**I respond:** As was explained above (a. 1), the ceremonial precepts are ordered toward the worship of God. In this worship we can consider (a) the worship itself, (b) the worshipers, and (c) the instruments of worship.

The worship itself consists specifically in the *sacrifices* that are offered in reverence for God.

The instruments of worship are the *sacred things*, e.g., the tabernacle, the vessels, and other things of this sort.

As for the worshipers, there are two things to consider:

The first is their being ordained for divine worship (*institutio ad cultum divinum*), which takes place through a consecration of the people or of the ministers; and this is what the *sacraments* have to do with.

The second is their unique way of life (*singularis conversatio*), through which they are distinguished from those who do not worship God; and this is what the *observances* concerning food, clothing, and other such things have to do with.

**Reply to objection 1:** Sacrifices had to be offered in certain places by certain men, and all of this pertains to the worship of God. Hence, just as the immolated Christ is signified through their sacrifices, so too the sacraments and sacred things of the New Law were prefigured through their sacraments and sacred things. What’s more, the way of life of the people of the New Law was prefigured through their observances. And all these things have to do with Christ.

**Reply to objection 2:** The sacrifice of the New Law, i.e., the Eucharist, contains Christ Himself, who is the author of sanctification; for as Hebrews 13:12 says, “He sanctified the people by His own blood.” And that is why this sacrifice is also a sacrament.

By contrast, the sacrifices of the Old Law did not contain Christ but instead prefigured Him, and so they are not called sacraments. Instead, in order to signify this separately, there were certain sacraments in the Old Law that were figures of the future consecration—even though it was also the case that sacrifices were adjoined to some of the consecrations.

**Reply to objection 3:** The sacrifices and sacraments were also ‘sacred things’. However, there were certain things which were called ‘sacred’ because they had been dedicated to the worship of God and yet which were neither sacrifices nor sacraments. And so these things retained for themselves the general name ‘sacred things’.

**Reply to objection 4:** Those things that had to do with the way of life of the people worshiping God retained for themselves the general name ‘observances’ insofar as they did not fall under the previously mentioned divisions. For instance, they were not called ‘sacred things’, since they did not have an immediate relation to the worship of God in the way that the tabernacle and its vessels did. Instead, they were ceremonial through a certain entailment, viz., insofar as they had to do with the fitness of the people worshiping God.

**Reply to objection 5:** Just as sacrifices were offered in a determinate place, so too they were offered at determinate times. Hence, the solemn feasts seem to be numbered among the sacred things.

On the other hand, oblations and gifts are counted with the sacrifices, since they were offered to God. Thus in Hebrews 5:1 the Apostle says, “Every high priest taken from among men is ordained for men in things that pertain to God, that he might offer up gifts and sacrifices.”

## QUESTION 102

### The Reasons for the Ceremonial Precepts

We next have to consider the reasons (*causae*) for the ceremonial precepts. On this topic there are six questions: (1) Are there reasons for the ceremonial precepts? (2) Do the ceremonial precepts have literal reasons or just figurative reasons? (3) What are the reasons for the sacrifices? (4) What are the reasons for the sacred things? (5) What are the reasons for the sacraments? (6) What are the reasons for the observances?

#### Article 1

##### Are there reasons for the ceremonial precepts?

It seems that there are no reasons for the ceremonial precepts (*non habeant causam*):

**Objection 1:** A Gloss on Ephesians 2:15 (“..... making void the Law of the commandments by the decrees”) says, “That is, making the Law void with respect to bodily observances, by means of the decrees, i.e., by means of the Gospel precepts, which are based on reasons (*ex ratione*).” But if the observances of the Old Law had been based on reasons, then there would not have been no point to making them void by means of the reasoned decrees (*per rationabilia decreta*) of the New Law. Therefore, there were no reasons for the ceremonial observances of the Old Law.

**Objection 2:** The Old Law is the successor of the law of nature. But as Augustine says in *Super Genesim ad Litteram* 8 about the prohibition regarding the tree of life, the law of nature contained a precept that had no reason behind it except to test man’s obedience. Therefore, in the Old Law some precepts likewise had to be given by which man’s obedience would be tested and which had no intrinsic reason behind them (*de se nullam rationem haberent*).

**Objection 3:** A man’s deeds are called moral insofar as they proceed from reason. Therefore, if there were reasons for the ceremonial precepts, then the ceremonial precepts would not differ from the moral precepts. Therefore, it seems that the ceremonial precepts have no causes, since the reason for a precept is taken from some cause.

**But contrary to this:** Psalm 18:9 says, “The precept of the Lord is clear, enlightening the eye.” But the ceremonial precepts are God’s precepts. Therefore, they are clear. But they would not be clear unless they had a reasoned cause (*nisi haberent rationabilem causam*). Therefore, the ceremonial precepts have a reasoned cause.

**I respond:** Since, according to the Philosopher in *Metaphysics* 1, “one who is wise has the role of giving order,” what proceeds from God’s wisdom must be well-ordered, as the Apostle says in Romans 13:1.

Now for things to be well-ordered, there are two requirements:

The first is that they be ordered toward a fitting end, since the end is the principle of all order in things to be done. For if things occur by chance without tending toward an end (*praeter intentionem finis*), or if they are done playfully and not in earnest, we say that they are unordered (*inordinata*).

Second, what is ordered toward an end must be proportioned to the end. From this it follows that the reasons for things that are ordered toward an end are themselves taken from the end—in the way that, as *Physics* 2 points out, the reason for the configuration of a saw is taken from the act of cutting.

Now it is clear that the ceremonial precepts, like all the other precepts of the Law, were instituted by God’s wisdom; hence, Deuteronomy 4:6 says, “This is your wisdom and your understanding in the sight of the nations.” Thus, one must assert that the ceremonial precepts are ordered toward an end and that their reasoned causes can be gathered (*assignari*) from that end.

**Reply to objection 1:** The observances of the Old Law can be described as being ‘without reason’ (*sine ratione*) in the sense that the deeds themselves did not have an explanation (*ratio*) in terms of their own nature—for instance, that a garment should not be made from wool and linen. However, they were able to be reasoned observances because of their relation to something else, viz., either because they were a figure of something or because they prevented something.

By contrast, the decrees of the New Law, which consist principally in having faith in God and in loving God, take their reason from the very nature of the act.

**Reply to objection 2:** The prohibition regarding the tree of the knowledge of good and evil was not made because the tree was evil by its nature; instead, this prohibition had a reason that was taken from its relation to something else, viz., insofar as it was a figure of something. In the same way, the ceremonial precepts of the Old Law have their reason in their relation to something else.

**Reply to objection 3:** It is by their very nature that moral precepts such as ‘You shall not kill’ and ‘You shall not steal’ have reasoned causes. By contrast, as has been explained, the ceremonial precepts have their reasoned causes from their relation to something else.

## Article 2

### Do the ceremonial precepts have literal reasons or only figurative reasons?

It seems that the ceremonial precepts have only figurative reasons (*causa figuralis*) and not literal reasons (*causa litteralis*):

**Objection 1:** The main ceremonial precepts were circumcision and the immolation of the Paschal lamb. But each of these had only a figurative reason, since each was given as a sign. For Genesis 17:11 says, “You shall circumcise the flesh of your foreskin, that it may be a sign of the covenant between me and you.” And regarding the celebration of the Passover, Exodus 13:9 says, “It shall be as a sign in your hand, and as a memorial before your eyes.” Therefore, *a fortiori*, the other ceremonial precepts have only figurative reasons.

**Objection 2:** An effect is proportioned to its cause. But as was explained above (q. 101, a. 2), all the ceremonial precepts are figurative. Therefore, they have only a figurative reason.

**Objection 3:** If something is of itself indifferent with respect to its being done this way or that way, then it does not seem to have a literal reason. But there are some ceremonial precepts that do not seem to determine whether things should be done this way or that way—for instance, with respect to the number of animals that are to be offered or with respect to other particular circumstances of this sort. Therefore, the [ceremonial] precepts of the Old Law do not have literal reasons.

**But contrary to this:** Just as the ceremonial precepts were figures of Christ, so too was the history (*historia*) of the Old Testament; for 1 Corinthians 10:11 says, “All these things happened to them in figure.” But in the historical events of the Old Testament there is, besides a mystical or figurative meaning (*intellectus mysticus seu figuralem*), a literal meaning as well. Therefore, the ceremonial precepts likewise had literal reasons in addition to their figurative reasons.

**I respond:** As was explained above (a. 1), the reason behind what is ordered toward an end must be taken from that end. Now the ceremonial precepts have two ends, since they were ordered (a) toward the worship of God for that time and (b) toward being figures of Christ—in the same way that, as Jerome points out in his commentary on Hosea, the words of the prophets were related to the present time in such a way that they were spoken to prefigure the future as well.

So, then, there are two ways to think of the reasons for the ceremonial precepts of the Old Law.

In the first way, the reasons are derived from the worship of God that was to be observed for that time. These are the *literal* reasons, which have to do (a) with preventing idolatrous worship, or (b) with commemorating certain favors bestowed by God, or (c) with intimating God's excellence, or (d) with making clear the mental disposition required for that time in those who were worshiping God.

In the second way, the reasons are derived from the fact that the precepts are ordered toward being figures of Christ. And in this way the precepts have *figurative* and *mystical* reasons—whether these reasons are taken (a) from Christ Himself and the Church (and this pertains to the *allegorical sense*), or (b) from the practice of the Christian people (and this pertains to the *moral sense*), or (c) from the state of future glory insofar as we are led to it by Christ (and this pertains to the *anagogical sense*).

**Reply to objection 1:** Just as the interpretation of a metaphorical locution in Scripture is literal, given that the words were used in order to signify metaphorically, so too the signification of those ceremonies of the Law that commemorate God's favors and have been instituted because of those favors does not go beyond the order of literal reasons. Hence, the fact that the reason for the celebration of the Passover is taken from its being a sign of the liberation from Egypt, or the fact that circumcision is a sign of the covenant (*pactum*) God had with Abraham, pertains to a literal reason.

**Reply to objection 2:** This objection would go through if the ceremonial precepts had been given solely in order to prefigure the future and not in order to worship God in the present.

**Reply to objection 3:** It was explained above (q. 96, a. 6) that there are general reasons for human laws, but not reasons for their particular conditions; rather, the particular conditions stem from the judgment of those who institute the laws. So, too, many of the particular determinations found in the ceremonies of the Old Law have only a figurative reason and not a [specific] literal reason, even though they do have a general literal reason.

### Article 3

#### Can appropriate reasons be assigned for the ceremonies that involve sacrifices?

It seems that appropriate reasons cannot be assigned for the ceremonies that involve sacrifices:

**Objection 1:** What was offered in sacrifice were things necessary for sustaining human life, e.g., certain animals and breads. But God does not need such sustenance—this according to Psalm 49:13 (“Will I eat the flesh of bullocks? Or will I drink the blood of goats?”). Therefore, it was inappropriate for sacrifices of this sort to be offered to God.

**Objection 2:** The only animals offered in divine sacrifice were (a) three kinds of quadrupeds, viz., oxen, sheep, and goats, and (b), among the birds, the turtledove and the dove generally speaking, while the sparrow was sacrificed in the specific case of the cleansing of a leper. But there are many other animals more noble than these. Therefore, since whatever is best ought to be given to God, it seems that it should not have been just these things that had to be offered to God as sacrifices.

**Objection 3:** Just as man has dominion from God over the birds and the beasts, so too he has dominion over the fish. Therefore, it was inappropriate for fish to be excluded from the divine sacrifices.

**Objection 4:** It is commanded indifferently that doves and turtledoves be offered. Therefore, just as it is commanded that the young of the doves be offered, so too it should be commanded that the young of the turtledoves be offered.

**Objection 5:** As is clear from what is said in Genesis 1, God is the author of the life not only of men but also of the animals. But death is opposed to life. Therefore, what should have been offered to God were living animals instead of animals that had been killed—especially because in Romans 12:1 the

Apostle likewise admonishes that we should present our bodies “as a living sacrifice, holy and pleasing to God.”

**Objection 6:** If animals were offered to God in sacrifice only after they had been killed, then it does not seem to make any difference how they were killed. Therefore, it was inappropriate for the manner of immolation to be set down—especially in the case of birds, as in Leviticus 1:15-16.

**Objection 7:** Every defect in an animal is a path to corruption and death. Therefore, if animals that had already been killed were being offered to God, then it was inappropriate to prohibit the sacrifice of a defective animal, e.g., a lame or blind or otherwise unclean animal.

**Objection 8:** Those who offer victims to God ought to partake of those victims—this according to the Apostle in 1 Corinthians 10:18 (“Are not they that eat of the sacrifices partakers of the altar?”). Therefore, it was inappropriate for certain parts of the victims—viz., the blood, the fat, the breastbone, and the right shoulder—to be withheld from those who were offering the sacrifice.

**Objection 9:** Just as holocausts were offered in honor of God, so too were peace-offerings and sin-offerings. But no female animal was offered to God in a holocaust, even though holocausts were made with both quadrupeds and birds. Therefore, it was inappropriate for female animals to be offered as peace-offerings and sin-offerings, and yet for birds not to be offered as peace-offerings.

**Objection 10:** All peace-offerings seem to be of the same type. Therefore, no distinction should have been drawn among them, as Leviticus 7:15-16 does in mandating that the flesh of some peace-offerings cannot be eaten a day later, whereas the flesh of others can be.

**Objection 11:** All sins alike involve a turning away from God. Therefore, a single type of sacrifice should have been offered for all sins in order to be reconciled with God.

**Objection 12:** All the animals that were offered in sacrifice were offered in a single way, viz., after having been killed. Therefore, it does not seem appropriate that offerings of things that grow in the earth should have been made in diverse ways. For instance, sometimes an offering was made of grain, sometimes of flour, and sometimes of bread, where the bread was sometimes cooked in an oven, sometimes in a pan, and sometimes on a grill.

**Objection 13:** All things that we have use of are such that we should acknowledge them as coming from God. Therefore, it was unfitting that, besides animals, the only things offered to God were bread, wine, oil, incense, and salt.

**Objection 14:** Bodily sacrifices express the heart’s interior sacrifice, by which a man offers his own spirit to God. But in an interior sacrifice there is more of sweetness, which is represented by honey, than of sharpness, which is represented by salt; for Ecclesiasticus 24:27 says, “My spirit is sweet beyond honey.” Therefore, it was inappropriate to prohibit in sacrifices the use of honey and leaven, which make bread tasty, and to prescribe instead the use of salt, which is sharp, and incense, which has a bitter taste.

Therefore, it seems that the things having to do with the ceremonies of the sacrifices do not have a reasoned cause.

**But contrary to this:** Leviticus 1:13 says, “The priest shall offer all the gifts and burn them upon the altar for a holocaust and a most sweet savor to the Lord.” But according to Wisdom 7:28, “God loves no one except he who dwells with wisdom,” from which one can infer that whatever is acceptable to God is imbued with wisdom. Therefore, the ceremonies of the sacrifices were imbued with wisdom, i.e., they had reasoned causes.

**I respond:** As was explained above (a. 2), there are two kinds of reasons for the ceremonies of the Old Law, viz., (a) *literal* reasons, given that the ceremonies are ordered toward the worship of God, and (b) *figurative* or *mystical* reasons, given that the ceremonies are ordered toward prefiguring Christ. The ceremonies having to do with sacrifices can be appropriately assigned reasons of both kinds.

Insofar as the sacrifices are ordered to the worship of God, there are two reasons that can be

specified for them:

The first reason is that the sacrifices represent that ordering of the mind toward God which the one offering the sacrifice is incited to. Now the correct ordering of the mind to God involves (a) a man's acknowledging that all the things he has are from God as their first principle and (b) his ordering all those things to God as their ultimate end. This was represented in the oblations and sacrifices by the fact that a man offered some of his own things to honor God, as if acknowledging that he had them from God. Accordingly, in 1 Paralipomenon 39:14 David said, "All things are yours, and we have given you what we received from your hand." So in offering sacrifices man was professing that God is the first principle of the creation of things and the ultimate end to whom all things should be directed.

Now because the correct ordering of the mind to God involves the human mind's (a) not recognizing any first author of things other than God alone and (b) not setting up any other being as its own last end, the Law prohibits offering sacrifices to any being other than God—this according to Exodus 22:20 ("Anyone who sacrifices to gods besides the Lord alone shall be put to death"). And so the second reason that can be specified for the ceremonies involving sacrifice is that through ceremonies of this sort men were restrained from offering sacrifices to idols. Moreover, this is why the precepts concerning the sacrifices were given to the Jewish people only after they had fallen into idolatry by worshiping the molten calf; it was as if these sacrifices were instituted in order that a people eager to offer sacrifices should offer such sacrifices to God rather than to idols. Hence, Jeremiah 7:22 says, "For I spoke not to your fathers, and I commanded them not, in the day that I brought them out of the land of Egypt, concerning the matter of burnt offerings and sacrifices."

Now among all the gifts that God gave to the human race once it had already fallen through sin, the principal one was that He gave His own Son. Hence, John 3:16 says, "God so loved the world as to give His only-begotten Son, so that whoever believes in Him may not perish, but may have eternal life." And so the most powerful sacrifice is the one by which Christ "offered Himself to God ..... for an odor of sweetness," as Ephesians 5:22 puts it. Because of this, all the other sacrifices were offered in the Old Law in order that they might be figures of this one singular and principal sacrifice, in the way that the imperfect is a figure of the perfect. Hence, in Hebrews 10:11 the Apostle says that a priest of the Old Law "offered many times the same sacrifices, which are never able to take away sins," whereas Christ "offered one sacrifice for sins" for all times. And since the reason for a figure is taken from what it is a figure of, it follows that the reasons for the figurative sacrifices of the Old Law are to be taken from the true sacrifice of Christ.

**Reply to objection 1:** God did not want sacrifices of this sort for the sake of the things themselves that were offered, as if He stood in need of them; hence, Isaiah 1:11 says, "I did not want holocausts of rams, and the fat of fatlings, and the blood of calves and lambs and goats." Rather, as has been explained, He wanted them offered to Himself (a) in order to prevent idolatry, (b) in order to signify the appropriate ordering of the human mind toward God, and (c) in order to be a figure of the mystery of human redemption accomplished by Christ.

**Reply to objection 2:** In all the respects just mentioned, there was an appropriate reason why the animals in question—and not others—were offered to God in sacrifice.

First, in order to prevent idolatry. For the idolaters offered all the other animals to their gods or used them for their sorceries (*maleficia*), whereas among the Egyptians, with whom they had lived, it was an abomination to kill the animals in question, and so the Egyptians did not offer them in sacrifice to their own gods. Hence, Exodus 8:26 says, "We shall sacrifice the abominations of the Egyptians to the Lord our God." For the Egyptians worshiped sheep and venerated goats, since demons appeared in the shape of these animals, whereas they used oxen for agriculture, which they held to be something sacred.

Second, this was appropriate in two ways for the ordering of the mind toward God:

(a) First, because animals of the sort in question are especially the ones that human life is sustained

by and, along with this, they are the cleanest animals and eat the cleanest food. By contrast, other animals are such that they either live in the wild and are not commonly thought of as useful to men or, if domesticated, then, like the pig and the goose, eat unclean food. But only what is pure should be offered to God. On the other hand, the birds in question were specifically offered to God because they were found in abundance in the promised land.

(b) Second, because purity of mind is signified by the immolation of animals of the sort in question. For as a Gloss on Leviticus 1 says, “We offer a calf when we conquer the pride of the flesh; we offer a lamb when we correct our irrational movements; we offer a goat when we conquer our lasciviousness; we offer a turtledove when we preserve our chastity; we offer unleavened bread when we eat the unleavened bread of sincerity.” Moreover, the turtledove clearly signifies charity and simplicity of mind.

Third, these animals were appropriately offered as figures of Christ. For a Gloss on the same passage says, “Christ is offered in the calf as a figure of the power of the cross; He is offered in the lamb as a figure of His innocence; He is offered in the ram as a figure of His sovereignty; He is offered in the goat as a figure of the sinful flesh. What is shown in the turtledove and the dove is the conjoining of the two natures”—or, alternatively, the turtledove signifies chastity and the dove signifies charity—“and the flour is a figure of the sprinkling of believers with the water of Baptism.”

**Reply to objection 3:** Since they live in the water, fish are more distant from man than are the other animals, which live in the air, as man does. Again, when fish are taken from the water, they immediately die, and so they could not be offered in the temple in the way the other animals were.

**Reply to objection 4:** Among the turtledoves, the older ones are better than the younger, whereas it is just the opposite in the case of the doves. And so, as Rabbi Moses puts it, they were told to offer turtledoves and the young of the doves, because everything that is the best should be given to God.

**Reply to objection 5:** The animals offered in sacrifice were killed because animals that have been killed are useful to man, insofar as God has given them to man for food. And so they were consumed by fire, because it was through fire that, having been cooked, they were apt for human use. Again, the killing of the animals signified the destruction of sins, and also signified that men deserved to be killed for their sins—as if the animals were being killed in place of the men in order to signify the expiation of sins.

Moreover, the killing of these animals signified the killing of Christ.

**Reply to objection 6:** The Law set down a specific way of killing the immolated animals in order to exclude the other ways by which idolaters sacrificed animals to their idols.

Alternatively, as Rabbi Moses puts it, “The Law chose a type of killing by which the animals being killed would suffer the least.” This excluded (a) cruelty (*immisericordia*) on the part of those offering the sacrifice and (b) the mangling (*deterioratio*) of the animals killed.

**Reply to objection 7:** Defective animals are normally held in contempt by men, and so it was forbidden that they be offered in sacrifice to God. Because of this, it was also forbidden “to offer the price of a prostitute or the price of a dog in the house of God” (Deuteronomy 23:18). And for this same reason they did not offer animals that were not yet seven days old; for such animals were, so to speak, abortive—not as yet fully firmed up because of their tender age.

**Reply to objection 8:** There were three kinds of sacrifice:

One kind was totally consumed by fire, and this was called a *holocaust* (*holocaustum*). For a sacrifice of this sort was offered to God specifically to show reverence to His majesty and love for His goodness, and it corresponded to *the state of perfection in fulfilling His counsels*. And so the sacrifice was totally consumed by fire, in order that just as the entire animal, reduced to smoke, ascended upward, so this might signify that the whole man and all that belonged to him were subject to the Lord God and were to be offered to Him.

The second kind of sacrifice was a *sin-offering* (*sacrificium pro peccatis*), which was offered to God because of the need for the forgiveness of sins and which corresponded to *the state of those doing penance as satisfaction for their sins*. The offering was divided into two parts: one part of it was consumed by fire, and the other part went for the use of the priests in order to signify that the expiation of sins is accomplished by God through the ministry of the priests. The only exception occurred when the sacrifice was being offered for the sins of all the people or specifically for the sins of the priests. On such occasions the whole offering was consumed by fire. For it would have been unfitting for the priests to have use of what had been offered for their sins in such a way that nothing sinful should remain in them. For this would not have been satisfaction for their sins. After all, if the offering were handed over for the use of those whose sins it had been offered for, this would seem to be equivalent to their not having made an offering at all.

The third kind of sacrifice was called a *peace-offering* (*hostia pacifica*), which was offered to God either as a thanksgiving (*pro gratiarum actione*) or for the well-being (*salus*) and prosperity of those making the offering, in return for a favor already received or to be received in the future, and which corresponds to *the state of those proficient in the fulfillment of the commandments*. These offerings were divided into three parts: (a) one part was burned in honor of God, (b) another part went for the use of the priests, and (c) the third part went for the use of those making the offering. This was in order to signify that (a) man's well-being proceeds from God, (b) under the direction of God's ministers, and (c) with the cooperation of the very men who are being saved.

Now it was a general rule that the blood and fat did not go either for the use of the priests or for the use of those making the offering; instead, the blood was poured out at the foot of the altar in honor of God, while the fat was burned up in the fire.

One reason for this was to prevent idolatry, since idolaters drank the blood of sacrificial victims and ate their fat—this according to Deuteronomy 32:38 (“Of the victims [of the idols] they ate the fat, and drank the wine of their drink offerings”).

A second reason was to give shape to a humane way of life. For the use of the blood was forbidden to them in order that they might abhor the shedding of human blood; hence, Genesis 9:4-5 says, “Flesh with blood you shall not eat; for I will require the blood of your lives.” And the use of the fat was forbidden to them in order to stave off licentiousness; hence, Ezekiel 34:3 says, “You killed that which was fat.”

A third reason was to show reverence for God. For blood is especially necessary for life and, because of this, the soul is said to exist in the blood (see Leviticus 17:11). Fat, on the other hand, points to an abundance of food. And so in order to show that life and every adequate supply of goods come to us from God, the blood was poured out and the fat burned in honor of God.

A fourth reason is that it prefigured the shedding of Christ's blood and the abundance of charity with which He offered Himself to God on our behalf.

The priests were given the breast and right shoulder from the peace-offerings in order to prevent the type of divination that is called spatulamancy (*spatulamantia*), since divinations were made in the shoulder-blades (*in spatulis*) of sacrificed animals, as well as in their breastbones. And so these things were taken away from those who made the offerings. This practice also signified that the priest needed (a) ‘wisdom of the heart’ (*sapientia cordis*) in order to instruct the people, and this is signified by the breast, which covers the heart, as well as (b) the fortitude to endure their defects, and this is signified by the right shoulder.

**Reply to objection 9:** Since the holocaust was the most perfect among the sacrifices, only the male was offered in a holocaust. For the female is an imperfect animal.

Now turtledoves and doves were offered because of the poverty of those making the offering; for they were unable to offer the bigger animals. Moreover, since the peace-offerings were offered

spontaneously and no one was forced to offer them unwillingly, birds of this sort were offered not in the peace-offerings, but rather in the holocausts and sin-offerings, which had to be offered at certain times. In addition, these birds fit in with the perfection of the holocausts because they fly high in the sky, and they fit in with the sin-offerings because of their sad singing.

**Reply to objection 10:** The holocaust was the chief among the sacrifices, since the entire offering was consumed by fire in honor of God, and none of it was eaten. The second place in holiness was held by the sin-offering, which was eaten only in the court, by the priests, and on the very day of the sacrifice. The third place was held by the peace-offerings of thanksgiving, which were eaten on the same day, but anywhere in Jerusalem. And the fourth place was had by peace-offerings made with a private vow (*ex voto*); the meat from these sacrifices could be eaten on the next day as well.

The reason for this ordering is that man is obligated to God (a) most of all because of His majesty; (b) second, because of the offenses committed against Him; (c) third, because of favors already received; and (d) fourth, because of favors hoped for.

**Reply to objection 11:** As was explained above (q. 73, a. 10), sins are made more serious by the status of the sinner. And so the offerings mandated for the sins of a priest or a ruler are different from those mandated for the sins of a private person.

But notice that, as Rabbi Moses points out, “the graver the sin was, the lower the species of animal offered for it. Hence, the goat, which is a very low animal, was offered for idolatry, which is the gravest sin, whereas a calf was offered for a sin of ignorance on the part of a priest, and a ram was offered for a sin of negligence on the part of a ruler.”

**Reply to objection 12:** In the case of sacrifices, the Law wished to take into account the poverty of those making the offering, so that someone who could not afford a four-footed animal might at least offer a bird, and someone who could not afford a bird might at least offer bread, and someone who could not afford bread might at least offer flour or grain.

The figurative reason for this is that the bread signifies Christ, who is the living bread, as John 6:41 says. Under the law of nature Christ was like grain in the faith of the patriarchs; and then He was like flour in the teaching of the Law of the prophets; and then He was like formed bread-dough after He assumed His human nature; and then He was cooked by a fire, i.e., He was formed by the Holy Spirit in the oven of the virgin’s womb, and He was also cooked in a baking pan through the hardships (*labores*) He endured in the world; and on the cross He was, as it were, consumed by fire on a grill.

**Reply to objection 13:** Among the things that grow from the earth, those that are useful to man are either (a) for eating, and from these bread was offered, or (b) for drinking, and from these wine was offered, or (c) for seasoning, and from these oil and salt were offered, or (d) for healing, and from these incense, which is aromatic and gives strength, was offered.

Now the bread is a figure of Christ’s flesh; the wine is a figure of His blood, through which we have been redeemed; the oil is a figure of Christ’s grace; the salt is a figure of His knowledge; and the incense is a figure of His prayer.

**Reply to objection 14:** The reason why honey was not offered in sacrifices to God was that it used to be offered in sacrifices to idols, and also in order to prevent any sort of carnal delight or pleasure in those who intended to make sacrifice to God.

The reason why leaven was not offered was to prevent spoiling. And perhaps it, too, used to be offered in sacrifices to idols.

On the other hand, salt was offered because it prevents spoiling, and sacrifices to God ought to be unspoiled. Also, salt signifies the discretion of wisdom as well as the mortification of the flesh.

Incense was offered in order to signify the devotion of mind required in those making the offering, and also to signify the odor of a good reputation. For incense is rich and fragrant. Moreover, since the

‘sacrifice of jealousy’ (*sacrificium zelotypiae*) proceeded not from devotion but instead from suspicion, incense was not offered in this sort of sacrifice (see Numbers 5:15).

#### Article 4

##### Can appropriate reasons be assigned for the ceremonies that involve the sacred things?

It seems that appropriate reasons cannot be assigned for the ceremonies that involve the sacred things:

**Objection 1:** In Acts 17:24 Paul says, “God, who made the world, and all things therein; He, being Lord of heaven and earth, dwells not in temples made with hands.” Therefore, it was inappropriate for the tabernacle or temple to be instituted under the Old Law for the worship of God.

**Objection 2:** The status of the Old Law was altered only by Christ. But the tabernacle signified the status of the Old Law. Therefore, it should not have been altered by the building of a temple.

**Objection 3:** The divine law should be principally concerned with inducing men to worship God. But as is clear in the New Law, the making of many altars and many temples contributes to an increase in the worship of God. Therefore, it seems that even in the Old Law there should have been many temples or tabernacles, and not just a single temple or single tabernacle.

**Objection 4:** The tabernacle or temple was ordered toward the worship of God. But it is especially God’s oneness and simplicity that should be venerated. Therefore, it does not seem to have been appropriate for the tabernacle or temple to be divided by veils.

**Objection 5:** The power of the first mover, who is God, is first apparent in the East (*in parte orientis*), where the first motion begins. But the tabernacle was instituted for the adoration of God. Therefore, it should have faced toward the East rather than the West.

**Objection 6:** In Exodus 20:4 the Lord commanded that they should “not make ..... a graven thing, nor the likeness of anything.” Therefore, it was improper for there to have been graven images of the Cherubim in the tabernacle or temple. Similarly, there seems to have been no appropriate reason for the ark or the propitiatory or the candelabra or the table or the two altars to be there.

**Objection 7:** In Exodus 20:24 the Lord commanded, “You shall make an altar of earth unto me,” and again, “You shall not go up by steps unto my altar.” Therefore, it was inappropriate to command later on that the altar be made of wood covered with gold or bronze and of such a height that it could not be ascended except by means of steps. For Exodus 27:1-2 says, “You shall make also an altar of setim wood, which shall be five cubits long and as many wide ..... and three cubits high ..... and you shall cover it with brass.” And Exodus 30:1,3 says, “You shall make ..... an altar to burn incense of setim wood ..... and you shall overlay it with the purest gold.”

**Objection 8:** There should be nothing superfluous in the works of God, since there is nothing superfluous in the works of nature. But a single covering (*operimentum*) is sufficient for one tabernacle or house. Therefore it was inappropriate for the tabernacle to have many coverings, viz., curtains, blankets made of the hair of goats, ram skins dyed red, and violet-colored skins (see Exodus 26).

**Objection 9:** Exterior consecration signifies interior holiness, whose subject is the soul. Therefore, since the tabernacle and its vessels were inanimate corporeal things, it was inappropriate for them to be consecrated.

**Objection 10:** Psalm 33:2 says, “I will bless the Lord at all times, His praise will always be in my mouth.” But the solemn feasts (*solemnitates*) were instituted in order to praise God. Therefore, it was inappropriate for certain set days to be instituted for celebrating the feasts.

So, then, it seems that there were no appropriate reasons for the ceremonies involving the sacred things.

**But contrary to this:** In Hebrews 8:4 the Apostle says, “Those who offer gifts according to the law ..... serve as an example and shadow of heavenly things. As Moses was told when he was finishing the tabernacle: ‘See to it that you make all things according to the pattern which was shown to you on the mountain.’”

**I respond:** The whole of the exterior worship of God was principally ordered toward men’s holding God in reverence. However, human affection is such that things that are common and not distinctive in relation to other things are less revered, whereas things that have some mark of excellence in distinction from other things are more revered and admired. Because of this, it has been the custom among men that kings and princes, who should be held in reverence by their subjects, dress in more expensive clothes and have bigger and more beautiful houses to live in.

For this reason, it was necessary that special times and special places and special vessels and special ministries should be ordered toward the worship of God, so that men’s minds might thereby be led to a greater reverence for God.

Similarly, as has been explained (a. 2), the status of the Old Law was instituted in order that it might be a figure of the mystery of Christ. But that which is a figure of another must itself be something determinate in order to represent a likeness of that other. And so, again, it was necessary for special things to be observed in those matters that involve the worship of God.

**Reply to objection 1:** The worship of God involves two things, viz., the God who is being worshiped and the men who are doing the worshiping. The God who is being worshiped is not Himself confined to any corporeal place, and hence it is not because of Him that a tabernacle or temple must be fashioned. By contrast, the men worshiping Him are corporeal, and it is because of them that a special tabernacle or temple must be instituted for the worship of God—and this for two reasons.

First, when they come together at such a place with the thought that the place has been set aside for the worship of God, they come with greater reverence.

Second, the arrangement of the tabernacle or temple signifies certain things that bear upon the excellence of the divine nature or of the humanity of Christ.

Thus, in 3 Kings 8:27 Solomon says, “If heaven and the heavens of heavens cannot contain You, how much less this house which I have built for You?” And after this he adds, “Let Your eyes be open upon this house ..... of which You said, ‘My name shall be there’, ..... so that You may hear the prayer of Your servant and of Your people Israel.” From this it is clear that the house of the sanctuary was instituted not in order to capture God, as if He might live there as in a place, but rather in order that (a) the name of God might dwell there, i.e., in order that the knowledge of God might be made manifest in that place through the things that were said and done there, and in order that (b) out of reverence for the place, the prayers made there would be heard more readily because of the devotion of those praying.

**Reply to objection 2:** In the time before Christ the status of the Old Law was not altered with respect to the fulfillment of the Law, which was accomplished only through Christ. However, it was altered with respect to the condition of the people who were living under the Law.

For at first the people were living in the desert and had no fixed dwelling place. After that, they waged various wars against the neighboring Gentiles. Finally, at the time of David and Solomon the people lived in a very peaceful state. And it was at that time that the temple was first built on the site that Abraham, instructed by God, had designated for sacrifice. For Genesis 22:2 says that Lord commanded Abraham to offer his son “for a holocaust upon one of the mountains which I will show you.” And afterwards it says that he named this place ‘The Lord Sees’—as if it were in accord with God’s foreknowledge that this place had been chosen for divine worship. It is for this reason that Deuteronomy 12:5-6 says, “You shall come to the place which the Lord your God shall choose ..... and you shall offer

..... your holocausts and victims.”

However, before the time of David and Solomon it would have been inappropriate to designate a place for building the temple, and this for the three reasons Rabbi Moses puts forth: first, so that the Gentiles would not appropriate that place for themselves; second, so that the Gentiles would not destroy that place; and, third, so that the tribes would not all want to have that place in their own territory, with quarrels and disputes arising as a result. And so the temple was not built until the people had a king who could stop the quarreling.

Before that time, a tabernacle that could be carried to different places had been ordained for the worship of God—as if there was not yet a determinate place for divine worship. And this is literal reason for the difference between the tabernacle and the temple.

Now one possible figurative reason is that this signified our twofold status. For the tabernacle, which is mutable, signifies the state of our present mutable life, whereas the temple, which is fixed and stable, signifies the state of the future life, which is completely unchangeable. And because of this it is said that when the temple was being built, no sound of hammers or saws was heard, and this to signify that all disturbances will be far removed from the future state.

An alternative reason is that the tabernacle signifies the status of the Old Law, whereas the temple constructed by Solomon signifies the status of the New Law. Hence, only Jews worked on the construction of the tabernacle, whereas even Gentiles from Tyre and Sidon cooperated in the building of the temple.

**Reply to objection 3:** Both a literal and a figurative reason can be given for the fact that there is just one temple or tabernacle.

The literal reason is to prevent idolatry. For the Gentiles used to build different temples to different gods, and so in order to strengthen in the minds of men a faith in God’s oneness, God willed that sacrifices to Himself should be offered in just one place. Again, He did this in order to show that it was not because of itself that bodily worship was acceptable to Him. And so they were kept from offering sacrifices at just any time or place. By contrast, worship under the New Law, whose sacrifice contains spiritual grace, is acceptable to God in its own right, and this is why the multiplication of altars and temples is accepted under the New Law.

However, as regards those things that had to do with the spiritual worship of God and consisted in the teaching of the Law and the prophets, even under the Old Law there were different places set aside where they would come together to praise God. These were called ‘synagogues’, just as now there are places called ‘churches’ where the Christian people congregate to praise God. And so among us the church has taken the place of both the temple and the synagogue, since the very sacrifice of the Church is spiritual, and so there is no distinction among us between the place of sacrifice and the place of teaching.

A possible figurative reason is that the oneness of the temple signifies the oneness of the Church, whether the Church militant or the Church triumphant.

**Reply to objection 4:** Just as the oneness of God or the oneness of the Church is represented by the oneness of the tabernacle or temple, so the distinctions within the tabernacle or temple represent the distinctions among the things which are subject to God and out of which we rise up to venerate God.

Now the tabernacle was divided into two parts. The one part was called the ‘Holy of Holies’ and was situated to the West, and the other was called ‘The Holy Place’ and was situated to the East. Again, in front of the tabernacle there was a court.

There are two reasons for this division.

The first reason is that the tabernacle is ordered toward the worship of God. For the divisions within the tabernacle are a figure of the different parts of the world. The part called the ‘Holy of Holies’ was a figure of the higher world, i.e., the world of spiritual substances, whereas the part called the ‘Holy Place’ represented the corporeal world. And this is why the Holy Place was divided off from the Holy of

Holies by a veil divided into four colors designating the four elements, viz., (a) flaxen (*byssum*), signifying *earth*, since linen, i.e., flax, grows from the earth; (b) purple (*purpura*), signifying *water*, since the purple tint was made from a certain shellfish found in the sea; (c) violet (*hyacinthus*), signifying *air*, since it has the color of the atmosphere; and (d) twice-dyed scarlet (*coccus bis tinctus*), signifying *fire*. The reason for this is that the matter composed of the four elements is a barrier by which the incorporeal substances are veiled from us. And so only the high priest entered the inner tabernacle, i.e., the Holy of Holies, and this just once a year, in order to signify that man's final perfection is to enter into that higher world. By contrast, the priests entered the outer part, i.e., the Holy Place, every day—though not the people, who went only as far as the court. For while the people can perceive corporeal things, only the wise are able, by their study, to grasp the inner natures (*rationes*) of those things.

As for the figurative reasons, the outer tabernacle, called the Holy Place, signifies the status of the Old Law, as the Apostle says in Hebrews 9:6-7. For the priests always entered the outer tabernacle in carrying out the duties associated with the sacrifices.

By contrast, the inner tabernacle, called the Holy of Holies, signifies either heavenly glory or the spiritual status of the New Law, which is a sort of beginning of future glory. Christ led us into this status, and a figure of this was the fact that the high priest entered into the Holy of Holies by himself.

Now the veil was a figure of the hiddenness of the spiritual sacrifices within the old sacrifices. And as for the fact that the veil was decorated with four colors, the flaxen signified the purification of the flesh (*carnis puritatem*), the purple signified the sufferings that the saints have endured for the sake of God, the twice-dyed scarlet signified the twofold love of God and neighbor, and the violet signified heavenly contemplation (*caelestis meditatio*).

Now the people and the priests were related in different ways to the status of the Old Law. For the people concentrated on the corporeal sacrifices that were offered in the court. The priests, on the other hand, took into account the reasons behind the sacrifices and had a more explicit faith concerning the mysteries of the Christ. And so they entered the outer tabernacle, which was divided off from the court by a veil, because certain things about the mystery of the Christ which were veiled from the people were made known to the priests. However, as Ephesians 3:5 says, these things were not revealed to them in full, as they would later be revealed in the New Testament.

**Reply to objection 5:** Adoration toward the West was introduced in the Law in order to prevent idolatry. For all the Gentiles worshiped toward the East out of reverence for the sun. Hence, Ezekiel 8:16 says, "Some had their backs toward the temple of the Lord, and their faces to the East, and they adored in the direction of the sun's rising." Hence, in order to prevent this, the tabernacle had the Holy of Holies situated to the West, so that they worshiped toward the West.

This can also serve as a figurative reason, since the whole status of the prior tabernacle was ordered toward being a figure of the death of Christ, which is signified by the West—this according to Psalm 67:5 ("He ascends unto the West, the Lord is His name.")

**Reply to objection 6:** Both literal and figurative reasons can be given for the things that were contained in the tabernacle.

The literal reasons, of course, have to do with their relation to the worship of God.

Since, as was explained above, the *inner tabernacle*, called the 'Holy of Holies', signified the higher world of spiritual substances, there were three things contained in that inner tabernacle. One was the ark of the covenant (*arca testamenti*), in which there was a golden vase containing manna, the rod of Aaron that had flowered, and the tablets on which the ten precepts of the Law had been written. This ark was situated between the two Cherubim, who were looking at each other. And above the ark there was a sort of table, called the 'propitiatory', which was located over the wings of the Cherubim and was being held up, as it were, by the Cherubim themselves—as if one were to imagine that this table was the seat of God. The reason the table was called the 'propitiatory' is that the people received propitiation when the

high priest prayed. And it was held up by the Cherubim, who were bowing down to God, whereas the ark of the covenant served as the footstool, as it were, of the One sitting on the propitiatory.

These three things signify three things that exist in that higher world.

First there is *God*, who exists above all things and is incomprehensible to every creature. And in order to represent His invisibility, no likeness of Him was placed there. Instead, a representation of His seat was placed there, because a creature's being subject to God is comprehensible, just like a seat's being subject to the one sitting on it. Again, there are *spiritual substances* called 'angels' in that higher world, and they are signified by the two Cherubim. They are looking at each other in order to signify their concord with one another—this according to Job 25:2 ("He makes concord in high places"). And the reason why there was not just one Cherub was to signify the multitude of heavenly spirits and to prevent their being worshiped by those who were commanded to worship the one God alone. Again, *conceptions (rationes)* of all the things that are brought to completion in our world are contained in some sense in that intelligible world—in the way that conceptions of effects are contained in their causes and that conceptions of his artifacts are contained in a craftsman. And this was signified by the ark, which, by the three things it contained, represented the three most powerful things in human affairs, viz., wisdom, which was represented by the tablets of the covenant; political power (*potestas regiminis*), which was represented by Aaron's rod; and life, which was represented by the manna that sustained life. An alternative explanation is that these three items represented three of God's attributes, viz., wisdom, in the tablets; power, in the rod; and goodness, in the manna, both because of its sweetness and because it was given to the people out of God's mercy and so was conserved in memory of God's mercy.

Figures of these three things are likewise found in Isaiah's vision (see Isaiah 6). For he saw the Lord exalted and elevated on His throne, and he saw the Seraphim attending Him, and the house was filled with the glory of God. And so the Seraphim proclaimed, "All the earth is full of the glory of God." And thus, as has been explained, the likenesses of the Seraphim were placed there not to be worshiped—something forbidden by the first precept of the Law—but instead, as has been explained, as a sign of their ministry.

On the other hand, the *outer tabernacle*, which signifies the present world, likewise contained three things, viz., the *altar of incense (altare thymiamatis)*, which was directly across from the ark; the *table of proposition (mensa propositionis)*, with the twelve loaves of bread on it, which was positioned toward the North; and the *candelabra*, which was positioned toward the South. These three items seem to correspond to the three things contained in the ark, but they represented them in a more evident way. For the conceptions of things have to be given a more evident manifestation than their existence in the minds of God and the angels in order for wise men to be able to grasp them, where the wise men are signified by the priests entering the tabernacle. The candelabra signified, as a visible sign, the wisdom that was expressed in intelligible words on the tablets. The altar of incense signified the role of the priests in leading the people back to God, and this was likewise signified by the rod. For the sweet-smelling incense, which signified the holiness of a people acceptable to God, was lit on that altar; as Apocalypse 8:3-4 puts it, the smoke of aromatic herbs signifies the "prayers of the saints" (*iustificaciones sanctorum*). The dignity of the priests was appropriately signified in the ark by the rod and in the inner tabernacle by the altar of incense, because the priest is a mediator between God and the people, ruling over the people by God's power, which is signified by the rod. And he offers, as it were, the fruit of his rule, viz., the holiness of the people, on the altar of incense. Now the table signifies the nourishment of life, just as the manna does—though the former is a more common and coarse sort of nourishment, while the latter is sweeter and more subtle. The candelabra was appropriately positioned toward the South and the table toward the North, since, as *De Caelo et Mundo 2* says, the South is the right-hand part of the world, whereas the North is the left-hand part. And wisdom pertains to the right, as do other spiritual goods, whereas temporal nourishment pertains to the left—this according to Proverbs 3:16 ("In her left hand are

riches and glory”). Moreover, the power of the priesthood occupies a middle place between temporal things and spiritual wisdom, since both spiritual wisdom and temporal goods are dispensed through this power.

Now these things can be assigned another and more literal reason.

The ark contained the tablets of the Law in order to prevent the Law from being forgotten; hence, Exodus 24 says, “I will give you two stone tablets, and the Law and commandments which I have written, that you might teach them to the children of Israel.” Aaron’s rod was placed there in order to suppress the dissension of the people against Aaron’s priesthood; hence, Numbers 17:10 says, “Carry back the rod of Aaron into the tabernacle of the testimony, that it may be kept there for a token of the rebellious children of Israel.” The manna was preserved in the ark as a reminder of the favors God had bestowed on the children of Israel in the desert; hence, Exodus 16:32 says, “Fill an omer with it, and let it be kept unto generations to come hereafter, that they may know the bread, wherewith I fed you in the wilderness.” The candelabra was set up to give honor to the tabernacle, since a house’s magnificence includes its being well lit. For the candelabra had seven arms to signify, as Josephus says, the seven planets by which the whole world is illumined, and the reason why the candelabra was positioned toward the South was that the course of the planets is from our South. The altar of incense was set up so that the tabernacle would continually have sweet-smelling smoke (*fumus boni odoris*)—both because of the veneration due the tabernacle and also as a remedy for the stench that necessarily arose from the outflow of blood and the killing of the animals. For things that smell bad are despised as vile, whereas things with a good odor are more highly valued by men. The table was set up to signify that the priests who served the temple were supposed to have their food in the temple; hence, as Matthew 12:4 says, only the priests were allowed to eat the twelve loaves of bread that were placed on the table as a memorial of the twelve tribes. Now the table was not placed exactly in the middle in front of the propitiatory. This was in order to prevent an idolatrous rite, since on the feasts of the moon the Gentiles put a table in front of the idol of the moon; hence, Jeremiah 7:18 says, “The women knead the dough, to make cakes to the queen of heaven.”

In the *court outside the tabernacle* there was an altar of holocausts, on which sacrifices were offered to God from among the things possessed by the people. And so the people who offered sacrifices by the hand of the priests could be present in the court. But only the priests, whose role was to offer the people to God, could go up to the inner altar, on which the very devotion and holiness of the people was offered to God. The altar of holocausts was placed in the court outside the tabernacle in order to prevent idolatrous worship, since the Gentiles set up altars within their temples to offer sacrifices to their idols.

Now figurative reasons can be assigned for all these things on the basis of the tabernacle’s relation to Christ, of whom it is a figure. Note that in order to signify the imperfection of the figures in the Law, diverse figures were set up in the temple to signify Christ.

For He is signified by the propitiatory, since, as 1 John 2:2 puts it, He Himself is “a propitiation for our sins.” And it was appropriate for the propitiatory to be held up by the Cherubim, since it is written of Him that all the angels of God adore Him, as Hebrews 1:6 says. He is likewise signified by the ark, since just as the ark was made of setim wood, so Christ’s body consists of the purest members. The ark was overlaid with gold, since Christ was full of wisdom and charity, which are signified by gold. Inside the ark there was a golden urn, i.e., a holy soul, containing manna, i.e., all the plenitude of divinity. Inside the ark there was also the rod, i.e., priestly power, since He was made a priest forever. The tablets of the covenant were also there, in order to signify that Christ Himself is the lawgiver. Christ Himself is also signified by the candelabra, since He says, “I am the light of the world,” and the seven lights signify the seven gifts of the Holy Spirit. He is spiritual food—this according to John 6:41 (“I am the living bread”), while the twelve loaves signify the twelve apostles, or their teaching. Alternatively, the candelabra and the table can signify the teaching and faith of the Church, which likewise gives light and spiritual

renewal. Christ is also signified by the two altars, the altar of holocausts and the altar of incense. For it is through Him that we must offer to God all the works of the virtues, or all the things by which we afflict our flesh and which are offered, as it were, on the altar of holocausts, along with those things which, with a greater perfection of mind and through the spiritual desires of the perfect, are offered to God in Christ as on the altar of incense—this according to Hebrews 13:15 (“By Him therefore let us offer the sacrifice of praise always to God”).

**Reply to objection 7:** The Lord commanded that the altar be constructed in order to offer gifts and sacrifices both in honor of God and for the sustenance of the ministers who served in the tabernacle. Now there are two commands given by the Lord concerning the construction of the altar.

The first occurs at the beginning of the Law in Exodus 20, where the Lord commanded that the altar be made of earth or at least of uncut stones and, again, that they not make the altar so high that it would be necessary to ascend it by means of steps. This was out of hatred for idolatrous worship, since the Gentiles constructed ornate and towering altars to their idols, and they believed there to be something holy and divine in their altars. It was for the same reason that the Lord commanded in Deuteronomy 16:21, “You shall plant no grove, nor any tree near the altar of the Lord your God.” For the idolaters used to offer sacrifices under trees because it was pleasant and shady there.

There was also a figurative reason for these precepts. For in Christ, who is our altar, we should confess the true nature of flesh with respect to His humanity, and this corresponds to making an altar of earth. And with respect to His divinity, we should confess His equality with the Father, and this corresponds to not ascending the altar by means of steps. Nor should we allow near to Christ the Gentile teaching which leads to licentiousness.

However, once the tabernacle had been fashioned in honor of God, then there was no reason to fear such occasions of idolatry. And so the Lord commanded that the altar of holocausts, which would be visible to all the people, should be made out of bronze, and that the altar of incense, which only the priests would see, should be made out of gold. Nor was bronze so precious that the people would be moved to idolatry because of it.

However, since Exodus 20:26 adds—as a reason for the precept ‘You shall not ascend my altar by steps’—“..... lest your nakedness be revealed,” one has to think that this precept was likewise instituted to prevent idolatry. For on the feasts of Priapus the Gentiles uncovered their genitals before the people. But later on the priests were ordered to use loincloths to cover their genitals, and so there was no danger in building an altar so high that at the hour of sacrifice the priests offering the sacrifices would ascend the altar by wooden steps—not permanent steps but portable ones.

**Reply to objection 8:** The main body of the tabernacle consisted of boards standing on end, which were covered on the inside by curtains of four different colors, viz., twisted flaxen, violet, purple, and twice-dyed scarlet. But these curtains covered only the sides of the tabernacle, whereas the roof of the tabernacle was one covering of violet-colored skins and, over that, another covering of red ram-skins, and, over that, a third covering of goat-skin blankets that not only covered the roof of the tabernacle but came down all the way to the ground and covered the outside of the boards of the tabernacle.

The general literal reason behind these coverings was to decorate and protect the tabernacle, in order that it might be treated with reverence. As for specific reasons, according to some the curtains signified the starry heaven, which is dotted with the different stars; and the blankets signified the waters that are above the firmament; and the red-colored skins signified the empyrean heaven, where the angels reside; and the violet-colored skins signified the heaven of the Holy Trinity.

On the other hand, the figurative reasons for these things are as follows: The boards out of which the tabernacle was built signify Christ’s faithful ones, out of whom the Church is built. The walls are covered on the inside with curtains of four different colors because the faithful are decorated interiorly with four virtues: for as a Gloss puts it, “The twisted flax signifies the flesh striving after chastity, the

violet signifies the mind desiring heavenly things, the purple signifies the flesh subject to the passions, and the twice-dyed scarlet signifies the mind shining forth from among the passions with the love of God and neighbor. As for the coverings on the roof, the violet-colored skins signify the prelates and doctors, in whom the celestial way of life should shine forth; the red-colored skins signify a readiness for martyrdom; and the goat-skin blankets—which, as a Gloss says, were exposed to the wind and the rain—signify austerity of life and perseverance against enemies.

**Reply to objection 9:** The sanctification of the tabernacle and its vessels had as its literal reason that they might be treated with great reverence, given that through this consecration they were being assigned to the worship of God.

On the other hand, the figurative reason is that this sanctification signifies the spiritual sanctification of the living tabernacle, viz., the tabernacle of the faithful from whom the Church of Christ is built.

**Reply to objection 10:** As can be seen from Numbers 28 and 29, in the Old Law there were seven periodic solemn feasts (*solemnitates temporales*) and one continuous solemn feast.

For there was, as it were, a continuous feast, since a lamb was sacrificed every day in the morning and in the evening, and this continuous feast of continual sacrifice represented the perpetuity of God's happiness.

Now the first of the periodic feasts was the one that was repeated every seventh day, and this was the solemn feast of the Sabbath, which, as explained above (q. 100, a. 5), was celebrated in memory of the creation of things.

The second solemn feast was repeated every month, viz., the feast of the New Moon (*festum Neomeniae*), which was celebrated to commemorate the work of divine governance. For things here below vary mainly according to the moon's motion, and so this feast was celebrated at the time of the new moon—and not at the time of the full moon, in order to prevent the idolatrous worship that offered sacrifices at the time of the full moon.

The other five feasts were celebrated once a year, and they recalled favors that had been specially given to that people. The feast of the Passover (*festum Phase*) was celebrated in the first month, in order to commemorate the favor of the liberation from Egypt, while the feast of Pentecost (*festum Pentecostes*) was celebrated fifty days later, in order to recall the favor of the giving of the Law. The other three feasts were celebrated in the seventh month, the whole of which was solemn among them in the same way that the seventh day was. On the first day of the seventh month was the feast of Trumpets (*festum Tubarum*), in memory of the liberation of Isaac, when Abraham found the ram caught by its horns, which were represented by the horns that they sounded. The feast of Trumpets was, as it were, an invitation to prepare oneself for the next feast, which was celebrated on the tenth day. This was the feast of Atonement (*festum Expiationis*), in memory of that favor by which, at the prayer of Moses, God forgave (*propitiatus est*) the sin of the people worshiping the calf. After this, the feast of Booths (*festum Scenopegiae*), i.e., the feast of Tabernacles, was celebrated for seven days to commemorate the favor of God's protecting them and leading them through the desert, where they lived in tents. Hence, on that feast they had to have the fruit of the most beautiful tree, i.e., the citron, and a tree of dense foliage, i.e., the myrtle, which is fragrant, and the branches of palm trees, and the willows of the brook, which keep their greenness for a long time. All of these are found in the promised land (*terra promissionis*), and signify that God had led them through the arid terrain of the desert into a delightful land. On the eighth day another feast was celebrated, viz., the feast of Assembly and Collection (*festum Coetus atque Collectae*), in which the necessary expenses for divine worship were collected from the people. This signified the union of the people and the peace bestowed on them in the promised land.

Now the figurative reasons for these feasts are as follows: The continual sacrifice of the lamb is a figure of the perpetuity of Christ, who is the Lamb of God—this according to Hebrews 13:8 (“Jesus

Christ yesterday and today, and the same for ever”). The Sabbath signifies the spiritual rest given to us through Christ, as Hebrews 4 says. The feast of the New Moon, which is the beginning of a new moon, signifies the illumination of the primitive Church by Christ through His preaching and miracles. The feast of Pentecost signifies the descent of the Holy Spirit on the apostles, whereas the feast of Trumpets signifies the preaching of the apostles. The feast of Atonement signifies the washing away of the sins of the Christian people, whereas the feast of Tabernacles signifies their journey in this world, in which they walk by advancing in virtue. The feast of Assembly and Collection signifies the congregation of the faithful in the kingdom of heaven, and that is why this feast was called “most holy.” And these last three feasts were continuous with one another because, as Psalm 83 says, it is necessary for those whose vices have been forgiven to make progress in virtue until they arrive at the vision of God.

### Article 5

#### Can appropriate reasons be assigned for the sacraments of the Old Law?

It seems that appropriate reasons cannot be assigned for the sacraments of the Old Law:

**Objection 1:** What is done in divine worship should not be similar to the observances of the idolaters; for Deuteronomy 12:31 says, “You shall not do in like manner to the Lord your God. For they have done to their gods all the abominations which the Lord abhors.” But in their worship, the worshipers of idols used to cut themselves to the point of drawing blood; for 3 Kings 18:28 says, “They cut themselves after their manner with knives and lancets, until they were all covered with blood.” For this reason the Lord commanded in Deuteronomy 14:1, “You shall not cut yourselves, nor shave your heads over the dead.” Therefore, it was inappropriate for circumcision to have been instituted in the Law.

**Objection 2:** What is done in divine worship should be upright and serious—this according to Psalm 34:18 (“I will praise You in a serious people”). But it seems to smack of a certain levity that men should eat in haste. Therefore, it was inappropriate for Exodus 12 to command that they should eat the paschal lamb in haste. In addition, other rules that were instituted concerning the eating of the lamb seem to have no reason at all behind them.

**Objection 3:** The sacraments of the Old Law were figures of the sacraments of the New Law. But the paschal lamb signifies the sacrament of the Eucharist—this according to 1 Corinthians 5:7 (“Christ our Pasch is sacrificed”). Therefore, there should also have been sacraments in the Law that prefigured the other sacraments of the New Law such as Confirmation, Extreme Unction, Matrimony, and the others.

**Objection 4:** One can be purified only of impurities. But in God’s eyes, nothing corporeal is considered unclean; for every corporeal entity is a creature of God and, as 1 Timothy 4:4 says, “Every creature of God is good, and nothing is to be rejected that is received with thanksgiving.” Therefore, it was inappropriate for them to have to be purified because of contact with a human corpse or with a similar kind of bodily infection.

**Objection 5:** Ecclesiasticus 34:4 asks, “What can be made clean by the unclean?” But the ashes of a burnt red heifer (see Hebrews 9:13) were unclean; for Numbers 19:7ff. says that the priest who killed the red heifer was rendered impure until evening, and likewise the one who burned it and the one who collected its ashes. Therefore, it was inappropriate for there to have been a precept in the Law according to which the unclean were purified by the sprinkling of these ashes.

**Objection 6:** Sins are not anything corporeal that can be moved from one place to another; nor can

a man be cleansed of his sins by anything unclean. Therefore, it was inappropriate that, in order to expiate the sins of the people, the priest would confess the sins of the children of Israel over a goat which would then carry them into the desert, whereas through another goat, which the priests used for purification and which they burned along with a calf outside the camp, they were rendered unclean, so that they had to wash their clothes and their bodies with water.

**Objection 7:** That which has already been made clean does not need to be made clean again. Therefore, it was inappropriate that after a man's leprosy, or even his house, had been made clean, another purification should be made, as Leviticus 16 has it.

**Objection 8:** Spiritual uncleanness cannot be washed away by corporeal water or by shaving. Therefore, it seems that there is no reason for the Lord to have commanded in Exodus 30:18-20 that a brass washbasin with its own base be fashioned for the washing of the hands and feet of the priests who were about to enter the tabernacle, or for Him to have commanded in Numbers 8:7 that the Levites be sprinkled with the water of purification and shave all the hair off their bodies.

**Objection 9:** What is greater should not be sanctified by what is lesser. Therefore, it was inappropriate for the consecration of the higher and lower priests (Leviticus 8) and of the Levites (Numbers 8) to be done with bodily ointment and corporeal sacrifices and corporeal oblations.

