distinct from Himself, notice that there are two ways in which something can be known: (a) in itself and (b) in another. Something is known in itself when it is known through a proper species that measures up to the knowable thing itself—as when the eye sees a man through a species of the man. On the other hand, a thing is seen in another when it is seen in the species of something that contains it—as when a part is seen in the whole through a species of the whole, or as when a man is seen in a mirror through a species of the mirror, or in whatever other way it is possible for one thing to be seen in another.

Therefore, one should say that God sees Himself in Himself, since He sees Himself through His own essence. Things distinct from Himself, however, He sees not in themselves, but in His own self, insofar as His essence contains a likeness of things that are distinct from Himself.

**Reply to objection 1:** The passage from Augustine, where he says that God “does not see anything outside of Himself,” should not be interpreted to mean that nothing which exists outside of Himself is seen. Rather, as has been explained, it should be interpreted to mean that what exists outside of Himself is not seen except in Himself.

**Reply to objection 2:** The thing understood is the perfection of the one who understands, but not according to its substance. Rather, it is the perfection of the one who understands according to the species by which it exists in the intellect as the intellect's form and perfection. As *De Anima* 3 puts it, "It is not the rock, but a species of the rock, that exists in the soul."

However, things that are distinct from God are understood by God insofar as His essence contains species of them in the way that has been explained. Hence, it does not follow that anything distinct from the very essence of God is a perfection of the divine intellect.

**Reply to objection 3:** An act of understanding takes its species not from what is understood in another, but from the principal thing which is understood and in which the other things are understood. For an act of understanding takes its species from its object insofar as the intelligible form is a principle of the intellectual operation, since every action takes its species from the form that is the principle of the action, in the way that the action of giving heat takes its species from the heat. Hence, an intellectual operation takes its species from the intelligible form that makes the intellect to be in act. And this is the species of the principal thing that is understood—which in the case of God is nothing other than His essence, in which all the species of things are included. Hence, God's act of understanding—or, better, God Himself—does not need to take a species from anything distinct from the divine essence.

## Article 6

### Does God know things that are distinct from Himself by means of a proper cognition?

It seems that God does not know things that are distinct from Himself by means of a proper cognition (*propria cognitione*):

**Objection 1:** As was just explained (a. 5), God knows things distinct from Himself insofar as things distinct from Himself exist within Him. But things distinct from Him exist within Him as in a general and universal first cause. Therefore, things distinct from God are likewise known by Him as in a first and universal cause. But this is to know them in general and not according to a proper cognition. Therefore, God knows things distinct from Himself in general and not according to a proper cognition.

**Objection 2:** God's essence is as far distant from a creature's essence as a creature's essence is from God's essence. But as was explained above (q. 12, a. 2), God's essence cannot be known through a creature's essence. Therefore, neither can a creature's essence be known through God's essence. And so, since God does not know anything except through His own essence, it follows that He does not know a creature according to its essence in the sense of knowing of it what it is (*quid est*)—which is what it means to have a proper cognition of an entity.

**Objection 3:** A proper cognition is had of an entity only by means of a concept that is proper to it. But since God knows all things through His own essence, it does not seem that He knows each thing through a proper concept. For it cannot be the case that one and the same thing is a proper concept of many and diverse entities. Therefore, God has a general, and not a proper, cognition of things. For to know things without knowing them according to a proper concept is to know them only in general.

**But contrary to this:** To have a proper cognition of things is to know them not only in general, but insofar as they are distinct from one another. But this is the way in which God knows things. Hence, Hebrews 4:12-13 says, "He reaches unto the division of the soul and the spirit, of the joints also and the marrow, and is a discerner of the thoughts and intents of the heart; neither is there any creature invisible in His sight."

**I respond:** On this topic some have made the mistake of asserting that God knows things distinct from Himself only in general, viz., insofar as they are beings. For, they claim, just as fire, if it knew

itself as a principle of heat, would know the nature of heat and would know all other things insofar as they are hot, so too God, insofar as He knows Himself as a principle of being, knows the nature of being and knows all other things insofar as they are beings.

But this is impossible. For to understand something in general, and not specifically, is to know it imperfectly. Hence, as is clear from *Physics* 1, when our intellect goes from potentiality into its act, it proceeds from the imperfect to the perfect, attaining a universal and vague cognition of things before attaining a proper cognition of them. Therefore, if God's cognition of things distinct from Himself were only general and not specific, it would follow that His act of understanding—and, consequently, His *esse* as well—is not perfect in every way. But this is contrary to what was shown above (q. 4, a. 1). Therefore, one must maintain that He knows things distinct from Himself by means of a proper cognition, i.e., not just insofar as they share in the nature of being, but insofar as one is distinct from another.

To see this clearly, notice that some writers, when they want to show that God knows many things by means of one thing, use a certain type of example: If, say, the center of a circle knew itself, it would know all the lines that proceed from the center; or, again, if light knew itself, it would know all the colors. Now these examples are, to be sure, similar [to the case of God] in one respect, viz., universal causality. However, the examples are deficient because the one universal principle in question is a cause of the multiplicity and diversity not with respect to the principle of distinction, but only with respect to what the things share in common. For the diversity of the colors is caused not by the light alone, but also by the diverse dispositions of the diaphanous recipients of light. Similarly, the diversity of lines [in the circle] is caused by the diverse places. And from this it follows that diversity and multiplicity of the sort in question can be known in their principle only by means of a general cognition and not by means of a proper cognition.

But this is not how it is with God. For it was shown above (q. 4, a. 2) that all the perfections that exist in creatures preexist in their entirety within God and are contained within Him in the most excellent way. But what pertains to perfection is not just that which the creatures share in common, viz., the very fact that they exist, but also that by virtue of which the creatures are distinct from one another—e.g., living, and understanding, and other such perfections by virtue of which living beings differ from non-living beings and intelligent beings from non-intelligent beings. In addition, every form through which an entity is constituted in its own species is a certain perfection. And so all things preexist in God not just with respect to what is common to all of them, but also with respect to that by virtue of which they differ from one another.

And so since God contains all perfections within Himself, God's essence is related to all the essences of things not as what is common to what is proper—in the way that unity is related to numbers, or the center of a circle to the lines—but rather as a perfect actuality is related to an imperfect actuality—in the way, say, that *man* is related to *animal*, or that the number six, which is a perfect number, is related to the imperfect numbers contained under it. But it is clear that an imperfect actuality can be known through a perfect actuality not only in general, but also by means of a proper cognition. For instance, if someone knows a man, then he knows an animal by means of a proper cognition; and if someone knows the number six, then he knows the number three by means of a proper cognition.

So, then, since God's essence has within itself whatever perfection is had by the essence of any other entity, and still more beyond that, it follows that God can know all things within Himself by means of a proper cognition. For the proper nature of each thing consists in its participating in some way in God's perfection. But God would not know Himself perfectly if He did not know all the ways that His own perfection can be participated in by other things; in fact, He would not even know the very nature of being perfectly if He did not know all the modes of being. Hence, it is clear that God knows all things by means of a proper cognition, i.e., He knows them insofar as they are distinct from one another.

**Reply to objection 1:** The proposition ‘A thing is known insofar as it exists in the knower’ can be taken in two senses.

In one sense, the adverb ‘insofar as’ connotes the mode of cognition on the part of the thing known. Taken in this sense, the proposition is false. For it is not always the case that a knower knows the thing that is known with respect to the *esse* that the latter has in the knower. For instance, it is not the case that the eye has cognition of a rock with respect to the *esse* that the rock has in the eye; instead, by means of the species of the rock that exists within itself, the eye has a cognition of the rock with respect to the *esse* that the rock has outside the eye. Even if the knower knows the thing that is known with respect to the *esse* it has within the knower, it is still the case that he knows it with respect to the *esse* that it has outside the knower. For example, the intellect knows a rock with respect to the intelligible *esse* it has within the intellect insofar as it knows that it itself is understanding [a rock]; but it still knows the rock’s *esse* in its proper nature.

On the other hand, if the proposition is taken in such a way that the adverb ‘insofar as’ connotes the mode of cognition on the part of the knower, then it is true that the knower knows the thing that is known only insofar as the latter exists within the knower. For the more perfectly the thing known exists in the knower, the more perfect the mode of cognition.

So, then, one should say that God not only knows that the things exist within Himself, but also knows the things in their proper natures by virtue of containing them within Himself. And the more perfectly a thing exists within Him, the more perfectly He knows it in its proper nature.

**Reply to objection 2:** A creature’s essence is related to God’s essence as an imperfect actuality is related to a perfect actuality. And so a creature’s essence is not sufficient to lead to a cognition of God’s essence, but God’s essence is indeed sufficient to lead to a cognition of a creature’s essence.

**Reply to objection 3:** The same concept cannot be taken as the concept of diverse things in the sense of corresponding exactly to each of the things. But God’s essence is something that surpasses all creatures. Hence, God’s essence can be taken as the proper concept of each thing insofar as it is able to be participated in, or imitated by, diverse creatures in diverse ways.

## Article 7

### Is God’s knowledge discursive?

It seems that God’s knowledge is discursive (*discursiva*):

**Objection 1:** God’s knowledge exists not as a habit of knowing, but as an occurrent act of intellective understanding (*non est secundum scire in habitu sed secundum intelligere in actu*). But according to the Philosopher in *Topics 2*, one can know many things at once in a habit of knowing, whereas one can have an act of intellective understanding only with respect to one thing. Therefore, since God knows many things—for, as has been shown (aa. 2 and 5), He knows both Himself and other things—it seems that He does not understand all things at once, but instead moves from one to another (*de uno in aliud discurrat*).

**Objection 2:** To know an effect through its cause is to know as a discursive reasoner. But God knows other things through Himself in the way that one knows an effect through a cause. Therefore, His cognition is discursive.

**Objection 3:** God knows each creature more perfectly than we do. But we ourselves know effects in their created causes, and so we move from the causes to what is caused by them. Therefore, the same thing seems to be true of God.

**But contrary to this:** In *De Trinitate 15* Augustine says, “God does not see all things one by one

or individual by individual, as if He were turning His sight from here to there and from there to here; rather, He sees all things at once.”

**I respond:** There is no discursive reasoning in God’s knowledge (*in divina scientia nullus est discursus*). This is clear as follows:

In our knowledge there are two types of discursive reasoning. The one type involves *only succession*, as when, after having an act of intellective understanding with respect to one thing, we turn to consider something else. The second type involves *causality*, as when we arrive at the cognition of conclusions through their principles.

The first type of discursive reasoning cannot belong to God. For while we understand many things successively when each is considered in itself, we understand them all at once when we understand them in some one thing—as, for example, when we understand the parts in the whole, or when we see diverse things in a mirror. But, as has been established (a. 5), God sees all things in some one thing, viz., in Himself. Hence, He sees them all at once and not successively.

Similarly, the second type of discursive reasoning cannot belong to God. For, first of all, the second type presupposes the first type, since those who are proceeding from principles to conclusions do not consider both of them simultaneously. Second, this sort of discursive reasoning is had by one who is proceeding from what is known to what is unknown. Hence, it is clear that while he is considering the first, he is still ignorant of the second, and so the second is being discerned not *in* the first, but rather *on the basis of* the first (*non in primo sed ex primo*). By contrast, the terminus of discursive reason occurs when the second is seen *in* the first—after the effects have been analyzed into their causes—and at that point discursive reasoning ceases. Hence, since God sees His own effects *in* Himself as in a cause, His cognition is not discursive.

**Reply to objection 1:** Even though just one thing at a time can be understood in itself, nonetheless, as has been explained, it is possible to understand many things in some one thing.

**Reply to objection 2:** God does not know effects *through* a cause in the sense that the cause is first discerned while the effects are still unknown. Rather, he knows the effects *in* the cause. Hence, as has been explained, His cognition does not involve discursive reasoning.

**Reply to objection 3:** God sees the effects of created causes in those very causes much better than we do. However, He does not see the effects in such a way that His cognition of the effects is caused in Him by His cognition of their created causes—as happens with us. Hence, His knowledge is not discursive.

## Article 8

### Is God’s knowledge a cause of things?

It seems that God’s knowledge is not a cause of things:

**Objection 1:** In his commentary on the Epistle to the Romans, Origen says, “It is not the case that something will occur because God knows that it will occur; rather, it is because it will occur that it is known by God before it occurs.”

**Objection 2:** Once a cause is posited, its effect is posited. But God’s knowledge is eternal. Therefore, if God’s knowledge is a cause of created things, then it seems that creatures exist from eternity.

**Objection 3:** As *Metaphysics* 10 says, what is knowable is prior to the knowledge of it and is a measure of that knowledge. But what is posterior and is measured cannot be a cause [of what is prior to it and measures it]. Therefore, God’s knowledge is not a cause of things.

**But contrary to this:** In *De Trinitate* 15 Augustine says, “It is not because they exist that God knows all creatures, both spiritual and corporeal. Rather, they exist because He knows them.”

**I respond:** God’s knowledge is a cause of things. For God’s knowledge is related to all created things as a craftsman’s knowledge is related to his artifacts. But a craftsman’s knowledge is a cause of the artifacts, because the craftsman acts through his understanding. Hence, the form of his act of intellectual understanding must be a principle of his action, in the way that heat is a principle of producing warmth.

Notice, however, that a natural form does not denominate a principle of action insofar as it is a form that remains in the thing to which it gives *esse*; rather, it denominates an action insofar as it has an inclination toward its effect. Similarly, an intelligible form does not denominate a principle of action insofar as it merely exists in the knower, unless it is joined to an inclination toward its effect—an inclination that comes from the will. For because an intelligible form is related to opposites (since the same knowledge applies to opposites), it would not produce a determinate effect if it were not determined by a desire to one of the opposites, as *Metaphysics* 9 points out.

Now it is clear that God causes things through His understanding, since His very *esse* is His own act of understanding. Hence, His knowledge must be a cause of things insofar as it is joined to His act of will. This is why God’s knowledge, insofar as it is a cause of things, is customarily called His *knowledge of approbation* (*scientia approbationis*).

**Reply to objection 1:** Origen was invoking the nature of knowledge, which, as has been explained, does not involve the nature of causality unless it is adjoined to an act of will.

However, his claim that God foreknows certain things because they will exist should be interpreted as referring to a cause of *inference*, and not to a cause of *being*. For if anything will occur, it follows that God foreknows it—even though it is not the case that the future things are a cause of God’s knowing them.

**Reply to objection 2:** God’s knowledge is a cause of things according to the way in which the things are contained in His knowledge. But it was not part of God’s knowledge that the things should exist from eternity. Hence, even though God’s knowledge is eternal, it nonetheless does not follow that creatures exist from eternity.

**Reply to objection 3:** Natural things fall in between God’s knowledge and our knowledge. For we take our knowledge from the natural things of which God is a cause through His knowledge. Hence, just as knowable natural things are prior to our knowledge and a measure of that knowledge, so God’s knowledge is prior to natural things and a measure of those things. In the same way, a house falls in between the knowledge of the craftsman who built it and the knowledge had of it by someone who takes his cognition from the house after it has already been built.

## Article 9

### Does God have knowledge of non-beings?

It seems that God does not have knowledge of non-beings (*Deus non habeat scientiam non entium*):

**Objection 1:** God’s knowledge is only of things that are true. But *true* and *being* are convertible. Therefore, God does not have knowledge of non-beings.

**Objection 2:** Knowledge requires a likeness between the knower and the thing known. But things that do not exist cannot bear any likeness to God, who is *esse* itself. Therefore, things that do not exist cannot be known by God.

**Objection 3:** God’s knowledge is a cause of the things known by Him. But God’s knowledge is

not a cause of non-beings, since a non-being does not have a cause. Therefore, God does not have knowledge of non-beings

**But contrary to this:** In Romans 4:17 the Apostle says, “He calls those things that are not, as those that are.”

**I respond:** God knows all things whatsoever, in whatever way they exist. But nothing prevents things that do not exist absolutely speaking from existing in some way or other. For things that exist absolutely speaking are those that have actuality. But things that do not have actuality exist in the power either of God Himself or of some creature—where this power may be active or passive, or a power of conceiving or of imagining or of signifying in some way or other. Therefore, even if they do not exist with actuality, God knows all things that can be made or conceived of or talked about by a creature, as well as all the things that He Himself can make. And it is in this sense that one can claim that He has knowledge even of non-beings.

However, we must note a certain diversity among things that do not exist with actuality.

For some of them, even though they do not now actually exist, have actually existed or will actually exist—and all of these God is said to know by His *knowledge of vision* (*scientia visionis*). For since God’s act of understanding, which is His *esse*, is measured by eternity, which exists without succession and comprehends the whole of time, God’s present vision carries through to the whole of time and to all things that exist at any time whatsoever, insofar as they are subject to that vision in their presentness (*sicut in subiecta sibi praesentialiter*).

By contrast, there are other things which are in God’s power or in the power of some creature, but which nonetheless do not actually exist and have never actually existed and will never actually exist. And with respect to these God is said to have *knowledge of simple understanding* (*scientia simplicis intelligentiae*) and not knowledge of vision. This is because in our own case the objects of vision have *esse* outside of the one who is seeing them.

**Reply to objection 1:** Things that do not actually exist have truth insofar as they exist in potentiality. For it is true that these things exist in potentiality. And they are known by God as such.

**Reply to objection 2:** Since God is *esse* itself, each thing exists to the extent that it participates in a likeness of God—just as each thing is hot to the extent that it participates in heat. So, too, things that exist in potentiality, even if they do not actually exist, are known by God.

**Reply to objection 3:** God’s knowledge is a cause of things when it is joined to His act of will. Hence, it need not be the case that everything known by God either exists or has existed or will exist. Rather, only those things that He wills to exist or permits to exist are such that they exist or have existed or will exist. Again, what is contained in God’s knowledge is that the things in question *can* exist and not that they *do* exist.

## Article 10

### Does God have cognition of evils?

It seems that God does not have cognition of evils (*non cognoscat mala*):

**Objection 1:** In *De Anima* 3 the Philosopher says that an intellect that is not in potentiality does not have cognition of privations. But, as Augustine says, evil is a privation of good. Therefore, since, as is clear from what has been said (a. 2), God’s intellect is always acting and is never in potentiality, it seems that God does not have cognition of evils.

**Objection 2:** All knowledge either is a cause of what is known or is caused by what is known. But God’s knowledge is not a cause of evil, and it is not caused by evil. Therefore, God does not have

knowledge of evils.

**Objection 3:** Everything that is known is known either through its likeness or through its opposite. Now, as is clear from what has been said (aa. 2 and 5), it is through His own essence that God has cognition of whatever He has cognition of. But God's essence is not a likeness of evil; nor is it an opposite of evil, since, as Augustine says in *De Civitate Dei* 12, nothing is contrary to God's essence. Therefore, God does not have cognition of evils.

**Objection 4:** What is known through another and not through itself is known imperfectly. But evil is not known by God through itself, since otherwise evil would have to exist in God. For what is known must exist in the knower. Therefore, if evil is known through another, viz., through what is good, then it will be known imperfectly by God. But this is impossible, since there is no imperfect cognition in God. Therefore, God does not have knowledge of evils.

**But contrary to this:** Proverbs 15:11 says, "Hell and destruction are before the Lord."

**I respond:** In order to know something perfectly, one must know all the things that can happen to it. But there are some good things to which it can happen that they are corrupted by evils. Hence, God would not know goods perfectly if He did not also know evils.

Now each thing is knowable insofar as it exists. Hence, since the *esse* of an evil is to be the privation of a good, by the very fact that God knows goods He also knows evils—just as shadows are known through light. This is why, in *De Divinis Nominibus*, chap. 7, Dionysius says, "God has a vision of shadows through His very self, just like one who sees shadows because of the light."

**Reply to objection 1:** The Philosopher's words should be taken to mean that an intellect that is not in potentiality does not know a privation through any privation that exists within itself. This fits in with what he had previously said, viz., that points and all other indivisibles are known [by us] through a privation of division. This is because simple and indivisible forms do not actually exist in our intellect, but exist in it only in potentiality—since if they actually existed in our intellect, they would not be known through privations. For simple things are known by separated substances without recourse to privations. Therefore, God does not know an evil through a privation that exists within Himself, but instead knows it through the opposite good.

**Reply to objection 2:** God's knowledge is a cause not of the evil, but rather of the good through which the evil is known.

**Reply to objection 3:** Even though evil is not opposed to God's essence, which is not corruptible by evil, evil is nonetheless opposed to God's effects. He knows these effects through His essence, and in knowing them, He knows the opposite evils.

**Reply to objection 4:** To know something just through another is to have an imperfect cognition as long as the thing in question is knowable through itself. But evil is not knowable through itself, since it is part of the concept of an evil that it is the privation of something good. And so it cannot be either defined or known except through something good.

## Article 11

### Does God have cognition of singular things [as singular]?

It seems that God does not have cognition singular things [as singular]:

**Objection 1:** God's intellect is more immaterial than the human intellect. But because of its immateriality, the human intellect does not have cognition of singular things [as singular]; instead, as *De Anima* 2 puts it, "reason is of universals, whereas sensation is of singulars." Therefore, God does not have cognition of singular things [as singular].

**Objection 2:** The only powers in us that have cognition of singular things [as singular] are those that receive species that are not abstracted from material conditions. But things exist in God in such a way that they are maximally abstracted from every sort of materiality. Therefore, God does not have cognition of singular things [as singular].

**Objection 3:** Every cognition takes place through a likeness. But no likeness of singular things as singular seems to exist in God. For the principle of singularity is matter, which, since it is merely a being in potentiality, is altogether dissimilar from God, who is pure actuality. Therefore, God cannot have cognition of singular things [as singular].

**But contrary to this:** Proverbs 16:2 says, “All the ways of a man are open to His eyes.”

**I respond:** God knows singular things [as singular]. For, as is clear from what has been said (q. 4, a. 2), all the perfections found in creatures preexist in God in a higher way. But to have cognition of singular things [as singular] pertains to our perfection. Hence, it is necessary that God should know singular things [as singular]. For even the Philosopher considers it absurd that we should have cognition of something that God does not have cognition of. Thus, in *De Anima* 1 and *Metaphysics* 3 he argues against Empedocles that God would be utterly stupid if He did not know about strife. But the perfections that are divided among lower beings exist in God in a simple and unified way. Hence, even though we ourselves have cognition of that which is universal and immaterial by one [cognitive] power and of that which is singular and material by another power, God has cognition of both sorts of things through His simple intellective understanding.

Now some writers, wishing to show how this is possible, have claimed that God knows singular things through universal causes. For there is nothing in any singular thing that does not find its origin in some universal cause. And they invoke the following example: If an astronomer knew all the universal motions of the heavens, he could predict every future eclipse.

But this is not enough. For singular things receive from their universal causes certain forms and powers which, in whatever way they might be connected with one another, are individuated only by individual matter. Hence, someone who had a cognition of Socrates insofar as he is white, or insofar as he is the son of Sophroniscus, or whatever else of this sort might be said, would not have a cognition of him insofar as he is *this* man. Hence, given the proposed mode of cognition, God would not have cognition of singular things in their singularity (*non cognosceret singularia in sua singularitate*).

Other writers have claimed that God knows singular things by virtue of the fact that He applies universal causes to particular effects.

But this amounts to nothing. For no one can apply one thing to another unless he has prior knowledge of that other thing. Hence, the application in question cannot be the explanation for the cognition of particulars, but instead presupposes the cognition of singular things [as singulars].

And so we must respond in a different way: Since, as has been explained (a. 8), God is a cause of things through His knowledge, His knowledge extends as far as His causality does. Hence, since God’s active power extends not only to forms, from which the universal concept is taken, but also—as will be shown below (q. 44, a. 2)—to matter, God’s knowledge must extend to the singular things that are individuated by matter. For since He knows things distinct from Himself through His own essence insofar as His essence is a likeness of things and their active principle, His essence must be a sufficient principle for knowing all the things that are made by Him, not only in their universal features, but also in their singularity. The same would be true of a craftsman’s knowledge if the craftsman’s knowledge produced the whole of a thing and not just its form.

**Reply to objection 1:** Our intellect abstracts an intelligible species from individuating principles, and so our intellect’s intelligible species cannot be a likeness of the individual principles. For this reason, our intellect does not have cognition of singular things.

However, the divine intellect’s intelligible species, which is God’s essence, is immaterial not

through abstraction but through itself, and it is a principle of all the principles that enter into the composition of a thing—regardless of whether they are the principles of the species or the principles of the individual. Hence, through His essence God knows not only universals, but also singulars [as singulars].

**Reply to objection 2:** Even though the divine intellect's [intelligible] species does not have material conditions in its own *esse*, in the way that the species received in the imagination and senses do, still, as has been explained, by its power it extends to both material and immaterial things.

**Reply to objection 3:** Even though matter is far removed from a likeness of God because of its potentiality, still, insofar as it has *esse* even of this sort, it retains a certain likeness to God's *esse*.

## Article 12

### Does God have cognition of infinities?

It seems that God cannot have cognition of infinities (*non possit cognoscere infinita*):

**Objection 1:** The infinite *qua* infinite is unknown, since, as *Physics* 3 says, "The infinite is such that if one takes a quantity of it, it is always possible to take something else outside that quantity."

Also, in *De Civitate Dei* 12, Augustine says, "Whatever is comprehended by knowledge is limited by the comprehension of the knower." But infinities cannot be limited. Therefore, they cannot be comprehended by God's knowledge.

**Objection 2:** Someone might reply that what is infinite in itself is finite with respect to God's knowledge.

Against this: As *Physics* 3 says, the nature of the infinite is such that it cannot be traversed, and the nature of the finite is such that it can be traversed. But, as *Physics* 6 proves, what is infinite cannot be traversed either by what is finite or by what is infinite. Therefore, the infinite cannot be finite either with respect to what is finite or even with respect to what is the infinite. And so what is infinite cannot be finite with respect to God's knowledge, which is infinite.

**Objection 3:** God's knowledge is a measure of the things known. But it is contrary to the nature of the infinite that it should be measured. Therefore, infinities cannot be known by God.

**But contrary to this:** In *De Civitate Dei* 12 Augustine says, "Even though none of the infinite numbers is numbered, the infinite is nonetheless not incomprehensible to Him whose knowledge is not numbered."

**I respond:** Since (a) God knows not only things that exist in actuality, but also, as has been shown (a. 9), things that exist either in His own power or in the power of a creature, and since (b) there are clearly infinitely many of the latter, one must claim that God knows infinities. And even though God's knowledge of vision, which is only of things that now exist or will exist or have existed, is not a knowledge of infinitely many things in the way that some claim—for we do not hold that the world has existed from eternity, or that generation and motion will continue into eternity, so that individuals are multiplied to infinity—nonetheless, if we consider the matter more carefully, we must claim that God knows infinitely many things even by His knowledge of vision. For God knows even the thoughts and affections of the heart, which will be multiplied to infinity, since rational creatures will endure without end.

Now this is because each knower's cognition extends to things in accord with the type of form that is the principle of cognition. For instance, a sensible species that exists in the senses is a likeness of just a single individual, and so only a single individual can be known through it. On the other hand, an intelligible species of our intellect is a likeness of a thing with respect to the nature of its species, which

can be participated in by infinitely many particular things. Thus, through the intelligible species of a man our intellect in some sense knows infinitely many men—not, to be sure, insofar as they are distinct from one another, but rather insofar as they share in the nature of the species. For this reason, an intelligible species of our intellect is a likeness of men not with respect to their individual principles, but only with respect to the principles of the species.

However, as has been shown (a. 11), God's essence, through which God's intellect has cognition, is a sufficient likeness of all the things that exist or can exist, not only with respect to their common principles, but also with respect to the proper principles of each individual. Hence, it follows that God's knowledge extends to infinitely many things, even insofar as they are distinct from one another.

**Reply to objection 1:** According to the Philosopher in *Physics* 1, "The nature of the infinite is congruent with quantity." But what belongs to the nature of quantity is the ordering of the parts. Therefore, to know the infinite according to the mode of the infinite is to know one part after another. And in this sense there is no way in which it is possible to know the infinite. For no matter how many parts are taken, something always remains outside of what has been taken.

However, God does not know the infinite, or infinitely many things, in such a way that He enumerates one part after another. For, as has been explained (a. 7), He knows all things at once and not successively. Hence, nothing prevents Him from knowing infinitely many things.

**Reply to objection 2:** 'To traverse' implies a certain succession in the parts, and this is why the infinite cannot be traversed either by what is finite or even by what is infinite.

Equality, however, is indeed sufficient for the notion of comprehension, since something is said to be comprehended when nothing of it escapes the one who comprehends it. Hence, it is not contrary to the nature of the infinite that it should be comprehended by an infinite being. And so what is infinite in itself can be said to be finite with respect to God's knowledge in the sense of being comprehended by it, though not in the sense of being traversable by it.

**Reply to objection 3:** God's knowledge is a measure of things, but not a quantitative measure of the sort lacked by what is infinite. Rather, it is a measure because it measures the essence and truth of a thing. For each thing participates in the truth of its own nature to the extent that it imitates God's knowledge—in the way that an artifact comports with its corresponding art or craft.

Now if there were things that were actually infinite either according to number (e.g., infinitely many men) or according to continuous quantity (as, e.g., if air were infinite, as some ancients claimed), then it is clear that they would have determinate and finite *esse* in the sense that their *esse* would be limited to certain determinate natures. So in this sense they would be measurable by God's knowledge.

### Article 13

#### Does God have knowledge of future contingents?

It seems that God does not have knowledge of future contingents (*scientia Dei non sit futurorum contingentium*):

**Objection 1:** From a necessary cause there proceeds a necessary effect. But, as was explained above (a. 8), God's knowledge is a cause of the things that are known by it (*causa scitorum*). Therefore, since that knowledge is itself necessary, it follows that the things known by it (*scita eius*) are necessary. Therefore, God does not have knowledge of contingent things.

**Objection 2:** Every conditional is such that if its antecedent is absolutely necessary, its consequent is absolutely necessary. For the antecedent is related to the consequent in the way that principles are related to a conclusion, and, as is proved in *Posterior Analytics* 1, the only sort of conclusion that follows

from necessary principles is a necessary conclusion.

Now the following is a true conditional: ‘If God knew that this was going to be, then it is going to be’. For God has knowledge only of truths. But the antecedent of this conditional is absolutely necessary, both because it is eternal and also because it is signified as past. Therefore, the consequent is likewise absolutely necessary. Therefore, whatever is known by God is necessary. And so God does not have knowledge of contingent things.

**Objection 3:** If anything is known by God, it is necessarily so, since it is even the case that if anything is known by us, it is necessarily so—and God’s knowledge is more certain than our knowledge. But no future contingent must be so. Therefore, no future contingent is known by God.

**But contrary to this:** Psalm 32 says, “He who has made the hearts of every one of them, who understands all their works,” i.e., the works of men. But the works of men are contingent, since they are subject to free choice. Therefore, God knows future contingents.

**I respond:** It was shown above (a. 9) that God knows all things—not only (a) those that are actual, but also (b) those that exist either in His own power or the power of a creature. Some of the latter are contingent things that are future to us. It follows that God knows future contingents.

To see this clearly, note that there are two ways in which a contingent thing can be thought of.

First, it can be thought of in itself, insofar as it is already actual. And when considered in this way, it is not being thought of as future; rather, it is being thought of as present, and it is being thought of not as contingent with respect to two opposites, but rather as determined to one of them. For this reason, it can be infallibly subject to a cognition that is certain—e.g., to the cognition of the sense of sight, as when I see that Socrates is sitting.

Second, a contingent thing can be thought of as existing in its cause. And considered in this way, it is being thought of as future and as contingent, not yet determined to one opposite; for a contingent cause is open to both opposites. And a contingent thing, when thought of in this way, is not subject to a cognition that is certain. Thus, if someone knows a contingent effect only in its cause, then he has only a conjectural cognition of it.

Now God knows all contingent things not only insofar as they exist in their causes, but also insofar as each them is actual in itself. And even though contingent things become actual successively, nonetheless, God, unlike we ourselves, does not know contingent things successively as they exist in their own *esse*; rather, he knows them all at once. For His cognition, like His *esse*, is measured by eternity. But as was explained above (q. 10, a. 2), eternity, which exists as a simultaneous whole, embraces the whole of time. Hence, all the things that exist in time are present to God from eternity, not just because, as some claim, God has the natures of things present to Himself, but because His gaze extends from eternity to all things as they exist in their presentness. Hence, it is clear that contingent things are both (a) known infallibly by God insofar as they are subject to the divine gaze according to their presentness and yet (b) future contingents in relation to their causes.

**Reply to objection 1:** Even if the highest cause is necessary, the effect can nonetheless be contingent because of a contingent proximate cause. For instance, the germination of a plant is contingent because of a contingent proximate cause, even though the motion of the sun, which is a first cause, is necessary. Similarly, the things known by God are contingent because of their proximate causes, even though God’s knowledge, which is a first cause, is necessary.

**Reply to objection 2:** Some claim that the antecedent ‘God knew that this contingent thing was going to be’ is contingent and not necessary, because even though it is past-tense, it implies a relation to the future. However, this does not undermine the necessity of the antecedent. For that which once had a relation to the future is now such that it is necessary that it once had that relation—even if that which was going to be never follows at any time.

Others claim that the antecedent in question is contingent because it is composed of something

necessary and something contingent—just as the dictum *that Socrates is a white man* is contingent. But this, too, amounts to nothing. For when one says, ‘God knew that this contingent thing was going to be’, what is contingent is posited here only as the subject-matter of the main verb and not as the principal part of the proposition. Hence, this subject-matter’s contingency or necessity has no bearing on whether the proposition itself is necessary or contingent, or true or false. For instance, it can be true that I said that a man is a donkey, just as it can be true that I said that Socrates is running or that God exists. And the same line of reasoning holds for necessity and contingency.

Therefore, one should assert that the antecedent in question is absolutely necessary.

However, some claim that from this it does not follow that the consequent is absolutely necessary, because the antecedent is a remote cause of the consequent, which is contingent because of some proximate cause. But this amounts to nothing. For the proposition would be false if its antecedent were a remote necessary cause and its consequent were a contingent effect—as, for instance, if I were to say, ‘If the sun moves, the plant will germinate.’

So we must respond in an alternative way: When something pertaining to an act of the soul is posited in the antecedent, the consequent should be taken not as it exists in itself, but as it exists in the soul. For the existence of a thing in itself is different from its existence in the soul. So, for instance, when I say, ‘If the soul understands something intellectually, then that thing is immaterial’, this should be taken to mean that the thing in question is immaterial insofar as it exists in the intellect and not that it is immaterial insofar as it exists in itself. Similarly, if I say, ‘If God knew something, it is going to be’, the consequent should be taken to mean ‘insofar as it falls under God’s knowledge’, i.e., ‘insofar as it exists in its presentness’. And, given this meaning, the consequent is necessary in the same way that the antecedent is; for, as *Perihermenias* 1 says, “Everything that is, while it is, is such that it is necessary that it be.”

**Reply to objection 3:** Those things that become actual in time are known by us successively in time, but they are known by God in eternity, which is beyond time. Thus, since we know future contingents insofar as they are contingent, they cannot be certain to us; rather, they are certain only to God, whose act of understanding exists in eternity and beyond time. Similarly, someone who is traveling along a road does not see those who come after him, whereas someone who is viewing the whole road from a height sees all the travelers on the road at once.

And so that which is known (*scitur*) by us must also be necessary insofar as it exists in itself, since things that are future contingent in themselves cannot be known by us. However, as has been explained, the things that are known by God have to be necessary insofar as they are subject to God’s knowledge—though they are not absolutely necessary insofar as they are considered in their proper causes.

Accordingly, the proposition, ‘If anything is known by God, it is necessarily so’ has two distinguishable meanings, since it can be either *de re* or *de dicto*. If it is interpreted *de re*, then it has a divided sense and is false—for its meaning is, ‘Anything that God knows is such that it is necessarily so’. Alternatively, it can be interpreted *de dicto*, in which case it has a composed sense and is true—for its meaning is, ‘The dictum *If anything is known by God, it is so* is necessary.’

However, some raise an objection here. They claim that this distinction is relevant in the case of forms that are separable from their subject, as when I say ‘A white thing is possibly black’—which is false if taken *de dicto* and true if taken *de re*, since a thing which is white is able to be black, whereas the dictum *A white thing is black* is never true. But, they say, in the case of forms that are inseparable from their subject, there is no room for this distinction, as when I say, ‘A black crow is possibly white’—for this is false in both senses. But being known by God is inseparable from a thing, since that which is known by God is not able not to be known.

Now this objection would be to the point if the term ‘known [by God]’ connoted a disposition that

inheres in a subject. However, since it instead connotes the act of a knower, something can be attributed to the known thing in its own right (*secundum se*), even if it is always known, that is not attributed to it insofar as it is subject to an act of knowing (*inquantum stat sub actu sciendi*)—just as material *esse* is attributed to a rock in itself, but is not attributed to it insofar as it is intelligible.

#### Article 14

##### Does God have cognition of propositions?

It seems that God does not have cognition of propositions (*non cognoscat enuntiabilia*):

**Objection 1:** Having cognition of propositions belongs to our intellect insofar as it composes and divides. But there is no composition in God’s intellect. Therefore, God does not know propositions.

**Objection 2:** Every cognition is effected by means of some likeness. But in God there is no likeness of propositions, since He is altogether simple. Therefore, God does not have cognition of propositions.

**But contrary to this:** Psalm 93:11 says, “The Lord knows the thoughts of men.” But propositions are included among the thoughts of men. Therefore, God has cognition of propositions.

**I respond:** Since (a) to formulate propositions lies within the power of our intellect, and since (b), as was explained above (a. 9), God knows whatever lies within either His own power or the power of a creature, it must be the case that God knows all the propositions that can be formulated.

However, just as He knows material things in an immaterial mode and composite things in a simple mode, so, too, it is not according to the mode of propositions that He knows propositions; that is, He does not know them in the sense that the composition or division of propositions exists in His intellect. Rather, through His simple understanding He has cognition of each thing by understanding the essence of each thing.

For instance, suppose that we ourselves were such that by the very fact that we understood intellectually what a man is, we understood everything that could be predicated of a man. Now, to be sure, this does not happen with our intellect, which goes from one thing to another. For an intelligible species [in our intellect] represents one thing in such a way that it does not represent another. Hence, we do not, simply by virtue of understanding what a man is, understand the other things that exist in a man; instead, we understand them bit by bit, according to a certain succession. Because of this, we have to bring together, in the mode of composition and division, the things that we understand separately, thus formulating a proposition.

By contrast, the species of God’s intellect, viz., His very essence, is sufficient for making known all things. Hence, in understanding His own essence, God knows the essences of all things and whatever can accrue to them.

**Reply to objection 1:** This argument would go through if God had cognition of propositions through the mode of propositions.

**Reply to objection 2:** A propositional composition signifies the *esse* of a thing. And so through His own *esse*, which is His essence, God is a likeness of all those things that can be signified by propositions.

## Article 15

### Is God's knowledge variable?

It seems that God's knowledge is variable:

**Objection 1:** 'Knowledge' is predicated relationally with respect to what is knowable. But names that connote a relation to creatures are predicated of God from a given point in time, and they vary according to variations in the creatures. Therefore, God's knowledge is variable according to variations in the creatures.

**Objection 2:** God can know whatever He can effect. But God is able to effect more things than He in fact effects. Therefore, He is able to know more things than He in fact knows. And so His knowledge can vary by way of addition and subtraction.

**Objection 3:** God knew that Christ would be born. However, He does not now know that Christ will be born, since it is not now the case that Christ will be born. Therefore, it is not the case that God now knows everything that He once knew. And so God's knowledge seems to be variable.

**But contrary to this:** James 1:17 says that with God "there is no change nor shadow of alteration."

**I respond:** Since, as is clear from what has been said (a. 4), God's knowledge is His substance, it follows that just as His substance is altogether immutable—as was shown above (q. 9, a. 1)—so too His knowledge must be altogether invariable.

**Reply to objection 1:** 'Lord', 'creator', and other names of this sort connote a relation to creatures as they exist in themselves. By contrast, 'God's knowledge' connotes a relation to creatures insofar as they exist in God. For each thing is actually understood insofar as it exists in the knower. But created things exist in an invariable way in God, even though they exist in a variable way in themselves.

An alternative reply is that 'lord', 'creator', and other names of this sort connote relations that follow upon acts that are understood to terminate in the creatures themselves insofar as they exist in themselves; and this is why relations of this sort are predicated of God in a way that varies according to variations in the creatures. By contrast, 'knowledge', 'love', and other names of this sort connote relations that follow upon acts that are understood to exist in God; and this is why they are predicated of God in an invariable way.

**Reply to objection 2:** God knows even those things that He can effect and yet does not effect. Hence, from the fact that He can effect more things than He does effect, it does not follow that He can know more things than He does know—unless we are talking about His knowledge of vision, according to which He is said to know those things that actually exist at some time or other.

Now from the fact that He knows that some things are able to exist and yet do not exist, or that some things are able not to exist and yet do exist, it does not follow that His knowledge is variable. Rather, all that follows is that He knows about the variability of things. To be sure, if there were something that God did not previously know and afterwards did know, then His knowledge would be variable. But this is impossible. For in eternity God knows whatever does exist or can exist at any time. And so on the assumption that a thing exists at some time or other, one must assert that it is known by God from eternity.

And so it should not be conceded that God can know more things than He does know, since this proposition implies that He previously did not know something and afterwards knows it.

**Reply to objection 3:** The old nominalists (*antiqui nominales*) claimed that 'Christ is born', 'Christ will be born', and 'Christ has been born' are the same proposition because exactly the same thing is signified by all three of them, viz., the birth of Christ. On this view it follows that whatever God did know, He now knows. For he now knows that Christ has been born, and this signifies the same thing as

that Christ will be born.

But this opinion is false. First, a diversity in the parts of a sentence makes for a diversity of propositions. Second, it would follow that a proposition that is true at any one time (*semel*) would always be true—which is contrary to the Philosopher, who says that the sentence ‘Socrates is sitting’ is true as long as Socrates is sitting and is false once he gets up.

And so one should concede that ‘God now knows everything that He once knew’ is not true, if we are talking about propositions. But from this it does not follow that God’s knowledge is variable. For just as God’s knowledge does not vary by virtue of the fact that He knows that one and same thing exists at some times and not at other times, so too God’s knowledge does not vary by virtue of the fact that He knows that a given proposition is true at some times and false at other times.

To be sure, God’s knowledge would be variable if He knew propositions through the mode of propositions by composing and dividing, as happens with our intellect. Hence, our cognition varies either (a) according to truth and falsity, as, e.g., when, once a thing has changed, we maintain the same opinion about that thing, or (b) according to diverse opinions, as when we first think that someone is sitting and afterwards think that he is not sitting. But neither of these can happen with God.

## Article 16

### Is God’s knowledge of things speculative?

It seems that God does not have speculative knowledge of things (*de rebus non habet scientiam speculativam*):

**Objection 1:** As was shown above (a. 8), God’s knowledge is a cause of things. But speculative knowledge is not a cause of the things known by it. Therefore, God’s knowledge is not speculative.

**Objection 2:** Speculative knowledge occurs through abstraction from things. But this feature does not belong to God’s knowledge. Therefore, God’s knowledge is not speculative.

**But contrary to this:** Everything that is more noble should be attributed to God. But as is clear from the Philosopher at the beginning of the *Metaphysics*, speculative knowledge is more noble than practical knowledge. Therefore, God has speculative knowledge of things.

**I respond:** Some knowledge is purely speculative and some purely practical, but some knowledge is both speculative in one respect and practical in another respect.

To see this clearly, notice that there are three ways in which knowledge can be called speculative:

First, on the part of the *things known*, when they are not things that can be effected by the knower—as, e.g., human knowledge about natural or divine things.

Second, with respect to the *mode of knowing*—as, e.g., when a builder thinks about a house by defining, distinguishing, and inquiring into its universal predicates. For here a thing that can be effected is being considered in a speculative way and not insofar as it can be effected, since something that can be effected exists through the application of form to matter and not through the analysis of a composite into its universal formal principles.

Third, with respect to its *end (finis)*. For as *De Anima* 3 says, “Practical understanding differs in its end from speculative understanding.” For practical understanding is ordered toward the end of effecting something, whereas the end of speculative understanding is the consideration of truth. Hence, if a builder is thinking about how a given house might be built, and he is ordering his thought only toward knowing it and not toward the end of making it, then his inquiry will be speculative with respect to its end, even though it is about a thing that can be effected.

Thus, knowledge that is speculative by reason of the thing known is purely speculative. On the

other hand, knowledge that is speculative by reason of either its mode or its end is speculative in one respect and practical in another respect. And when knowledge is ordered toward the end of effecting something, then it is purely practical.

So, then, one should claim that God has purely speculative knowledge about Himself, since He is not a thing that can be effected. But His knowledge of all other things is both speculative and practical. It is speculative with respect to its mode. For anything that we ourselves know speculatively about things by defining and distinguishing is such that God knows all of it much more perfectly. On the other hand, as regards those things that He is able to effect but does not effect at any time, He does not have practical knowledge of them in the sense in which practical knowledge is called practical because of its end. However, He does have practical knowledge of those things which He does effect at some time.

On the other hand, even though He cannot effect evils, they, like goods, nonetheless fall under His practical cognition insofar as He permits them or impedes them or orders them [toward some end]—in the way that illnesses fall under a physician's practical knowledge insofar as he cures them through his art.

**Reply to objection 1:** God's knowledge is a cause not of Himself, but of other things. It is an actual cause of some of them, viz., those which are effected at some time, and it is a virtual cause of others, viz., those which God is able to effect and yet which are never effected.

**Reply to objection 2:** The fact that knowledge is taken from the things that are known is a feature that belongs to speculative knowledge not *per se*, but *per accidents*, viz., insofar as it is human knowledge.

**Reply to argument for the contrary:** Perfect knowledge is had of things that are able to be effected only if they are known precisely insofar as they are able to be effected. And so since God's knowledge is perfect in every way, He must know the things that can be effected by Him insofar as they can be effected by Him and not just insofar as they are knowable speculatively. Still, this does not fall short of the nobility of speculative knowledge, since He sees all things that are distinct from Himself in Himself, and He knows Himself speculatively. And so in His speculative knowledge of Himself He has both speculative cognition and practical cognition of all other things.

## QUESTION 15

### God's Ideas

Now that we have considered God's knowledge, we have to consider His ideas. On this topic there are three questions: (1) Are there divine ideas? (2) Is there more than one divine idea, or just one? (3) Are there ideas of all the things that are known by God?

#### Article 1

##### Are there divine ideas?

It seems that there are no [divine] ideas (*ideae*):

**Objection 1:** In *De Divinis Nominibus*, chap. 7, Dionysius says that God does not know things by means of an idea. But ideas are posited for no other reason than that things might be known through them. Therefore, there are no ideas.

**Objection 2:** As was explained above (q. 14, a. 5), God knows all things in Himself. But He does not know Himself through an idea. Therefore, neither does He know things distinct from Himself through an idea.

**Objection 3:** An idea is posited as a principle of knowing and a principle of acting. But God's essence is a sufficient principle of knowing all things and of effecting all things. Therefore, there is no need to posit ideas.

**But contrary to this:** In *83 Quaestiones* Augustine says, "The power in ideas is so great that if they were not understood, no one could be wise."

**I respond:** It is necessary to posit ideas in God's mind.

For 'idea' (*idea*) in Greek corresponds to 'form' (*forma*) in Latin. Hence, it is through ideas that the forms of other things are understood outside of the existent things themselves. Now outside of the existent thing itself, the form of a thing can have two roles: either (a) as an exemplar of the thing of which it is called the form, or (b) as a principle of the cognition of the thing, since the forms of knowable things are said to exist within the knower. And it is necessary to posit the ideas for both of these roles.

This is clear as follows: In all things that are not generated by chance, the form has to be the end of the generation of a thing. But an agent would not be acting for the sake of a form unless a likeness of the form existed within it. This can happen in two ways. For in the case of some agents, the form of the thing to be effected preexists in the agent according to its natural *esse*—viz., in those agents that act through their nature, as when a man generates a man or a fire generates a fire. However, in the case of other agents, the form preexists in the agent according to its intelligible *esse*—viz., in those agents that act through their understanding, as when a likeness of a house preexists in the mind of the builder. And this likeness can be called an idea of the house, since the builder intends to assimilate the house to the form that he mentally conceives.

Therefore, since, as will become clear below (q. 47, a. 1), the world was not made by chance, but was instead made by God acting through His understanding, there has to be in God's mind a form in the likeness of which the world was made. And this is what the nature of an idea consists in.

**Reply to objection 1:** God does not understand things according to an idea that exists outside of Himself. This is also the line of reasoning by which Aristotle disproves Plato's opinion about ideas, insofar as Plato posited the ideas as existing *per se* and not in an intellect.

**Reply to objection 2:** Even though God understands both Himself and other things through His essence, His essence is an efficient principle of the other things, but not of Himself. And so God's essence has the nature of an idea insofar as it is related to other things, but not insofar as it is related to

God Himself.

**Reply to objection 3:** It is according to His essence that God is a likeness of all things. Therefore, an idea in God is nothing other than God's essence.

## Article 2

### Is there more than one divine idea?

It seems that there is not more than one [divine] idea:

**Objection 1:** An idea in God is His essence. But there is only one essence of God. Therefore, there is likewise only one idea.

**Objection 2:** Just as an idea is a principle of knowing and acting, so too are wisdom and art. But in God there is not more than one wisdom or more than one art. Therefore, neither is there more than one idea.

**Objection 3:** Someone might reply that ideas are multiplied according to their relations to diverse creatures.

Against this: The plurality of ideas exists from eternity. Therefore, if there is more than one idea and creatures are temporal, then what is temporal will be a cause of what is eternal.

**Objection 4:** The relations in question are real relations either in the creatures alone or in God as well.

If they are real relations in the creatures alone, then, since the creatures do not exist from eternity, the plurality of ideas will not exist from eternity, given that the ideas are multiplied only according to relations of this sort.

On the other hand, if the relations really exist in God, then it follows that there is some real plurality in God distinct from the plurality of the divine Persons. But this is contrary to Damascene, who says that in God all things are one except for "the ungeneration, the generation, and the procession." Therefore, it is not the case that there is more than one divine idea.

**But contrary to this:** In *83 Quaestiones* Augustine says, "The ideas are certain principal forms or conceptions of things (*formae vel rationes*), stable and unchangeable. For they themselves are not formed, and because of this they are eternal and always remain the same, since they are contained in God's understanding. But even though they themselves have no beginning and no end, it is according to them that everything that can have a beginning and an end, and everything that does have a beginning and an end, is said to be formed."

**I respond:** It is necessary to posit more than one idea.

To see this clearly, note that in the case of every effect, it is the ultimate end that is properly intended by the principal agent; for instance, the order of the army is what is intended by the general. Now as is clear from the Philosopher in *Metaphysics* 12, the highest good there is among things is the good of the order of the universe. Therefore, the order of the universe is properly intended by God, and this order does not emerge *per accidens* from a succession of agents—in the way suggested by some who claimed that God created only the first creature, and that this creature created the second creature, and so on until a great multitude of things was produced. According to this opinion, God would have an idea only of the first created thing.

However, if it is the very order of the universe that has been created *per se* by Him and was intended by Him, then He must have an idea of the order of the universe. But one cannot have a conception (*ratio*) of a whole without also having proper notions of the things out of which the whole is

constituted. For instance, a builder is unable to conceive a likeness of a house without having a proper conception of each of its parts. So, then, it must be the case that in God's mind there are proper conceptions of all things. Accordingly, in *83 Quaestiones* Augustine says, "Each thing is created by God through its own proper conception." Hence, it follows that there are many ideas in God's mind.

Moreover, it is easy to see that this does not conflict with God's simplicity, as long as one keeps in mind that the idea of a thing that is to be effected exists in the agent's mind as *that which* is understood—and not as a species *by which* something is understood, i.e., a form that makes the intellect to be in act. For the form of a house in the builder's mind is something that is understood by him and in whose likeness he forms the house in the relevant matter. But it is not contrary to the simplicity God's intellect that He should understand many things; rather, what would be contrary to its simplicity is that His intellect should be formed by many species. Hence, the many ideas exist in God's mind as ideas that are understood by Him.

This can be seen as follows: He knows His own essence perfectly. Hence, He knows it according to every way in which it can be known. But it can be known not only as it exists in itself, but also insofar as it can be participated in by creatures according to one or another mode of likeness. But each creature has its own proper species insofar as it participates in some way in a likeness of God's essence. So, then, insofar as God knows His own essence as imitable in this way by such a creature, He knows it as a proper conception and idea of this creature. And the same holds for the other creatures. And so it is clear that God understands the many proper natures of many things—and these are the many ideas.

**Reply to objection 1:** 'Idea' denominates God's essence not insofar as it is an essence, but insofar as it is a likeness or conception of this or that thing. Hence, since there are many conceptions understood by the one essence, they are called many ideas.

**Reply to objection 2:** Wisdom and art are assigned as that *by which* God understands, whereas an idea is assigned as *that which* God understands. But by one wisdom and art God understands many things, not only insofar as they exist in themselves, but also insofar as they are understood—and the latter is what it is to understand many conceptions of things. Similarly, if a craftsman understands the form of a house as it exists in matter, he is said to understand the house, whereas if he understands the form of a house as something that he is thinking about, then by the very fact that he understands that he is understanding it, he understands an idea or conception of a house (*intelligit ideam vel rationem domus*). But God not only understands many things through His essence, but also understands that He understands many things through His essence. But this is what it is to understand many conceptions of things—or, alternatively, this is what it is for many ideas to exist in His intellect as things that are understood.

**Reply to objection 3:** Relations of the sort by which ideas are multiplied are caused not by the things but by the divine intellect as it compares its essence to things.

**Reply to objection 4:** The relations that multiply ideas exist not in created things, but in God. However, they are not real relations like the relations by which the Persons are distinguished; instead, they are relations that are understood by God.

### Article 3

#### Are there ideas in God of all the things that are known by Him?

It seems that it is not the case that there are ideas of all the things known by Him:

**Objection 1:** The idea of evil does not exist in God, since otherwise it would follow that evil exists in God. But evils are known by God. Therefore, it is not the case that there are ideas of all the

things that are known by God.

**Objection 2:** As was explained above (q. 14, a. 9), God knows those things that do not exist and will not exist and have not existed. But there are no ideas of such things, since, as Dionysius says in *De Divinis Nominibus*, chap. 5, “The exemplars are divine volitions that are determinative of things and effect them.” Therefore, it is not the case that there are ideas in God of all the things that are known by Him.

**Objection 3:** God knows primary matter, which cannot have an idea because it has no form. Therefore, the same conclusion follows as before.

**Objection 4:** It is clear that God knows not only species, but also genera and singular things and accidents. But, as Augustine explains, there are no ideas of genera, singular things, and accidents according to Plato, who was the first to introduce the ideas. Therefore, it is not the case that there are ideas in God of all the things that are known by Him.

**But contrary to this:** As is clear from Augustine, the ideas are conceptions that exist in God’s mind. But God has proper conceptions of all the things He knows. Therefore, He has an idea for each thing that He knows.

**I respond:** Since Plato posited the ideas as principles both of the cognition of things and of their generation, an idea as posited in God’s mind has both these roles.

Insofar as it is a principle for effecting things, an idea is called an *exemplar* and pertains to practical cognition, whereas insofar as it is a cognitive principle, it is properly called a *conception (ratio)* and can also pertain to speculative knowledge.

Therefore, insofar as an idea is an exemplar, it is related to all the things that are made by God at some time or other. On the other hand, insofar as it is a cognitive principle, it is related (a) to all the things that are known by God, even if they are never made, and (b) to all the things that are known by God according to a proper conception and insofar as they are known by Him in a speculative way.

**Reply to objection 1:** Evil is known by God not through a proper conception, but rather through the conception of the good. And so evil does not have an idea in God, either insofar as an idea is an exemplar or insofar as an idea is a conception.

**Reply to objection 2:** God does not have a practical cognition—except just virtually—of those things that do not exist and will not exist and have not existed. Hence, with respect to those things there is no idea in God insofar as ‘idea’ signifies an exemplar; instead, there is an idea of them only insofar as ‘idea’ signifies a conception.

**Reply to objection 3:** According to some authors, Plato posited uncreated matter and so claimed that there is no idea of matter but that the idea is a co-cause with matter. However, since we ourselves posit a matter created by God and yet not without form, matter has, to be sure, an idea in God, but not an idea distinct from the idea of a composite thing. For matter does not of itself have *esse* and is not of itself knowable.

**Reply to objection 4:** Insofar as ‘idea’ signifies an exemplar, genera cannot have an idea distinct from the idea of a species, since a genus is never effected except in some species.

The same holds for accidents that are inseparably connected with a subject, since they are effected simultaneously with their subject. However, accidents that are added to a subject have a special idea. For through the form of a house the craftsman makes all the accidents that are connected with the house from the beginning, but he effects through another form those things that are added to the house once it has already been built, e.g., pictures or other such things.

On the other hand, individuals, according to Plato, do not have an idea distinct from the idea of their species, both because (a) singular things are individuated by matter, which (some claim) he took to be uncreated and a co-cause with the idea, and also because (b) nature’s intention has to do with the

species, and it produces individuals only in order to preserve the species in them. However, as will be explained below (q. 22, a. 2), God's providence extends not only to species but also to singular things.

## QUESTION 16

### Truth

Since knowledge is of things that are true (*scientia verorum est*), now that we have considered God's knowledge, we must inquire into truth (*de veritate*). On this topic there are eight questions: (1) Does truth exist in things or only in the intellect (*in re vel tantum in intellectu*)? (2) Does truth exist in the intellect only insofar as the intellect composes and divides? (3) How is *true* related to *being*? (4) How is *true* related to *good*? (5) Is God truth? (6) Are all things true by one truth or by many truths? (7) Is truth eternal? (8) Is truth immutable?

### Article 1

#### Does truth exist in things or only in the intellect?

It seems that truth exists not only in the intellect but even more so in things (*non tantum in intellectu sed magis in rebus*):

**Objection 1:** In *Soliloquia* Augustine disproves the account of *true* according to which the true is that which is seen; for on this account, rocks that lie in utterly remote recesses of the earth would not be true rocks, since they are not seen.

He likewise disproves the account of *true* according to which the true is that which is as it is seen by one who has cognition, if he is able to and wants to have cognition of it; for on this account it follows that nothing would be true if there were no one capable of having cognition.

And so he defines the true as follows: The true is that which is. And so it seems that truth exists in things and not in the intellect.

**Objection 2:** Whatever is true is true by reason of truth. Therefore, if truth exists in the intellect alone, then nothing will be true unless it is understood—which is the error of those ancient philosophers who claimed that whatever is seen is true (*omne quod videtur esse verum*). From this it follows that contradictories are simultaneously true, since contradictories are seen to be true by different individuals at the same time.

**Objection 3:** As is clear from *Posterior Analytics* 1, “That because of which a thing is such-and-such is itself even more so.” But, according to the Philosopher in the *Categories*, “A belief or spoken sentence is true or false because the thing itself is or is not so.” Therefore, truth exists more in the things than in the intellect.

**But contrary to this:** *Metaphysics* 6 says, “The true and the false exist not in the things, but in the intellect.”

**I respond:** Just as *good* names that toward which an appetite tends, so, too, *truth* names that toward which an intellect tends. However, the difference between the appetite and the intellect (or any kind of cognition) is that cognition exists insofar as what is known exists in the knower, whereas appetite exists insofar as the one who desires is inclined toward the desired thing itself. And so the terminus of an appetite, which is the good, exists in the desirable thing, whereas the terminus of cognition, which is the true, exists in the intellect itself.

However, the good exists in a thing insofar as the thing bears a relation to the appetite, and for this reason the concept *good* migrates from the desirable thing to the desire in such a way that the desire itself is called good insofar as it is a desire for something good. In the same way, since the true exists in an intellect insofar as that intellect is conformed to the thing that is understood, the concept *true* has to migrate from the intellect to what is understood in such a way that the thing that is understood is also called true insofar as it bears a certain relation to the intellect.

Now the relation that the thing that is understood bears to an intellect can be either *per se* or *per accidens*. It bears a *per se* relation to an intellect on which it depends for its own *esse*, whereas it has a *per accidens* relation to an intellect insofar it is knowable by that intellect. For example, we say that a house is related *per se* to the craftsman's intellect, whereas it is related *per accidens* to an intellect on which it does not depend for its *esse*. But a judgment about a thing derives not from what exists in it *per accidens*, but rather from what exists in it *per se*. Hence, each thing is called true absolutely speaking according to the relation it has to an intellect on which it depends for its *esse*.

Thus, artifacts are called true in relation to our intellect. For a house is called a true house when it attains a likeness of the form that exists in the mind of the craftsman; and a spoken sentence is called true insofar as it is a sign of a true understanding.

Similarly, natural things are called true to the extent that they attain a likeness of the species that exist in God's mind. For instance, a rock is called a true rock when it attains the proper nature of a rock as this is preconceived by God's intellect.

So, then, truth exists primarily in the intellect, but secondarily in the things insofar as they are related to an intellect as their principle. Accordingly, truth is explained in different ways.

For in *De Vera Religione* Augustine says, "Truth is that by which what exists is made manifest." And Hilary says, "Truth clarifies and manifests being." Such accounts pertain to truth as it exists in the intellect.

On the other hand, as regards the truth of a thing in its relation to the intellect, a pertinent definition is that given by Augustine in *De Vera Religione*: "Truth is the highest likeness of the principle, a likeness that has no dissimilarity to the principle." Again, here is a definition given by Anselm: "Truth is a correctness (*rectitudo*) that is perceptible only to the mind; for what is in agreement with the principle is correct (*rectum*)." Again, Avicenna gives this definition: "The truth of each thing is a property of its *esse* that is stable for it."

Moreover, the claim that truth is a correspondence between the intellect and the thing (*adequatio rei et intellectus*) can pertain to both sorts of truth.

**Reply to objection 1:** Augustine is speaking here of the truth of a thing, and he is excluding a relation to our intellect from the conception of this sort of truth (*a ratione huius veritatis*). For what is *per accidens* is excluded from every definition.

**Reply to objection 2:** The ancient philosophers claimed that the species of natural things originated by chance and did not proceed from any intellect; and because they noticed that *true* connotes a relation to an intellect, they were forced to define the truth of things in terms of a relation to our intellect. From this followed the various absurdities that the Philosopher attacks in *Metaphysics* 4. However, these absurdities do not arise if we claim that the truth of things consists in their relation to God's intellect.

**Reply to objection 3:** Even though the truth in our intellect is caused by the things, the concept *true* need not be realized primarily in the things—just as the concept *health* is realized in the primary sense not in the medicine but rather in the animal. For it is the power of medicine—and not its health—that causes health, since medicine is not a univocal agent. Similarly, it is the *esse* of a thing—and not its truth—that causes truth in the intellect. This is why the Philosopher says that an opinion or spoken sentence (*opinio et oratio*) is true "in virtue of the fact that the thing is such-and-such, not in virtue of the fact that the thing is true."

## Article 2

### Does truth exist in the intellect only insofar as the intellect composes and divides?

It seems that it is not the case that truth exists in the intellect only insofar as the intellect composes and divides:

**Objection 1:** In *De Anima* 3 the Philosopher says that just as the sensing of proper sensibles is always true, so the understanding of what a thing is (*quid est*) is always true. But composition and division are found neither in the senses nor in the intellect's cognition of what a thing is. Therefore, it is not the case that truth is found only in the intellect's composing and dividing.

**Objection 2:** In *De Definitionibus* Isaac says that truth is a correspondence between the intellect and the thing. But just as the understanding of propositions (*complexa*) can correspond to the things, so, too, can the understanding of simple terms (*incomplexa*), as well as the senses sensing a thing as it is. Therefore, it is not the case that truth is found only in the intellect's composing and dividing.

**But contrary to this:** In *Metaphysics* 6 the Philosopher says that there is no truth, either in the intellect or in things, with respect to simple terms or with respect to what a thing is (*circa simplicia et quod quid est*).

**I respond:** As has been explained (a. 1), the true, according to its primary concept, exists in the intellect. However, since every entity is true insofar as it has the proper form of its own nature, it must be the case that the intellect, insofar as it is an entity that has cognition, is true insofar as it bears a likeness to the thing that is known; for this likeness is the intellect's form insofar as the intellect is an entity that has cognition. It is for this reason that truth is defined as a conformity between the intellect and the thing. Hence, to have a cognition of this conformity is to have a cognition of truth.

Now the senses do not in any way have a cognition of this conformity. For instance, even though the sense of sight has a likeness of the visible thing, it nonetheless does not itself have a cognition of the relation that obtains between the thing that is seen and what it itself apprehends about that thing.

By contrast, the intellect is able to have a cognition of its own conformity to an intelligible thing. However, it does not apprehend this conformity by grasping what a thing is. Rather, it is when it judges the thing to be like the form it apprehends with respect to that thing that it first has a cognition of truth and asserts truth (*tunc primo cognoscit et dicit verum*). And it does this by composing and dividing. For in every proposition the intellect either applies the form signified by the predicate to the thing signified by the subject, or else it separates off (*removet*) the form signified by the predicate from the thing signified by the subject.

For this reason, even though it might well be the case that a sensory power *is true* with respect to a given thing, or that the intellect *is true* in grasping what a thing is, nonetheless, it is not the case that it *has a cognition of* what is true or *asserts* what is true. And the same difference holds between spoken simple terms and spoken sentences (*de vocibus complexis aut incomplexis*).

So, to be sure, truth can exist in—as in a certain true entity—the senses or the intellect when the intellect grasps what a thing is; however, truth cannot exist in them as something that there is a cognition of in the knower—which is what the name 'true' connotes. For the perfection of the intellect is the true as known (*verum ut cognitum*). And so, properly speaking, truth exists in the intellect when it composes and divides, but it does not exist in the senses or in the intellect when the intellect grasps what a thing is.

**Reply to objection 1 and objection 2:** The reply to the objections is clear from what has been said.

### Article 3

#### Is *true* convertible with *being*?

It seems that *true* and *being* are not convertible:

**Objection 1:** As has been explained (a. 1), what is true properly exists in the intellect. But being properly exists in things. Therefore, they are not convertible.

**Objection 2:** That which extends to both being and non-being is not convertible with *being*. But *true* extends to both being and non-being; for it is true that what is is and that what is not is not. Therefore, *true* and *being* are not convertible.

**Objection 3:** Things that are related as prior and posterior do not seem to be convertible. But *true* seems to be prior to *being*, since a being is understood only under the notion of the true (*sub ratione veri*). Therefore, it seems that they are not convertible.

**But contrary to this:** In *Metaphysics 2* the Philosopher says that things have the same disposition in being and in truth.

**I respond:** Just as *good* has the nature of the desirable, so *true* has a relation to cognition. But each thing is knowable to the extent that it has *esse*. Because of this, *De Anima 3* says that in a certain sense the soul is all things in its sensing and its intellective understanding. And so just as *good* is convertible with *being*, so is *true*. Still, just as *good* adds to *being* the notion of the desirable, so *true* adds a relation to the intellect.

**Reply to objection 1:** As was explained above (a. 1), the true exists both in things and in the intellect. Now the true as it exists in things is convertible with *being* according to its substance, while the true as it exists in the intellect is convertible with *being* in the sense that what manifests is convertible with what is manifested (*manifestativum cum manifestato*). For, as has been explained (a. 1), this is the nature of the true.

Now even though one could claim that being, like the true, exists both in things and in the intellect, it is still the case that the true exists principally in the intellect, whereas being exists principally in things. And this is so because *true* and *being* differ in concept.

**Reply to objection 2:** Non-being is not in itself capable of being known, but is instead known insofar as the intellect renders it knowable. Hence, the true is here grounded in being, insofar as a non-being is a certain being of reason, i.e., something apprehended by reason.

**Reply to objection 3:** There are two ways to interpret the claim that a being cannot be apprehended without the notion of the true (*sine ratione veri*).

In the first way, it has this sense: ‘A being is not apprehended unless the notion of the true follows upon the apprehension of the being’. So interpreted, the claim is true.

In the second way, it can be interpreted as follows: ‘A being could not be apprehended unless the notion of the true were apprehended’. And this is false.

It is the case, however, that something true cannot be apprehended unless the notion of being is apprehended. For *being* enters into the definition of *true*.

It is the same as comparing *intelligible* to *being*. For a being cannot be understood unless that being is intelligible, and yet a being can be understood without its intelligibility being understood. Similarly, a being as understood is true, but it is not the case that in understanding *being*, one understands *true*.

#### Article 4

##### Is *good* conceptually prior to *true*?

It seems that *good* is conceptually prior to *true*:

**Objection 1:** As is clear from *Physics* 1, that which is more universal is conceptually prior (*secundum rationem prius*). But *good* is more universal than *true*, since the true is a certain good, viz., the good of an intellect. Therefore, *good* is conceptually prior to *true*.

**Objection 2:** The good exists in the things, whereas the true exists in the intellect as it composes and divides, as has been explained (a. 2). But things that exist in reality are prior to things that exist in the intellect. Therefore, *good* is conceptually prior to *true*.

**Objection 3:** As is clear from *Ethics* 4, truth (*veritas*) is a certain species of virtue. But virtue is contained under the good, since, as Augustine says, a virtue is a good quality of the mind. Therefore, *good* is prior to *true*.

**But contrary to this:** That which exists in more things is conceptually prior. But the true exists in certain things in which the good does not exist, viz., mathematical entities. Therefore, *true* is prior to *good*.

**I respond:** Even though *good* and *true* are convertible with *being* as far as their subject (*suppositum*) is concerned, they differ in concept. And on this score *true* is, absolutely speaking, prior to *good*. This is clear from two considerations:

First, *true* is more closely related to *being*, which is itself prior to *good*. For *true* is related simply and immediately to *esse* itself, whereas the concept *good* follows upon *esse* insofar as *esse* is in some way perfect. For this is why it is desirable.

Second, cognition naturally precedes desire. Hence, since *true* has to do with cognition, whereas *good* has to do with appetite, *true* will be conceptually prior to *good*.

**Reply to objection 1:** The will and the intellect mutually include one another. For the intellect understands the will, and the will wills that the intellect understand. So, then, the things that pertain to the intellect are contained among the things that are ordered to an object of the will, and vice versa. Hence, in the order of desirable things, the good stands as a universal and the true as a particular, whereas the opposite holds in the order of intelligible things.

Thus, from the fact that the true is a certain good it follows that the good is prior in the order of desirable things, but not that it is prior absolutely speaking.

**Reply to objection 2:** A thing is conceptually prior to the extent that it is prior in the understanding. But the intellect first apprehends being itself, and then apprehends that it is understanding being, and thirdly apprehends that it desires being. Hence, the concept *being* comes first, the concept *truth* comes second, and the concept *good* comes third—even though the good exists in the things.

**Reply to objection 3:** The virtue that is called truth is not truth in general, but truth insofar as a man, in what he says and does, manifests himself as he is. Moreover, ‘truth of life’ is predicated in a particular sense, insofar as in his life a man fulfills that to which he is ordered by God’s intellect—in the same way that, as has been explained (a. 1), truth exists in other things as well. Again, the ‘truth of justice’ exists insofar as a man attends to that which he owes to others according to the order of law. Hence, one cannot infer anything about truth in general from these particular senses of truth.

## Article 5

### Is God truth?

It seems that God is not truth (*non sit veritas*):

**Objection 1:** Truth consists in the intellect's composing and dividing. But in God there is no composition and division. Therefore, there is no truth there.

**Objection 2:** According to Augustine in *De Vera Religione*, truth is a likeness to a thing's principle. But in God there is no likeness to His principle. Therefore, truth does not exist in God.

**Objection 3:** Whatever is said of God is said of Him as the first cause of all things. For instance, God's *esse* is a cause of all *esse*, and God's goodness is a cause of every good. Therefore, if truth exists in God, then everything that is true will come from Him. But it is true that someone sins. Therefore, this truth will come from God. But this is clearly false.

**But contrary to this:** In John 14:6 our Lord says: "I am the way, the truth, and the life."

**I respond:** As has been explained (a. 1), truth is found in the intellect insofar as it apprehends a thing as it is, and truth is found in a thing insofar as it has *esse* that is conformable to an intellect. But the latter is found especially in God. For God's *esse* is not only conformed to His intellect, but is His very act of understanding; and His act of understanding is the measure and cause of all other *esse* and of every other intellect. And He Himself is His own *esse* and His own act of understanding. Hence, it follows not only that truth exists in Him, but that He Himself is the first and highest truth.

**Reply to objection 1:** Even though there is no composition or division in God's intellect, He nonetheless judges all things according to His simple understanding, and He has cognition of all the propositions. And this is the sense in which truth exists in His intellect.

**Reply to objection 2:** Truth exists in our intellect insofar as our intellect is conformed to its principle, viz., the things themselves from which it takes its cognition. Likewise, truth exists in the things insofar as they are conformed to their principle, viz., God's intellect.

However, this conformity to a principle cannot, properly speaking, be predicated of God's truth—unless perhaps insofar as truth is appropriated to the Son, who has a principle. Still, if we are speaking of truth as predicated of God's essence, then conformity is unintelligible unless the affirmation is analyzed as a negation—as, for instance, when one says 'The Father is from Himself' because He is not from another'. Similarly, one can call God's truth a likeness of its principle insofar as His *esse* is not dissimilar to His intellect.

**Reply to objection 3:** Non-beings and privations have truth not of themselves, but only from the intellect's apprehension. But all of the intellect's apprehensions are from God. Thus, when I say, 'It is true that he is fornicating', whatever truth is contained therein is wholly from God. However, if someone goes on to infer, 'Therefore, the fact that he is fornicating is from God', then he is committing a fallacy of accident.

## Article 6

### Is there just one truth according to which all things are true?

It seems that there is just one truth according to which all things are true:

**Objection 1:** According to Augustine, nothing except God is greater than the human mind. But truth is greater than the human mind; otherwise, the mind would be the judge of truth, whereas in fact it

judges all things according to the truth and not according to itself. Therefore, God alone is the truth. Therefore, there is no truth other than God.

**Objection 2:** In *De Veritate* Anselm says that truth is related to true things as time is related to temporal things. But there is one time for all temporal things. Therefore, there is one truth by which all things are true.

**But contrary to this:** Psalm 11:2 says: “Truths are decayed from among the children of men.”

**I respond:** In a certain sense there is one truth by which all things are true, and in a certain sense there is not.

To see this clearly, note that when something is predicated univocally of many things, it is found in each of them according to its proper nature, in the way that *animal* is found in every species of animal. However, when something is predicated analogously of many things, it is found in just one of them according to its proper nature, and it is from this one that the others are denominated. For example, ‘healthy’ is predicated of an animal, of urine, and of medicine. It is not that health is found anywhere except in the animal alone; rather, medicine is denominated as healthy from the health of the animal, insofar as it effects that health, and urine is denominated as healthy insofar as it is a sign of that health. And even though health exists neither in the medicine nor in the urine, nonetheless, in the one there is something in virtue of which it effects health, while in the other there is something in virtue of which it is a sign of health.

Now it has been explained (a. 1) that truth exists primarily in the intellect and secondarily in the things insofar as they are ordered to God’s intellect. Therefore, if we are talking about truth as it exists in the intellect according to its proper nature, then there are many truths in the many created intellects and many truths even in one and the same intellect insofar as it knows many things. Hence, a Gloss on Psalm 11:2 (“Truths are decayed from among the children of men”) says that in the same way that many likenesses of a single human face might appear in a mirror, so too many truths result from the one divine truth.

On the other hand, if we are talking about truth as it exists in the things, then all the things are true by the one First Truth to which each is assimilated according to its own being (*entitas*). And so even though the things have many essences or forms, there is nonetheless one truth of God’s intellect in virtue of which all things are denominated as true.

**Reply to objection 1:** The soul judges of each thing not according to just any truth but according to the First Truth, insofar as that truth comes to exist in it, as in a mirror, by reason of the first intelligible things (cf. q. 15). Hence, it follows that the First Truth is greater than the soul.

And yet even the created truth that exists in our intellect is greater than the soul—not absolutely speaking, but in a certain respect, viz., insofar as it is the soul’s perfection. In this same sense, knowledge can also be said to be greater than the soul.

However, it is true that nothing *subsistent*, except God, is greater than the rational mind.

**Reply to objection 2:** This passage from Anselm is true in the sense that things are called true because of their relation to God’s intellect.

## Article 7

### Is created truth eternal?

It seems that created truth is eternal:

**Objection 1:** In *De Libero Arbitrio* Augustine says that there is nothing more eternal than the

nature of a circle or the fact that two plus three equals five. But the truth of these things is created truth. Therefore, created truth is eternal.

**Objection 2:** Everything that always exists is eternal. But universals exist always and everywhere. Therefore, they are eternal. Therefore, truth, which is especially universal, is likewise eternal.

**Objection 3:** That which is true at present is such that the proposition ‘It is going to be’ was always true. But just as the truth of a present-tense proposition is a created truth, so too is the truth of a future-tense proposition. Therefore, some created truth is eternal.

**Objection 4:** Everything that lacks both a beginning and an end is eternal. But the truth of propositions lacks both a beginning and an end.

For if truth began to exist after it had not previously existed, then the proposition ‘Truth does not exist’ was true. But surely it was true by some truth, and so truth existed before it began to exist.

Similarly, if someone claims that truth has an end, then it follows that truth exists after it will have ceased to exist. For the proposition ‘Truth does not exist’ will then be true.

Therefore, truth is eternal.

**But contrary to this:** As was established above (q. 10, a. 3), God alone is eternal.

**I respond:** The truth of propositions (*enuntiabilia*) is nothing other than the truth of the intellect. For propositions exist both in the intellect and in speech. Insofar as a proposition exists in the intellect, it has its truth *per se*. On the other hand, as existing in speech, a proposition is called true insofar as it signifies some truth of the intellect and not because of any truth that exists in it itself as in a subject—just as urine is called healthy not because of any health that exists in it itself, but because of the animal’s health, which it signifies.

Similarly, it was likewise explained above (a. 1) that things themselves are denominated as true from the truth of the intellect.

Hence, if no intellect were eternal, then no truth would be eternal. But since only God’s intellect is eternal, it is in that intellect alone that truth has eternity. Nor does it follow from this that something other than God is eternal. For, as was shown above (a. 5), the truth of the divine intellect is God Himself.

**Reply to objection 1:** The nature of a circle and the fact that two plus three equals five have eternity in the mind of God.

**Reply to objection 2:** There are two ways in which a thing can be understood to exist always and everywhere.

In the first way, the thing exists always and everywhere because it has within itself that in virtue of which it extends to every time and to every place. This is the way in which it belongs to God to exist always and everywhere.

In the second way, the thing exists always and everywhere because it does not have anything within itself by which it is limited to a certain time or place. This is like the way in which primary matter is said to be one. It is one not because it has one form—in the way, e.g., that a man is one because of the unity of his one form—but because of the absence of all distinguishing forms.

It is in this second way that a universal is said to exist always and everywhere. For universals abstract from the here and now. But from this it does not follow that universals are eternal—unless they are eternal in an intellect, if there is an eternal intellect.

**Reply to objection 3:** The reason why that which now exists was, before it existed, going to exist, is that its cause was such that that thing was going to exist. Hence, if that cause had been removed, then it would not have been the case that that thing was going to exist. But only the first cause is eternal. Hence, it does not follow that the things that now exist are such that the proposition ‘They are going to exist’ was always true, except insofar as an everlasting cause was such that they were going to exist. But God alone is such a cause.

**Reply to objection 4:** Since our intellect is not eternal, neither is it the case that the truth of any proposition formulated by us is eternal; rather, the truth of any such proposition begins to exist at some time. And before a truth of this sort existed, it was not true to assert ‘This truth does not exist’—unless it was being asserted by God’s intellect, in which alone truth is eternal.

To be sure, the assertion ‘This truth did not exist at that time’ is now true. But this is true only by a truth that now exists in our intellect, and not by any truth that now exists on the part of a thing. For it is a truth about a non-being. But a non-being does not have its truth of itself; rather, its being true comes solely from an intellect’s apprehending it. Hence, to the extent that we apprehend that the non-existence of the truth in question preceded its existence, the assertion ‘This truth did not exist’ is true.

## Article 8

### Is truth immutable?

It seems that truth is immutable:

**Objection 1:** In *De Libero Arbitrio* 2 Augustine says that truth is not of equal status with the mind, because otherwise it would be changeable, just like the mind is.

**Objection 2:** What remains after every change is immutable; for instance, primary matter is ungenerated and incorruptible, since it remains after every instance of generation and corruption. But truth remains after every change, since after each change either the assertion ‘This thing exists’ or the assertion ‘This thing does not exist’ will be true. Therefore, truth is immutable.

**Objection 3:** If the truth of a proposition changed, it would do so especially because of a change in things. But it does not change for this reason. For according to Anselm, truth is a sort of rectitude, viz., a thing’s fulfilling what is contained about it in God’s mind. But the fact that the proposition ‘Socrates is sitting’ signifies that Socrates is sitting derives from God’s mind, since the proposition signifies this even when Socrates is not sitting. Therefore, a proposition’s truth does not change in any way.

**Objection 4:** When the cause is the same, the effect is also the same. But the same reality is the cause of the truth of these three propositions: ‘Socrates is sitting’, ‘Socrates will be sitting’, and ‘Socrates was sitting’. Therefore, the truth of these propositions is the same. But one or another of these propositions must be true. Therefore, the truth of these propositions persists immutably—and, for the same reason, so does the truth that belongs to any other proposition.

**But contrary to this:** Psalm 11:2 says: “Truths are decayed from among the children of men.”

**I respond:** As was explained above (a. 1), truth exists properly in the intellect alone, whereas things are called true in a sense that derives from the truth that exists in an intellect. Hence, the mutability of truth must be thought of as having to do with an intellect.

Now the truth of the intellect consists in its conforming to the things that are understood. This conformity, just like any other kind of likeness, can change in two ways, viz., because of a change in one or the other of its terms. Hence, in the first way, truth changes on the part of the intellect, viz., from the fact that someone accepts a different opinion about a thing while the thing itself remains the same, whereas in the second way, truth changes when the thing changes while the opinion remains the same—assuming in both cases that there is a change from truth to falsity.

Therefore, if there is an intellect which is such that (a) a change of opinion cannot occur in it and (b) no entity can undermine its acceptance of an opinion, then immutable truth will exist in that intellect. As is clear from what was said above (q. 14, a. 15), God’s intellect is like this. Hence the truth of God’s intellect is immutable.

By contrast, the truth of our intellect is mutable. This is not because truth itself is subject to change, but because our intellect changes from truth to falsity. (For this is the sense in which forms can be called mutable.)

On the other hand, it is the truth of God's intellect according to which natural things are called true, and this sort of truth is altogether immutable.

**Reply to objection 1:** Augustine is speaking here of God's truth.

**Reply to objection 2:** *True* and *being* are convertible. Hence, just as, according to *Physics* 1, being itself is generated and corrupted not *per se* but *per accidens*, insofar as *this* or *that* being is corrupted or generated, so too truth changes not because no truth remains, but because *this* truth, which previously existed, does not remain.

**Reply to objection 3:** A proposition does not have truth merely in the way that other things are said to have truth, viz., insofar as they fulfill what is ordained for them by God's intellect. Rather, a proposition is also said to have truth in a certain special way, viz., insofar as it signifies the truth of an intellect. This latter truth consists in the conformity between the intellect and the thing, and once this conformity is removed, the truth of the opinion—and, consequently, the truth of the proposition—changes.

So, then, when Socrates is sitting, the spoken proposition 'Socrates is sitting' is true both (a) with the *truth of a thing*, insofar as it is a certain meaningful locution, and also (b) with the *truth of signification*, insofar as it signifies a true opinion (*veram opinionem*). However, once Socrates gets up, the first sort of truth remains, while the second changes.

**Reply to objection 4:** Socrates's sitting, which is the cause of the truth of the proposition 'Socrates is sitting', does not have the same status while Socrates is sitting and after he will have sat and before he sits. Hence, the truth caused by Socrates's sitting likewise exists in different ways and is signified in different ways by the present-tense proposition, the past-tense proposition, and the future-tense proposition. Hence, even though one or the other of the propositions is true, it does not follow that the same truth remains invariable.

## QUESTION 17

### Falsity

Next we must inquire into falsity. And on this topic there are four questions: (1) Does falsity exist in things? (2) Does falsity exist in the senses? (3) Does falsity exist in the intellect? (4) How are the true and the false related?

### Article 1

#### Does falsity exist in things?

It seems that falsity does not exist in things:

**Objection 1:** In the *Soliloquia* Augustine says, “If the true is that which is, one may infer—no matter who objects—that the false does not exist anywhere.”

**Objection 2:** The term ‘false’ derives from *fallere*, to deceive. But in *De Vera Religione* Augustine says that things do not deceive “because they do not manifest anything other than their own species.” Therefore, the false is not found in things.

**Objection 3:** As was explained above (q. 16, a. 1), ‘true’ is predicated of things because of their relation to God’s intellect. But each thing, insofar as it exists, imitates God. Therefore, each thing is true without any falsity. And so no entity is false.

**But contrary to this:** In *De Vera Religione* Augustine says, “Each body is a true body and a false unity,” since it merely imitates unity and is not a unity. But each entity imitates God’s goodness and falls short of that goodness. Therefore, falsity exists in all things.

**I respond:** Since the true and the false are opposed to one another, and since opposites are related to the same subject, falsity has to be looked for first where truth is primarily found, i.e., in the intellect.

Now neither truth nor falsity is found in the things except because of their relation to an intellect. And since each thing is named absolutely speaking in light of what belongs to it *per se*, whereas it is named only in a derivative way in light of what belongs to it *per accidens*, a thing can be called false absolutely speaking because of its relation to an intellect on which it depends [for its *esse*] and to which it is related *per se*, whereas in relation to other intellects to which it is related *per accidens* it can be called false only in a derivative way.

Now natural things depend on *God’s intellect* in the way that artifacts depend on a human intellect. Artifacts are called false absolutely speaking and in themselves insofar as they are defective in relation to the form of the relevant craft; thus, a craftsman is said to fashion a false work when that work is defective in relation to the operation associated with the craft. So in the case of things that depend on God, falsity cannot be found in relation to God’s intellect; for whatever accrues to things proceeds from the ordination of God’s intellect—except perhaps in the lone case of voluntary agents, who have it within their power to withdraw themselves from the ordination of God’s intellect. This is what the evil of sin consists in. Accordingly, in the Scriptures sins themselves are called falsehoods and lies (Psalm 4:3: “Why do you love vanity, and seek after lying?”)—just as, on the opposite side, virtuous action is called the ‘truth of life’ insofar it is subject to the order of God’s intellect (John 3:21: “He that does truth comes to the light.”).

On the other hand, as regards the order of *our intellect*, to which they are related *per accidens*, natural things can be called false not absolutely speaking, but in a derived sense. This happens in two ways:

In one way, things are called false because of the nature of the thing signified, so that what is signified or represented by a false assertion or conception is said to be false in the things. In this sense,

each thing can be said to be false with respect to what does not exist in it—as, for instance, if we were to call a diameter a false commensurable, as the Philosopher does in *Metaphysics* 5, or, as Augustine says in *Soliloquia*, “The tragic actor is a false Hector.” On the other hand, each thing can also be called true with respect to that which belongs to it.

In the second way, things are called false in the manner of a cause. A thing is called false in this sense when it is prone to cause a false belief about itself. Since it is natural for us to judge things by their exterior appearances, given that our cognition begins with the senses, which have to do *per se* and primarily with exterior accidents, it follows that things which resemble other things in their exterior accidents are said to be false with respect to those other things. For instance, gall is false honey, and tin is false silver. Accordingly, in *Soliloquia* Augustine says, “We call things false when we apprehend them as very similar.” And in *Metaphysics* 5 the Philosopher says, “If a thing is prone to appear such as it is not, or to appear as what it is not, then it is called false.” In this sense a man can be called false to the extent that he is enamored with false opinions and assertions—not, however, because he is able to formulate false opinions and assertions, since in that case, as *Metaphysics* 5 says, even those who are wise and knowledgeable would be called false.

**Reply to objection 1:** In relation to an intellect, a thing is called true with respect to what it is and false with respect to what it is not. Hence, as *Soliloquia* 2 says, “The true tragic actor is a false Hector.” So to the extent that a sort of non-being is found in things which exist, so too a certain type of falsity is found in things that exist.

**Reply to objection 2:** Things deceive us *per accidens* rather than *per se*. For they provide an occasion for falsity in that they bear a resemblance to things whose reality they do not have.

**Reply to objection 3:** Entities are not called false in relation to *God’s* intellect, which would be for them to be false absolutely speaking. Rather, they are called false in relation to *our* intellect, which is for them to be false in a derived sense.

**Reply to argument for the contrary:** A defective likeness or representation brings with it the nature of falsity only insofar as it presents an occasion for a false opinion. Hence, it is not the case that whenever there is a resemblance, the thing is called false. Rather, a thing is called false whenever the resemblance is apt to effect a false opinion—not in all cases, but for the most part.

## Article 2

### Does falsity exist in the senses?

It seems that falsity does not exist in the senses (*in sensu*):

**Objection 1:** In *De Vera Religione* Augustine says, “If all the bodily senses testify to the way in which they are affected, I do not know what more we should demand of them.” So it seems that we are not deceived by the senses. And so falsity does not exist in the senses.

**Objection 2:** In *Metaphysics* 4 the Philosopher says, “Falsity is proper not to the senses, but to the imagination.”

**Objection 3:** The true and the false exist only in propositions (*complexa*) and not in simple terms (*incomplexa*). But it does not pertain to the senses to compose and divide. Therefore, falsity does not exist in the senses.

**But contrary to this:** In the *Soliloquia* Augustine says, “It appears that we err in all the senses because of deceptive resemblances.”

**I respond:** Falsity should be looked for in the senses only to the extent that truth exists in them.

Now as was explained above (q. 16, a. 2), truth does not exist in the senses in such a way that the senses themselves have cognition of the true; rather, truth exists in them insofar as they have a true apprehension of sensible things. This happens to the extent that they apprehend the things as those things are. Hence, falsity can exist in the senses to the extent that they apprehend or assess things to be otherwise than those things are.

Now the senses know things insofar as a likeness of the things exists in them. But there are three ways in which a likeness of things exists in the senses:

In the first way, the likeness exists in them primarily and *per se*. This is the way in which a likeness of colors and other proper sensibles exists in the sense of sight.

In the second way, the likeness exists in them *per se* but not primarily. This is the way in which a likeness of shape or of magnitude or of the other common sensibles exists in the sense of sight.

In the third way, the likeness exists in them neither primarily nor *per se*, but rather *per accidens*. This is the way in which the likeness of a man exists in the sense of sight—not insofar as he is a man, but insofar as a thing of this particular color happens to be a man.

Now with respect to the proper sensibles the senses do not have a false cognition except *per accidens* and in just a few cases, viz., when, because a sense organ is not properly disposed, it does not receive the sensible form in the right way—just as other things that are acted upon likewise receive an agent’s impression in a defective way because they are not properly disposed. Thus, it is because of a disorder in the tongue that sweet things seem bitter to sick people.

On the other hand, as regards the common sensibles and the things that are sensed *per accidens*, there can be a false assessment even in properly disposed senses. For the senses are not related directly to these things, but are related to them *per accidens* or as a consequence of their being related to other things.

**Reply to objection 1:** The senses are such that their being affected is their very sensing. Hence, if the senses testify to the way in which they are affected, it follows that we are not deceived in the judgment by which we judge that we are sensing something. However, because the senses are sometimes affected in a way different from the way the thing is, it follows that they sometimes testify to us differently from the way the thing is. And because of this we are deceived by the senses with respect to a given thing, but not with respect to the sensing itself.

**Reply to objection 2:** Falsity is said not to be proper to the senses because the senses are not deceived with respect to their proper object. Hence, in another and clearer translation the passage reads as follows: “The sensing of a proper sensible is not false.”

On the other hand, falsity is attributed to the imagination to the extent that it presents the likeness of a thing even when it is absent. Hence, when someone turns to the likeness of a thing as if to the thing itself, then falsity results from such an apprehension. Hence, in *Metaphysics* 5 the Philosopher also says that shadows and pictures and dreams are called false, insofar as they are not grounded in the things to which they have a likeness.

**Reply to objection 3:** This argument proves that falsity does not exist in the senses in the same way that it exists in a power that has cognition of the true and the false.

### Article 3

#### Does falsity exist in the intellect?

It seems that falsity does not exist in the intellect (*in intellectu*):

**Objection 1:** In 83 *Quaestiones* Augustine says, “Whoever is deceived has no understanding (*non*

*intelligit*) of that about which he is deceived.” But the false is said to exist in a cognition insofar as we are deceived by that cognition. Therefore, falsity does not exist in the understanding (*in intellectu*).

**Objection 2:** In *De Anima* 3 the Philosopher claims that an act of understanding (*intellectus*) is always correct. Therefore, falsity does not exist in the understanding (*in intellectu*).

**But contrary to this:** *De Anima* 3 says, “The true and the false exist where there is a composition of thoughts.” But the composition of thoughts occurs in the intellect. Therefore, the true and the false exist in the intellect.

**I respond:** Just as a thing has *esse* through its proper form, so a cognitive power has its cognition through a likeness of the thing that it has cognition of. Now a natural thing is not defective with respect to the *esse* that belongs to it through its form, but it can be defective with respect to certain things that are accidental to or follow upon its form. For instance, a man might be defective with respect to having two feet, but not with respect to being a man. In the same way, a cognitive power is not defective in its cognition with respect to that thing by whose likeness it is informed, but it can be defective with respect to what follows upon or is accidental to that likeness. This is similar to the claim, made above (a. 2), that the sense of sight is not deceived with respect to a proper sensible, but might be deceived with respect to (a) the common sensibles that are consequent upon a proper sensible or (b) things that are sensible *per accidens*.

Now the intellect is informed by a likeness of a thing’s ‘what-ness’ (*quidditas*) in just the way that the senses are directly informed by a likeness of the proper sensibles. Hence, just as the senses are not deceived about proper sensibles, so too the intellect is not deceived about a thing’s ‘what-ness’. However, in its composing and dividing the intellect can be deceived when it attributes to a thing whose ‘what-ness’ it understands something which does not follow upon that ‘what-ness’ or which is opposed to it. For the intellect is related to a judgment about such things in the same way that the senses are related to judgments about common sensibles or about things that are sensible *per accidens*. Still, we must keep in mind this difference, explained above (q. 16, a. 2) for the case of truth: Falsity can exist in the intellect not only because the intellect’s cognition is false, but also because the intellect has a cognition of falsity in the same way that it has a cognition of truth, whereas, as has been explained (a. 2), falsity does not exist in the senses as something that the senses have cognition of.

However, even though falsity exists *per se* in the intellect only with respect to the intellect’s composition, there can also be falsity *per accidens* in the operation of the intellect by which it has cognition of what a thing is (*qua cognoscit quod quid est*), since the intellect’s composition may get mixed in with this operation. This can happen in two ways:

In the first way, it happens when the intellect attributes the definition of one thing to some other thing—for instance, if it should attribute the definition of a circle to a man. Hence, the definition of one thing is false of another thing.

In the second way, it happens insofar as the intellect puts together as parts of a definition things that cannot go together. For in such a case the definition is false in itself and not just with respect to some entity or other. For instance, if the intellect formulated a definition such as *rational quadrupedal animal*, then it would be false in formulating such a definition because it would be false if it formulated the proposition ‘Some rational animal is a quadruped’. It is for this reason that the intellect cannot be false in its cognition of simple ‘what-nesses’ (*in cognoscendo quidditates simplices*); rather, either it is true or else it understands nothing at all.

**Reply to objection 1:** The ‘what-ness’ of a thing is the proper object of our understanding (*intellectus*), and for this reason we are properly said to understand something when, tracing it back to what it is, we make a judgment about it of the sort that occurs in demonstrations, in which there is no falsity. This is how to interpret Augustine’s claim that whoever is deceived does not understand that about which he is deceived. However, his claim should not be interpreted to mean that no one is

deceived in any operation of the intellect.

**Reply to objection 2:** The understanding is always correct to the extent that it is the understanding of principles about which no one is deceived—and this for the very same reason that no one is deceived about the ‘what-ness’ of a thing. For the principles that are known *per se* are those which are such that they are known as soon as their terms are understood, because the predicate is posited in the definition of the subject.

#### Article 4

##### Are the true and the false contraries?

It seems that the true and the false are not contraries:

**Objection 1:** The true and the false are opposed as that which is and that which is not; for, as Augustine says, “The true is that which is.” But that which is and that which is not are not opposed as contraries. Therefore, the true and the false are not contraries.

**Objection 2:** One of two contraries does not exist in the other. But the false exists in the true; for as Augustine says in the *Soliloquia*, “The tragic actor would not be a false Hector, if he were not a true tragic actor.” Therefore, the true and the false are not contraries.

**Objection 3:** In God there is no contrariety, since, as Augustine says in *De Civitate Dei* 12, nothing is contrary to God’s substance. But falsity is opposed to God, since in Scripture an idol is called a lie (Jeremiah 8:5: “They have laid hold on lying”; Gloss: “that is, idols”). Therefore, the true and the false are not contraries.

**But contrary to this:** In *Perihermenias* 2 the Philosopher claims that a false opinion is contrary to a true opinion.

**I respond:** The true and the false are opposed as contraries—and not, as some have claimed, as an affirmation and a negation.

To see this clearly, note that a *negation* neither posits anything nor determines a subject for itself. For this reason, a negation—e.g., ‘non-seeing’ or ‘non-sitting’—can be predicated either of a being or of a non-being.

A *privation*, on the other hand, does not posit anything but does determine a subject for itself. For, as *Metaphysics* 4 says, a privation is a negation in a subject. For instance, ‘blind’ is predicated only of something that is apt by its nature to have sight.

By contrast, a *contrary* both posits something and determines a subject for itself. For example, black is a certain species of color.

Now the false posits something. For, as the Philosopher says in *Metaphysics* 4, something is false because it is asserted (or seen) to be what it is not or because it is asserted (or seen) not to be what it is. For just as the true posits an acceptance of what corresponds to the thing (*ponit acceptionem adaequatam rei*), so the false posits the acceptance of what does not correspond to the thing. Hence, it is clear that the true and the false are contraries.

**Reply to objection 1:** What exists in things is the truth of a thing, but what exists *as apprehended* is the truth of the intellect, in which truth exists primarily. Hence, the false is likewise that which is not *as apprehended*. And as the Philosopher proves in *Perihermenias* 2, apprehending what is and apprehending what is not are contraries; for example, the opinion ‘A good thing is good’ is contrary to the opinion ‘A good thing is not good’.

**Reply to objection 2:** The false is not grounded in the true that is contrary to itself, just as evil

does not exist in a good that is contrary to itself. Rather, evil is grounded in the good which is its subject. In both cases, this happens because the true and the good are universal and convertible with being. Hence, just as every privation is grounded in a subject that is a being, so too everything evil is grounded in something good, and everything false is grounded in something true.

**Reply to objection 3:** Contraries and things opposed privatively are apt to have the same subject. Therefore, nothing is contrary to God considered in Himself, either because of His goodness or because of His truth, since there cannot be any falsity in His intellect.

However, in *our* apprehension God *does* have a contrary in the sense that a false belief about Him is contrary to a true belief about Him. And so idols are called lies opposed to the divine truth, insofar as a false belief about idols is contrary to a true belief about God's oneness.

## QUESTION 18

### God's Life

Since understanding belongs to living things, now that we have considered God's knowledge and understanding, we must turn to a consideration of His life. And on this topic there are four questions: (1) Which things are living? (2) What is life? (3) Does life belong to God? (4) Are all things the life in God?

#### Article 1

##### Do all natural things have life?

It seems that all natural things have life:

**Objection 1:** In *Physics* 8 the Philosopher says that movement (*motus*) is, as it were, a sort of life in all things that exist by nature. But all natural things participate in movement. Therefore, all natural things participate in life.

**Objection 2:** Plants are said to be alive because they have within themselves a principle of the movements of growth and diminution. But as *Physics* 8 proves, local movement is more perfect than, and naturally prior to, the movements of growth and diminution. Therefore, since all natural bodies have some principle of local movement, it seems that all natural bodies have life.

**Objection 3:** Among natural bodies, the least perfect are the elements. But life is attributed to the elements—for instance, waters are called 'living waters'. Therefore, *a fortiori*, all natural bodies have life.

**But contrary to this:** In *De Divinis Nominibus*, chap. 6, Dionysius says, "Plants have life in its last echoes." From this one can infer that plants have the lowest grade of life. But inanimate bodies are lower than plants. Therefore, they do not have life.

**I respond:** Beginning with those things that clearly have life, we can determine which things have life and which do not. Now life clearly belongs to animals; for *De Vegetabilibus* says, "Life is manifest in the animals." Hence, we should distinguish living things from non-living things by looking at the reason why animals are said to have life. But this will be whatever life is first manifested in and which remains to the last.

Now we first say that an animal has life when it begins to have movement from itself, and an animal is judged to be alive for as long as such movement is apparent in it; and when it no longer has movement from itself, but is moved only by another, then an animal is said to be dead because of the absence of life. From this it is clear that the things that have life in the proper sense are those that move themselves with some type of movement—regardless of whether (a) movement is taken in the proper sense, according to which a movement is said to be the act of what is imperfect, i.e., of something that exists in potentiality, or (b) movement is taken in a broad sense, according to which an act of what is perfect is called a movement—in the way that acts of understanding and of sensing are called movements according to *De Anima* 3. Accordingly, things that impel themselves to some sort of movement or action are said to have life, whereas things whose nature is not such that they impel themselves to any movement or action cannot be said to have life, except according to some likeness.

**Reply to objection 1:** This passage from the Philosopher can be understood to apply either to the first movement, viz., the movement of the celestial bodies, or to movement in general. And in both cases movement is called 'the life' of natural bodies according to a certain likeness and not properly speaking. For the movement of the celestial bodies in the universe of corporeal natures is like the movement of the heart by which life is conserved in an animal. Similarly, every natural movement is, as it were, a certain

likeness of a vital operation in natural things. Hence, if the whole corporeal universe were a single animal, so that (as some have claimed) its movement were from an intrinsic mover, then it would follow that its movement is the life of all natural bodies.

**Reply to objection 2:** Movement belongs to heavy and light bodies only insofar as what their nature is disposed to remains unfulfilled—more specifically, only when they are located outside of their proper place. For when they are located in their proper and natural place, they are at rest. By contrast, plants and other living things are moved by a vital motion insofar as what their nature is disposed to is fulfilled—and not insofar as they are approaching it or receding from it. Indeed, to the extent that they recede from that movement, they recede from what their nature is disposed to.

What's more, as *Physics* 8 says, heavy and light bodies are moved either (a) by an extrinsic mover, or (b) by what generates them and gives them their form, or (c) by what removes an impediment. And so they do not move themselves in the way that living bodies do.

**Reply to objection 3:** What are called living waters are waters that are continuously flowing. For standing waters, which are not connected to a continually flowing source, are called dead waters, e.g., the waters in cisterns or ponds. And this is said by way of a likeness. For insofar as waters seem to move themselves, they have a likeness to life. Still, they do not have the true nature of life, since they have this movement not from themselves, but from the cause that generates them—just as happens with the movements of other heavy and light bodies.

## Article 2

### Is life an operation?

It seems that life is a certain operation:

**Objection 1:** Nothing is divided except into things that belong to its genus. But *to live* is divided into certain operations, as is clear from the Philosopher in *De Anima* 2, where he divides *to live* into four operations, viz., (a) to take nourishment, (b) to sense, (c) to move oneself by local movement, and (d) to understand. Therefore, life is a certain operation.

**Objection 2:** The active life is said to differ from the contemplative life. But contemplative people differ from active people only with respect to certain operations. Therefore, life is a certain operation.

**Objection 3:** To know God is a certain operation. But, as is clear from John 17:3 (“Now this is eternal life: that they may know You, the only true God”), this operation is life. Therefore, life is an operation.

**But contrary to this:** In *De Anima* 2 the Philosopher says, “In the case of living things, their living is their being.”

**I respond:** As is clear from what was said above (q. 17, aa. 1 and 3), our intellect, which properly grasps the ‘what-ness’ (*quidditas*) of a thing as its proper object, begins from the senses, whose proper objects are exterior accidents. So from a thing’s external appearances (*ex his quae exterius apparent de re*) we arrive at a cognition of the thing’s essence.

And, as is clear from what was said above (q. 13, a. 1), because we name a thing as we know it, in many cases we impose names derived from exterior properties in order to signify the essences of things. Hence, names of this sort are sometimes taken properly for the essences of the things which the names were principally imposed to signify, but sometimes they are taken instead—less properly—for the properties because of which they were imposed. For instance, it is clear that the name ‘body’ was

imposed to signify a certain genus of substances, and it was imposed because three dimensions are found in those substances. So sometimes this name is used to signify the three dimensions themselves, in which case ‘body’ is being used for a species of quantity.

Now something similar must be said about the name ‘life’. For the name ‘life’ is taken from a certain external appearance of a thing, viz., that it moves itself. But this movement is not what the name was imposed to signify. Rather, it was imposed to signify a substance which by its nature moves or impels itself in some way to an action. Accordingly, to live is nothing other than to exist in such a nature, and the name ‘life’ signifies this very thing, but in the abstract—in just the way that the name ‘a run’ signifies running itself in the abstract. Hence, [the concrete name] ‘living’ is not an accidental predicate but a substantival predicate.

However, sometimes the name ‘life’ is taken less properly for the vital operations from which the name ‘life’ was first taken. This is the way that the Philosopher is talking in *Ethics* 9 when he says, “Life is principally sensing or understanding.”

**Reply to objection 1:** The Philosopher is here taking *to live* for a vital operation.

An alternative, and better, reply is to claim that ‘to sense’ and ‘to understand’, etc., are sometimes taken for certain operations and sometimes for the very *esse* of those things that have these operations. For *Ethics* 9 says, “To be is to sense or to understand,” i.e., to have a nature capable of sensing or understanding. And this is the sense in which the Philosopher divides *to live* into the four operations. For the genera of living things are contained in these four logical subordinates: Some living things have a nature capable only of *taking nourishment* and of what follows from this, viz., growth and generation; other living things have, in addition, a nature capable of *sensing*, as is clear in the case of immobile animals such as oysters; others also have, along with these operations, natures capable of *moving themselves by local movement*, e.g., perfect animals like quadrupeds and birds, etc.; and still others have, in addition, a nature capable of *understanding*, e.g., men.

**Reply to objection 2:** The vital works are those whose principles exist within the agents, so that agents induce operations of this sort within themselves. However, it is possible for there to exist within men not only natural principles (e.g., natural powers) for certain works, but also certain added principles, e.g., habits that incline them in the manner of a nature to certain types of actions and render those actions pleasant. And on this basis—through, as it were, a certain likeness—a particular activity which is pleasant to a man, and to which he is inclined, and in which he spends his time, and to which he orders his life, is itself called the man’s life. Hence, some are said to lead the life of pleasure and some the noble life. It is in this same way that the contemplative life is distinguished from the active life. Also, it is in this same way that to know God is called eternal life.

**Reply to objection 3:** The answer to this objection is clear from what was just said.

### Article 3

#### Does God have life?

It seems that life does not befit God:

**Objection 1:** As has been explained (aa. 1-2), the things that are said to live are those that move themselves. But it does not belong to God to be moved. Therefore, neither does it belong to Him to live.

**Objection 2:** In all things that are living, there is some principle of life; hence, *De Anima* 2 says, “The soul is the cause and principle of a living body.” But God does not have any principle. Therefore, it does not belong to God to live.

**Objection 3:** The principle of life in the living things that surround us is the vegetative soul, which exists only in corporeal things. Therefore, it does not belong to incorporeal things to live.

**But contrary to this:** Psalm 83:3 says, “My heart and my flesh have rejoiced in the living God.”

**I respond:** Life exists in God in an especially proper way.

To see this clearly, consider that things are said to have life insofar as they operate by themselves and not as moved by others. The more perfectly this characteristic belongs to a thing, the more perfectly is life found in it.

Now among the things that move and are moved we find three elements in the following order: First, there is the *end* that moves the agent, whereas a principal agent is one that acts through its own *form*; and a principal agent sometimes acts through an instrument, which does not act by the power of its own form but instead acts by the power of the principal agent, so that it is only the *execution* of the action that belongs to the instrument.

Thus, there are some agents that move themselves, but not with respect to either the *form* or the *end*, which exist in them by nature. Rather, they move themselves only with respect to the *execution* of the action, whereas the form through which they act and the end for the sake of which they act are determined for them by their nature. Plants are agents of this sort. Given the form imparted to them by nature, they move themselves with respect to growth and diminution.

There are some agents that move themselves in a further way, not only with respect to the *execution* of the movement, but also with respect to the *form* that is the principle of the movement; for they acquire this form by themselves. Animals are agents of this sort. Their principle of movement is a form that is received through the senses rather than imparted to them by nature. Hence, the more perfect their sensory powers are, the more perfectly they move themselves. For animals that have only the sense of touch, e.g., oysters, move themselves only by movements of reaching out and drawing back, hardly surpassing the movement of a plant. On the other hand, animals that have a complete sentient power to know not only things conjoined to and touching them, but also things at a distance from them, move themselves to remote places by a progressive movement. However, even though animals of this sort receive through the senses the *form* that is the principle of action, they nonetheless do not determine for themselves the *end* of their action or movement; instead, this end is imparted to them by nature, so that it is through natural instinct that they are moved to do something by the form apprehended through their senses.

Hence, in addition to such animals, there are other animals that move themselves even with respect to the *end*, which they determine for themselves. This happens only through reason and understanding, whose function it is to know the relation between the end and the means to that end and to order the one to the other. Hence, a more perfect mode of living belongs to those animals that have understanding, since they move themselves in a more perfect way. An indication of this is that in one and the same man the intellective power moves the sentient powers, and the sentient powers by their command move the organs that execute the movement—just as, in the case of crafts, we see that the craft which makes use of a ship, viz., the navigational craft, directs the craft that designs the ship, and the latter directs the craft that executes just the task of assembling the materials.

However, even though our intellect moves itself with respect to some things, there are nonetheless other things that are determined for it by its nature—e.g., its *first principles*, with respect to which it cannot alter itself, and the *ultimate end*, which it is unable not to will. Hence, even though our intellect can move itself with respect to some things, it must nonetheless be moved by another with respect to other things.

Therefore, the highest grade of life is had by that which by its nature is its very act of understanding and which is such that what it has by nature is not determined by another. But God is such a being. Hence, life exists especially in God. Thus, in *Metaphysics* 12 the Philosopher, having shown that God is

intelligent, concludes that He has the most perfect and everlasting life, since His intellect is the most perfect and is always in act.

**Reply to objection 1:** As *Metaphysics* 9 says, there are two types of actions, one of which passes into an exterior matter, e.g., heating and cutting, and the other of which remains within the agent, e.g., understanding, sensing, and willing. The difference between them is that the first type of action is a perfection of the thing that is moved and not of the agent that effects the motion, whereas the second type of action is a perfection of the agent.

Hence, since a movement is an act of a movable thing, this second type of action, insofar as it is an act of the agent's, is called the agent's movement on the basis of a likeness. For just as a movement is an act of a movable thing, so an action of the second type is an act of the agent's—even though, as *De Anima* 3 says, a movement is the act of something imperfect, viz., something that exists in potentiality, whereas an action of the second type is the act of something perfect, i.e., something that exists in actuality.

Therefore, given this sense in which an act of understanding is a movement, that which understands itself is said to move itself. And it is in this sense that Plato claimed that God moves Himself—and not in the sense in which a movement is the act of something imperfect.

**Reply to objection 2:** Just as God is His own *esse* itself and His own act of understanding, so too He is His own life. And because of this, He is alive in such a way that He has no principle of living.

**Reply to objection 3:** Among lower things life is received in a corruptible nature that requires generation for the conservation of the species and nourishment for the conservation of the individual. Because of this, in lower things one does not find life without a vegetative soul. But this does not hold for the case of incorruptible things.

#### Article 4

##### Are all things the life in God?

It seems that it is not the case that all things are the life in God (*non omnia sint vita in Deo*):

**Objection 1:** Acts 17:28 says, “In Him we live and move and have our being.” But it is not the case that all things are the movement in God. Therefore, it is not the case that all things are the life in God.

**Objection 2:** All things exist in God as in a first exemplar. But the exemplifiers should be conformed to their exemplar. Therefore, since it is not the case that all things are alive in themselves, it seems that it is not the case that all things are the life in God.

**Objection 3:** In *De Vera Religione* Augustine says that a living substance is better than any non-living substance. Therefore, if things that are not alive in themselves are the life in God, then it seems that things exist more truly in God than in themselves. But this seems to be false, since in themselves they exist in actuality, whereas in God they exist in potentiality.

**Objection 4:** Just as good things are known by God, along with the things that are made at some time or other, so too evil things are known by God, along with the things that He is able to make and yet are never made. Therefore, if all things are the life in God insofar as they are known by Him, then it seems that even evil things and things that are never made are the life in God insofar as they are known by Him. But this seems absurd.

**But contrary to this:** John 1:3-4 says: “What was made . . . was life in Him.” But all things other than God were made. Therefore, all things are the life in Him.

**I respond:** As has been explained (a. 3), God's life is His act of understanding. But the intellect, what is understood, and the very act of understanding are all the same in God. Hence, whatever exists in God as something understood is His very living or life. Hence, since all the things that have been made by God exist in Him as things that are understood, it follows that all the things in Him are the very life of God.

**Reply to objection 1:** There are two ways in which creatures are said to exist in God.

In the first way, they exist in God insofar as they are contained in and conserved by God's *power*, just as we say that we 'have it in us' when something is within our power. And so creatures are said to exist in God even insofar as they exist in their proper natures. And this is the way to understand the words of the Apostle when he says, "In Him we live and move and have our being." For our life, and our being, and our movement are all caused by God.

In the second way, things are said to exist in God as in a *knower*. And in this sense they exist in God through their proper conceptions (*rationes*), which in God are nothing other than the divine essence. Hence, insofar as they exist in God in this way, they are the divine essence. And since God's essence is life but not movement, it follows that, in this manner of speaking, things are the life in God, but they are not the movement in Him.

**Reply to objection 2:** The exemplifiers should be conformed to their exemplar with respect to the nature of their form but not with respect to their mode of being. For sometimes the form in the exemplar and the form in the exemplifier have different modes of being. For instance, the form of a house has immaterial and intelligible *esse* in the craftsman's mind, but it has material and sensible *esse* in the house that exists outside the soul. So, too, the natures of things that are not alive in themselves are the life in God's mind, since in God's mind they have divine *esse*.

**Reply to objection 3:** If matter were not part of the nature of natural things, but only form were, then natural things would in all respects exist in a truer mode through their ideas in God's mind than they do in themselves. This is why Plato claimed that the separated Man was a true man, whereas a material man is a man through participation.

However, since matter is part of the nature of natural things, one must say that (a) natural things have *esse* more truly, absolutely speaking, in God's mind than in themselves—for in God's mind they have uncreated *esse*, whereas in themselves they have created *esse*, but that (b) they have *this particular esse* (e.g., the *esse* of a man or a horse) more truly in their proper natures than in God's mind. For material *esse*, which they do not have in God's mind, pertains to the truth of a man [or a horse]. In the same way, a house has *esse* in a more noble way in the craftsman's mind than in matter, but, nonetheless, the house which exists in matter is more truly called a house than the house which exists in the craftsman's mind. For the former is a house in actuality, whereas the latter is a house in potentiality.

**Reply to objection 4:** Even though evils exist in God's knowledge insofar as they are included in God's knowledge, they nonetheless do not exist in God either as created by God and conserved by Him or as having a conception in God. For God knows them through the conceptions of things that are good. Hence, it cannot be claimed that evils are the life in God.

As for things which do not exist at any time, they can be said to be the life in God insofar as 'life' names only the act of understanding by which God understands them, but not insofar as 'life' implies a principle of action.

## QUESTION 19

### God's Will

Having considered the things that pertain to God's knowledge, we must now consider the things that pertain to God's will. First, we will consider God's will itself (question 19); second, we will consider what pertains to His will absolutely speaking (questions 20-21); and, third, we will consider what pertains to His intellect in relation to His will (questions 22-24).

On the topic of God's will itself there are twelve questions: (1) Is there a will in God? (2) Does God will things distinct from Himself? (3) Does God will whatever He wills by necessity? (4) Is God's will a cause of things? (5) Can a cause be assigned for God's act of willing? (6) Is God's will always fulfilled? (7) Is God's will mutable? (8) Does God's will impose necessity on the things willed? (9) Does God will evils? (10) Does God have free choice? (11) Should signs be ascribed to God's will? (12) Is it appropriate to posit five signs of God's will?

### Article 1

#### Is there a will in God?

It seems that there is no will in God:

**Objection 1:** The object of the will is the end and the good. But no end can be assigned to God. Therefore, there is no will in God.

**Objection 2:** The will is a certain sort of desire (*appetitus quidam*). But since a desire is for a thing that is not had, it indicates an imperfection—which cannot belong to God. Therefore, there is no will in God.

**Objection 3:** According to the Philosopher in *De Anima* 3, the will is a moved mover. But as *Physics* 8 proves, God is the first unmoved mover. Therefore, in God there is no will.

**But contrary to this:** Romans 12:2 says: “. . . that you may prove what is . . . the will of God.”

**I respond:** There is a will in God, just as there is an intellect in Him, since the will follows upon the intellect.

For just as a natural thing has *esse* in actuality through its form, so an intellect understands in actuality through its intelligible form. But every entity is related to a form that is natural to it in such a way that (a) when it does not possess it, it tends toward it, and (b) when it does possess it, it comes to rest in it. The same holds for every natural perfection that is a good of the entity's nature. And this relation to the good is called *natural appetite* in things that lack cognition. Hence, an intellectual nature has a similar relation to the good apprehended through an intelligible form, so that (a) when it possesses that good, it rests in it, and (b) when it does not possess it, it seeks after it. And both of these points pertain to the will. Hence, in anything that has an intellect there is a will, just as there is an animal appetite in anything that has sensory cognition.

And so there has to be a will in God, because there is an intellect in Him. Hence, just as His act of understanding is His *esse*, so too is His act of will.

**Reply to objection 1:** Even though nothing distinct from God is God's end, nonetheless, He Himself is the end with respect to all the things that are made by Him. And this is so because of His essence, since, as was shown above (q. 6, a. 3), He is good through His essence. For the end has the nature of a good.

**Reply to objection 2:** In us the will pertains to the appetitive part of the soul. But even though the appetitive part gets its name from the fact that it desires, it is not the case that its only act is to desire what it does not possess. Rather, it also has the act of loving what it possesses, and the act of delighting

in it. And it is with respect to these two acts that a will is posited in God. For God's will always possesses the good that is its object, since, as has been explained, it does not differ from that object in its essence.

**Reply to objection 3:** A will whose principal object is a good that exists outside the will must be moved by something. But the object of God's will is His own goodness, which is His essence. Hence, since God's will is His essence, it is moved by itself alone and not by anything distinct from it—in the sense in which understanding and willing are called movements. (This is the sense in which Plato claimed that the first mover moves itself.)

## Article 2

### Does God will things distinct from Himself?

It seems that God does not will things distinct from Himself:

**Objection 1:** God's act of will is His *esse*. But God is not distinct from Himself. Therefore, He does not will anything distinct from Himself.

**Objection 2:** What is willed moves the will in the way that what is desirable moves the appetite, according to *De Anima* 3. Therefore, if God willed something distinct from Himself, His will would be moved by something distinct from Himself—which is impossible.

**Objection 3:** If the thing willed is sufficient for a given will, then it does not seek anything else. But God's goodness is sufficient for Himself, and His will is satisfied by it. Therefore, God does not will anything distinct from Himself.

**Objection 4:** Acts of will are multiplied according to the things that are willed. Therefore, if God willed both Himself and things distinct from Himself, it would follow that His act of will is multiplied, and as a result His *esse*, which is His act of will, would be multiplied. But this is impossible. Therefore, He does not will things distinct from Himself.

**But contrary to this:** In 1 Thessalonians 4:3 the Apostle says: "This is the will of God, your sanctification."

**I respond:** God wills not only Himself, but also things distinct from Himself.

This is clear from the comparison introduced above (a. 1). For a natural thing has a natural inclination toward its own good—not only in order that it might acquire it when it does not possess it, or rest in it when it does possess it, but also in order that it might diffuse its own good to others as much as possible. Hence, we see that every agent, insofar as it is perfect and acting, effects what is similar to itself.

Hence, it likewise pertains to the nature of the will that it should, to the extent that this is possible, communicate to others the good that it itself possesses. And this pertains in a special way to God's will, from which every perfection is derived through a certain likeness. Hence, if natural things communicate their own good to others insofar as they are perfect, then *a fortiori* it pertains to the divine will that it should communicate its own good to others through a likeness, to the extent that this is possible. So, then, God wills both that He Himself should exist and that other things should exist. But He wills Himself as an end and other things as ordered to that end, insofar as it is fitting that other things should also participate in the divine goodness.

**Reply to objection 1:** Even though God's act of will is His *esse* in reality, nonetheless, as is clear from what was said above (q. 13, a. 4), it differs conceptually from His *esse* according to different modes of understanding and signifying. For when I say 'God exists', no relation to anything is implied in the

way it is implied when I say, ‘God wills’. And so even though God is not something distinct from Himself, He nonetheless wills something distinct from Himself.

**Reply to objection 2:** In those things that we ourselves will for the sake of an end, the end has the complete nature of a mover, and this is what moves the will. This is especially clear in the case of those things that we will *only* for the sake of an end. For instance, when someone wills to take a bitter potion, he wills nothing in it except health, and it is health alone that moves his will. It is otherwise with someone who takes a sweet potion; he is able to will the potion not only for the sake of health, but also for its own sake.

Hence, since, as has been explained, God wills things distinct from Himself only for the sake of that end which is His own goodness, it does not follow that something other than His goodness moves His will. And so just as He understands things distinct from Himself by understanding His own essence, so too He wills things distinct from Himself by willing His own goodness.

**Reply to objection 3:** From the fact that God’s own goodness is sufficient for the divine will it does not follow that He wills nothing else; instead, all that follows is that He does not will anything else except because of His own goodness. In the same way, even though God’s intellect is perfect by reason of the fact that it knows the divine essence, it nonetheless knows other things in that essence.

**Reply to objection 4:** Just as God’s act of understanding is one because He sees many things in only one thing, so too God’s act of will is one and simple because He wills many things through just one thing, viz., His own goodness.

### Article 3

#### Does God will whatever He wills by necessity?

It seems that God wills whatever He wills by necessity:

**Objection 1:** Everything eternal is necessary. But whatever God wills, He wills from eternity; otherwise, His will would be mutable. Therefore, whatever God wills, He wills by necessity.

**Objection 2:** God wills things distinct from Himself insofar as He wills His own goodness. But God wills His own goodness by necessity. Therefore, He wills things distinct from Himself by necessity.

**Objection 3:** Whatever is natural to God is necessary, since, as was shown above (q. 2, a. 3), God is a necessary being *per se* and the source of all necessity. But it is natural to Him to will whatever He wills, since, as *Metaphysics 5* says, in God there cannot be anything besides His own nature. Therefore, whatever He wills, He wills of necessity.

**Objection 4:** *Not necessary to be* is equivalent to *possible not to be*. Therefore, if it is not necessary that God will some of the things that He wills, then it is possible that He not will those things, and it is possible that He will something that He does not in fact will. Therefore, the divine will is contingent with respect to two opposites. And so the divine will is imperfect, since everything contingent is imperfect and mutable.

**Objection 5:** As the Commentator says in *Physics 2*, no action follows from something that is open to two opposites, unless it is inclined by something else to one of the opposites. Therefore, if God’s will is open to two opposites in some matters, it follows that He is determined to His effect by something else. And so He has some prior cause.

**Objection 6:** Whatever God knows, He knows by necessity. But just as God’s knowledge is His essence, so too is His act of will. Therefore, whatever God wills, He wills by necessity.

**But contrary to this:** Ephesians 1:11 says: “He who works all things according to the counsel of

His will.” But what we ourselves do according to the counsel of our will, we do not will by necessity. Therefore, it is not the case that whatever God wills, He wills by necessity.

**I respond:** ‘Necessary’ is predicated in two ways, viz., absolutely (*absolute*) and conditionally (*ex suppositione*).

Something is judged to be *absolutely necessary* because of the relation between the terms, i.e., either because (a) the predicate occurs in the definition (*definitio*) of the subject, as in ‘It is necessary that a man is an animal’, or because (b) the subject is part of the nature (*ratio*) of the predicate, as in ‘It is necessary that a number is either even or odd.’ In this sense of ‘necessary’, it is not necessary that Socrates is sitting. Hence, this is not absolutely necessary, though it can be called *conditionally necessary*. For once it is assumed that Socrates is sitting, then, for as long as he is sitting, it is necessary that he is sitting.

As for the things willed by God, one must take into account that (a) it is absolutely necessary that God will some of them, but that (b) this is not true of all the things that He wills.

For instance, God’s will has a necessary relation to His own goodness, which is its proper object. Hence, God wills by necessity that His own goodness should exist, just as our own will wills happiness by necessity. In the same way, every other power has a necessary relation to its proper and principal object, e.g., sight to color. For it is part of its nature to tend toward that object.

However, God wills things distinct from Himself insofar as they are ordered toward His goodness as an end. But we ourselves, in willing an end, do not will by necessity the things that are ordered to that end, unless they are such that the end cannot exist without them—in the way that we will to eat food because we will to conserve our life, or in the way that we will a ship because we will to cross the sea. However, we do not will by necessity things without which the end can exist. For instance, we do not by necessity will to have a horse in order to go somewhere, since we can travel without a horse. And the same line of reasoning holds for other cases.

Hence, since God’s goodness is perfect and can exist without other things—for no perfection is added to Him by other things—it follows that things distinct from Himself are such that it is not absolutely necessary that He will them. And yet it is conditionally necessary. For once it is assumed that He has willed something, He is not able not to will it, since His will cannot change.

**Reply to objection 1:** From the fact that God wills something from eternity, it does not follow that it is necessary that He will it, except conditionally.

**Reply to objection 2:** Even though God wills His own goodness by necessity, He nonetheless does not will by necessity those things that He wills for the sake of His goodness, since His goodness can exist without those other things.

**Reply to objection 3:** It is not natural to God to will any of the other things that He does not will by necessity. But neither is it unnatural or contrary to His nature; instead, it is voluntary.

**Reply to objection 4:** In some cases a necessary cause does not have a necessary relation to any effect, and this happens because of a defect in the effect and not because of a defect in the cause. For instance, the sun’s power does not have a necessary relation to any of the things that happen contingently here below—not because of a defect in the sun’s power, but because of a defect in an effect that does not necessarily issue from the cause. Similarly, the fact that God does not will by necessity certain of the things that He wills stems not from a defect in the divine will, but from a defect that belongs by its nature to the thing willed—more specifically, because the thing is such that God’s perfect goodness can exist without it. Indeed, this defect is endemic to every created good.

**Reply to objection 5:** A cause that is of itself contingent must be determined to its effect by something external to it. But God’s will, which has necessity of itself, determines itself to what it wills when it has a non-necessary relation to the thing willed.

**Reply to objection 6:** Just as God's *esse* is necessary in itself, so too are the divine act of willing and the divine act of knowing. However, God's act of knowing has a necessary relation to the things known, whereas God's act of willing does not have a necessary relation to the things willed. The reason for this is that an act of knowing is had of things insofar as they exist in the knower, whereas an act of willing is related to things insofar as they exist in themselves. Therefore, all things distinct from God have necessary *esse* insofar as they exist in God, whereas insofar as they exist in themselves, they do not have absolute necessity in the sense of being necessary through themselves. Because of this, whatever God knows, He knows by necessity, whereas it is not the case that whatever He wills, He wills by necessity.

#### Article 4

##### Is God's will a cause of things?

It seems that God's will is not a cause of things:

**Objection 1:** In *De Divinis Nominibus*, chap. 4, Dionysius says, "Just as our sun—neither deliberating nor choosing, but through its very being—illuminates all things in such a way that by its power they participate in its light, so too the divine good—through its very essence—sends the rays of its goodness into all the things that exist." But anything that acts through its will acts with deliberation and choice. Therefore, God does not act through His will. Therefore, God's will is not a cause of things.

**Objection 2:** The first thing in any ordering is that which is such-and-such through its essence. For instance, in the ordering of things that are on fire, the first thing is that which is fire through its essence. But God is the first agent. Therefore, He is an agent through His essence, which is His nature. Therefore, He acts through His nature and not through His will. Therefore, God's will is not a cause of things.

**Objection 3:** If something is a cause of an effect by virtue of its being what it is, then it is a cause through its nature and not through its will. For instance, fire is a cause of warmth by virtue of its being hot, whereas, by contrast, a craftsman is a cause of a house by virtue of the fact that he wills to make it. But in *De Doctrina Christiana* 1 Augustine says, "Because God is good, we exist." Therefore, it is through His nature that God is a cause of things, and not through His will.

**Objection 4:** There is a single cause for a single thing. But, as was explained above (q. 14, a. 8), God's knowledge is a cause of created things. Therefore, God's will should not be posited as a cause of those things.

**But contrary to this:** Wisdom 11:26 says, "How could anything endure, if You did not will it?"

**I respond:** One must assert that God's will is a cause of things, and that God acts through His will and not, as some have claimed, by a necessity of nature. This can be made clear in three ways.

First, *from the very ordering of agent causes:* Since, as *Physics* 2 proves, both intellect and nature act for the sake of an end, a thing that acts through its nature must have both its end and the necessary means to that end predetermined for it by some higher intellect. For instance, an arrow has its end and fixed mode of acting predetermined for it by the archer. Hence, that which acts through its intellect and will must be prior to that which acts through its nature. Therefore, since God is first in the ordering of agents, He must act through His intellect and will.

Second, *from the nature of a natural agent:* It pertains to a natural agent to produce a single sort of effect, since its nature acts in one and the same way as long as it is unimpeded. This is because it acts by virtue of being what it is. Hence, as long as it is what it is, it produces only that sort of effect. For

everything that acts through its nature has delimited *esse* (*esse determinatum*). Therefore, since God's *esse* is not delimited but contains within itself all the perfections of being, it is impossible that God should act by a necessity of nature, unless perhaps He were to effect something indeterminate and unlimited in being—which, as was shown above (q. 7, a. 2), is impossible. Therefore, He does not act by a necessity of nature; instead, determinate effects proceed from His infinite perfection according to the determination of His will and intellect.

Third, *from the relation of effects to their cause*: Effects proceed from an agent cause to the extent that they preexist in that cause. For every agent effects what is similar to itself. Now effects preexist in a cause according to the mode of that cause. Hence, since God's *esse* is His very act of understanding, His effects preexist in Him in an intelligible mode. Therefore, they also proceed from Him through an intelligible mode. And so, as a result, they proceed from Him through the mode of an act of willing. For His inclination to effect what is conceived by His intellect pertains to His will.

Therefore, God's will is a cause of things.

**Reply to objection 1:** In this passage Dionysius does not mean to deny choice to God absolutely speaking, but only in a certain respect—viz., insofar as He communicates His goodness not just to some things, but to all things. So choice is denied only insofar as it implies a certain sort of selectivity.

**Reply to objection 2:** Since God's essence is His act of understanding and His act of willing, from the fact that He acts through His essence, it follows that He acts through the mode of intellect and will.

**Reply to objection 3:** The good is the object of the will. Therefore, as was explained above (a. 2), the assertion, "Because God is good, we exist," is made because God's goodness is the reason for His willing all other things.

**Reply to objection 4:** Even in our own case, one and the same effect is caused both (a) by the guidance of knowledge, by which the form of the work is conceived, and (b) by the authority of the will, since it is only through the will that the form as existing just in the intellect is ordered toward existing or not existing in the effect.

Hence, the term 'speculative intellect' does not imply anything about acting. Instead, power is the cause that executes the action, since the term 'power' denominates the immediate principle of action. But these things are all one in God.

## Article 5

### Can a cause be assigned for God's act of willing?

It seems that a cause can be assigned for God's act of willing:

**Objection 1:** In 83 *Quaestiones* Augustine says, "Who would dare to claim that God has created all things without reason?" But a voluntary agent's reason for acting is also a cause of his act of willing. Therefore, God's act of willing has a cause.

**Objection 2:** When things are effected by someone who wills them for the sake of no cause at all, one should not assign any cause to them except the will of the one who wills them. But, as has been shown (a. 4), God's will is a cause of all things. Therefore, if His act of willing does not have a cause, then in all natural things one should seek no cause other than God's will alone. And so all the sciences, which try to assign causes to various effects, would be in vain—which seems absurd. Therefore, some cause can be assigned to God's act of willing.

**Objection 3:** If something is effected by one who wills it for the sake of no cause at all, then it depends on his simple act of willing. Therefore, if God's act of willing has no cause, it follows that all

the things that are effected depend on His simple act of willing and do not have any other cause—which is absurd.

**But contrary to this:** In *83 Quaestiones* Augustine says, “Every efficient cause is greater than that which is effected by it; but nothing is greater than God’s act of willing; therefore, no cause should be sought for it.”

**I respond:** There is no way in which God’s act of willing has a cause.

To see this clearly, notice that since the will follows the intellect, there can be a cause of one who wills *qua* willing in the same way that there can be a cause of one who understands *qua* understanding.

Now in the case of the intellect, things are such that if someone understands a principle and its conclusion separately from one another, then the understanding of the principle is a cause of the knowledge of the conclusion. However, if some intellect were to discern the conclusion *in* the principle itself, apprehending both of them in a single thought, then in that intellect the knowledge of the conclusion would not be caused by an understanding of the principles. For one and the same thing is not a cause of itself. Nonetheless, that intellect would still understand that the principles are a cause of the conclusion.

Something similar holds in the case of the will. In the will, an end is related to the means to that end in the same way that, in the intellect, principles are related to their conclusions. Hence, if someone wills the end by one act and the means to that end by a separate act, then the act of willing the end will be a cause of the act of willing the means to that end. However, this cannot be the case if he wills both the end and the means to that end in a single act. For one and the same thing cannot be a cause of itself. Yet it will still be true to assert that he wills that the means to the end should be ordered toward that end.

Now just as God understands all things in His own essence by a single act, so too He wills all things in His goodness by a single act. In God’s case, His understanding a cause is not a cause of His understanding its effects; instead, He understands the effects *in* the cause. In exactly the same way, His willing an end is not a cause of His willing the means to that end; instead, [by one act] He wills that the means to an end should be ordered to that end. Therefore, He wills that *this* should exist because of *that*, but it is not because He wills *that* that He wills *this*.

**Reply to objection 1:** God’s will is reasonable not because there is some cause of God’s act of willing, but because He wills that one thing should exist because of another.

**Reply to objection 2:** Since God wills effects to exist in such a way that they issue forth from various causes, so that a certain order is preserved among things, it is not vain to look for other causes along with God’s will.

Still, it would be vain if these other causes were sought after as if they were first causes and did not depend on God’s will. This is why Augustine says in *De Trinitate* 3, “It pleased the vanity of the philosophers to attribute contingent effects to other causes, since they were completely incapable of seeing a cause higher than all the rest, viz., God’s will.”

**Reply to objection 3:** Since God wills that effects should exist because of their causes, any effects that presuppose some other effect do not depend on God’s will alone, but also depend on some other thing. However, the first effects depend on God’s will alone. For instance, we may say that (a) God willed that man should have hands in order to serve his intellect in carrying out various tasks; and that (b) He willed that he should have an intellect in order that he would be a man, and that (c) He willed him to be a man in order that he might enjoy God or in order to fill out the universe—which effects cannot be traced back to further created ends. Hence, effects of this last sort depend on God’s simple act of will, whereas the other effects depend as well on the order of causes other than God.

## Article 6

### Is God's will always fulfilled?

It seems that God's will is not always fulfilled:

**Objection 1:** In 1 Timothy 2:4 the Apostle says, "God wills all men to be saved and to come to the knowledge of the truth." But it has not turned out that way. Therefore, God's will is not always fulfilled.

**Objection 2:** The will is related to the good as knowledge is related to the true. But God knows every truth. Therefore, He wills every good. But it is not the case that every good is effected, since there are many goods that can be effected but are not in fact effected. Therefore, God's will is not always fulfilled.

**Objection 3:** As has been explained (a. 5), since God's will is a first cause, it does not rule out mediate causes. But a first cause's effect can be impeded because of a defect in a secondary cause; for instance, the effect of our body's moving power is impeded because of lameness in the leg. Therefore, an effect of God's will can likewise be impeded because of defects in secondary causes. Therefore, God's will is not always fulfilled.