**Objection 10:** 1 Kings 16:7 says, "Men see those things that appear, but the Lord beholds the heart." But the things that appear outwardly in a man are his bodily disposition and his clothes. Therefore, it was inappropriate for special vestments to be assigned to the higher and lower priests (Exodus 28). And there seems to be no reason why anyone should be excluded from the priesthood because of bodily defects, in the way stated in Leviticus 21:17-18: "Whoever of your seed throughout their families has a blemish, he shall not offer bread to his God; neither shall he approach to minister to Him if he is blind or lame."

Therefore, it seems that there were no reasons behind the sacraments of the Old Law.

**But contrary to this:** Leviticus 20:8 says, "I am the Lord your God, who sanctifies you." But nothing comes from God without a reason; for Psalm 103:24 says, "You have made all things with wisdom." Therefore, in the sacraments of the Old Law, which were ordered toward the sanctification of men, there was nothing that did not have a reasoned cause behind it.

**I respond:** What are properly called sacraments are things that were done to the worshipers of God by way of a consecration through which they were in some sense set off (*deputabantur*) for the worship of God. Now the worship of God pertained in a general way to the whole people and in a specific way to the priests and Levites, who were the ministers of divine worship. And so among the sacraments of the Old Law, some pertained in general to all the people, whereas others pertained specifically to the ministers.

With respect to both groups, there were three requirements:

The first is being initiated (*institutio*) into the state of worshiping God. This general initiation with respect to everyone was accomplished through *circumcision*, without which no one was admitted to anything having to do with the Law. With respect to the priests, on the other hand, the initiation was accomplished through the *consecration of the priests*.

The second requirement was the exercise (*usus*) of what pertained to divine worship. With respect to the people, this consisted in the eating of the Paschal meal, which, as is clear from Exodus 12:43-45, no one uncircumcised was admitted to. With respect to the priests, it consisted in the offering of sacrifices (*oblatio victimarum*) and in the eating of the loaves of proposition and other items set aside for the use of the priests.

The third requirement was the removal of whatever might impede someone from divine worship, viz., impurities. And so with respect to the people, certain purifications from exterior impurities were

instituted, along with rites for the atonement for sins; and with respect to the priests, the washing of the hands and feet was instituted, along with the shaving of the hair.

For all these sacraments there were both (a) literal reasons, insofar as the sacraments were ordered toward the worship of God for that time period, and (b) figurative reasons, insofar as they were ordered toward being figures of Christ. This will become clear as we go through them one by one.

**Reply to objection 1:** The main literal reason behind circumcision was to give witness to faith in the one God. For since Abraham was the first to separate himself from the non-believers (*infideles*), leaving his home and his relatives, he was the first to receive circumcision. The reason for this is set forth by the Apostle in Romans 4:9-11: “He received the sign of circumcision, a seal of the justice of the faith that he had while still uncircumcised.” More specifically, we read, “Abraham’s faith was reputed to justice ....” because “he believed in hope against hope”—i.e., he believed in the hope of grace against the hope of nature—“that he would become the father of many nations,” even though he was old and his wife was an old woman and barren. And in order that this witness, along with the imitation of Abraham’s faith, should be strengthened in the hearts of the Jews, they received a sign in their flesh which they could not forget about. Hence, Genesis 17:13 says, “My covenant (*pactum*) shall be in your flesh for a perpetual covenant (*foedus*).”

Now the reason why it was done on the eighth day was that before then a boy is very delicate and could suffer gravely from it and is not yet considered strong enough (*solidatum*). Hence, even animals were not offered before their eighth day. On the other hand, the reason why it was not delayed longer was that some boys might refuse the sign of circumcision because of the pain, and also that some parents, given that their love for their sons would increase after constant contact with them and after the boys had grown, would prevent them from being circumcised.

A second possible reason was to reduce concupiscence in the bodily member in question.

A third reason was to give affront to the sacred rites of Venus and Priapus, in which that bodily part was honored.

Moreover, the Lord prohibited only the sort of slashing that took place in the worship of idols, and circumcision was not similar to that.

On the other hand, the figurative reason for circumcision was that it was a figure of the removal of corruption which was to be brought about by Christ and which will be perfectly completed on the eighth day, i.e., the time of resurrection. And it was because all the corruption of sin and punishment came to us through our carnal origin from the sin of our first parent that this circumcision was done to the body’s generative member. Hence, the Apostle says in Colossians 2:11, “You are circumcised with a circumcision not made by hand, in despoiling of the body of the flesh, but in the circumcision of our Lord Jesus Christ.”

**Reply to objection 2:** The literal reason for the Paschal meal was to commemorate the favor by which God led them out of Egypt. Hence, through the celebration of this meal they professed that they belonged to that people whom God had taken to Himself out of Egypt. For when they were liberated from Egypt, they were commanded to sprinkle the lamb’s blood on the threshold of their houses, as if proclaiming that they rejected the rites of the Egyptians, who worshiped the ram. Hence, by sprinkling or rubbing the lamb’s blood on their door-posts, they were freed from the danger of being exterminated that threatened the Egyptians.

Now in their flight from Egypt there were two elements of note, viz., (a) their haste in going, since the Egyptians implored them to leave quickly, according to Exodus 12:33, and (b) the fact that those who did not hurry to leave with the crowd were threatened with the danger of being killed by the Egyptians if they remained behind.

Their haste was signified in two ways:

First, it was signified by *what* they ate. For they were commanded to eat unleavened bread, as a

sign of the fact that the bread “could not rise with the Egyptians pressing them to leave” (Exodus 12:39). And they were commanded to eat meat that had been roasted over a fire, since that was a quicker way to prepare it, and they were commanded not to separate the bone from the meat, since someone in a hurry does not have time to break the bones off.

Second, it was signified by *how* they ate. For Exodus 12:11 says, “You shall gird your loins, and you shall have shoes on your feet, holding your staffs in your hands; and you shall eat quickly.” This obviously signifies men who are ready to go on a journey. The same point is involved in this command that is given to them: “In one house shall you eat, and you shall not carry any of its meat outside” (Exodus 12:46). That is, because of their haste they do not have time to send out portions to one another. Again, the hardship that they had suffered in Egypt was signified by the bitter herbs (*lactuae agrestes*).

Now the figurative reasons behind the Paschal meal are clear. The sacrifice of the paschal lamb signified the sacrifice of Christ—this according to 1 Corinthians 5:7 (“Christ our paschal lamb has been sacrificed.”) The lamb’s blood, which freed them from the destroyer (*exterminator*) when it was sprinkled on the door-posts of their houses, signifies the faith in Christ’s passion which is found in the hearts and minds of the faithful and through which they are freed from sin and death—this according to 1 Peter 1:18 (“You were redeemed by the precious blood of the unspotted lamb”). They ate the meat to signify the eating of the body of Christ in the sacrament. The meat was roasted over a fire to signify the passion, or perhaps Christ’s charity. They ate it with unleavened bread to signify the pure way of life that belongs to the faithful who receive the body of Christ—this according to 1 Corinthians 5:8 (“Let us feast with the unleavened bread of sincerity and truth”). The bitter herbs were added as a sign of the repentance of sinners that is required of those who receive the body of Christ. Their loins had to be girded by the cincture of chastity, whereas the shoes on their feet signify the example given by our dead ancestors (*patres*). The staffs held in their hands signify pastoral care. Moreover, they are commanded to eat the paschal lamb in one house, i.e., in the Catholic Church, and not in gatherings of heretics.

**Reply to objection 3:** Some of the sacraments of the New Law had corresponding sacraments in the Old Law that were figures of them.

For example, Baptism, which is the sacrament of faith, corresponds to circumcision; hence, Colossians 2:11-12 says, “You have been circumcised in the circumcision of our Lord Jesus Christ and buried with Him in Baptism.” The Eucharist in the New Law corresponds to the meal of the paschal lamb, while the sacrament of Penance corresponds to all the purifications under the Old Law. Again, the sacrament of Orders corresponds to the consecration of the high-priests and priests.

On the other hand, the sacrament of Confirmation, which is a sacrament of the fullness of grace, cannot have any corresponding sacrament in the Old Law; for the time of fullness had not yet arrived, because “the Law brought no one to perfection” (Hebrews 7:19). The same holds for Extreme Unction, which is an immediate preparation for one’s entrance into glory, whereas the way to glory was not yet open under the Old Law, because the price for it had not yet been paid.

Matrimony did, to be sure, exist in the Old Law as a natural institution (*officium naturae*), but not as the sacrament of the union of Christ and the Church, since the Church had not yet come into existence. Hence, a decree of divorce (*libellus repudii*) was granted under the Old Law—which is contrary to the nature of the sacrament.

**Reply to objection 4:** As has been explained, the purifications under the Old Law were ordered toward removing impediments to divine worship. There are two kinds of worship, viz., *spiritual worship*, which consists in devoting one’s mind to God, and *corporeal worship*, which consists in sacrifices, offerings, and other things of this sort.

Men are impeded in spiritual worship through the sins by which men were said to be polluted, e.g., idolatry, homicide, adultery, and incest. Men were purified of this sort of pollution by certain sacrifices or offerings made either communally on behalf of the whole multitude or for the sins of individuals.

These carnal sacrifices did not in their own right have the power to expiate sins; rather, they signified the future expiation of sins through Christ. For the ancients, too, participated in Christ by professing their faith in a redeemer through the figures of their sacrifices.

On the other hand, men were impeded in their exterior worship through certain corporeal impurities that were thought of as first existing in the men and then also in other animals and in their clothes and houses and vessels. In men the uncleanness was thought of as stemming in part from the men themselves and in part from their contact with unclean things. As for men themselves, what was considered unclean was anything that already had some sort of corruption or had been exposed to corruption. And so since death is a kind of corruption, a man's corpse was considered unclean. Similarly, since leprosy occurs because of a corruption of bodily fluids (*humores*) that erupt externally and infect others, lepers were also considered unclean. The same held for women who were having a flow of blood—either through illness or else through nature, whether during their menstrual periods or at the time of conception. For the same reason, men were considered unclean when having an emission of seminal fluid—whether through sickness or nocturnal emission or sexual intercourse. For every bodily fluid flowing from a man or a woman in one of these ways has a certain unclean taint. Again, one was also unclean from having contact with anything unclean.

There were both literal and figurative reasons for these types of uncleanness.

The literal reason was to promote reverence for what had to do with divine worship, because when men are unclean, they do not normally touch precious objects, and also because sacred things are more venerated when access to them is rare. For since one could only rarely avoid all impurities of the sort in question, it happened that men could only rarely approach to touch those things that had to do with divine worship; and so when they did approach, they did so with more reverence and humility of mind.

In some of these cases the literal reason was so that men would not stay away from divine worship in order to avoid contact with lepers or other sick people whose diseases were loathsome and contagious. Again, in some cases the reason was to prevent idolatry, since in their rites the Gentiles sometimes used human blood and seminal fluid.

Now all types of corporeal uncleanness were purified either through the mere sprinkling of water or, in the case of more serious impurities, through some sacrifice to expiate the sin from which the indispositions (*infirmities*) arose.

On the other hand, the figurative reason for these impurities was that the forms of exterior uncleanness were figures of different types of sin. For instance, the uncleanness of a corpse signifies the uncleanness of sin, which is the death of the soul. The uncleanness of leprosy signifies the uncleanness of heretical doctrine, because heretical doctrine is contagious, just as leprosy is, and also because there is no false doctrine that does not mix truths with falsehoods, just as on the surface of a leprous body there is a distinction between unclean parts of the flesh and healthy parts. The uncleanness of a woman with a flow of blood signifies the uncleanness of idolatry, because of the stream of blood from immolated victims [in idolatrous rites]. The uncleanness of a man's loss of seminal fluid signifies the uncleanness of fruitless speech (*vana locutio*), since "the seed (*semen*) is the word of God" (Luke 8:11). The uncleanness of sexual intercourse and of a woman giving birth signifies the uncleanness of original sin. The uncleanness of a menstruating woman signifies the uncleanness of a mind weakened by sensual pleasure.

In general, uncleanness contracted by touching an unclean thing signifies the uncleanness of consenting to the sin of another—this according to 2 Corinthians 6:17 ("Exit from among them and be separate, and do not touch what is unclean"). This type of uncleanness by touching also extended to non-living things, since whatever someone who was unclean touched in any way was itself unclean. In this respect, the Law attenuated the superstition of the Gentiles, who claimed that uncleanness is contracted not only by touching someone unclean, but also by speaking with him or looking at him—as

Rabbi Moses reports about a menstruating woman. This signified in a mystical way what Wisdom 14:9 says, “To God, the wicked and his wickedness are alike hateful.”

Now there was also a certain kind of uncleanness that non-living things had in their own right, in the way that the uncleanness of leprosy existed in a house or in clothes. For just as the disease of leprosy occurs in men because of corrupted fluids that putrefy and corrupt the flesh, so too because of corruption and because of excessive moistness or dryness, corrosion sometimes occurs in the stones of a house or even in clothing. And so the Law called this sort of corruption ‘leprosy’, and on the basis of it a house or piece of clothing would be judged unclean—because, as has been explained, every sort of corruption is relevant to uncleanness, and also because the Gentiles worshiped household gods in order to combat this sort of corruption. And so the Law commanded that houses in which persistent corruption of this sort existed should be destroyed and that clothes of this sort should be burned, in order to remove an occasion for idolatry.

There were also certain kinds of uncleanness with respect to vessels, spoken of in Numbers 19:15: “The vessel that has no cover or binding over it shall be unclean.” The reason for this uncleanness is that something unclean could easily fall into such vessels and they could in that way be made unclean. This precept, too, was meant to discourage idolatry. For the idolaters believed that if mice or lizards or something of this sort that they sacrificed to their idols suddenly fell into a vessel or into water, they would become more pleasing to their gods. Even now some girls leave vessels uncovered in honor of the nocturnal spirits called the *Janae*.

The figurative reasons for these impurities are as follows: A leprous house signifies the assembly of heretics. A leprous piece of linen clothing signifies the perversity of the habits arising from a bitterness of mind, whereas a leprous piece of wool clothing signifies the perversity of flatterers. A leprous warp signifies vices of the soul, whereas a leprous woof signifies carnal sins; for the soul is in the body as the warp is in the woof. The vase that has no cover or binding signifies a man who has no covering of taciturnity and who is not constrained by any strictness of discipline.

**Reply to objection 5:** As was explained above, there were two kinds of uncleanness under the Law. The one kind involved a corruption of mind or body, and this was the more serious kind of uncleanness. The other kind merely involved touching something unclean, and this was less serious and expiated by a more simple rite. The first kind of uncleanness was expiated by a sacrifice for sins, since every type of corruption proceeds from sin and signifies sin, whereas the second kind of uncleanness was expiated simply by the sprinkling of a certain sort of water. Numbers 19 talks of this water of expiation. For in that place the Lord commands them to take a red heifer in memory of the sin they committed when they adored the calf. And it says a heifer rather than a calf because that is what the Lord used to call the assembly (*synagoga*)—this according to Hosea 4:16 (“Israel has gone astray like a wanton heifer”). Perhaps this was because they worshiped heifers in the manner of the Egyptians—this according to Hosea 10:5 (“They worshiped the heifers of Beth-aven”). Out of detestation for the sin of idolatry, the heifer was sacrificed outside the camp, and whenever a sacrifice was made for the expiation of the sins of the multitude, it was burned as a whole outside the camp. And in order to signify that through this sacrifice the people were cleansed from the totality of their sins, the priest dipped his finger into the heifer’s blood and sprinkled it “over against the entrance of the tabernacle seven times” (Numbers 19:4) because the number *seven* signifies a totality. The sprinkling itself also had to do with the renunciation of idolatrous rites in which the blood was not poured out but instead collected, and the men gathered around it to have a meal in honor of the idols. Then the blood was burned in the fire. This was either because God had appeared to Moses in a fire and the Law had been given in the midst of fire, or because the burning of the blood signified that idolatry had to be completely rooted out, along with everything having to do with idolatry, just as the heifer was cremated “with her skin and her flesh, her blood and dung being delivered to the flames” (Numbers 19:5).

Also, “cedar wood, hyssop, and twice-dyed scarlet” (Numbers 19:6) were added to the fire to signify that just as cedar wood does not easily putrefy, and twice-dyed scarlet does not lose its color, and hyssop retains its smell even after it has been dried out, so too this sacrifice was for the preservation of the people itself and of its uprightness and devotion. Hence, the ashes of the heifer are said to be “reserved for the multitude of the children of Israel” (Numbers 19:9). Alternatively, according to Josephus, they signified the four elements: the cedar was added to the fire in order to signify earth, because of its earthiness; hyssop signified air, because of its smell; and scarlet signified water for the reason that purple did, because of the tints that are derived from the water—and this was meant to express that the sacrifice was being offered to the creator of the four elements.

And because this sort of sacrifice was offered for the sin of idolatry, and in detestation of idolatry, the one who did the burning and the one who collected the ashes and the one who sprinkled the water with which the ashes had been mixed were all considered unclean, in order to show that anything that had to do in any way with idolatry was to be rejected as unclean. Now the three of them were purified of this uncleanness merely by the washing of their clothes, and they did not need to be sprinkled with water because of this sort of uncleanness, since this would have involved an infinite regress. For the one who sprinkled the water became unclean, and so if he sprinkled himself, he would remain unclean; but if someone else sprinkled him, then that one would remain unclean, and, again, the one who sprinkled that one would remain unclean, and so on *ad infinitum*.

Now the figurative reason for this sacrifice is that the red heifer signifies Christ with respect to the weakness He has taken on (*secundum infirmitatem assumptam*), which the feminine gender designates. The color of the heifer signifies the blood of His passion. The red heifer was of full age, because every operation of Christ’s is perfect. There was no blemish in the heifer and it did not carry a yoke, because Christ did not carry the yoke of sin. It is commanded that the heifer be led to Moses, because they imputed to it the transgression of the Mosaic Law in the violation of the Sabbath. It was commanded that it be handed over to Eleazar the priest, because Christ was handed over to the hands of the priests to be killed. It was sacrificed outside the camp, because Christ suffered outside the gates. The priest dipped his finger into the heifer’s blood because the mystery of Christ’s passion is to be meditated on and imitated with prudence, which the finger signifies. The blood was sprinkled against the tabernacle, through which the assembly is signified, either in order to condemn non-believing Jews or to purify the believing Jews. And it was sprinkled seven times either because of the seven gifts of the Holy Spirit or because of the seven days, in which the whole of time is understood.

Then there are all the things to be burned by the fire, i.e., to be understood spiritually, that have to do with Christ’s Incarnation. The skin and flesh signify Christ’s exterior action. The blood signifies the subtle interior virtue that gives life to His exterior actions. The dung signifies His weariness, His thirst, and every thing else related to His weakness. Of the three added things, the cedar wood signifies the height of hope or of contemplation, the hyssop signifies humility or faith, and the twice-dyed scarlet signifies the twofold charity—for it is through these things that we should adhere to the suffering Christ. The ashes of the fire are collected by “a man that is clean,” because the relics of Christ’s passion found their way to Gentiles who were not culpable in the death of Christ. The ashes were placed in water for the expiation because by virtue of Christ’s passion Baptism has the power to wash away sins. The priest who performed the sacrifice and burned the heifer, along with the priest who burned it and collected the ashes and the priest who sprinkled the water, were all unclean, either because (a) the Jews became unclean from the killing of Christ, through whom our sins are forgiven, and this right up to evening, i.e., until the end of the world, when the remnant of Israel will be converted, or because (b), as Gregory explains in *Pastoralis*, those who deal with holy things in order to cleanse others contract certain impurities themselves, and this right up to evening, i.e., to the end of this life.

**Reply to objection 6:** As has been explained, the sort of uncleanness that stemmed from the

corruption of mind or body was expiated through sacrifices made for sin. Now special sacrifices were made for the sins of individuals, but because some were negligent with regard to the expiation of such sins and impurities, or even failed to offer expiation out of ignorance, it was decreed that once a year, on the tenth day of the seventh month, a sacrifice of expiation should be offered for the whole people.

Since, as the Apostle points out in Hebrews 7:28, “the law makes men who have infirmity priests,” it was necessary that the priest first offer a calf on his own behalf for his own sins, in memory of the sin Aaron committed in the production of the golden calf, along with a ram in a holocaust in order to signify that the priest’s preeminence (*praelatio*), which the ram signifies as the leader of the flock, was ordered toward honoring God.

Then he offered two goats for the people.

One of the goats was sacrificed for the sins of the multitude. For the goat is a foul-smelling animal, and the clothes made from its skin have a pungent smell, and this signified the stench and impurity and pangs of sin. Now the blood of this sacrificial goat, along with the blood of the calf, was carried into the Holy of Holies and sprinkled over the whole sanctuary in order to signify that the tabernacle was being washed clean of the impurities of the children of Israel. But the corpses of the goat and the calf which had been sacrificed for sin had to be burned in order to signify the destruction (*consumptio*) of sin. However, this burning did not take place on the altar, since only the holocausts were totally consumed by fire on the altar. This is why it was commanded that the corpses of the goat and the calf be burned outside the camp in detestation of sin. This is what was done whenever a sacrifice was offered for some particular grave sin or for a multitude of sins.

However, the other goat was sent off into the desert, not to be offered to the demons whom the Gentiles used to worship in desert places, since [the children of Israel] were not allowed to make sacrifices to the demons, but rather to signify the effect of the immolated sacrifice. And so the priest imposed his hand on the goat’s head while confessing the sins of the children of Israel, as if the goat were carrying those sins off into the desert where he would be eaten by beasts—bearing, as it were, the punishment for the sins of the people. The goat was said to be carrying the sins of the people either because its being sent out signified the forgiveness of the sins of the people or because a piece of paper on which the sins had been written was tied to its head.

The figurative reason for these things were as follows: The calf signifies Christ because of His power (*propter virtutem*), the ram signifies Him because He is the leader of the faithful, and the goat signifies Him because of “the likeness of sinful flesh” (Romans 8:3). And Christ Himself was sacrificed for the sins of both the priests and the people, since through His passion both the great and the small (*maiores et minores*) were washed of their sins. Now the blood of the calf and the goat was carried into the sanctuary by the high priest because through the blood of Christ’s passion the entrance into the kingdom of heaven is opened up to us. Their corpses were burned outside the camp, because “Christ suffered outside the gates,” as the Apostle puts it in Hebrews 13:12. On the other hand, the goat that was sent out can signify either (a) Christ’s divine nature itself (*ipsa divinitas*), which goes off into solitude when Christ the man undergoes His suffering—not changing its place, but having its power restrained—or (b) evil desire, which we should cast off from ourselves while offering our virtuous actions (*virtuosos motus*) to the Lord.

As for the uncleanness of those who burned these sacrifices, the figurative reason is the same one given above in the case of the sacrifice of the red heifer.

**Reply to objection 7:** The rite of the Law did not cleanse a leper from the stain of leprosy, but rather declared him to be cleansed. This is shown in Leviticus 14:3-4, where it says of the priest, “When he finds that the leprosy has been cleansed, he shall command him to be purified.” Therefore, the leprosy had already been cleansed, whereas he was said to be purified insofar as he was restored by the priest’s decree to the fellowship of men and to divine worship. (However, it sometimes happened that when the

priest was mistaken in this judgment, the bodily leprosy was cleansed by a divine miracle through the rite of the Law.)

Now there were two purifications for the leper. First, he was judged to be clean, and, second, as clean, he was restored after seven days to the fellowship of men and to divine worship.

In the first purification, the leper who was to be cleansed offered on his own behalf “two living sparrows ..... cedar wood, and scarlet, and hyssop” (Leviticus 14:4), in such a way that the one sparrow and the hyssop were tied to the cedar wood with a scarlet thread, so that the cedar wood was like the handle of a sprinkler, while the hyssop and sparrow were the part of the sprinkler that was dipped into the blood of the other sparrow, which had been “immolated ..... over living waters” (Leviticus 14:5). He offered these four things to counter the four defects of leprosy. The cedar wood, which is a tree not subject to putrefaction, was offered to counter the putrefaction; the hyssop, which is a fragrant plant, was offered to counter the stench; the live sparrow was offered to counter the numbness; and the scarlet, which has a vivid color, was offered to counter the lurid color of leprosy. The live sparrow was sent off flying into the plain because the leper was being restored to his original freedom.

On the eighth day the leper was admitted to the divine worship and restored to the fellowship of men—though he first shaved the hair off his whole body and washed his clothes, since leprosy rots one’s hair and infects one’s clothes and makes them smell bad. Afterwards, a sacrifice was offered for his sins, since leprosy was often inflicted because of sin. Some blood from the sacrifice was put on the tip of the ear of the one who was being cleansed “and on the thumb of his right hand and on the big toe of his right foot” (Leviticus 14:14), because it is in these parts of the body that leprosy is first diagnosed and felt. Three liquids were used in this rite, viz., blood, to counter the corruption of the blood; oil, to signify the healing of the disease; and living water, to wash away the filth.

The figurative reasons were as follows: The two sparrows signify Christ’s divinity and humanity. One of them, viz., the humanity, is immolated in an earthen vessel over living waters, because the waters of Baptism are consecrated by the passion of Christ. The other sparrow, viz., the impassible divinity, remained alive, because the divinity cannot die; and it flew away, because it could not be bound by the passion. Now as noted above, this living sparrow—along with the cedar wood and scarlet (or cochineal) and hyssop, i.e., faith, hope, and charity—was dipped into the water for sprinkling, since we are baptized in faith in the God-man (*in fide Dei et hominis*). Through the water of Baptism, or the water of tears, the man washes his clothes, i.e., his deeds, and all his strands of hair, i.e., his thoughts. The tip of the right ear of the one who is being cleansed is tinged with the blood and the oil in order to guard his hearing against corrupting words, whereas his right thumb and big toe are tinged in order that his action might be holy.

There is nothing special to be said about any of the other things involved in this purification, or in the purification of other kinds of uncleanness, over and beyond what has been said about the other sacrifices for sins or for crimes.

**Reply to objections 8 and 9:** Just as the people were initiated (*instituebatur*) for divine worship through circumcision, so the ministers were initiated for divine worship through a special purification or consecration. In this way they were perceived as being separated off from the others in the sense of being set aside specially, in preference to the others, for the ministry of divine worship. Everything that was done to them in their consecration or initiation had to do with showing that they had a certain prerogative of cleanness and power and dignity. And so three things were done in the initiation of the ministers: first, they were purified; second, they were vested (*ornabantur*) and consecrated; and third, they were assigned (*applicabantur*) to the exercise of the ministry.

As Leviticus 8 [and Numbers 8] have it, all of them were purified in general through a washing with water and through certain sacrifices, while the Levites (*Levitae*) in particular shaved all the hair off their bodies.

The consecration of the high priests (*pontifices*) and priests (*sacerdotes*) was done in the following order: First, after they had been washed, they were clothed with certain special vestments to signify their dignity. The high priest in particular was anointed on the head with the oil of unction in order to signify that the power of consecrating flowed from him to the others, just as the oil flowed from his head to the lower parts of his body—this according to Psalm 132:2 (“Like the precious ointment on the head that ran down upon the beard, the beard of Aaron”).

The Levites, on the other hand, did not have a consecration other than being offered to the Lord by the children of Israel through the hands of the high priest, who prayed for them.

As for the lower priests (*sacerdotes minores*), only their hands, which were to be used for the sacrifices, were consecrated. In addition, the tip of their right ear, the big toe of their right foot, and the thumb of their right hand were tinged with the blood of an immolated animal. This was done in order that (a) they would be obedient to the Law of God in the offering of sacrifices (this was signified by the intinction of the right ear), and in order that (b) they would be solicitous and prompt in carrying out the sacrifices (this was signified by the intinction of the big toe of the right foot and the thumb of the right hand). They, along with their vestments, were sprinkled with the blood of an immolated animal, in memory of the blood of the lamb through which they had been liberated from Egypt. Moreover, in their consecration the following sacrifices were offered: (a) a calf for sin, in memory of the remission of the sin of Aaron in the fashioning of the [golden] calf; (b) a ram for a holocaust, in memory of the offering of Abraham, whose obedience the high priest was expected to imitate; (c) a ram of consecration, which was, as it were, a peace-offering in memory of the liberation from Egypt through the blood of the lamb; and (d) a basket of loaves of bread, in memory of the manna bestowed upon the people.

As for the assignment to the ministry, the fat of the ram and its right shoulder and a piece of bread twisted off from one of the loaves were placed in their hands, in order to show that they accepted the power of making offerings to the Lord. The Levites, on the other hand, were assigned to their ministry by being sent into the tabernacle of the covenant in order to take care of the vessels of the sanctuary.

The figurative meaning of these things was as follows: Those who are to be consecrated to the spiritual ministry of Christ must first be purified by the water of Baptism and the water of tears of faith in Christ’s passion, which is an expiative and cleansing sacrifice. And they should shave all the hairs off their bodies, i.e., they should shave off all evil thoughts. They should also be vested with the virtues and consecrated by the oil of the Holy Spirit and by being sprinkled with the blood of Christ. And they should in this way be ordered toward exercising their spiritual ministries.

**Reply to objection 10:** As has been explained, the intention of the Law was to induce reverence for divine worship, and this in two ways: first, by excluding from divine worship anything that could have been contemptible; second, by affixing to divine worship everything that seemed relevant to giving honor. And if this norm was observed in the case of the tabernacle and the vessels and the animals to be sacrificed, it had to be observed all the more in the case of the ministers themselves.

And so to remove any contempt for the ministers, it was commanded that they not have any bodily blemish or defect, since men of this sort are apt to be held in contempt by others. Because of this, it was also prescribed that those to be assigned to the ministry of God would come not in a haphazard way from just any family (*genus*), but would instead come by a succession of generation from a particular stock, so that in this way they might be thought of as more distinctive and more noble.

To ensure that they would be held in reverence, special ornate vestments and a special consecration were likewise provided for them—this is the general reason for their ornate vestments. As for specific reasons, note that the high priest had eight ornate vestments:

First, he had a linen tunic (*vestis lineae*).

Second, he had a violet tunic (*tunica hyacinthia*), at whose bottom edges there was a circle of little bells and “pomegranates of violet, and purple, and scarlet twice dyed” (Exodus 39:23).

Third, he had a humeral veil (*superhumorale*) that covered his shoulders and the front part of his body down to waist. The humeral veil was composed of gold, violet, purple, twice-dyed scarlet, and twisted linen, and on the shoulders it had two onyx-stones on which were inscribed the names of the sons of Israel.

Fourth, he had a breastpiece (*rationale*) made of the same material. It was square and positioned on the breast, and it was fastened to the humeral veil. On this breastpiece there were twelve precious stones separated into four rows, and the names of the sons of Israel were likewise inscribed on these stones. This was to signify that (a) the high priest was to bear the burden of the whole people, given that he was carrying their names on his shoulders, and that (b) he should constantly be thinking about their well-being, given that he was carrying them on his breast—having them, as it were, in his heart. The Lord also commanded that doctrine and truth (*doctrinam et veritatem*) be put on the breastpiece. For certain points concerning the truth of justice and the truth of doctrine were written on the breastpiece. (The Jews, however, imagine that there was a stone on the breastpiece that changed colors according to the different things that were going to happen to the sons of Israel, and they call this stone ‘Truth and Doctrine’.)

Fifth, there was the belt (*balteus*), i.e., girdle (*cingulus*), of the four colors mentioned above.

Sixth, there was the tiara (*tiara*), i.e., miter (*mitra*), made of linen.

Seventh, hanging on his forehead there was a thin piece of gold metal (*lamina aurea*) that had the name of the Lord on it.

Eighth, there were “the linen loincloths (*femoralia linea*) to cover the flesh of their nakedness” (Exodus 28:42) when they climbed up to the sanctuary or climbed up to the altar.

Of these eight ornate vestments, the lower priests had four, viz., the linen tunic, the loincloth, the belt, and the tiara.

Some give literal reasons for these ornate vestments, claiming that the arrangement of the world is signified in them, as if the high priest were declaring that he is the minister of the creator of the world. Hence Wisdom 18:24 says, “The world was described on the vestments of Aaron.” For the loincloth was a figure of the earth, in which linen grows. The circularity of the belt signified the ocean that surrounds the earth. The color of the purple tunic signified the atmosphere, its little bells signified claps of thunder, and the pomegranates signified flashes of lightning. The humeral veil signified by its variety the stars of the heavens, and the two onyx-stones signified the two hemispheres or, alternatively, the sun and the moon. The twelve gems on the breast, which were positioned on the breastpiece, signify the twelve signs of the zodiac, since the heavens contain explanations of earthly things—this according to Job 38:33 (“Do you know the order of heaven, and can you set down the reason thereof on the earth”). The miter or tiara signified the empyrean heaven, and the piece of gold metal signified God presiding over all things.

The figurative reasons are obvious. The blemishes or defects from which the priests should be immune signify the different vices and sins which they ought to lack. For a priest is not permitted to be blind, i.e., ignorant. Nor is he allowed to be lame, i.e., unstable and tending in many different directions. Nor is he allowed to have a nose that is too small or too big or crooked, i.e., he should not through a lack of discretion do too much or too little or engage in depraved acts; for the nose signifies discretion, because it distinguishes smells. Nor is he allowed to have a broken foot or hand, i.e., he is not allowed to lose the habit of acting well or of progressing toward virtue. He is also rejected if he has a large belly or is hunch-backed, since these signify a love of earthly things. If he is bleary-eyed, then his mind is darkened by carnal desire; for bleary eyes stem from a flow of the humors. He is likewise rejected if he has a pearl-like white spot in his eye, i.e., if in his own mind he presumes that he has the brightness of moral uprightness. He is also rejected if he has a chronic scab, i.e., lustfulness of the flesh (*petulantia carnis*). And he is also rejected if he has a skin disease (*impetigo*) that covers his body without pain and destroys the beauty of his body; this signifies avarice. Also, he is rejected if he has a rupture or is

overweight, since this gives rise to a heaviness of evil in his heart, even if he does not express it in his deeds.

The ornate vestments signify the virtues of the ministers of God. Now there are four virtues that are necessary for all ministers, viz., chastity, which is signified by the loincloth; purity of life, which is signified by the linen tunic; the moderation of discretion, which is signified by the girdle; and rectitude of intention, which is signified by the tiara covering the head.

But before all these, the high priests should have four things. First, they should have the constant remembrance of God in their contemplation, and this is signified by the thin piece of gold metal on their forehead with the name of God on it. Second, they should bear the weaknesses of the people, and this is signified by the humeral veil. Third, they should have the people in their hearts and in their breasts through the solicitude of charity, and this is signified by the breastpiece. Fourth, they should have a heavenly way of life through works of perfection, and this is signified by the violet tunic. That is also why the violet tunic has the golden bells at its edges, signifying the teaching of divine things that must be joined to the high priest's heavenly way of life. The adjoined pomegranates signify unity of faith and agreement in good morals, since his teaching ought to be interconnected in such a way that the unity of faith and peace is not ruptured by it.

## Article 6

### Are there reasoned causes for the ceremonial observances?

It seems that there are no reasoned causes for the ceremonial observances:

**Objection 1:** As the Apostle says in 1 Timothy 4:4: “Every creature of God is good, and nothing received with thanksgiving is to be rejected.” Therefore, it was inappropriate to prohibit, as Leviticus 11 and Deuteronomy 14 do, the eating of certain foods regarded as unclean.

**Objection 2:** Just as animals are given as food for man, so too are plants; hence, Genesis 9:3 says, “..... even as I have given you the green plants, so I have given all meat to you.” But the Law did not single out any plants as unclean, even though some of them were especially harmful, e.g., the poisonous ones. Therefore, it seems that no animals should have been prohibited as unclean, either.

**Objection 3:** If the matter from which something is generated is unclean, then by parity of reasoning that which is generated from it should be unclean. But meat is generated from blood. Therefore, since not all meats were prohibited as unclean, then by parity of reasoning neither should blood—or fat, which is generated from blood—have been prohibited as unclean.

**Objection 4:** In Matthew 10:28 and Luke 12:4 the Lord says, “Do not fear those who kill the body ..... since after death there is nothing else for them to do”—which would not be true if a man were harmed by something that came from his corpse. *A fortiori*, it does not matter how one cooks the meat of an animal that has already been killed. Therefore, it seems unreasonable for Exodus 23:19 to say, “You shall not cook a kid in the milk of his mother.”

**Objection 5:** Among men and animals, it is the ones that come forth first (*primitiva*) that are mandated to be offered to the Lord, since they are more perfect. Therefore, it is inappropriate for Leviticus 10:23 to command, “When you shall have come into the land and shall have planted fruit trees in it, you shall take away their foreskins (*praeputia*) [*read*: their first fruits], and they shall be unclean for you, and you shall not eat of them.”

**Objection 6:** A man's clothing is something separate from his body. Therefore, it should not have been the case that certain specific types of clothing were forbidden to the Jews—for instance, Leviticus

19:19 says, “You shall not wear a garment that is woven of two sorts of cloth,” and Deuteronomy 22:5 says, “A woman shall not be clothed with men’s apparel, neither shall a man use women’s apparel,” and later on in verse 11, “You shall not wear a garment that is woven of wool and linen together.”

**Objection 7:** Being mindful of God’s commandments has to do not with the body, but with the heart. Therefore, it was inappropriate for Deuteronomy 6 to command, “You shall tie the precepts of God as a sign on your hand ..... and they shall be written on the threshold of your doors.” And it was inappropriate for Numbers 15:38-39 to command, “They shall make themselves fringes in the corners of their garments, on which they will put violet ribbons to remind them of the commandments of God.”

**Objection 8:** In 1 Corinthians 9:9 the Apostle says, “God is not concerned about oxen,” and, as a consequence, neither is He concerned about other non-rational animals. Therefore, it was inappropriate for Deuteronomy 22:6 to command, “If you are walking along and you find a bird’s nest, you shall not take the mother with her young.” And it was inappropriate for Deuteronomy 25:4 to command, “You shall not muzzle the ox that is threshing.” And it was inappropriate for Leviticus 19:19 to command, “You shall not make your cattle mate with beasts of any other kind.”

**Objection 9:** The Law made no distinction between clean plants and unclean plants. Therefore, *a fortiori*, there should have been no distinctions made with respect to the cultivation of plants. Therefore, it was inappropriate for Leviticus 19:19 to command, “You shall not sow your field with different kinds of seeds.” And it was inappropriate for Deuteronomy 22:9-10 to command, “You shall not sow your vineyard with different kinds of seeds ..... You shall not plow with an ox and an ass together.”

**Objection 10:** We notice that inanimate things are especially subject to the power of men. Therefore, it was inappropriate to restrict a man, as the precept of the Law found in Deuteronomy 7:25-26 does, from taking the silver and gold from which idols had been made, or from taking the other things found in the temples of the idols. Likewise, the command in Deuteronomy 23:13, “Digging a hole in the earth, they shall cover their excrement with dirt,” seems ridiculous.

**Objection 11:** Piety is especially required in the priests. But piety seems to involve one’s being concerned with the burial of one’s friends; hence, Tobias is praised for this, as Tobias 1:20-25 attests. Similarly, piety sometimes also involves a man’s taking a prostitute for his wife, since in this way he frees her from sin and from a bad reputation. Therefore, it seems inappropriate that these things should be forbidden to the priests in Leviticus 21.

**But contrary to this:** Deuteronomy 18:14 says, “But you are otherwise instructed by the Lord your God.” From this one can gather that observances of the sort in question were instituted by God as the special prerogative of this people. Therefore, these observances are not unreasonable or without due cause.

**I respond:** As has been explained (a. 5), the Jewish people were set aside in a special way for divine worship; and, among the people, the priests were set aside in a special way. And just as the other things assigned to divine worship ought to have some sort of special character that involves the honored status (*honorificentia*) of divine worship, so too in the way of life of the people, and especially of the priests, there ought to be certain special elements, whether spiritual or corporeal, that are congruent with divine worship.

Now worship under the Law was a figure of the mystery of Christ, and so all their actions were a figure of things having to do with Christ—this according to 1 Corinthians 10:11 (“All these things happened to them in figure”). And so the reasons for the observances in question can be assigned in two ways: first, according to their fittingness for divine worship; and, second, insofar as they prefigured something in the life of Christians.

**Reply to objection 1:** As was explained above (a. 5), there were two kinds of pollution or uncleanness observed under the Law, viz., (a) the uncleanness of sin, through which the soul is polluted,

and (b) the uncleanness of any sort of corruption through which the body is in some way defiled.

If we are talking about the first kind of uncleanness, then no types of food are unclean, or able to defile a man, according to their nature; hence, Matthew 15:11 says, “It is not what goes into his mouth that defiles a man, but rather it is what comes out of his mouth that defiles a man,” and this is understood as talking about sins. However, certain foods are incidentally able to defile a man, viz., insofar as they are eaten out of disobedience or contrary to a vow or from excessive sensual desire, or insofar as they promote lust, for which reason some men abstain from wine and meat.

Now as regards corporeal uncleanness, i.e., the uncleanness of corruption, the meat of certain animals is unclean either because (a) the animals feed on unclean things, as the pig does, or because (b) they live in an unclean way, as do animals that live underground, such as moles and mice and others of this sort, and hence have a foul smell, or because (c) their meat generates corrupted humors in human bodies because of its moistness or dryness. And so the people were forbidden to eat the meat of animals having soles, i.e., uncloven hoofs, because of their earthiness. Similarly, they were forbidden to eat the meat of animals that have many clefts in their feet, since these are fierce and sun-scorched, e.g., lion meat and others of this sort. And for the same reason, they were forbidden to eat certain birds of prey, which have excessive dryness, along with certain water fowls, because of their excessive moistness. The same held for certain fish that do not have fins and scales, e.g., eels and others, and this because of their excessive moistness. On the other hand, they were permitted to eat animals that ruminate and have a cloven hoof, since these animals have well-digested humors and a balanced composition; for they are not too moist, which is signified by their hoofs, or too earthy, given that they have a cloven and not a continuous hoof. Among the fish, they were allowed to eat the fish that are drier, which is signified by the fact that they have scales and fins, since it is in this way that the moist composition of fish is tempered. Among the birds, they were permitted to eat the more temperate ones, such as hens, partridges, and others of this sort.

A second reason [for the prohibitions] was the detestation of idolatry. For the Gentiles, and especially the Egyptians, among whom they had been brought up, sacrificed these forbidden animals to their idols or used them for sorcery (*ad maleficia*). On the other hand, they did not eat the animals that the Jews were permitted to eat; instead, they worshiped those animals as gods or abstained from them for other reasons, as was explained above (a. 3, ad 2).

A third reason was to prevent excessive concern about food. This is why they were permitted to eat animals that could be easily and promptly obtained. However, they were generally forbidden to eat the blood and fat of any animal. The prohibition of blood was meant (a) to prevent cruelty, in order that they might hate the shedding of human blood, as was explained above (a. 3, ad 8), and (b) to prevent idolatrous rites, since the custom of the idolaters was to come together around the collected blood in order to have a meal in honor of the idols to whom they thought the blood was especially acceptable. This is why the Lord commanded that the blood be poured out and covered with dust. For this reason they were also forbidden to eat suffocated or strangled animals, because their blood was not separated from their flesh, or because the animals suffered greatly in that kind of death and the Lord wanted to prohibit cruelty even with respect to brute animals, so that having shown kindness (*exercitium pietatis*) even to beasts, the people might withdraw further from cruelty to men. They were forbidden to eat fat, because (a) the idolaters ate it in honor of their gods, and because (b) it was burned in honor of God, and because (c) blood and fat do not make for good nutrition—this is the explanation Rabbi Moses gives. Now the reason for the prohibition of the eating of sinews is expressed in Genesis 32:32, where it says, “The children of Israel, unto this day, eat not the sinew, because Jacob touched the sinew of his thigh and it shrank.”

The figurative reason for these prohibitions is that particular sins are signified by all the prohibited animals, and it is as a figure of those sins that the animals are prohibited. Hence, in *Contra Faustum*

Augustine says, “If someone asks about the pig and the lamb, both are clean by nature, since every creature of God’s is good; however, by signification the lamb is clean and the pig is unclean. It is as if one were to say that both of the words ‘foolish’ and ‘wise’ are clean with respect to the nature of the sounds and letters and syllables out of which they are composed, and yet by signification the one is clean and the other is unclean.” For the animal that ruminates and has a cloven hoof is clean by signification, since the cleft in the hoof signifies the distinction between the two Testaments, or between the Father and the Son, or between the two natures in Christ, or the distinction between good and evil—whereas the rumination signifies meditation on the Scriptures and the sound interpretation of the Scriptures, where anyone who lacks either of these things is spiritually unclean.

The same holds in the case of fish. The ones that have scales and fins are clean by signification, since the fins signify the sublime life, i.e., contemplation, whereas the scales signify the difficult life—and each of these is necessary for spiritual cleanness.

In the case of birds, certain kinds are specifically prohibited. For in the eagle (*aquila*), which flies high, pride is prohibited, and in the griffin (*gryps*), which is inimical to horses and men, the cruelty of the powerful is prohibited. The seahawk (*haliaeetos*), which feeds on small birds, signifies those who prey upon the poor, whereas the kite (*milvus*), which makes special use of deception, signifies fraudulent men. The vulture (*vultur*), which follows an army with the expectation of eating the corpses of the dead, signifies those who desire men to die or to have conflicts with one another, so that they can thereby profit. Raven-like animals (*animalia corvini generis*) signify those who are sullied by sensual desire or who are devoid of good affections, since the raven, once it had been sent off from the ark, did not return. The ostrich (*struthiocamelus*), which cannot fly even though it is a bird, but is always close to the ground, signifies those who, fighting for God, entangle themselves in worldly affairs. The night-raven (*nycticorax*), which sees well at night but cannot see in the daytime, signifies those who are astute in temporal matters but dull in spiritual matters. The seagull (*larus*), which both flies in the air and swims in the sea, signifies those who revere both circumcision and Baptism or, alternatively, those who wish to fly through contemplation and yet to live in the waters of sensual desire. The hawk (*accipiter*), which helps men in catching prey, signifies those who serve the powerful in preying upon the poor. The owl (*bubo*), which seeks its food at night and hides during the day, signifies the lustful, who seek to remain hidden in the night-time works they do. The sea-dove (*mergulus*), which by nature stays under water for long periods of time, signifies the gluttonous, who immerse themselves in the waters of delicacies. The ibis (*ibis*) is an African bird with a long beak which feeds on snakes and is perhaps the same as the stork (*ciconia*); it signifies the envious, who feed upon the ills of others as upon snakes. The swan (*cygnus*) is dazzling white in color and with its long neck extracts its food from the depths of the earth or water; and it can signify men who seek earthly profit with an external veneer of virtue. The pelican (*onocrotalus*) is a bird of the Orient with a long beak, whose jaws have sacks in which it first stores its food, and after an hour sends it to its belly; it signifies the greedy, who collect the necessities of life with excessive solicitude. The purple swamphen (*porphyrio*), beyond the manner of other birds, has one wide foot for swimming and one cloven foot for walking, since in the water it swims like a duck (*anas*), and on dry ground it walks like a partridge (*perdix*); it drinks only when it chews, since it moistens its food with water, and it signifies those who do not want to do anything at another’s bidding but want to do only what has been moistened with the water of their own will. The herodion (*herodio*), commonly called the falcon (*falco*), signifies those whose feet are “quick to the shedding of blood” (Psalm 13:3). The plover (*charadrius*), which is a garrulous bird, signifies the loquacious, whereas the hoopoe (*upupa*), which nests in dung and eats stinking excrement and simulates a moan in its song, signifies the sadness of the world, which works death in unclean men. The bat (*vespertilio*), which flies close to the ground, signifies those who, gifted in worldly knowledge, are wise only about worldly things.

In the case of the fowls and quadrupeds, the only permitted ones are those that have longer back

legs, so that they are able to leap. By contrast, the others, which stay closer to the ground, are prohibited, because those who misuse the doctrine of the four Evangelists and are not uplifted by it are considered unclean.

In the case of the blood and the fat and the nerves, what is being understood as prohibited are cruelty and voluptuousness and a bravado for sinning (*fortitudo ad peccandum*).

**Reply to objection 2:** Men ate plants and other things growing from the earth even before the flood, but the eating of meat seems to have been introduced after the flood. For Genesis 9:3 says, “I have given you all the meat, even as I have given you the green plants.” This is because the eating of things that grow in the earth bespeaks a certain simplicity of life, whereas the eating of meat bespeaks certain pleasures and cares in living. For the earth generates plants spontaneously, and things growing in the earth are procured in great volume with a modicum of effort, whereas a great effort is necessary for eating animals or even for catching them. And so the Lord, wishing to lead His people to a more simple way of life, forbade them to eat many things in the genus of animals, but not in the genus of things growing in the earth.

An alternative reason is that animals were sacrificed to idols, whereas things growing in the earth were not.

**Reply to objection 3:** The reply to the third objection is obvious from what has been said.

**Reply to objection 4:** Even if the kid that has been killed does not know how its own flesh is being cooked, there still seems to be a certain cruelty in the mind of the cook if the mother’s milk, which was given to the kid for nutrition, is used in the consumption of its meat.

Alternatively, one can point out that in the feasts of their idols the Gentiles cooked the meat of the kid in this way in order either to sacrifice it or to eat it. This is why Exodus 23, after it has previously talked about the celebration of the solemn feasts in the Law, adds, “You shall not cook a kid in the milk of his mother.”

The figurative reason for this prohibition is that it prefigured the fact that Christ, who is a kid because of the “likeness of sinful flesh” (Romans 8:3), was not to be cooked, i.e., killed, by the Jews in His mother’s milk, i.e., at the time of His infancy.

An alternative reply is that it signifies that the kid, i.e., the sinner, is not to be cooked in his mother’s milk, i.e., he is not to be soothed with blandishments.

**Reply to objection 5:** The Gentiles offered first fruits, which they considered lucky, to the gods, or even burned them in order to do certain forms of magic. And so the precept is that the people should consider the fruits of the first three years to be unclean. For in a period of three years almost all the trees of that land produce fruit from either seeding or grafting or planting. However, it rarely happens that the stones inside the tree fruits or the hidden seeds are planted; for these take more time to produce fruit, whereas the Law had an eye toward what happened for the most part. Now the fruits of the fourth year were offered to God as the first of the clean fruits, whereas the fruits from the fifth year and beyond were eaten.

The figurative reason was that this prefigured the fact that after the three stages of the Law—one of which lasted from Abraham to David, the second from David to the Babylonian exile, and the third from the Babylonian exile to Christ—Christ, who is the fruit of the Law, was to be offered to God.

An alternative figurative reason is that we should put the first of our own works under suspicion, because of our imperfection.

**Reply to objection 6:** As Ecclesiasticus 19:27 says, “A man’s clothing shows what he is.” And so the Lord wanted His people to be distinguished from other peoples not only by the sign of circumcision, but also by a distinctive way of dressing (*habitus*).

There were two reasons why they were forbidden to wear a garment sewn together from wool and

linen, and why the women were forbidden to wear men's clothes, and vice versa.

First, to prevent idolatrous worship. For in the worship of their gods the Gentiles used various vestments made of diverse materials. Moreover, in the worship of Mars the women put on men's armor, while, conversely, in the worship of Venus men used women's clothing.

The second reason is to fend off lust. For all kinds of disordered sexual intercourse are excluded [by the prohibition of] various mixtures of clothing. A woman dressing in men's clothing, or vice versa, is an incentive to sensual desire and provides an occasion for lust.

The figurative reason is that what is forbidden in the case of a garment sewn together from wool and linen is the combination of the simplicity of innocence, of which the wool is a figure, with the subtlety of malice, of which the linen is a figure. It is also prohibited that a woman should take upon herself the office of teaching or any of the other functions of a man, or that a man should descend to the softness of women.

**Reply to objection 7:** As Jerome says in *Super Matthaëum*, "The Lord commanded that they make violet fringes in the four corners of their garments in order to mark the people of Israel off from other peoples." Hence, in this way they professed that they were Jews, and so by looking at this sign they were induced to be mindful of their Law.

Now the words "You shall tie them on your hand, and they will be always before your eyes" were misinterpreted by the Pharisees when they wrote the Decalogue of Moses on scrolls and tied it on their foreheads like a crown, so that it would move before their eyes. The Lord's intention, however, was that the precepts should be tied to their hand, i.e., to their actions, and that the precepts should be before their eyes, i.e., in meditation. Also, in the case of the violet strips which were inserted inside their cloaks, what is signified is the heavenly intention that ought to be joined to all our works.

Still, one could claim that since these people were carnal and stiff-necked, they had to be stirred to the observance of the Law through sensible things of this sort.

**Reply to objection 8:** There are two kinds of human affect, the one involving reason and the other involving the passions.

With respect to the affect of reason, it does not matter what a man does with brute animals, since all of them have been subjected to his power by God—this according to Psalm 8:8 ("You have subjected all things under his feet"). In this regard, the Apostle says that God is not concerned about oxen because God does not require of man what he does to the oxen or other animals.

However, with respect to the affect of passion, human affect is moved even with respect to the other animals. For since the passion of pity (*miseriordia*) arises from the sufferings of others, and since brute animals are also able to sense pain, the affect of pity can arise in a man even with respect to the sufferings of animals. It follows that one who is able to feel the affect of pity with respect to animals is thereby more disposed toward the affect of pity with respect to men; hence, Proverbs 12:10 says, "The just man has regard for the lives of his beasts, but the innards of the wicked are cruel." And so the Lord, in order that He might call the Jewish people, who were prone to cruelty, back to pity, wished them to be moved to pity even for brute animals and prohibited them from doing to animals certain things that seem to involve cruelty. Thus, He forbade them to cook a kid in its mother's milk, or to muzzle an ox threshing grain, or to kill a mother with her children.

Still, one could also claim that it was out of a detestation of idolatry that they were forbidden to do these things. For the Egyptians considered it evil for oxen that were threshing to eat any of the grain. Again, certain magicians used an incubating mother together with her captured young ones for securing fertility and good fortune in the nurturing of children; also, among the fortune-tellers it was considered good fortune to find a mother incubating young ones.

As for the [prohibition against] mixing animals of differing species, there were three possible literal reasons:

First, detestation of the idolatry of the Egyptians, who used differing mixtures in the service of the planets, which according to their different conjunctions have diverse effects on diverse kinds of things.

The second reason was to prevent sexual intercourse that is contrary to nature.

The third reason is the general one of removing occasions for sensual desire. For animals of different species do not easily mate with one another unless this is procured by men, and the movement of sensual desire is excited in men when they witness animals having sexual intercourse. Hence, as Rabbi Moses reports, among the Jewish traditions there is a precept according to which men should avert their eyes from animals that are having sexual intercourse.

The figurative reasons for these things are as follows: The necessities of life should not be taken from the ox who is threshing, i.e., from the preacher who bears the sheaves of doctrine, as the Apostle puts it in 1 Corinthians 9:10. Again, we should not hold fast the mother along with her young, since in certain matters the spiritual meaning, i.e., the young, should be held on to while the literal observance, i.e., the mother, is overridden. Again, as beasts of burden, i.e., ordinary people, we are forbidden to have sexual intercourse, i.e., to have close connections, with living things of a different kind, i.e., with Gentiles or Jews.

**Reply to objection 9:** As far as the literal reason is concerned, all these agricultural mixtures were prohibited in renunciation of idolatry. For in their veneration of the stars, the Egyptians concocted different mixtures of seeds and animals and clothes, representing the different conjunctions of the stars.

An alternative reply is that all mixtures of the sort in question were prohibited in renunciation of sexual intercourse that is contrary to nature.

Still, these prohibitions have a figurative reason behind them. For the passage “You shall not sow your vineyard with diverse seeds” is to be understood spiritually to mean that strange doctrine is not to be sown within the Church, which is a spiritual vine. And similarly, the field, i.e., the Church, is not to be sown with diverse seeds, i.e., with both Catholic doctrine and heretical doctrine. Nor is to be plowed simultaneously with an ox and a donkey, since he who is foolish is not to join with him who is wise in preaching; for the one impedes the other.

**Reply to objection 10:** [*There is no reply in the manuscripts to objection 10.*]

**Reply to objection 11:** In their rites the magicians and priests of the idols used the bones or flesh of dead men. And so, in order to root out idolatrous worship, the Lord commanded that the lower priests, who ministered in the sanctuary for fixed periods, should not be defiled with death, except for the deaths of those close to them, viz., their father or mother or persons related to them in like manner.

The high priest, however, had always to be prepared for the ministry of the sanctuary, and so he was absolutely forbidden to approach the dead, no matter how closely related they were.

Again, the priests were also commanded to take a virgin as a wife, and not to marry a prostitute or divorced woman. This was meant to induce reverence for the priests, whose dignity might seem to be diminished by such a marriage, and also because of the sons, for whom the mother’s shame would be a source of ignominy—something to be especially avoided insofar as the dignity of the priesthood would be conferred on them according to familial succession.

In order to prevent idolatrous rites, they were also forbidden to shave their heads or beards or to make incisions in their flesh. For the priests of the Gentiles shaved their heads and beards; hence, Baruch 6:30 says, “The priests sit ..... with their garments rent, and their heads and beards shaven.” Also, in the worship of their idols “they cut themselves with knives and lances,” as 3 Kings 18:28 reports. Hence, the contraries of these things were mandated for the priests of the Old Law.

The spiritual reasons behind these precepts are as follows: The priests had to be entirely immune from dead works, i.e., the works of sin. And they should also not shave, i.e., put off wisdom, or rid themselves of their beards, i.e., rid themselves of wisdom, or tear their vestments or cut their flesh, i.e., incur the vice of schism.

## QUESTION 103

### The Duration of the Ceremonial Precepts

The next thing to consider is the duration of the ceremonial precepts. On this topic there are four questions: (1) Were there ceremonial precepts before the Law? (2) Did the Law have the power to give justification? (3) Did the ceremonial precepts cease to apply after Christ came? (4) Is it a mortal sin to observe the ceremonial precepts in the time after Christ?

#### Article 1

##### Did the ceremonies of the Law exist before the Law existed?

It seems that the ceremonies of the Law existed before the Law did:

**Objection 1:** As was explained above (q. 102, a. 3), sacrifices and holocausts have to do with the ceremonies of the Old Law. But there were sacrifices and holocausts before the Law; for Genesis 4:3-4 says, “Cain offered gifts to the Lord from the fruits of the earth, whereas Abel offered gifts from the first-born of his flock and from their fat.” Again, Noah offered holocausts to the Lord, as Genesis 18:20 states; and Abraham did so, too, as Genesis 22:13 reports. Therefore, the ceremonies of the Old Law existed before the Law existed.

**Objection 2:** The construction and anointing (*injunctio*) of an altar have to do with the ceremonies relating to the sacred things. But these things existed before the Law did; for Genesis 13:18 says, “Abraham built an altar to the Lord,” and Genesis 28:18 says of Jacob, “He took the stone ..... and set it up as a monument (*vitulus*), pouring oil over it.” Therefore, the ceremonies of the Law existed before the Law existed.

**Objection 3:** Among the sacraments of the Law the primary one (*primum*) seems to have been circumcision. But as is clear from Genesis 17:10ff., circumcision existed before the Law did. Likewise, the priesthood existed before the Law did; for Genesis 14:18 says, “Melchisedech was a priest of the most high God.” Therefore, the ceremonies of the sacraments existed before the Law existed.

**Objection 4:** As was explained above (q. 102, a. 6), the distinction between clean and unclean animals has to do with the ceremonies of the observances. But this distinction existed before the Law did; for Genesis 7:2-3 says, “Take seven and seven of all the clean animals, but two and two of the unclean animals.” Therefore, the ceremonies of the Law existed before the Law existed.

**But contrary to this:** Deuteronomy 6:1 says, “These are the precepts and ceremonies that the Lord your God has commanded that I should teach you.” But they would not have needed to be taught about them if these ceremonies had already existed. Therefore, the ceremonies of the Law did not exist before the Law existed.

**I respond:** As is clear from what has been said (q. 102, a. 2), the ceremonies of the Law were ordered toward two things, viz., worshiping God and being figures of Christ.

Now whoever worships God must worship Him in specific ways that bear upon exterior worship. But this specification (*determinatio*) of divine worship involves ceremonies in the same way that, as was explained above (q. 99, a.4), the specification of how we are ordered to our neighbor involves judicial precepts. And so just as it was common among men for there to be judicial precepts that were not instituted by God’s authority but were instead ordained by human reason, so too there were certain ceremonies that were specified not by the authority of any law but rather solely by the will and devotion of the men who were worshiping God.

However, since even before the Law existed there were certain outstanding men empowered with a prophetic spirit, it is plausible to believe that they were led by a divine instinct—by a private law, as it were—to a certain set way (*ad aliquem certum modum*) of worshiping God which was appropriate for

interior worship and which was also fit to signify the mysteries of Christ that other actions of theirs were also figures of—this according to 1 Corinthians 10:11 (“All things happened to them in figure”).

Therefore, there were ceremonies before the Law existed, but they were not the ceremonies of the Law, since they were not instituted through any legislation.

**Reply to objection 1:** Before the Law existed, the ancients offered oblations and sacrifices and holocausts out of the devotion of their own will, insofar as it seemed fitting to them that in those things which they had received from God and which they offered out of reverence for God, they should give witness (*protestarentur*) to the fact that they were worshiping God, who is the source and end of all things.

**Reply to objection 2:** They likewise instituted certain sacred things because it seemed fitting to them that there should be some places that were set off from others and tied to divine worship.

**Reply to objection 3:** The sacrament of circumcision was established by God’s command before the Law existed. Hence, circumcision can be called a sacrament of the Law only in the sense that it was observed under the Law and not in the sense that it was instituted by the Law. This is why our Lord says in John 7:22, “Circumcision is not from Moses, but from his fathers.”

Likewise, among those who worshiped God the priesthood existed according to a human specification before the Law existed, since they gave this dignity to the first-born.

**Reply to objection 4:** Before the Law existed, the distinction between clean and unclean animals did not exist as far as eating was concerned, since Genesis 9:3 says, “Everything that moves and lives will be food for you.” Rather, the distinction existed only with respect to the offering of sacrifices, since they offered certain specific animals as sacrifices.

However, if there was any distinction among animals that pertained to eating, this was not because the eating of the animals was illegal—for it was not forbidden by any law—but rather because of abhorrence or custom, just as even now we see that certain foods that are eaten in some lands are abhorred in others.

## Article 2

### Did the ceremonies of the Old Law have the power to confer justification at the time of the Law?

It seems that the ceremonies of the Old Law had the power to confer justification (*habuerint virtutem justificandi*) at the time of the Law:

**Objection 1:** Expiation from sin and the consecration of a man have to do with justification. But Exodus 29:21 says that the priests and their vestments were consecrated through the sprinkling of blood and anointing with oil, while Leviticus 16:16 says that through the sprinkling of the blood of the heifer the priest expiated the sanctuary from the impurities of the children of Israel and from their deceits and sins. Therefore, the ceremonies of the Old Law had the power to confer justification.

**Objection 2:** That by which a man is pleasing to God pertains to justification—this according to Psalm 10:8 (“The Lord is just, and He loved just acts”). But some men were pleasing to God because of the ceremonies—this according to Leviticus 10:19 (“How could I have been pleasing to the Lord in the ceremonies with the mind of a sad man?”) Therefore, the ceremonies of the Old Law had the power to confer justification.

**Objection 3:** What belongs to the worship of God involves the soul as well as the body—this according to Psalm 18:8 (“The Law of the Lord is pure, converting souls”). But as Leviticus 14 points out, lepers were cleansed by the ceremonies of the Old Law. Therefore, *a fortiori*, the ceremonies of the

Old Law were capable of cleansing the soul by conferring justification on it.

**But contrary to this:** In Galatians 2:21 the Apostle says, “If a law had been given that was capable of conferring justification, then Christ would have died for nothing (*gratis*),” i.e., for no reason. But this is absurd. Therefore, the ceremonies of the Old Law did not confer justification.

**I respond:** As was explained above (q. 102, a. 5), there were two kinds of uncleanness under the Old Law. The one kind was spiritual, and this is the uncleanness of sin (*immunditia culpae*). The other kind, by contrast, was corporeal (*immunditia corporalis*) and took away one’s fitness for divine worship; this is the sense in which a leper was unclean, or one who touched something associated with death. Uncleanness of this kind was nothing other than a certain irregularity (*irregularitas*).

The ceremonies of the Old Law had the power to cleanse this second kind of uncleanness, since these ceremonies were remedies applied by legal ordinance to remove those sorts of uncleanness, like the ones mentioned above, which had been induced by a statute of the Law. This is why in Hebrews 9:13 the Apostle says, “The blood of goats and bulls and the sprinkled ashes of a heifer sanctify those who are defiled as far as the cleansing of the flesh is concerned.” And just as the uncleanness that was washed away by these ceremonies was an uncleanness of the flesh rather than of the mind, so shortly before the cited passage (Hebrews 9:10) the Apostle calls these ceremonies ‘justifications of the flesh’ (*iustitiae carnis*). “They are justifications of the flesh,” he says, “imposed during the time of correction.”

However, these ceremonies did not have the power to expiate uncleanness of the mind, i.e., the uncleanness of sin. This is because the expiation from sins could never have been brought about except through Christ, who “takes away the sins of the world,” as John 1:29 says; and since the mystery of Christ’s incarnation and passion had not yet been accomplished in reality, the ceremonies of the Old Law were unable in their own right to have a real power that flowed from the incarnate and suffering Christ in the way that the sacraments of the New Law do. And so these ceremonies were unable to wash away sin. As the Apostle puts it in Hebrews 10:4, “It was impossible for sins to be removed by the blood of bulls and goats.” This is what in Galatians 4:9 the Apostle calls “those empty and weak elements”—weak because they cannot wash away sin, whereas the weakness arises from the fact that they are empty, i.e., from the fact that they do not contain grace in their own right.

Still, at the time of the Law the mind of the faithful ones was able, through faith, to be joined to Christ incarnate and suffering, and so the faithful were justified by their faith in Christ. The observance of the ceremonies in question was a kind of profession of this faith, insofar as the ceremonies were figures of Christ. And the reason that sacrifices were offered for sins in the Old Law was not that the sacrifices themselves washed away sin, but rather that they were a kind of profession of that faith which did wash away sin. The Law itself lends support to this claim by its mode of speaking; for Leviticus 4-5 says that in the offering of sacrifices for sin the priest “will pray for him and his sin will be forgiven”—as if to say that the sin is forgiven not by the power of the sacrifices, but rather because of the faith and devotion of those offering the sacrifices. Note, however, that the fact that the ceremonies of the Old Law expiated corporeal impurities was itself a figure of the expiation of sins that is made through Christ.

So, then, it is clear that the ceremonies under the status of the Old Law did not themselves have the power to confer justification.

**Reply to objection 1:** The sanctification of the priests and their sons and of their vestments, or of any other things, through the sprinkling of blood was nothing other than a deputation for divine worship and a removal of impediments to the purity of the flesh, as the Apostle puts it. This was done as a prefigurement of the sanctification by which Jesus sanctified the people by His own blood.

Similarly, the expiation in question should be thought of as removing corporeal impurities and not sins. Hence, the sanctuary, which was not capable of sinning (*culpae subiectum esse non poterat*), is likewise said to be expiated.

**Reply to objection 2:** In the ceremonies the priests were pleasing to God because of their

obedience and devotion and because of their faith in the reality prefigured by the ceremonies—and not because of the ceremonies themselves considered in their own right.

**Reply to objection 3:** The ceremonies that had been instituted for the cleansing of a leper were not ordered toward removing the uncleanness of the disease of leprosy. This is clear from the fact that these ceremonies were applied only to someone who was already cleansed of the disease; hence, Leviticus 14:3-4 says, “When the priest, upon leaving the camp, finds that the leprosy has been cleansed, he will command that the one *who is purified* should offer, etc.”—and not “*who is about to be purified*.” From this it is clear that the priest was set up as the judge of an already cleansed leper and not of a leper who was about to be cleansed.

Ceremonies of this sort were used to remove an uncleanness of irregularity. However, they say that sometimes, if the priest happened to make a mistake in his judgment, the leper was miraculously cleansed by God through His divine power—and not through the power of the sacrifices. In the same way, as Numbers 5:27 reports, the thigh of the adulterous woman rotted when she drank the water upon which the priest had “heaped curses.”

### Article 3

#### Did the ceremonies of the Old Law cease with the coming of Christ?

It seems that the ceremonies of the Old Law did not cease with the coming of Christ:

**Objection 1:** Baruch 4:1 says, “This is the book of God’s commandments and the law which lasts forever.” But the ceremonies of the Law are part of the Law. Therefore, the ceremonies of the Law were to last forever.

**Objection 2:** A cleansed leper’s offering belongs to the ceremonies of the Law. But even in the Gospel a cleansed leper is ordered to make offerings of this sort. Therefore, the ceremonies of the Old Law did not cease when Christ came.

**Objection 3:** As long as a cause remains, its effect remains. But the ceremonies of the Old Law had certain reasoned causes insofar as they were ordered toward divine worship, even beyond the fact that they were ordered toward being figures of Christ. Therefore, the ceremonies of the Old Law were not supposed to cease.

**Objection 4:** As was explained above (q. 102, a. 4), circumcision was instituted as a sign of Abraham’s faith, and the observance of the Sabbath was instituted to recall the favor of creation, and the other solemn feasts of the Law were instituted to recall others of God’s favors. But Abraham’s faith should be imitated even by us; and the favor of creation, along with God’s other favors, should always be recalled. Therefore, it is even less the case that circumcision and the solemn feasts of the Law should cease.

**But contrary to this:** In Colossians 2:16-17 the Apostle says, “Let no man judge you in meat or in drink, or with respect to a feast day or the new moon or the Sabbaths, which are a shadow of things to come.” And Hebrews 8:13 says, “In saying ‘a new [covenant]’, He has made the former [covenant] old, and that which decays and grows old is near its end.”

**I respond:** As was explained above (q. 102, a. 1 and 2), all the ceremonial precepts of the Old Law were ordered toward the worship of God. Now exterior worship should be proportioned to interior worship, which consists in faith, hope, and charity. Hence, exterior worship should be diversified in a way corresponding to the diversity of interior worship.

Now one can distinguish three states (*status*) of interior worship:

The first state is that in which faith and hope are had both (a) with respect to heavenly goods and also (b) with respect to the means by which we are led to those heavenly goods, where both of these are seen as something future. This is the state of faith and hope under the Old Law.

The second state of interior worship is that in which faith and hope are had (a) with respect to heavenly goods as something future, but (b) with respect to the means by which we are led to those goods as something present or past. This is the state of the New Law.

The third state is that in which both things are had as something present, and nothing is believed in or hoped for as something absent. This is the state of the blessed in heaven (*status beatorum*). Thus, in the state of the blessed nothing that has to do with divine worship is figurative; instead, there is only the act of thanksgiving and the voicing of praise. Thus, Apocalypse 21:22 says of the city of the blessed, “I saw no temple in it, for the Lord, the almighty God, is its temple, and the Lamb.”

Therefore, by parity of reasoning, it was fitting that the ceremonies of the first state, which were figures of the second and third states, should cease when the second state arrived, and that other ceremonies should be introduced which corresponded to the state of divine worship for that later time, in which the heavenly goods are something future, but the divine favors by which we are led to the heavenly goods are something present.

**Reply to objection 1:** The Old Law is said to be eternal in an absolute and unqualified way with respect to its moral precepts. On the other hand, as far as its ceremonial precepts are concerned, it is eternal with respect to the truth that the ceremonies are figures of.

**Reply to objection 2:** The mystery of the redemption of the human race was completed in Christ’s passion; hence, in John 19:30 our Lord says, “It is consummated” (*consummatum est*). As a sign of this, we read that during Christ’s passion the veil of the temple was rent (Matthew 27:51).

And so before Christ’s passion, when Christ was preaching and working miracles, the Law and the Gospel were running side by side, since the mystery of Christ had already begun but had not yet been consummated. And it was for this reason that our Lord ordered the leper to observe the ceremonies of the Law.

**Reply to objection 3:** The literal reasons given above (q. 102) for the ceremonies have to do with divine worship, which was worship with faith in something yet to come. And so when He who was to come had already come, the first state of worship ceased and all the reasons were ordered toward the second state of worship.

**Reply to objection 4:** Abraham’s faith was commended because he trusted God’s promise about his future seed, in which all nations were to be blessed. And so as long as this was still something future, Abraham’s faith had to be professed in circumcision. However, after it had already been accomplished, the same reality was declared by another sign, viz., Baptism, which was in this regard the successor to circumcision—this according to the Apostle in Colossians 2:11-12 (“You have been circumcised with a circumcision made not by hand in the despoiling of the body’s flesh, but rather with the circumcision of our Lord Jesus Christ, buried with Him in Baptism.”)

Moreover, the Sabbath, which signified the first creation, is changed to Sunday (*dies dominicus*), on which the new creature, begun in the Christ’s resurrection, is commemorated.

Likewise, the other solemn feasts of the Old Law are succeeded by the new solemn feasts, since the favors granted to that people signify the favors granted to us through Christ. Hence, the feast of the Passover is succeeded by the feast of the passion and resurrection of Christ. The feast of Pentecost on which the Old Law was given is succeeded by the feast of Pentecost on which the Law of the Spirit of life was given. The feast of the New Moon is succeeded by the feast of the Blessed Virgin on which the illumination of the sun, i.e., Christ, first appeared through the outpouring of grace. The feast of Trumpets is succeeded by the feasts of the apostles. The feast of the Atonement is succeeded by the feasts of the martyrs and confessors. The feast of Tabernacles is succeeded by the feast of the

consecration of a church. The feast of the Assembly and Collection is succeeded by the feast of the angels, or also by the feast of All Saints.

#### Article 4

##### Can the ceremonial precepts be observed without mortal sin after Christ's passion?

It seems that the ceremonial precepts can be observed without mortal sin after Christ's passion:

**Objection 1:** It is unbelievable that the apostles committed mortal sin after having received the Holy Spirit. For as Luke 24:29 says, by His fullness "they were endowed with power from on high." But after the coming of the Holy Spirit the apostles observed the Law. For Acts 16:3 says that Paul circumcised Timothy, and Acts 21:26 says that Paul, acting on the advice of James, "took the men and, having been purified with them, entered the temple, announcing the fulfillment of the day of purification while an offering was being made for each of them." Therefore, the ceremonial precepts can be observed without mortal sin after Christ's passion.

**Objection 2:** The ceremonial precepts include avoiding contact with Gentiles. But the first shepherd (*pastor*) of the Church observed this precept; for Galatians 2:12 says that when certain men came to Antioch, Peter withdrew from the Gentiles and separated himself from them. Therefore, the ceremonies of the Law can be observed without mortal sin after Christ's passion.

**Objection 3:** The commands of the apostles did not lead men into sin. But by a decree of the apostles it was decided that the Gentiles should observe certain of the ceremonial precepts (*quaedam de ceremoniis*) of the Law; for Acts 15:28-29 says, "It has seemed good to the Holy Spirit and to us to lay no further burden upon you than these necessary things: that you abstain from what has been sacrificed to idols, and from blood, and from things strangled, and from fornication." Therefore, the ceremonies of the Law can be observed without sin after Christ's passion.

**But contrary to this:** In Galatians 5:2 the Apostle says, "If you are circumcised, Christ shall profit you nothing." But nothing rules out Christ's fruit except mortal sin. Therefore, being circumcised, along with observing the other ceremonies of the Law, is a mortal sin after Christ's passion.

**I respond:** All the ceremonies were a sort of profession of that faith which the interior worship of God consists in. A man can profess this interior faith by deeds as well as by words, and in both sorts of profession, a man commits a mortal sin if he professes something false.

Now even though the faith we have in Christ is the same faith that the ancient fathers had, nonetheless, because they came before Christ whereas we come after Christ, this same faith is signified with different words by us and by them. For they say, "Behold, a virgin will conceive and bring forth a son," where the verbs are future-tense, whereas we represent this same thing with past-tense verbs by saying, "She conceived and brought forth a son."

Similarly, the ceremonies of the Old Law signified the Christ as someone who would be born and would suffer, whereas our sacraments signify Him as someone who has been born and has suffered. Therefore, just as someone would commit a mortal sin if he now, in professing his faith, claimed that the Christ will be born—something that the ancients said in a pious and faith-filled manner—so too someone would commit a mortal sin if he now observed those ceremonies which the ancients observed in their pious and faith-filled manner. This is what Augustine says in *Contra Faustum*: "Will be born', 'will suffer', and 'will rise'—which those [old] sacraments in a sense resounded with—are no longer permitted. Instead, it is proclaimed that He has been born, that He has suffered, and that He has risen—which the sacraments performed by Christians now resound with."

**Reply to objection 1:** Jerome and Augustine seem to have had differing views on this matter.

Jerome distinguished two periods of time. The one period occurred before Christ's passion, and in this period the ceremonial precepts of the Law were neither dead (*mortua*), in the sense of not having obligatory or expiatory force in their own way, nor deadly (*mortifera*), because those observing them did not thereby sin. However, immediately after Christ's passion, the ceremonial precepts of the Law began to be not only dead, i.e., lacking in power and obligation, but also deadly, in the sense that if anyone observed them, he was committing a mortal sin. For this reason, Jerome claims that after Christ's passion the apostles never in truth observed the ceremonial precepts of the Law, but instead observed them only by a sort of pious simulation, and this in order not to give scandal to the Jews and thus impede their conversion. The simulation is not to be understood in such a way that they did not in truth perform the relevant actions, but rather is to be understood to mean that they did not perform them in such a way as to observe the ceremonial precepts of the Law—as, for instance, if someone were to cut off the foreskin of the male member for the sake of health and not for the sake of observing the legal ceremony of circumcision.

However, because it seems implausible that the apostles should have hidden, out of concern for scandal, those very things that have to do with the truth of life and doctrine, and that they should have made use of a simulation in matters that involve the salvation of the faithful, Augustine more appropriately distinguishes three periods of time. One occurred before Christ's passion, and in this period the ceremonial precepts of the Law were neither dead nor deadly. A second occurs after the time of the spread of the Gospel, and in this period the ceremonial precepts of the Law were both dead and deadly. The third period was the time between the other two, viz., from Christ's passion to the spread of the Gospel, and during this period the ceremonial precepts of the Law were, to be sure, dead, because they did not have power and because no one was obliged to observe them, but they were nonetheless not deadly, because those who had been converted to Christ from among the Jews were able to observe them licitly as long as they did not place their hope in them in such a way that they considered them necessary for salvation, i.e., as long as they did not believe that faith in Christ was unable to justify them in the absence of the ceremonies of the Law. However, there was no reason for those who were converted to Christ from among the Gentiles to observe the ceremonial precepts of the Law.

Accordingly, Paul circumcised Timothy because Timothy had been born of a Jewish mother, whereas he decided not to circumcise Titus, since Titus had been born of Gentiles. However, in order to show the difference between the rites of the Law and the rites of the Gentiles, the Holy Spirit did not want the observance of the ceremonies of the Law to be immediately forbidden for those who had been converted from among the Jews, in the way that the Gentile rites were forbidden for those who had been converted from among the Gentiles. For the rites of the Gentiles were repudiated as altogether illicit and had always been prohibited by God. By contrast, the rites of the Law ceased because they had been fulfilled through Christ's passion; for they had been instituted by God as a figure of the Christ.

**Reply to objection 2:** According to Jerome, Peter put up the pretense of withdrawing from the Gentiles in order to avoid scandalizing the Jews, of whom he was the Apostle. Hence, in this he did not in any way sin. Paul, on the other hand, likewise put up the pretense of reprehending him in order to avoid scandalizing the Gentiles, of whom he was the Apostle.

Augustine, however, disproves this view by appeal to the fact that in the canonical Scriptures, viz., in Galatians 2:11, in which one cannot believe that there is anything false, Paul says that Peter was reprehensible. Hence, it is true that Peter sinned and that Paul corrected him in reality and did not just pretend to correct him.

Still, Peter did not sin in observing the Law for that time period, since he was permitted to observe the Law as someone converted from among the Jews. Instead, he sinned by being excessively diligent in his observance of the Law in order not to scandalize the Jews, with the result that he scandalized the

Gentiles instead.

**Reply to objection 3:** Some have claimed that this prohibition by the apostles should be understood not in a literal sense but in a spiritual sense, so that the prohibition of blood stands for the prohibition of homicide, and the prohibition of what is suffocated stands for the prohibition of robbery and violence, and the prohibition of what has been sacrificed stands for the prohibition of idolatry, and the prohibition of fornication stands for the prohibition of what is bad *per se*. This opinion is accepted by certain Glosses, which expound precepts of this sort in a mystical sense.

However, since homicide and robbery were thought of as being against the law even among the Gentiles, it would not have been necessary for a special commandment to be given about this matter to those who had been converted to Christ from paganism.

Hence, others have claimed that the foods were prohibited literally not because of the observances of the Law but in order to suppress gluttony. Hence, in *Super Ezechiel* 44:31 (“The priests shall not eat of anything that is dead”) Jerome says that the passage in question condemns priests who, out of gluttonous desire, do not keep these precepts in the case of thrushes and other things of this sort.

However, since there are foods that are greater delicacies and more conducive to gluttony, there does not seem to be any reason why the particular foods in question were prohibited rather than others.

Therefore, one should reply, in keeping with a third opinion, that the foods in question were prohibited literally not with an eye toward observing the ceremonies of the Law, but rather in order to strengthen the union of Gentiles and Jews who were living together. For as a matter of ancient custom, blood and strangled meat were abominable to the Jews, whereas the eating of things that had been sacrificed to idols could generate among the Jews the suspicion that the Gentiles were relapsing into idolatry. And so these things were forbidden for the period in which it was necessary to bring Gentiles and Jews together for the first time (*de novo*). However, as time went on and the cause ceased to be present, the effect also ceased to be present—once the truth of the Gospel teaching became evident, where our Lord teaches that “nothing that enters through the mouth makes a man unclean” (Matthew 15:11) and 1 Timothy 4:4 says, “Nothing is to be rejected that is received with thanksgiving.”

On the other hand, fornication was specifically prohibited because the Gentiles did not consider it a sin.

## QUESTION 104

### The Judicial Precepts of the Old Law

Next we have to consider the judicial precepts. First we have to consider them in general and, second, we have to consider the reasons for them.

On the first topic there are four questions: (1) What are the judicial precepts? (2) Are the judicial precepts figurative? (3) How long do they endure? (4) What are the kinds of judicial precepts?

#### Article 1

##### Does the nature of the judicial precepts consist in their directing a man in his relations with his neighbor?

It seems that the nature of the judicial precepts does not consist in their directing a man in his relations with his neighbor (*ordinantia ad proximum*):

**Objection 1:** The judicial precepts (*praecepta iudicialia*) take their name from judicial proceedings (*iudicium*). But there are many other things by which a man is directed in his relations with his neighbor and which do not involve any judicial proceeding. Therefore, it is not the case that these precepts are called judicial because they direct a man in his relations with his neighbor.

**Objection 2:** As was explained above (q. 99, a. 4), the judicial precepts are distinct from the moral precepts. But there are many moral precepts by which a man is directed in his relations with his neighbor, as is clear from the seven precepts of the second tablet. Therefore, it is not the case that precepts are called judicial by reason of the fact that they direct a man in his relations with his neighbor.

**Objection 3:** As was explained above (q. 99, a. 4 and q. 101, a. 1), the judicial precepts bear upon our neighbor in the same way that the ceremonial precepts bear upon God. But among the ceremonial precepts there are some that have to do with one's own self, e.g., the observances regarding food and clothing that were discussed above (q. 102, a. 6). Therefore, it is not the case that precepts are called judicial by virtue of the fact that they direct a man in his relations with his neighbor.

**But contrary to this:** Ezekiel 18:8 lists among the good works of the just man: "... if he judges accurately (*iudicium fecerit verum*) between one man and another." But the judicial precepts take their name from judicial proceedings (*iudicium*). Therefore, it seems that the precepts that are called judicial are those that involve directing men in their relations with one another.

**I respond:** As is clear from what was said above (q. 99, a. 4), certain precepts of the Law have their binding force (*vis obligandi*) from the very dictate of reason—i.e., in virtue of the fact that natural reason dictates that such-and-such is to be done or is to be avoided. Precepts of this sort are called *moral* precepts, because human morals (*mores humani*) come from reason.

By contrast, other precepts do not have their binding force from the very dictate of reason; for, considered in themselves, they do not absolutely speaking have the character of what ought to be done or ought not to be done. Instead, they have their binding force from some statute, either divine or human (*ex aliqua institutione divina vel humana*). Certain specifications (*determinationes*) of the moral precepts are of this sort. Thus, if the moral precepts are given a specification by divine statute in those matters in which man is ordered toward God, then the resulting precepts are called *ceremonial* precepts. On the other hand, if the moral precepts are given a specification in matters that involve the ordering of men to one another, then the resulting precepts are called *judicial* precepts.

Therefore, the nature of the judicial precepts consists in two things, viz., (a) the fact that they have to do with directing men in their relations with one another, and (b) the fact that they have binding force not just from reason, but from statutes.

**Reply to objection 1:** Judicial proceedings are conducted as the official duty of certain rulers (*principes*) who have the power to pass judgment. Now a ruler has the role of bringing order not only to what comes under litigation, but also to the voluntary contracts made among men and to everything that involves the communal life and governance of the people. Hence, the judicial precepts include not only those matters that involve disputes requiring judicial proceedings but also any matter that involves the ordering of men to one another and that is subject to the determination of the ruler as the supreme judge.

**Reply to objection 2:** This argument goes through in the case of those precepts that direct a man in his relations with his neighbor and that have their binding force solely from the dictate of reason.

**Reply to objection 3:** It is likewise the case that among the precepts that direct one toward God, some are moral, i.e., are dictated by reason itself as informed by faith—e.g., that God is to be loved and worshiped—whereas others are ceremonial, i.e., they have binding force only by divine ordinance.

Now what pertains to God are not just the sacrifices offered to God, but also anything relevant to one's fitness for making offerings and for worshiping God. For men are directed toward God as their end, and so it is relevant to the worship of God, and thus to the ceremonial precepts, that a man should have a certain sort of fitness (*idoneitas*) with respect to divine worship.

By contrast, a man is not directed to his neighbor as his end in such a way that he must be, within his very self, at the disposal of his neighbor (*ut oporteat eum disponi in seipso in ordine ad proximum*). For this is the way in which servants are related to their masters—where, according to the Philosopher in *Politics* 1, “servants, in all that they are, belong to their masters.” And so there are no judicial precepts that direct a man within himself; instead, all precepts of that sort are moral. For reason, which is the principle of the moral precepts, plays the same role within a man—i.e., with respect to the things pertaining to his very self—that a ruler or judge plays within a city.

Still, note that because the relation of a man to his neighbor falls [directly] under reason to a greater degree than does the relation of a man to God, there are more moral precepts by which a man is directed in his relations with his neighbor than there are moral precepts by which he is directed toward God. It is for this reason, too, that in the Law there are more ceremonial precepts than there are judicial precepts.

## Article 2

### Are the judicial precepts figures of anything?

It seems that the judicial precepts are not figures of anything:

**Objection 1:** It seems proper to the ceremonial precepts to be instituted as a figure of something. Therefore, if the judicial precepts were likewise figures of something, then there would be no difference between the judicial precepts and the ceremonial precepts.

**Objection 2:** Just as the Jewish people were given certain judicial precepts, so other peoples among the Gentiles were given judicial precepts, too. However, the judicial precepts of those other peoples were not figures of anything, but instead laid down what ought to be done. Therefore, the judicial precepts of the Old Law do not seem to have been figures of anything, either.

**Objection 3:** What pertains to the worship of God had to be handed down by means of figures, since, as was explained above (q. 101, a. 2), the things of God exceed our reason. By contrast, what has to do with our neighbor does not exceed our reason. Therefore, it is unnecessary for the judicial precepts, which direct us in our relations with our neighbor, to be figures of anything.

**But contrary to this:** In Exodus 21 the precepts are explained by means of both an allegorical sense and a moral sense (*allegorice et moraliter*).

**I respond:** There are two ways in which a precept can be a figure of something:

In the first way, a precept is a figure primarily and *per se*, i.e., it is instituted mainly in order to be a figure of something. This is the way in which the ceremonial precepts are figurative, since they were instituted in order to be figures of things having to do with the worship of God and the mystery of Christ.

On the other hand, certain precepts are figurative not primarily and *per se*, but in a derivative way (*in consequenti*). This is the way in which the judicial precepts of the Old Law are figurative. For they were instituted not for the purpose of being figures of anything, but rather for the purpose of regulating the condition (*status*) of the Jewish people in accordance with justice and equity. However, the judicial precepts were figures of something in a derivative way, viz., insofar as the overall condition (*totus status*) of the people who were disposed by these precepts was itself figurative—this according to 1 Corinthians 10:11 (“All things happened to them in figure”).

**Reply to objection 1:** As has been explained, the ceremonial precepts were figurative in a way different from that in which the judicial precepts were figurative.

**Reply to objection 2:** The Jewish people had been chosen by God in order that the Christ should be born from them. And so, as Augustine puts it in *Contra Faustum*, the overall condition of that people had to be prophetic and figurative. Because of this, it was also the case that the judicial precepts given to that people were figurative to a greater degree than the judicial precepts given to other peoples. For instance, that people’s wars and deeds are given a mystical interpretation, unlike the wars and deeds of the Assyrians and the Romans—even though the latter are far more famous among men.

**Reply to objection 3:** If, within that people, the directing of a man in his relations with his neighbor is considered merely by itself, then it is accessible to reason (*pervius rationi*). However, it surpassed reason insofar as it was ordered toward the worship of God. And it is on this score that it was figurative.

### Article 3

#### Do the judicial precepts of the Old Law have perpetual binding force?

It seems that the judicial precepts of the Old Law have perpetual binding force (*perpetuam obligationem habeant*):

**Objection 1:** The judicial precepts (*praecepta iudicialia*) have to do with the virtue of justice, since a legal judgment (*iudicium*) is an execution of justice. But as Wisdom 1:15 says, justice is “everlasting and undying (*perpetua et immortalis*).” Therefore, the binding force of the judicial precepts is perpetual.

**Objection 2:** A divine statute (*institutio divina*) is more stable than a human statute. But the judicial precepts of the codes of human law have perpetual binding force. Therefore, *a fortiori*, so do the judicial precepts of divine law.

**Objection 3:** In Hebrews 7:18 the Apostle says, “The previous Law (*mandatum*) was set aside because of its weakness and unprofitableness.” This is true of the ceremonial Law, which, as the Apostle says in Hebrews 9:9-10, “could not make one perfect in conscience except only with respect to food and drink and various types of ritual washing and rules governing the flesh.” By contrast, the judicial precepts were useful and effective for the purpose to which they were ordered, viz., to establish justice and equity among men. Therefore, the judicial precepts of the Old Law were not set aside, but still have force.

**But contrary to this:** In Hebrews 7:12 the Apostle says, “Once the priesthood is transferred

(*translatum*), the Law must be transferred as well.” But the priesthood is transferred from Aaron to Christ. Therefore, the whole of the Law is transferred. Therefore, it is not the case that the judicial precepts still have binding force.

**I respond:** The judicial precepts did not have perpetual binding force, but were set aside with the coming of Christ—though in manner different from that in which the ceremonial precepts were set aside.

For the ceremonial precepts were set aside in such a way that they are not only dead but also deadly for those observing them after Christ, especially after the spread of the Gospel. By contrast, the judicial precepts are, to be sure, dead, since they do not have binding force, and yet they are not deadly. For if a ruler were to command that these judicial precepts should be observed in his domain, he would not thereby sin—unless, perhaps, the precepts were observed or were to be observed as if they had their binding force from the institution of the Old Law. For this sort of intention in observing them would be deadly.

The explanation for this difference between the ceremonial precepts and the judicial precepts can be gathered from what was said above (a. 2). For it was claimed that the ceremonial precepts are figurative primarily and *per se*, in the sense that they were instituted primarily to be figures of the mysteries of the Christ understood as something future. And so to observe them now is prejudicial to the truth of the Faith, since we now confess that these mysteries have been accomplished. By contrast, the judicial precepts were instituted not in order to be figures, but in order to mold the state of the people that was ordered toward the Christ. And so when the status of that people changed because Christ had already come, the judicial precepts lost their binding force; for as Galatians 3:24 says, the Law was a teacher leading them to the Christ.

Still, since the judicial precepts are ordered not toward being figures of anything, but rather toward something’s being done, the observance of those precepts is not itself, absolutely speaking, prejudicial to the truth of the Faith. However, the intention to observe the judicial precepts because of the binding power of the Law is indeed prejudicial to the truth of the Faith. For it implies that the former people’s state still persists and that the Christ has not yet come.

**Reply to objection 1:** To be sure, justice must always be observed. But the specification of what is just by human or divine decree must vary with the different states of men.

**Reply to objection 2:** The judicial precepts instituted by men have perpetual binding force as long as the relevant state of the regime persists. But if a city or nation devolves into another regime, then the laws must change. For instance, as is clear from the Philosopher in his *Politics*, it is not the case that the same laws are appropriate for both a democracy, which is rule by the people (*potestas populi*), and an oligarchy, which is rule by the rich (*potestas divitum*). So, too, once the status of the people in question changed, the judicial precepts had to change.

**Reply to objection 3:** The judicial precepts disposed the people toward justice and equity in a way appropriate for their status. But after Christ, the status of that people had to change, since now in Christ there would be no distinction between Gentile and Jew, as there had been before. For this reason, the judicial precepts also had to change.

#### Article 4

##### Can the judicial precepts be divided into set kinds?

It seems that the judicial precepts cannot be divided into set kinds:

**Objection 1:** The judicial precepts direct men in their relations with one another. But the things

that need to be directed among men and are part of human practice do not fall under set kinds, since there are infinitely many of them. Therefore, the judicial precepts cannot have set kinds.

**Objection 2:** The judicial precepts are specifications of the moral precepts. But the moral precepts do not seem to admit of set kinds, except insofar as they are traced back to the precepts of the Decalogue. Therefore, the judicial precepts do not have set kinds.

**Objection 3:** Since the ceremonial precepts have set kinds, their division is based on the Law, as when some are called sacrifices and some are called observances. But there is no division of the judicial precepts that is based on the Law. Therefore, it seems that the judicial precepts do not have set kinds.

**But contrary to this:** Where there is order, there must be distinctions. But the notion of order is especially relevant to the judicial precepts, through which the people in question were ordered. Therefore, the judicial precepts ought especially to have set kinds.

**I respond:** Since law is, as it were, the craft (*ars*) of instituting or ordering human life, it follows that just as in any craft there is a set distinction among the rules of the craft, so too in any law there must be a set division of the precepts; otherwise, confusion would by itself destroy the law's usefulness. Accordingly, one should claim that the judicial precepts of the Old Law, through which men were ordered in their relations with one another, have divisions corresponding to the divisions of human ordering.

Now within a given people there are four orderings: (a) the ordering of the rulers of the people to their subjects, (b) the ordering of the subjects to one another, (c) the ordering of the people themselves to outsiders (*ad extraneos*), and (d) the ordering of domestic relations, e.g., father to son, wife to husband, master to servant. It is according to these four orderings that the judicial precepts of the Old Law can be divided:

(a) Some precepts are given that have to do with the institution of the rulers and their duties, and with the respect that ought to be shown for them; and this is one part of the judicial precepts.

(b) Again, some precepts are given that have to do with the citizens' relations with one another, e.g., precepts concerning buying and selling, and precepts concerning judgments and penalties. And this is the second part of the judicial precepts.

(c) Again, some precepts are given that have to do with outsiders, e.g., precepts concerning wars against enemies and precepts concerning the manner in which travelers and strangers are to be received. And this is the third part of the judicial precepts.

(d) Again, in the Law some precepts are given that have to do with domestic common life, e.g., precepts concerning servants and wives and children. And this is the fourth part of the judicial precepts.

**Reply to objection 1:** The things that have to do with the ordering of men to one another are, to be sure, infinitely many. However, as has been explained, they can still be reduced to certain set kinds of things according to the differences among human relations.

**Reply to objection 2:** As was explained above (q. 100, a. 3), the precepts of the Decalogue are first in the genus of morals, and so the other moral precepts are appropriately divided by reference to them. By contrast, the judicial and ceremonial precepts have a different sort of binding force that comes not from natural reason but solely by decree. And so their divisions have a different explanation.

**Reply to objection 3:** The Law bases the division of the judicial precepts on the very things that are ordered by the judicial precepts in the Law.

## QUESTION 105

### The Reasons for the Judicial Precepts

Next we have to consider the reasons for the judicial precepts. On this topic there are four questions: (1) What are the reasons for the judicial precepts that have to do with the rulers? (2) What are the reasons for the ones that have to do with the common life of men with one another? (3) What are the reasons for the ones that have to do with outsiders? (4) What are reasons for the ones that have to do with domestic life?

#### Article 1

##### Did the Old Law give appropriate direction concerning the rulers?

It seems that the Old Law did not give appropriate direction (*inconvenienter ordinaverit*) concerning the rulers:

**Objection 1:** As the Philosopher says in *Politics* 3, “The governance of the people depends principally on the highest ruling office.” But the Law does not say how the highest ruler should be appointed. By contrast, it does say something about the lower rulers in Exodus 18:21-22 (“Provide wise men from among the whole people”), Numbers 11:16-17 (“Gather to me seventy men from among the elders of Israel”), and Deuteronomy 1:13 (“Give me wise and knowledgeable men from among yourselves,” and so on). Therefore, the Old Law did not give sufficient direction concerning the rulers of the people.

**Objection 2:** As Plato says, “It belongs to the best to do the best.” But the best arrangement for a city or for any people is that it should be governed by a king, since governance (*regimen*) of this sort is the best representation of the divine governance by which God rules the world. Therefore, the Law should have set up a king for the people from the beginning, and it should not have left this up to the choice of the people, as Deuteronomy 27:14-15 does (“When you shall say, ‘I will set a king over me’, then you will set him over you,” and so on).

**Objection 3:** As Matthew 12:25 says, “Every kingdom divided against itself will be laid waste,” and this became clear from experience in the case of the Jewish people, among whom the division of the kingdom was a cause of devastation. But the Law should principally tend toward what contributes to the common welfare. Therefore, the Law should have forbidden the division of the kingdom between two kings. Nor should this division have been introduced by divine authority, in the way that, according to 3 Kings 11, it was introduced by the Lord’s authority through the prophet Ahijah the Shilonite.

**Objection 4:** Just as the priests are ordained (*instituantur*) in order to benefit the people in those things that have to do with God, as is clear from Hebrews 5, so too the rulers are constituted in order to benefit the people in human affairs. But certain things on which their livelihood depends—e.g., tithes and first fruits and many other such things—are allotted to the priests and Levites under the Law. Therefore, in the same way, certain things necessary for sustenance should have been directed to the rulers of the people, especially in light of the fact that they were forbidden to accept gifts, as is clear from Exodus 23:8 (“You shall not accept gifts, which make even prudent men blind and subvert the words of the just”).

**Objection 5:** Just as a monarchy (*regnum*) is the best kind of government (*regimen*), so a tyranny is the worst corruption of government. But in setting up a king, the Lord instituted a tyrannical rule; for 1 Kings 8:11 says, “This will be the right of the king who is to rule over you: that he should take your sons,” and so on. Therefore, the Law did not appropriately provide for the regulation of the rulers.

**But contrary to this:** In Numbers 24:5 the people of Israel is commended for the elegance of its

order (“How beautiful are your tabernacles, O Jacob, and your tents, O Israel”). But the beauty of a people’s order depends on its rulers being instituted in the right way. Therefore, through the Law this people was set up correctly with respect to its rulers.

**I respond:** There are two points to notice regarding the fitting institution (*ordinatio*) of the rulers in a city or among a people.

The first is that everyone should have some role in governance (*principatus*), since, as *Politics 2* points out, the peaceful existence (*pax*) of a people is thereby maintained, and everyone loves and safeguards an arrangement of this sort.

The second point has to do with the type of political arrangement (*species regiminis*), i.e., the manner in which the ruling offices are constituted. Even though, as the Philosopher points out in *Politics 3*, there are various types of political arrangements, the preeminent types are monarchy (*regnum*), in which a single ruler governs in accord with virtue (*principatur secundum virtutem*), and aristocracy (*aristocratia*), i.e., rule by the best, in which a small number govern in accord with virtue.

Hence, the best manner of constituting the ruling offices occurs in a city or region in which (a) there is a single person who is placed in authority on the basis of virtue (*secundum virtutem*) and presides over everyone, and in which (b) under him there are certain others who govern in accord with virtue, and yet in which (c) this political arrangement involves everyone (*ad omnes pertinet*), both because the rulers can be chosen *from among* everyone and also because they are chosen *by* everyone. This is the best political arrangement, with a good mixture of (a) *monarchy*, insofar as there is a single preeminent ruler, and (b) *aristocracy*, insofar as many govern in accord with virtue, and (c) *democracy*, i.e., rule by the people, insofar as the rulers can be chosen from among the people and the choice of rulers falls to the people (*ad populum pertinet electio principum*).

This was the arrangement instituted by divine law. For Moses and his successors governed the people as single rulers over all, which is a certain type of monarchy. Moreover, the seventy-two elders were chosen for their virtue; for Deuteronomy 1:15 says, “I took from your tribes men who were wise and honorable, and I made them rulers.” And this was similar to aristocracy. On the other hand, it was democratic in that (a) these rulers were chosen from among all the people (Exodus 18:21: “Provide wise men from among the whole people”) and (b) the people chose them (Deuteronomy 1:13: “Give me wise men from among yourselves,” and so on). Hence, it is clear that the Law established the best arrangement for the rulers.

**Reply to objection 1:** The people in question were ruled under God’s special care; this is why Deuteronomy 7:6 says, “The Lord your God chose you to be His special people.” And so the Lord reserved to Himself the institution of the highest ruler. And this is just what Moses asked for in Numbers 27:16: “May the Lord, the God of the spirits of all flesh, provide a man to preside over this multitude.” And so Joshua was appointed by God’s command to govern after Moses. And we read, with respect to each of the judges who succeeded Joshua, that “God raised up a savior for the people,” and that “the spirit of the Lord” was in them, as is clear from Judges 3. And so, as is clear from Deuteronomy 17:15 (“You shall appoint him king whom the Lord your God chooses”), the Lord did not hand over to the people the choice of a king, but instead reserved it for Himself.

**Reply to objection 2:** As long as it is not corrupt, monarchy is the best political arrangement for a people. However, because of the great power that is granted to a king, monarchy easily degenerates into tyranny unless the one who is granted such power is completely virtuous. For as the Philosopher says in *Ethics 6*, it is only the virtuous who bear good fortune well.

Now complete virtue is found in only a few cases, and the Jews were particularly cruel and prone to greed—vices through which men especially fall into tyranny. And so at the beginning the Lord did not establish for them a king with full power, but instead instituted a judge and a governor to watch over them. Later on, however, at the request of the people, He granted them a king—though indignantly, so to

speak, as is clear from what He said to Samuel in 1 Kings 8:7 (“It is not you they have rejected, but me, lest I rule over them”).

However, as regards the institution of a king, He did make arrangements from the beginning, first of all, for the manner of choosing a king. In this regard, He made two specifications, viz., (a) that in choosing a king they should wait for the Lord’s judgment, and (b) that they should not make anyone from another nation king, since such kings have no affective ties to the nation over which they preside and, as a result, do not take care of the people. Second, He prescribed how the kings, once appointed, should behave with respect to themselves, viz., that they should not accumulate chariots or horses or wives or even great wealth, since a strong desire for these things makes rulers fall into tyranny and abandon justice. He also specified how they should behave with respect to God, viz., that they should always be reading and meditating on God’s Law, and that they should always live in the fear of God and in obedience to Him. He also specified how they should behave with respect to their subjects, viz., that they should not hold them in contempt out of pride or oppress them, and also that they should not deviate from justice.

**Reply to objection 3:** The division of the kingdom and the multiplication of kings was given to the people less as something for their benefit than as a punishment for the many instances of dissension that they directed against David’s just kingdom. Hence, Hosea 13:11 says, “I will give you a king in my anger,” and Hosea 8:4 says, “They themselves ruled, but not because of me; they became rulers, and I did not know it.”

**Reply to objection 4:** The priests were appointed to sacred affairs through a succession of birth. And the reason was that they would be held in greater reverence if not just anyone from among the people could become a priest; and the honor they received contributed to the reverence for divine worship. And so they had to be granted certain special provisions in the form of tithes and first fruits, as well as oblations and sacrifices, so that they might live off of those things.

By contrast, the rulers, as has been explained, were taken from the people as a whole, and so they had certain possessions of their own that they could live off of. Also, and especially, the Lord forbade the king to have extravagant wealth or showy magnificence, both because (a), given these things, it would difficult for him not to be led into pride and tyranny, and also because (b) if the rulers were not extravagantly rich, and if ruling were arduous and full of anxiety, then ordinary people would not aspire to rule—and in this way one cause of rebellion (*seditio*) was removed.

**Reply to objection 5:** It is not the case that this right was being given to the king by divine institution; rather, the passage is foretelling the usurpation by the kings, who establish this unjust right as they degenerate into tyranny and plunder their subjects.

This interpretation is clear from what is added at the end—viz., “..... and you will be his servants”—which properly has to do with tyranny, since tyrants rule their subjects as if they were servants. Hence, Samuel uttered these words in order to deter them from asking for a king. For what follows is this: “The people refused to listen to the voice of Samuel.”

Still, it can happen that even a good king, in the absence of tyranny, takes away the sons and makes them tribunes and centurions, and demands many things from his subjects—and this in order to procure the common good.

## Article 2

### Were appropriate judicial precepts given with respect to the common life of the people?

It seems that appropriate judicial precepts were not given with respect to the common life of the

people:

**Objection 1:** Men cannot live peacefully with one another if one takes what belongs to another. But this seems to be encouraged in the Law; for Deuteronomy 23:24 says, “Having entered your neighbor’s vineyard, eat as many grapes as you please.” Therefore, the Old Law did not appropriately provide for peace among men.

**Objection 2:** As the Philosopher points out in *Politics* 2, a chief reason why many cities and kingdoms are destroyed is that their possessions fall to women. But this very thing was introduced in the Old Law; for Numbers 27:8 says, “When a man dies without a son, his inheritance shall pass to his daughter.” Therefore, the Law did not appropriately provide for the welfare of the people.

**Objection 3:** As *Politics* 1 says, human society is mainly conserved by the fact that men provide one another with the things they need through buying and selling. But as is clear from Leviticus 25:28, the Old Law undermined the effect of commerce (*virtus venditionis*) by commanding that possessions that had been sold should revert to the seller during the fiftieth year, the year of the Jubilee. Therefore, the Law did not appropriately direct the people on this matter.

**Objection 4:** Human needs are met especially by the fact that men are ready to lend. Yet this readiness is undermined when borrowers do not return what they have taken; hence, Ecclesiasticus 29:10 says, “Many have refused to lend, not out of wickedness, but because they were afraid of being defrauded without cause.” But the Law encourages just this. For, first of all, Deuteronomy 15:2 commanded, “One to whom something is owed by his friend or neighbor or brother shall not ask for it back, because it is the Lord’s year of remission,” and, again, Exodus 22:15 says that if a borrowed animal dies while its owner is present, the borrower does not have to make restitution (*reddere*). Second, the security the lender has because of the promised collateral (*pignus*) is undermined; for Deuteronomy 24:10ff. says, “When you demand of your neighbor something that he owes you, you shall not go into his house to take away the promised collateral,” and, again, “The promised collateral shall not pass the night with you, but you shall give it back to him immediately.” Therefore, the Law did not give sufficient direction in the case of lending.

**Objection 5:** There is a very great risk of being defrauded of what one has deposited for safekeeping (*depositum*), and so the greatest caution has to be exercised; hence, 2 Maccabees 3:15 says, “The priests ..... called upon Him from heaven who made the law concerning things deposited for safekeeping, that He would preserve them safe for those who had deposited them.” But in the precepts of the Old Law little caution is shown in the case of things deposited for safekeeping. For Exodus 22:10-11 says that when something deposited for safekeeping is lost, one should accept the oath of the one with whom the thing was deposited. Therefore, the Law’s direction on this matter was inappropriate.

**Objection 6:** Just as a wage laborer hires out his services, so too some rent out their houses or other possessions. But it is not necessary that a tenant (*conductor*) immediately pay the rent on a house he has rented. Therefore, it was excessively harsh for Leviticus 19:13 to command, “The wages owed to your wage laborer shall not remain in your hands all the way until morning.”

**Objection 7:** Since there is a frequent need for judgments, there should be easy access to a judge. Therefore, it was inappropriate for the Law to prescribe in Deuteronomy 17:8-9 that those seeking judgment for their cases should all proceed to a single fixed place.

**Objection 8:** It is possible not only for two people, but also for three or more, to agree to lie. Therefore, it was inappropriate for Deuteronomy 19:15 to say, “Every word that comes from the mouth of two or three witnesses shall stand.”

**Objection 9:** Punishment should be determined according to the measure of the fault (*culpa*); hence, Deuteronomy 25:2 says, “According to the measure of the sin shall the measure also of the lashes be.” But the Law established unequal punishments for certain equal faults. For instance, Exodus 22:1

says, “The thief shall restore five oxen for one oxen and four sheep for one sheep.” Also, certain sins that are not very grave are punished by severe punishments—e.g., in Numbers 15 a man was stoned because he had gathered wood on the Sabbath. Again, in Deuteronomy 21 it is commanded that an unruly son should be stoned for small transgressions, viz., for spending his time in revelry and feasting. Therefore, punishments were not appropriately instituted in the Law.

**Objection 10:** As Augustine says in *De Civitate Dei* 21, “Tully writes that there are eight forms of punishment recognized in the laws, viz., fines (*damnum*), incarceration (*vincula*), scourging (*verbera*), retaliation (*talio*), public disgrace (*ignominia*), exile (*exilium*), death (*mors*), and servitude (*servitudo*).”

Some of these were established under the Old Law: fines, as when a thief is fined five times or four times as much as he has stolen; incarceration, as when Numbers 15:34 commands, with respect to someone, that he be incarcerated; scourging, as when Deuteronomy 25:2 says, “If they see that he who has sinned deserves flogging, they shall lay him down, and shall make him to be scourged in their presence.” Likewise, the Law imposed public disgrace on anyone who refused to marry the wife of his deceased brother; she was to “take off his shoe and spit in his face.” Again, the Law imposed death, as is clear from Leviticus 20:9: “If anyone curses his father or mother, let him die the death.” Again, the Law imposed the punishment of retaliation, with Exodus 21:24 saying, “An eye for an eye, a tooth for a tooth.” Therefore, it was inappropriate for the Law not to impose the other two forms of punishment, viz., exile and servitude.

**Objection 11:** There ought not to be a punishment unless there is guilt. But brute animals cannot have guilt. Therefore, it is wrong for punishment to be imposed on them, as in Exodus 21:29 (“An ox shall be stoned if it kills a man or a woman”) and Leviticus 20:16 (“If a woman has sexual relations with any beast, she shall be killed along with the beast”). So, then, it seems that things pertaining to the common life of men with one another were inappropriately directed under the Old Law.

**Objection 12:** In Exodus 21:12 the Lord commanded that homicide should be punished by the death of a man. But the death of a brute animal counts for much less than the death of a man. Therefore, the punishment for homicide cannot be adequately replaced by putting a brute animal to death. Therefore, it was wrong for Deuteronomy 21:1-4 to command that “when the corpse of a slain man is found and no one knows who is guilty of the murder ..... the elders of the nearest city shall take from the herd a heifer that has not drawn a yoke or plowed the ground, and they shall bring her into a rough and stony valley that has never been plowed or sown, and there they shall cut off the head of the heifer.”

**But contrary to this:** Psalm 147:20 counts it as a special blessing that “He has not done thus for every nation, and He has not made His judgments known to them.”

**I respond:** In *De Civitate Dei* 2 Augustine cites the following passage from Tully: “A people is a the union of a multitude brought together by consent to the law and by their common welfare.” Hence, it pertains to the notion of a people that the interaction of men with one another should be directed by precepts of law that are just.

Now there are two types of interaction that men have with one another: One type is effected by the authority of the rulers, and the other type is effected voluntarily by private persons. Since everyone’s will is such that it has the capacity to oversee what is subject to its power, it has to be by the authority of the rulers, to whom men are subject, that judgments between men are enacted and that punishments are imposed on evildoers. By contrast, possessions are subject to the power of private persons, and so with respect to these possessions they are able to interact with one another voluntarily, e.g., in buying, selling, making gifts, and other activities of this sort.

Now the Law gave adequate direction with respect to both types of interaction.

For instance, the Law established judges, as is clear from Deuteronomy 16:18 (“You shall appoint judges and magistrates at all its gates, that they might judge the people with just judgment”). Again, the

Law instituted a just order of judgment, as when Deuteronomy 1:16-17 says, “Make a just judgment, regardless of whether the person is a citizen or a stranger; there will be no difference of persons.” Again, as is clear from Exodus 23:8 and Deuteronomy 16:19, the Law removed an occasion for unjust judgment by forbidding judges to accept gifts. Again, as is clear from Deuteronomy 16:6 and 19:15, it fixed the number of witnesses at two or three. Again, as will be described below, the Law established fixed punishments for various crimes.

With respect to possessions, on the other hand, as the Philosopher says in *Politics* 2, it is best for possessions to be divided among the people, and for their use to be partly communal and partly up to the will of those who possess them. These three points were laid out in the Law.

First, the possessions themselves were divided among the individuals. For instance, Numbers 33:53-54 says, “I have given the land for a possession, and you shall divide it among you by lot.” And since, as the Philosopher points out in *Politics* 2, many cities are ruined by disparities in possessions, the Law applied a threefold remedy for regulating possessions. First, the Law stipulated that possessions should be divided equally according to the number of men; hence Numbers 33:54 says, “You shall give a larger part to the more and a smaller part to the fewer.” The second remedy is that one’s possessions do not fall to others in perpetuity but revert to their former owners after a fixed period, so that shares of the possessions do not become mixed up with one another. The third remedy, aimed at removing confusion of the sort just mentioned, is that the relatives of those who die succeed them in ownership: in order, first, the son; second, the daughter; third, the brothers; fourth, the father’s brothers; fifth, any other relative. And to preserve shares of the possessions, the Law further stipulated in Numbers 36:6 that women who inherit should marry men of their own tribe.

Second, the Law stipulated to what extent the use of things would be communal. First, with respect to *taking care of things*, Deuteronomy 22:1 says, “You shall not pass by if you see your brother’s ox or his sheep going astray; but you shall bring them back to your brother,” and likewise for other possessions. Second, with respect to *fruits*, it was generally allowed, for instance, that anyone, having entered his friend’s vineyard, could licitly eat of the fruit, as long as he did not take any fruit away with him. Next, with respect to *poor people in particular*, according to Leviticus 19:9 and Deuteronomy 24:19, the leftover sheaves should be left behind for them, as well as the leftover fruit and bunches of grapes; and according to Exodus 23:11 and Leviticus 25:4, anything grown in the seventh year should be given to them.

Third, the Law regulated the transfer of possessions by those who owned them. One sort of transfer was a *pure gift*. Deuteronomy 14:28-29 says, “Every third year you shall separate off another tithe, and the Levite and the stranger and the orphan and the widow shall come, and they shall eat and be filled.” By contrast, the other sort of transfer was a transfer *with advantageous compensation*—as, for instance, through selling and buying, through leasing and hiring, and through loans and safekeeping, and there are fixed rules in the Law about all of these.

Hence, it is clear that the Old Law appropriately directed the common life of the people.

**Reply to objection 1:** As the Apostle says in Romans 13:8, he who loves his neighbor has fulfilled the Law, since all the precepts of the Law, especially the ones directed toward one’s neighbor, seem to be ordered toward the goal of men loving one another. Now what proceeds from this love is that men share their goods with one another. For as 1 John 3:17 says, “If someone sees his brother suffering from want and closes off his affection from him, then how does the love of God abide in him?” And so the Law intended to make men accustomed to sharing their goods easily with one another, just as the Apostle likewise commands the rich “to give readily and share with others” (1 Timothy 6:18).

Now someone is not quick to share if he does not tolerate his neighbor’s taking something modest from him without any great loss on his part. And so the Law stipulated that someone entering his neighbor’s vineyard is permitted to eat of the fruit there—though he is not permitted to carry any fruit

away, lest this become an occasion for inflicting a large loss on his neighbor and thereby disturbing the peace. Among disciplined people, the taking of a little does not disturb the peace, but rather strengthens friendship and makes men accustomed to being quick to share.

**Reply to objection 2:** The Law did not stipulate that women should have succession with respect to their father's goods unless there were no male children. In such a case it was necessary that the succession pass to the women in order to console the father, to whom it would have been a grave blow if his inheritance were going to pass in its entirety to outsiders.

However, according to Numbers 26:7-8, the Law did apply a due precaution in this matter, commanding that women who succeeded to their father's inheritance should marry within their own tribes, so that the shares of the tribes would not get mixed up with one another.

**Reply to objection 3:** As the Philosopher says in *Politics 2*, the regulation of possessions contributes greatly to the preservation of a city or nation. Hence, as he himself points out, in certain Gentile cities there was a rule that "no one could sell a possession except to compensate for an obvious loss" (*nisi pro manifesto detrimento*). For if possessions were sold indiscriminately, then it could happen that all the possessions would end up with just a few people, making it necessary for the city or region to be emptied of inhabitants. And so in order to remove this danger, the Old Law directed matters in such a way that men's needs might be satisfied by permitting the selling of possessions up to a certain point in time, and yet it removed the danger in question by commanding that at a set point in time the possessions that had been sold should revert to the seller. The Law set things up in this way so that the shares would not get mixed up with one another, but instead there would always be the same determinate division of goods among the tribes.

However, since urban houses were not divided by lot, the Law permitted them to be sold in perpetuity in the same way that mobile goods were. For the number of houses in a city had not been mandated in the same way that the Law had mandated a set measure of possessions which could not be added to. Rather, the number of houses in a city could be increased. By contrast, houses that were not in a city but in a village "that has no walls" (Leviticus 25:31) could not be sold in perpetuity. For houses of this sort are constructed only for purposes related to cultivation and for the safekeeping of possessions. And so the Law appropriately established the same rule for both.

**Reply to objection 4:** As has been explained, the Law's intention was to make men accustomed through its precepts to assisting one another promptly with necessities, since this is especially conducive to friendship. And it mandated such promptness in assisting not only with respect to those goods that are given away freely and without qualification, but also with respect to those goods that are given as loans, since assistance of this sort is the more frequent and the more necessary for the majority of people.

Now the Law prescribed this promptness of assistance in a number of ways:

First, as Deuteronomy 15 shows, the Law prescribed that they should show themselves willing to lend and that they should not withdraw from this practice when a year of remission was approaching.

Second, the Law prescribed that they should not burden the one to whom they lend either with usurious interest or by taking as collateral something that is altogether necessary for his life, and it prescribed that if such things have been taken, they should immediately be given back. For Deuteronomy 23:19 says, "You shall not lend money to your brother unto usury." And Deuteronomy 24:6 says, "You shall not take the lower or upper millstone as collateral, since he has pledged his life to you." And Exodus 22:26 says, "If you take your neighbor's garment as collateral, you shall give it back to him before sunset."

Third, the Law forbade them to be unmannerly in exacting payment. Hence Exodus 22:25 says, "If you lend money to my poor people who live among you, you shall not be exacting with them like an extortioner." And it is because of this that Deuteronomy 24:10-11 likewise says, "When you demand of your neighbor anything that he owes you, you shall not go into his house to take away the collateral, but

you shall stand outside and he shall bring out to you what he has”—this because one’s home is his safest refuge, and thus it is offensive to a man that his own house should be invaded, and also because the Law does not allow a creditor to take the collateral he wants, but rather allows the debtor to give what he needs the least.

Fourth, the Law prescribed that every seventh year debts would be entirely remitted. For it was probable that those who could easily repay their debts would do so before the seventh year and would not defraud their lender without cause. However, if they were altogether unable to repay, then cancelling the debt was owed to them out of love, for the same reason that it should have been given to them from the beginning because of their need.

As regards borrowed animals, the Law prescribed that if, because of the negligence of the borrower, the animals died or were injured in his absence, then he should be forced to make restitution. On the other hand, if the animals died or were injured while he was present and diligently caring for them, then he was not forced to make restitution—especially if they had been rented out for a fee. For they might likewise have died or been injured in the same way under the lender’s care (*apud mutuantem*), and so as long as the borrower succeeded in preserving the animal, the lender would already be profiting from the loan, and it would not be a gratuitous loan. This rule had to be observed especially in cases where the animals were rented out for a fee, since in such cases the lender received a set fee for the use of the animals. Hence, the lender was not to get anything extra by way of restitution for the animals—unless there was negligence on the part of the one entrusted with the animals. On the other hand, if the animals were not rented out for a fee, then the lender could have a just claim for at least as much compensation as the use of the dead or injured animal could have been rented out for.