**But contrary to this:** Psalm 113:11 says, "He has done all things whatsoever He willed."

**I respond:** God's will must always be fulfilled.

To see this clearly, note that since an effect is conformed to an agent by virtue of its form, the same line of reasoning that applies to formal causes also applies to agent causes. Now in the case of formal causes, things are such that even though something can fall short with respect to a particular form, nothing can fall short with respect to a universal form. For instance, there can be something that is neither a man nor a living thing, but there cannot be anything that is not a being.

Hence, this same thing must likewise be true in the case of agent causes. That is, something can occur outside the order of some particular agent cause, but not outside the order of a universal cause under which all the particular causes are included. For if some particular cause fails of its effect, this is because of some other particular impeding cause which is itself subordinated to the universal cause. Hence, an effect cannot in any way fall outside the order of the universal cause.

This is clear in the case of corporeal agent causes. For instance, a celestial body can be prevented from inducing its effect, but any effect that follows among corporeal things because of an impeding corporeal cause must be traced back through the mediate causes to the universal power of the first heaven.

Therefore, since God's will is a universal cause of all things, it impossible that God's will should not attain its effect. Hence, whatever seems to deviate from God's will in one order falls back under it in another order. For instance, a sinner, who, considered in himself, deviates from God's will by sinning, falls back under the order of God's will when he is punished through God's justice.

**Reply to objection 1:** The Apostle's statement, "God wills all men to be saved, etc.," can be interpreted in three ways:

First, it can be interpreted in such a way that the [logical] distribution is restricted (*accommoda*), in which case its meaning is this: 'God wills to be saved all the men who are saved'—"not that there is no man whom He does not will to be saved, but rather that no man is saved whom He does not will to be saved," as Augustine puts it.

Second, the statement can be interpreted in such a way that the distribution is made over the genera of the singulars and not over the singulars of the genera. On this interpretation, its meaning is: 'God wills men of every status to be saved, i.e., males and females, Jews and Gentiles, great and small, etc., but not everyone of each status.'

Third, according to Damascene, the statement should be understood as referring to God's *antecedent will* (*de voluntate antecedente*) and not to God's *consequent will* (*non de voluntate consequente*). This distinction applies not to God's will itself, in which there is nothing prior or posterior, but instead to the things that are willed. To understand this, note that each thing, insofar as it is good, is willed as such by God. However, there can be something which is good or evil when it is first thought of, considered absolutely, but which, insofar as it is thought of as conjoined with something else (which is a *consequent* consideration of it), turns out to be the opposite. For instance, considered absolutely, it is good for a man to live and bad for a man to be killed. However, if we add in a particular case that the man is a murderer or that his living poses a grave danger to society, then it is good for him to be killed and bad for him to live. Hence, one can say that a just judge *antecedently* wills that all men should live, but *consequently* wills that the murderer should be hanged. Similarly, God antecedently wills that all men should be saved, but He consequently wills that some should be damned in accord with the demands of His justice. However, what we antecedently will is not what we will absolutely speaking, but is instead what we will in a certain respect (*secundum quid*). For the will is related to things as they exist in themselves. But in themselves they are particulars. Hence, we will something absolutely speaking insofar as we will that thing while taking into account all the particular circumstances—which is just to will it *consequently*. Hence, one can say that a just judge wills absolutely speaking that the murderer should be hanged, whereas he wills in a certain respect that the man should live insofar as he is a man. Hence, the latter can be called a wish (*velleitas*) rather than an absolute act of willing. And so it is clear that what God wills absolutely speaking is effected, even though what He antecedently wills may not be effected.

**Reply to objection 2:** The act of a cognitive power occurs insofar as what is known exists in the knower, whereas the act of an appetitive power is ordered toward things insofar as they exist in themselves. Now everything that has the nature of being and of the true exists virtually in God as a whole, but it is not the case that everything that has the nature of being and of the true exists as a whole among created things. And so God knows everything that is true, but He does not will everything that is good except insofar as He wills Himself, in whom everything that is good exists virtually.

**Reply to objection 3:** A first cause can be impeded from producing its effect because of a defect in a secondary cause only when it is not itself a universally first cause that includes all causes under itself. For it were a universally first cause, then no effect could in any way escape its order. And so it is with God's will, as has been explained.

## Article 7

### Is God's will mutable?

It seems that God's will is mutable:

**Objection 1:** In Genesis 6:7 the Lord says, "I regret that I have made man." But whoever regrets something he has done has a mutable will. Therefore, God has a mutable will.

**Objection 2:** Jeremiah 18:7-8, speaking in the person of the Lord, says, "I will speak against a nation, and against a kingdom, to root out, and to pull down, and to destroy it. But if that nation against which I have spoken shall repent of their evil, I also will repent of the evil that I have thought to do to them." Therefore, God has a mutable will.

**Objection 3:** Whatever God does, He does voluntarily. But God does not always do the same things; for sometimes He has commanded that laws be observed, and sometimes He has prohibited this.

Therefore, He has a mutable will.

**Objection 4:** As was explained above (a. 3), God does not will what He wills by necessity. Therefore, He is able to will and able not to will the same thing. But everything that has power with respect to two opposites is mutable. For instance, that which is able to exist and able not to exist is mutable with respect to its substance; and that which is able to be here and able not to be here is mutable with respect to its place. Therefore, God is mutable with respect to His will.

**But contrary to this:** Numbers 23:19 says, “God is not a man, that He should lie, nor is He like a son of man, that He should be changed.”

**I respond:** God’s will is altogether immutable.

However, on this topic one should note that it is one thing to change one’s will and another thing to will a change in certain things. For even while someone’s will remains unchangeably the same, he can will that something should happen now and that its contrary should happen later. On the other hand, his will would change if he began to will what he previously did not will or ceased to will what he had previously willed. This cannot happen except on the assumption that there is a change either in the cognition of the one who wills or else in the disposition of his substance. For given that willing is of the good, there are two ways in which someone can begin to will something *de novo*:

The first way is that something should begin *de novo* to be good for him. This cannot happen without a change in him. For instance, when he gets cold, it begins to be good for him to sit by a fire—which was not the case beforehand.

The second way is that he should come to see *de novo* that something is good for him, when he had previously been ignorant of this. For instance, we deliberate precisely in order to ascertain what is good for us.

Now it was shown above (q. 9, a. 1 and q. 14, a. 15) that both God’s substance and His knowledge are altogether immutable. Hence, His will must be altogether immutable.

**Reply to objection 1:** These words of the Lord should be understood metaphorically according to a likeness with us. For when we regret something, we destroy what we have made. However, this can happen without a change of will; for even a man, without a change of will, may sometimes will to make something, all the while intending to destroy it afterwards.

Therefore, God is said to have regretted something according to a likeness of action—for man, whom He had made, He wiped from the face of the earth through the flood.

**Reply to objection 2:** Since God’s will is a first and universal cause, it does not rule out mediate causes that have it within their power to produce certain effects. But because all the mediate causes are unequal in power to the first cause, there are many things contained in God’s power, knowledge, and will that are not contained within the order of lower causes, e.g., the raising of Lazarus from the dead. Thus, someone who was thinking of the lower causes might have said, ‘Lazarus will not rise’, whereas someone who was thinking of the first divine cause might have said, ‘Lazarus will rise’. And God wills both of these, viz., that sometimes something will occur because of a lower cause that will not occur because of a higher cause, and vice versa.

Therefore, we should claim that God sometimes announces that something is going to occur insofar as it is contained in the order of lower causes, i.e., according to the disposition of nature or of merits, and yet that thing does not occur, because it is otherwise with the higher divine cause. For instance, God foretold to Hezekiah, “Take order with your house, for you shall die, and not live” (Isaiah 38:1), and yet this did not happen, because from eternity it was otherwise in God’s knowledge and will, which are immutable. For this reason, Gregory says, “God changes the sentence, but He does not change His counsel,” i.e., the counsel of His will. Therefore, the words, “I will repent,” are to be taken metaphorically. For when men do not carry out their threats, they seem to have repented.

**Reply to objection 3:** From this argument it does not follow that God has a changeable will; what follows instead is that He wills a change.

**Reply to objection 4:** As was explained above (a. 3), even if something is such that it is not absolutely necessary that God will it, it is nonetheless conditionally necessary (*ex suppositione*) that He will it—and this because of the immutability of God’s will.

## Article 8

### Does God’s will impose necessity on the things willed?

It seems that God’s will imposes necessity on the things willed:

**Objection 1:** In the *Enchiridion* Augustine says, “No one is saved unless God wills that he be saved. And so he should implore God to will it, since if He wills it, it will necessarily happen.”

**Objection 2:** Every unimpedible cause produces its effect by necessity; for, as *Physics 2* explains, nature always does the same thing unless something impedes it. But God’s will is unimpedible; for in Romans 9:19 the Apostle asks, “Who resists His will?” Therefore, God’s will imposes necessity on things.

**Objection 3:** That which has necessity from something prior to it is absolutely necessary; for instance, it is necessary for an animal to die because it is composed of contrary parts. But a thing created by God is related to God’s will as to something prior to it by virtue of which it has necessity; for the conditional, ‘If God wills something, it exists’, is true, and every true conditional is necessary. Thus, it follows that everything that God wills is absolutely necessary.

**But contrary to this:** All the goods that are effected are such that God wills that they be effected. Therefore, if His will imposed necessity on the things that are willed, it would follow that all goods occur by necessity. And so that would be the end of free choice, deliberation, and all other such things.

**I respond:** God’s will imposes necessity on some of the things willed, but not on all of them.

Some have wanted to explain this by appeal to the mediating causes, claiming that the things God’s will produces through necessary causes are necessary, whereas the things God’s will produces through contingent causes are contingent. But this explanation seems inadequate on two counts:

First, the reason why the effect of a first cause is contingent in virtue of a secondary cause is that the first cause’s effect is impeded by some defect in the secondary cause—in the way, for instance, that the sun’s power is impeded by a defect in a plant. But no defect in a secondary cause can prevent God’s will from producing its effect.

Second, if the distinction between contingent effects and necessary effects were traceable solely to the secondary causes, it would follow that this distinction falls outside of God’s intention and will—which is false.

And so a better explanation is that this distinction occurs because of the efficacy of God’s will. For when a cause is efficacious in its action, the effect follows upon the cause not only with respect to *what* is effected but also with respect to the *mode* in which it is effected or in which it exists. For instance, because of a defect in the active power of the semen, it is possible for a son to be born who is dissimilar to his father in various accidents that pertain to a thing’s mode of existing. Therefore, since God’s will is absolutely efficacious, it follows not only that the things God wills to be effected are in fact effected, but also that they are effected in the mode in which God wills them to be effected. But God wills some things to be effected necessarily and others contingently, so that there might be an order among things for the sake of the completeness of the universe. And so for some effects He has applied necessary causes

which cannot fail and from which the effects issue forth by necessity, whereas for other effects He has applied contingent and defectible causes, from which the effects issue forth contingently.

Therefore, the reason why effects willed by God come about contingently is not that their proximate causes are contingent, but rather that God has willed them to come about contingently and has prepared contingent causes for them.

**Reply to objection 1:** In this passage Augustine should be understood to be talking about a conditional, rather than absolute, necessity in the things willed by God. For this conditional is necessarily true: ‘If God wills this thing, then it exists.’

**Reply to objection 2:** From the fact that nothing resists God’s will it follows not only that what God wills to be effected is in fact effected, but also that what He wills to be effected contingently or wills to be effected necessarily is indeed effected in that way.

**Reply to objection 3:** What is posterior has its necessity from what is prior according to the mode of that prior thing. Hence, the things effected by God’s will have necessity of the sort that God wills them to have, viz., either absolute necessity or merely conditional necessity. And so not all of them are absolutely necessary.

## Article 9

### Does God will evils?

It seems that God wills evils:

**Objection 1:** God wills every good that is effected. But it is good that evils should be effected; for in the *Enchiridion* Augustine says, “Even though evils, insofar as they are evil, are not good, nonetheless, it is good not only that there should be goods, but also that there should be evils.” Therefore, God wills evils.

**Objection 2:** In *De Divinis Nominibus*, chap. 4, Dionysius says that evil will contribute to the perfection of everything (i.e., of the universe). And in the *Enchiridion* Augustine says, “All things are part of the admirable beauty of the universe, so that even what is called evil makes the good things stand out more prominently when it is correctly ordered and put in its proper place. For the good things are more pleasing and more laudable when they are compared to the evils.” But God wills everything that pertains to the perfection and beauty of the universe, since it is this perfection and beauty that God wills most of all in creatures. Therefore, God wills evils.

**Objection 3:** *That evils be effected* and *that evils not be effected* are opposed as contradictories. But God does not will that evils not be effected; for since some evils are in fact effected, it would follow that God’s will is not always fulfilled. Therefore, God wills that evils be effected.

**But contrary to this:** In *83 Quaestiones* Augustine says, “A man becomes worse when he has no wise man to guide him. But God is more excellent than any wise man. Therefore, when God is guiding him, a man will all the less become worse. But ‘when God is guiding’ is equivalent to ‘when God wills’.” Therefore, it is not the case that when God wills, a man becomes worse. But it is clear that something is made worse by every evil. Therefore, God does not will evils.

**I respond:** Since, as was explained above (q. 5, a. 1), the nature of the good is the nature of what is desirable, whereas evil is opposed to good, it is impossible that any evil, as such, should be desired either by a natural desire or by an animal desire or by an intellectual desire, i.e., by the will.

However, an evil may be desired *per accidens* to the extent that it follows upon some good. This is evident with every kind of desire. For a natural agent does not desire privation or corruption; rather, it

desires a form that is conjoined with the privation of some other form, and it desires the generation of one thing, which is the corruption of another. Again, when a lion kills a stag, it desires food that is conjoined with the death of an animal. Similarly, a fornicator desires a pleasure that is conjoined with the deformity of sin. Thus, an evil that is conjoined to one good is the privation of some other good. Therefore, evil would never be desired—not even *per accidens*—if the good that the evil is conjoined to were not desired more than the good that is undermined by the evil.

Now there is no good that God wills more than His own goodness, and yet He desires some goods more than others. God in no way wills the evil of sin, which undermines one's ordination to the divine good. On the other hand, He does will the evil of a natural defect or the evil of punishment by willing a good that is conjoined to such an evil. For instance, in willing justice, He wills punishment; and in willing that the order of nature be preserved, He wills that certain things be naturally corrupted.

**Reply to objection 1:** Some have claimed that even though God does not will evils, He nonetheless wills that evils exist or that they be effected—for even though evils are not good, it is nonetheless good that evils exist or that they be effected. They made this claim because things that are evil in themselves are ordered toward some good, and they believed that this ordering is implied when one says that evils exist or are effected.

But this claim is mistaken, since evil is ordered toward good *per accidens* and not *per se*. For it lies outside the sinner's intention that some good should follow from his sin; for example, it lay outside the intention of the tyrants that their persecutions should have made the patience of the martyrs shine forth. And so one cannot claim that such an ordering toward the good is implied when one says that it is good for evil to exist or to be effected. For nothing is judged according to what belongs to it *per accidens*; rather, it is judged according to what belongs to it *per se*.

**Reply to objection 2:** As has been explained, evil does not work toward the perfection and beauty of the universe except *per accidens*. Moreover, in the place where Dionysius says that evil contributes to the perfection of the universe, he is arguing by way of a *reductio ad absurdum*.

**Reply to objection 3:** Even though *that evils be effected* and *that evils not be effected* are opposed as contradictories, it is nonetheless the case that *to will that evils be effected* and *to will that evils not be effected* are not opposed as contradictories, since both are affirmative. Thus, God wills neither that evils be effected nor that evils not be effected; instead, He wills to permit evils to be effected. And this is something good.

## Article 10

### Does God have free choice?

It seems that God does not have free choice:

**Objection 1:** In a homily on the prodigal son, Jerome says, "God alone is such that sin neither does nor can belong to Him. Others, since they have free choice, can incline themselves to either part of a contradiction."

**Objection 2:** Free choice is a faculty of reason and will by which good and evil are chosen. But, as has been explained (a. 9), God does not will evil. Therefore, free choice does not exist in God.

**But contrary to this:** In *De Fide* Ambrose says, "The Holy Spirit gives to each as He wills, i.e., according to the choice of His free will, which is not subject to any necessity."

**I respond:** We ourselves have free choice with respect to those things that we do not will necessarily or by natural instinct. For instance, it pertains to natural instinct and not to free choice that

we will to be happy. Hence, other animals, which are moved to act by natural instinct, are not said to be moved by free choice.

Therefore, since, as was shown above (a. 3), God wills His own goodness by necessity, but does not will other things by necessity, He has free choice with respect to those things that He does not will by necessity.

**Reply to objection 1:** Jerome seems to be denying free choice to God not absolutely speaking, but only with respect to falling into sin.

**Reply to objection 2:** Since, as was shown above (a. 2), the evil of sin implies a turning away from the divine goodness through which God wills all things, it is clearly impossible for Him to will the evil of sin. Yet He is open to opposites insofar as He is able to will that *this* thing should exist or not exist—just as we ourselves are able, without sinning, to will to sit and not to will to sit.

## Article 11

### Should God's will be distinguished by signs?

It seems that God's will should not be distinguished by signs (*non sit distinguenda in Deo voluntas signi*):

**Objection 1:** Just as God's will is a cause of things, so too is His knowledge. But no signs are ascribed to God's knowledge. Therefore, neither should signs be ascribed to God's will.

**Objection 2:** Any sign that does not correspond to that of which it is a sign is a false sign. Therefore, any signs ascribed to God's will are such that (a) if they do not correspond to God's will, then they are false, and (b) if they do correspond to God's will, then it is superfluous to ascribe them. Therefore, no signs should be ascribed to God's will.

**But contrary to this:** God's will is unified, since it is God's very essence. But it is sometimes signified in the plural, as when it is said, "Great are the works of the Lord, sought out according to all His wills" (Psalm 110:2). Therefore, a sign of God's will sometimes has to be taken for His will.

**I respond:** As is clear from what was said above (q. 13, a. 3), some things are predicated of God properly speaking and other things are predicated of Him metaphorically. When certain human passions are appropriated metaphorically in predications about God, this is because of a similarity in their effects—so that something that is a sign of a given passion in our case is signified metaphorically in God by the name of that passion. For instance, we ourselves are prone to punish someone when we are angry with him, so that the punishment is a sign of our anger. Because of this, it is the punishment itself that is signified by the name 'anger' when anger is attributed to God.

Similarly, that which is normally in our case a sign of what we will is sometimes metaphorically called 'will' in the case of God. For instance, when someone commands something, this is a sign that he wills that thing to be done; hence, a divine command is sometimes metaphorically called 'God's will'—e.g., "Thy will be done on earth as it is in heaven" (Matthew 6:10).

However, there is a difference between 'will' and 'anger'. For 'anger' is never properly predicated of God, since it includes a passion in its principal meaning; by contrast, 'will' is properly predicated of God. And so in the case of God 'will' as properly predicated is distinct from 'will' as metaphorically predicated. For when 'will' is *properly* predicated of God, it is called his 'will of good pleasure' (*voluntas beneplaciti*), whereas when 'will' is *metaphorically* predicated of God, it is called His 'will of sign' (*voluntas signi*), because a sign of His will is itself being called His will.

**Reply to objection 1:** It is only through the will that knowledge is a cause of the things that are

effected. For we do not effect the things we know unless we will to. And so signs are not attributed to knowledge in the way they are attributed to the will.

**Reply to objection 2:** Signs of the will are called ‘God’s wills’ not because they are signs that God has willed something, but rather because things that in our case are usually signs of what we will are called ‘wills’ in the case of God. In the same way, punishment is not a sign that there is anger in God; rather, since punishment is a sign of anger in us, punishment is called ‘anger’ in the case of God.

## Article 12

### Is it appropriate to posit these five signs with respect to God’s will: *prohibition, command, counsel, operation, and permission?*

It seems inappropriate to posit these five signs with respect to God’s will, viz., *prohibition, command, counsel, operation, and permission*:

**Objection 1:** God sometimes operates to effect in us the same things that He commands or counsels us to do. And He sometimes prohibits the same things that at other times He permits. Therefore, these five signs should not be distinguished from one another as opposites.

**Objection 2:** As Wisdom 11:25-26 says, God does not operate to effect anything unless He wills that thing. But His will of sign (*voluntas signi*) is distinct from His will of good pleasure (*voluntas beneplaciti*). Therefore, *operation* should not be included under God’s will of sign.

**Objection 3:** *Operation* and *permission* apply to all things in general, since God operates in all things and permits things to happen among all things. By contrast, *command, counsel, and prohibition* apply only to rational creatures. Therefore, since these five signs do not belong to the same order, it is inappropriate for them to come together under a single division.

**Objection 4:** Evil occurs in more ways than good does; for, as is clear from the Philosopher in *Ethics 2* and from Dionysius in *De Divinis Nominibus*, chap. 4, good occurs in just one way, whereas evil occurs in many ways. Therefore, it is wrong to ascribe just one sign with respect to evil, viz., *prohibition*, and two signs with respect to good, viz., *counsel* and *command*.

**I respond:** These signs of the will are those by which we ourselves normally show that we will something.

Now someone can show that he wills something *through himself* (*per seipsum*) or that he wills something *through another* (*per aliud*).

He shows that he wills it *through himself* insofar as he does something either (a) *directly* or (b) *indirectly* and *per accidens*: *Directly*, when he does it by himself, and on this score the sign is called *operation*. *Indirectly*, insofar as he himself does not prevent an operation, since, according to *Physics 8*, one who removes an impediment is called a *per accidens* mover; and on this score the sign is called *permission*.

He shows that he wills something *through another* insofar as he directs another to do something—and this either (a) through a obligatory direction, which he does by *commanding* what he wills and *prohibiting* the contrary, or (b) through a persuasive direction, which pertains to *counsel*.

Therefore, since these are the ways in which someone shows that he wills something, these five things are sometimes called ‘God’s will’ in the sense of signs of His will. That *command, counsel, and prohibition* are called God’s will is clear from Matthew 6:10, “Thy will be done on earth as it is in heaven.” That *permission* and *operation* are called ‘God’s will’ is clear from Augustine, who says in the *Enchiridion*, “Nothing is effected unless the omnipotent one wills that it be effected, either by doing it or

by allowing it to be done.”

Alternatively, one can say that *permission* and *operation* relate to the present, with *permission* pertaining to evil and *operation* pertaining to good—whereas, with respect to the future, *prohibition* pertains to evil, *command* pertains to the sort of good that is necessary, and *counsel* pertains to the sort of good that is superabundant.

**Reply to objection 1:** Nothing prevents someone from showing in diverse ways that he wills one and the same thing—just as there are many names that signify the same thing. Hence, nothing prevents the same thing from falling under a command, a counsel, and an operation; and nothing prevents the same thing from falling under a prohibition or a permission.

**Reply to objection 2:** Just as one can signify metaphorically that God wills something that He does not will properly speaking, so too one can signify metaphorically that He wills something that He does will properly speaking. Hence, nothing prevents God from having both a will of good pleasure and a will of sign with respect to the same thing.

Now *operation* always coincides with God’s will of good pleasure, whereas this is not the case with *command* or *counsel*. For, as has been explained, (a) operation has to do with the present, whereas command and counsel have to do with the future, and (b) operation is an effect that God wills through Himself, whereas command and counsel are willed through another.

**Reply to objection 3:** A rational creature has dominion over his acts, and so special signs of God’s will are assigned for him insofar as God orders the rational creature toward acting voluntarily and through himself. However, other creatures do not act unless they are moved by God’s operation, and so in their case there is no room for anything other than operation and permission.

**Reply to objection 4:** All sinful evil, even if it happens in many ways, nonetheless concurs in being incompatible with God’s will, and this is why a single sign, viz., *prohibition*, is assigned with respect to evils. On the other hand, goods are related in different ways to God’s goodness. For there are some goods without which we cannot attain the enjoyment of God’s goodness, and with respect to these goods there is *command*. By contrast, there are other goods by which we attain God’s goodness in a more perfect manner, and with respect to these goods there is *counsel*. Alternatively, one can say that *counsel* pertains not only to the pursuit of greater goods, but also to the avoidance of lesser evils.

## QUESTION 20

### God's Love

Next we have to consider those things that pertain to God's will absolutely speaking. Now in the appetitive part of our soul we find both (a) the passions of the soul, e.g., joy, love, etc., and also (b) the habits of the moral virtues, e.g., justice, fortitude, etc. Hence, we will first consider God's love (question 20) and, second, God's justice and His mercy (question 21).

On the topic of God's love there are four questions: (1) Is there love in God? (2) Does God love all things? (3) Does God love one thing more than another? (4) Does God love better things more?

### Article 1

#### Is there love in God?

It seems that there is no love (*amor*) in God:

**Objection 1:** There are no passions in God. Love is a passion. Therefore, there is no love in God.

**Objection 2:** Love, anger, sadness, etc., fall under the same classification. But sadness and anger are not predicated of God except metaphorically. Therefore, neither is love predicated of God except metaphorically.

**Objection 3:** In *De Divinis Nominibus*, chap. 4, Dionysius says, "Love is a unitive and coalescent force." But there cannot be any place for this in God, since He is simple. Therefore, there is no love in God.

**But contrary to this:** 1 John 4:16 says, "God is love (*Deus caritas est*)."

**I respond:** Love must be posited in God. For love is the first movement of the will and of any appetitive power, since an act of will (or of any appetitive power) tends toward good and evil as its proper objects. Since the good is the more principal and *per se* object of will and appetite, whereas evil is the secondary and *per aliud* object, insofar as it is opposed to the good, it follows that acts of will and appetite that have to do with the good must be naturally prior to those that have to do with evil. For instance, joy is prior to sadness, and love is prior to hate. For it is always the case that what is *per se* is prior to what is *per aliud*.

Again, what is more common is naturally prior; hence, it is also the case that the intellect is ordered toward truth in general prior to being ordered to certain particular truths. Now there are some acts of will and appetite that have to do with the good under some special condition; for instance, joy and pleasure have to do with a good that is present and possessed, whereas desire and hope have to do with a good that is not yet possessed. Love, on the other hand, has to do with the good in general (*bonum in communi*), whether or not it is possessed.

Hence, love is by nature the first act of will and appetite. Because of this, all other appetitive movements presuppose love as their primary root. For no one desires anything except a good that is loved, and no one takes joy in anything except a good that is loved. Hate, too, is directed only toward what is contrary to something that is loved. Similarly, it is clear that sadness and the other passions are traced back to love as their first source. Hence, there must be love in any being that has will or appetite. For when what is first is removed, everything else is removed as well.

Now it was shown above (q. 19, a. 1) that there is a will in God. Hence, it is necessary to posit love in Him.

**Reply to objection 1:** A cognitive power effects a movement only by the mediation of an appetitive power. And just as, according to *De Anima* 3, a universal notion effects movement in us by the mediation of a particular notion, so too the intellectual appetite, which is called the will, effects

movement in us by the mediation of the sentient appetite. Hence, the sentient appetite is the proximate mover of the body in us. Thus, it is always the case that an act of the sentient appetite is accompanied by some bodily change—especially near the heart, which is the first principle of movement in an animal. So, then, insofar as they have a bodily change conjoined to them, acts of the sentient appetite are called passions, but not acts of willing.

Therefore, love, joy, and pleasure are passions insofar as these terms signify acts of the sentient appetite—but not insofar as they signify acts of the intellective appetite. And it is as acts of the intellective appetite that they are posited in God. Hence, in *Ethics 7* the Philosopher says, “God rejoices by a single and simple operation.” And, for the same reason, He loves in the absence of any passion.

**Reply to objection 2:** In the passions of the sentient appetite there is, as it were, something *material* to consider, viz., the bodily change, and also, as it were, something *formal*, i.e., something on the part of the appetite. For instance, as *De Anima 1* says, in the case of anger the material element is the heating of the blood around the heart or something of that sort, whereas the formal element is the desire for vindication.

Then again, some of the passions involve an imperfection on the part of the formal element. For instance, desire has to do with a good that is not yet possessed, and sadness has to do with an evil that is already possessed. And the same holds for anger, which presupposes sadness. On the other hand, some of them, e.g., love and joy, involve no imperfection.

As has been said, none of them belongs to God with respect to what is material in them. Again, as was explained above (q. 3, a. 2 and q. 19, a. 11), those which also imply an imperfection in their formal element cannot belong to God except metaphorically, because of a likeness in their effects. However, those that do not imply an imperfection, e.g., love and joy, can be properly predicated of God—though, as has been explained, without any passion.

**Reply to objection 3:** An act of love always tends toward two things, viz., (a) *the good* that one wills for someone and (b) *the one to whom* he wills this good. For to love someone, properly speaking, is to will the good for him.

Hence, for someone to love himself is for him to will a good for himself, and thus he seeks to unite that good to himself as far he is able to. It is for this reason that love is called a *unitive* force even in the case of God—yet without composition. For the good that He wills for Himself is none other than Himself, who is good through His essence, as was shown above (q. 6, a. 3).

Now for someone to love another is for him to will a good for that other. And in this sense he treats the other as himself, rendering good to the other as to himself. And it is for this reason that love is called a *coalescing* force. For he gathers the other to himself, rendering to the other as he renders to himself. And it is also in this sense that God’s love is a coalescent force, existing in God without composition, insofar as He wills goods to others.

## Article 2

### Does God love all things?

It seems that God does not love all things:

**Objection 1:** According to Dionysius in *De Divinis Nominibus*, chap. 4, love places the lover outside of himself and in a sense transports him into what he loves. But it is absurd to claim that God is placed outside of Himself and transported into other things. Therefore, it is absurd to claim that God loves things distinct from Himself.

**Objection 2:** God’s love is eternal. But things distinct from God do not exist from eternity except

within God. Therefore, God does not love them except within Himself. But insofar as they exist within Him, they are not distinct from Him. Therefore, God does not love things distinct from Himself.

**Objection 3:** There are two kinds of love, love of concupiscence (*amor concupiscentiae*) and love of friendship (*amor amicitiae*). But God does not love non-rational creatures with a love of concupiscence, since He does not need anything besides Himself. Nor does He love them with a love of friendship, since, as is clear from the Philosopher in *Ethics* 8, such love cannot be had for non-rational beings. Therefore, God does not love all things.

**Objection 4:** Psalm 5:7 says, “You hate all the workers of iniquity.” But nothing can be both hated and loved at the same time. Therefore, God does not love all things.

**But contrary to this:** Wisdom 11:25 says, “For You love all things that are, and hate none of the things which You have made.”

**I respond:** God loves all the things that exist. For all existing things are good insofar as they exist, since the very *esse* of each thing is a certain good, as are each of its perfections. Now it was shown above (q. 19, a. 4) that God’s will is a cause of all things, and so to the extent that a thing is willed by God, it must have some sort of *esse* or some sort of goodness. Therefore, God wills some good to each thing that exists. Thus, since to love is nothing other than to will some good to some existing thing, it is clear that God loves all the things that exist.

However, He does not love them in the same way that we ourselves do. For since our own will is not a cause of the goodness of things, but is instead moved by their goodness as by an object, it follows that the love by which we will some good to a thing is not a cause of its very goodness. To the contrary, the thing’s goodness, whether real or apparent (*vel vera vel aestimata*), induces the love by which we will that the good had by the thing should be preserved and that the good lacked by it should be added to it—and we act accordingly. God’s love, by contrast, is a love that pours out and creates the goodness in things.

**Reply to objection 1:** A lover is transported outside of himself into the thing that is loved in the sense that he wills the good for the thing loved and by his providence cares for that thing as for himself. Hence, in *De Divinis Nominibus*, chap. 4, Dionysius says, “One should dare to say—and take as the truth—that even He who is the cause of all things, through the abundance of His loving goodness, goes outside of Himself in exercising His providence over all the things that exist.”

**Reply to objection 2:** Even though creatures did not exist from eternity except within God, nonetheless, by the fact that things existed from eternity in God, God knew them from eternity in their proper natures and loved them in the same way. Similarly, it is through the likenesses of things existing in us that we ourselves likewise know the things that exist in themselves.

**Reply to objection 3:** Friendship can be had only with rational creatures, who are able to return love and to share in the works of life, and for whom things can turn out well or badly with respect to fortune and happiness. In the same way, it is to such creatures that benevolence, properly speaking, is directed.

Non-rational creatures, on the other hand, cannot attain to loving God or to sharing the intellectual and happy life that God lives. So, then, God does not, properly speaking, love non-rational creatures with a love of friendship. Rather, He loves them with something like a love of concupiscence to the extent that He orders them toward rational creatures as well as toward Himself—not in the sense that He needs them, but for the sake of His own goodness and for our advantage. For we ourselves desire (*concupiscimus*) things for others as well as for ourselves.

**Reply to objection 4:** Nothing prevents one and the same thing from being loved in one respect and hated in another. Now God loves sinners insofar as they are certain natures; for as such they exist and are from Himself. On the other hand, insofar as they are sinners, they do not exist but instead are

deficient in *esse*—a condition that is not in them because of God. Hence, in this respect He hates them.

### Article 3

#### Does God love one thing more than another?

It seems that God loves all things equally:

**Objection 1:** Wisdom 6:8 says, “He cares equally for all things.” But the providence that God has for things stems from the love by which He loves them. Therefore, God loves all things equally.

**Objection 2:** God’s love is His essence. But God’s essence does not admit of *more* and *less*. Therefore, neither does His love. Therefore, it is not the case that He loves some things more than others.

**Objection 3:** God’s love reaches out to created things in the same way that His knowledge and will do. But God is not said to know or to will some things more than others. Therefore, neither does He love some things more than others.

**But contrary to this:** In *Super Ioannem* Augustine says, “God loves all the things that He has made; and among these things He loves rational creatures more; and among rational creatures He loves more fully those who are members of His only-begotten; and He loves His only-begotten much more.”

**I respond:** Since to love is to will a good for something, there are two ways in which a thing can be loved to a greater or lesser degree:

First, on the part of the very *act of the will*, which can be more or less intense. And in this sense God does not love some things more than others, since He loves all things by the single and simple act of His will, which always remains the same (*semper eodem modo se habente*).

Second, on the part of the *good that one wills* for the thing loved. Thus, we are said to love someone more than another because we will him a greater good—even if we do not love him with a more intense act of will. And in this sense one must claim that God loves some things more than others. For since, as has been explained (a. 2), God’s love is the cause of goodness in things, one thing would not be better than another if God did not will a greater good to the one than to the other.

**Reply to objection 1:** God is said to care equally for all things not because He gives equal goods to all things in exercising His care for them, but because He administers all things with equal wisdom and goodness.

**Reply to objection 2:** This argument has to do with the intensity of love on the part of the act of will, which is God’s essence. However, the good that God wills for a creature is not the divine essence. Hence, nothing prevents that good from being greater or less.

**Reply to objection 3:** ‘To understand’ and ‘to will’ signify only the acts and do not include in their signification any objects in virtue of whose differences God might be said to know them or to will them to a greater or lesser degree. By contrast, as has been explained, this is indeed the case with love.

### Article 4

#### Does God love better things more?

It seems that God does not always love better things more:

**Objection 1:** It is clear that Christ is better than the whole human race, since He is God and man. But God loves the human race more than Christ; for Romans 8:32 says, “He spared not even His own

Son, but delivered Him up for us all.” Therefore, God does not always love better things more.

**Objection 2:** An angel is better than a man; thus, Psalm 8:6 says, “You have made him a little less than the angels.” But God loves men more than angels; for Hebrews 2:16 says, “Nowhere does He take hold of the angels, but of the seed of Abraham He takes hold.” Therefore, God does not always love better things more.

**Objection 3:** Peter was better than John, since he loved Christ more. Hence, the Lord, knowing that this was true, asked Peter, “Simon son of John, do you love me more than these?” (John 21:15). Yet Christ loved John more than Peter; for as Augustine says in commenting on John 21:15 (“Simon, son of John, do you love me?”), “John was set off from the other disciples not because Christ loved him alone, but because he loved him more than the others.” Therefore, it is not the case that God always loves better things more.

**Objection 4:** Someone who is blameless is better than someone who repents (*melior est innocens poenitente*); for, as Jerome says, “Repentance is the second plank, after the shipwreck.” But God loves the one who repents more than the blameless, since He rejoices more over him; for as Luke 15:7 says, “I say to you that even so there shall be joy in heaven upon one sinner that repents, more than upon ninety-nine just who need not repentance.” Therefore, God does not always love better things more.

**Objection 5:** A just man who is such that it is foreknown that he will be damned (*praescitus*) is now better than a sinner who is predestined to glory (*praedestinatus*). But God loves the predestined sinner more, since He wills him a greater good, viz., eternal life. Therefore, God does not always love better things more.

**But contrary to this:** Each thing loves what is similar to itself; for as Ecclesiasticus 13:19 says, “Every beast loves its like.” But the more similar a thing is to God, the better it is. Therefore, better things are loved more by God.

**I respond:** On the basis of what was said above (a. 3), one must claim that God loves better things more. For it was explained that for God to love a thing more is nothing other than for Him to will that thing a greater good, since God’s will is the cause of goodness in things. And so the reason why some things are better is that God wills a greater good for them. And from this it follows that He loves them more.

**Reply to objection 1:** God loves Christ not only more than the whole human race, but even more than the whole universe of creatures. For He willed him a greater good, since He gave him the name that is above every name, so that he was true God. Nor does it diminish his excellence that God gave him over to death for the salvation of the human race. To the contrary, by this very fact he became a glorious victor. For as Isaiah 9:6 says, “The government is upon his shoulder.”

**Reply to objection 2:** According to what has been said, God loves the human nature assumed by the Word of God in the person of Christ more than all the angels, and that human nature is better than all the angels, especially because of its union with God.

However, if we are talking about human nature in general and comparing it to the nature of an angel, then they are equal in the order of grace and glory, since, as Apocalypse 21:17 says, the measure of man is the same as the measure of an angel—though in such a way that some angels are better than some men and some men are better than some angels.

On the other hand, as far as the status of the natures is concerned, an angel is better than a man. For God assumed a human nature not because He loved man more, absolutely speaking, but because man needed it more. In the same way, a good father of a household might give something very costly to a sick servant that he does not give to his healthy son.

**Reply to objection 3:** This question about Peter and John has been answered in many ways.

Augustine calls it a mystery. He claims that the active life, signified by Peter, loves God more than

the contemplative life, signified by John, since the active life is more aware of the tribulations of the present life and desires more ardently to be liberated from them and to go to God. However, God loves the contemplative life more, since He conserves it for a longer time; for it does not end with the end of our bodily life in the way that the active life does.

On the other hand, there are those who claim that Peter loved Christ more in His members, and in this regard he was also loved more by Christ, who for this reason entrusted the Church to him. By contrast, John loved Christ more in Himself, and in this regard he was also loved more by Christ, who for this reason entrusted His mother to him.

Others claim that (a) it is uncertain which of the two loved Christ more with the love of charity and, similarly, that (b) it is uncertain which one God loved more as regards a greater degree of the glory of eternal life. However, Peter is said to have loved Christ more because of his promptitude or fervor, whereas John is said to have been loved more because of the signs of familiarity that Christ showed to him in virtue of his youthfulness and purity.

Still others claim that Christ loved Peter more because of his more excellent gift of charity, but that He loved John more because of his more excellent gift of understanding. Hence, Peter was better and more loved absolutely speaking, whereas John was better and more loved in a certain respect.

However, it seems presumptuous to adjudicate this matter, since, as Proverbs 16:2 says, the Lord, and no other, is the weigher of spirits.

**Reply to objection 4:** The penitents and the blameless are related as that which exceeds and that which is exceeded. For the ones who are better and more loved are those who have more grace, regardless of whether they are righteous or repentant. However, all other things being equal, blamelessness is more worthy and more loved.

Yet God is said to rejoice more over the one who repents than the one who is blameless because oftentimes when those who repent come back, they are more circumspect, more humble, and more fervent. Hence, in commenting on this passage, Gregory says, “In battle the commander has a greater love for the soldier who turned back after fleeing and bravely fought the enemy than for the soldier who never fled but also never acted courageously.”

An alternative explanation is that an equal gift of grace counts for more in relation to the penitent, who deserved punishment, than in relation to the blameless, who did not merit punishment—just as a hundred pieces of gold constitute a greater gift when given to a poor man than when given to a king.

**Reply to objection 5:** Since God’s will is the cause of the goodness in things, one has to measure the goodness of someone loved by God with reference to the time at which a relevant good is to be given to him by God’s goodness. Therefore, at the time at which the predestined sinner is to be given a greater good by God’s will, he is better, even though he might be worse at some other time. For there is also a time at which he is neither good nor bad.

## QUESTION 21

### God's Justice and Mercy

Now that we have considered God's love, we have to discuss His justice and mercy.

On this topic there are four questions: (1) Is there justice in God? (2) Can God's justice be called truth? (3) Is there mercy in God? (4) Do justice and mercy exist in every work of God?

#### Article 1

##### Is there justice in God?

It seems that there is no justice in God (*in Deo non sit iustitia*):

**Objection 1:** Justice and temperance fall under the same classification. But temperance does not exist in God. Therefore, neither does justice.

**Objection 2:** If someone does all things at the pleasure of his own will (*facit omnia pro libito suae voluntatis*), then he does not act in accord with justice. But in Ephesians 1:11 the Apostle says that God "works all things according to the counsel of His will." Therefore, justice should not be attributed to God.

**Objection 3:** The act of justice is to render a debt. But God is a debtor to no one. Therefore, justice does not belong to God.

**Objection 4:** Whatever exists in God is His essence. But justice cannot be God's essence; for in *De Hebdomadibus* Boethius says, "The good has to do with essence, whereas the just has to do with action." Therefore, justice does not belong to God.

**But contrary to this:** Psalm 10:8 says, "The Lord is just, and has loved justice."

**I respond:** There are two types of justice.

The first has to do with mutual giving and receiving—as, for instance, the giving and receiving involved in buying and selling and in other types of trades or exchanges. In *Ethics* 5 the Philosopher calls this *commutative justice*, i.e., justice that directs exchanges or trades. This type of justice does not belong to God, since as the Apostle says in Romans 11:35, "Who has first given to Him, and recompense shall be made him?"

The second type, which consists in distribution, is called *distributive justice*, whereby a ruler or manager gives to each according to his deserts. Therefore, just as the appropriate ordering of a family—or of any governed group of people—exhibits this sort of justice in the one who has authority over it, so too the order of the universe, which is apparent in both natural effects and voluntary effects, exhibits God's justice. Hence in *De Divinis Nominibus*, chap. 8, Dionysius, says, "God's true justice must be seen in the fact that (a) He gives what is appropriate to all things according to the worthiness of each of the things that exist, and that (b) He preserves the nature of each thing in its own proper order and with its own proper powers."

**Reply to objection 1:** Some of the moral virtues have to do with the passions. For instance, temperance (*temperantia*) has to do with sentient desires, fortitude (*fortitudo*) has to do with fear and daring, and gentleness (*mansuetudo*) has to do with anger. Virtues of this sort cannot belong to God except metaphorically, since, as was explained above (q. 20, a. 1), in God there are no passions; moreover, in God there is no sentient appetite, which, according to the Philosopher in *Ethics* 3, is the subject in which virtues of this sort exist.

On the other hand, some moral virtues have to do with actions; for instance, justice and generosity (*liberalitas*) and magnificence (*magnificentia*) have to do with giving and taking. These virtues exist not in the sentient part of the soul, but in the will. Hence, nothing prevents virtues of this sort from being

posited in God—yet not with respect to civic actions, but rather with respect to actions that are appropriate for God. For, as the Philosopher says in *Ethics* 10, it would be ridiculous to praise God for His political virtues.

**Reply to objection 2:** Since the object of the will is the good as understood, God cannot will anything other than what conforms to the measure of His wisdom. For the measure of His wisdom is, as it were, the law of justice, in accord with which His will is upright and just. Hence, God does justly whatever He does in accord with His will, just as we ourselves do justly whatever we do in accord with the law. But we act in accord with a law that is given to us by a superior, whereas God is a law unto Himself (*Deus sibi ipsi est lex*).

**Reply to objection 3:** What is due to each thing is what is its own; and what is its own is that which is ordered toward it. For instance, a servant is his master's own, and not vice versa, since what is free is master of itself. Therefore, the term 'debt' implies that the thing toward which the debt is ordered has a certain need or requirement.

Now we have to take into account two types of orderings among things. The first is that by which one created thing is ordered toward another created thing—in the way that the parts are ordered toward the whole, and accidents toward substances, and each thing toward its proper end. The second type of ordering is that by which all created things are ordered toward God.

Thus, there are two types of debt that have to be considered in the case of God's action: (a) what is owed to God and (b) what is owed to a created thing. And God renders a debt in both cases.

For it is owed to God that what belongs to His wisdom and will, along with what manifests His goodness, should be fulfilled in things. In this sense, God's justice has to do with His own uprightness, in accord with which He renders to Himself what is owed to Himself.

Moreover, it is owed to each created thing that it should have that which is ordered toward it. For instance, it is owed to man that he should have hands and that the other animals should serve him. And so God also enacts His justice when He gives to each thing what is owed to it by reason of its nature and status. However, this second debt depends upon the first, since each thing is owed what is ordained for it in the order of God's wisdom. And even though God in this sense renders a debt to another thing, He is nonetheless not Himself a debtor. For it is not the case that He Himself is ordered toward other things; just the opposite, the other things are ordered toward Him.

And so justice in God is sometimes called His conformity with His own goodness, whereas at other times it is called His recompense for what is deserved. Anselm touches on both these modes when he says, "It is just when You punish evildoers, because it corresponds to what they deserve; and it is just when You spare evildoers, because it befits your goodness."

**Reply to objection 4:** Even though justice has to do with acts, it is not thereby excluded from being God's essence. For what belongs to a thing's essence can also be a principle of action.

However, it is not always the case that the good has to do with action. For something is said to be good not only insofar as it acts, but also insofar as it is perfected in its essence. This is why Boethius says in the same place that goodness is related to justice as the generic is related to the specific.

## Article 2

### Can God's justice be called truth?

It seems that God's justice is not truth:

**Objection 1:** Justice exists in the will; for as Anselm says, justice is rectitude of the will. But according to the Philosopher in *Metaphysics* 6 and *Ethics* 6, truth exists in the intellect. Therefore,

justice does not pertain to truth.

**Objection 2:** According to the Philosopher in *Ethics* 4, truth (*veritas*) is a certain virtue distinct from justice. Therefore, truth does not pertain to the nature of justice.

**But contrary to this:** Psalm 84:11 says, “Mercy and truth have met each other.” And ‘truth’ is here being used for justice.

**I respond:** As was explained above (q. 16, a. 1), truth consists in a correspondence between the intellect and reality (*veritas consistit in adaequatione intellectus et rei*).

Now an intellect that is a cause of the relevant real thing is related to it as a rule and measure, whereas the converse holds in the case of an intellect that takes its scientific knowledge from the things.

Thus, when, as happens with us, the things are the measure and rule of the intellect, then truth consists in the intellect’s corresponding to the thing. For it is because reality is or is not such-and-such that our opinions and statements are true or false.

By contrast, when the intellect is the rule or measure of the things, then truth consists in the thing’s corresponding to the intellect. So, for instance, the craftsman is said to produce a true work when that work agrees with his craft. Now just actions are related to the law with which they accord as artifacts are related to their craft. Therefore, God’s justice, which establishes among things the order that conforms to the measure of His wisdom, i.e., His law, is appropriately called ‘truth’. And this is why, even among us, one speaks of the truth of justice.

**Reply to objection 1:** With respect to the *law* that regulates, justice exists in reason or in the intellect, but with respect to the *command* by which actions are regulated in accord with the law, justice exists in the will.

**Reply to objection 2:** The ‘truth’ of which the Philosopher is speaking here is a certain virtue by which someone’s words and deeds reveal what he is really like. And so it consists in the conformity of a sign to the thing signified—and not, as has been said about the truth of justice, in the conformity of an effect to its cause and its rule.

### Article 3

#### Is there mercy in God?

It seems that mercy or pity (*misericordia*) does not belong to God:

**Objection 1:** As Damascene says, mercy is a species of sadness. But sadness does not exist in God. Therefore, neither does mercy.

**Objection 2:** Mercy is a relaxation of justice. But God cannot omit what pertains to His justice. For as 2 Timothy 2:13 says, “If we believe not, He continues faithful, He cannot deny Himself,” and as a Gloss says in the same place, He would be denying Himself if He denied His own dictates. Therefore, mercy does not belong to God.

**But contrary to this:** Psalm 110:4 says, “He is a merciful and gracious Lord.”

**I respond:** Mercy must especially be attributed to God—though according to its effect and not according to the affective element in the passion.

To see this clearly, note that someone is called merciful (*misericors*) when he has, as it were, a saddened heart (*miserum cor*)—viz., because he is affected with sadness at the misery (*miseria*) of another as if it were his own misery. And from this it follows that he acts to dispel the other’s misery as his own misery, and this is the effect of mercy.

Thus, to be saddened at the misery of another does not belong to God, but it does especially belong

to Him to dispel another's misery, insofar as we mean by 'misery' any sort of defect. But defects are removed only through the perfection of some type of goodness, and, as was shown above (q. 6., a. 4), the first source of goodness is God.

Note, however, that the distribution of perfections to things pertains—though under different concepts—to God's goodness and to His justice and to His generosity (*liberalitas*) and to His mercy. For, as was shown above (a. 6, a. 1 and 4), the communication of perfections, considered absolutely, pertains to God's *goodness*. However, as was noted just above (a. 1), it pertains to God's *justice* that perfections are given to things by God in a way that is appropriate to them. On the other hand, it pertains to His *generosity* that He grants perfections to things not for His own advantage, but solely because of His goodness. Finally, it pertains to God's *mercy* that the perfections given by Him to things expel every sort of defect.

**Reply to objection 1:** This objection argues from mercy's affective element as a passion

**Reply to objection 2:** God acts mercifully not by doing anything contrary to His justice, but by doing something that goes beyond His justice. In the same way, if one gives two hundred denarii of his own money to someone who is owed one hundred denarii, then he is acting generously or mercifully and not contrary to justice. The same thing holds if someone forgives an offense committed against himself. For in forgiving this debt, he is in a certain sense making a gift of it; hence, in Ephesians 4:32 the Apostle calls forgiveness a 'gift': "Make a gift to one another, just as Christ has made a gift to you."

From this it is clear that mercy, far from destroying justice, is a certain fullness of justice. Hence, James 2:13 says, "Mercy is exalted above judgment."

#### Article 4

##### Do both mercy and justice both exist in every work of God?

It seems that mercy and justice do not both exist in every work of God:

**Objection 1:** Some of God's works, e.g., the justification of the wicked, are attributed to His mercy, whereas others, e.g., the damnation of the wicked, are attributed to His justice; hence, James 2:13 says: "Judgment will come without mercy to him that has not done mercy." Therefore, mercy and justice do not both appear in every work of God.

**Objection 2:** In Romans 15:8-9 the Apostle attributes the conversion of the Jews to justice and truth, whereas he attributes the conversion of the Gentiles to mercy. Therefore, justice and mercy do not both exist in every work of God.

**Objection 3:** Many just men are afflicted in this world. But this is unjust. Therefore, justice and mercy do not both exist in every work of God.

**Objection 4:** To render a debt belongs to justice, whereas to alleviate misery belongs to mercy. And so acts of both justice and mercy presuppose something. But creation does not presuppose anything. Therefore, in the act of creation there is neither mercy nor justice.

**But contrary to this:** Psalm 24:10 says: "All the ways of the Lord are mercy and truth."

**I respond:** It is necessary for both mercy and truth to be found in every work of God—as long as mercy is understood as the removal of any sort of defect. (However, not every defect can be properly called 'misery' (*miseria*), since this applies only to defects in a rational nature, which is able to be happy. For misery is opposed to happiness (*felicitas*.)

The reason for this necessity is that since the debt rendered by God's justice is either a debt owed to God or a debt owed to some creature, neither of these can be overlooked in any of God's works. For

God cannot do anything that conflicts with His wisdom and goodness—which is the sense in which, as we explained above (a. 1), something is owed to God. Similarly, whatever God does among created things, He does with a fitting order and proportion—which is what the nature of justice consists in. And so it is necessary that justice should exist in every work of God.

Moreover, a work of God's justice always presupposes, and is founded upon, a work of His mercy. For a creature is not owed anything except because of something that preexists or is preconceived in it. Again, if anything is owed to a creature, this will be because of something prior. And since an infinite regress is impossible here, we finally come down to something which depends solely on the goodness of God's will, which is the ultimate end. So, for instance, we say that having hands is owed to man because of his rational soul, and having a rational soul is owed to him because he is man; but that man should exist at all is due to God's goodness. And so mercy appears in every work of God as its first source. For the force of mercy is preserved in each of the consequent things, and it operates even more powerfully in them, in just the way that a first cause has a more powerful influence than a secondary cause. For this reason, even the things that are owed to a given creature are such that God, out of the abundance of His goodness, dispenses them more generously than is demanded by what is fitting for the thing's nature. For what would be sufficient to preserve the order of justice is less than what is in fact conferred by God's goodness, which exceeds what is merely fitting for each creature.

**Reply to objection 1:** Some works are attributed to God's justice and others to His mercy because justice appears more forcefully in some and mercy appears more forcefully in others.

Yet mercy is apparent even in the damnation of the reprobate—not in the sense that it totally relaxes justice, but in the sense that it slackens it in some way by making the punishment less than what is deserved.

Again, justice is apparent even in the justification of the wicked, when it remits sins because of the love which God Himself has mercifully infused into the sinner—as we read in Luke 7:47 about Mary Magdalene: “Many sins are forgiven her, because she has loved much.”

**Reply to objection 2:** Justice and mercy are apparent in the conversion of both the Jews and the Gentiles. However, in the conversion of the Jews there is a certain element of justice that is not present in the conversion of the Gentiles, since the Jews are saved because of the promises made to their fathers.

**Reply to objection 3:** Justice and mercy both appear in the fact that the just are punished in this world. For through these afflictions certain of their inconstancies are purged, and they are instead directed away from a love for earthly things toward God. Accordingly, Gregory says, “The evils that oppress us in this world impel us to go toward God.”

**Reply to objection 4:** Even though creation presupposes nothing in the nature of things, it nonetheless presupposes something in God's cognition. Accordingly, even in this case the nature of justice is preserved, since a thing is brought into being insofar as this accords with God's wisdom and goodness. Likewise, the nature of mercy is in some way preserved insofar as a thing passes from non-being into being.

## QUESTION 22

### God's Providence

Now that we have considered what pertains to God's will absolutely speaking, we must proceed to those things that are related to both His intellect and will together. These include providence, which is had with respect to all things (question 22), as well as predestination and reprobation and what follows upon them in the order of salvation—especially with respect to human beings (questions 23-24). For in moral science prudence, which clearly pertains to providence, is considered after the moral virtues.

On the topic of providence there are four questions: (1) Does providence exist in God? (2) Are all things subject to God's providence? (3) Is God's providence immediate with respect to all things? (4) Does God's providence impose necessity on the things it provides for?

### Article 1

#### Does providence exist in God?

It seems that providence (*providentia*) does not exist in God:

**Objection 1:** According to Tully, providence is a part of prudence (*pars prudentiae*). But since, according to the Philosopher in *Ethics* 6, prudence involves good deliberation, it cannot belong to God; for there is nothing which God is not sure about and which He would thus need to deliberate about (*qui nullum dubium habet, unde eum consiliari oporteat*). Therefore, providence does not belong to God.

**Objection 2:** Whatever exists in God is eternal. But providence is not eternal, since, according to Damascene, providence has to do with existing things that are not themselves eternal. Therefore, providence does not exist in God.

**Objection 3:** Nothing composite exists in God. But providence seems to be something composite, since it includes within itself both the will and the intellect. Therefore, providence does not exist in God.

**But contrary to this:** Wisdom 14:3 says, "But Your providence, O Father, governs all things."

**I respond:** It is necessary for providence to be posited in God. For, as has been shown (q. 6, a. 4), all the good that exists in things is created by God. But good is found in things not only with respect to their substance, but also with respect to their being ordered toward their end, and most especially toward their ultimate end, which, as was established above (q. 21, a. 4), is God's goodness. Therefore, this good of ordering that exists among created things is itself created by God. However, since God is a cause of things through His intellect, and since, as is clear from what was said above (q. 15, a. 2 and q. 19, a. 4), the idea of each of His effects must thus preexist in Him, it is necessary that a plan for the ordering of things to their end should preexist in God's mind (*necesse est quod ratio ordinis rerum in finem in mente divina praeexistat*). And this plan for ordering things to their end is providence, properly speaking.

For providence is the principal part of prudence, and the other two parts—viz., memory of what is past and understanding of what is present (*memoria praeteritorum et intelligentia praesentium*)—are ordered toward it. For it is from the past as remembered and the present as understood that we make inferences about future things that have to be provided for (*coniectamus de futuris providendis*). Now according to the Philosopher in *Ethics* 6, it is the role of prudence to order other things toward their end—whether this be (a) with respect to one's own self, and in this sense a prudent man is one who skillfully orders his acts toward the goal of his life, or (b) with respect to the end of others who are subject to one in the family or in the city or in the kingdom, and it is in this sense that Matthew 24:45 says, "... the faithful and prudent servant, whom his lord has appointed over his family." It is in this second way that prudence or providence can belong to God. For in God Himself there is nothing that can be ordered toward an end, since He Himself is the ultimate end.

Therefore, it is this plan for ordering things toward their end that is called providence in God. Accordingly, in *De Consolatione Philosophiae* 4, Boethius says, “Providence is divine reason itself, grounded in the ultimate ruler of all things, which disposes all things.” Now ‘disposition’ can refer either to a plan for ordering things toward their end or a plan for ordering the parts in a whole.

**Reply to objection 1:** According to the Philosopher in *Ethics* 6, prudence, properly speaking, gives commands about matters which good deliberation (*euboulia*) has correctly inquired into and which sound judgment (*sunesis*) has correctly passed judgment on. Hence, even though deliberating does not belong to God, given that deliberation involves inquiry into matters that one is not sure about, nonetheless, it does belong to God that He should issue commands about the ordering of things toward their end, concerning which He has ‘right reason’ (*recta ratio*)—this, according to Psalm 148:6 (“He has made a decree, and it shall not pass away.”) And this is the sense in which the nature of prudence and providence belongs to God.

Moreover, even though one can claim that the plan for things to be done may itself be called ‘deliberation’ or ‘counsel’ (*consilium*) in God, this will not be because of any sort of inquiry in God; instead, it will be because of the cognitional certitude that all those who deliberate aim to arrive at by means of their inquiry. Hence, Ephesians 1:11 says, “Who works all things according to the counsel of His will.”

**Reply to objection 2:** Two things are pertinent to care (*pertinent ad curam*), viz., (a) the *plan* of the ordering, which is called *providence* and *disposition*, and (b) the *execution* of that ordering, which is called *governance*. The first of these is eternal, and the second is temporal.

**Reply to objection 3:** Providence exists in the intellect but presupposes the willing of the end. For one does not give commands concerning what is to be done for the sake of an end unless he has willed the end. Hence, prudence also presupposes the moral virtues, through which the appetite is ordered toward the good, as *Ethics* 6 says.

Still, even if providence were related equally to God’s will and to His intellect, this would still not compromise God’s simplicity. For, as was explained above (q. 19, a. 1 and a. 4), in God the will and the intellect are the same.

## Article 2

### Are all things subject to God's providence?

It seems that not all things are subject to God’s providence:

**Objection 1:** Nothing that is provided for is fortuitous. Therefore, if all things are provided for by God, then nothing will be fortuitous, and so there will be no such thing as chance or fortune. But this is contrary to common opinion.

**Objection 2:** Every wise provider eliminates defects and evils as much as possible from the things that he takes care of. But we see that many evils exist among things. Therefore, either God is unable to prevent them and so is not omnipotent, or else He does not have care of all of them.

**Objection 3:** What happens by necessity does not require providence, i.e., prudence. Hence, according to the Philosopher in *Ethics* 6, prudence is right reason with respect to contingent things that are open to deliberation and choice. Therefore, since many things in the world happen by necessity, not everything is subject to providence.

**Objection 4:** Whoever is left to himself is not subject to the providence of any ruler. But men are left to themselves by God, according to Ecclesiasticus 15:14 (“God made man from the beginning, and

left him in the hand of his own counsel”). And this holds especially for evil men, according to Psalm 80:13 (“So He let them go according to the desires of their heart”). Therefore, not all things are subject to God’s providence.

**Objection 5:** In 1 Corinthians 9:9 the Apostle says, “God is not concerned about oxen,” or, for the same reason, about other non-rational creatures. Therefore, not all things are subject to God’s providence.

**But contrary to this:** Wisdom 8:1 says of God’s wisdom, “She reaches, therefore, from end to end mightily, and orders all things sweetly.”

**I respond:** Some thinkers, e.g., Democritus and Epicurus, have completely denied providence, claiming that the world came about by chance.

Others have claimed that only incorruptible things are subject to providence, and that corruptible things are subject to providence not as individuals but only according to their species, since in this respect they are incorruptible. In the person of these thinkers Job 22:14 says, “The clouds are His hiding place, and He does not consider our things, and He walks about the poles of heaven.” Rabbi Moses separated men off from the general run of corruptible things because of the splendor of the intellect they participate in, but he followed the opinion of the others in the case of other corruptible individuals.

Nonetheless, it is necessary to claim that *all things* are subject to divine providence—not only in general, but also *as individuals*. This is made clear as follows:

Since every agent acts for the sake of an end, the ordering of effects toward their end extends as far as the first agent’s causality does. For in the works of any given agent, the reason why an effect occurs that is not ordered toward the end is that this effect follows from some other cause and falls outside the intention of the relevant agent. But the causality of God, who is the first agent, extends to all beings—not only with respect to the principles of their species, but also with respect to their individual principles, and not only with respect to the principles of incorruptible things, but also with respect to the principles of corruptible things. Hence, everything that has *esse* in any way must be ordered by God toward its end—this according to the Apostle in Romans 13:1 (“The things that are from God are ordered by God”). Therefore, since, as has been explained (a. 1), God’s providence is nothing other than a plan for ordering things toward their end, it must be the case that all things, insofar as they participate in *esse*, are to that extent subject to God’s providence.

Similarly, it was shown above (q. 14, a. 11) that God knows all things, both universals and particulars. And since, as was explained above (q. 14, a. 8), God’s cognition is related to things as a craftsman’s cognition is related to his artifacts, it must be the case that all things are subject to God’s ordering in the way that all of a craftsman’s artifacts are subject to his ordering.

**Reply to objection 1:** Universal causes differ from particular causes, since something can elude a particular cause’s ordering, but not a universal cause’s ordering. For something eludes a particular cause’s ordering only because of some other particular cause that impedes that ordering; for instance, a piece of wood is prevented from bursting into flame by the action of water. Hence, since all the particular causes are included under the universal cause, it is impossible for any effect to escape the universal cause’s ordering.

Therefore, insofar as a given effect escapes the ordering of some particular cause, it is called a chance effect or fortuitous effect with respect to that particular cause. However, with respect to the universal cause, whose ordering it cannot be released from, it is said to be provided for. Similarly, it might happen that two servants of the same master meet one another, and that even though the meeting is a chance event from their perspective, it was nonetheless provided for by their master, who knowingly dispatched them to the same place in such a way that neither knew about the other.

**Reply to objection 2:** Someone who has care of a particular thing differs here from someone who

is a universal provider. For a particular provider eliminates defects as much as possible from that which is subject to his care, whereas a universal provider permits defects to occur in particular cases in order not to impede the good of the whole. Hence, the corruptions and defects in natural things are said to be contrary to a particular nature, but they nonetheless fall within the intention of nature as a whole, insofar as a defect in one thing works to the good of some other thing or to the good of the universe as a whole. For instance, the corruption of one thing is the generation of some other thing, and through this generation a species is preserved.

Therefore, since God is the universal provider for the totality of being, it pertains to His providence that He should permit certain defects to exist in some particular things in order that the complete good of the universe not be impeded. For if all evils were prevented, then many goods would be absent from the universe. For instance, the life of a lion would not exist if there were no killing of animals; again, the patience of the martyrs would not exist if it were not for the tyrants' persecution. Hence, in the *Enchiridion* Augustine says, "Almighty God would never allow any evil to exist among His works if He were not good and powerful enough to do well even given the evil."

Now these first two objections that we have just answered seem to have influenced those who excluded corruptible things from God's providence, since it is among corruptible things that chance events and evils occur.

**Reply to objection 3:** Man did not institute nature, but instead uses natural entities to his own advantage in his works of art and virtue. Hence, human providence does not extend to the necessary things that happen by nature. However, the providence of God, who is the author of nature, does indeed extend to these things.

This third objection seems to have influenced those who removed the course of natural things from God's providence and attributed it to the necessity of matter—e.g., Democritus and other ancient natural philosophers.

**Reply to objection 4:** Man is not excluded from God's providence by the statement that "God left man to himself." Instead, what this statement shows is that an operative power determined to a single effect is not fixed for man ahead of time, as it is for natural things. For natural things act only as if they are directed by another toward their end, and they do not act as if they are directing themselves toward the end, in the way that rational creatures do through the power of free choice by which they deliberate and choose. Hence, rational creatures are explicitly said to be "in the hand of their own counsel."

However, since the very act of free choice is traced back to God as a cause, the things that are done by free choice must be subject to God's providence. For human providence is contained under God's providence in the way that a particular cause is contained under a universal cause.

Moreover, God has providence over just men in a more excellent way than over wicked men, since He does not permit anything to happen to just men that would definitively undermine their salvation. For as Romans 8:28 says, "To them that love God all things work together unto good." On the other hand, from the fact that He does not restrain the wicked from the evil of sin, He is said to send them away—not, however, in the sense that they are totally excluded from His providence. For they would fall into nothingness if He did not conserve them through His providence.

The present objection seems to have influenced Tully, who removed from God's providence human affairs of the sort we deliberate about.

**Reply to objection 5:** Since, as has been explained, a rational creature has dominion over his own acts through free choice, he is subject to God's providence in a special way, so that guilt and merit are imputed to him and punishment and reward are rendered to him. And it is in this respect that the Apostle denies that God cares about oxen. However, he does not mean that individual non-rational creatures do not fall under God's providence, as Rabbi Moses thought.

### Article 3

#### Is God's providence immediate with respect to all things?

It seems that God does not have immediate providence with respect to all things:

**Objection 1:** Whatever is dignified must be attributed to God. But it is part of a king's dignity that he has ministers through the mediation of whom he provides for the things subject to him. Therefore, *a fortiori* God does not provide immediately for all things.

**Objection 2:** It pertains to providence to order things toward their end, and the end of each thing is its perfection and its good. But it pertains to a cause that it should lead its own effect to the good. Therefore, every agent cause is a cause of an effect of providence. Therefore, if God provided immediately for all things, then all secondary causes would be eliminated.

**Objection 3:** In the *Enchiridion* Augustine says, "There are some things it is better not to know about than to know about, e.g., vile things." And the Philosopher says the same thing in *Metaphysics* 12. But everything that is better should be attributed to God. Therefore, God does not have immediate providence with respect to things that are vile and evil.

**But contrary to this:** Job 34:13 says, "What other has He appointed over the earth? Or whom has He set over the world which He made?" Commenting on this, Gregory says, "He rules by Himself the world which He created by Himself."

**I respond:** Two things are relevant to providence: (a) a *plan* for ordering the things provided for toward their end (*ratio ordinis rerum provisarum in finem*); and (b) the *execution* of this ordering, which is called *governance* (*gubernatio*).

As regards the first of these, God immediately provides for all things. For in His intellect He has a plan for all things, even the very least things, and He has given the power to produce given effects to every cause that He has preordained for those effects. Hence, He had to have had the order of those effects in His plan beforehand (*oportet quod ordinem illorum effectuum in sua ratione praehabuerit*).

As regards the second, there are certain mediators of God's providence. For God's providence governs lower things by means of higher things—not because of any defect in His power, but rather because of the abundance of His goodness, so that He might communicate the dignity of causal activity even to His creatures.

This rules out an opinion of Plato's that is reported by Gregory of Nyssa. According to this opinion, there are three kinds of providence. The first kind belongs to the highest God, who provides primarily and principally for spiritual things and, as a result, for the whole world with respect to its genera, species, and universal causes. The second kind of providence is that by which generable and corruptible individuals are provided for, and this kind of providence he attributes to the gods who circle the heavens, i.e., to the separated substances that move the celestial bodies in circles. Lastly, the third kind of providence has to do with human affairs, and this kind of providence he attributes to the daimons (*attribuebat daemonibus*), whom the Platonists posited between us and the gods, as reported by Augustine in *De Civitate Dei* 9.

**Reply to objection 1:** It is indeed part of a king's dignity to have ministers who execute his providence, but it is a defect for him not to have a plan for those things that are to be done through his ministers. For all operational knowledge (*scientia operativa*) is more perfect to the extent that it considers things that are more particular, since acts have to do with particulars.

**Reply to objection 2:** As is clear from what has been said, the fact that God has immediate providence with respect to all things does not rule out secondary causes insofar as they *execute* this ordering.

**Reply to objection 3:** For us it is better not to know evil and vile things because (a) they keep us from considering better things, since we are unable to hold many things in our understanding at the same time, and also because (b) thinking about evil things sometimes perverts our will toward evil. However, these considerations have no place in God, who sees all things at once with a single act of vision and whose will cannot be turned to evil.

#### Article 4

##### Does God's providence impose necessity on the things it provides for?

It seems that God's providence imposes necessity on the things it provides for:

**Objection 1:** As the Philosopher proves in *Metaphysics* 6, every effect that has a *per se* cause which now exists or has already existed and from which that effect follows by necessity is such that it has issued forth by necessity. But since God's providence is eternal, it has already existed; and an effect follows from it by necessity, since God's providence cannot be frustrated. Therefore, God's providence imposes necessity on the things it provides for.

**Objection 2:** Every provider makes what he produces as stable as possible, lest it perish. But God is maximally powerful. Therefore, to the things He provides for He gives the firmness of necessity.

**Objection 3:** In *De Consolatione Philosophiae* 4 Boethius says that fate, "proceeding from the sources of immutable providence, constrains men's acts and fortunes with an indissoluble series of causes." Therefore, it seems that providence imposes necessity on the things provided for.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says, "It is not part of providence to corrupt nature." But the nature of certain things is such that they are contingent. Therefore, divine providence does not impose necessity on things in a way that excludes contingency.

**I respond:** God's providence imposes necessity on some things, but not—as some have held—on all things.

For it pertains to providence to order things toward their end. But after God's own goodness, which is an end that is separated from things, the principal good that exists in the things themselves is the perfection of the universe, which would not exist if there were not many grades of being found among things. Hence, it pertains to God's providence to produce all the grades of beings. And so God has prepared necessary causes for certain effects, so that those effects occur necessarily, whereas for other effects He has prepared contingent causes, so that they occur contingently in accord with the status of their proximate causes.

**Reply to objection 1:** The effect of God's providence is not just that something should occur in some way or other, but that something should occur contingently or that it should occur necessarily. And so if God's providence disposes a thing to occur infallibly and necessarily, then it occurs infallibly and necessarily, whereas if the plan of God's providence decrees that a thing should occur contingently, then it occurs contingently.

**Reply to objection 2:** The ordering of God's providence is unshakable and certain in the sense that the things that are provided for by God all occur in the mode which He Himself has provided for them, i.e., either necessarily or contingently.

**Reply to objection 3:** The indissolubility and immutability that Boethius mentions pertain to the certitude of providence itself, which cannot fail either in its effect or in the mode of occurrence that it has provided for. Nonetheless, indissolubility and immutability do not pertain to the necessity of the effects themselves.

Also, notice that *necessary* and *contingent* follow upon *being* as such. Hence, the modes of contingency and necessity fall under the oversight of God, who is the universal provider for all of being, and not just under the oversight of certain particular providers.

## QUESTION 23

### Predestination

Now that we have considered God's providence, we have to discuss predestination (question 23) and the book of life (question 24).

On the topic of predestination there are eight questions: (1) Is predestination fitting for God? (2) What is predestination, and is it an entity that exists in the one who is predestined? (3) Does God reprobate some men? (4) As regards the relation of predestination to election, are the predestined elected? (5) Are merits a cause of, or explanation for, predestination or reprobation or election? (6) As regards the certainty of predestination, are the predestined infallibly saved? (7) Is the number of the predestined fixed? (8) Can predestination be assisted by the prayers of the holy?

### Article 1

#### Are men predestined by God?

It seems that men are not predestined by God:

**Objection 1:** In *De Fide Orthodoxa* 2 Damascene says, "We must understand that God foreknows all things but does not predetermine all things (*omnia praecognoscit Deus, non autem omnia praedeterminat*). He foreknows what exists in us, but He does not predetermine it." But human merits and demerits exist in us insofar as we are masters of our own acts through the power of free choice. Therefore, whatever pertains to merits and demerits is not predestined by God. And thus the predestination of men is ruled out.

**Objection 2:** As was explained above (q. 22, a. 1), all creatures are ordered to their ends by God's providence. But other creatures are not said to be predestined by God. Therefore, neither are men predestined.

**Objection 3:** Angels are capable of happiness, in the same way that men are. But, so it seems, angels are not predestined, since there was never any unhappiness (*miseria*) in them and, as Augustine says, predestination is a work of mercy. Therefore, men are not predestined.

**Objection 4:** The gifts that God has conferred on men are revealed to holy men by the Holy Spirit—this according to the Apostle in 1 Corinthians 2:12 ("We have received not the spirit of this world, but the Spirit that is of God, that we may know the things that are given us from God"). Therefore, if men were predestined by God, then given that predestination is a divine gift, the predestined would know about their own predestination. But this is clearly false.

**But contrary to this:** Romans 8:30 says, "And whom He predestined, them He also called."

**I respond:** It is fitting for God to predestine men. For as was shown above (q. 22, a. 2), all things are subject to God's providence. But as was explained (q. 22, a. 1), it pertains to providence to order things toward their end.

Now there are two kinds of ends toward which created things are ordered by God. The one kind is disproportionate to, and exceeds the power of, a created nature; and this end is eternal life, which consists in seeing God (*in divina visione consistit*) and which, as has been shown (q. 12, a. 4), lies beyond the nature of any creature. The other kind of end is proportioned to a created nature, so that the created thing can attain it by the power of its own nature.

Now the kind of end that a thing cannot attain by the power of its own nature is such that the thing must be sent to it by another, in the way that an arrow is sent to its target by an archer. Hence, properly speaking, a rational creature, who is capable of eternal life, is led to eternal life in the sense of being sent to it by God (*perducitur in ipsam quasi a Deo transmissa*). But the plan for this sending (*transmissionis*

*ratio*) preexists in God, in the same way that there exists in Him a plan for ordering all things toward their end—which, as we explained above (q. 22, a. 1), is His providence. But a plan of action that exists in the mind of the agent is a sort of preexistence in the agent of the very thing that is going to be done. Hence, the plan for sending a rational creature to the end or goal of eternal life is called *predestination* (*ratio transmissionis creaturae rationaleis in finem vitae aeternae praedestinatio nominatur*). For to destine something is to send it (*destinare est mittere*). And so it is clear that with respect to its object, predestination is a certain part of providence.

**Reply to objection 1:** Damascene is using the name ‘predetermination’ for the imposition of necessity, as happens with natural things that are predetermined to a single effect. This is clear from the fact that he adds, “For He does not will malice, nor does He compel virtue.” Hence, predestination is not being ruled out.

**Reply to objection 2:** Non-rational creatures are not capable of that end which exceeds the power of human nature. Hence, they are not properly said to be predestined—even if the name ‘predestination’ might sometimes be used in an improper sense with respect to other ends.

**Reply to objection 3:** It is fitting for angels to be predestined, just as it is for men, even though the angels were never unhappy. For a movement takes its species not from its terminus *a quo*, but from its terminus *ad quem*. For instance, it makes no difference, as far as the nature of whitewashing is concerned, whether the thing that is being whitewashed was black or gray or red beforehand. Similarly, it makes no difference, as far as the nature of predestination is concerned, whether or not it is from a state of unhappiness that someone is predestined to eternal life—even though, as was explained above (q. 21, a. 3), one can claim that *every* conferral of a good that goes beyond what is owed to the thing on which it is conferred belongs to mercy.

**Reply to objection 4:** Even if, by a special privilege, their own predestination is revealed to some men, it is not appropriate for it to be revealed to everyone. For if it were so revealed, then those who are not predestined would despair, and, among the predestined, the security of predestination might engender negligence.

## Article 2

### Is predestination an entity that exists in the one who is predestined?

It seems that predestination is an entity that exists in the one who is predestined:

**Objection 1:** Every action of itself entails an instance of being acted upon (*passio*). Therefore, if predestination is an action in God (*si predestinatio actio in Deo*), then predestination must be an instance of being acted upon in those who are predestined (*oportet quod predestinatio passio sit in praedestinatis*).

**Objection 2:** In his commentary on Romans 1:4 (“Who was predestined ...”) Origen says, “Predestination belongs to one who does not yet exist, whereas the sending (*destinatio*) belongs to one who does exist.” But in *Praedestinatio Sanctorum* Augustine says, “What is predestination, if not the sending (*destinatio*) of someone?” Therefore, predestination belongs only to something that exists. And so it is an entity that exists in the one who is predestined (*ponit aliquid in praedestinato*).

**Objection 3:** Preparation is an entity that exists in a thing that is prepared. But as Augustine says in *Praedestinatio Sanctorum*, predestination is a preparation for God’s gifts. Therefore, predestination is an entity that exists in those who are predestined (*est aliquid in praedestinatis*).

**Objection 4:** What is temporal does not appear in the definition of what is eternal. But grace,

which is something temporal, appears in the definition of predestination. For predestination is said to be “a preparation for grace in the present and for glory in the future.” Therefore, predestination is not something eternal. And so it must exist not in God, but in those who are predestined. For whatever exists in God is eternal.

**But contrary to this:** Augustine says that predestination is the foreknowledge of God’s gifts. But foreknowledge is an entity that exists in the one who has the foreknowledge and not in the things that are foreknown. Therefore, predestination likewise exists in the one who predestines and not in those who are predestined.

**I respond:** Predestination is something that exists only in the one who predestines and not in those who are predestined. For it has been explained (a. 1) that predestination is a certain part of providence. But providence does not exist in the things that are provided for; instead, as has been explained (q. 22, a. 1), it is a plan that exists in the provider’s intellect. On the other hand, the execution of providence, which is called governance, is indeed something passive that exists in the things that are governed, whereas it exists as something active in the one who governs.

Thus, it is clear that predestination is a plan, existing in God’s mind, for ordering certain persons to eternal salvation. On the other hand, the execution of this ordering is something passive that exists in those who are predestined, whereas it exists in God as something active. Now this execution of predestination is a *calling (vocatio)* and *glorification (magnificatio)* according to the Apostle in Romans 8:30: “And whom He predestined, them He also called. And whom He called . . . them He also glorified.”

**Reply to objection 1:** Actions that pass into a exterior subject (*transeuntes in exteriorem materiam*)—e.g., heating and cutting—entail of themselves an instance of being acted upon (*passio*). However, as was explained above (q. 14, a. 2 and q. 18, a. 3), this is not the case with actions that remain within the agent, e.g., intellective understanding and willing. And predestination is an action of this latter sort. Hence, predestination does not posit any entity (*aliquid*) in the one who is predestined.

On the other hand, the execution of predestination, which passes into exterior things, exists as a certain effect in those things.

**Reply to objection 2:** ‘To send’ or ‘to destine’ (*destinare*) is sometimes taken for the real transmission of something toward a target, and in this sense an instance of being sent is an entity that exists only in something that itself exists.

In a second sense, ‘to send’ or ‘to destine’ is taken for a sending which someone mentally conceives of, and in this sense we are said to ‘destine’ something when we firmly intend it in our minds—this according to 2 Maccabees 6:20, where Eleazar “destined himself (*destinavit*) not to do any unlawful things for the sake of the love of life.” And in this sense destining can belong to something that does not yet exist.

However, because of the antecedent character (*ratio antecessionis*) that ‘predestination’ implies, predestination can belong to something that does not yet exist, regardless of how the term ‘destine’ is taken.

**Reply to objection 3:** There are two kinds of preparation. The first kind is the preparation of what is acted upon insofar as it is being acted upon, and this kind of preparation exists in the thing that is being prepared. The second kind of preparation belongs to an agent with respect to its acting, and this kind of preparation exists within the agent.

Predestination is a preparation of this latter kind. For an agent, through his intellect, is said to prepare himself for acting insofar as he preconceives a plan for what is going to be done. And in this sense God prepared from eternity by predestining, conceiving of a plan for ordering certain persons to salvation.

**Reply to objection 4:** Grace appears in the definition of predestination not as something that is part of the essence of predestination, but rather insofar as predestination implies a relation to grace, viz., the relation of a cause to its effect, and the relation of an act to its object. Hence, it does not follow that predestination is something temporal.

### Article 3

#### Does God reprobate some men?

It seems that God does not reprobate any man (*Deus nullum hominem reprobat*):

**Objection 1:** No one reprobates someone whom he loves. But God loves all men, according to Wisdom 11:25 (“For You love all things that exist, and hate none of the things that You have made”). Therefore, God does not reprobate any man.

**Objection 2:** If God reprobates some man, then it must be the case that reprobation is related to those who are reprobated in exactly the same way that predestination is related to those who are predestined. But predestination is a cause of salvation for those who are predestined. Therefore, reprobation will be a cause of perdition for those who are reprobated. But this is false; for Hosea 13:9 says, “Your perdition is from yourself, O Israel: your help is only from me.” Therefore, God does not reprobate anyone.

**Objection 3:** No one ought to be held responsible for what he cannot avoid. But if God reprobates someone, then that person cannot avoid perishing; for Ecclesiastes 7:14 says, “Consider the works of God, that no man can correct whom He has despised.” Therefore, men should not be held responsible for perishing. But this is false. Therefore, God does not reprobate anyone.

**But contrary to this:** Malachi 1:2-3 says, “I have loved Jacob, but have hated Esau.”

**I respond:** There are some whom God reprobates.

For it was asserted above (a. 1) that predestination is a part of providence. But as was explained before (q. 22, a. 2), it pertains to providence to permit some defects in the things that are subject to providence. Hence, since it is through divine providence that men are ordered toward eternal life, it likewise pertains to providence that it should permit some to fall short of this end. And this is what is called reprobation.

So, then, just as predestination is the part of providence that has to do with those who are divinely ordered toward eternal salvation, so reprobation is the part of providence that has to do with those who fall short of this end. Hence, reprobation does not signify just foreknowledge, but adds something to it conceptually (*secundum rationem*)—as was explained above (q. 22, a. 1) in the case of providence. For just as predestination includes the intention (*voluntas*) to confer grace and glory, so reprobation includes the intention to permit someone to fall into sin and to impose the punishment of damnation for that sin.

**Reply to objection 1:** God loves all men—and, indeed all creatures—in the sense that He wills some good for all of them, but not in the sense that He wills every good for all of them. Therefore, insofar as He does not will the good of eternal life for some, He is said to hate them or reprobate them.

**Reply to objection 2:** Reprobation is different from predestination in the way it functions as a cause.

For predestination is a cause both (a) of that which awaits in the future life for those who are predestined, viz., glory, and also (b) of that which is perceived in the present, viz., grace.

By contrast, reprobation is not a cause of that which exists in the present, viz., sin. However, it is a cause of one’s being abandoned by God (*est causa derelictionis a Deo*) and a cause of what is rendered

in the future, viz., eternal punishment. Sin, on the other hand, comes from the free choice of the one who is reprobated and deserted by grace. It is in this sense that what the prophet said is verified: “Your perdition is from yourself, O Israel.”

**Reply to objection 3:** God’s reprobation does not take away any power at all from the one who is reprobated. Hence, when it is claimed that one who is reprobated cannot obtain grace, this should be understood to mean a relative impossibility rather than an absolute impossibility—in the same way that, as was explained above (q. 19, a. 3), one who is predestined is necessarily saved, but with a relative necessity that does not destroy free choice. Hence, even if someone who is reprobated by God cannot obtain grace, nonetheless, the fact that he falls into this or that sin happens because of his free choice. Hence, he is rightly held to be guilty of his sin (*unde et merito sibi imputatur in culpam*).

#### Article 4

##### Are the predestined elected by God?

It seems that the predestined are not elected by God (*non eligantur a Deo*):

**Objection 1:** In *De Divinis Nominibus*, chap. 4, Dionysius says that just as the corporeal sun emits its light to all bodies without choosing (*non eligendo*) them, so too God emits His goodness without election. But God’s goodness is communicated in a special way to some by their participation in grace and glory. Therefore, God communicates grace and glory, which pertain to predestination, without any election.

**Objection 2:** Election has to do with what exists. But predestination from eternity is also of those who do not exist. Therefore, some are predestined without election.

**Objection 3:** Election implies a certain selectivity (*electio quandam discretionem importat*). But as 1 Timothy 2:4 says, “God wills all men to be saved.” Therefore, predestination, which preordains men to salvation, occurs without election.

**But contrary to this:** Ephesians 1:4 says, “He elected us in [Christ] before the foundation of the world.”

**I respond:** Predestination logically presupposes election, and election logically presupposes love.

The reason for this is that, as has been explained (a. 1), predestination is a part of providence. But providence, like prudence, is a plan which exists in the intellect and which issues commands about the ordering of certain things toward their end, as was explained above (q. 22, a. 2). However, one does not command anything to be ordered toward an end unless the end has already been willed.

Hence, the predestination of some to eternal salvation logically presupposes that God has willed their salvation. And it is to this willing that election and love are relevant (*ad quod pertinet electio et dilectio*). Love (*dilectio*) is relevant insofar as He wills the good of eternal salvation for them; for, as was explained above (q. 20, a. 2 and 3), to love is to will a good for someone. On the other hand, election (*electio*) is relevant insofar as He wills this good to some in preference to others; for as was said above (a. 3), there are some whom He reprobates.

However, election and love have an ordering in God that is different from their ordering with us, since in our case the will does not cause goodness by its love; instead, we are spurred to love by a preexisting good. Thus, we elect someone in order to love him, and so in our case election precedes love. With God, however, the reverse is the case. For His act of will, by which He wills a good to someone in loving Him, is a cause of the person’s having that good in preference to others. And so it is clear that love is logically presupposed by election, and that election is logically presupposed by predestination.

Hence, all those who are predestined are elected and loved.

**Reply to objection 1:** If one considers the communication of God's goodness in general, then He communicates His goodness in the absence of election, since, as was explained above (q. 6, a. 4), there is nothing that does not participate in His goodness. However, if one is considering the communication of this or that particular good, then He does not confer the good without election, since He gives certain goods to some things which He does not give to other things. And it is in this way that election is present in the conferral of grace and glory.

**Reply to objection 2:** When the will of the one who elects is spurred to love by a good that preexists in the thing, the election must be from among the things that exist—as happens when we elect something. But things are otherwise with God, as has been explained. And so as Augustine puts it, “Those who do not exist are elected by God, and He who elects them does not err.”

**Reply to objection 3:** As was explained above (q. 19, a. 6), God wills *antecedently* that all men should be saved—which is not to will it absolutely speaking, but only in a certain respect. However, He does not will this *consequently*. i.e., He does not will it absolutely speaking.

## Article 5

### Is the foreknowledge of merits a cause of predestination?

It seems that the foreknowledge of merits (*praescientia meritorum*) is a cause of predestination:

**Objection 1:** In Romans 8:29 the Apostle says, “Whom He foreknew, He also predestined.” Again, in Ambrose's gloss on Romans 9:15 (“I will have mercy on whom I will have mercy”) he says, “I will give mercy to him whom I foreknow will turn to me with all his heart.” Therefore, it seems that the foreknowledge of merits is a cause of predestination.

**Objection 2:** Since, as Augustine says, predestination is a work of mercy, God's predestination includes the divine act of will, which cannot be unreasonable. But there can be no reason for predestination except the foreknowledge of merits. Therefore, the foreknowledge of merits is a cause of, or explanation for, predestination.

**Objection 3:** As Romans 9:14 says, “There is no injustice with God.” Now it seems unjust that those who are equal should be treated unequally. But all men are equal both with respect to nature and with respect to original sin, whereas inequalities are present in them because of the merits and demerits that stem from their own actions. Therefore, God prepares unequal treatments for men, by predestining some and reprobating others, only because of His foreknowledge of different merits.

**But contrary to this:** In Titus 3:5 the Apostle says, “Not by the works of justice which we have done, but according to His mercy, He saved us.” But He predestined us to be saved in the same way that He saved us. Therefore, it is not the case that the foreknowledge of merits is a cause of, or explanation for, predestination.

**I respond:** Since, as was explained above (a. 3 and 4), predestination includes an act of will, a reason for predestination has to be sought in the same way that a reason for God's act of will is sought. But it was explained above (q. 19, a. 5) that it is impossible to assign a cause of God's act of will on the part of the act of willing itself, whereas it is possible to assign an explanation on the part of the things willed to the extent that God wills one thing to exist for the sake of another. Thus, no one has been crazy enough (*insanae mentis*) to claim that merits are a cause of God's predestination with respect to the very act of predestining. Instead, this matter has been discussed under the question of whether predestination has some cause on the part of the effect. And this is just to ask whether it was because of merits that God

preordained that He would give the effect of predestination to someone.

Thus, there have been some who claimed that the effect of predestination is preordained for someone because of merits that preexisted in another life. This was the position of Origen, who held that human souls were created from the beginning and that when they were united to bodies in this world, they were assigned different states according to differences in their works. But the Apostle excludes this position in Romans 9:11-12, when he says: “For when they had not yet been born, nor had done any good or evil . . . Not of works, but of Him that calls, it was said to her: ‘The elder shall serve the younger.’”

Thus, there have been others who claimed that preexisting merits in this life are an explanation for, and cause of, the effect of predestination. For instance, the Pelagians held that the beginning of good works comes from us, whereas their consummation is from God. And so the reason why one person, and not another, is given the effect of predestination is that the one, and not the other, had made a beginning by preparing himself. However, this position is contrary to what the Apostle says in 2 Corinthians 3:5, “Not that we are sufficient to think anything of ourselves, as of ourselves.” For no principle can be found that is prior to thought. Hence, it cannot be claimed that some beginning exists in us that might be the explanation for the effect of predestination.

Hence, there have been others who claimed that the merits which follow upon the effect of predestination are an explanation for predestination. The idea is that God gives grace to someone, and preordained that He would give it, because He foreknew that this person would make good use of the grace—in the way that a king might give a horse to some soldier whom he knows will make good use of it.

However, these thinkers seem to have distinguished what comes from free choice and what comes from grace in such a way that the same effect could not come from both of them at once. Now it is clear that what belongs to grace is an effect of predestination, and it cannot be counted as a reason for predestination because it is included under predestination. Therefore, if something else on our part is an explanation for predestination, it will not be an effect of predestination. But what comes from free choice is not distinct from what comes from predestination, since what comes from a secondary cause is not distinct from what comes from the first cause. For God’s providence produces effects through the operation of secondary causes, as was explained above (q. 22, a. 3). Hence, what comes from free choice comes from predestination as well.

Therefore, one should claim that the effect of predestination can be thought of in two ways:

(a) One way is *in particular*, and in this sense nothing prevents one effect of predestination from being a cause of, and explanation for, another effect of predestination—where a later effect is a *final cause* of a prior effect, and a prior effect is a *meritorious cause* (which is traced back to a material disposition) of a later effect. For instance, we might say that God preordained that He would give glory to some individual because of his merits, and that He preordained that He would give him grace in order that he might merit glory.

(b) The second way to think of the effect of predestination is *in general*, and in this sense it is impossible that the whole effect of predestination in general should have any cause on our part. For whatever there is in a man that orders him toward salvation is wholly included under the effect of predestination, even the very preparation for grace, which does not come about except through God’s assistance—this according to Lamentations 5:21 (“Convert us, O Lord, to You, and we shall be converted”). Predestination, taken in this way on the part of the effect, has God’s goodness for its explanation. For it is God’s goodness to which the whole effect of predestination is ordered as to an end and from which it proceeds as a first efficient principle.

**Reply to objection 1:** The foreknown use of grace is not a reason for the conferral of grace except as a final cause in the sense just explained.

**Reply to objection 2:** Predestination *taken in general* has God's goodness as an explanation on the part of the effect. But, as has been explained, predestination *taken in particular* is such that one of its effects is an explanation for another.

**Reply to objection 3:** An explanation for the predestination of some and the reprobation of others can be taken from God's goodness itself. For God is said to have made all things because of His goodness in such a way that the divine goodness is represented among things. But it is necessary for God's goodness, which is one and simple in itself, to be represented in a multitude of ways in the things, since created things cannot attain to God's simplicity. And so diverse grades of things are required for the completion of the universe—with some things occupying high places and others the lowest places in the universe. And as was explained above (q. 2, a. 3 and q. 22, a. 2), in order for this multiplicity of grades to be conserved among things, God permits certain evils to be effected, lest many goods should be impeded.

So, then, suppose that we think of the whole human race as a complete collection of things. God willed that some men, whom He predestines, should represent His goodness in the mode of mercy, by sparing them; and He willed that other men, whom He reprobates, should represent His goodness in the mode of justice, by punishing them. And this is the reason why God chooses some and reprobates others. This is the explanation the Apostle gives in Romans 9:22-23 when he says, "God, willing to show His wrath [*read*: the vindication of His justice] and to make His power known, endured [*read*: permitted] with much patience vessels of wrath, fitted for destruction, so that He might show the riches of His glory on the vessels of mercy which He has prepared unto glory." And in 2 Timothy 2:20 he says, "But in a great house there are vessels not only of gold and of silver, but also of wood and of earth, and some indeed unto honor, but some unto dishonor."

However, there is no explanation other than God's will for why He chose these *particular* men for glory and reprobated those *particular* men. Hence, in *Super Ioannem* Augustine says, "As to why He draws this one to Himself and not that one—do not dare to judge if you do not want to be mistaken."

Similarly, among natural things one can give an explanation for why the whole of primary matter, which is uniform in itself, is such that one part of it was created by God at the beginning under the form of fire and another part under the form of earth, viz., in order that there might be a diversity of species among natural things. But why this *particular* part of matter should exist under this *particular* form and that *particular* part of matter should exist under that *particular* form—this is something that depends on God's simple act of willing. In the same way, it depends on the craftsman's simple act of will that this *particular* stone should be in this *particular* part of the wall and that *particular* stone in another part of the wall—even though the nature of the art itself dictates that some stone or other should be in this part and that some stone or other should be in that part.

Yet it does not follow from this that there is any injustice in God when He prepares unequal treatments for equals. This would be contrary to the nature of justice if the effect of predestination were rendered as a debt and not conferred as a grace. For in those things that are given as a grace, one can, without any prejudice to justice, give as he wills to whom he wills, and he can give more or less, as long as he does not withhold what is owed. And this is what the master of the house says in Matthew 20:14-15: "Take what is yours, and go your way. Or is it not lawful for me to do what I will?"

## Article 6

### Is predestination certain?

It seems that predestination is not certain:

**Objection 1:** In commenting on Apocalypse 3:11 (“Hold fast that which you have, that no man take your crown”) Augustine says, “Another will not be accepted unless this one perishes.” Therefore, the crown—i.e., the effect of predestination—can be gained and lost. Therefore, predestination is not certain.

**Objection 2:** When something possible is posited, nothing impossible follows from it. But it is possible for someone who is predestined, say Peter, to sin and then be killed. But if this is posited, then it follows that the effect of predestination is thwarted. Therefore, this is not impossible. Therefore, predestination is not certain.

**Objection 3:** God is now able to do whatever He was able to do. But He was able not to have predestined someone whom He has in fact predestined. Therefore, He is even now able not to predestine that person. Therefore, predestination is not certain.

**But contrary to this:** A Gloss on Romans 8:29 (“Whom He foreknew, He also predestined”) says, “Predestination is foreknowledge plus the preparation for God’s gifts, and whoever is liberated by it is liberated with utter certainty.”

**I respond:** Predestination attains to its effect infallibly and with utmost certainty, and yet it does not impose necessity in the sense that its effect issues forth by necessity. For as was explained above (a. 1), predestination is a part of providence. But not all the things subject to providence are necessary; instead, some occur contingently according to the status of their proximate causes, which God’s providence has ordered toward effects of this sort. And yet, as was shown above (q. 22, a. 4), the order of providence is itself infallible. So, then, the order of predestination is likewise certain, and yet this does not undermine free choice, from which the effect of predestination issues forth contingently.

On this point, notice also what was said above about God’s knowledge and God’s will (q. 14, a. 13 and q. 19, a. 8), which do not destroy the contingency of things even though they themselves are infallible and utterly certain.

**Reply to objection 1:** There are two ways in which a crown can be said to belong to someone: (a) *from divine predestination*, and in this sense no one loses his crown, and (b) *from the merit of grace* (since what we merit is in some sense our own), and in this sense someone can lose his crown through a subsequent mortal sin.

Now someone else receives this lost crown insofar as he is substituted for the one who has lost it. For God does not permit any to fall without raising up others—this according to Job 34:24: “He shall break in pieces the many and the innumerable, and shall make others to stand in their stead.” Thus, men were substituted for the fallen angels, and Gentiles were substituted for the Jews. Moreover, the one who is substituted into the state of grace receives the crown of the one who has fallen even in the sense that he will rejoice in eternal life over the good things that the latter did. For in eternal life each one will rejoice over both the good things that he himself has done and also the good things that others have done.

**Reply to objection 2:** Even though it is possible for someone who is predestined, considered just in himself, to die in mortal sin, this is nonetheless impossible once it is assumed (as indeed it is being assumed here) that he is predestined. Hence, it does not follow that predestination can fail.

**Reply to objection 3:** Predestination involves God’s will, and so just as it was explained above (q. 19, a. 3) that it is conditionally necessary that God will that some created thing should exist—and this because of the immutability of God’s will—but that this is not absolutely necessary, so, too, the same thing should be said about predestination. Hence, one should not say, in the composed sense, that it is possible for God even now not to predestine someone whom He has in fact predestined—even though, considering the matter absolutely, God is able to predestine him or not to predestine him. But this latter point does not undermine the certainty of predestination.

## Article 7

### Is the number of the predestined fixed?

It seems that the number of the predestined is not fixed:

**Objection 1:** A number to which an addition can be made is not fixed. But, it seems, an addition can be made to the number of the predestined; for Deuteronomy 1:11 says, “May the Lord our God add to this number many thousands,” and a Gloss adds, “that is, as determined by God, who knows those who are His own.” Therefore, the number of the predestined is not fixed.

**Objection 2:** No reason can be given for why God should preordain this particular number of men to salvation rather than some other number. But God does nothing without a reason. Therefore, the number of those whom God preordains to be saved is not fixed.

**Objection 3:** God’s action is more perfect than nature’s action. But in the works of nature the good is found in most cases, whereas defects and evils are found in fewer cases. Therefore, if the number of those to be saved were fixed by God, then there would be more who were going to be saved than were going to be damned. But Matthew 7:13-14 proves just the contrary, when it says, “Wide is the gate, and broad is the way that leads to destruction, and many there are who go in there. How narrow is the gate, and strait is the way that leads to life, and few there are that find it!” Therefore, the number of those whom God preordains to be saved is not fixed.

**But contrary to this:** In *De Correptione et Gratia* Augustine says, “The number of the predestined is fixed, and it can be neither increased nor decreased.”

**I respond:** The number of the predestined is fixed.

However, some have claimed that the number is fixed *formally*, but not *materially*; that is, they claimed it to be certain that, say, a hundred or a thousand are saved, but not that these *particular* hundred or thousand are saved. However, this position undermines the certainty of predestination, which we have already talked about (a. 6). Therefore, one must claim that the number of the predestined is fixed by God not only formally, but also materially.

Notice, though, that the number of the predestined is said to be fixed by God not only (a) by reason of His cognition, in the sense that He knows how many are to be saved—for even the number of drops of rain or of the sands of the sea are fixed by God in this sense—but also (b) by reason of His choice and determination.

To see this clearly, notice that every agent intends to produce something definite, as is clear from what was said above about the infinite (q. 7, a. 4). Now when someone intends a determinate measure in his effect, he thinks out fixed numbers for the essential parts that are required *per se* for the perfection of the whole. However, he does not choose *per se* any particular number for those things that are not required principally, but required only for the sake of something else; rather, he uses things of this sort in as great a number as is required for the sake of the other. For instance, a builder thinks out determinate measurements for the house, along with a determinate number of rooms that he wants to construct in the house, and determinate measurements for the walls and the roof. However, he does not choose a determinate number of stones, but instead uses as many as are sufficient to fill out such-and-such a measurement for the wall.

This, then, is how we should think about God’s relation to the whole of the universe, which is His effect. For He preordained what the measurement should be for the whole universe, and what particular numbers would be appropriate for the universe’s essential parts, i.e., those parts that contribute in some way to its perpetuity; more specifically, He preordained how many spheres there would be, and how many celestial bodies, and how many elemental bodies, and how many species of things. On the other

hand, corruptible individuals are ordered to the good of the universe not primarily but only, as it were, secondarily, insofar as the good of the species is preserved in them. Hence, even though God knows the exact number of all individuals, He did not preordain *per se* the number of cows or gnats or other things of this sort; rather, God's providence produced as many of these sorts of things as are sufficient for the conservation of the species.

Now among all creatures, the ones that are ordered most principally to the good of the universe are the rational creatures, who as such are incorruptible—and, most especially, those rational creatures who attain happiness, since they attain the ultimate end in a more immediate way. Hence, the number of the predestined is fixed by God not only through the mode of cognition, but also by way of a principal predetermination (*non solum per modum cognitionis sed etiam per modum cuiusdam principalis praefinitionis*). However, the same thing is not altogether true of the number of the reprobate, whom God seems to preordain for the good of the elect, for whom all things work together for good.

Now as regards the precise number of all the predestined men, some claim that as many men are saved as the number of angels who fell. But others claim that as many men are saved as the number of angels who remained faithful. And still others claim that as many men are saved as the number of fallen angels plus the number of angels that were created. But here it is better to say that “the number of the elect who will find the highest happiness is known to God alone.”

**Reply to objection 1:** This passage from Deuteronomy should be understood to be talking about those who were foreknown by God with respect to justification in the present life. For the number of these both increases and decreases—but not the number of the predestined.

**Reply to objection 2:** The explanation for the quantity of a given part must be taken from that part's proportion to the whole. For the reason why God made just this many celestial bodies or just this many species of things, and the reason why He predestined just this number, is derived from the proportion of the principal parts of the universe to the good of the universe.

**Reply to objection 3:** The good that is proportioned to the common condition of nature occurs in most cases, and the lapses from that good occur in fewer cases. However, a good that exceeds the common condition of nature is found in fewer cases, and the lapses from that good are found in most cases. For instance, it is clear that most men have sufficient knowledge to direct their own lives, whereas a few, who are said to be half-wits or foolish, lack this knowledge. However, there are very few, compared to the others, who attain to the possession of a deep knowledge of intelligible things.

Therefore, since eternal happiness, which consists in seeing God, exceeds the common condition of nature—especially given that grace was lost through the corruption of original sin—it follows that there are fewer who are saved. And God's mercy is especially apparent in the fact that He raises some to that salvation which the many fail to attain according to the common course and inclination of their nature.

## Article 8

### Can the prayers of the holy contribute to predestination?

It seems that the prayers of the holy (*sanctorum*) cannot assist in predestination:

**Objection 1:** Nothing eternal is preceded by anything temporal and, as a result, what is temporal cannot assist in anything that is eternal. But predestination is eternal. Therefore, since the prayers of the holy are temporal, they cannot assist in someone's being predestined. Therefore, the prayers of the holy cannot assist in predestination.

**Objection 2:** Just as nothing requires deliberation except because of a lack of knowledge, so too

nothing requires assistance except because of a lack of power. But neither of these belongs to God, who is the one who predestines; hence, Romans 11:34 says, “For who has assisted the Spirit of the Lord? Or who has been His counselor?” Therefore, the prayers of the holy cannot assist in predestination.

**Objection 3:** Whatever can be assisted can also be impeded. But predestination cannot be impeded by anything. Therefore, it cannot be assisted by anything.

**But contrary to this:** Genesis 25:21 says, “And Isaac besought the Lord for his wife . . . and He made Rebecca to conceive,” and from this conception was born Jacob, who was predestined. But his predestination would not have been brought to fulfillment if he had not been born. Therefore, the prayers of the holy assist in predestination.

**I respond:** On this question there have been widely divergent errors.

For some, concentrating on the certainty of divine predestination, have claimed that prayers—or, for that matter, any other things that might be done to attain eternal salvation—are superfluous, since the predestined will attain salvation, and the reprobate will not attain it, regardless of whether or not these things are done. But contrary to this position are all the admonitions in Sacred Scripture that exhort us to prayer and other good works.

Others have claimed that God’s predestination is changed by prayers. This is said to have been the opinion of the Egyptians, who held that God’s ordination, which they called fate, can be impeded by certain sacrifices and prayers. But the authority of Sacred Scripture is likewise contrary to this position. For 1 Kings 15:29 says, “The triumpher in Israel will not spare, and will not be moved to repentance.” And Romans 11:29 says, “The gifts and the calling of God are without repentance.”

Therefore, one must reply in a different way:

There are two things that have be taken into account with respect to predestination, viz., (a) God’s *very act* of predestining and (b) the *effect* of predestination.

As for the first, there is no way in which the prayers of the holy assist in predestination. For it is not because of the prayers of the holy that someone is predestined by God.

As for the second, the prayers of the holy, as well as other good works, are said to assist in predestination in the sense that providence, a part of which is predestination, does not eliminate secondary causes, but instead provides for their effects in such a way that even the order of secondary causes is subject to providence. Thus, just as natural effects are provided for in such a way that the natural causes without which the effects would not issue forth are ordered toward those natural effects, so, too, someone’s salvation is predestined by God in such a way that whatever falls within the order of predestination moves the man toward salvation—whether this be his own prayers, or the prayers of others, or other good works, or anything else of this sort, without which this particular individual would not attain salvation. Thus, those who are predestined must strive to pray and do good works because it is through things of this sort that the effect of predestination is infallibly brought to fulfillment. This is why 2 Peter 1:10 says, “Labor the more, that by good works you may make sure your calling and election.”

**Reply to objection 1:** This objection shows that the prayers of the holy do not assist in predestination in the sense of assisting in the very act of preordaining.

**Reply to objection 2:** There are two ways in which someone is said to be assisted by another.

In the first way, he is assisted in the sense that he receives power from the other, and this is the way in which someone who is weak is assisted. Hence, God cannot be assisted in this way in predestination. And this is how to understand the passage, “For who has assisted the Spirit of the Lord?”

In the second way, someone is said to be assisted by another in the sense that his action is carried out by the other, in the way that a lord is assisted by his ministers. It is in this way that God is assisted by us to the extent that we carry out what He has ordained—this according to 1 Corinthians 3:9: “We are God’s coadjutors.” This is not because of any defect in God’s power, but rather because He makes use of

mediating causes in order to preserve the beauty of the order of things and in order to communicate even to His creatures the dignity of being causes (*et ut etiam creaturis dignitatem causalitatis communicet*).

**Reply to objection 3:** As was explained above (q. 19, a. 6 and q. 22, a. 2), secondary causes cannot escape the order of a universal first cause; instead, they execute that order. And so predestination can be assisted by creatures, but cannot be impeded by them.

## QUESTION 24

### The Book of Life

Next we must consider the book of life. And on this topic there are three questions: (1) What is the book of life? (2) Whose life is it the book of? (3) Can anyone be erased from the book of life?

#### Article 1

##### Is the book of life the same as predestination?

It seems that the book of life is not the same as predestination:

**Objection 1:** Ecclesiasticus 24:32 says, “All these things are the book of life,” and a Gloss adds, “that is, the New and Old Testaments.” But this is not predestination. Therefore, the book of life is not the same as predestination.

**Objection 2:** In *De Civitate Dei* 20 Augustine says that the book of life is a certain divine force by which it will come about that “each one remembers all his own good or bad works.” But a divine force seems to pertain more to an attribute of God’s power than to predestination. Therefore, the book of life is not the same as predestination.

**Objection 3:** Reprobation is opposed to predestination. Therefore, if the book of life were predestination, then there would be a book of death as well as a book of life.

**But contrary to this:** A Gloss on Psalm 68:29 (“Let them be blotted out of the book of the living”) says, “This book is the knowledge of God by which He has predestined to life those whom He foreknew.”

**I respond:** In the case of God, ‘the book of life’ is predicated metaphorically, according to a likeness taken from human affairs.

For it is customary among men that those who are chosen for some role should be recorded in a book, e.g., soldiers or advisors, who were at one time called ‘recorded fathers’ (*patres conscripti*). Now it is clear from what has been said (q. 23, a. 4) that all the predestined are elected by God to have eternal life. Therefore, the recording of the predestined is itself called ‘the book of life’.

However, something is metaphorically said to be recorded in one’s intellect when one holds it firmly in his memory—this according to Proverbs 3:1 (“Forget not my law, and let your heart keep my commandments,” and a little later, “Write them in the tables of your heart”). For things are likewise recorded in material books in order to aid the memory. Hence, God’s knowledge, by which He firmly retains the fact that He has predestined some to eternal life, is itself called the book of life. For just as the writing in the book is a sign of things that are to be done, so too God’s knowledge is a certain sign to Himself of those who are to be led to eternal life—this according to 2 Timothy 2:19 (“The sure foundation of God stands firm, having this seal: the Lord knows who are His”).

**Reply to objection 1:** ‘The book of life’ can have two meanings:

In one sense, the book of life is (a) the recording of those who have been elected to life, and this is the sense in which we are now talking about the book of life. In a second sense, ‘the book of life’ is the recording of those things that lead to life—and this in two ways: either (b) it is a recording of things that are yet to be done, and this is the sense in which the New and Old Testaments are called the book of life; or (c) else it is a recording of things that have already been done, and this is the sense in which the book of life is a divine force which brings it about that each one remembers what he himself has done.

In the same way, a book can be called ‘the book of war’ if it is either (a) a book in which those chosen for the military are recorded, or (b) a book in which the military arts are passed on, or (c) a book in which the deeds of the soldiers are recorded.

**Reply to objection 2:** The answer to this objection is clear from what has just been said.

**Reply to objection 3:** It is customary that only those who are chosen should be recorded—and not those who are rejected. Hence, there is no book of death for reprobation corresponding to the book of life for predestination.

**Reply to argument for the contrary:** There is a conceptual distinction between the book of life and predestination. For the former implies a knowledge of predestination, as is also clear from the Gloss adduced here.

## Article 2

### Is the book of life only about the life of glory had by the predestined?

It seems that the book of life is not only about the life of glory had by the predestined:

**Objection 1:** The book of life is the knowledge of life. But it is through His own life that God knows every other life. Therefore, ‘the book of life’ is predicated principally with respect to God’s life and not just with respect to the life of the predestined.

**Objection 2:** Just as the life of glory is from God, so too is the life of nature. Therefore, if the knowledge of the life of glory is called the book of life, then the knowledge of the life of nature will likewise be called the book of life.

**Objection 3:** There are some who are elected to grace without being elected to the life of glory; this is clear from John 6:71: “Have not I chosen you twelve, and one of you is a devil?” But as has been explained (a. 1), the book of life is the recording of God’s election. Therefore, the book of life is also about the life of grace.

**But contrary to this:** As has been explained (a. 1), the book of life is the knowledge of predestination. But predestination has to do with the life of grace only insofar as the life of grace is ordered toward glory. For those who have grace and yet fall short of glory are not predestined. Therefore, the book of life is only about the life of glory.

**I respond:** As has been explained (a. 1), ‘the book of life’ implies a certain recording or knowledge of those who have been elected to life. Now one is elected to what does not belong to him by his nature. Again, one is elected to what has the nature of an end; for instance, a soldier is elected or conscripted not for the sake of being armed, but for the sake of fighting. For this is the proper function to which soldiers are ordered.

Now as has been explained (q. 12, a. 4 and q. 23, a. 1), the life of glory is an end that lies beyond nature. Hence, the book of life has to do properly with the life of glory.

**Reply to objection 1:** God’s life, even insofar as it is a glorious life, is natural to God. Hence, with respect to God there is no election and, consequently, no book of life, either. For we do not say that a man is elected to have sensory powers or any of the other things that follow upon his nature.

**Reply to objection 2:** The answer to this objection is clear from what has just been said. For there is no election or book of life with respect to natural life.

**Reply to objection 3:** The life of grace does not itself have the nature of an end, but instead has the nature of a means to an end. Hence, one is not said to be elected to the life of grace except insofar as the life of grace is ordered toward glory. Because of this, those who have grace and yet fall short of glory are not said to be elected absolutely speaking; rather, they are elected only in a certain respect. Similarly, such persons are said to be written in the book of life not absolutely speaking, but only in a certain respect, viz., insofar as it is part of God’s knowledge and ordination that, because of their

participation in grace, they were to have a certain ordering toward eternal life.

### Article 3

#### Is anyone erased from the book of life?

It seems that no one is erased from the book of life:

**Objection 1:** In *De Civitate Dei* 20 Augustine says, “The book of life is God’s foreknowledge, which cannot be mistaken.” But it is impossible for anything to be subtracted from God’s foreknowledge or, similarly, from His predestination. Therefore, no one can be erased from the book of life.

**Objection 2:** Whatever exists in a thing exists in it in the mode of the thing it exists in. But the book of life is something eternal and immutable. Therefore, whatever exists in it exists there immutably and indelibly, and not temporarily.

**Objection 3:** Erasing is opposed to writing. But no one can be written into the book of life *de novo*. Therefore, no one can be erased from it, either.

**But contrary to this:** Psalm 68:29 says, “Let them be erased from the book of the living.”

**I respond:** Some claim that no one can be erased from the book of life *in reality*, but that someone can be erased from it *according to human opinion*. For often in Sacred Scripture something is said to be done when it becomes known. Accordingly, some are said to be inscribed in the book of life insofar as men believe them to be inscribed therein because of the righteousness they see in them at present. However, when it becomes clear—either in this life or in the future—that they have fallen from righteousness, then they are said to be erased from the book of life. This is also the way in which such deletions are explained in a Gloss on Psalm 68 (“Let them be erased from the book of the living”).

However, not being erased from the book of life is counted among the rewards of the just in Apocalypse 3:5 (“He that shall overcome shall thus be clothed in white garments, and I will not blot out his name from the book of life”), and what is thus promised to the saints does not exist just in human opinion. Thus, one can claim that being erased or not being erased from the book of life has to do not just with human opinion, but with reality as well. For the book of life is the record of those who have been ordered toward eternal life, and someone is ordered toward eternal life by two elements, viz., (a) by God’s predestination, and this is an ordination that never fails, and (b) by grace. For if anyone has grace, then by that very fact he is worthy of eternal life; and this ordination sometimes fails, since some who are ordered, by the grace they have, toward possessing eternal life fall short of eternal life because of mortal sin.

Therefore, those who are ordered *by God’s predestination* toward having eternal life are inscribed absolutely speaking in the book of life, since they are inscribed there as those who will have eternal life *in its own right*. And these will never be erased from the book of life.

By contrast, those who are ordered toward having eternal life not by God’s predestination, but *only by grace*, are said to be inscribed in the book of life not absolutely speaking, but only in a certain respect, since they are inscribed there as those who are going to have eternal life not in its own right, but *only in its cause*. And these can be erased from the book of life, where the deletion has to do not with God’s knowledge—as if God might foreknow something and afterwards not know it—but rather with the thing that is known. For God knows that someone is antecedently ordered toward eternal life and is afterwards not ordered toward it, because he falls from grace.

**Reply to objection 1:** As has been explained, the deletion has to do with the book of life not on the part of God’s foreknowledge—as if there were some mutability in God—but rather on the part of the

things foreknown, which are mutable.

**Reply to objection 2:** Even though things exist in God in an immutable way, they are nonetheless mutable in themselves. And it is to this that the deletion from the book of life pertains.

**Reply to objection 3:** In the same way that someone is said to be erased from the book of life, so too someone can be said to be inscribed there *de novo*—either according to human opinion or insofar as he begins *de novo* to have an ordering toward eternal life through grace. This is also included in God's knowledge, though God does not know it *de novo*.

## QUESTION 25

### God's Power

Now that we have considered God's intellect and will and the things pertaining to them, we must next consider God's power. On this topic there are six questions: (1) Is there power in God? (2) Is God's power infinite? (3) Is God omnipotent? (4) Can God bring it about that past things have never existed? (5) Is God able to do things which He does not in fact do, or able not to do things which He in fact does? (6) As regards the things He makes, could God make them better than He does?

#### Article 1

##### Is there power in God?

It seems that there is no power (*potentia*) in God:

**Objection 1:** God, who is the first agent, is related to actuality as primary matter is related to potentiality (*potentia*). But primary matter, considered in itself, lacks all actuality. Therefore, the first agent, which is God, lacks potentiality.

**Objection 2:** According to the Philosopher in *Metaphysics* 9, the actuality of a thing is better than any potentiality; for instance, form is better than matter, and action is better than active power, since it is the latter's purpose. But nothing is better than that which exists in God, since, as was shown above (q. 3, a. 3), whatever exists in God is God. Therefore, there is no power in God.

**Objection 3:** Power is a principle of action. But God's action is His essence, since there are no accidents in God, and nothing is a principle of God's essence. Therefore, the concept of power does not apply to God (*Deo non convenit*).

**Objection 4:** As was shown above (q. 14, a. 8 and q. 19, a. 4), God's knowledge and His will are a cause of things. But a cause is the same as a principle. Therefore, one should ascribe only knowledge and will to God—and not power.

**But contrary to this:** Psalm 88:9 says, "You are powerful, O Lord, and Your truth is round about You."

**I respond:** There are two kinds of power or potentiality (*potentia*), viz., (a) *passive* power, which in no way exists in God, and (b) *active* power, which one must especially posit in God. For it is clear that each thing, insofar as it has actuality and perfection, is an active principle of something, whereas each thing is acted upon insofar as it is deficient and imperfect.

Now it was shown above (q. 3, a. 1 and q. 4, a. 1-2) that God is pure actuality, and that He is perfect absolutely speaking and in every way, and that imperfection has no place in Him. Hence, it especially belongs to Him to be an active principle and in no way to be acted upon. But the nature of an active principle belongs to an active power. For as the Philosopher says in *Metaphysics* 5, an active power is a principle of acting upon another, whereas a passive power is a principle of being acted upon by another. Therefore, it follows that active power exists especially in God.

**Reply to objection 1:** Active power, far from being contrasted with actuality, is instead grounded in actuality. For each thing acts insofar as it is actual.

Passive power, on the other hand, is indeed contrasted with actuality, since a thing is acted upon insofar as it is in potentiality. Hence, passive power is excluded from God—but not active power.

**Reply to objection 2:** Whenever an actuality is distinct from a power, the actuality must be more noble than the power. But God's action is not distinct from His power; instead, both of them are God's essence, since His *esse* is not distinct from His essence. Hence, it is not the case that something has to be more noble than God's power.

**Reply to objection 3:** The power in created things is a principle not only of the action, but also of the effect. Therefore, the nature of power is salvaged in God with respect to its being a principle of the effect, though not with respect to its being a principle of the action, since God's action is just the divine essence.

Perhaps, though, God's power can be thought of as a principle of action according to our mode of understanding. For God's essence, which in itself possesses in a simple way whatever perfections exist in created things, can be thought of by us both under the concept of action and under the concept of power, just as He is also thought of by us both under the concept of a suppositum that has a nature and under the concept of a nature.

**Reply to objection 4:** Power is posited in God as something that differs from His knowledge and will not in reality, but only conceptually—viz., insofar as 'power' implies the nature of a principle that executes what the will commands it to do and what the knowledge directs it to do. All three of these coincide in God.

An alternative reply is that God's knowledge or will itself, insofar it is an efficient principle, has the nature of power. This is why a consideration of God's knowledge and will precedes a consideration of His power, in the way that a cause precedes its action and its effect.

## Article 2

### Is God's power infinite?

It seems that God's power is not infinite:

**Objection 1:** According to the *Philosopher* in *Physics* 3, everything infinite is imperfect. But God's power is not imperfect. Therefore, it is not infinite.

**Objection 2:** Every power is manifested by its effect; otherwise, it would be useless. Therefore, if God's power were infinite, then He could bring about an infinite effect. But this is impossible.

**Objection 3:** In *Physics* 8 the *Philosopher* proves that if a body had infinite power, it would effect an instantaneous movement. But God does not effect an instantaneous movement; instead, "He moves a spiritual creature through time and a corporeal creature through space and time," as Augustine puts it in *Super Genesim ad Litteram* 8. Therefore, His power is not infinite.

**But contrary to this:** In *De Trinitate* 8 Hilary says that God "is of immense power, living, and powerful." But everything immense is infinite. Therefore, God's power is infinite.

**I respond:** As has already been explained (a. 1), active power is found in God insofar as He is actual. But His *esse* is infinite, since it is not limited by anything receiving it. This is clear from what was said above (q. 7) when we were discussing the infinity of God's essence. Hence, it must be the case that God's active power is infinite. For with all agents we find that the more perfectly the agent has the form through which it acts, the more power it has in acting. For instance, the hotter something is, the more power it has to produce heat; and it would have an infinite power to produce heat if its own heat were infinite. Hence, since, as was shown above (q. 7, a. 1), the divine essence, through which God acts, is infinite, it follows that His power is infinite.

**Reply to objection 1:** The *Philosopher* is talking about an infinity that exists on the part of a matter which is not terminated by a form, i.e., an infinity that has to do with quantity. But, as has been shown (q. 7, a. 1), God's essence is not infinite in this sense—and, consequently, neither is His power infinite in this sense. Hence, it does not follow that God's power is imperfect.

**Reply to objection 2:** The entire power of a univocal agent is manifested in its effect. For

instance, the generative power of a man can do no more than generate a man. However, the power of a non-univocal agent is not wholly manifested in the production of its effect. For instance, the sun's power is not wholly manifested in the production of an animal that is generated by putrefaction.

Now it is clear that God is not a univocal agent, since, as was shown above (q. 3, a. 5), nothing can agree with him in either species or genus. Hence, it follows that His effect is always such that it falls short of His power. Therefore, God's infinite power does not have to be manifested by His producing an infinite effect.

And yet even if God were to produce no effect at all, His power would not be useless. For a power is useless when it does not attain the end toward which it is ordered. But God's power is not ordered toward any effect as an end; rather, it itself is the end of its own effect.

**Reply to objection 3:** In *Physics* 8 the Philosopher proves that if a body had infinite power, then it would effect a movement that takes no time at all. And yet he shows that the power of the mover of a celestial body is infinite because it can effect movement through an infinite stretch of time. It follows, then, that he intends to show that if there were an infinite *corporeal* power, it would effect movement that took no time at all, but that this does not hold for the power of an *incorporeal* mover. The reason is that a body which moves another body is a univocal agent, and thus all the agent's power would be manifested in the motion. Therefore, since the more power had by a body that effects movement, the faster the movement it effects, it has to be the case that if its power were infinite, then it would effect an immeasurably fast movement, which is just to effect a movement that takes no time at all. However, an incorporeal mover is a non-univocal agent. Hence, its entire power need not be manifested in the movement in such a way that it effects a movement that takes no time at all—especially in light of the fact that it effects movement according to the disposition of its will.

### Article 3

#### Is God omnipotent?

It seems that God is not omnipotent (*non sit omnipotens*):

**Objection 1:** To be moved and acted upon is counted among all things (*aliquid omnium est*). But God is not able to be moved and acted upon, because, as was shown above (q. 9, a. 1), He is immutable. Therefore, He is not omnipotent.

**Objection 2:** To sin is to do something. But God cannot sin or “deny Himself,” as 2 Timothy 2:13 puts it. Therefore, God is not omnipotent.

**Objection 3:** [In the Collect for the Tenth Sunday after Pentecost] it is said of God that “He manifests His omnipotence especially in pardoning and showing mercy.” Therefore, the ultimate effect of which God's power is capable is to pardon and to show mercy. But there are things much greater than pardoning and showing mercy, e.g., creating another world, or something of that sort. Therefore, God is not omnipotent.

**Objection 4:** A Gloss on 1 Corinthians 1:20 (“Has not God made foolish the wisdom of this world?”) says, “God made the wisdom of this world foolish by showing to be possible what the wisdom of this world judged to be impossible.” Hence, it seems that one should judge something to be possible or impossible not according to lower causes, in the way that the wisdom of this world judges, but according to God's power. Therefore, if God is omnipotent, then all things will be possible. Therefore, nothing is impossible. But if the impossible is eliminated, then so too is the necessary, since *necessary to be* is the same as *impossible not to be*. Therefore, if God is omnipotent, then nothing will be necessary

among things. But this is impossible. Therefore, God is not omnipotent.

**But contrary to this:** Luke 1:37 says, “No word shall be impossible with God.”

**I respond:** Everyone commonly confesses that God is omnipotent. But it seems difficult to formulate an account of omnipotence, since there can be doubts about what is included under the distribution of ‘all’ when one says that God is capable of all things (*cum dicitur omnia posse Deum*). However, if one considers the matter correctly, then since power is said in relation to possible things, it follows that when God is said to be capable of all things, the right way to understand this is that God is capable of all possible things and that this is why He is called omnipotent.

Now according to the Philosopher in *Metaphysics* 5, there are two senses of ‘possible’:

In the first sense, ‘possible’ is said *with respect to some power*, in the way that what is subject to human power is said to be ‘possible for man’. However, one cannot claim that the reason why God is called omnipotent is that He is capable of all the things that are possible for a created nature. For God’s power extends to more things. On the other hand, if one claims that the reason why God is omnipotent is that He is capable of all the things that are possible for His own power, then there will be a circularity in the explication of omnipotence. For this will be just to say that the reason why God is omnipotent is that He is capable of all the things that He is capable of.

It follows, then, that the reason why God is called omnipotent is that He is capable of all the things that are possible *absolutely speaking*—which is the second sense of ‘possible’. Now something is said to be absolutely possible or absolutely impossible because of the relation between the terms. More specifically, something is called possible because the predicate is compatible with the subject, as with ‘Socrates is sitting’, whereas something is called absolutely impossible because the predicate is incompatible with the subject, as with ‘A man is a donkey’.

Now notice that since each agent effects what is similar to itself, there is something possible that corresponds as a proper object to each active power, in keeping with the nature of the actuality in which that active power is grounded. For instance, the power to produce heat has possibly-heated *esse* (*esse calfactibile*) as its proper object. Now divine *esse*, in which the nature of God’s power is grounded, is infinite *esse*—i.e., *esse* which is not limited to any particular genus of being, but which contains within itself the perfection of the totality of *esse*. Hence, whatever can have the nature of being is included among the things which are absolutely possible and with respect to which God is called omnipotent.

Now nothing except non-being is opposed to the nature of being. Therefore, that which implies within itself both being and non-being at the same time is incompatible with the nature of the absolutely possible, which is subject to God’s omnipotence. For it is not because of a defect in God’s power that this sort of thing is not subject to omnipotence; rather, it is because it cannot have the nature of something that is possible or able to be effected.

Therefore, whatever does not imply a contradiction is included among those possible things with respect to which God is called omnipotent. But those things that do imply a contradiction are not contained under God’s omnipotence, since they cannot have the nature of something possible. Hence, it is more fitting to say that they cannot be effected than to say that God cannot effect them. Nor is this contrary to what the angel asserted when he said, “No word shall be impossible with God.” For that which implies a contradiction cannot be a ‘word’, since no intellect can conceive it.

**Reply to objection 1:** As has been explained (a. 1), God is called omnipotent because of His active power and not because of any passive power. Hence, it is not incompatible with His omnipotence that He cannot be moved or acted upon.

**Reply to objection 2:** To sin is to lapse from a perfect action; hence, to be able to sin is to be able to be defective in one’s acting—which is incompatible with omnipotence. Because of this, God, who is omnipotent, cannot sin.

To be sure, in *Topics* 4 the Philosopher says that God is able and eager to do evil things. But this

has to be understood in one of three ways:

Either (a) it is to be understood as a conditional, the antecedent of which is impossible, as if it meant ‘God can do evil things if He wills to’. For nothing prevents a conditional from being true if both its antecedent and its consequent are impossible. In the same way, one may assert ‘If a man is a donkey, then he has four feet’.

Or else (b) it should be taken to mean that God can do certain things that now appear evil but are such that if He were to do them, then they would be good.

Or else (c) the Philosopher is speaking in accord with the common opinion of the Gentiles, who claimed that men are transformed into gods, e.g., Jupiter and Mercury.

**Reply to objection 3:** The reason why God’s omnipotence is manifested especially in pardoning and showing mercy is that the fact that He freely forgives sins shows that He has the greatest power. For someone who is bound by a higher law may not freely forgive sins.

An alternative reply is that in forgiving men and showing them mercy, God leads them to participate in an infinite good, which is the ultimate effect of the divine power.

Yet another reply is that, as was explained above (q. 21, a. 4), the effect of God’s mercy is the foundation for all of God’s works. For nothing is owed to anything except in virtue of what has been given to it by God without being owed to it. And God’s omnipotence is especially manifested in the fact that it is responsible for the initial creation of all goods.

**Reply to objection 4:** It is with respect to itself—and not with respect to either higher or lower causes—that something is called absolutely possible.

On the other hand, something that is called possible with respect to a given power is called possible with respect to its proximate causes. Hence, those things that are apt to be effected immediately by God alone—e.g., creating, justifying, etc.—are called possible with respect to a higher cause, whereas those things that are apt to be effected by lower causes are called possible with respect to lower causes. For as was explained above (q. 14, a. 13), effects have contingency or necessity according to the status of their proximate causes. Now the wisdom of the world is counted as foolish because it judges that things which are impossible for nature are also impossible for God. And so it is clear that God’s omnipotence excludes neither impossibility nor necessity from things.

## Article 4

### Can God bring it about that past things have never existed?

It seems that God can bring it about that past things have never existed:

**Objection 1:** That which is impossible *per se* is more impossible than that which is impossible *per accidens*. But God can do that which is impossible *per se*, e.g., give sight to the blind or resuscitate the dead. Therefore, *a fortiori*, He can do that which is impossible *per accidens*. But it is impossible *per accidens* for past things not to have existed; for instance, Socrates’s not having run is impossible *per accidens*, because Socrates’s running is past. Therefore, God can bring it about that past things have not existed.

**Objection 2:** Whatever God was able to effect, He is even now able to effect; for His power does not diminish. But before Socrates ran, God was able to bring it about that he would not run. Therefore, after he has run, God can bring it about that he has not run.

**Objection 3:** Charity is a greater virtue than virginity. But God can restore lost charity. Therefore, He can also restore lost virginity. Therefore, He can bring it about that what was corrupted

has not been corrupted.

**But contrary to this:** Jerome says, “Even though God is capable of all things, He cannot make a woman uncorrupted after she has been corrupted.” Therefore, for the same reason, He cannot bring it about, with respect to any other past thing, that that thing has not existed.

**I respond:** As was explained above (a. 3), nothing that implies a contradiction falls under God’s omnipotence. But it implies a contradiction for past things not to have existed, since just as it implies a contradiction to assert that Socrates is both sitting and not sitting, so too it implies a contradiction to assert that Socrates both did and did not sit. For to assert that he did sit is to assert that his sitting is a past thing, whereas to assert that he did not sit is to assert that his sitting did not exist.

Hence, for past things not to have existed does not fall under God’s power. And this is why, in *Contra Faustum*, Augustine says, “Whoever says, ‘If God is omnipotent, then let Him bring it about that things which have been effected have not been effected’, does not see that he is saying, ‘If God is omnipotent, let Him bring it about that things that are true, by the very fact that they are true, are false.’” And in *Ethics* 6 the Philosopher says, “This alone is denied to God, that He should make undone that which has been done.”

**Reply to objection 1:** Even though it is impossible *per accidens* for past things not to have existed as long as one considers just the thing that is past, e.g., Socrates’s running, nonetheless, if one considers a past thing *as* a past thing, then it is not only impossible *per se*, but absolutely impossible, that this thing did not exist—for it implies a contradiction. And so this is more impossible than raising the dead, which does not imply a contradiction but is instead called impossible with respect to a certain kind of power, viz., a natural power. For things that are impossible in this sense are subject to God’s power.

**Reply to objection 2:** As far as the perfection of the divine power is concerned, God is capable of all things, and yet certain things are not subject to His power because they lack the nature of the possible. In the same way, given the immutability of God’s power, whatever God was capable of, He is even now capable of, and yet certain things once had the nature of the possible while they were yet to be effected, but lack the nature of the possible now that they have been effected. And so God is said not to be able to effect them, because they themselves are not now able to be effected.

**Reply to objection 3:** God can remove all mental and physical corruption from a woman who has been corrupted, but the fact that she was once corrupted cannot be removed from her. In the same way, God cannot remove from a sinner the fact that he once sinned and lost charity.

## Article 5

### Is God able to effect what He does not in fact effect?

It seems that God is not able to effect things other than those that He in fact effects (*Deus non possit facere nisi ea quae facit*):

**Objection 1:** It seems that God is not able to effect anything unless He foreknew and preordained that He would effect it. But He foreknew and preordained that He would effect only those things that He in fact effects. Therefore, He is not able to effect anything other than what He in fact effects.

**Objection 2:** God is not able to effect anything other than what He ought to effect and what it is just for Him to effect. But it is not the case that God ought to effect what He does not in fact effect; nor is it just for Him to effect what He does not in fact effect. Therefore, God is not able to effect anything other than what He in fact effects.

**Objection 3:** God is not able to effect anything except what is good and fitting for the things He

has made. But it is not good or fitting for the things God has made to be otherwise than they are. Therefore, God is not able to effect anything other than what He in fact effects.

**But contrary to this:** Matthew 26:53 says, “Think you that I cannot ask my Father, and He will give me presently more than twelve legions of angels?” But He did not ask for this, and neither did the Father aid Him in repelling the Jews. Therefore, God is able to effect what He does not in fact effect.

**I respond:** On this topic there have been two errors.

Some have claimed that God acts, as it were, *by a necessity of nature*, so that just as nothing other than what actually happens can issue forth from the action of natural things—e.g., nothing other than a man can come from a man’s semen, and nothing other than an olive tree can come from an olive seed—so too from God’s action there can flow no things, or order of things, other than what now exists.

However, we showed above (q. 19, a. 3-4) that God does not act by any necessity of nature, but that His will is a cause of all things and that His will is not itself determined naturally or by necessity to the particular things that now exist. Hence, there is no sense in which the present course of things issues forth by necessity from God in such a way that other things could not have issued forth.

Others, by contrast, have claimed that God’s power is determined to the present course of things *because of the order of God’s wisdom and justice*, without which God does nothing. For since God’s power, which is His essence, does not differ from God’s wisdom, one can appropriately claim that there is nothing in God’s power that does not also exist in the order of God’s wisdom. For God’s wisdom includes all that can be effected by His power.

However, as was explained above (q. 21, a. 4), the order which is imposed on things by God’s wisdom, and in which the nature of justice consists, does not exhaust God’s wisdom in such a way that the divine wisdom is limited to just this order. For it is clear that the whole nature of the order which someone who is wise imposes on the things he has made is taken from the end. Therefore, when an end is exactly proportioned to the things that have been made for the sake of that end, the wisdom of the maker is restricted to some determinate order. But God’s goodness is an end that immeasurably exceeds created things. Hence, God’s wisdom is not determined to any particular order of things in such a way that no other course of things could flow from it.

Therefore, one must assert, absolutely speaking, that God is able to effect things other than the things He in fact effects.

**Reply to objection 1:** Our own power and essence are different from our will and intellect; and, again, our intellect is different from our wisdom, and our will is different from our justice. So with us there can be something which is within our power and yet which cannot exist in a just will or in a wise intellect. By contrast, God’s power and essence and will and intellect and wisdom and justice are all the same. Hence, there can be nothing which is within God’s power and yet which cannot exist in His just will or in His wise intellect.

Still, since (a) God’s will is not determined by necessity to these particular things or those particular things—except, perhaps on some assumption, as was explained above (q. 19, a. 3)—and since, as has just been explained, (b) God’s wisdom and justice are likewise not determined to this particular order, nothing prevents it from being the case that there is something in God’s power which He does not will and which is not contained under the order that He has in fact established for things. And since the power is thought of as *executing* (whereas the will is thought of as *commanding*, and the intellect and wisdom as *directing*), whatever is attributed to the power considered in itself is such that God is said to be capable of it according to His *absolute power* (*potentia absoluta*). And, as was explained above (a. 3), this includes everything in which the nature of being can be preserved. On the other hand, whatever is attributed to God’s power insofar as it executes the command of His just will is such that God is said to be able to effect it by His *ordained power* (*potentia ordinata*).