**Reply to objection 5:** The difference between something that is lent (*mutuum*) and something that is deposited for safekeeping (*depositum*) is that what is lent is handed over for the benefit of the one to whom it is lent, whereas what is deposited for safekeeping is handed over for the benefit of the one who deposits it. And so in certain cases one was more constrained to give back what had been lent than to give back what had been deposited for safekeeping.

What was deposited for safekeeping could be lost in two ways.

First, through an *unavoidable* (i.e., natural) cause, as when an animal deposited for safekeeping died or was disabled, or through an *extrinsic* cause, as when an animal deposited for safekeeping was captured by enemy forces or was eaten by a beast. In this last case, however, one was obliged to return the remains of the slain animal to its owner, whereas in the previous cases one was not obliged to return anything, but was obliged only to take an oath in order to clear away any suspicion of fraud.

The second way in which something deposited for safekeeping could be lost was through an *avoidable* cause, viz., theft. In such a case the guardian was obliged to make restitution if the theft occurred because of negligence on his part. However, as has been explained, one who received an animal on loan was obliged to make restitution even if the animal died or was disabled in his absence. For it took a lesser degree of negligence to make a borrower liable than someone holding a thing in safekeeping, who was liable only in the case of theft.

**Reply to objection 6:** Laborers who sell their services are poor and seek their daily sustenance by their labors. And so the Law was provident in prescribing that a wage laborer should be paid immediately, lest he fall short of food. By contrast, those who rent out other items tend to be well-off, and they do not need the rental fee for their daily sustenance. Thus, the arguments in the two cases are not parallel.

**Reply to objection 7:** Judges are appointed among men to clear up possible ambiguities concerning justice among men.

Now there are two ways in which a matter can be ambiguous:

First, it can be ambiguous *to ordinary people* (*apud simplices*). And to remove this sort of doubt,

Deuteronomy 16:18 mandates that judges and magistrates should be appointed for each tribe in order to judge the people with just judgments.

In the second way, something can be doubtful *even to the experts (apud peritos)*. And so to remove this sort of doubt, the Law prescribed that everyone should return to the principal place which had been chosen by God and in which resided both (a) the *high priest*, who was to clear up doubts concerning the ceremonies of divine worship, and (b) the *high judge* of the people, who was to clear up things relevant to judicial matters among men—just as even in our own time cases are sent from lower judges to higher judges because of appeals (*per appellationem*) or for consultation (*per consultationem*). Hence, Deuteronomy 17:8-9 says, “If you notice among you a difficult and ambiguous judgment and you see that the words of the judges within your gates vary among themselves, then go up to the place that the Lord chooses and you will come to the priests of the Levite race and to the one who is judge at that time.” Still, doubtful judicial matters of this sort did not come up very often, and so the people were not burdened because of this.

**Reply to objection 8:** In human affairs there can be no demonstrative and infallible proofs; rather, what suffices is conjectural probability of the sort that rhetoricians use for persuasion. And so even if it is possible for two or three witnesses to agree in a lie, it is nonetheless not easy for them to conspire in this way or likely that they will do it. And so their testimony is accepted as the truth—especially if they do not vacillate in their testimony or come under suspicion in other ways. Moreover, in order that it might not be easy for witnesses to deviate from the truth, the Law prescribed that witnesses should be examined with extreme care and severely punished when caught in a lie (Deuteronomy 19:16).

However, there was a reason for specifying this number of witness, viz., to signify the infallible truthfulness of the divine persons, who are sometimes numbered as two, with the Holy Spirit as the link between them, and sometimes expressed as three—as Augustine points out in commenting on John 8:17 (“In your Law it is written that the testimony of two men is true”).

**Reply to objection 9:** Severe punishment is imposed not only because of the seriousness of a fault but for other reasons as well:

First, because of the quantity of the sin, since, all other things being equal, the more quantity a sin has, the more severe is the punishment due for it.

Second, because of the sin’s degree of habituation, since men are not easily drawn away from habitual sins except through severe punishments.

Third, because of a high degree of concupiscence or pleasure associated with the sin, since men are not easily drawn away from such sins except through severe punishments.

Fourth, because of the ease with which the sin was committed and the ease of hiding the sin, since when sins of this sort are made public, they should be more severely punished in order to instill fear in others.

As far as the quantity of a sin is concerned, there are four degrees to be noted, even with respect to one and the same deed:

The first occurs when someone commits a sin *involuntarily*. For in such a case, if he acts altogether involuntarily, he is totally exempt from punishment. For instance, Deuteronomy 22:25 says that a girl who is assaulted in the fields is not liable to death, since “she cried out and no one was there to help her.” On the other hand, if someone commits a sin that is in some sense voluntary but he sins out of weakness—as, for instance, when someone sins from passion—then the sin is lessened and the punishment should be lessened to the degree that this judgment about it is true. A possible exception occurs when, for the sake of the common welfare, the punishment, as explained above, is made more severe in order to deter men from sins of this sort.

The second degree of sin occurred when someone sinned *through ignorance*. In such a case guilt was in some way assigned because of the sinner’s negligence in finding something out. Yet instead of

being punished through the mediation of the judges, the sinner expiated his own sin through sacrifices; hence, Leviticus 4:2 says, “The soul that sins through ignorance .....”. However, this should be understood to mean ignorance of a fact and not ignorance of a divine precept, which everyone was expected to know.

The third grade of sin occurred when someone sinned *out of pride*, i.e., out of a fixed choice or out of fixed malice. In such a case he was punished in proportion to the quantity of his crime (*delictum*).

The fourth grade of sin occurred when someone sinned *through impudence* (*protervia*) and *obstinance* (*pertinacia*). In such a case, as a rebel and destroyer of the Law’s ordinance, he was to be wholly destroyed (*omnino occidendus erat*).

Accordingly, the reply to the objection is that in punishing theft, the Law took into consideration the frequency with which something could happen. So for the theft of things that could easily be guarded from thieves, the thief was to make twofold restitution. On the other hand, since sheep grazed in the fields, they could not be easily guarded from theft, and so it happened that sheep were very often taken by theft. Hence, the Law imposed a greater punishment, viz., that four sheep were to be given over for every one stolen. Again, oxen are even more difficult to guard, since they are kept in the fields and they do not graze in herds like sheep do. And so the Law imposed a still greater punishment in their case, viz., that five oxen were to be given back for every one stolen. (I mean this except for times when the same animal was found alive with the thief, in which case the restitution was only twofold, as with other thefts; for there could have been a presumption that the thief was thinking about returning the ox and that this is why he had preserved its life.)

An alternative reply, in accord with a Gloss [on Exodus 22:1], is that an ox has five uses—viz., being sacrificed, plowing, being eaten, giving milk, and providing a hide with many uses—and that this is why five oxen were given back for every one stolen. A sheep, on the other hand, has four uses—viz., being sacrificed, being eaten, giving milk, and providing wool.

Now an unruly son was put to death not because he ate and drank, but because of his contumaciousness and rebellious spirit, which were always punished by death, as was explained above.

On the other hand, someone who gathered wood on the Sabbath was stoned as a violator of the Law, which, as was explained above (q. 100, a. 5), prescribed that the Sabbath should be observed in order to call to mind one’s faith in the creation of the world. Thus, he was put to death as one who was unfaithful (*tamquam infidelis*).

**Reply to objection 10:** The Old Law imposed the death penalty in the case of very serious crimes, viz., sins against God, homicide, kidnapping (*furtum hominum*), disrespect for parents, adultery, and incest. For the theft of other things [besides human beings], the Law imposed fines as punishment. For striking or mutilating someone it imposed the punishment of retaliation, and likewise for the sin of false testimony. In the case of other lesser sins, the Law imposed the punishment of scourging or public disgrace.

Now the Law did impose servitude as a punishment in two cases. The first was when, during the seventh year of remission, someone who was a servant refused to take advantage of the Law in order to depart as a free man. In such a case, the punishment imposed on him was that he would remain a servant in perpetuity. Second, servitude was imposed on a thief when he was unable to make restitution (see Exodus 22:3).

However, the Law did not prescribe absolute exile as a punishment. For it was only among this people that God was worshiped, whereas all the other peoples had been corrupted by idolatry. Hence, if someone were absolutely excluded from this people, it would be an occasion of idolatry for him. And so 1 Kings 26:19 reports that David said to Saul, “They are cursed in the sight of the Lord who have cast me out this day, so that I might not dwell in the inheritance of the Lord, saying: ‘Go, serve strange gods’.”

Still, there was a certain limited exile (*particulare exilium*). For Deuteronomy 19:4 says that if

someone struck down his neighbor unknowingly and was proved to have had no hatred against him, then he was to flee to one of the cities of refuge and remain there until the death of the high priest. He was allowed to return to his home at that time because in the face of a general loss for the whole people, particular grievances were normally put to rest, and so those close to the dead man were less likely to kill the man in question.

**Reply to objection 11:** It was commanded that brute animals should be killed not because of any fault on their part, but as a punishment for their owners, who had not safeguarded the animals from sins of the sort in question. And so an owner was punished more if his ox had already gored people yesterday and the day before, in which case the present danger could have been obviated, than if the ox gored someone all of a sudden.

An alternative reply is that the animals were killed out of hatred for the sin and in order that men should not be struck with terror upon seeing those animals.

**Reply to objection 12:** As Rabbi Moses points out, the literal reason for the precept in question was that the killer was often from a neighboring city. Hence, the killing of the heifer was done to investigate the unsolved homicide (*homicidium occultum*). This was accomplished in three ways: (a) first, the elders of the city swore that they would overlook nothing in guarding their highways; (b) second, the owner of the heifer suffered a loss when the animal was killed, and if the murder was cleared up first, then the animal would not be killed; (c) third, the place where the heifer was killed remained uncultivated. And so, in order to avoid losses of both sorts, the men of the city would be quick to make the murderer known if they knew who he was, and it would rarely happen that no talk or opinions were voiced about the matter.

An alternative reply is that this was done to instill terror, out of hatred for homicide. For the killing of a heifer, which is a useful animal and very strong—especially a heifer that had not yet labored under the yoke—signified that (a) even if the one who had committed the murder was himself useful and strong, he should nonetheless be killed, and that (b) he should die a cruel death, which was signified by cutting the animal's head off, and that (c) he should be cut off from human society as someone vile and contemptible, which was signified by the fact that the heifer, once having been killed, was left in a wild and uncultivated place to rot away.

Now the mystical reason is that the heifer taken from the herd signifies the flesh of Christ, which did not bear the yoke, since He never sinned. Nor did the heifer ever plow the ground, i.e., Christ never admitted of the stain of rebellion. Now the fact that the heifer was killed in an uncultivated valley signified the disgraceful death of Christ, through which all sins are washed away and through which the devil is shown to be the author of murder.

### Article 3

#### Were appropriate judicial precepts given with respect to outsiders?

It seems that appropriate judicial precepts were not given with respect to outsiders (*extranei*):

**Objection 1:** In Acts 10:34-35 Peter says, "In truth I have come to see that God is not a respecter of persons, but, in every nation, whoever fears Him and does justice is acceptable to Him." But those who are acceptable to God should not be excluded from the assembly of God (*ecclesia Dei*). Therefore, it was inappropriate for Deuteronomy 23:3 to command, "The Ammonites and the Moabites, even after the tenth generation, shall not enter into the assembly of the Lord forever," while, on the contrary, in the very same place Deuteronomy 23:7 commands with respect to certain of the nations, "You shall not hate the Edomite, because he is your brother, or the Egyptian, because you were an alien in his land."

**Objection 2:** What is not within our power is not deserving of punishment. But that a man is a eunuch, or that he was born of a prostitute, is not within his power. Therefore, it was inappropriate for Deuteronomy 23:1-2 to command, “The eunuch and he who was born of a prostitute shall not enter the assembly of the Lord.”

**Objection 3:** The Old Law mercifully prescribed that aliens were not to be persecuted; for Exodus 22:21 says, “You shall not molest the alien or persecute him; for you yourselves were likewise aliens in the land of Egypt,” and Exodus 23:9 says, “You shall not make trouble for the alien, for you know the souls of aliens, because you were likewise aliens in the land of Egypt.” Therefore, it was inappropriate for Deuteronomy 23:19 to permit them to lend money to aliens at a usurious rate.

**Objection 4:** Men are much closer to us than trees are. But the closer something is to us, the more we ought to show it the affection of love and the effects of love—this according to Ecclesiasticus 13:19 (“Every beast loves what is like it; so every man likewise loves what is closest to himself.”) Therefore, it was inappropriate for the Lord to command in Deuteronomy 20:5-7 that they were to slay everyone in the captured enemy cities, and yet were not to cut down the fruit trees.

**Objection 5:** Everyone should, in accord with virtue, prefer the common good to his own private good. But in a war conducted against enemies, it is the common good that is sought. Therefore, it was inappropriate for Deuteronomy 20:5-7 to prescribe that when battle was imminent, certain men were to be left at home—for instance, whoever had just built a new house, whoever had planted vines, and whoever had just betrothed a wife.

**Objection 6:** No one ought to profit (*commodum reportare*) from his own faults. But it is a man’s own fault that he is fearful and fainthearted, since this is contrary to the virtue of fortitude. Therefore, it was inappropriate for the fearful and fainthearted to be excused from the hardships of battle.

**But contrary to this:** In Proverbs 8:8 Divine Wisdom says, “All my words are just, there is nothing wicked or perverse in them.”

**I respond:** The relations of men with outsiders can be of two types, viz., *peaceful* and *hostile*. And the Law contained appropriate precepts in directing both types.

There are three ways in which the Jews had occasion to have *peaceful* relations with outsiders:

The first was when outsiders passed through their territory as travelers. The second way was when they came to their land to live as aliens. And with respect to these two ways, Exodus 22:21 says, “You shall not make trouble for the alien,” and Exodus 23:9 says, “You shall not molest the traveler.”

The third way was when outsiders wished to be admitted fully into their fellowship and rites. And a certain order was followed in such cases. For they were not immediately received as citizens—just as, according to the Philosopher in *Politics* 3, in certain nations it was prescribed that no one would be counted as a citizen except those whose grandparents or great-grandparents had been citizens. The reason for this is that if outsiders, upon arriving, were immediately admitted into deliberations about matters pertaining to the people, many dangers could arise. For instance, outsiders, not yet having a firm love for the public good, might strive for certain goals in opposition to the people. And so the Law prescribed that those from nations that had some connection with the Jews—viz., the Egyptians, among whom they had been born and raised, and the Edomites, who were the children of Esau, the brother of Jacob—would be received into the fellowship of the people in the third generation. By contrast, others, since they were from nations that had maintained hostile relations with the Jews, e.g., the Ammonites and Moabites, would never be admitted into the fellowship of the people, whereas the Amalekites, who had been even more hostile to them and had no blood relations with them, would be counted as perpetual enemies. For Exodus 17:16 says, “God will war against Amalek from generation to generation.”

As for *hostile* relations with outsiders, the Law likewise handed down appropriate precepts.

First, it established that war should be justly undertaken; for instance, Deuteronomy 20:10

prescribes that when they go out to attack a city, they should first make an offer of peace.

Second, the Law prescribed that they should courageously fight the war once it had been undertaken, putting their trust in God. And to make sure that this precept would be observed in the best way, the Law prescribed that when battle was imminent, a priest should strengthen them by promising them God's help.

Third, the Law commanded that impediments to battle should be removed by leaving at home certain men who could present problems.

Fourth, the Law prescribed that they should moderate the advantage of victory by sparing the women and children and also by not cutting down the fruit trees of the region.

**Reply to objection 1:** The Law did not exclude the men of any nation from the worship of God and from what pertains to the salvation of the soul. For Exodus 12:48 says, "If an alien wants to dwell with you and to keep the Passover of the Lord, all his males shall first be circumcised, and then he shall celebrate the rite in the prescribed manner, and he shall be as one born in the land."

However, in temporal matters, not everyone was immediately admitted into the common life of the people, and this for the reason explained above. Rather, some, viz., the Egyptians and the Edomites, were admitted in the third generation, whereas others were permanently excluded out of hatred for their past sins, e.g., the Moabites, Ammonites, and Amalekites. For just as one man is punished for a sin he has committed in order that others who see this might be afraid and refrain from sinning, so too a nation or city can be punished for some sin in order that other nations and cities might refrain from a similar sin.

However, it was possible, in light of some act of virtue, that someone should be admitted by dispensation into the fellowship of the people. For instance, Judith 14:6ff. says that Achior, the leader of the children of Ammon, "was joined to the people of Israel, and all of his descendants." And the same is true of the Moabite Ruth, who was a woman of virtue. (Still, one could reply here that the prohibition in question extended only to men and not to women, who were not citizens absolutely speaking.)

**Reply to objection 2:** As the Philosopher says in *Politics* 3, there are two ways in which someone is said to be a citizen, viz., (a) absolutely speaking and (b) in a qualified sense.

A citizen absolutely speaking is one who is able to do those things that properly belong to citizens, e.g., to voice his views or make judgments (*dare consilium vel iudicium*) in the assembly of the people.

On the other hand, a citizen in the qualified sense is someone who lives in the city, including lowly people (*viles personae*) and children and the aged, who are not fit to have power in matters pertaining to the common welfare.

Thus, bastards, because of their lowly origin, were excluded from the assembly, i.e., from the tribunal of the people (*collegium populi*), up to the tenth generation.

The same was true of eunuchs, who were unable to have the honor that is owed to fathers—and especially within the people of the Jews, among whom the worship of God was preserved by carnal generation. For as the Philosopher points out in *Politics* 2, even among the Gentiles those who had begotten many sons were given special honor. However, as regards the things having to do with God's grace, eunuchs were not separated off from the others—just as, in the way explained above, outsiders were not separated off, either. For Isaiah 56:3 says, "Let not the son of the outsider that adheres to the Lord speak, saying, 'The Lord will divide and separate me from His people.' And let not the eunuch say, 'Behold, I am a dry tree'."

**Reply to objection 3:** It was not the Law's intention that usurious interest should be taken from outsiders; rather, the Law permitted this, as it were, because of the Jews' inclination toward greed and in order that they might relate more peaceably to the outsiders from whom they were making a profit.

**Reply to objection 4:** A distinction must be drawn with respect to the citizens of enemy lands.

Some of them lived far away and did not belong to those cities that had been promised to the Jews; and in these cities, once conquered, the men who had fought against the people of God were slain,

whereas the women and children (*infantes*) were spared.

However, in the nearby cities, which had been promised to them, the command was that everyone should be killed because of their prior iniquities, and it was to punish those iniquities that the Lord sent the people of Israel as the executioners of divine justice. For Deuteronomy 9:5 says, “Because they have acted wickedly, they are destroyed at your coming.”

Now it was commanded that the fruit trees be spared because of their usefulness to that people to whose rule the city and its territory were to be subject.

**Reply to objection 5:** There were two reasons why those who had built new houses, planted new vines, or betrothed a wife were exempted from battle.

The first is that the things a man has just acquired or is just about to acquire are such that he normally loves them more and, as a result, is fearful of losing them. Hence, it was likely that because of this love such men would fear death more and so would fight less courageously.

The second reason is that, as the Philosopher says in *Physics* 2, “It seems to be a misfortune, when one is close to acquiring some good, if he is afterwards prevented from doing so.” And so in order that the close survivors would not be more upset by the death of these men who had not gotten to possess the goods awaiting them, and in order that the people would likewise not be horrified, men of this sort were sequestered from the danger of death by being removed from battle.

**Reply to objection 6:** The fearful were left at home not in order that they themselves might thereby have an advantage, but in order that the people might not suffer a disadvantage from their presence. For because of their fearfulness and their taking flight others might likewise be incited to become fearful and take flight.

#### Article 4

##### Did the Old Law issue appropriate precepts with respect to household members?

It seems that the Old Law did not issue appropriate precepts with respect to household members (*circa domesticas personas*):

**Objection 1:** As the Philosopher says in *Politics* 1, a servant, in everything he is, belongs to his master. But what belongs to someone is owed to him perpetually. Therefore, it was inappropriate for Exodus 21:2 to command that servants should go free in the seventh year.

**Objection 2:** Just as an animal, like a donkey or an ox, is a possession of its owner, so too with his servant. But Deuteronomy 22:1-3 prescribes that animals are to be returned to their owners if they are discovered after having gone astray. Therefore, it is inappropriate for Deuteronomy 23:15 to command, “You shall not hand over a servant to his master if he flees to you.”

**Objection 3:** Divine law ought to move one toward mercy even more than human law does. But under human law someone who treats his male or female servants with excessive harshness is severely punished. Now the harshest treatment seems to be that which results in death. Therefore, it is inappropriate for Exodus 21:20-21 to mandate, “If someone beats his male or female servant with a rod .... and the servant survives for a day .... then he shall not be subject to punishment, since the money belongs to him.”

**Objection 4:** As *Politics* 1 and 3 say, the rule of a master over his servant is different from the rule of a father over his child. But it pertains to the rule of a master over his servant that the master is allowed to sell his male or female servant. Therefore, it was inappropriate for the Law to permit someone to sell his daughter as a handmaid or servant.

**Objection 5:** A father has power over his son. But one who has power over a sinner is in a position to punish him. Therefore, it was inappropriate for Deuteronomy 21:19 to prescribe that a father should take his son to the elders of the city to be punished.

**Objection 6:** In Deuteronomy 7:3 the Lord prohibited them from making marriages with aliens; and as is clear from Esdra 10, He commanded that marriages with aliens that had already been contracted should be dissolved. Therefore, it was inappropriate for Deuteronomy 21:10 to permit them to take women captured from alien nations as their wives.

**Objection 7:** As is clear from Leviticus 18, the Lord commanded that certain degrees of consanguinity and kinship were to be avoided in the making of marriages. Therefore, it was inappropriate for Deuteronomy 25:5 to command that if a man died without children, then his brother should marry his wife.

**Objection 8:** Just as there ought to be the greatest degree of familiarity between man and wife, so too there should be the firmest trust. But this cannot be if marriage is dissoluble. Therefore, it was inappropriate for the Lord to permit a man to dismiss his wife with a written decree of divorce (*repudium*) and to prescribe further that he could not take her back as his wife again (Deuteronomy 24).

**Objection 9:** Just as a wife can break trust with her husband, so too a servant can break trust with his master, and a son with his father. But no sacrifice was instituted in the Law as part of the investigation of a servant's harming his master or of a son's harming his father. Therefore, it seems superfluous for the Law to have established, in Numbers 5, a "sacrifice of jealousy" to investigate a wife's adultery.

Therefore, it seems that the Law did not issue appropriate precepts for household members.

**But contrary to this:** Psalm 18:10 says, "The judgments of the Lord are true, justified in themselves."

**I respond:** As the Philosopher says in *Politics* 1, the relation of household members with one another has to do with daily actions that are ordered toward the necessities of life. Now the life of man is preserved in two ways.

First, it is preserved in the *individual*, viz., insofar as numerically the same man remains alive. In the preservation of life in this sense a man is assisted by exterior goods on the basis of which he has food, clothing, and other things of this sort that are necessary for life. And a man needs servants to administer these goods.

Second, the life of man is preserved in the *species* through generation, and for this a man needs a wife in order that he might generate children from her.

So, then, a domestic community involves three sorts of relations, viz., master to servant, man to wife, and father to children. And the Old Law issued appropriate precepts with respect to all of them.

As regards *servants*, the Law prescribed that they should be treated with moderation, both (a) with respect to their work, so that they were not to be burdened with too much work—and this is why Deuteronomy 5:14 says, "The Lord commanded that on the Sabbath day your male and female servants should rest, even as you do"—and also (b) with respect to the punishments imposed on them, so that the Law prescribed that those who mutilated their servants must let them go free (Exodus 21:26-27). The Law prescribed this same freedom in the case of a female servant whom someone took as his wife. Again, the Law specifically prescribed that servants who themselves were members of the Jewish people should be freed in the seventh year, along with everything they had brought with them, including their clothes (Exodus 21:2). In addition, Deuteronomy 15:13 prescribed that they be given provisions for their journey.

As regards *wives*, the Law contained prescriptions about taking a wife. Specifically, as Numbers 36:6 has it, the Law prescribed that they take wives from their own tribe—and this in order that the

shares of the tribes not be conflated with one another. Again, as Deuteronomy 25:5-6 has it, the Law prescribed that a man was to marry the wife of his brother who had died without children—and this in order that someone who could not have descendants according to carnal origin might at least have descendants by a sort of adoption, so that the memory of the dead man would not be totally erased. Again, the Law prohibited them from marrying certain persons, viz., (a) alien women, because of the danger of their being seduced [by alien ways of life], and (b) women who were close relatives, because of the natural reverence owed to them. The Law also prescribed how wives, once taken in marriage, should be treated. Specifically, as Deuteronomy 22 has it, the Law commanded that anyone who falsely accused his wife of a crime should be punished. Again, as Deuteronomy 21 has it, a child was not to suffer harm because of a husband's hatred for his wife. And, as is clear from Deuteronomy 24, a husband was not to persecute his wife because of his hatred for her, but instead he was to dismiss her with a written decree of divorce. Again, in order that even greater love should draw the spouses closer together from the beginning, the Law prescribed that when someone had recently taken a wife, no publicly necessary task should be enjoined on him, so that he might be free to rejoice with his wife.

As regards *children*, the Law prescribed that fathers should give their children discipline by instructing them in the faith. Hence, Exodus 12 says, "When your children ask you, 'What is this rite?', you are to say, 'It is the Passover of the Lord.'" Likewise, the Law prescribed that they should instruct their children in morals. Hence, according to Deuteronomy 21:20, fathers had to say [to the elders], "He dislikes hearing our warnings; he gives himself over to revelry and debauchery."

**Reply to objection 1:** Since the children of Israel had been freed by the Lord from servitude and had thereby been assigned to serve God, the Lord did not want them to be servants in perpetuity. Hence, Leviticus 25:39 says, "If your brother, constrained by poverty, sells himself to you, you shall not oppress him with the service of servants, but he shall be like a wage laborer and a migrant worker. For they are my servants, and I brought them out of the land of Egypt. Let them not be sold as servants." And so since they were not servants absolutely speaking, they were to be let free.

**Reply to objection 2:** This commandment should be understood to be speaking of a servant whose master is seeking to kill him or to enlist his help in some sin.

**Reply to objection 3:** As far as injuries (*laesiones*) inflicted on servants are concerned, the Law seems to have taken into consideration whether or not it was certain [that the injury had resulted from the beating].

If it was certain, then the Law applied a penalty. More specifically, the prescribed penalty for mutilation was the loss of the servant, who was to be granted his freedom, whereas the prescribed penalty for death was that of a murderer, in cases where the servant died while being beaten at the hand of his master.

On the other hand, if it was not certain but had some appearance of being so (*aliquam apparentiam haberet*), then the Law did not impose a punishment in the case of one's own servant, e.g., when the beaten servant did not die immediately, but after a few days. For in that case it was uncertain whether or not he had died from the beating. For if his master had beaten a free man in such a way that the latter did not die immediately but "walked around again with the help of his staff" (Exodus 21:19), then he would not be guilty of homicide, even if the man died afterwards. Still, the master was obligated to assume the expenses which the beaten servant had paid to the doctors. However, this did not apply in the case of a master's own servant, since whatever the servant had—even the very person of the servant—was, as it were, the master's possession. And the reason given for his not being subject to a fine was that the servant's money belonged to him.

**Reply to objection 4:** As has been explained, no Jew could possess another Jew as a servant absolutely speaking; rather, he was a servant in a qualified sense—something like a wage laborer—for a certain period of time. And it is in this sense that the Law permitted someone, under the duress of

poverty, to sell his son or his daughter. This is also shown by the very wording of the Law, which says, “If a man sells his daughter as a servant, she shall not go forth as the handmaids are wont to” (Exodus 21:7). In this same way, a man was able to sell not only his child but even himself, more as a wage laborer than as a servant—this according to Leviticus 25:39-40 (“If, compelled by poverty, your brother sells himself to you, you shall not oppress him with the servitude of servants, but he will be like a wage laborer or migrant worker.”)

**Reply to objection 5:** As the Philosopher says in *Ethics* 10, a father’s authority extends only to the power to admonish, and he does not have the sort of coercive power by which someone rebellious and stubborn can be constrained. And so in this case the Law commanded that a stubborn child should be punished by the rulers of the city.

**Reply to objection 6:** The Lord prohibited them from taking foreign women in marriage because of the danger of seduction, i.e., lest they be led into idolatry. And He prohibited this especially with regard to women from those nations that lived close by, where they would be more likely to retain their own rites.

On the other hand, if the woman was willing to abandon idolatrous worship and to make the transition to worship under the Law, then she could be taken in marriage—as is clear from the case of Ruth, whom Boaz took in marriage. Hence, in Ruth 1:16 she had said to her mother-in-law, “Your people will be my people, and your God my God.” And so it was permitted to take a captive women in marriage only if she first shaved off her hair, cut her nails, cast off the clothes in which she had been captured, and mourned for her father and mother—all of which signified the everlasting rejection of idolatry.

**Reply to objection 7:** As Chrysostom says in *Super Matthaem*, “Because death was an unmitigated evil among the Jews, who did everything with a view to the present life, the Law prescribed that children should be born to the dead man through his brother, and this constituted a certain mitigation of death. However, no one other than his brother or a close relative was ordered to marry the wife of the dead man, since otherwise a child who was to be born from this union would not be regarded as the son of the man who had died. Moreover, an outsider would not be obliged, in the way a brother would be, to sustain the household of the man who had died. For it was a just thing for the brother to do this because of his relationship with the dead man.”

From this it is clear that in taking his brother’s wife as his own, he was acting in the place of his dead brother.

**Reply to objection 8:** The Law permitted divorcing one’s wife not because this was just absolutely speaking, but because of the Jews’ hardness of heart, as our Lord said in Matthew 19:8. We will have to talk about this more fully when we deal with the sacrament of Matrimony.

**Reply to objection 9:** Wives break the trust of matrimony through adultery, and they do it both easily, because of the pleasure, and covertly, because, as Job 24:15 says, “The eye of the adulterer observes darkness.”

However, it is not the case that a similar explanation holds for the case of a son with respect to his father or a servant with respect to his master. For unfaithfulness of this latter sort proceeds not from a desire for pleasure but rather from malice. Nor can it remain hidden in the way that the infidelity of an adulterous woman does.

## QUESTION 106

### The Law of the Gospel, Called the New Law, in Itself

Next we have to consider the Law of the Gospel, which is called the New Law. First, we will consider it in itself (question 106). Second, we will consider it in relation to the Old Law (question 107). Third, we will consider the things contained in the New Law (question 108).

On the first topic there are four questions: (1) What sort of law is it? More specifically, is it a written law or an infused law? (2) As to its power, does it confer justification? (3) As to its beginning, should it have been given from the beginning of the world? (4) As to its end, will it last until the end, or should another law succeed it?

#### Article 1

##### Is the New Law a written law?

It seems that the New Law is a written law:

**Objection 1:** The New Law is the Gospel itself. But the Gospel has been written down; for John 20:31 says, “These things have been written in order that you might believe.” Therefore, the New Law is a written law.

**Objection 2:** An instilled law (*lex indita*) is a law of nature—this according to Romans 2:14-15 (“They do by nature what belongs to the law ... They have the work of the law written in their hearts”). Therefore, if the Law of the Gospel were an instilled law, then it would not differ from the law of nature.

**Objection 3:** The Law of the Gospel belongs only to those who are in the status of the New Covenant. But an instilled law is common both to those in the status of the New Covenant and to those in the status of the Old Covenant; for Wisdom 7:27 says that divine wisdom “conveys herself throughout the nations into holy souls, and she establishes the friends of God and the prophets.” Therefore, the New Law is not an instilled law.

**But contrary to this:** The New Law is the Law of the New Covenant. But the Law of the New Covenant is instilled in the heart. For in Hebrews 8:8-10 the Apostle, citing the authority of Jeremiah 31:31-33 (“Behold the days shall come, says the Lord, and I will consummate a new covenant with the house of Israel and with the house of Judah ...”), goes on to explain what this covenant is in the following words: “This is the covenant I will make with the house of Israel by putting my laws in their minds, and I will write my laws in their heart.” Therefore, the New Law is an instilled law.

**I respond:** As the Philosopher puts it in *Ethics* 9, “Each thing seems to be that which is most prominent in it.” But that which is most prominent in the Law of the New Covenant and in which its power consists is the grace of the Holy Spirit, which is given through faith in Christ. And so the New Law is in the first instance the very grace of the Holy Spirit that is given to those who believe in Christ (*datur Christi fidelibus*).

This is manifestly apparent from the Apostle, who in Romans 3:27 says, “Where, then, is your boasting? It is excluded. By what law? The law of works? No, but by the law of faith.” For he calls the very grace of faith a law. And in Romans 8:2 he says even more clearly, “The Law of the Spirit of life in Christ Jesus has freed me from the Law of sin and death.” Thus, in *De Spiritu et Littera* Augustine says, “Just as the Law of works was written on tablets of stone, so the Law of faith has been written in the hearts of the faithful.” And elsewhere in the same book he says, “What else are the laws of God written by God in our hearts than the very presence of the Holy Spirit?”

Still, the New Law contains certain elements that *dispose* us toward the grace of the Holy Spirit and certain elements that have to do with the *use* of that grace. These elements are, as it were, secondary

aspects of the New Law, about which those who believe in Christ have to be instructed, through both the spoken word and the written word, regarding what they ought to believe and what they ought to do. And so one should reply that the New Law is in the first instance an instilled law, but that, secondarily, it is a written law.

**Reply to objection 1:** The Scriptures of the Gospel contain only things that pertain to the grace of the Holy Spirit, either in the sense that they dispose us toward that grace or in the sense that they direct us in the use of that grace.

In order to dispose our understanding through the faith by which the grace of the Holy Spirit is given, the Gospel contains things that involve the manifestation of either Christ's divinity or His humanity. Again, in order to dispose our affections, the Gospel contains things which involve that hatred of the world through which a man comes to have a capacity for the grace of the Holy Spirit. For as John 14:17 says, "The world [read: lovers of the world] cannot take in (*capere*) the Holy Spirit."

On the other hand, the use of spiritual grace occurs in the works of the virtues, which the Scriptures of the New Testament exhort men to in many ways.

**Reply to objection 2:** There are two senses in which something is instilled (*inditum*) into a man.

The first sense has to do with human nature, and it is in this sense that the natural law is a law which is instilled in a man.

In the second sense, what is instilled in a man is, as it were, something added to his nature through the gift of grace. And this is the sense in which the New Law is instilled in a man, not only pointing out what is to be done, but also helping him to do it.

**Reply to objection 3:** No one has ever had the grace of the Holy Spirit except through explicit or implicit faith in Christ. But it is through faith in Christ that a man belongs to the New Covenant. Hence, if anyone has had the Law of grace instilled in him, then he thereby belonged to the New Covenant.

## Article 2

### Does the New Law confer justification?

It seems that the New Law does not confer justification:

**Objection 1:** No one is justified unless he obeys God's law—this according to Hebrews 5:9 ("He, viz., Christ, has become to all who obey Him the cause of eternal salvation"). But the Gospel does not always bring it about that men obey it; for Romans 10:16 says, "Not everyone obeys the Gospel." Therefore, the New Law does not confer justification.

**Objection 2:** In Romans the Apostle proves that the Old Law did not confer justification from the fact that after it came, transgression increased; for Romans 4:15 says, "The Law makes for wrath, since where there is no law, there is no transgression, either." But the New Law increases transgression even more, since one who continues to sin after the New Law has been given is deserving of even more punishment—this according to Hebrews 10:28-29 ("One who invalidates the Law of Moses dies without any mercy at the word of two or three witnesses. How much more, do you think, does he who tramples upon the Son of God deserve worse punishments?"). Therefore, the New Law, like the Old Law, fails to confer justification.

**Objection 3:** Conferring justification is an effect that belongs properly to God—this according to Romans 8:33 ("It is God who confers justification"). But the Old Law was from God, just as the New Law is. Therefore, the New Law does not confer justification any more than the Old Law did.

**But contrary to this:** In Romans 1:16 the Apostle says, "I am not ashamed of the Gospel, since it

is the power of God for the salvation of all who believe.” But salvation comes only to those on whom justification has been conferred. Therefore, the Law of the Gospel confers justification.

**I respond:** As has been explained (a. 1), there are two elements involved in the New Law.

The first, and principal, element is the very grace of the Holy Spirit, which is given inwardly. And on this score, the New Law confers justification. Hence, in *De Spiritu et Littera* Augustine says, “There, viz., under the Old Covenant, a Law is posited outwardly by which the unjust are made fearful, whereas here, viz., in the New Covenant, a Law is given inwardly by which the unjust are justified.”

The other element involves the Law of the Gospel in a secondary way, viz., the documents of the faith and the precepts that direct human affections and human actions. On this score, the New Law does not confer justification. Hence, in 2 Corinthians 3:6 the Apostle says, “The letter kills, but the spirit gives life.” In *De Spiritu et Littera* Augustine explains that by ‘the letter’ is meant any writing that exists exterior to men, even the writing of the moral precepts contained in the Gospel. Hence, even the letter of the Gospel kills unless the healing grace of faith is inwardly present.

**Reply to objection 1:** This objection goes through in the case of the New Law not with respect to what is primary in it, but with respect to what is secondary in it, viz., the documents and precepts that are proposed to man exteriorly either by the spoken word or by the written word.

**Reply to objection 2:** Even if the grace of the New Covenant helps a man not to sin, it nonetheless does not confirm a man in the good, so that he is unable to sin. For this belongs to the state of glory. And so if anyone sins after having received the grace of the New Covenant, he deserves a greater punishment because he is ungrateful for greater blessings and is not using the help that has been given to him. However, the New Law is not said to “work wrath” because of this, since the New Law of itself gives help that is sufficient for not sinning.

**Reply to objection 3:** The one God gave both the New Law and the Old Law, but in different ways. For He gave the Old Law as written on stone tablets, whereas He gave the New Law as written on “the fleshy tablets of the heart,” as the Apostle puts it in 2 Corinthians 3:3. Furthermore, as Augustine says in *De Spiritu et Littera*, “The Apostle calls *that* letter, written outside of man, both a ministration of death and a ministration of damnation. *This* letter, however, viz., the Law of the New Covenant, he calls a ministration of the Spirit and a ministration of justification, since it is through the gift of the Spirit that we work justice and are freed from the damnation of transgression.”

### Article 3

#### Should the New Law have been given from the beginning?

It seems that the New Law should have been given from the beginning:

**Objection 1:** As Romans 2:11 says, “There is no respecting of persons with God.” But as Romans 3:23 says, “All men have sinned and need the glory of God.” Therefore the Law of the Gospel should have been given from the beginning of the world, in order that all might have been helped by it.

**Objection 2:** Just as different men live in different places, so too they live at different times. But God—who, as 1 Timothy 2:4 says, wills all men to be saved—commanded that the Gospel should be preached in all places, as is clear from Matthew 28:19 and Mark 16:15. Therefore, the Law of the Gospel should have been present at all times, with the result that it should have been given from the beginning of the world.

**Objection 3:** Spiritual salvation, which is eternal, is more necessary for man than is corporeal salvation, which is temporal. But as is clear from Genesis 1, from the beginning of the world God

provided man with those things necessary for corporeal salvation by giving him power over all the things that had been created for the sake of man. Therefore, the New Law, which is especially necessary for spiritual salvation, should have been given to man from the beginning of the world.

**But contrary to this:** In 1 Corinthians 15:46 the Apostle says, “That which is spiritual was not first, but instead that which is animal.” But the New Law is more spiritual than anything else is. Therefore, the New Law should not have been given from the beginning of the world.

**I respond:** Three reasons can be cited for why the New Law should not have been given from the beginning of the world.

The first is that, as has been explained (a. 1), the New Law is in the first instance the grace of the Holy Spirit, which could not have been given in abundance until the obstacle of sin had been removed from the human race by the consummation of redemption through Christ. Hence, John 7:39 says, “The Spirit had not yet been given, because Jesus had not yet been glorified.” And this is the reason clearly stated by the Apostle in Romans 8, where, after having begun by talking about the “law of the Spirit of life,” he added, “God, in sending His own Son in the likeness of sinful flesh and for the sake of sin, condemned sin in the flesh in order that the justification of the Law might be fulfilled in us.”

The second reason that can be given is based on the perfection of the New Law. For a thing is not brought to perfection immediately from the beginning; rather, it is brought to perfection with a certain temporal order of succession, in the way that someone is first a boy and later a man. The Apostle cites this reason in Galatians 3:24-25: “The Law was our teacher in Christ, in order that we might be justified by faith. But when faith arrives, we are no longer under the teacher.”

The third reason is based on the fact that the New Law is a law of grace, and so it was first required that man should be left to himself in the state of the Old Law, in order that, falling into sin and seeing his own weakness, he might recognize that he needed grace. It is this reason that the Apostle cites in Romans 5:20, where he says, “The Law entered in so that sin might abound; but where sin abounded, grace did more abound.”

**Reply to objection 1:** Because of the sin of its first parent, the human race deserved to be deprived of the assistance of grace. And so as Augustine says in *De Perfectione Iustitiae*, “If grace is not given to someone, this is out of justice, whereas if grace is given to someone, this is out of mercy (*ex gratia*).” Hence, the fact that God did not confer the Law of grace on everyone from the beginning of the world does not involve His being a respecter of persons. For as has been explained, grace had to be conferred in due order.

**Reply to objection 2:** A diversity of locations does not change the status of the human race; rather, this status varies through temporal succession. And so the New Law is proposed to all locations, but not at all times, even though, as was explained above (a. 1, ad 3), at every time there have been some who belong to the New Covenant.

**Reply to objection 3:** Things having to do with corporeal salvation aid man with respect to his nature, which is not destroyed through sin. By contrast, things having to do with spiritual salvation are ordered toward grace, which is lost through sin. And so the arguments in the two cases are not parallel.

#### Article 4

##### Will the New Law last until the end of the world?

It seems that the New Law will not last until the end of the world:

**Objection 1:** In 1 Corinthians 13:10 the Apostle says, “When that which is complete (*perfectum*)

has come, then that which is partial will be done away with.” But the New Law is partial (*ex parte*); for in the same place the Apostle says, “We know in part, and we prophesy in part.” Therefore, the New Law will have to be done away with when another, more complete, state succeeds it.

**Objection 2:** In John 16:13 our Lord promised His disciples that they would know “all truth” at the coming of the Holy Spirit, the Paraclete. But the Church does not yet know all truth within the state of the New Covenant. Therefore, another state is to be expected in which all truth will be manifested through the Holy Spirit.

**Objection 3:** Just as the Father is other than (*alius a*) than the Son, and the Son is other than the Father, so too the Holy Spirit is other than the Father and the Son. But there was a status corresponding to the person of the Father, viz., the status of the Old Law, in which men tended toward generating children. Similarly, there is likewise a status corresponding to the person of Son, viz., the status of the New Law, in which the leaders are clerics tending toward wisdom, which is appropriated to the Son. Therefore, there will be a third status of the Holy Spirit, in which spiritual men will lead.

**Objection 4:** In Matthew 24:14 our Lord says, “The Gospel of the kingdom will be preached in the whole world, and then the consummation will come.” But the Gospel of Christ has long since been preached in the whole world, and yet the consummation has not yet come. Therefore, the Gospel of Christ is not the Gospel of the kingdom; rather, there will be another Gospel, the Gospel of the Holy Spirit—another Law, as it were.

**But contrary to this:** In Matthew 24:34 our Lord says, “I tell you that this generation will not pass away until all these things have been accomplished.” Chrysostom explains that this refers to “the generation of those who believe in Christ.” Therefore, the status of those who believe in Christ will remain until the consummation of the world.

**I respond:** There are two senses in which the status of the world can vary.

One sense corresponds to the differences among the *laws*. And in this sense there will be no other status succeeding the present status of the New Law. For the status of the New Law succeeded the status of the Old Law in the way that the more perfect succeeds the less perfect. But no status of the present life can be more perfect than the status of the New Law. For there can be nothing closer to the ultimate end than that which immediately leads up to the ultimate end. But this is what the New Law does; hence, in Hebrews 10:19-22 the Apostle says, “And so, brothers, having confidence in our entry into the Holy of Holies through the blood of Christ, a new way that He has opened for us ... let us draw near to Him.” Hence, there can be no more perfect state of the present life than the status of the New Law, since the more perfect a given thing is, the closer it is to the ultimate end.

Second, the status of *men* can vary in a way corresponding to the different ways in which men are related to the same law, be it a more perfect or a less perfect law. And in this sense the status of the Old Law changed quite often. For sometimes the laws were kept very well, whereas at other times they were completely ignored. In this sense, the status of the New Law varies as well in a way corresponding to different places and times and persons, insofar as the grace of the Holy Spirit is had in a more perfect or less perfect way by given individuals.

However, one should not expect there to be some future status in which the grace of the Holy Spirit is had in a more perfect way than it has been had up to now—especially by the apostles, who received the first fruits of the Spirit, i.e., who “received them first in time and more abundantly than others,” as a Gloss on Romans 8:23 puts it.

**Reply to objection 1:** As Dionysius says in *De Ecclesiastica Hierarchia*, there are three statuses: first, the status of the Old Law; second, the status of the New Law; the third status comes afterwards, not in this life, but in heaven (*in patria*). But just as the first status is figurative and imperfect with respect to the status of the Gospel, so too the latter status is figurative and imperfect with respect to the status of

heaven. When this last status arrives, the present status will be done away with, just as we read in the same place, “Now we see darkly through a mirror, then we shall see face to face.”

**Reply to objection 2:** As Augustine reports in *Contra Faustum*, Montanus and Priscilla claimed that our Lord’s promise to give the Holy Spirit was brought to fulfillment not in the apostles, but in themselves. Similarly, the Manicheans claimed that it was brought to fulfillment in Manes, whom they claimed to be the spirit Paraclete. And so in both cases they refused to accept the Acts of the Apostles, in which it is manifestly shown that this promise was brought to fulfillment in the apostles, just as our Lord promised them again in Acts 1:5 (“You shall be baptized in the Holy Spirit, not many days from now”) and which Acts 2 says was fulfilled.

But these falsehoods are ruled out by the fact that John 7:39 says, “The Spirit had not yet been given, because Jesus had not yet been glorified.” From this it is understood that the Holy Spirit was given immediately upon Christ’s being glorified in His resurrection and ascension. This also rules out the empty notions of anyone who claims that another era of the Holy Spirit is to be expected.

Now the Holy Spirit taught the apostles all truth concerning those things that are necessary for salvation (*quae pertinent ad necessitatem salutis*)—more specifically, what is to be believed and what is to be done. However, He did not teach them about all future events, since this was not relevant to them—this according to Acts 1:7 (“It is not for you to know the times or moments which the Father has reserved for His own power.”)

**Reply to objection 3:** The Old Law belonged not only to the Father but also to the Son, since the Old Law was a figure of Christ. Hence, in John 5:46 our Lord says, “If you believed Moses, you would perhaps believe me as well, since he wrote about me.”

Similarly, the New Law belongs not only to Christ but also to the Holy Spirit—this according to Romans 8:2 (“The Law of the Spirit of life in Christ Jesus,” and so on). Hence, another law which is a law of the Holy Spirit is not to be expected.

**Reply to objection 4:** Since it was at the very beginning of the preaching of the Gospel that Christ said, “The kingdom of heaven is at hand,” it would be utterly stupid to claim that the Gospel of Christ is not the Gospel of the kingdom.

However, there are two possible meanings of ‘the preaching of the Gospel of Christ’:

The first sense has to do with spreading the knowledge about Christ, and in this sense, as Chrysostom points out, the Gospel was preached in the whole world even during the time of the apostles. Accordingly, what is then added, viz., “... and then the consummation will come,” should be understood to be speaking about the destruction of Jerusalem, about which He was speaking literally at that time.

In the second possible sense it means the preaching of the Gospel in the whole world with its full effect, with the result that the Church is firmly fixed (*fundetur*) in every nation. And as Augustine points out in his letter to Hesychius, in this sense the Gospel has not yet been preached in the whole world; but once this is done, the consummation of the world will come.

## QUESTION 107

### The Relation between the Old Law and the New Law

Next we have to consider the relation of the New Law to the Old Law. And on this topic there are four questions: (1) Is the New Law a law different from the Old Law? (2) Does the New Law bring the Old Law to fulfillment? (3) Is the New Law contained within the Old Law? (4) Which is the more burdensome, the New Law or the Old Law?

#### Article 1

##### Is the New Law different from the Old Law?

It seems that the New Law is not different from the Old Law:

**Objection 1:** Both Laws are given to those who have faith in God, since, as Hebrews 11:6 says, “Without faith it is impossible to please God.” But the faith of the ancients is the same as the faith of the moderns, as a Gloss on Matthew 21:9 says. Therefore, the Laws are the same as well.

**Objection 2:** In *Contra Adimantum Manichaei Discipulum* Augustine says, “Briefly put, the difference between the Law and the Gospel is fear and love.” But the New Law and the Old Law cannot be differentiated with respect to fear and love. For precepts of charity are proposed even in the Old Law. Leviticus 19:18 says, “You shall love your neighbor,” and Deuteronomy 6:5 says, “You shall love the Lord your God.” Similarly, they cannot be differentiated by the other distinction that Augustine proposes in *Contra Faustum*: “The Old Covenant made temporal promises, the New Covenant makes spiritual and eternal promises.” For even in the New Covenant certain temporal things are promised—this according to Mark 10:30 (“You will receive a hundred times as much in this present age, houses and brothers ...”). Moreover, even in the Old Covenant hope was placed in spiritual and eternal promises—this according to Hebrews 11:16, which says of the ancient fathers: “But now they desire a country, i.e., a celestial country.” Therefore, it seems that the New Law is not different from the Old Law.

**Objection 3:** In Romans 3:27 the Apostle seems to be distinguishing the two Laws, calling the Old Law a ‘law of works’, while calling the New Law a ‘law of faith’. But the Old Law was likewise a law of faith—this according to Hebrews 11:39, which says of the fathers of the Old Covenant: “All were approved by the testimony of faith.” Similarly, the New Law is likewise a law of works; for Matthew 5:44 says, “Do good to those who hate you,” and Luke 22:19 says, “Do this in memory of me.” Therefore, the New Law does not differ from the Old Law.

**But contrary to this:** In Hebrews 7:12 the Apostle says, “When the priesthood is transformed, it is necessary for a transformation of the Law to be made.” But as the Apostle proves in the same place, the priesthood of the New Law is different from the priesthood of the Old Law. Therefore, the Laws are likewise different.

**I respond:** As was explained above (q. 91, a. 4), all law directs human interaction in relation to some end. Now there are two ways in which things that are ordered to an end can be differentiated with respect to the notion of an end. First, they can be differentiated by the fact that they are ordered to diverse ends, and this is a difference in species, especially if the end is a proximate one. Second, they can be differentiated by their closeness to or distance from the end itself. For instance, it is clear that two movements differ in species insofar as they are ordered to different termini; on the other hand, to the extent that one part of a given movement is closer to the terminus than another part, there is a difference within the movement with respect to the perfect and the imperfect.

So, then, two laws can be differentiated in two ways.

In one way, they are differentiated in the sense of being wholly diverse, insofar as they are ordered

toward diverse ends. In the case of cities, for instance, a law that was ordered toward rule by the common people (*populus*) would be different in species from a law that was ordered toward rule by the aristocrats (*optimates*) in the city.

In the second way, two laws can be differentiated by the fact that the one of them orders things more closely to the end, while the other orders things more remotely. For instance, in one and the same city, a law imposed on grown men (*virī perfecti*), who are capable of immediately doing what contributes to the common good, is different from a law meant to teach children, who have to be instructed in how to perform the acts of men later in life.

Therefore, one should reply that, according to the first way of differentiating laws, the New Law is not different from the Old Law, since both have the same end, viz., that men should submit to God, and there is just one God for both the New Covenant and the Old Covenant—this according to Romans 3:30 (“There is one God who justifies circumcision on the basis of faith and the lack of circumcision through faith”).

According to the second way of differentiating laws, the New Law is different from the Old Law. For the Old Law is, as it were, a teacher of children, as the Apostle says in Galatians 3:24, whereas the New Law is a law of perfection, since it is a law of charity. On this score, the Apostle says in Colossians 3:14 that the New Law is a “bond of perfection.”

**Reply to objection 1:** The oneness of faith in both covenants attests to the oneness of the end. For it was explained above (q. 62, a. 2) that the object of the theological virtues, one of which is faith, is the ultimate end. Still, though, faith had one status in the Old Covenant and another in the New Covenant. For they believed in what was to come, we believe in what has been accomplished.

**Reply to objection 2:** All of the ascribed differences between the New Law and the Old Law are taken in a way corresponding to the perfect and the imperfect. For the precepts of any law are given concerning acts of virtue. But the imperfect, who do not yet have the habit of a virtue, are inclined toward doing the acts of virtue in a way different from those who have been perfected through the habit of the virtue.

Those who do not yet have the habit of a virtue are inclined toward doing the works of the virtue by some extrinsic cause, e.g., the threat of punishment or the promise of some extrinsic reward such as honor or wealth or something of this sort. And so the Old Law, which was given to the imperfect, i.e., to those who had not yet attained spiritual grace, was called a ‘law of fear’ insofar as it induced one to the observance of its precepts by threatening certain punishments. Again, it is said to contain certain temporal promises.

By contrast, those who have a virtue are inclined toward performing acts of that virtue out of love of virtue and not because of any extrinsic punishment or reward. And so the New Law, which consists principally in the spiritual grace poured into our hearts, is called a ‘law of love’. And it is said to contain spiritual and eternal promises, which are the objects of virtue, especially of charity. And thus the perfect are inclined *per se* toward those objects of virtue—not in the sense of being inclined toward something extrinsic, but in the sense of being inclined toward something that is their own.

Moreover, the reason why the Old Law is said to “restrain the hand and not the mind” is that someone who refrains from sinning out of a fear of punishment is such that his will does not abstain from sin absolutely speaking, as does the will of someone who abstains from sin out of a love of righteousness (*amore iustitiae*). And it is for this reason that the New Law, which is a law of love, is said to restrain the mind.

To be sure, there were some individuals in the status of the Old Law who, having charity and the grace of the Holy Spirit, looked toward spiritual and eternal promises. And to that extent, they belonged to the New Law. Similarly, even in the New Covenant there are some carnal men who have not yet attained the perfection of the New Law and who, even in the New Covenant, have to be induced to acts

of virtue through the fear of punishment and through certain temporal promises.

Moreover, even if the Old Law hands down precepts of charity, it is still the case that the Holy Spirit was not given *through* that Law—and, as Romans 5:5 says, it is through the Holy Spirit that “charity is diffused in our hearts.”

**Reply to objection 3:** As was explained above (q. 106, a. 1), the New Law is called a ‘law of faith’ insofar as it principally consists in the very grace which is given inwardly to those who have faith (*credentes*), and hence this grace is called the ‘grace of faith’. To be sure, the New Law secondarily contains certain moral and sacramental deeds, but the principal aspect of the New Law does not consist in these deeds, in the way that the principal aspect of the Old Law did consist in them.

Now someone who was acceptable to God through faith under the Old Covenant belonged in that respect to the New Covenant. For he received justification only through faith in Christ, who is the author of the New Covenant. Hence, in Hebrew 11:26 the Apostle says even of Moses that “he thought of the reproach of the Christ as greater riches than the treasures of the Egyptians.”

## Article 2

### Does the New Law bring the Old Law to fulfillment?

It seems that the New Law does not bring the Old Law to fulfillment:

**Objection 1:** *Being fulfilled (impletio)* is a contrary of *being made void (evacuatio)*. But the New Law makes void, or rules out, the observances of the Old Law; for in Galatians 5:2 the Apostle says, “If you get circumcised, Christ will profit you nothing.” Therefore, the New Law is not a fulfillment of the Old Law.

**Objection 2:** One contrary does not fulfill another. But in the New Law our Lord proposed certain precepts that are contrary to the precepts of the Old Law; for Matthew 5:31-33 says, “You have heard it said to the ancients, ‘Whoever dismisses his wife, let him give her a written decree of divorce.’ But I say to you, whoever divorces his wife makes her commit adultery.” And the same thing is clear with oaths, as well as with the prohibition of retaliation and with the hatred of enemies. Similarly, in Matthew 15:11 (“It is not what enters into the mouth that defiles a man ...”) our Lord also seems to have ruled out those precepts of the Old Law that have to do with the distinction among foods. Therefore, the New Law is not a fulfillment of the Old Law.

**Objection 3:** If anyone acts contrary to a law, he does not fulfill that law. But in certain cases Christ acted contrary to the Law. For instance, as Matthew 8:3 reports, He touched a leper—which was contrary to the Law. Again, He seems to have violated the Sabbath many times, and this is why the Jews said of Him in John 9:16, “This man is not from God, for He does not keep the Sabbath.” And so the New Law given by Christ is not a fulfillment of the Old Law.

**Objection 4:** As was explained above (q. 99, a. 4), the Old Law contained moral, ceremonial, and judicial precepts. But in Matthew 5, where He brought fulfillment to the Law in certain respects, he seems to make no mention of the judicial or ceremonial precepts. Therefore, it seems that the New Law does not completely fulfill the Old Law.

**But contrary to this:** In Matthew 5:17 our Lord says, “I have come not to destroy the Law, but to fulfill it.” And later on He adds, “Not one iota or one letter of the Law will pass away until each of them is fulfilled.”

**I respond:** As has been explained (a. 1), the New Law is related to the Old Law as the perfect to the imperfect. Now everything perfect supplies what the imperfect lacks. Accordingly, the New Law

brings the Old Law to fulfillment insofar as it supplies what the Old Law lacked.

Now there are two possible things to consider in the Old Law, viz., its *end* and the *precepts* contained in the Law:

As was explained above (q. 92, a. 1), the *end* of any type of law is that men should be made just and virtuous. Hence, the end of the Old Law was likewise men's becoming justified (*iustificatio hominum*). The Law was unable to accomplish this, but it prefigured it in certain ceremonial actions and promised it in words.

In this respect, the New Law brings the Old Law to fulfillment by conferring justification through the power of Christ's passion. This is what the Apostle is talking about in Romans 8:3-4: "What the Law could not do ... God, sending His own Son in the likeness of sinful flesh, has condemned sin in the flesh, in order that the justification of the Law might be fulfilled in us." In this respect, the New Law accomplishes what the Old Law had promised—this according to 2 Corinthians 1:20 ("All the promises of God are in Him," i.e., in Christ).

Again, the New Law likewise brings to completion what the Old Law was a figure of. Hence, Colossians 2:17 says of the ceremonial precepts that "they were shadows of things to come, but the body is Christ's," i.e., the reality (*veritas*) belongs to Christ. Hence, the New Law is called the 'law of reality' (*lex veritatis*), whereas the Old Law is called the 'law of shadows' or 'law of figures'.

On the other hand, Christ fulfilled the *precepts* of the Old Law both by His deeds and by His teaching.

He did this by His deeds in the sense that He willed to be circumcised and to observe all the legal regulations that were supposed to be observed at that time—this according to Galatians 4:4 ("... made under the Law").

Moreover, there were three ways in which He fulfilled the precepts of the Law by His teaching:

First, by expressing the true meaning of the Law. This is clear in the case of homicide and adultery, in the prohibition of which the Scribes and the Pharisees had understood only the prohibited exterior act. Hence, our Lord brought the Law to fulfillment by showing that interior acts of sin also fall under the prohibition.

Second, our Lord fulfilled the precepts of the Law by giving directions about how what the Law had prescribed might be more securely observed. For instance, the Old Law had prescribed that a man should not perjure himself, and this is more securely observed if he abstains from oaths altogether, except in the case of necessity.

Third, our Lord fulfilled the precepts of the Law by adding to them certain counsels of perfection, as is clear from Matthew 19:21, where our Lord, speaking to an individual who claims that he has observed the precepts of the Old Law, says, "One thing you are lacking. If you wish to be perfect, then go and sell all that you have."

**Reply to objection 1:** As was established above (q. 103, a. 3), the New Law does not make the observance of the Old Law void except with respect to the ceremonial precepts. But those precepts were figures of future realities. Hence, the ceremonial precepts are not to be observed any longer precisely because they have been fulfilled by the perfect things that they were figures of. For if they were observed, then something would still be signified as future and unfulfilled—just as there is no longer room for a promise of a future gift once the promise has already been fulfilled by the giving of the gift. And it is in this sense that the ceremonies of the Law are done away with when they are fulfilled.

**Reply to objection 2:** As Augustine explains in *Contra Faustum*, the cited precepts of our Lord are not contrary to the precepts of the Law: "For instance, what our Lord prescribed about not divorcing one's wife is not contrary to what the Law prescribed. For the Law does not say, 'If anyone wishes to, he may divorce his wife', the contrary of which would be 'Do not divorce your wife'. To the contrary, the Law did not want a wife to be divorced by her husband and proposed a delay in order that a mind bent on

divorce might desist when confronted with the writing of the bill of divorce. Hence, in order to emphasize that a wife is not to be easily divorced, He makes an exception only where the cause is fornication.”

The same thing should be said about the prohibition of oaths, as has been explained.

Again, the same thing is clear in the case of the prohibition of retaliation. For the Law set a limit to retribution by prescribing that a man should not pursue it to the point of immoderate revenge. But our Lord removed him more perfectly from immoderate revenge by warning him to refrain from retribution altogether.

Again, as regards hatred of one’s enemies, He corrected the inaccurate understanding had by the Pharisees, warning us that it is the sin, and not the person, that should be held in contempt.

And as for the distinctions concerning food, which were ceremonial, our Lord did not prescribe that these distinctions should not be observed at that very time. Rather, as has been explained (q. 102, a. 6), He showed that food is unclean not by its nature, but only figuratively.

**Reply to objection 3:** As was explained above (q. 102, a. 5), touching a leper was forbidden under the Law because from it a man incurred a sort of uncleanness of irregularity, as was also the case with touching the dead. But our Lord, who was a cleanser of lepers, could not incur uncleanness.

Now by the things He did on the Sabbath He did not in reality break the Sabbath. The Master Himself showed this in the Gospel, by the fact that (a) He worked miracles by divine power, which is always active in things, and also by the fact that (b) He performed works that contributed to man’s health, given that the Pharisees provided for the health even of animals on the Sabbath day; and also by the fact that (c) by reason of necessity He excused the apostles when they were collecting grain on the Sabbath.

To be sure, He did seem to break the Sabbath according to the superstitious understanding of the Sabbath had by the Pharisees, who believed that one should abstain even from health-giving works on the Sabbath—a belief that was contrary to the intention of the Law.

**Reply to objection 4:** The ceremonial precepts were not mentioned in Matthew 5 because, as has been explained, the observance of those precepts is entirely ruled out by their fulfillment.

As for the judicial precepts, He did mention the precept of retaliation in order that what was said about this precept should be understood to apply to all the others. In the case of this precept, He taught that the Law’s intention was not that the penalty of retaliation should be sought for the sake of vengeful spite, which He forbade, warning that a man should be ready to suffer even grave injuries. Instead, the Law’s intention was that retaliation should be sought only out of a love for justice—something that still remains under the New Law.

### Article 3

#### Is the New Law contained within the Old Law?

It seems that the New Law is not contained within the Old Law:

**Objection 1:** The New Law consists principally in faith, and this is why it is called a ‘law of faith’, as is clear from Romans 3:27. But there are many things proposed for belief in the New Law which are not contained in the Old Law. Therefore, the New Law is not contained within the Old Law.

**Objection 2:** A certain Gloss on Matthew 5:19 (“Whoever breaks one of the least of these commandments ...”) says that the commandments of the Law are lesser, whereas the commandments in the Gospel are greater. But what is greater cannot be contained within what is lesser. Therefore, the New Law is not contained within the Old Law.

**Objection 3:** Anything that is contained within another is such that it is had when the latter is had. Therefore, if the New Law were contained within the Old Law, then when the Old Law was had, the New Law would be had as well. Therefore, once the Old Law was had, it was redundant for the New Law to be given again. Therefore, it is not the case that the New Law is contained within the Old Law.

**But contrary to this:** As Ezechiel 1:16 says, “There was a wheel within a wheel”—that is, as Gregory explains, the New Covenant was contained within the Old Covenant.

**I respond:** There are two ways for one thing to be contained within another. In one way, it is *actually* contained, as in the case of something that is located in a place. In the second way, it is *virtually* contained, in the way that an effect is contained within its cause, or in the way that what is complete is contained within what is incomplete, as a genus contains its species in potentiality or as a whole tree is contained within its seed.

It is in this second way that the New Law is contained within the Old Law. For, as has been explained (a. 1), the New Law is related to the Old Law as the perfect to the imperfect. Hence, Chrysostom, in commenting on Mark 4:28 (“The earth for its part brings forth fruit: first, the blade, and then the ear, and then the full ear of corn”) says, “First, He brings forth the herb in the law of nature; then He brings forth the blade in the Law of Moses; and then He brings forth the full ear of corn in the Gospel.” So, then, the New Law is in the Old Law in the way that the full ear of corn is in the blade.

**Reply to objection 1:** Everything that is explicitly and openly proposed for belief in the New Covenant is proposed for belief in the Old Covenant, but implicitly through figures. And it is in this sense that the New Law is contained within the Old Law even with respect to what is proposed for belief.

**Reply to objection 2:** It is with respect to explicit manifestation that the precepts of the New Law are said to be greater than the precepts of the Old Law. But with respect to the very substance of the precepts of the New Covenant, all of them are contained within the Old Covenant. Hence, in *Contra Faustum* Augustine says, “Almost all the things our Lord warned about or commanded when He added the phrase, ‘But I say to you’, are found in those old books as well. But because they understood homicide to be nothing other than the slaying of the human body, our Lord disclosed that every evil impulse toward harming one’s brother is to be assigned to the genus of homicide.”

It is in light of disclosures of this sort that the precepts of the New Law are said to be greater than the precepts of the Old Law. But nothing prevents the greater from being contained virtually within the lesser in the way that a tree is contained within a seed.

**Reply to objection 3:** That which was given implicitly had to be made explicit. And so after the Old Law was handed down, the New Law likewise had to be given.

#### Article 4

##### Is the New Law more burdensome than the Old Law?

It seems that the New Law is more burdensome (*gravior*) than the Old Law:

**Objection 1:** In commenting on Matthew 5:19 (“Whoever breaks one of the least of these commandments ...”) Chrysostom says, “The commandments of Moses are easy to enact: ‘You shall not kill’, ‘You shall not commit adultery’. By contrast, the commandments of Christ—i.e., ‘You shall not be angry’, ‘You shall not lust’—are very difficult to enact.” Therefore, the New Law is more burdensome than the Old Law.

**Objection 2:** It is easier to take advantage of earthly prosperity than to endure tribulations. But as

is clear from Deuteronomy 28, in the Old Covenant temporal prosperity followed upon the observance of the Old Law. By contrast, many adversities follow for those who observe the New Law—just as 2 Corinthians 4:6 says: “Let us show ourselves to be God’s ministers in great patience, in tribulations, in necessities, in distresses,” and so on. Therefore, the New Law is more burdensome than the Old Law.

**Objection 3:** What results from addition to something else seems to be more difficult. But the New Law results from addition to the Old Law. For as is clear from Matthew 5, following Augustine’s commentary, the Old Law prohibited bearing false witness (*perjurium*), whereas the New Law prohibited even the taking of oaths; the Old Law prohibited divorcing one’s wife without a written decree of divorce, whereas the New Law prohibited divorce altogether. Therefore, the New Law is more burdensome than the Old Law.

**But contrary to this:** Matthew 11:28 says, “Come to me all you who labor and are burdened.” In commenting on this passage, Hilary says, “He calls to Himself those who labor under the difficulties of the Law and all who are burdened with the sins of the world.” And later on, concerning the yoke of the Gospel, our Lord adds: “My yoke is easy and my burden is light.” Therefore, the New Law is a lighter burden than the Old Law.

**I respond:** It is with respect to works of virtue that precepts of law are given, and there are two types of difficulty that can attend works of virtue.

One sort of difficulty involves the *exterior works*, which are in a way difficult and burdensome in their own right. On this score, the Old Law is much more burdensome than the New Law, since the Old Law obligated one to many more exterior actions in the many ceremonies than does the New Law, which in the teaching of Christ and the apostles adds very little beyond the precepts of the law of nature—even though afterwards some additional things were instituted by the holy Fathers. Even with respect to these additions, Augustine says that moderation should be observed in order that the way of life of the faithful not be rendered onerous. For in *Ad Inquisitiones Januarii* he says of certain individuals, “Our religion, which God’s mercy wanted to be free, with very clear and very few sacramental celebrations, these people load up with servile burdens, to such an extent that the situation of the Jews is more tolerable, since they were subject to the sacraments of the Law and not to human presumption.”

The second sort of difficulty involves the works of virtue in *interior acts*, i.e., that one should perform a virtuous work promptly and with pleasure. And in this respect virtue is difficult, since for someone who does not have a virtue it is very difficult; however, it is made easy by the virtue. On this score, the precepts of the New Law are more burdensome than the precepts of the Old Law, since in the New Law there are prohibitions against interior movements of the mind that were not explicitly prohibited in the Old Law. (Even if they were prohibited in some cases, there was no penalty attached to what was prohibited.) But this is extremely difficult for one who does not have a virtue; hence, in *Ethics* 5 the Philosopher says that it is easy to do the things that the just man does, but to do them in the way in which the just man does them, viz., with pleasure and promptly, is difficult for one who is not just. So, too, 1 John 5:3 says, “His commandments are not burdensome”—which Augustine comments on by saying that they are not burdensome for one who has love, but that they are burdensome for one who does not have love.

**Reply to objection 1:** The passage in question is expressly talking about the difficulty of the New Law with respect to the explicit constraint on interior movements.

**Reply to objection 2:** The adversities suffered by those who observe the New Law are not imposed by the Law itself. However, it is because of love, which the New Law consists in, that they are borne easily. For as Augustine says in *De Verbis Domini*, “Love renders easy and almost null all the things that are harsh and frightful.”

**Reply to objection 3:** As Augustine says, the additions to the precepts of the Old Law are ordered

toward making what the Old Law commanded easier to fulfill. And so the objection shows not that the New Law is more burdensome, but rather that it is easier.

## QUESTION 108

### The Contents of the New Law

Next we have to consider what is contained in the New Law. And on this topic there are four questions: (1) Should the New Law command or prohibit certain exterior works? (2) Does the New Law adequately command or prohibit exterior acts? (3) Does the New Law appropriately direct men with respect to interior acts? (4) Is it appropriate for the New Law to add counsels over and beyond its precepts?

#### Article 1

##### Should the New Law command or prohibit any exterior acts?

It seems that the New Law should not command or prohibit any exterior acts:

**Objection 1:** The New Law is the Gospel of the kingdom—this according to Matthew 24:14 (“This Gospel of the kingdom will be preached in the whole world”). But the kingdom of God consists not in exterior acts, but only in interior acts—this according to Luke 17:21 (“The kingdom of God is within you”) and Romans 14:17 (“The kingdom of God is not meat and drink, but justice and peace and joy in the Holy Spirit”). Therefore, the New Law should not command or prohibit any exterior acts.

**Objection 2:** As Romans 8:2 says, the New Law is “the Law of the Spirit.” But as 2 Corinthians 3:17 says, “Where the Spirit of the Lord is, there is freedom.” But there is no freedom where man is obligated to do or to avoid certain exterior works. Therefore, the New Law does not contain any commands or prohibitions with respect to exterior acts.

**Objection 3:** All exterior acts are thought of as involving the hand, just as interior acts involve the mind. But the difference posited between the New Law and the Old Law is that “the Old Law restrains the hand and the New Law restrains the mind.” Therefore, in the New Law prohibitions and precepts ought to be posited not with respect to exterior acts, but only with respect to interior acts.

**But contrary to this:** Through the New Law men are made children of the light; hence, John 12:36 says, “Believe in the light, in order that you might be children of the light.” But it is fitting for children of the light to do works of light and to cast aside works of darkness—this according to Ephesians 5:8 (“You were once darkness, but now you are light in the Lord. Walk as children of the light”). Therefore, the New Law should prohibit some exterior works and should command others.

**I respond:** As has been explained (q. 106, a. 1), the New Law is principally the grace of the Holy Spirit, which is manifested in faith working through love. But men attain this grace through the Son of God made man; for grace filled His humanity in the first instance, and from there it flowed to us. Hence, John 1:14 says, “The Word was made flesh,” and later adds, “He was full of grace and of truth,” and further on, “Of His fullness we have all received, and grace for grace.” Later on, John 1:17 adds, “Grace and truth were made by Christ.”

And so it is appropriate that (a) the grace flowing from the incarnate Word comes down to us through certain exterior and sensible things and that (b) from this interior grace, through which the flesh is made subject to the spirit, certain sensible works are produced.

So, then, there are two possible ways for exterior works to involve grace.

First, they lead us in a some way to grace. These are the works of the sacraments instituted under the New Law, such as Baptism, the Eucharist, and others of this sort.

Second, there are the exterior works produced by the prompting of grace. And among these works there is a distinction to be noted.

For some of them have a necessary agreement with or necessary opposition to the interior grace that

consists in faith working through love. Exterior works of this sort are commanded or prohibited in the New Law. For instance, the confession of one's faith is commanded and the denial of one's faith is prohibited. For Matthew 10:22-23 says, "If anyone acknowledges me before men, I will likewise acknowledge him before my Father. But if anyone denies me before men, I will likewise deny him before my Father."

By contrast, there are other works that do not have a necessary opposition to or agreement with faith operating through love. Such works were not commanded or prohibited in the New Law at the first institution of the Law; instead, the Lawgiver, viz., Christ, has left them up to each individual, to the extent that he is charged with the responsibility. And so with respect to such works, each individual is free to determine what is expedient for him to do or to avoid, and each individual who has responsibility for others (*praesidens*) is free to direct his subordinates with regard to what they should do or avoid in the case of such works. Hence, in this respect the Law of the Gospel is also called a 'law of freedom', since the Old Law determined many things and left few things to be determined by the freedom of men.

**Reply to objection 1:** The kingdom of God consists principally in interior acts, but, as a result, all the things without which interior acts cannot exist are likewise relevant to the kingdom of God. For instance, if the kingdom of God is interior justice and peace and spiritual joy, then all the exterior acts which are incompatible with justice or peace or spiritual joy must be incompatible with the kingdom of God. And so all such acts have to be forbidden in the kingdom of God.

By contrast, acts that are related neutrally to interior justice and peace and spiritual joy, e.g., eating this or that food, are such that the kingdom of God does not consist in them. And this is why the Apostle prefaces [the reference to justice and peace and joy] by saying, "The kingdom of God is not meat and drink."

**Reply to objection 2:** According to the Philosopher in *Metaphysics* 1, "the free is what is a cause of itself." Therefore, someone acts freely when he acts 'from himself' (*ex seipso*). Now when a man does something from a habit that agrees with his nature, he does it from himself, since a habit inclines one in the manner of a nature. By contrast, if the habit ran contrary to his nature, then the man would not act insofar as it is he himself, but instead he would act in accord with a certain corruption that had supervened on him. Therefore, since the grace of the Holy Spirit is like an interior habit infused into us and inclining us toward acting uprightly, it makes us do freely those things that agree with grace and to avoid those things that are contrary to grace.

Thus, there are two senses in which the New Law is called a 'law of freedom':

First, because it does not restrict us in doing or avoiding things except for those that are of themselves (*de se*) either necessary for salvation or incompatible with salvation; these things fall under either a commandment of the Law or a prohibition of the Law.

Second, because it makes us fulfill even these precepts or prohibitions freely, insofar as we fulfill them because of the interior prompting of grace.

It is for these two reasons that the New Law is called a "law of perfect freedom" (James 1:25).

**Reply to objection 3:** In restraining the mind from disordered movements, the New Law must also restrain the hand from disordered acts, since these acts are the effects of interior movements.

## Article 2

### Does the New Law give adequate direction to exterior acts?

It seems that the New Law does not give adequate direction to exterior acts:

**Objection 1:** The New Law seems principally to involve faith working through love—this

according to Galatians 5:6 (“In Christ Jesus neither circumcision nor lack of circumcision counts for anything; rather, it is faith that works through love”). But the New Law made explicit certain beliefs (*credenda*) that were not explicit in the Old Law, e.g., the belief in the Trinity. Therefore, it should likewise have added some exterior moral acts that had not been specified in the Old Law.

**Objection 2:** As was explained above (q. 102, a. 4), under the Old Law it was not only sacraments that were instituted, but also sacred things. But under the New Law, even if certain sacraments have been instituted, still, no sacred things seem to have been instituted by our Lord—e.g., things having to do with the sanctification of a temple or of vases, or even things having to do with the celebration of sacred feasts. Therefore, the New Law has not given adequate direction concerning exteriors.

**Objection 3:** Just as under the Old Law there were certain observances involving ministers of God, so too there were certain observances that involved the people—as was explained above (q. 102, a. 6) when the ceremonial precepts of the Old Law were being discussed. But under the New Law certain observances seem to have been handed down to the ministers of God, as is clear from Matthew 10:9 (“Do not take with you gold or silver or money in your wallets,” and so on, along with the other things that follow in that place and other things that are said in Luke 9 and 10). Therefore, there should also have been some observances involving the lay faithful (*populus fidelis*) instituted under the New Law.

**Objection 4:** In the Old Law there were judicial precepts in addition to the moral and ceremonial precepts. But no judicial precepts are handed down in the New Law. Therefore, the New Law did not give adequate direction to exterior works.

**But contrary to this:** In Matthew 7:24, “Everyone who hears my words and keeps them is like a wise man who built his house on rock.” But the wise builder did not overlook anything that was necessary for his building. Therefore, everything that involves salvation is adequately set down in the sayings of Christ.

**I respond:** As has been explained (a. 1), in the case of exterior acts the New Law should command or prohibit only (a) acts through which grace is introduced or (b) acts which necessarily involve the correct use of grace.

Because we are able to obtain grace only through Christ and not on our own, our Lord Himself instituted by Himself the sacraments through which we obtain grace, viz., Baptism, the Eucharist, the Ordination of ministers of the New Law (by appointing the apostles and the seventy-two disciples), Penance, and indissoluble Matrimony. He also promised Confirmation through the mission of the Holy Spirit. In addition, we read that, by His institution, the apostles cured the sick by anointing them with oil (Mark 6:13). These are the sacraments of the New Law.

Now the correct use of grace occurs through works of charity. Insofar as such works have a necessary connection with virtue, they pertain to the moral precepts, which were also handed down in the Old Law. Hence, on this score, it was not appropriate for the New Law to add anything to the Old Law with respect to exterior acts. On the other hand, as was explained above (q. 99. 4), the specification of exterior works in relation to the worship of God pertains to the ceremonial precepts of the Law, whereas the specification of such works in relation to one’s neighbor pertains to the judicial precepts. And so, since these specifications are not in themselves necessarily connected with interior grace, which the New Law consists in, they do not fall under a precept of the New Law, but are instead left up to human discretion. Some of these specifications are left up to the lower ranks and have to do with each individual taken one by one, whereas others are left up to temporal or spiritual authorities (*ad praelatos temporales vel spirituales*) and have to do with the common welfare.

So, then, the only exterior works that the New Law ought to determine by commands and prohibitions are (a) the sacraments and (b) moral precepts that of themselves involve the essence (*ratio*)

of virtue, e.g., ‘Do not kill’, ‘Do not steal’, and others of this sort.

**Reply to objection 1:** The things that pertain to faith lie beyond human reason; hence, we are unable to arrive at them except through grace. And so when a more abundant grace comes along, it is necessary that more things that are to be taken on faith should be made clear.

By contrast, we are directed to the works of the virtues by our rational nature, which, as was explained above (q. 19, a. 3 and q. 63, a. 2), is a measure (*regula*) of human action. And so in the case of these works there is no need for any precepts to be given beyond the moral precepts of the Law, which come from the dictate of reason.

**Reply to objection 2:** The grace given in the sacraments of the New Law is from Christ alone, and so the sacraments had to be instituted by Him.

By contrast, no grace is given in the sacred things, e.g., in the consecration of a temple or of an altar or of other things of this sort, or even in the very celebration of solemn feasts. And so because such things do not have a necessary relation to interior grace, our Lord left it up to the faithful to institute them by their own choice.

**Reply to objection 3:** Our Lord gave the precepts in question to the apostles not as ceremonial observances, but as moral statutes. There are two possible ways to understand this.

First, according to Augustine in *De Consensu Evangelistarum*, they were given not as precepts, but as permissions (*concessionones*). For instance, he permitted them to undertake the role of preaching without a wallet or a staff or other things of this sort, since they had the authority to receive the necessities of life from those to whom they preached; this is why he added, “For the laborer is deserving of his food.” However, one who has the role of preaching does not sin, but instead goes beyond his duty (*supererogat*), if, as Paul did, he brings along with him what he will live on and does not receive supplies from those to whom he preaches the Gospel.

The second way to understand these precepts, following the explanation of other saints, is that they are temporary statutes given to the apostles for that time during which they were being sent forth to preach in Judea before Christ’s passion. For the disciples, still like little ones under Christ’s care, needed to receive special instructions from Christ, in the way that subordinates need instructions from their superiors—and this mainly because they had to practice little by little at abandoning temporal cares, so that they might thereby become fit for preaching the Gospel throughout the whole world. And given that the status of the Old Law still persisted and that they had not yet attained the perfect freedom of the Spirit, it is not surprising that our Lord instituted certain determinate modes of living. When His passion was imminent, He abrogated these statutes, since the disciples had by that time been adequately trained through them. Hence, at Luke 22:35-36 our Lord said, “When I sent you without a sack or wallet or shoes, were you lacking anything?” And they replied, “No.” And then He said to them, “But now let one who has a sack take it, and the same with a wallet.” For the time of perfect freedom was already imminent, and so they were left entirely to their own judgment in those matters that did not of themselves have a necessary connection with virtue.

**Reply to objection 4:** Likewise, the judicial precepts, considered in themselves, have a necessary connection with virtue only with respect to the general nature of justice and not with respect to the particular specifications. And so our Lord left it up to those who were going to have spiritual or temporal care of others to specify the judicial precepts. However, as will be noted below (a. 3), He did explain certain of the judicial precepts of the Old Law because of the Pharisees’ defective interpretations of them.

### Article 3

#### Does the New Law give man adequate direction with respect to interior acts?

It seems that the New Law does not give man adequate direction with respect to interior acts:

**Objection 1:** There are ten precepts of the Decalogue ordering man toward God and neighbor. But our Lord brought only three of them to perfection, viz., the prohibition of homicide, the prohibition of adultery, and the prohibition of bearing false witness (*periurium*). Therefore, it seems that He gave man inadequate direction by failing to bring the other precepts to perfection.

**Objection 2:** In the Gospel our Lord gave no direction concerning the judicial precepts except for those having to do with divorcing one's wife, the punishment of retaliation, and the persecution of enemies. But as was explained above (q. 105), there were many other judicial precepts in the Old Law. Therefore, in this respect He gave inadequate direction to the lives of men.

**Objection 3:** In the Old Law there were ceremonial precepts in addition to the moral and judicial precepts. Our Lord gave no direction at all concerning ceremonial precepts. Therefore, it seems that He has given inadequate direction.

**Objection 4:** Having a good interior disposition of mind involves a man's not doing good works for the sake of temporal ends. But there are many temporal goods other than human respect, and there are likewise many good works other than fasting, almsgiving, and praying. Therefore, it was inappropriate for our Lord to teach, concerning just these three good works, that we ought to avoid the glory of human respect, without mentioning any other earthly goods.

**Objection 5:** It is naturally instilled in man that he should be solicitous about those things that are necessary for him to live, a solicitude that other animals also share in common with man; hence, Proverbs 6:6-8 says, "Go to the ant, O sluggard, and consider her ways ... she prepares her food in the summer and stores up provisions in a harvest." But every precept that is given in opposition to an inclination of nature is evil, since it is contrary to the natural law. Therefore, it seems inappropriate for our Lord to have prohibited solicitude about food and clothing.

**Objection 6:** No act of virtue should be prohibited. But judging is an act of justice—this according to Psalm 93:15 ("... until justice be turned into judgment"). Therefore, it seems inappropriate for our Lord to have prohibited judging.

And so it seems that the New Law has given inadequate direction with respect to interior acts.

**But contrary to this:** In *De Sermone Domini in Monte* Augustine says, "Notice that when He said, 'Whoever hears these words of mine ...', this is a sufficient indication that our Lord's sermon is complete, containing all the precepts by which the Christian life is shaped."

**I respond:** As is clear from the passage cited from Augustine, our Lord's Sermon on the Mount contains a comprehensive instruction for the Christian life in which the interior movements of man are perfectly directed. For after declaring beatitude to be the end and commending the authority of the apostles, through whom the doctrine of the Gospel was to be promulgated (Luke 6:12-17), He gives directions for the interior movements of man, first with respect to oneself and then with respect to one's neighbor.

As regards oneself, He does this in two ways, corresponding to man's two interior movements with respect to action (*de agendis*), viz., (a) willing the action and (b) intending the end. Hence, he first directs man's willing of an action in accord with the different precepts of the Law. More specifically, He directs that one should abstain not only from exterior works that are evil in themselves (*secundum se mala*), but from evil interior acts of will as well, and also from occasions for evil acts of will. He then directs man's intentions, teaching that in the good acts we do, we should seek neither human glory nor worldly riches, i.e., we should not seek to build up our treasure on earth.

Now after this He directs man's interior movement with respect to his neighbor. More specifically he directs that we should not pass judgment rashly or unjustly or presumptuously; nor, on the other hand, should we be remiss toward our neighbor in such a way that we entrust him with sacred things when he is unworthy.

Lastly, He teaches us the manner in which the Gospel doctrine should be fulfilled, viz., by imploring God's help, by making the effort to enter through the narrow gate of perfect virtue, and by exercising caution in order that we not be corrupted by those who would seduce us (*a seductoribus*). And He teaches us that observing His commandments is necessary for virtue, and that it is not sufficient merely to make a confession of faith, or to work miracles, or merely to hear His word.

**Reply to objection 1:** Our Lord brought to perfection those precepts of the Law which the Scribes and Pharisees had an incorrect understanding of. This occurred mainly with respect to three precepts of the Law. For in the case of the prohibitions against adultery and homicide, they thought that the exterior act alone was prohibited, and not the interior desire. They believed this more with regard to homicide and adultery than with regard to stealing and bearing false witness, because the movement of anger that leads to homicide and the movement of concupiscence that leads to adultery seemed to them to be somehow in us by nature, whereas this was not the case with the desire to steal or to bear false witness.

Still, they had a false understanding of perjury. To be sure, they believed that bearing false witness is a sin, but they believed that taking oaths was desirable in itself and should be done frequently, since it seems to involve reverence for God. And so our Lord showed that the taking of oaths is not to be desired as a good, but that it is better to speak without oaths unless necessity compels one to.

**Reply to objection 2:** There were two ways in which the Scribes and the Pharisees were mistaken about the judicial precepts.

First, there were certain acts handed down as *permissible* in the Law of Moses which they took to be *upright* in themselves, viz., divorcing one's wife and taking usurious interest from outsiders. And so our Lord prohibited divorcing one's wife (Matthew 5:32), along with the taking of usurious interest, saying "Lend without expecting something in return" (Luke 6:35).

The second way in which they were mistaken was in believing that certain things that the Old Law had directed to be done for the sake of justice were to be done out of either (a) an appetite for revenge or (b) a desire for temporal things or (c) a hatred of one's enemies. And this involved three precepts.

For they believed that the desire for revenge was licit because of the precept that had been given concerning retaliation as a punishment. However, this precept had been given to preserve justice and not so that a man might seek revenge. And so our Lord, in order to exclude this interpretation, teaches that a man's mind ought to be prepared so that, if necessary, he will be ready to suffer many things.

Again, they considered the movement of sentient desire licit because of those judicial precepts in which, as was explained above (q. 105, a. 2, ad 9), the restitution of a thing that had been stolen (*restitutio rei ablatae*) had to be made along with something additional. Now the Law commanded this in order to maintain justice, and not in order to make room for greed (*cupiditas*). And so our Lord teaches that we should not demand what belongs to us out of greed, but that we should be ready, if necessary, to hand over even more.

Again, they believed that the impulse to hatred was licit because of those precepts of the Law that had been given about the killing of enemies. As was explained above (q. 105, a. 3, ad 4), the Law prescribed this in order to fulfill justice and not in order to fully satisfy one's hatred. And so our Lord teaches that we should have love for our enemies and that we should be ready, if necessary, even to do good to them.

As Augustine explains, these precepts are to be taken "as a preparation of the mind."

**Reply to objection 3:** It was fitting for the moral precepts to remain in their entirety under the New Law, since they involve the essence of virtue in themselves. The judicial precepts, on the other

hand, did not necessarily remain in the manner in which the Law specified; instead, it was left up to the judgment of men whether they should be specified in the same way or in some other way. And so our Lord gave us adequate direction concerning these two kinds of precepts.

However, the observance of the ceremonial precepts was completely done away with because of the fulfillment of the reality. And so in His general teaching He did not give any direction with respect to precepts of this sort. However, in other places He shows that the entire corporeal worship which had been specified under the Law had to be changed into spiritual worship. This is clear from John 4:21-23, where He said, “The hour is coming when you will worship the Father neither on this mountain nor in Jerusalem, but true worshipers will worship the Father in spirit and in truth.”

**Reply to objection 4:** All worldly things fall under three headings, viz., honors, riches, and pleasures. This is in accord with 1 John 2:16, “All that is in the world is concupiscence of the flesh”—which has to do with pleasures of the flesh—“and concupiscence of the eyes”—which involves riches—“and pride of life”—which pertains to the ambition for fame and honor.

Now the Law did not promise superfluous pleasures of the flesh; rather, it prohibited them. On the other hand, it did promise lofty honor and an abundance of riches; for with respect to the former, Deuteronomy 28:1 says, “If you listen to the voice of the Lord your God, He will exalt you above all the nations,” and with respect to the latter, it adds a little later, “He will make you abound with every kind of good.” The Jews understood these promises perversely (*prave*) to mean that they should serve God for the sake of these things as an end.

And so our Lord excluded this understanding. He taught, first of all, that the works of virtue should not be done for the sake of human glory. And He proposed three such works, which all the others fall under. For all the things that someone does to restrain himself in his sentient desires fall under *fasting*; and whatever is done because of love of one’s neighbor falls under *almsgiving*; and all the things done for the sake of worshiping God fall under *prayer*. Now He posits these three works in particular because they are the principal ones and the ones through which men are especially wont to strive for glory.

Second, He taught that we should not set up riches as our end when He said, “Do not store up for yourselves treasures on earth” (Matthew 6:19).

**Reply to objection 5:** Our Lord did not prohibit necessary solicitude, but instead prohibited disordered solicitude. Now there are four types of disordered solicitude concerning temporal goods that should be avoided.

First, we should not take temporal goods as our end, and we should not serve God for the sake of necessary food and clothing. Hence, He says, “Do not store up for yourself treasures ...”

Second, we should not be solicitous about temporal goods in a way that involves our despairing of God’s help. Hence, our Lord says, “Your Father knows that you need all these things” (Matthew 6:32).

Third, our solicitude should not be presumptuous, as when a man becomes confident that he himself, through his own solicitude, can procure the necessities of life without God’s help. Our Lord rules this out by saying that a man cannot add to his own height (Matthew 6:27).

Fourth, a man anticipates the time of solicitude, so that he is solicitous at the present moment about what pertains to the cares of the future and not to the cares of the present moment. Hence, He says, “Do not be solicitous about tomorrow” (Matthew 6:34).

**Reply to objection 6:** Our Lord did not prohibit the sort of judgment that belongs to justice, without which what is sacred could not be taken away from those who are unworthy. Rather, He prohibits disordered judgment, as has been explained.

#### Article 4

##### Is it appropriate for certain determinate counsels to be proposed in the New Law?

It seems that it is inappropriate for certain determinate counsels (*consilia aliqua determinata*) to be proposed in the New Law:

**Objection 1:** As was explained above when we talked about counsel (q. 14, a. 2), counsels are given about things that are expedient for an end. But it is not the case that the same things are expedient for everyone. Therefore, certain determinate counsels should not have been proposed for everyone.

**Objection 2:** Counsels are given with respect to a better good. But there are no determinate grades of better goods. Therefore, determinate counsels ought not to be given.

**Objection 3:** Counsels have to do with the perfection of a life. But obedience has to do with the perfection of a life. Therefore, it is inappropriate that in the Gospel a counsel is not given for obedience.

**Objection 4:** Among the precepts there are many that pertain to the perfection of a life, such as our Lord's saying, "Love your enemies," along with the precepts He gave to the apostles in Matthew 10. Therefore, it is inappropriate for counsels to be given in the New Law, both because not all of them are posited, and also because they are not distinct from the precepts.

**But contrary to this:** The counsels of a wise friend afford great assistance—this according to Proverbs 27:9 ("Ointments and various perfumes delight the heart, and the good counsels of a friend gladden the soul"). But Christ especially is wise and a friend. Therefore, His counsels have the greatest usefulness and are appropriate.

**I respond:** The difference between a counsel and a precept is that a precept implies necessity, whereas a counsel is left up to the choice of the one to whom it is given. And so it was appropriate that counsels should be added to the precepts in the New Law, which is a law of freedom, but not in the Old Law, which was a law of servitude. Therefore, the precepts of the New Law must be understood to have been given about things that are necessary for attaining the end of eternal beatitude, toward which the New Law directly leads one. By contrast, the counsels have to concern things through which a man is able to attain the end in question in a better and more expeditious manner.

Now man is situated between the things of this world and the spiritual goods in which eternal beatitude consists, so that the more he clings to the one, the more he withdraws from the other, and vice versa. Therefore, someone who totally clings to the things of this world, in the sense that he sets them up as his end and takes them as the reasons for and measures of his actions, falls away entirely from spiritual goods. And so it is a disorder of this sort that is excluded by the precepts. However, a man need not totally cast off the things of the world in order to attain the end of eternal beatitude, since a man who makes use of the things of this world can attain eternal beatitude as long as he does not set them up as his end. And it is about this matter that the counsels of the Gospel are given.

Now as is clear from 1 John 2:16, the goods of this world that are involved in the practice of human life are of three types, viz., (a) the riches of exterior goods, which pertain to the concupiscence of the eyes; (b) carnal pleasures, which pertain to the concupiscence of the flesh; and (c) and honors, which pertain to pride of life. The evangelical counsels involve giving up all three of these in their entirety, to the extent that this is possible. Every sort of religious life (*religio*) that professes the state of perfection is based on these three counsels. For wealth is given up through *poverty*, carnal pleasures are given up through *perpetual chastity*, and pride of life is given up through *obedience*.

Now when these three are observed absolutely speaking, then they pertain to the proposed counsels in an unqualified way. On the other hand, the observance of any of them in a special case involves the counsels in a qualified way, viz., in that particular case. For instance, if a man gives alms to someone who is poor when he is not obligated to do so, then he is following the counsel with respect to that deed.

Similarly, when someone abstains from carnal pleasures for a fixed period of time in order to make room for prayer, then he is following the counsel during that time. Similarly, when someone does not follow his own wishes with respect to some action that he could licitly perform, then he is following the counsel in that particular case—if, say, he does good to his enemies when he is not obligated to, or if he forgives an offense for which he could justly demand retribution (*vindicta*).

And in this way all the particular counsels fall under the three general and perfect counsels.

**Reply to objection 1:** The counsels mentioned above are of themselves expedient for everyone, but because some individuals lack the right disposition, it happens that the counsels are not expedient for a given individual, since his affections are not inclined toward them. And so when our Lord proposes the evangelical counsels, he always mentions the fitness of men for observing the counsels. For instance, when He is giving the counsel of perpetual poverty in Matthew 19:21, He begins by saying, “If you wish to be perfect ...,” and then He adds, “... go and sell all that you have.” Similarly, when He was giving the counsel of perpetual chastity, after He had said, “There are eunuchs who have castrated themselves for the sake of the kingdom of heaven,” He immediately added, “Let him who can take it, take it.” Similarly, in 1 Corinthians 7:35 the Apostle, having given the counsel of virginity, says, “I am telling you this for your benefit, and not to set a trap for you.”

**Reply to objection 2:** It is not determinate just which particular goods are better in each case. But it is determinate which general goods are better simply and absolutely speaking. And, as has been explained, it is these goods that all the particular goods fall under.

**Reply to objection 3:** Our Lord is understood to have given the counsel of obedience when He said, “... and let him follow me” (Matthew 16:24). We follow Him not only by imitating His works, but also by obeying His commandments—this according to John 10:27 (“My sheep listen to my voice and follow me”).

**Reply to objection 4:** If the things our Lord says about genuine love of enemies and other such things in Matthew 5 and Luke 6 are taken to refer to *the preparation of the mind*, then they are necessary for salvation—viz., that a man be ready to do good to his enemies and to do other things of this sort when necessity requires it. And in this sense they are counted as precepts.

On the other hand, as has been explained, it pertains to the counsels that a man should promptly do good to his enemies in actuality, where there is no special necessity for doing so.

Now as was explained above, the things that are posited in Matthew 10 and Luke 9 and 10 were certain precepts of discipline for that time, or certain permissions. And so they are not taken to be counsels.

## QUESTION 109

### The Necessity for Grace

Next we have to consider the exterior principle of human acts that comes from God insofar as we are helped by Him to act rightly by His grace. We have to consider, first, God's grace (questions 109-111); second, the cause of grace (question 112); and, third, the effects of grace (questions 113-114).

There are three parts of the first topic. We will consider, first, the necessity for grace (question 109); second, grace itself with respect to its essence (question 110); and, third, the divisions of grace (question 111).

On the first topic there are ten questions: (1) Can a man have cognition of any truth without grace? (2) Can a man do anything good without God's grace? (3) Can a man love God above all things without grace? (4) Can a man keep the commandments of the Law without grace? (5) Can a man merit eternal life without grace? (6) Can a man prepare himself for grace without grace? (7) Can a man recover from sin without grace? (8) Can a man avoid sin without grace? (9) Can a man who has received grace do good and avoid sin without any further divine assistance? (10) Can man persevere in the good on his own (*per seipsum*)?

### Article 1

#### Can a man have cognition of any truth without grace?

It seems that a man cannot have cognition of any truth without grace:

**Objection 1:** Ambrose's Gloss on 1 Corinthians 12:3 ("No one can say 'Lord Jesus' except in the Holy Spirit") says, "Anything true that is said by anyone is from the Holy Spirit." But the Holy Spirit dwells in us through grace. Therefore, we cannot know the truth without grace.

**Objection 2:** In *Soliloquium* 1 Augustine says, "The most certain of the disciplines are those that are illuminated by the sun in order that they might be seen. Now it is God Himself who does the illuminating, whereas reason exists in minds in the way that sight (*aspectus*) exists in the eyes, and the mind's eyes are the soul's senses." But no matter how pure a bodily sense is, it cannot see any visible thing without the sun's illumination. Therefore, no matter how perfect a human mind is, it cannot come to know truth through its reasoning without God's illumination. But this involves the assistance of grace.

**Objection 3:** As is clear from Augustine in *De Trinitate* 14, the human mind cannot understand truth except by thinking. But in 2 Corinthians 3:5 the Apostle says, "Not that we are sufficient to think anything by ourselves, as if it were from us." Therefore, a man cannot have a cognition truth on his own without the assistance of grace.

**But contrary to this:** In *Retractationes* 1 Augustine says, "I do not approve of my having said in a prayer, 'O God, who willed that only the clean should know what is true.' For one can reply that even many unclean individuals know many truths." But it is through grace that a man is made clean—this according to Psalm 50:12 ("A clean heart create in me, O God, and renew in my innards a steadfast spirit"). Therefore, a man can know the truth by himself without grace.

**I respond:** Having cognition of the truth is a certain employment of, or act of, the intellectual light (*usus quidam vel actus intellectualis luminis*). For according to the Apostle in Ephesians 5:13, "Everything that is made manifest is light." Now 'employment' or 'use' (*usus*) implies a sort of movement, taking 'movement' in the broad sense according to which acts of intellective understanding and of willing are said to be movements—as is clear from the Philosopher in *De Anima* 3.

Now we see in the case of corporeal things that what is required for movement is not only (a) the very form that is the principle of the movement or action, but also (b) the motion of the first mover (*motio primi moventis*). And the first mover in the order of corporeal things is a celestial body. Hence, no matter how perfect a heat a given instance of fire might have, it does not effect change except through

the motion of a celestial body.

Now it is clear that just as all corporeal movements are traced back to the movement of a celestial body as to a first corporeal mover, so too all movements, both corporeal movements and spiritual movements, are traced back to the first mover absolutely speaking, viz., God. And so no matter how perfect a given corporeal or spiritual nature is claimed to be, it cannot proceed into its own act if it is not moved by God. This movement occurs in accord with the plan of God's providence and not in accord with a necessity of nature, as in the case of the motion of a celestial body. Moreover, it is not just every *movement* that comes from God as from a first cause; rather, every *formal perfection* comes from Him as from a first act. So, then, an action of the intellect, or of any created entity, depends on God in two ways: (a) insofar as it has from God the form by which it acts, and (b) insofar as it is moved by Him to act.

Now each form that has been put into created things by God has causal efficacy with respect to a determinate act that it is capable of in accord with its properties (*habet efficaciam respectu alicuius actus determinati in quem potest secundum suam proprietatem*), but it is incapable of anything beyond that except by the addition of another form; for instance, water cannot make anything hot unless it is itself made hot by fire. So, then, the human intellect has a form, viz., the intelligible light itself, which is by itself sufficient for the cognition of certain intelligible things, viz., those that we are able to come to knowledge of through sensible things. However, the human intellect is unable to have cognition of higher intelligible things unless it is perfected by a stronger light (*nisi fortiori lumine perficiatur*), e.g., the light of faith or the light of prophecy.

So, then, one should reply that in order to have cognition of anything at all, a man needs God's help in order that his intellect might be moved by God to its act. However, in order to have cognition of the truth, he does not in all cases need a new illumination in addition to his natural illumination; instead, he needs a new illumination only in certain cases that exceed his natural cognition.

Yet sometimes through His grace God miraculously instructs some individuals with respect to things that can be known through natural reason, in just the way that He sometimes does miraculously certain things that nature can do.

**Reply to objection 1:** Any truth that is uttered by anyone is from the Holy Spirit in the sense that it is from the one who pours the natural light [into the intellective soul] and moves a man to have intellective understanding and to speak the truth. However, not every truth is from the Holy Spirit in the sense that it is from the one who dwells [in the soul] through habitual or sanctifying grace (*per gratiam gratum datum*); this is the case with the cognition and utterance only of certain truths—especially those which belong to the Faith and which the Apostle was talking about [in the cited passage].

**Reply to objection 2:** The corporeal sun illuminates from without, whereas the intelligible sun, viz., God, illuminates from within. Hence, the natural light that is poured into the soul is itself the illumination on God's part by which we are illuminated by Him in order to have cognition of those things that pertain to natural cognition. And a further illumination is not required for this, but is instead required only with respect to things that exceed our natural cognition.

**Reply to objection 3:** We always need God's help in thinking about anything whatsoever, insofar as He moves our intellect to act. For as is clear from Augustine in *De Trinitate* 14, to think is to have an actual intellective understanding of something.

## Article 2

### Is a man able to will and do good without grace?

It seems that a man is able to will and do good without grace:

**Objection 1:** What is within a man's power is such that he is the master over it. But as was explained above (q. 1, a. 1), a man is the master of his own acts, and especially of the act of willing.

Therefore, a man is able to will and do good on his own (*per seipsum*) without the assistance of grace.

**Objection 2:** Each thing is more capable of what is in accord with its nature than of what is beyond its nature. But as Damascene explains in *De Fide Orthodoxa* 2, sin is contrary to nature, while, as was explained above (q. 71, a. 1), virtue is in accord with man's nature. Therefore, since a man is able to sin on his own (*per seipsum*), it seems that, *a fortiori*, he is able to will and to do good on his own.

**Objection 3:** As the Philosopher says in *Ethics* 6, the intellect's good is the true. But the intellect is able on its own (*per seipsum*) to have cognition of what is true, just as every other entity is able to perform its natural operation on its own (*per se*). Therefore, *a fortiori*, a man is able to do and will good on his own.

**But contrary to this:** In Romans 9:16 the Apostle says, "It"—viz., the willing—"does not belong to him who wills; nor does it"—viz., the running—"belong to him who runs, but instead it belongs to God, who has mercy." And in *De Correptione et Gratia* Augustine says, "Without grace men accomplish no good at all, either by thinking or by willing and loving or by doing."

**I respond:** There are two ways in which to consider a man's nature: (a) *in its uncorrupted or integral state (in sui integritate)*, in the way it existed in the first parent before the sin; and (b) *as corrupted in us* after the sin of the first parent.

Now in both these states human nature needs God's assistance as the first mover in order to do or will any good at all; this was explained above (a. 1).

However, in the state of *uncorrupted or integral nature (in statu naturae integrae)* the man was able by his natural powers (*poterat homo per sua naturalia*), as far as the sufficiency of his operative power was concerned, to will and do the good proportioned to his nature, i.e., the good of acquired virtue, but not the good that exceeds his nature, i.e., the good of infused virtue.

On the other hand, in the state of *corrupted nature* a man falls short even of what he is able to do in accord with his nature, so that he is unable to fulfill the whole of this sort of good (*totum huiusmodi bonum*) through his natural power. Yet since human nature has not been totally corrupted by sin in such a way as to be totally deprived of the good of nature, a man is able even in the state of corrupted nature to accomplish some particular goods through the power of his nature, e.g., to build houses and plant vines and other things of this sort, even though he is not able to accomplish the whole of the good that is connatural to him in such a way as to be lacking in nothing—in the same way that a sick man is able to have some movement on his own, but cannot, unless he is assisted by medicine, move perfectly with the movement of a healthy man.

So, then, in the state of integral nature a man needs the power of grace (*virtute gratuita*) in addition to his natural power for just one thing, viz., to do and will the supernatural good. By contrast, in the state of corrupted nature he needs the power of grace for two things, viz., (a) to be healed and, further, (b) to accomplish the good of supernatural virtue, i.e., the meritorious good. What's more, in both states a man needs God's help in order to be moved by Him toward acting well.

**Reply to objection 1:** A man is the master of his own acts, of both his willing and his not willing, because of reason's deliberation, which can be turned toward one part [of a contradiction] or the other. But if he is likewise the master of whether or not he deliberates, this must be because of a previous deliberation. And since there is no infinite regress here, one must in the end arrive at the point at which the man's free choice is moved by some exterior principle that lies beyond the human mind, viz., God. The Philosopher likewise proves this in *De Bona Fortuna*. Hence, even a healthy man's mind does not have dominion over its own act in the sense that it does not need to be moved by God. And the same holds *a fortiori* after the sin for the sick man's free choice, which is kept from the good by the corruption of nature.

**Reply to objection 2:** To sin is nothing other than to fall away from a good that is appropriate to a given thing in accord with its nature. But just as each created entity is such that (a) it does not have *esse* except from another and such that (b) it is nothing considered in itself, so too it needs to be conserved by another in the good of its own nature. By contrast, it can fall away from that good on its own, just as it

can likewise fall into non-*esse* on its own unless it is conserved by God.

**Reply to objection 3:** In the sense explained above (a. 1), a man cannot without God's assistance even have cognition of what is true. And yet human nature is corrupted by sin more with respect to its desire for the good than with respect to its cognition of the true.

### Article 3

#### Can a man love God above all things by just his natural power and without grace?

It seems that a man cannot love God above all things by just his natural power and without grace (*non possit diligere Deum super omnia ex solis naturalibus sine gratia*):

**Objection 1:** To love God above all things is the proper and principal act of charity. But man cannot have charity on his own, since, as Romans 5:5 puts it, "God's charity is diffused in our hearts by the Holy Spirit, who is given to us." Therefore, a man is unable to love God above all things by just his natural power.

**Objection 2:** No nature is capable of what lies beyond itself (*nulla natura potest supra seipsam*). But to love something more than oneself is to tend toward something beyond oneself. Therefore, no created nature can love God in a way that lies beyond itself without the assistance of grace (*nulla natura creata potest Deum diligere supra seipsam sine auxilio gratiae*).

**Objection 3:** Since God is the highest good, He is owed the highest love, viz., that He be loved above all things. But a man is unable without grace to devote to God the highest love that is owed to Him by us; otherwise, it would make no sense for grace to be added. Therefore, without grace a man cannot love God above all things by just his natural power.

**But contrary to this:** According to some, the first man was constituted with just his natural power. And it is clear that in that state he loved God in some way or other. But he did not love God exactly as much as he loved himself or less than he loved himself (*non dilexit Deum aequaliter sibi vel minus se*), since he would have thereby sinned. Therefore, he loved God more than he loved himself (*dilexit Deum supra se*). Therefore, a man is able to love God more than himself—and so above all things—by just his natural power.

**I respond:** As was explained above in the First Part (*ST* 1, q. 95, a. 1), where diverse opinions were likewise posited about the angels' natural love, man in the state of integral nature (*in statu naturae integrae*) was able by the power of his nature to accomplish that good that is connatural to him without the addition of the gift of grace (*absque superadditione gratuiti doni*)—though not without the assistance of God as mover (*tamen non absque auxilio Dei moventis*).

Now to love God above all things is something connatural to man as well as to every creature—not just rational creatures, but also non-rational and even non-living creatures, each in accord with the mode of love that can belong to it. The reason for this is that it is natural to every creature that it should desire and love something to the extent that this desire and love are naturally fitting (*secundum quod aptum natum est esse*); for as *Physics* 2 says, "Each thing acts in the way that is fitting for it." But it is clear that the good of the part exists for the sake of the good of the whole. Hence, by a natural desire or love each particular entity likewise loves its own proper good for the sake of the *common good of the whole universe*, i.e., for the sake of God. Hence, in *De Divinis Nominibus* Dionysius says, "God turns all things toward love for Himself." Thus, in the state of uncorrupted nature man referred his love for himself—and, similarly, his love for all other things—to the love of God as his end. And in this sense He loved God more than himself and loved Him above all things.

By contrast, in the state of corrupted nature a man falls short of this as far as the rational will's desire is concerned, since, because of the corruption of the nature, the rational will pursues *its own private good*—unless it is healed by God's grace.

And so one should reply that a man in the state of integral nature does not need the addition of the gift of grace to his natural goods in order to love God naturally above all things, even though he does need God's assistance in moving him to this act. However, in the state of corrupted nature a man needs the addition of the gift of grace healing his nature in order for him to do even this much.

**Reply to objection 1:** Charity loves God above all things in a more eminent way than [human] nature does. For the nature loves God above all things insofar as He is the source and end of natural goodness, whereas charity loves God above all things insofar as the man has a certain spiritual fellowship with God (*quandam societatem spiritualem cum Deo*).

Moreover, charity adds to the natural love for God a sort of promptitude and pleasure, in the same way that any virtuous habit adds something to a good act that comes just from the natural reason of a man who did not [previously] have the virtuous habit.

**Reply to objection 2:** The claim that no nature is capable of what lies beyond itself (*potest supra seipsam*) should not be understood to imply that a nature cannot be directed toward an object which lies beyond it (*in aliquod obiectum quod est supra se*). For it is clear that our intellect is able by its natural cognition to have cognition of things that lie beyond it, as is clear from its natural cognition of God. Rather, the claim should be understood to imply that a nature is incapable of an act that exceeds the measure of the nature's power. But loving God above all things is not an act of this latter sort, since, as has been explained, this act is natural to every created nature.

**Reply to objection 3:** Love (*amor*) is said to be 'highest' not only with respect to the *degree* of the loving (*quantum ad gradum dilectionis*) but also with respect to the *nature* of the loving and the *mode* of loving (*quantum ad rationem diligendi et dilectionis modum*). Accordingly, as has been explained, the highest degree of love is that by which charity loves God as the beatifier.

#### Article 4

##### Can a man without grace fulfill the precepts of the Law by his own natural power?

It seems that a man without grace can fulfill the precepts of the Law by his own natural power (*per sua naturalia possit praecepta legis implere*):

**Objection 1:** In Romans 2:14 the Apostle says, "The Gentiles, who do not have the Law, do naturally those things that belong to the Law." But what a man does naturally he is able to do on his own (*per seipsum*) without grace. Therefore, a man is able to carry out the precepts of the Law without grace.

**Objection 2:** In *Expositio Catholicae Fidei* Jerome says, "They are to be cursed who claim that God has commanded something impossible of man." But what a man is unable to fulfill on his own is impossible for him. Therefore, a man can fulfill all the precepts of the Law on his own.

**Objection 3:** As is clear from Matthew 25:37, the greatest of all the precepts of the Law is, "You shall love the Lord your God with all your heart." But as was explained above (a. 3), a man can fulfill this commandment through his natural powers by loving God above all things. Therefore, a man can fulfill all the precepts of the law without grace.

**But contrary to this:** In *De Haeresibus* Augustine says that it belongs to the Pelagian heresy "to believe that a man can carry out all of God's commandments without grace."

**I respond:** There are two senses of 'fulfill the commandments of the Law'.

One sense has to do with *the substance of the deeds*, viz., insofar as a man does just deeds and brave deeds and deeds of the other virtues. In this sense a man in the state of integral nature was able to fulfill all the commandments of the Law; otherwise, he would not have been able not to sin in that state, since to sin is nothing other than to transgress God's commandments. By contrast, in the state of corrupted nature a man is not able to fulfill all of God's commandments without healing grace.

In the second possible sense, the commandments of the law are fulfilled not only with respect to the

substance of the deed, but also with respect to *the mode of acting*, in the sense that they are done out of charity. And in this sense a man cannot fulfill the commandments of the Law without grace either in the state of integral nature or in the state of corrupted nature. This is why, in *De Correptione et Gratia*, after he had claimed that “without grace men can do no good at all,” Augustine adds, “not only in order that they might know what to do by the light of grace, but also in order that, with the help of grace, they might do with love what they know.”

In addition, as has been explained (a. 2), in both states men need the assistance of God as [first] mover in order to fulfill the commandments.

**Reply to objection 1:** As Augustine says in *De Spiritu et Littera*, “Let it not disturb you that he said that they are to do naturally what belongs to the Law. For the Spirit of grace does this in order to restore in us the image of God, in which we have been naturally made.”

**Reply to objection 2:** What we are able to do with God’s assistance is not altogether impossible for us—this according to the Philosopher in *Ethics* 3 (“What we can do through our friends, we can in some sense do through ourselves”). Hence, in the very same place Jerome likewise concedes that we have free choice in such a way that we may claim that we are always in need of God’s assistance.

**Reply to objection 3:** As is clear from what was said above (a. 3), a man cannot by his purely natural power fulfill the precept concerning the love of God insofar as it is fulfilled out of charity.

## Article 5

### Can a man merit eternal life without grace?

It seems that a man can merit eternal life without grace:

**Objection 1:** In Matthew 19:17 our Lord says, “If you want to enter into life, keep the commandments.” From this it is clear that it is within the power of man’s will (*sit constitutum in hominis voluntate*) to enter into eternal life. But we can do by ourselves what is within our will’s power. Therefore, it seems that a man can merit eternal life on his own (*per seipsum*).

**Objection 2:** Eternal life is a prize or reward (*praemium vel merces*) that is bestowed by God on men—this according to Matthew 5:12 (“Your reward is great in heaven”). But a reward or prize is bestowed by God on a man because of the man’s works—this according to Psalm 61:12 (“You will render to each one according to his works”). Therefore, since a man is the master of his own works, it seems that it is within his power to attain eternal life.

**Objection 3:** Eternal life is the ultimate end of human life. But each natural thing can attain its own end through its own natural powers. Therefore, *a fortiori*, man, who has a higher nature, can attain eternal life through his own natural powers and in the absence of any sort of grace (*absque aliqua gratia*).

**But contrary to this:** In Romans 6:23 the Apostle says, “The grace of God is eternal life.” As a Gloss on the same passage points out, this is said “in order that we might understand that God leads us to eternal life by His mercy.”

**I respond:** The acts that lead one to eternal life have to be proportioned to the end. But no act exceeds the proportion of its active principle. And so we see that, among natural things, no entity can by its own operation bring about an effect that exceeds its active power; instead, it is able through its operation to produce only an effect that is proportioned to its power.

But as is clear from what was explained above (q. 5, a. 5), eternal life is an end that exceeds the proportion of human nature. And so man cannot by his natural powers produce meritorious works that are proportioned to eternal life; instead, this requires a higher power, which is the power of grace. And so without grace a man cannot merit eternal life.

However, as Augustine says in his third reply to the Pelagians, a man is able to do works that attain

to some of the good that is connatural to him, e.g., “work in the field, drink, eat, have friends,” and others of this sort.

**Reply to objection 1:** It is by his own will that a man does the works that merit eternal life; however, as Augustine explains in the same book, what is required for this is that the man’s will should be prepared by God through grace.

**Reply to objection 2:** As a Gloss on Romans 6:23 (“The grace of God is eternal life”) says, “It is certain that eternal life will be given for good works, but the very works for which eternal life is rendered belong to God’s grace.” For it was likewise explained above (a. 4) that grace is required in order to fulfill the commandments of the Law in the right manner for their fulfillment to be meritorious.

**Reply to objection 3:** This objection goes through for the case of an end that is connatural to man. But by the very fact that human nature is more noble, it can, at least by the help of grace, be led to a higher end that lower natures can in no way attain—in the same way that, as the Philosopher points out in *De Caelo* 2, a man who can attain health with the help of certain medicines is better disposed toward health than is a man who cannot in any way attain health.

## Article 6

### Can a man prepare himself for grace on his own without the exterior assistance of grace?

It seems that a man can prepare himself for grace on his own without the exterior assistance of grace:

**Objection 1:** As was explained above (a. 4), nothing that is impossible for a man is imposed on him. But Zachariah 1:3 says, “Turn toward me, and I will turn toward you,” and preparing oneself for grace is nothing other than turning toward God. Therefore, it seems that man can prepare himself for grace on his own without the assistance of grace.

**Objection 2:** A man prepares himself for grace by doing something that is within him (*faciendo quod in se est*), since if a man does what is within him, then God does not deny him grace. For Matthew 7:11 says that God gives His good Spirit “to those who ask Him.” But what is ‘within us’ is what is within our power. Therefore, it seems that it is within our power to prepare ourselves for grace.

**Objection 3:** If a man needs grace in order to prepare himself for grace, then by parity of reasoning he will need grace in order to prepare himself for that first grace, and so there will be an infinite regress—which is absurd. Therefore, it seems that one should stop at the first step—so that, namely, a man without grace can prepare himself for grace.

**Objection 4:** Proverbs 16:1 says, “It belongs to a man to prepare his mind.” But what is said to belong to a man is that which he can do on his own. Therefore, it seems that a man can on his own prepare himself for grace.

**But contrary to this:** John 6:44 says, “No one can come to me unless the Father, who sent me, draws him.” But if a man were able to prepare himself for grace, he would not have to be drawn by another. Therefore, a man cannot prepare himself for grace without the assistance of grace.

**I respond:** There are two sorts of preparation of the human will for the good:

One sort of preparation is that by which the human will is prepared for operating well and enjoying God. And this sort of preparation cannot be accomplished in the absence of the *habitual* gift of grace (*non potest fieri sine habituali gratiae dono*), which, as has been explained (a. 5), is the principle of a meritorious work.

In the second way, the preparation of the human will can be thought of as a preparation for *attaining* the habitual gift itself of grace. Now the preparation itself for the reception of *this* gift would not have to presuppose any other *habitual* gift in the soul, since otherwise there would be an infinite regress. Instead, what has to be presupposed is some assistance of grace (*aliquod auxilium gratuitum*)

whereby God either moves the soul interiorly or inspires a good intention (*interius animam moventis sive inspirantis bonum propositum*). For as was explained above (aa. 2 and 3), it is in these two ways that we need God's assistance.

Now it is clear that for this [second sort of preparation] we need God's assistance in moving us. For since every agent acts for the sake of an end, every cause must turn its effects toward its own end. And so since there is an ordering of ends corresponding to the ordering of agents or movers, a man has to be turned toward his ultimate end by the motion of the first mover, whereas he has to be turned toward a proximate end by certain of the lower movers' effecting the movement (*per motionem alicuius inferiorum moventium*)—just as a soldier's mind is turned toward seeking victory by the army leader's effecting the movement (*ex motione ducis exercitus*), whereas it is moved toward following his company's standard by the company leader's effecting the movement (*ex motione tribuni*). So, then, since God is the first mover absolutely speaking, the effect of His motion is that all things are turned toward Him in accord with the common tendency of the good (*secundum communem intentionem boni*), through which each thing tends toward being similar to God in its own manner. Hence, in *De Divinis Nominibus* Dionysius says, "God turns all things toward Himself." But He turns justified men (*homines iustos*) toward Himself as toward a special end that they intend and that they desire to adhere to as their proper good—this according to Psalm 72:28 ("It is good for me to adhere to God"). And so a man's being turned toward God can occur only when God turns him toward Himself. But someone's preparing himself for grace is, as it were, his being turned toward God—in the same way that someone whose eyes are turned away from the sun's light prepares himself to receive the sun's light by turning his eyes toward the sun. Hence, it is clear that a man cannot prepare himself to receive the light of grace except through the assistance of the grace of God, who moves him interiorly (*nisi per auxilium gratuitum Dei interius moventis*).