Accordingly, then, one should claim that God is able by His absolute power to effect things other

than the things He foreknew and preordained that He would effect, even though it cannot be the case that He effects things which He did not foreknow and preordain that He would effect. For His *acting* is subject to His foreknowledge and preordination, but His *ability to act* is not, since it is natural. For God *effects* something because He wills it, but it is not the case that He *is able to effect* something because He wills it; rather, He is able to effect something because this ability lies within His nature.

**Reply to objection 2:** God owes nothing to anything except Himself. Hence, the claim that God cannot effect anything except what He ought to effect signifies nothing other than that God is able to effect only that which is fitting and just for Him to effect.

But what I am calling ‘just and fitting’ can be thought of in two ways:

In one way, what I am calling just and fitting is such that it is thought of as already coupled with the verb ‘is’, so that it is restricted to standing for present things and is related in this way to God’s power. On this reading, what is asserted in the objection is false, for its sense is this: ‘Only that which is now fitting and just is such that God is able to effect it.’

On the other hand, if ‘fitting and just’ is understood as being first coupled with the verb ‘is able to be’—which has the force of amplifying the description—and afterwards with the verb ‘is’, then what will be signified is a certain general present. And in that case the statement will be true, since it will have this sense: ‘God is able to effect only that which is such that, if He were to effect it, it would be fitting and just.’

**Reply to objection 3:** Even though the present course of things is limited to the things which now exist, it is nonetheless not the case that God’s wisdom and power are limited to this present course of things. Hence, even if no other course would be good and fitting for the things which now exist, it is still the case that God could make other things and impose a different order on them.

## Article 6

### Is God able to make the things that He makes better?

It seems that God is not able to make the things He makes better (*non possit meliora facere ea quae facit*):

**Objection 1:** Whatever God makes, He makes with the utmost power and wisdom. But He makes a thing better to the extent that He makes it with more power and wisdom. Therefore, God cannot make anything better than He makes it.

**Objection 2:** In *Contra Maximinum* Augustine argues as follows: “If God were able to and yet willed not to generate a Son equal to Himself, then He would be envious.” For the same reason, if God could have made things better than He has and yet willed not to do so, then He was envious. But envy is altogether foreign to God. Therefore, God has made each thing the best He can (*Deus unumquodque fecit optimum*). Therefore, God cannot make anything better than He has.

**Objection 3:** That which is maximally and utterly good cannot be made better, since there is nothing greater than the maximum. But, as Augustine says in the *Enchiridion*, “Each one of the things God made is good, but taken together they are utterly good, since the admirable beauty of the whole is constituted from all of them.” Therefore, the good of the universe cannot be made better by God.

**Objection 4:** The man Christ is full of grace and truth and has the Spirit without measure, and so He cannot be better. Likewise, created happiness is said to be the highest good, and so it cannot be better. Again, the Blessed Virgin Mary is exalted above all the choirs of angels, and so she cannot be better. Therefore, not all the things that God has made are such that He can make them better.

**But contrary to this:** Ephesians 3:20 says that God “is able to make all things more abundantly than we desire or understand.”

**I respond:** There are two kinds of goodness in a thing:

The one kind is that which belongs to the thing’s essence, in the way that being rational belongs to the essence of a man. With respect to this sort of goodness, God cannot make anything better than it is, even though He could make some other thing that is better than that thing. In the same way, He cannot make the number four greater, since if it were greater, then it would be some other number and no longer four. For as *Metaphysics* 8 says, the addition of a substantival difference to a definition is like the addition of a unit to a number.

The second sort of goodness in a thing is that which lies outside the thing’s essence, in the way that a man’s good is to be virtuous or wise. And with respect to this kind of goodness, God is able to make the things made by Him better.

However, absolutely speaking, for anything that has been made by Him, God is able to make some other thing that is better.

**Reply to objection 1:** The claim that God can make something better than He does is true as long as the term ‘better’ is taken as a noun (*nomen*), because for any given thing, He is able to make some other thing that is better than that thing. On the other hand, as has been explained, one and the same thing is such that in one sense He is able to make it better and in another sense He is not able to make it better.

However, if ‘better’ is taken as an adverb and implies a mode on the part of the maker, then in that sense God is not able to make something better than He does, because He is not able to make anything with more wisdom and goodness on His part.

By contrast, if ‘better’ is taken as an adverb and implies a mode on the part of the thing made, then in that sense God is able to make things better, since He is able to give to the things He has made a better mode of being with respect to their accidental features, though not with respect to their essential features.

**Reply to objection 2:** It is part of the nature of a son that he should be equal to his father when he comes to maturity, but it is not part of the nature of any creature that it should be better than it has been made by God. Hence, the two lines of reasoning are not parallel.

**Reply to objection 3:** Given the things that actually exist, the universe cannot be better. This is because of the utter appropriateness of the order that God has established among the things that actually exist, and it is in this order that the good of the universe consists. If just one of these things were better, then the balance of the order would be upset, in just the same way that if one string of a harp were tightened more than it should be, then the sound of the harp would be ruined.

However, God could make other things, or add other things to those He has in fact made, and in that case this other universe would be better.

**Reply to objection 4:** From the fact that (a) Christ’s human nature (*humanitas*) is united to God, and that (b) created happiness is the enjoyment of God, and that (c) the Blessed Virgin is the mother of God, it follows that they have a certain infinite dignity that stems from the infinite goodness which is God. And in this respect nothing can be made that is better than they are, just as there cannot be anything that is better than God.

## QUESTION 26

### God's Beatitude

Now that we have considered what pertains to the oneness of the divine essence, we must lastly consider God's beatitude (*beatitudo*). On this topic there are four questions: (1) Does beatitude belong to God? (2) Is it with respect to His act of intellect that God is said have beatitude? (3) Is God's beatitude by its essence the beatitude of everyone who is beatified? (4) Is every beatitude included in God's beatitude?

#### Article 1

##### Does beatitude belong to God?

It seems that beatitude does not belong to God (*beatitudo Deo non conveniat*):

**Objection 1:** According to Boethius in *De Consolatione Philosophiae* 3, "Beatitude is a state made perfect by the aggregation of all goods." But an aggregation of goods has no place in God, since there is no composition in God. Therefore, beatitude does not belong to God.

**Objection 2:** According to the Philosopher in *Ethics* 1, happiness or beatitude is the reward of virtue. But rewards are not fitting for God, and neither are merits. Therefore, neither is beatitude.

**But contrary to this:** In 1 Timothy 6:15 the Apostle says, "Which in His times He shall show, who is the Blessed (*beatus*) and only Mighty, the King of kings and Lord of lords."

**I respond:** Beatitude belongs especially to God. For what is understood by the name 'beatitude' is nothing other than the perfect good of an intellectual nature, where an intellectual nature is one which (a) is capable of grasping its own satisfaction with the good that it possesses, (b) is capable of doing well or doing badly, and (c) is a master of its own actions.

Now both of these features, viz., being perfect and being intelligent, belong to God in the most excellent way. Hence, beatitude belongs especially to God.

**Reply to objection 1:** An aggregation of goods exists in God not in the mode of composition, but in the mode of simplicity. For as was explained above (q. 4, a. 2 and q. 13, a. 4), things that are multiplied in creatures preexist in God in a simple and unified manner.

**Reply to objection 2:** Being the reward of virtue is an accident that accompanies happiness or beatitude insofar as someone acquires beatitude. In the same way, being the terminus of an act of generation is an accident that accompanies an entity insofar as it goes from potentiality into actuality. Therefore, just as God has *esse* even though He has not been generated, so too He has beatitude even though He has not gained it through merit (*quamvis non mereatur*).

#### Article 2

##### Is it with respect to His act of intellect that God is said to have beatitude?

It seems that it is not with respect to His act of intellect that God is said to have beatitude:

**Objection 1:** Beatitude is the highest good. But 'good' is said of God with respect to His essence, since, according to Boethius in *De Hebdomadibus*, the good is related to being, i.e., something is good with respect to its essence. Therefore, 'beatitude' is likewise said of God with respect to His essence and not with respect to His act of intellect.

**Objection 2:** Beatitude has the nature of an end. But the end is the object of an act of will in the

same way that the good is. Therefore, ‘beatitude’ is said of God with respect to His act of will and not with respect to His act of intellect.

**But contrary to this:** In *Moralium* 32 Gregory says, “He is glorious who rejoices in himself and has no need of praise from the outside.” But ‘glorious’ here signifies being happy. Therefore, since we ourselves will enjoy God with our intellect, and since (as Augustine puts it) “the vision [of God] is the whole of the reward,” it seems that ‘beatitude’ is said of God with respect to His act of intellect.

**I respond:** As has been explained (a. 1), ‘beatitude’ signifies the perfect good of an intellectual nature. And from this it follows that just as each thing desires its own perfection, so an intellectual nature naturally desires to be beatified. But that which is most perfect in any intellectual nature is the intellectual operation by which it in some sense grasps all things. Hence, the beatitude of a created intellectual nature consists in an act of understanding (*in intelligendo*).

Now God’s *esse* and His act of understanding do not differ in reality, but differ only with respect to the concept of an act of understanding. Therefore, beatitude should be attributed to God with respect to His act of intellect, just as it is in the case of other beatified beings, who are said to be beatified because of their assimilation to His beatitude.

**Reply to objection 1:** This argument proves that God has beatitude with respect to His essence, but not that beatitude belongs to Him under the concept of His essence. Rather, beatitude belongs to Him under the concept of His act of understanding (*secundum rationem intellectus*).

**Reply to objection 2:** Since beatitude is a good, it is an object of the will. But an object presupposes the act of a power. Hence, according to our mode of understanding, God’s beatitude is prior to the act of will that rests in that beatitude, and this can only be the act of His intellect. Hence, His beatitude consists in the act of His intellect.

### Article 3

#### Is God the beatitude of everyone who is beatified?

It seems that God is the beatitude of everyone who is beatified:

**Objection 1:** As has been shown above (q. 6, a. 2), God is the highest good. But, as is also clear from what was said above (q. 11, a. 3), it is impossible for there to be more than one highest good. Therefore, since it belongs to the nature of beatitude that it is the highest good, it seems that beatitude is nothing other than God.

**Objection 2:** Beatitude is the ultimate end of a rational nature. But it belongs to God alone to be the ultimate end of a rational nature. Therefore, the beatitude of everyone who is beatified is God alone.

**But contrary to this:** According to 1 Corinthians 15:41 (“Star differs from star in glory”), the beatitude of one person is greater than the beatitude of another. But nothing is greater than God. Therefore, beatitude is something other than God.

**I respond:** The beatitude of an intellectual nature consists in an act of the intellect. In this act two things can be considered, viz., (a) the object of the act, which is the intelligible thing, and (b) the act itself, which is an act of understanding.

Thus, if beatitude is considered with respect to the object itself, then in this sense God alone is beatitude, since someone is beatified only in virtue of the fact that he understands God. Accordingly, in *Confessiones* 5 Augustine says, “He is happy who knows You, even if he does not know other things.”

However, if beatitude is considered with respect to the act of understanding, then beatitude is something created that exists in the creatures who are beatified. In God, however, beatitude is something

uncreated in this respect as well.

**Reply to objection 1:** As far as its object is concerned, beatitude is the highest good absolutely speaking. However, as far as the act is concerned, in beatified creatures this act is not the highest good absolutely speaking, but the highest in that genus of goods that a creature can participate in.

**Reply to objection 2:** As the Philosopher says, there are two kinds of ends, an *end of which* (*finis cuius*) and an *end by which* (*finis quo*)—more specifically, the thing itself (*ipsa res*) and the possession of that thing (*usus rei*). For instance, in the case of someone who is avaricious, the one end is money and the other is the acquisition of money. Thus, a rational creature's ultimate end, *qua* thing, is God, whereas the ultimate end, *qua* possession (or, better, enjoyment) of the thing, is created beatitude.

#### Article 4

##### Does God's beatitude include every beatitude?

It seems that God's beatitude does not include every beatitude:

**Objection 1:** There are certain false types of beatitude. But in God there is nothing false. Therefore, God's beatitude does not include every beatitude.

**Objection 2:** According to some, a certain sort of beatitude consists in corporeal things such as sentient pleasures, riches, etc. But these things cannot belong to God, since He is incorporeal. Therefore, His beatitude does not include every beatitude.

**But contrary to this:** Beatitude is a certain perfection. But as was shown above (q. 4, a. 2), God's perfection includes every perfection. Therefore, God's beatitude includes every beatitude.

**I respond:** Whatever is desirable in any sort of beatitude—whether true beatitude or false beatitude—preexists as a whole more eminently in God's beatitude.

For with regard to contemplative beatitude, God's beatitude includes the continuous and most sure contemplation of both Himself and all other things, whereas with regard to active beatitude, God's beatitude includes the governance of the whole universe.

On the other hand, with regard to earthly beatitude—which, according to Boethius in *De Consolatione Philosophiae* 3, consists in sentient pleasure, riches, power, authority, and fame—God's beatitude includes (a) rejoicing in Himself and in all other things in the place of pleasure, (b) every type of sufficiency that riches promise in the place of riches, (c) omnipotence in the place of power, (d) ruling over all things in the place of authority, and (e) the admiration of all creatures in the place of fame.

**Reply to objection 1:** Certain sorts of beatitude, insofar as they are false, fall short of the nature of true beatitude and so are not found in God. However, whatever they have by way of similarity to true beatitude, no matter how tenuous that similarity might be, preexists as a whole in God's beatitude.

**Reply to objection 2:** The goods that exist corporeally in corporeal things exist in God in a spiritual way according to their own mode.

At this point we have said enough about what pertains to the oneness of God's essence (questions 2-26).

## QUESTION 27

### The Procession of the Divine Persons

Now that we have considered what pertains to the oneness of the divine essence (questions 2-26), what remains is to consider those things that pertain to the Trinity of persons in God (questions 27-43).

Because the divine persons are distinguished by their relations of origin, the order of teaching dictates that we should consider, first, the origin or procession (question 27); second, the relations of origin (question 28); and third, the persons themselves (questions 29-43).

On the topic of procession there are five questions: (1) Are there any processions in God? (2) Can any procession in God be called a generation? (3) Besides generation, can there be any other procession in God? (4) Can this other procession be called a generation? (5) Are there more than two processions in God?

#### Article 1

#### Are there any processions in God?

It seems that there cannot be any processions in God:

**Objection 1:** ‘Procession’ signifies an external movement. But there is nothing moveable in God, and there is nothing external in God. Therefore, neither is there any procession in God.

**Objection 2:** What proceeds is diverse from what it proceeds from. But within God there is no diversity at all, but instead the greatest simplicity. Therefore, there are no processions in God.

**Objection 3:** To proceed from another seems incompatible with the concept of a first principle. But, as was shown above (q. 2, a. 3), God is a first principle. Therefore, procession has no place in God.

**But contrary to this:** In John 8:42 our Lord says, “From God I proceeded.”

**I respond:** In speaking of God, divine Scripture uses names that pertain to procession. However, different thinkers have understood this sort of procession in different ways.

Some have understood this sort of procession in the manner of an effect proceeding from its cause. This is the way Arius understood it when he claimed that the Son proceeds from the Father as His first creature, and that the Holy Spirit proceeds from the Father and the Son as the creature of them both. On this interpretation, neither the Son nor the Holy Spirit would be true God. But this is contrary to what is said about the Son at 1 John 5:20 (“. . . that we may be in His true Son; this is the true God”). And as for the Holy Spirit, 1 Corinthians 6:19 says, “Know you not that your members are the temple of the Holy Spirit?” But it belongs to God alone to have a temple.

Others have understood procession in the manner in which a cause is said to proceed into its effect, either because it moves its effect or because it imprints a likeness of itself on it. This is the way in which Sabellius was taking ‘procession’ when he claimed that God the Father is Himself called the Son insofar as He assumed flesh from the virgin. Again, he claimed that the same Father is the Holy Spirit insofar as He sanctifies rational creatures and moves them toward life. But this understanding is undermined by our Lord’s words about Himself at John 5:19, when He says, “The Son cannot do any thing of Himself,” and in many other passages that prove that it is not the Father Himself who is the Son.

Now if one considers the matter carefully, both these positions understand procession as directed toward something external, and hence neither of them posits a procession within God Himself. But since every procession involves an action, it follows that just as there is an external procession in the case of an action directed toward an external subject, so too there is an internal procession in the case of an action that remains within the agent itself. This is especially clear in the case of the intellect, whose action—viz., an act of intellectual understanding—remains within the one who understands. For when

anyone has an act of intellectual understanding, then by the very fact that he has the act of intellectual understanding, something proceeds within him—viz., a conception of what is understood (*conceptio rei intellectae*) that arises from the intellectual power and proceeds from the cognition of what is understood (*ex eius notitia procedens*). This conception is signified by the spoken word and is called the ‘word of the heart’ (*verbum cordis*), which is signified by the ‘word of the voice’ (*verbum vocis*).

Now since God surpasses all things, whatever is said of God is to be understood not according to the mode of lower creatures, which are bodies, but rather according to a likeness taken from the highest creatures, which are intellectual substances—though even a likeness so taken falls short as a representation of divine things. Therefore, procession is not to be understood as it exists in corporeal things—whether in the manner of a local movement or in the manner of a cause’s action on an external effect, e.g., heat proceeding from the thing that produces heat to the thing that is heated. Rather, procession is to be understood here in the sense of an intellectual emanation (*secundum emanationem intelligibilem*)—more specifically, the emanation of a meaningful word from a speaker, where the word remains within the speaker. This is the sense in which the Catholic Faith posits procession within God.

**Reply to objection 1:** This argument is talking about a procession which is a local movement or, at least, an action that is directed toward an exterior subject or exterior effect. But as has been explained, this is not the sort of procession that exists in God.

**Reply to objection 2:** What proceeds by a procession directed toward something exterior must indeed be diverse from what it proceeds from. However, what proceeds internally by an intellectual process (*ad intra processu intelligibili*) need not be diverse. In fact, the more perfectly it proceeds, the more united it is to what it proceeds from. For, clearly, the better something is understood, (a) the more intimate its intellectual conception (*conceptio intellectualis*) is to the one who understands, and (b) the more united it is to him; for the intellect has an actual understanding insofar as it comes to be united with the thing understood. So since, as was explained above (q. 14, a.1), God’s act of intellectual understanding has the ultimate in perfection, it must be the case that the divine Word is perfectly one with what it proceeds from, without any sort of diversity.

**Reply to objection 3:** To proceed from a principle as something external to and diverse from that principle is indeed incompatible with the concept of a first principle. But to proceed in an intellectual mode as something intimate and non-diverse is included in the concept of a first principle. For instance, when we say that the builder is a principle of the house, his conception of his craft is included in the concept of this principle—and it would be included in the concept of the first principle if the builder were the first principle. But God, who is the first principle of things, is related to created things as a craftsman is related to his artifacts.

## Article 2

### Can any procession in God be called a generation?

It seems that no procession in God can be called a generation (*non possit dici generatio*):

**Objection 1:** Generation is a transition from non-being to being (*mutatio de non esse ad esse*), the opposite of corruption; and matter is the subject of both generation and corruption. But none of this belongs to God. Therefore, there cannot be any generation in God.

**Objection 2:** As has been explained (a. 1), procession in God has an intellectual mode. But in our case this sort of intellectual procession is not called a generation. Therefore, neither is it called a generation in the case of God.

**Objection 3:** Everything that is begotten receives its *esse* from the one who generates it. Therefore, the *esse* of whatever is begotten is received *esse*. But no received *esse* is subsistent *per se*. Therefore, since, as was proved above (q. 3, a. 4), God's *esse* is *esse* that subsists *per se*, it follows that the *esse* of anything that is begotten is not God's *esse*. Therefore, there is no generation in God.

**But contrary to this:** Psalm 2:7 says, "This day have I begotten you."

**I respond:** The procession of the Word in God is called a generation. To see this clearly, notice that we use the name 'generation' in two senses.

In one sense, we use it broadly for all generable and corruptible things, and in this sense generation is nothing other than a transition from non-being to being.

The other sense is proper to living things, and in this sense 'generation' signifies the origin of a living thing from a living principle that is conjoined with it. This is properly called 'nativity' (*nativitas*). Yet not everything of this sort is said to be 'begotten' (*genitum*); rather, what is begotten, properly speaking, is that which proceeds according to a type of likeness. Thus, a hair or a whisker does not satisfy the concept of a child (*filius*) or of what is begotten. Only something that proceeds by way of a likeness does—but not just any sort of likeness. For instance, worms of the sort generated inside of animals do not satisfy this concept of generation or filiation, even though there is a likeness with respect to the genus *animal*. Rather, what is required for this sense of 'generation' is that the thing proceed by way of a likeness with respect to the *same specific nature*, e.g., a man from a man, and a horse from a horse.

Now in the case of those living things which, like men and animals, proceed from potentiality into the act of living, the generation includes both of the above senses of 'generation'. However, if there is some living thing whose life does not pass from potentiality into actuality, then a procession found in this sort of living thing excludes the first sense of 'generation' altogether. Nonetheless, such a procession can still be a generation in the sense of 'generation' that is proper to living things. This, then, is the sense in which the procession of the Word in God satisfies the concept of generation. For the Word proceeds (a) in the manner of an *intellectual action*, which is a vital operation; (b) from a *conjoined principle*, as has already been explained above (a. 1); (c) according to a type of *likeness*, since the intellect's conception is a likeness of the thing understood; and (d) as something that has the *very same nature*, since, as was shown above (q. 14, a. 4), in God the act of understanding is the same as the *esse*. Hence, the procession of the Word in God is called a generation, and the Word Himself who proceeds is called the Son.

**Reply to objection 1:** This objection is talking about generation in the first sense, which implies a transition from potentiality to actuality. And, as has been explained, in God there is no generation in this sense.

**Reply to objection 2:** In our case the act of intellectual understanding is not the very substance of the intellect. Hence, the word that proceeds in us by way of an intellectual operation is not of the same nature as that from which it proceeds. Hence, the nature of generation does not belong to it properly and completely.

However, as was shown above (14, a. 4), God's act of understanding is the very substance of Him who understands. Hence, the Word that proceeds from it proceeds as something subsistent with the same nature. Because of this, the Word is properly said to be begotten and to be the Son. This is why Scripture uses terms that pertain to the generation of living things, viz., 'conception' (*conceptio*) and 'birth' (*partus*), in order to signify the procession of the divine Wisdom. For instance, Proverbs 8:24-25 says in the personage of the divine Wisdom, "The depths were not as yet, and I was already conceived . . . before the hills, I was given birth."

Still, in the case of our intellect we do use the name 'conception', since in the word of our intellect there is a likeness of the thing understood, though not an identity of nature.

**Reply to objection 3:** Not everything that is received is received in a subject; otherwise, one could not claim that the total substance of a created thing is received from God, since there is no subject that receives the whole of the substance. Therefore, that which is begotten in God does not receive *esse* from the one who generates in the sense that this *esse* is received in some matter or subject—that would be incompatible with the subsistence of the divine *esse*. Instead, this *esse* is said to be received insofar as that which proceeds from the other has divine *esse* and does not exist as something distinct from the divine *esse*. For the very perfection of the divine *esse* contains both the Word that proceeds intellectually and the principle of the Word. For as was explained above (q. 4, a. 2), the divine *esse* contains everything that pertains to its perfection.

### Article 3

#### Is there a procession in God other than the generation of the Word?

It seems that there is no procession in God other than the generation of the Word:

**Objection 1:** There would, for the same reason, be another procession from the second procession, and so there would be an infinite regress—which is absurd. Therefore, one should stop with the first procession, so that there is only a single procession in God.

**Objection 2:** For every nature, there is just one way of communicating that nature, and this is because operations are the same or different according to their termini. But a procession in God is nothing but a communication of the divine nature. Therefore, since, as was shown above (q. 11, a. 3), there is just a single divine nature, it follows that there is just a single procession in God.

**Objection 3:** If there were some other procession in God distinct from the intellectual procession of the Word, it would have to be a procession of love, which would involve an operation of the will. But such a procession could not be distinct from the intellect's intellectual procession, since, as was shown above (q. 19, a. 1), in God the will is not distinct from the intellect. Therefore, in God there is no procession other than the procession of the Word.

**But contrary to this:** As John 15:26 says, the Holy Spirit proceeds from the Father. But the Holy Spirit is distinct from the Son—this according to John 14:16 (“I will ask the Father, and He shall give you another Paraclete”). Therefore, there is in God another procession besides the procession of the Word.

**I respond:** In God there are two processions, viz., the procession of the Word and one other. To see this clearly, notice that in God a procession involves only an action which remains within the agent Himself and is not directed to anything external. But in an intellectual nature, the actions of this sort are the action of the intellect and the action of the will. The procession of the Word involves an action of the intellect. Now in our own case the other sort of procession, viz., the procession of love, involves an operation of the will, in which what is loved exists in the lover, just as through the conception of a word, the thing spoken or understood (*res dicta vel intellecta*) exists in the one who understands. Hence, in addition to the procession of the Word, another procession is posited in God, viz., the procession of the Love.

**Reply to objection 1:** There is no need to proceed to infinity in the divine processions. For the procession that is intrinsic to an intellectual nature is terminated in the procession that involves the will.

**Reply to objection 2:** As was shown above (q. 3, a. 3 and 4), whatever exists in God is God—something that is not true of other things. And so the divine nature, and no other nature, is communicated through any procession that is not directed toward something external.

**Reply to objection 3:** Even though the intellect and will are not distinct in God, nonetheless, it is part of the nature of an intellect and will that the processions that involve their actions have a certain ordering with respect to one another. For there is no procession of love except in relation to the procession of a word, since nothing can be loved by the will unless it is conceived by the intellect. Therefore, just as the Word is ordered to the principle from which it proceeds, despite the fact that in God the substance of the intellect is the same as the intellect's conception, so, too, despite the fact that the intellect and will are the same in God, the procession of the Love has an ordering distinct from the procession of the Word in God, because it is part of the nature of love that it should proceed only from a conception of the intellect.

#### Article 4

##### Is the procession of the Love in God a generation?

It seems that the procession of the Love in God is a generation:

**Objection 1:** Among living things, that which proceeds with a likeness of nature is said to be 'generated' and 'born' (*generatum et nascens*). But in the case of God, that which proceeds in the mode of love proceeds with a likeness of nature—otherwise, it would be something external to the divine nature and the procession would thus be directed toward something external. Therefore, that which proceeds in God in the mode of love proceeds as something begotten and born.

**Objection 2:** Just as likeness belongs to the nature of a word, so too it belongs to the nature of love; this is why Ecclesiasticus 13:19 says, "Every beast loves its like." Therefore, if it is by reason of a likeness that the Word which proceeds is generated and born, then it seems that the Love which proceeds is likewise generated.

**Objection 3:** Whatever belongs to a genus belongs to some species of that genus. Therefore, if there is a procession of the Love in God, then besides the common name 'procession', it must have some more specific name. But there is no name to give it other than 'generation'. Therefore, it seems that the procession of the Love in God is a generation.

**But contrary to this:** On this view it would follow that the Holy Spirit, who proceeds as the Love, would proceed as begotten. But this is contrary to the Athanasian creed, which says: "The Holy Spirit is not made or created or begotten by the Father and the Son, but proceeds from them."

**I respond:** The procession of the Love in God should not be called a generation. To see this clearly, note that the difference between the intellect and the will is that the intellect comes to have its act in virtue of the fact that what is understood exists in the intellect by means of its likeness, whereas the will comes to have its act not in virtue of the fact that a likeness of what is willed exists in the will, but rather in virtue of the fact that the will has an inclination toward what is willed. Therefore, a procession that takes place in accord with the nature of the intellect involves a type of likeness, and it can satisfy the concept *generation* because each generator generates what is similar to itself. By contrast, a procession that takes place in accord with the nature of the will is thought of not as involving a type of likeness, but rather as involving an impulse or movement toward something. And so that which proceeds in God in the mode of love does not proceed as something that is begotten or as a Son, but rather proceeds as Spirit, where the name 'Spirit' signifies a certain vital movement and impulse—in the way that someone is said to be moved or impelled by love to do something.

**Reply to objection 1:** Whatever exists in God is one with the divine nature. Hence, one cannot construct on the basis of this oneness a special argument about this or that procession, according to which

the one is distinguished from the other. Instead, a special argument about this or that procession has to be based on the ordering of the one procession toward the other. But an ordering of this sort involves the nature of the will and the intellect. Hence, it is in accord with the proper nature of the intellect and the will that the two processions in God receive names that are imposed to signify the proper nature of the reality. And, for this reason, what proceeds in the mode of love receives the divine nature and yet is not said to be born.

**Reply to objection 2:** Likeness pertains in one way to the Word and in a different way to the Love. For it pertains to the Word insofar as the Word Himself is a likeness of what is understood, in the way that what is begotten is a likeness of the generator. On the other hand, likeness pertains to the Love not because the Love Himself is a likeness, but because likeness is a principle of loving. Hence, it follows not that the Love is begotten, but that what is begotten is a principle of the Love.

**Reply to objection 3:** As was explained above (q. 13, a. 1), we cannot name God except from creatures. And since among creatures the communication of the nature occurs only through generation, procession in God does not have a proper or special name other than ‘generation’. Hence, the procession that is not a generation remains without a special name. Nonetheless, we can name it ‘spiration’, because it is the procession of the Spirit.

## Article 5

### Are there more than two processions in God?

It seems that there are more than two processions in God:

**Objection 1:** Just as knowledge and will are attributed to God, so, too, is power. Therefore, if there are two processions in God with respect to intellect and will, then it seems that there should be a third procession with respect to power.

**Objection 2:** Goodness seems especially apt to be a principle of procession, since the good is said to be diffusive of itself. Therefore, it seems that there should be a procession with respect to goodness in God.

**Objection 3:** The power of fecundity is greater in God than in us. But in us there are many processions of words and not just one, since in our case one word proceeds from another; and similarly, one love proceeds from another love. Therefore, in God there are likewise more than two processions.

**But contrary to this:** In God there are only two who proceed, viz., the Son and the Holy Spirit. Therefore, there are only two processions in God.

**I respond:** Processions cannot exist in God except with respect to actions that remain within the agent. But there are just two such actions in an intellectual and divine nature, viz., understanding and willing. For sensing, which likewise seems to be an operation within sentient beings, lies outside of an intellectual nature and is not totally removed from the genus of actions that are directed toward the outside, since sensing is perfected by the action of the sensible thing on the senses themselves. Therefore, it follows that there can be no processions in God other than the procession of the Word and the procession of the Love.

**Reply to objection 1:** Power is a principle of acting on another, and so in the case of power it is action with respect to something external that is understood. Thus, with respect to the attribute of power there is no procession of a divine person, but only the procession of creatures.

**Reply to objection 2:** As Boethius says in *De Hebdomadibus*, good pertains to the essence and not to action—unless perhaps as the object of an act of will. Hence, since the divine processions necessarily

involve certain actions, it follows that with respect to goodness and other such attributes there are no other processions besides the procession of the Word and the procession of the Love. For it is these two processions by which God understands and loves His own essence, truth, and goodness.

**Reply to objection 3:** As was established above (q. 14, a. 7 and q. 19, a. 5), God understands all things by one simple act and, similarly, wills all things by one simple act. Hence, in Him there cannot be any procession of one word from another word or of one love from another love. Rather, in Him there exists just one perfect Word and one perfect Love. And it is in this that His perfect fecundity is manifested.

## QUESTION 28

### The Divine Relations

Now we have to consider the divine relations. On this topic there are four questions: (1) Are there any real relations in God? (2) Are these relations the divine essence itself, or do they come from the outside? (3) Can there be a plurality of relations in God that are really distinct from one another? (4) How many of these relations are there?

#### Article 1

##### Are there any real relations in God?

It seems that there are no real relations in God (*in Deo non sint aliquae relationes reales*):

**Objection 1:** In *De Trinitate* Boethius says, “When one turns the [accidental] categories into divine predications, all the ones that can be predicated are changed to the category of substance, whereas relational predicates (*ad aliquid*) cannot be predicated at all.” But whatever really exists in God can be predicated of Him. Therefore, real relations do not exist in God.

**Objection 2:** In the same book Boethius says, “In the Trinity, the relation of the Father to the Son is similar to the relation of both to the Holy Spirit, viz., the relation of what is the same to what is the same.” But a relation of this sort is merely a relation of reason, since every real relation requires two really distinct extremes. Therefore, the relations posited in God are not real relations, but only relations of reason.

**Objection 3:** The relation of paternity is a relation had by a principle. But when one says ‘God is a principle of creatures’, this implies merely a relation of reason and not a real relation. Therefore, neither is Paternity in God a real relation. And for the same reason, the other relations posited in God are not real relations, either.

**Objection 4:** In God the generation involves the procession of an intellectual Word (*est secundum intelligibilis verbi processionem*). But relations that follow upon an operation of the intellect are relations of reason. Therefore, Paternity and Filiation, which are predicated of God because of the generation, are only relations of reason.

**But contrary to this:** ‘Father’ is predicated only because of the Paternity, and ‘Son’ is predicated only because of the Filiation. Therefore, if Paternity and Filiation are not real relations in God, it follows that God is not really a Father or really a Son, but a Father and Son only according to our mode of understanding. But this is the Sabellian heresy.

**I respond:** There are real relations in God (*relationes quaedam sunt in divinis realiter*). To see this clearly, note that it is only among things that are predicated relationally that some are predicated just with respect to reason and not with respect to reality. This does not occur in the other genera [of accidents], because the other genera, e.g., *quantity* and *quality*, when taken according to their proper concept, signify something that inheres in an entity. By contrast, things that are predicated relationally, when taken according to their proper concept, signify only a connection to something else.

A relation sometimes exists in reality (*in ipsa natura rerum*)—as, e.g., when by their nature the things in question are ordered toward one another and have an inclination toward one another. Relations of this sort must be real. For instance, in a heavy body there is an inclination and ordering toward the center of the earth, and thus a relation to the center of the earth exists within the heavy body itself. And the same thing holds in other cases of this sort.

On the other hand, sometimes the relation signified by what is predicated relationally exists only in the apprehension of reason insofar as it connects one thing to another, and in such a case there is only a

relation of reason—as, for instance, when reason connects *man* to *animal* as a species to a genus.

However, when something proceeds from a principle of the same nature as itself, then both of them—viz., what proceeds and what it proceeds from—must belong to the same ordering, and so they must have real relations with respect to one another. Therefore, since, as has been shown (q. 27, a. 3), the processions in God involve an identity of nature, the relations associated with the divine processions must be real relations.

**Reply to objection 1:** The reason why what is predicated relationally, when taken according to the proper concept of what is predicated relationally, is “not predicated at all” of God is that the proper concept of what is predicated relationally is taken not from what the relation inheres in, but rather from that thing’s connection to another. Therefore, in this passage Boethius wished to claim not that no relation exists in God, but rather that, in accord with the proper concept of a relation, a relation would be predicated of God not in the manner of something that inheres, but rather in the manner of being connected to another (*non praedicaretur per modum inhaerentis ... sed magis per modum ad aliud se habentis*).

**Reply to objection 2:** The relation that is implied by the name ‘same as itself’ is merely a relation of reason, if ‘same’ is taken absolutely. For a relation of this sort cannot consist in anything but a certain ordering, formulated by reason, of a given thing to itself, insofar as there are two separate thoughts of that thing. However, it is different when the things in question are said to be the same not in number but in nature, i.e., one in genus or in species.

Therefore, Boethius is not assimilating the relations that exist in God to the relation of identity in every respect; rather, he is assimilating them to the relation of identity only to the extent that God’s substance is not diversified by these relations—just as a substance is not diversified by the relation of identity.

**Reply to objection 3:** Since a creature proceeds from God with a diverse nature, God is outside the order of all creatures and does not by His nature have a relation to creatures. For, as was explained above (q. 14, a. 8 and q. 19, a. 4), He produces creatures not by a necessity of nature, but through His intellect and will. And this is why in God there are no real relations to creatures. However, in the creatures there is a real relation to God, since creatures are contained under God’s ordering and by their nature depend on God.

By contrast, the divine processions are processions within the very same nature. Hence, the two lines of reasoning are not parallel.

**Reply to objection 4:** Relations which exist between things that are understood and which follow upon just the operation of the intellect are merely relations of reason, since it is reason that formulates these relations between the two things that are understood.

By contrast, the relations which follow upon the operation of the intellect and which exist between the word that proceeds intellectually and that from which it proceeds are not just relations of reason, but real relations. For the intellect, and reason itself, is a certain entity, and it has a real relation to that which proceeds from it intellectually—just as a corporeal entity has a real relation to that which proceeds from it corporeally. And it is for this reason that Paternity and Filiation are real relations in God.

## Article 2

### Is a relation in God the same as His essence?

It seems that a relation in God is not the same as His essence (*relatio in Deo non sit idem quod sua essentia*):

**Objection 1:** In *De Trinitate* 5 Augustine says, “Not everything that is predicated of God is predicated as substance. For some things, e.g., ‘the Father’ with respect to the Son, are predicated as relations, and these are not predicated as substance.” Therefore, a relation is not the divine essence.

**Objection 2:** In *De Trinitate* 7 Augustine says, “Everything that receives a relational predication is an entity independently of that relation (*est etiam aliquid excepto relativo*); for instance, it is a man who is a master and a man who is a servant.” Therefore, if there are relations in God, there must be something in God over and beyond the relations. But this can be nothing other than the essence. Therefore, the essence is distinct from the relations.

**Objection 3:** As is explained in the *Categories*, the *esse* of a relation is to be connected to another. Therefore, if a relation is God’s essence itself, it follows that the *esse* of God’s essence is to be connected to another. But this is incompatible with the perfection of God’s *esse*, which, as was shown above (q. 3, a. 4), is maximally absolute and subsistent *per se*. Therefore, it is not the case that a relation is the same as God’s essence itself.

**But contrary to this:** Every entity which is not God’s essence is a creature. But a real relation belongs to God. Therefore, if the relation is not God’s essence, then it will be a creature, and it will not be the case that the adoration of *latria* should be given to it. But this is contrary to what is sung in the Preface of the Mass [of the Holy Trinity], “Let the distinctness of the Persons (*in personis proprietatis*) and their equality in majesty be adored.”

**I respond:** On this topic Gilbert de la Porrée is said to have erred and afterwards, at the Council of Rheims, to have recanted his error. For he had claimed that the relations in God are ‘bystanders’ (*assistantes*), i.e., extrinsically affixed (*extrinsecus affixae*) [to the divine essence].

To see this matter clearly, note that in each of the nine genera of accidents there are two things to take into account:

(a) One of them is the *esse* that belongs to each accident insofar as it is an accident. The *esse* common to all of them is to exist in a subject (*inesse subjecto*). For the *esse* of an accident is *inesse*.

(b) The other thing that can be taken into account in each case is the proper concept of each of the things in those genera. Now in the genera other than *relation*, e.g., *quantity* and *quality*, the proper concept of the genus is also taken from its comparison with its subject. For *quantity* is called the measure of a substance, and *quality* is called the disposition of a substance. By contrast, the proper concept of a relation is taken not from its comparison with the subject in which it exists, but rather from a comparison with something outside that subject.

Thus, if, in the case of created things, we consider relations *insofar as they are relations*, then they are found to be ‘bystanders’ and not intrinsically affixed. They signify, as it were, a certain connection that touches the thing itself that is related and reaches out from that thing to another. By contrast, if we consider a relation *insofar as it is an accident*, then, so considered, it inheres in its subject and has accidental *esse* in it. Gilbert de la Porrée was thinking of a relation only in the former way.

However, anything that has accidental *esse* among created things has substantial *esse* when it is transferred to the case of God. For there is nothing that exists in God in the way that an accident exists in a subject; instead, whatever exists in God is His essence. Therefore, corresponding to the fact that among created things a relation has accidental *esse* in a subject, a real relation that exists in God will have the *esse* of the divine essence and will be altogether the same as the essence. On the other hand, because it is predicated relationally, what is signified is not its connection with the essence, but rather its connection with its relational opposite (*non significatur aliqua habitudo ad essentiam, sed magis ad suum oppositum*).

So it is clear that a real relation existing in God is the same in reality as His essence and differs from the essence only conceptually (*non differt nisi secundum rationem intelligentiae*), insofar as the

relation implies a connection with its relational opposite—something that is not implied by the name ‘essence’. Therefore, it is clear that in God the *esse* of the relation and the *esse* of the essence do not differ, but are instead one and the same.

**Reply to objection 1:** This passage from Augustine does not mean that the Paternity or any other relation that exists in God is not in its *esse* the same as God’s essence. Rather, it means that the relation is not predicated in the manner of a substance, i.e., as existing in the thing of which it is predicated, but is instead predicated as being connected to another.

It is for this reason that only two categories are said to exist in God. For the categories other [than substance and relation] imply a connection to that of which they are predicated, both (a) with respect to their *esse* and (b) with respect to the concept of their proper genus. But nothing that exists in God can have a connection other than the relation of identity to that in which it exists or to that of which it is predicated—and this because of God’s utter simplicity.

**Reply to objection 2:** Among created things, in what is predicated relationally one finds not only a connection to another but also some absolute entity. The same holds true in the case of God, though in a different way. For what is found in a creature over and beyond what is contained in the relational name’s signification is another entity; by contrast, in God there is no other entity, but one and the same entity—though that entity is not perfectly expressed by the name of the relation in the sense of being included in that name’s signification (*quasi sub significatione talis nominis comprehensa*). For as was explained above when we were talking about the divine names (q. 13, a. 2), more is contained in the perfection of God’s essence than can be signified by any name. Hence, it follows not that there is some other real entity (*aliquid aliud secundum rem*) in God besides the relation, but only that there is something more after the meaning of the [relational] names has been taken into account (*sed solum considerata nominum ratione*).

**Reply to objection 3:** If nothing were contained in God’s perfection over and beyond what a relational name signifies, then it would follow that His *esse* is imperfect, since He would have a connection to something else. In the same way, if nothing were contained in God’s perfection over and beyond what the name ‘wisdom’ signifies, then there would not be anything subsistent. However, from the fact that the perfection of God’s essence is greater than can be comprehended by the signification of any name, it does not follow that if a relational name (or any other name) predicated of God does not itself signify something perfect, then God’s essence has imperfect *esse*. For, as was explained above (q. 4, a. 2), God’s essence includes within itself the perfection of every genus.

### Article 3

#### Are the relations that exist in God distinct in reality from one another?

It seems that the relations that exist in God are not distinct in reality from one another (*realiter ab invicem non distinguantur*):

**Objection 1:** Things that are the same as one and the same thing are the same as one another. But every relation that exists in God is the same in reality as God’s essence. Therefore, the relations are not distinct in reality from one another.

**Objection 2:** Just as Paternity and Filiation are distinct from God’s essence in the meaning of their names, so too are God’s goodness and power. But it is not the case that because of this distinctness in meaning there is a real distinction between God’s goodness and His power. Therefore, neither is there a real distinction between the Paternity and the Filiation.

**Objection 3:** In God there are no real distinctions except according to origin. But one relation does not seem to originate from another. Therefore, the relations are not distinct from one another in reality.

**But contrary to this:** In *De Trinitate* Boethius says, “*Substance* in God contains the oneness, whereas *relation* multiplies the Trinity.” Therefore, if the relations are not distinct in reality from one another, then only a conceptual Trinity, and not a real Trinity, will exist in God. But this belongs to the Sabellian error.

**I respond:** When one thing is attributed to another, then everything that is part of the concept of the former must be attributed to the latter. For instance, if *man* is attributed to someone, then *rational* must be attributed to him as well.

Now part of the concept of a relation is the connection of one thing to another, according to which the two things are relationally opposed (*opponitur relative*). Therefore, since, as has been explained (a. 1), there are real relations in God, there must be real oppositions in Him. But a relational opposition includes within its concept the distinction [between the opposites]. Hence, it must be the case that there are real distinctions within God—not, to be sure, real distinctions within the absolute entity, viz., the essence, which has utter unity and simplicity, but rather real distinctions among the relations.

**Reply to objection 1:** According to the Philosopher in *Physics* 3, the claim in question—viz., that things that are the same as one and the same thing are the same as one another—holds for those things that are the same both in reality and conceptually, e.g., a tunic and a garment, but not for those things that differ conceptually. Hence, in the same place he claims that even though [in any given case] the action is the same as the movement, and likewise for the passion, it nonetheless does not follow that the action is the same as the passion. For ‘action’ implies the status of being that from which there is a movement in the moveable thing (*respectus ut a quo est motus in mobili*), whereas ‘passion’ implies the status of being something that comes from another (*respectus ut qui est ab alio*).

Similarly, even though the Paternity and the Filiation are the same in reality as the divine essence, nonetheless in their proper concepts they imply opposite relations. Hence, they are distinct from one another.

**Reply to objection 2:** ‘Power’ and ‘goodness’ do not imply in their concepts any sort of opposition. Hence, the two arguments are not parallel.

**Reply to objection 3:** Even though the relations do not, properly speaking, arise or proceed from one another, nonetheless, they are understood through the opposition that stems from the procession of one thing from another.

#### Article 4

##### Are there just four real relations in God, viz., the Paternity, the Filiation, the Spiration, and the Procession?

It seems that there are not just four real relations in God, viz., the Paternity, the Filiation, the Spiration, and the Procession (*paternitas, filiatio, spiratio et processio*):

**Objection 1:** In God one can think of the relation of the one who understands to what is understood and the relation of the one who wills to what is willed. These seem to be real relations and yet are not included among the ones just mentioned. Therefore, there are not just four real relations in God.

**Objection 2:** Real relations in God stem from the intellectual procession of the Word. But, as

Avicenna says, intellectual relations are multiplied to infinity. Therefore, there are infinitely many real relations in God.

**Objection 3:** As was explained above (q. 15, a. 2), the ideas exist in God from eternity. But as was said there, the ideas are distinguished from one another only by their relation to things. Therefore, in God there a great number of eternal relations.

**Objection 4:** Equality, similarity, and identity are relations, and they exist in God from eternity. Therefore, in God there are more relations that exist from eternity than those just mentioned.

**But contrary to this:** It seems that there are fewer than four relations. For according to the Philosopher in *Physics* 3, “The road from Athens to Thebes is the same as the road from Thebes to Athens.” Therefore, by parity of reasoning it seems that the relation of the Father to the Son, which is called Paternity, is the same as the relation of the Son to the Father, which is called Filiation. And so it is not the case that there are four relations in God.

**I respond:** According to the Philosopher in *Metaphysics* 5, every relation is based either (a) on quantity, e.g., *double* and *half*, or (b) on action and being acted upon (*passio*), e.g., *making* and *being made*, *father* and *son*, *master* and *servant*, etc. Now since there is no quantity in God (for, as Augustine puts it, He is great without quantity), it follows that there cannot be real relations in God unless they are based on action. However, they cannot be based on actions by which something external proceeds from God, since, as was explained above (a. 1 and q. 13, a. 7), the relations of God to creatures are not real relations in Him. Thus, it follows that there cannot be real relations in God except because of actions by which there is an internal—and not external—procession in God (*actiones secundum quas est processio in Deo non extra sed intra*).

Now, as was explained above (q. 27, a. 5), there are just two processions of this sort, one of which stems from the action of the intellect and is the procession of the Word, and the other of which stems from the action of the will and is the procession of the Love. But with respect to each of these processions there have to be two opposite relations, one of which belongs to what proceeds from the principle and the other of which belongs to the principle itself.

Now the procession of the Word is called a generation in keeping with the proper concept in accord with which generation belongs to living things. But the relation that belongs to the principle of generation among perfect living things is called *Paternity*, whereas the relation that belongs to what proceeds from the principle is called *Filiation*. On the other hand, as was explained above (q. 27, a. 4), the procession of the Love does not have a fitting name, and so neither do the relations that are taken from it. However, the relation that belongs to the principle of this procession may be called *Spiration*, whereas the relation that belongs to what proceeds may be called *Procession*—even though these two names properly pertain to processions or origins themselves and not to relations.

**Reply to objection 1:** In those cases in which the act of intellect differs from what is understood and the act of will differs from what is willed there can be a real relation both of the knowledge to the thing known and of the willing to the thing willed. But in the case of God the act of intellect is wholly the same as what is understood, since it is in understanding Himself that He understands all other things, and the same holds for the act of willing and what is willed. Hence, in God relations of this type are not real relations, just as relations of the same thing to itself are not real relations.

However, the relation to the Word is a real relation, since the Word is thought of as proceeding by means of the intellectual action and not as the thing which is understood. For when we ourselves understand a stone, that which the intellect conceives on the basis of the thing that is understood is called a word (*id quod ex re intellecta concipit intellectus vocatur verbum*).

**Reply to objection 2:** In our own case intellectual relations are multiplied to infinity because by one act a man understands a stone, and by another act he understands that he understands the stone, and

by yet another act he understands this last act of understanding—and in this way acts of understanding are multiplied to infinity and, as a result, so are the intellectual relations. But there is no room for this sort of thing in God, since He understands all things by just a single act.

**Reply to objection 3:** The relations among the ideas exist insofar as they are understood by God. Hence, from the fact that there are many such relations it does not follow that there are many relations in God. All that follows is that God knows many relations.

**Reply to objection 4:** Equality and similarity are not real relations in God, but are instead merely relations of reason, as will become clear below (q. 42, a. 1).

**Reply to argument for the contrary:** Even though the path from the one terminus to the other is the same as the path from the latter to the former, it is still the case that the relations are diverse. Hence, from this premise one cannot conclude that the relation of the Father to the Son is the same as the relation of the Son to the Father. Rather, one could draw this conclusion only about something non-relational (*absolutum*), if it lay in between them.

## QUESTION 29

### The Divine Persons

Given these points about the processions and relations which it seemed we should have in mind beforehand, we must now consider the persons. First, we will consider them absolutely (questions 29-38), and then we will consider them in relation to one another (questions 39-43).

As for the absolute consideration of the persons, we will first consider them in general (questions 29-32) and then consider them one by one (questions 33-38). There seem to be four pertinent topics for the general consideration of the persons: (a) the signification of the name 'person' (question 29); (b) the plurality of persons (question 30); (c) the things that follow from the plurality of persons or stand in opposition to it, e.g., their diversity, 'aloneness', etc. (question 31); and (d) the things that pertain to our knowledge of the persons (question 32).

On the first topic there are four questions: (1) What is the definition of 'person'? (2) How is a person related to an essence, a subsistent, and a hypostasis? (3) Does the name 'person' belong to God? (4) What does the name 'person' signify in God?

### Article 1

#### What is the definition of 'person'?

In *De Duabus Naturis* Boethius formulates the following definition of 'person': 'A person is an individual substance with a rational nature' (*rationalis naturae individua substantia*). But this definition seems to be inadequate:

**Objection 1:** No singular thing is defined. But 'person' signifies something singular. Therefore, it is inappropriate to define 'person'.

**Objection 2:** As it occurs in the definition of 'person', 'substance' is being used either for 'primary substance' or 'secondary substance'. If it is being used for 'primary substance', then it is superfluous to add 'individual', since a primary substance is an individual substance. On the other hand, if it stands for 'secondary substance', then the terms are opposed to one another and it is wrong to add 'individual', since secondary substances are called 'genera' or 'species' [and not 'individuals']. Therefore, the definition is incorrectly formulated.

**Objection 3:** The name of a logical intention (*intentio*) should not occur in the definition of a real entity (*res*). For instance, it would not be well-formulated if one were to say, 'A man is a species of animal'; for 'man' is the name of a real entity and 'species' is the name of a logical intention. Therefore, since 'person' is the name of a real entity (for it signifies a substance with a rational nature), it is wrong for 'individual', which is the name of a logical intention, to occur in its definition.

**Objection 4:** As *Physics 2* says, a nature is a principle of movement and rest in that in which it exists *per se* and not *per accidens*. But there are persons, e.g., God and the angels, who are immovable beings. Therefore, 'nature' should not be used in the definition of 'person'; instead, 'essence' should be.

**Objection 5:** A separated soul is an individual substance with a rational nature. But a separated soul is not a person. Therefore, this definition of 'person' is incorrect.

**I respond:** Even though universals and particulars are found in every genus, nonetheless, there is a special way in which individuals are found in the genus of substance. For a substance is individuated through itself. Accidents, on the other hand, are individuated by their subject, which is a substance; for instance, something is called *this* whiteness insofar as it exists in *this* subject. Hence, it is appropriate for individuals in the genus of substance to have a special name in preference to other things; so they are called 'hypostases' or 'primary substances'.

However, there is an even more special and perfect mode in which particulars and individuals are found among *rational* substances, which have dominion over their acts and which are not just acted upon like other substances, but act on their own. Now actions belong to singular things. And so among the other substances, singular substances with a rational nature likewise have a special name. And this name is ‘person’.

And so ‘individual substance’ occurs in the aforementioned definition of ‘person’ insofar as ‘person’ signifies a singular thing in the genus of substance, whereas ‘with a rational nature’ is added insofar as ‘person’ signifies a singular thing among the rational substances.

**Reply to objection 1:** Even though this or that singular thing cannot be defined, nonetheless, that which pertains to the common concept of singularity can be defined—and so it is that the Philosopher defines ‘primary substance’. And it is in this sense that Boethius is defining ‘person’.

**Reply to objection 2:** According to some, ‘substance’ is being used for ‘primary substance’—i.e., ‘hypostasis’—in the definition of ‘person’, and yet it is not superfluous to add ‘individual’. For the name ‘hypostasis’ or ‘primary substance’ excludes both the idea of a universal and the idea of a part (for we do not say that the universal *man* is a hypostasis or that a hand is a hypostasis, given that it is a part), whereas the addition of ‘individual’ excludes the notion of assumability from a person. For the human nature in Christ is not a person, since it has been assumed by a more dignified person, viz., the Word of God.

Nonetheless, a better reply is that in the definition ‘substance’ is being taken generically, insofar as it is divisible into *primary substance* and *secondary substance*, and that the addition of ‘individual’ restricts it to standing for a primary substance.

**Reply to objection 3:** Since substantial differences are not [always] known to us—or at least not named by us—it is sometimes necessary to use accidental differences in place of substantial ones. For instance, someone might say that fire is a simple hot and dry body. For proper accidents are the effects of substantial forms and reveal those forms. Similarly, the names of logical intentions can be used to define things insofar as these names are taken for certain unposited names of things. And so it is that the name ‘individual’ is used in the definition of ‘person’ to designate the mode of subsisting that belongs to particular substances.

**Reply to objection 4:** According to the Philosopher in *Metaphysics* 5, the name ‘nature’ (*natura*) is imposed in the first place to signify the generation of living things, which is called their nativity (*nativitas*). And since a generation of this sort comes from an intrinsic principle, the name ‘nature’ is extended to signify the intrinsic principle of any movement. And this is the way ‘nature’ is defined in *Physics* 2.

Since a principle of this sort is either formal or material, both matter and form are called ‘nature’ in general. And since the essence of each thing is completed through its form, the essence of each thing—which is what the thing’s definition signifies—is commonly called its nature. And this is the way in which ‘nature’ is being used in the present definition. Hence, in the same book Boethius says, “The nature is the specific difference informing each thing.” For the specific difference completes the definition and is taken from the thing’s proper form. And so in the definition of ‘person’, given that a person is a singular of a determinate genus, it was more appropriate to use the name ‘nature’ than the name ‘essence’, which is taken from ‘*esse*’ and is a more general term.

**Reply to objection 5:** A soul is a *part* of the human species, and so even if it is separated, it cannot be called an individual substance, i.e., a hypostasis or a primary substance, because it still retains the nature of a thing that can be united to something else—just as a hand, or any other part of a man, cannot be called an individual substance. And so neither the name ‘person’ nor its definition belongs to a separated soul.

## Article 2

### Is a person the same as a hypostasis, a subsistent, and an essence?

It seems that a person is the same as a hypostasis (*hypostasis*), a subsistent (*subsistentia*), and an essence (*essentia*):

**Objection 1:** In *De Duabus Naturis* Boethius says, “The Greeks called an individual substance with a rational nature by the name *hypostasis*.” But this is what the name ‘person’ likewise signifies for us. Therefore, a person is altogether the same as a hypostasis.

**Objection 2:** Just as we say that there are three persons in God, so too we say that there are three subsistents (*ita in divinis dicimus tres subsistentias*). But this would not be the case unless ‘person’ and ‘subsistent’ had the same signification. Therefore, ‘person’ and ‘subsistent’ have the same signification.

**Objection 3:** In commenting on the *Categories*, Boethius says that *ousia*, which is the same as ‘essence’ (*essentia*), signifies what is composed of matter and form. But that which is composed of matter and form is an individual substance and is also called a hypostasis and a person. Therefore, all these names seem to have the same signification.

**But contrary to this:**

1. In *De Duabus Naturis* Boethius says, “Genera and species only subsist, whereas individuals not only subsist (*subsistunt*) but also ‘stand under’ (*substant*).” But subsistents are so-called because of subsisting, just as substances or hypostases are so-called because of ‘standing under’. Therefore, since the *esse* of hypostases or persons does not belong to genera and species, hypostases or persons are not the same as subsistents.

2. In commenting on the *Categories*, Boethius says that the hypostasis is called ‘matter’, whereas the *ousia*, i.e., subsistent, is called ‘form’. But neither form nor matter can be called a person. Therefore, a person is different from a hypostasis and from a subsistent.

**I respond:** According to the Philosopher in *Metaphysics* 5, ‘substance’ is said in two ways:

In one sense, what is called a substance is a thing’s ‘what-ness’ (*quidditas*), which is signified by the definition. It is in this sense that we say that the definition signifies the ‘substance’ of a thing. Substance in this sense is what the Greeks call ‘*ousia*’ and what we can call the ‘essence’.

In the second sense, what is called a substance is a subject or suppositum which subsists in the category of substance. Substance in this sense, taken generally, can likewise be denominated by a name signifying a logical intention, and in this way it is called a ‘suppositum’ (*suppositum*). It is also named by three names that signify a real entity—viz., ‘thing with a nature’ (*res naturae*), ‘subsistent’ (*subsistentia*), and ‘hypostasis’. These names correspond to the three ways of considering a substance in this second sense:

(a) A substance is called a ‘subsistent’ insofar as it exists in its own right and not in another (*per se existit et non in alio*). For things that exist in themselves (*in se*) and not in another are said to subsist.

(b) A substance is called a ‘thing with a nature’ insofar as it underlies a common nature (*supponitur alicui naturae communi*). For instance, this man is a thing with a human nature.

(c) A substance is called a ‘hypostasis’ or a ‘substance’ insofar as it underlies its accidents (*supponitur accidentibus*).

Moreover, what these three names signify generally within the whole genus of substance, the name ‘person’ signifies within the genus of rational substances.

**Reply to objection 1:** By its proper signification the Greek name ‘*hypostasis*’ signifies any individual in the genus of substance. However, in common usage it is taken for an individual with a

rational nature, by reason of the excellence of such a nature.

**Reply to objection 2:** Just as we say that there are three *persons* and three *subsistents* in God, the Greeks say that there are three *hypostases*. But since the name ‘substance’ corresponds to ‘hypostasis’ according to its proper signification, there is an ambiguity among us. For sometimes ‘substance’ signifies the essence and sometimes a hypostasis. So to prevent a possible occasion of error, it was deemed preferable to use ‘subsistent’, rather than ‘substance’, for ‘hypostasis’.

**Reply to objection 3:** The essence is, properly speaking, what is signified by the definition. But the definition includes the principles of the species and not the individual principles. Hence, in the case of things composed of matter and form, ‘essence’ does not signify just the form or just the matter, but instead signifies that which is composed of the *common* form and the *common* matter, since these are the principles of the species.

However, that which is composed of *this* matter and *this* form has the nature of a hypostasis and a person. So, for instance, soul and flesh and bone belong to the nature of man, but *this* soul and *this* flesh and *this* bone belong to the nature of *this* man.

Thus, ‘hypostasis’ and ‘person’ add the individual principles to the concept of the essence, and they are not the same as the essence in things composed of matter and form. This was explained above, when we were discussing God’s simplicity (q. 3, a. 3).

**Reply to argument 1 for the contrary:** Boethius says that genera and species subsist (*subsistere*) in the sense that subsisting belongs to individuals by reason of the fact that they are included under genera and species in the category of substance, and not because the species or genera themselves subsist—except according to the opinion of Plato, who claimed that the species of things subsist separately from the singulars.

On the other hand, to ‘stand under’ (*substare*) belongs to the same individuals in relation to their accidents, which fall outside the nature of the genera and species.

**Reply to argument 2 for the contrary:** An individual composed of form and matter is such that its ‘standing under’ its accidents derives from its matter. This is why, in *De Trinitate*, Boethius himself says, “A simple form cannot be a subject.”

But the fact that an individual subsists *per se* derives from its form, which does not ‘come to’ a subsistent thing from the outside, but instead gives actual *esse* to the matter in order that the individual might be able to subsist.

It is for this reason that Boethius attributes ‘hypostasis’ to the matter and ‘*ousia*’ (or ‘subsistent’) to the form. For the matter is the principle of ‘standing under’, and the form is the principle of subsisting.

### Article 3

#### Should the name ‘person’ be used in the case of God?

It seems that the name ‘person’ should not be used in the case of God (*nomen personae non sit ponendum in divinis*):

**Objection 1:** At the beginning of *De Divinis Nominibus* Dionysius says, “In general one should not dare to say or think anything about the super-substantial and hidden divinity beyond those things which have been divinely expressed to us by the sacred declarations.” But the name ‘person’ is not expressed to us in the Sacred Scripture of either the Old Testament or the New Testament. Therefore, the name ‘person’ should not be used in the case of God.

**Objection 2:** In *De Duabus Naturis* Boethius says, “The name ‘person’ seems to derive from those

masks (*personae*) that were used to represent men in comedies and tragedies. For ‘person’ comes from ‘sounding through’ (*personare*), since a louder sound had to be shouted out through the cavity of the mask. Now the Greeks called these masks ‘*prosopa*’ from the fact that they are placed over (*pros*) the face (*ops*) and hide one’s visage from the onlookers.” But this cannot apply to the case of God except perhaps in accord with a metaphor. Therefore, the name ‘person’ is said of God only metaphorically.

**Objection 3:** Every person is a hypostasis. But as was explained above (a. 1), the name ‘hypostasis’ does not seem to belong to God, since, according to Boethius, it signifies that which is the subject of accidents, and there are no accidents in God. Likewise, Jerome says, “In the name ‘hypostasis’ poison lies hidden underneath the honey.” Therefore, the name ‘person’ should not be said of God.

**Objection 4:** If a definition is denied of something, then so is that which is defined. But the definition of ‘person’ formulated above (a. 1) does not seem to belong to God. For, first of all, ‘rational’ implies discursive cognition, which, as was shown above (q. 14, a. 7), does not belong to God—and so God cannot be said to have a rational nature. Again, God cannot be called an ‘individual’ substance, since the principle of individuation is matter, and God is immaterial. Again, He does not ‘stand under’ accidents, so that He might be called a ‘substance’. Therefore, the name ‘person’ should not be attributed to God.

**But contrary to this:** The Athanasian creed says, “The person of the Father, the person of the Son, and the person of the Holy Spirit are distinct from one another.”

**I respond:** ‘Person’ signifies that which is most perfect in all of nature, viz., that which subsists in a rational nature. Hence, since everything that involves perfection should be attributed to God—given that His essence contains within itself every perfection—it follows that the name ‘person’ is appropriately said of God.

However, it is not said of God in exactly the same way in which it is said of creatures; rather, it is said of God in a more excellent way—just like the other names which, having been imposed by us on creatures, are attributed to God. This was explained above when we were discussing the names of God (q. 13, a. 3).

**Reply to objection 1:** Even though the name ‘person’ is not said of God in the Scriptures of either the Old Testament or the New Testament, nonetheless, what the name signifies—viz., that God is maximally a *per se* being and utterly perfect in His understanding—is asserted of God in many places in Sacred Scripture.

Moreover, if it were necessary to predicate of God only those things that Sacred Scripture says word for word about God, it would follow that no one could ever speak about God in any language other than the languages in which the Scriptures of the Old Testament and the New Testament were originally written.

Again, the urgency of refuting the heretics necessitated finding new names to signify the ancient faith regarding God. Nor should this sort of novelty be avoided. For this is not a profane novelty that departs from the sense of the Scriptures; by contrast, it is *profane* novelties in terminology that the Apostle teaches us to avoid in 1 Timothy 6:20.

**Reply to objection 2:** Even though the name ‘person’ does not belong to God with respect to *that because of which* the name was imposed, nonetheless, it especially belongs to God with respect to *that which* the name is imposed to signify. For because famous men were being represented in the comedies and tragedies, the name ‘person’ was imposed to signify those who have dignity. Hence, in the churches it was customary to use the name ‘person’ for those who had some sort of dignity. For this reason, some define ‘person’ as follows: ‘A person is a hypostasis with a distinctive property pertaining to dignity’. Moreover, as has been explained (a. 1), it is because subsisting in a rational nature is a great dignity that every individual with a rational nature is called a person. But the dignity of God’s nature surpasses every

dignity, and, accordingly, the name ‘person’ belongs especially to God.

**Reply to objection 3:** The name ‘hypostasis’ does not belong to God with respect to that because of which the name was imposed, since God does not ‘stand under’ any accidents. However, the name does belong to Him with respect to the fact that it was imposed to signify a subsistent entity.

Now the reason why Jerome says that poison is hidden in this name is that before the signification of the name was fully known among the Latins, there were heretics deceiving simple people by using this name, with the result that the people were confessing belief in more than one essence by confessing belief in more than one hypostasis. This occurred because the name ‘substance’, which corresponds to the Greek ‘hypostasis’, is commonly taken among us for the essence.

**Reply to objection 4:** God can be said to have a rational nature insofar as ‘rational’ implies an intellectual nature in general—and not insofar as it implies discursive reasoning.

Again, ‘individual’ can belong to God not with respect to the fact that the principle of individuation is matter, but only with respect to the fact that ‘individual’ implies incommunicability.

Again, ‘substance’ is appropriately said of God insofar as it signifies that which exists *per se*.

Still, some claim that the definition formulated above by Boethius is not a definition of ‘person’ in the sense in which we say that there are persons in God. For this reason, Richard of St. Victor, wishing to correct this definition, claimed that ‘person’, as said of God, is “the incommunicable existence of the divine nature” (*est divinae naturae incommunicabilis existentia*).

#### Article 4

##### Does the name ‘person’ signify a relation in God?

It seems that the name ‘person’ signifies the substance, rather than a relation, in God (*nomen persona non significet relationem sed substantiam in divinis*):

**Objection 1:** In *De Trinitate* 7 Augustine says, “When we say ‘the person of the Father’, we are saying nothing other than ‘the substance of the Father’. Indeed, ‘person’ is said with respect to Him Himself, not with respect to the Son.”

**Objection 2:** The question ‘What is it?’ is a query about the essence. But as Augustine says in the same place, “There are three who give testimony in heaven—the Father, the Word, and the Holy Spirit. And someone asks, ‘Three what?’, and the reply is, ‘Three persons’.” Therefore, the name ‘person’ signifies the essence.

**Objection 3:** According to the Philosopher in *Metaphysics* 4, the definition of a name is what is signified by the name. But the definition of ‘person’ is ‘an individual substance with a rational nature’. Therefore, the name ‘person’ signifies the substance.

**Objection 4:** In the case of men and angels, the name ‘person’ signifies something absolute and not a relation. Therefore, if it signified a relation in God, then ‘person’ would be predicated equivocally of God and men and angels.

**But contrary to this:** In *De Trinitate* Boethius says that every name pertaining to the persons signifies a relation. But no name pertains more to the persons than the name ‘person’. Therefore, the name ‘person’ signifies a relation.

**I respond:** The signification of the name ‘person’ presents a difficulty because (a) the name is predicated of the three in the plural, in contrast to the nature of the names belonging to the essence, and also because (b) it is not predicated relationally in the way that names signifying a relation are.

Hence, it has seemed to some that, absolutely speaking and by force of the word itself, the name

‘person’ signifies the essence in God—just like the name ‘God’ and the name ‘wise’ do—but that because of the threat posed by heretics, the name has been adapted by conciliar decree in such a way that it can be used for the relations. And it is used mainly either in the plural, as when we say ‘three persons’, or with a partitive name, as when we say ‘The person of the Father is distinct from the person of the Son’. On the other hand, in the singular it can be used both for something absolute and for a relation.

However, this line of reasoning does not seem adequate. For if, by force of its own signification, the name ‘person’ were such that it signifies only God’s essence, then the misrepresentations of the heretics would not have been put to rest by the decree that there are three persons; indeed, the heretics would have been presented with an occasion for even greater misrepresentations.

For this reason, others have claimed that the name ‘person’, as used of God, signifies both the essence and a relation together.

Some of them have asserted that it signifies the essence directly (*in recto*) and a relation indirectly (*in obliquo*). For a person is said to be, as it were, one *per se*, and oneness pertains to the essence; on the other hand, what is said *per se* implies a relation indirectly, since the Father is understood to exist *per se* in the sense of being relationally distinct from the Son (*quasi relatione distinctus a filio*).

By contrast, others have claimed just the opposite, viz., that ‘person’ directly signifies a relation and indirectly signifies the essence. For ‘nature’ is used in an oblique grammatical case in the definition of ‘person’. And this claim is closer to the truth.

To understand the matter clearly, notice that what is less general in a given signification is not contained in what is more general in that signification. For instance, *rational* is included in the signification of ‘man’, but it is not part of the signification of ‘animal’. Hence, it is one thing to ask about the signification of ‘animal’ and another to ask about the signification of ‘animal which is a man’. Similarly, it is one thing to ask about the signification of ‘person’ in general and another to ask about the signification of ‘divine person’. For ‘person’ in general signifies an individual substance with a rational nature, as has been explained (a. 1). But an individual is that which is undivided in itself and distinct from others. Therefore, ‘person of such-and-such a nature’ signifies that which is distinctive in that nature; for instance, ‘person of a human nature’ signifies *this* flesh and *these* bones and *this* soul, which are the principles that individuate a man. These principles, even though they are not part of the signification of ‘person’, are nonetheless part of the signification of ‘human person’.

Now, as was explained above (q. 28, a. 3), the distinctions in God arise only from the relations of origin. However, a relation in God does not exist as an accident inhering in a subject, but is instead the divine essence itself, and thus it subsists in just the way that the divine essence subsists. Therefore, just as the divine essence (*deitas*) is God, so too the divine Paternity is God the Father, who is a divine person. Therefore, ‘divine person’ signifies a relation as subsistent. And this is just to signify, in the manner of a substance, a relation which is a hypostasis subsisting in the divine nature—though what subsists in the divine nature is not different from the divine nature itself.

In this sense it is true that the name ‘person’ signifies a relation directly and the essence indirectly (*nomen persona significat relationem in recto, et essentiam in obliquo*). However, it does not directly signify a relation insofar as it is a relation, but rather signifies a relation in the manner of a hypostasis. Likewise, it also signifies the essence directly and a relation indirectly, insofar as the essence is the same as a hypostasis (*etiam significat essentiam in recto, et relationem in obliquo*). However, a hypostasis is signified in God by a distinctive relation, and so a relation, signified in the manner of a relation, falls under the concept of a person indirectly.

Thus, it can also be said that this signification of the name ‘person’ was not perceived prior to the misrepresentations of the heretics, and hence at that prior time the name ‘person’ in this sense was not in use except as one among other absolute names. But afterwards this name was adapted to stand for a relation—though congruently with its signification, viz., in the sense that its standing for a relation does

not derive solely from [this new] usage, as the first opinion claimed, but derives also from its own signification.

**Reply to objection 1:** The name 'person' is predicated with respect to itself and not with respect to another. For it signifies a relation not in the manner of a relation, but in the manner of a substance that is a hypostasis. And this is the sense in which Augustine claims that it signifies the essence, since in God the hypostasis is the same as the essence. For in God *that which is* does not differ from *that by which it is*.

**Reply to objection 2:** The question 'What is it?' is sometimes a query about the nature that is signified by the definition, as when one asks, 'What is a man?'. And the response is, 'A mortal rational animal'.

On the other hand, 'What is it?' is sometimes a query about the suppositum, as when one asks, 'What is that swimming in the sea?' And the answer is, 'A fish'. And it is in this sense that 'Three persons' is the response to those who ask, 'Three what?'.

**Reply to objection 3:** As has been explained, in the case of God a relation is what is understood by the concept of an individual (i.e., distinctive or incommunicable) substance.

**Reply to objection 4:** A different concept of something less general does not create an equivocation in the more general concept. For even though the proper definition of a horse is different from the proper definition of a donkey, the name 'animal' is still used univocally for both a horse and a donkey, since the general definition of 'animal' belongs to both. Hence, it does not follow that the name 'person' is being used equivocally, even though it is the case that 'relation' is contained in the signification of 'divine person', whereas it is not contained in the signification of 'angelic person' or 'human person'.

On the other hand, the name 'person' is not used univocally of God and angels and men, either; for as was shown above (q. 13, a. 5), nothing can be predicated univocally of God and creatures.

## QUESTION 30

### The Plurality of Persons in God

Next we ask about the plurality of persons in God.

On the first topic there are four questions: (1) Is there a plurality of persons in God? (2) How many persons are there in God? (3) What do numerical terms signify in the case of God? (4) Is the name 'person' common to the three persons?

#### Article 1

##### Is there a plurality of persons in God?

It seems that one should not posit a plurality of persons in God:

**Objection 1:** A person is an individual substance with a rational nature. Therefore, if there are a plurality of persons in God, it follows that there are a plurality of substances—which seems heretical.

**Objection 2:** A plurality of absolute properties does not make for a distinction among persons, either in God or in us. Therefore, *a fortiori*, a plurality of relations does not do this, either. But, as was explained above (q. 28, a. 3), in God there is no plurality other than a plurality of relations. Therefore, one cannot claim that there is a plurality of persons in God.

**Objection 3:** In speaking about God, Boethius says that what is truly one is such that there is no number in it. But plurality implies number. Therefore, there is no plurality of persons in God.

**Objection 4:** Wherever there is number, there are parts and a whole. Therefore, if there are a number of persons in God, then it will be necessary to posit parts and a whole in God. But this is incompatible with God's simplicity.

**But contrary to this:** The Athanasian creed says, "The person of the Father, the person of the Son, and the person of the Holy Spirit are distinct from one another." Therefore, the Father and the Son and the Holy Spirit are a plurality of persons.

**I respond:** From what has already been said it follows that there is a plurality of persons in God. For it was shown above (q. 29, a. 4) that in the case of God the name 'person' signifies a relation as a reality subsisting in the divine nature. But prior to that (q. 28, aa. 1 and 3 and 4) it was shown that there is a plurality of real relations in God. Hence, it follows that there is a plurality of realities subsisting in the divine nature. And this is what it is for there to be a plurality of persons in God.

**Reply to objection 1:** 'Substance' is used in the definition of 'person' not to signify an *essence*, but rather to signify a *suppositum*. This is clear from the fact that 'individual' is added to 'substance'. Now to signify the substance taken in this sense, the Greeks have the name '*hypostasis*', so that just as we say that there are three persons, so they say that there are three hypostases. But because of the ambiguity of the name 'substance', our custom has been not to say 'three substances', lest this be understood to mean 'three essences'.

**Reply to objection 2:** In God the absolute properties, e.g., goodness and wisdom, are not opposed to one another and are not distinct in reality from one another. Therefore, even though they subsist, they are nonetheless not a plurality of subsisting realities—which is what it is for there to be a plurality of persons.

Now in the case of created things, the absolute properties, e.g., whiteness and sweetness, do not subsist, though they are distinct in reality from one another. By contrast, as was explained above (q. 28, a. 3 and q. 29, a. 4), the relational properties in God (*proprietas relativae in Deo*) are both (a) such that they subsist and (b) such that they are distinct in reality from one another. Hence, the plurality of such properties is sufficient for a plurality of persons in God.

**Reply to objection 3:** Every plurality of things predicated absolutely is excluded from God because of His utter oneness and simplicity, but not every plurality of relations is excluded. For relations are predicated of a thing with respect to something else, and so, as Boethius teaches in the same book, they do not imply composition in that of which they are predicated.

**Reply to objection 4:** There are two types of numbers, viz., (a) simple or absolute numbers, e.g., *two* and *three* and *four*, and (b) numbers which exist in the things that are numbered, e.g., *two men* and *two horses*.

Thus, if in the case of God number is taken absolutely, i.e., abstractly, then nothing prevents there being whole and part in Him, and in this sense they exist only in our intellect's understanding (*sic non est nisi in acceptione intellectus nostri*). For an absolute number, abstracted from the things that are numbered, exists only in the intellect.

On the other hand, if we take number as it exists in the things that are numbered, then in the case of created things *one* is a part of *two*, and *two* is a part of *three*, since *one man* is a part of *two men* and *two men* are a part of *three men*. But this is not the way it is in the case of God, since, as will be explained below (q. 42, a. 4), the Father is as great as the whole Trinity.

## Article 2

### Are there more than three persons in God?

It seems that there are more than three persons in God:

**Objection 1:** As has been explained (a. 1), the plurality of persons in God stems from the plurality of relational properties. But as was explained above (q. 28, a. 4), there are four relations in God, viz., the Paternity, the Filiation, the Common Spiration, and the Procession. Therefore, there are four persons in God.

**Objection 2:** In God the nature differs from the will no more than the nature differs from the intellect. But in God the person who proceeds as the Love in the manner of an act of will (*per modum voluntatis ut amor*) differs from the person who proceeds as the Son in the manner of a nature (*per modum naturae ut filius*). Therefore, it is likewise the case that the person who proceeds as the Word in the manner of an act of intellect (*per modum intellectus ut verbum*) differs from the person who proceeds as the Son in the manner of a nature. And so once again it follows that there are not just three persons in God.

**Objection 3:** Among created things, that which is more excellent has a greater number of intrinsic operations. For instance, beyond the other animals, man has intellectual understanding and willing. But God infinitely surpasses every creature. Therefore, in God persons proceed not only by way of the will and the intellect, but in infinitely many other ways. Therefore, there are infinitely many persons in God.

**Objection 4:** It is because of the infinite goodness of the Father that He communicates Himself in an infinite way by producing a divine person. But the Holy Spirit likewise has infinite goodness. Therefore, the Holy Spirit produces a divine person, and that person produces another, and so on *ad infinitum*.

**Objection 5:** Anything contained within a determinate number is measured, since number is a certain sort of measure. But as is clear from the Athanasian creed ("The Father is unmeasured (*immensus*), the Son is unmeasured, the Holy Spirit is unmeasured"), the divine persons are unmeasured. Therefore, they are not contained within the number three.

**But contrary to this:** 1 John 5:7 says, "There are three who give testimony in heaven: the Father,

the Word, and the Holy Spirit.” But as Augustine says in *De Trinitate* 7, to those who ask ‘Three what?’, the answer is ‘Three persons’. Therefore, there are just three persons in God.

**I respond:** Given what has already been said, one must claim that there are just three persons in God. For it has been shown (a. 1) that the plurality of persons is a plurality of subsistent relations that are distinct in reality from one another.

Now the real distinction among the divine relations consists of nothing other than relational opposition. Therefore, two opposed relations must belong to two persons, while if certain relations are not opposed to one another, then they must belong to the same person.

Thus, since the Paternity and the Filiation are opposed relations, they must belong to two persons. Therefore, the subsistent Paternity is the person of the Father, and the subsistent Filiation is the person of the Son. Now the other two relations, [viz., the Spiration and the Procession], are not opposed either to the Paternity or to the Filiation, but are instead opposed to one another. Therefore, they cannot both belong to a single person. So it must be the case either that (a) one of them belongs to both the Father and the Son or that (b) one of them belongs to the Father and the other to the Son. But it is impossible for the Procession to belong to both the Father and the Son or to either one of them, since in that case it would follow that the intellectual procession, which is the generation in God and from which the Paternity and the Filiation stem, would itself come from the procession of the Love, from which the Spiration and Procession stem—if, that is, the generating person and the generated person proceeded from the spirating person, which is contrary to what has already been said (q. 27, a. 3). It follows, then, that it is the Spiration that belongs to both the person of the Father and the person of the Son, since it has no relational opposition either to the Paternity or to the Filiation. As a result, the Procession must belong to the other person, who is called the person of the Holy Spirit and proceeds in the manner of love, as was explained above (q. 27, a. 4).

Therefore, it follows that there are just three persons in God, viz., the Father and the Son and the Holy Spirit.

**Reply to objection 1:** Even though there are four relations in God, one of them, viz., the Spiration, is not separate from the person of the Father and the person of the Son, but instead belongs to both of them. And so, even though the Spiration is a relation, nonetheless, (a) it is not called a *property*, since it does not belong to just a single person and (b) it is not a *personal relation*, i.e., a relation that constitutes a person. By contrast, the other three relations, viz., the Paternity, the Filiation, and the Procession, are called *personal properties* in the sense that they constitute persons. For the Paternity is the person of the Father, the Filiation is the person of the Son, and the Procession is the person of the Holy Spirit, who proceeds [from the Father and the Son].

**Reply to objection 2:** That which proceeds as the Word in the manner of an act of intellect proceeds by way of a likeness, just as that which proceeds in the manner of a nature does. This is why it was claimed above (q. 27, a. 2 and q. 28, a. 4) that the procession of the divine Word is itself a generation in the manner of a nature.

By contrast, the Love as such does not proceed as a likeness of that from which it proceeds (even though in God the Love is co-essential insofar as He is divine). This is why the procession of the Love is not called a generation in God.

**Reply to objection 3:** Insofar as he is more perfect than the other animals, man has a greater number of intrinsic operations than do the other animals, because his perfection is in the mode of composition. Hence, in the angels, who are more perfect and more simple, there are fewer intrinsic operations than there are in man, since the angels do not have imagination, sensation, etc. But in God, according to reality, there is just a single operation, which is His essence. (The way in which there are nonetheless two processions was explained above (q. 27, a. 3 and 5).)

**Reply to objection 4:** This argument reasons as follows: If the Holy Spirit had a goodness which is numerically distinct from the Father's goodness, then just as the Father produces a divine person through His own goodness, so too the Holy Spirit would produce a divine person through His own goodness.

However, the Father's goodness is one and the same goodness as the Holy Spirit's goodness, and there is a distinction only because of the relations among the persons. For the goodness belongs to the Holy Spirit as derived from another, whereas it belongs to the Father as the one by whom it is communicated to another.

Moreover, the relational opposition does not permit there to be a principle with respect to another divine person together with the Holy Spirit's relation. For the Holy Spirit Himself proceeds *from* the other persons who are able to exist in God.

**Reply to objection 5:** If a determinate number is taken as a simple number, i.e., as a number that exists only in the intellect's understanding, then it is measured by the number *one*. However, if it is taken as the number of realities among the divine persons, then the notion of something's being measured has no place there. For as will be shown below (q. 42, a. 1 and 4), the greatness of the three persons is the same, and it is not the case that what is the same is measured by what is the same.

### Article 3

#### Do numerical terms posit some reality in God?

It seems that numerical terms posit some reality in God:

**Objection 1:** God's oneness (*unitas divina*) is His essence. But every number is just a repeated oneness (*unitas repetita*). Therefore, in the case of God every numerical term signifies the essence. Therefore, it posits some reality in God.

**Objection 2:** Whatever is predicated of both God and creatures belongs to God in a more eminent way than it does to creatures. But numerical terms posit some reality in creatures. Therefore, *a fortiori*, they do so in God as well.

**Objection 3:** If numerical terms do not posit any reality in God but are instead used only to deny something of Him, with the result that oneness is denied by 'plurality' and plurality is denied by 'oneness', then it follows that the reasoning has a circularity that confounds the intellect and establishes nothing. But this is unacceptable. Therefore, it follows that numerical terms posit some reality in God.

**But contrary to this:** In *De Trinitate* 4 Hilary says, "The profession of a fellowship (*consortium*) [*read*: the profession of plurality] excludes the idea of singularity and aloneness (*solitudo*)." And in *De Fide* Ambrose says, "When we say 'one God', this oneness does not posit quantity in God, but instead excludes a plurality of gods." On the basis of these passages it seems that names of this sort are used to deny things of God and not to posit any reality.

**I respond:** In the *Sentences* the Master claims that numerical terms do not posit any reality in God, but only deny something of God. Others, however, hold the contrary position.

To see this matter clearly, notice that every plurality follows upon some sort of division. Now there are two kinds of division:

(a) One kind is *material* division and is effected by dividing a continuous thing. And the number that follows upon this kind of division is a species of quantity. Hence, this sort of number exists only in material things that have quantity.

(b) The second kind is *formal* division, which is effected through opposites or through diverse

forms. And the multitude that follows upon this kind of division is not found in any genus, but is instead a transcendental that derives from the division of *being* into *one* and *many*. This is the only sort of multitude that can exist among immaterial things.

Now some writers, focusing just on the *many* that is a species of discrete quantity and realizing that discrete quantity has no place in God, have claimed that numerical terms do not posit any reality in God, but instead only deny something of God. However, others, focusing on the same sort of *many*, have claimed that just as knowledge is posited in God according to the proper concept of knowledge but not according to the concept of its genus (for there are no qualities in God), so too number is posited in God according to the proper concept of number but not according to the concept of its genus, which is quantity.

However, we ourselves claim that to the extent that numerical terms enter into divine predication, they are not taken from the number which is a species of quantity—otherwise, they would be predicated of God only metaphorically, as are other properties of corporeal things, such as breadth, length, etc. Instead, they are taken from *many* insofar as it is a transcendental. But *many*, taken in this sense, is related to the many things of which it is predicated in the same way that *one*, taken as convertible with *being*, is related to a being. For as was explained above when we were discussing God's oneness (q. 11, a. 1), *one* in this sense adds to *being* only the negation of division, since *one* signifies undivided being. And so anything of which *one* is predicated is such that it is signified as an undivided entity. For instance, *one* as predicated of a man signifies the undivided nature or substance of the man. For the same reason, when things are called 'many', *many* taken in this sense signifies those things along with a negation of division with respect to each of them.

By contrast, the number which is a species of quantity posits an accident added to a being, and so does the *one* which is a principle of number.

Therefore, as has been explained, in the case of God numerical terms signify those things of which they are said and, beyond this, add nothing except a negation. On this score, what the Master said in the *Sentences* was true. Thus, when we say 'The essence is one', 'one' signifies the undivided essence. When we say 'The person is one', 'one' signifies the undivided person. When we say 'The persons are many', the persons are signified, along with a negation of division with respect to each one of them; for it is part of the nature of the many that it is made up of ones.

**Reply to objection 1:** *One*, taken as a transcendental, is common (a) to a substance and (b) to a relation and, likewise, (c) to the many. Hence, in the case of God 'one' can stand for either the substance or a relation, depending on what it is joined to. Yet, as has been explained, by their proper signification names of this sort add, over and beyond the essence or relation, a certain negation of division.

**Reply to objection 2:** Insofar as *many* posits some reality in created things, it is a species of quantity and does not carry over into divine predication. Instead, it is only the transcendental *many* that carries over, and it adds nothing to the things of which it is predicated except a negation of division with respect to each of the singulars. This is the *many* that is predicated of God.

**Reply to objection 3:** *One* is a negation not of *many*, but of *division*, which is conceptually prior to both *one* and *many*. *Many* does not deny oneness, but instead denies division with respect to each of the things that make up the many. This was explained above when we were discussing God's oneness (q. 11, a. 2).

**Reply to argument for the contrary:** Notice that the passages adduced for the contrary position are not sufficient to prove that position. For even though (a) aloneness is excluded by the plurality and (b) a plurality of gods is excluded by the oneness, still, it does not follow that this is the only thing signified by the names 'one' and 'many'. By way of example, blackness is excluded by whiteness, but the exclusion of blackness is not the only thing signified by the name 'whiteness'.

#### Article 4

##### Can the name ‘person’ be common to the three persons?

It seems that the name ‘person’ cannot be common to the three persons:

**Objection 1:** Nothing except the essence is common to the three persons. But the name ‘person’ does not directly signify the essence. Therefore, it is not common to the three persons.

**Objection 2:** ‘Common’ is opposed to ‘incommunicable’. But it is part of the concept of a person that a person is incommunicable, as is clear from the definition of Richard of St. Victor cited above (q. 29, a. 3). Therefore, the name ‘person’ is not common to the three persons.

**Objection 3:** If ‘person’ is common to the three persons, then this commonality is either real or conceptual. But it is not real, since if it were, then the three persons would be one person. Nor, again, is it merely conceptual, since if it were, then *person* would be a universal, whereas in God, as was shown above (q. 3, a. 5), there is no universal and particular or genus and species. Therefore, the name ‘person’ is not common to the three persons.

**But contrary to this:** In *De Trinitate* 7 Augustine says that when someone asks ‘Three what?’, the answer is ‘Three persons’. For being a person is common to them (*commune est eis id quod est persona*).

**I respond:** When we say ‘three persons’, our very way of speaking shows that the name ‘person’ is common to the three of them—just as when we say ‘three men’, we show that ‘man’ is common to the three of them. But it is clear that there is no real commonality in the latter case, in the way in which the one essence is common to the three persons. For if there were a real commonality, then it would follow that the person of the three is one in just the way that the essence is one.

However, those investigating this matter have talked in different ways about just what this commonality amounts to. Some have claimed that it is a commonality of *negation*, because ‘incommunicable’ occurs in the definition of ‘person’. Others have claimed that it is a commonality of *logical intention* (*intentio*), because ‘individual’ occurs in the definition of ‘person’—just as one might claim that being a species is common to *horse* and *ox*. But both of these claims are ruled out by the fact that the name ‘person’ is the name of a reality and not the name of a negation or the name of a logical intention.

So one should say that even in the case of human beings the name ‘person’ is common by a commonality of concept—not as a genus or species, but rather as a *vague individual*. For the names of genera and species, e.g., *animal* or *man*, are imposed to signify the common natures themselves and not the logical intentions of the common natures; the latter are signified by the names ‘genus’ and ‘species’. On the other hand, a vague individual such as ‘a man’ (*aliquis homo*) signifies the common nature along with the determinate mode of existing that belongs to a singular thing, viz., its subsisting *per se* as something distinct from other singulars. By contrast, the name of a *designated singular thing* signifies the determinate distinguishing factor, in the way that *this* flesh and *this* bone are signified in the name ‘Socrates’.

Now the difference between them is that ‘a man’ signifies a nature, i.e., what is individual on the part of the nature (*aliquis homo significat naturam vel individuum ex parte naturae*), along with the mode of existing that belongs to singular things, whereas the name ‘person’ is imposed not to signify what is individual on the part of the nature, but rather to signify a reality that subsists in such-and-such a nature (*ad significandum rem subsistentem in tali natura*). But this latter is conceptually common to all of the divine persons, since each of them subsists in the divine nature as distinct from the others. And so the name ‘person’ is conceptually common to all three divine persons.

**Reply to objection 1:** This argument has do with a real commonality.

**Reply to objection 2:** Even though a person is incommunicable, the very mode of existing in an incommunicable way can itself be common to many.

**Reply to objection 3:** Even though the commonality is conceptual and not real, it does not follow that there is universal and particular or genus and species in God. For, first of all, even among human beings the commonality of personhood is not a commonality of genus or species. Second, the divine persons have a single *esse*, whereas a genus or a species—or any universal whatever—is predicated of many things that differ in *esse*.

## QUESTION 31

### Things Pertaining to the Oneness or to the Plurality in God

Next we have to inquire about the things that pertain to the oneness or to the plurality in God.

On this topic there are four questions: (1) What does the name ‘Trinity’ signify? (2) Can one say that the Son is other than the Father? (3) Can the exclusive expression [‘alone’], which seems to exclude others, be used to modify a name pertaining to God’s essence (*possit adiungi nomini essentiali in divinis*)? (4) Can the exclusive expression be used to modify a term pertaining to a divine person (*possit adiungi termino personali*)?

#### Article 1

#### Is there a Trinity in God?

It seems that there is not a Trinity in God:

**Objection 1:** In the case of God, every name signifies either the substance or a relation. But the name ‘Trinity’ does not signify the substance, since in that case it would be predicated of the individual persons. Nor does it signify a relation, since it is not a name that is predicated with respect to another. Therefore, the name ‘Trinity’ should not be used in the case of God.

**Objection 2:** The name ‘Trinity’ seems to be a collective name, since it signifies a multitude. But such a name is inappropriate in the case of God, since the oneness implied by a collective name is a minimal oneness, whereas in God there is maximal oneness. Therefore, the name ‘Trinity’ does not belong to God.

**Objection 3:** Every group of three is a triplet. But in God there is no tripleness (*triplicitas*), since tripleness is a species of inequality. Therefore, there is no Trinity in God.

**Objection 4:** Whatever exists in God exists in the oneness of the divine essence, since God is His essence. Therefore, if there is a Trinity in God, it will exist in the oneness of the divine essence. And so in God there will be three essential onenesses—which is heretical.

**Objection 5:** In everything said of God, the concrete term is predicated of the corresponding abstract term. For instance, the divinity (*deitas*) is God, and the Paternity is the Father. But the Trinity cannot be said to be three, since if it were, then there would be nine realities in God—which is erroneous. Therefore, the name ‘Trinity’ should not be used in the case of God.

**But contrary to this:** The Athanasian creed says, “Oneness in Trinity and Trinity in Oneness is to be revered.”

**I respond:** In the case of God, the name ‘Trinity’ signifies a determinate number of persons. So given that a plurality of persons is posited in God, one should use the name ‘Trinity’, since this name signifies determinately the same thing that ‘plurality’ signifies indeterminately.

**Reply to objection 1:** According to the etymology of the word, the name ‘Trinity’ seems to signify the single essence of the three persons. For a trinity (*trinitas*) is, as it were, the oneness of three (*trium unitas*). However, according to the proper meaning of the word, it signifies instead the number of persons with a single essence. Because of this, we cannot say that the Father is the Trinity; for He is not three persons.

Moreover, ‘Trinity’ does not signify the relations that belong to the persons; rather, it signifies the number of persons who are related to one another. For this reason, the name does not itself make reference to another.

**Reply to objection 2:** A collective name implies two things, viz., (a) a plurality of supposita and (b) a oneness with respect to some ordering. For instance, a people is a multitude of men collected under

some ordering. On the first point, the name ‘Trinity’ is consistent with other collective names. However, it differs on the second point, since in the divine Trinity there is not only a oneness with respect to an ordering but, along with this, a oneness of essence as well.

**Reply to objection 3:** ‘Trinity’ is predicated absolutely [and not relationally], since it signifies the number of persons, viz., three. But as is clear from Boethius in the *Arithmetica*, the term ‘tripleness’ signifies a proportion of inequality, since it is a species of unequal proportion. And so in God there is a trinity, but no tripleness.

**Reply to objection 4:** ‘Divine Trinity’ conveys both the number and the persons who are numbered. Therefore, when we say ‘Trinity in Oneness’, we are not positing a number in the oneness of the essence, as if the one essence were being taken three times. Rather, we are positing the numbered persons in the oneness of the nature, in the sense in which the supposita of a given nature are said to exist ‘in’ that nature. By contrast, we say ‘Oneness in Trinity’ in the sense in which a nature is said to exist ‘in’ its supposita.

**Reply to objection 5:** When one says, ‘The Trinity is three’, what is signified, because of the number implied [in ‘Trinity’], is the multiplication of the same number by itself. For when I say ‘three’, it implies a distinction within each of the supposita that belongs to what ‘three’ is predicated of. And so one cannot say that the Trinity is three, since if the Trinity were three, then it would follow that there are three supposita that are Trinities. In the same way, when one says ‘God is three’, it follows that there are three supposita that are divinities (*deitates*).

## Article 2

### Is the Son other than the Father?

It seems that the Son is not other than the Father (*filius non sit alius a patre*):

**Objection 1:** ‘Other’ is a relational term indicating a diversity of substance. Therefore, if the Son is other than the Father, then it seems that He is diverse from the Father. But this is contrary to Augustine in *De Trinitate* 7, where he claims that when we say ‘three persons’, we do not intend to imply a diversity.

**Objection 2:** If two things are ‘other’ than one another, then they differ from one another in some way. Therefore, if the Son is other than the Father, then it follows that He differs from the Father. But this is contrary to Ambrose in *De Fide* 1, where he says, “The Father and the Son are one in divinity (*deitas*); nor is there a difference of substance or any other sort of diversity.”

**Objection 3:** ‘Alien’ (*alienum*) comes from ‘other’ (*aliud*). But the Son is not alien to the Father; for in *De Trinitate* 7 Hilary says that among the divine persons nothing is diverse, nothing is alien, and nothing is separable. Therefore, the Son is not other than the Father.

**Objection 4:** ‘Other [person]’ (*alius*) and ‘other [thing]’ (*aliud*) signify the same thing and differ only in their co-signification of grammatical gender. Therefore, if the Son is a person other (*alius*) than the Father, it seems to follow that He is a thing other (*aliud*) than the Father.

**But contrary to this:** In *De Fide ad Petrum* Augustine says, “The essence of the Father and the Son and the Holy Spirit is one, and in that essence it is not the case that the Father is one [thing] (*aliud*) and the Son another [thing] (*aliud*) and the Holy Spirit yet another [thing] (*aliud*)—even though, speaking of the persons, the Father is one [person] (*alius*) and the Son is another [person] (*alius*) and the Holy Spirit is yet another [person] (*alius*).”

**I respond:** Since, as Jerome puts it, heresy arises from words that are used incorrectly, it follows

that when we speak of the Trinity, we must proceed with caution and moderation. For as Augustine says in *De Trinitate* 1, “There is no other place where error is more dangerous, where questions are asked more rigorously, or where anything more fruitful is found.”

In what we say about the Trinity, there are two opposed errors we must avoid by steering carefully between them, viz., (a) the error of Arius, who claimed that there is a trinity of substances along with the trinity of persons, and (b) the error of Sabellius, who claimed that there is a oneness of person along with the oneness of essence.

Now to escape the error of Arius, we should avoid the name ‘diverse’ (*nomen diversitatis*) and the name ‘different’ (*nomen differentiae*) in speaking of God, so as not to deny the oneness of the essence. We can, however, use the name ‘distinct’ (*nomen distinctionis*) because of the relational oppositions. Hence, wherever we find ‘diverse’ or ‘different’ applied to the persons in some authoritative text, ‘diverse’ or ‘different’ is being used for ‘distinct’. Again, so as not to deny the simplicity of God’s essence, we should avoid the name ‘separate’ (*nomen separationis*) and the name ‘divided’ (*nomen divisionis*), which suggest the parts in a whole. Again, so as not to deny the equality of the persons, we should avoid the name ‘disparate’ (*nomen disparitatis*). Again, so as not to deny the similarity of the persons, we should avoid the names ‘alien’ (*alienus*) and ‘discrepant’ (*discrepans*). For in *De Fide* Ambrose says that there is no discrepancy between the Father and the Son, but a single divinity. And according to Hilary, as quoted above, in God there is nothing alien and nothing separable.

On the other hand, to escape the error of Sabellius, we should avoid the name ‘singular’ (*singularitas*), so as not to deny the communicability of the divine essence. Thus, in *De Trinitate* 7 Hilary says, “It is a sacrilege to say that the Father or the Son is the singular God.” We should also avoid the name ‘unique’ (*unicus*), so as not to deny the number of persons. Hence, in the same book Hilary says that the meanings of ‘singular’ and ‘unique’ are excluded from God. Still, we say ‘the unique Son’, since there are not many Sons in God. Yet we do not say ‘the unique God’, since the divinity (*deitas*) is common to a plurality. We should also avoid the name ‘mixed together’ (*confusus*), lest the ordering of the nature be denied of the persons. Thus, in *De Fide* 1 Ambrose says, “What is one is not mixed together, nor can what is indifferent be multiple.” Again, we should avoid the name ‘solitary’ (*solitarius*), so as not to deny the fellowship of the three persons. For in *De Trinitate* 4 Hilary says, “We must confess that God is neither solitary nor diverse.”

Now the name ‘other [person]’ (*alius*), taken in the masculine, implies only a distinction of suppositum. Hence, it is appropriate for us to say that the Son is other (*alius*) than the Father. For He is another suppositum of the divine nature, just as He is another person and another hypostasis.

**Reply to objection 1:** Since ‘other’ (*alius*) is a particular name, it has to do with the suppositum, and so a distinction of substance, in the sense of hypostasis or person, is sufficient for its meaning. By contrast, diversity requires a distinction of substance in the sense of essence. And so we cannot say that the Son is diverse from the Father, even though He is other than the Father.

**Reply to objection 2:** Difference (*differentia*) implies a distinction among forms. But there is just one form in God, as is clear from Philippians 2:6 (“Who being in the form of God . . .”). And so the name ‘differing’ (*nomen differentis*) does not properly belong to ‘God’, as is clear from the adduced passage.

Still, Damascene uses the name ‘different’ (*nomen differentiae*) in speaking of the divine persons, insofar as a relational property is signified in the manner of a form. Hence, he says that the hypostases differ from one another not according to substance, but according to determinate properties. However, as has been explained, ‘different’ is being used here for ‘distinct’.

**Reply to objection 3:** What is alien is extraneous and dissimilar. But this is not what is implied by ‘other’. And so we say that the Son is other than the Father, even though we do not say that the Son is alien from the Father.

**Reply to objection 4:** The neuter (*aliud*) is indeterminate (*informe*), whereas the masculine (*alius*), and likewise the feminine (*alia*), are determinate and distinct. And so it is appropriate that the common essence should be signified by the neuter (*aliud*), while a determinate suppositum in a common nature is signified by the masculine (*alius*) and the feminine (*alia*). Hence, even in human affairs, if someone asks ‘Who is he?’, the answer is ‘Socrates’, which is the name of a suppositum. On the other hand, if someone asks ‘What is he?’, the answer is ‘A rational and mortal animal’.

And so since in God the distinction is according to the persons and not according to the essence, we say that the Father is [a person] other (*alius*) than the Son, but not that He is [a thing] other (*aliud*) than the Son. Conversely, we say that the Father and the Son are one [essence] (*unum*), but not that they are one [person] (*unus*).

### Article 3

#### Can the exclusive expression ‘alone’ be used to modify a term pertaining to God’s essence?

It seems that the exclusive expression ‘alone’ (*dictio exclusiva solus*) should not be used to modify a term pertaining to God’s essence (*non sit addenda termino essentiali in divinis*):

**Objection 1:** According to the Philosopher in *Sophistical Refutations* 2, “He is alone who is not with another.” But God is with the angels and the souls of the blessed. Therefore, we cannot say that God is alone.

**Objection 2:** Whatever modifies a term pertaining to God’s essence can be predicated of each of the persons *per se* and of all of them together. For instance, since it is appropriate to say ‘wise God’, we can also say ‘The Father is a wise God’ and ‘The Trinity is a wise God’. But in *De Trinitate* 6 Augustine says, “We should give heed to the position that says that it is not the case that the Father is true God alone.” Therefore, one cannot say ‘God alone’.

**Objection 3:** If the expression ‘alone’ modifies a subject term pertaining to the essence, then the predicate will pertain either to a person or to the essence. But it does not pertain to a person, since ‘God alone is Father’ is false, given that men are also fathers. Nor does it pertain to the essence. For if ‘God alone creates’ were true, then it would follow, so it seems, that ‘The Father alone creates’ is also true, since whatever is said of God can be said of the Father. But this proposition is false, since the Son is also a creator. Therefore, in the case of God the expression ‘alone’ cannot modify a term pertaining to the essence.

**But contrary to this:** 1 Timothy 1:17 says, “To the king of ages, immortal, invisible, who is God alone.”

**I respond:** The expression ‘alone’ can be taken either categorematically or syncategorematically.

Now an expression is called *categorematic* when it posits the signified thing in an absolute way with respect to some suppositum, e.g., ‘white’ with respect to a man, when one says ‘a white man’. If the expression ‘alone’ is taken in this sense, then it cannot modify any term at all in the case of God. For it would posit solitariness (*solitudo*) with respect to the term it modified, and so it would follow that God is all alone by Himself (*solitarius*)—which is contrary to what was said above (a. 2).

On the other hand, an expression is called *syncategorematic* when it implies an ordering of the predicate to the subject, e.g., the expression ‘all’ or ‘none’, and, similarly, the expression ‘alone’, which excludes every other suppositum from association with the predicate. For instance, when one says ‘Socrates alone is writing’, the meaning is not that Socrates is all alone by himself, but rather that no one is joining him in writing—even if there are many others with him. And in this sense nothing prevents the

expression ‘alone’ from modifying a term pertaining to God’s essence, insofar as it excludes all things other than God from association with the predicate. For instance, we say ‘God alone is eternal’, because nothing besides God is eternal.

**Reply to objection 1:** Even though the angels and the souls of the blessed are always with God, still, if there were no plurality of persons in God, it would follow that God is all alone or by Himself. For solitariness is not negated by association with something that is extraneous to one’s nature. For instance, someone is said to be alone in the garden, even if there are many plants and animals there. Similarly, God would be said to be all alone or by Himself if there were no plurality of persons in God—even if angels and men existed along with Him. Therefore, the companionship of angels and souls does not rule out absolute solitariness on the part of God, and, *a fortiori*, it does not rule out relative solitariness with respect to some predicate.

**Reply to objection 2:** Properly speaking, the expression ‘alone’ is not posited as part of the predicate, which is taken formally. For ‘alone’ has to do with the subject (*suppositum*) insofar as it excludes another suppositum from that to which it is joined. By contrast, when the adverb ‘only’ (*tantum*) is used as an exclusive expression, it can be posited as part of either the subject or the predicate. For instance, we say both (a) ‘Only (*tantum*) Socrates is running’, i.e., no one else is running, and (b) ‘Socrates is only (*tantum*) running’, i.e., he is doing nothing else.

Hence, one cannot properly say ‘The Father is God alone’ or ‘The Trinity is God alone’—unless, perhaps, something implicit is being understood on the part of the predicate, so that the meaning is ‘The Trinity is the God who is God alone’. Accordingly, ‘The Father is the God who is God alone’ could also be true, if the relative pronoun were referring back to the predicate and not to the subject.

Now when Augustine says that it is not the case that the Father is God alone, but that the Trinity is God alone, he is speaking expositively, as if to say that when [the Apostle] says ‘to the king of ages, the invisible, who is God alone’, one should explain this as referring not to the person of the Father, but to the Trinity alone.

**Reply to objection 3:** The expression ‘alone’ can be joined in both ways to a term pertaining to the essence, since the proposition ‘God alone is Father’ has two readings.

For ‘Father’ can serve to predicate the *person* of the Father, and in this sense the proposition is true, since no man is that person.

Alternatively, ‘Father’ can predicate just the *relation*, and in this sense the proposition is false, since the relation of paternity is also found among other beings, even if not univocally.

Similarly, ‘God alone creates’ is true, but ‘therefore, the Father alone creates’ does not follow from this. For, as the logicians put it, the exclusive expression ‘immobilizes’ the term it modifies, so that one cannot descend from it to a suppositum. For this is invalid: ‘Man alone is a rational mortal animal; therefore, Socrates alone is a rational mortal animal’.

#### Article 4

##### Can the exclusive expression ‘alone’ be used to modify a term pertaining to a person?

It seems that the exclusive expression ‘alone’ can be used to modify a term pertaining to a person, even if the predicate is a common term:

**Objection 1:** At John 17:3, speaking to the Father, our Lord says, “That they may know You, the only true God.” Therefore, the Father alone is true God.

**Objection 2:** Matthew 11:27 says, “No one knows the Son but the Father.” This signifies the

same thing as ‘The Father alone knows the Son’. But ‘knows the Son’ is a common term. Therefore, we reach the same conclusion as before.

**Objection 3:** The exclusive expression does not exclude anything that pertains to our understanding of the term to which it is joined. Hence, it does not exclude a part or a universal. For this is invalid: ‘Socrates alone is white; therefore, his hand is not white.’ Nor is this valid: ‘Socrates alone is white; therefore, no man is white’. But one person is understood in the other; for instance, ‘the Father’ is understood in ‘the Son’, and vice versa. Therefore, the fact that someone says ‘The Father alone is God’ does not exclude the Son or the Holy Spirit. And so it seems that this sentence is true.

**Objection 4:** [In the *Gloria*] the Church sings, “You alone are the most high, Jesus Christ.”

**But contrary to this:** The sentence ‘The Father alone is God’ has two exponents, viz., ‘The Father is God’ and ‘No one other than the Father is God’. But this second exponent is false, since the Son, who is God, is other than the Father. Therefore, ‘The Father alone is God’ is false. And the same holds for the other similar cases.

**I respond:** When we say ‘The Father alone is God’, this proposition can have several readings.

For if the proposition is positing solitariness with respect to the Father, then it is false, since ‘alone’ is being taken categorically.

On the other hand, if ‘alone’ is being taken syncategorematically, then once again the proposition can have more than one reading.

For if ‘alone’ is excluding others from the subject’s form, then it is true, since it has the sense, ‘The lone Father is God’, i.e., ‘He, along with whom no one else is the Father, is God’. This is the way Augustine expounds it *De Trinitate* 6 when he says, “We do not say ‘the Father alone’ by reason of the fact that He is separated from the Son or the Holy Spirit; rather, when we say this, we signify that they are not the Father along with Him.” Still, this reading does not reflect the normal way of speaking unless something implicit is being understood, so that the meaning is ‘He who alone is called the Father is God’.

However, the proper sense of the proposition excludes others from association with the predicate. So taken, the proposition is false if it excludes another (*alius*) in the masculine, whereas it is true if it excludes another (*aliud*) only in the neuter. For the Son is [a person] other (*alius*) than the Father, but not [a thing] other (*aliud*) than the Father—and the same holds for the Holy Spirit.

However, since, as has been explained (a. 3), the expression ‘alone’ properly modifies the subject, it is more prone toward excluding another [person] (*alius*) than another [thing] (*aliud*). Hence, the meaning of a sentence such as ‘The Father alone is God’ should not be stretched. Instead, the sentence should be expounded piously whenever it is found in the authoritative writings.

**Reply to objection 1:** As Augustine explains, when we say ‘You alone are true God’, this is understood to mean not the person of the Father, but the whole Trinity.

An alternative reply is that if it is understood to mean the person of the Father, then because of the oneness of the essence the other persons are not excluded as long as ‘alone’ is being taken to exclude just another [thing] (*aliud*), as has been explained.

**Reply to objection 2:** A similar reply holds for this objection. When something pertaining to the essence is said of the Father, then in virtue of the oneness of the essence it is not the case that the Son and the Holy Spirit are excluded.

Still, notice that in the cited passage the expression ‘no one’ (*nemo*) is not the same as ‘no man’ (*nullus homo*), despite the fact that ‘no one’ might seem to have this signification. (For if it did, then the person of the Father could not be the object of the exception.) Instead, ‘no one’ is being taken, according to common usage, as distributed over every rational nature.

**Reply to objection 3:** The exclusive expression does not exclude things, e.g., parts and universals, that belong to the meaning of the term to which it is joined, as long as these things do not differ from it in suppositum. However, the Son differs from the Father in suppositum, and so the arguments are not

parallel.

**Reply to objection 4:** [In the *Gloria*] we do not say absolutely speaking that the Son alone is the most high, but rather that He is the most high “with the Holy Spirit, in the glory of God the Father.”

## QUESTION 32

### Our Cognition of the Divine Persons

The next thing we have to inquire about is our cognition of the divine persons.

On this topic there are four questions: (1) Can the divine persons be known by natural reason? (2) Should certain 'notions' (*notiones*) be attributed to the divine persons? (3) How many notions are there? (4) Are different opinions about the notions permissible?

#### Article 1

##### Can the Trinity of divine persons be known by natural reason?

It seems that the Trinity of divine persons can be known by natural reason:

**Objection 1:** The philosophers came to the cognition of God only through natural reason, and yet we find the philosophers saying many things about the Trinity of persons.

For instance, in *De Caelo et Mundo* 1 Aristotle says, "Through this number [*read*: the number three] we bring ourselves to glorify the one God, who surpasses the properties of the things that have been created."

Likewise, in *Confessiones* 7 Augustine says, "I read there [*read*: in the books of the Platonists]—not in these exact words, but altogether the same thing, supported by many complex arguments—that in the beginning was the Word, and the Word was with God, and the Word was God"—and other things of this sort that follow in the same place. But these are the very words in which the distinction among the divine persons is taught.

Again, Glosses on Romans 1 and Exodus 8:19 say that Pharaoh's magicians failed in the third sign, i.e., in their knowledge of the third person, viz., the Holy Spirit; and so they must have known at least two of the persons.

Again, Trismegistus said, "Monad begot monad, and in Himself He reflected His own ardor." This seems to be an intimation of the generation of the Son and the procession of the Holy Spirit.

Therefore, a cognition of the divine persons can be had through natural reason.

**Objection 2:** In *De Trinitate* Richard of St. Victor says, "I believe without hesitation that not only probable explanations, but even necessary explanations, are available for any articulation of the truth." Hence, in order to prove the Trinity of persons, some have produced an argument from the infinity of God's goodness; for this goodness communicates itself in an infinite way in the procession of the divine persons. On the other hand, some have argued from the fact that "the delightful possession of a good is impossible without fellowship." Again, Augustine proceeds to explain the Trinity of persons on the basis of the procession of the word and of the love in our own minds—a path that we ourselves followed above (q. 27, a. 1 and 3). Therefore, the Trinity of persons can be known by natural reason.

**Objection 3:** It seems unnecessary (*superfluum*) to hand down to men what cannot be known by human reason. But one should not claim that the divine teaching about the cognition of the Trinity is unnecessary. Therefore, the Trinity of persons can be known by human reason.

**But contrary to this:** In *De Trinitate* 2 Hilary says, "Let no man think that by his own intelligence he can grasp the sacred mystery of the generation." Likewise, Ambrose says, "It is impossible to know the secret of the generation. The mind falls short, the voice is silent." But as is clear from what was said above (q. 30, a. 2), it is through origin, i.e., generation and procession, that the three divine persons (*trinitas in divinis personis*) are distinguished. Therefore, since man cannot know or grasp with his intelligence that for which a necessary argument cannot be had, it follows that the Trinity of persons cannot be known by natural reason.

**I respond:** It is impossible to arrive at the cognition of the Trinity of divine persons by natural reason. For it was shown above (q. 12, a. 4 and 11 and 12) that by natural reason man cannot arrive at a cognition of God except on the basis of creatures. But creatures lead us to a cognition of God in the way that an effect leads us to a cognition of its cause. Therefore, what we can know about God by natural reason is only what must belong to Him insofar as He is the origin of all beings; and this is the foundation we used above (q. 12, a. 12) in our consideration of God. But God's creative power is common to the whole Trinity and thus pertains to the oneness of the essence, not to the distinction among the persons. Therefore, what can be known about God by natural reason are those things that pertain to the oneness of the essence, but not those things that pertain to the distinction among the persons.

In fact, one who tries to prove the Trinity of persons by natural reason damages the Faith in two ways.

First of all, he detracts from the dignity of the Faith itself, since it has this dignity insofar as it is about invisible things that surpass human reason. This is why the Apostle says at Hebrews 11:1 that faith is about things that are not evident. And in 1 Corinthians 2:6 the Apostle says, "We speak wisdom among the perfect—yet not the wisdom of this world or of the princes of this world. But we speak the wisdom of God in a mystery, a wisdom which is hidden."

Second, he undermines the possibility of drawing others to the Faith. For when, in an attempt to prove the Faith, he adduces arguments that are not cogent, he exposes the Faith to the ridicule of non-believers. For they come to think that we rely on arguments of this sort and that we hold the Faith because of them.

Therefore, one should attempt to prove matters of Faith only through the authoritative writings and only to those who accept the authoritative writings. As for the others, it is enough to show them that what the Faith teaches is not impossible. Thus, in *De Divinis Nominibus*, chap. 2, Dionysius says, "If there is someone who completely resists the writings, then he is far from our philosophy; but if he accepts the writings [*read*: the sacred writings] as the truth, then we likewise make use of the canonical writings."

**Reply to objection 1:** The philosophers did not know the mystery of the Trinity of divine persons through their properties, i.e., through the Paternity, the Filiation, and the Procession. This is why the Apostle says in 1 Corinthians 2:6, "We speak the wisdom of God, which none of the princes of this world knew"—i.e. (according to a Gloss), "which none of the philosophers knew."

However, they did come to know certain of the attributes which pertain to the essence and which, as will become clear below (q. 39, a. 7), are *appropriated to the persons*, e.g., the power appropriated to the Father, the wisdom appropriated to the Son, and the goodness appropriated to the Holy Spirit.

What Aristotle said ("Through this number we bring ourselves . . .") should not be taken to mean that he is positing the number three in God. Rather, he means to say that the ancients used the number three in their sacrifices and prayers because of a certain perfection associated with the number three.

Again, in the books of the Platonists one finds "In the beginning was the Word," not because 'the Word' signifies the divine person who is generated, but rather because 'the Word' means the ideal pattern (*ratio idealis*) through which God created all things and which is appropriated to the Son.

And even though they knew of things that are appropriated to the three persons, they are nonetheless said to fail in the third sign, i.e., in their knowledge of the third person, because they deviated from the goodness that is appropriated to the Holy Spirit. For as Romans 1:21 puts it, "Knowing God, they did not glorify Him as God."

An alternative reply is that, as Macrobius reports in *Super Somnium Scipionis*, the Platonists posited a single first being, whom they also asserted to be the father of the whole universe, and as a result they claimed that there was another substance subordinate to him, whom they called the father's Mind or Intellect and in whom existed the ideas of all things—though they did not posit a separate third substance

which, it seems, would have corresponded to the Holy Spirit. However, we do not think of the Father and Son in this way, as differing in substance; rather, this was the error of Origen and Arius, who followed the Platonists in this.

As for what Trismegistus said, viz., “Monad begot monad, and in Himself He reflected His own ardor,” this should be taken to refer not to the generation of the Son and the procession of the Holy Spirit, but rather to the production of the world. For the one God produced the one world because of His love for Himself.

**Reply to objection 2:** There are two ways in which an explanation is adduced for a given subject matter:

In the first way, it is adduced to provide *a sufficient proof of some fundamental thesis (radix)*. For instance, in natural science a sufficient explanation is adduced to prove that a celestial body’s movement always has a uniform velocity.

In the second way, instead of being adduced in order to give a sufficient proof of a fundamental thesis, the explanation is adduced in order to show that *certain ensuing effects make sense once the thesis is posited (iam positae ostendat congruere consequentes effectus)*. For instance, in astronomy an explanation for eccentrics and epicycles is adduced from the fact that, once eccentrics and epicycles are posited, one can save the sensible appearances of celestial movements. However, this argument is not itself a sufficient proof for eccentrics and epicycles, since those appearances might also be able to be saved by some other hypothesis.

Thus, in the first way one can adduce an explanation proving that there is one God, along with other similar theses. By contrast, it is in the second way that an explanation is adduced to make the Trinity known—viz., because once the Trinity is posited, then certain considerations make sense, yet not in such a way that the Trinity of persons is sufficiently proved by those considerations.

This is clear from the examples.

God’s infinite goodness is manifested even in the production of creatures, since it takes an infinite power to produce something *ex nihilo*. For in order for God to communicate Himself by His infinite goodness, it is not necessary that something infinite should proceed from Him; rather, all that is necessary is that what proceeds from Him should receive the divine goodness according to its own mode.

Similarly, there is room for the claim that “the delightful possession of a good is impossible without fellowship” in the case of a person who does not by himself have perfect goodness. For such a person thus needs the good of someone else’s associating with him for the full goodness of delight.

Again, the similarity with our intellect does not sufficiently prove anything about God, since the intellect is not found univocally in God and in us. And this is why in *Super Ioannem* Augustine says that it is through faith that one comes to knowledge, and not vice versa.

**Reply to objection 3:** Knowledge of the divine persons was necessary for us in two ways.

First, it was necessary in order for us think correctly about the creation of things. For by holding that God made all things by His Word, we exclude the error of those who claim that God produced things by a necessity of nature. And by positing the procession of the Love in God, we show that God produced creatures not because of any need on His part or because of any other extrinsic cause, but because of the love of His own goodness. Hence, after Moses had said, “In the beginning God created heaven and earth,” he added, “God said, ‘Let there be light’” in order to make known the divine Word; and afterwards he said, “God saw that the light was good” in order to make manifest the approval of God’s Love. And the same holds for His other works.

Second, and more importantly, knowledge of the divine persons was necessary in order for us to think correctly about the salvation of the human race, which is perfected through the Incarnate Son and through the gift of the Holy Spirit.

## Article 2

### Should notions be posited in God?

It seems that notions (*notiones*) should not be posited in God:

**Objection 1:** In *De Divinis Nominibus*, chap. 1, Dionysius says, “No one should dare to say anything about God beyond those things that are expressed to us in the sacred writings.” But there is no mention of the notions in the writings of Sacred Scripture. Therefore, notions should not be posited in God.

**Objection 2:** Whatever is posited in God pertains either to the oneness of the essence or to the Trinity of persons. But the notions pertain neither to the oneness of the essence nor to the Trinity of persons. For what belongs to the essence is not predicated of the notions; for instance, we do not say that the Paternity creates or that the Paternity is wise. Nor, again, is what belongs to the persons predicated of the notions; for instance, we do not say that the Paternity generates or that the Filiation is generated. Therefore, notions should not be posited in God.

**Objection 3:** Abstract entities that are principles of knowing should not be posited in simple beings, since simple beings are known in themselves. But the divine persons are the most simple of beings. Therefore, notions should not be posited in the divine persons.

**But contrary to this:** John Damascene says, “We recognize the difference among the hypostases [*read*: the persons] in the three properties, i.e., in the paternal, filial, and processional properties.” Therefore, we should posit properties and notions in God.

**I respond:** Praepositivus, focusing on the simplicity of the persons, claimed that properties and notions should not be posited in God, and so whenever they are mentioned, he explains the abstract form in terms of the concrete form. For instance, just as we are accustomed to saying ‘I beg your kindness’ for ‘I beg you, who are kind’, so too when someone says ‘Paternity’ in the case of God, what is understood is ‘God the Father’.

However, as was shown above (q. 3, a. 3 and q. 13, a. 1), the fact that we use both concrete and abstract names for God does not undermine God’s simplicity. For we name in accord with the way in which we understand. But our intellect cannot attain to God’s simplicity, considered in itself, and so it apprehends and names divine realities according to its own mode, i.e., to the extent that those realities are found in the sensible things from which our intellect takes its cognition. In the case of sensible things, we use abstract names to signify simple forms, whereas we use concrete names to signify subsistent entities. Hence, as was explained above (*ibid.*), we signify divine realities both with abstract names because of God’s simplicity and also with concrete names because of God’s subsistence and completeness.

However, it is not only the names that pertain to God’s essence that we must signify in the abstract and the concrete—as when we say ‘divinity’ (*deitas*) and ‘God’, or ‘wisdom’ and ‘wise’—but also the names that pertain to the persons, as when we say ‘Paternity’ and ‘Father’.

There are two main considerations that compel us to do this.

The first consideration is the threat posed by heretics. For when we confess that the Father, the Son, and the Holy Spirit are one God and three persons, to those who ask us for that by which they are one God and for that by which they are three persons, just as we respond that they are one by their essence, i.e., by their divinity (*deitas*), so, too, we had to have certain abstract names by reference to which we could respond that the persons are distinguished. And the properties and notions signified abstractly, e.g., ‘Paternity’ and ‘Filiation’, are abstract names of this sort. So the essence in God is signified as a ‘what’ (*ut quid*), a person is signified as a ‘who’ (*ut quis*), and a property is signified as a

‘that by which’ (*ut quo*).

The second consideration is that one of the persons in God is related to two persons—viz., the person of the Father is related to the person of the Son and the person of the Holy Spirit—but not by just a single relation. For if the Father were related to them by just a single relation, then it would follow that the Son and the Holy Spirit are likewise related to the Father by one and the same relation; and thus, since in God it is only the relations that multiply the Trinity, it would follow that the Son and the Holy Spirit are not two persons.

Nor can one claim, as Praepositivus did, that just as God is related in a single way to creatures even though creatures are related in diverse ways to Him, so too the Father is related by a single relation to the Son and the Holy Spirit even though they are related by two relations to the Father. For since the specific nature of a relation consists in its reference to another, one must claim that two relations do not differ in species if there is just a single opposed relation corresponding to both of them. For instance, *being a master* (*esse dominus*) and *being a father* (*esse pater*) are relations of different species because of the difference between [the opposed relations] *being a servant* (*servitudo*) and *being a son* (*filiatio*).

Moreover, all creatures are related to God by a single species of relation because they are His creatures, whereas the Son and the Holy Spirit are not related to the Father by relations of a single kind. Hence, the arguments are not parallel.

Again, as was explained above (q. 28, a. 1), no real relation to creatures is required in God, and there is no absurdity involved in multiplying relations of reason in God. By contrast, it has to be by real relations that the Father is related to the Son and the Holy Spirit, and so corresponding to the two relations by which the Son and the Holy Spirit are related to the Father, we must understand two relations in the Father by which He is related to the Son and to the Holy Spirit. Hence, since there is just one person of the Father, these relations had to be signified in the abstract, and it is these abstract designations that are called properties and notions.

**Reply to objection 1:** Even though no mention is made of the notions in Sacred Scripture, mention is made of the persons, in whom the notions are understood as something abstract contained in something concrete.

**Reply to objection 2:** The notions are signified in God not as entities (*res*) but as certain characteristics (*rationes*) by which the persons are known—even though, as noted above (q. 28, a. 1), the notions or relations themselves exist in reality in God. And so that which is ordered toward an act pertaining to the essence or toward a person cannot be predicated of the notions, since this conflicts with their [abstract] mode of signification. This is why we do not say that the Paternity generates, or that the Paternity creates, or that the Paternity is wise or intelligent.

On the other hand, that which pertains to the essence and is not ordered toward any act, but simply denies some creaturely condition of God, can be predicated of the notions. For instance, we can say that the Paternity is eternal or unmeasured (*immensa*) or other things of this sort.

Similarly, because of the identity of the realities, substantival names pertaining to the essence or the persons can be predicated of the notions. For instance, we can say that the Paternity is God and that the Paternity is the Father.

**Reply to objection 3:** Even though the persons are simple, nonetheless, as has been explained, the proper characteristics (*rationes*) of the persons can be signified in the abstract without undermining this simplicity.

### Article 3

#### Are there five notions?

It seems that there are not five notions:

**Objection 1:** The proper notions of the persons are the relations by which they are distinguished. But as was explained above (q. 28, a. 4), there are only four relations in God. Therefore, there are likewise only four notions.

**Objection 2:** Because there is one essence in God, God is called one, whereas because there are three persons, God is called three. Therefore, if there were five notions in God, God would be called five—which is absurd.

**Objection 3:** If there are three persons in God and five notions, then in some of the persons there are two or more notions. For instance, in the person of the Father there is Innascibility and Paternity and Common Spiration. Therefore, either these three notions differ in reality or they do not. If they do differ in reality, then it follows that the person of the Father is composed of more than one reality. On the other hand, if they differ only conceptually, then it follows that one of them can be predicated of another—so that we can say that just as God's goodness is His wisdom because of the undifferentiated character of the reality, so too the Common Spiration is the Paternity. But this is not admissible. Therefore, there are not five notions.

**But contrary to this:** It seems that there are more than five notions:

1. Just as the Father is such that He is not from any person, from which stems the notion that is called Innascibility, so too the Holy Spirit is such that no other person is from Him. Accordingly, there must be a sixth notion.

2. Just as it is common to the Father and the Son that the Holy Spirit proceeds from them, so too it is common to the Son and the Holy Spirit that they proceed from the Father. Therefore, just as a notion is posited that is common to the Father and the Son, so a notion should be posited that is common to the Son and the Holy Spirit.

**I respond:** What is called a *notion* is a proper characteristic (*ratio*) for knowing a divine person. Now the divine persons are multiplied according to their origin, and what pertains to origin is (a) *being such that another is from you (a quo alius)* and (b) *being such that you are from another (qui ab alio)*. Accordingly, there are two ways in which a person can be known.

Thus, the person of the Father can be known not from His being from another, but from the fact that He is from no one, and so in this respect His notion is Innascibility. However, insofar as someone is from Him, He is known in two respects. On the other hand, insofar as the Son is from Him, He is known by the notion of Paternity, while insofar as the Holy Spirit is from Him, He is known by the notion of Common Spiration.

The Son, on the other hand, can be known (a) from the fact that He is from another who begets Him, in which respect He is known by Filiation, and (b) from the fact that another, viz., the Holy Spirit, is from Him, and in this respect He is known in the same way as the Father, viz., by Common Spiration.

The Holy Spirit can be known from the fact that He is from another or, better, from the others, and in this respect He is known by Procession. However, He is not known through another's being from Him, since no divine person proceeds from Him.

Thus, there are five *notions* in God, viz., Innascibility, Paternity, Filiation, Common Spiration, and Procession. But only four of these are *relations*, since, as will be explained below (q. 33, a. 4), Innascibility is not a relation except by reduction. Moreover, only four of the notions are *properties*; for Common Spiration is not a property, since it belongs to two persons. On the other hand, three of the

notions are *personal*, i.e., constitutive of persons, viz., Paternity, Filiation, and Procession. For as will be explained in more detail below (q. 40, a. 1), Common Spiration and Innascibility are called ‘notions of persons’, but not ‘personal notions’ (*dicuntur notiones personarum, non autem personales*).

**Reply to objection 1:** As has been explained, it is necessary to posit one other notion beyond the four relations.

**Reply to objection 2:** In God the essence is signified as a sort of entity (*res quaedam*) and, similarly, the persons are signified as certain entities (*res quaedam*). The notions, however, are signified as characteristics (*rationes*) that make the persons known. And so even though God is called one because of the oneness of the essence and three because of the Trinity of persons, it is nonetheless not the case that God is called five because of the five notions.

**Reply to objection 3:** Since a single relational opposition makes for a real plurality in God, it follows that a plurality of properties for one person, when they are not relationally opposed to one another, do not differ in reality. Yet neither are they predicated of one another, since they are signified as diverse characteristics (*rationes*) of the persons. In the same way, neither do we say that the attribute of power is the attribute of knowledge, even though we do say that God’s knowledge is His power.

**Reply to argument 1 for the contrary:** Since, as was explained above (q. 29, a. 3), ‘person’ implies dignity, there is no notion for the Holy Spirit stemming from the fact that no person is from Him. For this does not pertain to His dignity in the way that it does pertain to the Father’s authorship (*auctoritas*) that He is from no one.

**Reply to argument 2 for the contrary:** The Son and the Holy Spirit do not share one specific way of being from the Father (*non conveniunt in uno speciali modo existendi a patre*)—in the way that the Father and the Son do share one specific way of producing the Holy Spirit. But a principle of cognition has to be something specific. And so the arguments are not parallel.

#### Article 4

##### Are contrary opinions about the notions permissible?

It seems that contrary opinions about the notions are not permissible:

**Objection 1:** In *De Trinitate* 1 Augustine says that nowhere is error more dangerous than on the topic of the Trinity, to which the notions are certainly relevant. But contrary opinions cannot exist without error. Therefore, contrary opinions about the notions are impermissible.

**Objection 2:** As has been explained, the persons are known through the notions. But contrary opinions about the persons are impermissible. Therefore, so are contrary opinions about the notions.

**But contrary to this:** There are no articles of the Faith concerning the notions. Therefore, different opinions on the one side and the other about the notions are permissible.

**I respond:** There are two ways in which something can pertain to the Faith:

First of all, something can pertain to the Faith *directly*, as with the principal things that are divinely revealed to us, e.g., that God is one and three, that the Son of God is incarnate, etc. Having a false opinion about these things by its very nature involves heresy, especially if it is accompanied by stubbornness.

Second, things that pertain to the Faith *indirectly* are such that something contrary to the Faith follows from them. For instance, if someone were to claim that Samuel was not the son of Elkanah, then from this it would follow that divine Scripture is false. Someone could hold a false opinion about this sort of thing without the danger of heresy—at least prior to its being discovered or determined that

something contrary to the Faith follows from it, and especially if he did not adhere to it obstinately. However, once it has been made clear that something contrary to the Faith follows from it—and especially if this has been determined by the Church—then one would no longer be able to err in this matter without heresy.

Because of this, there are many views which are now considered heretical but which were not considered heretical in previous times. The reason is that it is now more clear just what follows from these views.

So, then, concerning the notions one should say that there were those who held contrary views without the danger of heresy and who did not intend to hold anything contrary to the Faith. But if someone were to hold a false opinion about the notions even while acknowledging that something contrary to the Faith followed from that opinion, then he would fall into heresy.

**Reply to objection 1 and objection 2:** The replies to the objections are clear from what has been said.

## QUESTION 33

### The Person of the Father

Next we have to consider the persons in particular—and, first, the person of the Father.

On this topic there are four questions: (1) Does it belong to the Father to be a principle? (2) Is the person of the Father properly signified by the name ‘Father’? (3) Is ‘Father’ said of God as it pertains to a person prior to its being said of God as it pertains to the essence? (4) Is it proper to the Father to be unbegotten?

#### Article 1

##### Can the Father be called a principle of the Son or of the Holy Spirit?

It seems that the Father cannot be called a principle (*principium*) of the Son or of the Holy Spirit:

**Objection 1:** According to the Philosopher, a principle is the same as a cause. But we do not say that the Father is a cause of the Son. Therefore, we should not say that He is a principle of the Son.

**Objection 2:** ‘Principle’ is said with respect to that which is begun (*principiatum*). Therefore, if the Father is a principle of the Son, it follows that the Son is such that He is begun and, consequently, created. But this seems to be erroneous.

**Objection 3:** The name ‘principle’ comes from the name ‘priority’. But as the Athanasian creed says, in God “there is nothing prior or posterior.” Therefore, in the case of God we should not use the name ‘principle’.

**But contrary to this:** In *De Trinitate* 4 Augustine says, “The Father is the principle of the whole divinity (*deitas*).”

**I respond:** The name ‘principle’ signifies nothing other than that from which something proceeds. For anything from which something proceeds in any way at all is such that we call it a principle, and vice versa. Therefore, since the Father is such that another proceeds from Him, it follows that the Father is a principle.

**Reply to objection 1:** The Greeks use the name ‘cause’ (*aitia*) and the name ‘principle’ (*arche*) indifferently in the case of God, whereas the Latin doctors use only the name ‘principle’ and not the name ‘cause’. The reason for this is that ‘principle’ is more general than ‘cause’, just as ‘cause’ is more general than ‘element’. For the first beginning point (*terminus*) of a thing, as well as the first part of a thing, is called a principle, but not a cause.

Now, as was explained above (q. 13, a. 2), the more general a name is, the more appropriate it is to use it in the case of God. For the more specific a name is, the more it is tied to a mode that belongs to creatures. Hence, the name ‘cause’ seems to imply a diversity of substance and a dependence of one thing on another—which the name ‘principle’ does not imply. For with every type of cause there is always a distance in perfection or power between the cause and what it is a cause of. By contrast, we use the name ‘principle’ even in cases where there is no difference of this sort, but only a difference in ordering—as when we say that a point is the principle or beginning of a line or, again, when we say that the first part of a line is a principle or beginning of the line.

**Reply to objection 2:** Among the Greeks it is customary to say that the Son and the Holy Spirit are such that they are begun (*principari*). However, this is not common usage among our doctors. For even though we attribute a certain authorship (*auctoritas*) to the Father in virtue of His being a principle, nonetheless, in order to avoid an occasion of error, we do not in any way attribute subordination or inferiority to the Son or the Holy Spirit. As Hilary puts it in *De Trinitate* 9, “The Father is the greater because of the honor attached to giving, but the Son is not the lesser in virtue of being the one to whom

the gift is given.”

**Reply to objection 3:** Even though with respect to *that because of which* it is imposed to signify, the name ‘principle’ is taken from ‘priority’, it nonetheless does not signify priority, but instead signifies origin. For as was explained above (q. 13, aa. 2 and 8), *that which* a name signifies is not the same as *that because of which* it is imposed to signify.

## Article 2

### Is the name ‘Father’ properly speaking the name of a divine person?

It seems that the name ‘Father’ is not properly speaking the name of a divine person:

**Objection 1:** The name ‘Father’ signifies a relation. But a person is an individual substance. Therefore, the name ‘Father’ is not properly speaking a name that signifies a person.