**Reply to objection 1:** A man's turning toward God does, to be sure, come about through free choice and, accordingly, the man is commanded to turn himself toward God. But free choice cannot be turned toward God unless God turns it toward Himself—this according to Jeremiah 31:18 ("Turn me toward you and I will be turned, since you are my God") and according to Lamentations 5:21 ("Turn us, O Lord, toward you and we will be turned").

**Reply to objection 2:** A man can do nothing unless he is moved by God—this according to John 15:5 ("Without me you can do nothing"). And so when it is said that a man does what is 'within him', what is being said is that this is within a man's power insofar as he is moved by God.

**Reply to objection 3:** This objection goes through for the case of habitual grace, which requires some preparation, since every form requires something that is disposed toward being able to receive it (*requirit susceptibile dispositum*). But a man's being moved by God does not have as a prerequisite any other movement, since God is the first mover. Hence, there need be no infinite regress.

**Reply to objection 4:** It belongs to a man to prepare his mind, since he does this through free choice, and yet, as has been explained, he does not do this without the assistance of God moving him and attracting him to Himself.

## Article 7

### Can a man rise up from sin without the assistance of grace?

It seems that a man can rise up from sin without the assistance of grace:

**Objection 1:** That which is a prerequisite for grace can be effected without grace. But to rise up from sin is a prerequisite for the illumination of grace; for Ephesians 5:14 says, "Rise up from the dead, and Christ will illuminate you." Therefore, a man can rise up from sin without grace.

**Objection 2:** As was explained above (q. 71, a. 1), sin is opposed to virtue in the way that sickness

is opposed to health. But by his natural power a man is able to rise up from sickness to health without the aid of any exterior medicine, because there remains within him a life-principle (*principium vitae*) from which natural operations proceed. Therefore, it seems that, for a similar reason, a man can recover on his own by going from a state of sin back to a state of justice (*de statu peccati ad statum iustitiae*) without the assistance of exterior grace.

**Objection 3:** Each natural thing is able to return to the act that is appropriate for its nature, in the way that hot water returns on its own to its natural coldness, and in the way that a rock that has been thrown returns on its own to its natural movement. But as is clear from Damascene in *De Fide Orthodoxa* 2, a sin is in some sense an act that is contrary to nature. Therefore, it seems that a man is able on his own to go from sin back to a state of justice.

**But contrary to this:** In Galatians 2:21 the Apostle says, “If a Law was given that was able to confer justification (*potest iustificare*), then Christ died in vain (*gratis*),” i.e., for no reason (*sine causa*). Therefore, by parity of reasoning, if a man has a nature through which justification is able to be conferred, then Christ died in vain, i.e., for no reason. But it is absurd to say this. Therefore, a man is not able to be justified on his own, i.e., to go from a state of sin back to a state of justice.

**I respond:** A man cannot in any way rise up from sin on his own without the assistance of grace. For since, as was explained above (q. 87, a. 6), a sin that passes away in its act remains in its guilt (*peccatum transiens actu remaneat reatu*), rising up from a sin is not the same thing as ceasing to commit the sin (*cessare ab actu peccati*).

Now as was explained above (q. 85, a. 1 and q. 86, a. 1 and q. 87, a. 1), there are three sorts of damage that a man incurs by sinning, viz., (a) the stain or blemish of sin (*macula*), (b) the corruption of the natural good (*corruptio naturalis boni*), and (c) the debt of punishment (*reatus poenae*). He incurs the stain of sin insofar as he is deprived of the beauty of grace by the deformity of sin. And the good of nature is corrupted insofar as the man’s nature is disordered by a human will that is not subject to God; for when this order is removed, the result is that the sinful man’s whole nature remains disordered. On the other hand, the debt of punishment is that by which a man, in committing a mortal sin (*peccando mortaliter*), merits eternal damnation.

Now it is clear, with respect to all three of these, that they can be repaired only by God. For since the beauty of grace results from being illuminated by God’s light, such beauty cannot be restored unless God once again does the illuminating; hence, what is required is a habitual gift, i.e., the light of grace. Similarly, the order of nature cannot be repaired in such a way that a man’s will is subject to God unless, as has been explained (a. 6), God draws the man’s will toward Himself. Likewise, the debt of eternal punishment can be remitted only by God, against whom the offense was committed and who is the judge of men.

And so the assistance of grace is required in order for a man to rise up from sin, both (a) in the sense of a habitual gift and (b) in the sense of an interior movement from God.

**Reply to objection 1:** What is being indicated to a man in this passage involves the act of free choice that is required in the man’s rising up from sin. And so when it says, “Rise up ... and Christ will illuminate you,” this should not be taken to mean that the whole of the rising up from sin precedes the illumination of grace. Rather, it means that when a man, through free choice moved by God, tries to rise up from sin, he receives the light of justifying grace.

**Reply to objection 2:** Natural reason is not a sufficient principle of the health that exists in a man through justifying grace. Instead, the principle of this health is grace, which is destroyed by sin. And so a man is not able to rise up on his own; instead, he needs the light of grace to be poured into him once again, in the same way that a soul would be poured once again into a dead body that was to be resuscitated.

**Reply to objection 3:** When nature is integral, then it can be restored on its own to what is appropriate for and proportioned to itself. However, it cannot without exterior assistance be restored to what exceeds its own proportion. So, then, as was explained above, since human nature as it goes

downward through sin does not remain integral but is instead corrupted, it cannot be restored through itself either with respect to the good that is connatural to itself or, *a fortiori*, with respect to the good of supernatural justification.

## Article 8

### Is a man without grace able not to sin?

It seems that a man without grace is able not to sin:

**Objection 1:** As Augustine points out in *De Duabus Animabus* and in *De Libero Arbitrio*, no one sins in what he cannot avoid. Therefore, if a man who is in mortal sin is not able to avoid sin, then it seems that in sinning he will not sin—which is absurd.

**Objection 2:** A man is corrected in order that he might not sin. Therefore, if a man who is in mortal sin is not able not to sin, then it seems that it would be useless to give him correction—which is absurd.

**Objection 3:** Ecclesiasticus 15:18 says, “Before man is life and death, good and evil; what pleases him shall be given to him.” But someone does not cease to be a man by sinning. Therefore, it is still within his power to choose good or choose evil. And so a man can avoid sin without grace.

**But contrary to this:** In *De Perfecta Iustitia* Augustine says, “If anyone denies that we should pray not to enter into temptation (and someone denies this if he claims that the assistance of God’s grace is not necessary for a man not to sin, but that, once a man merely receives the Law, the human will is sufficient), I have no doubt that this denial should be obliterated from the ears of everyone and condemned by the mouth of everyone.”

**I respond:** There are two ways in which we can speak about a man: (a) in accord with the state of *integral nature* and (b) in accord with the state of *corrupted nature*.

With respect to the state of *integral nature*, a man was able not to sin—either mortally or venially—even without habitual grace. For sinning is nothing other than withdrawing from what is in accord with nature, and a man in the integrity of his nature is able to avoid this. However, he was not able to do this without the assistance of God’s conserving him in the good [of his nature]; for if this were taken away, then he would fall into nothingness.

By contrast, in the state of *corrupted nature* a man needs habitual grace healing his nature in order to abstain entirely from sin. In the present life this healing occurs first in the mind, even while the carnal appetite is not yet repaired; hence, in Romans 7:25 the Apostle says in the person of a man who has been restored: “I myself, with the mind, serve the law of God, but with the flesh, the law of sin.” As was established above (q. 74, a. 5), in this state a man is able to abstain from mortal sins that exist in reason. However, a man is not able to abstain from every venial sin, and this because of the corruption of the lower appetite of sensuality. To be sure, *each* movement of sensuality is such that the man is able to repress it (and for this reason these movements have the character of sins and of voluntary acts), but he is nonetheless not able to repress *all* of them, since (a) while he is trying to resist the one, another is likely to rise up, and also, as was explained above (q. 74, a. 3), since (b) reason is unable to be ever watchful, so as to avoid movements of this sort.

Similarly, even before man’s reason, in which mortal sin exists, is repaired through justifying grace, each mortal sin is such that reason is able to avoid it (*postest singula peccata mortalia vitare*) and for some time, since it is not necessary for reason to be continually sinning in actuality; but it is impossible for reason to remain without mortal sin for a long time. Hence, in *Super Ezechiel* Gregory says, “A sin that is not erased right away through repentance leads by its momentum (*suo pondere*) to other sins.” The reason for this is that, just as the lower appetite should be subject to reason, so too reason should be subject to God and to posit the end or goal of its will in God (*in ipso constituere finem suae voluntatis*).

But all human acts have to be regulated by the end, in the same way that the movements of the lower appetite ought to be regulated by reason's judgment. Therefore, just as, when the lower appetite is not totally subject to reason, it is impossible that disordered movements should not arise in the sentient appetite, so too, when man's reason is not subject to God, the result is that many disorders occur in the very acts of reason. For since the man does not have his heart fixed on God in such a way that he wills not to be separated from Him for the sake of any good to be pursued or evil to be avoided, many things occur which are such that for the sake of pursuing them or avoiding them, the man withdraws from God by disregarding His precepts (*contemnendo praecepta ipsius*). And in this way he commits mortal sin, mainly because, as the Philosopher says in *Ethics* 3, in matters that come up suddenly (*in repentinis*) a man acts according to his preconceived ends and preexistent habits—even though the man is able, by reason's antecedent consideration (*ex praemeditatione rationis*), to do something outside the order of his preconceived ends and outside the inclination of his habits. But since a man cannot always have this sort of antecedent consideration, it is impossible that he should remain for a long time without acting in accord with the natural result of a will not ordered toward God (*secundum consequentiam voluntatis deordinatae a Deo*), unless he is quickly restored through grace to the correct ordering.

**Reply to objection 1:** As has been explained, each individual act of sinning is such that a man is able to avoid it; but he is not able to avoid all of them together (*non tamen omnes*) except through grace. And yet since a man's not preparing himself to have grace results from his own defect, his sin is not excused by the fact that he is unable to avoid sin without grace.

**Reply to objection 2:** Correction is useful, as Augustine puts it in *De Correptione et Gratia*, "when a desire for regeneration arises from the pain of the correction. Yet if a son of the promise is corrected, then while the noise of the correction resounds outwardly and lashes out, God is working and willing in him internally by His hidden inspirations."

Therefore, the reason why correction is necessary is that a man's act of will is required in order for him to abstain from sin; and yet the correction is not sufficient without God's assistance. This is why Ecclesiastes 7:14 says, "Consider the works of God, that no man is able to correct someone whom He has despised."

**Reply to objection 3:** As Augustine says in *Hypognosticon*, this passage is to be understood of man in the state of integral nature, when he was as yet not a slave of sin and so was able to sin and able not to sin.

In his present state, too, man is given whatever he wills, but the fact that he wills the good comes from the assistance of grace.

## Article 9

### **Is someone who has already received grace able on his own to do good and avoid evil without any further assistance of grace?**

It seems that someone who has already received grace is able on his own to do good and avoid evil without any further assistance of grace (*absque alio auxilio gratiae*):

**Objection 1:** A thing is either useless or imperfect (*frustra aut imperfectum*) if it does not accomplish what it is given for. But grace is given to us in order that we might be able to do good and avoid sin. Therefore, if a man is not able to do this through grace, then it seems that grace is either useless or else imperfect.

**Objection 2:** Through grace the Holy Spirit Himself dwells within us—this according to 1 Corinthians 3:16 ("Do you not know that you are the temple of God, and that the Spirit of God dwells within you?"). But since the Holy Spirit is omnipotent, He is sufficient to induce us to act well and to guard us from sin. Therefore, a man who has received grace is able to do both of the aforementioned

things without any further assistance of grace.

**Objection 3:** If a man who has received grace still needed a further assistance of grace in order to live well and to abstain from sin, then, by parity of reasoning, if he received that further assistance of grace, he would still need a further assistance [of grace]. Therefore, there would be an infinite regress—which is absurd. Therefore, someone who is in the state of grace does not need any further assistance of grace in order to act well and to abstain from sin.

**But contrary to this:** In *De Natura et Gratia* Augustine says, “Just as a fully healthy bodily eye cannot see unless it is aided by the clarity of light, so, too, even a most perfectly justified man cannot live correctly unless he is aided divinely by the eternal light of justice.” But justification comes from grace—this according to Romans 3:24 (“... justified gratuitously by His grace”). Therefore, even a man who already has grace needs the further assistance of grace in order to live correctly.

**I respond:** As was explained above (a. 5), in order to live correctly, a man needs God’s assistance in two ways: In one way, with respect to a *habitual gift*, through which corrupted human nature is healed and, once healed, is elevated to do works that merit eternal life and that exceed the proportion of nature. In the second way, a man needs the assistance of grace in order *to be moved by God to act*.

Therefore, as regards the first type of assistance, a man in the state of grace (*in gratia existens*) does not need any further assistance in the sense of another infused habit.

However, he does need the other type of assistance of grace, in order, namely, to be moved by God to act correctly—and this for two reasons. First, a general reason, viz., that, as was explained above (a. 1), no created entity is able to proceed into any act except by virtue of God’s moving it (*nisi virtute motionis divinae*). Second, a specific reason, viz., because of the condition of the state of human nature, which, even if it has been healed with respect to the mind, is still such that corruption and infection remain in it with respect to the flesh, through which “it serves the law of sin,” as Romans 7:25 puts it. In addition, a certain darkness of ignorance remains in the intellect and, accordingly, as Romans 8:26 likewise says, “We do not know what to pray for as we ought.” For because of the various turns of events, and because we do not know even our very own selves perfectly, we are not able to know in full what is good for us (*quid expediat nobis*)—this according to Wisdom 9:14 (“The thoughts of mortals are timid, and our counsels uncertain”). And so it is necessary for us to be directed and protected by God, who knows all things and can do all things.

This is why it is proper even for those who have been re-born through grace as children of God to say, “And lead us not into temptation,” and “Thy will be done on earth as it is in heaven,” and the rest of what is contained in the Lord’s prayer that is relevant in this regard.

**Reply to objection 1:** The gift of habitual grace is not given to us in order that we might not need any further divine assistance, since every creature needs to be conserved by God in the good that it has received from Him. And so if, after having received grace, a man still needs God’s assistance, one cannot infer that it is useless for the grace to have been given, or that the grace is imperfect. For even in the state of glory, when the grace will be altogether perfect, a man will still need God’s assistance.

Still, as has been explained, in our present state (*hic*) the grace is indeed imperfect in the sense that it does not heal a man totally.

**Reply to objection 2:** The action of the Holy Spirit by which He moves and protects us is not limited to the effect of the habitual gift that He causes within us. To the contrary, along with the Father and the Son, He moves and protects us beyond this effect.

**Reply to objection 3:** This argument shows that a man does not need any further *habitual* grace.

## Article 10

### Does a man in the state of grace need the assistance of grace in order to persevere?

It seems that a man in the state of grace (*in gratia constitutus*) does not need the assistance of grace in order to persevere:

**Objection 1:** Perseverance is something less than virtue, in the same way that, as is clear from the Philosopher in *Ethics* 7, continence is something less than virtue. But in order to have the virtues, a man does not need the assistance of grace other than that assistance by which he is justified. Therefore, *a fortiori*, he does not need the [further] assistance of grace in order to have perseverance.

**Objection 2:** All the virtues are infused together. But perseverance is counted as a virtue. Therefore, it seems that perseverance is given along with the other virtues infused by grace.

**Objection 3:** As the Apostle says in Romans 5:20, more was restored through Christ's gift than was lost through Adam's sin. But Adam received that by which he was able to persevere. Therefore, *a fortiori*, our ability to persevere is restored to us through Christ's grace. And so a man does not need [any further] grace in order to persevere.

**But contrary to this:** In *De Perseverantia* Augustine says, "Why is perseverance begged for from God, if it is not given by God? Wouldn't that prayer be laughable, since one is asking from Him something that He is known not to give, but that is within the man's power even though God doesn't give it?" But perseverance is begged for even by those who are sanctified through grace; this is understood when we say, "Hallowed be Thy name"—something that Augustine confirms in the same place by citing Cyprian's words. Therefore, a man—even a man in the state of grace—needs to be given perseverance by God.

**I respond:** There are three senses of 'perseverance'.

Sometimes 'perseverance' signifies a habit of the mind through which a man stands firm, lest he be drawn away by pressing sorrows (*per tristitias irruentes*) from what accords with virtue. Taken in this sense, perseverance is related to sorrows in the way that, as the Philosopher explains in *Ethics* 7, continence is related to sensual desires and pleasures.

In a second sense, 'perseverance' implies a certain habit in accord with which a man adopts the plan to persevere in the good right up to the end.

Now in both of these senses, perseverance is infused together with grace, just as continence is and just as the rest of the virtues are.

In yet another sense, 'perseverance' implies a continuation in the good right up until the end of one's life. And as is clear from the preceding article (a. 9), in order to have this sort of perseverance, a man does not, to be sure, need any further *habitual* grace, but he does need God's assistance directing him and protecting him against the pressure of temptations (*contra impulsus tentationum*). And so after a man is justified through grace, he has to ask God for this gift of perseverance, in order that he might be guarded from evil right up until the end of his life. For there are many men to whom grace is given, but to whom perseverance in grace is not given.

**Reply to objection 1:** This objection goes through on the first sense of 'perseverance', just as the second objection goes through on the second sense.

**Reply to objection 2:** For the same reason, the reply to this objection is clear.

**Reply to objection 3:** As Augustine puts it in *De Natura et Gratia*, "Man in his first state received the gift through which he could persevere, but he did not receive it in order to persevere. Now, however, through the grace of Christ many receive the gift of grace by which they are able to persevere, and it is further granted them that they do in fact persevere." And it is in this sense that Christ's gift is greater than Adam's crime.

Yet a man was more easily able to persevere through the gift of grace in the state of innocence, in which there was no rebellion of the flesh against the spirit, than he is now, when the restoration by

Christ's grace, even if it has begun with respect to the mind, is nonetheless not yet finished with respect to the flesh. This will occur in heaven (*in patria*), where a man will not only be able to persevere, but will also be unable to sin.

## QUESTION 110

### The Essence of God's Grace

Next we have to consider God's grace with respect to its essence. On this topic there are four questions: (1) Is grace an entity of some sort in the soul (*utrum gratia ponat aliquid in anima*)? (2) Is grace a quality? (3) Does grace differ from an infused virtue? (4) What is the subject of grace?

#### Article 1

##### Is grace an entity of some sort in the soul?

It seems that grace is not an entity of any sort in the soul:

**Objection 1:** A man is said to have the grace or favor of another man (*habere gratiam hominis*) in the same way that he is said to have the grace or favor of God (*habere gratiam Dei*); hence, Genesis 39:21 says, "The Lord gave to Joseph favor (*gratiam*) in the eyes of the chief keeper of the prison." But the fact that a man is said to have the grace or favor of some other man does not bespeak any sort of entity in the one who has the grace or favor of the other; instead, it bespeaks some kind of act of acceptance (*acceptatio*) in the one whose grace or favor he has. Therefore, the fact that a man is said to have the grace or favor of God does not bespeak any sort of entity in the soul; instead, the only thing it signifies is God's act of acceptance.

**Objection 2:** Just as the soul gives life to the body, so God gives life to the soul; hence, Deuteronomy 30:20 says, "He is your life." But the soul gives life to the body without mediation. Therefore, there is likewise nothing that falls between God and the soul. Therefore, grace is not a created entity of any sort in the soul.

**Objection 3:** A Gloss on Romans 1:7 ("Grace to you and peace") says, "Grace, i.e., the remission of sins ..." But the remission of sins is not an entity of any sort in the soul; rather, it exists in God alone by virtue of his not imputing the sin—this according to Psalm 31:2 ("Blessed is the man to whom the Lord has not imputed sin"). Therefore, neither is grace an entity of any sort in the soul.

**But contrary to this:** Light is an entity of some sort in the thing that is illuminated. But grace is a sort of light of the soul; hence, in *De Natura et Gratia* Augustine says, "Light deservedly deserts the defamer of the law, and the one who is thus deserted becomes blind." Therefore, grace is an entity of some sort in the soul.

**I respond:** In the common manner of speaking, there are three ways in which 'grace' is ordinarily understood:

(a) In one way, it is taken for someone's love (*pro dilectione*), as when we say, "The soldier has the king's grace or favor" (*miles habet gratiam regis*), i.e., he is in the king's good graces (*rex habet eum gratum*).

(b) In a second way, it is taken for a gift that is given for free (*pro aliquo dono gratis dato*), as when we say, "I bestow this grace or favor on you" (*hanc gratiam facio tibi*).

(c) In a third way, it is taken for acknowledging in gratitude a benefit that has been freely given (*pro recompensatione beneficii gratis dati*), in accord with which we are said to give thanks for, or 'say grace' over, gifts (*secundum quod dicimur agere gratias beneficiorum*).

Of these three, the second depends on the first; for the result of the love by which someone holds another in his favor or in his good graces is that he freely expends something on his behalf (*ex amore quo aliquis alium gratum habet procedit quod aliquid ei gratis impendat*). On the other hand, the third proceeds from the second, since the action of saying grace or giving thanks (*gratiarum actio*) arises from the benefits that have been freely bestowed.

Thus, with respect to the last two, it is clear that grace is an entity in the one who receives the grace—in the case of the former, it is the very gift that has been given for free, and in the case of the

latter, it is the act of recognizing the gift.

On the other hand, as regards the first, there is a difference to be noted between God's grace or favor and a man's grace or favor. For given that a creature's good comes from God's will, it is from the love by which God loves a creature that any good at all flows into the creature. By contrast, a man's will is moved by a good that already preexists in things, and from this it follows that a man's love is not a total cause of the thing's goodness, but instead presupposes that goodness either in part or in whole.

Therefore, it is clear that some good or other, caused in a creature at some time, follows upon any sort of love on God's part—even if not a good that is coeternal with God's eternal love. And God's love for creatures is thought of as differing, depending on the differences among the sorts of goods:

One sort of love is a *general love* in accord with which God "loves all the things that exist," as Wisdom 11:25 puts it, and in accord with which natural *esse* is bestowed on all things.

The other sort of love is a *special love* in accord with which God draws the rational creature beyond the status of his nature to a participation in the divine good. And with this love He is said to love someone absolutely speaking (*dicitur aliquem diligere simpliciter*), since with this love God wills for the creature an eternal good absolutely speaking, viz., Himself. In this sense, then, what is signified by saying that a man has God's grace or favor is a supernatural entity in the man that comes from God (*significatur quiddam supernaturale in homine a Deo proveniens*).

Sometimes, however, 'God's grace' expresses God's eternal love itself, and in this sense it is also called 'the grace of predestination' insofar as God has predestined or elected (*praedestinavit sive elegit*) certain men gratuitously and not on the basis of merits; for Ephesians 1:5ff. says, "He has predestined us for adoption as his children ... unto the praise of the glory of His grace."

**Reply to objection 1:** Even when someone is said to have the grace or favor of a *man*, it is understood that in him there exists some entity that is held in favor by that man, just as in the case when someone is said to have the grace or favor of *God*—though in different ways. For what is held in favor by one man in another man is *presupposed* by the former's love, whereas, as has been explained, what is held in favor by God in a man is *caused* by God's love.

**Reply to objection 2:** God is the life of the soul in the manner of an *efficient* cause, whereas the soul is the life of the body in the manner of a *formal* cause. Now there is nothing that lies between a form and its matter, since the form on its own informs its matter or subject. By contrast, an agent informs its subject not through its substance, but through the form that it causes in the matter.

**Reply to objection 3:** In *Retractationes* Augustine says, "When I said that grace is the remission of sins, whereas peace lies in reconciliation with God, this should not be taken to mean that peace itself and reconciliation do not belong to general grace. Rather, it should be taken to mean the name 'grace' specifically signifies the remission of sins." Therefore, it is not just the remission of sins that belongs to grace, but many other of God's gifts as well. Moreover, as will become clear below (q. 113, a. 2), even the remission of sins does not occur without some divinely caused effect in us.

## Article 2

### Is grace a quality of the soul?

It seems that grace is not a quality of the soul:

**Objection 1:** No quality acts on its own subject, since a quality's action does not exist without the subject's action, and so it would have to be the case that the subject acts on itself. But grace acts on the soul in justifying it. Therefore, grace is not a quality.

**Objection 2:** A substance is more noble than a quality. But grace is more noble than the nature of the soul, since, as was explained above (q. 109), through grace we can do many things that nature is insufficient for. Therefore, grace is not a quality.

**Objection 3:** No quality remains after it ceases to exist in a subject. But grace remains, since it is not corrupted. For if it were corrupted, then it would return to nothingness, just as it is created *ex nihilo*—this is why it is called a “new creature” in Galatians 6:15. Therefore, grace is not a quality.

**But contrary to this:** A Gloss on Psalm 103:15 (“... that He might make the face cheerful with oil”) says, “Grace is the splendor of the soul, procuring holy love.” But the splendor of the soul is a certain quality, just as the beauty of the soul is. Therefore, grace is a certain quality.

**I respond:** As has already been explained (a. 1), when someone is said to have God’s grace or favor, what is signified is that there exists within him an effect of God’s gratuitous will. But it was explained above (q. 109, aa. 1-2 and 5) that there are two ways in which a man is assisted by God’s gratuitous will:

(a) In one way, insofar as a man’s soul is moved by God to know or to will or to do something. And in this mode the gratuitous effect is not a quality in the man, but is instead *a certain movement of the soul*; for as *Physics* 3 says, “The act of the mover in the thing moved is the movement.”

(b) In the second way, a man is assisted by God’s gratuitous will insofar as a *habitual gift* is infused into the soul by God. The reason for this is that it would be inappropriate for God to provide in a lesser way for those creatures whom He loves in order that they might have a supernatural good than for those creatures whom He loves in order that they might have a natural good. Now He provides for natural creatures in such a way that He not only moves them to their natural acts but also gives them certain forms and powers which are the principles of their acts, so that they might be inclined in their own right to acts of this sort. And so the movements by which they are moved by God become connatural to those creatures and easy for them—this according to Wisdom 8:1 (“... and [wisdom] orders all things agreeably” (*suaviter*)). Therefore, *a fortiori*, as regards those beings whom He moves in order that they might have an eternal supernatural good, He infuses into them certain forms, i.e., qualities, by which they might be moved agreeably and promptly by Him toward attaining that eternal good. And in this way the gift of grace is a certain quality.

**Reply to objection 1:** Insofar as grace is a quality, it is said to act on the soul not in the manner of an efficient cause, but in the manner of a formal cause—in the same way that whiteness makes something white, and justice makes someone just.

**Reply to objection 2:** Every substance is either (a) the very nature of the thing whose substance it is or (b) part of the nature, in the sense in which the matter or the form is called a substance. And since grace lies beyond human nature, it is impossible that it should be either the substance or the substantial form; instead, it is an accidental form that belongs to the soul itself. For what exists as the substance (*substantialiter*) in God exists as an accident (*accidentaliter*) in a soul that is participating in God’s goodness, as is clear in the case of knowledge. Accordingly, then, since the soul participates imperfectly in God’s goodness, its very participation in God’s goodness, viz., grace, has a less perfect mode of being in the soul than the soul has subsisting in itself (*gratia imperfectiori modo habet esse in anima quam anima in seipsa subsistat*). And yet grace is more noble than the nature of the soul insofar as it is an expression of or participation in God’s goodness—even if not with respect to its mode of being (*non autem quantum ad modum essendi*).

**Reply to objection 3:** As Boethius says, “The *esse* of an accident is *to exist in* or *to inhere in*” (*accidentis esse est inesse*). Hence, any accident is called an accident not in the sense that it itself has *esse*, but because something exists by means of it. Hence, as *Metaphysics* 7 explains, it is better to say that an accident *belongs to* an entity than that it *is* an entity (*magis dicitur esse entis quam ens*). And since the *coming into being* or *being corrupted* of an entity belongs to that which has *esse*, it follows that, properly speaking, no accident either comes into being or is corrupted; instead, an accident is said to come into being or to be corrupted insofar its subject begins to be or ceases to be actually such-and-such in accord with that accident (*secundum quod subiectum incipit vel desinit esse in actu secundum illum accidens*).

Accordingly, grace is likewise said to be ‘created’ by virtue of the fact that men are ‘created’ in

accord with it, i.e., insofar as they are constituted in a new *esse* ‘out of nothing’, i.e., not because of any merits (*secundum ipsam creantur, idest in novo esse constituuntur ex nihilo, idest non ex meritis*)—this according to Ephesians 2:10 (“... created in Christ Jesus for good works”).

### Article 3

#### Is grace the same as a virtue?

It seems that grace is the same as a virtue (*gratia sit idem quod virtus*):

**Objection 1:** Augustine claims that operating grace is grace that operates through love, as it says in *De Spiritu et Littera*. But faith that operates through love is a virtue. Therefore, grace is a virtue.

**Objection 2:** What is defined belongs to whatever the definition belongs to. But the definitions of virtue handed down by both saints and philosophers are appropriate for grace; for grace itself makes the one who has it good and makes his action good, and it is likewise a good quality of the mind by which one lives well, etc. Therefore, grace is a virtue.

**Objection 3:** Grace is a certain quality. But it is clear that grace is not in the fourth species of quality, i.e., the form and abiding shape of thing, since grace does not belong to a body. Neither is it in the third species, since it is not either a passion or a passible quality—which, as *Physics 7* proves, are in the sentient part of the soul. Nor, again, is it in the second species, i.e., a natural power or weakness, since grace lies beyond the nature and is not related to the good and the bad in the way that a natural power is. Therefore, what remains is that grace is in the first species of quality, i.e., it is a habit or disposition. But habits of the mind are virtues, since, as was explained above (q. 57, aa. 1 and 2), even knowledge itself is in some sense a virtue. Therefore, grace is the same thing as a virtue.

**But contrary to this:** If grace is a virtue, then it would seem especially to be one of the three theological virtues. But grace is not faith or hope, since these can exist without sanctifying grace (*sine gratia gratum faciente*). Nor, likewise, is it charity, since, as Augustine says in *De Praedestinatione Sanctorum*, “Grace precedes charity.” Therefore, grace is not a virtue.

**I respond:** Some have claimed that grace and virtue are the same in essence (*idem esse secundum essentiam*) and differ only conceptually (*differre secundum rationem*), so that one and the same thing is called ‘grace’ insofar as it makes man favored by God or insofar as it is given for free, whereas it is called ‘virtue’ insofar as it perfects a man for operating well. This seems to have been the opinion of the Master in *Sentences 2*.

However, if one correctly considers the concept of virtue, then this opinion cannot stand. For as the Philosopher says in *Physics 7*, a virtue is a certain disposition of what is perfect, where I am using ‘perfect’ to mean ‘disposed according to its nature’. From this it is clear that, with respect to any given thing, ‘virtue’ is said in relation to some preexisting nature, viz., when the thing in question is disposed in a way that is congruent with its nature.

Now it is clear that the virtues acquired through human acts, which were discussed above (q. 55ff.), are dispositions by which a man is appropriately disposed in relation to the nature by which he is a man. By contrast, the infused virtues dispose a man in a higher mode and with respect to a higher end, and so they must be related to some higher nature as well. Now they are related to a participated divine nature—this according to 2 Peter 1:4 (“He has given us the greatest and most precious gifts, that by them you might be made partakers in God’s nature”). And because of the reception of this nature, we are said to be generated again as sons of God.

Therefore, just as the natural light of reason is something in addition to the acquired virtues, which are called virtues in relation to the natural light itself, so too the light of grace, which is a participation in God’s nature, is something in addition to the infused virtues, which are derived from that light and are ordered toward that light. Thus, in Ephesians 5:8 the Apostle says, “At one time you were darkness, but

now you are light in the Lord. Walk, then, as children of the light.” For just as the acquired virtues perfect a man in order that he might walk in a way congruent with the light of natural reason, so the infused virtues perfect a man in order that he might walk in a way congruent with the light of grace.

**Reply to objection 1:** Augustine is using the name ‘grace’ for faith operating through love, since the act of faith operating through love is the first act in which sanctifying (or habitual) grace (*gratia gratum faciens*) is made manifest.

**Reply to objection 2:** ‘Good’ as posited in the definition of virtue expresses a fittingness with respect to a preexistent nature, either an essential nature or a participated nature. But this is not the way in which ‘good’ is attributed to grace. Rather, as has been explained, ‘good’ is attributed to grace as a *root* of goodness in man.

**Reply to objection 3:** Grace is traced back to the first species of quality. Yet it is not the same as a virtue; instead, it is a certain habitual condition (*habitus*) that is presupposed by the infused virtues as their source and root (*sicut earum principium et radix*).

#### Article 4

##### Is it the essence of the soul that is the subject of grace?

It seems that it not the essence of the soul that is the subject of grace (*gratia non sit in essentia animae sicut in subiecto*):

**Objection 1:** In *Hypognosticon* Augustine says that grace is related to the will, or to free choice, “as a rider to his horse.” But as was explained in the First Part (*ST* 1, q. 83, a. 2), the will, or free choice, is a certain power. Therefore, it is a power of the soul that grace has as its subject (*gratia est in potentia animae sicut in subiecto*).

**Objection 2:** As Augustine says, “Man’s merits begin with grace.” But merit consists in an act that proceeds from a power. Therefore, it seems that grace is the perfection of some power of the soul.

**Objection 3:** If the essence of the soul were the proper subject of grace, then the soul would have to have a capacity for grace insofar as it has an essence. But this is false, since then it would follow that every soul has a capacity for grace. Therefore, it is not the essence of the soul that is the proper subject of grace.

**Objection 4:** The soul’s essence is prior to its powers. But what is prior is such that one can think of it without thinking of what is posterior to it. Therefore, it will follow that one can think of grace in the soul without thinking of any part or power of the soul—more specifically, without thinking of the will or the intellect or anything of this sort. But this is absurd.

**But contrary to this:** Through grace we are generated again as sons of God. But generation terminates in an essence prior to terminating in its powers. Therefore, grace is in the essence of the soul prior to its being in the soul’s powers.

**I respond:** This question depends on the preceding one. For if grace is the same as a virtue, then it has to have a power of the soul as its subject (*necesse est quod sit in potentia animae sicut in subiecto*), since, as was explained above (q. 56, a. 1), it is a power of the soul that is the proper subject of a virtue. By contrast, if grace differs from a virtue, then one cannot claim that the subject of grace is a power of the soul, since, as was explained above (q. 55, a. 1 and q. 56, a. 1), every perfection of a power of the soul has the character of a virtue.

Hence, what remains is that just as grace is prior to virtue, so too it has a subject that is prior to the powers of the soul—in such a way, namely, that it is in the essence of the soul. For just as by his intellectual power a man participates in God’s cognition through the virtue of faith, and just as by his power of will he participates in God’s love through the virtue of charity, so, too, by the nature of his soul

he participates in God's nature, in accord with a certain likeness, by being in a way generated or created again (*per quamdam regenerationem sive recreationem*).

**Reply to objection 1:** Just as the soul's powers, which are the principles of its works, flow from its essence, so too the virtues flow from grace itself into the soul's powers, and through these virtues the powers are moved to their acts. Accordingly, grace is related to the will as a mover to what is moved—which is the relation of a rider to a horse—and not as an accident to a subject.

**Reply to objection 2:** This makes clear the reply to the second objection. For grace is a principle of meritorious works through the mediation of the virtues, in the same way that the essence of the soul is the principle of vital operations by the mediation of the powers.

**Reply to objection 3:** The soul is the subject of grace insofar as it is in the species *intellectual* (or *rational*) nature. But the soul is not constituted in this species by any power, since the powers are natural properties of the soul that follow upon the species. And so it is in its essence that the [rational] soul differs in species from other kinds of soul, viz., the souls of brute animals and of plants. For this reason, it does not follow that if the human soul's essence is the subject of grace, then any soul whatsoever can be the subject of grace. For being the subject of grace is fitting for the essence of the soul insofar as the soul belongs to this particular species (*inquantum est talis speciei*).

**Reply to objection 4:** Since the powers of the soul are natural properties that follow from the species, the soul cannot exist without them. But even if it did exist without them, the soul would still be called *intellectual* (or *rational*) in accord with its species—not because it would have those powers in actuality, but because of the species of the sort of essence from which the relevant powers are apt to flow.

## QUESTION 111

### The Divisions of Grace

Next we have to consider the divisions of grace. On this topic there are five questions: (1) Is grace appropriately divided into gratuitously given grace (*gratia gratis data*) and sanctifying grace (*gratia gratum faciens*)? (2) Is sanctifying grace appropriately divided into operating grace (*gratia operans*) and cooperating grace (*gratia cooperans*)? (3) Is sanctifying grace appropriately divided into prevenient grace (*gratia preveniens*) and subsequent grace (*gratia subsequens*)? (4) What are the divisions of gratuitously given grace? (5) What is the relation between sanctifying grace and gratuitously given grace?

#### Article 1

##### Is grace appropriately divided into sanctifying grace and gratuitously given grace?

It seems that grace is not appropriately divided into sanctifying grace and gratuitously given grace (*gratia non convenienter dividatur per gratiam gratum facientem et gratiam gratis datam*):

**Objection 1:** As is clear from what has been explained above (q. 110, a. 1), grace is a certain sort of gift from God. But it is not because something has been given to a man by God that the man is in God's grace or favor (*ideo non est Deo gratus quia aliquid est ei datum a Deo*); instead, it is just the opposite. For something is freely given to someone by God because he is a man in God's grace or favor. Therefore, there is no such thing as sanctifying grace, i.e., grace that puts one in God's grace or favor (*nulla est gratia gratum faciens*).

**Objection 2:** Things that are given but not on the basis of preceding merits are given gratuitously. But the good of nature is itself likewise given to a man without any preceding merit, since nature is presupposed for merit. Therefore, nature itself is likewise gratuitously given by God. But nature is divided off from grace. Therefore, it is inappropriate that *gratuitously given* should be posited as one of the differences that divides *grace*, given that it is also found outside the genus *grace*.

**Objection 3:** Every division should be made by means of opposites. But even sanctifying grace itself, through which we are justified, is given to us gratuitously by God—this according to Romans 3:24 (“... having been justified gratuitously by His grace”). Therefore, sanctifying grace should not be divided off from gratuitously given grace.

**But contrary to this:** The Apostle attributes both things to grace, viz., (a) that it puts one into God's favor (*gratum facere*), and (b) that it is given gratuitously. With respect to the former he says in Ephesians 1:6, “He has graced us in His beloved Son.” With respect to the latter, he says in Romans 11:6, “And if by grace, it is not now by works; otherwise, grace is no longer grace.” Therefore, grace that has just one of these features can be distinguished from grace that has both of them.

**I respond:** As the Apostle says in Romans 13:1, “Things that are from God are well-ordered.” Now as Dionysius says in *De Caelesti Hierarchia*, the order of things consists in some things being led back to God through other things. Therefore, since grace is ordered toward man's being led back to God, this is done in a certain order, viz., with some being led back to God by others.

Accordingly, there are two kinds of grace:

(a) One kind of grace is such that through it a man is himself joined to God, and this is called *sanctifying grace* (*gratia gratum faciens*)

(b) On the other hand, the second kind of grace is such that through it one man cooperates with another in order to be led back to God. Now a gift of this sort is called *gratuitously given grace* (*gratia gratis data*), since (a) it lies beyond the power of nature and (b) is given to a man beyond his personal merits (*supra meritum personae*); however, because it is given not in order that the man himself should be justified by it, but rather in order that he cooperate in the justification of others, it is not called

sanctifying grace. And it is of this kind of grace that the Apostle is speaking in 1 Corinthians 12:7, “To each one is given the manifestation of the Spirit for its usefulness,” viz., its usefulness for others.

**Reply to objection 1:** Grace is said to put one in God’s favor not as an *efficient* cause, but as a *formal* cause (*non effective sed formaliter*), since through it a man is justified and made worthy of being said to be in God’s grace or favor—this according to Colossians 1:12 (“He has made us worthy of sharing the lot of the saints in light”).

**Reply to objection 2:** Insofar as grace is given *gratuitously*, what is excluded is the character of a debt. Now there are two ways in which a debt can be thought of:

(a) In one way, the debt arises from merit and is owed to the person who does the meritorious works (*quod refertur ad personam cuius est agere meritoria opera*)—this according to Romans 4:4 (“To someone who works, the reward is imputed as a debt and not according to grace”).

(b) In the second way, the debt is based on the constitution of a nature (*ex conditione naturae*), as when we say that it is owed to man that he should have reason and the other things that pertain to human nature.

It is not because God is under obligation to a creature that ‘debt’ is used in either of these senses; rather, it is because a creature ought to be subject to God in order that God’s ordination might be fulfilled in it, and God’s ordination is that such-and-such a nature should have such-and-such a constitution and properties, and that doing such-and-such should follow upon such-and-such a constitution and properties.

Therefore, natural gifts are not owed in the first sense of ‘debt’, but they are owed in the second sense (*dona naturalia carent primo debito, non autem carent secundo debito*). On the other hand, supernatural gifts are not owed in either sense (*dona supernaturalia utroque debito carent*), and so they deserve the name ‘grace’ in a more special way.

**Reply to objection 3:** Sanctifying grace adds something that (a) is over and beyond the character of gratuitously given grace and that also (b) pertains to the character of grace, viz., it puts a man into God’s grace or favor. And so the gratuitously given grace that does not do this retains the name that is common to them, as happens in many other cases. And it is in this sense that the two parts of the division are opposed to one another as *sanctifying* and *non-sanctifying*.

## Article 2

### Is grace appropriately divided into operating grace and cooperating grace?

It seems that grace is not appropriately divided into operating grace and cooperating grace:

**Objection 1:** As was explained above (qu. 110, a. 2), grace is a certain accident. But an accident cannot act on its own subject. Therefore, no kind of grace should be called ‘operating grace’.

**Objection 2:** If grace effects anything within us, then it especially effects justification. But it is not grace alone that effects this within us; for in his commentary on John 14:12 (“The works that I do he also shall do”) Augustine says, “He who created you without you, will not justify you without you.” Therefore, no kind of grace should be called simply ‘operating grace’.

**Objection 3:** Cooperating with someone seems to belong to a lower agent and not to a more principal agent. But grace operates within us as a more principal agent than free choice (*gratia principalius operatur in nobis quam liberum arbitrium*)—this according to Romans 9:16 (“It is not of him who wills or of him who runs, but of God, who shows mercy”) Therefore, no kind of grace should be called ‘cooperating grace’.

**Objection 4:** A division ought to be made by appeal to opposites. But *operating* and *cooperating* are not opposites, since one and the same thing can both operate and cooperate. Therefore, grace is not appropriately divided into operating grace and cooperating grace.

**But contrary to this:** In *De Gratia et Libero Arbitrio* Augustine says, “By cooperating, God

brings to completion within us what He begins by operating. For He Himself operates at the beginning in order that we might will, and He cooperates with those who will in order to perfect them.” But the operations of God by which He moves us toward the good pertain to grace. Therefore, grace is appropriately divided into operating grace and cooperating grace.

**I respond:** As was explained above (q. 109, aa. 2 and 3 and 9, and q. 110, a. 2), there are two ways in which grace can be thought of: (a) as a divine assistance by which God moves us to will correctly and act correctly, and (b) as a habitual gift that is poured into us by God. Now grace taken in either of these senses is appropriately divided into operating grace and cooperating grace:

(a) The operation with respect to a given effect is attributed not to the thing being moved but instead to the thing that effects the movement. Thus, in the case of that effect in which our mind is moved but is not effecting the movement, whereas God alone is effecting the movement, the operation is attributed to God and the grace is accordingly called *operating grace*. On the other hand, in the case of that effect in which our mind is both effecting the movement and being moved, the operation is attributed not only to God but also to our soul and the grace is accordingly called *cooperating grace*.

Now there are two sorts of acts within us:

(i) The first is an *interior act of the will*. And as regards this sort of act, the will is being moved, whereas God is effecting the movement—especially when the will begins to will what is good after having willed what is bad prior to this (*praesertim cum voluntas incipit bonum velle quae prius malum volebat*). And so insofar as God is moving the human mind to its act, the grace is called *operating grace*.

(ii) The second is the *exterior act*, which, as was explained above (q. 17, a. 9), is commanded by the will; the result is that the operation with respect to this act is attributed to the will. And since God, too, assists us with respect to this act—both by interiorly strengthening the will to arrive at the act and by exteriorly providing the power to operate—the grace is called *cooperating grace* with respect to this act. Hence, after the passage quoted above, Augustine adds, “He operates in order that we might will, and when we will, He cooperates with us in order that we might bring the act to completion.”

Therefore, if ‘grace’ is being taken for the gratuitous motion of God’s by which He moves us to a meritorious good, then grace is appropriately divided into operating grace and cooperating grace.

(b) On the other hand, if ‘grace’ is being taken for a habitual gift, then, just as with any other form, grace has two effects, the first of which is *esse*, and the second of which is *operation*, in the way that the operation of heat is to make something hot and an exterior act of heating (*sicut caloris operatio est facere calidum et exterior calefactio*).

So, then, insofar as habitual grace heals or justifies the soul, or puts the soul into God’s favor, it is called *operating grace*, whereas insofar as it is a principle of the meritorious works that also proceed from free choice, it is called *cooperating grace*.

**Reply to objection 1:** Insofar as grace is a certain accidental quality, it acts on the soul not as an efficient cause but as a formal case, in the way that whiteness is said to make a surface white.

**Reply to objection 2:** God does not justify us without us in the sense that while we are being justified we consent to God’s justice by a movement of free choice. However, that movement is an *effect* of grace and not a *cause* of grace. Hence, the operation as a whole belongs to grace.

**Reply to objection 3:** Someone is said to cooperate with another not only as a secondary agent with a principal agent, but also as an assisting agent with respect to a presupposed end. Now through operating grace a man is assisted by God in order to will the good. And so, with the end already presupposed, the result is that the grace cooperates with us.

**Reply to objection 4:** Operating grace and cooperating grace are the same grace, but, as is clear from what has been said, they are distinguished by their diverse effects.

### Article 3

#### Is grace appropriately divided into prevenient grace and subsequent grace?

It seems that grace is not appropriately divided into prevenient grace and subsequent grace:

**Objection 1:** Grace is an effect of God's love. But God's love is always prevenient and never subsequent—this according to 1 John 4:10 (“It is not that we have loved God, but that He has first loved us”). Therefore, one should not posit both prevenient grace and subsequent grace.

**Objection 2:** Sanctifying grace is just a single thing in a man, since it is sufficient—this according to 2 Corinthians 12:9 (“My grace is sufficient for you”). But being prior is not the same as being posterior. Therefore, grace is not appropriately divided into prevenient grace and subsequent grace.

**Objection 3:** Grace is known through its effects. But grace has infinitely many effects, one of which precedes another. Therefore, if, given this, grace were to be divided into prevenient grace and subsequent grace, it seems that there would be infinitely many species of grace. But infinities are ignored by every art. Therefore, grace is not appropriately divided into prevenient grace and subsequent grace.

**But contrary to this:** God's grace proceeds from His mercy. But we read both things in the Psalms: “His mercy shall precede me,” and, again, “His mercy shall follow me.” Therefore, grace is appropriately divided into prevenient grace and subsequent grace

**I respond:** Just as grace is divided into operating grace and cooperating grace because of its diverse effects, so, too, in whatever sense ‘grace’ is taken, grace is divided into prevenient grace and subsequent grace.

Now there are five effects of grace in us:

- (a) The soul is healed.
- (b) The soul wills the good.
- (c) The soul efficaciously does the good that it wills.
- (d) The soul perseveres in the good.
- (e) The soul attains glory.

And so insofar as grace causes the first effect in us, it is called *prevenient* with respect to the second effect, and insofar as it causes the second effect in us, it is called *subsequent* with respect to the first effect. And just as a given effect is posterior to one effect and prior to another, so as regards one and the same effect, grace can be called both prevenient and subsequent in different respects. This is the point Augustine is making in *De Natura et Gratia*: “It is prevenient in order that we might be healed, and it is subsequent in order that, having been healed, we might be invigorated; it is prevenient in order that we might be called, and it is subsequent in order that we might be glorified.”

**Reply to objection 1:** ‘God's love’ names something eternal, and so it can never be called anything but prevenient. But ‘grace’ signifies a temporal effect that can precede one thing and be subsequent to another. And so grace can be called prevenient and subsequent.

**Reply to objection 2:** The fact that it is both prevenient and subsequent does not make grace diverse *in its essence*, but instead makes it diverse *only with respect to its effects*—in the same sense that was explained above (a. 2) concerning operating grace and cooperating grace.

Likewise, the fact that subsequent grace pertains to glory does not make it numerically different from the prevenient grace through which we are now justified. For just as the charity of our earthly pilgrimage (*caritas viae*) is not laid aside in heaven but is instead perfected, so the same should be said of the light of grace. For in their concepts, neither charity nor grace implies any imperfection.

**Reply to objection 3:** Even if the effects of grace can be infinitely many, in just the way that human acts are infinitely many, still, all of them are traced back to things that are determinate in species. Furthermore, all agree in the fact that one precedes another.

#### Article 4

##### Does the Apostle appropriately distinguish the kinds of gratuitously given grace ?

It seems that the Apostle does not appropriately distinguish the kinds of gratuitously given grace:

**Objection 1:** Every gift that is given to us gratuitously by God can be called a gratuitously given grace. But there are infinitely many gifts which (a) are given to us gratuitously by God, among both goods of the soul and goods of the body, and yet which (b) are not sanctifying (*quae tamen nos Deo gratos non faciunt*). Therefore, gratuitously given grace cannot be comprehended under any fixed divisions.

**Objection 2:** Gratuitously given grace is distinguished from sanctifying grace. But faith (*fides*) has to do with sanctifying grace, since we are justified by it—this according to Romans 5:1 (“... having therefore been justified by grace, etc.”). Therefore, it is inappropriate to put faith among the gratuitously given graces, especially since the other virtues such as hope and charity are not put there.

**Objection 3:** The working of healings (*operatio sanitarum*), along with speaking in different tongues (*loqui diversa genera linguarum*), are miracles of a certain sort. Again, the interpretation of tongues (*interpretatio sermonum*) pertains to wisdom or knowledge—this according to Daniel 1:17 (“And to these young men God gave knowledge and learning in every book and wisdom”). Therefore, it is inappropriate to divide the grace of the working of healings and speaking in different of tongues from the working of miracles (*operatio virtutum*), and to divide the interpretation of tongues from the word of wisdom and knowledge (*sermo sapientiae et sermo scientiae*).

**Objection 4:** Just as wisdom and knowledge are certain gifts of the Holy Spirit, so too, as was explained above (q. 68, a. 4), are understanding, counsel, piety, fortitude, and fear. Therefore, these, too, should have been posited among the gratuitously given graces.

**But contrary to this:** In 1 Corinthians 12:8-10 the Apostle says, “To one, indeed, by the Spirit is given the word of wisdom (*sermo sapientiae*); and to another, the word of knowledge (*sermo scientiae*), according to the same Spirit; to another, faith (*fides*), in the same Spirit; to another, the grace to work healings (*gratia sanitarum*); to another, the working of miracles (*operationes virtutum*); to another, prophecy (*prophetia*); to another, the discerning of spirits (*discretio spirituum*); to another, diverse kinds of tongues (*genera linguarum*); to another, the interpretation of tongues (*interpretatio sermonum*).”

**I respond:** As has been explained (a. 1), gratuitously given grace is ordered toward one man’s cooperating with others in order that they might be led back to God. But a man cannot accomplish this by effecting an interior movement in the others, since this belongs to God alone; rather, he can accomplish it only exteriorly, by teaching and persuading. And so gratuitously given graces include those which a man needs for instructing others in those divine matters that lie beyond reason.

Now three things are required for this: (a) that the man be given a fullness of cognition of divine things, so that on this basis he might be able to instruct others; (b) that he be able to confirm or prove the claims he makes, since otherwise his teaching might not be efficacious; and (c) that he be able to present the things he understands to his hearers in an appropriate way.

As regards the first of these, three things are necessary, as is obvious in the case of a human teacher:

First of all, the one who is charged with instructing another in a given science has to be such that the principles of that science are absolutely certain to him. And in this regard what is posited is *faith*, which is certitude with respect to the invisible realities that are presupposed as principles in Catholic doctrine.

Second, the teacher has to have the correct relation to the main conclusions of the science. And in this regard what is posited is the *word of wisdom*, i.e., the cognition of divine matters.

Third, he has to abound in examples and in his cognition of the effects through which he must sometimes make known their causes. And in this regard what is posited is the *word of knowledge*, i.e.,

the cognition of human matters; for “the invisible things of God ... are clearly seen ... through the things that have been made” (Romans 1:20).

Now in those things that are subject to reason, confirmation comes through arguments. By contrast, in those things that are revealed by God beyond reason, confirmation comes through the things proper to God’s power—and this in two ways:

First, in such a way that the teacher of sacred doctrine does, in miraculous works, what only God is able to do, whether (a) these works are ordered toward the health of bodies, and in this regard what is posited is the grace *to work healings*, or whether (b) they are ordered solely to the manifestation of God’s power, e.g., the sun’s standing still or being darkened, or the sea’s being divided, and in this regard what is posited is the *working of miracles*.

Second, in such a way that the teacher of sacred doctrine is able to make manifest things that only God knows. And these things are (a) future contingents, and in this regard what is posited is *prophecy*, and also (b) the secrets of the heart, and in this regard what is posited is the *discerning of spirits*.

Now the power of proclaiming (*facultas pronuntiandi*) can occur either (a) with respect to the languages in which someone can be understood, and accordingly what is posited is the *diverse kinds of tongues*, or (b) with respect to understanding the things that are said, and in this regard what is posited is the *interpretation of tongues*.

**Reply to objection 1:** As was explained above (a. 1), not all gifts that are given to us by God are called gratuitously given graces, but only those that exceed the power of nature, e.g., that a fisherman should abound in the word of wisdom and the word of knowledge, etc. And these are the sorts of gifts that are included here under *gratuitously given grace*.

**Reply to objection 2:** Faith is counted here not insofar as it is a virtue that justifies a man in himself, but insofar as it implies a certain preeminent certitude of faith, on the basis of which a man is especially capable of instructing others about those things that pertain to the faith. By contrast, hope and charity pertain to the appetitive power, since it is through the appetitive power that a man is ordered toward God.

**Reply to objection 3:** The grace to work healings is distinguished from the general working of miracles by the fact that it has a special character that induces one to faith. For someone is rendered more ready for faith through the gift of corporeal health which he has received through the power of faith.

Similarly, speaking in various tongues and interpreting tongues have certain special characters for moving others to faith, and so they are posited as special gratuitously given graces.

**Reply to objection 4:** Wisdom and knowledge are not counted among the gratuitously given graces by reason of the fact they are enumerated among the gifts of Holy Spirit, viz., insofar as a man’s mind is able to be moved easily by the Holy Spirit to what belongs to wisdom or knowledge; for, as was explained above (q. 68, aa. 1 and 4), this is how it is with the gifts of the Holy Spirit. Instead, wisdom and knowledge are counted among the gratuitously given graces insofar as they imply a certain abundance of knowledge and wisdom, with the result that the man is not only able to be appropriately wise about divine things in his own case, but is also able to instruct others and to refute opponents. And the reason why the word of wisdom and the word of knowledge are prominently placed among the gratuitously given graces is that, as Augustine puts it in *De Trinitate* 14, “It is one thing to know merely what a man ought to believe in order to attain the happy life; it is another thing to know the way in which this enriches the pious and is defended against the impious.”

## Article 5

### Is gratuitously given grace superior to sanctifying grace?

It seems that gratuitously given grace is superior to (*dignior quam*) sanctifying grace:

**Objection 1:** As Aristotle says in *Ethics* 1, “The good of a nation is better than the good of one man.” But sanctifying grace is ordered toward the good of just one man, whereas gratuitously given grace, as was explained above (aa. 1 and 4), is ordered toward the common good of the whole Church. Therefore, gratuitously given grace is superior to sanctifying grace.

**Objection 2:** It takes more power (*maioris virtutis est*) for a given thing to act on another than for it simply to be perfected in itself; for instance, the brightness of a body that is also able to illuminate other bodies is greater than the brightness of a body that shines in its own right in such a way that it is unable to illuminate other bodies. For this reason, in *Ethics* 5 the Philosopher says, “The most outstanding virtue is justice, through which a man is correctly related to others as well.” But it is through sanctifying grace that a man is perfected in his own right, whereas it is through gratuitously given grace that a man works for the perfection of others. Therefore, gratuitously given grace is superior to sanctifying grace.

**Objection 3:** What is proper to those who are better is more excellent than what is common to the many; for instance, to reason discursively, which is proper to man, is more excellent than sensing, which is common to all the animals. But sanctifying grace is common to all the members of the Church, whereas gratuitously given grace is the proper gift of the more excellent members of the Church. Therefore, gratuitously given grace is more excellent than sanctifying grace.

**But contrary to this:** In 1 Corinthians 12:31, after having enumerated the gratuitously given graces, the Apostle adds, “I show you a still more excellent way,” and as become clear from what follows, he is talking about charity, which pertains to sanctifying grace. Therefore, sanctifying grace is more excellent than gratuitously given grace.

**I respond:** A power (*virtus*) is more excellent to the extent that it is ordered to a higher good. And it is always the case that the end is more important (*potior*) than the means to that end.

Now sanctifying grace orders a man directly to being joined with his ultimate end. By contrast, gratuitously given graces order a man toward things that are preparatory for the ultimate end; for instance, through prophecies and miracles and other things of this sort men are led toward being joined to their ultimate end. And so sanctifying grace is much more excellent than gratuitously given grace.

**Reply to objection 1:** As the Philosopher says in *Metaphysics* 7, the good of a multitude is twofold. There is one sort of good that exists within the multitude itself, e.g., the ordering within an army. But there is another sort of good that is separate from the multitude, e.g., the good of the leader; and this good is better, because the other good is also ordered toward it.

Now gratuitously given grace is ordered toward the common good of the Church, which is the ordering within the Church (*ordo ecclesiasticus*); but sanctifying grace is ordered toward a common separate good, viz., God Himself. And this is why sanctifying grace is more excellent.

**Reply to objection 2:** If gratuitously given grace were able effect in another what a man attains through sanctifying grace, then it would follow that gratuitously given grace is more excellent, in just the way that the brightness of the illuminating sun is more excellent than the brightness of an illuminated body. But a man is not able, through gratuitously given grace, to cause another to be joined to God, which is what he himself has through sanctifying grace. And so gratuitously given grace need not be more excellent—just as, in the case of a fire, the heat that manifests the fire’s species and through which the fire acts to induce heat in another is not more excellent than the substantial form of the fire.

**Reply to objection 3:** Sensing is ordered toward discursive reasoning as its end, and this is why discursive reasoning is more excellent. But in the present case the opposite holds, since what is proper is ordered toward what is common as its end. And so there is no parallel.

## QUESTION 112

### The Cause of Grace

Next we have to consider the causes of grace. On this topic there are five questions: (1) Is God alone an efficient cause of grace? (2) Is any disposition toward grace required on the part of the one who receives the grace, through an act of free choice? (3) Can this sort of disposition be a necessity for grace? (4) Is grace equal in everyone? (5) Can someone know that he has grace?

#### Article 1

##### Is God alone a cause of grace?

It seems not to be the case that God alone is a cause of grace:

**Objection 1:** John 1:17 says, “Grace and truth came through Jesus Christ.” But in the name ‘Jesus Christ’ one understands not just the divine nature that assumes, but also the created nature that is assumed. Therefore, some creature is able to be a cause of grace.

**Objection 2:** The difference posited between the sacraments of the New Law and the sacraments of the Old Law is that the sacraments of the New Law are a cause of the grace which the sacraments of the Old Law merely signified. But the sacraments of the New Law are certain visible elements. Therefore, it is not the case that God alone is a cause of grace.

**Objection 3:** According to Dionysius in *De Caelesti Hierarchia*, the angels cleanse, illuminate, and perfect both lower angels and men. But a rational creature is cleansed and illuminated and perfected through grace. Therefore, it is not the case that God alone is a cause of grace.

**But contrary to this:** Psalm 83:12 says, “The Lord will give grace and glory.”

**I respond:** No entity is able to act beyond its species, since it must always be the case that a cause is more powerful (*potior*) than its effect. But the gift of grace exceeds every power of created nature, since it is nothing other than a certain participation in God’s nature, which exceeds every other nature. And so it is impossible for any creature to be a cause of grace. For it is as necessary that God alone should deify (*deificet*), by communicating a share of the divine nature through a certain participation in His likeness, as that it is impossible that anything other than fire alone should produce fire.

**Reply to objection 1:** As Damascene puts it in *De Fide Orthodoxa* 3, Christ’s human nature (*humanitas Christi*) is “like an instrument (*organum*)” of His divinity. But an instrument effects the principal agent’s action not by its own power but by the power of the principal agent. And so Christ’s human nature is a cause of grace not by its own power, but by the power of the adjoined divine nature (*sed virtute divinitatis adiunctae*), by virtue of which the actions of Christ’s human nature are salvific (*ex qua actiones humanitatis Christi sunt salutes*).

**Reply to objection 2:** Just as, in the very person of Christ, the human nature is a cause of our salvation through grace, with the divine power acting as the principal cause, so, too, in the sacraments of the New Law, which flow from Christ (*quae derivantur a Christo*), grace is caused instrumentally, as it were, through the sacraments themselves, whereas it is caused principally by the power of the Holy Spirit operating in the sacraments—this according to John 3:5 (“Unless a man be born again from water and Holy Spirit, etc.”).

**Reply to objection 3:** An angel cleanses, illuminates, and perfects an angel or a man by means of some sort of instruction, and not by justifying him through grace (*per modum instructionis cuiusdam, non autem iustificando per gratiam*). Hence, in *De Divinis Nominibus*, chap. 7, Dionysius says that this sort of cleansing, illuminating, and perfecting is “nothing other than the reception of divine knowledge.”

## Article 2

### Is any preparation or disposition for grace required on the part of a man?

It seems that no preparation or disposition for grace is required on the part of a man:

**Objection 1:** In Romans 4:4 the Apostle says, “To someone who works, the reward is imputed as a debt and not according to grace.” But a man’s preparation through free choice occurs only through some work (*non nisi per aliquam operationem*). Therefore, the character of grace would be destroyed.

**Objection 2:** Someone who persists in his sin is not preparing himself to have grace. But grace has been given to some who were persisting in their sin, as is clear in the case of Paul, who, as Acts 9:1 reports, received grace even while he was “breathing threats and slaughter against the disciples of the Lord.” Therefore, no preparation for grace is required on the part of a man.

**Objection 3:** An agent with infinite power does not require a disposition on the part of the matter, since he does not even require matter itself; this is clear in the case of the act of creating, since this act is compared with the giving of grace, which is itself called “a new creature” in Galatians 6:15. But as has been explained (a. 1), only God, who has infinite power, is a cause of grace. Therefore, no preparation is required on the part of a man for receiving grace.

**But contrary to this:** Amos 4:12 says, “Prepare to meet your God, O Israel,” and 1 Kings 7:3 says, “Prepare your hearts for the Lord”.

**I respond:** As has been explained above (q. 109, aa. 2 and 3 and 6 and 9, and q. 110, a. 2, and q. 111, a. 2), ‘grace’ is said in two ways: (a) sometimes for God’s habitual gift itself and (b) sometimes for God’s assistance in moving the soul toward the good.

Thus, on the first way of taking ‘grace’, some preparation for grace is needed for grace, since no form can exist except in disposed matter.

However, if we are speaking of ‘grace’ insofar as it signifies God’s assistance in moving the soul toward the good, then no preparation is required on the part of a man in the sense of something that precedes God’s assistance. To the contrary, any preparation that can exist in a man is itself from God’s assistance in moving the soul toward the good. Accordingly, the good movement of free choice by which someone is prepared to receive the gift of grace is itself an act of free choice as moved by God, and it is in this respect that a man is said to prepare himself—this according to Proverbs 16:1 (“It is the part of man to prepare his mind”). This movement is from God as a principal cause (*principaliter a Deo*) moving the faculty of free choice and, accordingly, a man’s will is said to be prepared by God and a man’s steps to be directed by the Lord (Psalm 36:23).

**Reply to objection 1:** A man’s act of preparing (*preparatio*) to have grace is something simultaneous with the very infusion of the grace. And such an operation is, to be sure, meritorious; however, it merits not *grace*, which is already had, but instead *glory*, which is not yet had.

Now there is another, imperfect act of preparing for grace that sometimes precedes the gift of sanctifying grace and yet is still from God as a mover. However, as long as the man has not yet been justified through grace, this sort of act is not sufficient for merit. For as will be explained below (q. 114, a. 2), there can be no merit except on the basis of grace.

**Reply to objection 2:** Since a man cannot prepare himself for grace unless God comes in first and moves him toward the good (*nisi Deo eum praeveniente et movente ad bonum*), it does not matter whether someone comes to complete preparation quickly or little by little. For Ecclesiasticus 11:23 says, “It is easy in God’s eyes to make a poor man rich all of a sudden.”

Now it sometimes happens that God moves a man toward some good, but not toward a perfect good; and this sort of preparation precedes grace. However, He sometimes moves a man toward the good completely and instantaneously (*statim perfecte*), and the man receives grace suddenly—this according to John 6:45 (“Everyone who has heard from the Father and has learned comes to me”). And this is the way

it happened with Paul, since while he was still persisting in his sin, his heart was moved suddenly and perfectly by God to listen and to learn and to come. And in this way he received grace all of a sudden.

**Reply to objection 3:** An agent with infinite power does not need matter or the disposition of matter in the way that they are presupposed by the action of some other cause. However, it must still be the case that, in keeping with the constitution of the thing to be caused, the agent causes within that thing itself its matter and the appropriate disposition for its form. Likewise, in order for God to infuse grace into a soul, there is no preparation required that He does not bring about Himself.

### Article 3

#### Must grace necessarily be given to someone who prepares himself for grace or who does what is within his power?

It seems that grace must necessarily be given to someone who prepares himself for grace or who does what is within his power (*ex necessitate detur gratia se praeparanti ad gratiam, vel facienti quod in se est*):

**Objection 1:** A Gloss on Romans 5:1 (“Having been justified by faith, let us have peace”) says, “God accepts the one who flees to Him; otherwise, there would be iniquity in Him.” But it is impossible for there to be iniquity in God. Therefore, it is impossible for God not to accept someone who flees to Him. Therefore, he must necessarily receive grace.

**Objection 2:** In *De Casu Diaboli* Anselm says, “The reason why God did not give the devil grace is that he willed not to accept it; nor was he prepared for it.” But when the cause is removed, the effect is necessarily removed. Therefore, if someone wills to accept grace, then it must necessarily be given to him.

**Objection 3:** As is clear from Dionysius in *De Divinis Nominibus*, chap. 4, the good is communicative of itself. But the good of grace is better than the good of nature. Therefore, since a natural form must necessarily come to a disposed matter, it seems that, *a fortiori*, grace must necessarily be given to someone who prepares himself for grace.

**But contrary to this:** A man is related to God as clay to a potter—this according to Jeremiah 18:6 (“As clay is in the hand of a potter, so you are in my hand”). But no matter how the clay is prepared, it does not necessarily receive a form from the potter. Therefore, no matter how a man prepares himself, he does not receive grace from God necessarily.

**I respond:** As was explained above (a. 2), a man’s act of preparing for grace comes *from God* as a mover and *from free choice* as what is moved. Therefore, there are two possible ways to consider the act of preparing:

(a) First, insofar as it comes from free choice. In this regard, the act has no necessity of attaining grace, since the gift of grace exceeds all the preparation that belongs to human power.

(b) Second, the act can be considered insofar as it is from God as a mover. And in this case it does have a necessity with respect to that toward which it is ordered by God—not a necessity of coercion, but a necessity of infallibility (*non quidem coactionis sed infallibilitatis*), since God’s intention cannot fail. This accords with what Augustine says in *De Praedestinatione Sanctorum*: “Whoever is liberated through God’s gifts is liberated with absolute certitude.” Hence, if it is God’s intention as mover that a man whose heart He is moving should receive grace, then the man infallibly receives it—this according to John 6:45 (“Everyone that has heard from the Father and has learned comes to me”).

**Reply to objection 1:** The Gloss in question is talking about someone who flees to God through a meritorious act of free choice as already informed by grace, where it would be contrary to the justice that God Himself has established if the man were not to receive grace.

Alternatively, if the Gloss is referring to a movement of free choice before grace, then it is speaking in such a way that the man's very fleeing to God comes through God's motion, which cannot fall short of what is just.

**Reply to objection 2:** The first cause of a lack of grace comes from us, whereas the first cause of the reception of grace comes from God—this according to Hosea 13:9 (“The perdition, O Israel, is yours; your help is only from me”).

**Reply to objection 3:** Even among natural things, the disposition of the matter necessarily follows upon the form only through the power of the agent that causes the disposition.

#### Article 4

##### Is grace greater in one man than in another?

It seems that grace is not greater in one man than in another:

**Objection 1:** As has been explained (q. 110, a. 4), grace is caused in us by God's love. But Wisdom 6:8 says, “He has made the little and the great, and He cares equally for all.” Therefore, everyone receives grace equally from Him.

**Objection 2:** What is said in the superlative does not admit of more and less (*ea quae in summo dicuntur non recipiunt magis et minus*). But ‘grace’ is said in the superlative, since grace joins one to the ultimate end. Therefore, it does not admit of more and less. Therefore, it is not greater in one man than in another.

**Objection 3:** In the sense explained above (q. 110, a. 1), grace is the life of the soul. But ‘to live’ does not admit of more and less. Therefore, neither does ‘grace’.

**But contrary to this:** Ephesians 4:7 says, “To each of us grace is given according to the measure of Christ's giving.” But what is given in a measured way is not given equally to all. Therefore, it is not the case that all have equal grace.

**I respond:** As was explained above (q. 52, aa. 1 and 2, and q. 66, aa. 1 and 2), there are two possible ways to measure the greatness of a habit: (a) the one based on the habit's *end* or *object*, in accord with which one virtue is more noble than another to the extent that it is ordered toward a greater good; and (b) the other based on the *subject*, which participates to a greater or lesser degree in the inhering habit.

Therefore, in accord with the first measure of greatness, sanctifying grace cannot be greater or lesser, since by its nature grace joins a man to the highest good, viz., God.

However, on the part of the subject grace can admit of more and less, viz., insofar as one individual is illuminated more perfectly by grace than another is. One reason for this difference stems from someone's preparing himself for grace; for one who prepares himself to a greater degree for grace receives a fuller grace.

Still, this cannot be the primary reason for the difference in question, since the preparation for grace belongs to a man only insofar as his free choice is prepared by God. Hence, the primary cause of the difference has to be taken from God Himself, who dispenses the gifts of His grace in different ways, in order that the beauty and perfection of the Church might emerge from different grades, just as He has instituted diverse grades of entities in order that the universe might be perfect. Hence, in Ephesians 4, after having said, “To every one of us is given grace according to the measure of Christ's giving” (4:7), the Apostle, having enumerated the different graces, adds, “... for the perfecting of the saints in building up the body of Christ” (4:12).

**Reply to objection 1:** There are two possible ways to think of God's care:

The first is with respect to *God's act itself*, which is simple and uniform, and in this sense His care

is related equally to everyone, since He dispenses greater and lesser things by a single and simple act.

But one can think of another sense on the part of the things in creatures that come from God's care. And in this sense one finds inequality, viz., insofar as by His care God provides greater gifts for some and lesser gifts for others.

**Reply to objection 2:** This argument goes through for the first sense of the greatness of grace. For grace cannot be greater in the sense of being ordered to a greater good; rather, it can be greater because it orders one to a greater or lesser degree toward participating in the same good to a greater or lesser degree. For as far as the subject's participation is concerned, there can be differences of intensity or remission, both in the grace itself and in final glory.

**Reply to objection 3:** Natural life has to do with a man's substance, and this is the reason why it does not admit of more and less. By contrast, a man participates in the life of grace as an accident (*accidentaliter*), and so the man can have it to a greater or lesser degree.

## Article 5

### Can a man know that he has grace?

It seems that a man can know that he has grace:

**Objection 1:** Grace is in the soul through the soul's essence. But as is clear from Augustine in *Super Genesim ad Litteram* 12, the soul's most certain cognition is of those things that are in the soul through the soul's essence. Therefore, grace can be known with the highest certitude by someone who has grace.

**Objection 2:** Just as knowledge is God's gift, so too is grace. But one who receives knowledge from God knows that he has knowledge—this according to Wisdom 7:17 (“The Lord has given me true knowledge of the things that are”). Therefore, by parity of reasoning, one who receives graces from God knows that he has grace.

**Objection 3:** Light is more knowable than darkness, since according to the Apostle in Ephesians 5:13, “All that is made manifest is light.” But sin, which is spiritual darkness, can be known with certitude by one who has sin. So, all the more, can grace be known, since it is spiritual light.

**Objection 4:** In 1 Corinthians 2:12 the Apostle says, “Now we have received not the Spirit of this world, but the Spirit that is of God, that we may know the things that are given to us by God.” But grace is God's principal gift. Therefore, a man who receives grace through the Holy Spirit knows through that same Spirit that grace has been given to him.

**Objection 5:** In Genesis 22:12 it is said to Abraham in the person of God, “Now I know that you fear God,” i.e., “I have made you know.” Now this is said here because of his chaste fear, which does not exist without grace. Therefore, a man is able to know that he has grace.

**But contrary to this:** Ecclesiastes 9:1, “No man knows whether he is worthy of hatred or worthy of love.” But sanctifying grace (*gratia gratum faciens*) is what makes a man worthy of God's love. Therefore, no one can know whether he has sanctifying grace.

**I respond:** There are three ways in which something can be known (*potest cognosci*):

In one way, *through revelation*. And someone can know in this way that he has grace. For God sometimes reveals this to certain individuals by a special privilege, in order that the joy of security might begin in them in this life, so that they might more confidently and courageously carry out magnificent deeds and sustain the evils of the present life—just as it was said to Paul, “My grace is sufficient for you” (2 Corinthians 12:9).

In a second way, *a man knows something on his own and with certitude (per seipsum et hoc certitudinaliter)*. And in this sense no one can know that he has grace. For certitude cannot be had with

respect to anything unless that matter can be judged by its proper principle, since it is in this way that certitude is had with respect to conclusions that are demonstrated through universal indemonstrable principles. But no one can know that he has knowledge of any given conclusion, if he does not know the relevant principle. But the principle of grace, as well as its object, is God Himself, who because of His excellence is not known to us—this according to Job 36:26 (“Behold, God is great, exceeding our knowledge”). And so the presence or absence of grace in us cannot be known with certitude in this way—this according to Job 9:11 (“If He comes to me, I will not see Him; if He departs, I will not perceive it”). And so a man cannot discern with certitude whether or not he himself has grace—this according to 1 Corinthians 4:3-4 (“But neither do I judge my own self ... Rather, the one who judges me is the Lord”).

In a third way, something is known *conjecturally through signs*. And someone can know in this way that he has grace, viz., insofar as (a) he perceives himself to take delight in God and to contemn worldly things, and insofar as (b) the man is not conscious of any mortal sin in himself. It is in this way that one can understand what is said in Apocalypse 2:17 (“To him who overcomes I will give the hidden manna ... which no man knows except the one who receives it”—since he who receives it knows it through his experience of sweetness, which he who does not receive it does not experience. But this is an imperfect sort of cognition. That is why the Apostle says in 1 Corinthians 4:4, “I am not conscious of anything in myself, but I am not thereby justified.” For as Psalm 18:13 says, “Who can understand sins? From my secret ones cleanse me, O Lord.”

**Reply to objection 1:** The things that exist in the soul through its essence are known by an experiential cognition to the extent that a man experiences intrinsic principles through their acts, in the way that we perceive the will by willing and life in the vital works.

**Reply to objection 2:** It is part of the nature of knowledge (*de ratione scientiae*) that a man has certitude about the things of which he has knowledge, and it is likewise part of the nature of faith that a man is certain about those things with respect to which he has faith. This is because certitude has to do with the perfection of the intellect, in which these two gifts exist. And so whoever has knowledge or faith is certain that he has them. However, there is no similar argument for grace or charity or other things of this sort, which perfect the *appetitive* power.

**Reply to objection 3:** Sin has as its principle and as its object some changeable good that is known to us. But the object or end of grace is not known to us because of the immensity of the light source (*propter sui luminis immensitatem*)—this according to 1 Timothy 6:16 (“... who inhabits light inaccessible”).

**Reply to objection 4:** The Apostle is here speaking about the gifts of glory, which are given to us in hope and which we know with greatest certitude through faith—even though we do not know with certitude that we have grace, through which we are able to merit those gifts.

An alternative reply is that he is talking about the sort of privileged knowledge that comes through a revelation. This is why he adds, “But to us God has revealed them through His Holy Spirit.”

**Reply to objection 5:** The words spoken to Abraham can likewise be traced back to experiential knowledge, which occurs through the manifestation of a work. For in that work which Abraham had done he was able to know experientially that he had the fear of God.

An alternative reply is that it can also be traced back to a revelation.

## QUESTION 113

### The Effects of Grace

Next we have to consider the effects of grace: first, the justification of a sinner, which is an effect of operating grace (question 113) and, second, merit, which is an effect of cooperating grace (question 114).

On the first topic there are ten questions: (1) What is the justification of a sinner? (2) Does it require an inpouring of grace? (3) Does it require any movement of free choice? (4) Does it require a movement of faith? (5) Does it require a movement of free choice against sin? (6) Should the forgiveness of sin be counted among the requirements already mentioned? (7) Is there a temporal ordering in the justification of a sinner, or does it occur all at once? (8) What is the natural ordering of the things that come together for justification? (9) Is the justification of a sinner God's greatest work? (10) Is the justification of a sinner a miracle?

### Article 1

#### Is the justification of a sinner the forgiveness of sins?

It seems that the justification of a sinner (*iustificatio impii*) is not the forgiveness of sins:

**Objection 1:** As was explained above (q. 71, a. 1), sin is opposed not only to justice but to all virtues. But 'justification' signifies a certain movement toward justice. Therefore, not every instance of the forgiveness of sin is a justification, since every movement is from one contrary to another.

**Objection 2:** As is explained in *De Anima* 2, each thing ought to be denominated from what is most important in it. But the forgiveness of sins is effected primarily (a) by faith—this according to Acts 15:9 ("... purifying their hearts by faith")—and (b) by charity—this according to Proverbs 10:12 ("Charity covers all sins"). Therefore, the forgiveness of sins should be denominated from faith or charity rather than from justice.

**Objection 3:** The forgiveness of sins seems to be the same thing as a calling (*vocatio*), since it is someone distant who is called, and one is distant from God through sin. But being called is prior to justification—this according to Romans 8:30 ("Those whom He called He also justified"). Therefore, justification is not the forgiveness of sins.

**But contrary to this:** A Gloss on Romans 8:30 ("Those whom He called He also justified") says, "By the forgiveness of their sins." Therefore, justification is the forgiveness of sins.

**I respond:** An act of justifying (*justificatio*), taken passively, implies a movement toward justice, just as an act of heating (*calefactio*) implies a movement toward heat. And since justice by its nature implies a certain rectitude of order, 'justice' can be taken in two ways:

In one way, 'justice' implies a correct ordering within a man's *action itself*. And as *Ethics* 5 makes clear, this is the sense in which justice is posited as a virtue, whether it be *particular justice*, which orders a man's act with respect to its rectitude in relation to another individual man, or *legal justice*, which orders a man's act with respect to its rectitude in relation to the common good of the many.

In the second way, 'justice' implies a certain rectitude of order within a man's *interior disposition itself*, viz., insofar as the man's highest part is subject to God and insofar as the lower powers of his soul are subject to the highest power, viz., reason. And this is the disposition that in *Ethics* 5 the Philosopher likewise calls "justice metaphorically speaking."

Now there are two ways in which this sort of justice can be effected in a man:

In one way, in the manner of a simple generation, which goes *from a privation to a form*. And justification in this sense could belong to a man who was not in sin, as long as he received justice of this sort from God in the way that Adam is said to have received original justice.

In the second way, this sort of justice can be effected in a man in accord with the sort of movement

that goes *from one contrary to another*. In this sense, ‘justification’ implies a certain change from a state of injustice to a state of justice of the sort just mentioned. And it is in this sense that we are talking here about the justification of a sinner—in accord with what the Apostle says in Romans 4:5 (“To him who does not works, yet believes in Him who justifies a sinner,” etc.). And since a movement is denominated from its *terminus ad quem* rather than from its *terminus a quo*, it follows that a change of this sort, by which someone is changed from a state of injustice through the forgiveness of his sins, is given its name from its *terminus ad quem* and is called ‘the justification of a sinner’.

**Reply to objection 1:** Every sin, insofar as it involves a certain disorder on the part of a mind not subject to God, can be called a injustice that is contrary to the sort of justice explained above—this according to 1 John 3 (“Everyone who commits a sin likewise commits an iniquity, and his sin is an iniquity”). Accordingly, the removal of any sin is called a justification.

**Reply to objection 2:** ‘Faith’ and ‘charity’ express a specific ordering of the human mind to God with respect to intellect or with respect to affection. By contrast, ‘justice’ implies in a more generic way a *total* rectitude of order. And so a change of the sort in question is denominated from justice rather than from charity or faith.

**Reply to objection 3:** The ‘calling’ refers back to God’s assistance in moving and exciting the mind interiorly toward giving up sin. This motion on God’s part is a cause of the forgiveness of sin and not itself the forgiveness of sin.

## Article 2

### Is an inpouring of grace required for that forgiveness of sin which is the justification of a sinner?

It seems that an inpouring of grace (*infusio gratiae*) is not required for that forgiveness of sin which is the justification of a sinner:

**Objection 1:** Someone can be removed from one contrary without being led all the way to the other contrary, as long as the contraries admit of something in the middle (*si contraria sint mediata*). But the state of sin and the state of grace are contraries that admit of something in the middle; for between them lies the state of innocence, in which a man has neither grace nor sin. Therefore, it is possible for someone’s guilt to be remitted without his being led all the way to grace.

**Objection 2:** The forgiveness of sin (*remissio culpae*) consists in God’s reckoning—this according to Psalm 31:2 (“Blessed the man to whom the Lord has not imputed his sin”). But as was established above (q. 110, a. 1), the inpouring of grace posits something within us as well. Therefore, the inpouring of grace is not required for the forgiveness of sin.

**Objection 3:** No one is simultaneously the subject of two contraries. But certain sins are contraries, e.g., prodigality and stinginess (*prodigalitas et illiberalitas*). Therefore, someone who is the subject of the sin of prodigality is not simultaneously the subject of the sin of stinginess. Therefore, when one sins by the vice of prodigality, he is freed from the sin of stinginess. And in this sense a certain sin is forgiven without grace.

**But contrary to this:** Romans 3:24 says, “... justified graciously (*gratis*) by His grace.”

**I respond:** As is clear from what was said above (q. 71, a. 6 and q. 87, a. 3), by sinning a man offends God. But no one’s offense is forgiven unless the mind of the one who has been offended is at peace with the offender. So our sin is said to be forgiven insofar as God is at peace with us. This peace consists in the love by which God loves us (*consistit in dilectione qua Deus nos diligit*). But God’s love, on the part of the divine act, is eternal and immutable, whereas, on the part of the effect that it imprints upon us, it is sometimes interrupted, viz., insofar as we sometimes fall short of it, and sometimes such that we get it back again. But the effect of God’s love in us, which is removed through sin, is grace, by

which a man is made worthy of the eternal life from which mortal sin excludes us. And so the forgiveness of sin is unthinkable without the presence of an inpouring of grace.

**Reply to objection 1:** More is required for an offender's sin to be forgiven than that some non-offender's is not hated. For among men it can happen that one man neither loves nor hates another; on the other hand, if he offends him, then his being forgiven for the offense cannot occur without special benevolence.

Now God's benevolence with respect to a man is said to be restored through the gift of grace. And so even though, before man sinned, he could have existed both without grace and without sin, nonetheless, after his sin, he is no longer able to exist without sin unless he has grace.

**Reply to objection 2:** Just as God's love does not, as was explained above (q. 110, a. 1), consist only in the act of God's will, but also implies a certain effect of grace, so, too, the fact that God does not impute to a man his sin implies a certain effect in the one whose sin is not imputed. For the fact that a sin is not imputed by God proceeds from God's love.

**Reply to objection 3:** As Augustine says in *De Nuptiis et Concupiscentia*, "If ceasing to sin were the same as not having sin, then it would be sufficient for Scripture to issue this warning: 'Son, you have sinned; do not add to this any more'. But this is not sufficient; rather, it adds, 'Also pray that your past sins might be forgiven you.'" For as has been explained (q. 87, a. 6), the actual sin passes away, but the guilt remains (*transit peccatum actu et remanet reatu*). And so when someone passes from the sin of one vice to this sin of a contrary vice, he does, to be sure, cease to have the *act* of the past sin, but he does not cease to have the *guilt*, and so he simultaneously has the guilt of both sins. For the sins are not contrary to one another as far as the turning away from God is concerned, and it is on this score that a sin carries guilt.

### Article 3

#### Is a movement of free choice required for the justification of a sinner?

It seems that a movement of free choice is not required for the justification of a sinner:

**Objection 1:** We see that through the sacrament of Baptism children, and sometimes even adults, are justified without a movement of free choice. For instance, in *Confessiones* 4 Augustine says that when a certain friend of his was afflicted with a fever, "he lay senseless for a long time in a deadly sweat, and when hope was lost, he was baptized unknowingly and re-created"—where re-creation comes about through justifying grace. But God has not fettered His power to the sacraments (*potentiam suam non alligavit sacramentis*). Therefore, He is likewise able to justify a man without the sacraments in the absence of any movement of free choice.

**Objection 2:** When a man is sleeping, he does not have the use of reason, and without the use of reason there cannot be a movement of free choice. But according to 3 Kings 3:5ff. and 2 Paralipomenon 1:7ff., it was in his sleep that Solomon received from God the gift of wisdom. Therefore, by parity of reasoning, the gift of justifying grace is sometimes given to a man by God without any movement of free choice.

**Objection 3:** It is through the same cause that grace is both brought into being and conserved; for in *Super Genesim ad Litteram* 8 Augustine says, "A man should turn himself to God in such a way that he is always being made just by God." But grace is conserved in a man without a movement of free choice. Therefore, it can be poured into him from the beginning without a movement of free choice.

**But contrary to this:** John 6:45 says, "Everyone who has heard from the Father and learned comes to me." But learning does not take place without a movement of free choice, since the learner gives his consent to the teacher. Therefore, no one comes to God through justifying grace without a movement of free choice.

**I respond:** The justification of a sinner occurs when God moves a man to justice; for according to Romans 4:5, it is “He who justifies a sinner.” Now God moves each thing in accord with its own mode; for instance, we see among natural things that heavy and lightweight things are moved by Him in different ways because of their diverse natures. Hence, He likewise moves men in accord with the condition of human nature. Now a man by his proper nature has the power of free choice (*homo secundum propriam naturam habet quod sit liberi arbitrii*). And so in someone who has the use of free choice, God’s moving him to justice does not occur without a movement of free choice. Rather, God infuses the gift of justifying grace in such a way that, along with this, He simultaneously moves free choice to accept the gift of grace in the case of those who have a capacity for this movement.

**Reply to objection 1:** Young children (*pueri*) do not have the capacity for free choice, and so they are moved by God to justice solely through the informing of their soul. However, this does not occur without the sacrament. For just as original sin, in opposition to which they are justified (*a quo iustificantur*), comes to them not by their own will but from a carnal origin, so, too, grace flows into them from Christ through a spiritual regeneration.

The same line of reasoning holds for those who are insane or mentally incapacitated and who have never had the use of free choice. On the other hand, if someone at one time had the use of free choice and afterwards lost it either through infirmity or sleep, he would not receive justifying grace through Baptism administered exteriorly—or through any other sacrament—unless he had previously intended to have the sacrament (*nisi prius habuerit sacramentum in proposito*), and this could not occur without the use of free choice. It is in this sense that the man that Augustine is talking about was re-created; for he accepted his Baptism both beforehand and afterwards.

**Reply to objection 2:** Solomon did not merit or receive wisdom in his sleep. Rather, in his sleep it was declared to him that, because of his previous desire, wisdom would be poured into him by God; hence, in Wisdom 7 it says in his person, “I desired it, and understanding (*sensus*) was given to me.”

An alternative reply is that the sleep in question was not natural sleep, but a sleep of prophecy—this in accord with Numbers 12:6 (“If there is a prophet of the Lord among you, I will speak to him through his sleep or in a vision”). In such a case the one in question has the use of free choice.

Notice, however, that the line of reasoning is not the same for the gift of wisdom and the gift of justifying grace. For the gift of justifying grace orders a man principally toward the good, which is the object of the will, and so a man is moved toward it by a movement of the will, i.e., by a movement of free choice. By contrast, wisdom perfects the intellect, which precedes the will, and so the intellect can be illuminated by the gift of wisdom without a complete movement of free choice. In the same way, we see that certain things are revealed to men in their sleep—this according to Job 33:15-16: “When deep sleep falls upon men and they are sleeping in their beds, then He opens the ears of men, and teaching, instructs them in what they are to learn.”

**Reply to objection 3:** When justifying grace is poured into the soul, there is a certain transmutation of the soul, and so a proper movement of the human soul is required in order for the soul to be moved in accord with its own mode. By contrast, the conservation of grace occurs without a transmutation, and so it does not require any movement on the part of the soul; rather, it requires only a continuation of God’s influence.

#### Article 4

##### Is a movement of faith required for the justification of a sinner?

It seems that a movement of faith is not required for the justification of a sinner:

**Objection 1:** Just as a man is justified through faith, so he is likewise justified through other things as well—for instance,

(a) through *fear*, about which Ecclesiasticus 1:27 says, “The fear of the Lord drives out sin, for he who is without fear cannot be justified,” and

(b) through *charity*—this according to Luke 7:47 (“Many sins have been forgiven her, because she has loved much”), and

(c) through *humility*—this according to James 4:6 (“God resists the proud, but gives grace to the humble”), and

(d) through *mercy*—this according to Proverbs 15:27 (“Through mercy and faith sins are washed away”).

Therefore, it is not the case that a movement of faith is required for justification more than movements of the virtues just mentioned.

**Objection 2:** An act of faith is required for justification only insofar as it is through faith that a man has cognition of God. But there are also other ways in which a man can have cognition of God, viz., through natural cognition and through the gift of wisdom. Therefore, it is not the case that an act of faith is required for the justification of a sinner.

**Objection 3:** The articles of the Faith are diverse. Therefore, if an act of faith were required for the justification of a sinner, then, it seems, when a man was first justified, he would have to think of all the articles of the Faith. But this seems absurd, since such thinking would require a long period of time. Therefore, it seems that an act of faith is not required for justification.

**But contrary to this:** Romans 5:1 says, “Therefore, having been justified by faith, let us have peace with God.”

**I respond:** As has been explained (a. 3), a movement of free choice is required for the justification of a sinner in the sense that a man’s mind is moved by God. But God moves a man’s soul by turning it toward Himself—as it says in Psalm 84:7 (according to the alternative version): “You will turn us, O God, and bring us to life.” And so what is required for the justification of a sinner is a movement of the mind by which it is turned toward God.

But the initial turning toward God (*prima conversio in Deum*) is effected through faith—this according to Hebrews 11:6 (“He who comes to God must have faith that He exists”). And so a movement of faith is required for the justification of a sinner.

**Reply to objection 1:** The movement of faith is not perfect unless it is informed by charity, and so a movement of charity also occurs in the justification of a sinner along with the movement of faith.

Now free choice is moved toward God in order to submit itself to Him, and so an act of filial fear and an act of humility likewise occur, since it is possible for one and the same act of free choice to belong to diverse virtues, insofar as the one commands and the other is commanded, i.e., insofar as the act can be ordered to diverse ends.

Now an act of mercy works against sin either (a) in the manner of satisfaction, and in this sense it *follows upon* justification; or (b) in the manner of *preparation*, insofar as the merciful receive mercy, and in that sense it can also precede justification; or (c) it can also concur *simultaneously* in justification along with the other virtues mentioned above, insofar as mercy is included in the love of neighbor.

**Reply to objection 2:** It is not the case that through natural cognition a man is turned toward God insofar as He is the object of beatitude and the cause of justification. Hence, that sort of cognition is not sufficient for justification. Moreover, as is clear from what was said above (q. 68, a. 2), the gift of wisdom presupposes the cognition that belongs to faith (*praesupponit cognitionem fidei*).

**Reply to objection 3:** As the Apostle says in Romans 4:5, “But to him who believes in the one who justifies a sinner, his faith is reputed to justice, according to the purpose of the grace of God.” From this it is clear that in the justification of a sinner an act of faith is required in the sense of the man’s believing that God is the one who justifies men through the mystery of the Christ (*quod homo credit Deum esse iustificatorem hominum per mysterium Christi*).

## Article 5

### Is a movement of free choice with respect to sin required for the justification of a sinner?

It seems that a movement of free choice with respect to sin is not required for the justification of a sinner:

**Objection 1:** Charity suffices by itself for erasing sin—this according to Proverbs 10:12 (“Charity covers all sins”). But the object of charity is not sin. Therefore, a movement of free choice with respect to sin is not required for the justification of a sinner.

**Objection 2:** One who is going forward should not pay attention to what is behind him—this according to the Apostle in Philippians 3:13 (“Forgetting the things that are behind, and stretching myself forth to the things that are before me, I press on toward the mark, to the prize of my lofty vocation”). But to someone who is going forward toward justice, his past sins are behind him. Therefore, he should forget about them, and he should not “stretch himself” toward them (*nec in ea se extendere debet*) through a movement of free choice.

**Objection 3:** In the justification of a sinner it is not the case that one sin is forgiven without the others, since “it is impious to hope for half a pardon from God.” Therefore, if in the justification of a sinner there had to be a movement of free choice with respect to sin, then he would have to think of all his sins. But this seems absurd, both because this sort of thought would require a long time and also because the man would not be able to have forgiveness for the sins he has forgotten about. Therefore, a movement of free choice against sin is not required for the justification of a sinner.

**But contrary to this:** Psalm 31:5 says, “I said: I will confess against myself my injustice to the Lord, and You have forgiven the wickedness of my sin.”

**I respond:** As was explained above (a. 1), the justification of a sinner is a certain movement by which the human mind is moved by God from the state of sin to the state of justice. Therefore, the human mind must be related to both extremes in its movement of free choice, just as a body that is moved in place by some mover is related to the two termini of the movement. Now it is clear that in the case of the local movement of bodies, a body that is being moved moves away from the terminus *a quo* and moves toward the terminus *ad quem*. Hence, when the human mind is being justified, it must, through its movement of free choice, move away from sin and move toward justice. But in the case of a movement of free choice, *moving away from* and *moving toward* have to do with hatred and desire (*accipitur secundum detestationem et desiderium*). For as Augustine says in *Super Ioannem*, when commenting on the passage, “The mercenary flees, etc.” (John 10:12), “Our affections are movements of the mind: joy is the mind’s extending outward (*diffusio*) and fear is the mind’s fleeing. You go forward in mind when you desire something; you flee in mind when you are afraid.” Therefore, in the justification of a sinner there must be two movements of free choice: by the first one tends through his desire toward God’s justice, and by the second he detests sin.

**Reply to objection 1:** It belongs to the same virtue to move toward one of the two opposites and to move away from the other. And so just as it belongs to charity to love God, so it likewise belongs to charity to detest the sins through which the soul is separated from God.

**Reply to objection 2:** As for the things that are behind him, a man should not go back to them through love; rather, he should forget them in the sense of not being attached to them. Yet he ought to keep them in mind (*debet eorum recordari per considerationem*) in order to detest them, since it is in this way that he withdraws from them.

**Reply to objection 3:** In the time that precedes justification, a man must detest each sin which he has committed and remembers. From this sort of thought process there follows in the soul a certain movement of detesting all sins in general, among which are also included his now forgotten sins. For a man in this state is so disposed that he would also be sorry for the sins he does not remember if they were present to his memory. And this is a movement that occurs in justification (*iste motus concurrat ad*

*iustificationem*).

## Article 6

### Should the forgiveness of sins be counted among the things required for the justification of a sinner?

It seems that the forgiveness of sins should not be counted among the things required for the justification of a sinner:

**Objection 1:** An entity's substance is not counted among those things required for the entity; for instance, *man* should not be counted along with *soul* and *body*. But as has been explained (a. 1), the justification of a sinner is itself the forgiveness of sins. Therefore, the forgiveness of sins should not be counted among the things required for the justification of a sinner.

**Objection 2:** The inpouring of grace is the same as the forgiveness of sin (*culpae remissio*), just as the act of illuminating is the same as the expulsion of darkness. But the same thing should not be counted along with itself, since *one* is opposed to *many*. Therefore, the forgiveness of guilt should not be counted along with the inpouring of grace.

**Objection 3:** The forgiveness of sins follows upon a movement of free choice—with respect to God and with respect to sin—in same the way that an effect follows upon a cause. For sins are forgiven though faith and contrition. But an effect should not be enumerated with its cause, since things that are enumerated together in the sense of being divided off from one another are at the same level by nature (*simul natura*). Therefore, the forgiveness of guilt should not be counted among the things required for the justification of a sinner.

**But contrary to this:** In the enumeration of what is required for a thing, the end, which is the most important aspect in each thing, should not be omitted. But the forgiveness of sins is the end in the justification of a sinner. For Isaiah 27:9 says, “This all the fruit: that his sin should be taken away.” Therefore, the forgiveness of sins should be counted among the things required for the justification of a sinner.

**I respond:** There are four items counted among the things required for the justification of a sinner, viz., (a) the inpouring of grace, (b) the movement of free choice with respect to God through faith, (c) the movement of free choice with respect to sin, and (d) the forgiveness of guilt.

The reason for this is that, as has been explained (a. 1), justification is a certain movement by which the soul is moved by God from a state of sin into a state of justice (*movetur a Deo a statu culpae in statum iustitiae*). But there are three things required in every movement by which something is moved by another: (a) the motion of the mover itself (*motio ipsius moventis*), (b) the movement of the thing to be moved (*motus mobilis*), and (c) the consummation of the movement, i.e., the attainment of the end. Thus, on the part of God's motion, there is the inpouring of grace; on the part of free choice as moved, there are its two movements, i.e., the moving away from the terminus *a quo* and the moving toward the terminus *ad quem*; and the consummation, i.e., the arrival at the terminus of this movement, is connoted by ‘the forgiveness of sins’, since it is in the forgiveness of sin that justification is consummated.

**Reply to objection 1:** The justification of a sinner is said to be the forgiveness of sins itself in the sense in which every movement takes its species from its terminus. And yet, as is clear from what has been said above (a. 5), many other things are required for this terminus.

**Reply to objection 2:** There are two possible ways to think of the inpouring of grace and the forgiveness of guilt:

The first way is with respect to the very *substance of the act*. And in this sense they are the same act, since it is by the same act that God both bestows grace and forgives sin (*eodem actu Deus et largitur gratiam et remittit culpam*).

They can also be thought of as regards the *objects [of the act]*. And in this sense they differ from one another in accord with the difference between the guilt that is removed and the grace that is poured in. It is in this same way that generation and corruption differ among natural things, even though the act of generating one thing is the act of corrupting another (*quamvis generatio unius sit corruptio alterius*).

**Reply to objection 3:** The enumeration in question is not a division of a genus into its species; in that sort of enumeration the things enumerated must be on the same level (*oportet quod sint simul*). Rather, it is an enumeration of the different things that are required for the completion of something. In this sort of enumeration it is possible for one thing to be prior and another posterior; for among the principles and parts of a composite thing, one can be prior to another.

## Article 7

### Does the justification of a sinner occur instantaneously or successively?

It seems that the justification of a sinner occurs successively and not instantaneously:

**Objection 1:** As has been explained (a. 3), a movement of free choice is required for the justification of a sinner. But the act of free choice is to choose, and, as was established above (q. 13, a. 1), this requires the deliberation of counsel. Therefore, since deliberation involves a certain sort of discursive reasoning, which itself contains successiveness, it seems that the justification of a sinner is successive.

**Objection 2:** A movement of free choice does not take place without an act of considering (*absque actuali consideratione*). But as was explained in the First Part (*ST* 1, q. 85, a. 4), it is impossible to have intellectual understanding of many things simultaneously. Therefore, since the justification of a sinner requires a movement of free choice with respect to diverse objects, viz., God and sin, it seems that the justification of a sinner cannot be instantaneous (*non possit esse in instanti*).

**Objection 3:** A form that admits of greater and lesser degrees is received successively in a subject, as is clear in the case of whiteness and blackness. But as was explained above (q. 112, a. 4), grace admits of greater and lesser degrees. Therefore, it is not received all at once (*subito*) in a subject. Therefore, since an inpouring of grace is required for the justification of a sinner, it seems that the justification of a sinner cannot take place instantaneously.

**Objection 4:** The movement of free choice that accompanies the justification of a sinner is meritorious, and so it must proceed from grace, without which there is no merit; this will be explained below (q. 114, a. 2). But a thing acquires a form before it operates in accord with that form. Therefore, grace is first poured in and then free choice is moved with respect to God and with respect to detesting sin. Therefore, justification does not occur all at once as a whole (*non est tota simul*).

**Objection 5:** If grace is poured into the soul, then there must be an instant at which it first exists in the soul. Similarly, if guilt is forgiven, then there must be a last instant at which a man is subject to the guilt. But these cannot be the same instant, since in that case opposites would exist in the same thing at the same time. Therefore, they must be two successive instants, between which—according to the Philosopher in *Physics* 6—there has to be a temporal interval (*inter quae oportet esse tempus medium*). Therefore, justification occurs successively and not all at once as a whole.

**But contrary to this:** The justification of a sinner is effected through the grace of the Holy Spirit. But the Holy Spirit comes all of a sudden—this according to Acts 2:2 (“And suddenly there came a sound from heaven as of a mighty wind coming”), where a Gloss on this passage says, “The grace of the Holy Spirit knows no tardy endeavors.” Therefore, the justification of a sinner is instantaneous and not successive.

**I respond:** The whole of the justification of a sinner consists at the beginning in the inpouring of grace (*tota originaliter consistit in gratiae infusione*), since it is through this inpouring of grace that free

choice is moved and that guilt is forgiven. But the inpouring of the grace occurs in an instant and without successiveness.

This is so because the reason why a given form is not impressed on a subject all at once is that its subject is not disposed and the agent needs time to dispose the subject. And so we see that a substantial form is acquired by its matter as soon the matter is disposed by the preceding alteration; and, for the same reason, a diaphanous body is illuminated all at once by an actively illuminating body because it is disposed in its own right for receiving light.

Now it was explained above (q. 112, a. 2) that in order for God to infuse grace, He does not require any disposition other than the disposition that He Himself effects. But He makes this sort of disposition sufficient for receiving grace—sometimes all at once and sometimes little by little and successively, as was explained above (*ibid.*). The fact that a natural agent is unable to dispose its matter all at once stems from the fact that there is a certain lack of proportion to the agent's power on the part of that which is resisting it in the matter, and because of this we see that the stronger the agent's power, the more quickly the matter is disposed. Therefore, since God's power is infinite, He is able to dispose any created matter whatsoever all at once for a form, and He is able to do this all the more to a man's free choice, the movement of which can be instantaneous in accord with its nature.

So, then, the justification of a sinner is effected by God instantaneously.

**Reply to objection 1:** The movement of free choice that accompanies the justification of a sinner is a consent to detesting sin and to approaching God, and this consent does indeed occur all at once.

Now it sometimes happens that this consent is preceded by some sort of deliberation, but the deliberation is not itself part of the substance of justification; instead, it is a path toward justification, in the same way that a local motion is a path to illumination and that an alteration is a path to generation.

**Reply to objection 2:** As was explained in the First Part (*ST* 1, q. 85, a. 5), nothing prevents someone from having actual intellective understanding of two things simultaneously to the extent that they are in some sense one. For instance, we simultaneously understand the subject and predicate insofar as they are united in the ordering of a single affirmation. And in the same way free choice can be moved simultaneously toward two objects insofar as the one is ordered to the other. But the movement of free choice with respect to sin is ordered to the movement of free choice with respect to God, since a man detests sin because it is contrary to God, whom he wills to adhere to. And so in the justification of a sinner free choice simultaneously detests sin and turns itself toward God, in the same way that a body approaches one place by simultaneously withdrawing from another place.

**Reply to objection 3:** The fact that a form admits of greater and lesser degrees is not a reason for its not being received all at once in matter. For otherwise light would not be received all at once in the air, given that the air can be illuminated to greater and lesser degrees. Rather, as has been explained, the reason should be taken from the side of the disposition of the matter or subject.

**Reply to objection 4:** At the very instant at which a form is acquired, the entity begins to operate in accord with that form; for instance, as soon as fire is generated, it moves upward. And if the thing's movement is instantaneous, then the movement is completed in that same instant.

Now the movement of free choice, i.e., *to will*, is instantaneous and not successive. And so the justification of a sinner does not have to be successive.

**Reply to objection 5:** The succession of two opposites in the same subject has to be thought of in one way in things that are subject to time and in another way in things that lie beyond time (*supra tempus*).

In things that are subject to time, there is no last instant (*non est dare ultimum instans*) in which the prior form exists in the subject, but instead there is a last temporal interval (*est dare ultimum tempus*) and a first instant at which the succeeding form exists in the matter or subject. The reason for this is that in time there cannot be one instant immediately preceding another instant, because, as is proved in *Physics* 6, the instants are not arranged consecutively in time (*instantia non consequenter se habeant in tempore*), just as the points in a line are not arranged consecutively. But a temporal interval terminates in

an instant. And so in the whole of the preceding temporal interval (*in toto tempore praecedenti*), in which something is being moved toward a given form, that thing is the subject of the opposite form; and in the last instant of that temporal interval, which is the first instant of the following temporal interval, the thing has the form that is the terminus of the movement.

However, it is different with things that lie beyond time. For if there is a succession of affections and intellectual conceptions (*succession affectuum vel intellectualium conceptionum*) in such a case—for instance, in angels—then a succession of this sort is measured not by continuous time, but instead by discrete time, in the same way that, as was explained in the First Part (*ST* 1, q. 53, a. 2), the things themselves that are being measured are not continuous. Hence, in such cases there is a last instant in which the first thing exists and a first instant in which what follows exists, and there does not have to be an intermediate time, since there is no continuous time to require this in such a case (*quia non est ibi continuitas temporis quae hoc requirebat*).

Now the human mind, which is what is justified, lies beyond time in its own right, but it is *per accidens* subject to time, viz., insofar as it has intellective understanding of something continuous and temporal in accord with the phantasms in which it considers the intelligible species (*intelligit cum continuo et tempore secundum phantasmata in quibus species intelligibiles considerat*); this was explained in the First Part (*ST* 1, q. 85, aa. 1 and 2). And so, accordingly, the mind's change should be judged in accord with the condition of temporal movements—so, that, more specifically, we claim that there is a last temporal interval, but no last instant, in which guilt exists in the mind; on the other hand, there is a first instant in which grace exists in the mind, whereas guilt existed in it in the whole of the preceding temporal interval.

## Article 8

### Is the inpouring of grace first in the natural ordering of the things required for the justification of a sinner?

It seems that the inpouring of grace is not first in the natural ordering of the things required for the justification of a sinner:

**Objection 1:** Withdrawing from evil is prior to approaching good—this according to Psalm 36:15 (“Turn away from evil and do good”). But the forgiveness of guilt (*remissio culpae*) has to do with withdrawing from evil, whereas the inpouring of grace has to do with pursuing the good. Therefore, the forgiveness of guilt is naturally prior to the inpouring of grace.

**Objection 2:** The disposition for a form naturally precedes the form for which it is a disposition. But the movement of free choice is, as it were, a disposition for receiving grace. Therefore, it naturally precedes the inpouring of grace.

**Objection 3:** Sin prevents the soul from freely tending toward God. But removing that which prevents a movement is prior to the movement's ensuing. Therefore, the forgiveness of guilt and the movement of free choice with respect to sin are naturally prior to the movement of free choice with respect to God and the inpouring of grace.

**But contrary to this:** A cause is naturally prior to its effect. But as was explained above (a. 7), the inpouring of grace is a cause of all the other things required for the justification of a sinner. Therefore, it is naturally prior to them.

**I respond:** The four things mentioned above that are required for the justification of a sinner are, to be sure, *simultaneous in time*, since, as has been explained (a. 7), the justification of a sinner is not successive; nevertheless, one is indeed prior to another in the *order of nature*:

The first among them in the order of nature is the inpouring of grace; the second is the movement of free choice with respect to God; the third is the movement of free choice with respect to sin; and the

fourth is the forgiveness of sin (*remissio culpa*).

The reason for this ordering is that in any movement what is naturally first is the motion of the mover itself (*motio ipsius moventis*); second is the disposition of the matter, i.e, the movement of the movable thing itself (*motus ipsius mobilis*); and last of all is the end or terminus of the movement in which the mover's motion terminates (*finis vel terminus motus ad quem terminatur motio moventis*). As was explained above (a. 6), the very motion of God the mover is the inpouring of grace, whereas the movement or disposition of the movable thing is the twofold movement of free choice; and, as is clear from what was said above (a. 6), the terminus or end of the movement is the forgiveness of sin.

And so in the justification of a sinner the first thing in the natural ordering is the inpouring of grace. The second thing is the movement of free choice with respect to God. The third thing is the movement of free choice with respect to sin—for the one who is justified hates sin because it is contrary to God, and so the movement of free choice with respect to God naturally precedes the movement of free choice with respect to sin, since it is its reason and cause. And the fourth and last thing is the forgiveness of sin, since, as has been explained (aa. 1 and 6), this whole transmutation is ordered toward the forgiveness of sin as its end.

**Reply to objection 1:** There are two possible ways to think about withdrawing from a terminus and approaching a terminus:

The first is on the part of the *thing moved*. In this sense, withdrawing from a terminus naturally precedes approaching a terminus. For the opposite that is being withdrawn from exists beforehand in the movable subject and what exists later is that which the movable thing reaches through its movement.

But on the part of the *agent*, the reverse holds. For the agent, through a form that preexists in it, acts to remove the contrary.

For instance, the sun through its light acts to remove darkness. And so on the sun's part, illuminating is prior to removing darkness, whereas on the part of the air to be illuminated, being purged of darkness is prior in the order of nature to acquiring light—even though the two of them are simultaneous in time.

Since the inpouring of grace and the forgiveness of sin are attributed to God as the one effecting justification, it follows that the inpouring of grace is prior in the order of nature to the forgiveness of sin. On the other hand, if we take the things attributed to the man as the one being justified, then the reverse holds. For the liberation from sin is prior in the order of nature to the acquisition of justifying grace.

An alternative reply is that one can claim that the termini of justification are sin as the terminus *a quo* and justice as the terminus *ad quem*, and that grace is the cause of the forgiveness of sin and the acquisition of justice.

**Reply to objection 2:** The subject's disposition is prior in the order of nature to the reception of the form, and yet it follows upon the agent's action, through which the subject itself is likewise disposed. And so the movement of free choice is prior in the order of nature to the acquisition of the grace, but it follows upon the inpouring of the grace.

**Reply to objection 3:** As the Philosopher says in *Physics 2*, in the case of movements of the mind what is altogether first is the movement toward the principle of speculation or toward the end of action, whereas in the case of exterior movements the removal of impediments precedes the attainment of the end. And since the movement of free choice is a movement of the mind, it is moved with respect to God as an end naturally prior to being moved toward removing the impediment of sin.

## Article 9

### Is the justification of a sinner God's greatest work?

It seems that the justification of a sinner is not God's greatest work:

**Objection 1:** Through the justification of a sinner one attains the grace for this life (*consequitur gratiam viae*). But through glorification one attains the grace of heaven (*consequitur gratiam patriae*), which is greater. Therefore, the glorification of angels or men is a greater work than the justification of a sinner.

**Objection 2:** The justification of a sinner is ordered toward the particular good of a single man. But as is clear from *Ethics* 1, the good of the universe is greater than the good of a single man. Therefore, the creation of heaven and earth is a greater work than the justification of a sinner.

**Objection 3:** To make something from nothing, when nothing is cooperating with the agent, is greater than to make something from something with some cooperation on the part of the patient. But in the work of creation something is made from nothing, and hence nothing can cooperate with the agent, whereas in the justification of a sinner God makes something from something, i.e., He makes a just man from a sinner, and in this case there is some cooperation on the man's part, since, as has been explained (a. 3), there is a movement of free choice here. Therefore, the justification of a sinner is not God's greatest work.

**But contrary to this:** Psalm 144:9 says, "His tender mercies are over all His works." And there is a Collect that says, "O God, who does show forth your almightiness most by pardoning and having mercy ..." And in commenting on John 14:12 ("Greater works than these shall he do") Augustine says, "To make a just man from a sinner is a greater work than to create heaven and earth."

**I respond:** There are two ways in which a work can be called great:

In the first way, on the part of *the mode of acting*. And in this sense the greatest work is the work of creation, in which something is made from nothing.

In the second way, a work can be called great because of *the magnitude of what is effected*. And in this sense the justification of a sinner, which terminates in the eternal good of participation in God (*quae terminatur ad bonum aeternum divinae participationis*), is a greater work than the creation of heaven and earth, which terminates in the good of a mutable nature. This is why Augustine, after having claimed that it is greater to make a just man out of a sinner than to create heaven and earth, adds, "For heaven and earth will pass away, but the salvation and justification of the predestined will remain forever."

However, there are two ways in which [an effect] is called 'great':

In one way, with respect to *absolute quantity*. And in this sense the gift of glory is greater than the gift of the grace that justifies a sinner.

In the second way, something is called great by a *proportionate quantity (magnum quantitate proportionis)*, in the way that a mountain might be called 'small' and a grain 'great'. And in this sense the gift of grace that justifies a sinner is greater than the gift of glory that beatifies the just, since the gift of grace exceeds the worthiness of the sinner, who deserved punishment, more than the gift of glory exceeds the worthiness of the just man, who is deserving of glory by the very fact that he has been justified. This is why, in the same place, Augustine says, "Let him who is capable of it judge whether it is greater to create the angels just than to justify sinners. Certainly, if they both involve equal power, the latter involves greater mercy."

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** The good of the universe is greater than the particular good of a single individual, as long as both are assumed to be in the same genus. But the good of grace that belongs to a single individual is greater than the good of nature of the whole universe.

**Reply to objection 3:** This argument proceeds from the side of the mode of acting, according to which creation is God's greatest work.

## Article 10

### Is the justification of a sinner a miraculous work?

It seems that the justification of a sinner is a miraculous work:

**Objection 1:** Miraculous works are greater than non-miraculous works. But as is clear from Augustine in the place cited above, the justification of a sinner is greater than all other miraculous works. Therefore, the justification of a sinner is a miraculous work.

**Objection 2:** A movement of the will exists in the soul in the way that a natural inclination exists in natural entities. But when God does something contrary to the inclination of nature in natural entities, it is a miraculous work—as when He gives sight to the blind or resuscitates the dead. But a sinner’s will tends toward evil. Therefore, since, in justifying a man, God moves him toward the good, it seems that the justification of a sinner is miraculous.

**Objection 3:** Just as wisdom is a gift from God, so too is justice. But it is miraculous that someone should suddenly obtain wisdom from God without study. Therefore, it is miraculous that a sinner should be justified by God.

**But contrary to this:** Miraculous works are beyond natural power. But the justification of a sinner is not beyond natural power; for in *De Praedestinatione Sanctorum* Augustine says, “Being able to have faith, like being able to have charity, belongs to men, whereas having grace belongs to the faithful.” Therefore, the justification of a sinner is not miraculous.

**I respond:** There are three things usually found in miraculous works:

The first is on the part of the *agent’s power*, since the work is able to be effected only by God’s power. And, as was explained in the First Part (*ST* 1, q. 105, a. 8), such works are miraculous absolutely speaking, since they have a hidden cause. In this sense, both the justification of a sinner and the creation of the world, and, generally speaking, any work that can be effected by God alone, can be called miraculous.

Second, in certain miraculous works one finds that the induced form is *beyond the natural power of the matter involved*; for instance, the resuscitation of the dead is beyond the natural power of the body involved. And in this regard, the justification of a sinner is not miraculous, since the soul is naturally capable of grace (*naturaliter anima est gratiae capax*). For by reason of the fact that the soul is made to the image of God, it is, as Augustine says, capable of God through grace.

In the third way, one finds in miraculous works something outside of the usual and customary order of causing an effect, as when someone sick suddenly attains perfect health outside of the usual course of healing that is effected by nature or by skill. And in this regard, the justification of a sinner is sometimes miraculous and sometimes not. For it is the usual and customary course of justification that when God moves the soul interiorly, the man turns toward God first by an imperfect conversion and later comes to a perfect conversion, since, as Augustine puts it, “the inchoate charity merits an increase, and when it is increased, it merits to be perfected.” Sometimes, by contrast, God moves the soul so vehemently that it immediately attains a sort of perfection of justice, as happened in the conversion of Paul, which was also accompanied exteriorly by a miraculous prostration. And this is why Paul’s conversion is festively commemorated in the Church.

**Reply to objection 1:** Even if certain miraculous works are lesser than the justification of a sinner with respect to the goodness that occurs, they are nonetheless beyond the usual order of such effects. And this is why they have more of the character of a miracle.

**Reply to objection 2:** It is not the case that there is a miraculous work whenever a natural thing is moved in a way contrary to its inclination; otherwise, it would be miraculous for water to be heated or for a rock to be thrown upward. Rather, there is a miraculous work when this happens outside the order of a proper cause that is apt to do this sort of thing. But no cause other than God is able to justify a sinner, just as no cause other than fire is able to heat water. And this is why the justification of a sinner by God

is not, in this respect, miraculous.

**Reply to objection 3:** A man is apt to acquire wisdom and knowledge from God through his own talent and study (*per proprium ingenium et studium*), and so when a man is made wise or knowledgeable outside of this manner, it is miraculous. But a man is apt to acquire justifying grace through God's working and not through his own work. Hence, the cases are not parallel.

## QUESTION 114

### Merit

Next we have to consider merit, which is an effect of cooperating grace.

On this topic there are ten questions: (1) Can a man merit anything from God? (2) Can someone without grace merit eternal life? (3) Can someone through grace merit eternal life by his own worthiness (*ex condigno*)? (4) Is grace the principle of merit mainly by the mediation of charity? (5) Can a man merit first grace for himself? (6) Can one man merit grace for another? (7) Can someone merit his own restoration (*sibi mereri reparationem*) after a fall? (8) Can someone merit an increase of grace or of charity? (9) Can someone merit final perseverance for himself (*sibi mereri finalem perseverantiam*)? (10) Do any temporal goods fall under merit?

### Article 1

#### Can a man merit anything from God?

It seems that a man cannot merit anything from God:

**Objection 1:** It seems that no one merits a reward by rendering to someone what he owes him. But we are unable, through all the good things we do, to pay God back what we owe Him in an adequate way, i.e., without always owing yet more; the Philosopher likewise points this out in *Ethics* 8. Hence, as Luke 17:10 says, “When you have done all these things that are commanded, say: ‘We are unprofitable servants; we have done what we were obliged to do’.” Therefore, a man cannot merit anything from God.

**Objection 2:** By the fact that a man profits himself, it seems that he merits nothing in the eyes of someone whom he does not profit in any way at all. But in acting a man profits himself, or perhaps some other man, but not God; for as Job 35:7 says, “If you act justly, what shall you be giving Him, or what will He receive from your hand?” Therefore, a man cannot merit anything from God.

**Objection 3:** If someone merits something in the eyes of another, he makes the latter his debtor, since one should repay a merited fee (*debitum est ut aliquis merendi mercedem rependat*). But God is a debtor to no one; hence, Romans 11:35 says, “Who has first given to Him, and recompense shall be made to him?” Therefore, no one can merit anything from God.

**But contrary to this:** Jeremiah 31:16 says, “There is a reward for Your work.” But a reward involves something given because of merit. Therefore, it seems that a man can merit something from God.