**Objection 2:** ‘One that generates’ (*generans*) is more general than ‘father’, since every father is one that generates, but not vice versa. But as has been explained (a. 1), the more general name is the one that is more properly said of God. Therefore, ‘One that generates’ or ‘Begetter’ (*genitor*) is a more appropriate name for a divine person than ‘Father’ is.

**Objection 3:** Nothing that is said metaphorically can be the name of anything properly speaking. But in our case, a word is metaphorically said to be begotten or to be an offspring and, as a result, the one who utters the word is metaphorically called its ‘father’. Therefore, the principle of the Word in God cannot properly speaking be called ‘Father’.

**Objection 4:** Everything that is properly said of God is said of God in a way that is prior to its being said of creatures. But ‘generation’ seems to be said of creatures prior to its being said of God. For a generation seems to be more genuine when that which proceeds from the other is distinct from that other not only with respect to a relation but with respect to its essence as well. Therefore, the name ‘father’, which is taken from generation, does not properly speaking seem to be the name of any divine person.

**But contrary to this:** Psalm 88:27 says, “He shall cry out to me: You are my Father.”

**I respond:** The proper name of a person signifies that by which the person in question is distinguished from all others. For according to *Metaphysics* 7, just as soul and body belong to the nature of man, so *this* soul and *this* body belong to our understanding of *this* man, and they are what distinguish this man from all others. But that by which the person of the Father is distinguished from all other persons is the Paternity. Hence, the proper name of the person of the Father is the name ‘Father’, which signifies the Paternity.

**Reply to objection 1:** Among us a relation is not a subsistent person, and so among us the name ‘father’ signifies not a person but a relation belonging to a person. But, contrary to the false opinion held by some, this is not the way it is with God. For in God the relation that the name ‘Father’ signifies is a subsistent person. Hence, it was explained above (q. 29, a. 4) that in God the name ‘person’ signifies a relation as subsisting in the divine nature.

**Reply to objection 2:** According to the Philosopher in *De Anima* 2, the designation of a thing should be derived especially from its perfection and completion. But ‘generation’ signifies a thing as coming into being (*fieri*), whereas ‘paternity’ signifies the completion of a generation. And so the name ‘Father’ is a better name for a divine person than is ‘One that generates’ or ‘Begetter’.

**Reply to objection 3:** In a human nature a word is not something subsistent, and this is why it cannot properly be said to be begotten or to be a son. By contrast, in the divine nature the divine Word is

something that subsists. Thus, He is properly, and not metaphorically, called the Son, and His principle is properly, and not metaphorically, called the Father.

**Reply to objection 4:** With respect to the thing that is signified, though not with respect to their mode of signifying, the names ‘generation’ and ‘paternity’, like the other names that are properly said of God, are said of God in a way prior to their being said of creatures. This is why the Apostle says at Ephesians 3:14-15, “For this cause I bow my knees to the Father of our Lord Jesus Christ, from whom all paternity in heaven and earth is named.”

This is evident as follows. It is clear that generation takes its species from its terminus, which is the form of the thing that is generated. And the closer this form is to the form of the one that generates, the more genuine and more perfect the generation is (*quanto haec fuerit propinquior formae generantis, tanto verior et perfectior est generatio*). For instance, a univocal generation is more perfect than a non-univocal generation, since it belongs to the nature of the thing that generates that it should generate something similar to itself in form. Hence, the very fact that in the divine generation the one who generates and the one who is generated have numerically the same form—whereas in created things the form is the same only in species and not numerically—shows that generation and thus paternity exist in God in a way that is prior to their existing in creatures. Hence, the very fact that in God the distinction between the one who generates and the one who is generated is only relational pertains to the genuineness of the divine generation and the divine paternity.

### Article 3

#### Is the name ‘Father’ said of God in the first place with respect to a person?

It seems that the name ‘Father’ is not said of God in the first place with respect to a person:

**Objection 1:** What is conceptually common is prior to what is conceptually proper. But insofar as the name ‘Father’ is taken for a [divine] person, it is proper to the person of the Father, whereas insofar as it is taken for the essence, it is common to the whole Trinity, since we say ‘Our Father’ to the whole Trinity. Therefore, the name ‘Father’ is taken for the essence prior to its being taken for a person.

**Objection 2:** There is no prior or posterior predication in the case of names that have the same definition. But paternity and filiation seem to be predicated with the same definitions in (a) ‘A divine person is the Father of the Son’ and (b) ‘The whole Trinity is our Father, i.e., the Father of creatures’. For according to Basil, to receive something is common to both the Son and creatures. Therefore, ‘Father’ is not predicated of God with respect to the essence prior to its being predicated with respect to a person, [or vice versa].

**Objection 3:** There can be a comparison only between names that are predicated with a single definition. But according to Colossians 1:15 (“... who is the image of the invisible God, the firstborn of every creature”), the Son is comparable to creatures in the concepts of filiation and generation. Therefore, ‘paternity’ is not taken for a person in God prior to being taken for the essence; rather, it is taken with the same definition in both cases.

**But contrary to this:** The eternal is prior to the temporal. But from eternity God is the Father of the Son, whereas it is from a given point in time that God is the Father of creatures. Therefore, ‘paternity’ is said of God with respect to the Son prior to its being said with respect to creatures.

**I respond:** A name is predicated of something in which the whole meaning of the name is perfectly preserved prior to its being predicated of something in which the meaning is preserved only in a certain respect (*secundum aliquid*). For it is predicated of the latter because of a certain likeness to that

in which the meaning is perfectly preserved, since everything imperfect is taken from what is perfect. Thus it is that the name 'lion' is said of the animal in which the whole meaning of 'lion' is preserved and which is properly called a lion prior to its being said of a man in whom something of the nature of a lion is found, e.g., audacity or courage, etc. For it is said of the man because of a likeness.

Now it is clear from what was said above (q. 27, a. 2 and q. 28, a. 4) that the *perfect meaning* of paternity and filiation is found in God the Father and God the Son, since the Father and the Son are one in nature and in glory.

By contrast, the filiation with respect to God that is found in a creature is not in keeping with this perfect meaning, but only in keeping with a certain likeness, since the creator and the creature are not one in nature. And the more perfect the likeness is, the more closely it approaches the genuine nature of filiation.

For instance, according to Job 38:28 ("Who is the father of rain? Or who begot the drops of dew?"), God is said to be the Father of certain creatures, viz., non-rational creatures, only because of a certain *vestigial likeness*.

By contrast, according to Deuteronomy 32:6 ("Is not He your father, that has possessed you, and made you, and created you?"), He is the Father of certain other creatures, viz., rational creatures, according to a *likeness of image*.

Moreover, according to Romans 8:16-17 ("For the Spirit himself gives testimony to our spirit that we are the sons of God; and if sons, heirs also"), He is the Father of some according to a *likeness of grace*; these are called His adopted children insofar as they are ordered to the inheritance of eternal glory through the gift of grace they have received.

Finally, according to Romans 5:2 ("We glory in the hope of the glory of the sons of God"), He is the Father of some according to a *likeness of glory*, insofar as they already possess the inheritance of glory.

So, then, it is clear that 'paternity' is predicated of God insofar as it implies the relation of one person to another prior to its being predicated of Him insofar as it implies a relation of God to creatures.

**Reply to objection 1:** According to the order of our intellect, common names, predicated absolutely, are prior to proper names, since common names are included in our understanding of proper names, but not vice versa. For instance, our concept of the person of the Father includes the concept *God*, but is not convertible with it.

However, common names that imply a relation to creatures are predicated of God posterior to the predication of proper names that imply the relations among the [divine] persons, since a person who proceeds in God proceeds as a principle for the production of creatures. For just as a word conceived in the mind of the craftsman is understood to proceed from the craftsman prior to the procession of the artifact, which is produced as a likeness of the word conceived in the mind, so too the Son proceeds from the Father prior to the procession of creatures, of whom the name 'filiation' is predicated insofar as they have some participation in a likeness of the Son. This is clear from Romans 8:29, "Whom he foreknew, he also predestinated to be made conformable to the image of his Son."

**Reply to objection 2:** To receive is said to be common to creatures and to the Son not univocally, but according to a certain remote likeness by reason of which the Son is called the firstborn of creatures. Hence, in the passage cited [in objection 3] it is added that He is the firstborn among many brothers, after [the Apostle] had already said that some have been conformed to image of the Son of God.

However, the Son of God has by nature a singular status over the others, viz., having *by His nature* that which He receives, as Basil himself says. Accordingly, as is clear from John 1:18 ("The only-begotten Son who is in the bosom of the Father, He has declared Him"), He is called the 'Only-begotten'.

**Reply to objection 3:** The reply to this objection is clear from what has already been said.

## Article 4

### Is it proper to the Father to be unbegotten?

It seems that it is not proper to the Father to be unbegotten (*ingenitum*):

**Objection 1:** Every property posits some reality in that of which it is the property. But ‘unbegotten’ merely denies something of the Father and does not posit anything in Him. Therefore, it does not signify a property of the Father.

**Objection 2:** ‘Unbegotten’ is predicated either as a privation or as a negation. If it is predicated as a negation, then whatever is not begotten can be called ‘unbegotten’. But the Holy Spirit is not begotten, and neither is the divine essence. Therefore, to be unbegotten belongs to them as well and so is not proper to the Father. On the other hand, if ‘unbegotten’ is predicated as a privation, then since every privation signifies an imperfection in the thing that has the privation, it follows that the person of the Father is imperfect—which is impossible.

**Objection 3:** In the case of God, ‘unbegotten’ does not signify a relation, since it is not predicated relationally. Therefore, it signifies the substance. Therefore, what is unbegotten differs in substance from what is begotten. But the Son, who is begotten, does not differ from the Father in substance. Therefore, the Father should not be said to be unbegotten.

**Objection 4:** What is proper belongs to just one person. But in God since there is more than one person who proceeds from another, it seems that nothing prevents it from being the case that there should be more than one person who is not from another. Therefore, it is not proper to the Father to be unbegotten.

**Objection 5:** Just as the Father is a principle of the person who is begotten, so too He is a principle of the person who proceeds. Therefore, if one should claim that being unbegotten is proper to the Father because of the [relational] opposition that He has to the begotten person, then one should likewise claim that it is proper to Him that He does not proceed.

**But contrary to this:** In *De Trinitate* 4 Hilary says, “One is from One, i.e., the begotten One is from the unbegotten One, viz., by the property in each, respectively, of Innascibility and Origin.”

**I respond:** Just as, among creatures, there are first principles and secondary principles, so too, among the divine persons, in whom there is no prior or posterior, there is a *principle-not-from-a-principle*, which is the Father, and a *principle-from-a-principle*, which is the Son.

Now among created things a first principle is known in two ways: (a) in one way, insofar as it is a first principle in virtue of having a relation to those things that are from it; and (b) in a second way, insofar as it is a first principle in virtue of its not itself being from another. So, then, the Father is likewise known by the Paternity and the Common Spiration in virtue of His relation to the persons who proceed from Him, whereas insofar as He is a *principle-not-from-a-principle*, He is known in virtue of the fact that He is not from another—which pertains to the property of Innascibility and which is signified by the name ‘unbegotten’.

**Reply to objection 1:** Some claim that insofar as Innascibility, which is signified by the name ‘unbegotten’, is a property of the Father, it is not just predicated as a negation, but instead either (a) signifies both things at the same time, viz., that the Father is from no one and that He is a principle of the others, or else (b) signifies [just] universal authorship (*universalis auctoritas*) or, again, originating fullness (*fontalis plenitudo*).

But this does not seem true. For if it were so, then Innascibility would not be a property different from Paternity and [Common] Spiration, but would instead include them in the way that what is common

includes what is proper. For ‘origination’ (*fontalitas*) and ‘authorship’ (*auctoritas*) signify nothing in God other than the principle of origin.

Thus, one should say instead, with Augustine in *De Trinitate* 5, that ‘unbegotten’ implies the negation of passive generation; for Augustine says, “‘Unbegotten’ means exactly what ‘not the Son’ means.” Nor does it follow from this that ‘unbegotten’ should not be posited as a proper notion of the Father. For first things and simple things are known through negations; for instance, we say that a point is that which has no parts.

**Reply to objection 2:** ‘Unbegotten’ is sometimes taken just as a negation. This is the sense in which Jerome says that the Holy Spirit is unbegotten, i.e., not begotten.

Alternatively, ‘unbegotten’ can in some sense be predicated as a privation, though not as a privation that implies an imperfection. For ‘privation’ has several meanings:

In one sense, there is a privation when a thing lacks something that another thing is apt to have, even if it itself is not apt to have it—as, for instance, if a rock were said to be a dead thing because it lacks life, which certain other things are apt to have.

In a second sense, there is a privation when a thing lacks something that is apt to be had by some member of its own genus—as, for instance, if moles were said to be blind.

In a third sense, there is a privation when a thing lacks something that it itself is apt to have, and this is the sense in which ‘privation’ implies an imperfection.

Now ‘unbegotten’ is not predicated as a privation of the Father in this third sense, though it may be predicated of Him in the second sense, viz., insofar as one suppositum of the divine nature is not begotten, whereas some other suppositum of that nature is begotten. But on this meaning ‘unbegotten’ can likewise be predicated of the Holy Spirit.

Hence, in order for ‘unbegotten’ to be proper to the Father alone, we must understand something further in the name ‘unbegotten’, viz., that it belongs to a divine person who is a principle of another person; and in this sense the name is understood to imply a negation in the genus *principle* insofar as it is predicated of God with respect to a person.

Alternatively, we might understand in the name ‘unbegotten’ that what is unbegotten is such that it is *in no way* from another—and not just that it is not from another *through generation*. In this sense it does not belong to the Holy Spirit to be unbegotten, since the Holy Spirit is from another as a subsistent person through the Procession. Neither does it in this sense belong to the divine essence to be unbegotten, since the divine essence can be said to be in the Son from another or in the Holy Spirit from another, viz., from the Father.

**Reply to objection 3:** According to Damascene, in one sense ‘unbegotten’ is the same as ‘uncreated’, and in this sense it is predicated of the [divine] substance. For it is through this that a created substance differs from an uncreated substance.

In a second sense, ‘unbegotten’ signifies what is not begotten. And in this sense it is predicated relationally, in the way that a negation is reduced to the genus of its corresponding affirmation—as ‘non-man’ is reduced to the genus of substance and ‘non-white’ is reduced to the genus of quality. Hence, since ‘begotten’ implies a relation in God, ‘unbegotten’ likewise pertains to a relation. And so it does not follow that the unbegotten Father is distinct in substance from the begotten Son; rather, all that follows is that they are distinct with respect to a relation, viz., insofar as the Son’s relation is denied of the Father.

**Reply to objection 4:** Just as it necessary to posit a first element in any genus, so too in the divine nature it is necessary to posit one principle which is not from another and which is called ‘unbegotten’. Therefore, to posit two innascible elements is to posit two gods and two divine natures. Hence, in *De Synodis* Hilary says, “Since God is one, there cannot be two innascibles.” This is mainly because if there were two innascibles, it would not be the case that one of them is from the other, and so they would not

be distinguished by a relational opposition; therefore, they would have to be distinguished by a diversity of nature.

**Reply to objection 5:** The property of the Father insofar as He is not from another is signified by the negation of the Son's begottenness (*nativitas*) rather than by the negation of the Holy Spirit's procession. This is because, first of all, as was remarked above (q. 27, a. 4), the procession of the Holy Spirit does not have a special name. Second, in the order of nature the procession of the Holy Spirit presupposes the generation of the Son. Hence, once being begotten is denied of the Father, since He is nonetheless a principle of the generation, it follows as a consequence that He does not proceed by the procession of the Holy Spirit. For the Holy Spirit is not a principle of generation, but is instead the one who proceeds from Him who has been begotten.

## QUESTION 34

### The Person of the Son: The Name 'Word'

Next we have to consider the person of the Son. Three names are attributed to the Son, viz., 'Son', 'Word', and 'Image'. But the concept *Son* is taken from the concept *Father*. So it is 'Word' (question 34) and 'Image' (question 35) that remain to be considered.

As regards the name 'Word', there are three questions: (1) Is the name 'Word' said of God with respect to the divine essence or with respect to a person? (2) Is 'Word' a proper name of the Son? (3) Does the name 'Word' imply a relation to creatures?

#### Article 1

##### Is 'Word' the name of a person in God?

It seems that the name 'Word' is not the name of a person in God:

**Objection 1:** The names of the persons in God, e.g., 'Father' and 'Son', are predicated properly [and not metaphorically]. But as Origen says in *Super Ioannem*, 'Word' is predicated metaphorically of God. Therefore, 'Word' is not the name of a person in God.

**Objection 2:** According to Augustine in *De Trinitate*, "A word is a cognition (*notitia*) with love." And according to Anselm in the *Monologion*, "For the Highest Spirit, to speak is nothing other than to see by thinking (*cogitando*)." But cognition and thinking and seeing are said of God with respect to His essence. Therefore, 'Word' is not predicated of God with respect to a person.

**Objection 3:** It is part of the concept of a word that it should be spoken. But according to Anselm, just as the Father is intelligent and the Son is intelligent and the Holy Spirit is intelligent, so too the Father speaks and the Son speaks and the Holy Spirit speaks. And, similarly, each of them is spoken. Therefore, the name 'Word' is said of God with respect to the divine essence and not with respect to a person.

**Objection 4:** No divine person is a deed to be done (*factum*). But the Word of God is a deed to be done; for instance, Psalm 148:8 says, "Fire, hail, snow, ice, stormy winds, which do His Word." Therefore, 'Word' is not the name of a person in God.

**But contrary to this:** In *De Trinitate* 7 Augustine says, "A word is related to that whose word it is in the same way that the Son is related to the Father." But 'Son' is the name of a person, since it is predicated relationally. Therefore, so is 'Word'.

**I respond:** As long as the name 'Word' is being used properly of God, it is the name of a person and in no way the name of the essence.

To see this clearly, notice that among us there are three senses in which the name 'word' is predicated properly and a fourth sense in which it is predicated improperly or figuratively.

In our case, what is most clearly and commonly called a word is that which is uttered vocally. This spoken word proceeds from within us with respect to the two aspects that are found in an exterior word, viz., (a) the sound itself and (b) the signification of that sound. For according to the Philosopher in *Perihermenias* 1, the sound signifies what is conceived by the intellect and, again, as he puts it in *De Anima* 2, the sound proceeds from the imagination. However, a sound that does not signify anything cannot be called a word. Thus, an exterior sound is called a word in virtue of the fact that it signifies something conceived interiorly by the mind (*quia significat interiorem mentis conceptum*).

So, then, (a) what is *first* and principally called a word is what is interiorly conceived by the mind, and (b) what is called a word in the *second* place is the sound that signifies what is interiorly conceived, and (c) what is called a word in the *third* place is the imagining of the sound. These are the three senses

of ‘word’ that Damascene posits in *De Fide Orthodoxa* 1, chap. 13, when he says, “What is called a word is the natural movement of the intellect in accord with which it moves and understands and thinks, like a light and shining beam”—this is the *first* of the above senses. “Second, a word is not what is uttered by the voice, but what is pronounced in the heart”—this is the *third* of the above senses. “Third, there is also the word that is an angel [*read*: a messenger] of the intelligence”—this is the *second* of the above senses. In the fourth sense, (d) what is called a word figuratively is what is either signified by a word or effected by a word. Thus, we customarily say, ‘This is the word I have spoken to you’, or ‘This is the word that the king has commanded’, indicating some deed that has been signified by the word of a mere herald or even of the one who is doing the commanding.

Now ‘Word’ is predicated properly of God insofar as ‘Word’ signifies what is conceived by the divine intellect. Hence, in *De Trinitate* 15 Augustine says, “Whoever is able to conceive of a word not only before it is sounded, but even before the image of its sound is seized upon by thought, can grasp a likeness of that Word of whom it is said, ‘In the beginning was the Word’.” But what is conceived in the heart is by its nature such that it proceeds from another, viz., from the cognition of the one who conceives it (*ipse conceptus cordis de ratione sua habet quod ab alio procedat, scilicet a notitia concipientis*). Hence, insofar as ‘Word’ is said properly of God, it signifies something that proceeds from another, and this pertains to the nature of those names that are predicated of God with respect to a person. For as has been explained (q. 32, a. 3), the divine persons are distinguished by origin.

Hence, the name ‘Word’, insofar as it is used properly in the case of God, must be taken only as the name of a person and not as a name of the essence.

**Reply to objection 1:** The Arians, whose source is found in Origen, claimed that the Son is distinct from the Father by a diversity of substance. Hence, they tried to maintain that when the Son is called the Word of God, the term ‘Word’ is not being predicated properly—lest, by reason of the fact that the Word proceeds from the Father, they should be forced to admit that the Son of God does not exist outside the substance of the Father. For an interior word proceeds from the speaker in such a way that it remains within him.

However, even if one claims that ‘Word of God’ is predicated metaphorically, it must also be claimed that ‘Word of God’ is predicated properly. For nothing can be called a word metaphorically except by reason of a manifestation, since either (a) it makes something manifest like a word does, or else (b) it is itself made manifest by a word. Now if it is made manifest by a word, then one must posit a word by which it is made manifest. On the other hand, if it is called a word because it makes something manifest exteriorly, note that what makes something manifest exteriorly is called a word only insofar as it signifies something which is conceived interiorly by the mind and which one then makes manifest by means of exterior signs. Therefore, even if ‘Word’ is sometimes predicated metaphorically in the case of God, it is still necessary to claim that ‘Word’ is predicated properly, i.e., predicated with respect to a person.

**Reply to objection 2:** With the sole exception of the name ‘Word’, nothing that pertains to the intellect in God is predicated with respect to a person. For it is only ‘Word’ that signifies something that emanates from another, since a word is what the intellect forms when it conceives something.

By contrast, insofar as the intellect itself is made to act by an intelligible species, it is being considered absolutely [and not relationally]—and the same holds for an act of understanding, which is related to an acting intellect in the way that existing (*esse*) is related to an actual being (*similiter intelligere, quod ita se habet ad intellectum in actu sicut esse ad ens in actu*). For ‘to understand’ does not signify an action that *proceeds from* the one who is understanding, but instead signifies an action that *remains within* the one who is understanding. Therefore, when it is claimed that a word is a cognition (*notitia*), ‘cognition’ is not being taken for the knower’s act of understanding or for any habit of his; instead, it is being taken for what the intellect conceives in having a cognition (*sed pro eo quod*

*intellectus concipit cognoscendo*). This is why Augustine himself says that a word is “wisdom begotten,” which is nothing other than what is conceived by one who is wise, and which can also in a parallel manner be called a ‘cognition begotten’ (*notitia genita*).

This is also the way to understand the claim that for God to speak is for Him to “see by thinking”—viz., insofar as the Word of God is conceived by the vision of God’s thinking (*inquantum intuitu cogitationis divinae concipitur verbum Dei*). Still, the name ‘thinking’ does not properly apply to the Word of God. For in *De Trinitate* 15 Augustine says, “The name ‘Word of God’ is not predicated in the way that ‘thinking’ is predicated—lest one believe that in God there is something unstable, as it were, which at one time takes the form of the Word of God and then can lose that form and in some way wallow around without a form.” For thinking properly consists in inquiry after the truth, which has no place in God. But when the intellect has already attained to the form of truth, it is no longer thinking, but is instead contemplating the truth in a perfect manner. Hence, Anselm is taking ‘think’ in an improper sense for ‘contemplate’.

**Reply to objection 3:** Just as ‘Word’, properly speaking, is predicated of a person in God and not of the divine essence, so too it is with ‘speak’. Hence, just as ‘Word’ is not common to the Father and the Son and the Holy Spirit, so neither is it true that the Father and the Son and the Holy Spirit are one speaker. Hence, in *De Trinitate* 7 Augustine says, “The one who speaks by that coeternal Word is understood as not being alone in God.”

On the other hand, ‘to be spoken’ belongs to each of the persons. For it is not only a word that is spoken, but also the thing that is understood or signified by the word. Therefore, it belongs to one person alone in God to be spoken in the way in which a word is spoken, but it belongs to each of the persons to be spoken in the way that the thing understood is spoken by a word. For it is in understanding Himself and the Son and the Holy Spirit and all the other things contained in His knowledge that the Father conceives the Word, with the result that the whole Trinity, and every creature as well, is spoken in that Word—just as a man’s intellect ‘speaks’ a rock with the word it conceives when it understands a rock.

Now Anselm is taking ‘speak’ in an improper sense for ‘understand’, though the two differ. For ‘understand’ implies just the relation of the one understanding to the thing understood, and this relation does not imply any sort of origin, but merely implies that our intellect has a form, since our intellect is made to act by the form of the thing that is understood. However, as was shown above (q. 14, a. 2 and 4), in God ‘understand’ implies complete identity, since in God the intellect is altogether the same as the thing understood. On the other hand, ‘speak’ principally implies a relation to the word that is conceived, since to speak is nothing other than to utter a word; however, by the mediation of the word, ‘speak’ also implies a relation to the thing understood, which is made manifest by the uttered word to someone who understands that word.

And so only the person who utters the Word is speaking in God, even though each of the persons both understands and is understood—and, as a consequence, is spoken by the Word.

**Reply to objection 4:** In this passage ‘Word’ is being taken figuratively, since what is being called a ‘Word’ is that which is signified or effected by a word. For creatures are said to do the word of God insofar as they bring about an effect to which they are ordained by the conceived Word of divine wisdom. In the same way, someone is said to do the word of a king when he does some deed to which he has been prompted by the king’s word.

## Article 2

### Is 'Word' a proper name of the Son?

It seems that 'Word' is not a proper name of the Son:

**Objection 1:** The Son is a subsistent person in God. But 'Word' does not signify a subsistent thing, as is clear in our own case. Therefore, 'Word' cannot be a proper name of the person of the Son.

**Objection 2:** A word proceeds from the speaker by way of an utterance. Therefore, if the Son is, properly speaking, the 'Word', then He proceeds from the Father only by means of an utterance. But as is clear from Augustine in *De Haeresibus*, this is the heresy of Valentinus.

**Objection 3:** Every name that is proper to a [divine] person signifies some property of His. Therefore, if 'Word' is a proper name of the Son, then it will signify some property of His. And so there will more properties in God than those enumerated above (q. 32, a. 3).

**Objection 4:** If anyone understands, then he conceives a word in his understanding. But the Son understands. Therefore, there is a Word with respect to the Son (*filius est aliquod verbum*). And so 'Word' is not proper to the Son.

**Objection 5:** Hebrews 1:3 says of the Son, "He upholds all things by the word of his power." Basil infers from this that the Holy Spirit is a Word with respect to the Son (*Basilii accepit quod spiritus sanctus sit verbum filii*). Therefore, it is not proper to the Son to be a Word.

**But contrary to this:** In *De Trinitate* 6 Augustine says, "'Word' means the Son alone."

**I respond:** In God the name 'Word', properly speaking, is taken with respect to a person, and it is a proper name of the person of the Son. For 'Word' signifies what emanates from the intellect, and, as was shown above (q. 27, a. 2), in God the person who proceeds by an emanation of the intellect is called the Son, and the relevant procession is called the generation. Hence, it follows that in God the Son alone is properly called the Word.

**Reply to objection 1:** In our case, to be (*esse*) and to understand (*intelligere*) are not the same, and so that which has intelligible *esse* in us does not pertain to our nature. But God's *esse* is the same as His act of understanding, and so the Word of God is not an accident in Him or an effect of His; rather, it pertains to His very nature. And so it must be the case that the Word of God is something subsistent, since whatever exists in God's nature is subsistent. This is why Damascene says, "The Word of God is substantial and a being in a hypostasis, whereas other words [*read: our words*] are powers of the soul."

**Reply to objection 2:** As Hilary notes in *De Trinitate* 6, Valentinus was condemned not because—as the Arians misrepresented the matter—he claimed that the Son was begotten by an utterance, but rather, as is clear from Augustine in *De Haeresibus*, because of the various modes of utterance that he posited.

**Reply to objection 3:** The name 'Word' implies the same property implied by the name 'Son', and this is why Augustine says, "'Word' says the same thing as 'Son'." For the begottenness of the Son, which is His personal property, is signified by different names that are attributed to the Son in order to express the diverse aspects of His perfection. For the fact that He is connatural with the Father is expressed by the name 'Son'; the fact that He is coeternal with the Father is expressed by the name 'Splendor'; the fact that He is altogether similar to the Father is expressed by the name 'Image'; and the fact that He is begotten in an immaterial mode is expressed by the name 'Word'. And it was impossible to find any one name to designate all of these aspects.

**Reply to objection 4:** The Son understands in virtue of being God, since, as has been explained (a. 1), to understand is predicated of God with respect to the divine essence. However, the Son is God Begotten and not God Begetting. Hence, He understands not insofar as He produces the Word but

insofar as He is the Word that proceeds. For in God the Word that proceeds does not differ in reality from the divine intellect, but is distinguished from the Word's source (*principium*) only by a relation.

**Reply to objection 5:** When it is said of the Son that "He upholds all things by the word of his power," the name 'word' is being taken figuratively for the effect of a word. Hence, a Gloss on this passage says that 'word' here means 'command', viz., insofar as it is because of the effect of the word's power that things are conserved in being, just as it is because of the word's power that things are brought into being.

Now when Basil interprets 'word' here as the Holy Spirit, he is speaking improperly and figuratively. For everything that is revelatory of someone can be called his word, and so the Holy Spirit is called the word of the Son by reason of the fact that He makes the Son manifest.

### Article 3

#### Does the name 'Word' imply a relation to creatures?

It seems that the name 'Word' does not imply a relation to creatures:

**Objection 1:** Every effect that connotes a relation to creatures is predicated of God with respect to the divine essence. But, as has been explained (a. 1), 'Word' is predicated of God with respect to a person and not with respect to the essence. Therefore, 'Word' does not imply a relation to creatures.

**Objection 2:** Names that imply a relation to creatures, e.g., 'lord' and 'creator', are predicated of God from a given point in time. But 'Word' is predicated of God from eternity. Therefore, 'Word' does not imply a relation to creatures.

**Objection 3:** 'Word' implies a relation to that from which it proceeds. Therefore, if it implies a relation to creatures, then it follows that the Word proceeds from a creature.

**Objection 4:** There are many divine ideas, corresponding to the diverse relations to creatures. Therefore, if 'Word' implies a relation to creatures, it follows that in God there are many Words and not just one Word.

**Objection 5:** If 'Word' implies a relation to creatures, then this is only because creatures are known by God. But God knows not only beings, but also non-beings. Therefore, 'Word' will imply a relation to non-beings—which seems false.

**But contrary to this:** In *83 Quaestiones* Augustine says, "The name 'Word' signifies not only a relation to the Father, but also a relation to those things that are made through the Word by means of the operative power."

**I respond:** 'Word' implies a relation to creatures. For in knowing Himself, God knows every creature. But a word conceived in the mind represents each thing that is actually being understood. Hence, in our case there are different words corresponding to the different things that we understand. But since God understands Himself and all things by a single act, His single Word expresses not only the Father but all creatures as well. And just as God's knowledge of God is merely speculative (*cognoscitiva*) whereas His knowledge of creatures is both speculative and creative (*cognoscitiva et factiva*), so too the Word of God is merely expressive (*expressiva*) of that which is in God the Father, but is both expressive of and operative with respect to creatures. It is because of this that Psalm 32:9 says, "He spoke and they were made." For the Word implies a creative idea of the things that God makes.

**Reply to objection 1:** The name 'person' includes 'nature' in an oblique grammatical case, since a person is an individual substance with a rational nature. Therefore, the name of a divine person does not imply a relation to creatures as far as the personal relation is concerned, but instead implies only that

which pertains to the divine nature. However, nothing prevents it from implying a relation to creatures insofar as it includes the divine essence in its signification. For just as it is proper to the Son to be the Son, so too it is proper to Him to be God Begotten, i.e., the Creator Begotten. And it is in this way that a relation to creatures is implied by the name 'Word'.

**Reply to objection 2:** Since relations follow upon actions, some names implying a relation of God to creatures—e.g., 'create', 'govern', and others of this sort—follow upon God's action with respect to an exterior *transeunt* effect. Such names are predicated of God from a given point in time. On the other hand, some names—e.g., 'know', 'will', and others of this sort—imply a relation which follows upon an action that remains within the agent and does not pass into an exterior effect. And names of this sort are not predicated of God from a given point in time. It is a relation to creatures of this latter sort that is implied by the name 'Word'.

Moreover, it is not true that names implying a relation of God to creatures are all predicated from a given point in time. Instead, the only names that are predicated of God from a given point in time are those which imply a relation that follows upon God's action with respect to a *transeunt* exterior effect.

**Reply to objection 3:** Creatures are known by God through His essence and not by a knowledge that is taken from the creatures. Hence, it is not necessary for the Word to proceed from creatures, even though the Word expresses creatures.

**Reply to objection 4:** The name 'idea' is imposed mainly to signify a relation to creatures, and so it is used in the plural of God and does not pertain to a person. By contrast, the name 'Word' is imposed mainly to signify (a) a relation to the speaker of the Word and, as a consequence, (b) a relation to creatures insofar as God understands every creature in understanding Himself. For this reason, there is in God just a single Word, and the name 'Word' is predicated with respect to a person.

**Reply to objection 5:** God's Word is of non-beings in just the way that God's knowledge is of non-beings. For, as Augustine puts it, there is nothing less in God's Word than in God's knowledge.

Still, the Word both expresses and produces beings, but [merely] expresses and manifests non-beings.

## QUESTION 35

### The Person of the Son: The Name 'Image'

Next we have to consider the name 'Image'. On this topic there are two questions: (1) Is the name 'Image' said of God with respect to a person? (2) Is 'Image' a proper name of the Son?

#### Article 1

#### Is the name 'Image' said of God with respect to a person?

It seems that 'Image' is not said of God with respect to a person:

**Objection 1:** In *De Fide ad Petrum* Augustine says, "The divinity of the Holy Trinity is the same as the Image to which man was made." Therefore, 'Image' is predicated with respect to the essence and not with respect to a person.

**Objection 2:** In *De Synodis* Hilary says, "An image is an exactly similar species of the thing which is imaged." But 'species', i.e., 'form', is predicated of God with respect to the divine essence. Therefore, the same holds for 'Image'.

**Objection 3:** 'Image' derives from 'imitate' and so implies something prior and something posterior. But there is nothing prior or posterior in God. Therefore, 'Image' cannot be the name of a person in God.

**But contrary to this:** Augustine says, "What is more ridiculous than to predicate 'image' of oneself?" Therefore, 'Image' is predicated relationally in God, and so it is the name of a person.

**I respond:** It is part of the concept of an image that it is a likeness. But not just any likeness is sufficient for the concept of an image. Rather, an image is a likeness that exists within the same species as the thing [imaged], or at least has the appearance (*signum*) of the same species. Now among corporeal things, the appearance of the species seems especially to involve their shape (*figura*). For we see that it is different shapes, and not different colors, that correspond to animals differing in species. Hence, if the color of a thing is depicted on a wall, it is not said to be an image of that thing unless the thing's shape is also depicted. Still, even a likeness of species or shape is not itself sufficient. What is further required for the concept of an image has to do with its origin, since, as Augustine puts it in *83 Quaestiones*, "One egg is not the image of another, because it does not come from the latter." Therefore, in order for something to be truly an image, it must proceed from another thing that is similar to it in species or that, at least, appears like it in species. But those things that imply procession or origin in God pertain to the persons. Hence, the name 'Image' is the name of a person.

**Reply to objection 1:** An image, properly speaking, proceeds in the likeness of the other. But that in whose likeness something proceeds is properly called an exemplar and only improperly an image. Still, it is in the latter sense that Augustine uses the name 'image' when he says that the divinity of the Holy Trinity is the image to which man was made.

**Reply to objection 2:** As it is used by Hilary in the definition of 'image', 'species' means a form in one thing that is derived from another thing. For an image is said to be the 'species' of a thing in the sense that what is made similar to a thing is called its 'form', because it has a form similar to that thing.

**Reply to objection 3:** Among the divine persons, 'imitating' does not signify 'being posterior to'. Rather, it means only 'being made similar to'.

## Article 2

### Is ‘Image’ a proper name of the Son?

It seems that the name ‘Image’ is not proper to the Son:

**Objection 1:** As Damascene says, the Holy Spirit is the Image of the Son. Therefore, ‘Image’ is not proper to the Son.

**Objection 2:** As Augustine says in *83 Quaestiones*, an image is a likeness together with derivation. But this belongs to the Holy Spirit, since He proceeds from another in a mode of likeness. Therefore, the Holy Spirit is an Image. And so it is not proper to the Son to be an Image.

**Objection 3:** According to 1 Corinthians 11:7 (“A man (*vir*) indeed ought not to cover his head: because he is the image and glory of God”), man (*homo*), too, is said to be the image of God. Therefore, it is not proper to the Son to be the Image of God.

**But contrary to this:** In *De Trinitate* 6 Augustine says, “The Son alone is the Image of the Father.”

**I respond:** The Greek doctors generally claim that the Holy Spirit is the Image of the Father and the Son. By contrast, the Latin doctors attribute the name ‘Image’ only to the Son, since in the canonical Scriptures it is attributed only to the Son. For Colossians 1:15 says, “He is the image of the invisible God, the firstborn of every creature,” and Hebrews 1:3 says, “He is the brightness of His glory and the figure of His substance.”

Some claim that the explanation for this is that the Son agrees with the Father not only in nature, but also in the notion *principle*, whereas the Holy Spirit does not agree in any of the notions with either the Father or the Son.

But this explanation does not seem adequate. For in the same way that, as Augustine puts it, there is no equality or inequality with respect to the relations in God, so too with respect to the relations there is no likeness of the sort that is required for the concept of an image.

Hence, others claim that the reason why the Holy Spirit cannot be called the Image of the Son is that there is no image of an image. Nor is the Holy Spirit the Image of the Father, since an image is related directly to that of which it is an image, whereas the Holy Spirit is related to the Father through the Son. Again, the Holy Spirit is not the Image of the Father and the Son together, since if He were, then there would be one image of two [persons]—which seems impossible. Hence, it follows that the Holy Spirit is in no way an image.

But this argument comes to naught. For as will be explained below (q. 36, a. 4), the Father and the Son are a single principle of the Holy Spirit, and so given that they are a single principle, nothing prevents the Father and the Son from having an image. After all, a man is a single image of the whole Trinity.

So we must reply in a different way: Just as the Holy Spirit is not said to be begotten even though He receives the nature of the Father by a procession just as the Son does, so too He is not called an Image even though He receives a species similar to that of the Father. For the Son proceeds as the Word, and it is of the very nature of a word to be a likeness of the species with respect to that from which it proceeds. However, this does not belong to the nature of love—even though it does belong to the Love, who is the Holy Spirit, insofar as He is the divine Love.

**Reply to objection 1:** Damascene and the other Greek doctors generally use the name ‘image’ to mean ‘perfect likeness’.

**Reply to objection 2:** Even though the Holy Spirit is similar to the Father and the Son, it still does not follow that He is their Image—and this for the reason already explained.

**Reply to objection 3:** There are two ways in which an image of something may be found in a given thing. In one way, it exists in a thing which has the same nature with respect to its species—in the way, for instance, that the image of a king exists in his own son. In the second way, it exists in a thing with a different nature—in the way that the image of the king exists on a coin.

It is in the first way that the Son is the Image of the Father, whereas it is in the second way that a man is called an image of God. This is why, in order to signify the imperfection of the image in a man, the man is not only called an image (*imago*) but is said to be ‘to the image’ (*ad imaginem*) [of God], where this indicates a certain movement of something that is tending toward perfection. By contrast, it cannot be said of the Son of God that He is ‘to the image’ of the Father, since He is the perfect image of the Father.

## QUESTION 36

### The Person of the Holy Spirit: The Name 'Holy Spirit'

Next we have to consider the things that pertain to the person of the Holy Spirit (questions 36-38), who is called not only the Holy Spirit (question 36), but also the Love of God (question 37) and the Gift of God (question 38).

On the topic of the name 'Holy Spirit' there are four questions: (1) Is the name 'Holy Spirit' a proper name of a divine person? (2) Does the divine person who is called the Holy Spirit proceed from the Father and the Son? (3) Does the Holy Spirit proceed from the Father through the Son? (4) Are the Father and the Son a single principle of the Holy Spirit?

#### Article 1

##### Is the name 'Holy Spirit' a proper name of a divine person?

It seems that the name 'Holy Spirit' is not a proper name of any divine person (*hoc nomen spiritus sanctus non sit proprium nomen alicuius divinae personae*):

**Objection 1:** No name that is common to the three persons is proper to any one person. But the name 'Holy Spirit' is common to the three persons. For in *De Trinitate* 8 Hilary shows that 'Spirit of God' (a) sometimes signifies the Father, as when it is said, "The Spirit of the Lord is upon me" [Luke 4:18], (b) sometimes signifies the Son, as when the Son says, "It is in the Spirit of God that I cast out demons" [Matthew 12:18], indicating that by the power of His nature He casts out demons, and (c) sometimes signifies the Holy Spirit, as when it is said, "I pour out my Spirit over all flesh" [Joel 2:28]. Therefore, the name 'Holy Spirit' is not a proper name of any divine person.

**Objection 2:** As Boethius says in *De Trinitate*, the names of the divine persons are predicated relationally. But the name 'Holy Spirit' is not relational (*non dicitur ad aliquid*). Therefore, this name is not a proper name of a divine person.

**Objection 3:** Since 'Son' is the name of a divine person, the Son cannot be called 'the Son of this man' or 'the Son of that man'. But 'spirit of this man' or 'spirit of that man' does occur. For Numbers 11:17 says, "The Lord said to Moses . . . 'I will take of your Spirit, and will give to them'." And 4 Kings 2:15 says, "The spirit of Elijah has rested upon Elisha." Therefore, 'Holy Spirit' does not seem to be the proper name of a divine person.

**But contrary to this:** 1 John 5:7 says, "There are Three who give testimony in heaven, the Father, the Word, and the Holy Spirit." But as Augustine puts it in *De Trinitate* 7, if someone asks, 'Three what?', we reply, 'Three persons'. Therefore, 'Holy Spirit' is a name of a divine person.

**I respond:** As was pointed out above (q. 27, a. 4), even though there are two processions in God, the one that is in the mode of love does not have a proper name, and so, as was also pointed out above (q. 28, a. 4), the relations that derive from a procession of this sort are likewise unnamed. Because of this, the divine person who proceeds in this way likewise does not have a proper name.

However, just as certain names are adapted by the usage of speakers to signify the relations just alluded to—for we call them by the names 'Procession' and 'Spiration', which, according to their strict meaning, seem to signify the notional acts rather than the relations—so, too, the name 'Holy Spirit' has been adapted by the usage of Scripture to signify the divine person who proceeds in the mode of love.

There are two reasons why this is appropriate.

First of all, He is called the Holy Spirit by reason of the fact that He is common to [the other two persons]. For as Augustine says in *De Trinitate* 15, "Because the Holy Spirit is common to both of them, it is proper to call Him what both of them have in common. For the Father is a spirit and the Son is a

spirit, and the Father is holy and the Son is holy.”

Second, He is called the Holy Spirit because of the proper signification of the two names. For among corporeal things the name ‘spirit’ seems to signify a certain impulse and movement; for instance, we call breath and wind by the name ‘spirit’. And it is a property of love that it moves and impels the will of the lover toward the beloved. By the same token, holiness is attributed to those things that are ordered toward God. Therefore, since a divine person proceeds in the mode of the Love by which God is loved, He is appropriately named the Holy Spirit.

**Reply to objection 1:** The expression ‘holy spirit’, taken in effect as two words, is common to the whole Trinity. For the name ‘spirit’ signifies the immateriality of the divine substance, since a spirit is an invisible body and has almost no matter. That is why we attribute this name to all immaterial and invisible substances. By the same token, the name ‘holy’ signifies the purity of God’s goodness.

However, when the expression ‘Holy Spirit’ is taken to have the force of a single word, then, for the reason explained above, it has been adapted by the usage of the Church to signify just one of the three persons, viz., the one who proceeds in the mode of the Love.

**Reply to objection 2:** Even though the expression ‘Holy Spirit’ is not predicated relationally, it is nonetheless used in place of a relational name insofar as it has been adapted to signify a person who is distinguished from the others only by a relation.

Still, a relation can also be understood in the name itself if ‘Spirit’ is taken for ‘one who is spirated’.

**Reply to objection 3:** What one grasps by the name ‘Son’ is just the relation to a principle on the part of the one who is from that principle. By contrast, what one grasps by the name ‘Father’ is the relation *being a principle of*, and the same holds for the name ‘spirit’ insofar as it implies a certain moving force. Now it does not belong to any creature to be a principle of a divine person, but it does belong to a creature to have a divine person as a principle. And so one can say ‘our Father’ and ‘our Spirit’, but one cannot say ‘our Son’.

## Article 2

### Does the Holy Spirit proceed from the Son?

It seems that the Holy Spirit does not proceed from the Son (*non procedat a filio*):

**Objection 1:** According to Dionysius, “No one should dare to say anything about God beyond those things that are divinely expressed to us in the sacred writings.” But Sacred Scripture does not say that the Holy Spirit proceeds from the Son, but says only that He proceeds from the Father. This is clear from John 15:26 (“... the Spirit of truth, who proceeds from the Father”). Therefore, the Holy Spirit does not proceed from the Son.

**Objection 2:** The creed of the Council of Constantinople says, “We believe in the Holy Spirit, the Lord and Giver of life, who proceeds from the Father; with the Father and the Son He is to be worshiped and glorified.” Therefore, it should in no way be added to our creed that the Holy Spirit proceeds from the Son. Rather, those who would add this seem to deserve condemnation.

**Objection 3:** Damascene says, “We say that the Holy Spirit is from the Father and we name Him the Spirit of the Father, but we do not say that the Holy Spirit is from the Son, even though we name Him the Spirit of the Son.” Therefore, the Holy Spirit does not proceed from the Son.

**Objection 4:** Nothing proceeds from that in which it comes to rest. But the Holy Spirit comes to rest in the Son. For the legend of St. Andrew says, “Peace be to you and to all who believe in the one

God the Father, and in His one Son, our only Lord Jesus Christ, and in the one Holy Spirit, who proceeds from the Father and abides in the Son.” Therefore, the Holy Spirit does not proceed from the Son.

**Objection 5:** The Son proceeds as the Word. But, in our own case, our spirit does not seem to proceed from our word. Therefore, neither does the Holy Spirit proceed from the Son.

**Objection 6:** The Holy Spirit proceeds perfectly from the Father. Therefore, it is superfluous to claim that He proceeds from the Son.

**Objection 7:** As *Physics* 3 says, in the case of things that are everlasting, *is (esse)* does not differ from *can be (posse)*, and so they differ all the less in God. But the Holy Spirit can be distinguished from the Son even if He does not proceed from the Son. For in *De Processione Spiritus Sancti* Anselm says, “The Son and the Holy Spirit do, to be sure, have *esse* from the Father, but in different ways; for the one has it by being begotten and the other has it by proceeding, so that they are distinct from one another because of this.” And later on he adds, “Even if the Son and the Holy Spirit were not distinct for any other reason, they would be distinct solely for this reason.” Therefore, the Holy Spirit is distinct from the Son without being from Him.

**But contrary to this:** The Athanasian creed says, “The Holy Spirit is from the Father and the Son, neither made nor created nor begotten, but proceeding.”

**I respond:** It is necessary to say that the Holy Spirit is from the Son. For if He were not from the Son, then there could be no way of distinguishing them as persons.

This is clear from what was said above (q. 28, a. 3 and q. 30, a. 2). For it is impossible to claim that the divine persons are distinct from one another by something absolute [and not relational], since it would follow that there is no single essence common to the three persons. For whatever is predicated absolutely in God pertains to the oneness of the divine essence. Therefore, it follows that the divine persons are distinct from one another only by relations.

But the relations cannot make the persons distinct except insofar as they are opposed relations. This is clear from the fact that the Father has two relations, one of which relates Him to the Son and the other of which relates Him to the Holy Spirit. However, since these two relations are not opposed to one another, they do not constitute two persons but instead pertain just to the one person of the Father. Therefore, if in the Son and the Holy Spirit there were just the two relations by which each is related to the Father, then those relations would not be opposed to one another, just as the two relations by which the Father is related to them are not opposed to one another. Hence, just as the person of the Father is one, so it would follow that the person of the Son is one with the person of the Holy Spirit, and that this one person has two relations opposed to the two relations had by the Father. But this is heretical, since it undermines our faith in the Trinity.

Therefore, it must be the case that the Son and the Holy Spirit are related to one another by opposed relations. But as was shown above (q. 28, a. 4), the only opposed relations that there can be in God are relations of origin. Now opposed relations of origin involve a principle and that which is from the principle. Therefore, it follows that one must say either that (a) the Son is from the Holy Spirit—which no one says—or that (b) the Holy Spirit is from the Son—which is what we confess.

The nature of the two processions is consonant with this conclusion. For it was explained above (q. 27, aa. 2 and 4 and q. 28, a. 4) that the Son proceeds as the Word in the mode of the intellect, whereas the Holy Spirit proceeds as the Love in the mode of the will. Now it is necessary that the Love should proceed from the Word, since we do not love something except insofar as we apprehend it by the mind’s conception. Hence, in keeping with this, it is likewise clear that the Holy Spirit proceeds from the Son.

Again, the very way things are ordered teaches us this. For we never find many things proceeding from a single thing without some ordering. The sole exception has to do with things which differ solely in matter; for instance, a single blacksmith produces many knives that differ in matter from one another

and have no ordering with respect to one another. But in the case of things in which there is more than just a distinction of matter, we always find some ordering among the many things produced. Hence, the beauty of God's wisdom is revealed even in the ordering of the creatures that are produced. Therefore, if two persons, viz., the Son and the Holy Spirit, proceed from the single person of the Father, then there must be some ordering they have with respect to one another. But the only conceivable ordering here is an ordering of nature by which the one comes from the other (*quo alius est ex alio*). Nor can one claim that the Son and the Holy Spirit proceed from the Father in such a way that neither of them proceeds from the other, unless he posits a distinction of matter in them—which is impossible.

This is why even the Greeks themselves understand the procession of the Holy Spirit as having some ordering to the Son. For they admit that the Holy Spirit is the Spirit of the Son and that He is from the Father *through* the Son. What's more, some of them are said to concede that He *is from* the Son, or that He *flows from* the Son, but *not* that He *proceeds* from the Son. But they say this, it would seem, either out of ignorance or out of stubbornness. For if one considers the matter correctly, he will find that the word 'procession' is the most general of all the words that pertain to an origin, since we use it to designate any sort of origin at all. For instance, we say that a line proceeds from a point, that a ray proceeds from the sun, that a river proceeds from its source, and so on for all the other types of origin.

Hence, on the basis of everything else that pertains to origins, one can conclude that the Holy Spirit proceeds from the Son.

**Reply to objection 1:** We should not say about God anything that is not found in Sacred Scripture either word-for-word or implicitly. Now even though we do not find it said word-for-word in Sacred Scripture that the Holy Spirit proceeds from the Son, it is nonetheless found implicitly in Sacred Scripture, and especially when the Son, at John 16:14, says of the Holy Spirit: "He shall glorify me, because He shall receive of me."

In addition, with Sacred Scripture we should follow the rule that whatever is said of the Father must also be understood of the Son, even if an exclusive expression is added—with the sole exception of those things in which the Father and the Son are distinguished by opposed relations. For instance, when our Lord says at Matthew 11:27, "No one knows the Son except the Father," this does not rule out the Son's knowing Himself. So, too, when the Holy Spirit is said to proceed from the Father, then even if it were added that He proceeds from the Father alone, this would still not exclude the Son. For the Father and the Son are not opposed with respect to being a principle of the Holy Spirit; rather, they are opposed only insofar as the one is the Father and the other is the Son.

**Reply to objection 2:** Every Council formulated a creed in light of some error that was condemned at that Council. Hence, subsequent Councils did not formulate a creed different from the first one; rather, what was implicitly contained in the first creed was made explicit by certain additions aimed at heresies which were gaining ground at that later time.

Hence, the determination of the Council of Chalcedon declares that those who met at the Council of Constantinople handed down a doctrine concerning the Holy Spirit, and that they did this not by implying that their own predecessors, who had met at Nicea, had left something out, but rather "by making the meaning of their predecessors clear against the heretics." Therefore, since at the time of the ancient Councils the error of asserting that the Holy Spirit does not proceed from the Son had not yet arisen, it was unnecessary to make an explicit pronouncement on this matter. But later on, because of an error that had arisen among some, and in a Council that met in the West, the teaching in question was declared explicitly by the authority of the Roman Pontiff, by whose authority the ancient councils had themselves been convened and confirmed. Nonetheless, the teaching was already contained implicitly in the very fact that the Holy Spirit had already been declared to proceed from the Father.

**Reply to objection 3:** The Nestorians first introduced the claim that the Holy Spirit does not proceed from the Son, as is clear from a Nestorian creed condemned at the Council of Ephesus. This

error was espoused by Theodoric the Nestorian and by many after him, among whom we find even Damascene. Hence, on this matter Damascene's position does not hold good. Still, some point out that even though Damascene does not confess that the Holy Spirit is from the Son, neither do his words strictly speaking deny this.

**Reply to objection 4:** The fact that the Holy Spirit is said to 'rest in' or 'abide in' the Son does not rule out His proceeding from the Son, since the Son is likewise said to abide in the Father, even though He nonetheless proceeds from the Father.

Again, the Holy Spirit is said to 'rest in' the Son either (a) in the sense that the love of the lover rests in the beloved or (b) insofar as this applies to Christ's human nature, and this because of John 1:33 ("He upon whom you shall see the Spirit descending and remaining upon Him, He it is that baptizes)."

**Reply to objection 5:** 'Word', as said of God, does not come from a likeness to a *spoken* word, from which no spirit proceeds, since this is said only metaphorically. Rather, it derives from a likeness to a *mental* word, from which love proceeds.

**Reply to objection 6:** The fact that the Holy Spirit proceeds perfectly from the Father not only does not make it superfluous to say that the Holy Spirit proceeds from the Son, but in fact makes it altogether necessary to say this. For the power of the Father is the same as the power of the Son, and whatever is from the Father is necessarily from the Son as well, unless it is something incompatible with the property of Filiation—for instance, it is not the case that the Son is from Himself, even though He is from the Father.

**Reply to objection 7:** The Holy Spirit is distinguished as a person from the Son by the fact that the origin of the one is distinct from the origin of the other. However, this difference of origin itself stems from the fact that the Son is from just the Father, whereas the Holy Spirit is from the Father and the Son. Otherwise, as was shown above, the two processions would not be distinct from one another.

### Article 3

#### Does the Holy Spirit proceed from the Father *through* the Son?

It seems that the Holy Spirit does not proceed from the Father *through* (*per*) the Son:

**Objection 1:** What proceeds from someone through another does not proceed from the first one immediately. Therefore, if the Holy Spirit proceeds from the Father through the Son, then He does not proceed immediately from the Father—which seems wrong.

**Objection 2:** If the Holy Spirit proceeds from the Father through the Son, then He does not proceed from the Son except because of the Father. But if a thing is such-and-such because of something else, then the latter is more such-and-such. Therefore, the Holy Spirit proceeds from the Father more than from the Son.

**Objection 3:** The Son has *esse* through generation. Therefore, if the Holy Spirit is from the Father through the Son, it follows that the Son is generated first and that the Holy Spirit proceeds afterwards. And so the procession of the Holy Spirit is not eternal—which is heretical.

**Objection 4:** When someone is said to operate through someone else, the converse can likewise be said. For instance, just as we say that the king operates through the magistrate, so too we can say that the magistrate operates through the king. But there is no sense in which we can say that the Son spirates the Holy Spirit through the Father. Therefore, there is no sense in which we can say that the Father spirates the Holy Spirit through the Son.

**But contrary to this:** In *De Trinitate* Hilary says, "Preserve, I beg of you, this religion of my faith,

that I may always possess the Father, viz., you, and adore the Son along with you, and be deserving of your Holy Spirit, who is through your Only-begotten.”

**I respond:** In all the expressions in which someone is said to operate through someone else, the preposition ‘through’ (*per*), as a causal expression, designates some cause or principle of the act in question.

Now since an action lies between the doer and the thing done, sometimes the causal [element] to which the preposition ‘through’ is joined is a cause of the action *insofar as the action goes forth from the agent*. And in such a case it is a cause of the agent’s acting, whether this be (a) a final cause or (b) a formal cause or (c) an efficient, i.e., moving, cause—(a) a *final* cause, as when we say that it is through the craftsman’s desire for money that he works, or (b) a *formal* cause, as when we say that it is through his craft that he works, or (c) a *moving* cause, as when we say that it is through the command of someone else that he works.

On the other hand, sometimes the causal [element] to which the preposition ‘through’ is joined is a cause of the action *insofar as the action is terminated in the thing done*, as when we say that it is through the craftsman’s hammer that he acts. For this does not mean that the hammer is a cause of the craftsman’s acting, but rather that (a) it is a cause of the artifact’s proceeding from the craftsman and that (b) its being a cause is itself a feature it has from the craftsman. This is why some claim that the preposition ‘through’ (a) sometimes takes the source (*auctoritas*) of the action in the nominative case, as in ‘The king operates through the magistrate’, and (b) sometimes takes it in an oblique case, as in ‘The magistrate operates through the king’. Therefore, since the Son has from the Father the fact that the Holy Spirit proceeds from Him, one can say that it is through the Son that the Father spirates the Holy Spirit or—what amounts to the same thing—that the Holy Spirit proceeds from the Father through the Son.

**Reply to objection 1:** In every action there are two things to consider, viz., (a) the *suppositum* that acts and (b) the *power* by means of which the suppositum acts. So, for instance, a fire gives warmth by means of its heat.

Therefore, if we consider the *power* by which the Father and the Son spirate the Holy Spirit, then there is no mediation here, since this power is one and the same power [for both of them].

On the other hand, if we consider the *persons themselves* who spirate the Holy Spirit, then, even though the Holy Spirit proceeds in common from the Father and the Son, the Holy Spirit proceeds from the Father (a) *immediately* insofar as He is from Him and (b) *mediately* insofar as He is from the Son (*immediate a patre procedere inquantum est ab eo et mediate inquantum est a filio*). And this is the sense in which He is said to proceed from the Father through the Son. In the same way, Abel proceeded from Adam (a) *immediately* insofar as Adam was his father and (b) *mediately* insofar as Eve was his mother, because Eve had proceeded from Adam—though this material example of procession seems inadequate for signifying the immaterial procession of the divine persons.

**Reply to objection 2:** If the Son had received from the Father a numerically distinct power for spirating the Holy Spirit, then it would follow that the Son is a secondary and instrumental cause and that the Holy Spirit proceeds more from the Father than from the Son. However, numerically one and the same spirating power exists in the Father and the Son, and so the Holy Spirit proceeds equally from both of them. Still, He is sometimes said to proceed ‘principally’ or ‘properly’ from the Father by reason of the fact that the Son has this power from the Father.

**Reply to objection 3:** Just as the generation of the Son is coeternal with the one who generates Him, so that the Father did not exist prior to begetting the Son, so too the procession of the Holy Spirit is coeternal with His principle. Hence, the begotten Son did not exist prior to the Holy Spirit’s proceeding from Him. Instead, both are eternal.

**Reply to objection 4:** When someone is said to operate through something, the converse does not

always hold true. For instance, we do not say that the hammer operates through the craftsman. On the other hand, we do say that the magistrate operates through the king. For it belongs to the magistrate to act, since he is the master of his own actions. By contrast, it does not belong to the hammer to act; instead, what belongs to the hammer is only to be acted upon. This is why it is designated only as an instrument.

Now the reason why the magistrate is said to operate through the king, even though the preposition ‘through’ denotes a means, is that to the extent that a suppositum is prior in acting, its power is more immediate to the effect. For the first cause’s power conjoins the secondary cause to the first cause’s effect, and this is why in the demonstrative sciences first principles are said to be ‘immediate’. So, then, insofar as the magistrate is intermediate in the order of *acting supposita*, the king is said to operate through the magistrate, whereas in the order of *power* the magistrate is said to act through the king, since the king’s power makes the magistrate’s action attain to its effect.

Now the ordering that exists between the Father and the Son is not an ordering of power, but only an ordering of supposita. And this is why the Father is said to spirate the Holy Spirit through the Son, but not vice versa.

#### Article 4

##### Are the Father and the Son a single principle of the Holy Spirit?

It seems that the Father and the Son are not a single principle of the Holy Spirit (*non sint unum principium spiritus sancti*):

**Objection 1:** The Holy Spirit does not seem to proceed from the Father and the Son insofar as they are one—i.e., either (a) insofar as they are one in *nature*, since if that were so, the Holy Spirit would also proceed from Himself, given that He is one in nature with them, or, again, (b) insofar as they are one in some *property*, since, as is evident, it cannot be the case that one property belongs to two supposita. Therefore, the Holy Spirit proceeds from the Father and the Son insofar as they are many. Therefore, it is not the case that the Father and the Son are a single principle of the Holy Spirit.

**Objection 2:** When it is claimed that the Father and the Son are a single principle of the Holy Spirit, this cannot mean a oneness of *person*, since in that case the Father and the Son would be a single person. Nor can it mean a oneness of *property*, since if it were due to a single property that the Father and the Son are a single principle of the Holy Spirit, then, by parity of reasoning, the Father, it seems, would be two principles of the Son and the Holy Spirit in virtue of the two corresponding properties—which is absurd. Therefore, it is not the case that the Father and the Son are a single principle of the Holy Spirit.

**Objection 3:** The Son’s oneness with the Father is no greater than the Holy Spirit’s oneness with the Father. But the Holy Spirit and the Father are not a single principle with respect to any divine person. Therefore, neither are the Father and the Son.

**Objection 4:** If the Father and the Son are a single principle of the Holy Spirit, then either this single principle is the Father or it is not the Father. But neither of these alternatives is possible. For if the single principle is the Father, then it follows that the Son is the Father, whereas if the single principle is not the Father, it follows that the Father is not the Father. Therefore, one should not say that the Father and the Son are a single principle of the Holy Spirit.

**Objection 5:** If the Father and the Son are a single principle of the Holy Spirit, then it seems, conversely, that the single principle of the Holy Spirit is the Father and the Son. But this seems false,

since the expression ‘principle’ must supposit either for the person of the Father or for the person of the Son. And either way, the proposition is false. Therefore, ‘The Father and the Son are a single principle of the Holy Spirit’ is likewise false.

**Objection 6:** Oneness in substance makes for sameness. Therefore, if the Father and the Son are a single principle of the Holy Spirit, it follows that they are the same principle. But many deny this. Therefore, one should not concede that the Father and the Son are a single principle of the Holy Spirit.

**Objection 7:** Because the Father and the Son and the Holy Spirit are a single principle of creatures, they are said to be a single creator. But the Father and the Son are not a single Spirator; instead, as many insist, they are two Spirators. This is also consonant with the words of Hilary, who says in *De Trinitate* 2 that the Holy Spirit should be confessed to be “from the Father and the Son as sources (*auctoribus*).” Therefore, it is not the case that the Father and the Son are a single principle of the Holy Spirit.

**But contrary to this:** In *De Trinitate* 5 Augustine says that the Father and the Son are a single principle of the Holy Spirit and not two principles.

**I respond:** The Father and the Son are one in all things in which no relational opposition makes for a distinction between them. Hence, since they are not relationally opposed in being a principle of the Holy Spirit, it follows that the Father and the Son are a single principle of the Holy Spirit.

However, some claim that the proposition ‘The Father and the Son are a single principle of the Holy Spirit’ is improper. For when the name ‘principle’ is taken in the singular, it signifies a property rather than a person, and so they claim that here it must be taken adjectivally. And since an adjective is not determined by another adjective, it cannot be appropriate to say that the Father and the Son are a single principle of the Holy Spirit, unless the term ‘single’ is understood as if it were posited adverbially, in which case the meaning of ‘are a single principle’ would be that they are principles in a single way.

However, one could reply along the same lines that the Father is two principles of the Son and the Holy Spirit, i.e., that He is a principle of them in two ways.

Therefore, one should reply that even though the name ‘principle’ signifies a property, it nonetheless signifies it in a substantival mode—just as the names ‘father’ and ‘son’ do even among created things. Hence, the grammatical number is taken from the form that is signified, just as with other substantival expressions. Therefore, just as the Father and the Son are a single God because of the oneness of the form that is signified by the name ‘God’, so too they are a single principle of the Holy Spirit because of the oneness of the property signified by the name ‘principle’.

**Reply to objection 1:** If one considers the *spirative power*, the Holy Spirit proceeds from the Father and the Son insofar as they are one in the spirative power, where, as will be explained below (q. 41, a. 5), ‘spirative power’ signifies the divine nature in a certain way along with a property. Nor is it absurd that one property should exist in two supposita that share a single nature.

On the other hand, if one considers the *supposita* involved in the spiration, then the Holy Spirit proceeds from the Father and the Son insofar as they are many. For He proceeds from them as the Love who unites the two of them (*ut amor unitivus duorum*).

**Reply to objection 2:** When one says, ‘The Father and the Son are a single principle of the Holy Spirit’, a single property is designated, viz., the form signified by the name ‘principle’. However, it does not follow that the Father can be called more than one principle because of the plurality of principles. For this would imply that He is a plurality of supposita.

**Reply to objection 3:** In God, likeness and unlikeness have to do not with the relational properties, but with the divine essence. Hence, just as the Father is not more similar to Himself than He is to the Son, so too the Son is not more similar to the Father than the Holy Spirit is.

**Reply to objection 4:** The two propositions ‘The Father and the Son are a single principle that is the Father’ and ‘The Father and the Son are a single principle that is not the Father’ are not opposed as

contradictories. Hence, it is not necessary to grant either one of them. For when we say, ‘The Father and the Son are a single principle’, the expression ‘principle’ does not have determinate supposition, but instead has confused supposition for both of the persons together. Hence, the inference [to one of the two propositions just mentioned] commits the fallacy of a figure of speech, since it goes from confused supposition to determinate supposition.

**Reply to objection 5:** The proposition ‘The single principle of the Holy Spirit is the Father and the Son’ is in fact true. For the term ‘principle’ does not supposit for just one person; instead, as was just explained, it supposits indeterminately for two persons.

**Reply to objection 6:** It is appropriate to say that the Father and the Son are the same principle, as long as ‘principle’ is suppositing confusedly and indeterminately for the two persons together.

**Reply to objection 7:** Some claim that even though the Father and the Son are a single principle of the Holy Spirit, they are nonetheless two spirators, and this because of the distinction between the supposita. Likewise, they are two who are spirating, since acts are attributed to supposita. The same line of reasoning does not hold in the case of the name ‘creator’. For, as has been explained, the Holy Spirit proceeds from the Father and the Son insofar as they are two distinct persons. By contrast, creatures proceed from the three persons not insofar as they are distinct persons, but insofar as they are one in essence.

However, it seems better to reply as follows: Because ‘spirating’ is an adjective, whereas ‘spirator’ is a noun (*substantivum*), we can say that the Father and the Son are two who are spirating, and this because of the plurality of supposita, but that they are not two spirators, because there is just a single spiration. For adjectival names derive their grammatical number from the number of supposita, whereas nouns derive it from themselves in accord with the form that is signified.

Now as for the claim made by Hilary, viz., that “the Holy Spirit is from the Father and the Son as sources,” he should be interpreted as using a noun in place of an adjective (*exponendum est quod ponitur substantivum pro adiectivo*).

## QUESTION 37

### The Person of the Holy Spirit: The Name ‘Love’

Next we have to consider the name ‘Love’ (*amor*). On this topic there are two questions: (1) Is ‘Love’ a proper name of the Holy Spirit? (2) Do the Father and the Son love one another by the Holy Spirit?

#### Article 1

##### Is ‘Love’ a proper name of the Holy Spirit?

It seems that ‘Love’ (*amor*) is not a proper name of the Holy Spirit:

**Objection 1:** In *De Trinitate* 15 Augustine says, “I do not know why, just as the Father and the Son and the Holy Spirit are called Wisdom and are all together not three Wisdoms but one Wisdom, it should not also be the case that the Father and the Son and the Holy Spirit are called Love (*caritas*) and should all together be one Love.” But no name that is predicated of each person and of all of them together in the singular is a proper name of any one person. Therefore, the name ‘Love’ (*amor*) is not a proper name of the Holy Spirit.

**Objection 2:** The Holy Spirit is a subsistent person. But ‘love’ (*amor*) does not signify a subsistent person; rather, it signifies a certain action that passes from the lover to the beloved. Therefore, ‘Love’ is not a proper name of the Holy Spirit.

**Objection 3:** Love is a bond between lovers, since according to Dionysius in *De Divinis Nominibus*, chap. 4, it is a certain unitive force. But a bond lies between the things that it connects and is not something that proceeds from them. Therefore, since, as has been shown (q. 36, a. 2), the Holy Spirit proceeds from the Father and the Son, it seems that He is not the Love, i.e., the bond, between the Father and the Son.

**Objection 4:** Every lover is such that some act of love belongs to him. But the Holy Spirit is a lover. Therefore, there is an act of love that belongs to Him. Therefore, if the Holy Spirit is the Love, then there will be a Love that belongs to the Love, and a Spirit from the Spirit—which is absurd.

**But contrary to this:** In his homily on the feast of Pentecost Gregory says, “The Holy Spirit Himself is Love.”

**I respond:** In God the name ‘Love’ (*amor*) can be taken both with respect to the essence and with respect to a person.

Insofar as it is taken with respect to a person, it is a proper name of the Holy Spirit in the same way that ‘Word’ is a proper name of the Son. To see this clearly, note that, as has been shown (q. 27, aa. 1 and 3-5), there are two processions in God—one in the mode of the intellect, which is the procession of the Word, and the other in the mode of the will, which is the procession of the Love. Since the first procession is better known to us, there are more available proper names to signify each of the aspects that can be considered in it. But this is not the case with the procession that involves the will. Hence, we use certain circumlocutions to signify the person who proceeds, as well as to signify the relations that stem from this procession. And so, as was explained above (q. 28, a. 4), we designate the relations by the names ‘Procession’ and ‘Spiration’, even though these are, strictly speaking, names of origin rather than names of relations.

And yet we must consider both of the processions in a similar manner. For just as from the fact that someone understands something, a certain intellectual conception of the thing understood—called a ‘word’—comes to exist in the one who understands, so, too, from the fact that someone loves something, a certain impression, so to speak, of the thing loved comes to exist in the affective part of the lover, so

that the thing loved is said to exist in the one who loves it in the way that the thing understood exists in the one who understands it. The result is that when someone understands himself and loves himself, he exists within himself not only through his real identity with himself, but also in the way that something understood exists within the one who understands it and in the way that something loved exists within the one who loves it.

Now as for the intellect, there are words available to signify the relation of the one who understands to the thing understood, as is clear with the expression ‘to understand’; and there are likewise other words available to signify the process of conceiving something intellectually, viz., ‘to speak’ and ‘word’. Hence, in God ‘to understand’ is predicated only of the essence, since it does not imply a relation to the word that proceeds, whereas (a) ‘word’ is predicated of a person, since it signifies that which proceeds, and (b) ‘to speak’ is predicated as a notion, since it implies a relation between the principle of the word and the word itself.

On the part of the will, by contrast, besides ‘to have affection for’ (*diligere*) and ‘to love’ (*amare*), which imply a relation of the lover to the thing loved, there are no other available words that imply the relation that the very impression of or affection for the thing loved, which arises in the lover because of his love, bears to the principle of this love, or vice versa. And so, because of this shortage of words, we signify these relations by the words ‘love’ (*amor*) and ‘affection’ (*dilectio*)—in a way analogous to that in which we call the Word the Conceived Understanding or the Begotten Wisdom.

So then, insofar as ‘love’ and ‘affection’ imply only the relation of the lover to thing loved, ‘love’ and ‘to have affection for’ are predicated of the divine essence, just as ‘an understanding’ (*intelligentia*) and ‘to understand’ are. However, insofar as we use these words to express the relation that the reality which proceeds in the mode of love bears to its principle and vice versa—so that by ‘Love’ we mean ‘Love as proceeding’ and by ‘to have affection for’ we mean ‘to spirate the Love that proceeds’—‘Love’ is in this sense the name of a person and ‘to have affection for’ or ‘to love’ is the name of a notion in the way in which ‘to speak’ or ‘to generate’ is.

**Reply to objection 1:** Augustine is talking about love (*caritas*) insofar as it is predicated of the essence in God, in the way just explained.

**Reply to objection 2:** As was explained above (q. 14, a. 2), even though to understand and to will and to love are signified in the manner of *transeunt* actions on objects, they are nonetheless actions that remain with the agent—yet in such a way that they imply a relation to the object within the agent himself. Hence, even in our own case, love is something that remains within the lover, and the interior word (*verbum cordis*) is something that remains within the speaker—yet with a relation to the thing loved or to the thing expressed by the word.

However, since there are no accidents in God, it is true in addition that both the Word and the Love are subsistent. Therefore, when the Holy Spirit is said to be the Love of the Father for the Son or for anything else, what is signified by ‘Love’ is not something that passes into another, but simply the relation of the Love to the thing loved, just as ‘Word’ implies a relation of the word to the thing expressed by the word.

**Reply to objection 3:** The Holy Spirit is said to be the bond between the Father and the Son insofar as He is the Love. For since the Father loves both Himself and the Son by a single love (and vice versa), what is implied in the Holy Spirit as the Love is the relation that the Father bears to the Son (and vice versa) as a lover to His beloved. But from the very fact that the Father and the Son mutually love one another, it follows that their mutual love, which is the Holy Spirit, must proceed from them both.

Therefore, as far as His origin is concerned, the Holy Spirit is not a medium between the Father and the Son, but rather a third person in the Trinity. But according to the relation just mentioned, He is a bond between the two of them who proceeds from them both.

**Reply to objection 4:** Even though the Son understands, it nonetheless does not belong to Him to

produce the Word, since to understand belongs to Him insofar as He is the Word that proceeds. So, too, even though the Holy Spirit loves insofar as ‘loves’ is predicated of the divine essence, nonetheless it does not belong to Him to spirate the love, which is to love insofar as ‘to love’ is taken as a notion. For insofar as ‘to love’ is predicated of the essence, the Holy Spirit loves as the Love which proceeds and not as that from which the Love proceeds.

## Article 2

### Do the Father and the Son love one another by the Holy Spirit?

It seems that the Father and the Son do not love one another by the Holy Spirit (*pater et filius non diligant se spiritu sancto*):

**Objection 1:** In *De Trinitate* 7 Augustine proves that it is not the case that the Father is wise by the Begotten Wisdom. But, as was explained above (a. 1), just as the Son is the Begotten Wisdom, so the Holy Spirit is the Love that Proceeds. Therefore the Father and the Son do not love one another by the Love that Proceeds, i.e., by the Holy Spirit.

**Objection 2:** When one says ‘The Father and the Son love one another by the Holy Spirit’, the word ‘love’ is being taken either for the essence or for a notion. But the proposition cannot be true if ‘love’ is being taken for the essence, since by parity of reasoning the Father could be said to understand by the Son. Nor, again, can it be true if ‘love’ is taken for a notion, since by parity of reasoning one could claim that the Father and the Son spirate by the Holy Spirit or that the Father generates by the Son. Therefore, there is no sense in which the proposition ‘The Father and the Son love one another by the Holy Spirit’ is true.

**Objection 3:** It is by the same love that the Father loves the Son, Himself, and us. But the Father does not love Himself by the Holy Spirit, since no notional act is reflected back on to the principle of that act. For instance, one cannot claim that the Father generates Himself or that He spirates Himself. Therefore, one likewise cannot claim that He loves Himself by the Holy Spirit, insofar as ‘loves’ is taken for a notion. Likewise, the love by which the Father loves us does not seem to be the Holy Spirit, since this love implies a relation to creatures and so pertains to the divine essence. Therefore, the proposition ‘The Father loves the Son by the Holy Spirit’ is also false.

**But contrary to this:** In *De Trinitate* 6 Augustine says, “The Holy Spirit is He by whom the Begotten is loved by the one who generates Him, and He by whom the Begotten loves His Begetter.”

**I respond:** On this question the difficulty arises from the fact that when one says ‘The Father loves the Son by the Holy Spirit’, if the ablative construction ‘by the Holy Spirit’ is taken as standing for some sort of cause, it seems that the Holy Spirit is the principle of loving for the Father and the Son—which is altogether impossible.

For this reason some have claimed that the proposition ‘The Father and the Son love one another by the Holy Spirit’ is false. And they further claim that this proposition was retracted by Augustine when he retracted the similar proposition ‘The Father is wise by the Begotten Wisdom’.

By contrast, there are those who claim that the proposition is improper and that ‘The Father loves the Son by the Holy Spirit’ should be expounded as ‘The Father loves the Son by the Holy Spirit, i.e., by the love which belongs to the essence and which is appropriated to the Holy Spirit’.

On the other hand, some have claimed that the ablative construction ‘by the Holy Spirit’ is to be taken as standing for a sign [rather than a cause], so that the sense of the proposition is ‘The Holy Spirit is the sign that the Father loves the Son insofar as He proceeds from them as the Love’.

Still others have claimed that the ablative construction is to be taken as standing for a formal cause, since the Holy Spirit is the Love by which the Father and the Son formally love one another.

Finally, some have claimed that the ablative construction is to be taken as standing for a formal effect, and they are the ones who have come closer to the truth. To see this clearly, note that since things are commonly named from their forms, e.g., a white thing from its whiteness, and a man from his human-ness, everything from which something is named has to that extent the status of a form. For instance, if I say ‘He is clothed by a garment’, the ablative construction ‘by a garment’ is taken to stand for a formal cause, even though it is not a form. Now something can be named on the basis of what proceeds from it—not just in the way that an agent is named by its action, but also in the way that an agent is named by the very terminus of the action, which is the effect, when that effect is itself included in our understanding of the action. For instance, we say that a fire produces warmth by heating, even though heating is not itself the heat which is the form of the fire, but is instead the action that proceeds from the fire. Again, we say that a tree flowers by flowers, even though the flowers are not the form of the tree, but are instead certain effects that proceed from it.

Accordingly, we should respond that ‘to love’ is taken in two ways in the case of God, viz., (a) with respect to the essence and (b) for a notion.

Insofar as ‘to love’ is taken with respect to the essence, the Father and the Son love one another not by the Holy Spirit, but by their essence. This is why Augustine says in *De Trinitate* 15, “Who would dare to claim that the Father loves neither Himself nor the Son nor the Holy Spirit except through the Holy Spirit?” And the first set of opinions proceeds on this understanding.

However, insofar as ‘to love’ is taken for a notion, to love is in this sense nothing other to spirate the Love, just as to speak is to produce a word, and just as to flower is to produce flowers. So in the sense in which a tree is said to flower by flowers, the Father is said to speak Himself and creatures by the Word (or by the Son), and the Father and the Son are said to love one another and us by the Holy Spirit, i.e., by the Love that Proceeds.

**Reply to objection 1:** In God, ‘to be wise’ or ‘to be intelligent’ is taken only with respect to the essence, and so it cannot be said that the Father is wise or intelligent by the Son. However, ‘to love’ is taken not only with respect to the essence, but also for a notion. Accordingly, in the sense explained above, we can say that the Father and the Son love one another by the Holy Spirit.

**Reply to objection 2:** When a determinate effect is implied in our understanding of a given action, the principle of that action can be named both from the action and from the effect. For instance, we can say that the tree flowers by a flowering and that it flowers by flowers. However, when a determinate effect is not included in [our understanding of] the action, then the principle of the action cannot be named from an effect, but instead can be named only from the action. For instance, we do not say that the tree produces a flower by a flower; instead, we say that it produces a flower by the production of a flower.

Therefore, since the expressions ‘spirate’ and ‘generate’ imply only a notional action, we cannot say that the Father spirates by the Holy Spirit or that He generates by the Son. However, we can say that the Father speaks by the Word (as by a person who proceeds), and that the Father speaks by a speaking (as by a notional act). For ‘to speak’ implies a determinate person who proceeds, since to speak is just to produce the Word. Similarly, ‘to love’, insofar as it is taken for a notion, is just to produce the Love. And so one can say that the Father loves the Son by the Holy Spirit as by a person who proceeds, and that the Father loves the Son by the loving itself as by a notional act.

**Reply to objection 3:** The Father loves not only the Son but also Himself and us by the Holy Spirit. For insofar as the expression ‘to love’ is taken for a notion, it not only implies the production of a divine person but also implies a person produced in the mode of love, where love has a relation to the thing loved. Hence, just as the Father speaks Himself and every creature by the Word which He begets,

insofar as the begotten Word adequately represents the Father and every creature, so too the Father loves Himself and every creature by the Holy Spirit, insofar as the Holy Spirit proceeds as the Love of the first goodness according to which the Father loves Himself and every creature. And so it is also clear that a relation to creatures is implied—secondarily, as it were—both in the Word and in the Love that proceeds, insofar as the divine truth and goodness constitute the principle for understanding and loving every creature.

## QUESTION 38

### The Person of the Holy Spirit: The Name ‘Gift’

Next we consider the name ‘Gift’ (*donum*). On this topic there are two questions: (1) Can ‘Gift’ be a name of a person? (2) Is ‘Gift’ a proper name of the Holy Spirit?

#### Article 1

#### Is ‘Gift’ the name of a person?

It seems that ‘Gift’ is not the name of a person (*donum non sit nomen personale*):

**Objection 1:** Every name of a person implies some distinction in God. But the name ‘Gift’ does not imply any distinction in God, since in *De Trinitate* 15 Augustine says, “The Holy Spirit is given as God’s gift in such a way that He also gives Himself as God.” Therefore, ‘Gift’ is not the name of a person.

**Objection 2:** No name of a person belongs to the divine essence. But as is clear from Hilary in *De Trinitate* 9, the divine essence is a gift that the Father gives to the Son. Therefore, ‘Gift’ is not the name of a person.

**Objection 3:** According to Damascene, among the divine persons there is no subjection or servitude. But ‘gift’ implies a certain subjection both to the one to whom the gift is given and to the one by whom the gift is given. Therefore, ‘Gift’ is not the name of a person.

**Objection 4:** ‘Gift’ implies a relation to creatures, and so it seems to be predicated of God from a given point in time. But the names of the persons, e.g., ‘Father’ and ‘Son’, are predicated of God from eternity. Therefore, ‘Gift’ is not the name of a person.

**But contrary to this:** In *De Trinitate* 15 Augustine says, “Just as a body of flesh is nothing other than the flesh, so too the Gift of the Holy Spirit is nothing other than the Holy Spirit.” But ‘Holy Spirit’ is a name of a person. Therefore, so is ‘Gift’.

**I respond:** The name ‘Gift’ implies an aptness for being given. Now what is given has a relation both to the one by whom it is given and to the one to whom it is given. For a gift is given by someone only if it belongs to him, and it is given to someone in order that it might belong to him.

Now a divine person is said ‘to belong to someone’ (*esse alicuius*) either (a) according to His origin, in the way that the Son belongs to the Father, or (b) insofar as He is possessed by someone, where we are said to possess what we can in freedom use or enjoy as we wish. A divine person cannot be possessed in this second sense by anything except a rational creature who is conjoined to God. Other creatures can, to be sure, be moved by a divine person, but not in such a way that it is within their power to enjoy the divine person or to make use of some effect of His. By contrast, rational creatures attain to this in some cases—as, for instance, when someone participates in the divine Word and in the Love that proceeds in such a way that he can in freedom know God truly and love God rightly. Hence, only rational creatures can possess a divine person. But they cannot attain to possessing a divine person in this way by their own power. Hence, it is necessary that this be given to them from above; for it is what we have from elsewhere that is said to be given to us. Hence, in this sense it belongs to a divine person to be given and to be a Gift.

**Reply to objection 1:** The name ‘Gift’ implies a personal distinction insofar as the Gift is said to belong to someone through His origin. And yet the Holy Spirit gives Himself insofar as He belongs to Himself as one who is able to use Himself or, better, to enjoy Himself—in the same sense in which a free man is said to belong to himself. This is why in *Super Ioannem* Augustine says, “What is more yours than yourself?”

An alternative, and better, reply is this: A gift must belong in some way to the giver. But ‘to belong to someone’ has several meanings:

In one sense, one belongs to oneself in the mode of identity, as Augustine says in *Super Ioannem*, and in this sense there is no distinction between the gift and the giver, but only a distinction between the gift and the one to whom the gift is given. And in this sense the Holy Spirit is said to give Himself.

In a second sense, something is said to belong to someone as a possession or as a servant, and in this sense the gift must be distinct in essence from the giver. According to this sense, the gift of God is something created.

In a third sense, something is said to belong to someone just through its origin, and this is the sense in which the Son belongs to the Father and in which the Holy Spirit belongs to both of them. Thus, insofar as a gift is said to belong to the giver in this sense, the gift and the giver are distinct persons, and thus ‘Gift’ is a name of a person.

**Reply to objection 2:** The essence is called a gift of the Father in the first sense, since the essence belongs to the Father in mode of identity.

**Reply to objection 3:** Insofar as ‘Gift’ is a name of a person in God, it does not imply subjection, but implies only origin in relation to the giver. However, in relation to the one to whom the Gift is given, it implies free use or enjoyment, as has been explained.

**Reply to objection 4:** Something is called a ‘gift’ not from the fact that it is actually given, but rather insofar as it has an aptness for being possibly given. Hence, a divine person is called a Gift from eternity, even if He is given from a certain point in time.

Nor does it follow from the fact that ‘Gift’ implies a relation to creatures that it is predicated of the essence. All that follows is that something pertaining to the essence is included in our understanding of ‘Gift’, in just the same way that, as was explained above (q. 34, a. 3), the essence is included in our understanding of a person.

## Article 2

### Is ‘Gift’ a proper name of the Holy Spirit?

It seems that ‘Gift’ is not a proper name of the Holy Spirit:

**Objection 1:** ‘Gift’ comes from ‘that which is given’. But Isaiah 9:6 says, “A Son is given to us.” Therefore, the name ‘Gift’ belongs to the Son as well as to the Holy Spirit.

**Objection 2:** Every proper name of a person signifies some property of His. But the name ‘Gift’ does not signify any property of the Holy Spirit. Therefore, ‘Gift’ is not a proper name of the Holy Spirit.

**Objection 3:** As was pointed out above (q. 36, a. 1), the Holy Spirit can be called the ‘Spirit’ of a man. By contrast, He cannot be called the ‘Gift’ of any man, but only God’s Gift. Therefore, ‘Gift’ is not a proper name of the Holy Spirit.

**But contrary to this:** In *De Trinitate* 4 Augustine says, “Just as for the Son to be begotten is for Him to be from the Father, so for the Holy Spirit to be the Gift of God is for Him to proceed from the Father and the Son.” But the Holy Spirit is given proper names insofar as He proceeds from the Father and the Son. Therefore, ‘Gift’ is a proper name of the Holy Spirit.

**I respond:** Insofar as ‘Gift’ is taken for a person in God, it is a proper name of the Holy Spirit. To see this clearly, note that, according to the Philosopher, a gift is properly speaking an unreturnable offering. That is, a gift is not given with the intention of being repaid, and so ‘gift’ implies a gratuitous

donation. But the reason for the gratuitous donation is love. For we give something gratuitously to another because we will his good. Therefore, the first thing we give him is the love by which we will his good. Thus it is clear that love has the character of a primary gift through which all of our gratuitous gifts are given. Hence, since, as has already been explained (q. 27, a. 4 and q. 37, a. 1), the Holy Spirit proceeds as the Love, He proceeds with the character of the First Gift (*procedit in ratione doni primi*). Thus, in *De Trinitate* 15 Augustine says, “Through the Gift which is the Holy Spirit, the many particular gifts are parceled out to the members of Christ.”

**Reply to objection 1:** Because the Son proceeds in the manner of a Word, which by its very nature is a likeness of its principle, He is properly speaking called the Image—even though the Holy Spirit is also similar to the Father. In like manner, because the Holy Spirit proceeds from the Father as the Love, He is properly speaking called the Gift—even though the Son is also given. For the very fact that the Son is given stems from the Father’s love—this according to John 3:16: “For God so loved the world that He gave His Only-begotten Son.”

**Reply to objection 2:** The name ‘Gift’ implies that the Gift belongs to the giver through origin. And so it is that ‘Gift’ implies the property of the Holy Spirit’s origin, viz. the Procession.

**Reply to objection 3:** Before a gift is given, it belongs only to the giver; but after it is given, it belongs to the one to whom it is given. Therefore, since ‘Gift’ does not imply the actual giving, He cannot be said to be the Gift of a man. Instead, He is the Gift of God as giver. However, once He has been given, He is then the Spirit or the Gift of a man.

## QUESTION 39

### The Persons in Comparison to the Essence

Now that we have discussed the divine persons taken absolutely, we must consider the persons in comparison to the essence (question 39), to the properties (question 40), and to the notional acts (question 41), and then we must compare the persons with one another (questions 42 and 43).

With respect to the first of these topics there are eight questions: (1) Is the essence in God the same as a person? (2) Should one say that the three persons are ‘of one essence’? (3) Should the names of the essence be predicated of the persons in the singular or the plural? (4) Can the notions in their adjectival forms—whether verbs or participles—be predicated of the names of the essence taken in their concrete forms? (5) Can the notions in their adjectival forms be predicated of the names of the essence taken in their abstract forms? (6) Can the names of the persons be predicated of the names of the essence in their concrete forms? (7) Should the attributes of the essence be appropriated to the persons? (8) Which attributes should be appropriated to which persons?

#### Article 1

#### Is the essence in God the same as a person?

It seems that in God the essence is not the same as a person:

**Objection 1:** If the essence is the same as a person or suppositum (*persona seu suppositum*) in any given thing, then there must be just one suppositum per nature—as is clear in the case of all separated substances. For when things are the same in reality, the one cannot be multiplied without the other also being multiplied. But it is clear from what has been said above (q. 28, a. 3 and q. 30, a. 2) that in God there is a single essence and three persons. Therefore, the essence is not the same as a person.

**Objection 2:** An affirmation and corresponding negation are not true of the same thing at one and the same time. But an affirmation and corresponding negation are true of the essence and the persons. For there are distinct persons, but not distinct essences. Therefore, a person is not same as the essence.

**Objection 3:** Nothing is a subject of itself. But a person is a subject of the essence, and this is why it is called a suppositum or hypostasis. Therefore, a person is not the same as the essence.

**But contrary to this:** In *De Trinitate* 7 Augustine says, “When we say ‘the person of the Father’, we are not saying anything different from ‘the substance of the Father’.”

**I respond:** To anyone who considers God’s simplicity, the truth regarding this question is evident. For it was shown above (q. 3, a. 3) that God’s simplicity requires that in God the essence is the same as a suppositum, which in intellectual substances is nothing other than a person.

But a difficulty seems to arise because the essence retains its oneness even though the divine persons are multiplied. And since, as Boethius says, “it is the relations that multiply the Trinity of persons,” some have claimed that the essence differs from a person in God in such a way that they called the relations ‘bystanders’ (*assistantes*), taking into account only that they exist with respect to another and not that they are themselves realities (*res*).

However, as was shown above (q. 28, a. 2), just as relations exist as accidents in created things, so in God they are the divine essence itself. From this it follows that (a) in God the essence does not differ as a thing (*secundum rem*) from a person, and yet that (b) the persons are really distinct from one another. For as was explained above (q. 29, a. 4), ‘person’ signifies a relation as subsisting in the divine nature (*persona significat relationem prout est subsistens in natura divina*). Now when compared to the essence, a relation differs from it not as a thing but only conceptually, whereas when compared to an opposed relation, it has a real distinction from that relation by reason of the opposition. And so it follows

that there is one essence and three persons.

**Reply to objection 1:** In creatures there cannot be a distinction among supposita that derives from relations (*non potest esse distinctio suppositorum per relationes*); instead, a distinction among supposita must derive from the principles of the essence, since in creatures relations are not subsistent. By contrast, in God the relations are subsistent and so, insofar as the relations are opposed to one another, they can make for distinct supposita (*possunt distinguere supposita*). And yet there are not distinct essences (*neque tamen distinguitur essentia*), since it is not by reason of their being the same in reality as the essence that the relations themselves are distinct from one another.

**Reply to objection 2:** From the fact that in God the essence and a person differ conceptually, it follows that something can be affirmed of the one and denied of the other. Consequently, the one is a subject [of a given predicate] without the other being a subject [of that predicate].

**Reply to objection 3:** As was explained above (q. 13, aa. 1 and 3), we impose names on divine realities according to the mode of created things. And the reason why created individuals are called subjects or supposita or hypostases is that the natures of created things are individuated by matter, which serves as the subject of the nature of the species. It is for this reason that the divine persons are likewise called supposita or hypostases—and not because there really is in God any such thing as being an underlying suppositum or subject (*aliqua suppositio vel subiectio*).

## Article 2

### Should one say that the three persons are ‘of one essence’?

It seems that one should not say that the three persons are ‘of one essence’ (*unae essentiae*):

**Objection 1:** In *De Synodis* Hilary says that the Father and the Son and the Holy Spirit “are three in substance, though one in harmony.” But God’s substance is His essence. Therefore, the three persons are not of one essence.

**Objection 2:** As is clear from Dionysius, *De Divinis Nominibus*, chap. 1, one should not affirm anything of God unless it is explicitly expressed by the authority of Sacred Scripture. But Sacred Scripture nowhere says explicitly that the Father and the Son and the Holy Spirit are of one essence. Therefore, this should not be asserted.

**Objection 3:** The divine nature is the same as the divine essence. Therefore, it should be enough to say that the three persons are ‘of one nature’.

**Objection 4:** It is customary to say that an essence is ‘the essence of a person’ rather than that a person is ‘the person of an essence’. Therefore, it does not seem appropriate to say that the three persons are of one essence.

**Objection 5:** Augustine explains that we do not say that the three persons are *from* one essence (*ex una essentia*), lest someone should think that the essence and a person are different in God. But just as prepositions [such as ‘*ex*’] are grammatically transitive (*transitivae*), so too are oblique cases [such as the genitive]. Therefore, by parity of reasoning, we should not say that the three persons are *of* one essence.

**Objection 6:** We should not say anything about God that can be an occasion of error. But when someone says that the three persons are of one essence or substance, an occasion for error arises. For as Hilary says in *De Synodis*, “‘One substance’, predicated of the Father and the Son, signifies either that (a) one subsistent thing has two names, or that (b) one substance has been divided and become two imperfect substances, or that (c) there is a third and prior substance which has been taken over and assumed by the two of them.” Therefore, one should not say that the three persons are of one substance.

**But contrary to this:** In *Contra Maximinum 2* Augustine says that the name ‘*homoousion*’, which the Council of Nicea confirmed in opposition to the Arians, signifies that the three persons are of one essence.

**I respond:** As was explained above (q. 13, aa. 1 and 3), our intellect does not name divine realities according to their own mode, since we cannot have cognition of them as such; instead, it names them according to the mode found among created things. Now among sensible things, from which our intellect takes its knowledge, the nature of any given species is individuated by matter, so that the nature has the character of a form and the individual has the character of a suppositum of that form. So likewise in God, as far as the mode of signifying is concerned, the essence is signified as the form of the three persons.

Now among created things we say that a form is ‘of’ that whose form it is, e.g., the health ‘of’ a man or the beauty ‘of’ a man. But we do not say that the thing that has the form is ‘of’ the form, unless an adjective is added that modifies the form. For instance, we say ‘This is a woman of handsome figure’ or ‘This is a man of perfect virtue’. Similarly, since in God the essence is not multiplied despite the fact that the persons are multiplied, we say that there is one essence ‘of the three persons’; and we also say that there are three persons ‘of one essence’, since the genitive construction ‘of one essence’ (*unius essentiae*) is understood as designating a form.

**Reply to objection 1:** In this passage ‘substance’ is being taken for ‘hypostasis’ and not for ‘essence’.

**Reply to objection 2:** Even though Sacred Scripture does not say in these exact words that the three persons are of one essence, this is nonetheless the meaning of passages such as “The Father and I are one” [John 10:30], and “I am in the Father and the Father is in me” [John 10:38]. And the same thing can be shown by appeal to many other passages.

**Reply to objection 3:** Since ‘nature’ designates a principle of *action*, whereas ‘essence’ is taken from *being*, there are some things that can be said to be of one nature because they agree in some act—e.g., all things which produce warmth—but cannot be said to be of one essence if they do not share the same *esse*. And so God’s oneness is better expressed by saying that the three persons are of one essence than by saying that they are of one nature.

**Reply to objection 4:** A form, taken absolutely, is normally signified as being ‘of’ that whose form it is—as, for instance, the virtue ‘of’ Peter.

By contrast, a thing that has a form is not normally signified as being ‘of’ the form. This happens only when we wish to determine, i.e., to modify, the form in question. And in such a case what is required is either (a) two genitives, one of which signifies the form and the other of which signifies the modification of the form—as, for instance, when we say ‘Peter is someone of great virtue’ (*magnae virtutis*)—or (b) one genitive that has the force of two genitives—as, for instance, when we say ‘He is a man of blood’ (*sanguinis*), i.e., a spiller of much blood (*multi sanguinis*).

Therefore, since God’s essence is signified as a form in relation to the persons, one can appropriately say ‘the essence of a person’. But the converse does not hold, unless something is added to modify the essence—as, for instance, when someone says that the Father is a person of the divine essence (*divinae essentiae*), or that the three persons are of one essence (*unius essentiae*).

**Reply to objection 5:** The preposition ‘from’ (*ex* or *de*) does not signify the character of a formal cause, but instead signifies the character of an efficient or material cause. The latter are in all cases distinct from the things of which they are causes. For nothing is its own matter; nor is anything its own active principle. However, there are things that are their own forms, as is clear in the case of all immaterial things. And so when we say that the three persons are ‘of’ one essence, thus signifying the essence as having the character of a formal cause, this does not show that the essence is different from a

person—as it would if we were to say that the three persons are ‘from’ (*ex*) the same essence.

**Reply to objection 6:** As Hilary puts it in *De Synodis*, “It would be prejudicial to holy things if the fact that some do not hold them to be holy meant that they should not be held as holy . . . So if someone understands ‘*homoousion*’ incorrectly, what is that to me, as long I understand it correctly? . . . Therefore, there is the one substance proper to the generated nature (*sit una substantia ex naturae genitae proprietate*), but it is not one by being a part or by union or by communion.”

### Article 3

#### May the names of the essence be predicated in the singular of the three persons?

It seems that the names of the essence, e.g., the name ‘God’, may be predicated in the plural of the three persons, but not in the singular:

**Objection 1:** Just as ‘man’ signifies *one having human-ness* (*habens humanitatem*), so ‘God’ signifies *one having divinity* (*habens divinitatem*). But the three persons are three who have divinity. Therefore, the three persons are three Gods.

**Objection 2:** In Genesis 1:1, when it says, “In the beginning God created heaven and earth,” the Hebrew text has ‘Elohim’, which can be translated as ‘gods’ or ‘judges’. And it says this because of the plurality of persons. Therefore, the three persons are three Gods and not one God.

**Objection 3:** When the name ‘thing’ (*res*) is taken absolutely, it seems to pertain to substance. But this name is predicated in the plural of the three persons. For instance, in *De Doctrina Christiana* Augustine says, “The things which are to be enjoyed are the Father and the Son and the Holy Spirit.” Therefore, the other names of the essence can likewise be predicated in the plural of the three persons.

**Objection 4:** Just as the name ‘God’ signifies *one having divinity*, so the name ‘person’ signifies *one subsisting in an intellectual nature*. But we say ‘three persons’. Therefore, for the same reason we can say ‘three Gods’.

**But contrary to this:** Deuteronomy 6:4 says, “Listen, Israel, the Lord your God is one God.”

**I respond:** Some names of the essence signify the essence substantively (*substantive*), while others signify it adjectivally (*adiective*). The names that signify the substance substantively are predicated of the three persons only in the singular and not in the plural, whereas those that signify the essence adjectivally are predicated of the three persons in the plural. The reason for this is that substantival names signify a thing in the mode of a substance, whereas adjectival names signify a thing in the mode of an accident that inheres in a subject. Now just as a substance has *esse per se*, so too it has oneness or manyness *per se*, and so the form signified by a substantival name determines whether it is singular or plural. By contrast, just as accidents have *esse* in a subject, so too they take their oneness and manyness from their subject, and so the supposita determine whether adjectival names are singular or plural.

Now in creatures it is not the case that a single form exists in more than one suppositum except in virtue of a unity of order, i.e., as the form of an ordered multitude. Hence, if the names that signify such a form are substantival, then they are predicated of many in the singular—but not if they are adjectival. For instance, we say that many men are a college or an army or a people, but we say that several men are collegians.

By contrast, as was shown above (q. 3, a. 7 and q. 11, a. 4), in God the divine essence is signified in the mode of a form which, as was explained above (a. 2), is simple and maximally one. Hence, names that signify the divine essence substantively are predicated of the three persons in the singular and not in

the plural. Thus, the reason why we say that Socrates and Plato and Cicero are three men, but that the Father and the Son and the Holy Spirit are one God and not three Gods, is that there are three humanities in the three supposita with a human nature, whereas there is a single divine essence in the three persons. On the other hand, the names that signify the divine essence adjectivally are predicated in the plural of the three persons because of the plurality of supposita. For instance, we call them three existents, or three who are wise, or three who are eternal and uncreated and unmeasured (*dicimus tres existentes vel tres sapientes aut tres aeternos et increatos et immensos*), as long as these names are taken adjectivally. By contrast, if the names are taken substantivally instead, then we say “the uncreated, unmeasured, and eternal one,” as the Athanasian creed puts it.

**Reply to objection 1:** Even though ‘God’ signifies *one having divinity*, it is nonetheless the case that the two expressions have different modes of signifying. For ‘God’ is said substantivally, whereas ‘one having divinity’ is said adjectivally. Hence, even though there are three who have divinity, it does not follow that there are three Gods.

**Reply to objection 2:** Different languages have different ways of speaking. Hence, just as the Greeks say ‘three hypostases’ because of the plurality of the supposita, so too in Hebrew ‘Elohim’ is said in the plural. We, however, do not say either ‘Gods’ or ‘substances’ in the plural, lest this plurality be referred to the substance.

**Reply to objection 3:** The name ‘thing’ (*res*) is a transcendental. Hence, insofar as it pertains to a relation, it is predicated in the plural of God, whereas insofar as it pertains to the substance, it is predicated in the singular. Thus, in the same place Augustine says, “The same Trinity is a certain highest thing.”

**Reply to objection 4:** The form signified by the name ‘person’ is not the essence or the nature but instead personhood (*personalitas*). Hence, since in the Father and the Son and the Holy Spirit there are three personhoods, i.e., three personal properties, ‘person’ is predicated of the three in the plural and not in the singular.

#### Article 4

##### Can the concrete names of the essence supposit for a person?

It seems that the concrete names of the essence cannot supposit for a person in such a way that the proposition ‘God begot God’ is true:

**Objection 1:** As logicians put it, a singular term signifies and supposits for the same thing. But the name ‘God’ seems to be a singular term, since, as has been explained (a. 3), it cannot be predicated in the plural. Therefore, since it signifies the essence, it seems to supposit for the essence and not for a person.

**Objection 2:** A term in the subject position is not restricted by a term in the predicate position in virtue of the latter’s signification; rather, it is restricted only in virtue of the co-signified tense. But when I say “God creates”, the name ‘God’ is suppositing for the essence. Therefore, when one says, ‘God begot’, the term ‘God’ cannot supposit for a person just because of the notional predicate.

**Objection 3:** If ‘God begot’ is true because the Father generates, then by parity of reasoning ‘God does not generate’ is true because the Son does not generate. Therefore, there is a generating God and a non-generating God. And so it seems to follow that there are two Gods.

**Objection 4:** If God begot God, then either He begot Himself as God or else He begot another God. But He did not beget Himself as God, since as Augustine says in *De Trinitate* 1, “No entity

generates itself.” Nor did He beget another God, since there is just one God. Therefore, ‘God begot God’ is false.

**Objection 5:** If God begot God, then either He begot a God who is God the Father or He begot a God who is not God the Father. If He begot a God who is God the Father, then God the Father is begotten. If He begot a God who is not God the Father, then there is a God who is not God the Father—which is false. Therefore, one cannot say that God begot God.

**But contrary to this:** The creed says, “God from God.”

**I respond:** Some have claimed that, by their nature, the name ‘God’ and similar names properly supposit for the essence, but that they are drawn into suppositing for a person when a notional term is joined to them. This opinion seems to have arisen from a consideration of God’s simplicity, which requires that in God the one who has is the same as what is had, and so the one who has divinity, which is signified by the name ‘God’, is the same as the divinity.

However, among the properties of locutions, one must pay attention not only to the thing signified, but also to the mode of signifying. And so, since the name ‘God’ signifies the divine essence as existing in one who has that essence—just as the name ‘man’ signifies human-ness in a suppositum—others have claimed more correctly that, because of this mode of signifying, the name ‘God’ is such that it can properly supposit for a person in the same way that the name ‘man’ can.

Therefore, the name ‘God’ sometimes supposits for the essence, as when one says, ‘God creates’, since the predicate ‘creates’ belongs to the subject by reason of the form that is signified, i.e., the divinity. Sometimes, however, ‘God’ supposits for a person—either (a) just one of the persons, as when one says, ‘God generates, or (b) for two persons, as when one says, ‘God spirates’, or (c) for three persons, as when one says with 1 Timothy 1:17, “To the king of ages, immortal, invisible, the only God . . .”

**Reply to objection 1:** Even though the name ‘God’ agrees with singular terms in the fact that the form signified by it is not multiplied, it nonetheless agrees with common terms in the fact that it is found in more than one suppositum. Hence, it need not always supposit for the essence that it signifies.

**Reply to objection 2:** This objection has force against those who claimed that the name ‘God’ does not naturally supposit for a person.

**Reply to objection 3:** The name ‘God’ and the name ‘man’ supposit for a person in different ways.

Since the form signified by the name ‘man’, i.e., human-ness, is in reality divided into diverse supposita, the name ‘man’ supposits *per se* for a person even if nothing is added to determine it to a person that is a distinct suppositum. On the other hand, human nature’s being one or being common is not something real but only something conceptual, and so the term ‘man’ does not supposit for the common nature except because of the demands of something added to it, as when one says, ‘*Man* is a species’.

By contrast, the form signified by the name ‘God’, viz., the divine essence, is both one and common in reality. Hence, ‘God’ supposits *per se* for the common nature, whereas its supposition is delimited to a person by something added to it. Hence, when one says ‘God generates’, the name ‘God’ supposits for the person of the Father by reason of the notional act. By contrast, when one says ‘God does not generate’, nothing is added that delimits this name to the person of the Son, and so the proposition entails that generation is incompatible with the divine nature. However, if something pertaining to the person of the Son is added, then the proposition will be true—as, for instance, if one were to say ‘The God who is begotten does not generate’. Hence, it is also the case that ‘There is a generating God and a non-generating God’ does not follow unless something pertaining to the persons is posited—as, for instance, if we were to say ‘The Father is a generating God and the Son is a non-generating God’. And

so it does not follow that there is more than one God, since the Father and the Son are one God, as has been explained (a. 3).

**Reply to objection 4:** ‘The Father generated Himself as God’ is false, since ‘Himself’ is a reflexive pronoun and refers to the same suppositum [as ‘Father’ does]. Nor is this contrary to what Augustine says in *Ad Maximinum*, viz., that the Father begot another self. For either (a) ‘self’ is in the ablative case, and then the meaning is ‘He begot someone other than Himself’ (*alterum a se*) or (b) ‘self’ induces a simple relation and thus refers to an identity of nature, in which case the proposition is improper or emphatic and has the following sense: ‘He generated another exactly similar to Himself’.

Similarly, ‘The Father generated another God’ is false. For as was explained above (q. 31, a. 2), even though the Son is other than the Father (*alius a patre*), it must not be said that He is another God (*alius Deus*). For ‘another God’ would be understood in such a way that the adjective ‘another’ adds its own entity (*res*) to the substantival term ‘God’, and so it would signify that there are distinct divinities. To be sure, some concede ‘The Father begot another God’, as long as ‘another’ is the substantival term and ‘God’ is taken as apposite to it. But this is an improper way of speaking and should be avoided, lest it provide an occasion for error.

**Reply to objection 5:** ‘God begot a God who is God the Father’ is false. For since ‘Father’ is taken as apposite to ‘God’, it restricts ‘God’ to standing for the person of the Father. As a result, the meaning would be ‘The Father begot a God who is Himself the Father’, and so the Father would be begotten—which is false. Hence, this negative proposition is true: ‘The Father begot a God who is not God the Father’.

On the other hand, if the construction ‘who is God the Father’ were understood not as being apposite but as interposing something, then, conversely, the affirmative proposition would be true and the negative proposition would be false. For the meaning of the affirmative proposition would be this: ‘The Father begot a God who is the God who is the Father’. However, this reading [of the original proposition] is strained. Hence, it is better simply to deny the affirmative proposition and concede the negative proposition.

By contrast, Praepositinus maintained that both the affirmative proposition and the negative proposition are false, since the relative pronoun ‘who’ can refer to a suppositum in the affirmative proposition, whereas in the negative proposition it refers both to the thing signified and to a suppositum. On this reading, the implication of the affirmative proposition is that being God the Father belongs to the person of the Son, and the implication of the negative proposition is that being God the Father is denied not only of the person of the Son but also of His divinity. However, this position seems unreasonable. For according to the Philosopher, if anything is such that there is an affirmation with respect to it, then there can also be a negation with respect to that very same thing.

## Article 5

### Can the names of the essence, taken in their abstract forms, supposit for a person?

It seems that the names of the essence, taken in their abstract forms, can supposit for a person, so that ‘The essence generates the essence’ is true:

**Objection 1:** In *De Trinitate* 7 Augustine says, “The Father and the Son are one wisdom, since they are one essence, and, taken singly, wisdom is from wisdom, just as essence is from essence.”

**Objection 2:** When we are generated and corrupted, the things that exist in us are generated and corrupted. But the Son is generated. Therefore, since the divine essence exists in the Son, it seems that the divine essence is generated.

**Objection 3:** As is clear from what was said above (q. 3, a. 3), God is the same as the divine essence. But as has been explained (a. 4), ‘God generates God’ is true. Therefore, ‘The essence generates the essence’ is true.

**Objection 4:** Everything is such that whatever is predicated of it can supposit for it. But the divine essence is the Father. Therefore, ‘essence’ can supposit for the person of the Father. And so the essence generates.

**Objection 5:** The essence is a thing that generates, since the essence is the Father, who generates. Therefore, if the essence does not generate, the essence will be a thing that both generates and does not generate—which is impossible.

**Objection 6:** In *De Trinitate* 4 Augustine says, “The Father is the source (*principium*) of the whole divinity.” But He is not the source except by generating and spirating. Therefore, the Father generates (or spirates) the divinity.

**But contrary to this:** In *De Trinitate* 1 Augustine says, “Nothing generates itself.” But if the essence generates the essence, then it generates nothing other than itself, since there is nothing in God that is distinct from the divine essence. Therefore, it is not the case that the essence generates the essence.

**I respond:** Abbot Joachim was mistaken on this question when he asserted that just as one says ‘God begets God’, so too one can say ‘The essence generates the essence’; he was thinking that because of God’s simplicity, God is not other than the divine essence.

However, he was deceived in this, since, as has been pointed out (a. 4), for the truth of a proposition one must take into account not only the things signified but also the mode of signifying. Even though in reality God is the same as the divine essence (*deitas*), nonetheless, the mode of signifying is not the same in the two cases. For since the name ‘God’ signifies the divine essence as existing in one who has it, its mode of signification is by nature such that it can supposit for a person; and so the things that are proper to the persons can be predicated of the name ‘God’, as when one says ‘God is begotten’ or ‘God generates’, as has been explained (a. 4). By contrast, the name ‘essence’, given its mode of signification, is not such that it supposits for a person, since it signifies the essence as an abstract form. And so the things which are proper to the persons and by which they are distinguished from one another cannot be attributed to the essence. For that would mean that there are distinct divine essences in the same way that there are distinct divine supposita.

**Reply to objection 1:** In order to express the oneness of the essence and the persons, the holy doctors sometimes put things more strongly than the strict meaning of their phrases would allow. Hence, those phrases should not be given an extended sense, but should instead be understood in such a way that the concrete terms, or even the names of the persons, are substituted for the abstract terms. So, for instance, when someone says ‘essence from essence’ or ‘wisdom from wisdom’, the meaning is ‘The Son, who is the essence and wisdom, is from the Father, who is the essence and wisdom’. However, a certain order must be observed with these abstract names. For those that pertain to acts are more closely tied to the persons, since the acts belong to the supposita. Hence, ‘nature from nature’ or ‘wisdom from wisdom’ is less improper than ‘essence from essence’.

**Reply to objection 2:** In the case of creatures, what is generated does not have numerically the same nature had by the one who generates, but instead has a numerically distinct nature that begins to exist in it *de novo* through generation and ceases to exist through corruption. And so the nature as such is generated and corrupted *per accidens*. By contrast, the Begotten God receives numerically the same nature had by the one who generates. And so the divine nature is not generated in the Son, either *per se* or *per accidens*.

**Reply to objection 3:** Even though God is the same as the divine essence in reality, still, because

of the differing modes of signifying, one must speak in different ways of the two of them.

**Reply to objection 4:** The divine essence is predicated of the Father in the mode of identity because of the divine simplicity. However, it does not follow that ‘divine essence’ can supposit for the Father, and this because of the different modes of signifying.

Still, the objection does go through in those cases in which one thing is predicated of another as a universal of a particular.

**Reply to objection 5:** The difference between the substantival names and the adjectival names is that the substantival names carry with them their own suppositum, whereas the adjectival names do not. Instead, the adjectival names posit the thing they signify with respect to a substantival name. Hence, logicians say that substantival names have ‘supposition’, whereas adjectival names have ‘copulation’ and not supposition.

Therefore, because of a real identity of the persons with the essence, the substantival names of the persons can be predicated of the essence. Nor does it follow that each personal property makes for a distinct essence; rather, such a name is posited with respect to the suppositum implied by the substantival name.

By contrast, adjectival names of the notions and persons cannot be predicated of the essence unless a substantival name is joined to them. Hence, we cannot say that the essence generates. But we can say that the essence is a thing (*res*) that generates or that the essence is the God who generates, as long as ‘thing’ and ‘God’ are suppositing for a person—though not if they are suppositing for the essence. Hence, there is no contradiction involved in saying that the essence is a thing that generates and a thing that does not generate. For in the first conjunct ‘thing’ is being taken for a person, whereas in the second conjunct it is being taken for the essence.

**Reply to objection 6:** Insofar as the divinity is one thing in many supposita, it agrees with the form of a collective name. Hence, when one says ‘The Father is the source of the whole divinity’, this can be taken for the collection of persons, viz., insofar as He is the source in every divine person. Nor does this require that He be the source of Himself; in the same way, someone who is one of the people is said to be the ruler of all the people, but not the ruler of himself.

An alternative reply is that the Father is the source of the whole divinity not because He generates it and spirates it, but rather because He communicates the divinity by generating and spirating.

## Article 6

### Can the names of the persons be predicated of the names of the essence in their concrete forms?

It seems that the [names of the] persons cannot be predicated of the names of the essence in their concrete forms, as by saying ‘God is three persons’ or ‘God is a Trinity’.

**Objection 1:** ‘A man is every man’ is false, since there cannot be a suppositum for which it is true. For Socrates is not every man, and Plato is not every man, and no other man is every man. But the same holds for ‘God is a Trinity’, since there cannot be a suppositum with a divine nature for which it is true. For the Father is not a Trinity, and the Son is not a Trinity, and the Holy Spirit is not a Trinity. Therefore, ‘God is a Trinity’ is false.

**Objection 2:** A logical inferior cannot be predicated of its logical superior except by a *per accidens* predication, as when I say, ‘An animal is a man’. For it is accidental that an animal should be a man. But, as Damascene says, the name ‘God’ is related to the three persons as a common name to its

logical inferiors. Therefore, it seems that the names of the persons cannot be predicated of the name ‘God’ except accidentally.

**But contrary to this:** In the sermon *De Fide* Augustine says, “We believe that the one God is a Trinity with the divine name.”

**I respond:** As has already been explained (a. 5), even though the adjectival names of the persons and notions cannot be predicated of the essence, their substantival counterparts can be—and this because of the real identity of the essence with a person. But the divine essence is not only really the same as one person, but also really the same as the three persons. Hence, one person or two persons or three persons can be predicated of the essence, as by saying ‘The essence is the Father and the Son and the Holy Spirit’. And since, as has been explained (a. 4), the name ‘God’ is *per se* such that it suppositis for the essence, it follows that just as ‘The essence is three persons’ is true, so too ‘God is three persons’ is true.

**Reply to objection 1:** As was explained above (a. 4), the name ‘man’ is *per se* such that it suppositis for a person, but when something else is joined to it, it is such that it stands for the common nature. And this is why ‘A man is every man’ is false. For there is no suppositum for which it can be true.

By contrast, the name ‘God’ is *per se* such that it stands for the essence. Hence, even though there is no suppositum with a divine nature for whom ‘God is a Trinity’ is true, the proposition is nonetheless true for the essence. It is because he did not pay attention to this point that Gilbert de la Porrée denied the proposition.

**Reply to objection 2:** When one says ‘God is the Father’ or ‘The divine essence is the Father’, there is a predication through identity, but not in the sense that a logical inferior is being predicated of a logical superior. For in God there is no universal and singular. Hence, just as ‘The Father is God’ is a *per se* predication, so too is ‘God is the Father’, and it is in no sense *per accidens*.

## Article 7

### Should the names of the essence be appropriated to the persons?

It seems that the names of the essence should not be appropriated to the persons:

**Objection 1:** Anything that can verge on an error from the perspective of the Faith should be avoided with respect to God. For as Jerome says, “Heresy arises from words that are used incorrectly.” But to appropriate to one person the things that are common to the three persons can verge on an error from the perspective of the Faith, since it can be taken to mean either that (a) those things belong only to the person to whom they are appropriated or that (b) they belong to that person more than to the others. Therefore, the attributes of the essence should not be appropriated to the persons.

**Objection 2:** The attributes of the essence, signified in the abstract, signify in the mode of a form. But it is not the case that one person is related to another as a form, since a form is not distinct in suppositum from that of which it is the form. Therefore, the attributes of the essence, especially when signified in the abstract, ought not to be appropriated to the persons.

**Objection 3:** What is proper is prior to what is appropriated, since what is proper is part of the nature of what is appropriated. But according to our mode of understanding, the attributes of the essence are prior to the persons in the way that what is common is prior to what is proper. Therefore, the attributes of the essence should not be appropriated.

**But contrary to this:** In 1 Corinthians 1:24 the Apostle says, “Christ, the power of God and the wisdom of God.”

**I respond:** In order to make the Faith manifest, it was fitting for the attributes of the essence to be appropriated to the persons. For even though, as was explained above (q. 32, a. 1), the Trinity of persons cannot be proved by a demonstration, it is nonetheless fitting for it to be clarified by means of certain more manifest things. But the attributes of the essence are more manifest to us according to reason than are the properties of the persons, since on the basis of creatures, from which we take our cognition, we can arrive with certitude at the cognition of the attributes of the essence—though not, as was explained above (q. 32, a. 1), at the cognition of the properties of the persons. Therefore, just as we use the likeness of a vestige or an image found among creatures to make the divine persons more manifest, so too we can make use of the attributes of the essence in the same way. And this manifestation of the persons through the attributes of the essence is called *appropriation*.

Now there are two ways in which the divine persons can be made manifest through the attributes of the essence.

The first way is the *way of likeness (via similitudinis)*. For instance, things that have to do with the intellect are appropriated to the Son, who proceeds as the Word in an intellectual mode.

The second way is the *way of unlikeness (via dissimilitudinis)*. For instance, as Augustine points out, the fathers among us are often weak because of old age, and so, lest we suspect something like this in the case of God, power is appropriated to the Father.

**Reply to objection 1:** As was just explained, the attributes of the essence are appropriated to the persons not in order to assert that they are proper to the persons, but rather in order to make the persons manifest through the ways of likeness and unlikeness. Hence, no error follows from the perspective of the Faith; instead, this is a manifestation of the truth of the Faith.

**Reply to objection 2:** If the attributes of the essence were appropriated to the persons in such a way that they were proper to the persons, then it would follow that one person is related to another in the manner of a form. In *De Trinitate* 7 Augustine excludes this view, showing that the Father is not wise by the wisdom He has begotten—as if the Son alone were wise, in which case the Father and the Son could be called wise together, but not the Father without the Son.

However, the Son is called the wisdom of the Father because He is wisdom from the Father who is wisdom, and both are wisdom *per se*, and together are both one wisdom. Hence, the Father is not wise by the wisdom He has begotten; instead, He is the wisdom which is His essence.

**Reply to objection 3:** Even though, according to our mode of understanding, an attribute of the essence is by its proper nature prior to a person, nonetheless, insofar as an attribute has the character of being appropriated, there is nothing to prevent what is proper to a person from being prior to what is appropriated. In the same way, *color* is posterior to *body qua body*, but *color* is naturally prior to *white body qua white*.

## Article 8

### Have the holy doctors correctly assigned the attributes of the essence to the persons?

It seems that the holy doctors have not correctly assigned the attributes of the essence to the persons:

**Objection 1:** In *De Trinitate* 2 Hilary says, “*Eternity* is in the Father, *species* is in the Image, and *use* is in the Bounty (*munus*).” With these words he uses three proper names of the persons, viz., the name ‘Father; the name ‘Image’, which is proper to the Son, as was explained above (q. 35, a. 2); and the name ‘Bounty’, i.e., ‘Gift’ (*donum*), which is proper to the Holy Spirit, as was also explained above

(q. 38, a. 2). He also posits three appropriated attributes. For he appropriates *eternity* to the Father, *species* to the Son, and *use* to the Holy Spirit. But it seems that he does so unreasonably. For eternity implies a duration of being, species is a principle of being, and use seems to pertain to operation. But the essence and the operation are not appropriated to any person. Therefore, these attributes seem to be appropriated incorrectly to the persons.

**Objection 2:** In *De Doctrina Christiana* 1 Augustine says, “In the Father there is *oneness*, in the Son *equality*, and in the Holy Spirit the *harmony* of oneness and equality.” But this seems incorrect. For one person is not formally denominated by that which is appropriated to another person. For instance, it is not the case that the Father is wise by a begotten wisdom, as has already been explained (a. 7). Yet Augustine adds in the same place, “The three are all one because of the Father, they are all equal because of the Son, and they are all connected because of the Holy Spirit.” Therefore, these attributes are not correctly appropriated to the persons.

**Objection 3:** According to Augustine, *power* is attributed to the Father, *wisdom* to the Son, and *goodness* to the Holy Spirit. But this seems incorrect. For strength (*virtus*) pertains to power (*potentia*). Yet according to 1 Corinthians 1:24 (“Christ, the strength of God”), strength is appropriated to the Son, and according to Luke 6:19 (“Strength went forth from Him, and He healed everyone”), strength is attributed to the Holy Spirit. Therefore, power should not be appropriated to the Father.

**Objection 4:** In *De Trinitate* Augustine says, “One should not interpret in a conflated way (*confuse*) what the Apostle says, viz., ‘*From Him*, and *through Him*, and *in Him*’. He says ‘from Him’ because of the Father, and ‘through Him’ because of the Son, and ‘in Him’ because of the Holy Spirit.” But this seems incorrect. For ‘in Him’ seems to imply the character of a final cause, which is the first among causes. Therefore, this sort of cause should be appropriated to the Father, who is the principle who is not from a principle.

**Objection 5:** According to John 14:6 (“I am the Way, the Truth, and the Life”), *truth* is appropriated to the Son. And so is the *book of life*, according to Psalm 39:8, “At the head of the book it is written of me,” where a Gloss says, “That is, with the Father, who is my head.” The name ‘*He Who Is*’ is likewise appropriated to the Son, since a Gloss on Isaiah 65:1 (“. . . ‘Here I am’ to a nation . . .”) says, “The one speaking is the Son, who said to Moses, ‘I am who am’.”

But all of these seem to be *proper* to the Son and not *appropriated* to Him. For according to Augustine in *De Vera Religione*, “Truth is the highest likeness of the principle, without any unlikeness at all.” And so it seems that truth belongs properly to the Son, who has a principle. Likewise, the book of life seems to be something proper to the Son, since ‘book of life’ signifies a being that is from another, since every book is written by someone. Again, the name ‘He Who Is’ seems to be proper to the Son. For if it had been the Trinity speaking when it was said to Moses, “I am who am”, then Moses could have said, “He who is the Father and the Son and the Holy Spirit has sent me to you.” Therefore, further, he could have said, “He who is the Father and the Son and the Holy Spirit has sent me to you,” pointing to one of the persons. But this is false, since no person is the Father and the Son and the Holy Spirit. Therefore, this name is not common to the whole Trinity, but is instead proper to the Son.

**I respond:** Our intellect, which is led from creatures to the cognition of God, must consider God according to the mode it takes from creatures. Now in our consideration of a creature, there are four steps that occur in order: (a) first, we consider the thing itself absolutely speaking, insofar as it is a *being*; (b) second, we consider it insofar as it is *one*; (c) third, we consider the thing insofar as it has the *power* to act and to be a cause; and (d), fourth, we consider *its relation to what it has caused*. Hence, this fourfold consideration also occurs to us in the case of God.

(a) Thus, on the basis of the first consideration, by which God is considered absolutely with respect to His *esse*, we get Hilary’s appropriation [see Objection 1], according to which *eternity* is appropriated

to the Father, *species* to the Son, and *use* to the Holy Spirit.

For insofar as *eternity* designates *esse* that is not derived from any principle, it bears a likeness to what is proper to the Father, who is a principle that is not from a principle.

Again, *species*, i.e., *beauty*, has a likeness to what is proper to the Son. For three elements are required for beauty. The first is *integrity* or *perfection*, since things which are impaired are by that very fact ugly. The second is *due proportion* or *consonance*. And the third is *clarity*, so that things with bright colors are said to be beautiful. As for the first element, it has a likeness to what is proper to the Son, insofar as He is the Son who has the Father's nature truly and perfectly in Himself. Hence, to intimate this, Augustine says in his exposition, "Where [*read*: in the Son] there is the highest and first life . . ." As for the second element, it agrees with what is proper to the Son insofar as He is the expressed Image of the Father. Hence, we see that an image is said to be beautiful if it represents a thing perfectly, even an ugly thing. Augustine touches on this when he says, "Where there is such great agreement, and first equality . . ." As for the third element, it agrees with what is proper to the Son insofar as He is the Word, which is the light and splendor of the intellect, as Damascene puts it. Augustine, too, touches on this when he says, ". . . as the perfect Word to whom nothing is lacking, and as the art of the omnipotent God . . ."

*Use*, on the other hand, has a likeness to what is proper to the Holy Spirit, taking 'use' (*usus*) in a broad sense to include enjoyment as well—so that, as Augustine puts it in *De Trinitate* 10, to use something is to take it up into the faculty of will, and to enjoy it is to use it with joy. Therefore, the use by which the Father and the Son enjoy one another agrees with what is proper to the Holy Spirit insofar as He is the Love. And this is why Augustine says, "[Hilary] calls that love, pleasure, and happiness (or beatitude) by the name 'use'." On the other hand, the use by which we ourselves enjoy God bears a likeness to what is proper to the Holy Spirit insofar as He is the Gift. Augustine shows this when he says, "The Holy Spirit exists within the Trinity, the sweetness of the Begetter and the Begotten, filling us with His enormous generosity and wealth."

And so it is clear why *eternity*, *species*, and *use* are attributed or appropriated to the persons, but not the essence or the operation. For since the essence and the operation are by their nature common to all the persons, they have no likeness to what is proper to the persons.

(b) The second consideration of God is to consider Him as *one*. On this score, Augustine appropriates *oneness* to the Father, *equality* to the Son, and *harmony* or *connection* to the Holy Spirit [see Objection 2]. It is clear that all three of these imply oneness, but in different ways.

For '*oneness*' is predicated absolutely and does not presuppose anything else. And so it is appropriated to the Father, who does not presuppose any other person, since He is a principle who does not have a principle.

*Equality*, on the other hand, implies oneness with respect to another, since the equal is that which is of one quantity with another. And so equality is appropriated to the Son, who is a principle from a principle.

Now *connection* implies the oneness of two things. Hence, it is appropriated to the Holy Spirit insofar as He is from the other two.

It is on this basis that one can understand Augustine when he says, "The three are all one because of the Father, they are all equal because of the Son, and they are all connected because of the Holy Spirit." For it is clear that each thing is attributed to that in which it is first found; for instance, all lower things are said to live because of the vegetative soul, in which the nature of life is first found among lower things. But oneness would be found without mediation in the person of the Father even if, *per impossible*, the other persons were removed. And so the other persons have oneness from the Father. However, if the other persons were removed, then there would be no equality in the Father; but as soon as the Son is posited, then there is equality. And so they are all called 'equal' because of the Son—not

because the Son is the principle of the Father's equality, but rather because if the Son were not equal to the Father, then the Father could not be called 'equal'. For the Father's equality is first considered with respect to the Son, and the very fact that the Holy Spirit is equal to the Father is something He has from the Son. Similarly, if the Holy Spirit, who is the union of the Father and the Son, were excluded, then one could not understand the oneness of the connection between the Father and the Son. And so all of them are said to be connected because of the Holy Spirit. For once the Holy Spirit is posited, the Father and the Son can be said to be connected.

(c) The third appropriation—viz., of *power*, *wisdom*, and *goodness*—follows upon the third consideration, by which one considers God's power as sufficient for causing [see Objection 3]. This appropriation is derived both from the way of likeness, if one considers it within the divine persons, and from the way of unlikeness, if one considers it within creatures.

For *power* has the character of a principle. Hence, it bears a likeness to the heavenly Father, who is the principle of the whole divinity. However, it is sometimes found lacking in an earthly father because of his old age.

*Wisdom* bears a likeness to the heavenly Son insofar as He is the Word, which is nothing other than the conception of wisdom. However, it is sometimes found lacking in an earthly son because of his youthfulness.

Since, on the other hand, *goodness* is the reason for and object of love, it bears a likeness to the divine Spirit, who is the Love. But it seems incompatible with an earthly spirit, insofar as the latter implies a violent impulse—in keeping with Isaiah 25:4, "For the spirit of the mighty is like a whirlwind beating against a wall."

Now *strength* (*virtus*) is appropriated to the Son and the Holy Spirit, not insofar as strength is called the very power of a thing, but rather insofar as that which proceeds from the power of a thing is sometimes called its strength, in the way that we say that a strong deed is the strength of the agent.

(d) The appropriation of *from Him*, *through Him*, and *in Him* derives from the fourth consideration, according to which God is considered in relation to His effects [see Objection 4].

The preposition '*from*' sometimes implies the character of a material cause, which has no place in the case of God. However, sometimes it implies the character of an efficient cause, which belongs to God by reason of His active power, and in this sense *from Him* is appropriated to the Father in the same way that *power* is.

The preposition '*through*' sometimes designates an intermediate cause; for instance, we say that the blacksmith operates through his hammer. And so *through Him* is sometimes not *appropriated* to the Son but is *proper* to Him in accord with John 1:3 ("All things were made through Him")—not because the Son is an instrument, but because He is a principle from a principle. Sometimes, however, '*through*' designates the character of a form through which an agent acts, as when we say that the craftsman operates through his art. In this sense, *through Him* is appropriated to the Son in the same way that *wisdom* and *art* are.

The preposition '*in*' properly designates the character of a container. Now God is a container in two ways. In one way, with respect to His likenesses, i.e., in the sense in which all things are said to exist in God insofar as they exist in His knowledge. And in this sense the expression *in Him* is appropriated to the Son. However, in the second way, things are contained in God insofar as God conserves them and governs them with His goodness, by leading them to their appropriate ends. And in this sense *in Him* is appropriated to the Holy Spirit in the same way that *goodness* is.

Moreover, even though the final cause is the first among causes, it need not be appropriated to the Father, who is a principle that is not from a principle. For the divine persons, of whom the Father is the source, do not proceed as if proceeding to an end, since each of them is the ultimate end. Rather, they proceed by a natural procession, which seems to have to do more with the character of a natural power.

As for Objection 5, which raises other questions, one should reply that since, as was explained above (q. 16, a. 1), *truth* pertains to the intellect, it is *appropriated* to the Son and is not *proper* to him. For as was explained in the same place, truth can be considered either insofar as it exists in the intellect or insofar as it exists in things. Therefore, just as ‘intellect’ and ‘thing’ are taken with respect to the essence and not with respect to the persons, so too the same holds for ‘truth’. And the definition introduced from Augustine is intended to be a definition of *truth* insofar as it is appropriated to the Son.

‘*Book of life*’ implies knowledge in the nominative case and life in an oblique case. For as was explained above (q. 24, a. 1), the book of life is God’s knowledge of those who will have eternal life. Hence, *book of life* is appropriated to the Son—even though *life* (a) is appropriated to the Holy Spirit insofar as it implies a certain interior movement and (b) is proper to the Holy Spirit insofar as He is the Love. Moreover, being written by another is not part of the concept of a book *qua* book; rather, it is part of the concept of a book only insofar as the book is an artifact. Hence, *book of life* does not imply origin and so is not the name of a person, but is instead appropriated to a person.

Now *He Who Is* is appropriated to the person of the Son not according to its proper meaning, but rather by reason of something added to it, viz., that the liberation of the human race, which is accomplished through the Son, is prefigured in what God says to Moses. Still, insofar as ‘Who’ is taken as a relative pronoun, it could sometimes refer to the person of Son and so be taken for a person—as, for instance, if one were to say, ‘The Son is the Begotten Who Is’, in the same way that ‘God Begotten’ is the name of a person. However, ‘He Who Is’, taken without modification, is a name of the essence.

Furthermore, even though the pronoun ‘that [person]’ (*iste*) seems, grammatically speaking, to pertain to a determinate person, still, any demonstrable thing can, grammatically speaking, be called a person, even a thing that is not by its nature a person. For instance, we say ‘that rock’ (*iste lapis*) and ‘that donkey’ (*iste asinus*). Hence, grammatically speaking, even the divine essence, insofar as the name ‘God’ signifies and supposits for it, can be pointed to by the pronoun ‘that [person]’ (*iste*)—this according to Exodus 15:2 (“That (*iste*) is my God, and I will glorify Him”).

## QUESTION 40

### The Persons in Comparison to the Relations or Properties

Next we ask about the persons in comparison to the relations or properties. There are four questions: (1) Is a relation the same as a person? (2) Do the relations distinguish and constitute the persons? (3) If the relations are intellectually abstracted from the persons, do distinct hypostases still remain? (4) Do the relations conceptually presuppose the acts of the persons, or vice versa?

#### Article 1

##### Is a relation the same as a person?

It seems that in God a relation is not the same as a person:

**Objection 1:** If things are the same, then if one of them is multiplied, the other is likewise multiplied. But it is possible for there to be more than one relation in one person; for instance, the Paternity and the Common Spiration exist in the person of the Father. Again, it is possible for there to be one relation that exists in two persons; for instance, the Common Spiration is in the Father and in the Son. Therefore, a relation is not the same as a person.

**Objection 2:** According to the Philosopher in *Physics* 4, nothing exists within itself. But a relation exists in a person. And one cannot claim that the relation exists in the person by reason of identity, since if that were so, then the relation would exist in the essence as well. Therefore, a relation or property is not the same as a person in God.

**Objection 3:** If things are the same, then they are such that whatever is predicated of the one is likewise predicated of the other. But it is not the case that whatever is predicated of a person is predicated of His property. For instance, we say that the Father generates, but we do not say that the Paternity generates. Therefore, a property is not the same as a person in God.

**But contrary to this:** As Boethius puts it in *De Hebdomadibus*, in God *that which is (quod est)* does not differ from *that by which it is (quo est)*. But the Father is the Father by the Paternity. Therefore, the Father is the Paternity. And, for the same reason, the other properties are the same as the persons.

**I respond:** On this matter there have been different opinions.

Some have claimed that the properties neither *are* the persons nor are *in* the persons. They were motivated to say this by the mode of signifying had by relational names, since such names signify a thing not as being *in* something (*in aliquo*), but rather as being *with respect to* something (*ad aliquid*). Hence, as was explained above (q. 28, a. 2), they called the relations ‘bystanders’ (*assistantes*).

However, since (a) insofar as a relation is a certain thing in God, it is the essence itself, and since (b), as is clear from what has been said (q. 39, a. 1), the essence is the same as a person, it must be the case that a relation is the same as a person.

Thus, others, taking this identity into account, claimed that, to be sure, the properties *are* the persons, but they are not *in* the persons. For, as was noted above (q. 32, a. 2), they posited the properties in God only as a manner of speaking.

However, as was explained above in the same place, one must say that the properties are *in* God and that they are signified in the abstract as the forms of the persons. Hence, since it is part of the nature of a form that it exists *in* that of which it is the form, one must say that the properties are *in* the persons and yet that they *are* the persons. In the same way, we say that the essence is *in* God and yet that the essence *is* God.

**Reply to objection 1:** A person and a property are the same in reality, but they differ conceptually.

Hence, it need not be the case that if the one is multiplied, the other is also multiplied.

Still, note that because of God's simplicity, there are two types of real identity in God among things that differ from one another in creatures:

(a) Since God's simplicity excludes a composition of *form* and *matter*, it follows that in God the *abstract* is the same as its *concrete* counterpart; for instance, the divinity is the same as God.

(b) Since God's simplicity excludes a composition of *subject* and *accident*, it follows that whatever is attributed to God is His essence. Because of this, wisdom and power are the same in God, since both exist in the divine essence.

It is because of this twofold character of identity that a property in God is the same as a person:

(a) The properties that constitute the persons (*properitates personales*) are the same as the persons by reason of the fact that the *abstract* is the same as the *concrete*. For the properties are the subsistent persons themselves; in particular, the Paternity is the Father Himself, and the Filiation is the Son, and the Procession is the Holy Spirit.

(b) On the other hand, the properties that do not constitute the persons are the same as the persons by the second type of identity, in virtue of which everything that is attributed to God is His essence. So, then, the Common Spiration is the same as the person of the Father and the person of the Son, not because the Common Spiration is a single person subsisting *per se*, but because just as the one essence exists in the two persons, so too the one property exists in the two persons—as was explained above (q. 30, a. 2).

**Reply to objection 2:** The properties are said to be in the *essence* only in the mode of identity. However, they are said to be in the *persons* in the mode of identity not only with respect to their reality, but also with respect to their mode of signifying, viz., the mode of signifying something as a form in a suppositum. This is why the properties determine the persons and make for distinct persons, but do not make for distinct essences.

**Reply to objection 3:** Participles and verbs pertaining to the notions signify the notional acts, and acts belong to supposita. The properties, however, are signified not as supposita, but as the forms of supposita; and so the properties' mode of signifying prevents the participles and verbs pertaining to the notions from being predicated of the properties.

## Article 2

### Do the relations constitute the persons and make them distinct?

It seems that the persons are not made distinct by the relations:

**Objection 1:** Simple things are distinct through themselves. But the divine persons are maximally simple. Therefore, they are made distinct through themselves and not by the relations.

**Objection 2:** A form is distinct only with respect to its own genus; for instance, *white* is distinct from *black* only with respect to the genus *quality*. But 'hypostasis' signifies an individual in the genus *substance*. Therefore, the hypostases are not made distinct by the relations.

**Objection 3:** What is absolute is prior to what is relational. But the distinction among the divine persons is a primary distinction. Therefore, the divine persons are not made distinct by the relations.

**Objection 4:** That which presupposes a given distinction cannot be the primary source of that distinction. But a relation presupposes a distinction among the persons, since the definition of 'relation' posits that the *esse* of a relation is *to be with respect to another*. Therefore, a relation cannot be the primary source of a distinction in God.

**But contrary to this:** In *De Trinitate* Boethius says that the relations alone multiply the Trinity of divine persons.

**I respond:** When something is common to a plurality of things, it is necessary to look for something distinctive. Hence, since the three persons agree in oneness of essence, it is necessary to look for something by which they are made distinct in such a way as to be a plurality.

Now there are two things in which the divine persons differ from one another, viz., their origins and their relations. Even though these two things do not differ in reality, they nonetheless differ in their mode of signifying. For origins are signified in the mode of an act, e.g., generation, whereas relations are signified in the mode of a form, e.g., Paternity.

Thus, there have been some who, noticing that a relation follows upon an act, have claimed that the hypostases in God are made distinct from one another by their origins, and that the reason we say that the Father is distinct from the Son is that the one generates and the other is begotten. On the other hand, the distinctions among the hypostases (or persons) are made manifest after the fact by the relations (or properties)—in much the same way that the distinctions among individual creatures are effected by their material principles and are then made manifest by their properties.

However, there are two reasons why this position cannot be maintained.

First, in order for two things to be understood as distinct from one another, it is necessary that the distinction between them be understood through something intrinsic to them both—in the way that, among created things, the distinctions among them are understood through their matter or through their form. However, the origin of a thing is not signified as something intrinsic to it, but is instead signified as a certain path (*via*) from a thing or to a thing. For instance, generation is signified as a certain path that leads to the thing that is generated and that proceeds from the thing that generates it. Hence, it cannot be the case that the generated thing is made distinct from the generating thing by the act of generation alone; instead, one must grasp within both the generating thing and the generated thing those features in virtue of which they are distinct from one another. Now within a divine person one can grasp only the essence and the relation (or property). Hence, since the divine persons agree in the essence, it follows that it is through the relations that the persons are made distinct from one another.

Second, the distinction among the divine persons is not to be understood in such a way that something common is divided among them. For their common essence remains undivided. Instead, the distinguishing elements must themselves constitute the distinct things. But it is the relations (or properties) that so constitute the hypostases (or persons) and make them distinct from one another as subsistent persons. Thus, the Paternity is the Father and the Filiation is the Son, since in God the abstract does not differ from the concrete. By contrast, it is contrary to the notion of an origin that it should constitute a hypostasis (or person). For since an origin is signified as an action, it is signified as proceeding from a subsisting person, and hence it presupposes that person. On the other hand, when an origin is signified passively, as in the case of ‘being begotten’, it is signified as a path (*via*) to a subsistent person and not yet as constituting it. Hence, it is better to say that it is by the relations, rather than by their origins, that the persons (or hypostases) are made distinct from one another. For even though they are distinct from one another in both these ways, nonetheless, in our manner of understanding they are distinct in a prior and more principal way through the relations.

Hence, the name ‘Father’ signifies not only the property but also the hypostasis, whereas the name ‘Begetter’ or ‘One that generates’ signifies only the property. For the name ‘Father’ signifies the relation that constitutes the hypostasis and makes it distinct, whereas names such as ‘One that generates’ and ‘Begotten’ signify origins, which do not constitute the hypostases or make them distinct from one another.

**Reply to objection 1:** The persons are the subsistent relations themselves. Hence, it is not incompatible with the simplicity of the divine persons that they should be made distinct from one another

through the relations.

**Reply to objection 2:** The persons are distinct not in the *esse* in which they subsist or in anything absolute, but only in that which is *with respect to another*. Hence, the relations are sufficient to make them distinct from one another.

**Reply to objection 3:** To the extent that a distinction is prior, it is closer to oneness and so should be a minimal distinction. Thus, the distinctions among the persons should derive only from that which makes them minimally distinct, viz., the relations.

**Reply to objection 4:** It is when a relation is an accident that it presupposes a distinction among the supposita. However, if the relation in question is subsistent, then it does not presuppose a distinction among the supposita but brings that distinction with it. For when it is claimed that the *esse* of a relation is to be related to another, it is the correlative thing that is understood by the word ‘another’, and the correlative thing is not prior in nature to its counterpart, but is instead simultaneous in nature with it.

### Article 3

#### If the properties or relations are intellectually abstracted from the persons, do distinct hypostases still remain?

It seems that if the properties or relations are intellectually abstracted from the persons, distinct hypostases still remain:

**Objection 1:** That to which something is related by an addition can still be understood even if that which is added to it has been removed. For instance, *man* is related to *animal* by an addition, and *animal* can still be understood if *rational* is removed. But *person* is related to *hypostasis* by an addition, since a person is a hypostasis with a distinguishing property pertaining to dignity. Therefore, when the property pertaining to a person is removed from *person*, *hypostasis* is still understood.

**Objection 2:** The fact that the Father is the *Father* and the fact that the Father is *someone* (*aliquis*) do not derive from the same thing. For given that He is the *Father* by the Paternity, if He were also *someone* by the Paternity, then it would follow that the Son, in whom the Paternity does not exist, is not *someone*. Therefore, if the Paternity is intellectually removed from the Father, then it still remains true that He is *someone*—i.e., that He is a hypostasis. Therefore, even if the property is removed from the person, the hypostasis still remains.

**Objection 3:** In *De Trinitate* 5 Augustine says, “To say ‘unbegotten’ is not the same as saying ‘Father’, since even if He had not begotten the Son, nothing would prevent His being called unbegotten.” By contrast, if He had not begotten the Son, then the Paternity would not exist in Him. Therefore, even if the Paternity is removed, the hypostasis of the Father still remains as unbegotten.

**But contrary to this:** In *De Trinitate* 4 Hilary says, “The Son has nothing other than being begotten (*natum*).” But it is by being begotten (*nativitate*) that He is the Son. Therefore, if the Filiation is removed, the hypostasis of the Son does not remain. And the same line of reasoning holds for the other persons.

**I respond:** There are two kinds of intellectual abstraction. The first involves a universal’s being abstracted from a particular, in the way that *animal* is abstracted from *man*. The other involves a form’s being abstracted from matter, in the way that the figure of a circle is intellectually abstracted from all sensible matter. The difference between these two kinds of abstraction is that in the kind of abstraction that involves universals and particulars, that from which the abstraction is made does not remain; for instance, when the difference *rational* is removed from *man*, only *animal*—and not *man*—remains in the

intellect. By contrast, in the abstraction that involves form and matter, both of them remain in the intellect; for instance, when the figure of a circle is abstracted from bronze, the concept *circle* and the concept *bronze* remain separately in our intellect.

Now even though in God there is in reality no universal or particular and no matter or form, nonetheless, there is a likeness of them in God because of the mode of signifying. It is in accord with this mode that Damascene says, “What is common is the substance, and what is particular is the hypostasis.”

Thus, if we are talking about the kind of abstraction that involves universals and particulars, then when the properties are removed, what remains in our intellect is the common essence but not the hypostasis of the Father, which is a sort of particular.

On the other hand, if we are talking about the abstraction of form from matter, then when the properties that do not constitute the persons (*proprietates non personales*) are removed, the concepts of the hypostases (or persons) remain. For instance, if the fact that He is unbegotten or spirating is intellectually removed from the Father, then the hypostasis (or person) of the Father remains.

However, when a property that constitutes a person (*proprietas personalis*) is intellectually removed, then the concept of the hypostasis is removed as well. For the properties that constitute the persons are not thought of as coming to the divine hypostasis in the way that a form comes to a preexistent subject; instead, these properties bring their supposita along with them, since they are the subsisting persons themselves, in the way that the Paternity is the Father Himself. For ‘hypostasis’ signifies something distinct [from other hypostases] in God, since a hypostasis is an individual substance. Therefore, since, as has been explained (a. 2), it is the relations which make the hypostases distinct from one another and which constitute them, it follows that if the relations that constitute the persons are intellectually removed, then the hypostases do not remain.

However, as was explained above (a. 2), some claim that the hypostases in God are made distinct from one another not by their relations, but solely by their origins, with the result that the Father is understood to be a certain hypostasis by the fact that He is not from another, and the Son by the fact that He is from another through generation. By contrast, the relations that come [to the hypostases] as properties pertaining to dignity constitute the nature of a person and so are called personhoods (*personalitates*). Hence, when relations of this sort are intellectually removed, the hypostases remain, but not the persons.

But there are two reasons why this view cannot be true. First, as has been shown (a. 2), the relations constitute the hypostases and make them distinct from one another. Second, every hypostasis with a rational nature just is a person; this is clear from Boethius’s definition, according to which a person is an individual substance with a rational nature. Hence, in order for something to be a hypostasis and not a person, one would have to abstract the rationality of the nature and not the property constituting the person.

**Reply to objection 1:** *Person* does not add just *distinguishing property* to *hypostasis*; instead it adds *distinguishing property that pertains to dignity*, since this whole phrase must assume the place of the specific difference. Now a distinguishing property pertains to dignity insofar as it is understood as subsisting in a rational nature. Hence, when *distinguishing property* is removed from *person*, *hypostasis* does not remain—though *hypostasis* would remain if the rationality of the nature were removed. For a person, like a hypostasis, is an individual substance, and so in God the distinguishing relation is part of both concepts.

**Reply to objection 2:** By the Paternity the Father is not only the Father but also a person and a *someone*, i.e., a hypostasis. Nor it does not follow from this that the Son is not a *someone*, i.e., a hypostasis—just as it does not follow that He is not a person.

**Reply to objection 3:** Augustine’s intent was not to claim that the hypostasis of the Father would

remain as unbegotten if the Paternity were removed—as if Innascibility constituted the hypostasis of the Father and made Him distinct [from the other persons]. For this is impossible, since ‘unbegotten’ does not posit anything, but is instead predicated negatively, as Augustine himself explains.

Rather, Augustine is here making the general point that not everything that is unbegotten is a father. Therefore, when the Paternity is removed, the hypostasis of the Father does not remain in God in such a way that He is distinct from the other *persons*. Rather, it remains insofar as He is distinct from *creatures*, in the way that the Jews understood Him.

#### Article 4

##### Are the notional acts presupposed by the properties?

It seems that the notional acts are presupposed by the properties:

**Objection 1:** In 1 *Sentences*, dist. 27, the Master says, “The Father always exists because He has always begotten the Son.” And so it seems that the generation conceptually precedes the Paternity.

**Objection 2:** Every relation conceptually presupposes that which it is founded on, in the way that equality presupposes quantity. But the Paternity is a relation founded on the action that is the generation. Therefore, the Paternity presupposes the generation.

**Objection 3:** The nativity is related to the Filiation in the same way that the active generation is related to the Paternity. But the Filiation presupposes the nativity; for the Son is the Son because He is begotten. Therefore, the Paternity likewise presupposes the generation.

**But contrary to this:** The generation is an operation of the person of the Father. But the Paternity constitutes the person of the Father. Therefore, the Paternity is conceptually prior to the generation.

**I respond:** According to those who claim that the properties do not constitute the hypostases and make them distinct, but merely make manifest the hypostases as already constituted and distinct, it is absolutely necessary to claim that the relations are, according to our mode of understanding, posterior to the notional acts—so that it can simply be said that the Father is the Father because He generates.

However, if we assume that it is the relations that constitute the hypostases in God and make them distinct, then we must draw a distinction. For the origins in God are signified both actively and passively: (a) *actively*, in the way that the act of generating (*generatio*) is attributed to the Father and that the act of spirating (*spiratio*), taken as a notional act, is attributed to the Father and the Son; and (b) *passively*, in the way that being begotten (*nativitas*) is attributed to the Son and that proceeding (*processio*) is attributed to the Holy Spirit.

The origins as *passively* signified are conceptually prior in an absolute sense to the properties of the persons who proceed, even those properties that constitute them. For an origin, passively signified, is signified as a path (*via*) to the person who is constituted by the property.

Similarly, the origins as *actively* signified are conceptually prior to any relation which is had by the originating person but which is not constitutive of that person. For instance, the notional act of spirating conceptually precedes the unnamed relational property that is common to the Father and the Son.

However, the property that constitutes the person of the Father can be thought of in two ways:

(a) In one way, it is thought of insofar as it is a relation, and here, once again, it conceptually presupposes the notional act. For a relation as such is founded on an act.

(b) In the second way, it is thought of as constitutive of the person, and in this sense it must be the case that the relation is presupposed by the notional act, in the way that a person who is an agent is presupposed by his action.

**Reply to objection 1:** When the Master says that the Father is the Father because He generates, he is taking the name 'Father' insofar as it designates just the relation, but not insofar as it signifies the subsistent person. For when it is taken in the latter way, we must say, conversely, that the Father generates because He is the Father.

**Reply to objection 2:** This objection goes through with respect to the Paternity insofar as it is a relation, but not with respect to the Paternity insofar as it is constitutive of the person of the Father.

**Reply to objection 3:** Being begotten (*nativitas*) is a path to the person of the Son, and so it is conceptually prior to the Filiation, even insofar as the Filiation is constitutive of the person of the Son. However, the active generation is signified as proceeding from the person of the Father, and so it presupposes the personal property that constitutes the Father.

## QUESTION 41

### The Persons in Comparison to the Notional Acts

Next we must consider the persons in comparison to the notional acts (*actus notionales*). On this topic there are six questions: (1) Should the notional acts be attributed to the persons? (2) Are the notional acts necessary or voluntary? (3) In these acts, does the person proceed from nothing or from something? (4) Should one posit in God a power with respect to the notional acts? (5) What does this sort of power amount to? (6) Could a notional act terminate in more than one person?

#### Article 1

##### Should the notional acts be attributed to the persons?

It seems that the notional acts should not be attributed to the persons:

**Objection 1:** In *De Trinitate* Boethius says, “When one turns to divine predication, all the genera, with the exception of *relation*, are changed to *substance* in God.” But *action* is one of the ten genera. Therefore, if an action is attributed to God, it will pertain to His essence and not to a notion.

**Objection 2:** In *De Trinitate* 5 Augustine claims that everything said of God is predicated either with respect to the substance or with respect to a relation. But things that pertain to the substance are signified by the attributes of the essence, whereas things that pertain to the relations are signified by the names of the persons and the names of the properties. Therefore, the notional acts should not be attributed to the persons over and beyond these things.

**Objection 3:** It is proper to an action that a passion should be inferred from it. But we do not posit passions in God. Therefore, neither should the notional acts be posited there.

**But contrary to this:** In *De Fide ad Petrum* Augustine says, “It is proper to the Father that He begot the Son.” But generation is a certain act. Therefore, the notional acts should be posited in God.

**I respond:** The distinctions among the divine persons derive from their origins. But origins cannot be correctly designated except by certain acts. Therefore, to designate the order of origins among the divine persons, it was necessary to attribute the notional acts to the persons.

**Reply to objection 1:** Every origin is designated by an act. Now there are two orders of origin that can be attributed to God.

The one has to do with the procession of creatures from God, and this order is common to the three persons. So the actions that are attributed to God in order to designate the procession of creatures from Him pertain to the essence.

The other order of origin in God has to do with the procession of person from person. Hence, the acts that designate the order of this sort of origin are called notional acts. For as is clear from what has been said (q. 32, a. 2-3), the notions belonging to the persons are relations that the persons bear to one another.

**Reply to objection 2:** The notional acts differ from the relations had by the persons only in their mode of signifying, and they are altogether the same as the relations in reality. Thus, in 1 *Sentences*, dist. 26, the Master says that ‘generating’ and ‘being begotten’ (*nativitas*) are just other names for the Paternity and the Filiation.

To see this clearly, notice that it was through movement that we were first able to guess the origin of one thing from another. For if a thing changed its disposition through movement, it was clear that this happened because of some cause. And so according to its primary imposition, the name ‘action’ implies an origin of movement. For just as a movement is called a passion insofar as it exists in a thing moved by another, so too the origin of the movement is itself called an *action* insofar as the movement begins

from another and terminates in that which is moved. Therefore, if the movement is excluded, then ‘action’ implies nothing other than an order of origin, insofar as the action proceeds from some cause or principle to that which is from the principle.

Thus, since there is no movement in God, the personal action of producing a person is nothing other than the relationship of the principle to the person who is from the principle—and this is just the relation or notion itself. However, we ourselves cannot talk about divine and super-sensible (*intelligibilia*) things except according to the mode of sensible things, from which we take our cognition and among which actions and passions, insofar as they imply movement, are distinct from the relations that follow upon those actions and passions; and so we had to signify the relationships of the persons to one another in the mode of acts separately from signifying their relationships to one another in the mode of relations. This makes it clear that the acts are the same as the relations in reality, and that they differ only in the mode of signifying.

**Reply to objection 3:** It is insofar as ‘action’ signifies the origin of a movement that a passion is inferred from it. But it is not the case that an action in this sense is posited in the divine persons. Hence, passions are not posited there except grammatically speaking, because of the mode of signifying, in the way that we attribute *generating* to the Father and *being generated* to the Son.

## Article 2

### Are the notional acts voluntary?

It seems that the notional acts are voluntary:

**Objection 1:** In *De Synodis* Hilary says, “Not induced by natural necessity, the Father begot the Son.”

**Objection 2:** In Colossians 1:13 the Apostle says, “He has translated us into the kingdom of the Son of His love.” But love belongs to the will. Therefore, the Son is begotten by the Father through His will.

**Objection 3:** Nothing is more voluntary than love. But the Holy Spirit proceeds from the Father and the Son as the Love. Therefore, He proceeds in a voluntary way (*voluntarie*).

**Objection 4:** The Son proceeds in the mode of the intellect as the Word. But every word proceeds from someone who is speaking by his will. Therefore, the Son proceeds from the Father by His will and not by nature.

**Objection 5:** What is not voluntary is necessary. Therefore, if the Father did not beget the Son by His will, then it seems to follow that He begot Him by necessity. But this is contrary to what Augustine says in *Ad Orosium*.

**But contrary to this:** In the same book Augustine says, “The Father begot the Son neither by His will nor by necessity.”

**I respond:** There are two ways to understand the claim that something exists or is done by the will.

In one way, the ablative construction ‘by the will’ designates *mere concomitance*. For instance, I can say that I am a man by my will, i.e., that I will myself to be a man. In this sense, one can say that the Father begot the Son by His will—so that just as He is God by His will because He wills Himself to be God, so too He wills Himself to generate the Son.

In the second way, the ablative construction implies the status of a *cause*. For instance, a craftsman is said to work by his will, since his will is a principle of his work. Given this sense, one must say that

God the Father did not beget the Son by His will, though He did produce creatures by His will. Hence, *De Synodis* says, “If anyone claims that the Son is made as one among the creatures by the will of God, let him be anathema.” The reason for this is that nature and will differ in their causality by virtue of the fact that nature is determined to a single effect, whereas the will is not determined to a single effect. This is because an effect is assimilated to the form through which the agent acts. But it is clear that each thing has a single natural form through which it has *esse*, and so it effects things that are like itself. By contrast, the will acts not through just a single form, but through many forms, insofar as there are many intellectual conceptions. And so the will’s effect is not similar to the agent, but instead conforms to what the agent wills it to be and understands it to be. Therefore, the will is a principle of what can be one way or another, whereas nature is a principle of what cannot be other than the way it is.

Now that which can be one way or another is far removed from the divine nature, but pertains instead to the nature of creatures. For God is *per se* a necessary being, whereas creatures are made *ex nihilo*. And so when the Arians tried to prove that the Son is a creature, they claimed that the Father begot the Son by His will, in the sense in which ‘will’ designates a causal principle. We, on the other hand, must say that the Father begot the Son by nature and not by His will. Hence, in *De Synodis* Hilary says, “The will of God conferred substance on all creatures, but a perfect nativity gave to the Son a nature from the impassible and unbegotten substance. For all creatures have been created in the way that God willed them to be, but the Son, begotten of God, subsists as one who is just like God.”

**Reply to objection 1:** This passage is aimed against those who exclude even concomitance from the Father’s will in the generation of the Son, claiming that He begot the Son by nature in such a way that He did not even will to generate the Son—in just the way that we suffer against our will many things that occur by natural necessity, e.g., death, old age, and other defects of this sort. This interpretation is clear from what precedes and what follows the words in question. For the whole passage reads, “It is not the case that the Father willed not to beget the Son, or that He was forced to beget the Son, or that He was induced by natural necessity to beget Him even though He did not want to.”

**Reply to objection 2:** The Apostle calls Christ “the Son of God’s love” because He is loved superabundantly by God, and not because love is the principle of the generation of the Son.

**Reply to objection 3:** Insofar as it is a certain nature, even the will wills something by nature. For instance, the human will naturally tends toward beatitude. Similarly, God wills and loves Himself by nature. However, as was explained above (q. 19, a. 3), with respect to things other than Himself, God’s will is open in a certain way to both contraries.

Now the Holy Spirit proceeds as the Love insofar as God loves Himself. Hence, the Holy Spirit proceeds by nature, even though He proceeds in the mode of the will.

**Reply to objection 4:** Among intellectual conceptions there is likewise a reduction to primary things that are understood by nature. But God understands Himself by nature. Accordingly, the conception of the divine Word is natural.

**Reply to objection 5:** A thing can be said to be necessary either through itself (*per se*) or through another (*per aliud*).

There are two ways for a thing to be necessary through another (*per aliud*).

In one way, the thing is necessary because of some cause that acts on it and coerces it; and what is necessary in this sense is the violent.

In the second way, it is necessary because of a final cause—as when something is said to be necessary as a means to an end because without it the end cannot exist, or cannot exist in the best way. The divine generation is not necessary in either of these two ways. For God does not exist for the sake of any end, and there is no coercion in God.

A thing is called necessary through itself (*per se*) when it is such that it is impossible for it not to

exist. It is in this sense that God's existing is necessary, and it is also in this sense that the Father's generating the Son is necessary.

### Article 3

#### In the notional acts, do the persons proceed from something or from nothing?

It seems that the notional acts are not from anything (*non sint de aliquo*):

**Objection 1:** If the Father generates the Son from (*de*) something, then it is either from Himself or from something else.

If it is from something else, then since that from which something is generated exists in that which is generated, it follows that something other than the Father is in the Son. But this is contrary to Hilary in *De Trinitate* 7, where he says, "There is nothing diverse or different in them."

Suppose, on the other hand, that the Father generates the Son from Himself. Now if that from which something is generated is a permanent being, then what is generated is predicated of it. For instance, since a man is a permanent being, we say that a man is white when he goes from being non-white to being white. Therefore, it follows either that (a) the Father is not a permanent being when the Son is begotten or else that (b) the Father is the Son, which is false.

Therefore, the Father generates the Son from nothing (*de nihilo*) and not from something.

**Objection 2:** That from which something is generated is a principle of that which is generated. Therefore, if the Father generates the Son from His essence or nature, it follows that the Father's essence or nature is a principle of the Son. But it is not a material principle, since matter has no place in God. Therefore, it is some sort of active principle, in the sense that what generates is an active principle of what is generated. And so it follows that the essence generates—which was disproved above (q. 39, a. 5).

**Objection 3:** Augustine says that the three persons are not from (*ex*) the same essence, since the essence is not something other than the persons. But the person of the Son is not something other than the essence of the Father. Therefore, the Son is not from (*de*) the essence of the Father.

**Objection 4:** Every creature is from nothing (*ex nihilo*). But in Sacred Scripture the Son is called a creature; for instance, Ecclesiasticus 24:5 says in the person of Begotten Wisdom, "I came out of the mouth of the most High, the firstborn before all creatures," and afterwards (24:14) says in the person of that same Wisdom, "From the beginning, and before the world, was I created." Therefore, the Son is begotten from nothing and not from something.

Similarly, the same objection can be made concerning the Holy Spirit in light of the fact that (a) Zacharias 12:1 says, "Thus says the Lord, who stretches forth the heavens, and lays the foundations of the earth, and creates the spirit of man in him," and that (b) Amos 4:13 says (according to the alternate version), "I who form the mountains and create the spirit."

**But contrary to this:** In *De Fide ad Petrum* Augustine says, "From the beginning, God the Father begot from His nature a Son equal to Himself."

**I respond:** The Son is generated not from nothing (*de nihilo*) but from the substance of the Father. For it was shown above (q. 27, a. 2 and q. 33, aa. 2-3) that 'Paternity' and 'Filiation' and 'Nativity' are truly and properly predicated of God.

However, there is a difference between a *true generation*, through which someone proceeds as a son, and a *making*, where the maker makes something from some external matter; for instance, a craftsman makes a bench from wood, whereas a man generates a son from himself.

Now as will be shown below (q. 45, a. 2), in the same way that a created craftsman makes something from matter, so God makes something from nothing (*ex nihilo*)—not because nothingness enters into the substance of the thing, but because the total substance of the thing is produced by God without presupposing anything else. Therefore, if the Son proceeded from the Father in such a way that He was from nothing, then He would be related to the Father as an artifact is related to a craftsman, and it is clear that this relation could bear the name ‘filiation’ only according to a certain likeness and not properly speaking. Hence, it follows that if the Son of God proceeded from the Father in such a way that He was from nothing, He would not be truly and properly a son. But 1 John 5:20 (“That we might be in His true Son, Jesus Christ”) asserts the contrary of this. Therefore, the true Son of God is not from nothing, nor is He made; rather, He is simply begotten.

Moreover, if anyone who is created by God *ex nihilo* is called a son of God, this will be a metaphorical predication, insofar as that creature is in some way assimilated to the one who is truly the Son. Hence, it is because He is the only true and natural Son of God that He is called ‘the only-begotten’, in accord with John 1:18 (“The only-begotten Son who is in the bosom of the Father, He has declared Him”). However, insofar as others are called adoptive sons by assimilation to Him, He is metaphorically called ‘the firstborn’, according to Romans 8:29 (“For whom He foreknew, He also predestined to be made conformable to the image of His Son: that He might be the firstborn among many brethren”). Therefore, it follows that the Son of God is generated from the substance of the Father.

However, it is otherwise with the son of a man. For it is a part of the substance of the man who generates that passes into the substance of the one who is begotten, whereas the divine nature cannot be divided into parts (*est impartibilis*). Hence, it must be the case that in generating the Son, the Father did not transfer a part of His nature to Him but instead communicated the whole of His nature to Him, whereas the distinction between them remained only according to origin—as is clear from what has been said (q. 40, a. 2)

**Reply to objection 1:** When one says ‘The Son is begotten of the Father’, the preposition ‘of’ (*de*) signifies a consubstantial generating principle and not a material principle. For that which is produced from matter is made through a transmutation of that from which it is produced into some form. The divine essence, however, is not transmutable and not susceptible to another form.

**Reply to objection 2:** According to the Master’s explanation in 1 *Sentences*, dist. 5, the proposition ‘The Son is begotten of (*de*) the essence of the Father’ designates some sort of active principle. The Master expounds the proposition as ‘The Son is begotten of the essence of the Father, i.e., the Father-essence’. This is why, in *De Trinitate* 15 Augustine says, “I say ‘of the Father-essence’, as if to say ‘of the essence of the Father’ in a more expressive way.”

However, this does not seem to capture the meaning of the sort of locution in question. For we can likewise say that a creature is from (*ex*) the God-essence, and yet it is not the case that a creature is from the essence of God.

Hence, we must reply along other lines that the preposition ‘of’ (*de*) always denotes consubstantiality. Hence, we do not say that a house is of the builder, since the builder is not a consubstantial cause of the house. However, we can say that one thing is ‘of’ another if the latter is in some way signified as a consubstantial principle—whether it be (a) an *active* principle, in the sense in which a son is said to be ‘of’ his father, or (b) a *material* principle, in the sense in which a knife is said to be ‘of’ iron, or (c) a *formal* principle, as in the case of things in which the forms themselves are subsistent and do not come to inhere in another; for instance, we can say that an angel is ‘of’ an intellectual nature. And it is in this last way that we say that the Son is begotten of the essence of the Father, since the essence of the Father, communicated to the Son through generation, subsists in him.

**Reply to objection 3:** When one says ‘The Son is begotten of the essence of the Father’, one is adding something with respect to which the distinction between them can be preserved. But when one

says ‘The three persons are of the divine essence’, nothing is posited with respect to which the distinction signified by the preposition ‘of’ can be conveyed. And so the two cases are not parallel.

**Reply to objection 4:** The proposition ‘Wisdom is created’ can be interpreted as referring not to the Wisdom that is the Son of God, but to the created wisdom that God pours into creatures. For Ecclesiasticus 1:9-10 says, “He created her [*read: wisdom*] in the Holy Spirit .... and He poured her out upon all His works.” Nor is it inappropriate that in one and the same context Sacred Scripture should speak of both begotten Wisdom and created wisdom, since created wisdom is a participation in uncreated Wisdom.

An alternative interpretation is that the proposition refers to the created nature assumed by the Son, so that its meaning is, ‘I was created from the beginning and before all ages, i.e., I was foreseen as united to a creature’.

On yet another interpretation, the fact that created wisdom and begotten Wisdom are mentioned together intimates to us the mode of divine generation. For in generation, what is generated receives the nature of what generates, and this bespeaks perfection, whereas in creation the creator does not change and what is created does not receive the nature of the creator. Therefore, the Son is both created and begotten, so that on the basis of creation we grasp the Father’s immutability, and on the basis of generation we grasp the oneness of nature in the Father and the Son. And that is how, in *De Synodis*, Hilary explains the meaning of this passage from Sacred Scripture.

Now the other passages that are adduced speak not of the Holy Spirit, but of a created spirit, where ‘spirit’ is the name sometimes given to the wind, sometimes to the air, sometimes to human breath, and sometimes even to the soul or some other invisible substance.

#### Article 4

##### Is there power in God with respect to the notional acts?

It seems that there is no power in God with respect to the notional acts:

**Objection 1:** Every power is either active or passive. But neither type can fit in this case. For as was shown above (q. 25, a. 1), there is no passive power in God. And no active power can belong to one person with respect to another, since, as has been shown (a. 3), the divine persons are not made. Therefore, in God there is no power with respect to the notional acts.

**Objection 2:** ‘Power’ is predicated with respect to what is possible. But the divine persons are numbered among the things that are necessary and not among the things that are possible. Therefore, one should not posit power in God with respect to the notional acts by which the divine persons proceed.

**Objection 3:** The Son proceeds as the Word, i.e., as a conception of the intellect, whereas the Holy Spirit proceeds as the Love, which pertains to the will. But as was shown above (q. 25, a. 1), ‘power’ is predicated of God with respect to His effects, and not with respect to His act of understanding and willing. Therefore, one should not claim that there is a power in God with respect to the notional acts.

**But contrary to this:** In *Contra Maximinum Haereticum* Augustine asks, “If God the Father was unable to generate a Son equal to Himself, then where is the omnipotence of God the Father?” Therefore, there is a power in God with respect to the notional acts.

**I respond:** Just as the notional acts are posited in God, so too it is necessary to posit in God a power with respect to acts of this type, since ‘power’ signifies nothing other than the principle of some act. Hence, since we understand the Father to be the principle of the generation, and the Father and the Son to be the principle of the spiration, we must attribute to the Father the power to generate, and we

must attribute to the Father and the Son the power to spirate. For ‘power to generate’ signifies that by which the one who generates generates, and everything that generates generates by something. Hence, the power to generate must be posited in anything that generates, and the power to spirate must be posited in anything that spirates.

**Reply to objection 1:** Just as none of the persons proceeds as *made* in a notional act, so too neither is power with respect to the notional acts in God a power with respect to a person who is *made*. Rather, it is merely a power with respect to a person who *proceeds*.

**Reply to objection 2:** The possible, insofar as it is *opposed to* the necessary, follows upon a passive power, which does not exist in God. Hence, there is nothing in God that is possible in that sense. Rather, whatever is possible in God is possible only in the sense in which the possible is *included under* the necessary. In this latter sense, one can say that just as it is possible for God to exist, so too it is possible for the Son to be generated.

**Reply to objection 3:** ‘Power’ signifies a principle. But a principle implies a distinction from that which it is a principle of.

Now there are two kinds of distinction among those things that are predicated of God, viz., (a) a distinction in reality (*distinctio secundum rem*) and (b) a merely conceptual distinction (*distinctio secundum rationem tantum*).

By a distinction in reality, God is distinct in His essence from those things whose principle He is through creation, and one person is distinct from another whose principle He is through a notional act. However, within God an action is not distinct from its agent except by a merely conceptual distinction, since otherwise actions would be accidents in God.

Thus, with respect to those actions by which real things proceed as distinct from God’s essence or from a divine person, power can be attributed to God in the proper sense of a principle. And so just as we posit in God the power to create, so too we posit the power to generate or to spirate.

By contrast, understanding (*intelligere*) and willing (*velle*) are not acts of the sort that mark the procession of a real thing distinct from God’s essence or from a divine person. Hence, with respect to these acts the nature of power can be preserved in God only according to our mode of understanding and mode of signifying, i.e., insofar as in God the intellect (*intellectus*) and the act of understanding are signified in different ways, despite the fact that God’s act of understanding is in reality His essence and thus has no principle.

## Article 5

### Do ‘power to generate’ and ‘power to spirate’ signify a real relation or instead God’s essence?

It seems that ‘power to generate’, or ‘power to spirate’, signifies a real relation in God and not God’s essence:

**Objection 1:** As is obvious from its definition, ‘power’ signifies a principle, since, as is clear from *Metaphysics 5*, an active power is a principle of acting. But in God ‘principle’ is predicated of a person in virtue of a notion. Therefore, in God ‘power’ signifies a relation and not the essence.

**Objection 2:** In God, *having the power to act (posse)* does not differ from *acting (agere)*. But ‘act of generating’ (*generatio*) signifies a relation in God. Therefore, so does ‘power to generate’.

**Objection 3:** Names that signify the essence in God are common to the three persons. But ‘power to generate’ is proper to the Father and not common to the three persons. Therefore, ‘power to generate’

does not signify the essence.

**But contrary to this:** Just as God is able to generate a Son, so too He wills to generate a Son. But ‘wills to generate’ signifies the essence. Therefore, so does ‘power to generate’.

**I respond:** Some have claimed that ‘power to generate’ signifies a relation in God. But this cannot be true. For what is properly called a power in any agent is that by which the agent acts. But anything that produces something by its action produces something similar to itself with respect to the form by which it acts. For instance, a man who is begotten is similar to the one who begets him with respect to human nature, by the power of which the father is able to generate a man. Therefore, the generative power in that which generates is the power by which what is generated is made similar to what generates it.

Now it is with respect to the divine nature that the Son of God is assimilated to the Father who begets Him. Hence, it is the divine nature in the Father which is His power to generate. This is why Hilary says in *De Trinitate* 5, “The nativity of God cannot but contain that nature from which it proceeded; for He does not subsist from any source other than God, and He does not subsist as anything other than God.” Therefore, one must claim, as the Master does in *1 Sentences*, dist. 7, that ‘power to generate’ principally signifies the divine essence and not just a relation.

Nor does ‘power to generate’ signify the essence just insofar as the essence is the same as the relation, as if it signified both of them on a par. For instance, even though the Paternity is signified as the form of the Father, it is nonetheless a property that pertains to the person and is related to the person of the Father in the way that an individual form is related to a created individual. But among created things, even though an individual form constitutes the *person* who generates, it is not *that by which* he generates; otherwise, Socrates would generate Socrates. Hence, the Paternity cannot be understood as that by which the Father generates. Instead, the Paternity is understood as that which constitutes the person of the one who generates; otherwise, the Father would generate the Father. Rather, that by which the Father generates is the divine nature, with respect to which the Son is assimilated to Him. Accordingly, Damascene says that generation is a work of the nature—not insofar as the nature is the one who generates, but insofar as the nature is that by which He generates. And so ‘power to generate’ signifies the divine nature directly and the relation indirectly.

**Reply to objection 1:** ‘Power’ does not signify the very relation *principle of*; otherwise, it would be in the genus *relation*. Instead, it signifies that which is a principle—not in the sense in which an agent is called a principle, but rather in the sense in which that by which an agent acts is called a principle. Now even though an agent is distinct from what is effected, and even though that which generates is distinct from what it generates, still, *that by which* an agent (*generator*) generates is common both to that which generates and that which is generated—and the more perfect it is, the more perfect the act of generating is. Hence, since the divine act of generating is the most perfect of all, that by which the generator generates is common both to what is generated and to the one who generates, and it is *numerically* the same in them—and not just the same in *species*, as in the case of created things. Therefore, when we say that the divine essence is the principle by which the generator generates, it does not follow that there is more than one divine essence—in the way that it would follow if one claimed that the divine essence itself generates.

**Reply to objection 2:** In God the power to generate is the same as the act of generating in the sense in which the divine essence is the same in reality as the act of generating and as the Paternity. However, they are not conceptually the same.

**Reply to objection 3:** In the expression ‘the power to generate’, the power is signified directly and the act of generating is signified indirectly—just as if we were to say ‘the essence of the Father’. Hence, with respect to the essence that is signified, the power to generate is common to all three persons, but

with respect to the notion that is connoted, it is proper to the person of the Father.

### Article 6

#### Could a notional act terminate in more than one person?

It seems that a notional act could terminate in more than one person, so that in God there could be more than one person who is begotten or more than one person who is spirated:

**Objection 1:** Everything in which the power to generate exists is able to generate. But the power to generate exists in the Son. Therefore, the Son is able to generate. But He cannot generate Himself. Therefore, He is able to generate another Son. Therefore, there can be more than one Son in God.

**Objection 2:** In *Contra Maximinum* Augustine says, “The Son did not beget the creator. It was not that He was unable to, but that He did not need to.”

**Objection 3:** God the Father has a greater power to generate than does a created father. But one man is able to generate more than one son. Therefore, God can, too—especially given that the Father’s power is not diminished by the fact that one Son has already been generated.

**But contrary to this:** In God, the possible (*posse*) does not differ from the actual (*esse*). Therefore, if it were possible for there to be more than one Son in God, then there would be more than one Son. And so there would be more than three persons in God—which is heretical.

**I respond:** As the Athanasian creed says, “In God there is only one Father, one Son, and one Holy Spirit.” Four reasons can be given for this:

The first reason is based on the relations, which alone distinguish the persons: Since the divine persons are themselves subsistent relations, there cannot be more than one Father or Son in God unless there is more than one Paternity and more than one Filiation. But this could not be the case except because of a material distinction among the things, since the forms of a given species are multiplied only by matter—which does not exist in God. Hence, in God there can be just one subsistent Filiation, just as there could be only one subsistent whiteness.

The second reason is based on the manner of the processions: God understands and wills all things by a single simple act. Hence, there can be just one person who proceeds in the manner of a word, viz., the Son, and just one person who proceeds in the manner of a love, viz., the Holy Spirit.

The third reason is taken from the mode of proceeding: As has been explained (a. 2), the persons themselves proceed by nature. But nature is determined to a single effect.

The fourth reason is based on the perfection of the divine persons: The Son is perfect because the entire divine Filiation is contained in Him and because there is only one Son. And the same must be said about the other two persons.

**Reply to objection 1:** Even though it should be conceded without qualification that the Son has the power that the Father has, still, it should not be conceded that the Son has the power of generating, if ‘of generating’ is the gerundive of an active verb, so that the meaning is that the Son has the power to generate. Similarly, even though the same *esse* belongs to the Father and the Son, it nonetheless does not belong to the Son to be (*esse*) the Father—and this because of the added notional term ‘Father’.

However, if the expression ‘of generating’ is the gerundive of a passive verb, then the power of generating is in the Son, i.e., the power of being generated. The same holds if ‘of generating’ is the gerundive of an impersonal verb, so that ‘power of generating’ means the power by which some person is generated.

**Reply to objection 2:** In this passage Augustine wants to claim not that the Son was able to

generate a Son, but that it is not because of the Son's impotence that He did not generate. This will be explained below (q. 42, a. 6).

**Reply to objection 3:** As has been explained, God's immateriality and perfection require that there cannot be more than one Son in God. Hence, the fact that there is not more than one Son does not stem from the Father's inability to generate.

## QUESTION 42

### The Equality and Likeness of the Divine Persons in Comparison to One Another

Next we must consider the persons in comparison to one another: first, with respect to their equality and likeness (question 42) and, second, with respect to their missions (question 43).

On the first topic there are six questions: (1) Does equality have a place among the divine persons? (2) Is a person who proceeds equal from eternity to the person from whom He proceeds? (3) Is there any ordering among the divine persons? (4) Are the divine persons equal in greatness? (5) Does one divine person exist in another? (6) Are the divine persons equal in power?

#### Article 1

##### Does equality belong to the divine persons?

It seems that equality does not belong to the divine persons:

**Objection 1:** As is clear from the Philosopher in *Metaphysics* 5, equality stems from oneness in quantity. But among the divine persons one finds neither (a) intrinsic continuous quantity, which is called magnitude (*magnitudo*), nor (b) extrinsic continuous quantity, which is called place and time. Moreover, there is no equality among the divine persons with respect to discrete quantity, since two persons are more than one person. Therefore, equality does not belong to the divine persons.

**Objection 2:** As was explained above (q. 39, a. 2), the divine persons are of one essence, and an essence is signified in the manner of a form. But agreement in form makes for likeness and not for equality. Therefore, we should speak of the likeness—and not the equality—of the divine persons.

**Objection 3:** Whenever equality is found among things, those things are equal to one another, since what is equal is said to be equal to its equal. But the divine persons cannot be called equal to one another. For as Augustine says in *De Trinitate* 6, “If an image answers perfectly to that of which it is an image, then the image is made equal to that thing, but the thing itself is not made equal to its own image.” But the Son is the Image of the Father, and so the Father is not equal to the Son. Therefore, there is no equality among the divine persons.

**Objection 4:** Equality is a certain relation. But no relation is common to the three persons, since it is by their relations that the persons are made distinct from one another. Therefore, equality does not belong to the divine persons.

**But contrary to this:** The Athanasian creed says, “The three persons are coeternal and coequal with one another.”

**I respond:** It is necessary to posit equality among the divine persons. For according to the Philosopher in *Metaphysics* 10, ‘equal’ expresses, as it were, a negation of both greater and less. But we cannot posit anything greater or less among the divine persons. For as Boethius says in *De Trinitate*, “Differences [*read: within God*] are forced on those who add or subtract, as the Arians do when they break up the Trinity by assigning varying degrees of worthiness and thus produce a plurality.” The reason for this is that unequals cannot share numerically the same quantity. But in God there is no quantity other than His essence. Hence, it follows that if there were an inequality among the divine persons, then they would not share one essence, and so the three persons would not be one God—which is impossible. Therefore, one must posit equality among the divine persons.

**Reply to objection 1:** There are two kinds of quantity. The one is called the *quantity of mass* (*quantitas molis*) or *dimensive quantity*, and this kind exists only in corporeal things and so has no place among the divine persons. The other is *quantity of force* (*quantitas virtutis*), which is proportioned to the perfection of a nature or form. This is the sort of quantity that is involved when something is said to be

more or less hot to the extent that it is more or less perfect in heat.

Now this quantity of force is found in the *first* place in its *root*, i.e., in the very perfection of the form or nature, and as such it is called ‘spiritual greatness’ (*magnitudo spiritualis*), in the way that heat is called ‘great’ (*magnus*) because of its intensity and perfection. Thus, in *De Trinitate* 6 Augustine says, “In those things that are great without mass, the greater *esse* is the better *esse*.” For it is the more perfect that is being called ‘better’ here.

In the *second* place, quantity of force is found in a form’s *effects*. Now the first effect of a form is *esse*, since every entity has *esse* according to its own form, whereas the second effect of a form is its operation, since every agent acts through its own form. Therefore, quantity of force is involved both in *esse* and in operation—(a) in *esse*, because things of a more perfect nature have a greater duration, and (b) in operation, because things of a more perfect nature have a greater power to act.

Thus, as Augustine puts it in *De Fide ad Petrum*, equality is found in the Father and the Son and the Holy Spirit “insofar as none of the three either precedes the others in eternity or exceeds them in greatness or surpasses them in power.”

**Reply to objection 2:** Where there is equality with respect to quantity of force, the equality includes within itself likeness plus something else, since it excludes excess. For when given things share in one form, they can be said to be like one another even if they participate unequally in that form. For instance, air is said to be like fire with respect to heat, but they cannot be called equals as long as the one participates more perfectly in the form of heat than the other does. And it is because the nature of the Father and the Son is not only one, but also equally perfect in the two of them, that we claim not only that the Son is *like* the Father, so as to exclude the error of Eunomius, but also that they are *equal*, so as to exclude the error of Arius.

**Reply to objection 3:** In God, there are two ways in which equality or likeness can be signified, viz., by *names* and by *verbs*.

Insofar as it is signified by *names*, mutual equality and likeness are predicated of the divine persons. For the Son is equal to and like the Father, and vice versa. This is because the divine essence belongs no more to the Father than to the Son, and so just as the Son has the greatness of the Father, i.e., He is equal to the Father, so too the Father has the greatness of the Son, i.e., He is equal to the Son. By contrast, as far as creatures are concerned, “in their case equality and likeness are not convertible,” as Dionysius says in *De Divinis Nominibus*, chap. 9. For things that are caused are like their causes to the extent that they have the form of their causes, but the converse does not hold, since the form exists principally in the cause and [only] secondarily in the thing that is caused.

*Verbs*, on the other hand, signify equality along with movement. And even though there is no movement in God, there is nonetheless reception there (*est tamen ibi accipere*). Therefore, since the Son receives from the Father that by which He is equal to the Father, and not vice versa, we say that the Son is made equal to the Father, but not that the Father is made equal to the Son (*filius coaequatur patri et non e converso*).

**Reply to objection 4:** Among the divine persons the only things to consider are the *essence*, in which they share, and the *relations*, by which they are distinguished. Equality implies both of these. It implies the distinction among the persons, because nothing is said to be equal to itself; and it implies the oneness of the essence, since the persons are equal to one another because they have a single greatness and a single essence.

Now it is clear that the same thing is not related to itself by any real relation. Nor, again, is one relation related to another by any further relation; for instance, when we say that the Paternity is opposed to the Filiation, the opposition is not itself a relation that mediates between the Paternity and the Filiation. For in both of these ways, the relations would be multiplied to infinity. And so the equality and likeness among the divine persons are not real relations distinct from the relations that constitute the

persons, but instead include within their concepts both the relations that distinguish the persons and the oneness of the essence. This is why in 1 *Sentences*, dist. 31, the Master says that in these cases the relations are merely names.

## Article 2

### Is a person who proceeds coeternal with His principle?

It seems that a person who proceeds is not coeternal with His principle, e.g., the Son is not coeternal with the Father:

**Objection 1:** Arius lays out twelve modes of generation. The first mode is the flowing of a line from a point, where equality of simplicity is lacking. The second mode is the emission of rays from the sun, where equality of nature is lacking. The third mode is the character or impression left by a seal, where consubstantiality and efficacy of power are lacking. The fourth mode is the infusion by God of a good act of will, where consubstantiality is lacking. The fifth mode is the emanation of an accident from its substance, where the accident lacks subsistence. The sixth mode is the abstraction of a species from matter in the way that the senses receive a species from a sensible thing, and here equality of spiritual simplicity is lacking. The seventh mode is the stimulation of the will by thought, which is a temporal stimulation. The eighth mode is transformation, as when an image is made from brass, and this transformation is material. The ninth mode is movement from a mover, and this is likewise effect and cause. The tenth mode is the eduction of a species from a genus, which has no place in God, since the Father is not predicated of the Son as a genus of a species. The eleventh mode is the realization of an idea, as when an external box is made from one that exists in the mind. The twelfth mode is birth, in the way that a man is from his father, and here there is temporal priority and posteriority.

Therefore, it is clear that in every mode in which one thing comes from another, there is either no equality of nature or no equality of duration. Therefore, if the Son is from the Father, then one must say that He is either less than the Father or posterior to the Father, or both.

**Objection 2:** Everything that is from another has a beginning. But nothing eternal has a beginning. Therefore, neither the Son nor the Holy Spirit is eternal.

**Objection 3:** Everything that is corrupted ceases to exist. Therefore, everything that is generated begins to exist, since it is generated in order that it might exist. But the Son is begotten by the Father. Therefore, He begins to exist and is not coeternal with the Father.

**Objection 4:** If the Son is begotten by the Father, then either He is always being generated or else there is some instant of His generation. If He is always being generated, then given that a thing is imperfect while it is in the process of being generated—as is clear in the case of successive entities like time and movement, which are always in the state of coming to be—then it follows that the Son is always imperfect. But this is unacceptable. Therefore, there is some instant of the Son’s generation. Therefore, before that instant the Son did not exist.

**But contrary to this:** The Athanasian creed says, “All three persons are coeternal with one another.”

**I respond:** One must claim that the Son is coeternal with the Father. To see this clearly, note that there are two ways in which something that comes from a principle can be posterior to its principle, viz., either (a) because of the agent or (b) because of the action.

As for the agent, this happens in one way with voluntary agents and in a different way with natural agents. In the case of voluntary agents, it happens because of the choice of time. For just as it is within a

voluntary agent's power to choose the form that he will confer on the effect—this was explained above (q. 41 a. 2)—so too it is within his power to choose the time at which he will produce the effect. On the other hand, in the case of natural agents, it happens because some agents do not possess from the beginning the entire power required to act by nature; instead, this power accrues to them after some time. For instance, a man does not possess from the beginning the power to generate.

As for the action, when an action is a successive entity, that which comes from the principle is prevented from existing at all the same times as its principle. Hence, if a given agent began to act by a successive action as soon as it itself came into existence, its effect would not exist immediately at the same instant, but would instead exist at the instant at which the action was terminated.

Now it is clear from what has been previously said (q. 41, a. 2) that (a) the Father generates the Son by nature and not by His will, and, again, that (b) the Father's nature was perfect from eternity, and, again, that (c) the action by which the Father produces the Son is not a successive entity, since in that case the Son of God would be generated successively and His generation would be a material generation involving movement—which is impossible. Therefore, it follows that the Son existed whenever the Father did. And so the Son is coeternal with the Father and, similarly, the Holy Spirit is coeternal with both of them.

**Reply to objection 1:** As Augustine says in *De Verbis Domini*, there is no mode of procession among creatures that perfectly represents the divine generation, and so it is necessary to gather likenesses from many modes in order that what is lacking in one might in some way be supplied by another. This is why the Council of Ephesus says, “Let the Splendor announce to you that the Son coexists always as coeternal with the Father; let the Word show you the impassibility of His nativity; let the name of the Son intimate His consubstantiality.” However, among all of these modes it is the procession of a word from the intellect that provides the clearest representation. But a word is not posterior to that from which it proceeds, unless the intellect in question is such that it goes from potentiality into actuality—which cannot be said in the case of God.

**Reply to objection 2:** Eternity rules out a beginning of duration, but not a principle of origin.

**Reply to objection 3:** Every instance of corruption involves a change, and so everything that is corrupted begins not to exist and ceases to exist. But as was explained above (q. 27, a. 2), the divine generation is not a change. Hence, the Son is always being generated, and the Father is always generating.

**Reply to objection 4:** In the case of time, that which is indivisible, viz., an instant, is different from that which has duration, viz., time. But as was explained above (q. 10, aa. 2 and 4), in the case of eternity, the indivisible *now* always abides. Now the generation of the Son takes place not in the temporal *now* or in time, but rather in eternity. And so in order to signify the presentness and permanence of eternity, one can say, as Origen did, that the Son is always ‘being born’ (*nascitur*). However, as Gregory and Augustine reply, it is better to say that He is always ‘already born’ (*natus*), where ‘always’ designates the permanence of eternity and ‘already born’ designates the perfection of the one who has been begotten. Therefore, the Son is not imperfect and, contrary to what Arius claimed, it was never the case that He did not exist.

### Article 3

#### Is there a natural ordering among the divine persons?

It seems that there is no natural ordering (*ordo naturae*) among the divine persons:

**Objection 1:** Whatever exists in God is either the essence or a person or a notion. But ‘natural ordering’ does not signify the essence, and there is no ordering of the persons or of the notions. Therefore, there is no natural ordering in God.

**Objection 2:** Whenever things are ordered naturally, one of them is prior to another, at least conceptually and according to nature. But as the Athanasian creed says, among the divine persons there is nothing prior or posterior. Therefore, there is no natural ordering among the divine persons.

**Objection 3:** If things are ordered, then they are distinct from one another. But there is no distinction within God’s nature (*natura in divinis non distinguitur*). Therefore, there is no ordering. Therefore, neither is there any natural ordering there.

**Objection 4:** God’s nature is His essence. But one does not speak of an essential ordering in God. Therefore, neither is there a natural ordering.

**But contrary to this:** Wherever there is a plurality of things without order, there is conflation (*confusio*). But as the Athanasian creed says, there is no conflation among the divine persons. Therefore, there is an ordering there.

**I respond:** An ordering always involves a comparison to some principle. Hence, just as ‘principle’ is said in many ways—viz., (a) with respect to *position*, as in the case of a point, (b) with respect to *understanding*, as in the case of a principle of demonstration, and (c) with respect to *singular causes*—so, too, ‘ordering’ is said in many ways.

Now as was explained above (q. 33, a. 1), in the case of God, ‘principle’ is predicated with respect to *origin* and without any priority. Hence, in this case there must be an ordering with respect to origin, but without priority. And this is called a *natural ordering* (*ordo naturae*), in keeping with what Augustine says: “Not an ordering whereby one is *prior to* another, but an ordering whereby one is *from* another.”

**Reply to objection 1:** ‘Natural ordering’ signifies the notion of an origin in general, though not in particular.

**Reply to objection 2:** Among created things, even when that which is from a principle is coeval in duration with its principle, the principle is nonetheless conceptually prior to it and prior to it in nature, as long as we are considering the thing itself which is a principle.

By contrast, if the relations *cause of* and *caused by*, and *principle of* and *from a principle*, are themselves being considered, then it is clear that the opposed relations are simultaneous both naturally and conceptually, since each occurs in the definition of the other. But in God the relations are themselves subsistent persons in a single nature. Hence, one person cannot be prior to another—naturally or conceptually—either with respect to the nature or with respect to the relations.

**Reply to objection 3:** There is a natural ordering not because the nature itself is ordered, but rather because there is an ordering among the divine persons with respect to their natural origin.

**Reply to objection 4:** ‘Nature’, but not ‘essence’, in some sense implies the character of a principle. And so the ordering of origin is better called a *natural* ordering than an *essential* ordering.

#### Article 4

##### Is the Son equal to the Father in greatness?

It seems that the Son is not equal to the Father in greatness (*secundum magnitudinem*):

**Objection 1:** At John 14:28 the Son Himself says, “The Father is greater than I.” And at 1 Corinthians 15:28 the Apostle says, “The Son also Himself shall be subject unto Him that put all things

under Him.”

**Objection 2:** The Paternity pertains to the dignity of the Father. But the Paternity does not belong to the Son. Therefore, it is not the case that the Son has whatever dignity the Father has. Therefore, the Son is not equal in greatness to the Father.

**Objection 3:** Whenever there is a whole and parts, many parts are something greater than one part or a few parts; for instance, three men are something greater than two men or one man. But in God there seems to be a universal whole along with parts. For more than one notion is contained under a relation or notion. Therefore, since there are three notions in the Father and only two in the Son, it seems that the Son is not equal to the Father.

**But contrary to this:** Philippians 2:6 says, “He thought it not robbery to be equal with God.”

**I respond:** It is necessary to claim that the Son is equal to the Father in greatness. For God’s greatness is nothing other than the perfection of the divine nature itself. But it is part of the concepts of the Paternity and of the Filiation that through His generation the Son attains to having the perfection of the nature that is in the Father, just as the Father does.

By contrast, since among men generation is a certain change in something that goes from potentiality into actuality, a human son is not from the beginning equal to the father who generates him. Rather, he must attain to equality by growing in the normal way, unless things turn out otherwise because of some defect in the principle of generation.

However, it is clear from what has been said (q. 27, a. 2 and q. 33, aa. 2-3) that in God Paternity and Filiation exist truly and properly. Nor can one claim that God the Father’s power was defective in generating, or that the Son of God reached perfection step by step and through changes. Hence, one must say that from eternity the Son was equal to the Father in greatness. Thus, in *De Synodis* Hilary says, “If one removes the infirmities of the bodies, and removes the beginning of conception, and removes the sorrows and all human necessity, then every son has equality with his father because of his natural birth, since there is a likeness of nature.”

**Reply to objection 1:** These words are understood of Christ with respect to His human nature, in which He is less than the Father and subject to the Father. But with respect to His divine nature, He is equal to the Father. And this is just what the Athanasian creed says: “Equal to the Father with respect to His divinity, less than the Father with respect to His human-ness.”

Here is an alternative reply given by Hilary in *De Trinitate* 9: “The Father is greater by the authority of the giver, but the one to whom *esse* is given is not lesser.” And in *De Synodis* Hilary says, “The subjection of the Son’s nature is His piety [*read*: His recognition of the Father’s authority], whereas the subjection of other sons is the infirmity of creatures.”

**Reply to objection 2:** Equality has to do with greatness. But as has been explained (a. 1), in God ‘greatness’ signifies the perfection of the nature and pertains to the essence. And so in God equality and likeness stem from the attributes of the essence, whereas inequality and unlikeness cannot be predicated with respect to the distinction among the relations. Hence, in *Contra Maximinum* Augustine says, “The question about origin is ‘What is from what?’, whereas the question about equality is, ‘What qualities does it have?’ or ‘How great is it?’” Therefore, the Paternity is the dignity of the Father because it is the essence of the Father. For dignity is something absolute and thus pertains to the essence. Thus, just as the same essence that is the Paternity in the Father is the Filiation in the Son, so too the same dignity that is the Paternity in the Father is the Filiation in the Son. Therefore, it is true to say that the Son has whatever dignity the Father has. Still, ‘The Father has the Paternity, therefore the Son has the Paternity’ is invalid, since here relational names have replaced a substantival name (*mutatur enim quid ad aliquid*). For the essence is the same as the dignity of the Father and the Son, but it is in the Father according to the relation *giving*, whereas it is in the Son according to the relation *receiving*.

**Reply to objection 3:** In God a relation is not a universal whole, even if it is predicated of more than one relation. For all the relations are one in essence and *esse*, and this is incompatible with the nature of a universal whole, whose parts are distinct in *esse*. Similarly, as was explained above (q. 30, a. 4), ‘person’ is not a universal in God. Nor is it the case that all the relations are something greater than just one relation; nor are all the persons something greater than just one person. For the whole perfection of the divine nature exists in each of the persons.

## Article 5

### Is the Son in the Father, and vice versa?

It seems that the Son is not in the Father, or vice versa (*filius non sit in patre et e converso*):

**Objection 1:** In *Physics* 4 the Philosopher lays out eight ways in which one thing is in another and, as is clear to anyone who goes through them one by one, in none of these ways is the Son in the Father, or vice versa. Therefore, the Son is not in the Father, or vice versa.

**Objection 2:** Nothing that goes forth from a thing is in that thing. But according to Micah 5:2 (“His going forth is from the beginning, from the days of eternity”), the Son goes forth from the Father from eternity. Therefore, the Son is not in the Father.

**Objection 3:** One of two opposites is not in the other. But the Father and the Son are relational opposites. Therefore, one cannot be in the other.

**But contrary to this:** John 14:10 says, “I am in the Father, and the Father is in me.”

**I respond:** There are three things to consider in the case of the Father and the Son, viz., the *essence*, the *relations*, and *origin*. And with respect to each of these the Son is in the Father, and vice versa.

With respect to the *essence*, the Father is in the Son, since the Father is His own essence and communicates His essence to the Son—but not through any sort of change. Hence, it follows that since the essence of the Father is in the Son, the Father is in the Son. Similarly, since the Son is His own essence, it follows that He is in the Father, because His own essence is in the Father. Accordingly, in *De Trinitate* 5 Hilary says, “The immutable God follows His nature, so to speak, in begetting an immutable God. We understand that the nature of God subsists in [the Son], since He is God in God.”

With respect to the *relations*, it is clear that one of two relational opposites is in the other conceptually.

With respect to *origin*, it is likewise clear that the procession of the intelligible Word is not external to the speaker, but instead remains within the speaker. Also, that which is said by means of the Word is contained by the Word.

And the same line of reasoning applies to the Holy Spirit.

**Reply to objection 1:** The things that are in creatures do not adequately represent the things that belong to God. And so the Son is in the Father, and vice versa, in none of those ways that the Philosopher enumerates. However, the closest of those ways is the one according to which a thing is said to be in its originating principle—except that oneness of essence between the principle and what is from the principle is not found among created things.

**Reply to objection 2:** The Son’s going forth from the Father is in the manner of an interior procession, in the way a word goes forth from the heart and yet remains within the heart. Hence, this ‘going forth’ in God involves just a distinction among relations and not any distance between essences.

**Reply to objection 3:** The Father and the Son are opposed relationally and not with respect to

their essence. And yet, as has been explained, one relational opposite is in the other.

### Article 6

#### Is the Son equal to the Father in power?

It seems that the Son is not equal to the Father in power:

**Objection 1:** John 5:19 says, “The Son cannot do anything by Himself (*a se*), but what He sees the Father doing.” But the Father is able to do things by Himself. Therefore, the Father is greater in power than the Son.

**Objection 2:** The one who commands and teaches is greater in power than one who obeys and listens. But according to John 14:31 (“As the Father has given me commandments, so do I . . .”), the Father commands the Son, and according to John 5:20 (“For the Father loves the Son and shows Him all things which He Himself does”), the Father also teaches the Son. Similarly, according to John 5:30 (“As I hear, so I judge”), the Son listens to the Father. Therefore, the Father is greater in power than the Son.

**Objection 3:** It pertains to the Father’s omnipotence that He is able to generate a Son equal to Himself; for in *Contra Maximinum* Augustine says, “If God the Father was unable to generate a Son equal to Himself, then where is the omnipotence of God the Father?” But as was shown above (q. 41, a. 6), the Son is unable to generate a Son. Therefore, it is not the case that the Son is able to do whatever pertains to the Father’s omnipotence. And so the Son is not equal to the Father in power.

**But contrary to this:** John 5:19 says, “For whatever things the Father does, these the Son also does in like manner.”

**I respond:** It is necessary to claim that the Son is equal to the Father in power, since the power to act follows upon the perfection of the nature. For among creatures we see that a thing has more power to act to the extent that it has a more perfect nature. But it was shown above (a. 4) that the very character of the divine Paternity and Filiation demands that the Son be equal to the Father in greatness, i.e., in the perfection of the nature. Hence, it follows that the Son is equal to the Father in power. And the same line of reasoning holds for the Holy Spirit with respect to both the Father and the Son.

**Reply to objection 1:** The claim that the Son cannot do anything by Himself (*a se*) does not take away from the Son any power had by the Father. For He adds immediately that whatever the Father does, the Son does in like manner. Instead, this shows that the Son has His power from the Father, from whom He has His nature. Hence, in *De Trinitate* 9 Hilary says, “The oneness of the divine nature is such that the Son does *through* Himself (*per se*) what He does not do *by* Himself (*a se*).”

**Reply to objection 2:** By the Father’s teaching and the Son’s listening, all that is meant is that the Father communicates His knowledge to the Son in the same way that He communicates His essence to Him. And the Father’s command can be interpreted in the same way, viz., that in generating the Son, the Father gave to Him from eternity His knowledge and will with respect to the things that were to be done.

An alternative, and perhaps better, reply is that this should be taken to refer to Christ with respect to His human nature.

**Reply to objection 3:** Just as it is the same essence that is the Paternity in the Father and the Filiation in the Son, so too it is the same power by which the Father generates and the Son is generated. Hence, it is clear that the Son is able to do whatever the Father is able to do.

However, it does not follow that the Son is able to generate. Rather, a relational name (*ad aliquid*) has here replaced a substantival name (*quid*), since ‘generation’ signifies a relation in God. Therefore, the Son has the same omnipotence as the Father, but with a different relation. For the Father has the omnipotence as the one who *gives* it, and this is what is meant by saying that He is able to generate. The

Son, on the other hand, has the omnipotence as one who *receives* it, and this is what is meant by saying that He is able to be generated.

## QUESTION 43

### The Missions of the Divine Persons

Next we must consider the missions (*missiones*) of the divine persons. On this topic there are eight questions: (1) Is it fitting for a divine person to be sent on mission? (2) Is a mission eternal or only temporal? (3) In what sense is a divine person sent on mission invisibly? (4) Is it fitting for each person to be sent on mission? (5) Are both the Son and the Holy Spirit sent on mission invisibly? (6) To whom is an invisible mission made? (7) What about visible missions? (8) Does any person send Himself on a mission, be it visible or invisible?

#### Article 1

##### Is it fitting for a divine person to be sent on mission?

It seems that it is not fitting for a divine person to be sent on mission (*personae divinae non conveniat mitti*):

**Objection 1:** The one who is sent on mission is of lesser status than the one who sends him. But it is not the case that one divine person is of lesser status than another. Therefore, it is not the case that one divine person is sent on mission by another.

**Objection 2:** Everything that is sent is separated from the one who sends it, and this is why in *Super Ezechielem* Jerome says, “That which is connected and conjoined in one body cannot be sent.” But as Hilary puts it, “there is nothing separable” in the divine persons. Therefore, it is not the case that one person is sent by another.

**Objection 3:** Whoever is sent on mission leaves one place and goes anew to some other place. But this is unfitting in the case of a divine person, since He is everywhere. Therefore, it is not fitting for a divine person to be sent on mission.

**But contrary to this:** John 8:16 says, “I am not alone, but I and the Father who sent me.”

**I respond:** There are two things implied by the concept of a mission. The one is the relation that the one who is sent bears to the one by whom he is sent, and the other is the relation that the one who is sent bears to the terminus toward which he is sent.

Now someone’s being sent involves a certain procession of what is sent by what sends it, and this procession takes place either (a) by a *command*, as when a master sends his servant, or (b) by *counsel*, as when an advisor is said to send his king into war, or (c) by *origin*, as when a flower is said to be sent forth by a tree. Likewise, someone’s being sent bears a relation to the terminus toward which he is sent, so that he begins to be present there in some way—either because (a) he was previously not present in any way where he is now being sent, or because (b) he begins to be present there in some way in which he was not previously present.

Therefore, a mission can belong to a divine person insofar as this implies, on the one hand, a procession of *origin* from the one who sends Him, and, on the other hand, a *new mode of existing* in something. It is in this way that the Son is said to have been sent by the Father into the world. For He began to exist visibly in the world through His assumed flesh, and yet, as John 1:10 says, He had previously been present in the world.

**Reply to objection 1:** A mission implies a lesser status in the one who is sent when it implies a procession from the sending principle either by a command or by counsel. For one who commands is greater, and the one who counsels is wiser. However, in the case of God the only thing implied is a procession of *origin*, which—as was explained above (q. 42, a. 4 and 6)—preserves equality.

**Reply to objection 2:** That which is sent in such a way that it begins to be present where it had in

no way been previously present undergoes local motion because of its mission, and so it is necessary that it be separated from the one who sent it. However, this does not happen with the sending of a divine person, since a divine person who is sent does not begin to be present where He was not previously present, and He does not cease to be present where He was previously present. Hence, such a sending occurs without separation, but is instead characterized only by a distinction of origin.

**Reply to objection 3:** This objection goes through in the case of a mission that is accomplished by local motion—which has no place in the case of God.

## Article 2

### Can a mission be eternal?

It seems that a mission can be eternal:

**Objection 1:** Gregory says that the Son is sent on mission by the very fact that He is generated. But the generation of the Son is eternal. Therefore, so is His mission.

**Objection 2:** If someone has something temporally (*temporaliter*), then he undergoes change. But a divine person does not undergo change. Therefore, the mission of a divine person is eternal and not temporal.

**Objection 3:** ‘Mission’ implies procession. But the procession of the divine persons is eternal. Therefore, so are their missions.

**But contrary to this:** Galatians 4:4 says, “When the fullness of time had come, God sent his Son.”

**I respond:** Among the names that imply the origin of the divine persons, there is a certain distinction that must be taken into account. For in their signification some of these names, e.g., ‘procession’ and ‘going forth’, imply only a relation to the principle, whereas other names specify a terminus of the procession in addition to the relation to the principle.

Among these latter names, some, e.g., ‘generation’ and ‘spiration’, specify an eternal terminus. For instance, a generation is the procession of a divine person into the divine nature, and ‘spiration’, taken passively, implies the procession of the subsistent Love. However, some of these names, e.g., ‘mission’ and ‘giving’ (*datio*), imply a temporal terminus in addition to the relation to the principle. For a thing is sent on mission in order that it might be present in something, and a thing is given in order that it might be had. But for a divine person to be had by some creature—that is, for a divine person to exist in a creature with a new mode of existing—is something temporal.

Hence, ‘mission’ and ‘giving’ are predicated of God only from a given point in time, whereas ‘generation’ and ‘spiration’ are predicated of God only from eternity. On the other hand, ‘procession’ and ‘going forth’ are predicated of God both from eternity and temporally. For instance, the Son processes from eternity so as to be God, whereas He processes temporally (a) so as to be a man as well, in keeping with His visible mission, and (b) so as also to exist within men, in keeping with His invisible mission.

**Reply to objection 1:** Gregory is talking about the temporal generation of the Son from His mother, and not about the generation from His Father.

An alternative reply is that by the very fact that He was begotten from eternity, the Son has the possibility of being sent on mission (*habet quod possit mitti*).

**Reply to objection 2:** The fact that a divine person exists in a new way in something, or that He is had by someone in time, stems not from any change in the divine person, but from a change in the creature—in just the way that God is called ‘Lord’ from a given point in time because of a change

involving creatures.

**Reply to objection 3:** ‘Mission’ not only implies the procession from a principle, but also specifies the temporal terminus of the procession. Hence, a mission is exclusively temporal.

An alternative reply is that ‘mission’ includes the eternal procession and adds something else, viz., a temporal effect. For the relation of a divine person to His principle is exclusively eternal. Hence, the procession may be called a ‘twin procession’, both eternal and temporal, not because the relation to the principle is twofold, but because there is a double terminus, one temporal and one eternal.

### Article 3

#### Is a divine person sent on mission invisibly only through the gift of sanctifying grace?

It seems that it is not the case that a divine person is sent on mission invisibly only through the gift of sanctifying grace (*non sit solum secundum donum gratiae gratum facientis*):

**Objection 1:** For a divine person to be sent on mission is for Him to be given. Therefore, if a divine person is sent only through the gifts of sanctifying grace, it will not be the divine person Himself who is given, but only His gifts. But this is the error of those who claim that it is not the Holy Spirit who is given, but rather His gifts.

**Objection 2:** The preposition ‘through’ (*secundum*) denotes the character of some type of cause. But according to Romans 5:5 (“The charity of God is poured forth in our hearts by the Holy Spirit, who is given to us”), a divine person is a cause of someone’s having sanctifying grace, and not vice versa. Therefore, it is inappropriate to say that a divine person is sent through the gifts of sanctifying grace.

**Objection 3:** In *De Trinitate* 4 Augustine says, “The Son is said to be sent on mission because He is perceived in time by the mind.” But the Son is known not only through sanctifying grace, but also through gratuitous grace (*gratia gratis data*), e.g., through faith and knowledge. Therefore, it is not the case that a divine person is sent only through sanctifying grace.

**Objection 4:** Rabanus says that the Holy Spirit was given to the Apostles for the working of miracles. But this is a gift of gratuitous grace and not of sanctifying grace. Therefore, it is not the case that a divine person is given only through sanctifying grace.

**But contrary to this:** In *De Trinitate* 15 Augustine says that the Holy Spirit proceeds temporally in order to sanctify creatures. But a mission is a temporal procession. Therefore, since the sanctification of creatures occurs only through sanctifying grace, it follows that the mission of a divine person occurs only through sanctifying grace.

**I respond:** A divine person is *sent on mission* insofar as He exists in a new way in something, and a divine person is *given* insofar as He is had by someone. Neither of these occurs except through sanctifying grace.

There is the common mode in which God exists in all things through His essence, power, and presence as a cause existing in the effects that participate in His goodness (cf. q. 8). But over and beyond this common mode, there is a special mode that belongs to rational creatures, in whom God is said to exist in the way that what is known exists in the knower and what is loved exists in the lover. And since in knowing and loving, rational creatures attain to God Himself by their own operation, God is said not only to exist in a special mode in rational creatures, but also to live in them as in His temple.

So, then, there is no effect other than sanctifying grace that can be the explanation for the fact that a divine person exists in a new way in rational creatures. Hence, it is through sanctifying grace alone that a divine person proceeds temporally and is sent on mission.

Similarly, the only things we are said to have are those that we can freely use and enjoy. But it is only through sanctifying grace that we have the power to enjoy a divine person, and it is precisely in the gift of sanctifying grace that the Holy Spirit is had by and inhabits a man. Hence, it is the Holy Spirit Himself who is given and sent.

**Reply to objection 1:** Through sanctifying grace rational creatures are perfected not only in order that they might use this created gift, but also in order that they might enjoy the divine person Himself. And so the invisible mission is accomplished through the gift of sanctifying grace, but it is the divine person Himself who is given.

**Reply to objection 2:** Sanctifying grace disposes the soul to have the divine person, and this is what is meant by saying that the Holy Spirit is given through the gift of grace. Yet the gift of grace itself comes from the Holy Spirit, and this is what is meant by saying that the charity of God is poured into our hearts by the Holy Spirit.

**Reply to objection 3:** Even though the Son can be known by us through certain effects, it is not through those effects that He inhabits us or is had by us.

**Reply to objection 4:** The working of miracles, like the gift of prophecy and all the other types of gratuitous grace, makes sanctifying grace manifest. Thus in 1 Corinthians 12:7 gratuitous grace is called a manifestation of the Spirit. So, then, the reason why the Holy Spirit is said to have been given to the apostles for the working of miracles is that sanctifying grace was given to them along with a sign that made it manifest.

However, if only the sign of sanctifying grace were given without the sanctifying grace itself, the Holy Spirit would not be said to be given absolutely speaking—unless, that is, there were some qualification according to which one might say that a prophetic spirit or a spirit of miracles is given to someone to the extent that he has from the Holy Spirit the power to prophesy or to work miracles.

#### Article 4

##### Is it fitting for the Father to be sent on mission?

It seems fitting for even the Father to be sent on mission (*etiam patri conveniat mitti*):

**Objection 1:** For a divine person to be sent on mission is for Him to be given. But the Father gives Himself, since He cannot be possessed unless He Himself gives Himself. Therefore, one can say that the Father sends Himself.

**Objection 2:** A divine person is sent through the indwelling of grace. But according to John 14:23 (“We will come to him and will make our abode with him”), the whole Trinity dwells in us through grace. Therefore, each of the divine persons is sent on mission.

**Objection 3:** Except for the notions and the persons themselves, whatever belongs to one person belongs to them all. But ‘mission’ does not signify any person in particular or even any notion, since there are just five notions, as was explained above (q. 32, a. 3). Therefore, it belongs to each divine person to be sent on mission.

**But contrary to this:** In *De Trinitate* 2 Augustine says, “The Father alone is never said to have been sent on mission.”

**I respond:** The concept *mission* implies a procession from another, and as applied to the divine persons, it implies procession from another through *origin*, as was explained above (a. 1). Hence, since the Father does not proceed from another, it does not belong to Him in any way to be sent on mission. Rather, this belongs only to the Son and the Holy Spirit, to whom it belongs to proceed from another.

**Reply to objection 1:** If ‘to give’ implies someone’s generous sharing, then in that sense the Father gives Himself, because He generously communicates Himself to creatures in order that they might enjoy Him. However, if ‘to give’ implies the authorship (*auctoritas*) of the giver with respect to that which is given, then in this sense nothing in God is given—just as nothing is sent on mission—except a divine person who proceeds from another.

**Reply to objection 2:** Even though the effect of grace is also from the Father, who dwells in us through grace just as the Son and the Holy Spirit do, nonetheless, because He does not proceed from another, He is not said to be sent on mission. This is the point Augustine is making in *De Trinitate* 4 when he says, “Even though the Father is known in time by someone, He is not said to have been sent on mission, since there is no one from whom He exists or from whom He proceeds.”

**Reply to objection 3:** Insofar as ‘mission’ implies a procession from the sender, it includes a notion in its signification—not a specific notion, but a notion in general, since ‘being from another’ is common to two of the notions.

## Article 5

### Does it belong to the Son to be sent on mission invisibly?

It seems that it does not belong to the Son to be sent on mission invisibly (*filio non conveniat invisibiliter mitti*):

**Objection 1:** The invisible mission of a divine person takes place through the gifts of grace. But according to 1 Corinthians 12:11 (“But all these things, one and the same Spirit does”), all the gifts of grace pertain to the Holy Spirit. Therefore, only the Holy Spirit is sent on mission invisibly.

**Objection 2:** The mission of a divine person is accomplished through sanctifying grace. But gifts that pertain to the perfection of the intellect are not gifts of sanctifying grace, since they can be had without charity—this according to 1 Corinthians 13:2 (“If I should have prophecy and should know all mysteries and all knowledge, and if I should have all faith, so that I could remove mountains, and have not charity, I am nothing”). Therefore, since the Son proceeds from the Father as the Word of the intellect, it seems that it does not belong to Him to be sent on mission invisibly.

**Objection 3:** As has been explained (aa. 1 and 4), the mission of a divine person is a certain sort of procession. But the procession of the Son is different from the procession of the Holy Spirit. Therefore, their missions would be different if both of them were sent. And so one of these missions would be superfluous, since a single mission is sufficient to sanctify creatures.

**But contrary to this:** Wisdom 9:10 says of divine Wisdom, “Send her out of Your holy heaven, and from the throne of Your majesty.”

**I respond:** According to John 14:23 (“We will come to him and will make our abode with him”), it is the whole Trinity that dwells in the mind through sanctifying grace. But a divine person’s being sent to someone through invisible grace implies (a) a new mode of dwelling for that divine person and (b) His origin from another. Hence, since it belongs to both the Son and the Holy Spirit to dwell in someone through grace and to proceed from another, it belongs to both of them to be sent on mission invisibly. By contrast, even though it belongs to the Father to dwell in someone through grace, it does not belong to Him to proceed from another and, as a result, it does not belong to Him to be sent on mission.

**Reply to objection 1:** All the gifts *qua* gifts are attributed to the Holy Spirit, since, as was explained above (q. 38, a. 2), He has the character of being the first Gift insofar as He is the Love. Nonetheless, because of their specific character, some gifts, viz., those pertaining to the intellect, are

attributed by a certain appropriation to the Son, and the Son's mission involves those gifts. Hence, in *De Trinitate* 4 Augustine says, "The Son is sent invisibly to someone when He is known and perceived by that person."

**Reply to objection 2:** Through grace the soul is conformed to God. Hence, in order for a divine person to be sent to someone through grace, there must be an assimilation on his part to the divine person who is sent through the gift of grace.

Since the Holy Spirit is the Love, it is through the gift of charity that the soul is assimilated to the Holy Spirit, and so the mission of the Holy Spirit involves the gift of charity. The Son, on the other hand, is the Word—not just any sort of word, but the Word who spirates the Love. Thus, in *De Trinitate* 9 Augustine says, "The Word which we have in mind is knowledge with love." Therefore, the Son is sent not through every perfection of the intellect, but through the sort of formation (*instructio*) of the intellect by which one breaks forth into the affection of love. Thus, John 6:45 says, "Everyone who has listened to the Father and learned, come to me," and Psalm 38:4 says, "In my meditation a fire shall flame out." And this is why Augustine says in plain words that the Son is sent whenever He is known and perceived by someone; for 'perceive' signifies a sort of experiential knowledge. And according to Ecclesiasticus 6:23 ("The wisdom of doctrine is according to her name"), this is properly called wisdom (*sapientia*) or, so to speak, wise knowledge (*sapida scientia*).

**Reply to objection 3:** As was explained above (aa. 1 and 3), 'mission' implies (a) the origin of the person who is sent, along with (b) indwelling through grace.

So if we are speaking of the missions as far as *origin* is concerned, then the mission of the Son is distinguished from the mission of the Holy Spirit in the same way that the Generation is distinguished from the Procession.

On the other hand, if we are speaking of the missions as far as the effect of *grace* is concerned, then the two missions share the fact that they are both rooted in grace, but they are distinguished in the effects of grace, viz., the illumination of the intellect and the inflaming of the affections. And in this sense it is clear that the one effect cannot exist without the other, since neither occurs without sanctifying grace, and the one person is not separated from the other.

## Article 6

### Is an invisible mission made to everyone who participates in grace?

It seems that an invisible mission is not made to everyone who participates in grace:

**Objection 1:** The patriarchs of the Old Testament participated in grace. But the invisible missions do not seem to have been made to them. For John 7:39 says, "For as yet the Spirit was not given, because Jesus was not yet glorified." Therefore, the invisible missions are not made to everyone who participates in grace.

**Objection 2:** Progress in virtue occurs only through grace. But an invisible mission does not seem to seem to have anything to do with progress in virtue. For progress in virtue seems to be continuous, since charity is always either increasing or decreasing, and so the mission would be continuous in the same way. Therefore, an invisible mission is not made to everyone who participates in grace.

**Objection 3:** Christ and the blessed in heaven have grace to the fullest extent. But a mission does not seem to be made to them, since a mission is made to something distant, whereas Christ, insofar as he is a man, and all the blessed are perfectly united to God. Therefore, it is not the case that an invisible mission is made to all who participate in grace.

**Objection 4:** The sacraments of the New Law contain grace, and yet an invisible mission is not said to be made to them. Therefore, it is not the case that an invisible mission is made to all things that have grace.

**But contrary to this:** According to Augustine, an invisible mission is made in order to sanctify creatures. But every creature who has grace is sanctified. Therefore, an invisible mission is made to every creature of this sort.

**I respond:** As was explained above (a. 1), the concept *mission* implies that the one who is sent either (a) begins to exist where he previously did not exist, as happens with created things, or (b) begins to exist, but in a new mode, where he previously existed—and it is in this latter sense that missions are attributed to the divine persons. So there are two elements to consider in the one to whom the mission is made, viz., the indwelling of grace and a certain renewal through grace. Therefore, an invisible mission is made to everyone in whom these two elements are found.

**Reply to objection 1:** An invisible mission was made to the patriarchs of the Old Testament, and this is why in *De Trinitate* 4 Augustine says that insofar as the Son is sent invisibly, “He comes to exist in men or with men; however, this had been done beforehand in the patriarchs and prophets.” Therefore, the statement that the Spirit had not yet come has to do with the giving of the Spirit along with a visible sign, which was done on the day of Pentecost.

**Reply to objection 2:** An invisible mission is also accomplished through progress in virtue or an increase in grace. Hence, in *De Trinitate* 4 Augustine says, “The Son is sent to someone when He is known or perceived by someone to the extent that He can be known or perceived through the understanding of a rational soul that is either progressing toward God or already perfected in God.”

However, an invisible mission involves an increase of grace especially when someone progresses to a new sort of act or to a new state of grace—as, for instance, when someone progresses to the grace of miracles or prophecy, or when someone, out of the fervor of charity, progresses to the point of exposing himself to martyrdom or of renouncing his possessions or of undertaking some arduous task.

**Reply to objection 3:** An invisible mission was made to the blessed in heaven at very beginning of their beatitude. Afterwards, an invisible mission is made to them not through the intensification of grace, but by the fact that more and more mysteries are revealed to them, right up to judgment day. This increase constitutes an extension of grace as it reaches more and more things.

However, an invisible mission was made to Christ at the very beginning of His conception, but not afterwards. For from the beginning of His conception He was full of all wisdom and grace.

**Reply to objection 4:** Grace exists instrumentally in the sacraments of the New Law, in the way that the form of an artifact exists in the craftsman’s tools as the action proceeds from the agent to the patient. A mission, however, is said to be made only with respect to its terminus. Hence, the mission of a divine person is made not to the sacraments, but rather to those who receive grace through the sacraments.

## Article 7

### Does it belong to the Holy Spirit to be sent on mission visibly?

It seems that it does not belong to the Holy Spirit to be sent on mission visibly:

**Objection 1:** Insofar as the Son was sent visibly into the world, He is said to be less than the Father. But we never read that the Holy Spirit is less than the Father. Therefore, it does not belong to the Holy Spirit to be sent on mission visibly.

**Objection 2:** A visible mission involves the assumption of some visible creature, like the mission of the Son according to the flesh. But the Holy Spirit has not assumed any visible creature. Hence, it cannot be said that He exists in some visible creatures differently from the way He exists in other visible creatures—except, perhaps, in the manner of a sign, in the way He exists in the sacraments or in all the figures of the Old Law (*figurae legales*). Therefore, either the Holy Spirit is not sent visibly, or else one must claim that His mission is visible through *all* the things just mentioned.

**Objection 3:** Every creature is a visible effect that shows forth the whole Trinity. Therefore, it is not the case that the Holy Spirit is sent through visible creatures more than the other divine persons are.

**Objection 4:** The Son is sent on mission visibly through the most worthy of visible creatures, viz., a human nature. Therefore, if the Holy Spirit is sent on mission visibly, He ought to be sent through rational creatures.

**Objection 5:** As Augustine says in *De Trinitate* 3, things that are done visibly by God are dispensed through the ministry of the angels. Therefore, if there have been any visible appearances, then this has been done through the angels. And so it is the angels themselves who are sent on mission, and not the Holy Spirit.

**Objection 6:** If the Holy Spirit were sent on mission visibly, this would be done only in order to make His invisible mission manifest, since invisible things are made manifest through visible things. Therefore, a visible mission should not have been made to anyone to whom an invisible mission had not been made; and a visible mission should have been made to anyone—whether in the New Testament or the Old Testament—to whom an invisible mission had been made. But this is clearly false. Therefore, it is not the case that the Holy Spirit is sent on mission visibly.

**But contrary to this:** Matthew 3:16 says that when the Lord was baptized, the Holy Spirit descended upon Him under the appearance of a dove.

**I respond:** God provides for everything according to its mode. But as is clear from what was said above (q. 12, a. 12), the mode that is connatural to men is led to invisible things through visible things, and so the invisible things of God had to be made manifest to men through visible things. Therefore, just as God in some sense revealed (*demonstravit*) to men His own self, along with the eternal processions of the divine persons, through visible creatures according to certain intimations, so too it was fitting that the invisible missions of the divine persons should be made manifest through certain visible creatures.

However, the Son and the Holy Spirit were made manifest in different ways. For it belongs to the Holy Spirit, insofar as He proceeds as the Love, to be the gift of sanctification, whereas it belongs to the Son, insofar as He is a principle of the Holy Spirit, to be the author of this sanctification. And so the Son was sent visibly as the author of sanctification, whereas the Holy Spirit was sent visibly as the sign of sanctification.

**Reply to objection 1:** The visible creature in which the Son appeared is such that He assumed it into the unity of His person, so that what is said of that creature can be said of the Son of God. And so it is by reason of His assumed nature that the Son is said to be less than the Father. By contrast, the Holy Spirit did not assume any visible creature in which He appeared into the unity of His person in such a way that whatever belongs to that creature is predicated of Him. Hence, the Holy Spirit cannot be called less than the Father because of a visible creature.

**Reply to objection 2:** The visible mission of the Holy Spirit does not involve imaginative visions, i.e., prophetic visions. For as Augustine says in *De Trinitate* 2, “A prophetic vision is not exhibited to bodily eyes through corporeal forms, but is instead exhibited in the spirit through spiritual images of bodies. Yet everyone who was looking saw the dove and the fire with their own eyes. Again, the Holy Spirit was not related to any appearance in the way that the Son was related to the rock—for it is written, ‘The rock was Christ’ (1 Corinthians 10:4). For that rock had already existed as a creature, and because

of its mode of acting was given the name of Christ, whom it typified, whereas the dove and the fire came into existence suddenly just in order to signify the things in question. Rather, the dove and the fire seem to be like the flames that appeared to Moses in the bush, or the column that the people followed in the desert, or the lightning and thunder that occurred while the Law was being given on the mountain. For the corporeal appearance of these things came into existence in order to signify something and then disappeared.”

So, then, it is clear that the visible mission involves neither prophetic visions, which existed in the imagination and were not corporeal, nor the sacramental signs of the Old and New Testaments, in which certain preexisting things are taken up in order to signify something. Rather, the Holy Spirit is said to be sent on mission visibly insofar as He showed Himself—as in signs—in certain creatures that were made specifically for this purpose.

**Reply to objection 3:** Even though the whole Trinity operated through these visible creatures, they were nonetheless specifically made in order to reveal this or that person. For just as the Father and the Son and the Holy Spirit are signified by diverse names, so also they were able to be signified by diverse things—even though there is no separation or diversity among the persons themselves.

**Reply to objection 4:** As has been explained, the Son had to be made known as the author of sanctification, and so the Son’s visible mission had to be accomplished through a rational nature, whose function it is to act and to which the act of sanctifying can belong. By contrast, any other creature whatsoever could have served as a *sign* of sanctification. Nor did a visible creature made for this purpose have to be assumed by the Holy Spirit into the unity of His person. For such a creature was assumed not in order to do anything, but only in order to be a sign. Because of this, the creature in question did not need to last any longer than the time during which it played its role.

**Reply to objection 5:** The visible creatures in question were formed by the ministry of the angels, but they were formed in order to signify the person of the Holy Spirit and not in order to signify the person of an angel. Therefore, since the Holy Spirit existed in those visible creatures in the way that the thing signified exists in a sign, it follows that it was the Holy Spirit—and not an angel—who was visibly sent on mission through those things.

**Reply to objection 6:** As it says in 1 Corinthians 12:7 (“And the manifestation of the Spirit is given to every man for its usefulness [*read: to the Church*]”), it is not necessary that an invisible mission should always be manifested through some visible exterior sign. This usefulness consists in the fact that the Faith is confirmed and propagated through visible signs of the sort in question. According to Hebrews 2:3 (“Which, having begun to be declared by the Lord, was confirmed to us by them that heard Him”), this has been done mainly through Christ and the Apostles. And so the visible mission of the Holy Spirit had to be made especially to Christ and the apostles and certain early saints, on whom the Church was in one way or another founded. And yet a visible mission made to Christ was to reveal the invisible mission that had been made to Him not at that time, but at the very beginning of His conception.

Now a visible mission was made to Christ at His Baptism—under the appearance of a dove, which is a fertile animal—in order to show forth in Christ His authority to give grace through spiritual regeneration. Hence, the voice of the Father said, “This is my beloved Son” (Matthew 3:17), in order that others might be regenerated in the likeness of the Only-begotten.

A visible mission was made to Christ at His Transfiguration—under the appearance of a bright cloud—in order to show the abundance of His teaching. Hence, the voice said, “Listen to Him” (Matthew 17:5).

A visible mission was made to the Apostles under the appearance of breathing in order to show forth the power of the ministry under the dispensation of the sacraments. Hence, they were told, “Whose sins you will remit, they are remitted them” (John 20:23).

Again, a visible mission was made to the Apostles under the tongues of fire in order to show forth

the office of teaching. Hence, it is said, “They began to speak in various tongues” (Acts 2:4).

On the other hand, it was not proper for a visible mission of the Holy Spirit to be made to the Patriarchs of the Old Testament, since the visible mission of the Son had to be made before the visible mission of the Holy Spirit. For the Holy Spirit made the Son known in just that way that the Son made the Father known. Still, visible appearances of the divine persons were made to the patriarchs of the Old Testament. But these cannot be called visible *missions*, because, according to Augustine, they were made not to designate the indwelling of a divine person through grace, but instead to make something else manifest.

### Article 8

#### Is a divine person sent on mission only by a person from whom He eternally proceeds?

It seems that a divine person is sent on mission only by a person from whom He eternally proceeds:

**Objection 1:** As Augustine says in *De Trinitate* 4, “The Father is sent on mission by no one because He proceeds from no one.” Therefore, if one divine person is sent on mission by another, He must proceed from that person.

**Objection 2:** The one who sends has authority over the one who is sent. But authority cannot be had over a divine person except because of origin. Therefore, a divine person who is sent must proceed from the person who sends Him.

**Objection 3:** If a divine person could be sent on mission by a person He does not proceed from, then nothing would prevent the Holy Spirit from being given by a man, even though He does not proceed from that man. But this is contrary to what Augustine says in *De Trinitate* 15. Therefore, a divine person can be sent on mission only by a person that He proceeds from.

**But contrary to this:** According to Isaiah 48:16 (“And now the Lord God and His Spirit have sent me”), the Son is sent by the Holy Spirit. But the Son does not proceed from the Holy Spirit. Therefore, a divine person is sent by a person He does not proceed from.

**I respond:** Authors have talked in different ways about this topic.

According to some, a divine person is sent on mission only by a person from whom He proceeds eternally. According to this view, when the Son of God is said to be sent on mission by the Holy Spirit, this should be taken to refer to His human nature, according to which He was sent to preach by the Holy Spirit.

On the other hand, in *De Trinitate* 2 Augustine says that the Son is sent on mission both by Himself and by the Holy Spirit, and that the Holy Spirit is likewise sent on mission both by Himself and by the Son, with the result that, in God, *being sent on mission* does not belong to every person, but instead belongs only to a person who proceeds from another, whereas *sending on mission* belongs to every person.

Both of these positions are in some sense true. For when a person is said to be sent on mission, what is being designated are both (a) the person Himself who proceeds from another and (b) the visible or invisible effect that the divine person’s mission involves.

Therefore, if the one who sends a person on mission is designated as the principle of the person who is sent, then it is not the case that each person sends another on mission; instead, this belongs only to Him who is a principle of the person sent. In this sense, the Son is sent on mission only by the Father, and the Holy Spirit is sent on mission by the Father and the Son.

However, if ‘person who sends’ is taken to mean the principle of the effect that the mission

involves, then the whole Trinity sends the person who is sent. However, this does not mean that a man might give the Holy Spirit, since a man cannot cause the effect of grace.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

## QUESTION 44

### The Procession of Creatures from God, and the First Cause of All Beings

Now that we have considered the divine persons, we will next consider the procession of creatures from God. This treatment will be divided into three parts. We will deal, first, with the production of creatures (questions 44-46); second, with the different kinds of creatures (questions 47-102); and, third, with the conservation and governance of creatures (questions 103-119).

As for the production of creatures, there are three things to consider, viz., (a) what the first cause of beings is (question 44), (b) the way in which creatures proceed from the first cause (question 45), and (c) the principle of duration for things (question 46).

On the first topic there are four questions: (1) Is God an efficient cause of all things? (2) Is primary matter created by God, or is it instead a coordinate principle on equal footing with Him (*principium ex aequo coordinatum ei*)? (3) Is God the exemplary cause of things, or are there other exemplars besides Him? (4) Is God a final cause of things?

#### Article 1

##### Is it necessary for every being to be created by God?

It seems that it is not necessary for every being (*ens*) to be created by God.

**Objection 1:** Nothing prevents a being from existing without that which does not belong to its definition (*ratio*), e.g., a man without whiteness. But the relation of what is caused to its cause does not seem to belong to the definition of *being*, since some beings can be understood without it. Therefore, they can exist without that relation. Therefore, nothing prevents it from being the case that some beings are not created by God.

**Objection 2:** It is in order to exist that a thing needs an efficient cause. Therefore, that which is not able not to exist does not need an efficient cause. But no necessary being is able not to exist, since what has to exist is not able not to exist (*quia quod necesse est esse non potest non esse*). Therefore, since there are many necessary beings among the things that exist, it seems that not all beings are from God.

**Objection 3:** Anything that has a cause is such that there can be a demonstration with respect to it through that cause. But as is clear from the Philosopher in *Metaphysics* 3, no demonstrations about mathematical entities are made through agent causes. Therefore, not all beings are from God as an agent cause.

**But contrary to this:** Romans 11:36 says: “For of Him, and by Him, and in Him are all things.”

**I respond:** One must affirm that anything which exists in any way at all is from God.

For any feature that is found in a thing through participation must be caused in that thing by something which has the feature through its essence; for instance, iron is made red-hot by fire. But it was shown above, when we were discussing God’s simplicity (q. 3, a. 4), that God is *esse* itself subsisting *per se*. Again, it was shown (q. 7, aa. 1 and 2) that there can be only one subsistent *esse*—just as if whiteness were subsistent, then there could be only one such whiteness, since whitenesses are multiplied because of the things that receive them. Therefore, it follows that all things other than God are not their own *esse*, but instead participate in *esse*.

Hence, it must be the case that all things which are diversified through diverse participations in *esse*—so that they exist in more and less perfect ways—are caused by a single first being, which itself exists in an absolutely perfect way. This is why Plato claimed that oneness must be posited prior to any multitude. And according to Aristotle in *Metaphysics* 2, that which is maximally a being and maximally

true is a cause of every entity and of every true thing, just as that which is maximally hot is a cause of all hotness.

**Reply to objection 1:** Even though its relation to its cause does not enter into the definition of a being that is caused, this relation nonetheless follows from those things that do belong to its definition. For from the fact that something is a being through participation it follows that it is caused by another. Hence, a being of this sort cannot exist without being caused, just as a man cannot exist without being capable of laughing. On the other hand, *being caused* does not belong to the definition of *being* absolutely speaking, and this is why there is a being that is not caused.

**Reply to objection 2:** As *Physics* 8 explains, some have been moved by this objection to claim that whatever is necessary does not have a cause. But this is obviously false in the demonstrative sciences, in which necessary principles are causes of necessary conclusions. That is why Aristotle says in *Metaphysics* 5 that some necessary things have a cause of their necessity. Thus, the reason why an agent cause is required is not just that the effect is able not to exist, but rather that the effect would not exist if the cause did not exist. And this conditional is true regardless of whether its antecedent and consequent are possible or impossible.

**Reply to objection 3:** Mathematical entities are taken as abstract with respect to reason, even though they are not abstract with respect to their *esse*. And each thing has an agent cause insofar as it has *esse*. Thus, even though mathematical entities have an agent cause, still, they do not come under the mathematician's consideration with respect to the relation that they have to their agent cause. And this is why in the mathematical sciences nothing is demonstrated through an agent cause.

## Article 2

### Is primary matter created by God?

It seems that primary matter is not created by God:

**Objection 1:** As *Physics* 1 says, everything that comes to exist is composed of a subject plus something else. But there is no subject of primary matter. Therefore, primary matter cannot be made by God.

**Objection 2:** Action and passion are opposed to one another. But just as the first active principle is God, so the first passive principle is matter. Therefore, God and primary matter are two principles that are opposed to one another, and neither of them is from the other.

**Objection 3:** Every agent effects what is similar to itself, and so since every agent acts insofar as it is actual, it follows that everything that is made is in some sense actual. But primary matter, as such, exists only in potentiality. Therefore, it is contrary to the nature of primary matter that it should be made.

**But contrary to this:** In *Confessiones* 12 Augustine says, "Lord, you have made these two things, the one close to Yourself [viz., the angel], and the other close to nothingness [viz., primary matter]."

**I respond:** Little by little and, as it were, step by step, the ancient philosophers came to a realization of the truth. Being rather immature, so to speak, at the beginning, they believed that the only beings were sensible bodies, and those among them who posited motion in those bodies considered such motion only with respect to certain accidents, e.g., density and rarity, or combining and separating. And taking it for granted that the very substance of the bodies was uncreated, they ascribed to these accidental transmutations causes such as love or strife or intelligence or something of the sort.

Proceeding further, however, they made a reasoned distinction between substantial form and matter, which they thought of as uncreated, and they saw that there are transformations among bodies

with respect to their essential forms. And to these transformations they ascribed more general causes such as the elliptic circle (Aristotle) or the ideas (Plato).

Notice, however, that it is to a determinate species that matter is contracted by form, and in the same way a substance of a given species is contracted to a determinate mode of being by an accident that accrues to it, in the way that *man* is contracted by *white*. In both of these ways, then, they subjected *being* (*ens*) to a more particularized consideration, viz., insofar as it is *this-being* (*hoc ens*) and insofar as it is *such-being* (*tale ens*). And in accord with this they ascribed particular agent causes to things.

And some of them elevated themselves to the further point of considering *being* insofar as it is *being*, and these philosophers considered the causes of things not only insofar as the things are *these-beings* or *such-beings*, but insofar as the things are *beings*. Therefore, that which is a cause of things insofar as they are *beings* must be a cause of things not just insofar as they are *such-beings* through their accidental forms, or just insofar as they are *these-beings* through their substantial forms; rather, it must be a cause of things with respect to *everything* that pertains to their *esse* in any way at all. And it is for this reason that one must claim that even primary matter is created by the universal cause of beings.

**Reply to objection 1:** In *Physics* 1 the Philosopher is talking about particularized coming-to-be, which goes from one form to another form, be it accidental or substantial. Here, however, we are talking about things with respect to their emanation from the universal principle of being. And not even matter is excluded from this latter sort of emanation, despite the fact that it is excluded from the first sort of making.

**Reply to objection 2:** A passion is the effect of an action. Hence, it stands to reason that the first passive principle should be an effect of the first active principle. For everything that is imperfect is caused by something perfect. Therefore, as Aristotle puts it in *Metaphysics* 12, the first principle must be absolutely perfect.

**Reply to objection 3:** This objection does not prove that matter is not created; rather, it proves that matter is not created without form. For even though each created thing is actual, it is nonetheless not *pure* actuality. Hence, even that which lies on the side of potentiality must be created if the whole that involves its *esse* is created.

### Article 3

#### Is the exemplar cause of creatures something other than God?

It seems that the exemplar cause [of creatures] is something other than God (*praeter Deum*):

**Objection 1:** A copy bears a likeness to its exemplar. But creatures are hardly at all like God. Therefore, God is not their exemplar cause.

**Objection 2:** As has already been explained (a. 1), each thing that exists through participation is traced back to something that exists *per se*; for instance, what is red-hot is traced back to fire. But whatever exists among sensible things exists only through participation in some species. This is clear from the fact that there is no sensible thing in which one finds only what pertains to the nature of the species; instead, there are individuating principles joined to the principles of the species. Therefore, one must claim that the species themselves exist *per se*, e.g., *man per se* and *horse per se*, etc. And these are called exemplars. Therefore, certain things outside of God (*extra Deum*) are exemplars.

**Objection 3:** Definitions and scientific knowledge are about the species themselves and not about the species as they exist in particulars, since there is no definition or scientific knowledge with respect to

particulars. Therefore, some beings are such that they are beings—more specifically, species—without existing in singular things, and these are called exemplars. Therefore, we reach the same conclusion as above.

**Objection 4:** This same point seems to be made by Dionysius, *De Divinis Nominibus*, chap. 5, where he says: “*Esse* itself *per se* is prior to that which is *life per se* and to that which is *wisdom per se*.”

**But contrary to this:** An exemplar is the same as an idea. But according to Augustine in *83 Quaestiones*, ideas “are the principal forms contained in God’s understanding.” Therefore, the exemplars of things do not exist outside of God.

**I respond:** God is the first exemplar cause of all things. To see this clearly, notice that the reason why an exemplar is required for the production of a thing is in order that the effect might receive a determinate form. For a craftsman produces a determinate form in matter by reason of the exemplar to which he looks—regardless of whether it is an exemplar that he sees exteriorly or an exemplar that is conceived interiorly by the mind.

Now it is clear that the things that come to exist naturally receive determinate forms. But the determinateness of the forms has to be traced back to God’s wisdom as a first principle which devised the order of the universe that consists in the differences among things. And so one should say that within God’s wisdom there are concepts (*rationes*) of all things, which we called ideas (*ideae*) above (q. 15, a. 1), i.e., exemplary forms existing in God’s mind. Even though these ideas are multiplied in relation to the things, they are in reality nothing other than God’s essence insofar as a likeness of His essence can be participated in by diverse things in diverse ways. So, then, God Himself is the first exemplar of all things.

Among created things, one thing can be called an exemplar of another to the extent that it bears a likeness to that other either with respect to the same species or with respect to an analogy based on some type of imitation.

**Reply to objection 1:** Even though creatures do not reach the point of being like God with respect to His nature by a likeness of species—in the way that a generated man is like the man who generates him—nonetheless, they do reach the point of being a likeness of God by representing a conception which is understood by God, in the way that the house which exists in matter is like the house which exists in the mind of the craftsman.

**Reply to objection 2:** It is part of the nature of a man that he should exist in matter, and so there cannot be a man without matter. Therefore, even though *this* man exists by participating in the species, this cannot be traced back to anything in the same species that exists *per se*. Rather, it is traced back to a higher species (*ad speciem superexcedentem*) such as a separated substance. And the same line of reasoning holds for other sensible things.

**Reply to objection 3:** Even though all definition and scientific knowledge is only about beings, the things need not have the same mode in being that the intellect has in understanding them. For by virtue of the agent intellect we abstract universal likenesses from particular conditions, but the universals do not have to subsist over and above the particulars as exemplars of those particulars.

**Reply to objection 4:** As Dionysius puts it in *De Divinis Nominibus*, chap. 11, ‘*life per se*’ and ‘*wisdom per se*’ sometimes name God and sometimes name powers that are given to things themselves, but they do not name subsistent entities, as the ancients had posited.

#### Article 4

#### Is God a final cause of all things?

It seems that God is not a final cause of all things:

**Objection 1:** To act for the sake of an end seems to belong to something that stands in need of that end. But God does not stand in need of anything. Therefore, it does not belong to Him to act for the sake of an end.

**Objection 2:** As *Physics 2* says, the end of the act of generating, the form of the thing generated, and the agent of the act of generating do not all coincide in numerically the same thing, because the end of the act of generating is the form of the thing generated. But God is the first agent of all things. Therefore, He is not a final cause of all things.

**Objection 3:** All things desire their own end. But not all things desire God, since not all things have a cognition of Him. Therefore, God is not an end of all things.

**Objection 4:** The final cause is the first of causes. Therefore, if God is both an agent cause and a final cause, it follows that there is something prior and something posterior in Him. But this is impossible.

**But contrary to this:** Proverbs 16:4 says: “The Lord has made all things for Himself.”

**I respond:** Every agent acts for the sake of an end; otherwise, it would only be by chance that one thing rather than another follows from the agent’s action. Now the agent’s end is the same as the end of the patient *qua* patient, though in a different way. For what the agent has a tendency to give (*intendit imprimere*) is one and the same as what the patient has a tendency to receive (*tendit recipere*).

Now there are certain things which act and are acted upon at the same time. These are imperfect agents, and in acting they also intend to acquire something. By contrast, the first agent, who is just an agent [and not a patient], does not act for the sake of acquiring any end; instead, He intends only to communicate His own perfection, which is His goodness. And each creature intends to acquire its own perfection, which is a likeness of God’s perfection and goodness. It is in this sense, then, that God’s goodness is an end of all things.

**Reply to objection 1:** It is only an imperfect agent, which is apt both to act and to be acted upon, that acts for the sake of what it needs. But this does not hold true of God. And the reason why God alone is maximally generous is that He does not act for the sake of His own advantage, but instead acts just for the sake of His own goodness.

**Reply to objection 2:** The form of the generated thing is the end of the act of generating only insofar as it is a likeness of the form of the generating thing, which intends to communicate its own likeness. Otherwise, the form of the thing generated would be more noble than the thing that generates, since the end is more noble than those things that are ordered to the end.

**Reply to objection 3:** Each thing desires God as an end by desiring any sort of good whatsoever, regardless of whether it does this by means of an intellectual desire or by means of a sentient desire or by means of a natural desire not involving cognition. For nothing has the nature of the good and the desirable except insofar as it participates in a likeness of God.

**Reply to objection 4:** Since God is an efficient cause, an exemplar cause, and a final cause of all things, and since primary matter is from Him, it follows that the first principle of all things is in reality just one in number. However, nothing prevents us from considering in Him many aspects, some of which come before others in our understanding.

## QUESTION 45

### The Mode of the Emanation of Things from the First Principle

Next we ask about the mode of the emanation of things from the first principle; this mode is called creation. On this topic there are eight questions: (1) What is creation? (2) Can God create something? (3) Is the act of creating a real entity (*aliquid ens in rerum natura*)? (4) What things does *being created* belong to? (5) Does the act of creating belong to God alone? (6) Is the act of creating common to the whole Trinity, or is it instead proper to a person? (7) Does some trace (*vestigium*) of the Trinity exist in created things? (8) Is the work of creating involved in the works of nature and of will?

#### Article 1

##### Is creating the same as making something from nothing?

It seems that creating (*creare*) is not the same as making something from nothing (*ex nihilo aliquid facere*):

**Objection 1:** In *Contra Adversarium Legis et Prophetarum* Augustine says, “To make (*facere*) pertains to something that did not exist at all, whereas to create (*creare*) is to constitute something by educing it from what already exists.”

**Objection 2:** The nobility of an action or change stems from its [two] termini. Therefore, an action is more noble if it is from one good into another good, or from one being into another being, than if it is from nothing into something. But creation seems to be the most noble action and the first among all actions. Therefore, creation is not from nothing into something, but is instead from one being into another being.

**Objection 3:** The preposition ‘from’ (*ex*) implies a relation to some cause—and especially to a material cause, as when we say that a statue is made from bronze. But nothingness cannot be the matter of a being; nor can it be a cause of a thing in any way. Therefore, creating is not the same as making something from nothing (*ex nihilo*).

**But contrary to this:** A Gloss on Genesis 1:1 (“In the beginning God created heaven,” etc.) says that creating is the same as making something from nothing.

**I respond:** As was explained above (q. 44, a. 2), one must take into account not only the emanation of a particular entity from a particular agent, but also the emanation of the totality of an entity from the universal cause, viz., God. And it is this latter sort of emanation that we designate by the name ‘creation’.

Now what proceeds by means of a particular emanation is not presupposed by that emanation. For instance, if a man is generated, then the man did not previously exist. Rather, the man comes from (*ex*) what is not a man, and a white thing comes from (*ex*) what is not white. Hence, if we are thinking about the complete emanation of the totality of an entity (*emanatio totius entis universalis*) by the agency of the first principle, then it is impossible that any entity at all should be presupposed by this emanation. But *nothing* is the same as *no entity*. Therefore, just as the generation of a man is from non-being in the sense of what is not a man, so too creation, which is the emanation of the totality of *esse*, is from non-being in the sense of nothing.

**Reply to objection 1:** Augustine is here using the name ‘creation’ in a different sense (*aequivoce*) according to which things that are changed into something better are said to be created—as, for instance, when someone is said to be ‘created’ a bishop. This is not the sense in which we are talking about creation here; rather, we are speaking of creation in the sense just explained.

**Reply to objection 2:** Changes take their species and dignity not from their terminus *a quo*, but

from their terminus *ad quem*. Thus, a change has a greater perfection and priority to the extent that the change's terminus *ad quem* has a greater nobility and priority—even if the terminus *a quo* corresponding to that terminus *ad quem* is more imperfect. For instance, a generation has more nobility and priority, absolutely speaking, than does an alteration, since a substantial form is more noble than an accidental form—despite the fact that the privation of a substantial form, which is the terminus *a quo* of a generation, is more imperfect than a contrary [accident], which is the terminus *a quo* of an alteration. Similarly, an act of creation has more perfection and priority than either a generation or an alteration, because its terminus *ad quem* is the whole substance of the thing, whereas what is conceived of as its terminus *a quo* is non-being absolutely speaking.

**Reply to objection 3:** When a thing is said to be made from nothing (*ex nihilo*), the preposition 'from' (*ex*) does not designate a material cause, but instead designates only an ordering—as when one says that midday comes from morning, i.e., after the morning comes midday.

Still, notice that [in 'It is made from nothing'] the preposition 'from' can either (a) include within its scope the negation implied by the term 'nothing' or (b) be included within the scope of that negation. If the preposition includes the negation, then a certain ordering is being affirmed, and it is displayed as an ordering of what now exists to previous non-being. On the other hand, if the negation includes the preposition, then an ordering is being denied, and the sense of 'It is made from nothing' is 'It is not made from anything'—just as if one were to say 'He is talking about nothing' in virtue of the fact that he is not talking about anything. The proposition is true on both readings, since in both cases what is being said is that from nothing something comes to be. On the first reading the preposition 'from' connotes an ordering, as has been explained, whereas on the second reading it connotes a relation to a material cause, which is then denied [by the proposition].

## Article 2

### Can God create anything?

It seems that God cannot create anything:

**Objection 1:** According to the Philosopher in *Physics* 1, the ancient philosophers took it as a common deliverance of reason that nothing is made from nothing. But God's power does not extend to the contraries of first principles in the sense that God might make it the case that a whole is not greater than its part, or that an affirmation and corresponding negation are both true at the same time. Therefore, God is unable to make something from nothing, i.e., to create something.

**Objection 2:** If to create is to make something from nothing, then for something to be created (*creari*) is for it to be made (*fieri*). But every instance of *being made* is an instance of *being changed* (*mutari*). Therefore, creation is a change. But as is clear from the definition of motion, every change is from (*ex*) some subject, since motion is the actuality of a thing that exists in potentiality. Therefore, it is impossible for anything to be made by God from nothing.

**Objection 3:** If something has been made (*factum est*), then at some time it must have been the case that it was being made (*fit*). But one cannot claim that what is created is simultaneously being made (*fit*) and such that it has been made (*factum*). For in the case of permanent entities, that which is being made does not yet exist, whereas that which has been made exists already—and so something would both exist and not exist at the same time. Therefore, if something is made, then its *being made* precedes its *having been made*. But this can be the case only if there is a pre-existing subject that underlies the *being made* itself. Therefore, it is impossible for something to be made from nothing.

**Objection 4:** An infinite distance cannot be traversed. But there is an infinite distance between being and nothingness. Therefore, it is impossible for something to be made from nothing.

**But contrary to this:** Genesis 1:1 says, “In the beginning God created heaven and earth.”

**I respond:** As has already been established (q. 44, a. 1), not only is it not impossible for something to be created by God, but it is necessary to claim that all things have been created by God.

For if someone makes something from something, than what he makes it from is presupposed by his action and is not itself produced by that very action. For instance, a craftsman works from natural things such as wood and bronze, which are themselves caused not by the craftsman’s action but by nature’s action. But nature itself likewise causes natural things with respect to their form while presupposing their matter. Therefore, if God acted only on some presupposed thing, it would follow that this presupposed thing is not caused by Him. But it was shown above (q. 44, a. 1 and 2) that there can be nothing in entities that is not caused by God, who is the universal cause of all *esse*. Hence, one must claim that God brings things into existence from nothing.

**Reply to objection 1:** As was explained above (q. 44, a. 2), the ancient philosophers considered only the emanation of particular effects from particular causes, which must presuppose something in their action. Accordingly, it was the common opinion of the ancient philosophers that nothing is made from nothing. But this view has no place in the case of the first emanation by the agency of the universal principle of things.

**Reply to objection 2:** Creation is a change only in our mode of understanding it. For it is part of the concept of a change that one and the same thing is different now from the way it was before. Sometimes it is the same *actual* being that is different now from the way it was before, as in changes with respect to quantity, quality, and place; and sometimes it is only the same being *in potentiality*, as in changes with respect to substance, where the subject is [primary] matter.

By contrast, in creation, through which the entire substance of things is produced, it cannot be the case that one and the same thing is different now from the way it was before—except only in our understanding, as when we conceive of an entity as not existing in any of its parts (*totaliter*) beforehand and then existing afterwards. However, since, as *Physics* 3 says, an action and a passion coincide in the substance of a change and differ from one another only in their diverse relations, it must be the case that if we subtract the change, then nothing remains in the creator and the thing created except their diverse relations. But since, as has been explained (q. 13, a. 1), the mode of signifying follows the mode of understanding, creation is signified in the manner of a change, and because of this we say that to create is to make something from nothing. However, ‘to make’ and ‘to be made’ are more appropriate here than ‘to effect change’ and ‘to be changed’, because ‘to make’ and ‘to be made’ imply the relation of a cause to its effect and of an effect to its cause, whereas they imply change [only] as a consequence of this relation.

**Reply to objection 3:** In the case of things that are made without any motion, their *being made* (*fieri*) is simultaneous with their *having been made* (*factum esse*)—regardless of whether (a) their *being made* is the terminus of a motion, as in the case of illumination (for a thing is simultaneously being illuminated and such that it has been illuminated) or (b) their *being made* is not the terminus of a motion, as when an interior word (*verbum in corde*) is simultaneously being formed and such that it has been formed. In the case of these things, what is being made already exists; and when one says that they are ‘being made’, what is signified is that they have *esse* from another and that they did not previously exist. Hence, since creation occurs without motion, a thing is simultaneously being created and such that it has been created.

**Reply to objection 4:** This objection is based on a misleading picture according to which there is some infinite medium between being and nothingness—which is obviously false. And this false picture

stems from the fact that creation is signified as a certain change that stands between two termini.

### Article 3

#### Is the act of creation an entity that exists in the creature?

It seems that an act of creation (*creatio*) is not an entity that exists in the creature (*non sit aliquid in creatura*):

**Objection 1:** Just as creation understood passively is attributed to the creature, so too creation understood actively is attributed to the creator. But creation understood actively is not an entity that exists in the creator, since if it were, then it would follow that something temporal exists in God. Therefore, creation understood passively is not an entity that exists in the creature.

**Objection 2:** Nothing stands as a medium between the creator and the creature. But an act of creation is signified as a medium between them. For an act of creation is not the creator, since it is not eternal; and it is not the creature, since for the same reason one would have to posit an act of creation by which that first act of creation is itself created, and so on *ad infinitum*. Therefore, an act of creation is not an entity.

**Objection 3:** If an act of creation were an entity over and beyond the substance that is created, then it would have to be an accident of that substance. But every accident exists in a subject. Therefore, the created thing would have to be the subject of an act of creation. And so one and the same thing would be both the subject of an act of creation and its terminus. But this is impossible, since a subject is prior to its accident and conserves it, whereas a terminus is posterior to the action and passion whose terminus it is, and once the terminus exists, the action and passion cease to exist. Therefore, the act of creation is not itself an entity.

**But contrary to this:** For a thing to be made with respect to its whole substance is greater than for it to be made with respect to its substantial form or with respect to an accidental form. But an absolute act of generation by which a thing is made with respect to its substantial form, and a relative act of generation by which a thing is made with respect to an accidental form, are both entities in the thing that is generated. Therefore, *a fortiori*, an act of creation, by which a thing is made with respect to its whole substance, is an entity that exists in the thing that is created.

**I respond:** An act of creation posits only a relation in the thing that is created, since what is created is not made through any motion or change. For what is made through a motion or change is made from a preexistent thing. To be sure, this occurs in the particular production of some entities, but it cannot occur in the production of the entire *esse* of a thing by the universal cause of all entities, i.e., God. In creating, then, God produces things in the absence of motion. But, as was explained above (a. 2), once motion is subtracted from action and passion, all that remains is a relation. Hence, it follows that, in the creature, the act of creation is nothing other than a certain relation to the creator as the principle of its *esse*—just as in the passion that accompanies a motion there is a relation to the principle of the motion.

**Reply to objection 1:** Creation as signified actively signifies a divine action, which is God's essence plus a relation to the creature. But in God this relation to the creature is only a conceptual relation and not a real relation. By contrast, the creature's relation to God is a real relation, as was explained above when we were discussing the names of God (q. 13, a. 7).

**Reply to objection 2:** Since, as has been explained (a. 2), creation is signified as a change, and since a change is in some sense a medium between the mover and what is moved, it follows that an act of creation is likewise signified as a medium between the creator and the creature.

Yet an act of creation understood passively exists in the creature and is itself a creature. However, this act does not have to be created by means of another act of creation. For since the very reality of relations is to be said with respect to something (*ad aliquid*), they are themselves related not through any further relations, but through themselves—as was explained above when we were discussing the equality of the divine persons (q. 42, a. 1).

**Reply to objection 3:** The creature is the terminus of an act of creation insofar as the act of creation (*creatio*) is signified as a change. However, insofar as the act of creation is in reality (*vere*) a relation, the creature is its subject and is prior to it in *esse*, in the way that a subject is prior to its accident.

On the other hand, the act of creation has a certain type of priority on the part of the object of which it is predicated, viz., the source (*principium*) of the creature.

Moreover, it is not necessary to say that a creature is being created for as long as it exists. For ‘creation’ implies the relation of the creature to the creator along with a newness or beginning of existence.

#### Article 4

##### Is being created proper to composite things and subsistent things?

It seems that *being created* is not proper to composite things and subsistent things:

**Objection 1:** The *Liber de Causis* says, “*Esse* is the first among created things.” But the *esse* of a created thing is not a subsistent thing. Therefore, creation does not properly speaking belong to subsistent things and composite things.

**Objection 2:** What is created is out of nothing (*quod creatur est ex nihilo*). But composite things are not out of nothing (*composita non sunt ex nihilo*); rather, they are out of their components. Therefore, it does not belong to composite things to be created.

**Objection 3:** What is properly produced in the first emanation is what is presupposed in the second emanation. For instance, natural things are produced through natural generation, which is presupposed by the operation of a craft. But it is the matter that is presupposed in natural generation. Therefore, it is the matter—and not the composite thing—that is properly speaking created.

**But contrary to this:** Genesis 1:1 says, “In the beginning God created heaven and earth.” But heaven and earth are subsistent composite things. Therefore, creation belongs, properly speaking, to composite things and subsistent things.

**I respond:** As has been explained (a. 2), *being created* is a certain sort of *being made*. But a thing’s *being made* is ordered to its *esse*. Hence, the things to which *being made* and *being created* belong properly speaking are those things to which *esse* belongs properly speaking. But *esse* belongs properly speaking to subsistent things, regardless of whether they are simples, as in the case of separated substances, or composites, as in the case of material substances. For *esse* belongs properly speaking to that which has *esse*—and this is a thing that subsists in its own *esse*.

By contrast, forms and accidents and other such things are called entities not because they themselves exist, but rather because it is *by* them that something exists. For example, whiteness is called an entity because it is that *by which* a subject is white. Hence, according to the Philosopher, an accident is more properly said to be *of a being* than *a being*. Therefore, just as accidents and forms and other such things that do not subsist are *co-existents* rather than *existents*, so too they should be said to be *co-created* rather than *created*. Instead, it is subsistent things that are properly speaking created.

**Reply to objection 1:** When it is said that the first among created things is *esse*, ‘*esse*’ does not connote a created subject, but instead connotes the proper nature of the object of an act of creating (*importat propriam rationem obiecti creationis*). For something is said to be created by virtue of the fact that it is *a being* and not by virtue of the fact that it is *this being*—since, as has been explained (a. 1), creation is the emanation of the totality of *esse* from the universal Being. There is a similar manner of speaking when one says that *color* is the first visible thing, even though, properly speaking, what is seen is a colored thing.

**Reply to objection 2:** ‘Creation’ does not express the constitution of a composite thing out of pre-existing principles. Rather, a composite thing is said to be created in the sense that it is brought into existence simultaneously with all of its principles.

**Reply to objection 3:** This objection does not prove that matter alone is created; instead, it proves that matter does not exist except by creation. For creation is the production of the totality of the *esse* and not just the production of the matter.

## Article 5

### Does it belong to God alone to create?

It seems that it does not belong to God alone to create:

**Objection 1:** According to the Philosopher, the perfect is that which can make something similar to itself. But immaterial creatures are more perfect than those material creatures that can make something similar to themselves in the way that a fire generates a fire and a man generates a man. Therefore, an immaterial substance can make a substance similar to itself. But an immaterial substance can be made only through creation, since it does not have any matter from which it can be made. Therefore, some creatures are able to create.

**Objection 2:** The more resistance there is on the part of the thing that is being made, the greater the power that is required in the maker. But a contrary puts up more resistance than does nothingness. Therefore, greater power is required to make something from a contrary—though creatures do this—than is required to make something from nothing. Therefore, *a fortiori*, some creatures can do the latter.

**Objection 3:** The power of a maker is measured by what is made. But as was proved above when we were discussing God’s infinity (q. 7, a. 2), a created being is finite. Therefore, only a finite power is required in order to produce a created thing through an act of creation. But it is not contrary to the nature of a creature to have a finite power. Therefore, it is not impossible for a creature to create.

**But contrary to this:** In *De Trinitate* 3 Augustine says that neither good angels nor bad angels can be the creators of any entity. Therefore, *a fortiori*, no other creatures can create, either.

**I respond:** Given what has already been said (a. 1), it is obvious enough at first glance that creating cannot be the proper action of any being other than God. For effects that are more universal must be traced back to causes that are prior and more universal. But the most universal of all effects is *esse* itself. Hence, *esse* must be the proper effect of the first and most universal cause, viz., God. This is why the *Liber de Causis* says that neither an intelligence nor a noble soul gives *esse* except insofar as it acts by God’s action. But to give *esse* absolutely speaking—and not just insofar as it is *this-esse* or *such-esse*—pertains to the nature of creation (see q. 44, a. 1). Thus, it is clear that creation is the proper action of God Himself.

However, it is possible for one thing to participate in another’s proper action not by its own proper power but rather instrumentally, insofar as it acts in that other’s power. For instance, air ignites and

gives warmth through the power of fire. Accordingly, some have suggested that even though creation is the proper action of the universal cause, certain lower causes can nonetheless create insofar as they act in the power of the first cause. Thus, Avicenna claimed that (a) the first separated substance, having been created by God, creates another separated substance after itself, along with the substance of the heavens and its soul, and that (b) the substance of the heavens creates the matter of lower bodies. And in the same manner, in *Sentences* 4, dist. 5, the Master says that God can communicate to a creature the power to create in such a way that it creates as God's minister and not by its own power.

But this is impossible. For a secondary instrumental cause participates in the action of a higher cause only insofar as it contributes dispositively, through something proper to itself, to the principal agent's effect. Therefore, if in a given case it did nothing through what is proper to itself, then it would be pointless to put it to work; nor would there have to be determinate instruments for determinate actions. For instance, we see that, by cutting wood, a saw, which has this power as something proper to its own form, produces the form of a bench, which is the principal agent's proper effect. But the proper effect of God *qua* creator is that which is presupposed for every other effect, viz., *esse* absolutely speaking. Hence, nothing can contribute dispositively and instrumentally to the effect of creation, since creation is not from any presupposed thing that could be disposed by an instrumental agent's action.

So, then, it is impossible that it should belong to any creature to create, either by its own power or instrumentally, i.e., ministerially. And the claim that a creature can create is especially absurd in the case of a body, since a body does not act except by touching something or moving it. And so a body requires for its action some pre-existent thing that can be touched or moved. But this is contrary to the nature of creation.

**Reply to objection 1:** A perfect entity that participates in a nature makes something similar to itself not by producing its own nature absolutely speaking, but rather by applying that nature to something. For instance, this man cannot be a cause of human nature absolutely speaking, since in that case he would be a cause of his own self. Rather, he is a cause of human nature's existing in *this* generated man. And so in his action he presupposes the determinate matter through which *this* man exists. But in the same way that this man participates in human nature, so every created entity participates, as I put it, in the nature of being (*essendi*)—since, as was explained above (q. 7, aa. 1 and 2), only God is His own *esse*. Therefore, no created entity can produce any entity absolutely speaking except insofar it causes *esse* in *this* [subject], and so the action by which it produces an entity similar to itself presupposes that through which that entity is a *this*.

However, in an immaterial substance there is nothing presupposed through which it is a *this*. For since it is a subsistent form, it is a *this* through its form, by which it has *esse*. Therefore, an immaterial substance cannot make another immaterial substance similar to itself with respect to its *esse*, but can make it similar to itself [only] with respect to certain superadded perfections, as when we say, following Dionysius, that a higher angel illuminates a lower angel. And it is in this same way that there is 'paternity' among the celestial bodies, as is clear from the words of the Apostle in Ephesians 3:15: "From whom all paternity in the heavens and on the earth receives its name."

From what has been said it is evident that no created entity can cause anything unless something is presupposed. But this is incompatible with the nature of creation.

**Reply to objection 2:** As *Physics* 1 puts it, something is made *per accidens* from the relevant contrary, whereas it is made *per se* from the subject, which is in potentiality. Thus, the contrary resists the agent to the extent that it blocks the potentiality off from the actuality into which the agent intends to lead it. For instance, the fire intends to bring the matter of the water to an actuality similar to itself, but it is impeded by the contrary form and dispositions by which the water's potentiality is, as it were, constrained from being led into actuality. And the more this potentiality is constrained, the more the power that is required in the agent in order to lead the matter into actuality. Hence, a much greater power

is required in the agent if there is no pre-existent potentiality at all. So, then, it is clear that it takes a much greater power to make something from nothing than it does to make something from a contrary.

**Reply to objection 3:** A maker's power is assessed not only on the basis of the *substance* of the thing that is made, but also on the basis of the *manner* of the making. For a high degree of heat not only effects a higher degree of heat, but also effects it more quickly. Therefore, even though creating a finite effect does not [by itself] demonstrate an infinite power, creating a finite effect from nothing does indeed demonstrate an infinite power. This is clear from what has been said. For if it is true that the further away a potentiality is from actuality, the greater the power that is required in the agent, then it must be the case that the power to act from no presupposed potentiality—which is the sort of acting involved in creation—is infinite. For there is no proportion between no potentiality and some potentiality, which is what a natural agent's power requires, just as there is no proportion between non-being and being. And since no creature has an absolutely infinite power—just as, in keeping what was proved above (q. 7, a. 2), no creature has infinite *esse*—it follows that no creature is able to create.

## Article 6

### Is creating proper to some divine person?

It seems that creating is proper to some divine person (*proprium alicuius personae*):

**Objection 1:** What is prior is a cause of what is posterior, and the perfect is a cause of the imperfect. But the procession of a divine person is prior to, and more perfect than, the procession of a creature. For a divine person proceeds with a perfect likeness of its principle, whereas a creature proceeds with an imperfect likeness. Therefore, the processions of the divine persons are causes of the procession of [created] things. And so creating is proper to a person.

**Objection 2:** The divine persons are distinguished from one another only by their processions and relations. Therefore, if any feature is attributed to the divine persons in different ways, this feature belongs to them because of the processions of the persons and their relations. But the causing of creatures is attributed in different ways to the divine persons. For, in the creed, it is attributed to the Father that He is the “creator of all things, visible and invisible,” while to the Son it is attributed that “through Him all things were made,” and to the Holy Spirit it is attributed that He is “the Lord and Giver of life.” Therefore, the causing of creatures belongs to the persons because of the processions and relations.

**Objection 3:** If someone replies that the causing of creatures involves attributes of the essence that are appropriated to the persons, this does not seem adequate. For each of God's effects is caused by each attribute of the essence, viz., power, goodness, and wisdom, and so each effect pertains as much to one of these attributes as to the others. Therefore, a determinate manner of causing should not be attributed to one person rather than another unless, in creating, the persons are distinguished from one another by the relations and processions.

**But contrary to this:** In *De Divinis Nominibus*, chap. 2, Dionysius says that all causal attributions are common to the whole divine essence.

**I respond:** To create is, properly speaking, to cause or produce the *esse* of things. Now since every agent effects what is similar to itself, the principle of action can be inferred from the action's effect. For instance, fire is that which generates fire. And so creating belongs to God according to His *esse*, i.e., His essence, which is common to the three persons. Hence, creating is not proper to any of the persons, but is instead common to the whole Trinity.

Still, the divine persons have causality with respect to the creation of things in accord with the nature of their processions. For as was shown above when we were discussing God's knowledge and will (q. 14, a. 8 and q. 19, a. 4), God is a cause of things through His intellect and will in the way that a craftsman is a cause of his artifacts. But a craftsman acts through the word conceived in his intellect and through the love of his will as directed toward something. In the same way, God the Father effects creatures through His Word, which is the Son, and through His Love, which is the Holy Spirit. And so to the extent that the processions of the divine persons include the attributes of the essence, viz., knowledge and will, they are causes (*rationes*) of the production of creatures.

**Reply to objection 1:** In the way that has just been explained, the processions of the divine persons are a cause of creation.

**Reply to objection 2:** Just as the divine nature, though common to the three persons, nonetheless belongs to them in a certain order—insofar as the Son receives the divine nature from the Father, and the Holy Spirit receives it from them both—so, too, the power to create, though common to the three persons, nonetheless belongs to them in a certain order. For the Son has this power from the Father, and the Holy Spirit has it from them both. Hence, “the creator” is attributed to the Father as one who has this power from no one else. On the other hand, “through Him all things were made” is said of the Son insofar as He has this power, but from another. For the preposition ‘through’ (*per*) normally denotes a mediate cause, i.e., a principle-from-a-principle. Again, it is attributed to the Holy Spirit, who has that same power from both the Father and the Son, that He rules by being “the Lord” and that He “gives life” to the things that are created by the Father through the Son.

The general explanation for these attributions can also be taken from an appropriation of the properties of God's essence. For as was explained above (q. 39, a. 8), *power*, which is especially manifested in creation, is appropriated to the Father, and so it is attributed to the Father that He is “the creator.” On the other hand, *wisdom*, through which an intellectual agent acts, is appropriated to the Son, and it is thus said of the Son that “through Him all things were made.” Again, to the Holy Spirit is attributed *goodness*, which is the source of (a) the sort of governance that leads things to their appropriate ends and of (b) the giving of life. For life consists in a certain interior movement, whereas the first mover is the end and the good.

**Reply to objection 3:** Even though each of God's effects proceeds from each of the attributes, each effect is nonetheless traced back to that attribute with which it has a special consonance because of the attribute's proper definition. For instance, the ordering of all things is traced back to *wisdom*, and the justification of the wicked is traced back to *mercy* and *goodness*, which overflow in abundance. On the other hand, creation, which is the production of the very substance of a thing, is traced back to *power*.

## Article 7

### Must a trace of the Trinity be found in creatures?

It seems that a trace (*vestigium*) of the Trinity need not be found in creatures:

**Objection 1:** Each thing can be discovered through its traces. But as was established above (q. 32, a. 1), the Trinity of persons cannot be discovered on the basis of creatures. Therefore, there are no traces of the Trinity in creatures.

**Objection 2:** Whatever exists in creatures is created. Therefore, if a trace of the Trinity exists in a creature with respect to certain of its properties, and if every created thing has a trace of the Trinity, then there must also be a trace of the Trinity in each of these traces, and so on *ad infinitum*.

**Objection 3:** An effect represents nothing other than its cause. But the causing of creatures pertains to the common [divine] nature and not to the relations by which the persons are distinguished and numbered. Therefore, in creatures there are no traces of the Trinity, but only traces of the oneness of God's essence.

**But contrary to this:** In *De Trinitate* 6 Augustine says, "A trace of the Trinity is evident in creatures."

**I respond:** All effects somehow represent their causes, but in diverse ways.

Some effects represent only the causality of their cause and not its form, in the way that smoke represents fire. Such a representation is said to be the representation had by a *trace* (*vestigium*). For a trace displays the motion of something that is passing by, but not its intrinsic character (*quale*).

On the other hand, some effects represent their cause by being like it in form, in the way that a generated fire represents the fire that generates it, and in the way that a statue of Mercury represents Mercury. This is the sort of representation had by an *image* (*imago*).

Now the processions of the divine persons have to do with acts of intellect and will, as was explained above (q. 27). For the Son proceeds as the intellect's Word, and the Holy Spirit proceeds as the will's Love. Therefore, in rational creatures, in whom there is intellect and will, there is a representation of the Trinity in the manner of an *image*, to the extent that in these creatures we find a word conceived and a love that proceeds.

However, in all creatures there is a representation of the Trinity in the manner of a *trace*, insofar as we find in each creature certain things that have to be traced back to the divine persons as a cause. For each creature (a) subsists in its own *esse*, (b) has a form by which it is determined to a species, and (c) is ordered to something else. Therefore, insofar as it is a created substance, it represents its cause and principle, and in this way it points to the person of the Father, who is a principle-not-from-a-principle. Again, insofar as it has a certain form and species, it represents the Word in the sense that the form of the artifact comes from the craftsman's conception. Again, insofar as it has an ordering, it represents the Holy Spirit insofar as He is the Love, since the ordering of an effect to some further thing comes from the creator's will.

Accordingly, Augustine claims in *De Trinitate* 6 that a trace of the Trinity is found in each creature, in that each creature (a) "is some one entity," (b) "is formed by a species," and (c) "has a certain ordering." Again, these three features are the basis for the other three posited by Wisdom 11:21, viz., number (*numerus*), weight (*pondus*), and measure (*mensura*). For measure has to do with the substance of a thing delimited by its principles, number has to do with the species, and weight has to do with order. Likewise, these same three features are the basis for the other three posited by Augustine, viz., mode (*modus*), species (*species*), and order (*ordo*). The same holds for the features posited by Augustine in *83 Quaestiones*, viz., that a thing exists (*constat*), that it is distinct (*discernitur*), and that it fits in (*congruit*). For it exists as something through its substance, it is distinct because of its form, and it fits in because of its ordering. And any other features invoked in this way can easily be traced back to these same features.

**Reply to objection 1:** The representation of a trace has to do with the appropriated [attributes of the essence], and, as was explained above (q. 32, a. 1), this is the manner in which one can arrive at the Trinity of persons on the basis of creatures.

**Reply to objection 2:** A creature is an entity which subsists, properly speaking, and in which the three aforementioned features are found. These three features do not have to be found in everything that *inheres in* the creature; rather, it is because of them that a trace [of the Trinity] is attributed to the subsistent thing.

**Reply to objection 3:** In a certain sense, as was explained above (a. 6), even the processions of the persons are a cause of and explanation for creation.

## Article 8

### Is creation involved in the works of nature and art?

It seems that creation is involved in the works of nature and art:

**Objection 1:** A form is produced in each work of nature and art. But a form is not produced from anything, since it does not have the matter as part of itself. Therefore, it is produced from nothing. And so there is an act of creating in every operation of nature and art.

**Objection 2:** An effect is not more powerful than its cause. But among natural things there are no agents except accidental forms, which are active or passive forms. Therefore, no substantial form is produced by an operation of nature. Therefore, it follows that substantial forms exist through creation.

**Objection 3:** A nature effects what is similar to itself. But some of the things generated in nature are not generated by anything similar to themselves, as is clear in the case of animals that are generated through putrefaction. Therefore, the forms of these animals are produced by creation and not by nature. And the same line of reasoning holds for other forms as well.

**Objection 4:** What is not created is not a creature. Therefore, if creation is not involved in the case of things that are produced by nature, then it follows that things produced by nature are not creatures. But this is heretical.

**But contrary to this:** In *Super Genesim ad Litteram* Augustine distinguishes the work of propagation, which is a work of nature, from the work of creation.

**I respond:** This question arises because of forms.

Some, claiming that forms are latent, have asserted that forms do not begin to exist through nature's action, but existed beforehand in the matter. They fell into this position because of their ignorance of matter. For they did not know how to distinguish potentiality from actuality, and given that forms pre-exist in the matter in potentiality, they claimed that the forms pre-exist absolutely speaking.

Again, others have claimed that forms are bestowed or caused by a separated agent in the mode of creation. On their view, an act of creation is joined to every natural operation. They fell into this position because of their ignorance of form. For they did not take into account the fact that the natural form of a body is not itself subsistent, but is instead that *by which* something exists. And so, since, as was explained above (a. 4), *being made* and *being created* belong properly only to subsistent things, the forms are neither made nor created, but are instead co-created.

Now that which is, properly speaking, made by a natural agent is the composite, which is made from the matter. Hence, creation is not *involved in* the works of nature but is instead *presupposed by* the operation of nature.

**Reply to objection 1:** Forms begin to exist in actuality when the composites have been made. And the forms themselves are not made directly (*per se*), but are instead made coincidentally (*per accidens*).

**Reply to objection 2:** The active qualities in a nature act in the power of the substantial forms. And so a natural agent produces something similar to itself not only with respect to qualities but also with respect to its species.

**Reply to objection 3:** A universal agent, i.e., a celestial power, suffices for the generation of imperfect animals. The animals are assimilated to this power not with respect to their species, but according to a certain analogy. Nor does one have to say that their forms are *created* by a separated agent.

By contrast, a universal agent is not sufficient for the generation of perfect animals; instead, what is required is a proper agent, i.e., a univocal generator.

**Reply to objection 4:** A natural operation occurs only when created principles are presupposed, and this is why the things that are made by nature are called creatures.

## QUESTION 46

### The Beginning of Duration for Created Things

The next thing to consider is the beginning of duration for created things. On this topic there are three questions: (1) Have creatures always existed? (2) Is it an article of the Faith that creatures began to exist? (3) In what sense is God said to have created heaven and earth ‘in the beginning’?

#### Article 1

##### Has the universe of creatures always existed?

It seems that the universe of creatures (*universitas creaturarum*), which goes by the name ‘the world’ (*mundum*), did not begin to exist, but has instead existed from eternity:

**Objection 1:** Everything that began to exist is such that before it existed, it was possible for it to exist; otherwise, it would have been impossible for it to come into existence. Therefore, if the world began to exist, then before it began to exist, it was possible for it to exist. But that which is such that it is possible for it to exist is matter, which is in potentiality both to existing (which occurs through form) and also to not existing (which occurs through privation). Therefore, if the world began to exist, then matter existed before the world did. But matter cannot exist without form, and the matter of the world with form just *is* the world. Therefore, the world existed before it began to exist—which is impossible.

**Objection 2:** Nothing that has the power to exist at all times is such that it exists at one time and not at some other time; for the power of a given thing [to exist] is as extensive as the length of time for which it does exist. But every incorruptible thing has the power to exist at all times, since it does not have a power to exist that is for a set length of time. Therefore, nothing incorruptible is such that it exists at one time and not at some other time. But everything that begins to exist is such that it exists at one time and not at some other time. Therefore, nothing incorruptible begins to exist. But there are many incorruptible things in the world, e.g., the celestial bodies and all intellectual substances. Therefore, the world did not begin to exist.

**Objection 3:** Nothing that is ungenerated began to exist. But in *Physics* 1 the Philosopher proves that matter is ungenerated, and in *De Caelo et Mundo* 1 he proves that celestial bodies are ungenerated. Therefore, it is not the case that the whole universe of things began to exist.

**Objection 4:** A vacuum is a place where a body does not exist but where it is possible for a body to exist. But if the world began to exist, then the place where the body of the world now exists is such that a body did not exist there beforehand. And yet a body was able to exist there; otherwise, it would not exist there now. Therefore, before the world existed, there was a vacuum—which is impossible.

**Objection 5:** Nothing begins to move anew except because some mover or some movable thing is now different from the way it was before. But what is now different from the way it was before is such that it is moving. Therefore, before any motion that begins anew, there was some previous motion. Therefore, motion has always existed. Therefore, it has likewise always been the case that a movable thing exists, since motion exists only in a movable thing.

**Objection 6:** Every mover is either a natural mover or a voluntary mover. But neither of these begins to effect motion unless some previous motion has existed.

For nature always operates in the same way, and so unless some change has previously occurred either in the nature of the mover or in the thing moved, no motion that did not previously exist will begin to exist by the agency of a natural mover.

On the other hand, in the absence of any change within itself, the will puts off doing what it plans to do; but this change within itself occurs only because of some imagined change, at least on the part of

time itself. For example, if someone wills to build a house tomorrow and not today, he expects that something will be the case tomorrow that is not the case today. At the very least, he expects that today will pass and tomorrow will come—which does not occur in the absence of change, since time is a measure of motion (*numerus motus*).

Therefore, it follows that before any motion that begins anew, there was some other motion. And so we reach the same conclusion as before.

**Objection 7:** If something is always at its own beginning (*semper in principio*) and always at its own end (*semper in fine*), it can neither begin to exist nor cease to exist. For that which begins to exist is not at its own end, and that which ceases to exist is not at its own beginning. But time is always at its own beginning and always at its own end, since none of time exists except the *now*, which is the end of the past and the beginning of the future. Therefore, time can neither begin to exist nor cease to exist. And, consequently, motion, of which time is a measure, likewise cannot begin to exist or cease to exist, either.

**Objection 8:** God is either (a) prior to the world only in nature or (b) prior in duration as well. If He is prior to the world only in nature, then, since God exists from eternity, the world likewise exists from eternity. On the other hand, if He is prior to the world in duration, then since the prior and posterior in duration constitute time, it follows that time existed before the world did—which is impossible.

**Objection 9:** Once a sufficient cause is posited, its effect is posited; for a cause that is not followed by its effect is an incomplete cause that stands in need of something else in order for its effect to follow. But, as is clear from what was said above (q. 44, aa. 1 and 3 and 4), God is a sufficient cause of the world: He is a sufficient *final* cause by reason of His goodness; He is a sufficient *exemplar* cause by reason of His wisdom; and He is a sufficient *efficient* cause by reason of His power. Therefore, since God exists from eternity, the world likewise existed from eternity.

**Objection 10:** A thing whose action is eternal is such that its effect is likewise eternal. But God's action is His substance, which is eternal. Therefore, the world is likewise eternal.

**But contrary to this:** John 17:5 says, “Glorify me, Father, with Yourself, with the glory which I had before the world was made.” And Proverbs 8:22 says: “The Lord possessed me in the beginning of His ways, before He made anything at the beginning.”

**I respond:** Nothing except God existed from eternity. And this claim is not impossible to uphold.

For it was shown above (q. 19, a. 4) that God's will is a cause of things. Therefore, a thing exists necessarily to the extent that it is necessary for God to will it, since, as *Metaphysics* 5 says, the necessity of an effect depends on the necessity of its cause. But it was shown above (q. 19, a. 3) that, absolutely speaking, it is not necessary for God to will anything except Himself. Therefore, it is not necessary for God to will that the world should have always existed. Rather, the world exists for the length of time that God wills it to exist for, since the world's existence depends on God's will as its cause. Therefore, it is not necessary that the world should always exist. Hence, it cannot be demonstratively proved that the world has always existed.

Nor is it the case that the arguments Aristotle adduced for this conclusion are absolutely demonstrative; instead they are demonstrative only relatively speaking, viz., as refutations of the arguments of those ancients who held that the world began to exist in certain ways that are in fact impossible. This is apparent from three considerations:

First, in *Physics* 8, and again in *De Caelo* 1, Aristotle lays out certain opinions, e.g., those of Anaxagoras, Empedocles, and Plato, and adduces contrary arguments against them.

Second, whenever he talks about this topic, he adduces the testimony of the ancients—something that is characteristic not of one who is giving a demonstration (*non demonstratoris*), but of one who is giving a persuasive probabilistic argument (*sed probabiliter persuadentis*).

Third, in *Topics* 1 he expressly says that there are certain dialectical problems that we do not have answers (*rationes*) for, such as whether the world is eternal.

**Reply to Objection 1:** Before the world existed, it was possible that the world should exist, not because of any passive potentiality (*potentia*), i.e., matter, but rather because of God's active power (*potentia*).

The world was also possible in the sense in which something is said to be *absolutely* possible—i.e., possible not because of any sort of potentiality [or power] (*non secundum aliquam potentiam*), but solely because of the relationship between the terms (*ex sola habitudine terminorum*), which are not incompatible with one another. As is clear from the Philosopher in *Metaphysics* 5, it is in this sense that the possible is opposed to the impossible.

**Reply to Objection 2:** That which has the power to exist at all times is such that, once it has this power, it does not exist at some times and not at other times. However, before it had this power, it did not exist. Hence, this argument, which Aristotle proposes in *De Caelo* 1, does not prove the simple conclusion that incorruptible entities did not begin to exist; rather, it proves that they did not begin to exist in the natural way in which generable and corruptible things begin to exist.

**Reply to Objection 3:** In *Physics* 1 Aristotle argues that matter is ungenerated by appealing to the fact that matter does not have a subject from which to be made. On the other hand, in *De Caelo et Mundo* 1 he argues that a celestial body is ungenerated by appealing to the fact that a celestial body does not have a contrary from which to be generated. Hence, it is clear that the two arguments establish only that matter and the celestial bodies did not begin to exist through generation—as some had claimed, mainly in the case of the celestial bodies. By contrast, as is clear from what was said above (q. 45, a. 2), we ourselves are claiming that matter and the celestial bodies were brought into existence through creation.

**Reply to Objection 4:** A vacuum is not just that in which nothing exists. Rather, as is clear from Aristotle in *Physics* 4, a vacuum must be a space that is capable of holding a body but in which there is no body. We ourselves, however, are claiming that neither place (*locus*) nor space (*spatium*) existed before the world did.

**Reply to Objection 5:** The first mover is always in the same state, whereas the first movable thing is not always in the same state, since it begins to exist after not having previously existed. However, this occurs not through change but instead through creation—which, as was explained above (q. 45, a. 2), is not a change. Hence, it is clear that the present argument, which Aristotle puts forth in *Physics* 8, is effective against those who—as is clear from the opinions of Anaxagoras and Empedocles—had posited an eternal movable thing but not an eternal motion. We, on the other hand, are claiming that motion has always existed from the moment at which movable things began to exist.

**Reply to Objection 6:** The first agent is a voluntary agent, and even though He had an eternal volition to produce an effect, He did not produce an eternal effect.

Nor is it necessary to presuppose any [previous] motion—not even a motion that invokes imaginary time. For a *particular* agent, which presupposes one thing and causes something else, must be thought of differently from a *universal* agent, which produces the totality. Because a particular agent produces a form while presupposing the matter, it must induce a form that is properly proportioned to the matter. Hence, in the case of a particular agent it makes sense to think that it induces a form in this sort of matter and not in another sort because of the difference of the one matter from the other. But it does not make sense to think this way in the case of God, who produces the form and the matter at the same time. Rather, in the case of God it makes sense to think that He produces a matter that is suitable for the form and for the end.

Now a particular agent presupposes time in the same way that it presupposes matter. Hence, in the

case of a particular agent it makes sense to think of it as acting at a later time and not at an earlier time, invoking the imagined succession of one time after another. By contrast, in the case of a universal agent, which produces both the entity and time itself, one ought not to think of Him as acting now after not having acted, invoking the imaginary succession of one time after another—as if His action presupposed the existence of time. Instead, in His case one must say that He gave His effect the temporal extent He wanted to (*dedit effectui suo tempus quantum voluit*), and that He did this in a way that was appropriate for demonstrating His power—since the world leads us more clearly to a cognition of God’s creative power if it has not always existed than it would if it had always existed. For it is manifestly clear that everything that has not always existed has a cause, whereas this would not be as clear in the case of something that had always existed.

**Reply to Objection 7:** As *Physics* 4 puts it, the earlier and the later exist in time in the way that the earlier and the later exist in motion. Hence, the beginning and the end in the case of time should be thought of in the same way they are thought of in the case of motion.

Now if we assume that a motion is eternal, then each moment of that motion must be thought of as the beginning of one motion and the end of another, whereas this is not necessary if the motion begins to exist. And this same line of reasoning holds for the temporal *now*. So it is clear that the stated conception of the present instant, according to which it is always the beginning of a time and always the end of a time, presupposes that time and motion are eternal. Hence, in *Physics* 8 Aristotle uses this argument against those who had claimed that time is eternal but had denied that motion is eternal.

**Reply to Objection 8:** God is prior to the world in duration. But ‘prior’ here designates the priority of eternity and not a temporal priority.

An alternative reply is that ‘prior’ here designates an eternity of imagined time and not an eternity of really existing time—just as, when someone says, “There is nothing above the heavens,” the word ‘above’ designates only an imagined place, insofar as it is possible to imagine further dimensions added to the dimensions of the body of the heavens.

**Reply to Objection 9:** As is clear from what was said above (q. 19, a. 4 and q. 41, a. 2), just as an effect follows from a naturally acting cause in a way consonant with the cause’s form, so too an effect follows from a cause that acts through its will in a way consonant with the form that has been preconceived and decided upon by the agent. Therefore, even though God was from eternity a sufficient cause of the world, the world produced by Him does not have to be posited except in the way that His will predetermined it—so that, namely, it would have existence after non-existence in order to point more clearly to its author.

**Reply to Objection 10:** Once an action is posited, its effect follows according to the demands of the form that serves as the principle of the action. But in the case of agents who act by their will, what the agent conceives of and predetermines is thought of as the form that serves as the principle of the action. Therefore, from the fact that God’s action is eternal it does not follow that His effect is eternal. Rather, the effect is as God willed it to be—so that, namely, it would have existence after non-existence.

## Article 2

### Is it an article of the Faith that the world began to exist?

It seems that it is not an article of the Faith, but instead a demonstrable conclusion, that the world began to exist:

**Objection 1:** Each thing that is made has a beginning of its duration. But it can be

demonstratively proved that God is an efficient cause of the world, and, indeed, the best philosophers have asserted this. Therefore, it can be demonstratively proved that the world began to exist.

**Objection 2:** If it is necessary to claim that the world was made by God, then it was made either from nothing or from something. But it was not made from something, since in that case the matter of the world would have preceded the world—a claim against which Aristotle argued effectively when he showed that the celestial bodies are ungenerated. Therefore, it must be the case that the world was made from nothing. And so the world had existence after non-existence. Therefore, it must be the case that the world began to exist.

**Objection 3:** As is clear in the case of all artifacts, everything that is done through an intellect is done from a starting point (*a quodam principio*). But God acts through His intellect. Therefore, He acts from a starting point. Therefore, the world, which is His effect, has not always existed.

**Objection 4:** It is manifestly obvious that certain crafts, along with the inhabitation of certain regions, began at a determinate time. But this would not be the case if the world had always existed. Therefore, it is manifestly obvious that the world has not always existed.

**Objection 5:** It is certain that nothing is God's equal. But if the world had always existed, then it would be God's equal in duration. Therefore, it is certain that the world has not always existed.

**Objection 6:** If the world has always existed, then infinitely many days have preceded this present day. But it is impossible to traverse infinitely many things. Therefore, we would never have arrived at this present day—which is manifestly false.

**Objection 7:** If the world were eternal, then generation would likewise have occurred from eternity. Therefore, one man would have been generated by another *ad infinitum*. But as *Physics 2* says, a father is an efficient cause of his child. Therefore, it is possible to proceed to infinity among efficient causes. But this is disproved in *Metaphysics 2*.

**Objection 8:** If the world and generation had always existed, then infinitely many men would have preceded us. But the human soul is immortal. Therefore, infinitely many souls would now actually exist. But this is impossible.

Therefore, it can be known with certainty that the world began to exist, and this is not held by faith alone.

**But contrary to this:** The articles of the Faith cannot be demonstratively proved, since “faith is of things that are not apparent,” as Hebrews 11:1 puts it. But it is an article of the Faith that God is the creator of the world in such a way that the world began to exist. For [in the creed] we say, “I believe in one God, etc.”

Again, in *Homilia 1 in Ezechiel* Gregory says that Moses prophesied about the past when he said that “in the beginning God created heaven and earth”—a verse in which the world's newness (*novitas*) is taught. Therefore, the world's newness is had only through revelation. And so it cannot be demonstratively proved.

**I respond:** That the world has not always existed is held by faith alone and cannot be proved demonstratively—just as was explained above about the mystery of the Trinity (q. 32, a. 1).

The reason is that the world's newness does not admit of a demonstration from the side of the world itself. For the principle of a demonstration is what a thing is (*quod quid est*). But as far as the concept of its species is concerned, each thing abstracts from the here and now, and it is for this reason that universals are said to exist always and everywhere. Hence, it cannot be demonstrated that men or celestial bodies or rocks have not always existed.

Similarly, the world's newness does not admit of a demonstration from the side of an agent cause who acts through his will. For God's will cannot be ascertained except with respect to those things which are such that it is absolutely necessary for God to will them. But, as has been explained (q. 19,

a. 3), what He wills with respect to creatures is not of this sort.

However, God's will can indeed be made known to man through revelation, which the Faith depends on. Hence, that the world had a beginning is something to be held on faith (*credibile*), and is neither demonstrable (*demonstrabile*) nor scientifically knowable (*scibile*). Moreover, it is advantageous to dwell on this point, lest someone, presuming to demonstrate what belongs to the Faith, should put forth unconvincing arguments (*rationes non necessarias*) that would present non-believers with an occasion for ridiculing us if they thought that it is because of arguments of this sort that we believe the things that belong to the Faith.

**Reply to objection 1:** As Augustine explains in *De Civitate Dei* 11, there were two opinions among the philosophers who claimed that the world is eternal.

Some of them claimed that the substance of the world is not from God. The error of these philosophers is unsupportable, and so it is refuted by a compelling argument.

However, others held that the world is eternal while still claiming that the world was made by God: "They want the world to have a beginning not of time, but of its creation, so that in some scarcely intelligible way the world is made at all times." And as the same Augustine puts it in *De Civitate Dei* 10, "They have discovered a way to understand this: 'If a foot', they say, 'had always been planted in the dust from eternity, there would always have been a footprint underneath it, which no one would doubt was made by someone treading on the dust. In the very same way, the world has always existed, just as the one who made it has always existed.'" To understand this, note that an efficient cause that acts through motion must temporally precede its effect, since the effect exists only at the end of the action, whereas every agent has to exist at the beginning of the action. However, if the action is instantaneous and not successive, then the maker need not be prior in duration to what is made; this is clear in the case of the act of illumination. Hence, they claim that it does not necessarily follow that if God is an active cause of the world, He is prior in duration to the world. For as was explained above (q. 45, a. 2), creation, by which He produced the world, is not a successive change.

**Reply to objection 2:** Those who claim that the world is eternal would assert that the world was made by God *from* nothing—not in the sense that it was made *after* nothing (which is what we ourselves understand by the name 'creation'), but in the sense that it was not made from anything. And it is even the case that some of them do not shy away from the name 'creation', as is clear from Avicenna in his *Metaphysica*.

**Reply to objection 3:** This is the argument of Anaxagoras that is set forth in *Physics* 3. But it does not prove its point except in the case of an intellect that inquires about what to do by deliberating, which is similar to a motion. However, even though the human intellect is like this, God's intellect is not—as was shown above (q. 14, a. 7).

**Reply to objection 4:** Those who claim that the world is eternal assert that any given region has changed infinitely many times from being uninhabitable to being inhabitable, and vice versa. Similarly, they claim that because of various catastrophes and accidents, the crafts have been discovered and then lost infinitely many times. Hence, in *Meteorologia* Aristotle says that it is ridiculous to base one's opinion about the newness of the whole world on particular changes of this sort.

**Reply to objection 5:** As Boethius says at the end of *De Consolatione Philosophiae*, even if the world had always existed, it would not be on a par with God in its eternity, since God's *esse* is an *esse* that is a simultaneous whole, without succession, whereas this does not hold for the world.

**Reply to objection 6:** A traversal (*transitus*) is always understood as being from one terminus to another. But given any designated past day, there are finitely many days from that day to this present day, and so they could have been traversed. The objection, by contrast, proceeds on the assumption that once the [two] termini are posited, there are infinitely many items between them.

**Reply to objection 7:** It is impossible to proceed to infinity *per se* among efficient causes, i.e., it is impossible for causes that are required *per se* for a given effect to be multiplied to infinity—as, for instance, if a rock were being moved with a stick, and the stick were being moved by a hand, and so on *ad infinitum*.

By contrast, it is not impossible to proceed to infinity *per accidens* among agent causes, i.e., it is not impossible if all the causes that are multiplied to infinity belong to a single order (*ordinem*) of causes and if their multiplication is incidental (*per accidens*)—as, for instance, if a craftsman were to use many hammers incidentally, because one after another kept breaking. In such a case, it is incidental to any given hammer that it acts after the action of a given one of the other hammers. In the same way, it is incidental to this man, insofar as he generates, that he himself was generated by another. For he generates insofar as he is a man and not insofar as he is the son of some other man, since all the men who generate belong to the same order (*gradum*) of efficient causality, viz., the order of a particular generating cause. In this sense, it is not impossible for man to be generated by man *ad infinitum*.

However, it would indeed be impossible for the generation of *this* man to depend upon *that* man, and upon an elemental body, and upon the sun, and so on *ad infinitum*.

**Reply to objection 8:** Those who claim that the world is eternal try to evade this objection in various ways.

Some do not think it impossible that there should be infinitely many souls in actuality. This is clear in the *Metaphysica* of Al-Ghazali, who claims that this is a *per accidens* infinity. But this claim was disproved above (q. 7, a. 4).

Again, some claim that the soul is corrupted with the body. And others claim that only a single one of all the souls remains. Finally, as Augustine reports, to avoid this objection others claimed that there is a recirculation of souls, so that after a set interval of time, souls that have been separated from bodies once again return to bodies. All of these positions will be discussed in what follows (q. 75, a. 6 and q. 76, a. 2 and q. 118, a. 6).

Note, however, that the objection in question is a particular argument. Hence, someone could reply that the world has always existed or, at least, that some creature such as an angel has always existed, but that men have not always existed. For we ourselves mean to be asking *in general* whether some creature might have existed from eternity.

### Article 3

#### Did the creation of things occur at the beginning of time?

It seems that the creation of things did not occur at the beginning of time:

**Objection 1:** That which does not exist in time does not exist at any time. But the creation of things did not exist in time, since it is the substance of things that was brought into existence through creation, whereas time does not measure the substance of things, especially incorporeal things. Therefore, creation did not occur at the beginning of time.

**Objection 2:** The Philosopher proves that everything that is made was once being made, and so every instance of *being made* has a *before* and an *after*. But in the case of the beginning of time there is no *before* or *after*, since the beginning of time is an indivisible. Therefore, since *being created* is a certain sort of *being made*, it seems that things were not created at the beginning of time.

**Objection 3:** Time itself is also created. But it cannot be created at the beginning of time, since time is divisible, whereas the beginning of time is an indivisible. Therefore, the creation of things did

not occur at the beginning of time.

**But contrary to this:** Genesis 1:1 says, “In the beginning God created heaven and earth.”

**I respond:** This passage from Genesis 1 (“In the beginning God created heaven and earth”) is given three readings in order to rule out three errors.

Some have held that the world has always existed and that time does not have a beginning. To rule out this error, “in the beginning” is interpreted to mean “at the beginning of time.”

On the other hand, some have claimed that there are two principles of creation, one a principle of good things and the other a principle of evil things. To rule out this error, “in the beginning” is interpreted to mean “in the Son.” For just as being an efficient principle is appropriated to the Father because of His power, so being an exemplary principle is appropriated to the Son because of His wisdom, so that when it is said, “You have made all things in wisdom” [Psalm 103:24], this is understood to mean that God has made all things in the beginning, i.e., in the Son. Accordingly, in Colossians 1:16 the Apostle says, “In Him (*read: the Son*) were all things created.”

Finally, others have claimed that corporeal entities were created by God through the mediation of spiritual creatures. In order to rule out this error, “In the beginning God created heaven and earth” is interpreted to mean that God created them *before* all things. In other words, four things are claimed to be created simultaneously, viz., (a) the empyrean heaven (*caelum empyreum*), (b) corporeal matter (which is called ‘earth’ here), (c) time, and (d) angelic nature.

**Reply to objection 1:** Things are said to have been created at the beginning of time not in the sense that the beginning of time is the measure of creation, but rather in the sense that heaven and earth were created together with time.

**Reply to objection 2:** The passage cited from the Philosopher has to do with the sort of *being made* which occurs through motion, i.e., which is the terminus of a motion. For since in the case of every motion there is a *before* and an *after*, it follows that prior to any designated point within a designated motion—i.e., as long as the thing is in the process of being moved or being made—there is a *before*; and likewise there is something *after* the *being moved* or the *being made*. For what exists either at the beginning of the motion or at its end is not in the process of being moved.

However, as was explained above (q. 45, aa. 2 and 3), creation is neither a motion nor the terminus of a motion. Hence, a thing is created in such a way that it was not previously in the process of being created.

**Reply to objection 3:** Nothing is made except in a way consonant with what it is. But nothing of time exists except the *now*. Hence, time cannot come into existence except with respect to some *now*—not because time *consists in* that first *now*, but rather because time *begins from* that *now*.

## QUESTION 47

### The Diversity among Things in General

After the production of creatures in *esse*, the next thing to consider is the diversity among them. This discussion will have three parts. First, we will consider the diversity among things in general (question 47); second, the distinction between good and evil (questions 48 and 49); and, third, the distinction between spiritual creatures and corporeal creatures (question 50).

On the first topic we will ask about three things: (1) the very multiplicity or diversity of things, (2) the inequality among things, and (3) the oneness of the world.

#### Article 1

##### Is God the source of the multiplicity and diversity among things?

It seems that God is not the source of the multiplicity and distinction among things:

**Objection 1:** One single agent is always apt to effect just one thing. But as is clear from what was said above (q. 11, a. 4), God is maximally one. Therefore, He produces just one effect.

**Objection 2:** An exemplifier is similar to its exemplar. But as was explained above (q. 44, a. 3), God is an exemplar cause of His effect. Therefore, since God is one, His effect is just one and not multiple (*distinctus*).

**Objection 3:** Things that are ordered to an end are proportioned to that end. But as was shown above (q. 44, a. 4), the end of creatures is one thing, viz., God's goodness. Therefore, God's effect is just one thing.

**But contrary to this:** Genesis 1:4-7 says, "God separated the light from the darkness . . . and He divided the waters . . . from the waters . . ." Therefore, God is the source of the diversity and multiplicity among things.

**I respond:** Different writers have assigned different causes to the diversity among things.

Some have attributed it to *matter*, either by itself or along with some agent. For instance, Democritus and all the ancient natural philosophers attributed it to matter alone, positing only a material cause in virtue of which the diversity of things happens by chance because of the movement of matter. Anaxagoras, on the other hand, attributed the diversity and multiplicity among things to matter along with an agent. For he posited Mind (*Intellectus*), which distinguished things by extracting what had been mixed together in the matter.

However, there are two reasons why this position cannot be sustained. First, it was shown above (q. 44, a. 2) that even matter itself was created by God. Hence, if there is any diversity on the part of the matter, it must likewise be traced back to a higher cause. Second, matter exists for the sake of form, and not vice versa. But the diversity among things derives from their proper forms. Therefore, it is not the case that diversity occurs among things because of the matter; just the opposite, differentiation was created in the matter in order that it might be accommodated to diverse forms.

Again, some have attributed the diversity among things to *secondary agents*. For instance, Avicenna claimed that in understanding Himself, God produced the first intelligence, in which—as will become clear below (q. 50, a. 2)—there is necessarily a composition of potentiality and actuality, since it is not its own *esse*. So, then, insofar as the first intelligence understands the first cause, it produced the second intelligence; on the other hand, insofar as it understands itself with respect to what it has of potentiality, it produced the body of the heavens, which it moves; and insofar as it understands itself with respect to what it has of actuality, it produced the soul of the heavens.

However, there are two reasons why this position cannot be sustained. First, it was shown above

(q. 45, a. 5) that it belongs to God alone to create. Hence, things that cannot be caused except through creation are produced by God alone, and these include all the things that are not subject to generation and corruption. Second, according to this position the totality of things comes about not by the first agent's intention, but rather by the coincidence of many agent causes. But this is what we call coming about by chance. Hence, the perfection (*complementum*) of the universe, which consists in the diversity among things, would exist by chance—which is impossible.

Instead, one should claim that the diversity and multiplicity among things comes about by the intention of the first agent, who is God. For He brought things into existence in order to communicate His goodness to creatures and to represent His goodness through them. And since His goodness cannot be adequately represented by any one creature, He produced many diverse creatures, so that what was lacking in one's representation of the divine goodness might be supplied by another. For the goodness that exists in a simple and uniform way in God exists in a multiple and divided way among creatures. Hence, the universe as a whole participates in and represents God's goodness in a more perfect way than any other creature does. And it is because the reason for the diversity of things lies in God's wisdom that Moses says that things are divided by God's Word, which is the conception of His wisdom. Thus it is that Genesis 1:3-4 says, "God said, 'Let there be light' . . . and He separated the light from the darkness."

**Reply to objection 1:** That which acts through its nature acts through the form by which it exists, and there is just one form for each thing. That is why such an agent effects just one thing. But as was shown above (q. 19, a. 4), a voluntary agent like God acts through a conceived form. Therefore, since, as was shown above (q. 15, a. 2), the fact that God understands many things is not incompatible with His oneness and simplicity, it follows that even though He is one, He is able to make many things.

**Reply to objection 2:** This objection would hold good in the case of an exemplifier that represents its exemplar perfectly and is multiplied only materially. Hence, there is just a single uncreated Image, which is perfect. But no creature is a perfect representation of the first exemplar, which is God's essence, and so God's essence can be represented through many things.

Still, to the extent that ideas are called exemplars, there is a plurality of ideas in God's mind corresponding to the plurality of things.

**Reply to objection 3:** In speculative matters, there is just one middle term of demonstration that perfectly demonstrates the conclusion, though there are many middle terms for probable proofs. Similarly, in practical matters, when the means, as I will put it, measure up fully (*adaequat*) to the end, then all that is required is a single means. But creatures are not related in this way to the end which is God. Hence, it was necessary for creatures to be multiplied.

## Article 2

### Is God the source of the inequality among things?

It seems that God is not the source of the inequality among things:

**Objection 1:** It belongs to the best to bring about the best. But among things that are the best, it is not the case that one is greater than another. Therefore, it belongs to God, who is the best, to make all things equal.

**Objection 2:** As *Metaphysics* 5 says, equality is an effect of oneness. But God is one. Therefore, He made all things equal.

**Objection 3:** It is part of justice to treat unequals unequally. But God is just in all of His operations. Therefore, since the operation by which He communicates *esse* to things does not presuppose

any inequality among the things, it seems that He made all things equal.

**But contrary to this:** Ecclesiasticus 33:7-8 says, “Why does one day surpass another, and one light another light, and one year another year, and one sun another sun? It is by the Lord’s knowledge that they were distinguished.”

**I respond:** Wishing to rule out the position of those who claimed that the diversity of things comes from the opposition between a principle of good and a principle of evil, Origen claimed that in the beginning all things were created equal by God. For he asserts that at first God created only rational creatures, all of whom were equal and among whom inequality first arose because of free choice, with some turning toward God to greater and lesser degrees and others turning away from God to greater and lesser degrees. Thus, those rational creatures who had turned toward God through their free choice were promoted to the different orders of angels in proportion to the differences among their merits, whereas those who had turned away from God were tied to different bodies according to the differences among their sins. And Origen claims that this is the reason for the creation of bodies and their diversity.

However, according to this view, the totality of corporeal creatures would exist not for the sake of communicating God’s goodness to creatures, but in order to punish sin—which is contrary to Genesis 1:31 (“God saw all the things that He had made, and they were very good”). Moreover, as Augustine says in *De Civitate Dei* 11, “What claim could be more stupid than that the craftsman God did not choose this sun, as the one sun in the one world, for the embellishment of the world’s beauty or for the well-being of corporeal things, but that instead it came to exist because some soul sinned in a given way? On this account, if a hundred souls had sinned in the same way, this world would have had a hundred suns.”

One should reply instead that just as God’s wisdom is the cause of the diversity of things, so too it is the cause of their inequality. This is made clear as follows:

There are two kinds of diversity among things—(a) *formal* diversity among things that differ in species and (b) *material* diversity among things that differ only in number. Now since matter exists for the sake of form, material diversity exists for the sake of formal diversity. For we see that among incorruptible things there is just one individual to a species, since the species is sufficiently conserved in the one individual; by contrast, among generable and corruptible things there are many individuals belonging to the same species, and this for the sake of conserving the species. From this it is clear that formal diversity is more central than material diversity. But formal diversity always requires inequality, since, as *Metaphysics* 8 says, the forms of things are like numbers, in which the species are differentiated by the addition or subtraction of a unit. Hence, among natural things the species seem to be ordered step by step, so that mixed bodies are more perfect than the elements, and plants are more perfect than minerals, and animals are more perfect than plants, and men are more perfect than the other animals; and within each of these divisions, one species is found to be more perfect than another.

Therefore, just as God’s wisdom is the cause of the diversity among things for the sake of the perfection of the whole universe, so too it is the cause of the inequality among things. For the universe would not be perfect if just one grade of goodness were found among things.

**Reply to objection 1:** It belongs to the best agent to produce his best *overall* effect—not to make each part of the whole the best absolutely speaking, but rather to make each part the best in its proportion to the whole. By way of example, an animal’s goodness would be destroyed if each of its parts had the dignity that belongs to the eyes. So too, then, God made the universe the best it can be as a whole, given its status as a creature. But He did not make each creature the best; instead, He made one better than another. Thus, it is of *each* creature that Genesis 1:4 says, “God saw the light, that it was good,” and so on for each individual, but it is of *all of them together* that Genesis 1:31 says, “God saw all the things that He had made, and they were very good.”

**Reply to objection 2:** The first thing that comes from oneness is equality, and then comes

multiplicity. And so the Son, to whom equality is appropriated, proceeds from the Father, to whom oneness is appropriated, according to Augustine. And then comes the creature, to which inequality belongs. Still, creatures participate in a certain kind of equality, viz., an equality of proportion.

**Reply to objection 3:** This is the argument that moved Origen, but it has a place only in the giving of rewards, where unequal rewards are owed for unequal merits. By contrast, in the very establishment of things it is not the case that the inequality among the parts derives from a prior inequality of merits or even from a prior inequality in the disposition of the matter; rather, the inequality exists for the sake of the perfection of the whole. This is clear from the works of a craft. For the roof of a house does not differ from the foundation because they are made out of diverse materials. To the contrary, it is in order to make a perfect house from diverse parts that the craftsman looks for diverse materials—and he would make those materials himself if he were able to.

### Article 3

#### Is there just one world?

It seems that there is not just one world, but many worlds:

**Objection 1:** As Augustine says in *83 Quaestiones*, it is ridiculous to claim that God created things for no reason. But He could have created many worlds for the same reason that He created one world; for His power is not limited to the creation of just one world, but is instead infinite, as was shown above (q. 25, a. 2). Therefore, God has produced more than one world.

**Objection 2:** Nature does what is better and, *a fortiori*, God does, too. But it would be better for many worlds to exist rather than just one, since more good things are better than fewer good things. Therefore, more than one world was made by God.

**Objection 3:** Everything that has a form in matter can be numerically multiplied while remaining the same in species, since numerical multiplication is based on matter. But the world has a form in matter. For just as when I say ‘man’, I signify a form, whereas when I say ‘this man’, I signify a form in matter, so too when I say ‘world’, I signify a form, whereas when I say ‘this world’, I signify a form in matter. Therefore, nothing prevents there from being more than one world.

**But contrary to this:** John 1:10 says, “The world was made by Him,” where ‘the world’ names in the singular, as if only one world exists.

**I respond:** The order that exists among the things created by God is such that it makes manifest the oneness of the world. For this world is called one by a oneness of order, insofar as some things are ordered to others. But as was shown above (q. 11, a. 3 and q. 21, a. 1), all the things that come from God have an ordering both with respect to one another and with respect to God. Hence, it is necessary that all of them belong to a single world.

For this reason, those who were able to posit many worlds were the ones who claimed that chance—and not any ordering wisdom—is the cause of the world, e.g., Democritus, who said that this world and infinitely many others had been made from the convergence of atoms.

**Reply to objection 1:** The reason why the world is one is that all things are duly ordered by a single ordering and to a single end. Thus, in *Metaphysics* 12 Aristotle infers the oneness of God as governor from the oneness of the ordering that exists among things. And Plato proves the oneness of the world as an exemplifier from the oneness of the exemplar.

**Reply to objection 2:** No agent intends material plurality itself as an end. For material multiplicity has no set terminus and of itself tends toward unlimitedness (*de se tendit in infinitum*), where

unlimitedness is incompatible with the notion of an end. Now when the objection claims that many worlds are better than just one world, it is talking about material multiplicity. But such multiplicity is not better in the case of God's intention as an agent. For by the same line of reasoning one could assert that if He had made two worlds, it would have been better if there were three worlds, and so on *ad infinitum*.

**Reply to objection 3:** The world consists of the totality of its matter. For it is not possible for there to be an earth other than this one, since every 'earth', wherever it might be, would naturally tend toward this central earth. And the same line of reasoning holds for the other bodies that are parts of the world.

## QUESTION 48

### The Distinction between Good and Evil

The next thing to consider is the diversity among things in particular: first, the distinction between good and evil (questions 48 and 49), and then the distinction between spiritual creatures and corporeal creatures (question 50). As for the former, we must inquire first into evil (question 48) and then into the cause of evil (question 49)

On the first of these topics there are six questions: (1) Is evil a sort of nature (*natura aliqua*)? (2) Is evil found in things? (3) Is the good the subject of evil? (4) Does evil totally corrupt the good? (5) Is evil divided into the evil of punishment and the evil of sin? (6) Which of the two, punishment or sin, has more of the character of evil?

#### Article 1

##### Is evil a sort of nature?

It seems that evil is a sort of nature (*natura quaedam*):

**Objection 1:** Every genus is a sort of nature. But evil is a genus, since according to the *Categories*, “Good and evil are not in a genus, but are instead the genera of other things.” Therefore, evil is a sort of nature.

**Objection 2:** Every difference that constitutes a species is a sort of nature. But evil is a constitutive difference in morals, since a bad habit (e.g., stinginess) differs in species from a good habit (e.g., generosity). Therefore, ‘evil’ signifies a sort of nature.

**Objection 3:** Two contraries are such that each is a sort of nature. But good and evil are opposed as contraries—and not as a habit and a privation. The Philosopher proves this in the *Categories* from the fact that there is a middle ground between good and evil, and also from the fact that a return can be made from being evil to being good. Therefore, ‘evil’ signifies a sort of nature.

**Objection 4:** What does not exist does not act. But evil acts, since it corrupts the good. Therefore, evil is a sort of entity and thus a sort of nature.

**Objection 5:** Only that which is a being and a sort of nature contributes to the perfection of the totality of things. But evil contributes to the perfection of the totality of things. For as Augustine says in the *Enchiridion*, “The admirable beauty of the totality consists in everything; indeed, even that which is called evil, when it is rightly ordered and kept in its place, makes the good stand out more prominently.” Therefore, evil is a sort of nature.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says, “Evil is neither a being nor a good.”

**I respond:** One of two opposites is grasped through the other, e.g., darkness through light. Hence, one must come to understand what evil is on the basis of the notion of the good. Now we said above (q. 5, a. 1) that the good is whatever is desirable. And so, since every nature desires its own *esse* and its own perfection, one must claim that the *esse* and perfection of each nature has the character of the good. Hence, it cannot be the case that ‘evil’ signifies any sort of *esse* or form, i.e., any sort of nature. It follows that the name ‘evil’ signifies an absence of the good. Moreover, evil is said to be “neither a being nor a good” by reason of the fact that since a being as such is good, the denial of ‘being’ is the same as the denial of ‘good’.

**Reply to objection 1:** In the place cited, Aristotle is talking in accord with the opinion of the Pythagoreans, who thought that evil is a sort of nature and so posited good and evil as genera. For, especially in his logical books, Aristotle often used examples that in his day were plausible in the opinion

of certain philosophers.

An alternative reply, in keeping with what the Philosopher says in *Metaphysics* 10, is that “the first sort of contrariety is between a habit and its privation.” For this sort of contrariety is preserved in all pairs of contraries, since it is always the case that one of the contraries is imperfect in relation to the other—in the way that *black* is imperfect in relation to *white*, and *bitter* in relation to *sweet*. And it is in this sense that *good* and *evil* are called genera—not genera absolutely speaking, but rather genera of contraries. For just as every form has the character of the good, so too every privation as such has the character of evil.

**Reply to objection 2:** Good and bad are constitutive differences only in the case of morals, since moral [acts and habits] take their species from the end, which is the object of the will, on which moral matters depend. It is because the good has the character of an end that good and evil are specific differences in moral matters—the good *per se*, and evil insofar as it is the negation of a fitting end. Yet the negation of a fitting end constitutes a species in moral matters only insofar as it is accompanied by some unfit end—just as, in natural things, the privation of a substantial form is found only when it is conjoined with some other form. So, then, the evil that is a constitutive difference in morals is a certain good conjoined with the privation of some other good. For instance, the end of an intemperate man is not to lack the good of reason, but instead to have some sensual delight outside the order of reason. Hence, it is not evil *qua* evil that is a constitutive difference; rather, evil is a constitutive difference by reason of some good that is conjoined with it.

**Reply to objection 3:** The last reply makes clear the reply to this third objection. For in the place cited, the Philosopher is talking about good and evil insofar as they are found in morals. In this sense there is a middle ground between good and evil, since the good is that which is well-ordered and the evil is that which is not only disordered but also harmful to another. Hence, in *Ethics* 4 the Philosopher says that a spendthrift is vain, but not evil.

In addition, it is from this sort of evil, viz., moral evil—and not from just any evil—that a return can be made to the good. For there is no return to being sighted from being blind, even though blindness is a sort of evil.

**Reply to objection 4:** There are three ways in which something is said to act.

First, something is said to act *formally*, in the manner of speaking in which whiteness is said to make a thing white. And in this sense evil, by reason of the privation itself, is likewise said to corrupt the good because it is itself a corruption, i.e., privation, of the good.

Second, something is said to act *effectively*, in the way that a painter is said to make a wall white.

Third, something is said to act in the manner of a *final cause*, in the sense that an end is said to make something happen by moving an efficient cause.

In neither of these last two ways does evil do anything *per se*, i.e., insofar as it is a privation; rather, it acts in these two ways only insofar as some good is conjoined with it. For every action begins from some form, and everything that is desired as an end is a perfection. This is why in *De Divinis Nominibus*, chap. 4, Dionysius says that evil neither acts nor is desired except in virtue of some good that is conjoined with it, whereas by itself (*per se*) it is indeterminate (*infinitum*) and lies beyond the will and beyond intention.

**Reply to objection 5:** As was explained above (q. 44, a. 3), the parts of the universe are ordered to one another to the extent that (a) one acts on another and that (b) one is an end of and exemplar for another. But as has been explained, these ways of acting cannot belong to evil except by reason of some good that is conjoined with it. Hence, it is only *per accidens*, i.e., by reason of a conjoined good, that evil pertains to the perfection of the universe and is included under the order of the universe.

## Article 2

### Is evil found in things?

It seems that evil is not found in things:

**Objection 1:** Whatever is found in things is either a being or the privation of a being, i.e., a non-being. But in *De Divinis Nominibus*, chap. 4, Dionysius says that evil is far from a being (*existens*) and even further from a non-being. Therefore, there is no way in which evil is found in things.

**Objection 2:** *Being (ens)* and *thing (res)* are convertible. Therefore, if evil is a being in things, it follows that evil is a sort of thing—which is contrary to what was said above (a. 1).

**Objection 3:** As Aristotle says in *Topics* 3, “What is whiter is that which has less black mixed in with it.” Therefore, what is better is that which has less evil mixed in with it. But God—even more than nature—always makes what is better. Therefore, no evil is found in the things made by God.

**But contrary to this:** If these objections were correct, then there would be no prohibitions or punishments, since prohibitions and punishments have to do only with evils.

**I respond:** As was explained above (q. 47, a. 2), the perfection of the universe requires that there be inequality among things, so that all the grades of goodness might be filled in.

Now one grade of goodness is for a thing to be good in such a way that it can never fail with respect to its goodness, whereas another grade of goodness is for a thing to be good in such a way that it is able to fail with respect to its goodness. These two grades are found in *esse* itself. For there are some things—e.g., incorporeal things—that cannot lose their *esse*, whereas there are other things—e.g., corporeal things—that can lose their *esse*.

Therefore, just as the perfection of the totality of things requires that there be not only incorruptible entities but also corruptible entities, so too the perfection of the universe requires that there be some things that can fail with respect to their goodness—from which it follows that they sometimes do so fail. Now the notion of evil consists in something’s failing with respect to the good. Hence, it is clear that evil is found in things, in the same way that corruption is. For corruption itself is a certain sort of evil.

**Reply to objection 1:** Evil is far both from being, absolutely speaking, and from non-being, absolutely speaking, since it is neither a habit nor a pure negation, but is instead a privation.

**Reply to objection 2:** As *Metaphysics* 5 asserts, *being (ens)* is said in two ways.

In one way, it signifies the positive being (*entitas*) of a thing (*res*), as divided by the ten categories, and is thus convertible with *thing*. In this sense no privation is a being, and hence in this sense evil is not a being, either.

In the second way, *being* signifies the truth of a proposition, which consists in a composition whose characteristic mark is the verb ‘is’, and it is this sense of *being* with which one replies to the question ‘Is there \_\_\_?’. This is the sense in which we say that there is blindness in the eye—and so on for any other privation. And it is in this sense that evil is likewise called a being.

Now it is because they did not understand this distinction that certain writers, noting that some things are called evil or that there is said to be evil in things, came to believe that evil is a sort of positive thing (*res*).

**Reply to objection 3:** As was explained above (q. 47, a. 2), God or nature (or any other agent, for that matter) effects what is best overall, but not what is best in each part—except in the sense of what is best in its ordering to the whole. But the whole that is the totality of creatures is better and more perfect if it contains some things that are able to lose their good and do in fact lose their good when God does not prevent it. There are two reasons for this.

First, as Dionysius puts it in *De Divinis Nominibus*, chap. 4, it belongs to providence to preserve

nature rather than to destroy it, and the nature of things is such that things that are able to lose their good sometimes do lose their good.

Second, as Augustine says in the *Enchiridion*, God is so powerful that He is able to do well even with evil. Hence, many goods would be destroyed if God did not permit evil. For fire would not be generated if air were not corrupted; and the lion's life would not be preserved if the ass were not killed; and if there were no wickedness, then vindicating justice and long-suffering patience would not be praised.

### Article 3

#### Does evil have what is good as its subject?

It seems that evil does not have what is good as its subject:

**Objection 1:** All good things are existent things (*existentia*). But in *De Divinis Nominibus*, chap. 4, Dionysius says that evil is neither an existent thing nor in an existent thing. Therefore, evil does not have what is good as its subject.

**Objection 2:** Evil is not a being (*ens*), whereas the good is a being. But a non-being does not require a being in which to exist as in a subject. Therefore, evil does not require a good in which to exist as in a subject.

**Objection 3:** One of two contraries is not the subject of the other contrary. But good and evil are contraries. Therefore, evil does not have what is good as its subject.

**Objection 4:** That which whiteness has as its subject is said to be white. Therefore, that which evil has as its subject is likewise evil. Therefore, if evil has what is good as its subject, it follows that what is good is evil—which is contrary to Isaiah 5:20, “Woe to you who call evil good and good evil.”

**But contrary to this:** In the *Enchiridion* Augustine says that evil does not exist except in what is good.

**I respond:** As has been explained (a. 1), ‘evil’ implies the negation of a good. However, not just any negation of a good is called evil. For the negation of a good can be understood either *privatively* or *negatively*.

The negation of a good, as understood *negatively*, does not have the character of evil, since otherwise it would follow that things which do not exist in any way at all are evil or, again, that each entity is evil by reason of the fact that it does not have some good that belongs to another thing—for instance, a man would be evil because he does not have the swiftness of a deer or the strength of a lion.

By contrast, the negation of a good, as understood *privatively*, is called evil in the way that the privation of sight is called blindness. Now there is one and the same subject for both the privation and the form, viz., a being in potentiality, regardless of whether it is (a) a being in potentiality absolutely speaking, viz., primary matter, which is the subject both of the substantial form and of the opposed privation, or (b) a being in potentiality relatively speaking and in actuality absolutely speaking, e.g., a transparent body, which is the subject of both darkness and light.

Now it is clear that the form through which something exists in actuality is a certain perfection and good. And so every actual entity is a certain good. Similarly, every being in potentiality is, as such, a certain good insofar as it is ordered to a good. For just as it is a being in potentiality, so too it is a good in potentiality. It follows, then, that the subject of evil is what is good.

**Reply to objection 1:** What Dionysius means is that evil is not in existent things either as a part of an existent thing or as a natural property of an existent thing.

**Reply to objection 2:** Non-being, as understood *negatively*, does not require a subject. But as *Metaphysics* 4 puts it, a *privation* is a negation-in-a-subject, and this is the sort of non-being that evil is.

**Reply to objection 3:** An evil has as its subject not the good that is opposed to it, but instead some other good. For instance, the subject of blindness is not the power of sight, but the animal.

As Augustine points out, however, this might seem to violate the logical rule that contraries cannot exist together. However, our meaning has to do with ‘good’ and ‘evil’ taken in general and not insofar as they are taken specifically for *this* good and *this* evil. Now contraries such as ‘white’ and ‘black’, and ‘sweet’ and ‘bitter’, are taken only in this specific way, since they are in determinate genera. By contrast, *good* encompasses all genera, and in this sense one good can exist together with the privation of another good.

**Reply to objection 4:** The prophet calls down woe on those who say that what is good is, as such, evil. But this does not follow from the claims made above, as is clear from the explanation that has been given.

#### Article 4

##### Does evil totally corrupt the good?

It seems that evil totally corrupts the good:

**Objection 1:** One of two contraries is totally corrupted by the other. But good and evil are contraries. Therefore, evil is able to corrupt the whole good.

**Objection 2:** In the *Enchiridion* Augustine says that an evil is harmful to the extent that it “takes away the good.” But the good is undifferentiated (*simile sibi*) and uniform. Therefore, it is totally destroyed by evil.

**Objection 3:** As long as an evil exists, it causes harm and takes away the good. But that from which something is always being taken away is at some point consumed, unless it is infinite—which cannot be said in the case of any created good. Therefore, evil totally consumes the good.

**But contrary to this:** In the *Enchiridion* Augustine says that evil cannot totally consume the good.

**I respond:** Evil cannot totally consume the good. To see this clearly, note that there are three sorts of goods.

One sort of good is totally destroyed by evil, and this is the good that is the opposite of a given evil. For instance, light is totally destroyed by darkness, and the power of sight is totally destroyed by blindness.

The second sort of good is neither totally destroyed nor even diminished by evil, viz., the good that serves as the subject of a given evil. For instance, nothing of the substance of the air is destroyed by darkness.

The third sort of good is diminished by evil, but not totally destroyed, viz., the good that is the subject’s capacity for some actuality. The diminishment of this sort of good should be thought of not as occurring through *subtraction*, in the way that diminishment occurs in quantities, but rather as occurring through *remission*, in the way that diminishment occurs in qualities and forms. Now the remission of this sort of capacity is to be understood as the contrary of its intensification. For a capacity of this sort is intensified through the dispositions by which the matter is prepared for the relevant actuality, so that the more these dispositions are increased in the subject, the more capable it is of receiving its perfection and form. Conversely, such a capacity is diminished through contrary dispositions, so that the more these contrary dispositions are increased in the matter and the more intense they are, the more the matter’s

potentiality for the relevant actuality is reduced.

Thus, if these contrary dispositions cannot be increased and intensified *ad infinitum*, but instead can be increased and intensified only to a set limit, then the capacity in question is not diminished or reduced *ad infinitum*. This is clear in the case of the active and passive qualities of the elements. For instance, coldness and wetness, through which the matter's capacity for the form of fire is diminished or reduced, cannot be increased *ad infinitum*.

On the other hand, if the contrary dispositions are able to be increased *ad infinitum*, then the capacity in question can likewise be diminished or reduced *ad infinitum*—and yet it is not totally destroyed, since it always remains in its root, which is the substance of the subject. For instance, if opaque bodies were interposed *ad infinitum* between the sun and the air, the air's capacity for light would be diminished *ad infinitum*, and yet it would not be totally destroyed as long as the air remained, since air by its nature is transparent. Similarly, there can be addition *ad infinitum* in the case of sins, through which the soul's capacity for grace is always being more and more diminished, so that the sins become, as it were, an obstacle interposed between God and us, in accord with Isaiah 59:2 (“Our iniquities have set up a division between us and God”). And yet the capacity for grace is not totally taken away from the soul, since it follows upon the soul's nature.

**Reply to objection 1:** As has been explained, the sort of good that is the opposite of a given evil is totally destroyed, but the other sorts of good are not totally destroyed.

**Reply to objection 2:** The sort of capacity discussed above falls in between the subject and the actuality. Hence, as far as attaining the actuality is concerned, the capacity is diminished by evil, but as far as its being rooted in the subject is concerned, the capacity remains. Therefore, even though the good is undifferentiated in itself, still, because of its relation to these diverse things, it is destroyed only in part and not totally.

**Reply to objection 3:** Some writers, imagining that the diminishment of the good in question is similar to the diminishment of a quantity, have claimed that just as a continuum is divided *ad infinitum* by means of a division made with the same ratio (e.g., a half of a half, or a third of third), so too it happens in the case under discussion.

However, this line of reasoning has no place in the present case. For in a division in which the same ratio is always preserved, less and less is always being subtracted, since half of a half is less than half of the whole. But a second sin does not necessarily diminish the capacity in question by less than the preceding sin. Instead, it might diminish it either equally or even more.

Therefore, one should reply that even though this capacity is a certain finite thing, it is nonetheless diminished *ad infinitum*—not *per se*, but *per accidens*, i.e., insofar as the contrary dispositions are also increased *ad infinitum* in the way that has been explained.

## Article 5

### Is evil adequately divided into the evil of punishment and the evil of sin?

It seems that evil is not adequately divided into the evil of punishment (*poena*) and the evil of sin (*culpa*):

**Objection 1:** Every defect seems to be some sort of evil. But every creature has the defect of not being able to conserve itself in *esse*, and yet this defect is neither a punishment nor a sin. Therefore, evil is not adequately divided into punishment and sin.

**Objection 2:** There is neither punishment nor sin in the case of non-rational creatures. But they

nonetheless have defects and corruption, which pertain to the character of evil. Therefore, not every evil is a punishment or a sin.

**Objection 3:** Temptation is a certain evil. Yet it is not a sin, since a temptation that is not consented to is not a sin, but is instead an occasion for exercising a virtue, according to a Gloss on 2 Corinthians 12:7. Nor is temptation a punishment, since it precedes a sin, whereas punishment follows a sin. Therefore, evil is not adequately divided into punishment and sin.

**But contrary to this:** The division in question is unnecessary. For as Augustine says in the *Enchiridion*, something is called evil because it is harmful. But that which does harm is related to punishment (*poenale*). Therefore, every evil falls under punishment.

**I respond:** As was explained above (a. 3), evil is a privation of the good, which consists principally and *per se* in perfection and actuality. Now there are two sorts of actuality, viz., *first* actuality and *second* actuality. First actuality is the form and integrity of a thing, whereas second actuality is its operation. Therefore, evil occurs in two ways.

Evil occurs in the first way through the subtraction of a form or of some part that is required for the thing's integrity—in the way that blindness is an evil, or in the way that lacking an arm or a leg is an evil.

Evil occurs in the second way through the subtraction of a fitting operation, either by virtue of the fact that the operation does not exist at all or by virtue of the fact that it does not have the manner and order it ought to have.

However, since the good is, absolutely speaking, the object of the will, it follows that evil, which is a privation of the good, is found in a special way among rational creatures who have a will. Thus, in their case, the evil that occurs through the subtraction of the form or integrity of a thing has the character of punishment—especially, as was shown above (q. 22, a. 2), on the assumption that all things are subject to God's justice and providence. For it is part of the nature of punishment that it is contrary to the will. On the other hand, among voluntary beings, the evil that consists in the subtraction of a fitting operation has the character of sin. For a sin is imputed to someone when he falls short of perfection in an action over which he has dominion through his will. So, then, every evil in beings with a will (*in rebus voluntariis*) is considered either a punishment or a sin.

**Reply to objection 1:** Since, as was explained above (a. 3), evil is a privation of the good and not a pure negation, it follows that not every lack of good is evil, but that instead an evil is a lack of a good that is apt to be had and should be had. For instance, a lack of vision is an evil not in a rock but in an animal, since it is contrary to the rock's nature that it should have sight. Similarly, it is contrary to the nature of a creature that it should conserve itself in *esse*, since it is the same agent who both gives *esse* and conserves it. Hence, this defect is not an evil for a creature.

**Reply to objection 2:** Punishment and sin do not divide evil absolutely speaking. Rather, they divide the evil found in beings with a will.

**Reply to objection 3:** Insofar as temptation implies an incitement to evil, there is always a sinful evil (*malum culpae*) in anyone who is doing the tempting. However, in the one who is tempted there is no sin, properly speaking, except insofar as he is changed in some way, since an agent's action exists in the patient. However, to the extent that the one who is tempted is turned toward evil by the tempter, he falls into sin.

**Reply to argument for the contrary:** It is part of the nature of punishment that it does harm to the agent in himself. But it is part of the nature of sin that it harms the agent in his very action. And so both of them are contained under evil insofar as they both have the character of a harm.

## Article 6

### Does punishment have more of the character of evil than sin does?

It seems that punishment has more of the character of evil than sin does:

**Objection 1:** Sin is related to punishment as merit is related to reward. But reward has more of the character of the good than merit does, since it is the terminus of merit. Therefore, punishment has more of the character of evil than sin does.

**Objection 2:** An evil is worse to the extent that it is opposed to a greater good. But as has been explained (a. 5), punishment is opposed to the good of the agent, whereas sin is opposed to the good of the action. Therefore, since the agent is a greater good than his action, it seems that punishment is a greater evil than sin.

**Objection 3:** That particular privation of an end which is called the absence of the vision of God is a certain punishment. But the evil of sin stems from the privation of a fitting order to that end. Therefore, punishment is a worse evil than sin.

**But contrary to this:** The wise craftsman induces a lesser evil in order to avoid a greater evil. For instance, a physician amputates a limb in order that the body not be corrupted. But God's wisdom inflicts punishment in order to prevent sin. Therefore, sin is a greater evil than punishment.

**I respond:** Sin has more of the character of evil than punishment does—not only more than sensible punishment, which consists in being deprived of corporeal goods and which is the sort of punishment most people think of, but also more than punishment taken in the most general sense, in which being deprived of grace or of glory is a punishment. There are two reasons for this.

The first is that someone becomes evil because of the evil of sin, but not because of the evil of punishment—this according to Dionysius in *De Divinis Nominibus*, chap. 4: “It is not evil to be punished; rather, it is evil to become deserving of punishment.” The reason for this is that since the good consists, absolutely speaking, in an actuality and not in a potentiality, and since the last actuality is an operation, viz., the use of whatever things are possessed, it follows that the good of man, absolutely considered, is a good operation, viz., the good use of things that are possessed. But we use all things through our will. Hence, it is because of a good will, by which a man makes good use of the things he possesses, that a man is called good; and it is because of a bad will that he is called evil. For it is possible for someone with a bad will to make bad use even of the good which he possesses—as, for instance, if a grammarian were voluntarily to speak ungrammatically. Therefore, since sin consists in a disordered act of the will, whereas punishment consists in someone's being deprived of the things his will makes use of, it follows that sin has the character of evil in a more complete way than punishment does.

The second reason is based on the fact that God is the author of the evil of punishment, but not of the evil of sin. The reason for this is that the evil of punishment deprives a creature of some good—whether the creature's good is taken as something created, as when blindness deprives one of sight, or whether instead it is an uncreated good, as when an uncreated good is removed from a creature through the absence of the vision of God. The evil of sin, on the other hand, is properly opposed to the uncreated good itself, since it is contrary to the fulfillment of God's will, as well as contrary to the divine love by which God's good is loved for itself and not just insofar as the creature participates in it.

It is clear, then, that sin has more of the character of evil than punishment does.

**Reply to objection 1:** Even though a sin terminates in punishment in the way that merit terminates in a reward, the sin is nonetheless not intended for the sake of the punishment in the way that merit is intended for the sake of the reward. Just the opposite, the punishment is inflicted in order that sin might

be avoided. And so sin is worse than punishment.

**Reply to objection 2:** Since it is a second perfection, an action's ordering that is removed through sin is a more perfect good of the agent than is the good removed through punishment, which is a first perfection.

**Reply to objection 3:** Sin is not related to punishment in the way that what is ordered to an end is related to that end. For both sin and punishment can in some way involve either a privation of the end or a privation of the ordering to the end. Punishment can do this insofar as the man himself is removed by punishment either from the end or from the ordering to the end, whereas sin can do it to the extent that the relevant privation involves an action that is not ordered to a fitting end.

## QUESTION 49

### The Cause of Evil

The next thing to ask about is the cause of evil. On this topic there are three questions: (1) Can what is good be a cause of evil? (2) Can the greatest good, viz., God, be a cause of evil? (3) Is there a greatest evil that is the first cause of all evils?

#### Article 1

##### Can what is good be a cause of evil?

It seems that what is good cannot be a cause of evil:

**Objection 1:** Matthew 7:18 says, “A good tree cannot bear bad fruit.”

**Objection 2:** One of a pair of contraries cannot be a cause of the other. But *evil* is contrary to *good*. Therefore, what is good cannot be a cause of evil.

**Objection 3:** A defective effect proceeds only from a defective cause. But evil, assuming that it has a cause, is a defective effect. Therefore, it has a defective cause. But everything defective is evil. Therefore, only what is evil is a cause of evil.

**Objection 4:** In *De Divinis Nominibus*, chap. 4, Dionysius says that evil does not have a cause. Therefore, it is not the case that what is good is a cause of evil.

**But contrary to this:** In *Contra Julianum* Augustine says, “There was nothing at all from which evil could arise except what is good.”

**I respond:** One must hold that every evil has a cause in some way or other. For evil is the lack of a good that is apt to be had and should be had. But the fact that a thing falls short of its natural and fitting disposition can arise only from a cause that draws the thing away from that disposition. For instance, a heavy thing is moved upward only by something that impels it, and an agent fails in its action only because of something that impedes it. But only what is good can be a cause, since nothing can be a cause except insofar as it is a being, and every being as such is good.

Moreover, when we consider the specific types of causes, the *agent* and the *form* and the *end* all imply some sort of perfection, which pertains to the notion of the good; and even the *matter*, insofar as it is a potentiality for the good, has the character of goodness. In fact, it is already clear from what has been said that what is good is a cause of evil in the manner of a *material cause*; for it was shown above (q. 48, a. 3) that what is good is the subject of evil. On the other hand, evil does not have a *formal cause*, but is rather the privation of a form. Similarly, it does not have a *final cause*, but is rather the privation of the ordering to a fitting end; for it is not only the end that has the nature of the good, but also the useful, which is ordered to the end.

However, evil does have a cause in the manner of an *agent (per modum agentis)*, though it has such a cause *per accidens* rather than *per se*. To see this clearly, note that evil is caused in one way in an *action* and in another way in an *effect*.

In the *action*, evil is caused because of a defect in one of the principles of the action—either in the principal agent or in an instrumental agent. For instance, a defect in an animal’s motion can happen either because of a weakness in the moving power, as in young children, or solely because of some ineptitude on the part of an instrument, as in the case of those who are lame.

On the other hand, the evil in a given *thing*, though not in the agent’s proper effect, is sometimes caused by the agent’s power and sometimes by the thing’s own defectiveness or that of its matter.

It is caused by the agent’s power or perfection when the privation of another form necessarily follows upon the form aimed at by the agent—in the way that the privation of the form of air or of water

follows upon the form of fire. Therefore, just as a fire imprints its form more perfectly to the extent that it is more perfect in power, so also it corrupts the contrary form more perfectly. Hence, the evil and corruption that belong to the air or the water derive from the perfection of the fire. However, this happens *per accidens*, since the fire does not aim at depriving the water of its form, but instead aims at inducing its own proper form—and yet in doing the latter, it also does the former incidentally (*per accidens*).

On the other hand, if the defect is in the fire's *proper effect*—viz., if the fire falls short in its heating—then this is either (a) because of a defect in the action, which, as has already been explained, results from a defect in one of the principles of the action, or (b) because of a lack of disposition (*indispositio*) in the matter, which does not receive the action of the acting fire. But the very fact that the effect is deficient is likewise incidental to the good thing which is acting *per se*.

Hence, it is true that evil does not in any way have a cause except *per accidens*, and so it is in this sense that what is good is a cause of evil.

**Reply to objection 1:** As Augustine puts it in *Contra Julianum*, “The Lord is calling a bad act of will (*voluntas*) a bad tree and a good act of will a good tree.” Now a morally evil act is not produced by a good act of will, since an act is judged to be morally good because of the good act of will itself. On the other hand, the very movement of a bad act of will is caused by the rational creature, who is good. And it is in this way that it is a cause of evil.

**Reply to objection 2:** What is good does not cause the evil which is contrary to itself, but instead causes some other evil, in the way that the fire's goodness causes what is bad for the water, and in the way that a man, who is good by his nature, causes a morally bad act. And this itself is *per accidens* in the way just explained. (It even happens that one of two contraries causes the other contrary *per accidens*, as when an exterior surrounding coldness gives warmth insofar as the interior heat is trapped by it.)

**Reply to objection 3:** The way in which evil has a defective cause in the case of natural beings is different from the way it has a defective cause in the case of voluntary beings.

For a natural agent produces an effect that is such as itself is, unless it is impeded by something extrinsic, and this very thing is a kind of defect in it. Hence, evil never results in the effect unless some other evil previously existed either in the agent or in the matter, as was explained above.

By contrast, in the case of voluntary beings, a defect in the action proceeds from an actualized defect in the will, insofar as the will, in its acting, fails to subject itself to its own rule. This latter defect is not yet itself a sin, but a sin results from the fact that the will operates in the presence of such a defect.

**Reply to objection 4:** As has been explained, evil has a cause only *per accidens* and not *per se*.

## Article 2

### Is the greatest good, viz., God, a cause of evil?

It seems that the greatest good, viz., God, is a cause of evil:

**Objection 1:** Isaiah 45:6-7 says, “I am the Lord, and there is no other God who forms the light and creates darkness, who makes peace and creates evil.” Further, Amos 3:6 says, “Shall there be evil in a city which the Lord has not done?”

**Objection 2:** The effect of a secondary cause is traced back to the first cause. But as has been explained (a. 1), it is what is good that is a cause of evil. Therefore, since, as was shown above (q. 6, a. 1), God is a cause of every good, it follows that every evil is likewise from God.

**Objection 3:** As *Physics 2* says, the cause of the ship's salvation is the same as the cause of its

peril. But God is a cause of the salvation of all things. Therefore, He is likewise a cause of all perdition and evil.

**But contrary to this:** In *83 Quaestiones* Augustine says, “God is not an author of evil because He is not a cause of anything’s tending toward non-being.”

**I respond:** As is clear from what has been said (a. 1), the sort of evil that consists in a defective action is always caused by a defect in the agent. However, as was shown above (q. 4, a. 1), in God there is no defect, but only the greatest perfection. Hence, the sort of evil that consists in a defective action or is caused by a defect in the agent is not traced back to God as a cause.

By contrast, the sort of evil that consists in the corruption of various things is indeed traced back to God as a cause. This is clear both in the case of natural beings and in the case of voluntary beings. For it has already been explained (a. 1) that insofar as an agent produces by its own power a form upon which corruption and defectiveness follow, it is a cause by its own power of that corruption and defectiveness. But it is clear that the form that God principally intends in created things is the good of the order of the universe. Yet, as was explained above (a. 48, a. 2), the order of the universe requires that certain things are able to fail and sometimes do in fact fail. And so in causing the good of the order of the universe among things, God consequently and, as it were, *per accidens*, causes the corruption of things—this in accord with 1 Kings 2:6 (“The Lord kills and gives life”). And when Wisdom 1:13 says, “God has not made death,” this means that He does not intend death *per se*.

Now the order of justice, which requires that punishment be inflicted on sinners, is also relevant to the order of the universe. Accordingly, God is the author of the evil which is punishment, though He is not—for the reason explained above (q. 48, a. 6)—an author of the evil which is sin.

**Reply to objection 1:** The cited passages are talking about the evil of punishment and not about the evil of sin.

**Reply to objection 2:** The effect of a defective secondary cause is traced back to a non-defective first cause with respect to what that effect has of being and perfection, but not with respect to its defectiveness. For instance, in an act of limping the motion is caused by the moving power, whereas the lameness in the act is caused not by the moving power, but instead by the curvature of the leg. Similarly, whatever there is of being and action in a bad action is traced back to God as a cause, but whatever is defective in the act is caused by the defective secondary cause and not by God.

**Reply to objection 3:** The reason why the sinking of the ship is attributed to the sailor as its cause is that he does not do what is required to save the ship. By contrast, God does not fail to do what is necessary for salvation. Hence, the two cases are not parallel.

### Article 3

#### Is there one greatest evil which is a cause of every evil?

It seems that there is one greatest evil which is a cause of every evil:

**Objection 1:** Contrary effects have contrary causes. But according to Ecclesiasticus 33:15 (“Good is set against evil, and life against death: so also is the sinner against a just man”), contrariety is found among things. Therefore, there are contrary principles, the one a principle of good and the other a principle of evil.

**Objection 2:** As *De Caelo et Mundo* 2 says, if one of two contraries exists in reality, then so does the other contrary. But as was shown above (q. 2, a. 3 and q. 6, a. 2), the greatest good, which is a cause of all good, exists in reality. Therefore, there is likewise a greatest evil opposed to it which is a cause of

every evil.

**Objection 3:** Just as the good and the better are found in reality, so too are the bad and the worse. But *good* and *better* are predicated relative to the best. Therefore, *bad* and *worse* are predicated relative to some greatest evil.

**Objection 4:** Everything that is such-and-such through participation is traced back to what is such-and-such through its essence. But things that are evil among us are evil through participation and not through their essence. Therefore, something is the greatest evil through its essence and is a cause of every evil.

**Objection 5:** Everything that is such-and-such *per accidens* is traced back to what is such-and-such *per se*. But what is good is a *per accidens* cause of evil. Therefore, we must posit some greatest evil that is a *per se* cause of evils.

Nor can one reply that evil has only a *per accidens* cause and not a *per se* cause, since then it would follow that evil does not exist in most things (*ut in pluribus*), but only in a few (*ut in paucioribus*).

**Objection 6:** The evil of an effect is traced back to the evil of its cause, since, as was explained above (a. 1), a defective effect comes from a defective cause. But there can be no infinite regress here. Therefore, one must posit a first evil being that is the cause of every evil.

**But contrary to this:** As was shown above (q. 2, a. 4 and q. 6, a. 2), the greatest good is a cause of all being. Therefore, there cannot be a principle opposed to it which is a cause of evil things.

**I respond:** It is clear from what has already been said that there is no single first principle of evils in the way that there is a single first principle of good things.

For first of all, as was shown above (q. 6, a. 3), the first principle of good things is good through its essence. But nothing can be evil through its essence; for it was shown above (q. 48, a. 3) that (a) every being, insofar as it is a being, is good, and that (b) evil does not exist except in a subject that is good.

Second, as was shown above (q. 6, a. 2), the first principle of good things is a greatest and perfect good that contains within itself every sort of goodness. But there cannot be a greatest evil because, as has been shown (q. 48, a. 4), even if an evil continually diminishes a good, it can nonetheless never totally consume it. And so since some good always remains, there cannot be anything that is wholly and perfectly evil. For this reason the Philosopher says in *Ethics* 4 that if there were something completely evil, it would destroy itself, since if the entire good were destroyed (which is what is required for the completeness of the evil), the evil itself would also be removed, given that its subject is something good.

Third, the notion (*ratio*) of evil is incompatible with the notion of a first principle. For, first of all, as was shown above (a. 1), every evil is caused by what is good. Second, evil cannot be a cause except *per accidens* and so it cannot be a first cause, since, as is clear from *Physics* 2, a *per accidens* cause is posterior to a *per se* cause.

Now those who posited two first principles, one good and the other evil, fell into this error by virtue of the same root cause that also gave rise to other peculiar positions held by the ancients—viz., they did not take into account the universal cause of all being, but instead considered only the particular causes of particular effects. For this reason, if they found a thing to be harmful to another because of the power of its nature, they thought that the nature of that thing was evil—as, for instance, if someone were to call the nature of a fire evil because it had burned down a poor man's house.

However, a judgment about the goodness of a thing should not be based on the way it is ordered to a given particular thing; rather, as has been shown (q. 47, a. 2), it should be based on the thing itself and on the way it is ordered to the entire universe, within which each thing has its own perfectly ordained place.

Again, when they discovered two particular contrary causes of two particular contrary effects, they did not know how to trace the particular contrary causes back to a common universal cause. And so they judged that contrariety among causes holds all the way back to the first principles.

However, since all contraries agree in some one common thing, they must have, over and beyond their contrary proper causes, some one common cause—in the way, for instance, that the power of a celestial body is something over and beyond the contrary qualities of the elements. Similarly, as has been shown (q. 2, a. 3), over and beyond all the things that exist in any way, there is one first principle of being.

**Reply to objection 1:** Contraries agree in one genus, and they also agree in the nature of being. And so, even though they have contrary particular causes, we must arrive in the end at a single common first cause.

**Reply to objection 2:** A privation and the corresponding disposition are apt to be effected with respect to the same [subject]. Now as has been explained (q. 48, a. 3), the subject of a privation is a being in potentiality. Hence, since, as is clear from what has been said, evil is a privation of the good, it is opposed to a good that is conjoined with potentiality—and not to the greatest good, which is pure actuality.

**Reply to objection 3:** Each thing is intensified in accord with its proper nature. But just as a form is a sort of perfection, so a privation is a sort of negation. Hence, every form and perfection and good is intensified by approaching a perfect terminus, whereas a privation or evil is intensified by receding from that terminus. Hence, a thing is not called bad and worse by approaching the greatest evil, in the way that a thing is indeed called good and better by approaching the highest good.

**Reply to objection 4:** No being is called evil through participation; rather, a being is called evil through a privation of participation. Hence, an evil does not need to be traced back to something that is evil through its essence.

**Reply to objection 5:** As was shown above (a. 1), evil can have only a *per accidens* cause. Hence, it cannot be traced back to something that is a *per se* cause of evil.

However, the claim that evil exists in most things is simply false. For generable and corruptible things, in which only an evil of nature can exist, are only a relatively small part of the whole universe. Again, within each species defects of nature do not occur in most cases. In men alone does evil seem to occur in most cases. For the good of man with respect to the senses is not the good of man *qua* man, i.e., the good with respect to reason, and yet most men follow their senses rather than reason.

**Reply to objection 6:** One cannot proceed to infinity among the causes of evil; instead, one can trace every evil back to some good cause from which that evil follows *per accidens*.

## QUESTION 50

### The Substance of Angels Considered Absolutely

The next thing to consider is the distinction between the corporeal creature and the spiritual creature. We will consider, first, the purely spiritual creature, which is called an angel in Sacred Scripture (questions 50-64); second, the purely corporeal creature (questions 65-74); and, third, the creature composed of the spiritual and the corporeal, viz., man (questions 75-102).

On the topic of angels, we must first consider what pertains to their substance (questions 50-53); second, what pertains to their intellect (questions 54-58); third, what pertains to their will (questions 59-60); and, fourth, what pertains to their creation (questions 61-64).

As for the substance of angels, we must consider it both absolutely (question 50) and in relation to corporeal things (questions 51-53).

On the topic of the substance of angels considered absolutely, there are five questions: (1) Is there any creature that is wholly spiritual and completely incorporeal? (2) On the assumption that an angel is wholly spiritual, is he composed of matter and form? (3) How many angels are there? (4) How do they differ from one another? (5) Are angels immortal, i.e., incorruptible?

### Article 1

#### Is an angel wholly incorporeal?

It seems that an angel is not wholly incorporeal:

**Objection 1:** That which is incorporeal only with respect to us and not with respect to God is not incorporeal absolutely speaking. But in *De Fide Orthodoxa* 2 Damascene says, “An angel is called incorporeal and immaterial with respect to us, but as compared to God, he is corporeal and material.” Therefore, an angel is not incorporeal absolutely speaking.

**Objection 2:** As *Physics* 6 proves, nothing is moved except a body. But in the same place Damascene says, “An angel is an ever movable intellectual substance.” Therefore, an angel is a corporeal substance.

**Objection 3:** In *De Spiritu Sancto* Ambrose says, “Every creature is circumscribed by the set limits of its nature.” But being circumscribed is something proper to bodies. Therefore, every creature is corporeal. But as is clear from Psalm 148:2 (“Praise the Lord, all you His angels ... For He spoke, and they were made; He commanded, and they were created”), angels are creatures of God. Therefore, angels are corporeal.

**But contrary to this:** Psalm 103:4 says, “He makes His angels spirits.”

**I respond:** It is necessary to hold that some creatures are incorporeal. For what God principally intends in the case of created things is the good, which consists in an assimilation to God. But the perfect assimilation of an effect to its cause occurs when the effect imitates its cause with respect to that through which the cause produces the effect. For instance, what is hot effects what is hot. But as was shown above (q. 14, a. 8 and q. 19, a. 4), God produces creatures through His intellect and will. Hence, the perfection of the universe requires that there be some intellectual creatures. But an act of understanding is not an act of a body or of any corporeal power, since each body is limited to the here and now. Hence, in order for the universe to be perfect, it is necessary to hold that some creatures are incorporeal.

However, the ancients, who did not appreciate the power of understanding and failed to distinguish sensing from understanding, thought that there was nothing in the world except what could be apprehended by sensation and imagination. And since only bodies fall under the power of imagining, they thought that the only beings were bodies, as the Philosopher points out in *Physics* 4. The error of

the Sadducees, who claimed that there are no spirits, originated from these premises.

Nonetheless, the very fact that understanding is superior to (*altior*) sensing is a plausible proof that there are some incorporeal beings that are comprehensible only by the understanding.

**Reply to objection 1:** Incorporeal substances stand in the middle between God and corporeal creatures. But when what is in the middle is compared to one of the endpoints, it looks like the other endpoint; for instance, what is lukewarm, when compared to what is hot, seems cold. It is for this reason that angels, when compared to God, are said to be ‘material’ and ‘corporeal’—and not because anything of a corporeal nature exists in them.

**Reply to objection 2:** ‘Movement’ is here being taken in the sense that acts of understanding and willing are called movements. Thus, an angel’s substance is said to be ‘ever movable’ because he is always understanding in actuality and not, like us, sometimes understanding in actuality and sometimes in potentiality. Hence, it is clear that the objection involves an equivocation.

**Reply to objection 3:** It is proper to bodies to be circumscribed by the limits of their place, but it is common to all creatures, whether corporeal or spiritual, to be circumscribed by the limits of their essence. This is why Ambrose says in *De Spiritu Sancto* that even though certain creatures are not contained by corporeal places, they are nonetheless not without circumscription as far as their substance is concerned.

## Article 2

### Is an angel composed of matter and form?

It seems that an angel is composed of matter and form:

**Objection 1:** Everything contained under any genus is composed of a *genus* and a *difference*, where the difference constitutes the species when added to the genus. But as is clear from *Metaphysics* 8, the genus is taken from the matter, while the difference is taken from the form. Therefore, everything that is in a genus is composed of matter and form. But an angel is in the genus of substance. Therefore, an angel is composed of matter and form.

**Objection 2:** Matter is found in anything in which the properties of matter are found. But the properties of matter are *being receptive* (*recipere*) and *being a subject* (*substare*); this is why Boethius says in *De Trinitate* that a simple form cannot be a subject. But these properties are found in an angel. Therefore, an angel is composed of matter and form.

**Objection 3:** Form is an actuality (*actus*). Therefore, whatever is just a form is pure actuality. But an angel is not pure actuality, since this belongs to God alone. Therefore, an angel is not just a form, but instead has a form in matter.

**Objection 4:** A form is properly limited (*limitatur*) and made finite (*finitur*) by matter. Therefore, a form that does not exist in matter is infinite. But an angel’s form is not infinite, since every creature is finite. Therefore, an angel’s form exists in matter.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says, “The first creatures are understood to be incorporeal and immaterial.”

**I respond:** Some claim that angels are composed of matter and form. This is the opinion that Avicenna tries to establish in *Fons Vitae*. For he assumes that things that are distinguished intellectually likewise exist as distinct in reality (*in rebus*). But in the case of an incorporeal substance our intellect apprehends something by which it is distinguished from a corporeal substance and something in which it agrees with a corporeal substance. Hence, from this he wants to infer that (a) that by which an

incorporeal substance differs from a corporeal substance is, as it were, its form, and that (b) what is common, as it were, and serves as the subject of this distinguishing form is its matter. For this reason he claims that the same ‘universal’ matter belongs to both spiritual and corporeal beings, so that the form of an incorporeal substance is thought of as being impressed on the matter of spiritual beings in the same way that the form of quantity is impressed on the matter of corporeal beings.

However, it is obvious at first glance that it is impossible for there to be a single matter for both spiritual beings and corporeal beings. After all, it is impossible that a spiritual form and a corporeal form should be received into the same part of matter, since in that case numerically one and the same thing would be both corporeal and spiritual. Hence, it follows that one part of the matter would receive the corporeal form and another part would receive the spiritual form. But matter cannot be divided into parts except insofar as it is understood to be the subject of quantity—so that, as *Physics* 1 explains, if the quantity were removed, then an indivisible substance would remain. So, then, it follows that the matter of spiritual beings would be the subject of quantity—which is impossible. Therefore, it is impossible that there should be a single matter for both spiritual beings and corporeal beings.

But beyond this, it is impossible that an intellectual substance should have *any* kind of matter at all. For the operation of any given entity corresponds to the mode of its substance. But an act of understanding is a completely immaterial operation. This is clear from its object, since every act takes its species and nature from its object. For a thing is understood insofar as it is abstracted from matter, since forms in matter are individual forms, which the intellect cannot apprehend as such. Hence, it follows that every intellectual substance is completely immaterial.

Moreover, it is not necessary for things that are distinguished intellectually to exist as distinct things in reality, since the intellect apprehends things not according to the mode of the things but according to its own mode. Hence, material entities, which are lower than our intellect, exist in our intellect in a more simple way than they exist in themselves. By contrast, angelic substances are higher than our intellect. Hence, our intellect cannot attain to an apprehension of them as they are in themselves. Rather, it apprehends them in its own mode, according to which it apprehends them as composite things. And, as was explained above (q. 3, a. 3), it is in this same way that our intellect apprehends God.

**Reply to objection 1:** It is the *difference* that constitutes the species. But each thing is constituted in a species insofar as it is limited to some specific grade of being (*gradus in entibus*). For as *Metaphysics* 8 says, the species of things are like numbers, which differ through the addition and subtraction of the unit.

Now in the case of material things, that which determines the specific grade, viz., the form, is distinct from that which is so determined, viz., the matter, and this is why the genus is taken from the one and the difference from the other.

By contrast, in the case of immaterial things, that which does the determining is not distinct from that which is determined. Instead, each immaterial being possesses through its very self a determinate grade of being. And so in the case of immaterial things, the genus and the difference are taken not from different sources, but from one and the same source.

Still, there are different sources as far as our own understanding is concerned. For insofar as our intellect considers an immaterial being *indeterminately*, the concept of a genus is apprehended in it, whereas insofar as it considers an immaterial being *determinately*, the concept of a difference is apprehended in it.

**Reply to objection 2:** This objection is put forth in *Fons Vitae*. And the argument would reach its conclusion with necessity if the mode in which an intellect receives [a form] were the same as the mode in which matter receives [a form]. But this is clearly false.

For matter receives a form in order to be constituted by it in the *esse* of some species, such as air or

fire or any other. By contrast, an intellect does not receive a form in this way; if it did, then this would validate the opinion of Empedocles, who claimed that we know earth by means of earth and fire by means of fire. Instead, an intelligible form exists in an intellect with the very nature of a form; for this is how it is known by an intellect. Hence, this sort of reception is not the sort of reception that belongs to matter, but is instead the sort of reception that belongs to an immaterial substance.

**Reply to objection 3:** Even though there is no composition of form and matter in an angel, nonetheless, both actuality and potentiality exist in him. This can be made clear by considering material things, in which there are two types of composition.

The first type is the composition of the form and the matter out of which a given nature is constituted.

However, a nature composed in this way is not its own *esse*; instead, its *esse* is its actuality. Hence, the nature itself is related to its own *esse* as potentiality is related to actuality. Therefore, even if the matter were subtracted and we assumed that the form itself subsisted without the matter, the form would still be related to its *esse* as potentiality is related to actuality. This latter is the sort of composition that should be understood to exist in angels.

This is the point being made by those who say that an angel is composed of *that by which it is* (*quo est*) and *that which is* (*quod est*) or, as Boethius puts it, that an angel is composed of *esse* and *that which is*. For *that which is* is a subsistent form, whereas the *esse* itself is *that by which the substance is*, in the sense in which an act of running (*cursus*) is that by which a runner runs.

By contrast, as was shown above (q. 3, a. 4), in God the *esse* is not distinct from *that which is*. Hence, God alone is pure actuality.

**Reply to objection 4:** Every creature is finite absolutely speaking, insofar as its *esse* is not an absolute subsistent thing but is instead limited to the given nature that it comes to. However, nothing prevents a creature from being unlimited (*infinita*) in a relative sense.

Now material creatures have unlimitedness on the part of their matter and limitedness on the part of their form, which is limited by the matter in which it is received. Immaterial substances, on the other hand, are limited with respect to their very *esse*, but unlimited in the sense that their forms are not received in something else. It would be like saying that a whiteness existing as separate [from any subject] is unlimited with respect to the nature of whiteness because it is not restricted to any subject; yet its *esse* would still be limited, since that *esse* is determined to a specific nature.

This is why the *Liber de Causis* says that an intelligence is a *higher finite* being, viz., insofar as it receives *esse* from its superior, whereas it is a *lower infinite* being insofar as its *esse* is not received in any matter.

### Article 3

#### Do angels exist in great numbers?

It seems that angels do not exist in great numbers (*non sint in aliquo magno numero*):

**Objection 1:** Number is a species of quantity, and it follows upon the division of a continuum. But this cannot be the case with angels, since, as was shown above (a. 1), they are incorporeal. Therefore, angels cannot exist in great numbers.

**Objection 2:** As is clear in the case of numbers, the closer something is to one, the less it is multiplied. But compared to the other created natures, angelic nature is closer to God. Therefore, since God is maximally one, it seems that a minimal multitude is found within angelic nature.

**Objection 3:** The proper effect of the separated substances seems to be the movements of the

celestial bodies. But the movements of the celestial bodies have some small determinate number that we can comprehend. Therefore, angels are not more numerous than the movements of the celestial bodies.

**Objection 4:** In *De Divinis Nominibus*, chap. 4, Dionysius says, “All intelligible and intellectual substances subsist because of the rays of God’s goodness.” But rays are multiplied only according to the diversity of their recipients. Now one cannot claim that it is the matter of the intellectual substances that receives an intelligible ray, since, as was shown above (a. 2), the intellectual substances are immaterial. Therefore, it seems that the multiplication of intellectual substances can occur only because the first bodies, viz., the celestial bodies, need them in order for the procession of the aforementioned rays to be terminated by those bodies in those ways. And so we reach the same conclusion as before.

**But contrary to this:** Daniel 7:10 says, “Thousands of thousands ministered to Him, and ten thousand times a hundred thousand stood before Him.”

**I respond:** As far as the number of separated substances is concerned, different authors have gone their different ways.

For instance, Plato held that the separated substances are the species of sensible things, as if to say that human nature itself is a separated substance. Accordingly, he had to claim that the separated substances are as numerous as the species of sensible things.

However, Aristotle disproves this position by appealing to the fact that matter is part of the nature of the species of these sensible things. Hence, separated substances cannot be the exemplary species of such sensible things; instead, separated substances have higher natures than the natures of sensible things. Yet Aristotle claimed that these more perfect natures are related to those sensible natures as their movers and ends. And so he tried to discover the number of the separated substances by appealing to the number of primary movements.

However, since this appears to be incompatible with the teaching of Sacred Scripture, Rabbi Moses, himself a Jew, wishing to reconcile Aristotle and Sacred Scripture, claimed that (a) insofar as the angels are called *immaterial substances*, they are multiplied according to the number of movements or the number of celestial bodies, as Aristotle held, but that (b) in Scripture even men who announce divine tidings are called angels, as are the powers of natural things, since they manifest God’s omnipotence.

However, it is foreign to the usage of Scripture for the powers of non-rational things to be called angels.

Hence, one should reply that even insofar as they are immaterial substances, angels have a certain maximal multitude, exceeding every material multitude. As Dionysius says in *De Caelesti Hierarchia*, chap. 14, “There are many holy armies of the higher minds, exceeding the feeble and limited measure of our material numbers.” The reason for this is that since the perfection of the universe is what God principally intends in the creation of things, to the extent that certain things are more perfect, they are created by God in greater abundance. But just as there is abundance in *magnitude* in the case of bodies, so too there is abundance in *multitude* in the case of incorporeal things. For we notice that incorruptible bodies, which are the most perfect bodies, exceed corruptible bodies beyond measure in their magnitude, since the whole sphere of active and passive things is very small compared with the celestial bodies. Hence, it is reasonable to think that immaterial substances exceed material substances beyond measure in their multitude.

**Reply to objection 1:** The sort of number that is a discrete quantity and is caused by the division of a continuum does not exist among angels. Instead, as was explained above (q. 11, a. 2 and q. 30, a. 3), the sort of number that exists among the angels is caused by a distinction among forms, and it corresponds to the sense in which *many* (*multitudo*) belongs to the transcendentals.

**Reply to objection 2:** The fact that angelic nature is close to God means that it must have a minimum of multiplicity in its [intrinsic] composition, and not that it must be preserved in just a few entities.

**Reply to objection 3:** This argument is drawn from Aristotle in *Metaphysics* 12, and it would establish its conclusion with necessity if separated substances existed for the sake of corporeal substances. For in that case immaterial substances would be superfluous unless certain movements among corporeal things occurred because of them.

However, it is not true that immaterial substances exist for the sake of corporeal substances, since an end is more noble than the things that are ordered to that end. Hence, even Aristotle himself says in the same place that the argument in question is a probable rather than necessary argument. However, he was forced to use this argument because we cannot reach a cognition of intelligible things except through sensible things.

**Reply to objection 4:** This argument finds its source in the opinion of those who held that matter is the cause of the distinctions among things. But this has already been disproved (q. 47, a. 1).

Hence, the multiplicity of angels is to be taken neither from matter nor from bodies, but instead from God's wisdom insofar as it devises the various orders of immaterial substances.

#### Article 4

##### Do angels differ from one another in species?

It seems that angels do not differ from one another in species:

**Objection 1:** Since the *difference* is more noble than the *genus*, things that agree with respect to what is most noble in themselves agree in the ultimate constitutive difference, and so they are the same in species. But all angels agree in that which is most noble in themselves, viz., their intellectuality. Therefore, all angels belong to a single species.

**Objection 2:** Species are not diversified by the greater and the lesser. But angels seem to differ from one another only with respect to the greater and the lesser, insofar as one is more simple than another, and insofar as one has a more perspicacious intellect than another. Therefore, angels do not differ from one another in species.

**Objection 3:** The human soul and an angel are divided as corresponding opposites. But all human souls belong to the same species. Therefore, so do all angels.

**Objection 4:** The more perfect something is in its nature, the more it ought to be multiplied. But this would not be the case if there were just a single individual in a given species. Therefore, many angels belong to a given species.

**But contrary to this:** As *Metaphysics* 3 says, among the things that belong to the same species there is no prior and posterior. But as Dionysius says in *De Caelesti Hierarchia*, chap. 10, among angels—even among those belonging to a single order of angels—there are those who are first, those who are in the middle, and those who are last. Therefore, it is not the case that angels belong to the same species.

**I respond:** Some have claimed that all spiritual substances, including human souls, belong to a single species. Others, leaving aside human souls, have claimed that all angels belong to a single species. And still others have claimed that all angels in the same hierarchy or in the same order belong to a single species.

However, this is impossible. For things that agree in species while differing in number agree in their form and are distinct in their matter. Therefore, if, as was argued above (a. 2), angels are not composed of matter and form, it follows that it is impossible for two angels to belong to the same species—just as it would likewise be impossible to claim that there are many separated whitenesses or

many separated humanities. For whitenesses are many only insofar as they exist in many substances.

Yet even if angels had matter, it would still be impossible for many angels to belong to one species. For if they had matter, the principle by which one angel is distinct from another would have to be matter—not, to be sure, matter in accord with a division of quantity, since angels are incorporeal, but instead matter in accord with a diversity of powers. But this sort of diversity of matter makes for a diversity not only of species, but even of genus.

**Reply to objection 1:** The *difference* is more noble than the *genus* in the sense that what is determinate is more noble than what is indeterminate, and in the sense that what is proper is more noble than what is common. But this is not the sense in which one nature is more noble than another. Otherwise, either all non-rational animals would have to belong to one species or else they would all have to have another form more perfect than the sentient soul. Thus, non-rational animals differ in species according to diverse determinate grades of sentient nature. And, similarly, angels differ in species according to diverse grades of intellectual nature.

**Reply to objection 2:** Insofar as the greater and the lesser are caused by the intensification and remission of a single form, they do not diversify species. Rather, they diversify species insofar as they are caused by forms of diverse grades, in the way that we say that fire is more perfect than air. And it is in this way that angels are diversified according to greater and lesser.

**Reply to objection 3:** The good of the species takes precedence over the good of the individual. Hence, it is much better that the species of angels should themselves be multiplied than that individuals should be multiplied within a single species.

**Reply to objection 4:** As was explained above (q. 47, a. 3), since numerical multiplication can be carried on to infinity, it is not intended by an agent—only the multiplication of species is so intended. Hence the perfection of angelic nature requires a multiplication of species and not a multiplication of individuals within a single species.

## Article 5

### Are angels incorruptible?

It seems that angels are not incorruptible:

**Objection 1:** Damascene says of the angel, “He is an intellectual substance who receives immortality by grace and not by nature.”

**Objection 2:** In the *Timaeus* Plato says, “O gods of the gods, whose maker and father I am, you are indeed my works, dissoluble by nature, yet indissoluble because I will it.” But by ‘gods’ he may mean nothing other than the angels. Therefore, angels are corruptible by their nature.

**Objection 3:** According to Gregory, “All things would fall into nothingness if the hand of the Almighty did not conserve them.” But whatever is able to fall into nothingness is corruptible. Therefore, since angels are made by God, it seems that they are corruptible by their nature.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says, “Intellectual substances have unfailing life and are free from all corruption, death, matter, and generation.”

**I respond:** One must claim that angels are by their nature incorruptible. The reason for this is that nothing is corrupted except in virtue of the fact that its form is separated from its matter. Hence, since, as is clear from what has been said (aa. 1 and 2), an angel is a subsistent form, it is impossible for his substance to be corruptible. For what belongs to a thing with respect to its very self (*secundum se*) can never be separated from it, whereas what belongs to it through something else (*per aliud*) can be

separated from it when that in virtue of which that thing belongs to it is itself separated. For instance, roundness cannot be separated from a circle, since roundness belongs to the circle with respect to its very self, whereas a bronze circle can lose its roundness by virtue of the circular shape's being separated from the bronze.

Now *esse* belongs to a form *with respect to its very self*, since each thing is a being in actuality insofar as it has a form. Matter, by contrast, is a being in actuality *through* its form. Therefore, that which is composed of matter and form can cease to exist in actuality by virtue of the fact that its form is separated from its matter. But if the form itself subsists in its own *esse*—which, as has been explained (a. 2), is the case with angels—then it cannot lose its *esse*.

Therefore, the very immateriality of an angel is the reason why an angel is incorruptible by his nature. And an indication of this incorruptibility can be taken from the angel's intellectual operation. For since each thing operates insofar as it is actual, a thing's operation indicates the mode of its *esse*. Now the species and nature of an operation is grasped through its object. But an intelligible object, since it lies beyond time, is everlasting (*sempiternum*). Hence, every intellectual substance is incorruptible by its nature.

**Reply to objection 1:** Damascene has in mind *perfect* immortality, which includes every type of immutability, since, as Augustine puts it, every change is a sort of death. But as will be explained below (q. 62, a. 2), angels attain perfect immutability only through grace.

**Reply to objection 2:** By 'gods' here Plato means the celestial bodies, which he took to be composed of the elements and thus dissoluble by their nature, though always conserved in *esse* by God's will.

**Reply to objection 3:** As was explained above (q. 44, a. 1), there are some necessary beings that have a cause of their necessity. Hence, it is not impossible for a necessary or incorruptible being to have its *esse* depend on another as its cause. Thus, the claim that all things, even angels, would fall into nothingness if they were not maintained by God should be understood to imply not that there is some principle of corruption within angels, but rather that the *esse* of an angel depends on God as its cause. For something is said to be corruptible not because God can reduce it to non-being by withdrawing His act of conserving it, but rather because it has within itself a principle of corruption, either some sort of contrariety or at least the potentiality of matter.

## QUESTION 51

### The Relation of Angels to Bodies

The next thing to ask about is the relation of angels to corporeal things. We ask, first, about the relation of angels to bodies (question 51); second, about the relation of angels to places (question 52); and, third, about the relation of angels to local motion (question 53).

On the first topic there are three questions: (1) Do angels have bodies that are naturally united to them? (2) Do angels assume bodies? (3) Do angels exercise life functions in their assumed bodies?

#### Article 1

##### Do angels have bodies that are naturally united to them?

It seems that angels have bodies that are naturally united to them:

**Objection 1:** In *Peri Archon* Origen says, “Only God—that is, Father, Son, and Holy Spirit—is such that it is proper to His nature that He is understood to exist without a material substance and without any commerce with a corporeal appendage.” Again, in *Homilia Super Canticum Cantorum* 6 Bernard says, “Let us grant incorporeality, as we do immortality, only to God, whose nature alone is in no need of the help of a corporeal instrument either for His own sake or for the sake of another. By contrast, it is clear that every created spirit needs corporeal assistance.” Again, in *Super Genesim ad Litteram* Augustine says, “The demons are called animals of air (*animalia aëria*) because by nature they are like airy bodies.” But the nature of the demons is the same as the nature of the angels. Therefore, angels have bodies that are naturally united to them.

**Objection 2:** In his homily for the feast of the Epiphany Gregory calls an angel a rational animal. But every animal is composed of a body and a soul. Therefore, angels have bodies that are naturally united to them.

**Objection 3:** Life is had more perfectly by angels than by souls. Yet the soul is not only living, but also gives life to the body. Therefore, angels give life to bodies that are naturally united to them.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says, “Angels are understood to be incorporeal.”

**I respond:** Angels do not have bodies that are naturally united to them. For what happens incidentally to a nature is not found always and everywhere in that nature. For instance, *having wings* does not belong to every animal because it is not part of the nature *animal*. But since, as will become clear below (q. 75, a. 2), an act of intellective understanding (*intelligere*) is not the act of a body or of any corporeal power, *having a body united to itself* is not part of the nature *intellectual substance* as such, but rather accrues to some intellectual substances for the sake of something else. For instance, *being united to a body* belongs to the human soul because the human soul is imperfect and exists in potentiality within the genus *intellectual substance*, not having the fullness of knowledge within its nature, but instead, as will be explained below (q. 84, a. 6 and q. 89, a. 1), acquiring knowledge from sensible things through the corporeal senses.

Now if in a given genus there is something imperfect, then something perfect must exist in that same genus. Therefore, within the genus *intellectual nature* there are some perfect intellectual substances that do not need to acquire knowledge from sensible things. Therefore, not all intellectual substances are united to bodies; instead, some of them are separate from bodies. And these are the intellectual substances we call angels.

**Reply to objection 1:** As was noted above (q. 50, a. 1), some have held the opinion that every entity is a body. And this belief seems to have led others to think that there are no incorporeal substances

unless they are united to bodies—so much so that, as Augustine reports in *De Civitate Dei* 7, some even claimed that God is the soul of the world. However, since this is incompatible with the Catholic Faith, which claims that God is exalted above all things, in keeping with Psalm 8:2 (“Your magnificence is exalted beyond the heavens”), Origen, refusing to make this claim about God, followed the opinion of the others about substances other than God. Here, as in many other matters, he was deceived in following the opinions of the ancient philosophers.

Now the passage from Bernard can be understood to be claiming not that created spirits need a corporeal instrument that is naturally united to them, but that instead, as will be explained below (a. 2), they need a corporeal instrument that is assumed for some purpose.

On the other hand, Augustine is not speaking assertively here; rather, he is making use of the opinion of the Platonists, who posited certain airy animals that they called ‘demons’ (*daemones*).

**Reply to objection 2:** Here Gregory is calling an angel a rational animal metaphorically, because of the angel’s likeness to reason.

**Reply to objection 3:** To give life as an efficient cause is an absolute perfection. Hence, it belongs especially to God, according to 1 Kings 2:6 (“The Lord kills and gives life”).

However, to give life as a formal cause belongs to a substance that is part of some nature and does not have the whole nature of the species within itself. Hence, an intellectual substance that is not united to a body is more perfect than one that is united to a body.

## Article 2

### Do angels assume bodies?

It seems that angels do not assume bodies:

**Objection 1:** There is nothing superfluous in an angel’s work, just as there is nothing superfluous in a work of nature. But it would be superfluous for angels to assume bodies, since an angel does not need a body, given that his power exceeds every corporeal power. Therefore, angels do not assume bodies.

**Objection 2:** Every instance of assuming a thing (*assumptio*) terminates in some sort of union, since to assume (*assumere*) means ‘to take up to oneself’ (*ad se sumere*). But as has been explained (a. 1), a body is not united to an angel in the sense that the angel is the form of the body. Moreover, a body’s being united to an angel in the sense that the angel moves the body is not the same as the body’s being assumed by an angel; otherwise, it would follow that all the bodies moved by angels are assumed by them. Therefore, angels do not assume bodies.

**Objection 3:** Angels do not assume bodies made of earth or water, since then they would not disappear suddenly. Nor, again, do angels assume bodies made of fire, since then they would burn things that they touched. Nor, yet again, do angels assume bodies made of air, since air cannot have a shape or a color. Therefore, angels do not assume bodies.

**But contrary to this:** In *De Civitate Dei* 16 Augustine says that angels in assumed bodies appeared to Abraham.

**I respond:** Some have claimed that angels never assume bodies, but that instead all the things we read in the divine Scriptures about the apparitions of angels have occurred in prophetic visions, i.e., in the imagination.

However, this view is incompatible with the intent of the Scriptures. For that which is seen in an imaginative vision exists just in the imagination of the one who has the vision and so is not seen

generally by everyone. But the divine Scriptures sometimes introduce the appearances of angels in such a way that the angels are seen by everyone. For instance, the angels who appeared to Abraham (Genesis 18-19) were seen by him, by his whole family, by Lot, and by the citizens of Sodom. Similarly, the angel who appeared to Tobias (Tobit 5ff.) was seen by everyone. Hence, it is clear that occurrences of this sort involved corporeal vision, in which what one sees is something existing outside of the seer, and so it can be seen by everyone. But only a body is seen by such a vision. Therefore, since, as is clear from what has been said (a. 1 and q. 50, a. 1), angels are not bodies and do not have bodies naturally united to them, it follows that they sometimes assume bodies.

**Reply to objection 1:** Angels need an assumed body not for their own sake, but rather for our sake, so that by living on familiar terms with men, they might indicate the sort of intellectual companionship that men expect to have with them in the life to come.

In addition, the fact that angels assumed bodies in the Old Testament was a sort of figurative indication that the Word of God would assume a human body. For all their appearances in the Old Testament were ordered toward that appearance by which the Son of God appeared in the flesh.

**Reply to objection 2:** An assumed body is united to an angel not in such a way that the angel is its form or even just its mover, but rather in such a way that the angel is a mover who is represented through the assumed movable body. For just as the properties of intelligible things are described in Sacred Scripture by likenesses drawn from sensible things, so too, by God's power, sensible bodies are formed by angels in such a way as to represent the intelligible properties of an angel. And this is what it is for an angel to assume a body.

**Reply to objection 3:** Even though air does not have a shape or a color as long as it remains rarified, nonetheless, when it is condensed, it can have a shape and a color, as is clear in the case of clouds. And so angels assume a body made of air by condensing it through God's power as much as is necessary for forming the body that is going to be assumed.

### Article 3

#### Do angels exercise life functions in their assumed bodies?

It seems that angels exercise life functions (*opera vitae*) in their assumed bodies.

**Objection 1:** Deception does not befit angels of truthfulness. But it would be a deception if the body which they have assumed and which seems to be alive and to have life functions did not have functions of this sort. Therefore, angels exercise life functions in their assumed bodies.

**Objection 2:** There is nothing without a purpose in the works of an angel. But the eyes and ears and other sensory instruments would be formed without purpose in the body assumed by an angel if the angel did not sense anything through them. Therefore, an angel senses through his assumed body, and this is an especially characteristic life function.

**Objection 3:** As is clear from *De Anima 2*, one of the life functions is to move around. But angels clearly move around in their assumed bodies. For Genesis 18:16 says that "Abraham walked along with them," giving directions to the angels who had appeared to him. And when Tobias asked, "Do you know the way to the city of the Medes?" the angel responded, "I do know the way, and I have often walked all its streets." Therefore, angels often exercise life functions in their assumed bodies.

**Objection 4:** Speaking is a life function, since it is done by means of the voice, which is a sound enunciated by the mouth of an animal, as *De Anima 2* puts it. But it is clear from many places in Scripture that angels spoke in their assumed bodies. Therefore, they exercise life functions in their

assumed bodies.

**Objection 5:** To eat is a function proper to an animal. Thus, as the last chapter of Luke tells us, the Lord ate with his disciples after the resurrection as a proof of His resumed life. But the angels who appeared in assumed bodies ate, and Genesis 18:2 says that Abraham offered them food after he had bowed down (*adoraverat*) before them. Therefore, angels exercise life functions in their assumed bodies.

**Objection 6:** To generate a man is a life function (*actus vitae*). But this action belongs to angels in their assumed bodies. For Genesis 6:4 says, “After the sons of God went in to the daughters of men, they brought forth children, and these are the mighty men of old, men of renown.” Therefore, angels exercise life functions in their assumed bodies.

**But contrary to this:** As was explained above (a. 2), the bodies assumed by angels are not alive. Therefore, the angels cannot exercise life functions through those bodies.

**I respond:** Certain life functions have something in common with other kinds of operations. For instance, speaking, which is a life function, has something in common with other sounds that are made by inanimate things insofar as it is a sound, and walking has something in common with other movements insofar as it is a movement. Therefore, with respect to what is common to both sorts of operations, life functions can be exercised by angels through their assumed bodies. However, this is not the case with respect to what is proper to living things, since, according to the Philosopher in *De Somno et Vigilia*, an action belongs to that which has the power for it. Hence, nothing can have a life function if it does not have life, which is the principle of power for such an action.

**Reply to objection 1:** It is not contrary to truthfulness that intelligible things are described in Scripture by sensible figures. For this is not done in order to suggest that the intelligible things are sensible things; rather, it is through figures drawn from the sensible things that the properties of the intelligible things are understood by way of a certain likeness.

So, too, it is not incompatible with the truthfulness of the holy angels that the bodies assumed by them should seem to be living men even though they are not. For these bodies are assumed only in order that the angels’ spiritual properties and their spiritual operations might be depicted by means of human properties and human operations. This would not be done as appropriately if they assumed real men, since the properties of those men would lead us to think of the men themselves and not of the angels.

**Reply to objection 2:** Sensation is exclusively a life function, and hence one cannot in any way claim that angels have sensation through the organs of their assumed bodies. And yet it is not the case that these assumed bodies are formed for no purpose. For they are formed not in order for the angels to sense through them, but rather in order for the spiritual powers of the angels to be depicted by means of organs of the sort in question. For instance, as Dionysius teaches in the last chapter of *De Caelesti Hierarchia*, an angel’s cognitive power is depicted by means of the eye, and his other powers are depicted by means of other parts of the assumed body.

**Reply to objection 3:** Movement that has a conjoined mover as its source is a proper life function. But this is not the way in which the bodies angels assume are moved by them, since angels are not the forms of those bodies. Still, the angels are moved *per accidens* when their assumed bodies are moved, since the angels exist in the bodies as movers in movable things, and so they are here [where the bodies are] and nowhere else—something that cannot be said of God. Hence, even though God is not moved when the things in which He exists are moved (for He is everywhere), angels are moved *per accidens* with the movement of their assumed bodies.

However, angels are not moved with the movement of the celestial bodies, even if they exist in them as movers in movable things. The reason is that the celestial bodies do not completely leave a place, and the spirit who moves a sphere does not have a place (*locus*) in any determinate part of the

substance of the sphere, given that any such determinate part is now in the east and now in the west; rather, the spirit has a set position (*situm*), since, as *Physics* 8 says, the moving power is always in the east.

**Reply to objection 4:** Strictly speaking, angels do not speak through their assumed bodies. However, there is something like speech insofar as they produce sounds in the air that are similar to human words.

**Reply to objection 5:** Again, angels do not eat, properly speaking. For eating implies the ingestion of food that can be converted into the substance of the eater. And even though food was not converted into the body of Christ after His resurrection, but was instead resolved into its preexisting matter, still, Christ had a body of such a nature that food could be converted into it, and so His was a true eating. By contrast, the food taken by the angels was not converted into the assumed body, and the assumed body was not of such a nature that food could be converted into it. Hence, theirs was not a true eating, but was instead a depiction of spiritual eating. And this is just what the angel said at Tobit 12:18-19: “When I was with you ... I seemed indeed to eat and to drink with you, but I use an invisible meat and drink.” Again, Abraham offered [the angels] food, thinking them to be men; and yet he venerated God in them, “as God is wont to be in the prophets,” according to Augustine in *De Civitate Dei* 16.

**Reply to objection 6:** As Augustine says in *De Civitate Dei* 15, “Many affirm that they know by experience—or have heard from those who know by experience—that Silvans and Fauns, whom common people call ‘Incubi’, have often presented themselves improperly to women and have sought and procured sexual intercourse with them. Hence, it smacks of impudence to deny this. But the holy angels of God could not have fallen in this way before the flood. Hence, ‘the sons of God’ means the sons of Seth, who were good, whereas Scripture calls ‘the daughters of men’ those women who had been born of the race of Cain. It is no surprise that giants could have been born of them, since even though not all of them were giants, there were more of them before the flood than after it.”

However, if some of them were sometimes born from intercourse with demons, this was not through semen that came from the demons or from their assumed bodies; rather, it was through semen that was taken from some man for this purpose, so that the same demon who was a ‘Succubus’ to the man became an ‘Incubus’ to the woman—in the way that, according to Augustine in *De Trinitate* 3, they likewise took the seeds of other things in order to generate those other things. The upshot is that the one who is born is not the demon’s son, but instead the son of the man whose semen was taken.

## QUESTION 52

### The Relation of an Angel to Places

The next thing to ask about is an angel's place. On this topic there are three questions: (1) Does an angel exist in a place? (2) Can an angel be in more than one place at the same time? (3) Can more than one angel be in the same place?

#### Article 1

##### Does an angel exist in a place?

It seems that an angel does not exist in a place.

**Objection 1:** In *De Hebdomadibus* Boethius says, "Among the wise, the common view of the soul is that incorporeal things do not exist in a place." And in *Physics* 4 Aristotle says, "Not everything that exists in a place, but only movable bodies do." But as was shown above (q. 50, a. 1), an angel is not a body. Therefore, an angel does not exist in a place.

**Objection 2:** A place is a quantity that has a position (*positio*). Therefore, everything that exists in a place has some position (*situm*). But *having a position* cannot belong to angel, since his substance is devoid of quantity, a proper difference of which is *having a position*. Therefore, an angel does not exist in a place.

**Objection 3:** As is clear from the Philosopher in *Physics* 4, to exist in a place is to be measured by the place and to be contained by the place. But an angel can be neither measured nor contained by a place, since, as *Physics* 4 says, that which contains is more form-like (*formalius*) than that which is contained, in the sense in which air is more form-like than water. Therefore, an angel does not exist in a place.

**But contrary to this:** A Collect [at Compline] says, "May Your holy angels, who live in this dwelling, preserve us in peace."

**I respond:** It belongs to angels to exist in a place, though an angel and a body are said to exist in a place in different senses. For a body exists in a place in virtue of being applied to the place through the contact had by its dimensional quantity (*quantitas dimensiva*). This is not so in the case of angels; instead, they have quantity of power (*quantitas virtutis*). Thus, it is through the application of an angel's power in some way or other to a given place that the angel is said to exist in a corporeal place.

Accordingly, it is clear that an angel should not be said to be measured by his place or to have a position within a continuum, since these features belong to a located body insofar as it is a quantum through its dimensional quantity.

Again, an angel should likewise not be said to be contained by his place. For an incorporeal substance that touches a corporeal thing by its power contains that corporeal thing and is not contained by it. For instance, the soul exists in the body as something that contains the body and not as something that is contained by the body. Similarly, an angel is said to exist in a corporeal place not as a thing contained by the place, but rather as a thing that in some sense contains the place.

**Reply to objection 1 and objection 2 and objection 3:** The reply to the objections is clear from what has been said.

## Article 2

### Can an angel be in more than one place at the same time?

It seems that an angel can be in more than one place at the same time:

**Objection 1:** An angel does not have less power than a soul does. But the soul is able to be in more than one place at the same time, since, as Augustine says, it exists as a whole in each part of the body. Therefore, an angel can be in more than one place at the same time.

**Objection 2:** An angel exists in a body that he assumes, and when he assumes a continuous body, he seems to exist in each part of it. But diverse places are thought of as corresponding to the parts of the body. Therefore, an angel exists in more than one place at the same time.

**Objection 3:** Damascene says that angels exist where they operate. But as is clear in the case of the angel who destroyed Sodom (Genesis 19:25), sometimes an angel operates in more than one place at the same time. Therefore, an angel can exist in more than one place at the same time.

**But contrary to this:** Damascene says that when angels are in heaven, they are not on earth.

**I respond:** An angel has finite power and a finite essence. By contrast, God's power and essence are infinite, and He is a universal cause of all things; and so He touches all things by His power, and He exists not just in more than one place, but everywhere. By contrast, since an angel's power is finite, it extends only to a single determinate thing and not to all things. For whatever is related to a single power must be related to it as a single thing. Therefore, just as the totality of being is related to God's universal power as a single thing, so too a particular being is related as a single thing to an angel's power. Hence, since an angel exists in a place through the application of his power to that place, it follows that he is in just one place and not everywhere or even in more than one place.

However, certain authors have made a mistake about this. For some, unable to transcend the imagination, thought that an angel's indivisibility is like the indivisibility of a point, and hence they believed that an angel could exist only in a point-sized place (*in loco punctuali*).

However, they were manifestly mistaken. For a point is an indivisible that has a position, whereas an angel is an indivisible that is outside the genus of quantity and the genus of position. Hence, it is not necessary for an angel to be limited to a single indivisible place as far as his position is concerned; instead, his place may be either divisible or indivisible and either greater or smaller, depending upon whether he voluntarily applies his power to a bigger body or a smaller one. And so the whole body to which he is applied through his power is related to him as a single place.

And even if a given angel moves a celestial body, it is not necessary for him to be everywhere. For, first of all, his power is applied only to that which is primarily moved by him, and there is just one part of a celestial body, viz., the eastern part, in which the motion primarily exists. Hence, in *Physics* 8 the Philosopher likewise attributes the power of the mover of a celestial body to the eastern part. Second, philosophers do not hold that a single separated substance is an immediate mover of all the spheres. Thus, it is not necessary that the angel should be everywhere.

So, then, it is clear that place belongs in different ways to a body, to an angel, and to God. For a body exists in a place *circumscriptively* (*circumscriptive*), since it is measured by the place. An angel, on the other hand, does not exist in a place circumscriptively, since he is not measured by the place; instead, an angel exists in a place *definitively* (*definitive*), since he exists in one place in such a way that he does not exist in some other place. Finally, God exists in a place neither circumscriptively nor definitively, since He exists everywhere.

**Reply to objection 1 and objection 2 and objection 3:** The reply to the objections is easily seen from what has been said. For the whole to which an angel's power is immediately applied counts as his

single place, even if that whole is a continuum.

### Article 3

#### Can more than one angel be in the same place at the same time?

It seems that more than one angel can be in the same place at the same time:

**Objection 1:** The reason that not more than one body can be in the same place at the same time is that bodies fill their place. But angels do not fill their place, since, as is clear from the Philosopher in *Physics* 4, only a body fills a place in such a way that the place is not empty. Therefore, more than one angel can be in the same place at the same time.

**Objection 2:** An angel differs from a body more than two angels differ from one another. But an angel and a body can both be in the same place at the same time, since, as *Physics* 4 proves, there is no place that is not filled with a sensible body. Therefore, *a fortiori*, two angels can be in the same place.

**Objection 3:** According to Augustine, the soul exists in every part of the body. But demons, even if they do not penetrate minds, do sometimes penetrate bodies, and in such a case the soul and the demon are in the same place at the same time. By the same line of reasoning, then, any other spiritual substances can be in the same place at the same time.

**But contrary to this:** It is not the case that two souls exist in the same body. Therefore, by parity of reasoning, it is not the case that two angels are in the same place.

**I respond:** It is not the case that two angels are in the same place at the same time. The reason for this is that it is impossible for there to be two complete and immediate causes of one and the same thing. This is clear in every genus of cause. For instance, there is a single proximate form of a single thing; and there is a single proximate mover, even though there can be more than one remote mover. Nor is the case of several men dragging a boat a counterexample, since none of the men is a complete mover, given that the power of each of them is insufficient to move the boat. Rather, all of them together take the place of a single mover insofar as all their powers are brought together to produce a single movement.

Hence, since, as has been explained (a. 1), an angel is said to exist in a place by virtue of the fact that his power immediately touches the place in the manner of something that completely contains the place, there can be only one angel in a single place.

**Reply to objection 1:** As has been explained, what prevents there from being more than one angel in the same place has to do with something other than the filling of the place.

**Reply to objection 2:** An angel and a body are not in a place in the same way, and thus the argument does not go through.

**Reply to objection 3:** A demon and a soul are not related to a body by the same causal relation. For the soul is the form of the body, but the demon is not. Hence, the argument does not go through.

## QUESTION 53

### An Angel's Local Motion

The next thing to consider is the local motion of angels. On this topic there are three questions: (1) Can an angel have local motion? (2) Does an angel move from one place to another by passing through the middle? (3) Does an angel's motion take time (*est in tempore*) or is it instantaneous (*est in instanti*)?

#### Article 1

##### Can an angel have local motion?

It seems that an angel cannot have local motion (*moveri localiter*):

**Objection 1:** As the Philosopher proves in *Physics* 6, nothing without parts is moved. For when a thing is at a *terminus a quo*, it is not being moved; and, likewise, when it is at a *terminus ad quem*, it is not being moved but has by that time already been changed. Hence, it follows that everything that is moved is such that while it is being moved, it is partly at a *terminus a quo* and partly at a *terminus ad quem*. But an angel is without parts. Therefore, an angel cannot have local motion.

**Objection 2:** As *Physics* 3 explains, movement is an act of what is imperfect. But a beatified angel is not imperfect. Therefore, a beatified angel does not have local motion.

**Objection 3:** Movement exists only because of some need. But the holy angels have no such need. Therefore, the holy angels do not have local motion.

**But contrary to this:** A beatified angel's being moved is the same in nature as a beatified soul's being moved. But one must say that a beatified soul has local motion, since it is an article of the Faith that Christ descended into hell with respect to his soul. Therefore, a beatified angel has local motion.

**I respond:** A beatified angel can have local motion. However, just as *being in a place* belongs in different ways to a body and to an angel, so too with *being moved with respect to place*.

For a body exists in a place insofar as it is contained by that place and is measured by it. Hence, the local motion of a body must likewise be measured by place and satisfy its requirements. This is why the continuity of movement derives from the continuity of magnitude, and also why, as *Physics* 4 puts it, *before* and *after* in a body's local motion stems from *before* and *after* in a magnitude.

By contrast, an angel exists in a place not as a thing measured and contained by the place, but rather as a thing that contains the place. Hence, an angel's local motion need not be measured by its place, and it does not have to satisfy the requirements of place in the sense of deriving continuity from its place; instead, it is a non-continuous movement. For since, as has been explained (q. 52, a. 1), an angel exists in a place only by a contact of power, the angel's movement in place must be nothing other than his having diverse contacts with diverse places successively rather than simultaneously—for, as was explained above (q. 52, a. 2), an angel cannot be in more than one place at the same time—and successive contacts of this sort need not be continuous.

Still, it is possible for a sort of continuity to be found in these contacts. For, as has been explained (q. 52, a. 2), nothing prevents an angel from having a divisible place through contact with his power, just as a body has a divisible place through contact with its magnitude. Hence, just as a body leaves a place it previously occupied successively and not all at once, and just as there is continuity in its local motion because of this, so too an angel can successively leave a divisible place he previously occupied, and in that case his local motion will be continuous. Yet he is also able to leave the entire place all at once and apply himself all at once to some entirely different place, and in that case his movement will not be continuous.

**Reply to objection 1:** There are two respects in which this argument fails in what it intends to do.

First of all, Aristotle's demonstration has to do with a *quantitative* indivisible, and what corresponds to a quantitative indivisible is necessarily an indivisible place—something that cannot be said of an angel.

Second, Aristotle's demonstration has to do with continuous movement. For if the movement were not continuous, then one could claim that a thing is being moved both when it is at a *terminus a quo* and when it is at a *terminus ad quem*, since the very succession of diverse places with respect to the same thing would be called a movement (*quia ipsa successio diversorum ubi circa eandem rem motus diceretur*). Hence, whichever of the places the thing existed in, one could say that it was being moved. However, the continuity of the movement prevents this, since, as is obvious, nothing continuous exists in its terminus; for instance, a line does not exist in its endpoint (*linea non est in puncto*). And so that which is being moved must not be totally in either terminus while it is being moved; rather, it must be partly in the one terminus and partly in the other.

Therefore, to the extent that an angel's movement is non-continuous, Aristotle's demonstration does not prove what it intends to. On the other hand, to the extent that a given movement of an angel is posited as continuous, one can concede that while the angel is moving, he is partly in a *terminus a quo* and partly in a *terminus ad quem* (though the partialness in question has to do with the angel's place and not with his substance). For at the beginning of his continuous movement, the angel is in the whole divisible place from which he begins to move, whereas when he is in the very condition of moving, he is in a part of the first place, which he is leaving, and in a part of the second place, which he is taking possession of. And the reason why it belongs to the angel to be able to occupy parts of two places is that he is able to occupy a divisible place through the application of his power in just the way that a body is able to do so through the application of its magnitude. Hence, it follows in the case of a body movable with respect to place that it is divisible with respect to its magnitude, whereas it follows in the case of an angel that his power can be applied to something divisible.

**Reply to objection 2:** It is the movement of what exists in potentiality that is the act of what is imperfect. But a movement that occurs by an application of power belongs to what exists in actuality, since the power of a thing exists insofar as that thing is actual.

**Reply to objection 3:** The movement of what exists in potentiality occurs because of its own need, whereas the movement of what exists in actuality occurs not because of its own need, but because of the need of another. And in this sense an angel has local motion because of our need—this according to Hebrews 1:14 (“Are they not all ministering spirits, sent to minister for those who shall receive the inheritance of salvation?”).

## Article 2

### Does an angel pass through the middle in moving from one place to another?

It seems that an angel does not pass through the middle (*transeat per medium*) in moving from one place to another:

**Objection 1:** Everything that passes through the middle passes through a place equal to itself before passing through a greater place. But the place equal to an angel, who is indivisible, is a point-sized place. Therefore, if in his movement the angel passes through the middle, then he must number infinitely many points by his movement—which is impossible.

**Objection 2:** An angel is a more simple substance than our soul is. But our soul can pass in

thought from one endpoint to another without passing through the middle. For instance, I can think of France and afterwards of Syria without thinking at all about Italy, which lies between them. Therefore, *a fortiori*, an angel can pass from one endpoint to the other without passing through the middle.

**But contrary to this:** If an angel moves from one place to another, then when he is at the *terminus ad quem*, he is not moving but has already been changed. But every instance of having-being-changed is preceded by an instance of being-changed. Therefore, there was some place such that he was moving when he was there. But he was not moving when he was at the *terminus a quo*. Therefore, he was moving when he was in the middle. And so it must be that he passes through the middle.

**I respond:** As was explained above (a. 1), an angel's local motion can be either continuous or non-continuous.

If his motion is continuous, then the angel cannot move from one endpoint to the other without passing through the middle. For as *Physics 5* says, the middle is what a continuously changing thing arrives at before arriving at the last terminus (*ultimum*) into which it is changing. And, as *Physics 4* says, the ordering of *before* and *after* in a continuous movement corresponds to the ordering of *before* and *after* in a magnitude.

On the other hand, if the angel's movement is non-continuous, then it is possible for him to pass from one endpoint to the other without having passed through the middle. This is clear as follows:

Between any two end-places there are infinitely many places in the middle, regardless of whether these places are thought of as divisible or indivisible.

This is obvious in the case of *indivisible* places. For given any two points, there are infinitely many points in between them, since, as *Physics 6* proves, no two points follow one another without there being points in between them.

Moreover, it is still necessary to say this even in the case of *divisible* places. This is proved from the continuous motion of a given body. For a body does not move from one place to another unless this takes time. But in the whole time that measures the movement of the body one cannot designate two *nows* at which the moving body is not in two different places, since if it were in one and the same place at two *nows*, then it would be at rest in that place. For to be at rest is nothing other than to be in the same place both now and before now. Therefore, since there are infinitely many *nows* between the first *now* and the last *now* of the time that measures the motion, there must be infinitely many places between the first place, from which the movement begins, and the last place, at which the movement is terminated.

This is obvious even to the senses. For instance, let there be a body the size of the palm of one's hand, and let there be a path through which it passes that is the size of the two palms together. It is clear that the first place, from which the movement begins, is the size of the one palm, and that the place at which the movement is terminated is the size of the other palm. Now it is clear that when the body begins to move, it leaves the first palm little by little and enters the second palm. Therefore, to the extent that the palm's magnitude is divided, the places in the middle are multiplied, since any designated point in the magnitude of the first palm is the beginning of a place, and a determinate point in the magnitude of the other palm is the terminus of that same place. Hence, since the magnitude is divisible *ad infinitum*, and since, likewise, infinitely many points exist in potentiality in any magnitude, it follows that between any two places there are infinitely many places in the middle.

Now a movable thing completely covers (*consumit*) the infinitely many places in the middle only through the continuity of its movement. For just as the places in the middle are infinitely many in potentiality, so, too, in a continuous movement there is a certain infinity [of parts] in potentiality. Therefore, if the movement is not continuous, then all the parts of the motion will be numbered in actuality. Therefore, if any movable thing is moved by a non-continuous movement, it follows either that (a) it does not pass through all the places in the middle or that (b) it numbers the infinitely many middle places in actuality—which is impossible.

So, then, insofar as an angel's movement is non-continuous, he does not pass through all the places in the middle. Now this feature, viz., moving from one terminus to the other without passing through the middle, can befit an angel, but not a body. For a body is measured and contained by its place, and so it must follow the 'laws of place' in its movement (*oportet quod sequatur leges loci in suo motu*). By contrast, an angel's substance is not subject to a place as something contained by that place; instead, it is superior to a place as something that contains that place. Hence, it is within an angel's power to apply himself to a place in whichever way he wishes, either by passing through the middle or without passing through the middle.

**Reply to objection 1:** An angel's place is understood as equal not with respect to magnitude, but with respect to a contact of power, and so an angel's place can be divisible and is not always point-sized. Still, as has been explained, the places in the middle, even if they are divisible, are infinitely many—although, as is clear from what has been said, they are completely covered because of the continuity of the movement.

**Reply to objection 2:** When an angel moves in place, his essence is applied to diverse places. By contrast, the soul's essence is not applied to the things it thinks of; just the opposite, the things that are thought of exist in the soul. And so the arguments are not parallel.

**Reply to argument for the contrary:** In a continuous movement, the having-been-changed is not a part of the being-moved, but is instead the terminus of the being-moved. Hence, the being-moved must precede the having-been-changed. And so such a movement must go through the middle.

By contrast, in a non-continuous movement, the having-been-changed counts as a part of the being-moved, in the way that *one* counts as a number (*sicut unitas est pars numeri*). Hence, such a movement is constituted by the very succession of diverse places, even without the middle.

### Article 3

#### Is an angel's movement instantaneous?

It seems that an angel's movement is instantaneous (*in instanti*):

**Objection 1:** The stronger the mover's power is, and the less resistant the movable thing is to the mover, the faster the movement is. But the power of an angel who is moving himself exceeds any power that moves a body in such a way that there is no proportion between them. Now the proportion among velocities has to do with a decrease in the time, and every time has a proportion to every other time. Therefore, if a body's movement takes time (*movetur in tempore*), then an angel moves instantaneously (*movetur in instanti*).

**Objection 2:** An angel's movement is more simple than any corporeal change. But some corporeal changes are instantaneous—e.g., illumination, both because a thing is not illuminated progressively (*successive*) in the way that a thing becomes hotter progressively, and also because a ray of light does not reach what is closer prior to reaching what is farther away. Therefore, *a fortiori*, an angel's movement is instantaneous.

**Objection 3:** If an angel takes time to move from place to place, then it is clear that at the last instant of that time he is at the *terminus ad quem*, whereas for the whole of the preceding time he is either (a) in the immediately preceding place, which we are taking to be the *terminus a quo*, or (b) partly in the one place and partly in the other. But if he is partly in the one place and partly in the other, then it follows that he has parts—which is impossible. Therefore, in the whole of the preceding time he is at the *terminus a quo*. Therefore, he is at rest there, since, as was explained above (a. 2), to be at rest is to be in

the same place now and before now. And so it follows that he is moving only at the last instant of the time in question.

**But contrary to this:** In every change there is a *before* and an *after*. But the *before* and *after* of a movement are numbered by time. Therefore, every movement—even an angel’s movement—takes time, since there is a *before* and an *after* in that movement.

**I respond:** Some have claimed that an angel’s local motion is instantaneous. For they maintained that when an angel moves from one place to another, the angel is at the *terminus a quo* for the whole preceding time, whereas he is at the *terminus ad quem* at the last instant of that time. And there does not have to be any middle between the two termini, just as there is no middle between the preceding time and the terminus of that time. However, between any two *nows* of time, there is time in the middle, and so they claim that there is no last *now* at which the angel was at the *terminus a quo*—just as in illumination (or in the substantival generation of a fire) there is no last instant at which the air was dark (or at which the matter had the privation of the form of fire), but instead there is a last temporal interval (*ultimum tempus*) such that at the last instant of that temporal interval (*in ultimo illius temporis*) there is light in the air (or the form of fire in the matter). And it is in this sense that illumination and substantival generation are called instantaneous movements.

However, this example is out of place in the present discussion. This is shown as follows:

It is part of the nature of rest that what is at rest is in the same condition now as it was before now, and so a thing at rest is in the same condition at every *now* of the time that measures the rest, whether it be the first *now* of that time, a *now* in the middle, or the last *now*. By contrast, it is part of the nature of movement that what is moving is different now from the way it was before now, and so at each of the *nows* of the time that measures the movement, the movable thing is in a different condition (*in alia et alia dispositione*), and so at the last *now* it must have a form that it did not have before that *now*. And so it is clear that to be at rest for the whole time in a given condition, e.g., the condition of being white, is to be in that condition at each instant of that time; and thus it is not possible for something to be at rest in one terminus for the whole preceding time and then to be in the other terminus at the last instant of that time. On the other hand, this is indeed possible in the case of a movement, since to be moved for some entire time is not to be in the same condition in any [two] instants of that time. Therefore, every instantaneous change of the sort in question is the terminus of a continuous movement. For instance, generation is the terminus of the alteration of the matter, and illumination is the terminus of the local motion of the illuminating body.

By contrast, an angel’s local motion is not the terminus of any other continuous movement, but exists on its own (*per seipsum*) without depending on any other movement. Hence, it is impossible to claim that the angel is in one place for the whole time and in another place at the last *now*. Instead, one must designate a *now* at which he was last in the preceding place. But where there are many *nows* succeeding one another, there must be time, since time is nothing other than the numbering of *before* and *after* in a movement. Hence, it follows that an angel’s movement takes time—a continuous time if his movement is continuous, and a non-continuous time if his movement is non-continuous. (As has been explained (a. 1), an angel’s movement can be of either type.) For as *Physics* 4 says, the continuity of time derives from the continuity of movement. But the time in question, regardless of whether or not it is continuous, is not the same as the time which measures the movement of the heavens and by which all corporeal things that have mutability because of the movement of the heavens are themselves measured. For an angel’s movement does not depend on the movement of the heavens.

**Reply to objection 1:** If the time of the angel’s movement is not continuous, but is instead a certain succession of the *nows* themselves, then it will not be proportionate to the time that measures the movement of corporeal things, which is continuous. For the time of the angel’s movement will not be of the same nature (cf. q. 10, a. 5).

On the other hand, if the time of the angel's movement is continuous, then it is, to be sure, proportionate, not because of a proportion between the mover and what is moved, but rather because of a proportion between the magnitudes in which the movement exists. Furthermore, the velocity of the angel's movement does not stem from the quantity of his power; instead, it stems from the determination of his will.

**Reply to objection 2:** Illumination is the terminus of a movement. Moreover, it is an alteration—and it is not a local motion in which the light might be thought of as moving to what is closer before moving to what is farther away. By contrast, an angel's movement is a local motion and is not the terminus of any movement. Hence, the two cases are not parallel.

**Reply to objection 3:** This objection proceeds on the assumption that time is continuous. However, the time of an angel's movement can be non-continuous. And so it is possible for an angel to be in one place at one instant and in another place at another instant without there being any time in the middle (cf. q. 10, a. 5).

On the other hand, if the time of the angel's movement is continuous, then, as was explained above (a. 2), in the whole of the time preceding the last *now*, the angel goes through infinitely many places. And yet he is partly in one of the continuous places and partly in the other—not because his substance can have parts, but because, as was also explained above (a. 1), his power is applied to a part of the first place and a part of the second place.

## QUESTION 54

### An Angel's Cognition

Now that we have considered what pertains to an angel's substance, we must proceed to his cognition. This consideration will have four parts: we must consider, first, an angel's cognitive power (question 54); second, those matters that have to do with the medium of his knowing (question 55); third, the things known by him (questions 56-57); and, fourth, the mode of his cognition (question 58).

On the first topic there are five questions: (1) Is an angel's act of understanding the same as his substance? (2) Is an angel's *esse* the same as his act of understanding? (3) Is an angel's substance the same as his intellective power? (4) Is an angel's intellect both active and passive? (5) Is there any cognitive power in angels besides the intellect?

#### Article 1

##### Is an angel's act of understanding the same as his substance?

It seems that an angel's act of understanding (*intelligere*) is his substance:

**Objection 1:** An angel is more sublime and more simple than the soul's active intellect. But as is clear from Aristotle and his Commentator in *De Anima* 3, the substance of the active intellect is its own action. Therefore, *a fortiori*, an angel's substance is his own action, viz., his act of understanding.

**Objection 2:** In *Metaphysics* 12 the Philosopher says that the intellect's action is its life. But since, as *De Anima* 2 puts it, to live (*vivere*) is what it is to be (*esse*) for living things, it seems that their life is their essence. Therefore, the intellect's action is the essence of the angel who is doing the understanding.

**Objection 3:** If the termini are the same, then what is in the middle between them does not differ from them, since the one terminus is more distant from the other terminus than the middle is. But in an angel the intellect is the same as what is understood, at least insofar as he understands his own essence. Therefore, the act of understanding, which lies in the middle between the intellect and the thing understood, is the same as the substance of the angel who is doing the understanding.

**But contrary to this:** A thing's action differs from its substance more than its *esse* itself differs from its substance. But no created entity is such that its *esse* is its substance, since, as is clear from what was said above (q. 3, a. 4 and q. 44, a. 1), this is proper to God alone. Therefore, it is not the case for an angel, or for any other creature, that its action is its substance.

**I respond:** It is impossible for the action of an angel or of any other creature to be its substance.

For an action is, properly speaking, the actualization of a power (*actualitas virtutis*), just as *esse* is the actualization of a substance or essence (*actualitas substantiae vel essentiae*). But it is impossible for anything which has an admixture of potentiality and which is not pure actuality to be its own actualization, since actualization is incompatible with potentiality. But God alone is pure actuality. Hence, it is only in the case of God that His substance is His *esse* and His acting (*agere*).

Furthermore, if an angel's act of understanding (*intelligere*) were his substance, then the angel's act of understanding would have to be subsistent. But there can be only one subsistent act of understanding, just as there could be only one abstract subsistent [whiteness] (cf. q. 7, a. 1 and q. 41, a. 6). Hence, an angel's substance would not be distinct either (a) from God's substance, which is His subsistent act of understanding itself, or (b) from the substance of any other angel.

Again, if an angel himself were his own act of understanding, then there could not be gradations with respect to more perfect and less perfect understanding, since these gradations occur because of the diverse degrees of participation had by the act of understanding itself.

**Reply to objection 1:** When the active intellect is said to be its own action, the predication is not an essential predication (*per essentiam*), but one of concomitance (*per concomitantiam*). For when the active intellect's substance exists in actuality, then insofar as it exists in itself, its action is immediately concomitant with it. This is not the case with the passive intellect, since it has actions only after it has been brought into act.

**Reply to objection 2:** The relation between *a life (vita)* and *to live (vivere)* is not like the relation between *an essence (essentia)* and *to be (esse)*, but it is rather like the relation between *a run (cursus)* and *to run (currere)*, the former signifying the relevant act abstractly and the latter signifying it concretely. Hence, it does not follow that if to live is what it is to be for some entity, then its life is its essence.

However, 'life' is sometimes used for an essence, as when Augustine says in *De Trinitate* that "memory and intelligence and will are one essence, one life." But this is not what the Philosopher means when he says that the intellect's action is its life.

**Reply to objection 3:** An action that passes into an extrinsic thing is in reality a middle ground between the agent and the subject that receives the action. By contrast, an action that remains in the agent is not in reality a middle ground between the agent and the object; instead, it is a middle ground only in the mode of signifying, whereas in reality it *follows upon* the union of the object with the agent. For from the fact that the thing understood is one with that which understands it, the act of understanding follows like an effect that differs from them both.

## Article 2

### Is an angel's act of understanding the same as his *esse*?

It seems that an angel's act of understanding is his *esse*:

**Objection 1:** As *De Anima 2* says, to live (*vivere*) is what it is to be (*esse*) for living things. But as it says in the same place, to understand intellectually (*intelligere*) is a certain way of living. Therefore, an angel's act of understanding is his *esse*.

**Objection 2:** One effect is related to another in the way that the cause of the one is related to the cause of the other. But the form through which an angel exists is the same as the form through which he understands at least himself. Therefore, his act of understanding is the same as his *esse*.

**But contrary to this:** As is clear from *De Divinis Nominibus*, chap. 4, an angel's act of understanding is his motion (*motus*). But *esse* is not a motion. Therefore, an angel's *esse* is not his act of understanding.

**I respond:** The action of an angel is not his *esse*; nor is the action of any other creature its *esse*.

For as *Metaphysics 9* says, there are two kinds of action. The first kind of action is that which passes into something external, bringing with it an instance of being acted upon (*passio*)—e.g., setting fire to something or cutting something. The second kind of action is that which does not pass into an external thing but remains within the agent himself—e.g., sensing, intellectual understanding, and willing. In this kind of action nothing external is changed; rather, everything takes place within the agent himself.

It is clear, then, that the first kind of action cannot be the agent's very *esse*. For the agent's *esse* is signified as being within the agent, whereas this kind of action is the agent's flowing forth into the thing that is acted upon.

On the other hand, the second kind of action has by its nature a certain unlimitedness (*infinitas*),

either absolutely speaking or relatively speaking:

(a) The act is unlimited, *absolutely speaking*, in the case of an act of understanding, whose object is the true, or an act of willing, whose object is the good, where both *true* and *good* are convertible with *being*. And so an act of understanding or an act of willing, taken just by itself, is related to all things, and it receives its species from its object.

(b) The act is unlimited, *relatively speaking*, in the case of an act of sensing, which is related to all sensible things; for instance, the act of seeing is related to all visible things.

However, the *esse* of each creature is limited to a single genus and species. It is the *esse* of God alone that is absolutely unlimited (*infinitum*), comprehending all things within itself, as Dionysius puts it in *De Divinis Nominibus*, chap. 5. Hence, it is only God's *esse* that is His act of understanding and His act of willing.

**Reply to objection 1:** 'To live' is sometimes taken for the very *esse* of a living thing and sometimes taken for an operation associated with life, i.e., an operation through which it is demonstrated that something is alive. It is in this latter sense that the Philosopher says that to understand is a certain way of living. For in that place he is distinguishing the different grades of living things according to the different life functions.

**Reply to objection 2:** An angel's essence itself exhausts the nature of his entire *esse*, but does not itself exhaust the nature of his whole act of understanding, since he cannot understand all things through his essence. And so it is according to his proper nature, i.e., insofar as his essence is such-and-such, that he is related to the *esse* itself of an angel, whereas he is related to his act of understanding according to the nature of a more universal object, viz., *true* or *being*.

From this it is clear that even though the form is the same in both cases, it is not a principle of being in the same way in which it is a principle of understanding. For this reason, it does not follow that in an angel the *esse* is the same as the act of understanding.

### Article 3

#### Is an angel's intellectual power or potentiality distinct from his essence?

It seems that an angel's intellectual power or potentiality is not distinct from his essence:

**Objection 1:** 'Mind' and 'intellect' are names of the intellectual power. But in many places in his books Dionysius calls the angels themselves minds and intellects. Therefore, an angel is his own intellectual potentiality.

**Objection 2:** If an angel's intellectual potentiality is something over and beyond his essence, then it has to be an accident; for what we call an accident of a thing is something over and beyond its essence. But as Boethius says in *De Trinitate*, a simple form cannot be a subject. Therefore, an angel would not be a simple form—which is contrary to what was established above (q. 50, aa. 1 and 2).

**Objection 3:** In *Confessiones* 12 Augustine says that God made the angelic nature close to Himself, whereas He made primary matter close to nothingness. From this it seems to follow that an angel is more simple than primary matter is, given that he is closer to God. But primary matter is its own potentiality. Therefore, *a fortiori*, an angel is his own intellectual potentiality.

**But contrary to this:** In *De Caelesti Hierarchia*, chap. 11, Dionysius says that angels "are divided into substance, power, and operation." Therefore, the substance in them is one thing, the power or potentiality another thing, and the operation still another thing.

**I respond:** It is not true either of an angel or of any other creature that its operative power or

potentiality is the same as its essence. This is clear as follows:

Since ‘power’ or ‘potentiality’ is predicated with respect to an act, there must be a diversity of potentialities with respect to diverse acts, and because of this it is said that a thing’s proper act corresponds to its proper potentiality. Now as is clear from what was said above (a. 1 and 2, and q. 3, a. 4, and q. 44, a. 1), every created thing is such that its essence differs from its *esse* and is related to its *esse* as potentiality is related to actuality. But the act to which an operative potentiality is related is an operation. Now the act of understanding in an angel is not the same as his *esse*; nor is any other operation, either in an angel or in any other created thing, the same as the thing’s *esse*. Hence, an angel’s essence is not his intellective potentiality; nor is the essence of any created thing its operative potentiality.

**Reply to objection 1:** The reason that an angel is called an intellect or a mind is that all of its cognition is intellective cognition. By contrast, the [human] soul’s cognition is partly intellective and partly sentient.

**Reply to objection 2:** A simple form that is pure actuality cannot be the subject of any accident, since a subject is related to its accidents as potentiality is related to actuality. God alone is a simple form of this first sort, and it is this sort of form that Boethius is talking about in the cited passage.

By contrast, a simple form which is not its own *esse*, but which instead is related to its *esse* as potentiality is related to actuality, can be the subject of an accident—especially of an accident that follows upon its species, since this type of accident pertains to the form (whereas an accident that belongs to an individual and does not follow upon the whole species follows upon the matter, which is the principle of individuation). An angel is a simple form of this second sort.

**Reply to objection 3:** The potentiality of primary matter is a potentiality for substantial *esse* itself. However, an operative potentiality is a potentiality for accidental *esse* and not substantial *esse*. Hence, the two cases are not parallel.

#### Article 4

##### Is an angel’s intellect both active and passive?

It seems that in an angel the intellect is both active (*agens*) and passive (*possibilis*):

**Objection 1:** In *De Anima* 3 the Philosopher says, “Just as in every nature there is something by which it can become all things and something by which it can constitute all things, so too it is with the soul.” But an angel is a certain nature. Therefore, in an angel the intellect is both active and passive.

**Objection 2:** As is clear from *De Anima* 3, to receive is proper to the passive intellect, whereas to illuminate is proper to the active intellect. But an angel receives illumination from a higher angel and illuminates a lower angel. Therefore, in him the intellect is both active and passive.

**But contrary to this:** In us the intellect is active and passive in relation to phantasms, which, as is clear from *De Anima* 3, are related (a) to the *passive* intellect in the way that colors are related to sight and (b) to the *active* intellect in the way that colors are related to light. But this is not the case with an angel. Therefore, in an angel the intellect is not both active and passive.

**I respond:** It was necessary to posit a *passive* intellect in us because we are sometimes understanding in potentiality and not in actuality. Hence, there must be a power which (a) is in potentiality with respect to intelligible things before the act of intellective understanding itself and which (b) is actualized with respect to those things when it comes to apprehend (*sciens*) them and, further, when it comes to inquire into (*considerans*) them. This power is called the passive intellect.

On the other hand, it was necessary to posit an *active* intellect in us because the natures of the material things that we understand intellectually do not subsist outside the soul as *actually* immaterial and intelligible; rather, they exist outside the soul only as *potentially* intelligible. And so there had to be a power that would render those natures actually intelligible. This power is called the active intellect in us.

Neither of these necessities is present in the angels. For it is not the case that they sometimes understand only in potentiality the things that they naturally understand, and it is not the case that the things they understand are intelligible only in potentiality and not in actuality. For as will become clear below (q. 56), they principally and primarily understand immaterial things. And so in angels there cannot be an active intellect or passive intellect, except by equivocation.

**Reply to objection 1:** As the words themselves clearly indicate, the Philosopher means that these two features exist in every nature in which it is possible for something to be generated or effected. However, in an angel knowledge is not generated (*non generatur scientia*), but is instead naturally present. Hence, it is not necessary to hold that the intellect is active and passive in them.

**Reply to objection 2:** The role of the agent intellect is not to illuminate another being who himself has understanding; rather, it is to 'illuminate' *things* that are potentially intelligible, and it does this by rendering them actually intelligible through abstraction. On the other hand, it is the role of the passive intellect (a) to be in potentiality with respect to things that are naturally knowable (*respectu naturalium cognoscibilium*) and (b) sometimes to be brought into act.

Hence, the fact that one angel illuminates another has nothing to do with the notion of the active intellect. Nor is it relevant to the notion of the passive intellect that an angel is illuminated about supernatural mysteries which he at some point is in potentiality to knowing. Still, if someone insists on calling this an active and passive intellect, then he will be speaking equivocally and we should not fuss over the names.

## Article 5

### Is there just intellectual cognition in angels?

It seems that there is not just intellectual cognition in angels:

**Objection 1:** In *De Civitate Dei* 8 Augustine says angels have a life of understanding and sensing. Therefore, there is a sentient power in angels.

**Objection 2:** Isidore says that angels have learned many things through experience. But as *Metaphysics* 1 says, experience comes from many memories. Therefore, there is also a power of memory in angels.

**Objection 3:** In *De Divinis Nominibus*, chap. 4, Dionysius says that in the demons there are perverted fantasies. But fantasies pertain to the power of imagination. Therefore, there is a power of imagination in the demons, and for the same reason in the angels, since they have the same nature as the demons.

**But contrary to this:** In his homily for the feast of the Ascension Gregory says that man senses with the brutes and thinks with the angels.

**I respond:** In our soul there are certain powers whose operations are exercised through corporeal organs, and powers of this sort are acts of certain parts of the body; for instance, the act of seeing is in the eye, and the act of hearing is in the ear. On the other hand, there are powers of our soul, e.g., intellect and will, whose operations are not exercised through corporeal organs, and these are not acts of any part

of the body.

Now as is clear from what was said above (q. 51, a. 1), angels do not have bodies naturally united to them. Hence, the only powers of the soul that can belong to them are intellect and will. The Commentator likewise says in *Metaphysics* 12 that separated substances are divided into intellect and will. Furthermore, it befits the order of the universe that the highest intellectual creature should be completely intellective—and not just partly intellective, as our soul is. As was pointed out above (a. 3), this is why angels are called intellects and minds.

**Reply to the objection 1 and objection 2 and objection 3:** There are two possible replies to the objections in support of the contrary position.

First, one can reply that these passages are talking in accord with the opinion of those who had claimed that angels and demons have bodies naturally united to them. Augustine often makes use of this opinion in his books, even though he does not mean to assert it. Hence, in *De Civitate Dei* 21 he says that one should not spend much effort on this inquiry.

Second, one can reply that these and similar passages are to be interpreted according to certain likenesses.

For instance, since the senses apprehend their proper sensibles with certitude, we are likewise commonly said to ‘have a strong feeling’ (*sentit*) about what is apprehended with certitude by the intellect. This is also called ‘a strong sentiment’ (*sententia*).

Again, ‘experience’ can be attributed to the angels because of a likeness in the things that are known, even if not because of a likeness in the relevant cognitive power. For we ourselves have experience when we know singular things through sensation, whereas Angels likewise know singular things, though not through sensation, as will become clear below (q. 57, a. 2). And yet memory can be posited in the angels to the extent that Augustine posits memory in the mind—even though memory cannot belong to them insofar as it is posited as a part of the sentient soul.

Similarly, one should say that ‘perverted fantasies’ are attributed to the demons in virtue of the fact that they have a false practical estimation of the true good, while in our case deception properly arises from the imagination, because of which we sometimes cling to the likenesses of things as if they were the things themselves, as is clear in the case of people who are dreaming or hallucinating.

## QUESTION 55

### The Medium of Angelic Cognition

The next thing to ask about is the medium of angelic cognition. On this topic there are three questions: (1) Do angels have cognition of all things through their own substance or through intelligible species? (2) If they have cognition through intelligible species, are these species connatural to them, or are they instead received from the things themselves? (3) Do higher angels have cognition through species that are more universal than those of lower angels?

#### Article 1

##### Do angels have cognition of all things through their own substance?

It seems that angels have cognition of all things through their own substance:

**Objection 1:** In *De Divinis Nominibus*, chap. 7, Dionysius says that angels know the things that exist on earth through the proper nature of their mind. But an angel's nature is his essence. Therefore, an angel has cognition of these things through his own essence.

**Objection 2:** According to the Philosopher in *Metaphysics* 12 and *De Anima* 3, in things which exist without matter, the intellect is the same as that which is understood. But that which is understood is the same as the one who understands it by reason of that by which it is understood. Therefore, in things, like the angels, which exist without matter, that by which things are understood is the very substance of the one who understands.

**Objection 3:** Everything that exists in another exists in it according to the mode of that in which it exists. But an angel has an intellective nature. Therefore, whatever exists in an angel exists in him in an intelligible mode (*per modum intelligibilem*). But all things exist in an angel, since among beings the lower ones exist in the essence of the higher ones, whereas the higher ones exist in the lower ones by participation; this is why Dionysius says in *De Divinis Nominibus*, chap. 4, that God gathers together the whole within the whole, i.e., all things in all things. Therefore, an angel has cognition of all things in his own substance.

**But contrary to this:** In the same chapter Dionysius says that angels are illuminated by the notions of things (*rationes rerum*). Therefore, they have cognition of things through these notions and not through their own substance.

**I respond:** That by which an intellect understands is related to the understanding intellect as its form, since a form is that by which an agent acts. But in order for a power to be brought to complete fulfillment by a form, all the things to which that power extends must be contained under that form. Hence, the reason why among corruptible things the form does not bring the matter's potentiality to complete fulfillment is that the matter's potentiality extends to more things than are contained under this or that form.

Now an angel's intellective power extends to the understanding of all things, since the object of an intellect is *being* or *true* in general. But an angel's essence does not include all things within itself, since it is an essence limited to a genus and a species. Rather, it is proper to God's essence, which is unlimited, that it should perfectly comprehend all things within itself, absolutely speaking. And so God alone has cognition of all things through His essence. By contrast, an angel cannot have cognition of all things through his essence; rather, his intellect must be brought to fulfillment by intelligible species in order for him to have cognition of things.

**Reply to objection 1:** When it is said that an angel has cognition of things through his own nature, the word 'through' is referring not to the medium of cognition, which is a likeness of the thing known,

but rather to the cognitive power that belongs to an angel by his nature.

**Reply to objection 2:** Just as, according to *De Anima* 3, a sense organ in act is the sensible thing in act—not in the sense that the sentient power is itself the very likeness of the sensible thing that exists in the sense organ, but rather in the sense that something unified is fashioned from the likeness and the organ as from an actuality and a potentiality—so, too, the intellect in act is said to be the thing understood in act—not because the substance of the intellect is itself the very likeness through which it understands, but because that likeness is the form of the intellect. Now to say that in those things which exist without matter, the intellect is the same as what is understood is just to say that the intellect in act is the thing understood in act, since it is by virtue of being immaterial that a given thing is actually being understood.

**Reply to objection 3:** Both the things that stand lower than an angel and the things that stand higher than him exist in some sense in his essence—not, to be sure, perfectly or according to their proper notion (*secundum propriam rationem*), since an angel's essence is limited and thus distinct from other things through its proper notion, but rather according to a certain general notion (*secundum quendam rationem communem*).

By contrast, in God's essence all things exist perfectly and according to their proper notion (*sunt omnia perfecte et secundum propriam rationem*) as in the first and universal operative power from which proceeds whatever exists, be it proper or common, in any entity. And so God has a proper cognition of all things through His essence, but an angel has only a common cognition of all things through his essence and not a proper cognition.

## Article 2

### Do angels understand things through intelligible species received from the things themselves?

It seems that angels understand things through intelligible species received from the things themselves:

**Objection 1:** Everything that is understood is understood by means of some likeness of itself that exists in the one who understands. But a thing's likeness existing in another exists in that other either (a) in the manner of an *exemplar* (*per modum exemplaris*), so that the likeness is a cause of the thing in question, or (b) in the manner of an *image* (*per modum imaginis*), so that it is caused by that thing. Therefore, all the knowledge had by the one who understands must either be a cause of the thing that is understood or be caused by that thing. But an angel's knowledge is not a cause of the things that exist in nature; only God's knowledge is (cf. q. 14, a. 8). Therefore, the intelligible species by means of which the angelic intellect understands things must be received from the things themselves.

**Objection 2:** An angel's intellectual light is stronger than the light of the active intellect in the soul. But the active intellect's light abstracts intelligible species from phantasms. Therefore, the light of an angel's intellect can likewise abstract intelligible species from sensible things themselves. And so there is nothing to prevent one from claiming that an angel understands things through intelligible species received from the things themselves.

**Objection 3:** The intelligible species that exist in the intellect are related in exactly the same way to what is present and to what is distant, except to the extent that they are being received from the sensible things themselves. Therefore, if an angel did not understand things by means of intelligible species received from the things themselves, then his cognition would be related in exactly the same way both to nearby things and to distant things, and so local motion would be utterly pointless for him.

**But contrary to this:** In *De Divinis Nominibus*, chap. 7, Dionysius says, “The angels do not gather their divine knowledge from divisible or sensible things.”

**I respond:** The intelligible species by which angels understand things are not received from the things themselves; instead, they are connatural to the angels.

For the distinction and ordering among spiritual substances must be thought of in the same way as the distinction and ordering among corporeal substances. Now the highest bodies have a potentiality in their nature that is brought to total fulfillment by their form. By contrast, among lower bodies the potentiality of the matter is not brought to total fulfillment by the form; instead, the matter receives now one form from an agent and now another form. Similarly, the lower intellectual substances, viz., human souls, have an intellectual potentiality that is not naturally fulfilled, but is instead brought to fulfillment gradually in them by their reception of intelligible species from the things themselves. By contrast, the intellectual potentiality of the higher spiritual substances, i.e., angels, is naturally fulfilled through their intelligible species because they have connatural intelligible species for understanding all the things that they can have natural knowledge of.

This same point is also clear from the very mode of being had by substances of these types. For the lower spiritual substances, viz., souls, have *esse* that has an affinity for a body, since they are the forms of bodies. And so because of their mode of being they attain their intellectual fulfillment from bodies and through bodies; otherwise, it would be pointless for them to be united to bodies. By contrast, the higher substances, i.e., angels, are totally unconnected with bodies, since they subsist immaterially and in intelligible *esse*. And so they attain their intellectual fulfillment from the intelligible outpouring through which they receive from God, along with their intellectual nature, intelligible species of the things they have cognition of. Hence, in *Super Genesim ad Litteram 2* Augustine says, “The other beings that are lower than the angels are created in such a way that they first come to exist in a rational creature’s cognition and then come to exist in their own nature.”

**Reply to objection 1:** The likenesses of creatures in the mind of an angel are received not from the creatures themselves, but from God, who is the cause of creatures and in whom the likenesses of things primarily exist. Hence, in the same book Augustine says, “Just as the idea through which a creature is made exists in the Word of God before the creature itself is made, so too a cognition of that same idea first exists in an intellectual creature, and then there is the creation itself of the creature.”

**Reply to objection 2:** In going from one endpoint to the other, one must pass through the middle. The *esse* of forms in the imagination, which is without matter but not without material conditions, lies in the middle between (a) the *esse* of the forms that exist in matter and (b) the *esse* of the forms that exist in the intellect through abstraction from matter and from material conditions. Hence, however powerful an angel’s intellect might be, it could not give material forms intelligible *esse* unless it first gave them the *esse* of forms in the imagination. But this is impossible, since, as was explained above (q. 54, a. 5), an angel does not have imagination.

And even if we granted that an angel could abstract intelligible species from material things, he would not abstract them in any case, since he would not need them, given that he has connatural intelligible species.

**Reply to objection 3:** An angel’s cognition is related in exactly the same way to things that are distant with respect to place and to things that are nearby. But it does not follow that an angel’s local motion is pointless. For he moves to a place not in order to find something out, but in order to do something in that place.

### Article 3

#### Do higher angels understand things through intelligible species that are more universal than those had by lower angels?

It seems not to be the case that higher angels understand things through intelligible species that are more universal than those had by lower angels:

**Objection 1:** A universal, it seems, is what is abstracted from particulars. But angels do not understand things through intelligible species abstracted from the things themselves. Therefore, one cannot claim that the intelligible species of an angel's intellect are either more or less universal.

**Objection 2:** What is known in a specific way (*in speciali*) is known more perfectly than what is known in a universal way (*in universali*), since to know in a universal way in some sense lies between potentiality and actuality. Therefore, if higher angels have cognition of things through forms that are more universal than those had by lower angels, it follows that higher angels have a knowledge that is more imperfect than that of lower angels—which is absurd.

**Objection 3:** One and the same thing cannot be a proper notion (*propria ratio*) of many diverse things. But if a higher angel knows through a single universal form (*per unam formam universalem*) diverse things that a lower angel knows through several more specific forms (*per plures formas speciales*), then it follows that the higher angel is using a single universal form to know diverse things. Therefore, he could not have a proper cognition of both things—which seems absurd.

**But contrary to this:** In *De Caelesti Hierarchia*, chap. 12, Dionysius says that higher angels have a greater participation in universal knowledge than lower angels do. And the *Liber de Causis* says that higher angels have forms that are more universal.

**I respond:** The reason that some beings are higher is that they are closer and more similar to the one first being, viz., God. But in God the whole plenitude of intellectual cognition is contained in a single thing, viz., the divine essence, through which God knows all things. Now in created intellects this sort of intellectual plenitude is found in an inferior and less simple way. Hence, what God knows through one thing, lower intellects must know through many; and the lower the intellect is, the more things it knows them through. So, then, to the extent that an angel is higher, he is able to apprehend the universe of intelligible things through fewer intelligible species. And so his forms must be more universal, with each of them extending, as it were, to many intelligible things.

An example of this can be seen to some extent in our own case. For there are some people who cannot grasp an intelligible truth unless it is explained to them piece by piece through separate steps, and this is so because of the weakness of their intellect. By contrast, others who have a stronger intellect can grasp many things on the basis of a few.

**Reply to objection 1:** It is accidental to a universal that it should be abstracted from singulars; this happens insofar as the intellect that knows it receives its cognition from the things themselves. However, if there is an intellect that does not receive its cognition from the things themselves, then the universal as known by that intellect will not be abstracted from the things, but will in some way exist prior to the things—either (a) prior in the order of *causality*, in the way that the universal notions of things are contained in the Word of God, or at least (b) prior in the order of *nature*, in the way that the universal notions of things exist in the angelic intellect.

**Reply to objection 2:** There are two senses of 'to know something in a universal way (*in universali*)'.

The first sense, which has to do with *the thing that is known*, is that only the universal nature of that thing is known. And to know something in a universal way in this sense is less perfect. For instance,

someone would know a man less perfectly if all he knew about him was that he is an animal.

The second sense has to do with *the medium of knowing*. And in this sense it is more perfect to know something in a universal way. For if an intellect is able to know proper singulars through a single universal medium, then it is more perfect than an intellect that cannot do this.

**Reply to objection 3:** One and the same thing cannot be a *precisely equal* proper notion (*propria ratio adaequata*) of many things. However, if it *exceeds* them, then one and the same thing can be taken as a proper notion and likeness of many things.

For instance, in man there is such a thing as universal prudence (*universalis prudentia*) with respect to *all* acts of virtue, and this universal prudence can be taken as a proper notion and likeness of the particular sort of prudence that exists in a lion with respect to acts of magnanimity and of the particular sort of prudence that exists in a fox with respect to acts of caution, etc.

In the same way, because of its excellence, God's essence is taken as a proper notion of each thing, since it contains within itself that by reason of which each thing is assimilated to it in keeping with its proper notion. In the same way, one should say about a universal notion that exists in the mind of an angel that, because of its excellence, many things can be known through it by a proper cognition.

## QUESTION 56

### An Angel's Cognition of Immaterial Things

The next thing to ask about is the cognition of angels as regards the things that they have cognition of. We ask, first, about their cognition of immaterial things (question 56) and, second, about their cognition of material things (question 57).

On the first topic there are three questions: (1) Does an angel have cognition of himself? (2) Does one angel have cognition of another? (3) Does an angel have cognition of God through his natural powers (*per sua naturalia cognoscat Deum*)?

#### Article 1

##### Does an angel have cognition of himself?

It seems that an angel does not have cognition of himself (*seipsum non cognoscat*):

**Objection 1:** In *De Caelesti Hierarchia*, chap. 6, Dionysius says that angels “are unaware of their own powers.” But when a substance is known, its powers are known. Therefore, an angel does not have cognition of his own essence.

**Objection 2:** An angel is a certain sort of singular essence; otherwise, he would not act, since actions belong to singular subsistent things. But no singular thing is intelligible. Therefore, it cannot be understood intellectually (*non potest intelligi*). And so, since an angel has only intellectual cognition, no angel can have cognition of himself.

**Objection 3:** An intellect is moved by an intelligible thing, since, as *De Anima* 3 puts it, to understand intellectually is a certain way of being acted upon. But nothing is moved or acted upon by itself, as is clear in the case of corporeal things. Therefore, an angel cannot understand himself intellectually.

**But contrary to this:** In *Super Genesim ad Litteram* 2 Augustine says that an angel “had cognition of himself as soon as he was fashioned, i.e., illuminated by the truth.”

**I respond:** As is clear from what was said above (q. 14, a. 2 and q. 54, a. 2), the object of an action that remains within the agent differs from the object of an action that passes into something external to the agent.

For in an action that passes into something external, the object or matter into which the act passes is separate from the agent; for instance, that which is heated is separate from that which gives it heat, and that which is built is separate from the builder.

By contrast, in an action that remains within the agent, the object must be united to the agent in order for the action to proceed; for instance, the sensible object must be united to the sense organ in order for an actual sensing to occur. And so in this sort of action the object is united to the relevant power like the form which serves as the principle of action in other agents. For just as in a fire the heat is the formal principle of giving heat, so too the sensible species of the thing that is seen is the formal principle of an act of seeing in the eye.

Now notice that this sort of species of an object sometimes exists only in potentiality in the relevant cognitive power, and in that case the power has cognition only in potentiality. In order for this cognitive power to be having an actual cognition, it must be brought into the act of the species. However, if it always has this species in actuality, then it can have cognition through it without any preceding change or receptivity. From this it is clear that being moved by the object is not part of the nature of one who has cognition insofar as he has cognition, but only part of his nature insofar as he has cognition in potentiality.

Moreover, in order for a form to be a principle of action, it is irrelevant whether the form itself inheres in another or whether it instead subsists *per se*. For example, an instance of heat would not give any less heat if it existed as subsistent *per se* than it does when it inheres [in a substance]. So, then, if something that belongs to the genus of intelligible things is a subsistent intelligible form, then it will understand itself. But given that an angel is immaterial, he is a certain sort of subsistent form and thereby actually intelligible. Hence, it follows that he understands himself intellectually through this form, which is his substance.

**Reply to objection 1:** The cited passage is from the old translation and is corrected by the new translation, which has “and, furthermore, they, viz., the angels, had cognition of their own powers” instead of “and still they were unaware of their own powers,” which appears in the other translation.

Still, even the old translation can be salvaged with respect to one point, viz., that angels do not have a perfect cognition of their own power insofar as that power flows from the order of God’s wisdom, which cannot be comprehended by the angels.

**Reply to objection 2:** We ourselves have no intellectual understanding of the singulars that exist among corporeal things—not because of their singularity, but because of their matter, which is the principle of individuation in them. Hence, if there are singular things which, like the angels, subsist without matter, then nothing prevents them from being actually intelligible.

**Reply to objection 3:** To be moved and to be acted upon belong to an intellect insofar as it is in potentiality. Hence, being moved and being acted upon have no place in the case of the angelic intellect, especially with respect to an angel’s understanding of himself.

Also, the intellect’s action is not of the same type as the sort of action that is found among corporeal things, since the latter sort of action passes into another matter.

## Article 2

### Does one angel have cognition of another?

It seems that one angel does not have cognition of another (*alium non cognoscat*):

**Objection 1:** In *De Anima* 3 the Philosopher says that if the human intellect had within itself a nature from among the sensible things, then that nature existing within it would prevent external natures from being apprehended by the intellect—just as, if the pupil of the eye were itself colored, then the eye would not be able to see all the colors. But the angelic intellect is related to the cognition of immaterial things in just the way that the human intellect is related to the cognition of corporeal things. Therefore, since the angelic intellect has within itself a determinate nature from among the immaterial natures, it seems that it cannot have cognition of other immaterial natures.

**Objection 2:** The *Liber de Causis* says, “Every intelligence is such that he knows (a) what is above him insofar as he is caused by it and (b) what is below him insofar as he is a cause of it.” But it is not the case that one angel is a cause of another angel. Therefore, it is not the case that one angel has cognition of another.

**Objection 3:** One angel cannot have cognition of another through the essence of the angel who is having the cognition, since every cognition is in accord with some likeness, while, as is clear from what was said above (q. 50, a. 4 and q. 55, a. 1), the essence of the angel who has the cognition is similar only in its genus to the essence of the angel of whom the cognition is had. Hence, it would follow that one angel has only a general cognition of another and not a proper cognition.

Again, it cannot be claimed that one angel has cognition of another through the essence of the angel

of whom the cognition is had, since that by which the intellect understands something is intrinsic to the intellect, whereas only the Trinity penetrates the mind.

Again, it likewise cannot be claimed that one angel has cognition of another through an intelligible species, since the species in question would not differ from the understood angel, given that both are immaterial.

Therefore, there seems to be no way in which one angel could understand another.

**Objection 4:** If one angel understands another, this occurs either (a) through an innate intelligible species, in which case it would follow that if God were now to create an angel *de novo*, this new angel could not be known by the angels that now exist; or (b) through an intelligible species acquired from the things themselves, in which case it would follow that higher angels would not be able to have cognition of lower angels, since they acquire nothing from lower angels. Therefore, there seems to be no way in which one angel has cognition of another.

**But contrary to this:** The *Liber de Causis* says, “Every intelligence knows the things that are not corrupted.”

**I respond:** As Augustine says in *Super Genesim ad Litteram* 2, the things that pre-existed from eternity in the Word of God flowed from Him in two ways: (a) first, into the angelic intellect, and (b) second, as subsisting in their own proper natures.

Now the things in question proceeded into the angelic intellect by virtue of God’s impressing on an angel’s mind likenesses of the things He produced with their natural *esse*. But the Word of God contained from eternity the notions (*rationes*) not only of corporeal things, but also of all spiritual creatures. Therefore, all the notions of all things, both corporeal and spiritual, were impressed by the Word of God on each spiritual creature. And yet they were impressed in such a way that the notion of his own species was impressed on each angel both with respect to its natural *esse* and with respect to its intelligible *esse*, so that he might subsist in the nature of his own species and through that species understand himself. On the other hand, the notions of the other natures, both corporeal and spiritual, were impressed on him only with respect to their intelligible *esse*, so that through impressed intelligible species of this sort he might have cognition of both corporeal creatures and spiritual creatures.

**Reply to objection 1:** As was explained above (q. 50, a. 4), the spiritual natures of the angels are distinguished from one another by a certain ordering. And so the nature of a given angel does not prevent his intellect from having cognition of the other angelic natures, since both higher and lower angels have an affinity with his nature, whereas the differences among them stem only from diverse grades of perfection.

**Reply to objection 2:** The notions of causing and being caused do not contribute to one angel’s having cognition of another except by reason of a likeness, i.e., insofar as a cause is similar to what it causes. And so as long as there is a likeness without causality among the angels, each will retain his cognition of the others.

**Reply to objection 3:** One angel has cognition of another through an intelligible species which exists in his own intellect and which differs from the angel whose likeness it is—not in the way that immaterial *esse* differs from material *esse*, but rather in the way that intentional *esse* (*esse intentionale*) differs from natural *esse* (*esse naturale*). For an angel is himself a form that subsists with natural *esse*, whereas the intelligible species of him that exists in the intellect of another angel is not a subsistent form, but has only intelligible *esse* there—just as the form of a color has natural *esse* in a wall, but only intentional *esse* in the medium that conveys it [to the eye] (*in medio deferente*).

**Reply to objection 4:** God made each creature proportionate to that whole which He decided to create. And so if God had resolved to create more angels or more natures of things, then He would have impressed more intelligible species on the minds of the angels—just as, if the builder had wished to make

a bigger house, he would have laid a bigger foundation. Hence, God's adding some creature to the whole is of a piece with His adding another intelligible species to an angel.

### Article 3

#### Can angels have cognition of God by their natural powers?

It seems that angels cannot have cognition of God by their natural powers (*per sua naturalia Deum cognoscere non possint*):

**Objection 1:** In *De Divinis Nominibus*, chap. 1, Dionysius says that God “is situated above all the heavenly minds with His incomprehensible power.” And afterwards he adds, “For He is above every substance and removed from all cognition.”

**Objection 2:** God is infinitely far removed from an angel's intellect. But what is infinitely far removed cannot be reached. Therefore, it seems that an angel cannot have cognition of God by his natural powers.

**Objection 3:** 1 Corinthians 13:12 says, “We see now through a mirror in a dark manner, but then face to face.” From this it seems to follow that there are two kinds of cognition of God, one by which He is seen through His essence, and this is the sense in which it is said that He is seen “face to face”; and, second, insofar as He is seen in the “mirror” of creatures. But as was shown above (q. 12, a. 4), angels could not have had the first sort of cognition of God by their natural powers. On the other hand, a mirror-like vision does not belong to the angels, since, as Dionysius says in *De Divinis Nominibus*, chap. 7, they do not receive their cognition of God from sensible things. Therefore, angels cannot have cognition of God by their natural powers.

**But contrary to this:** Angels are cognitively more powerful than men. But men can have cognition of God by their natural powers—this according to Romans 1:19 (“Because that which is known of God is manifest in them”). Therefore, *a fortiori*, so can the angels.

**I respond:** Angels can have a certain sort of cognition of God by their natural powers. To see this clearly, note that there are three ways in which cognition can be had of something:

(a) through the presence of its essence in the one who has the cognition—in the way that light is seen in the eye—and this is the way, as was explained above (a. 1), in which an angel understands himself;

(b) through the presence of a likeness of itself in the cognitive power—in the way that a rock is seen by the eye because of the likeness of itself that arises in the eye;

(c) not by virtue of the fact that a likeness of it is received immediately from the very thing that the cognition is of, but rather by virtue of the fact that a likeness of it is received from some other thing in which it occurs—in the way that we see a man in a mirror.

Thus, the cognition of God by which He is seen through His essence is like the first type of cognition. And, as was explained above (q. 12, a. 4), this cognition of God cannot be present in any creature by the creature's natural powers.

On the other hand, the cognition of God by which we know God in this life, through the likeness of Him that occurs in creatures, is like the third type of cognition—this according to Romans 1:20 (“For the invisible things of God are clearly seen, being understood through the things that have been made”). This is why we are said to see God in a mirror.

Now the cognition by which an angel knows God through his natural powers lies between these two types of cognition, and it is like the type of cognition by which a thing is seen by means of a likeness

received from it. For since the image of God is stamped on the very nature of an angel through his essence, an angel knows God insofar as he himself is a likeness of God. Yet he does not see the very essence of God, since no created likeness suffices to represent God's essence. Hence, this type of cognition is more like looking into a mirror, since an angel's very nature is itself a sort of mirror representing the likeness of God.

**Reply to objection 1:** Dionysius is talking here about a cognition that involves comprehension, as his words explicitly indicate. And God is not known in this way by any created intellect.

**Reply to objection 2:** Because an angel's intellect and essence are indeed infinitely far removed from God, it follows that an angel cannot comprehend God or see God's essence by his nature. However, it does not thereby follow that he cannot have any cognition of God at all. For just as God is infinitely far removed from the angel, so too the cognition that God has of Himself is infinitely far removed from the cognition that an angel has of Him.

**Reply to objection 3:** The cognition of God that an angel has by his nature lies between the two types of cognition mentioned in the objection—and yet, as was just explained above, it is more like the one of them [than the other].

## QUESTION 57

### An Angel's Cognition of Material Things

Next we ask about the material things that angels have cognition of. On this topic there are five questions: (1) Do angels have cognition of the natures of material things? (2) Do angels have cognition of singulars? (3) Do angels have cognition of future things? (4) Do angels have cognition of the thoughts of hearts? (5) Do angels have cognition of all the mysteries of grace?

#### Article 1

##### Do angels have cognition of material things?

It seems that angels do not have cognition material things (*non cognoscant res materiales*):

**Objection 1:** What is understood is a perfection of the one who is understanding it. But material things cannot be perfections of the angels, since they are lower than the angels. Therefore, angels do not have cognition of material things.

**Objection 2:** As a Gloss on 2 Corinthians 12:2 says, an intellective vision is of things that exist in the soul through their essence. But material things cannot exist through their essences in the soul of a man or in the mind of an angel. Therefore, there cannot be a cognition of them by an intellective vision; instead, there can be a cognition of them only by either (a) a vision of the imagination, by which likenesses of corporeal things are apprehended, or (b) a sentient vision, which is of the corporeal things themselves. But neither imaginative vision nor sentient vision exist in the angels; only intellective vision does. Therefore, angels cannot have cognition of material things.

**Objection 3:** Material things are not actually intelligible, but are knowable only by the apprehension of the senses and of the imagination, which do not exist in angels. Therefore, angels do not have cognition of material things.

**But contrary to this:** A higher power is capable of whatever a lower power is capable of. But a man's intellect, which is lower than an angel's intellect in the order of nature, can have cognition of material things. Therefore, *a fortiori*, so can an angel's intellect.

**I respond:** The order among things is such that (a) the higher entities are more perfect than the lower entities, and that (b) what is contained in the lower entities in a deficient and partial and fragmented way (*deficienter et partialiter et multipliciter*) is contained in the higher entities in a preeminent way and with a certain completeness and simplicity. Thus, as Dionysius puts it in *De Divinis Nominibus*, in God, the summit of things, all things pre-exist 'supersubstantially' in the manner of His own simple *esse*.

Now among all creatures it is the angels who are closest to and most similar to God, and hence, as Dionysius says in *De Caelesti Hierarchia*, chap. 4, they participate in more aspects of God's goodness and participate in them more perfectly. So, then, all material things pre-exist within the angels themselves in a more simple and immaterial way than they exist in themselves, though in a more fragmented and imperfect way than they exist in God.

Now everything that exists in a thing exists in it according to the mode of that in which it exists. But angels are intellectual beings by their nature. And so just as God knows material things through His own essence, so too angels know these things in virtue of the fact that they exist in the angels through their intelligible species.

**Reply to objection 1:** What is understood is a perfection of the one who is understanding it as regards the intelligible species which he has in his intellect. And so the intelligible species that exist in an angel's intellect are perfections of, and acts of, the angelic intellect.

**Reply to objection 2:** The senses do not apprehend the essences of things, but instead apprehend only certain exterior accidents. Similarly, the imagination does not apprehend the essences of things, but instead apprehends only likenesses of corporeal things. It is the intellect alone that apprehends the essences of things. Hence, according to *De Anima* 3, the object of the intellect is the ‘what-ness’ of a thing, and the intellect cannot err with respect to this, just as the senses cannot err with respect to a proper sensible. So, then, the essences of material things do indeed exist in the intellect of a man or an angel—not, to be sure, with their own real *esse*, but rather in the way that what is understood exists in the one who is understanding it. On the other hand, there are some things that exist in the intellect or in the soul with both sorts of *esse*, and there is intellective vision with respect to both.

**Reply to objection 3:** If an angel received his cognition of material things from the material things themselves, then he would have to make those things actually intelligible by abstracting them. But he does not receive his cognition of them from the material things themselves; instead, he has knowledge of material things through the actually intelligible species of those things that are connatural to him—just as our intellect has cognition of them through the species that it makes intelligible by abstraction.

## Article 2

### Does an angel have cognition of singulars?

It seems that an angel does not have cognition of singulars (*singularia non cognoscat*):

**Objection 1:** In *Physics* 1 the Philosopher says that sensation is of singulars, whereas reason (or understanding) is of universals. But as is clear from what was said above (q. 54, a. 5), the only cognitive power in angels is an intellective power. Therefore, they do not have cognition of singulars.

**Objection 2:** Every type of cognition occurs through the assimilation of the knower to what is known. But it seems impossible for there to be any assimilation of an angel to a singular thing *qua* singular. For, as was explained above (q. 50, a. 2), an angel is immaterial, whereas the principle of singularity is matter. Therefore, an angel cannot have cognition of singulars.

**Objection 3:** If an angel knows singulars, then he knows them either through singular intelligible species or through universal intelligible species. He does not know them through singular intelligible species, since in that case he would have to have infinitely many such species. Nor does he know them through universal intelligible species, since a universal is not a sufficient principle for having cognition of a singular *qua* singular; for singulars are known only potentially in a universal. Therefore, an angel does not have cognition of singulars.

**But contrary to this:** No one can exercise guardianship over what he has no cognition of. But according to Psalm 90:11 (“He has given his angels charge over you, etc.”), angels exercise guardianship over individual human beings. Therefore, angels have cognition of singulars.

**I respond:** Some have completely denied the cognition of singulars to angels.

First of all, however, this position detracts from the Catholic Faith, which claims, in accord with Hebrews 1:14 (“Are they not all ministering spirits?”), that lower things here below are ministered to by the angels. But if angels did not have knowledge of singulars, then they would not be able to exercise providence over the things that are done in this world, since acts belong to singular things—and this is contrary to Ecclesiastes 5:5 (“Say not before the angel: ‘There is no providence’”).

Second, this position also detracts from the teachings of philosophy, which claims that angels are the movers of the celestial spheres and that they move the spheres by their intellect and will.

And so others have maintained that angels do indeed have cognition of singulars, but that they have

this cognition in the universal causes which all particular effects are traced back to—in the way, for instance, that an astronomer might judge that an eclipse will occur by appeal to the arrangement of the celestial motions.

However, this position does not evade the difficulties alluded to above. For to have cognition of a singular in this way in its universal causes is not to have cognition of it *as* a singular, i.e., as existing here and now. For when an astronomer comes to know that an eclipse will occur by computing the celestial motions, he knows the eclipse in general; and he does not know it as existing here and now unless he perceives it through his senses. But ministration and providence and motion all belong to singulars insofar as they exist here and now.

So we have to reply in an alternative way: Just as a man has cognition of all the genera of things by diverse cognitive powers—viz., universals and immaterial things by the intellect, and singulars and corporeal things by the senses—so an angel knows both sorts of things through a single intellectual power. For the order among things is such that to the extent that a thing is higher in that order, its power is more unified and extends to more things. For instance, in man himself it is clear that even though the common sensory power, which is higher than the proper sensory powers, is a single power, it knows all the things known by the five exterior senses as well as other things that none of the exterior senses knows, e.g., the difference between whiteness and sweetness. Something similar can be seen in other cases as well. Thus, since an angel is higher than a man in the order of nature, it is ridiculous to claim that a man has cognition of something by some power of his that an angel does not have cognition of through his own single cognitive power, viz., his intellect. This is why, as is clear from *De Anima* 1 and *Metaphysics* 3, Aristotle thinks it absurd that God should not know about discord, which we know about.

Now the mode by which an angel's intellect has cognition of singulars can be gathered from the fact that just as things flow forth from God in such a way as to subsist in their own proper natures, so too they flow forth from God in such a way as to exist in angelic cognition. But, clearly, what flows forth from God in things is not only that which pertains to their universal natures, but also those things that serve as their individuating principles. For God is a cause of the whole substance of a thing, with respect to both its matter and its form. And He knows things insofar as He is a cause, since, as was shown above (q. 14, a. 8), His knowledge is a cause of things. So, then, just as God is a likeness of all things by His essence, through which He causes all things, and just as He knows all things through His essence—not only what pertains to their universal natures, but also what pertains to their singularity—so, too, through the intelligible species that flow into the angels from God, the angels have cognition of things not only with respect to their universal natures but also with respect to their singularity, insofar as those species are multiple representations of the unified and simple divine essence.

**Reply to objection 1:** The Philosopher is speaking here about our intellect, which understands things only by abstracting; and it is through this abstraction from material conditions that what is abstracted becomes universal. But as was explained above (q. 55, aa. 2 and 3), this mode of understanding does not belong to the angels, and so the arguments are not parallel.

**Reply to objection 2:** Angels are not by their nature assimilated to material things in the way that one thing is assimilated to another by an agreement in genus or species or accident. Rather, angels are assimilated to material things in the way that a higher entity bears a likeness to a lower entity, e.g., in the way that the sun is like a fire. And it is also in this manner that a likeness of all things exists in God, both with respect to their form and with respect to their matter, since whatever is found among things pre-exists in Him as its cause. For the same reason, the intelligible species in an angel's intellect, which are certain likenesses derived from God's essence, are likenesses of things not only with respect to their form, but also with respect to their matter.

**Reply to objection 3:** Angels have cognition of singulars through universal forms, and yet these forms are likenesses of the things both with respect to their universal principles and with respect to their

principles of individuation. It has already been explained above (q. 55, a. 3) how it is that many things can be known through the same intelligible species.

### Article 3

#### Do angels have cognition of future things?

It seems that angels have cognition of future things (*cognoscant futura*):

**Objection 1:** Angels are much more powerful in their cognition than men are. But some men have cognition of many future things. Therefore, *a fortiori*, so do the angels.

**Objection 2:** *Present* and *future* are specific differences within time. But an angel's intellect lies beyond time, since, as the *Liber de Causis* puts it, "An intelligence ranks with eternity," in the sense of aeviternity (*aevum*). Therefore, the past and the future do not differ as far as an angel's understanding is concerned; instead, he has cognition of both of them in exactly the same way.

**Objection 3:** An angel has cognition of things not through intelligible species that are received from the things themselves, but rather through innate universal intelligible species. But universal species are related in the same way to the present, the past, and the future. Therefore, it seems that angels have cognition of present things, past things, and future things in exactly the same way.

**Objection 4:** Something can be said to be distant in place just as something can be said to be distant in time. But angels have cognition of things that are distant in place. Therefore, they likewise have cognition of things that are distant in future time.

**But contrary to this:** That which is a proper indicator of divinity does not belong to the angels. But according to Isaiah 41:23 ("Announce the things that are to come hereafter, and we shall know that you are gods"), to have cognition of future things is a proper indicator of divinity. Therefore, angels do not have cognition of future things.

**I respond:** There are two ways in which something future can be known:

First, a future thing can be known *in its cause*. Future things that proceed by necessity from their causes can be known in this way with certitude, e.g., that the sun will rise tomorrow, whereas future things that proceed from their causes in most instances can be known by an educated guess (*per coniecturam*) but not with certitude, in the way that a physician foresees the health of someone who is sick. Now this is the way in which angels know future things, and they know them better than we do to the extent that they know the causes of things in a more universal and perfect way—just as a physician who sees the causes of an illness more accurately is better able to predict its future course. Finally, those things that proceed from their causes only in a few instances, i.e., random (*casualia*) or fortuitous (*fortuita*) events, are completely unknown.

Second, a future thing can be known *in itself*. And only God knows future things in this way—not only those future things which proceed from their causes by necessity or in most instances, but even random and fortuitous things. For God sees all things in His eternity, which, since it is simple, is present to the whole of time and includes the whole of time. And so God's single glance (*unus Dei intuitus*) reaches to all things occurring throughout all of time as things that are present, and He sees all things as they are in themselves. This was explained above when we were discussing God's knowledge (q. 14, a. 13). By contrast, the angelic intellect—along with every created intellect whatsoever—falls short of God's eternity. Hence, the future, as existing in its own *esse*, cannot be known by any created intellect.

**Reply to objection 1:** Men do not have cognition of future things except in their causes or else because God reveals them. And angels have cognition of future things in this same way, though much

more accurately (*multo subtilius*).

**Reply to objection 2:** Even though an angel's intellect lies beyond the sort of time that measures corporeal movements, time exists in an angel's intellect with respect to the succession of his intelligible conceptions. It is in this sense that Augustine says in *Super Genesim ad Litteram* 8 that God moves spiritual creatures through time. And so, since there is succession in an angel's intellect, it is not the case that all the things that occur throughout the whole of time are present to him.

**Reply to objection 3:** Even though the intelligible species (*species*) that exist in an angel's intellect, taken just in themselves, are related in exactly the same way to present things, past things, and future things, still, it is not the case that present things, past things, and future things themselves are related to the species (*rationes*) in exactly the same way. For things that are present have a nature through which they are assimilated to the intelligible species that exist in an angel's mind, and so they can be known through those intelligible species. By contrast, things that are future do not yet have a nature through which they are assimilated to the intelligible species, and so they cannot be known through them.

**Reply to objection 4:** Distances with respect to place already now exist in reality and participate in a species whose likeness exists in the angel. This is not true of future things, as has already been explained. And so there is no parallel between the two cases.

#### Article 4

##### Do angels have cognition of the thoughts of hearts?

It seems that angels have cognition of the thoughts of hearts (*cognoscant cogitationes cordium*):

**Objection 1:** In *Moralia*, section on Job 28:17 ("Gold or crystal cannot equal it"), Gregory says, "At that time [*read*: after those who rise from the dead are beatified] one will be transparent to another in the same way that he is transparent to himself, and as soon as the intellect of anyone is attended to, his knowledge (*conscientia*) will be immediately penetrated." But as Matthew 22:30 says, those who rise from the dead will be like the angels. Therefore, one angel can see what is in the knowledge of another angel.

**Objection 2:** A shape is to a body what an intelligible species is to the intellect. But when a body is seen, its shape is seen. Therefore, when an intellectual substance is seen, any intelligible species that exists in it is seen. Therefore, when an angel sees another angel or even a human soul, it seems that he can see what each is thinking (*possit videre cogitationem utriusque*).

**Objection 3:** Things that exist in our intellect are more similar to an angel than things that exist in our imagination, since the former are actually understood, whereas the latter are only potentially understood. But things that exist in the imagination can be known by an angel in the same way that he knows corporeal things, since the imagination is a corporeal power. Therefore, it seems that an angel can know an intellect's thoughts (*cogitationes intellectus*).

**But contrary to this:** What is proper to God does not belong to the angels. But according to Jeremiah 17:9-10 ("The heart of a man is perverse above all things, and unsearchable, who has cognition of it? I the Lord search hearts"), to know the thoughts of hearts is proper to God. Therefore, angels do not know the secrets of hearts.

**I respond:** There are two ways in which thoughts of the heart can be known:

First, they can be known *in their effects*. A thought of the heart can be known in this way not only by an angel, but also by a man; and the more hidden an effect of this sort is, the more insightful the

cognition is. For a thought is sometimes known not only through an exterior act, but also through a change in facial expression; and physicians can sometimes know certain affections of the soul even through the pulse. Angels, as well as demons, can know these affections all the more, given that they examine hidden bodily changes of this sort with more subtlety. Hence, in *De Divinatione Daemonum* Augustine says that the demons sometimes discover men's dispositions with great ease—not only their spoken words, but even their conceived thoughts—when certain signs of those dispositions are expressed by the soul in the body. However, in the *Retractationes* Augustine cautions that we should not make assertions about how this takes place.

Second, thoughts can be known *as they exist in the intellect*, and affections *as they exist in the will*. God alone can know the thoughts of hearts and the affections of wills in this way. The reason for this is that a rational creature's will is subject to God alone, and He alone can operate on the will, given that He is, as the ultimate end, the will's principal object. And so what exists in the will or depends on the will alone is known only to God; this will become clearer below (q. 63, a. 1 and q. 105, a. 5). Now, clearly, it depends on the will alone that someone should actually be thinking about certain things, since when one has certain intelligible species or the habit of a science existing within him, he makes use of them whenever he wills to. This is why the Apostle says in 1 Corinthians 2:11, "No man knows the things of a man, except the spirit of a man that is in him."

**Reply to objection 1:** There are two obstacles which now prevent the thoughts of one man from being known to another, viz., the body's density (*grossities*) and the fact that the will hides its secrets. The first of these obstacles will be removed at the resurrection and is not found among the angels, whereas the second obstacle will remain after the resurrection and is now found among the angels. Yet after the resurrection the body's splendor (*claritas*) will represent the quality of the mind as far as its quantity of grace and glory are concerned. And in this sense one will be able to see the mind of another.

**Reply to objection 2:** Even if one angel sees another angel's intelligible species in the sense that the mode of the intelligible species—i.e., their greater or lesser universality—is proportionate to the nobility of the substances, it still does not follow that one knows how the other is making use of those intelligible species in his actual thinking.

**Reply to objection 3:** A brute animal's appetite is not the master of its own acts, but instead follows the impression of another corporeal or spiritual cause. Therefore, since angels know corporeal things and their dispositions, through these things they can know what is in a brute animal's appetite or what its imagination apprehends. And they can likewise know what is in a man's sentient appetite or what his imagination apprehends to the extent that the sentient appetite in men sometimes proceeds into act by following a corporeal impression in the way that this always occurs in brute animals.

However, to the extent that the sentient appetite and imagination are moved by the will and reason, one must not claim that angels know the movements of the sentient appetite or the apprehensions of the imagination. For even the lower part of the soul participates in some sense in the rational part, in the way that one obeys his commander, as *Ethics* 1 puts it. Nor does it follow that if an angel knows what is in a man's sentient appetite or imagination, then he knows what the man is thinking or willing. For the intellect and will are not subject to the sentient appetite and imagination, but are instead able to make use of them in various ways.

## Article 5

### Do angels have cognition of the mysteries of grace?

It seems that angels have cognition of the mysteries of grace (*mysteria gratiae cognoscant*):

**Objection 1:** Of all the mysteries of grace, the most excellent is the mystery of Christ's Incarnation. But the angels knew of this mystery from the beginning; for in *Super Genesim ad Litteram* 5 Augustine says, "This mystery, hidden from the ages in God, was such that He nonetheless made it known to the Principalities and Powers in heaven." And in 1 Timothy 3:16 the Apostle says, "This great mystery of piety was apparent to the angels." Therefore, angels know the mysteries of grace.

**Objection 2:** The reasons for all the mysteries of grace are contained in God's wisdom. But angels see God's wisdom itself, since it is His essence. Therefore, angels know the mysteries of grace.

**Objection 3:** As is clear from Dionysius in *De Caelesti Hierarchia*, chap. 4, the prophets are instructed by the angels. But the prophets knew the mysteries of grace; for as Amos 3:7 says, "The Lord will not carry out His word without revealing His secret to His servants, the prophets." Therefore, the angels know the mysteries of grace.

**But contrary to this:** No one learns what he already knows. But the angels—even the highest ones—ask about the divine mysteries of grace and come to learn of them. For *De Caelesti Hierarchia*, chap. 7, says that Sacred Scripture "describes certain heavenly essences as putting questions to Jesus himself and learning the divine wisdom of His actions on our behalf, and it describes Jesus as teaching them directly." This is clear from Isaiah 63:1, where to the angels who ask "Who is He who comes up from Edom?" Jesus replies, "It is I, who speak justice." Therefore, the angels do not know the mysteries of grace.

**I respond:** There are two types of cognition in the angels:

One type is *natural*. By this type of cognition angels know things both through their essence and also through their innate intelligible species. Angels cannot know the mysteries of grace by this type of cognition. For these mysteries depend on God's simple will (*ex pura voluntate*), and if one angel cannot know the thoughts of another angel that depend on the latter's will, then he will all the less be able to know things that depend just on God's will. The Apostle reasons along these same lines at 1 Corinthians 2:11: "No man knows the things of a man, except the spirit of a man that is in him. So the things also that are of God, no one knows, but the Spirit of God."

The second type of angelic cognition is that which makes the angels *beatified* and by which they see the Word and all things in the Word. By this type of vision they do indeed know mysteries of grace—not all of them or all of them equally, but to the extent that God has willed to reveal the mysteries to them. This is in accord with what the Apostle says at 1 Corinthians 2:10, "But God has revealed them to us through His Spirit." Yet He reveals them in such a way that the higher angels, who contemplate God's wisdom more insightfully, know more and deeper mysteries in the very vision of God, and they then make these mysteries known to the lower angels by illuminating those angels. And some of these mysteries they knew from the beginning of their creation, whereas others they learn afterwards insofar as this knowledge is appropriate for their assigned roles.

**Reply to objection 1:** There are two possible ways to speak about the mystery of Christ's Incarnation:

First, one can speak about it *in general*, and in this sense it was revealed to all the angels at the beginning of their beatification. The reason is that this mystery is a certain general principle to which all of the angels' assigned roles are ordered. For all of them are ministers of the Spirit, according to Hebrews 1:14 ("Are they not all ministering spirits, sent to minister for those who shall receive the inheritance of salvation?"), and this inheritance occurs through the mystery of the Incarnation. Hence, from the beginning all the angels had to be taught about this mystery in general.

Second, we can speak of the mystery of the Incarnation *with respect to its specific circumstances*. And in this sense not all the angels were taught about all these circumstances from the beginning. Indeed, as is clear from the passage cited from Dionysius, even some of the higher angels learned about

them afterwards.

**Reply to objection 2:** Even though the beatified angels *contemplate* God's wisdom, they nonetheless do not *comprehend* it. And so it is not necessary that they should know whatever is hidden in it.

**Reply to objection 3:** Whatever the prophets knew through divine revelation about the mysteries of grace was revealed in a more excellent way to the angels. And even though the angels revealed in general to the prophets the things that God would do concerning the salvation of the human race, still, on this matter the apostles knew certain specific things that the prophets had not known—this according to Ephesians 3:4-5 (“You who are reading can perceive my understanding in the mystery of Christ, which was not known to other generations as it has now been revealed to His holy apostles”).

Again, even among the prophets themselves, the later ones knew things that the earlier ones had not known—this according to Psalm 118:100 (“I have understood beyond the ancients”). And Gregory says that the knowledge of divine things increased as time went on.

## QUESTION 58

### The Mode of an Angel's Cognition

The next thing to consider is the mode of an angel's cognition. On this topic there are seven questions: (1) Is an angel sometimes thinking in potentiality and sometimes in actuality? (2) Can an angel understand many things at once? (3) Does an angel understand by means of discursive reasoning? (4) Does an angel understand by composing and dividing? (5) Can there be falsity in an angel's intellect? (6) Can an angel's cognition be called 'morning knowledge' and 'evening knowledge'? (7) Are morning knowledge and evening knowledge the same, or are they distinct from one another?

#### Article 1

##### Is an angel's intellect sometimes in a state of potentiality?

It seems that an angel's intellect is sometimes in a state of potentiality:

**Objection 1:** As *Physics* 3 says, movement is the act of something that exists in a state of potentiality. But as Dionysius says in *De Divinis Nominibus*, chap. 4, the minds of angels are moved when they think. Therefore, the minds of angels are sometimes in a state of potentiality.

**Objection 2:** Since desire is directed toward a thing that is not had but is able to be had, whoever desires to understand something is now in potentiality with respect to understanding that thing. But 1 Peter 1:12 talks of "things into which angels desire to look." Therefore, an angel's intellect is sometimes in a state of potentiality.

**Objection 3:** The *Liber de Causis* says that an intelligence understands in a way that accords with the mode of his substance. But an angel's substance has an admixture of potentiality. Therefore, an angel sometimes understands in potentiality.

**But contrary to this:** In *Super Genesim ad Litteram* 2 Augustine says of the angels that "from the moment they were created, they thoroughly enjoyed the very eternity of the Word with holy and pious contemplation." But a contemplating intellect understands in actuality and not in potentiality. Therefore, an angel's intellect is not in a state of potentiality.

**I respond:** As the Philosopher says in *De Anima* 3 and *Physics* 8, there are two ways for the intellect to be in a state of potentiality: (a) in the first way, it is said to be in potentiality before it learns or discovers something, i.e., before it has the habit of a given science; and (b) in the second way, it is said to be in potentiality when it already has the habit of a science, but is not actually considering that science.

As for the first way, an angel's intellect is never in potentiality with respect to the things its natural cognition can extend to. For just as the higher bodies, i.e., the celestial bodies, do not have any potentiality for *esse* which has not already been brought to completion through their actuality, so the celestial intellects, viz., the angels, do not have any intellectual potentiality which has not already been brought to total completion through the intelligible species that are connatural to them. On the other hand, nothing prevents the intellects of angels from being in potentiality with respect to the things revealed to them by God—just as the celestial bodies are likewise sometimes in potentiality with respect to being illuminated by the sun.

As for the second way, an angel's intellect can be in potentiality with respect to the things it knows by its natural cognition, since it is not always actually considering all the things that it knows by its natural cognition. However, an angel's intellect is never in potentiality in this way with respect to its cognition of the Word and of the things it sees in the Word, since an angel's intellect is always actually viewing the Word and the things it sees in the Word. For it is this vision that the angels' beatitude consists in and, as the Philosopher says in *Ethics* 1, beatitude consists in an act and not in a habit.

**Reply to objection 1:** In the cited passage, ‘movement’ is not being taken for the act of something imperfect, i.e., of something that is in a state of potentiality. Rather, it is being taken for the act of something perfect, i.e., of something that is in a state of actuality. For as *De Anima* 3 says, this is the sense in which acts of understanding and acts of sensing are called movements.

**Reply to objection 2:** This particular desire on the part of the angels does not rule out possession of the thing desired, but rules out only weariness of it.

An alternative reply is that the angels are said to desire the vision of God in the sense of new revelations, which they receive from God in order to make them fit for their assigned roles.

**Reply to objection 3:** There is in an angel’s substance no potentiality that is wholly bereft of actuality. And, similarly, an angel’s intellect is not in potentiality in such a way that is without its act.

## Article 2

### Can an angel understand many things at once?

It seems that an angel cannot understand many things at once:

**Objection 1:** In *Topics* 2 the Philosopher says that it is possible to know (*scire*) many things at once, but it is possible to be understanding (*intelligere*) only one thing at a time.

**Objection 2:** Nothing is understood except insofar as the intellect is formed by an intelligible species in the way in which a body is formed by its shape. But a single body cannot be formed by different shapes. Therefore, a single intellect cannot understand diverse intelligible things all at once.

**Objection 3:** To understand is a certain movement. But no movement is terminated at diverse endpoints. Therefore, it is not possible to understand many things at once.

**But contrary to this:** In *Super Genesim ad Litteram* 4 Augustine says, “The spiritual power of an angel’s mind easily comprehends at once all the things that the angel wants to.”

**I respond:** Just as the oneness of a movement requires the oneness of its endpoint, so too the oneness of an operation requires the oneness of its object. However, it can happen that several things are taken either as many or as one, in the way that the parts of a continuum are taken as one.

For if each of them is taken by itself (*per se*), then they are many, and as such they cannot be grasped by the senses or the intellect all at once in a single operation.

In the second way, they are grasped as a single whole and in this way, as *De Anima* 3 says, they are known by the senses or the intellect all together and in a single operation as long as the whole continuum is being considered. So even our own intellect understands the subject and the predicate together insofar as they are parts of a single proposition; and it understands the two in comparison with one another insofar as they come together in a single comparison.

From this it is clear that many things cannot be understood all at once insofar as they are distinct from one another, but that they are understood all at once insofar as they are united in a single intelligible object.

Now each thing is actually intelligible insofar as its likeness exists in the intellect. Therefore, if several things can be known through a single intelligible species, then they are known as a single intelligible object, and so they are known all at once. On the other hand, things that are known through diverse intelligible species are grasped as diverse intelligible objects.

Therefore, in the cognitive act by which angels understand things through the Word, they know all things through a single intelligible species, viz., God’s essence. And so as far as this cognitive act is concerned, they know all things at once—just as, according to Augustine in *De Trinitate* 15, “In heaven

our own thoughts will not be changeable, going from one thing to another, but we will see all our knowledge together at a single glance.” By contrast, in the cognitive act by which angels know things through their innate intelligible species, they can understand simultaneously whatever things are known through a single intelligible species, but they cannot understand simultaneously things that are known by diverse intelligible species.

**Reply to objection 1:** To understand many things as one is in a sense to understand a single thing.

**Reply to objection 2:** The intellect is formed by an intelligible species that it now has present to itself. And so through a single intelligible species it can see many intelligible things all at once, in the way that through a single shape a given body can be similar to many bodies at the same time.

**Reply to objection 3:** The reply here is the same as the reply to objection 1.

### Article 3

#### Does an angel gain knowledge through discursive reasoning?

It seems that an angel gains knowledge through discursive reasoning (*cognoscat discurrendo*):

**Objection 1:** Discursive understanding takes place to the extent that one thing is known through another. But an angel knows one thing through another, since he knows creatures through the Word. Therefore, an angel’s intellect gains knowledge through discursive reasoning.

**Objection 2:** A higher power can do whatever a lower power can do. But the human intellect can reason through syllogisms, and it can know causes in their effects—both of which involve discursive reasoning. Therefore, *a fortiori*, an angel’s intellect, which is higher in the order of nature, can do this.

**Objection 3:** Isidore says that the demons know many things from experience. But experiential cognition is discursive, since an experience is made up of many memories and since, as it says at the end of the *Posterior Analytics* and the beginning of the *Metaphysics*, a single universal is fashioned from many experiences. Therefore, angels have discursive cognition.

**But contrary to this:** In *De Divinis Nominibus*, chap. 7, Dionysius says, “Angels do not collect divine cognition from diffuse lines of thought, nor do they go from something general to something specific.”

**I respond:** As has already been explained several times (a. 1 and q. 50, a. 3, and q. 55, a. 2), angels occupy the status among spiritual substances that celestial bodies occupy among corporeal substances. For this reason, Dionysius calls them ‘celestial minds’. Now the difference between celestial bodies and terrestrial bodies is that terrestrial bodies attain their ultimate perfection through change and movement, whereas celestial bodies attain their ultimate perfection immediately through their very nature. So, then, lower intellects, i.e., human intellects, attain the perfection of intellectual operation in their cognition of the truth through a certain kind of movement and discourse, viz., as they proceed from the cognition of one thing to the cognition of another. But if in their cognition of a known principle they immediately perceived, as it were, all the knowable conclusions that follow from that principle, then discursive reasoning would have no place in them.

And this is the way it is with the angels. For in the things that the angels know first by their natural knowledge they perceive immediately anything whatever that can be known in those first things. And angels are called ‘intellectual’ (*intellectuales*) beings because, even among us, things that are naturally apprehended in an unmediated way are said to be understood (*intelligi*). This is why *understanding* (*intellectus*) is called a habit with respect to first principles.

By contrast, human souls, which acquire knowledge of the truth through a certain sort of discursive

reasoning, are called ‘rational’. This condition stems from the weakness of the intellectual light in human souls. For if human souls had the fullness of intellectual light, as the angels do, then in their first glance at the principles they would immediately comprehend the entire power of those principles by intuiting whatever could be derived from them by means of syllogisms.

**Reply to objection 1:** ‘Discursive reasoning’ names a certain sort of movement. But all movement is from one thing that is prior to something else that is posterior. Hence, discursive reasoning involves going from something previously known to the cognition of something else that is then later known and was not previously known. However, if that something else were seen as soon as the first thing was seen—in the way that the image of a thing and the thing itself are seen together in a mirror—then because of this there would be no discursive cognition. And it is in this way that angels know things in the Word.

**Reply to objection 2:** Angels can reason by syllogisms in the sense that they know the syllogisms. And they see effects in their causes and causes in their effects, but not in such a way that they acquire knowledge of an unknown truth by reasoning syllogistically from the causes to what is caused or from what is caused to the causes.

**Reply to objection 3:** In the case of angels and demons, ‘experience’ is predicated according to a certain likeness, viz., insofar as they know sensible things as present—though without any sort of discursive reasoning.

#### Article 4

##### Do angels understand by composing and dividing?

It seems that angels understand by composing and dividing (*intelligent componendo et dividendo*):

**Objection 1:** As *De Anima* 3 says, there is a composition of thoughts where there is a multitude of thoughts. But there is a multitude of thoughts in an angel’s intellect, since he understands diverse things through diverse intelligible species, and he does not understand the diverse things all at once. Therefore, there is composition and division in an angel’s intellect.

**Objection 2:** Negation is more distant from affirmation than any two opposed natures are distant from one another, since the first distinction is that between affirmation and negation. But as is clear from what was said above (a. 2), there are certain natures, distant from one another, that an angel understands through diverse intelligible species and not through just one species. Therefore, he must know affirmation and negation in diverse ways. And so it seems that an angel understands by composing and dividing.

**Objection 3:** Speech is a sign of what is understood. But as is clear from many places in Sacred Scripture, angels who speak to men use affirmative and negative propositions, which are signs of composition and division in their own understanding. Therefore, it seems that angels understand by composing and dividing.

**But contrary to this:** In *De Divinis Nominibus*, chap. 7, Dionysius says, “The intellectual power of the angels reflects the clear simplicity of God’s thoughts.” But as *De Anima* 3 says, simple understanding (*simplex intelligentia*) occurs without composition and division. Therefore, angels understand without composition and division.

**I respond:** A predicate is related to its subject in an intellect that is composing and dividing in just the way that a conclusion is related to its principle in an intellect that is reasoning discursively (*in intellectu ratiocinante*). For if the intellect immediately saw the truth of the conclusion in the principle

itself, then it would never come to understand by means of discursive reasoning or ratiocination. Similarly, if in apprehending the subject's 'what-ness' (*quidditas*), the intellect immediately knew everything that can be attributed to the subject or denied of it, then it would never come to understand by means of composing and dividing. Instead, it would understand everything by understanding what the subject is. Therefore, the fact that our intellect understands by composing and dividing clearly has the same source as the fact that it understands by reasoning discursively—viz., that it cannot in its initial apprehension of some first thing see whatever is virtually contained in that thing. And this is so, as has been pointed out (a. 3), because of the weakness of the intellectual light in us.

Hence, since the intellectual light is perfected in an angel—for an angel is, as Dionysius puts it in *De Divinis Nominibus*, chap. 4, a pure and absolutely clear mirror—it follows that just as an angel does not understand by means of discursive reasoning, so too he does not understand by composing and dividing. However, he does understand the composition and division involved in propositions, just as he likewise understands the reasoning involved in syllogisms. For he understands in a simple way that which is composed, and he understands in a motionless way that which is in motion, and he understands in an immaterial way that which is material.

**Reply to objection 1:** It is not just any sort of multitude of thoughts that causes a composition, but rather a multitude of thoughts which is such that one is attributed to the other or denied of the other. Now in understanding the 'what-ness' of a given thing, an angel understands all at once whatever can be attributed to that thing or denied of it. Hence, in understanding what the thing is, he understands by his one simple thought whatever we ourselves are able to understand by composing and dividing.

**Reply to objection 2:** The different 'what-nesses' of things differ less from one another with respect to the nature of existence than an affirmation differs from a negation. Nonetheless, with respect to the nature of cognition, an affirmation and negation agree more with one another, because by the very fact that the truth of an affirmation is known, the falsity of the opposite negation is immediately known.

**Reply to objection 3:** The fact that an angel speaks with affirmative and negative propositions shows that angels know *about* composition and division, but not that they know *by means of* composing and dividing. Instead, they know what something is in a simple way.

## Article 5

### Can there be falsity in an angel's understanding?

It seems that there can be falsity in an angel's understanding (*in intellectu angeli possit esse falsitas*):

**Objection 1:** Perversity pertains to falsity. But as Dionysius puts it in *De Divinis Nominibus*, chap. 4, the demons have a perverted imagination. Therefore, it seems that there can be falsity in an angel's understanding.

**Objection 2:** Ignorance is a cause of false judgment. But as Dionysius says in *De Ecclesiastica Hierarchia*, chap. 6, there can be ignorance in angels. Therefore, it seems that there can be falsity in them.

**Objection 3:** Everyone who falls away from the truth of wisdom and has a depraved nature has falsity and error in his understanding. But this is what Dionysius attributes to the demons in *De Divinis Nominibus*, chap. 7. Therefore, it seems that there can be falsity in an angel's understanding.

**But contrary to this:** In *De Anima* 3 the Philosopher says, "Understanding is always true." Also, in 83 *Quaestiones* Augustine says, "Nothing except what is true is understood." But the angels

have no type of cognition other than understanding. Therefore, there cannot be deception or falsehood in an angel's cognition.

**I respond:** The truth regarding this matter depends to some extent on what has already been said. For it has already been explained (a. 4) that an angel understands something by understanding what the thing is and not by composing and dividing. But as *De Anima* 3 says, the intellect is always accurate (*verus*) with respect to what a thing is, just as the senses are with respect to their proper objects.

However, deception and falsehood do occur *per accidens* in our understanding of what a thing is, viz., within a composition, when either (a) we take the definition of one thing as the definition of some other thing, or (b) the parts of a given definition do not cohere with one another—as, for instance, if *four-footed flying animal* were taken to be the definition of something (for there is no such animal). And this happens in the case of *composite* things, whose definitions are taken from diverse sources, one of which is material with respect to the other. By contrast, as *Metaphysics* 9 says, there is no falsity in our understanding of *simple* 'what-nesses', because either they are not grasped at all, in which case we understand nothing about them, or else they are understood as they are.

So, then, neither falsity nor error nor deception can exist *per se* in any angel's understanding, but they can occur *per accidens*—though in a way different from the way they occur in us. For we ourselves sometimes arrive at an understanding of the 'what-ness' of a thing by composing and dividing, as when we discover a definition by dividing or demonstrating. This does not happen in the case of angels; for through a given thing's 'what-ness' they know all the propositions that pertain to that thing (*cognoscunt omnes enuntiationes ad illam rem pertinentes*).

Now it is clear that a thing's 'what-ness' can be a principle of cognition with respect to what *naturally* belongs to it or is denied of it, but not with respect to what depends on God's *supernatural* ordination. Therefore, the good angels, who have an upright will, do not through their cognition of a thing's 'what-ness' make any judgment about what naturally pertains to the thing except in light of God's ordination. Hence, in the good angels there cannot be falsity or error. By contrast, the demons, who have withdrawn their intellect from God's wisdom through their perversity of will, sometimes make absolute judgements about a thing on the basis of its natural condition. And while they are not deceived in matters that pertain naturally to the thing, they can be deceived with respect to matters that are supernatural. For instance, considering that man is mortal, a demon might judge that he will not rise from the dead; or seeing the man Christ, a demon might judge that He is not God.

**Reply to objection 1 and objection 2 and objection 3:** The reply to the objections on both sides is clear from what has been said. For the perversity of the demons stems from the fact that they do not subject themselves to God's wisdom. Still, ignorance is found in the angels not with respect to what is naturally knowable, but with respect to what is knowable [only] supernaturally.

Again, it is clear that an angel's understanding of a thing's 'what-ness' is always true except *per accidens*, when it is ordered in an inappropriate way toward some composition or division.

## Article 6

### Does an angel have both evening knowledge and morning knowledge?

It seems that an angel has neither evening knowledge (*cognitio vespertina*) nor morning knowledge (*cognitio matutina*):

**Objection 1:** Both evening and morning have an element of darkness. But there is no darkness in an angel's cognition, since there is no error or falsity in it. Therefore, an angel's cognition should not be called either 'morning knowledge' or 'evening knowledge'.

**Objection 2:** Night falls between evening and morning, and noontime falls between morning and evening. Therefore, if there is morning knowledge and evening knowledge in angels, then by parity of reasoning there should be noontime knowledge and nocturnal knowledge in them as well.

**Objection 3:** Cognitions are distinguished by differences in the objects known, and this is why in *De Anima* 3 the Philosopher says, “The sciences are divided in the same way that things are.” Now as Augustine says in *Super Genesim ad Litteram* 2, things have three types of existence (*esse*), viz., (a) existence in the Word, (b) existence in their own proper nature, and (c) existence in the angelic mind (*in intelligentia angelica*). Therefore, if morning knowledge and evening knowledge are posited in the angels because of the existence of things in the Word and because of their existence in their own proper nature, then a third type of knowledge should also be posited in the angels because of the existence of things in the angelic mind.

**But contrary to this:** In *Super Genesim ad Litteram* 4, and again in *De Civitate Dei* 11, Augustine distinguishes between the morning knowledge of angels and their evening knowledge.

**I respond:** Talk about morning knowledge and evening knowledge in the angels was introduced by Augustine, who claimed that the six days in which God is said in Genesis 1 to have made all things are to be thought of not as ordinary days lasting for one circuit of the sun (for we read that the sun was made on the fourth day), but as a single day—more specifically, as the angelic cognition presented with six kinds of things.

Now just as the morning is the beginning of a normal day and the evening its end, so too the cognition of the primordial existence of things is called ‘morning knowledge’, and this is knowledge of things insofar as they exist in the Word. On the other hand, what is called ‘evening knowledge’ is the cognition of the very *esse* of a created thing insofar as it exists in its own proper nature. For the *esse* of things flows from the Word as from a primordial principle, and this outflow is terminated in the *esse* that things have in their own proper nature.

**Reply to objection 1:** In the case of angelic cognition, ‘evening’ and ‘morning’ are used not because of their likeness in having an element of darkness, but because of their likeness to a beginning and an end.

An alternative reply is that, as Augustine points out in *Super Genesim ad Litteram* 4, nothing prevents a thing from being called ‘light’ in comparison to one thing and ‘darkness’ in comparison to something else. For instance, in keeping with Ephesians 5:8 (“You were once darkness, but now light in the Lord”), the life of those who are faithful and just is called ‘light’ in comparison to the wicked, whereas, in keeping with 2 Peter 1:19 (“You have the prophetic word, which you do well to attend to as a light that shines in a dark place”), the life of those who are faithful is said to be dark in comparison to the light of glory. So, then, the angelic cognition by which an angel knows things in their own proper nature is like day in comparison to ignorance or error, but it is dark in comparison to the angel’s vision of the Word.

**Reply to objection 2:** Morning and evening knowledge pertain to the day, i.e., to the illuminated angels, who are distinct from the darkness, i.e., the bad angels. Now in knowing a creature, the good angels do not cling to it, which would be to turn to darkness and become as night; instead, they turn their knowledge into praise of God, in whom they know all things as in the source of all things. And so after evening comes morning, and not night, in the sense in which morning is the end of the preceding day and the beginning of the next day, because the angels turn their knowledge of the previous work into the praise of God.

On the other hand, noontime is included under the name ‘day’ as a midpoint between two extremes. Alternatively, noontime can refer to their knowledge of God Himself, who has no beginning or end.

**Reply to objection 3:** The angels are themselves creatures, and so the existence of things in the angelic understanding is itself included under evening knowledge, in just the way that the existence of things in their own proper nature is.

### Article 7

#### Is evening knowledge the same as morning knowledge?

It seems that evening knowledge is the same as morning knowledge:

**Objection 1:** Genesis 1:5 says, “And there came evening and morning one day.” But as Augustine says, ‘day’ refers here to angelic cognition. Therefore, in angels the morning knowledge and the evening knowledge are one and the same.

**Objection 2:** It is impossible for one power to have two operations at the same time. But angels are always actually having morning knowledge, since, according to Matthew 18:10 (“Their angels in heaven always see the face of my Father ...”), they always see God and other things in God. Therefore, if his evening knowledge were distinct from his morning knowledge, then an angel could not in any way actually be having evening knowledge.

**Objection 3:** In 1 Corinthians 13:10 the Apostle says, “When that which is perfect is come, that which is in part shall be done away with.” But if evening knowledge is distinct from morning knowledge, then it is related to it as something imperfect to something perfect. Therefore, evening knowledge will not be able to exist together with morning knowledge.

**But contrary to this:** In *Super Genesim ad Litteram* 4 Augustine says, “There is a huge difference between knowing a thing in the Word of God and knowing it in its own nature, so that the former is properly like daytime and the latter like evening.”

**I respond:** As has been explained (a. 6), the knowledge by which an angel knows things in their own proper nature is called evening knowledge. But this cannot be understood in such a way that angels receive their cognition from the proper natures of things, so that the preposition ‘in’ would be indicating the status of a source [of cognition]; for as was explained above (q. 55, a. 2), angels do not receive their cognition from the things themselves. Therefore, it follows that the phrase ‘in their own proper nature’ is being taken for the thing known insofar as it is subject to the cognition—so that, namely, knowledge is called ‘evening knowledge’ in the angels insofar as they know the existence that the things have in their own proper nature.

Now the angels know this through two mediums, viz., (a) through their innate intelligible species and (b) through the ideas of things that exist in the Word. For it is not the case that in seeing the Word they know only the existence that the things have in the Word; rather, they [also] see the existence that the things have in their own proper nature—just as God, in seeing Himself, knows the existence that things have in their own proper nature. Therefore, if their knowledge is called ‘evening knowledge’ because in seeing the Word they know the existence that things have in their own proper nature, then evening knowledge and morning knowledge are one and the same in essence, differing only with respect to what is known. On the other hand, if their knowledge is called ‘evening knowledge’ because they know the existence that things have in their own proper nature by means of their innate intelligible forms, then their evening knowledge is distinct from their morning knowledge. And Augustine seems to understand the matter in this latter way, since he claims that the one sort of knowledge is imperfect in comparison to the other.

**Reply to objection 1:** Just as the number of the six days, as understood by Augustine, is taken

from the six kinds of things that are known by the angels, so the oneness of the day is taken from the oneness of the thing known, and yet this one thing can be known by diverse types of cognition.

**Reply to objection 2:** Two operations of the same power can exist at the same time as long as the one is referred back to the other. This is clear in a case in which the will simultaneously wills (a) an end and (b) what is ordered to that end, as well as in a case in which the intellect, once it has acquired knowledge (*scientia*), simultaneously understands (a) the principles and (b) the conclusion through the principles. Now as Augustine explains, the evening knowledge in angels is referred back to the morning knowledge. Hence, nothing prevents both of them from existing in the angels simultaneously.

**Reply to objection 3:** When the perfect has come, the imperfect that is opposed to it is done away with. For instance, faith, which is of things that are not seen, is done away with when the vision [of God] comes.

However, the imperfection of evening knowledge is not opposed to the perfection of morning knowledge. For the fact that a thing is known in its own self is not opposed to its being known in its cause. Again, there is nothing incoherent about a thing being known through two mediums, one of which is more perfect and the other of which is less perfect; for instance, we can have both a demonstrative middle term and a dialectical middle term with respect to the same conclusion. Similarly, the same thing can be known by an angel both through the Uncreated Word and through an innate intelligible species.

## QUESTION 59

### An Angel's Will

We next have to consider what pertains to an angel's will. We will first consider the will itself (question 59) and then the movement of the will, which is love (*amor*) or affection (*dilectio*) (question 60).

On the first topic there are four questions: (1) Do angels have a will? (2) Is an angel's will his very nature or, again, his very intellect? (3) Do angels have free choice? (4) Do angels have an irascible appetite and a concupiscible appetite?

#### Article 1

##### Do angels have a will?

It seems that angels do not have a will (*in angelis non sit voluntas*):

**Objection 1:** As the Philosopher says in *De Anima* 3, "The will exists in the reason." But in the angels there is no reason (*ratio*); instead, there is something higher than reason. Therefore, in the angels there is no will; instead, there is something higher than the will.

**Objection 2:** As is clear from the Philosopher in *De Anima* 3, the will is a type of desire (*appetitus*). But desire belongs to what is imperfect, since a desire is for something that is not yet had. Therefore, since there is no imperfection in the angels—especially the beatified angels—it seems that they do not have a will.

**Objection 3:** In *De Anima* 3 the Philosopher says that the will is a moved mover, since it is moved by a desirable thing *qua* understood. But angels are not moveable, since they are incorporeal. Therefore, angels do not have a will.

**But contrary to this:** In *De Trinitate* 10 Augustine says that the image of the Trinity is found in the mind with respect to memory, intelligence, and will. But the image of God is found in the angelic mind and not just in the human mind, since the angelic mind is likewise capable of seeing God. Therefore, angels have a will.

**I respond:** One must posit a will in the angels. To make this clear, notice that since all things proceed from God's will, they are all in their own way inclined toward the good through appetite (*appetitus*), though in different ways.

For certain things, e.g., plants and inanimate bodies, are inclined toward the good only through a natural disposition and without any cognition. This sort of inclination toward the good is called a *natural appetite*.

Other things are inclined toward the good with some sort of cognition, not in the sense that they understand the very concept of the good (*ratio boni*), but in the sense that they know some particular good—as, for instance, the senses, which know the sweet and the white and other things of this sort. The inclination that follows upon this type of cognition is called a *sentient appetite*.

Finally, certain things are inclined toward the good with a cognition by which they know the very concept of the good, and this is proper to an intellect. These things are inclined toward the good in the most perfect way—not, as it were, directed toward the good only by another, as are things that lack cognition, and not directed toward a merely particular good, as are things that have only sentient cognition, but inclined, as it were, toward the universal good itself. And this sort of inclination is called a *will*.

Hence, since angels through their intellect have cognition of the universal concept of the good (*cognoscant ipsam universalem rationem boni*), it is clear that they have a will.

**Reply to objection 1:** Reason (*ratio*) transcends the sensory power (*sensus*) in a way different from that in which intellective understanding (*intellectus*) transcends reason. For reason transcends the sensory power because of a diversity in the *objects of cognition* (*secundum diversitatem cognitorum*), since the sensory power has to do with particulars, whereas reason has to do with universals. And so an appetite that tends toward the universal good, which corresponds to reason, is different from an appetite that tends toward a particular good, which corresponds to the sensory power. By contrast, intellective understanding and reason differ in their *mode of cognition* (*quantum ad modum cognoscendi*). For intellective understanding has cognition by simply looking (*simplici intuitu*), whereas reason has cognition by going discursively (*discurrendo*) from one thing to another. Still, by means of discursive reasoning, reason arrives at a cognition of what intellective understanding has cognition of without discursive reasoning, viz., the universal. Therefore, the very same object is proposed to the appetitive power by both reason and intellective understanding. Hence, in the angels, who are purely intellectual, there is no appetite higher than the will.

**Reply to objection 2:** Even though the *name* of the appetitive part of the soul is taken from the seeking out (*appetendo*) of what is not yet possessed, the appetitive part nonetheless extends not only to this sort of thing, but also to many other things. In the same way, the name ‘rock’ (*lapis*) is taken from the hurting of the foot (*laesio pedis*), and yet this is not the only thing that belongs to a rock. Similarly, the irascible power is named from anger, and yet there are in the irascible power passions other than anger, e.g., hope, audacity, and others of this sort.

**Reply to objection 3:** The will is called a moved mover in the sense that willing, along with intellective understanding, is a certain sort of movement. Nothing prevents a movement in this sense from existing in angels, since, as *De Anima* 3 says, this sort of movement is the act of what is perfect.

## Article 2

### Does an angel’s will differ from his intellect or his nature?

It seems that an angel’s will does not differ from his intellect or his nature (*non differat voluntas ab intellectu et natura*):

**Objection 1:** An angel is more simple than a natural body. But through its form a natural body is inclined toward its end, which is its good. Therefore, *a fortiori*, an angel is inclined toward his end through his form. But ‘angel’s form’ refers either (a) to the very nature in which he subsists, or else (b) to an intelligible species that exists in his intellect. Therefore, an angel is inclined toward the good both through his nature and through his intelligible species. But this inclination toward the good pertains to the will. Therefore, an angel’s will is not distinct from his nature or his intellect.

**Objection 2:** The intellect’s object is the true, whereas the will’s object is the good. But the good and the true differ only conceptually and not in reality. Therefore, the will and the intellect do not differ from one another in reality.

**Objection 3:** Powers are not differentiated by a distinction between the common and the proper; for instance, the power of vision is directed both toward color [in general] and toward whiteness. But the good and the true seem to be related as the common and the proper, since the true is a certain good, viz., the good of the intellect. Therefore, the will, whose object is the good, does not differ from the intellect, whose object is the true.

**But contrary to this:** An angel’s will is directed only toward good things, whereas his intellect is directed toward both good and bad things, since it has cognition of both. Therefore, an angel’s will is

distinct from his intellect.

**I respond:** An angel's will is a certain power (*virtus*) or potentiality (*potentia*) that is neither his very nature nor his intellect.

The claim that an angel's will is not his nature is obvious from the fact that a thing's nature or essence is included within the thing itself, and so anything that extends to what exists outside a thing is not that thing's essence. Hence, in the case of natural bodies we see that the inclination toward their own *esse* is not something added to the essence, but derives (a) from the thing's matter, which desires the *esse* before it has it, and (b) from its form, which keeps the thing in existence once it exists. By contrast, an inclination for what is extrinsic derives from something added to the essence. For instance, a body's inclination to a given place derives from its heaviness or lightness, while its inclination to effect what is similar to itself derives from its active qualities. Now a will is naturally inclined toward the good. Hence, the only case in which the essence and the will are the same is where the good is totally contained within the essence of the one who is willing—i.e., in the case of God, who wills nothing outside Himself except for the sake of His own goodness. This cannot be said of any creature, since the infinite good lies outside the essence of every created thing. Hence, an angel's will—or any other creature's will—cannot be the same as his essence.

Similarly, an angel's will—or a man's will—cannot be the same as his intellect. For cognition occurs in virtue of the fact that the object of cognition exists within the one having the cognition (*cognitum est in cognoscente*), and so the intellect extends to what exists outside itself insofar as what exists outside the intellect is by its essence capable of existing in some sense within the intellect. By contrast, the will extends itself to what exists outside itself insofar as it in some way tends toward an exterior thing by a certain inclination. But the power by which a creature has within itself something that exists outside itself is distinct from the power by which it tends toward an exterior thing. And so in any creature the intellect must be distinct from the will.

However, this is not so with God, who has both universal being and universal good within Himself. So both His will and His intellect are His essence.

**Reply to objection 1:** As has been explained, a natural body is inclined toward its own *esse* through its substantial form, whereas it is inclined toward what is exterior to itself through something added to itself.

**Reply to objection 2:** Powers are differentiated not by a material distinction among their objects, but rather by a formal distinction, which involves the concept (*ratio*) of the power's object. And so the difference between the concepts *true* and *good* is sufficient for a distinction between the intellect and the will.

**Reply to objection 3:** The true and the good are convertible in reality, and this is why the good is understood by the intellect under the concept *true*, and why the true is desired by the will under the concept *good*. And yet, as has been explained, the diversity of the concepts is sufficient to differentiate the powers.

### Article 3

#### Do angels have free choice?

It seems that angels do not have free choice (*liberum arbitrii*):

**Objection 1:** The act of free choice is to choose (*eligere*). But the act of choosing cannot exist in angels, because the act of choosing is a desire for something which has been deliberated about

beforehand and, as *Ethics* 3 says, deliberation is a certain sort of inquiry. But angels do not come to have cognition through inquiry, since inquiry involves discursive reasoning. Therefore, it seems that angels do not have free choice.

**Objection 2:** Free choice is open to both parts of a contradiction (*habet se ad utrumlibet*). But there is nothing in an angel's intellect that is open to both parts of a contradiction, since, as has been explained (q. 58, a. 5), an angel's intellect cannot be mistaken with respect to its natural intelligible objects. Therefore, an angel's appetite cannot have free choice.

**Objection 3:** Things that are natural in angels belong to them in greater or lesser degrees, since the intellectual nature in higher angels is more perfect than in lower angels. But free choice does not admit of greater and lesser degrees. Therefore, angels do not have free choice.

**But contrary to this:** Free choice belongs to the dignity of man. But angels have more dignity than men do. Therefore, since free choice exists in men, *a fortiori* it exists in angels.

**I respond:** Some things do not act from free choice, but instead act insofar as they are acted upon and moved by others, in the way that an arrow is moved to its target by an archer. On the other hand, some things, e.g., non-rational animals, act by a sort of choice, but not by free choice; for instance, a sheep flees from a wolf in virtue of a certain sort of judgment by which it takes the wolf to be harmful to itself. However, this judgment is not free for the sheep, but is instead instilled in it by nature.

Only that which has intellective understanding (*intellectus*) can act in virtue of a free judgment, since it has cognition of the universal concept of the good (*cognoscit universalem rationem boni*) and on this basis can judge that this thing or that thing is good. Hence, wherever there is intellective understanding, there is free choice. And so it is clear that angels have free choice in an even more excellent way than men do, just as they have intellective understanding in a more excellent way as well.

**Reply to objection 1:** The Philosopher is talking here about choice as it exists in man. But just as a man's judgment about speculative matters (*speculativa*) differs from an angel's in that the latter occurs without inquiry, whereas the former occurs through inquiry, so it is with practical matters (*operabilia*). Hence, angels have choice in virtue of their direct reception of truth and in the absence of the deliberative inquiry of counsel.

**Reply to objection 2:** As has been explained (a. 2), cognition occurs in virtue of the fact that the object of cognition exists in the one having the cognition. Now a thing is imperfect when what is apt by nature to exist in it does not exist in it. Hence, an angel would not be perfect in his nature if his intellect were not determinate with respect to every truth that he can have cognition of by nature.

By contrast, an act of an appetitive power occurs in virtue of the fact that the affections are inclined toward an exterior thing. Now the perfection of a thing does not depend on every entity toward which it is inclined, but depends only on what is higher. And so it is not an imperfection on the part of an angel if he does not have a determinate will with respect to those things that are lower than himself. However, it would be an imperfection on his part if he had an indeterminate will with respect to what is higher than himself.

**Reply to objection 3:** Free choice exists in a more noble way in the higher angels than it does in the lower angels, just as the judgment of the intellect exists in a more noble way in the higher angels. Yet it is true that freedom itself, to the extent that it is thought of as involving a certain absence of coercion, does not admit of greater and lesser degrees. For privations and negations are not intensified or remitted *per se*, but are intensified or remitted only through their causes or in light of an adjoined affirmation.

#### Article 4

##### Do angels have an irascible appetite and a concupiscible appetite?

It seems that angels have an irascible appetite and a concupiscible appetite (*in angelis sit irascibilis et concupiscibilis*):

**Objection 1:** In *De Divinis Nominibus*, chap. 4, Dionysius says that in the demons “there is irrational fury and insane concupiscence.” But demons have the same nature as angels, since their sin did not alter their nature. Therefore, angels have an irascible appetite and a concupiscible appetite.

**Objection 2:** Love and joy exist in the concupiscible appetite, whereas anger, hope, and fear exist in the irascible appetite. But all of these are attributed to good and bad angels in Sacred Scripture. Therefore, angels have an irascible appetite and a concupiscible appetite.

**Objection 3:** Certain virtues are said to exist in the irascible and concupiscible appetites; for instance, charity and temperance seem to exist in the concupiscible appetite, whereas hope and fortitude exist in the irascible appetite. But these virtues exist in angels. Therefore, angels have an irascible appetite and a concupiscible appetite.

**But contrary to this:** In *De Anima* 3 the Philosopher says that the irascible and concupiscible appetites exist in the sentient part of the soul. But angels do not have a sentient part. Therefore, they do not have an irascible appetite or a concupiscible appetite.

**I respond:** Only a sentient appetite, and not an intellective appetite, is divided into the irascible and the concupiscible. The reason for this is that since powers are differentiated only by the formal concept of their objects and not by a material distinction among their objects, it follows that if a given object corresponds to a power under some common concept, then there will not be a distinction of powers corresponding to the diversity of the proper concepts contained by that common concept. For instance, if the proper object of the visual power is color under the concept *color*, then there will not be two distinct visual powers corresponding to the difference between *black* and *white*. However, if *white* as *white* were the proper object of some power, then the power that sees white would be distinct from the power that sees black.

Now it is clear from what has been said (a. 1 and q. 16, a. 1) that the object of the intellective appetite (or will) is the good under the common concept of the good, and there cannot be any desire that is not a desire for the good. Hence, in the intellective part [of our soul] the appetite is not divided in a way that corresponds to the distinction among particular goods—unlike the sentient appetite, which is divided in virtue of the fact that its objects are certain particular goods and not the good under the common concept of the good. Hence, since angels have only an intellective appetite, their appetite is not divided into the irascible and concupiscible, but instead remains undivided and is called the will.

**Reply to objection 1:** Fury and concupiscence are predicated of the demons metaphorically, in just the way that anger is sometimes attributed to God, because of a likeness in the effects.

**Reply to objection 2:** Insofar as love and joy are passions, they exist in the concupiscible appetite, but insofar as ‘love’ and ‘joy’ name simple acts of will, these acts exist in the intellective part. For instance, to love is to will the good for someone, and to rejoice is for the will to rest in some good that is now possessed. And, more generally, as Augustine says in *De Civitate Dei* 9, none of these names is used for a passion in the case of the angels.

**Reply to objection 3:** Insofar as charity is a virtue, it exists in the will and not in the concupiscible appetite. For the object of the concupiscible appetite is a good that is pleasurable to the senses. But the divine good, which is the object of charity, is not a good of this sort.

For the same reason, one should claim that hope does not exist in the irascible appetite. For the

object of the irascible appetite is some arduous sensible good. But this is not what the hope which is a virtue has to do with; instead, it has to do with an arduous divine good.

Now insofar as temperance is a human virtue, it has to do with desires for sensible pleasures, which pertain to the concupiscible power. Similarly, fortitude has to do with acts of daring and fear, which exist in the irascible power. And so temperance, insofar as it is a human virtue, exists in the concupiscible power, and fortitude exists in the irascible power. But temperance and fortitude do not exist in the angels in this way. For in the angels there are no passions of sense desire or of fear and daring, which are the passions that have to be regulated by temperance and fortitude. Rather, temperance is said to exist in the angels to the extent that they employ their will with moderation in keeping with the rule of God's will. And fortitude is said to exist in them to the extent that they carry out God's will steadfastly. But all of this is done through their will and not through an irascible or concupiscible appetite.

## QUESTION 60

### An Angel's Love or Affection

We next have to consider the act of the will, which is love, i.e., affection (*amor sive dilectio*). For every act of an appetitive power stems from love, i.e., affection. On this topic there are five questions: (1) Do angels have natural love? (2) Do angels have elective love? (3) Is it with natural love or elective love that an angel loves himself? (4) Does an angel love another angel as himself with natural love? (5) Does an angel love God more than himself with natural love?

#### Article 1

##### Do angels have natural love or affection?

It seems that angels do not have natural love or affection:

**Objection 1:** As is clear from Dionysius, *De Divinis Nominibus*, chap. 4, natural love is contrasted with intellectual love. But an angel's love is intellectual love. Therefore, it is not natural love.

**Objection 2:** Things that love with a natural love do not so much act as they are acted upon, since nothing has control over its own nature. But angels act and are not acted upon, since, as has been shown (q. 59, a. 3), they have free choice. Therefore, angels do not have natural love or affection.

**Objection 3:** Every affection is either upright or not upright. Now upright affection involves charity, whereas affection that is not upright involves wickedness. But neither charity nor wickedness pertains to nature; for charity is supernatural, whereas wickedness is contrary to nature. Therefore, angels do not have natural affection.

**But contrary to this:** Love follows upon cognition, since, as Augustine says in *De Trinitate* 10, nothing is loved unless it is known. But angels have natural cognition. Therefore, they also have natural love.

**I respond:** One must posit a natural love in the angels. To see this clearly, notice that what is prior is always preserved in what is posterior to it. But nature is prior to intellect, since the nature of each thing is its essence. Hence, that which belongs to nature has to be preserved even in entities that have an intellect.

Now it is common to every nature to have a certain inclination that constitutes its natural appetite or love. This inclination is found in diverse ways in diverse natures and in each according to its own mode. Hence, in an intellectual nature there is a natural inclination in the will, whereas in a sentient nature there is a natural inclination in the sentient appetite, and in a nature that lacks cognition there is only the nature's being ordered toward something.

Hence, since an angel is an intellectual nature, there must be a natural love in his will.

**Reply to objection 1:** Intellectual love is distinguished from a natural love that is *merely* natural in the sense that merely natural love belongs to a nature that does not have, over and beyond the notion of a nature, the additional perfection of the senses or the intellect.

**Reply to objection 2:** All the things that exist in the whole world are acted upon by something—except the first agent, which acts in such a way that it is not in any sense acted upon by another and in which nature and will are the same. And so there is nothing inappropriate about an angel's being acted upon, given that his natural inclination is instilled in him by the author of his nature. And yet he is not acted upon in such a way that he does not also act. For he has free will.

**Reply to objection 3:** Just as a natural cognition is always true, so too a natural affection is always upright. For natural love is nothing other than an inclination instilled in the nature by the author of the nature. Therefore, to say that a natural inclination is not upright is to disparage the author of the nature.

However, the rectitude of natural love is different from the rectitude of charity and virtue, since the latter rectitude is perfective of the former. It is likewise in this same way that the truth of a natural cognition is different from the truth of an infused or acquired cognition.

## Article 2

### Do angels have elective love?

It seems that the angels do not have elective love (*dilectio electiva*):

**Objection 1:** Elective love seems to be rational love (*amor rationalis*), since the act of choosing (*electio*) follows upon deliberation, which, as *Ethics* 3 says, consists in inquiry. But rational love is contrasted with intellectual love, which, as *De Divinis Nominibus*, chap. 4 says, is proper to the angels. Therefore, angels do not have elective love.

**Objection 2:** Over and beyond infused cognition, the angels have only natural cognition, since they do not reason from principles in order to reach conclusions. And so they are related to all the things that they can have cognition of naturally in just the way that our intellect is related to the first principles that we ourselves can have cognition of naturally. But, as has been pointed out (a. 1), love follows upon cognition. Therefore, over and beyond the love that stems from grace, angels have only natural love. Therefore, they do not have elective love.

**But contrary to this:** We neither gain merit nor lose merit by what is natural. But angels gain or lose merit by their love. Therefore, they have elective love.

**I respond:** Angels have both natural love and elective love. Their natural love is the principle of their elective love, since that which pertains to what is prior always has the nature of a principle. Hence, since the nature is what is first in each thing, what belongs to the nature must be the principle in each thing.

This is obvious in man both with respect to his intellect and with respect to his will. For the intellect has cognition of the principles naturally, and this cognition is a cause of a man's knowledge (*scientia*) of the conclusions, which the man does not have cognition of naturally but comes to have cognition of through discovery or teaching. Similarly, as *Physics* 2 points out, the end plays the same role in the case of the will that the principles play in the case of the intellect. Hence, the will naturally tends toward its own ultimate end. For every man naturally desires beatitude. And this natural act of will is a cause of all other acts of will, since a man wills whatever he wills for the sake of the end. Thus, a man's *natural love* is the love of that good which he naturally wills as his end, whereas his *elective love*, derived from this natural love, is the love of a good that is loved for the sake of that end.

However, there is a difference here between the intellect and the will. For as was explained above (q. 59, a. 2), the intellect's cognition occurs insofar as what the cognition is of exists in the one who has the cognition. And because of the imperfection of man's intellectual nature, his intellect does not by nature immediately possess all of its intelligible objects, but instead has only some of them immediately and from these it moves in some way to the others. By contrast, the act of an appetitive power involves the ordering of the one who desires toward the things themselves. Certain of these things are good in themselves (*secundum se*) and so are desirable in themselves, whereas others have the nature of goodness because of their relation to something else and are desirable because of that something else. Hence, it is not because of any imperfection on the part of the one who desires that he should desire one thing naturally as his end and another thing by choice insofar as it is ordered toward that end. Therefore, since angels have a perfect intellectual nature, they have only natural cognition and not discursive cognition, and yet they have both natural love and elective love.

Now what has been said so far leaves out things that are supernatural to the angels, since their nature is not a sufficient principle of those things. More will be said below (q. 62) about such things.

**Reply to objection 1:** Not every sort of elective love is rational love in the sense in which rational love is contrasted with intellectual love. For love is called rational when it follows upon discursive cognition and, as was explained above when we were discussing free choice (q. 59, a. 3), not every act of choosing follows upon discursive reasoning; only a man's act of choosing does. Hence, the objection does not go through.

**Reply to objection 2:** The reply to the second objection is clear from what has been said.

### Article 3

#### Does an angel love himself with both natural love and elective love?

It seems that an angel does not love himself with both natural love and elective love:

**Objection 1:** As has been explained (a. 2), natural love is directed toward the end itself, whereas elective love is directed toward what is ordered toward the end. But the same thing cannot, in the same respect, be both the end and what is ordered toward the end. Therefore, natural love and elective love cannot be directed toward the same thing.

**Objection 2:** As Dionysius says in *De Divinis Nominibus*, chap. 4, "Love is a uniting and bonding power." But uniting and bonding apply to diverse things that are made one. Therefore, an angel cannot love himself.

**Objection 3:** Love is a certain movement. But every movement tends toward another. Therefore, it seems that an angel cannot love himself with either natural love or elective love.

**But contrary to this:** In *Ethics* 9 the Philosopher says, "Friendship with another stems from friendship with oneself."

**I respond:** Since, as is clear from *Ethics* 1, love is directed toward a good, and since a good is either a substantial good or an accidental good, it follows that something may be loved in one of two ways: either (a) as a subsistent good or (b) as an accidental or inhering good. What is loved as a subsistent good is loved in such a way that someone wills the good for it, whereas what is loved as an accidental or inhering good is loved in such a way that it is desired for the other, in the way that knowledge is loved not in order that it itself might be good, but rather in order that it might be possessed by someone. This second type of love is called the *love of concupiscence* by some, whereas the first type is called the *love of friendship*.

Now it is clear that each thing that lacks cognition desires naturally to attain what is good for itself; for instance, fire seeks a higher place. Hence, an angel or a man naturally desires his own good and his own perfection; and this is what it is to love oneself. Hence, an angel or a man loves himself by nature, since he desires some good for himself by a natural desire.

On the other hand, to the extent that an angel or a man desires some good for himself by choice, he loves himself with elective love.

**Reply to objection 1:** As has been explained, it is not in the same respect, but rather in diverse respects, that an angel or a man loves himself with natural love and loves himself with elective love.

**Reply to objection 2:** Just as being one with something is more than simply being united with it, so there is more oneness in love directed toward oneself than there is in love directed toward other things that are united to oneself.

However, the reason why Dionysius used the names 'uniting' and 'bonding' was in order to show

that love for other things derives from love for oneself, just as being united is derived from being one.

**Reply to objection 3:** Just as love is an action that remains within the agent, so too it is a movement that remains within the lover. Moreover, this movement does not necessarily tend toward something else, but can instead be reflected back on the lover in order that he might love himself. In the same way, cognition is also reflected back on the one having the cognition in order that he might have cognition of himself.

#### Article 4

##### Does an angel love another angel as himself with natural love?

It seems that an angel does not love another angel as himself with natural love:

**Objection 1:** Love follows upon cognition. But one angel does not have cognition of another angel as of himself, since, as was explained above, (q. 56, aa. 1 and 2), he has cognition of himself through his own essence, whereas he has cognition of another angel through a likeness of that angel. Therefore, it seems that one angel does not love another angel as himself.

**Objection 2:** A cause is more powerful than what it causes, and a principle is more powerful than what is derived from that principle. But as the Philosopher says in *Ethics* 9, a love that is directed toward another is derived from the love that is directed toward oneself. Therefore, an angel does not love another angel as himself; instead, he loves himself more.

**Objection 3:** Natural love is directed toward something as an end, and it cannot be removed. But it is not the case that one angel is the end of another angel; in addition, the love of one angel for another can be removed, as is clear in the case of the demons, who do not love the good angels. Therefore, one angel does not love another angel as himself with natural love.

**But contrary to this:** What is found in all things, even in things that lack reason, seems to be natural. But Ecclesiasticus 13:19 says, "Every beast loves its like." Therefore, one angel naturally loves another angel as himself.

**I respond:** As has been explained (a. 3), an angel or a man naturally loves himself. Now what is one with a thing is that very thing itself, and so each thing loves that which is one with it. If that thing is one with it through a natural union, then it loves it with natural love, whereas if it is one with it through a non-natural union, then it loves it with non-natural love. For instance, a man loves his fellow citizen with the love that is a political virtue, whereas he loves his blood relative with natural love, since he is one with his blood relative in the principle of natural generation.

Now it is clear that what is one with something in species or genus is one with him in nature. And so each thing loves with natural love that which is one with him in species, since it loves its own species. This is obvious even in the case of things that lack cognition; for instance, a fire has a natural inclination to communicate its form to another—which communication is its good—in just the same way that it has a natural inclination to seek its own good, viz., being high up.

So, then, one should claim that one angel loves another angel with natural love insofar as he shares a nature with him. However, it is not the case that he loves another angel with natural love insofar as he shares other things with him or, again, insofar as he differs from him in other things.

**Reply to objection 1:** In one sense, the phrase 'as himself' can modify the cognition (or the love) with respect to the thing that the cognition is of (or that is loved). And in this sense an angel knows another as himself because he knows that the other exists, just as he knows that he himself exists.

In a second sense, the phrase 'as himself' modifies the cognition (or love) with respect to the one

who has the cognition (or who is loving). And in this sense it is not the case that one angel knows another angel as himself, since he knows himself through his own essence, whereas he does not know the other through the other's own essence. Similarly, he does not love the other as himself, since he loves himself through his own will, whereas he does not love the other through the other's own will.

**Reply to objection 2:** The particle 'as' implies similarity and not equality. For since natural love is based upon natural oneness, that which is one with him to a lesser degree is such that he naturally loves it less. Hence, he naturally loves that which is numerically one with him to a greater degree than he loves what is one with him only in species or in genus. On the other hand, it is natural that he should have a love for the other that is similar to his love for himself in the sense that just as he loves himself insofar as he wills the good for himself, so he loves the other insofar as he wills the other's good.

**Reply to objection 3:** Natural love is said to be directed toward the end itself not in the sense that one wills the good for the end, but in the sense that he wills the end as a good for himself and, consequently, as a good for another insofar as that other is one with him.

Moreover, this natural love cannot be removed even from the bad angels in the sense that it would not be the case that they have a natural love for other angels insofar as they share their nature with them. However, they do hate the good angels insofar as they differ from them with respect to uprightness (*iustitia*) and wickedness (*iniustitia*).

## Article 5

### Does an angel love God more than himself with natural love?

It seems that an angel does not love God more than himself with natural love:

**Objection 1:** As has been explained (a. 4), natural love is based on natural union. But God's nature is maximally distant from an angel's nature. Therefore, an angel loves God less than himself with natural love—and even less than he loves another angel.

**Objection 2:** That for the sake of which each thing is such-and-such is itself more such-and-such. But it is for his own sake that each one loves another with natural love, since everything is such that it loves a thing insofar as that thing is good for it. Therefore, an angel does not love God more than himself with natural love.

**Objection 3:** Nature reflects back on itself; for we see that every agent acts naturally to conserve itself. But nature would not reflect back on itself if it tended toward another more than it tends toward itself. Therefore, an angel does not love God more than himself with natural love.

**Objection 4:** It seems proper to charity that someone should love God more than himself. But the love of charity is not natural in angels; instead, as Augustine puts it in *De Civitate Dei* 12, the love of charity is "poured into their hearts by the Holy Spirit, who is given to them." Therefore, angels do not love God more than themselves with natural love.

**Objection 5:** Natural love always remains as long as the nature remains. But to love God more than oneself does not remain in an angel or a man who sins. For as Augustine says in *De Civitate Dei* 14, "The two loves created two cities. Specifically, the love of oneself even to the point of contempt for God created the earthly city, whereas the love of God even to the point of contempt for oneself created the heavenly city." Therefore, it is not natural to love God above oneself (*supra seipsum*).

**But contrary to this:** All the moral precepts of the Law belong to the natural law. But the precept to love God above oneself is a moral precept of the Law. Therefore, it belongs to the natural law. Therefore, an angel loves God above himself with natural love.

**I respond:** Some have claimed that (a) by natural love an angel loves God more than himself both with a love of concupiscence, since he desires the divine good for himself more than his own good, and in some sense with a love of friendship, insofar as an angel naturally wills for God a greater good than he wills for himself, since he naturally wills that God should be God and that he himself should have his own proper nature, but that (b), *absolutely speaking*, by natural love an angel loves himself more than God in the sense that he loves himself more intensely and more principally than he loves God.

However, the falsity of this opinion is obvious if one considers, in the case of natural things, what such things are naturally moved toward. For the natural inclination of the things that lack reason is an indication of the natural inclination of an intellectual nature's will. Now among natural things, each thing that by its very nature belongs to another is such that it is inclined more principally and more intensely toward that to which it belongs than toward itself. This natural inclination is clear from things that are naturally acted upon. For as *Physics 2* says, each thing is acted upon in just the way that it is naturally apt to be acted upon. For instance, we see that a part naturally exposes itself for the sake of conserving the whole, in the way that a hand is exposed to a blow without deliberation for the sake of conserving the whole body. And since reason imitates nature, we also find an inclination of this sort among the political virtues. For a virtuous citizen exposes himself to the danger of death for the sake of conserving the whole polity; and if a man were a natural part of this [earthly] city, then this inclination would be natural to him.

Therefore, since God Himself is the universal good, and since this good contains within itself angels and men and all creatures (for every creature is naturally such that, given what it is, it belongs to God), it follows that even by natural love an angel or man loves God to a greater degree and more principally than himself. Otherwise, if he naturally loved himself more than God, it would follow that his natural love is perverted and that it would be destroyed, rather than perfected, by charity.

**Reply to objection 1:** This argument is talking about those things which are divided from one another as equals and which are not such that one of them is the reason for the existence and goodness of the other. For among such things, each one loves itself by nature more than the other, since it is more one with itself than with the other.

By contrast, if the one has the other as the whole reason for its existence and goodness, then by nature it loves this sort of other more than itself—in the way that, as was explained above, a part naturally loves the whole more than itself, and in the way that each particular thing naturally loves the good of its species more than its own particular good. But God is not only the good of each species but also the universal good itself, absolutely speaking. Hence, each thing in its own way naturally loves God more than itself.

**Reply to objection 2:** When one says that God is loved by an angel insofar as He is good for that angel, if the expression 'insofar as' expresses the *end* [of the love], then the claim is false. For an angel naturally loves God not for the sake of his own good, but for the sake of God Himself.

On the other hand, if 'insofar as' expresses the *explanation* for the love (*amoris ratio*) on the part of the lover, then the claim is true. For it would not be natural to anything that it should love God, if it were not the case that each thing depends on the good which is God.

**Reply to objection 3:** Nature is reflected back on itself not only with respect to what is particular in it, but even more with respect to what is common. For each thing is inclined to conserve not only itself as an individual, but also its own species. And, *a fortiori*, each thing has a natural inclination toward that which is the universal good, absolutely speaking.

**Reply to objection 4:** It is insofar as God is the universal good on which every natural good depends that He is loved by each thing with a natural love. However, it is insofar as He is the good who naturally beatifies everyone with a supernatural beatitude that He is loved with the love of charity.

**Reply to objection 5:** Since God's substance and the common good are one and the same, everyone who sees God's very essence is moved with the very same movement of love toward God's essence itself both (a) insofar as it is distinct from other things and also (b) insofar as it is the common good. And since a good is naturally loved by all things insofar as it is common, everyone who sees God through His essence is such that he cannot but love Him.

However, those who do not see His essence have cognition of Him through His particular effects, which are sometimes contrary to their will. And so it is in this sense that they are said to hold God in contempt. And yet, insofar as God is the common good of all things, everything still loves God naturally more than itself.

## QUESTION 61

### The Production of Angels with Their Natural *Esse*

Given what has already been said about the nature of angels and about their cognition and willing, what remains to be considered is their creation or, more generally, their origin. This inquiry has three parts. First, we will consider the way in which angels were produced with their natural *esse* (question 61); second, the way in which angels were perfected in grace and glory (question 62); and, third, the way in which some of them became bad (questions 63 and 64).

On the first topic there are four questions: (1) Do angels have a cause of their *esse*? (2) Do angels exist from eternity? (3) Were angels created before corporeal creatures? (4) Were angels created in the empyrean heaven?

#### Article 1

##### Do angels have a cause of their *esse*?

It seems that angels do not have a cause of their *esse*:

**Objection 1:** Genesis 1 talks about the things that were created by God. But no mention of angels is made there. Therefore, angels were not created by God.

**Objection 2:** In *Metaphysics* 8 the Philosopher says that if a given substance is a form without matter, then it has being and oneness immediately through itself, and it does not have a cause which makes it an entity or makes it one. But as was shown above (q. 50, a. 2), angels are immaterial forms. Therefore, they do not have a cause of their *esse*.

**Objection 3:** Everything that is made by an agent is such that by the very fact that it is made, it receives its form from that agent. But since angels are forms, they do not receive their form from any agent. Therefore, angels do not have an agent cause.

**But contrary to this:** Psalm 148:2 says, "Praise Him, all you His angels." And afterwards it adds, "For He spoke, and they were made."

**I respond:** It is necessary to assert that angels, as well as everything else other than God, was made by God. For God alone is His own *esse*, whereas in all other things, as was shown above (q. 3, a. 4), the essence of the thing differs from its *esse*. From this it is clear that God alone is a being through His essence, whereas all other things are beings by participation. But everything that is such-and-such by participation is caused by that which is such-and-such through its essence; for instance, fire is a cause of everything that is on fire. Hence, it is necessary for angels to have been created by God.

**Reply to objection 1:** In *De Civitate Dei* 11 Augustine claims that the angels were not left out in the first creation of things, but that they are signified by the name 'heaven' or even by the name 'light'. Now the reason why they were either left out or signified by the names of corporeal things is that Moses was speaking to an uneducated people who were not yet able to comprehend an incorporeal nature. And if he had told them that there were certain things above every corporeal nature, this would have been for them an occasion of idolatry, which they were already prone to and which Moses wanted especially to call them back from.

**Reply to objection 2:** Substances that are subsistent forms do not have any formal cause of their *esse* or their oneness; nor do they have an agent cause that transforms their matter from potentiality to actuality. But they do have a cause that produces their whole substance.

**Reply to objection 3:** The reply to objection 3 is clear from what has just been said.

## Article 2

### Were the angels produced by God from eternity?

It seems that the angels were produced by God from eternity (*ab aeterno*):

**Objection 1:** God is a cause of an angel through His own *esse*, since He does not act through anything that is added to His essence. But His *esse* is eternal. Therefore, He produced angels from eternity.

**Objection 2:** Anything that exists at some times and not at others is subject to time. But as the *Liber de Causis* says, an angel is beyond time. Therefore, an angel is not such that he exists at some times and not at others; instead, he always exists.

**Objection 3:** Augustine proves the incorruptibility of the soul from the fact that the soul is able through its intellect to know truth. But truth is eternal in the same way that it is incorruptible. Therefore, the intellectual nature of souls and angels is not only incorruptible, but also eternal.

**But contrary to this:** Proverbs 8:22 says in the person of Begotten Wisdom, “The Lord possessed me in the beginning of His ways, before He made anything at the beginning.” But as has been shown (a. 1), angels were made by God. Therefore, there was a time at which angels did not exist.

**I respond:** God alone—Father, Son, and Holy Spirit—exists from eternity. This is what the Catholic Faith firmly holds, and any contrary opinion is to be rejected as heretical. For God produced creatures in such a way that He made them from nothing (*ex nihilo*), i.e., He made them after there was nothing.

**Reply to objection 1:** God’s *esse* is His very act of willing. Therefore, the fact that God produced angels and other creatures through His *esse* does not rule out His having produced them by His act of will. But as was explained above (q. 19, a. 3 and q. 46, a. 1), God’s will does not produce creatures by necessity. And so He produced the things He wanted to, and He produced them when He wanted to.

**Reply to objection 2:** An angel is beyond that time which numbers the movement of the heavens, since an angel is above all the movements of corporeal nature. Yet an angel is not beyond that time which numbers the succession of his own *esse* after non-*esse*, or that time which numbers the succession of his own operations. This is why Augustine says in *Super Genesim ad Litteram* 8 that God moves the spiritual creature through time.

**Reply to objection 3:** Angels and intellective souls are incorruptible by the very fact that they have a nature through which they are capable of knowing truth. But they did not have this nature from eternity; instead, it was given to them by God when He willed to give it to them. Hence, it does not follow that the angels existed from eternity.

## Article 3

### Were the angels created before the corporeal world?

It seems that the angels were created before the corporeal world:

**Objection 1:** In *Super Epistolam ad Titum* Jerome says, “Six thousand years of our time have not yet been completed. How much time, and how many beginnings of ages, must we think there have been in which the angels—the Thrones, Dominations, and the rest of the orders—have served God?” And in *De Fide Orthodoxa* 2 Damascene says, “Some claim that the angels were born before all of creation; for instance, the theologian Gregory says, ‘God first thought of the angelic and heavenly powers, and this

thought was His work.”

**Objection 2:** Angelic nature lies between God’s nature and corporeal nature. But God’s nature exists from eternity, whereas corporeal nature exists from the onset of time. Therefore, angelic nature was made before the creation of time and after eternity.

**Objection 3:** Angelic nature is more distant from corporeal nature than one corporeal nature is from another. But one corporeal nature was made before another; this is why the beginning of Genesis describes six days of the production of things. Therefore, *a fortiori*, angelic nature was made before every corporeal nature.

**But contrary to this:** Genesis 1:1 says, “In the beginning God created heaven and earth.” But this would not be true if He had created something before this. Therefore, angels were not created before corporeal nature.

**I respond:** On this matter the holy doctors hold two opinions, but it seems that the more probable opinion is that the angels were created at the same time that corporeal creatures were. For the angels are a certain part of the universe, since they do not by themselves constitute a universe, but instead come together with corporeal creatures to constitute a single universe. This is clear from the ordering of one creature toward another, since the ordering of things toward one another is the good of the universe. But no part is perfect when separated from its whole. Therefore, it is not probable that God, “whose works are perfect” (Deuteronomy 32:4), would have created angelic creatures separately before other creatures.

However, the contrary position should not be labeled ‘erroneous’—mainly because it is the opinion of Gregory Nazianzus. For as Jerome says, Gregory’s authority in Christian doctrine is so great that, as in the case of Athanasius’s writings, no one has ever presumed to impugn his teaching.

**Reply to objection 1:** Jerome is here relating the position of the Greek doctors, who all agree that the angels were created before the corporeal world.

**Reply to objection 2:** God is not a part of the universe, but instead stands above the whole universe, containing within Himself the entire perfection of the universe in a more eminent way. Angels, by contrast, are a part of the universe. Therefore, the arguments are not parallel.

**Reply to objection 3:** Corporeal creatures are all one in matter, whereas angels do not share in matter with corporeal creation. Hence, once the matter of corporeal creatures has been created, all of them have in some sense been created, whereas it is not the case that once angels are created, the universe itself has been created.

Still, if one maintains the contrary position, then the words of Genesis 1:1, “In the beginning God created heaven and earth,” have to be interpreted in such a way that ‘in the beginning’ means ‘in the Son’ or, alternatively, ‘at the beginning of time’. But ‘in the beginning’ would not mean a beginning before which there was nothing, except in the sense that it was a beginning before which there was nothing in the genus of corporeal creatures.

#### Article 4

##### Were the angels created in the empyrean heaven?

It seems that the angels were not created in the empyrean heaven:

**Objection 1:** Angels are incorporeal substances. But an incorporeal substance does not depend on a body for its *esse* and, as a result, it does not depend on a body for its being-made (*fieri*), either. Therefore, angels were not created in a corporeal place.

**Objection 2:** In *Super Genesim ad Litteram* 3 Augustine says that the angels were created in the

highest part of the air. Therefore, they were not created in the empyrean heaven.

**Objection 3:** The empyrean heaven is said to be the highest heaven. Therefore, if the angels had been created in the empyrean heaven, then it would not have been possible for them to ascend to a higher heaven. But this is contrary to what Isaiah 14:13 (“I will ascend into heaven”) says in the person of a sinful angel.

**But contrary to this:** In commenting on the passage, “In the beginning God created heaven and earth,” Strabo says, “What he is here calling ‘heaven’ is not the visible firmament, but the empyreum, i.e., the fiery or intellectual heaven, which is named not from its heat but from its splendor and which was filled with angels as soon as it was made.”

**I respond:** As has been explained (a. 3), corporeal creatures and spiritual creatures together constitute a single universe. Hence, spiritual creatures were created in such a way that they have some ordering toward corporeal creatures and preside over the whole of corporeal creation. Thus, it was fitting for the angels to be created in the highest body in order that they might preside over the whole of corporeal nature—whether we call this the empyrean heaven or use some other name for it. Hence, in *Super Deuteronomium* 10:14 (“Behold heaven belongs to the Lord your God, and the heaven of heavens”) Isidore says that the highest heaven is the heaven of the angels.

**Reply to objection 1:** The angels were not created in a corporeal place in the sense that they depended on a body for their *esse* or for their being-made. For God could have created the angels before the whole of corporeal creation, as many doctors maintain He did. Rather, the angels were made in a corporeal place in order to exhibit their relation to corporeal nature and to show that they have contact with bodies by their power.

**Reply to objection 2:** Perhaps by ‘the highest part of the air’ Augustine means the highest part of the heavens, with which air has a certain agreement because of its subtle and diaphanous nature. Or perhaps he is talking not about all the angels, but about only those who had sinned, since, according to some authors, the ones who sinned belonged to the lower orders of angels.

However, nothing prevents one from saying that the higher angels, who have an elevated and universal power over all bodies, were created in the highest of corporeal creatures, whereas other angels, who have a more particularized power, were created among the lower bodies.

**Reply to objection 3:** The passage in question is talking not about any corporeal heaven, but rather about the heaven of the Holy Trinity, to which the sinful angel wanted to ascend when he willed to be in some sense equal to God. This will become clear below (q. 63, a. 3).

## QUESTION 62

### The Perfection of Angels in the *Esse* of Grace and Glory

Next we have to investigate how the angels were brought into the *esse* of grace and glory. On this topic there are nine questions: (1) Were the angels beatified at their creation? (2) Did the angels need grace in order to turn toward God? (3) Were the angels created in grace? (4) Did the angels merit their beatitude? (5) Did the angels attain beatitude immediately upon meriting it? (6) Did the angels receive grace and glory in proportion to their natural gifts? (7) Did natural love and natural cognition remain in the angels after they attained glory? (8) Were the angels able to sin after attaining glory? (9) Were the angels able to make progress in beatitude after attaining glory?

#### Article 1

##### Were the angels created in beatitude?

It seems that the angels were created in beatitude (*angeli fuerint creati beati*):

**Objection 1:** *De Ecclesiasticis Dogmatibus* says, “The angels who persevered in the beatitude in which they were created do not by nature possess the good which they have.” Therefore, the angels were created in beatitude.

**Objection 2:** Angelic nature is more noble than a corporeal creature. But the corporeal creature was created as formed and perfect from the very beginning of its creation and, as Augustine says in *Super Genesim ad Litteram* 1, its being unformed was only naturally, and not temporally, prior to its being formed. Therefore, God did not create the angelic nature as unformed and imperfect, either. But an angel is formed and perfect to the extent that he enjoys God through beatitude. Therefore, the angels were created in beatitude.

**Objection 3:** According to Augustine in *Super Genesim ad Litteram*, the things made in the work of the six days of creation were made all at once, and so all six of those days must have existed immediately at the very beginning of creation. But according to Augustine’s interpretation, the morning knowledge of the angels existed in those six days insofar as they knew the Word and knew [created] things in the Word. Therefore, immediately from the beginning of their creation they knew the Word and [created] things in the Word. But the angels are beatified by the very fact that they see the Word. Therefore, the angels were beatified at the very beginning of their creation.

**But contrary to this:** Stability in the good—i.e., being confirmed in the good—is part of the nature of beatitude. But as the fall of some of the angels demonstrates, the angels were not confirmed in the good immediately upon being created. Therefore, the angels were not beatified at their creation.

**I respond:** By the name ‘beatitude’ we mean the ultimate perfection of a rational or intellectual nature. Thus, beatitude is what such a nature naturally desires, since each thing naturally desires its own ultimate perfection.

Now there are two sorts of ultimate perfection for a rational or intellectual nature:

One of them is the perfection that it can attain by the power of its own nature, and this is called beatitude or happiness in a certain respect (*quodammodo*). Hence, Aristotle says that ultimate human happiness is the most perfect type of human contemplation by which a man is able in this life to contemplate the best intelligible object, viz., God.

However, beyond this happiness there is another sort of happiness, which we ourselves look forward to in the future and by which “we will see God as He is” (1 John 3:2). As was explained above (q. 12, a. 4), this sort of happiness lies beyond the nature of any created intellect.

So, then, one should claim that as regards the first sort of beatitude, which an angel was able to

attain by the power of his own nature, he was created in beatitude. For an angel did not acquire this sort of perfection by any kind of discursive movement, in the way that a man does; instead, as was explained above (q. 58, aa. 3 and 4), this sort of beatitude was immediately present to him because of the dignity of his nature.

However, at the very beginning of their creation the angels did not have the sort of ultimate beatitude that exceeds the power of their nature. For this sort of beatitude is not part of their nature, but is instead the end of their nature. And so it was not right for them to have it immediately at the very beginning.

**Reply to objection 1:** In this passage ‘beatitude’ is being used for the sort of natural perfection that the angels had in the state of innocence.

**Reply to objection 2:** A corporeal creature could not at the very beginning of its creation have the perfection that it is led to by its own operation. Hence, according to Augustine, the germination of plants from the earth did not occur immediately at the time of the first works, when only the power to germinate plants was given to the earth. Similarly, the angelic creature had the perfection of his own nature at the beginning of his creation, but he did not have the perfection at which he was supposed to arrive through his own operation.

**Reply to objection 3:** An angel has two types of knowledge of the Word, one a natural knowledge and the other a glorified knowledge. The natural knowledge is the knowledge by which he knows the Word through the likeness of the Word that shines forth in the angel’s own nature. The glorified knowledge, on the other hand, is the knowledge by which an angel knows the Word through the Word’s own essence.

Furthermore, it is in both of these ways that an angel knows created things in the Word. He knows them imperfectly through his natural cognition and perfectly through his glorified cognition. Therefore, the first sort of cognition of created things in the Word was present to the angel at the very beginning of his creation, whereas the second sort of cognition was not. Instead, the second sort of cognition became present to him when he was beatified through his turning toward the good; and it is this cognition that is properly called ‘morning knowledge’.

## Article 2

### Did an angel need grace in order to turn toward God?

It seems that an angel did not need grace in order to turn toward God (*ad hoc quod converteretur in Deum*):

**Objection 1:** We do not need grace for what we are naturally able to do. But an angel is naturally turned toward God, since, as is clear from what was said above (q. 60, a. 5), he loves God with natural love. Therefore, an angel did not need grace in order to turn toward God.

**Objection 2:** We ourselves seem to need assistance only for things that are difficult. But it was not difficult for an angel to turn toward God, since there was nothing in him that would militate against such a conversion. Therefore, an angel did not need the assistance of grace in order to turn toward God.

**Objection 3:** To turn toward God is to prepare oneself for grace. Hence, Zachariah 1:3 says, “Turn toward me, and I will turn toward you.” But we ourselves do not need grace in order to prepare for grace, since otherwise there would be an infinite regress. Therefore, an angel did not need grace in order to turn toward God.

**But contrary to this:** It is through turning toward God that an angel arrives at beatitude.

Therefore, if he did not need grace in order to turn toward God, it would follow that he does not need grace in order to have eternal life. But this is contrary to what the Apostle says at Romans 6:23 (“The grace of God is eternal life”).

**I respond:** The angels needed grace to turn toward God insofar as He is the object of beatitude. For as was explained above (q. 60, a. 2), the will’s natural movement is the source (*principium*) of all the things we will. But the will’s natural inclination is toward what is naturally fitting for it. And so if something lies beyond its nature, then the will cannot be moved toward it without the assistance of some other principle that lies beyond its nature (*ab aliquo alio principio supernaturali*). For instance, it is clear that fire has a natural inclination to produce heat and to generate fire; however, it lies beyond fire’s natural power to generate flesh, and so fire does not have an inclination toward generating flesh except insofar as it is moved as an instrument by the nutritive soul.

Now it was shown above, in the discussion of our knowledge of God (q. 12, aa. 4 and 5), that to see God through His essence—which is what the ultimate beatitude of a rational creature consists in—lies beyond the nature of any created intellect. Hence, no rational creature can have a movement of will that is ordered toward this sort of beatitude unless he is moved by a supernatural agent; this is what we call the assistance of grace. And so one has to claim that an angel could not have turned with his will toward this sort of beatitude except through the assistance of grace.

**Reply to objection 1:** An angel has natural love for God insofar as God is the source of his natural *esse*. But here we are talking about the angel’s turning toward God insofar as God beatifies him through the vision of His essence.

**Reply to objection 2:** The difficult is that which exceeds a given power. But this can happen in two ways:

In one way, a thing is difficult because it exceeds the relevant power with respect to the power’s own natural ordering. And in such a case, if the power can attain that thing with some sort of assistance, then the thing is called ‘difficult’, whereas if it cannot be attained in any way at all, then it is called ‘impossible’ in the sense in which it is impossible for a man to fly.

In the second way, the thing in question exceeds the relevant power not with respect to the power’s natural ordering, but rather because of some impediment that is conjoined with the power. For instance, to ascend is not contrary to the natural ordering of the soul’s moving power, since the soul, taken just by itself, is apt to move to any place at all; rather, the soul is impeded from doing this by the body’s heaviness (*gravitas*), and this is why it is difficult for a man to ascend.

Now to turn toward ultimate beatitude is difficult for a man both because it exceeds his nature and also because he has impediments stemming from the corruption of the body and the infection of sin. By contrast, turning toward ultimate beatitude is difficult for an angel solely because it exceeds his nature.

**Reply to objection 3:** Every movement of the will toward God can be called a ‘turning toward’ Him (*conversio ad ipsum*). So there are three types of turning toward God:

One type is through perfect love, which is had by a creature who is already enjoying God. What is required for this type of turning toward God is *consummated grace* (*gratia consummata*).

The second type is that turning toward God which merits beatitude. And what is required for this is *habitual grace* (*habitualis gratia*), which is the principle of merit.

The third type is that turning toward God through which someone prepares himself to have grace. And what is needed for this is not habitual grace, but rather *the action of God* turning the soul toward Himself, in accord with Lamentations 5:21 (“Convert us, O Lord, to You, and we shall be converted”).

Hence, it is clear that there is no infinite regress here.

### Article 3

#### Were the angels created in grace?

It seems that the angels were not created in grace (*non sit creati in gratia*):

**Objection 1:** In *Super Genesim ad Litteram* 2 Augustine says that angelic nature was first created in an unformed way and called ‘heaven’, and that afterwards it was formed and called ‘light’. But this formation occurs through grace. Therefore, the angels were not created in grace.

**Objection 2:** Grace inclines a rational creature toward God. Therefore, if the angels had been created in grace, then no angel would have turned away from God.

**Objection 3:** Grace lies between nature and glory. But the angels were not beatified at their creation. Therefore, it seems that they were not created in grace, either. Rather, first they were created only in their nature, and afterwards they attained grace, and finally they were beatified.

**But contrary to this:** In *De Civitate Dei* 12 Augustine says, “Who else fashioned the good will in the angels other than He who created them with His will—i.e., with the pure love by which they adhered to Him—which simultaneously produced their nature and bestowed grace on them?”

**I respond:** There are diverse opinions on this matter, with some claiming that the angels were created just with their natural powers and others claiming that they were created in grace. Still, the opinion which, it seems, should be held as most probable and which is more consonant with the writings of the saints is that the angels were created in habitual grace (*in gratia gratum faciente*).

For in this way we see that all the things, e.g., trees and animals and other such things, which were produced by a temporal process through the work of divine providence, with the creature operating in subordination to God, were produced in the first condition of things as certain ‘seminal reasons’ (*seminales rationes*), as Augustine calls them in *Super Genesim ad Litteram*. But it is clear that habitual grace is related to beatitude in just the way that a seminal reason in nature is related to a natural effect. This is why in 1 John 3:9 grace is called “the seed of God.” Therefore, following Augustine’s opinion, just as he claims that the seminal reasons of all natural effects were instilled in the very first creation of corporeal creation, so, too, from the very beginning the angels were created in grace.

**Reply to objection 1:** This ‘unformedness’ of an angel should be understood either (a) in relation to the formation effected by *glory*, in which case the ‘unformedness’ precedes the formation in time, or (b) in relation to the formation effected by *grace*, in which case it preceded the formation only in the order of nature and not in the order of time—in keeping with what Augustine likewise claims about corporeal formation.

**Reply to objection 2:** Every form inclines its subject in a way that accords with the mode of the subject’s nature. But the natural mode of an intellectual nature is that it should tend freely toward the things that it wills. And so the inclination of grace does not impose necessity; instead, one who has grace is able not to use it and to sin.

**Reply to objection 3:** Even though grace lies between nature and glory in the order of nature, nonetheless, as far as the order of time is concerned, it is not fitting for the nature and the glory to have existed from the same moment (*simul*) in a created nature. For glory is the end of the nature’s operation as assisted by grace. By contrast, grace is not the end of an operation, since it does not stem from works; rather, it is the beginning of operating well. And so it was appropriate for God to give grace immediately along with the nature.

#### Article 4

##### Did a beatified angel merit his own beatitude?

It seems that a beatified angel did not merit his own beatitude:

**Objection 1:** Merit stems from the difficulty of the meritorious act. But an angel had no difficulty in acting well. Therefore, his good act was not meritorious for him.

**Objection 2:** We ourselves do not merit by what is natural to us. But it was natural for an angel to turn toward God. Therefore, he did not merit beatitude by doing this.

**Objection 3:** If a beatified angel merited his beatitude, then he did this either before he had the beatitude or after he had it. But he did not merit his beatitude before he had it, since, as many hold, he did not have grace beforehand, and without grace there is no merit. Nor, again, did he merit his beatitude after he had it, since in that case he would be gaining merit even now—which seems false, since a lesser angel would by his merit be able to attain to the level of a higher angel, and so there would not be stable distinctions among the levels of grace. But this is absurd. Therefore, a beatified angel did not merit his own beatitude.

**But contrary to this:** Apocalypse 21:17 says that “the measure of an angel” in the heavenly Jerusalem is “the measure of a man.” But a man cannot attain beatitude except through merit. Therefore, neither can an angel.

**I respond:** Perfect beatitude is natural to God alone, since His *esse* is the same as His being happy. By contrast, being beatified is the ultimate end, and not the nature, of every [intellectual] creature. But each entity attains its ultimate end through its operation. And the operation that leads to the end is such that either (a) it *effects* the end, when the end does not exceed the power of that which is operating for the sake of the end, as when medicine effects health, or else (b) it *merits* the end, when the end exceeds the power of that which is operating for the end, and so the end is expected as a gift from another.

Now as is clear from what has been said (aa. 1 and 2, and q. 12, aa. 4 and 5), ultimate beatitude exceeds both angelic nature and human nature. Hence, it follows that both men and angels have merited their own happiness. And if an angel was created in grace, without which there is no merit, then we can say that it was without difficulty that he merited his beatitude—and the same holds as long as one concedes that he had grace in some way or other before he had glory.

By contrast, if he did not have grace before he was beatified, then one would have to claim that he had beatitude without merit, in the way that we ourselves have grace without merit. But this is contrary to the notion of beatitude, which has the nature of an end and which is, as the Philosopher says in *Ethics* 1, the reward of virtue. Or, alternatively, one would have to claim, as certain others have, that the angels merit their beatitude by the things they do in their divine ministries once they have already been beatified. But this is contrary to the notion of merit, since merit has the nature of a pathway (*via*) to the end, whereas it is absurd for someone who is already at the terminus to be moved toward the terminus; and so no one merits what he already has. Or, alternatively, one would have to say that one and the same act of turning toward God is both (a) *meritorious* insofar as it proceeds from free choice and (b) *a fruit of beatitude* insofar as it attains its end. But this, too, seems absurd. For free choice is not a sufficient cause of merit, and so an act cannot be meritorious *qua* proceeding from free choice except to the extent that the act is informed by grace; but it cannot simultaneously be informed both by *imperfect grace*, which is a principle of merit, and by *perfect grace*, which is a principle of the enjoyment of beatitude. Hence, it does not seem possible for someone to be enjoying beatitude at the same time that he is meriting that enjoyment.

And so it is better to say that an angel had grace before he was beatified, and that he merited beatitude through that grace.

**Reply to objection 1:** The angels have difficulty in acting well not because of any contrariety or because of any impediment to their natural power, but rather because there is a certain good work that exceeds the power of their nature.

**Reply to objection 2:** An angel merits beatitude not by his natural turning toward God, but rather by his turning toward God with charity, which occurs through grace.

**Reply to objection 3:** The reply to this objection is clear from what has been said.

### Article 5

#### Did an angel have beatitude immediately after just one meritorious act?

It seems that an angel did not have beatitude immediately after just one meritorious act:

**Objection 1:** It is more difficult for a man to act well than for an angel. But a man is not rewarded immediately after just one act. Therefore, neither is an angel.

**Objection 2:** An angel could have had some act instantaneously at the very beginning of his creation; for even natural bodies begin to be moved at the very instant of their creation, and if a body's movement could be instantaneous, as acts of intellect and will are, then a body would have movement at the very first instant of its generation. Therefore, if an angel merited beatitude through a single movement of his will, then he merited beatitude at the first instant of his creation. Therefore, if the beatitude of angels is not delayed, then they were beatified at the very first instant.

**Objection 3:** Things that are far distant from one another are such that there have to be many things that mediate between them. But an angel's state of beatitude is far distant from his state of nature, and it is meritorious action that mediates between the two of them. Therefore, an angel had to go through many such mediating acts in order to arrive at beatitude.

**But contrary to this:** An angel and a human soul are ordered toward beatitude in similar ways, and thus the saints are promised equality with the angels at Luke 20:36. But if a soul which is separated from its body has merited beatitude, then it immediately receives beatitude unless there is some other impediment. Therefore, by parity of reasoning, the same holds for an angel. But an angel merited beatitude immediately upon his first act of charity. Therefore, since there was no impediment in him, he arrived at beatitude immediately through just one meritorious act.

**I respond:** An angel was beatified immediately after the first act of charity by which he merited beatitude. The reason for this is that grace perfects nature in accord with the mode of that nature, just as every perfection is received in a perfectible thing in accord with the thing's own mode. But as was shown above (a. 1, and q. 58, a. 3 and 4), it is proper to an angelic nature to have its natural perfection immediately through its nature rather than to acquire it through a process. But an angel is ordered to glory by his merit in the same way that he is ordered to natural perfection by his nature. And so an angel received beatitude immediately after he merited it.

Now the meriting of beatitude—not only in the case of an angel, but even in the case of a man—can come through a single action, since a man merits beatitude by each act that is informed by charity. Hence, it follows that an angel was beatified immediately after just one act informed by charity.

**Reply to objection 1:** A man is not apt by his nature, in the way that an angel is, to attain ultimate perfection immediately. And so a man is given a longer pathway for meriting beatitude than an angel is.

**Reply to objection 2:** An angel exists outside the time of corporeal things, and so different instants in matters pertaining to angels are taken only from the successiveness of their acts.

Still, in the case of angels, the act that merits beatitude could not have been simultaneous with the act of beatitude, i.e., the act of enjoyment (*fruitio*), since the one is an act of imperfect grace, whereas the other is an act of consummated grace. Hence, it follows that there had to be distinct instants, at one of which the angel merited beatitude and at the other of which he was beatified.

**Reply to objection 3:** It is part of an angel's nature that he immediately attains the perfection toward which he is ordered. And so all that is required is a single meritorious act, and it can be called a mediating act in the sense that the angel is ordered toward beatitude through it.

## Article 6

### Do angels receive grace and glory in a quantity proportionate to their natural gifts?

It seems that angels do not receive grace and glory in a quantity proportionate to their natural gifts (*secundum quantitatem suorum naturalium*):

**Objection 1:** Grace is given by God's will alone. Therefore, the quantity of grace likewise depends on God's will and not on the quantity of natural gifts.

**Objection 2:** A human act seems closer to grace than human nature does, since a human act is a preparation for grace. But as Romans 11:6 explains, grace does not come from works. Therefore, *a fortiori*, the quantity of grace in angels is not proportionate to the quantity of natural gifts.

**Objection 3:** A man and an angel are ordered toward beatitude or grace in the same way. But grace is not given to men in proportion to the level of their natural gifts (*homini non datur plus de gratia secundum gradum naturalium*). Therefore, neither is grace given to angels in proportion to the level of their natural gifts.

**But contrary to this:** In *Sentences* 2, dist. 3, the Master says, "Those angels who by nature were created more subtle and insightful in their wisdom were likewise given greater gifts of grace."

**I respond:** It is reasonable to hold that angels are given gifts of grace, along with the perfection of beatitude, in proportion to the level of their natural gifts. There are two possible explanations for this:

The first lies on the side of God, who by the order of His wisdom established the diverse grades of angelic nature. Now just as the angelic nature was made by God to attain grace and beatitude, so too the diverse grades of the angelic nature seem to be ordered toward diverse levels of grace and glory—in the way, for instance, that when a builder is smoothing stones in constructing a house, by the very fact that he makes some of them more comely and attractive, he seems to be ordering them to a more ornate part of the house. So, then, it seems that the angels to whom God gave a higher nature are such that He ordered them toward greater gifts of grace and toward a more ample beatitude.

Second, the same conclusion is evident on the side of the angel himself. For an angel is not composed of diverse natures in such a way that the inclination of the one nature might impede or restrain the impulse of the other—as happens in the case of a man, in whom the movement of the intellectual part of the soul is restrained or impeded by the inclination of the sentient part. But when there is nothing to restrain or impede a nature, it moves with all its strength. And so it is reasonable to hold that those angels who had a better nature also turned to God more firmly and efficaciously. Now it happens even in the case of men that they are given greater grace and glory in proportion to the intensity of their conversion to God. Hence, it seems that the angels who had better natures had more of grace and glory.

**Reply to objection 1:** Just as grace comes from God's will alone, so also does an angel's nature.

And just as God's will ordered this nature toward grace, so too God's will ordered the diverse grades of this nature toward diverse levels of grace.

**Reply to objection 2:** A rational creature's act comes from himself, but his nature comes directly from God. Hence, it seems that grace is given in proportion to the grade of nature rather than because of works.

**Reply to objection 3:** The diversity of natural gifts is one thing among angels, who differ from one another in species, and another thing among men, who differ from one another only in number. For a difference in species stems from the end, whereas a numerical difference stems from the matter.

Also, in a man—but not in the angels—there is something that can impede or restrain the movement of the intellective nature. Hence, the line of reasoning is not the same in the two cases.

## Article 7

### Do natural cognition and love remain in the beatified angels?

It seems that natural cognition and love do not remain in the beatified angels:

**Objection 1:** As 1 Corinthians 13:10 says, "When what is perfect comes, what is partial will pass away." But natural love and cognition are imperfect in relation to beatific cognition and love. Therefore, natural cognition and love cease with the advent of beatitude.

**Objection 2:** Where one thing suffices, anything else is superfluous. But glorified love and cognition suffice in the beatified angels. Therefore, it would be superfluous for natural cognition and love to remain in them.

**Objection 3:** The same power cannot simultaneously have two acts, just as a single line is not terminated by two points in the same direction. But the beatified angels always have an act of beatified cognition and love, since, as *Ethics* 1 says, happiness is an act and not a habit. Therefore, there can never be natural cognition or love in the angels.

**But contrary to this:** As long as a given nature remains, its operation remains. But beatitude does not destroy the nature, since it is the perfection of the nature. Therefore, it does not destroy natural cognition and love.

**I respond:** Natural cognition and love remain in the beatified angels. For operations are themselves related to one another in the way that the principles of those operations are related to one another. But it is clear that the nature is related to beatitude in the way that what is first is related to what is second, since beatitude adds something to the nature. But what is first must always be preserved in what is second. Hence, the nature must be preserved in beatitude. And, similarly, the act of the nature must be preserved in the act of beatitude.

**Reply to objection 1:** When a perfection is achieved, it destroys any imperfection that is opposed to it. However, the imperfection of nature is not opposed to the perfection of beatitude. Rather, the imperfection of nature underlies the perfection of beatitude in the way that the imperfection of a potentiality underlies the perfection of the corresponding form. For it is not the potentiality that is removed by the form; instead, it is the privation opposed to the form that is removed by the form.

In the same way, the imperfection of natural cognition is not opposed to the perfection of glorified cognition. For nothing prevents one from having a cognition of something through diverse middle terms simultaneously; for instance, it is possible to have cognition of something simultaneously through a probable middle term and through a demonstrative middle term. Similarly, an angel can simultaneously have a cognition of God through God's essence, which pertains to glorified cognition,

and through his own essence, which pertains to natural cognition.

**Reply to objection 2:** What belongs to beatitude is sufficient *per se*. But in order for it to exist, it presupposes what belongs to nature, since there is no beatitude that subsists *per se* except [God's] uncreated beatitude.

**Reply to objection 3:** It is impossible for two operations to belong simultaneously to a single power unless the one operation is ordered toward the other. But natural cognition and love are ordered toward glorified cognition and love. Hence, nothing prevents an angel from having natural cognition and natural love simultaneously with glorified cognition and glorified love.

## Article 8

### Is a beatified angel able to sin?

It seems that a beatified angel is able to sin (*peccare possit*):

**Objection 1:** As has been explained (a. 7), beatitude does not destroy the nature. But it is part of the notion of a created nature that it is able to fall short (*quod possit deficere*). Therefore, a beatified angel is able to sin.

**Objection 2:** As the Philosopher says, rational powers are open to opposites. But a beatified angel's will does not cease to be rational. Therefore, it is open to both good and evil.

**Objection 3:** It is part of free choice that a man is able to choose good and to choose evil. But free choice is not diminished in the beatified angels. Therefore, they are able to sin.

**But contrary to this:** In *Super Genesim ad Litteram* 11 Augustine says that the holy angels have a nature that is not able to sin. Therefore, the holy angels are not able to sin.

**I respond:** The beatified angels are not able to sin. The reason for this is that their beatitude consists in their seeing God through His essence. But God's essence is the very essence of goodness. Hence, an angel who sees God through His essence is related to God Himself in the same way that someone who does not see God is related to the common notion of the good. But it is impossible for anyone to will or to do anything except by fixing his sight (*attendens*) on the good, and it is impossible for anyone to will to turn away from the good *qua* good. Therefore, a beatified angel is not able to will or to do anything except by fixing his sight on God. But one who wills and acts in this way is not able to sin. Hence, a beatified angel is in no way able to sin.

**Reply to objection 1:** A created good, considered in itself, can fall short. But from its perfect union with the uncreated good—and beatitude is a union of this sort—it reaches the point of not being able to sin, and for the reason explained above.

**Reply to objection 2:** Rational powers are open to opposites in cases with respect to which they have no natural ordering, but they are not open to opposites with respect to what they are naturally ordered toward. For instance, the intellect is not able not to assent to naturally known principles and, similarly, the will is not able not to adhere to the good *qua* good, since it is naturally ordered to the good as its object.

Therefore, an angel's will is open to opposites with respect to doing or not doing many things. But with respect to God Himself, whom the angels see to be the very essence of goodness, they are not open to opposites. Rather, they are directed to all things in accord with God, no matter which opposites they might choose. And this is what it is to be without sin.

**Reply to objection 3:** Free choice is related to choosing the means to an end in the same way that the intellect is related to [syllogistic] conclusions. Now it is clear that the intellect's power is such

that it can proceed to diverse conclusions given a certain set of principles. However, when the intellect proceeds to a given conclusion by ignoring the order imposed by the principles, this stems from its own defectiveness. Hence, the fact that free choice is able to choose diverse things while preserving the order imposed by the end pertains to the *perfection* of its freedom. But when it chooses something by deviating from the order imposed by the end—i.e., when it sins—this is a *defect* in its freedom (*defectus libertatis*). Hence, the angels, who are not able to sin, have a greater freedom of choice (*maior libertas arbitrii*) than we ourselves, who are able to sin.

### Article 9

#### Are the beatified angels able to make progress in beatitude?

It seems that the beatified angels are able to make progress in beatitude:

**Objection 1:** Charity is the principle of merit. But the angels have perfect charity. Therefore, the beatified angels are able to merit. But when merit increases, the reward of beatitude likewise increases. Therefore, the beatified angels are able to make progress in beatitude.

**Objection 2:** In *De Doctrina Christiana* Augustine says, “God uses us to our own advantage and for His goodness.” The same holds for the angels, whom He uses in spiritual ministries, since, as Hebrews 1:14 says, “Are they not all ministering spirits, sent to minister for those who shall receive the inheritance of salvation?” But it would not be to their advantage if through this ministry they did not merit or make progress in beatitude. Therefore, it follows that the beatified angels are able to merit and to make progress in beatitude.

**Objection 3:** It is an imperfection for someone who is not at the summit to be unable to make progress. But angels are not at the summit. Therefore, if they are unable to make more progress, then it seems that they are imperfect and defective. But this is absurd.

**But contrary to this:** Meriting and making progress belong to the state of the pilgrim (*pertinent ad statum viae*). But angels are ‘comprehenders’ (*comprehensores*) and not pilgrims. Therefore, the beatified angels are unable to merit and unable to make progress in beatitude.

**I respond:** In every movement the mover’s intention is directed toward something determinate to which it intends to lead the movable object. For an intention is directed toward an end, and it is impossible for an end to be indeterminate. But since, as is clear from what was said above (a. 1 and q. 12, a. 4), a rational creature cannot by his own power attain beatitude, which consists in the vision of God, it is obvious that he needs to be moved toward beatitude by God. Therefore, there must be something determinate to which, as an ultimate end, every rational creature is directed.

And, in the context of the vision of God, this determinate thing cannot consist in *what* is seen, since the highest truth is seen by all those who are beatified in all the diverse grades. However, as far as the *mode of seeing* is concerned, the terminus is fixed beforehand in different ways by the intention of the one who is directing [the rational creatures] to their end. For it is impossible that a rational creature should be produced in order to have the *highest mode* of seeing or comprehending in the same way that he is produced in order to see the *highest essence*. For as is clear from what was said above (q. 12, a. 7), this highest mode can belong only to God. But since (a) infinite efficacy is required to comprehend God, and (b) a creature’s efficacy in seeing can only be finite, and (c) there are infinitely many degrees by which something finite can be distant from what is infinite, it follows that there can be infinitely many modes in which a rational creature understands God with more or less clarity. And just as beatitude consists in the seeing itself, so a given level of beatitude consists in a determinate mode of seeing. So,

then, each rational creature is led by God to the end of beatitude in such a way that he is also led by God's predestination to a determinate level of beatitude. Hence, once this level of beatitude has been attained, it is not possible to pass to a higher grade.

**Reply to objection 1:** Meriting belongs to that which is moving toward the end. Now a rational creature is moved toward the end not only by being acted upon but also by acting. And if the end in question is subject to the rational creature's power, then the action in question will be said to *acquire* the end, in the way in which a man acquires knowledge by studying, whereas if the end is not within his power but is instead expected from another, then the action will *merit* the end. On the other hand, someone who is already at the last terminus is such that he has been moved and not such that he is being moved.

Hence, imperfect charity, which belongs to the path [to the ultimate end], is what merits, whereas perfect charity does not merit but instead enjoys the reward—just as, even in the case of acquired habits, an operation that precedes the habit helps one to acquire the habit, whereas an operation that flows from the habit once acquired is now a perfect operation accompanied by delight. In the same way, an act of perfect charity does not have the nature of merit, but rather belongs to the perfection of the reward.

**Reply to objection 2:** There are two ways in which something is said to be advantageous:

First, it may be advantageous as something on the path to the end, and what merits beatitude is advantageous in this sense.

Second, it may be advantageous in the way in which a part is advantageous to the whole—for instance, in the way that a wall is advantageous to a house. It is in this second way that the ministry of the angels is advantageous to the beatified angels, since it is a certain part of their beatitude. For to diffuse a perfection one has to another is part of the nature of the perfect insofar as it is perfect.

**Reply to objection 3:** Even though a beatified angel might not be at the highest level of beatitude absolutely speaking, he is nonetheless at the limit as far as he himself is concerned, in keeping with God's predestination.

Still, an angel's joy can be increased by the salvation of those who are saved through his ministry—this according to Luke 15:10 ("There is joy among the angels of God over one sinner doing penance"). But this joy, which can continue to increase right up to judgment day, is incidental to the angel's reward. Hence, some claim that the angels can still merit as far as this incidental reward is concerned. However, it is better to insist that someone who is beatified cannot gain merit in any way at all (unless he is simultaneously a pilgrim and a comprehender, as Christ alone was both a pilgrim and a comprehender). For rather than meriting the joy in question, the angels acquire it by virtue of their beatitude.

## QUESTION 63

### The Sinful Wickedness of the Angels

Next we have to investigate how angels became bad, first with respect to the evil of sin (question 63) and second with respect to the evil of punishment (question 64).

On the first topic there are nine questions: (1) Can the evil of sin exist in an angel? (2) What sort of sins can exist in the angels? (3) What was it that an angel sinned by desiring? (4) Given that some angels became bad by a sin of their own will, were any angels naturally bad? (5) Given that no angels were naturally bad, were any of them able to become bad through an act of their own will at the very first instant of their creation? (6) Given that they could not sin at the very first instant of their creation, was there an interval between their creation and their fall? (7) Was the highest angel of those who fell also the highest among all the angels, absolutely speaking? (8) Was the sin of the first angel a cause of the sin of the others? (9) Did as many angels fall as remained faithful?

#### Article 1

##### Can the evil of sin exist in angels?

It seems that the evil of sin (*malum culpae*) cannot exist in angels:

**Objection 1:** As *Metaphysics* 9 says, evil can exist only in those things that are in a state of potentiality, since the subject of a privation is a being in potentiality. But since angels are subsistent forms, they do not have being in potentiality. Therefore, evil cannot exist in them.

**Objection 2:** The angels have more dignity than the celestial bodies have. But as the philosophers claim, evil cannot exist in the celestial bodies. Therefore, neither can it exist in the angels.

**Objection 3:** What is natural to a thing is such that it always exists in it. But it is natural to the angels that they should be moved by a movement of love toward God. Therefore, this cannot be taken away from them. But as long as they love God, they do not sin. Therefore, angels are not able to sin (*peccare non possit*).

**Objection 4:** A desire is only for something good, or at least for an apparent good. But an apparent good that is not a true good cannot exist in the angels, since either (a) there cannot be any error at all in them or (b), at the very least, there cannot be any error in them that precedes sin. Therefore, angels cannot desire anything that is not truly good. But no one sins by desiring what is truly good. Therefore, an angel cannot sin by desiring something.

**But contrary to this:** Job 4:18 says, “In His angels He found depravity.”

**I respond:** Angels, along with other rational creatures, are such that if they are considered just in their nature alone, then they are able to sin; and if any rational creature is such that he is not able to sin, then this stems from a gift of grace and not from his natural condition.

The reason for this is that to go amiss (*peccare*) is nothing other than to deviate from the rectitude that a thing’s act ought to have—regardless of whether we are talking about a deviation (*peccatum*) among natural things or among artifacts or in morals. Now the only sort of act that cannot deviate from rectitude is one whose rule is the agent’s very power (*virtus*). For instance, if the craftsman’s hand were itself the rule of cutting, then the craftsman could never cut the wood incorrectly; however, if there is some distinct rule of correct cutting, then his cutting can be either correct or incorrect.

Now it is only God’s will that is the rule of its own act, since God’s will is not ordered toward any end higher than itself. By contrast, a creature’s will has rectitude in its act only to the extent that it is regulated by God’s will, to which its ultimate end pertains—just as the will of anyone who is lower must be regulated in accord with the will of his superior, in the way that a soldier’s will is regulated in accord

with the will of the general of the army. So, then, it is only in God's will that there can be no sin, whereas sin can exist in any created will whatsoever, as far as its natural condition is concerned.

**Reply to objection 1:** Angels do not have potentiality with respect to their natural *esse*, but in their intellectual part they do have potentiality with respect to turning toward this or that object. And it is in this respect that evil can exist in them.

**Reply to objection 2:** The celestial bodies have only a natural operation. And so just as the evil of substantial corruption cannot exist in their nature, so neither can there be an evil of disorder in their natural action. By contrast, angels, in addition to their natural action, have the action of free choice, and it is with respect to this sort of action that evil can exist in them.

**Reply to objection 3:** It is natural for an angel to turn toward God with a movement of love, given that God is the principle of the angel's natural *esse*. But to turn toward God as the object of supernatural beatitude is something that stems from the love associated with grace (*ex amore gratuito*), and an angel was able to turn away from this object by sinning.

**Reply to objection 4:** There are two ways in which sin can exist in an act of free choice:

First, sin can exist in an act of free choice in virtue of the fact that something *bad* is chosen, as when a man sins by choosing adultery, which is bad in itself. This sort of sin always proceeds from some sort of ignorance or error; otherwise, what is evil would not be chosen as something good. Indeed, the adulterer is mistaken about the *particular* case when he chooses *this* pleasure associated with *this* disordered act as a good to be pursued *right now*—and this because of either the inclination of a passion or the inclination of a habit. (This is so even if he is not mistaken about the *universal* principle, but instead holds a true opinion about it.)

Now this sort of sin could not have existed in the angels, since, as is clear from what was said above (q. 59, a. 4), the angels do not have passions by which their reason or intellect might be bound (*ligetur*) and, again, since no habit inclining them toward sin could have preceded their first sin.

Second, one can sin through free choice by choosing something *good* in itself, but choosing that good *without ordering it toward the proper rule or measure*—so that the defect which induces the sin stems solely from the disordered choice and not from the thing that is chosen. For instance, someone might choose to pray while disobeying the order of prayer established by the Church. A sin of this sort does not presuppose *ignorance*, but presupposes only a *lack of consideration* of things that ought to be considered.

It is in this second way that the angels sinned, when by their free choice they turned to a proper good without ordering that good toward the rule of God's will.

## Article 2

### Are pride and envy the only sins that can exist in angels?

It seems that pride (*superbia*) and envy (*invidia*) are not the only sins that can exist in angels:

**Objection 1:** If the pleasure associated with a given sin can belong to someone, then the sin itself can belong to him. But according to Augustine in *De Civitate Dei* 2, the demons also take pleasure in the lewdness of carnal sins. Therefore, carnal sins can also exist in the demons.

**Objection 2:** Listlessness (*acedia*), avarice (*avaritia*), and anger (*ira*) are spiritual sins in the same way that pride and envy are. But spiritual sins belong to the spirit in the same way that carnal sins belong to the flesh. Therefore, it is not just pride and envy that can exist in angels, but listlessness and avarice as well.

**Objection 3:** According to Gregory in *Moralia*, many vices stem from pride and likewise from envy. But once a cause has been posited, its effect is posited. Therefore, if pride and envy can exist in angels, then for the same reason other vices can exist in them as well.

**But contrary to this:** In *De Civitate Dei* 14 Augustine says, “Though the devil is not a fornicator or a drunkard or anything else of that sort, he is nonetheless proud and envious.”

**I respond:** There are two ways in which a sin can exist in someone: first, with respect to *guilt* (*secundum reatum*) and, second, with respect to *affect* (*secundum affectum*).

All sins can exist in the demons with respect to *guilt*. For when the demons induce men to commit all types of sins, they incur guilt for all those sins.

However, the only sins that can exist in the bad angels with respect to *affect* are those that a spiritual nature can be drawn toward. Now a spiritual nature cannot be drawn (*affici*) toward goods that are proper to the body, but is instead drawn toward those goods that can be found in spiritual entities. For an entity is drawn only toward what can in some way be suitable to its nature.

Now in the case of spiritual goods, when someone is drawn toward them, there can be a sin only by virtue of the fact that the rule of a superior is not observed in such an affect. And this is the sin of *pride*, viz., not to submit oneself to a superior in a matter in which one ought to submit. Hence, the first sin of an angel can be nothing other than pride.

However, as a consequence, *envy* was able to exist in an angel as well. For an affect’s tending toward something desirable is of a piece with its resisting the opposite. Now someone is envious in virtue of being saddened by the good of another, insofar as he sees the other’s good as an obstacle to his own good. But a bad angel could have seen another’s good as an obstacle to a good he desired only insofar as he desired to be uniquely excellent, where the other’s excellence put an end to this uniqueness (*nisi in quantum affectavit excellentiam singularem, quae quidem singularitas per alterius excellentiam cessat*). And so after the sin of pride, what followed in a sinful angel was the evil of envy, insofar as he was saddened (a) by the good of man and even (b) by God’s excellence, insofar as God uses man, against the will of the devil himself, for His own glory.

**Reply to objection 1:** The demons do not take pleasure in the lewdness of carnal sins in the sense that they themselves are drawn toward carnal pleasures. Rather, the fact that they take pleasure in all the sins of men, insofar as those sins are impediments to the human good, stems entirely from envy.

**Reply to objection 2:** Insofar as avarice (*avaritia*) is a special sin, it is an immoderate desire for temporal things that come into use in human life and whose value can be measured by money. The demons are not drawn toward such goods, just as they are not drawn toward carnal pleasures, either. Hence, avarice, understood properly, cannot exist in them. However, if we use the name ‘avarice’ to designate any immoderate desire for the possession of created goods, then avarice so understood is included in the pride that exists in the demons.

On the other hand, anger (*ira*), like sense desire (*concupiscentia*), is accompanied by a certain passion. Hence, it itself cannot exist in the demons, except metaphorically.

Finally, listlessness (*acedia*) is a certain kind of sadness by which a man is rendered lethargic (*tardus*) with respect to spiritual acts because of the bodily work they involve. This does not apply to the demons.

So it is clear that only pride and envy are purely spiritual sins that can belong to the demons—as long as the name ‘envy’ is taken not for a passion, but simply for the will to resist the good of another.

**Reply to objection 3:** All the sins that can stem from pride and envy are included under pride and envy as posited in the demons.

### Article 3

#### Did the devil desire to be like God?

It seems that the devil did not desire to be like God (*esse ut Deus*):

**Objection 1:** What does not fall under someone's apprehension cannot fall under his desire, since it is an apprehended good that moves the appetite, be it a sentient appetite, a rational appetite, or an intellective appetite (for it is only in appetites of these types that there can be sin). But a creature's being equal to God (*esse aequalem Deo*) does not fall under anyone's apprehension, since it implies a contradiction. For what is finite would have to be infinite if it were equal to what is infinite. Therefore, an angel could not have desired to be like God (*esse ut Deus*).

**Objection 2:** That which constitutes the end of a given nature can be desired without sin. But being assimilated to God is the end that every creature naturally tends toward. Therefore, if an angel desired to be like God—not through equality, but through some sort of likeness—then it seems that he did not sin in desiring this.

**Objection 3:** An angel is created with a greater fullness of wisdom than a man is. But no man, unless he is completely out of his mind (*nisi omnino amens*), chooses to be equal to an angel, not to mention God. For an act of choosing is directed only toward what is possible and toward what is subject to deliberation. Therefore, *a fortiori*, no angel sinned by desiring to be like God.

**But contrary to this:** Isaiah 14:13-14 says in the person of the devil, "I will ascend into heaven ... and I will be like the Most High." And in *De Quaestionibus Veteris Testamenti* Augustine says, "Inflated with self-exaltation, he wanted to be called 'God'."

**I respond:** Without any doubt, an angel sinned by desiring to be like God.

However, 'to be like God' can be understood in two ways: first, to be like God *through equality* (*per aequiparantiam*); and, second, to be like God *through similarity* (*per similitudinem*).

An angel could not have desired to be like God in the first way, since (a) he knew by his natural cognition that this is impossible, and since (b) his first act of sinning was not preceded by any habit or passion that might have clouded his cognitive power in such a way that, failing to see the impossibility in this particular case, he would choose the impossible—as sometimes happens with us.

And yet even if being like God in this first way were possible, it would still be contrary to an angel's natural desire. For everything has a natural desire to conserve its own being, and its own being would not be conserved if it were transmuted into a different nature. Hence, no entity in a lower grade of nature can desire the grade of a higher nature; for instance, a donkey has no desire to be a horse, since if the donkey were elevated to the grade of that higher nature, then it itself would no longer exist. Still, the imagination is easily deceived about this. For instance, given that a man desires to be in a higher grade of nature with respect to certain accidental characteristics that can increase without the subject's being corrupted, someone might imagine that it is possible for him to desire a higher grade of nature—and yet he could not attain that grade without ceasing to exist.

Now it is clear that God surpasses an angel not only with respect to certain accidental characteristics, but with respect to His grade of nature, and it is also the case that one angel surpasses another in this way. Hence, it is impossible for a lower angel to desire to be equal to a higher angel, not to mention desiring equality with God.

On the other hand, there are two ways in which someone can desire to be like God through similarity.

In one way, he desires to be like God with respect to something in which he is apt by nature to be assimilated to God. And if someone desires to be similar to God in this way, then he does not sin as long

as he desires to attain this similarity to God in the right way, viz., by receiving it from God. However, he would sin if he desired to be similar to God as a matter of justice, i.e., by his own power and not by God's power.

In the second way, someone can desire to be similar to God with respect to something in which he is not apt to be assimilated to God. For instance, suppose that someone desired to be the creator of heaven and earth, which is proper to God; he would sin in this desire. This is the way in which the devil desired to be like God. To be sure, he did not desire to be like God in the sense that he desired not to be subject to anyone, absolutely speaking; for to desire this would be to desire his own non-existence, given that there cannot be a creature who does not participate in *esse* in a way that is subject to God. Rather, he desired to be similar to God in the sense that he desired as his ultimate beatific end something that he could obtain by the power of his own nature, while turning his desire away from the supernatural beatitude that comes from God's grace. Or, alternatively, if he did desire as an ultimate end the sort of similarity to God which is given by grace, he willed to have this through the power of his own nature and without God's help in keeping with the divine plan. This second way of putting it is consonant with the writings of Anselm, who says that the devil desired what he would have attained if he had remained faithful. In fact, these two ways of putting it amount to the same thing in a certain sense. For on both of them, the devil desired to have ultimate beatitude through his own power—something that is proper to God.

And since that which is *per se* is a principle and cause of that which is *per aliud*, it also followed from this that he desired to have dominion over others. In this he likewise desired in a perverted way to be similar to God.

**Reply to objection 1 and objection 2 and objection 3:** The replies to all the objects are clear from what has been said.

#### Article 4

##### Are any demons naturally bad?

It seems that some demons are naturally bad (*sint naturaliter mali*):

**Objection 1:** As Augustine reports in *De Civitate Dei* 10, Porphyry says, "There are demons of a certain type who are deceitful by nature, pretending to be gods and the souls of the dead." But to be deceitful is to be bad. Therefore, some demons are naturally bad.

**Objection 2:** Men are created by God in the same way that angels are. But some men are naturally bad, and Wisdom 12:10 says of them, "Their badness was natural." Therefore, some angels can likewise be naturally bad.

**Objection 3:** Even though non-rational animals are God's creatures, some of them have certain types of natural badness; for instance, foxes are naturally deceptive, and wolves are naturally rapacious. Therefore, even though the demons are God's creatures, they can likewise be naturally bad.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says, "The demons are not naturally bad."

**I respond:** Everything that exists, insofar as it exists and has a certain nature, naturally tends toward some good; for it comes from a good principle, and an effect always turns toward its own principle.

Now it can happen that an evil is conjoined with a *particular* good; for instance, fire has the conjoined evil of being such that it consumes other things. However, no evil can be conjoined with the

*universal* good. Therefore, if a thing is such that its nature is ordered toward some particular good, then it can naturally tend toward an evil—not insofar as that evil is evil, but *per accidens*, insofar as that evil is conjoined with a certain good. On the other hand, if a thing is such that its nature is ordered toward the good in accord with the universal notion of the good (*secundum communem boni rationem*), then such a thing cannot tend by its nature toward any evil.

Now it is clear that every intellectual nature is ordered toward the universal good, which it can apprehend and which is an object of its will. Hence, since demons are intellectual substances, they cannot in any way have a natural inclination toward any evil whatsoever. And so they cannot be naturally bad.

**Reply to objection 1:** In that same place Augustine reprimands Porphyry for claiming that the demons are naturally deceitful, and he replies that they are deceitful not by nature, but by their own will.

The reason why Porphyry had claimed that the demons are naturally deceitful is that he held that the demons are animals with a sentient nature. Now a sentient nature is ordered toward a particular good, which can have an evil conjoined with it. Accordingly, sentient natures can have a natural inclination toward something evil—but only *per accidens*, insofar as that evil is conjoined with a good.

**Reply to objection 2:** The badness of some men can be called ‘natural’ either (a) because their badness is by habit, which constitutes a ‘second nature’, or else (b) because of a natural inclination of the sentient nature toward some disordered passion, in the way that some men are said to be naturally angry or naturally lustful. But an intellectual nature cannot have a natural inclination of this sort.

**Reply to objection 3:** Given their sentient nature, brute animals have a natural inclination toward certain particular goods that evils are conjoined with. For instance, a fox is naturally inclined toward seeking its food in a clever manner, and deceit is conjoined with this. Hence, to be deceitful is not bad for a fox, since it is natural to it—just as, according to Dionysius in *De Divinis Nominibus*, chap. 4, being fierce is not bad for a dog.

## Article 5

### Was the devil bad through the fault of his own will at the very first instant of his creation?

It seems that the devil was bad through the fault of his own will at the very first instant of his creation (*diabolus in primo instanti suae creationis fuerit malus per culpam propriae voluntatis*):

**Objection 1:** John 8:44 says, “He was a murderer from the beginning.”

**Objection 2:** In *Super Genesim ad Litteram* 1 Augustine says that the ‘unformedness’ of creatures preceded their being formed only in origin and not in time. And as he says in *Super Genesim ad Litteram* 2, ‘heaven’, in the sense in which heaven is said to have been created first, means the unformed angelic nature, whereas the sentence “God said, ‘Let there be light’, and there was light” refers to the formation of the angelic nature through its turning toward the Word. Therefore, the nature of an angel was created at the same time that light was made. But as soon as light was made, it was divided from the darkness, where ‘darkness’ designates the sinning angels. Therefore, at the very first instant of their creation some angels were beatified and some sinned.

**Objection 3:** Sin is opposed to merit. But an intellectual nature is able to gain merit at the first instant of its creation; this happened in the case of Christ’s soul, as well as in the case of the good angels themselves. Therefore, the demons were likewise able to sin at the very first instant of their creation.

**Objection 4:** Angelic nature is more powerful than corporeal nature. But at the very first instant of its creation a corporeal thing begins to have its own operation; for example, at the first instant at which

fire is generated, it begins to move upward. Therefore, at the first instant of his creation an angel was likewise able to act. Therefore, he had either an upright action or one that was not upright. If the action was upright, then since the angels had grace, they merited beatitude by that action. But as was explained above (q. 62, a. 5), in angels the reward immediately follows upon the merit. Therefore, they would [all] have been beatified immediately and so would never have sinned—which is false. Therefore, it follows that [the bad angels] sinned at the very first instant by acting in an way that was not upright.

**But contrary to this:** Genesis 1:31 says, “God saw all the things that He had made, and they were very good.” But these things included even the demons. Therefore, at one time even the demons were good.

**I respond:** Some have claimed that the demons were bad at the very first instant of their creation—not, to be sure, bad by nature, but bad through the sin of their own will. For as Augustine says in *De Civitate Dei* 11, “Those who acquiesced in the position that, as soon as he was made, the devil rejected righteousness, did not agree with those heretics, viz., the Manicheans, who claimed that the devil has an evil nature.”

Still, this position contradicts the authority of Scripture. For in the person of the prince of Babylon, Isaiah 14:12 asks of the devil, “How did you fall from heaven, O Lucifer, who rose in the morning?” And in the person of the king of Tyre, Ezechiel 28:13 says to the devil, “You were in the pleasures of the paradise of God.” This is why it was reasonable for the masters to reject this opinion as erroneous.

Hence, others have claimed that the angels were able to sin at the very first instant of their creation, but that they did not sin then.

But some have rejected this position on the grounds that when two operations follow one another, it seems impossible that both of them should be terminated at the very same instant (*nunc*). Now it is obvious that an angel’s sin was an operation posterior to his creation. But the terminus of the act of creation is the angel’s very *esse*, whereas the terminus of his act of sin was his being bad. Therefore, it seems impossible that an angel should have been bad at the very first instant at which he began to exist.

However, this argument does not seem adequate. For it applies only in the case of temporal movements that are effected successively; for instance, if a local motion follows an alteration, then the alteration and the local motion cannot be terminated at the same instant. By contrast, if the changes in question are instantaneous, then the terminus of the first change and the terminus of the second change can be simultaneous and exist at the same instant; for example, the air is illuminated by the moon at the very same instant at which the moon is illuminated by the sun. Now, clearly, creation is an instantaneous action; and so is the movement of free choice in an angel, since, as was explained above (q. 58, a. 3), angels do not have to reason comparatively or discursively. Hence, nothing prevents the terminus of creation and the terminus of an act of free choice from being simultaneous with one another and existing at the very same instant.

So we have to explain in some alternative way why it was impossible for an angel to have sinned in his very first instant through a disordered act of free choice. Even though a thing can begin to operate at the very same instant at which it begins to exist, still, the operation that begins simultaneously with the thing’s *esse* comes to the thing from the agent from whom it has its *esse*. For instance, a fire has its operation of moving upward from the thing that generates the fire. Hence, if a thing has *esse* from a defective agent that can be the cause of a defective action, then it will be able to have a defective operation at the very first instant at which it exists; for instance, a leg that is lame at birth because of a defect in the semen will immediately begin to limp. But the agent that produced angels in their *esse*, viz., God, cannot be a cause of a sin. Hence, one cannot claim that the devil was bad at the very first instant of his creation.

**Reply to objection 1:** As Augustine explains in *De Civitate Dei* 11, “When Scripture says, ‘The devil sins from the beginning’ (1 John 3:8), he should be thought of as sinning not from the beginning of

his creation, but rather from the beginning of his sin”—namely, because he never drew back from his sin.

**Reply to objection 2:** Insofar as ‘darkness’ designates the sins of the demons, the distinction between light and darkness should be taken to involve God’s foreknowledge. Hence, in *De Civitate Dei* 11 Augustine says, “The only one who could divide the light from the darkness was He who could likewise foreknow, before they fell, that they would fall.”

**Reply to objection 3:** Whatever is involved in merit comes from God, and so at the first instant of their creation the angels were able to merit. But as has been explained, the parallel argument does not hold for sin.

**Reply to objection 4:** As Augustine says in *De Civitate Dei* 11, God did not distinguish among the angels before some turned away from Him and some turned toward Him. And so all of them, having been created in grace, merited at the first instant. But some of them immediately put up an obstacle to their own beatitude and destroyed their previous merit. And so they were deprived of the beatitude that they had merited.

## Article 6

### Was there an interval between the creation of an angel and his fall?

It seems that there was an interval between the creation of an angel and his fall (*aliqua mora fuerit inter creationem et lapsum angeli*):

**Objection 1:** Ezechiel 28:14-15 says, “You walked perfect in your ways from the day of your conception, until iniquity was found in you.” But since walking is a continuous movement, it requires an interval. Therefore, there was an interval between the devil’s creation and his fall.

**Objection 2:** Origen says, “The ancient serpent did not at first walk on his breast and his belly”—by which he means the serpent’s sin. Therefore, the devil did not sin immediately after the first instant of his creation.

**Objection 3:** The ability to sin is common to men and angels. But there was an interval between the formation of man and his sin. Therefore, by parity of reasoning, there was an interval between the formation of the devil and his sin.

**Objection 4:** The instant at which the devil sinned was distinct from the instant at which he was created. But there is time in the middle between any two given instants. Therefore, there was an interval between the devil’s creation and his fall.

**But contrary to this:** John 8:44 says of the devil that “he stood not in the truth.” And as Augustine says in *De Civitate Dei* 11, “We must take this to mean that he was in the truth, but did not persevere in the truth.”

**I respond:** There are two opinions about this matter. But the one that is more probable—as well as more consonant with the writings of the saints—is that the devil sinned immediately after the first instant of his creation. It is necessary to hold this if one posits (a) that he broke into (*proruperit*) an act of free choice at the first instant of his creation and (b) that, as we claimed above (q. 62, a. 3), he was created with grace. For since, as was explained above (q. 62, a. 5), the angels arrived at beatitude through a single meritorious act, it follows that if the devil, created in grace, merited at the first instant, then he would have received beatitude immediately after that first instant if he had not immediately put up an obstacle by sinning.

On the other hand, if one posits that the angels were not created in grace or that they could not have had an act of free choice at the first instant (*in primo instanti actum liberi arbitrii non potuerit habere*),

then nothing would prevent there from being an interval between their creation and their fall.

**Reply to objection 1:** Sometimes in Sacred Scripture instantaneous spiritual movements are understood metaphorically by reference to corporeal movements that are measured by time. And so ‘walking’ here means a movement of free choice tending toward the good.

**Reply to objection 2:** It is because of the first instant, at which the ancient serpent was not yet bad, that Origen says that the serpent did not walk on his breast immediately or from the beginning.

**Reply to objection 3:** An angel has inflexible free choice after his act of choice, and so unless he had put up an obstacle to beatitude immediately after the first instant, at which he had a natural movement toward the good, he would have been confirmed in the good. But the same does not hold for a man. And so the conclusion does not follow.

**Reply to objection 4:** As *Physics* 6 proves, the proposition ‘There is time in the middle between any two given instants’ is true insofar as time is continuous. But in the case of the angels, who are not subject to the celestial movement—i.e., the movement primarily measured by continuous time—‘time’ is understood as the succession of intellectual and affective operations.

So, then, the first instant in the case of angels is taken to correspond to that operation of the angelic mind by which the angel turns inward toward himself through his evening knowledge; for there is mention of an evening, but not a morning, on the first day. And this operation was a good one in all the angels. But from this operation some turned through morning knowledge to the praise of the Word, whereas others, remaining within themselves, became night and “were swelled up with pride,” as Augustine puts it in *Super Genesim ad Litteram* 4. And so the first operation was common to all the angels, but in the second operation they were separated. And so in the first instant all of them were good, but in the second instant the good were separated off from the bad.

## Article 7

### Was the highest angel among those who sinned the highest among all the angels?

It seems that the highest angel among those who sinned was not the highest among all the angels:

**Objection 1:** Ezekiel 28:14 says of him, “You were a Cherub, stretched out and protecting, and I set you on the holy mountain of God.” But as Dionysius explains in *De Caelesti Hierarchia*, chap. 7, the order of the Cherubim is lower than the order of the Seraphim. Therefore, the angel who was the highest among those who sinned was not the highest among all the angels.

**Objection 2:** God made the intellectual nature in order that it might attain beatitude. Therefore, if the angel who is the highest of all the angels sinned, then it would follow that God’s plan was frustrated in his most noble creature. But this is absurd.

**Objection 3:** The more a thing is inclined toward something, the less able it is to fall short of it. But the higher an angel is, the more inclined he is toward God. Therefore, the less able he is to fall short of God by sinning. And so it seems that any angel who sinned was not the highest among all the angels, but was instead one of the lower angels.

**But contrary to this:** In his homily on the hundred sheep, Gregory says that the first angel who sinned, “being set above all the hosts of angels, surpassed them in brightness and was by comparison more illustrious than all of them.”

**I respond:** There are two things to consider in a sin, viz., (a) one’s proneness to sinning and (b) one’s motive for sinning.

Thus, if we consider *the proneness to sinning* (*si consideremus pronitatem ad peccandum*) among

the angels, then the higher angels seem less likely to have sinned than the lower angels. This is why Damascene held that the greatest among those who sinned were the ones who were set over the terrestrial order. This opinion seems consonant with position of the Platonists that Augustine records in *De Civitate Dei* 8 and 10. For the Platonists claimed that all the gods were good, but that among the demons, some were good and some were bad—where by ‘gods’ they meant those intellectual substances who are higher than the lunar sphere, and by ‘demons’ they meant those intellectual substances who are lower than the lunar sphere but higher than men in the order of nature.

Now this opinion should not be rejected outright as alien to the Faith, since, as Augustine says in *De Trinitate* 3, all of corporeal creation is administered by God through the angels. Hence, nothing prevents one from claiming that (a) lower angels were assigned by God to minister to the lower bodies, (b) higher angels were assigned to minister to the higher bodies, and (c) the highest angels were assigned to attend God. Accordingly, Damascene says that those who fell were from among the lower angels and that within their order there were also some good angels who remained faithful.

On the other hand, if we consider *the motive for sinning* (*motivum ad peccandum*), then the higher angels have a greater motive than the lower angels. For as was explained above (a. 2), the sin of the demons was pride, whose motive is excellence, which was greater among the higher angels. And this is why Gregory says that the one who sinned was the highest of all the angels.

And this opinion seems more plausible. For an angel’s sin proceeded not from any proneness to sin, but solely from free choice. Hence, more weight should be given to the argument taken from the motive for sinning.

Yet this does not mean that the other opinion should be summarily rejected. For even the leader of the lower angels could still have a motive for sinning.

**Reply to objection 1:** ‘Cherubim’ means ‘full of knowledge’, whereas ‘Seraphim’ means ‘ardent’ or ‘on fire’. And so it is clear that the Cherubim are named from their knowledge, which can co-exist with mortal sin, whereas the Seraphim are named from the ardor of charity, which cannot co-exist with mortal sin. And so the first angel who sinned is called a Cherub rather than a Seraph.

**Reply to objection 2:** God’s intention is frustrated neither in those who sin nor in those who are saved, since He foreknows the outcome for both, and He has glory from both. For He saves the latter by His goodness, and He punishes the former by His justice.

On the other hand, when an intellectual creature sins, he himself falls short of his due end. Nor is this absurd in the case of a sublime creature. For an intellectual creature was created by God in such a way that it lay within his own choice to act for the sake of his end.

**Reply to objection 3:** No matter how strong the inclination to the good was in the highest angel, it still did not induce necessity in him. Hence, he was able by his free choice not to follow that inclination.

## Article 8

### Was the sin of the first angel who sinned a cause of the sin of the others?

It seems that the sin of the first angel who sinned was not a cause of the sin of the others:

**Objection 1:** A cause is prior to what it causes. But as Damascene explains, they all sinned at the same time. Therefore, the sin of the one was not a cause of the sin of the others.

**Objection 2:** As was explained above (a. 2), the first angelic sin was nothing other than pride. But pride seeks excellence. Now to be subject to someone of lower status is more in conflict with excellence than to be subject to someone of higher status; and so, it seems, the sin of the demons was not that they

willed to be subject to one of the higher angels rather than to God. But the sin of one angel would have been a cause of the sin of the others only if the first angel had induced the others to subject themselves to him. Therefore, it does not seem that the sin of the first angel was a cause of the sin of the others.

**Objection 3:** To will to be subject to another in opposition to God is a greater sin than to will to rule over another in opposition to God, since it involves a weaker motive for sinning. Therefore, if the first angel's sin was a cause of the sin of the others because he induced them to be subject to him, then the lower angels sinned more gravely than the highest angel—which is contrary to the Gloss on Psalm 103:26 (“This sea dragon which You have formed”) that says, “He who was more excellent than the others in being became greater in wickedness.” Therefore, it is not the case that the sin of the first angel was a cause of the sin of the others.

**But contrary to this:** Apocalypse 13:4 says that the dragon dragged down with him “a third part of the stars.”

**I respond:** The sin of the first angel was a cause of the sin of the others—not, to be sure, a coercive cause, but rather a cause that induced them by exhortation. An indication of this is evident from the fact that all the demons are subject to that supreme angel, as is clear from what Our Lord says at Matthew 25:41 (“Depart from me, you cursed, into everlasting fire, which was prepared for the devil and his angels”). For the order of God's justice is such that when someone consents to a sin at the suggestion of another, he is subject in punishment to that other's power—this according to 2 Peter 2:19 (“For by whom a man is overcome, of the same also he is the slave.”)

**Reply to objection 1:** Even though the demons all sinned at the same time, the sin of the one could still be a cause of the sin of the others. For an angel does not need an interval of time in order to choose or to exhort or to consent—in the way that a man needs deliberation in order to choose or consent and audible speech in order to exhort, where both of these take time. Now it is clear that even a man begins to speak at the very same instant that he has conceived something in his heart. And at the last instant of the speaking, when [the hearer] grasps the speaker's meaning, it is possible for him to assent to what is being said—as is especially clear in the case of first principles (*in primis conceptionibus*), which one accepts as soon as they are heard. Therefore, if we subtract the time taken up by the speech and deliberation that we ourselves require, then at the very same instant at which the first angel expressed his own affection by means of intellectual speech, it was possible for the others to consent to that affection.

**Reply to objection 2:** Other things being equal, one who is proud wills to subject himself to someone of higher status rather than to someone of lower status. However, if by being subject to someone of lower status he stands to receive some sort of excellence which he cannot receive by being subject to someone of higher status, then he will choose to be subject to the former rather than to the latter. Therefore, it was not contrary to the pride of the demons that they should will to subject themselves to someone of lower status [than God]—especially given that even then it was the highest angel in the order of nature that they were subject to. For they consented to his rule and willed to have him as their prince and leader in order that they might receive their ultimate beatitude by their own natural power.

**Reply to objection 3:** As was explained above (q. 62, a. 6), an angel does not have anything to hold him back; instead, he moves with all his power to that toward which he is moved, whether it be good or bad. Therefore, since the highest angel had more natural power than the lower angels, he fell into sin with a more intense movement, and thus he also became greater in wickedness.

## Article 9

### Did as many angels sin as remained faithful?

It seems that more angels sinned than remained faithful (*plures peccaverunt de angelis quam permanserunt*):

**Objection 1:** As the Philosopher says, evil is found in the majority, but good in the few.

**Objection 2:** Sin and moral uprightness are found in angels and men in the same way. But there are more bad men than good men—this according to Ecclesiastes 1:15 (“The number of fools is infinite”). Therefore, by parity of reasoning, the same holds for angels.

**Objection 3:** The angels are distinguished both in person and in order. Therefore, if a majority of angelic persons remained faithful, then it seems not to be the case that some angels sinned from each of the orders of angels.

**But contrary to this:** 4 Kings 6:16 says, “There are more with us than with them.” This is interpreted as talking about the good angels who are with us to help and about the bad angels who are opposed to us.

**I respond:** The angels who remained faithful were more numerous than those who sinned. For sin is contrary to an angel’s natural inclination, and things that are contrary to nature occur in fewer cases, since nature attains its effect always or for the most part.

**Reply to objection 1:** The Philosopher is talking here about men, in whom evil occurs because (a) they pursue sensible goods, which are known to more of them, and (b) they desert the good of reason, which is known to fewer of them. By contrast, the angels have just an intellectual nature. Hence, the arguments are not parallel.

**Reply to objection 2:** The reply to this objection is clear from what was just said.

**Reply to objection 3:** If we follow those who claim that the devil was the highest angel in the lower order of angels who preside over earthly affairs, then it is clearly not the case that angels of each order fell; rather, only angels of the lowest order fell.

By contrast, if we follow those who claim that the devil was the greatest angel of the highest order, then it is probable that some from each order of angels fell—just as men are taken up into every order in compensation for the angelic ruin. This is a corroboration of the freedom of free choice, which can be turned toward evil at any level of creation. However, in Sacred Scripture the names of certain orders, e.g., ‘Seraphim’ and ‘Thrones’, are not attributed to the demons, because these names are derived from the ardor of charity and from God’s indwelling, which cannot co-exist with mortal sin. On the other hand, the names ‘Cherubim’, ‘Powers’, and ‘Principalities’ are attributed to the demons, because these names are taken from knowledge and power, which can be common to both those who are good and those who are bad.

## QUESTION 64

### The Punishment of the Demons

Next we inquire into the punishment of the demons. On this topic there are four questions: (1) Is a demon's intellect darkened? (2) Is a demon's will obstinate? (3) Do the angels have sorrow? (4) In what place are the demons punished?

#### Article 1

##### Is a demon's intellect darkened by being deprived of the cognition of all truth?

It seems that a demon's intellect is darkened (*intellectus daemonis sit obtenebratus*) by being deprived of the cognition of all truth:

**Objection 1:** If the demons had cognition of any truth, they would especially have cognition of themselves, i.e., they would have cognition of separated substances. But this is incompatible with their unhappiness (*miseria*), since such cognition seems to involve great happiness—so much so that some have identified man's ultimate beatitude with having cognition of separated substances. Therefore, the demons are deprived of all cognition of the truth.

**Objection 2:** What is most manifest by its nature seems to be especially manifest to the angels, regardless of whether they are good or bad. For the fact that what is most manifest by its nature is not especially manifest to us stems from the weakness of our intellect, which receives phantasms—just as the fact that an owl cannot see the sun's light stems from the weakness of its eyes. But God, who is in Himself the most manifest object because He is at the summit of truth, is such that the demons cannot have cognition of Him; for they do not have a clean heart, and it is only by means of a clean heart that God can be seen. Therefore, neither do they have cognition of anything else.

**Objection 3:** According to Augustine, the angels have two types of cognition of things, viz., morning knowledge and evening knowledge. But morning knowledge cannot belong to the demons, since they do not see things in the Word. Nor can they have evening knowledge, since evening knowledge relates the things that are known to the praise of the creator. (This is why Genesis 1 says that after evening comes morning.) Therefore, the demons cannot have any cognition of things.

**Objection 4:** As Augustine says in *Super Genesim ad Litteram* 5, at their creation the angels knew the mystery of the kingdom of God. But the demons are deprived of this cognition; for if they had known the mystery of the kingdom of God, then, as 1 Corinthians 2:8 says, "They would in no way have crucified the Lord of glory." Therefore, by parity of reasoning, they are likewise deprived of every other cognition of the truth.

**Objection 5:** If someone knows a truth, then either (a) he has cognition of it naturally, in the way that we ourselves have cognition of first principles, or (b) he has cognition of it by receiving it from another, in the way that we come to know by being taught, or (c) he has cognition of it through long experience (*per experientiam longi temporis*), in the way that we come to know by discovery. But the demons cannot have cognition of the truth by their nature, since, as Augustine says, the good angels are divided off from them as the light is divided off from the darkness, and, as Ephesians 5:13 says, all manifestation takes place by means of light. Similarly, they cannot have cognition of the truth through revelation or by being taught by the good angels, since, as 2 Corinthians 6:14 puts it, "There is no fellowship between light and darkness." Nor can they have cognition of the truth through long experience, since experience has its source in the senses. Therefore, the demons have no cognition of the truth.

**But contrary to this:** In *De Divinis Nominibus*, chap. 4, Dionysius says, "We claim that the angelic

gifts given to the demons are in no way changed, but remain in their integrity and great splendor.” Now among these natural gifts is the cognition of the truth. Therefore, the demons have some cognition of the truth.

**I respond:** There are two kinds of cognition of the truth, one of which is had through *nature* and the other of which is had through *grace*. Again, there are two kinds of cognition of the truth had through *grace*, one of which is purely *speculative*, as when certain hidden things about divine matters are revealed to someone, and the other of which is *affective*, which produces love for God and properly pertains to the gift of wisdom.

Now of these three kinds of cognition, the *first* is neither taken away from the demons nor diminished in them. For this kind of cognition follows upon the very nature of an angel, who is by his nature a type of intellect or mind; and because of the simplicity of his substance, nothing can be subtracted from his nature in the sense that he might be punished by the removal of something natural, in the way that a man might be punished by the removal of a hand or a foot, etc. This is why Dionysius says that a demon’s natural gifts remain in their integrity. Hence, the demons’ natural cognition is not diminished.

On the other hand, the *second* kind of cognition, which is had through grace and consists in purely speculative knowledge, is not taken away from the demons in its entirety, but it is diminished. For as Augustine says in *De Civitate Dei* 9, divine secrets of the sort in question are revealed to them as much as is necessary, either by the mediation of the angels or through certain temporal effects of God’s power—though not in the same way that they are revealed to the holy angels, to whom they are revealed in more abundance and more clearly in the Word Himself.

Lastly, the demons are totally deprived of the *third* kind of cognition, just as they are totally deprived of charity.

**Reply to objection 1:** Happiness consists in one’s being joined to what is higher. Now separated substances are higher than we are in the order of nature, and so a man can have a certain sort of happiness by having cognition of separated substances—even though his perfect happiness lies in knowing the first substance, viz., God.

By contrast, it is natural (*connaturale*) for a separated substance to have cognition of separated substances, in just the way that it is natural for us to have cognition of sensible natures. Hence, just as a man’s happiness does not consist in his having cognition of sensible natures, so an angel’s happiness does not consist in his having cognition of separated substances.

**Reply to objection 2:** That which is most manifest by its nature is hidden from us because it exceeds the capacity of our intellect, and not just because our intellect receives its cognition from phantasms. Now the divine substance exceeds the capacity not only of the human intellect, but also of the angelic intellect. Hence, even an angel himself cannot by his nature have cognition of God’s substance. Nonetheless, because of the perfection of his intellect, he can by his nature have a deeper cognition of God than a man can. And this sort of cognition of God remains even in the demons. For even if they do not have the purity that comes from grace, they do nonetheless have a purity of nature that is sufficient for the cognition of God that belongs to them by their nature.

**Reply to objection 3:** A creature is darkness when compared to the excellence of the divine light, and this is why the cognition that a creature has in his own nature is called ‘evening knowledge’. For even though evening has some darkness adjoined to it, it nonetheless has some light as well, since it is night that is totally lacking in light. So, then, when the cognition of things in their proper nature is directed toward the praise of God, as it is in the good angels, then it has something of the divine light and can be called evening knowledge. By contrast, if it is not directed toward God, as happens in the case of the demons, then it is called ‘nocturnal knowledge’ rather than ‘evening knowledge’. Hence, we read in Genesis 1 that the darkness, which God separated from the light, He called ‘night’.

**Reply to objection 4:** The mystery of God’s kingdom, which is fulfilled through Christ, was known in some way by all the angels at the beginning, especially if they were beatified by their vision of the Word—a vision that the demons never had. However, not all the angels knew this mystery perfectly or equally well. Hence, when Christ came into the world, the demons knew the mystery of the Incarnation much less perfectly than the others did. For as Augustine says, “It was not made known to the demons in the way it was made known to the holy angels, who enjoy a participation in the Word’s eternity. Rather, it had to be made known to them through certain temporal effects in order to instill terror in them.” Now if they had known perfectly and with certitude that Christ was the Son of God and what the effect of His passion would be, they would never have taken care to have the Lord of glory crucified.

**Reply to objection 5:** There are three ways in which demons know truths.

First, they know some truths by the subtlety of their nature. For even though their intellects are darkened by the fact that they are deprived of the light of grace, they are nonetheless enlightened by the light of their intellectual nature.

Second, they know some truths by having them revealed by the holy angels, with whom they do not have a conformity of will, but with whom they do have a similarity of intellectual nature, in accord with which they are able to receive what is shown to them by others.

Third, they know some truths through long experience—though not in the sense that they receive anything from sensation. Rather, as was explained above when we were discussing angelic cognition (q. 57, a. 3), when the likeness of the intelligible species of a thing that is naturally instilled in the demons is realized in singular things, they know certain things as present which they did not previously know as future.

## Article 2

### Is the will of the demons obstinate in evil?

It seems that the will of the demons is not obstinate in evil (*non est obstinata in malo*):

**Objection 1:** As has been explained (a. 1), freedom of choice belongs naturally to an intellectual nature, and this nature remains in the demons. But freedom of choice is ordered *per se* and primarily toward good rather than to evil. Therefore, a demon’s will is not so obstinate in evil that he cannot return to the good.

**Objection 2:** God’s mercy, which is infinite, is greater than a demon’s wickedness, which is finite. But no one returns from the wickedness of sin to the goodness of justice except through God’s mercy. Therefore, even the demons can return to the state of justice from the state of wickedness.

**Objection 3:** If the demons have a will that is obstinate in evil, then they have this obstinacy especially in the sin by which they fell. But that sin, viz., pride, does not now remain in them, since the motive for it, viz., excellence, no longer remains in them. Therefore, a demon is not obstinate in evil.

**Objection 4:** Gregory says that one man can be cured (*reparari*) by another, since he fell because of another. But as was explained above (q. 63, a. 8), the lower demons fell because of the first demon. Therefore, their fall can be cured by another. Therefore, they are not obstinate in evil.

**Objection 5:** If someone is obstinate in wickedness, then he never does any good work. But a demon does some good works. For a demon confesses the truth when he says to Christ, “I know that you are the holy one of God” (Mark 1:24); the demons also “believe and tremble,” as James 2:19 puts it; again, in *De Divinis Nominibus*, chap. 4, Dionysius says, “The demons desire the good and the best: to

exist, to live, and to understand.” Therefore, the demons are not obstinate in wickedness.

**But contrary to this:** Psalm 73:23 says, “The pride of those who hate you ascends continually,” which is interpreted as speaking about the demons. Therefore, the demons always persevere obstinately in wickedness.

**I respond:** Origen’s position was that, because of its freedom of choice, every created will is able to turn toward the good and able to turn toward evil—the only exception being Christ’s soul, due to its union with the Word.

However, this position undermines the genuineness of the beatitude of the holy angels and men, since everlasting stability is part of the nature of genuine beatitude—which is why it is called ‘eternal life’. This position is also incompatible with the authority of Sacred Scripture, which decrees that the demons and evil men “will be sent into eternal punishment,” and that those who are good “will be brought into eternal life” (Matthew 25:46). Hence, the position in question must be counted as erroneous, and according to the Catholic Faith one must hold firmly both that (a) the will of the good angels is confirmed in the good and that (b) the will of the demons is obstinate in evil.

The reason for this obstinacy is to be found not in the gravity of a demon’s sin, but rather in the condition of the nature of his state (*ex conditione naturae status*). For as Damascene puts it, the fall is to angels what death is to men. Now it is clear that all of a man’s mortal sins, whether they be great or small, can be remitted before death, whereas after death they remain forever and cannot be remitted. To understand the reason for this sort of obstinacy, note that in each thing the appetitive power is proportioned to the apprehensive power by which it is moved in the way that a movable thing is proportioned to its mover. For as was explained above (q. 59, a. 1), the sentient appetite is directed toward a particular good, whereas the will is directed toward the universal good; in the same way, the senses apprehend singulars, whereas the intellect apprehends universals. Now an angel’s apprehension differs from a man’s in that through his understanding (*intellectus*) an angel apprehends everything in an immovable way (*immobiliter*), just as we apprehend in an immovable way the first principles that are the object of an act of understanding (*intellectus*). By contrast, through reason (*ratio*) a man understands in a movable way (*mobiliter*) by reasoning discursively from one thing to another, so that he has a way open to both opposites. Hence, it is likewise the case that a man’s will adheres to something in a movable way in the sense that it is able to retreat from that thing and adhere to some contrary thing, whereas an angel’s will adheres to something in a fixed and immovable way. So if we think about an angel before he adheres to something, then he is able freely to adhere to this thing or to its opposite (we are speaking here of things that he does not will naturally); but after he has already adhered to one or the other, he adheres to it in an immovable way. And so it is customary to say that a man’s free choice is flexible with respect to opposites both before and after his act of choice, whereas an angel’s free choice is flexible with respect to opposites before his act of choice, but not afterwards.

So, then, the good angels, who always adhere to justice, are confirmed in the good, whereas the bad angels, who sin, are obstinate in sin. Later on (*Supplement*, q. 98, aa. 1 and 2) we will talk about the obstinacy of men who are damned.

**Reply to objection 1:** The good and bad angels both have free choice, but, as has been explained, they have it in accord with the mode and condition of their nature.

**Reply to objection 2:** God’s mercy frees from their sins those who are repentant. But those who are incapable of repentance adhere immovably to evil and are not freed by God’s mercy.

**Reply to objection 3:** As far as the devil’s desire is concerned, the sin by which he first sinned remains in him—even though it does not remain in him in the sense that he believes that he can fulfill that desire. In the same way, if someone believes that he is able to commit a murder and wills to do so and later has the power to do it taken away from him, the desire (*voluntas*) to commit the murder can still

remain in him in the sense that he wishes that he had done it, or in the sense that he would will to do it if he could do it.

**Reply to objection 4:** It is not the case that the entire reason why a man's sin can be remitted is that he sinned at the suggestion of another. And so the conclusion does not follow.

**Reply to objection 5:** A demon has two kinds of act:

One kind of act proceeds from a deliberate will and can properly be called his own act. This kind of act on the part of a demon is always bad, since even if he sometimes effects something good, he nonetheless does not effect it in an upright way—as, for instance, when he tells the truth in order to deceive someone, or when he believes or confesses the truth not willingly, but because he is compelled to by the evidentness of things.

By contrast, the second kind of act on the part of a demon is a natural act, which can be good and which attests to the goodness of his nature. And yet even a good act of this sort he uses for an evil end.

### Article 3

#### Is there sorrow in the demons?

It seems that there is no sorrow (*dolor*) in the demons:

**Objection 1:** Sorrow and joy are opposed to one another and so they cannot exist in the same thing at the same time. But there is joy in the demons; for in *Contra Manichaeos* Augustine says, “The devil has power over those who despise God's precepts, and he rejoices over this utterly miserable power of his.” Therefore, there is no sorrow in the demons.

**Objection 2:** Sorrow is a cause of fear, since the things that we fear while they are still future are such that we have sorrow over them when they become present. But according to Job 41:24 (“He was made to fear no one”), there is no fear in the demons. Therefore, there is no sorrow in the demons.

**Objection 3:** It is good to have sorrow for evil. But the demons are unable to do anything in an upright way. Therefore, they cannot have sorrow, at least sorrow for the evil of sin—the sort of sorrow that involves the ‘worm of conscience’.

**But contrary to this:** A demon's sin is more grave than a man's sin. But according to Apocalypse 18:7 (“As much as she has glorified herself and lived in delicacies, so much torment and sorrow you give to her”), a man is punished with sorrow for the pleasure he takes in his sin. Therefore, *a fortiori*, the devil, who glorified himself to the maximum, is punished with the grief of sorrow.

**I respond:** Insofar as fear, sorrow, joy, etc., are passions, they cannot exist in the demons; for as such they are proper to the sentient appetite, which is a power existing in a corporeal organ.

However, insofar as the names ‘fear’, ‘sorrow’, and ‘joy’ designate simple acts of will, they can as such exist in the demons. And one must claim that sorrow does exist in the demons. For insofar as ‘sorrow’ signifies a simple act of will, it is nothing other than the will's resistance either to what does exist or to what does not exist. But it is clear that many things are either such that (a) they exist and the demons wish they did not exist or such that (b) they do not exist and the demons wish they did exist. For instance, because the demons are envious, they wish that those who are in fact saved might be damned. Hence, one must claim that there is sorrow in the demons, principally because it is part of the notion of punishment that punishment be repugnant to the will. In addition, they are deprived of the beatitude that they naturally desire, and their evil will is held in check in many matters.

**Reply to objection 1:** Joy and sorrow are opposites when they are directed at the same thing, but not when they are directed at diverse things. Hence, nothing prevents one from having sorrow over one

thing while at the same time rejoicing over something else. This is especially true when the sorrow and joy in question are simple acts of will. For not only in diverse things, but even in one and the same thing, there can be both something that we will and something that we will the opposite of.

**Reply to objection 2:** The demons have fear with respect to what is future in the same way that they have sorrow over what is present.

Now the cited verse, “He was made to fear no one,” is talking about the fear of God that keeps one from sinning. For in another place Scripture says that “the demons believe and tremble” (James 2:19).

**Reply to objection 3:** To have sorrow for the evil of sin because of the evil itself attests to the *will's* goodness, which the evil of sin is opposed to. By contrast, to have sorrow over the evil of punishment—or over the evil of sin because of the punishment for it—attests to the *nature's* goodness, which the evil of punishment is opposed to. Hence, in *De Civitate Dei* 19 Augustine says, “The sorrow over a good that is lost because of punishment is a witness to the goodness of a nature.” Therefore, since a demon has a perverse and obstinate will, he does not have sorrow for the evil of sin.

#### Article 4

##### Is the air the demons' place of punishment?

It seems that the air is not the demons' place of punishment (*aer iste non sit locus poenalis daemonum*):

**Objection 1:** A demon is a spiritual nature. But a spiritual nature is not affected by place. Therefore, there is no place of punishment for the demons.

**Objection 2:** A man's sin is not more grave than a demon's sin. But hell (*infernus*) is the place of man's punishment. Therefore, *a fortiori*, it is the place of a demon's punishment. Therefore, the misty air (*aer caliginosus*) is not the place of a demon's punishment.

**Objection 3:** Demons are punished with a punishment of fire. But there is no fire in the misty air. Therefore, the misty air is not the demons' place of punishment.

**But contrary to this:** In *Super Genesim ad Litteram* 3 Augustine says, “The misty air is, as it were, the prison of the demons until judgment day.”

**I respond:** Given their nature, the angels stand between God and men. Now the nature of divine providence is such that it procures the good of lower beings through the mediation of higher beings; and there are two ways in which the good of man is procured through divine providence:

The first way is *direct*, viz., when someone is induced toward the good and drawn back from evil, and this is fittingly accomplished through the mediation of the good angels.

The second way is *indirect*, viz., when someone who is under attack occupies himself with fighting back. And it was appropriate for this sort of procurement of the human good to be accomplished through the mediation of the bad angels—lest after their sin they should be totally useless to the natural order.

Accordingly, there have to be two places of punishment for the demons—one by reason of their sin, and this is hell; and the other for the sake of their putting men to the test, and this is the misty air. Now the procurement of human salvation will last until judgment day, and so the angels' ministry and the demons' agitations will last until then. Hence, until then, the good angels are sent here to us, and the demons are in the misty air to tempt us—even though some of the demons are even now in hell in order to torment those whom they have led into evil, just as some of the good angels are now with the holy souls in heaven.

After judgment day, however, all evildoers, both men and angels, will be in hell, whereas the good

will be in heaven.

**Reply to objection 1:** A place is a place of punishment for an angel or for a soul not in the sense that it affects them by altering their nature, but in the sense that it affects them by saddening their will, since the angel or soul sees himself as being in a place that is not agreeable to his will.

**Reply to objection 2:** It is not the case that one soul is given preference over another soul according to the order of nature, in the way that the demons are given preference over men by the order of nature. Therefore, the arguments are not parallel.

**Reply to objection 3:** Some have claimed that the sentient punishment of both demons and souls is deferred until judgment day and that, similarly, the beatitude of the saints is deferred until judgment day. But this position is erroneous and incompatible with what the Apostle says at 2 Corinthians 5:1 (“If our earthly house of this habitation is dissolved, we have a house in heaven”).

By contrast, others, even though they do not concede this claim with respect to souls, concede it with respect to the demons. However, it is better to hold a uniform opinion about the bad souls and bad angels, just as it is better to hold a uniform opinion about the good souls and good angels.

Hence, one should say that a heavenly place is appropriate for the glory of the angels, even though their glory is not diminished when they come to us, since they still consider this heavenly place to be their own (just as we say that the bishop’s honor is not diminished when he is not actually seated on his episcopal chair). And, similarly, one should say that even if the demons are not actually bound to the fire of Gehenna when they are in the misty air, nonetheless, by the very fact that they know they deserve to be bound to it, their punishment is not diminished. Hence, a Gloss on James 3:6 says, “They carry the fire of Gehenna with them wherever they go.”

Nor is this contrary to the fact that “they pleaded with the Lord not to send them into the abyss,” as Luke 8:31 puts it. For they made this plea because they thought it a punishment to be driven from a place where they could harm men. Hence, Mark 5:10 says, “They begged Him not to drive them away out of the region.”

## QUESTION 65

### The Work of Creating Corporeal Creatures

Now that we have considered the spiritual creature, we next have to consider the corporeal creature. In the production of corporeal creatures Scripture recalls three works, viz., (a) the work of *creation* (*opus creationis*), when it says, “In the beginning God created heaven and earth,” and (b) the work of *division* (*opus distinctionis*), when it says, “He divided the light from the darkness, and the waters that are above the firmament from the waters that are below the firmament,” and (c) the work of *adornment* (*opus ornatus*), when it says, “Let there be lights in the firmament ...” Therefore, we must consider, first, the work of creation (questions 65-66); second, the work of division (questions 67-69); and, third, the work of adornment (questions 70-74).

On the first topic there are four questions: (1) Are corporeal creatures from God? (2) Are they made for the sake of God’s goodness? (3) Are they made by God through the mediation of angels? (4) Are the forms of bodies from angels or directly from God?

#### Article 1

#### Are corporeal creatures from God?

It seems that corporeal creatures are not from God:

**Objection 1:** Ecclesiastes 3:14 says, “I have learned that all the works which God has made last forever.” But visible bodies do not last forever; for 2 Corinthians 4:18 says, “The things that are seen are temporary (*temporalia*), whereas the things that are not seen are eternal.” Therefore, God did not make visible bodies.

**Objection 2:** Genesis 1:31 says, “God saw all the things He had made, and they were very good.” But corporeal creatures are evil. For we experience them to be harmful in many ways, as is clear with many kinds of snakes, with the heat of the sun, and with other things of this sort; and the reason why something is called evil is that it does harm. Therefore, corporeal creatures are not from God.

**Objection 3:** What is from God does not draw us away from God, but instead leads us to Him. But corporeal creatures draw us away from God; thus, in 2 Corinthians 4:18 the Apostle says, “While we look not at the things which are visible ...” Therefore, corporeal creatures are not from God.

**But contrary to this:** Psalm 145:6 says, “... who made heaven and earth, the sea and all the things that are in them.”

**I respond:** The position of certain heretics is that visible things were created not by a good God, but by an evil principle. And in support of their error they appropriate what the Apostle says at 2 Corinthians 4:4: “The god of this world (*deus huius saeculi*) has blinded the minds of unbelievers.”

However, this position is altogether impossible. For if diverse things are united in some one feature (*uniantur in uno*), then there must be a cause of this union, since diverse things are not united of themselves (*secundum se*). And so it is that whenever some one feature is found in diverse things, those diverse things must receive that one feature from a unitary cause (*ab aliqua una causa*), in the way that diverse hot bodies have their heat from fire. Now the feature which is *esse* is found universally in all things, regardless of how diverse they are. Therefore, there must be some one principle of being from which all things have *esse*, regardless of whether they are invisible and spiritual or whether they are visible and corporeal.

Now the devil is called “the god of this world” not because he is a creator (*non creatione*), but because those who live in a worldly fashion serve him. This is the same manner of speaking the Apostle uses in Philippians 3:19, when he says, “Their god is their belly.”

**Reply to objection 1:** All God's creatures endure forever in some sense, at least with respect to their matter. For creatures are never reduced to nothingness, even if they are corruptible. But the closer creatures are to God, who is altogether unchangeable, the more unchangeable they are. For corruptible creatures endure forever with respect to their matter, but change with respect to their substantial form. On the other hand, incorruptible creatures do, to be sure, endure with respect to their substance, but they are changeable with respect to other things, viz., place in the case of celestial bodies, and affections in the case of spiritual creatures.

As for what the Apostle says, "The things that we see are temporary"—although this is true even with respect to [visible] things considered in themselves, given that every visible creature is subject to time either because of its *esse* or because of its movement, still, the Apostle means to be speaking about visible things insofar as they are man's rewards. For those of man's rewards that consist in these visible things pass away with time, whereas the rewards that consist in invisible things remain forever (*permanent in aeternum*). Thus, he had said just before this, "... works in us an eternal weight of glory."

**Reply to objection 2:** A corporeal creature is good with respect to its nature, but it is not a universal good. Rather, it is a particular and contracted good, and as a result of this particularity and contraction there exists among corporeal creatures a contrariety in virtue of which one is contrary to another, even though both are good in themselves.

Now there are those who, considering things not on the basis of their natures, but rather on the basis of what is suited to them as individuals (*ex suo proprio commodo*), think that whatever is harmful to them in some respect is evil absolutely speaking—not taking into account that what is evil for one of them in some respect is either beneficial for another or beneficial for that same one in some [other] respect. This would in no way be the case if bodies were of themselves evil and harmful.

**Reply to objection 3:** Taken in themselves, creatures do not draw us away from God, but instead lead us to Him; for as Romans 1:20 says, "The invisible things of God are clearly seen, being understood through the things that have been made."

The fact that they turn us away from God is the fault of those who use them unwisely. Hence, Wisdom 14:11 says, "Creatures have become a snare to the feet of the unwise." And the very fact that they lead us away from God in this way testifies to the fact that they are from God. For they do not lead the unwise away from God except by attracting them with something good that exists in them, and they have this something good from God.

## Article 2

### Were corporeal creatures made for the sake of God's goodness?

It seems that corporeal creatures were not made for the sake of God's goodness:

**Objection 1:** Wisdom 1:14 says, "God created in order that all things might exist." Therefore, all things were created for the sake of their own proper *esse*, and not for the sake of God's goodness.

**Objection 2:** The good has the character of an end. Therefore, that which is a greater good among things is the end of that which is a lesser good. But spiritual creatures are related to corporeal creatures as a greater good to a lesser good. Therefore, corporeal creatures exist for the sake of spiritual creatures, and not for the sake of God's goodness.

**Objection 3:** Justice does not give unequally except to unequals. But God is just. Therefore, prior to any inequality created by God, there is an inequality not created by God. But an inequality not created by God cannot exist unless it stems from free choice. Therefore, every inequality follows from the

diverse movements of free choice. But corporeal creatures are not equal to spiritual creatures. Therefore, corporeal creatures were made because of certain movements of free choice and not for the sake of God's goodness.

**But contrary to this:** Proverbs 16:4 says, "The Lord has made all things for Himself."

**I respond:** Origen claimed that corporeal creatures were made not because of God's primary intention, but in order to punish sinful spiritual creatures. For he claimed that in the beginning God made spiritual creatures alone, and He made them all equal to one another. Given that they had free choice, some among them turned toward God and, corresponding to the intensity (*quantitas*) of their conversion to Him, they were given higher and lower ranks while retaining their simplicity. Others, however, having turned away from God, were tied to (*alligatae*) different kinds of bodies according to the manner of their turning away from God.

This position is erroneous.

First of all, it is contrary to Sacred Scripture, which, having recounted the production of each kind of corporeal creature, adds, "God saw that it was good"—as if to say, "Each of them was made because its very existence is good." By contrast, according to Origen's opinion, corporeal creatures were made not because it was good for them to exist, but in order to punish the evil of the other sort of being.

Second, it would follow that the present arrangement of the corporeal world exists by chance. For if the body of the sun was made the way it was in order to be a fitting punishment for a spiritual creature's sin, then if many spiritual creatures had sinned in the same way as the one whose sin the sun was created as a punishment for, then it follows that there would be more suns in the world. And the same thing would hold for the other cases. But these consequences are altogether absurd.

Now that this position has been eliminated as erroneous, note that the entire universe is made up of all things in the way that a whole is made up of its parts. And if we want to ascribe an end to a given whole along with its parts, we will discover, first, that the individual parts exist for the sake of their own acts, in the way that an eye exists for the sake of seeing. Second, a less noble part exists for the sake of a more noble part, in the way that the senses exist for the sake of the intellect, and in the way that the lung exists for the sake of the heart. Third, the parts together (*omnes partes*) exist for the sake of the perfection of the whole, in the way that matter exists for the sake of form; for the parts are, as it were, the matter of the whole. Further, a man as a whole exists for the sake of an extrinsic end, viz., to enjoy God.

So, then, likewise in the case of the parts of the universe, each creature exists for the sake of its own act and perfection. Second, the less noble creatures exist for the sake of the more noble creatures; for instance, the creatures below man exist for the sake of man. Further, each creature exists for the sake of the perfection of the whole universe. Further, the universe as a whole, with all its individual parts, is ordered to God as its end, insofar as God's goodness is represented in the whole and parts through a sort of imitation, and this for God's glory—though there is a special way that goes beyond this in which rational creatures have God as an end whom they can attain to by their action, viz., knowing and loving.

In this way it is clear that God's goodness is the end of all corporeal beings.

**Reply to objection 1:** By the very fact that a creature has *esse*, it represents God's *esse* and His goodness. And so the fact that God created all things in order that they might exist does not rule out His having created all things for the sake of His goodness.

**Reply to objection 2:** A proximate end does not exclude an ultimate end. Hence, the fact that corporeal creatures were in some sense made for the sake of spiritual creatures does not rule out their having been made for the sake of God's goodness.

**Reply to objection 3:** The equality of justice has a place in retributive matters (*in retribuendo*), since it is just that what is equal should be repaid with what is equal.

However, there is no room for this point in the initial establishment of things. For just as a

craftsman, without any injustice, places stones of the same kind in different parts of a building—not because of any prior differences among the stones but with an eye toward the building’s perfection as a whole, which would not exist unless the stones were positioned in different ways in the building—so, too, in the beginning God, in order that there might be perfection in the universe, made diverse and unequal creatures according to His wisdom—with no injustice, and yet without presupposing any differences of merit.

### Article 3

#### Were corporeal creatures produced by God through the mediation of angels?

It seems that corporeal creatures were produced by God through the mediation of angels:

**Objection 1:** All things were created by God’s wisdom in just the way that things are governed by God’s wisdom—this according to Psalm 103:24 (“You have made all things in wisdom”). But as the beginning of the *Metaphysics* puts it, “One who is wise has the role of ordering.” Hence, in the governance of things, lower things are ruled by higher things with a sort of order, as Augustine says in *De Trinitate* 3. Therefore, the order present in the production of things was likewise such that corporeal creatures, as lower creatures, were produced by spiritual creatures, as higher creatures.

**Objection 2:** A diversity of effects points to a diversity of causes, since one and the same cause always does the same thing. Therefore, if all creatures, both spiritual and corporeal, were directly (*immediate*) produced by God, there would be no diversity among creatures; nor would one creature be more distant from God than another. But this is clearly false, since the Philosopher says that certain corruptible things are “too far distant from God.”

**Objection 3:** An infinite power is not required to produce a finite effect. But each body is finite. Therefore, it could have been produced by the finite power of a spiritual creature. And it was in fact so produced, since in spiritual creatures actuality (*esse*) does not differ from possibility (*posse*)—especially given that no dignity which belongs to a thing by its nature is denied to it, except perhaps because of sin.

**But contrary to this:** Genesis 1:1 says, “In the beginning God created heaven and earth,” where ‘earth’ is understood to mean corporeal creatures. Therefore, corporeal creatures were directly produced by God.

**I respond:** Some have claimed that things proceeded from God step by step, so that the first creature proceeded directly from Him, and this creature produced another one, and so on down to corporeal creatures.

But this position is impossible. The initial production of a corporeal creature is through an act of creation, by which even the matter itself is produced; for the imperfect is prior to the perfect in being made. But it is impossible for anything to be created except by God alone.

To see this clearly, notice that the higher a cause is, the more things it extends to in its causing. But it is always the case that what is underlying (*id quod substernitur*) in things is more general (*communius*) than that which forms (*informat*) and limits (*restringit*) it. For instance, to exist (*esse*) is more general than to be alive (*vivere*), and to be alive is more general than to be intelligent (*intelligere*), and matter is more general than form. Therefore, the more of an underlying substratum something is, the more it must proceed directly from a higher cause. Therefore, that which is the most basic substratum in all things (*est primo substratum in omnibus*) properly involves the causality of the highest cause. Therefore, no secondary cause can produce anything without presupposing, within the thing produced,

something that is caused by a higher cause. But creation is the production of a thing with respect to its *entire* substance, presupposing *nothing* that is uncreated or has been created by some cause. Hence, it follows that nothing is able to create except God alone, who is the first cause. And this is why, in order to show that all bodies are directly created by God, Moses said, “In the beginning God created heaven and earth.”

**Reply to objection 1:** In the production of things there is a certain order—not, to be sure, an order such that one creature is created by another creature (for this is impossible), but rather an order such that diverse grades are established among creatures by God’s wisdom.

**Reply to objection 2:** As was shown above (q. 15, a. 2), the one God Himself, without prejudice to His simplicity, has knowledge of diverse things. And so likewise, in keeping with the diverse things known, He is through His wisdom a cause of the diverse things produced—just as a craftsman, by apprehending diverse forms, produces a diversity of artifacts.

**Reply to objection 3:** The quantity of an agent’s power is measured not only by the thing made but also by the manner of making it. For the same thing is made in different ways by a greater power and by a lesser power. But it is proper to an infinite power to produce something finite in such a way that nothing is presupposed. Hence, this mode of production cannot belong to any creature.

#### Article 4

##### Are the forms of bodies derived from angels?

It seems that the forms of bodies are derived from angels (*formae corporum sint ab angelis*):

**Objection 1:** In *De Trinitate* Boethius says, “From the forms that exist without matter come the forms that exist in matter.” But the forms that exist without matter are the spiritual substances, whereas the forms that exist in matter are the forms of bodies. Therefore, the forms of bodies are from the spiritual substances.

**Objection 2:** Everything that is such-and-such by participation is traced back to what is such-and-such through its essence. But spiritual substances are forms through their essence, whereas corporeal creatures participate in forms. Therefore, the forms of corporeal things are derived from the spiritual substances.

**Objection 3:** Spiritual substances have more causal power than celestial bodies do. But the celestial bodies are causes of forms in things here below, and thus they are said to be a cause of generation and corruption. Therefore, *a fortiori*, the forms that exist in matter are derived from the spiritual substances.

**But contrary to this:** In *De Trinitate* 3 Augustine says, “Do not think that corporeal matter obeys the angels at will (*ad nutum servire*); rather, it obeys God.” But corporeal matter is said to obey at will the one from whom it receives its species. Therefore, corporeal forms are from God and not from angels.

**I respond:** Some have held the opinion that all corporeal forms are derived from the spiritual substances we call angels. And they have posited this in two ways:

Plato claimed that the forms which exist in corporeal matter are derived (*derivari*) from and shaped by (*formari*) Forms that subsist without matter, by way of a kind of participation. For he posited a sort of Man that subsists immaterially, and likewise Horse, and so on for the other Forms, from which singular sensible things are constituted insofar as an impression from those separated Forms is found in corporeal matter, in the manner of an assimilation that he called ‘participation’. And the Platonists

posited an order among the separated substances that corresponds to the order of the [corporeal] forms, viz., that there is a separated substance Horse that is a cause of all horses; and beyond this there is a separated Life, which they called Life itself and a cause of all life; and, further, there is a separated substance they called Being itself and a cause of all *esse*.

By contrast, Avicenna and certain others claimed that the forms of corporeal things do not subsist *per se* in matter but subsist *per se* only in an intellect. Thus, they asserted that all the forms that exist in corporeal matter proceed from the forms that exist in the intellect of spiritual creatures (whom they call ‘intelligences’, while we call them ‘angels’) in the way that the forms of artifacts proceed from the forms in the mind of a craftsman. And this seems to amount to the same thing that is proposed by certain modern heretics when they claim that while God is the creator of all things, it is the devil who shaped corporeal matter and divided it into the various species.

Now all these opinions seem to have proceeded from a single source. For they were asking about the cause of [corporeal] forms as if the forms themselves are made in their own right (*fierent secundum seipsas*). But as Aristotle shows in *Metaphysics* 7, what is made, properly speaking, is the composite, whereas the forms of corruptible things are such that they exist at some times and not at others without themselves being generated or corrupted, but rather because the composites are generated and corrupted. For the forms do not have *esse*, but instead it is the composites that have *esse* through the forms; for *being made* belongs to a thing in the same sense in which *esse* belongs to it. And so, since the similar is made by what is similar to it, it is not any immaterial form that one should look for as the cause of corporeal forms. Rather, one should look for some composite; for *this* fire is generated by *that* fire. So, then, corporeal forms are caused not in the sense that they flow from some immaterial form (*influxae ab aliqua immateriali forma*), but rather in the sense that their matter is reduced (*reducta*) from potentiality to actuality by some composite agent.

However, since, as Augustine says in *De Trinitate* 3, a composite agent, which is a body, is moved by a created spiritual substance, it follows further that corporeal forms are also derived from spiritual substances—not in the sense that the spiritual substances ‘pour’ the forms [into bodies] (*influxantibus formis*), but in the sense that they move [bodies] toward the forms (*moventibus ad formas*). Moreover, corporeal forms are further traced back to God as their first cause, as are the [intelligible] species of the angelic intellect, which are like seminal ideas (*seminales rationes*) of corporeal forms.

Now in the initial production of corporeal creatures there is no thought of any transition from potentiality to actuality. And so the corporeal forms that bodies had in this initial production were produced by God alone as a proper cause, and God is the only one whom matter obeys at will. Hence, to signal this, Moses premised each of the works with “God said, ‘Let there be this or that.’” This signifies the formation of things effected by God’s Word, from whom, as Augustine puts it, “comes every form and structure and agreement of parts.”

**Reply to objection 1:** By ‘forms that exist without matter’ Boethius means the conceptions of things that exist in God’s mind, just as in Hebrews 11:3 the Apostle says, “By faith we believe that the world was framed by the word of God, that from invisible things visible things might be made.”

However, if by ‘forms that exist without matter’ one means the angels, then one must claim that the forms that exist in matter come from the angels not by being poured into things, but through movement.

**Reply to objection 2:** Participated forms that exist in matter are traced back not to forms of the same type that subsist *per se*, as the Platonists held, but either (a) to the intelligible forms that belong to the angelic intellect and are such that corporeal forms proceed from them through movement or (b), further back, to the conceptions of God’s intellect, from which the seeds of the forms are instilled into created things, so that they can be educed into actuality through movement.

**Reply to objection 3:** The celestial bodies cause forms in bodies here below not by pouring those forms into the bodies but by moving the bodies.

## QUESTION 66

### The Order of Creation with respect to Division

The next thing to consider is the work of division (*opus distinctionis*). We have to consider, first, the order of creation with respect to division (question 66) and, second, the divisions in themselves (questions 67-69).

On the first topic there are four questions: (1) Did created matter's being unformed temporally precede its division? (2) Is there a single matter for all corporeal things? (3) Was the empyrean heaven co-created along with unformed matter? (4) Was time co-created along with unformed matter?

#### Article 1

#### Was matter unformed temporally prior to its being formed?

It seems that matter's being unformed temporally preceded its being formed:

**Objection 1:** Genesis 1:2 says that the earth was “void (*inanis*) and empty (*vacua*)”— or “invisible (*invisibilis*) and nondescript (*incomposita*),” according to another version—and this designates matter's being unformed, as Augustine says. Therefore, matter was unformed at some time before it was formed.

**Objection 2:** In its operation nature imitates God's operation, in the way that a secondary cause imitates a first cause. But in nature's operation *being unformed* temporally precedes *being formed*. Therefore, the same holds for God's operation.

**Objection 3:** Matter is more important than an accident, since matter is a part of the substance. But as is clear in the Sacrament of the Altar, God can make it the case that an accident exists without a subject. Therefore, He could have made it the case that matter exists without form.

**But contrary to this:**

1. The imperfection of an effect attests to the imperfection of its agent. But God is the most perfect agent; thus, Deuteronomy 32:4 says of Him, “The works of God are perfect.” Therefore, it is not the case that any work created by Him was ever unformed.

2. The formation of corporeal creatures was accomplished through the work of division. But *confusion* is opposed to *division*, in the way that *being unformed* is opposed to *being formed*. Therefore, if matter's being unformed temporally preceded its being formed, then it follows that at the beginning there was confusion among corporeal creatures of the sort the ancients called ‘chaos’.

**I respond:** The saints have had differing opinions about this question. For instance, Augustine claims that corporeal matter's being unformed did not temporally precede its being formed, but preceded it only in origin or in the order of nature. On the other hand, others such as Basil, Ambrose, and Chrysostom claimed that matter's being unformed temporally preceded its being formed.

Even though these opinions seem to be contraries, they nonetheless differ very little from one another, since Augustine has a different understanding from the others of what it is for matter to be unformed. For Augustine takes matter's being unformed to mean that it lacks all form. And in this sense it is impossible to claim that matter's being unformed temporally preceded either its being formed (*formatio*) or its being divided (*distinctio*).

This is obvious in the case of its being formed. For if unformed matter was prior in duration, then it was already actual or in actuality (*in actu*); for its duration implies this, and the terminus of creation is an actual entity (*ens actu*). But the very thing that is actuality is form (*ipsum quod est actus est forma*). Therefore, to claim that matter preceded without form is to claim that an actual being (*ens actu*) preceded without actuality (*sine actu*)—which implies a contradiction.

Nor, again, can one claim that matter had some common form, and that afterwards the diverse

forms by which the matter was divided came over and beyond this (*supervenit ei*). For this would be same as the opinion of the ancient natural philosophers, who held that primary matter was some actual body, e.g., fire or air or water or something in between. From this it followed that *being altered* would be the only kind of *being made*. For since the antecedent [common] form would give *esse* in actuality in the genus *substance* and would make the thing a *this-something* (*hoc aliquid*), it followed that the added form (*superveniens forma*) would not make the thing an actual entity, absolutely speaking, but would instead make it an entity that is actually *such-and-such* (*hoc*)—which is proper to an accidental form. And so the subsequent forms would be accidents and, accordingly, there would be an *alteration* and not a *generation*.

Hence, one must claim that primary matter was neither created without any form at all nor created under some common form. Rather, it was created under distinct forms. And so if ‘matter’s being unformed’ refers to the condition of primary matter, which in its own right (*secundum se*) does not have any form, then matter’s being unformed did not *temporally* precede its being formed or being divided; rather, as Augustine says, it preceded it only *in origin* or *in nature*, in the sense in which potentiality is prior to actuality and in which a part is prior to its whole.

By contrast, the other saints understand the lack of form not as excluding all form, but as excluding the beauty (*formositas*) and elegance (*decor*) which is now apparent in corporeal creatures. And it is in this sense that they claim that corporeal matter’s lack of form temporally preceded its having form. Accordingly, as we shall see below (q. 69, a. 1 and q. 74, a. 2), Augustine agrees with them in some respects and disagrees with them in other respects.

And as far as can be gathered from the text of Genesis 1, there were three kinds of missing beauty (*formositas*) in virtue of which corporeal creatures were called unformed.

For the beauty of light (*pulchritudo lucis*) was missing from the whole diaphanous body that is called ‘the heavens’, and it is in virtue of this that the text says, “Darkness was upon the face of the deep.” Two kinds of beauty were missing from the earth. The first is the beauty that it has from the fact that it is not covered by the waters, and in this regard the text says, “The earth was empty (or: invisible),” since its corporeal aspect could not be seen because of the waters covering it everywhere. The other kind of beauty is that which it has from the fact that it is adorned with herbs and plants, and in this regard the text says, “It was empty” (or “nondescript,” i.e., not adorned, according to the other version). And so since the text had previously mentioned the two created natures, viz., heaven and earth, it expressed heaven’s lack of form by saying, “Darkness was upon the face of the deep” (insofar as the air is also included under ‘heaven’), whereas it expressed earth’s lack of form by saying, “The earth was void and empty.”

**Reply to objection 1:** The name ‘earth’ in this text is understood differently by Augustine and by the other saints.

Augustine claims that in this text the names ‘earth’ and ‘waters’ signify primary matter itself. For Moses was unable to make primary matter clear to an uneducated people except by means of likenesses to things known to them. Hence, he made primary matter clear with multiple likenesses, not calling it just ‘water’ or just ‘earth’, lest it seem that primary matter is in fact either earth or water. Yet it does have a similarity to earth, insofar as it sits under forms; and it does have a similarity to water, since it is apt to be shaped by diverse forms. Therefore, the sense in which the earth is said to be “void and empty” (or “invisible and nondescript”) is that matter is known through form (and so, considered in itself, is “invisible” or “empty”), and its potentiality is fulfilled by form (and thus Plato says that matter is place (*locus*)).

By contrast, the other saints understood ‘earth’ as itself an element. We have already explained the sense in which it was unformed according to them.

**Reply to objection 2:** Nature produces an actual effect (*effectum in actu*) from a being that is in

potentiality (*de ente in potentia*), and so in its operation the potentiality must temporally precede the actuality, and the *being unformed* must precede the *being formed*.

God, on the other hand, produces an actual being *ex nihilo*, and so He can directly produce a complete entity (*rem perfectam*), given the magnitude of His power.

**Reply to objection 3:** Since an accident is a form, it is a certain actuality (*quidam actus*), whereas matter, given its character (*secundum id quod est*), is a being in potentiality (*ens in potentia*). It is a greater anomaly (*magis repugnat*) for matter to exist in actuality without form than for an accident to exist without a subject.

**Reply to argument 1 for the contrary:** If, according to the other saints, matter's being unformed temporally preceded its being formed, this did not stem from a lack of power on God's part. Rather, it stemmed from His wisdom, so that order might be preserved in the condition of things as they were led from being incomplete to being complete.

**Reply to argument 2 for the contrary:** Certain of the ancient natural philosophers posited a confusion that excluded every type of division—apart from the fact that Anaxagoras posited Mind as the only distinct and unmixed reality. But Sacred Scripture posits several distinctions before the work of division.

The first is the distinction between heaven and earth (in which, as will be explained below (a. 3), we also see a division with respect to matter), when it says, “In the beginning God created heaven and earth.”

The second is the distinction among the elements with respect to their forms, which is made by naming earth and water. It does not name air and fire, since it is not as obvious to the uneducated people Moses was addressing as it is in the case of earth and fire that things of this sort are bodies—though, as Augustine points out in *De Civitate Dei* 8, Plato understood (a) air to be signified by “the spirit of the Lord” (since air is also called a spirit) and (b) fire to be signified by ‘heaven’ (which he claimed to be of a fiery nature). However, Rabbi Moses, who agrees with Plato in other matters, claims that fire is signified by “darkness,” since, as he puts it, fire does not give light in its own proper sphere. Still, what was said above seems to more plausible, since “spirit of the Lord” is not normally used in Scripture except for the Holy Spirit, who is said here to “move over the waters,” not corporeally, but in the way that a craftsman's will “moves over” the matter that he wants to give shape to.

The third distinction is signified with respect to position. For the earth was under the waters and rendered invisible by them, whereas the air, which is the subject of darkness, is signified as having been above the waters when it says, “Darkness was upon the face of the deep.”

Now what remained to be divided will become clear in what follows (q. 71).

## Article 2

### Is there a single type of unformed matter for all corporeal things?

It seems that there is a single type of unformed matter for all corporeal things (*una sit materia informis omnium corporalium*):

**Objection 1:** In *Confessiones* 12 Augustine says, “I find two things that you have made, one that was formed and the other that was unformed.” He says that the latter is “the invisible and nondescript earth,” a phrase which, he says, signifies the matter of corporeal things. Therefore, there is a single type of matter for all corporeal things.

**Objection 2:** In *Metaphysics* 5 the Philosopher says that things which are one in genus are one in

matter. But all corporeal things agree in the genus *body*. Therefore, there is a single type of matter for all corporeal things.

**Objection 3:** Diverse actualities come to be in diverse potentialities, and a single actuality comes to be in a single potentiality. But there is a single form for all bodies, viz., corporeality. Therefore, there is a single type of matter for all corporeal things.

**Objection 4:** Matter, considered in itself, exists only in potentiality. But division comes about through forms. Therefore, if matter is considered in itself, there is just a single type of matter for all corporeal things.

**But contrary to this:** As *De Generatione et Corruptione* 1 says, if things agree in their matter, then they are transmutable into one another, and they act on and are acted upon by one another. But the celestial bodies and the lower bodies are not related in this way to one another. Therefore, they do not share the same type of matter (*eorum materia non est una*).

**I respond:** The philosophers have had differing opinions on this topic.

Plato and all the philosophers before Aristotle claimed that all bodies are of the nature of the four elements. Hence, since the four elements share a single type of matter, as mutual generation and corruption among them make clear, it followed as a result that there is a single type of matter for all bodies. And Plato ascribed the fact that some bodies are incorruptible not to the status of their matter, but rather to the will of their maker, viz., God, whom he represents as saying to the celestial bodies, “By your nature you are subject to dissolution, but by my will you are not subject to dissolution, since my will is stronger than your bond.”

However, Aristotle refutes this position by appeal to the natural motions of bodies. For since a celestial body has a natural motion that is different from the natural motion of the elements, it follows that its nature is different from the nature of the four elements. And just as circular motion, which is proper to a celestial body, lacks contrariety, whereas the motions of the elements are contrary to one another in the way that an upward motion is contrary to a downward motion, so too a celestial body exists without contrariety, whereas elemental bodies exist with contrariety. Moreover, since corruption and generation stem from contraries, it follows that it is by their nature that the celestial bodies are incorruptible and that the elements are corruptible.

However, despite this difference in natural corruptibility and incorruptibility, Avicenna, focusing on the unity of the form of corporeality (*attendens ad unitatem formae corporalis*), claimed that there is a single type of matter for all bodies.

To be sure, if the form of corporeality were of itself a single form such that the other forms by which bodies are divided supervened on it, then this claim would be necessary. For the form in question would immutably inhere in matter, and each body would be incorruptible with respect to it. Corruption would occur through the removal of the subsequent forms, but this would be corruption only in a qualified sense and not absolutely speaking, since some actual entity would be the subject of the privation—just as with the ancient natural philosophers, who posited as the subject of bodies some actual entity such as fire or air or something of this sort.

However, if we assume that no form that exists in a corruptible body remains as the substratum for generation and corruption, then it follows necessarily that the matter of corruptible bodies is not the same as the matter of incorruptible bodies. For matter, given what it is, is in potentiality with respect to form. Therefore, matter, considered in itself, must be in potentiality with respect to the forms of all those things which share a common matter. Now through one form the matter comes to be actual (*in actu*) only with respect to that form. Therefore, it remains in potentiality with respect to all the other forms. Nor is this conclusion undermined if one of those forms is more perfect and virtually contains the others within itself. For potentiality, taken in itself, is related indifferently to the perfect and the imperfect; hence, just as it is in potentiality to a perfect form when it is the subject of an imperfect form, so the converse holds

as well. So, then, matter, insofar as it is the subject of the form of an incorruptible body, will still be in potentiality with respect to the form of a corruptible body. And since it does not have the latter form in actuality, it will simultaneously be the subject of the form [of an incorruptible body] and of the privation [of the form of a corruptible body], since a privation is the absence of a form in something which is in potentiality with respect to that form. But this is precisely the condition of a corruptible body. Therefore, it is impossible for there to be a single type of matter for both a body that is corruptible by its nature and a body that is incorruptible by its nature.

And yet one should not claim, as Averroes imagines, that (a) the matter of the heavens is the celestial body itself, a being in potentiality with respect to place and not with respect to *esse*, and that (b) its form is the separated substance that is united to it as its mover. For it is impossible to posit an actual being unless either (a) the whole of it *is itself* an actuality and a form or (b) it *has* an actuality, i.e., a form. Therefore, if, once the separated substance that is posited as the mover is mentally removed, the celestial body is such that it does not *have* a form—i.e., if it is not composed of a form and the subject of that form—then what follows is that it is a form and actuality as a whole. But everything like that is an intellect in actuality—something that cannot be said of a celestial body, since it is sensible. What remains, then, is that the matter of a celestial body, taken in itself, is in potentiality only with respect to the form that it in fact has. And it makes no difference to the argument what that form is, whether it is a soul or something else. Hence, as Aristotle says, the form of a celestial body so perfects the matter that no potentiality with respect to *esse* remains in it in any way; rather, it has potentiality only with respect to place.

And so the matter of a celestial body is not the same as the matter of the elements, except by way of an analogy, insofar as both agree in the notion of potentiality.

**Reply to objection 1:** On this point Augustine is following the opinion of Plato, who does not posit the “fifth essence” (*quintam essentiam*).

An alternative reply is that unformed matter is one by a oneness of order, in the sense that all bodies are one within the order of corporeal creatures.

**Reply to objection 2:** If the genus is thought of within *physics* (*physice*), then, as *Metaphysics* 10 says, corruptible and incorruptible things are not in the same genus, and this because of the different types of potentiality they have.

On the other hand, from the perspective of *logic* (*secundum logicam considerationem*), there is a single genus for all bodies, and this because there is a single concept of corporeality.

**Reply to objection 3:** The form of corporeality is not a single form in all bodies, since, as has been explained, it is not other than the forms by which bodies are distinguished from one another.

**Reply to objection 4:** Since potentiality is predicated in relation to actuality, *being in potentiality* is diversified by virtue of being ordered to diverse actualities, e.g., sight is ordered to color, and hearing is ordered to sound. Hence, the matter of a celestial body is other than the matter of an element by the very fact that it is not in potentiality to the form of any element.

### Article 3

#### Was the empyrean heaven co-created with unformed matter?

It seems that the empyrean heaven was not co-created with unformed matter:

**Objection 1:** The empyrean heaven, if there is such a thing, must be a sensible body. But every sensible body is subject to motion (*est mobile*). However, the empyrean heaven is not subject to motion,

since its motion would be ascertained through the motion of some visible body—which does not at all appear to be the case. Therefore, it is not the case that the empyrean heaven is something co-created with unformed matter.

**Objection 2:** In *De Trinitate* 3 Augustine says, “The lower bodies are ruled in a certain order by the higher bodies.” Therefore, if the empyrean heaven is a highest body, it must have some influence on lower bodies. But this does not seem to be the case, especially if the empyrean heaven is posited as a body not subject to motion, since a body does not effect motion unless it is itself moved. Therefore, it is not the case that the empyrean heaven was co-created with unformed matter.

**Objection 3:** Someone might reply that the empyrean heaven is a place of contemplation not ordered to natural effects.

Against this: In *De Trinitate* 4 Augustine says, “Insofar as we grasp something eternal with our mind, we are not in this world.” From this it is clear that contemplation elevates the mind above corporeal things. Therefore, there is no corporeal place set aside for contemplation.

**Objection 4:** Among the celestial bodies there is a body that is partly diaphanous and partly luminous, viz., the starry heaven (*caelum sidereum*). There is also a totally diaphanous celestial body, which some call the aqueous or crystalline heaven (*caelum aqueum vel crystallinum*). Therefore, if there is a yet higher celestial body, it must be totally luminous. But this is impossible, since if it were so, then the air would be continuously illuminated and night would never occur. Therefore, it is not the case that the empyrean heaven was co-created with unformed matter.

**But contrary to this:** Strabo says that the verse, “In the beginning God created heaven and earth,” is talking not about the visible firmament, but about the empyrean, i.e., fiery, heaven.

**I respond:** The empyrean heaven is posited only on the authority of Strabo and Bede, and again on the authority of Basil.

In positing the empyrean heaven, they all agree on one point, viz., that it is the place of the blessed in heaven (*locus beatorum*). For Strabo says, and Bede agrees, “As soon as it was made, it was filled with the angels.” Likewise, in *Hexameron* 2 Basil says, “Just as the damned are driven into the last darkness, so the reward for worthy deeds is laid up in the light which lies outside the world, where the blessed shall receive the abode of rest.”

However, they differ in their reasons for positing the empyrean heaven. For Strabo and Bede posit the empyrean heaven because the firmament, by which they mean the starry heaven, is said to have been made not in the beginning, but on the second day. By contrast, Basil posits the empyrean heaven in order that God not seem to have begun His work simply with darkness. (The Manicheans falsely make this claim, calling the God of the Old Testament the ‘God of darkness’.)

However, these reasons are not very compelling. For Augustine and the other saints have an alternative answer to the question about the firmament’s being said to have been made on the second day. And, according to Augustine, the question about the darkness is answered by the fact that matter’s not being formed (which is signified by ‘darkness’) preceded its being formed not in duration, but [only] in origin. According to others, however, since the darkness is not a creature but is instead the privation of light, it attests to God’s wisdom that the things that He produced *ex nihilo* were such that He established them in a state of imperfection and afterwards brought them to completion.

Still, a more fitting explanation can be based on the very condition of glory. For there are two sorts of glory that are looked for in our future reward, viz., (a) spiritual glory and (b) corporeal glory not only in the human bodies that will be glorified, but also in the whole world that is to be renewed. But spiritual glory commenced at the very beginning of the world in the beatitude of the angels, equality with whom is promised to the saints. Hence, it was fitting that corporeal glory should also have commenced at the beginning in a body that was likewise totally lucid from the beginning and free from the servitude of

corruption and mutability—just as all of corporeal creation is expected to be in the future after the resurrection. And so the reason why that heaven is called empyrean, i.e., fiery, is because of its splendor and not because of its heat.

Notice, though, that in *De Civitate Dei* 10 Augustine says that Porphyry “distinguished the angels from the demons in such a way that he claimed that airy places belong to the demons, whereas the ethereal or empyrean places belong to the angels.” However, Porphyry, as a Platonist, thought that the starry heaven was fiery, and so he called it ‘empyrean’ or ‘ethereal’, insofar as the name ‘ether’ is taken from inflammation and not, as Aristotle claims, from the swiftness of the motion. I point this out lest anyone think that Augustine posited an empyrean heaven in the way that it is now posited by modern authors.

**Reply to objection 1:** Sensible bodies are subject to motion according to the very status of the world, since the multiplication of the elect is procured through the motion of corporeal creatures. However, the motion of bodies will cease in the final consummation of glory, and the empyrean heaven had to have such a condition from the beginning.

**Reply to objection 2:** It is likely enough that since the empyrean heaven is, according to certain authors, ordered toward the state of glory, it does not have an influence on lower bodies, which belong to a differ order insofar as they are ordered toward the natural course of things.

Still, it seems more probable to claim that just as the highest angels, who stand before God (*assistunt*), have influence over the intermediate and lowest angels, who are sent on mission, even though, according to Dionysius, they themselves are not sent on mission, so too the empyrean heaven has an influence over the bodies that are moved, even though it itself is not moved. And in light of this one can claim that the empyrean heaven communicates (*influit*) to the first moved heaven something fixed and stable rather than something that is transient and comes with motion, e.g., the power to contain and to cause, or something of this sort that pertains to its dignity.

**Reply to objection 3:** A corporeal place is set aside for contemplation not because it is necessary, but because it is fitting that an exterior brightness should correspond to the interior brightness. Hence, Basil says, “The ministering spirit was unable to pass his time in darkness, but had his fit dwelling place in light and joy.”

**Reply to objection 4:** As Basil says in *Hexameron* 2, “It is certain that heaven was created spherical in shape, with a dense body and strong enough that it could separate what was outside it from what was inside. Because of this, it necessarily left in its wake a region bereft of light, shut out from the splendor that radiated above it.”

However, since the body of the firmament, though solid, is diaphanous, given that it does not impede light (as is clear from the fact that we see the light of the stars despite the intervening heavens), an alternative reply is that the empyrean heaven has a light which is more subtle and is not condensed in such a way as to emit rays like the body of the sun does.

Yet another reply is that the empyrean heaven has the brightness of glory, which differs from natural brightness.

#### Article 4

##### Was time co-created with unformed matter?

It seems that time was not co-created with unformed matter:

**Objection 1:** In *Confessiones* 12 Augustine, speaking to God, says, “I find two things You have

made that are bereft of time, viz., primary corporeal matter and the angelic nature.” Therefore, time was not co-created with unformed matter.

**Objection 2:** Time is divided into day and night. But at the beginning there was neither night nor day; they came afterwards, when God divided the light from the darkness. Therefore, time did not exist at the beginning.

**Objection 3:** Time is the numbering (*numerus*) of the motion of the firmament, which, we read, was created on the second day. Therefore, time did not exist at the beginning.

**Objection 4:** Motion is prior to time. Therefore, motion, rather than time, should be numbered among the things created first.

**Objection 5:** Just as time is an extrinsic measure, so too is place. Therefore, time ought not to be counted among the things created first any more than place is.

**But contrary to this:** In *Super Genesim ad Litteram* Augustine says, “Spiritual and corporeal creatures were created at the beginning of time.”

**I respond:** It is commonly claimed the four things were created first, viz., (a) angelic nature, (b) the empyrean heaven, (c) unformed corporeal matter, and (d) time.

Note, however, that this claim does not go through on Augustine’s opinion. For Augustine posits two things that were created first, viz., angelic nature and corporeal matter, and makes no mention of the empyrean heaven. But these two things, viz., angelic nature and unformed matter, precede matter’s formation not in duration, but [only] in nature; and just as they precede matter’s formation in nature, so too they precede motion and time in nature. Hence, time cannot be numbered among the things created first.

On the other hand, the aforementioned enumeration does go through on the opinion of the other saints, who posit that matter’s being unformed precedes its being formed in duration. In that case, time must be posited for that duration; otherwise, there could not be a measure of duration.

**Reply to objection 1:** Augustine says this on the understanding that angelic nature and unformed matter precede time in origin or nature.

**Reply to objection 2:** Just as, according to the other saints, matter was unformed in a certain way and later on formed, so too time was in a certain way unformed and afterwards formed and distinguished into day and night.

**Reply to objection 3:** If the motion of the firmament did not start immediately at the beginning, then the time that preceded it was not the numbering of the motion of the firmament, but was instead the numbering of whatever the first motion was. For it is accidental to time that it is the numbering of the motion of the firmament, and this in virtue of the fact that this motion is the first motion. But if some other motion were the first, then time would be the measure of that motion, since all things are measured by what is first in their genus.

Moreover, it is necessary to assert that there was some motion immediately at the beginning—at least in the sense of a succession of conceptions and affections in the angelic mind. But motion cannot be understood without time, since time is nothing other than the numbering of the prior and posterior in motion.

**Reply to objection 4:** Among the things counted as having been created first are those which have a general relation to things. And so time, which has the character of a common measure, should be counted, whereas motion, which is related only to the moveable subject, should not be counted.

**Reply to objection 5:** Place is understood as included with the empyrean heaven, since it encompasses all things.

And since place belongs to permanent things, all of it is simultaneously co-created. By contrast, time, which is non-permanent, is co-created in its beginning, since in like manner nothing is actual in time except the now.

## QUESTION 67

### The Work of Division: The First Day

The next thing to consider is the work of division in its own right (*opus distinctionis secundum se*): First, the work of the first day (question 67); second, the work of the second day (question 68); and, third, the work of the third day (question 69).

On the first topic there are four questions: (1) Is ‘light’ properly predicated in the case of spiritual things? (2) Is corporeal light a body? (3) Is corporeal light a quality? (4) Was it appropriate for light to be made on the first day?

#### Article 1

##### Is ‘light’ properly predicated in the case of spiritual things?

It seems that ‘light’ (*lux*) is properly predicated in the case of spiritual things:

**Objection 1:** In *Super Genesim ad Litteram* 4 Augustine says that in the case of spiritual things “light is better and more certain, and Christ is not called the ‘Light’ in the same way He is called the ‘stone’ (*lapis*) (cf. Acts 4:11 and 1 Peter 2:4); the former is said properly, whereas the latter is said figuratively.”

**Objection 2:** In *De Divinis Nominibus*, chap. 4, Dionysius places ‘Light’ (*lumen*) among the intelligible names of God. But intelligible names are properly predicated in the case of spiritual things. Therefore, ‘light’ (*lux*) is properly predicated in the case of spiritual things.

**Objection 3:** In Ephesians 5:13 the Apostle says, “All that is made manifest is light.” But manifestation exists more properly in the case of spiritual things than in the case of corporeal things. Therefore, so does light.

**But contrary to this:** In *De Fide* Ambrose posits ‘Light’ (*splendor*) among those names that are predicated of God metaphorically.

**I respond:** There are two ways in which it is proper (*convenit*) for a name to be predicated: (a) in accord with the name’s *first imposition* and (b) in accord with the *usage* of the name. This is clear in the case of the name ‘see’ (*visio*), which was first imposed to signify the act of the sense of sight. But then, because of the dignity and certitude of this sense, the name ‘see’, in accord with the usage of speakers, was extended to all cognition on the part of the other senses (for we say, “See how it tastes” or “See how it smells” or “See how hot it is”), and, further, even to the intellect’s cognition—this according to Matthew 5:8 (“Happy are the clean of heart, for they shall see God”).

Something similar should be said about the name ‘light’ (*lux*). For it was first instituted to signify that which effects manifestation in the case of the sense of sight, and then afterwards it was extended to signify everything that effects manifestation in the case of any kind of cognition whatsoever.

Therefore, if the name ‘light’ is taken according to its first imposition, then it is predicated metaphorically in the case of spiritual things, as Ambrose claims. However, if it is taken according to the way it is extended in the usage of speakers to any kind of manifestation, then it is properly predicated in the case of spiritual things.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

## Article 2

### Is light a body?

It seems that light (*lux*) is a body:

**Objection 1:** In *De Libero Arbitrio* Augustine says, “Light holds first place among bodies.” Therefore, light is a body.

**Objection 2:** The Philosopher says that light (*lumen*) is a species of fire. But fire is a body. Therefore, light is a body.

**Objection 3:** It is proper to bodies to be carried (*ferrī*), to be intersected (*intersecari*), and to be reflected (*reflecti*). But all these things are attributed to light (*lumen*) or light rays (*radīi*). Again, according to Dionysius in *De Divinis Nominibus*, chap. 2, different light rays are joined and separated, which likewise seems to be able to belong only to bodies. Therefore, light (*lumen*) is a body.

**But contrary to this:** Two bodies cannot be in the same place at the same time. But light (*lumen*) is in the same place as air. Therefore, light is not a body.

**I respond:** It is impossible for light (*lumen*) to be a body. This is clear in three ways.

First, by appeal to *place*. For the place of a given body is different from the place of any other body. Nor is it possible, in accord with nature, for two bodies to be in the same place at the same time, no matter what sort of bodies they are; for contiguity (*contiguum*) requires a difference in position (*in situ*).

Second, the same thing is clear by appeal to *motion*. For if light were a body, then illumination would be the local motion of a body. But no local motion on the part of a body can be instantaneous (*in instanti*), since everything that is moved with respect to place (*movetur localiter*) must reach the middle (*medium*) of the relevant magnitude before reaching the end (*extremum*). But illumination is effected instantaneously. Nor can one reply that illumination is effected within an imperceptible temporal interval (*in tempore imperceptibili*). For a temporal interval could be hidden in the case of a small spatial distance (*in parvo spatio*), but a temporal interval could not be hidden in the case of a large spatial distance (*in magno spatio*), e.g., from the east to the west; for when the sun is at its easternmost point, the whole hemisphere is immediately illuminated all the way to the opposite point. There is also a second consideration based on motion. Each body has a determinate natural motion, whereas the motion of illumination is in all directions and is no more circular than straight. Hence, it is clear that illumination is not the local motion of a body.

Third, the same thing is clear by appeal to *generation and corruption*. For if light were a body, then when the air became dark because of the absence of a light source (*per absentiam luminaris*), it would follow that the body of light had been corrupted and that its matter had received another form. But this does not appear to be the case—unless one claims that darkness is a body as well. Nor is it clear from what matter such a large body is generated every day, given that it completely fills the hemispheric medium. Again, it is ridiculous to claim that such a large body is corrupted merely because of the absence of a light source. And if someone asserts that the light is not corrupted, but instead comes with and moves around with the sun, what can he possibly say about the fact that when a body is interposed around a candle, the whole house is darkened? Nor does the light seem to collect around the candle, since the brightness around the candle is not greater in that place than it was before.

Thus, since all these claims are contrary (*repugnant*) not only to reason, but also to the senses, one should say that it is impossible for light to be a body.

**Reply to objection 1:** Augustine is taking ‘light’ here for a body that is luminous in actuality, viz., fire, which is the most noble of the four elements.

**Reply to objection 2:** Aristotle is calling fire in its proper matter ‘light’, just as fire is called a ‘flame’ (*flamma*) in airy matter and a ‘coal’ (*carbo*) in earthy matter.

Still, the examples that Aristotle uses in his logical works do not matter much, since he introduces them as probable according to the opinion of others.

**Reply to objection 3:** All the things in question are attributed to light metaphorically, in the same way that they can also be attributed to heat. For since, as is shown in *Physics* 8, local motion is naturally the first of movements, we use names pertaining to local motion in the case of alteration and all other movements—in the same way that, as *Metaphysics* 10 explains, the name ‘distance’, which is derived from place, is applied to all contraries.

### Article 3

#### Is light a quality?

It seems that light (*lux*) is not a quality:

**Objection 1:** Every quality remains in its subject even after the agent ceases to act; for instance, heat remains in the water after it is been removed from the fire. But light (*lumen*) does not remain in the air when the light source (*luminare*) withdraws. Therefore, light is not a quality.

**Objection 2:** Every sensible quality has a contrary; for instance, hot has cold as a contrary, and black has white as a contrary. But there is no contrary for light (*lumen*), since darkness is the privation of light. Therefore, light is not a sensible quality.

**Objection 3:** A cause is more powerful than its effect. But the light (*lux*) of the celestial bodies is a cause of substantial forms in things here below. Also, it gives spiritual *esse* to colors, since it makes them visible in actuality. Therefore, light is not a sensible quality, but is instead a substantial or spiritual form.

**But contrary to this:** In *De Fide Orthodoxa* 1 Damascene says that light is a certain quality.

**I respond:** Some have claimed that light (*lumen*) in the air does not have *natural esse* in the way that the color in a wall does, but that it instead has *intentional esse* in the way that the likeness (*similitudo*) of a color in the air does. However, this cannot be the case, and for two reasons.

First, ‘light’ (*lumen*) denominates the air, since the air becomes luminous in actuality (*luminosus in actu*). By contrast, ‘color’ does not denominate the air, since the air is not said to be colored.

Second, light has an effect in nature, since through the sun’s rays bodies become warm. Intentions, on the other hand, do not cause natural transmutations.

Others have claimed that light (*lux*) is the substantial form of the sun. But this, too, seems impossible, and for two reasons.

First, no substantial form is *per se* able to be sensed, since, as *De Anima* 3 says, what a thing is (*quod quid est*) is an object of the intellect. But light (*lux*) is visible in itself (*secundum se*).

Second, it is impossible for something that is a substantial form in one thing to be an accidental form in another thing, since it belongs *per se* to a substantial form to constitute a thing within a species, and so to be present to that thing always and in all respects. But light is not the substantial form of the air; otherwise, when it withdrew, the air would be corrupted. Hence, it cannot be the substantial form of the sun.

Therefore, one should claim that just as heat is an active quality that follows upon the substantial form of fire, so too light is an active quality that follows upon the substantial form of the sun or of any other body that gives light of itself, if there is any other such body. An indication of this is that the rays

of different stars have different effects corresponding to the different natures of the bodies.

**Reply to objection 1:** Since a quality follows upon a substantial form, a subject can be related in different ways to the reception of the quality, just as it is related in different ways to the reception of the form:

For when the matter receives a form in a complete way (*perfecte*), then the quality that follows upon the form is likewise had firmly, as when water is converted into fire.

On the other hand, if the substantial form is received imperfectly, in a certain inchoative way, then the consequent quality remains for a while but not permanently, as is clear in the case of hot water that returns to its own nature.

By contrast, illumination is not effected through a transmutation of matter aimed at the reception of a substantial form, so that there might be something like the inchoative reception of a form. For this reason, light does not remain unless the agent is present.

**Reply to objection 2:** Light does not have a contrary because it is a natural quality of the first corporeal cause of alteration, and this cause is far removed from contrariety.

**Reply to objection 3:** Just as heat acts instrumentally in the power of the substantial form to induce the form of fire, so light acts instrumentally in the power of the celestial bodies (a) to produce substantial forms and (b) to make colors visible in actuality, insofar as it is a quality of the first sensible body.

#### Article 4

##### Was it appropriate for the production of light to be put on the first day?

It seems that it was not appropriate for the production of light to be put on the first day:

**Objection 1:** As has been explained (a. 3), light is a certain quality. But since a quality is an accident, it has the character of something last and not of something first. Therefore, the production of light should not have been put on the first day.

**Objection 2:** It is through light that night is distinguished from day. But this distinction is effected by the sun, which, we read, was made on the fourth day. Therefore, the production of light should not have been put on the first day.

**Objection 3:** Night and day come about because of the circular motion of a luminous body. But circular motion is proper to the firmament, which, we read, was made on the second day. Therefore, the production of light, which divides night and day, should not have been put on the first day.

**Objection 4:** Someone might reply that the verse is to be understood as applying to *spiritual* light. Against this: The light which, we read, was made on the first day effects a division from darkness. But there were no dark spirits at the beginning, since, as was explained above (q. 63, a. 5), the demons were good at the beginning. Therefore, the production of light should not have been put on the first day.

**But contrary to this:** That without which day cannot exist had to be made on the first day. But without light there can be no day. Therefore, light had to be made on the first day.

**I respond:** There are two opinions about the production of light.

It seems to Augustine that it would not have been appropriate for Moses to omit the production of spiritual creatures. And so he claims that when it says, "In the beginning God created heaven and earth," what is meant by 'heaven' is a still unformed spiritual nature, whereas what is meant by 'earth' is the unformed matter of corporeal creatures. And since spiritual nature has more dignity than corporeal nature, it was the first to be formed. Therefore, it is the formation of spiritual nature that is signified by

the production of light, so that what is meant is spiritual light. For the formation of a spiritual nature is effected by his being illuminated in such a way that he adheres to the word of God.

To others, however, it seems that the production of spiritual creatures was indeed omitted by Moses. But they have given different explanations for this.

Basil claims that Moses began his narration from that ‘beginning’ which has to do with the time of sensible things, and that he omitted spiritual, i.e., angelic, nature because it had been created before this beginning.

Chrysostom, however, gives a different explanation: Moses was addressing an uneducated people who could understand nothing except corporeal things and whom he wanted to call back from idolatry. But if substances above all corporeal creatures had been presented to them, they would have seized the occasion to commit idolatry. For they would have thought of these substances as gods, since they were already prone to worship even the sun and the moon and the stars as gods—something forbidden them by Deuteronomy 4:19.

Now Genesis 1:2 had earlier talked about different kinds of formlessness (*informitas*) with respect to corporeal creatures: (a) one, when it said, “The earth was void and empty,” and (b) the other, when it said, “Darkness was upon the face of the deep.”

Now the formlessness involving darkness had to be removed first through the production of light, and this for two reasons.

First, because, as has been explained (a. 3), light is a quality of the first body, and so the world had first to be formed in accord with light.

Second, because of the commonality of light. For the lower bodies share in light with the higher bodies. And just as one proceeds in *cognition* from what is more common, so too in *operation*. For, as is explained in *De Generatione Animalium*, the living thing is generated before the animal, and the animal before the man. Therefore, the order of God’s wisdom had to be made manifest in such a way that what was produced first of all among the works of division was light, as the form of the first body and as a more common [quality].

Basil posits a third reason, viz., that all other things are made manifest through light.

Moreover, a fourth reason, touched on in the objections, can be added: Day cannot exist without light, and so light had to be made on the first day.