**I respond:** ‘Merit’ (*meritum*) and ‘reward’ or ‘wage’ or ‘compensation’ (*merces*) refer to the same thing, since what is called a reward or wage is paid to someone in compensation for his work or labor (*pro retributione operis vel laboris*) as a certain fee (*pretium*) for it. Hence, just as it is an act of justice to pay a just price (*iustum pretium*) for an item received from someone, so too it is an act of justice to pay a reward or wage in compensation for work or labor (*recompensare mercedem operis vel laboris*).

Now as is clear from the Philosopher in *Ethics* 5, justice is a certain sort of equality. And so justice absolutely speaking exists among those who are equal absolutely speaking. On the other hand, among those who are not equal absolutely speaking, justice does not exist absolutely speaking, but there can be a certain mode of justice, in the way that one speaks of a father’s right or a master’s right (*sicut dicitur quoddam ius paternum vel dominativum*), as the Philosopher notes in the same book. Because of this, in cases in which justice exists absolutely speaking, the notions of merit and reward likewise apply absolutely speaking, whereas in cases in which justice exists in a certain respect (*secundum quid*) and not absolutely speaking, the notion of merit likewise applies in a certain respect and not absolutely speaking, to the extent that the character of justice is preserved in such a case. For it is in this sense that a son might merit something from his father and a servant from his master.

Now it is clear that there is maximal inequality between God and man, since (b) they are infinitely distant from one another and (b) the whole of the good that belongs to man comes from God. Hence, there can be justice on the part of man with respect to God only according to a certain proportion and not according to absolute equality, viz., insofar as each operates according to his own mode. But man has the mode and measure of human virtue from God. And so man's merit in the eyes of God can exist only on the presupposition of a divine ordination—so that, more specifically, through his own operations a man obtains from God as a reward that for which God has allotted him his power to operate, in the same way that through their own movements and operations natural entities likewise achieve what they have been ordered toward by God. There is a difference, however, since through his free choice a rational creature moves himself to act, and so his action has the character of merit; this is not so in the case of other creatures.

**Reply to objection 1:** A man merits insofar as he does what he should by his own will. Otherwise, an act of justice by which someone pays back a debt would not be meritorious.

**Reply to objection 2:** God seeks no profit from our good works; rather, He seeks glory, i.e., the manifestation of His own goodness, which is what He likewise seeks from His own works.

Now from the fact that we worship Him something accrues to us rather than to Him. And so we merit something from God not in the sense that something accrues to Him because of our works, but rather in the sense that we work for the sake of His glory.

**Reply to objection 3:** From the fact that our action has the character of merit only on the presupposition of a divine ordination, it does not follow that God becomes a debtor to us absolutely speaking. Rather, He becomes a debtor to Himself insofar as it ought to be the case that His ordination is fulfilled.

## Article 2

### Can someone merit eternal life without grace?

It seems that someone can merit eternal life without grace:

**Objection 1:** As has been explained (a. 1), a man merits from God that toward which he is divinely ordered. But by his nature a man is ordered toward beatitude as his end, and so he likewise naturally desires to be beatified. Therefore, a man by his own power (*per sua naturalia*) can merit beatitude—that is to say, eternal life.

**Objection 2:** The less obligatory a given work is, the more meritorious it is (*quanto est minus debitum, tanto est magis meritorium*). But a good that is less obligatory is one that is done by someone who has been given smaller benefits. Therefore, since someone who has only natural goods (*habet solum bona naturalia*) has received smaller benefits from God than someone who has the goods of grace (*bona gratuita*) along with the natural goods, it seems that the former's works are more meritorious in the eyes of God. And so, if someone who has grace can in some way merit eternal life, then *a fortiori* someone who does not have grace can merit eternal life.

**Objection 3:** God's mercy and generosity infinitely exceed human mercy and generosity. But one man can merit in the eyes of another man even if he has never been in that man's good graces beforehand (*etiam si nunquam suam gratiam ante habuerit*). Therefore, it seems that, *a fortiori*, a man without grace can merit eternal life from God.

**But contrary to this:** In Romans 6:23 the Apostle says, "The grace of God, life eternal."

**I respond:** As was explained above (q. 109, a. 2), it is possible to think of two states belonging to a man without grace (*hominis sine gratia duplex status considerari potest*): (a) the state of *integral nature* (*status naturae integrae*), such as existed in Adam before the sin, and (b) the state of *corrupted nature* (*status naturae corruptae*), such as exists in us before the restoration effected by grace (*ante*

*reparationem gratiae*).

Thus, if we are speaking of a man with respect to the first state, then there is a single reason why he cannot merit eternal life without grace through his natural powers—viz., that a man’s merit depends on God’s preordination. Now every entity’s act is such that it is not divinely ordered to anything that exceeds the measure of the power that is the principle of the act (*excedens proportionem virtutis quae est principium actus*), since it is by the institution of God’s providence that nothing acts beyond its own power. But eternal life is a good that exceeds the measure of any created nature, since it likewise exceeds that nature’s cognition and desire—this according to 1 Corinthians 2:9 (“Eye has not seen, nor has ear heard, nor has it entered into man’s heart ...”). And so it is that no created nature is a sufficient principle of an act that merits eternal life, unless a supernatural gift, which is called ‘grace’, is added to it.

On the other hand, if we are speaking of a man who exists under sin, then to this is added a second reason in light of the impediment of sin. For since, as is clear from what was said above (q. 113, a. 2), sin is a certain offense against God that excludes one from eternal life, no one who exists in a state of sin can merit eternal life unless he is first reconciled with God by his sin’s being forgiven (*nisi prius Deo reconcilietur dimisso peccato*)—something that is effected by grace. For a sinner is owed death and not life—this according to Romans 6:23 (“The wages of sin is death”).

**Reply to objection 1:** God ordered human nature toward attaining the end of eternal life not by its own power, but through the assistance of grace. And it is in this way that its act can merit eternal life.

**Reply to objection 2:** A man without grace cannot have a work equal to a work that proceeds from grace, since the more perfect the principle of an action, the more perfect the action. However, the argument would go through if an equality of operation were assumed in the two cases.

**Reply to objection 3:** As regards the first reason set forth above, there is a dissimilarity between God and man. For a man has all his power of doing good from God and not from any man. And so a man cannot merit anything from God except through God’s gift. The Apostle makes this point explicitly when he says, “Who has first given to Him, and recompense will be made to him?”

But as regards the second reason, taken from the impediment of sin, there is a similarity between man and God, since one man cannot merit from another whom he has previously offended unless he is reconciled to him by making satisfaction.

### Article 3

#### Can a man who is in the state of grace merit eternal life by his own worthiness?

It seems that a man who is in the state of grace (*homo in gratia constitutus*) cannot merit eternal life by his own worthiness (*non possit mereri vitam aeternam ex condigno*):

**Objection 1:** In Romans 8:18 the Apostle says, “The sufferings of this time are not worthy (*non sint condignae*) to be compared with the glory to come that shall be revealed in us.” But among all meritorious works, the sufferings of the holy ones seem to be the most meritorious. Therefore, none of men’s works merit eternal life by their own worthiness (*ex condigno*).

**Objection 2:** A Gloss on Romans 6:23 (“The grace of God, life eternal”) says, “One could correctly say, ‘The wages of justice is eternal life’, but it would be preferable to say, ‘The grace of God is eternal life’, so that we might understand that God leads us to eternal life for the sake of His own mercy (*pro sua miseratione*) and not because of our merits (*non meritis nostris*).” But what someone merits because of his own worthiness (*ex condigno*) is received because of his merit and not out of mercy. Therefore, it seems that a man cannot through grace merit eternal life by his own worthiness (*non possit per gratiam mereri vitam aeternam ex condigno*).

**Objection 3:** Merit seems to be worthy (*condignum*) when it equals the reward. But no act in this

life can equal eternal life, which exceeds our cognition and desire. It also exceeds the charity or love present in this life (*excedit caritatem vel dilectionem viae*), in the same way that it exceeds nature. Therefore, a man cannot through grace merit eternal life by his own worthiness.

**But contrary to this:** What is rendered in accord with a just judgment seems to be a reward that one is worthy of (*videtur esse merces condigna*). But eternal life is granted by God in accord with a just judgment—this according to 2 Timothy 4:8 (“As to the rest, there is laid up for me a crown of justice, which the Lord, the just judge, will render to me in that day”). Therefore, a man merits eternal life by his own worthiness (*meretur vitam aeternam ex condigno*).

**I respond:** A man’s meritorious work can be thought of in two ways: (a) insofar as it proceeds from free choice, and (b) insofar as it proceeds from the grace of the Holy Spirit.

If we think of the substance of the work and the fact that it proceeds from free choice, then there cannot be any *worthiness* (*non potest ibi esse condignitas*) there, and this because of a maximal inequality. But there can be a *fittingness* (*congruitas*) there because of a certain equality of proportion, since it seems fitting (*videtur congruum*) that when a man operates in accord with his own virtue, God should repay him according to the excellence of his virtue.

On the other hand, if we are speaking of a meritorious act insofar as it proceeds from the grace of the Holy Spirit, then it merits eternal life by its worthiness (*ex condigno*). For the value of the merit is attendant upon the power of the Holy Spirit as He moves us toward eternal life—this according to John 4:14 (“There shall come to be in him a fount of water springing up unto life everlasting”). Again, the reward for the work is attendant upon the worthiness of the grace through which a man, now made to share in God’s nature (*consors factus divinae naturae*), is adopted as a son of God to whom the inheritance is owed by right of adoption—this according to Romans 8:17 (“If sons, heirs also”).

**Reply to objection 1:** The Apostle is talking about the sufferings of the holy ones as regards the substance of those sufferings.

**Reply to objection 2:** The Gloss in question should be understood to be talking about the first cause of attaining eternal life, which is God’s mercy. By contrast, our merit is a subsequent cause (*causa subsequens*).

**Reply to objection 3:** Even if the grace of the Holy Spirit that we have in this life is not actually equal to the grace of glory, it is nonetheless virtually equal to it (*aequalis in virtute*), like the seed of a tree that virtually contains the whole tree (*in quo est virtus ad totam arborem*). Similarly, the Holy Spirit, who is the sufficient cause of eternal life, inhabits a man through grace, and this is why He is said to be “the pledge of our inheritance” in 2 Corinthians 1:22.

#### Article 4

##### Is grace the principle of merit mainly through charity rather than through the other virtues?

It seems not to be the case that grace is the principle of merit mainly through charity rather than through the other virtues:

**Objection 1:** Compensation (*merces*) is due for work—this according to Matthew 20:8 (“Call the laborers and pay them their wages (*mercedem*)”). But every virtue is the principle of some work, since, as was established above (q. 55, a. 2), a virtue is a habit of operation (*habitus operativus*). Therefore, every virtue is equally a principle of meriting.

**Objection 2:** In 1 Corinthians 3:8 the Apostle says, “Every man shall receive his own reward according to his labor.” But charity diminishes labor rather than increasing it, since, as Augustine says in *De Verbis Domini*, “Love makes every hard and repulsive task easy and next to nothing.” Therefore, charity is not a principle of meriting more principally than any other virtue is.

**Objection 3:** The virtue that seems to be the main principle of meriting is the one whose acts are

the most meritorious. But it is acts of faith and patience, i.e., fortitude, that seem to be the most meritorious, as is clear in the case of the martyrs, who patiently and courageously contended for the faith up to the point of death. Therefore, virtues other than charity are more principally a principle of meriting.

**But contrary to this:** In John 14:21 our Lord says, “If anyone loves me, he will be loved by my Father, and I will love him and make myself manifest to him.” But eternal life consists in a manifest cognition of God—this according to John 17:3 (“This is eternal life, that they should know you, the only living and true God”). Therefore, the meriting of eternal life lies especially in charity.

**I respond:** As can be gathered from what has been said (a. 1), a human act has the character of meriting from two things: first, and principally, from divine ordination, according to which an act is said to merit that good toward which a man is ordered by God; and, second, from free choice, viz., insofar as it belongs to a man, in preference to other creatures, that he acts *per se* by acting voluntarily. And with respect to both of these, merit rests mainly on charity (*principalitas meriti penes caritatem consistit*).

The first thing to note is that eternal life consists in the enjoyment of God. But the movement of the human mind toward the enjoyment of the divine good is the proper act of charity, through which all the acts of the other virtues are ordered toward this end, insofar as the other virtues are commanded by charity. And so meriting eternal life pertains in the first place to charity and secondarily to the other virtues, insofar as their acts are commanded by charity.

Similarly, it is also clear that what we do out of love, we do in a way that is maximally voluntary. Hence, to the extent that what is required for the character of merit is that the act be voluntary, merit is attributed principally to charity.

**Reply to objection 1:** Insofar as charity has the ultimate end as its object, it moves the other virtues to operate. For, as is clear from what was said above (q. 9, a. 1) it is always the case that the habit to which the end pertains commands the habits to which the means to the end pertain.

**Reply to objection 2:** There are two ways in which a work can be laborious and difficult:

The first is because of the magnitude of the work, and in this way the magnitude of the work involves an increase of merit. In this sense, charity does not diminish the labor; indeed, it makes one pursue the greatest works. For as Gregory says in one of his homilies, “It does great things if it exists.”

In the second way, it is because of a weakness in the one who is working (*ex defectu ipsius operantis*). For what is laborious and difficult for each individual is what he does not do with a prompt will. This is the sort of toil (*labor*) that diminishes merit and is removed by charity.

**Reply to objection 3:** As Galatians 5:6 puts it, an act of faith is meritorious only if “faith is operating through love.” Similarly, even acts of patience and fortitude are meritorious only if one does them out of charity—this according to 1 Corinthians 13:3 (“If I should deliver my body to be burned, and have not charity, it profits me nothing”).

## Article 5

### Can a man merit first grace for himself?

It seems that a man can merit first grace for himself:

**Objection 1:** As Augustine says, “Faith merits justification.” But a man is justified through first grace. Therefore, a man can merit first grace for himself.

**Objection 2:** God does not give grace except to those who are worthy (*nisi dignis*). But one is said to be worthy of a gift only when he merits the gift by his worthiness (*ex condigno*). Therefore, one can merit first grace by his worthiness.

**Objection 3:** Among men it is possible for someone to merit a gift that has already been received; for instance, someone who receives a horse from his master merits it by making good use of it in the

service of his master. But God is more generous than a man. Therefore, *a fortiori*, it is possible for a man, through his subsequent works, to merit first grace that has already been received.

**But contrary to this:** The character of grace is incompatible with its being a reward for works—this according to Romans 4:4 (“To him that works, the reward is credited not as grace but as a debt”). But a man merits that which is credited to him as a reward for his work. Therefore, a man cannot merit first grace.

**I respond:** There are two possible ways to think of the gift of grace (*donum gratiae*):

In one way, as a gratuitous gift. And in this sense it is clear that any sort of merit is incompatible with grace; for as the Apostle says in Romans 11:6, “If by grace, it is already not by works.”

In the second way, grace can be thought of with respect to the nature of the very thing that is given. And in this sense it likewise cannot fall under the merit of anyone who does not have grace, both because it exceeds the measure of nature (*excedit proportionem naturae*), and also because before grace, in the state of sin, a man has an impediment to meriting grace, viz., sin itself.

Moreover, once someone already has grace, the grace that is already had cannot fall under merit, since the reward is the terminus of the work, whereas grace is the principle of any good work in us, as was explained above (q. 109). On the other hand, if someone merits another gratuitous gift by virtue of his previous grace, then this later gift will no longer be first grace.

Hence, it is clear that no one can merit first grace for himself.

**Reply to objection 1:** As Augustine relates in *Retractationes*, he was at one time deceived into believing that the beginnings of faith are from us, but that the consummation of faith is given to us by God. He retracts this belief in this same place. And it is this belief that seems to be involved in the claim that faith merits justification.

By contrast, if we suppose, as the truth of the Faith holds, that the beginnings of faith are in us from God, then even the act of faith itself follows upon first grace, and so it cannot merit first grace.

Therefore, a man is justified through faith not in the sense that, by having faith, the man merits justification, but rather because he has faith while he is being justified (*dum iustificatur credit*). For as was explained above (q. 113, a. 4), a movement of faith is required for justification.

**Reply to objection 2:** God gives grace only to those who are worthy of it—not in the sense that they were worthy beforehand, but in the sense that through grace He Himself makes them worthy. For He alone “can make clean what is conceived of unclean seed” (Job 14:4).

**Reply to objection 3:** Every good work that belongs to a man proceeds from first grace as its principle. By contrast, it is not the case that every good work proceeds from any human gift. And so there is no parallel between the gift of grace and a human gift.

## Article 6

### Can one man merit first grace for another man?

It seems that one man can merit first grace for another man:

**Objection 1:** A Gloss on Matthew 9:2 (“When Jesus saw their faith ...”) says, “How much is one’s own faith worth in the eyes of God, in whose eyes the faith of the others (*aliena*) was of such value that he healed the man both interiorly and exteriorly.” But a man’s interior healing comes through first grace. Therefore, one man can merit first grace for another.

**Objection 2:** The prayers of the just are efficacious and not empty—this according to James 5:16 (“The continual prayer of the just man is very powerful”). But in the same place, just before this, it says, “Pray for one another, that you might be saved.” Therefore, since a man’s salvation can exist only through grace, it seems that one man can merit first grace for another man.

**Objection 3:** Luke 16:9 says, “Make yourselves friends of the mammon of iniquity, so that when

you fail, they may receive you in the eternal dwellings.” But no one is received into the eternal dwellings except through grace, through which alone, as has been explained (a. 2), one may merit eternal life. Therefore, one man can, by meriting, acquire first grace for another man.

**But contrary to this:** Jeremiah 15:1 says, “Even if Moses and Samuel should stand before me, my soul is not turned toward this people”—and yet Moses and Samuel had the greatest merit in the eyes of God. Therefore, it seems that no one can merit first grace for another.

**I respond:** As is clear from what has been said above (aa. 1 and 3 and 4), our work has the character of merit from two sources:

The first is the force of God’s motion, and on this score someone may merit by his worthiness (*meretur aliquis ex condigno*).

Second, our work has the character of merit because it proceeds from free choice, insofar as we do something voluntarily. And on this score there is the merit of fittingness (*ex hac parte est meritum congrui*), since it is fitting that when a man uses his power well (*dum homo bene utitur sua virtute*), God should operate in a more excellent way that corresponds with the excellent power.

From this it is clear that no one except Christ can merit first grace for another by a merit of worthiness. For each of us is moved by God through the gift of grace in order that he himself might come to eternal life, and so the merit of worthiness does not extend beyond this motion. By contrast, Christ’s soul is moved by God through grace not only in order that Christ himself might come to the glory of eternal life, but also in order that He lead others to this glory insofar as He is head of the Church and the author of salvation—this according to Hebrews 2:10 (“He has brought many children into glory, the author of salvation”).

On the other hand, one man can merit first grace for another by a merit of fittingness. For given that a man in the state of grace fulfills God’s will, it is fitting, by the measure of friendship, that God should fulfill the man’s will in the matter of another’s salvation. Still, there can sometimes be an impediment on the part of the one whose justification a holy man desires; it is this sort of case that the passage quoted in the last place above from Jeremiah is talking about.

**Reply to objection 1:** The strength of others strengthens one for salvation by a merit of fittingness, not by a merit of worthiness (*merito congrui, non merito condigni*).

**Reply to objection 2:** The appeal made by prayer (*impetratio orationis*) relies on mercy, whereas the merit of worthiness relies on justice. And in praying for many things a man appeals to God’s mercy, even though he does not merit them in justice—this according to Daniel 9:18 (“For it is not in light of our justifications that we present our prayers before your face, but in light of your many mercies”).

**Reply to objection 3:** The poor who receive alms are said to “receive others into the eternal dwellings” either by appealing in their prayer for them to be forgiven (*impetrando eis veniam orando*), or by meriting for them by a merit of fittingness through other good works. Or they might even receive them materially speaking, since through the works of mercy that one exercises for the poor, he merits to be received into the eternal dwellings.

## Article 7

### Can someone merit restoration for himself after a fall?

It seems that someone can merit restoration for himself after a fall (*possit mereri sibi reparationem post lapsum*):

**Objection 1:** It seems that it is possible for a man to merit what is justly sought from God. But as Augustine says, nothing is more justly sought from God than to be restored after a fall—this according to Psalm 70:9 (“When my strength fails, do not abandon me, O Lord”). Therefore, a man can merit his being restored after a fall.

**Objection 2:** A man's own works profit him much more than do the works of another. But a man is able in some way to merit restoration for another after a fall, just as he is able to merit first grace for him. Therefore, *a fortiori*, he is able to merit restoration for himself after a fall.

**Objection 3:** As is clear from what was said above (a. 2), a man who at one time was in a state of grace merited eternal life by the works that he did. But no one is able to arrive at eternal life unless he is restored by grace (*nisi reparatur per gratiam*). Therefore, it seems that one can merit restoration for himself by grace.

**But contrary to this:** Ezechiel 18:24 says, "If a just man turns himself away from his justice and does iniquity, then all his justices which he has done shall not be remembered." Therefore, his previous merits will avail him nothing toward his recovering. Therefore, it is not the case that one can merit restoration for himself after a future fall.

**I respond:** No one can merit restoration for himself after a future fall, either by the merit of worthiness or by the merit of fittingness.

The reason why he cannot merit this for himself by the merit of worthiness is that the character of this sort of merit depends on the motion of God's grace, and this motion is interrupted by a subsequent sin. Hence, none of the benefits which one later acquires from God and by which he is restored fall under merit, since the motion of his prior grace does not reach this far.

Moreover, the merit of fittingness by which someone merits first grace for another man is impeded from attaining its effect by the impediment of sin in the one for whom it is merited. Therefore, *a fortiori*, the efficacy of this sort of merit is impeded by an impediment of sin that exists both in the one who is meriting and in the one for whom it is merited, since in this case both of them are joined in a single person (*hic utrumque in unam personam concurrat*).

And so there is no way in which someone can merit restoration for himself after a fall.

**Reply to objection 1:** The desire by which one desires restoration after a fall is called 'just'—and the same holds for the prayer—because it tends toward justice, and yet in such a way that it relies solely on mercy and not on justice in the manner of merit.

**Reply to objection 2:** One can merit first grace for another by fittingness, since in such a case there is at least no impediment on the part of the one who merits. But such an impediment is present when someone withdraws from justice after the merit of grace.

**Reply to objection 3:** Some have claimed that no one merits eternal life absolutely speaking except through an act of final grace; rather, one merits eternal life only under the condition that he perseveres.

But this is an unreasonable claim, since sometimes the act of final grace is less meritorious, and not more meritorious, than the preceding act, and this because of the stress caused by illness (*propter aegritudinis oppressionem*).

Hence, one should claim that every act of charity merits eternal life absolutely speaking, but that an impediment to previous merit is posed by subsequent sin, so that the effect is not attained—in just the way that natural causes likewise fail of their effects because of a supervening impediment.

## Article 8

### Can a man merit an increase of grace or charity?

It seems that a man cannot merit an increase of grace or charity:

**Objection 1:** When someone receives a reward he has merited, no other reward is owed to him—as is said of certain men in Matthew 6:2 ("They have received their reward"). Therefore, if someone merited an increase of charity or grace, it would follow that, when the grace is increased, he would not be able to look forward to any further reward. But this is absurd.

**Objection 2:** Nothing acts beyond its own species. But as is clear from what was said above (aa. 2 and 4), the principle of merit is grace or charity. Therefore, no one can merit more grace or charity than he has.

**Objection 3:** A man merits what falls under merit through any act that proceeds from grace or charity; for instance, through any act of this sort a man merits eternal life. Therefore, if an increase of grace or charity fell under merit, it seems that one would merit an increase of charity through any act informed by charity. But what a man merits is received infallibly from God if it is not impeded by a subsequent sin; for 2 Timothy 1:12 says, “I know whom I have believed, and I am certain that He is able to preserve what I have deposited with Him.” So, then, it would follow that grace or charity is increased through every meritorious act. But this seems absurd, since meritorious acts are sometimes not fervent enough for an increase of charity. Therefore, an increase of charity does not fall under merit.

**But contrary to this:** In *Super Epistolas Ioannis* Augustine says, “Charity merits being increased, and what is increased merits being perfected.” Therefore, an increase of charity or grace falls under merit.

**I respond:** As has been explained (aa. 6 and 7), the motion of grace extends to whatever falls under the merit of worthiness. But a mover’s motion extends not only to the movement’s ultimate terminus, but also to the all of the progress contained in the movement (*ad totum progressum in motu*).

Now the terminus of the movement of grace is eternal life, whereas the progress contained in this movement involves an increase of charity or grace—this according to Proverbs 4:18 (“The path of the just proceeds as a shining light and increases unto perfect daylight,” i.e., the daylight of glory).

So, then, an increase of grace falls under the merit of worthiness.

**Reply to objection 1:** The reward is the terminus of merit. But a movement has two sorts of termini, viz., (a) an ultimate terminus and (b) a mediate terminus, which is both a beginning and a terminus. And the reward of an increase [of grace] is this latter sort of terminus.

Now the reward of human favor is like an ultimate terminus for those who set up their end in that reward. Hence, such men receive no other reward.

**Reply to objection 2:** An increase of grace does not exceed the *power* of the preexisting grace, even though it does exceed its *quantity*. In the same way, even though the tree exceeds the quantity of the seed, it nonetheless does not exceed its power.

**Reply to objection 3:** A man merits an increase of grace by any meritorious act, just as he merits the consummation of grace, i.e., eternal life. But eternal life is given in its own time and not immediately. So, too, grace is increased not immediately, but in its own time, viz., when one is sufficiently disposed for the increase of grace.

## Article 9

### Can someone merit [final] perseverance?

It seems that someone can merit [final] perseverance (*possit perseverantiam mereri*):

**Objection 1:** What a man obtains by petitioning can fall under merit for one who has grace. But by petitioning men obtain perseverance from God; otherwise, as Augustine explains in *De Dono Perseverantiae*, perseverance would be sought from God in vain in the petitions of the Lord’s prayer. Therefore, perseverance can fall under merit for one who has grace.

**Objection 2:** Not being able to sin is greater than being able to sin. But not being able to sin falls under merit, since one merits eternal life, part of the nature of which is the inability to sin (*de cuius ratione est impeccabilitas*). Therefore, *a fortiori*, someone can merit not sinning, i.e., persevering.

**Objection 3:** An increase of grace is greater than perseverance in the grace that one already has. But as was explained above (a. 8), a man can merit an increase of grace. Therefore, *a fortiori*, he can

merit perseverance in the grace that he has.

**But contrary to this:** One obtains from God everything that he merits, unless he is impeded by sin. But there are many who have meritorious works and yet do not receive perseverance. Nor can one claim that this happens because of an impediment of sin, since it is sinning itself that is opposed to perseverance, so that if someone merited perseverance, then God would not permit him to fall into sin. Therefore, it is not the case that perseverance falls under merit.

**I respond:** Since a man naturally has free choice that is open to both good and bad, there are two possible ways in which someone can obtain from God perseverance in the good.

In one way, through free choice's being determined to the good through final grace (*per gratiam consummatam*); this will occur in the state of glory (*quod erit in gloria*).

In the second way, on the part of God's motion, which inclines a man toward the good right up to the end (*inclinat ad bonum usque in finem*). However, as is clear from what has been said (aa. 6 and 7 and 8), what falls under human merit is what is related as a *terminus* to the movement of free choice insofar as free choice is directed by God, and not what is related to this movement as a *principle*.

Hence, it is clear that the perseverance associated with the state of glory, which is the terminus of the movement just mentioned, falls under merit, whereas perseverance in this life (*perseverantia viae*) does not fall under merit, since it depends solely on God's motion, which is the principle of all merit. Still, God graciously (*gratis*) grants the good of perseverance to whomever it is granted.

**Reply to objection 1:** We seek through our prayer even what we do not merit. For God listens to sinners who seek the forgiveness of their sins, as is clear from Augustine's commentary on John 11:31 ("We know that God does not hear sinners"). Otherwise, it would have been useless for the publican to say, "O God, be merciful to me, a sinner" (Luke 18:13). Similarly, by petitioning one seeks the gift of perseverance from God either for himself or for another, even though it does not fall under merit.

**Reply to objection 2:** The perseverance that will exist in the state of glory is related to the movement of free choice as a terminus, but not the perseverance that exists in this life, for the reason explained.

**Reply to objection 3:** Something similar should be said in reply to the third objection, the one that concerns an increase of grace; this is clear from what has been said (a. 8).

## Article 10

### Do temporal goods fall under merit?

It seems that temporal goods fall under merit:

**Objection 1:** What falls under merit is that which is promised to someone as a reward of justice (*ut praemium iustitiae*). But as is clear from Deuteronomy 28, in the Old Law temporal goods were promised as a reward of justice. Therefore, it seems that temporal goods fall under merit.

**Objection 2:** It seems that what God gives someone in compensation for service he has rendered falls under merit. But sometimes God gives temporal goods to men in compensation for service done to Him. For instance, Exodus 1:21 says, "Because the midwives feared God, He built them houses," where Gregory's Gloss says, "The reward given in return for their kindness could have been in eternal life, but because of their sin of lying, they received an earthly compensation instead." Again, Ezekiel 29:18 says, "The king of Babylon has made his army undergo hard service against Tyre, and no reward was given it." And later it is added, "There will be a reward for his army, and I have given him the land of Egypt in return for what he has done for me." Therefore, temporal goods fall under merit.

**Objection 3:** Evil is related to demerit as good is related to merit. But as is clear from the Sodomites in Genesis 19, because of the demerit of sin some are punished by God with temporal punishments. Therefore, temporal goods fall under merit.

**But contrary to this:** The things that fall under merit are not related in the same way to everyone. By contrast, temporal goods and temporal evils are related in the same way to good and bad men—this according to Ecclesiastes 9:2 (“All things equally happen to the just and the wicked, to the good and to the evil, to the clean and to the unclean, to him that offers victims and to him that despises sacrifices”).

**I respond:** What falls under merit is a reward or wage (*praemium vel merces*), which has the character of a certain sort of good. Now there are two sorts of goods that belong to a man: one sort is good absolutely speaking (*simpliciter*), and the other is good relatively speaking (*secundum quid*).

The good for a man absolutely speaking is (a) his ultimate end—this according to Psalm 72:27 (“It is good for me to adhere to God”)—and, as a result, (b) all the things that are ordered in such a way as to lead to the ultimate end. And things of this sort fall under merit absolutely speaking.

By contrast, the good that belongs to a man relatively speaking and not absolutely speaking is what is good for him right now or what is good for him in some respect. Goods of this sort fall under merit relatively speaking and not absolutely speaking.

Accordingly, one should reply that if temporal goods are thought of insofar as they are *useful for the works of the virtues*, by which we are led to eternal life, then in this sense they fall directly and simply under merit, in the same way that an increase of grace does, along with everything else by which a man is assisted after first grace in arriving at beatitude. For God gives just men as much of temporal goods—and temporal evils, too—as expedites their arriving at eternal life. And to that extent temporal goods of this sort are good absolutely speaking. Hence, the Psalm [33:10] says, “Those who fear the Lord are not lacking in any good,” and, again, in another place [Psalm 36:25], “I have not seen a just man forsaken.”

On the other hand, if temporal goods of this sort are thought of *in their own right (secundum se)*, then they are human goods relatively speaking and not absolutely speaking. And in this sense they fall under merit not absolutely speaking but relatively speaking, viz., insofar men are moved by God to do certain things temporally in which their goals are attained with God’s favor. Just as eternal life is, as was explained above (aa. 3 and 6), the reward absolutely speaking of works of justice because of their relation to God’s motion, so temporal goods thought of in their own right have the character of a reward, as long as they have a relation to the divine motion by which men’s wills are moved to pursue them—even though sometimes in these cases the men do not have an upright intention (*non habeant rectam intentionem*).

**Reply to objection 1:** As Augustine says in *Contra Faustum* 4, “In these temporal promises there were figures of spiritual things to come. For the carnal people were adhering to the promises of the present life, and not only was their speech prophetic, but also their life.”

**Reply to objection 2:** The compensations in question are said to be rendered by God by way of comparison to God’s motion, but with respect to the badness of the will. This applies mainly to the king of Babylon, who attacked Tyre not because he wished to serve God, but rather in order to usurp dominion for himself. Similarly, even though the midwives had a good will as regards the liberation of the children, their will was not upright as regards the fact that they told a lie (*quantum ad hoc quod mendacium confinxerunt*).

**Reply to objection 3:** Temporal evils are inflicted as punishment on bad men (*infliguntur in poenam impiis*) in the sense that through them those men are not assisted in attaining eternal life. For just men, on the other hand, who are assisted by evils of this sort, they are not punishments but are instead medicines, as was also explained above (q. 87, a. 8).

**Reply to the argument for the contrary:** All things happen equally to good men and bad men as far as the *substance* of temporal goods and evils is concerned, but not as far as their *end* is concerned. For good men are led to beatitude by goods and evils of this sort, whereas bad men are not.

What has been said is sufficient concerning morals in general.

## PROLOGUE TO PART 2-2

After the general consideration of virtues and vices and of the other things relevant to moral matters (*de aliis ad materiam moralem pertinentibus*), we must next consider each of these things specifically (*in speciali*). For general morals (*morales universales*) are less useful, given that actions involve particulars.

Now there are two ways in which something concerning morals can be thought about specifically: (a) on the part of the *moral matters themselves*, as when one considers this particular virtue or that particular vice; and (b) as regards the *specific states that belong to men* (*quantum ad speciales status hominum*), as when one considers prelates and those subject to them, or those who are active and those who are contemplative, or any of the other different states of men. Therefore, we will first give specific consideration to what is relevant to *all* the states of men (questions 1-179) and, second, we will consider specifically what is relevant to *determinate* states (questions 180-189).

However, as regards the first topic, if we were to treat the virtues (*virtutes*), the gifts [of the Holy Spirit] (*dona*), the vices (*vitia*), and the commandments (*praecepta*) separately, then we would have to say the same thing many times. For instance, if someone wanted to give an adequate treatment of the commandment, ‘You shall not commit adultery’, he would have to inquire into adultery, which is a certain sin, knowledge about which depends upon knowledge about the opposed virtue. Therefore, our path of inquiry will be more advantageous and expeditious if we consider a virtue, its corresponding gift, its opposite vices, and the relevant affirmative and negative commandments all together within the same treatise. Moreover, this manner of inquiry will be appropriate for the vices themselves in accord with their proper species (*secundum propriam speciem*). For it was shown above (*ST* 1-2, q. 72) that vices and sins are diversified in species by their *subject matter* or *object* (*secundum materiam vel obiectum*) and not by the other distinctions among sins—e.g., sins of the heart, of the mouth, and of deed; or sins stemming from weakness, from ignorance, and from malice; or other distinctions of this sort. By contrast, it is the same subject matter with respect to which a virtue operates uprightly and the opposed vices recede from rectitude.

So, then, now that all moral matters have been traced back to a consideration of the virtues, all the virtues themselves are further traced back to seven virtues, three of which are the *theological* virtues, which we will talk about first (questions 1-46), and the other four of which are the *cardinal* virtues, which we will talk about after that (questions 47-179).

Now among the intellectual virtues there is, to be sure, prudence (*prudentia*), which is contained within the cardinal virtues and numbered among them. However, as was explained above (*ST* 1-2, q. 57, aa. 3-4), crafts (*artes*), which have to do with things that can be *made*, are not relevant to morals, which have to do with things that can be *done*. And the other three intellectual virtues, viz., wisdom, understanding, and knowledge, share their names with certain gifts of the Holy Spirit. Hence, they will be treated within the treatment of the gifts that correspond to the virtues.

Now as is clear from what was said above (*ST* 1-2, q. 61, a. 3), the other moral virtues are all in some way or other traced back to the cardinal virtues. Hence, in the treatment of a given cardinal virtue, all the virtues and opposed vices that are in any way relevant to it will likewise be treated. And in this way nothing belonging to morals will be left out.

## QUESTION 1

### The Object of Faith

As for the theological virtues, we must consider, first, faith (questions 1-16); second, hope (questions 17-22); and, third, charity (questions 23-46).

As regards faith, there are four things to consider: first, faith itself (questions 1-7); second, the gifts of understanding and knowledge, which correspond to faith (questions 8-9); third, the vices opposed to faith (questions 10-15); and, fourth, the commandments that belong to this virtue (question 16).

As regards faith itself, we must consider, first, the object of faith (question 1); second, the act of faith (questions 2-3); and, third, the very habit of faith (questions 4-7).

On the first topic there are ten questions: (1) Is the object of faith the First Truth? (2) Is the object of faith something complex (*complexum*) or something non-complex (*incomplexum*)—that is, is it a proposition (*enuntiabile*) or an entity (*res*)? (3) Can anything false fall under faith? (4) Can the object of faith be something that is seen? (5) Can the object of faith be something that is known scientifically (*aliquid scitum*)? (6) Are the things to be taken on faith (*credibilia*) appropriately divided into certain articles of the Faith? (7) Do the same articles fall under faith at all times (*secundum omne tempus*)? (8) How many articles are there? (9) What of the manner of handing down the articles in a creed (*in symbolo*)? (10) Whose role is it to put together a creed of the Faith (*fidei symbolum constituere*)?

### Article 1

#### Is the object of faith the First Truth?

It seems that the object of faith is not the First Truth:

**Objection 1:** It seems that the object of faith is what is proposed to us to be taken on faith (*nobis proponitur ad credendum*). But what is proposed to us to be taken on faith are not just those things that pertain to the divine nature, which is the First Truth, but also things that pertain (a) to Christ's human nature (*ad humanitatem Christi*), (b) to the sacraments of the Church (*ad Ecclesiae sacramenta*), and (c) to the creation of creatures (*ad creaturaum conditionem*). Therefore, it is not only the First Truth that is the object of faith.

**Objection 2:** Since faith and unbelief (*fides et infidelitas*) are opposites, they have to do with the same thing. But each thing contained in Sacred Scripture is such that unbelief can be about it, since if a man denies any one of those things, then he is counted as an unbeliever. Therefore, faith likewise has to be about all the things contained in Sacred Scripture. But Sacred Scripture contains many things that have to do with men and other created entities. Therefore, the object of faith includes not only the First Truth, but also created truth.

**Objection 3:** As was explained above (*ST* 1-2, q. 62, a. 3), faith is divided off from charity on the same level (*fides caritati condividitur*). But by charity we love not only God, who is the highest goodness, but also our neighbor. Therefore, the object of faith is not just the First Truth.

**But contrary to this:** In *De Divinis Nominibus*, chap. 7, Dionysius says, "Faith has to do with the truth that is simple and everlasting (*circa simplicem et semper existentem veritatem*)." But this is the First Truth. Therefore, the object of faith is the First Truth.

**I respond:** The object of a cognitive habit has two aspects: (a) what is known *materially*, and this is, as it were, the *material object*, and (b) *that through which* it is known, and this is the *formal character of the object* (*formalis ratio obiecti*). For instance, in the science of geometry the conclusions are what is known *materially*, whereas the *formal* character of the knowing is the medium of demonstration through which the conclusions are known.

So, then, in the case of faith, if we are thinking about the *formal character of the object*, this is none other than the First Truth; for the sort of faith we are speaking of assents to something only because it has been revealed by God, and so it relies on divine truth as a medium.

On the other hand, if we are thinking *materially* about the things to which faith assents, then this is not only God Himself, but many other things as well. Still, these things fall under the assent of faith only insofar as they have a relation to God, viz., because it is through certain of God's effects that man is assisted in tending toward the enjoyment of God. And so even on this score the object of faith is the First Truth, since nothing falls under faith except in relation to God—in the same way that the object of the medical art is health because it takes nothing into account except in relation to health.

**Reply to objection 1:** Things pertaining to Christ's human nature or to the sacraments of the Church or to any creatures whatsoever fall under faith insofar as we are ordered toward God through them. And we likewise assent to them because of divine truth.

**Reply to objection 2:** The same thing should be said, in reply to the second objection, with respect to all the things that are handed down in Sacred Scripture.

**Reply to objection 3:** Charity likewise loves one's neighbor because of God, and so, as will be explained below (q. 25, a. 1), the object of charity is, properly speaking, God Himself.

## Article 2

### Is the object of faith something complex in the manner of a proposition?

It seems that the object of faith is not anything complex in the manner of a proposition (*non sit aliquid complexum per modum enuntiabilis*):

**Objection 1:** As has been explained (a. 1), the object of faith is the First Truth. But the First Truth is something non-complex. Therefore, the object of faith is not anything complex.

**Objection 2:** The exposition of the Faith is contained in the creed (*expositio fidei in symbolo continetur*). But it is things (*res*) and not propositions that are posited in the creed; for instance, the creed does not say 'God is almighty', but instead says 'I believe in God the almighty'. Therefore, the object of faith is a thing and not a proposition.

**Objection 3:** Faith is succeeded by sight—this according to 1 Corinthians 13:12 ("We see now through a glass darkly, but then face to face"). But the vision that belongs to heaven is of something non-complex, since it is a vision of God's essence itself. Therefore, the same likewise holds for faith in this life (*ergo etiam fides viae*).

**But contrary to this:** Faith (*fides*) lies between scientific knowledge (*scientia*) and opinion (*opinio*). But what lies in the middle is of the same species as the extremes. Therefore, since scientific knowledge and opinion have to do with propositions, it seems that faith likewise has to do with propositions. And so since faith has to do with propositions, the object of faith is something complex.

**I respond:** What is known exists in the knower in the manner of the knower. But as was explained in the First Part (*ST* 1, q. 85, a. 5), the proper mode of the human intellect is to have cognition of the truth by composing and dividing. And so it is with a certain complexity that the human intellect has cognition of things that are simple in their own right—just as, conversely, the divine intellect has cognition in a non-complex way of things that are complex in their own right.

So, then, the object of faith can be thought of in two ways: In one way, on the part of *the thing itself that is taken on faith*, and in this sense the object of faith is something non-complex, viz., the very thing with respect to which one has faith. In the second way, on the part of *the one who has faith*, and in this sense the object of faith is something complex in the manner of a proposition.

This is why both opinions were held with truth by the ancients, and why both are true in a certain respect.

**Reply to objection 1:** This argument goes through with respect to the object of faith on the part of the very thing that is taken on faith.

**Reply to objection 2:** As is clear from the very manner of speaking, in the creed the things with respect to which there is faith are touched upon insofar as they terminate the act of the believer. But the act of the believer is terminated in the thing and not in a proposition, since we form propositions only in order that through them we might have cognition of the things—and this holds in the case of faith, just as it holds in the case of scientific knowledge.

**Reply to objection 3:** The vision that belongs to heaven will be of the First Truth as it exists in

itself—this according to 1 John 3:2 (“When He appears, we shall be like Him, and we will see Him as He is”). And so that vision will exist in the manner of a simple act of understanding and not in the manner of a proposition. By contrast, we do not through faith apprehend the First Truth as He is in Himself. Hence, the arguments are not parallel.

### Article 3

#### Can anything false fall under faith?

It seems that something false can fall under faith (*fidei possit subesse falsum*):

**Objection 1:** Faith is divided off from hope and charity on the same level (*fides condividitur spei et caritati*). But something false can fall under hope, since many who will not in fact have eternal life hope that they will have it. The same thing likewise holds for charity, since many are loved as good and yet are not good. Therefore, it is also the case that something false can fall under faith.

**Objection 2:** Abraham took it on faith that the Christ would be born—this according to John 7:56 (“Abraham, your father, rejoiced to see my day”). But after Abraham’s time God was able not to be incarnated, since He took on flesh by His own will alone; and in that case Abraham would have taken on faith something false about the Christ. Therefore, it is possible for what is false to fall under faith.

**Objection 3:** The faith of the ancients was that Christ would be born, and this faith endured in many right up until the preaching of the Gospel. But once Christ had already been born and before He began to preach, it was false that Christ would be born. Therefore, what is false can fall under faith.

**Objection 4:** One of the things that belongs to the Faith is that one takes it on faith that the true body of Christ is contained under the Sacrament of the Altar. But it can happen, when the bread is not correctly consecrated, that only bread, and not the true body of Christ, exists there. Therefore, what is false can fall under faith.

**But contrary to this:** As is clear from the Philosopher in *Ethics 7*, no virtue that perfects the intellect is related to what is false insofar as what is false is bad for the intellect. But as will become clear below (q. 4, aa. 2 and 5), faith is a virtue that perfects the intellect. Therefore, what is false cannot fall under it.

**I respond:** Nothing falls under a power or habit—or even an act—except by the mediation of the formal character of the object (*nisi mediante ratione formali obiecti*). For instance, color cannot be seen except by means of light, and a conclusion cannot be known except by means of a demonstration.

Now it has been explained (a. 1) that the formal object of faith is the First Truth. Hence, nothing can fall under faith except insofar as it stands under the First Truth (*nisi in quantum stat sub veritate prima*). But nothing false can stand under the First Truth—just as a non-being cannot stand under *being* and just as what is bad cannot stand under goodness. Hence, it follows that nothing false can stand under faith.

**Reply to objection 1:** It is because the true is the intellect’s good—though it is not the good of any appetitive virtue—that all the virtues which perfect the intellect totally exclude what is false. For it belongs to the nature of a virtue to be related only to the good. By contrast, the virtues which perfect the appetitive part of the soul do not totally exclude what is false; for instance, someone can act in accord with justice or temperance even while having a false opinion about that with respect to which he is acting. And so since faith perfects the intellect, whereas hope and love perfect the appetitive part of the soul, the arguments are not parallel.

Still, what is false does not fall under hope, either. For one hopes that he will have eternal life not by his own power (for this would belong to presumption), but with the assistance of grace, and if he perseveres in grace, then he will attain eternal life altogether unfailingly (*omnino infallibiter*).

Similarly, it belongs to charity to love God in whomever He might be present (*in quocumque fuerit*). Hence, it does not matter to charity whether or not God is present in someone who is loved for the sake of God.

**Reply to objection 2:** God's not being incarnated, considered just by itself, was possible even after the time of Abraham. However, insofar as it falls under God's foreknowledge, it has a certain necessity of infallibility, as was explained in the First Part (*ST* 1, q. 14, a. 13). And this is the way in which it falls under faith. Hence, insofar as it falls under faith, it cannot be false.

**Reply to objection 3:** After Christ's birth, it belongs to a believer's faith to believe that He is born at some time. But the specification of the time about which he is deceived stems not from faith but from human conjecture. For it is possible that a faithful individual should, because of human conjecture, have a false opinion (*falsum aliquid aestimare*). By contrast, it is impossible for him to have a false opinion that stems from faith.

**Reply to objection 4:** A believer's faith does not refer to these or those species of bread, but to the fact that the true body of Christ lies under those sensible species of bread when the bread is correctly consecrated. Hence, if it has not been correctly consecrated, then nothing false falls under faith because of this.

#### Article 4

##### Is the object of faith something seen?

It seems that the object of faith is something seen:

**Objection 1:** In John 20:29 the Lord says to Thomas, "Because you have seen me, you have believed." Therefore, vision and faith are of the same thing.

**Objection 2:** In 1 Corinthians 13:12 the Apostle says, "We see now through a glass darkly." And he is speaking here of the sort of cognition had by faith. Therefore, what is taken on faith is seen.

**Objection 3:** Faith is a certain spiritual light. But any sort of light is such that something is seen by it. Therefore, faith is of things that are seen.

**Objection 4:** As Augustine says in *De Verbo Domini*, "Every sensory power is called 'sight' (*visus*)." But what is taken on faith are things that are heard—this according to Romans 10:17 ("Faith comes from hearing"). Therefore, the things taken on faith are seen.

**But contrary to this:** In Hebrews 11:1 the Apostle says, "Faith is the evidence of things that are not apparent" (*fides est argumentum non apparentium*).

**I respond:** 'Faith' implies the intellect's assent to what is taken on faith (*creditur*). But there are two ways in which the intellect assents to something:

In one way, it assents because it is moved to assent *by the object itself*, i.e., either (a) by the very thing that the cognition is of, as is clear in the case of first principles, with respect to which there is *understanding (intellectus)*, or (b) by means of something else that there is a cognition of, as is clear in the case of conclusions, with respect to which there is *scientific knowledge (scientia)*.

In the second way, the intellect assents to something not because it is sufficiently moved by its own object, but because it is moved *voluntarily by an act of choosing (per quandam electionem voluntarie)* that inclines it toward the one part [of a contradiction] rather than the other part. And if this occurs with hesitation and a fear of the other part, then there will be *opinion (opinio)*, whereas if it occurs with certitude and without such a fear, then there will be *faith (fides)*.

Now things that are said to be *seen* are those that *by themselves* move our intellect or sensory power to its cognition. Hence, it is clear that neither *faith* nor *opinion* can be of things that are *seen* either by the sensory power or by the intellect.

**Reply to objection 1:** Thomas *saw* one thing and took something else *on faith*. He saw a man and, taking Him on faith to be God, he confessed by saying, “My Lord and my God.”

**Reply to objection 2:** There are two possible ways to think of the things that fall under faith:

In one way they can be thought of *individually (in speciali)*, and, as has been explained, in this sense they cannot be both seen and taken on faith at the same time.

In the second way, they can be thought of *in general (in generali)*, viz., under the common character *something to be taken on faith (sub communi ratione credibilis)*. And in this sense they are seen by the one who has faith, since he would not have faith in them unless he saw that they should be taken on faith, either because of the evidentness of signs or miraculous works (*propter evidentiam signorum*) or for some other such reason.

**Reply to objection 3:** The light of faith makes one see which things are taken on faith. For just as through other virtuous habits a man sees what is appropriate for him in accord with that habit, so, too, through the habit of faith a man’s mind is inclined toward assenting to those things that are appropriate for a correct faith and not to other things.

**Reply to objection 4:** What is heard are words that signify what belongs to the Faith, but not the very things that are taken on faith. And so it is not necessary for these latter things to be seen.

## Article 5

### Can what belongs to the Faith be known scientifically?

It seems that what belongs to the Faith can be known scientifically (*ea quae sunt fidei possint esse scita*):

**Objection 1:** What is not known scientifically seems to be such that one is ignorant of it (*quae non sciuntur videntur ignorata*), since ignorance is opposed to scientific knowledge (*ignorantia scientiae opponitur*). But what belongs to the Faith is not such that one is ignorant of it, since ignorance pertains to unbelief (*ignorantia ad infidelitatem pertinet*)—this according to 1 Timothy 1:13 (“I did it while ignorant, in my unbelief” (*in incredulitate mea*)). Therefore, what belongs to the Faith can be known scientifically.

**Objection 2:** Scientific knowledge is acquired through arguments. But arguments are adduced by the sacred writers for what belongs to the Faith. Therefore, what belongs to the Faith can be known scientifically.

**Objection 3:** What is proved demonstratively is known scientifically, since a demonstration is a syllogism that produces scientific knowledge. But certain things that are contained in the Faith have been proved demonstratively by the philosophers, e.g., that God exists, that there is one God, and other things of this sort. Therefore, what belongs to the Faith can be known scientifically.

**Objection 4:** Opinion is more distant from scientific knowledge than faith is, since faith is said to be in the middle between opinion and scientific knowledge. But as *Posterior Analytics* 1 says, there is a sense in which there can be opinion and scientific knowledge about the same thing. Therefore, this holds for faith and scientific knowledge as well.

**But contrary to this:** Gregory says, “What is evident is subject to intellectual perception and not to faith” (*apparentia non habent fidem sed agnitionem*). Therefore, what is held on faith is not subject to intellectual perception. But what is known scientifically (*scita*) is subject to intellectual perception. Therefore, there cannot be faith with respect to what is known scientifically.

**I respond:** All scientific knowledge is had through principles that are known *per se* and are, as a consequence, seen. And so anything that is known scientifically has to be seen in some way. But as was explained above (a. 4), it is impossible for the same thing to be both seen and taken on faith by the same

individual. Therefore, it is impossible for the same thing to be both known scientifically and taken on faith by the same individual.

However, it is possible for something that is seen or known scientifically by one individual to be taken on faith by another individual. For instance, we hope to see what we take on faith about the Trinity—this according to 1 Corinthians 13:12 (“We see now through a glass darkly, but then face to face”). This vision is already seen by the angels, and so they see what we take on faith. Similarly, even in the state of the present life it is possible for something that is seen or known scientifically by one man to be taken on faith by another man, who does not know it demonstratively.

However, what is proposed generally to all men to be taken on faith is in all cases not known scientifically (*communiter non scitum*). And so these are the things that fall under faith absolutely speaking. And this is why faith and scientific knowledge are not about the same thing.

**Reply to objection 1:** Those who do not believe what belongs to the Faith are in a state of ignorance (*ignorantia habent*), since they do not see these things or know them scientifically, and they do not realize that these things are to be taken on faith. Now it is in this last way that the faithful have knowledge of them (*habent eorum notitiam*)—not demonstratively, but rather, as has been explained, to the extent that they are seen by the light of faith to be things that should be taken on faith (*inquantum per lumen fidei videntur esse credenda*).

**Reply to objection 2:** The arguments adduced by the saints to prove what belongs to the Faith are not demonstrative arguments, but are instead certain persuasive arguments showing that what is proposed in the Faith is not impossible.

Or else, as Dionysius explains in *De Divinis Nominibus*, chap. 2, they are arguments that proceed from the principles of the Faith. Now something is proved from these principles in the eyes of the faithful (*apud fideles*) in the same way that something is proved in everyone’s eyes from naturally known principles. Hence, as was explained at the beginning of this work (*ST* 1, q. 1, a. 2), theology is likewise a science.

**Reply to objection 3:** Things that can be proved demonstratively are numbered among the things to be taken on faith not because faith is directed toward them absolutely speaking in the case of everyone, but because they are prerequisites for the things that do belong to the Faith, and they must at least be presupposed for faith by those who do not have demonstrations of them.

**Reply to objection 4:** As the Philosopher says in the same place, “Scientific knowledge and opinion can be had by different men about exactly the same thing,” in the same way that was just explained for the case of scientific knowledge and faith.

However, faith and scientific knowledge about the same thing can, in fact, be had by one and the same individual in a certain sense—viz., they can be had about the same subject matter but not in the same respect. For with respect to one and the same entity, it is possible for someone to know one thing and to have opinion about some other thing; and, similarly, with respect to God, it is possible for someone to know demonstratively that He is one and to take it on faith that He is triune.

Still, in one and the same man scientific knowledge cannot exist along with either opinion or faith about the same thing in the same respect—but for different reasons in the two cases:

For it is impossible, absolutely speaking, for scientific knowledge to exist along with *opinion* about the same thing, since it is of the nature of scientific knowledge that what is known scientifically is thought of as not being possibly otherwise, whereas it is of the nature of opinion that what one is thinking about is such that he thinks it possible that it should be otherwise.

By contrast, what is taken on *faith* is, because of the certitude of faith, likewise thought of as not being possibly otherwise. Instead, the reason why the same thing cannot, in the same respect, be both known scientifically and taken on faith, is that, as has been explained (a. 4), what is known scientifically is seen and what is taken on faith is not seen.

## Article 6

### Should what is taken on faith be divided into a set number of articles?

It seems that what is taken on faith should not be divided into a set number of articles (*credibilia non sint per certos articulos distinguenda*):

**Objection 1:** Faith is to be had with respect to all the things that are contained in Sacred Scripture. But because of their multiplicity these things cannot be reduced to any set number. Therefore, it is useless to divide the articles of the Faith.

**Objection 2:** Since material distinctions can go on to infinity, they have to be set aside by the arts and crafts (*est ab arte praetermittenda*). But, as was explained above (a. 1), the formal character of the object of faith is singular and indivisible, viz., the First Truth, and so the things taken on faith cannot be distinguished by appeal to their formal character. Therefore, one should set aside the material division into articles of what is taken on faith.

**Objection 3:** As has been explained by certain writers, an article is “an indivisible truth about God that constrains us to have faith (*arctans nos ad credendum*).” But having faith is voluntary, since, as Augustine explains, “No one has faith unless he wills to.” Therefore, it seems inappropriate for what is taken on faith to be divided into articles.

**But contrary to this:** Isidore says, “An article is a perception of God’s truth and tends toward it.” But a perception of God’s truth belongs to us in accord with a certain division, since what is one in God is multiplied in our intellect. Therefore, what is taken on faith should be divided into articles.

**I respond:** The name ‘article’ seems to be derived from the Greek. For ‘*arthon*’ in Greek, which is translated by the Latin ‘*articulus*’, signifies a sort of joining together of distinct parts (*significat quandam coaptationem aliquarum partium distinctarum*). This is why the smaller parts of the body which fit together with one another are called ‘articulations’ of the limbs (*articuli membrorum*). And, similarly, in Greek grammar the ‘articles’ are certain parts of speech that fit together with other words to express their genus, number, or case. Again, in rhetoric what are called ‘articulations’ (*articuli*) are certain collections of parts; for instance, in *Rhetorica* 4 Tully explains that there is an articulation when individual words are distinguished by breaks in speech, in this way: “By your *acrimony*, by your *voice*, and by your *look*, you have struck terror into your adversaries.”

Hence, the things to be held by the Christian faith are said to be divided into articles insofar as they are divided into parts that fit together in some way with one another. Now as has been explained (a. 4), the object of faith is something regarding God that is not seen. And so when there is something that is not seen for a specific reason, there is a special article, whereas when many things are hidden (*incognita*) for the same reason, then they should not be divided into articles. For instance, there is one sort of difficulty associated with seeing that God suffers, and another sort of difficulty in seeing that someone dead rises again. And so the article about the resurrection is divided off from the article about the passion. On the other hand, the fact that He suffered, died, and was buried presents one and the same difficulty, in the sense that once one of them is accepted, it is not difficult to accept the others; and for this reason all of them belong to a single article.

**Reply to objection 1:** Some of the things to be held by faith are such that there is faith with respect to them in their own right (*secundum se*), while some of the things to be held by faith are such that there is faith with respect to them not in their own right, but only in relation to other things—just as, in the other sciences as well, some things are proposed as intended in their own right (*ut per se intenta*), and some are proposed in order to make other things clear (*ad manifestationem aliorum*).

For faith has to do principally with what we hope to see in heaven—this according to Hebrews 11:1 (“Faith is the substance of things to be hoped for” (*fides est substantia sperandarum rerum*)). So what pertains in its own right to faith are those things that directly order us toward eternal life, e.g., that there

are three persons [in God], God's omnipotence, the mystery of Christ's incarnation, and other things of this sort. And it is with respect to these items that the articles of the faith are distinguished.

By contrast, some things are proposed in Sacred Scripture to be taken on faith not in the sense that they are principally intended, but rather for the manifestation of the things noted above, e.g., that Abraham had two sons, that a dead man was resuscitated by being made to touch of the bones of Elisha, and other things of this sort which are narrated in Sacred Scripture in order to manifest God's majesty or Christ's incarnation. And it is unnecessary to distinguish articles with respect to such things.

**Reply to objection 2:** There are two possible ways to understand the formal object of faith:

In one way, on the part of *the very thing that is taken on faith*. And in this sense there is one formal object for everything taken on faith, viz., the First Truth. And on this score there is no division into articles.

In the second way, the formal object of the things taken on faith can be understood *on our part*. And in this sense the formal object of what is taken on faith is that it is not seen. And, as has been seen, it is on this score that the articles of the Faith are distinguished.

**Reply to objection 3:** This definition of an article is more in keeping with an etymology of the name as deriving from the Latin than in keeping with its true signification as derived from the Greek. Hence, the definition that is given has no great weight.

Still, one could reply that even though, since faith is voluntary, no one is constrained to have faith by a necessity of coercion (*necessitate coactionis*), one is nonetheless constrained by a necessity of the end (*arctatur tamen necessitate finis*), since for one who approaches God it is necessary to have faith and, as the Apostle puts it in Hebrews 11:6, "Without faith it is impossible to please God."

## Article 7

### Have the articles of the Faith increased with the passage of time?

It seems that the articles of the Faith have not increased with the passage of time (*non creverint secundum temporum successionem*):

**Objection 1:** As the Apostle says in Hebrews 11:1, "Faith is the substance of things to be hoped for." But the same things are to be hoped for at every time. Therefore, the same things are to be taken on faith at every time.

**Objection 2:** As is clear from the Philosopher in *Metaphysics 2*, in the humanly ordered sciences there has been an increase with the passage of time because of a lack of cognition in the first people who invented the sciences. By contrast, the doctrine of the Faith was handed down by God and not humanly invented. For as Ephesians 2:8 says, "It is a gift of God." Therefore, since there is no defect of knowledge in God, it seems that the cognition of what is to be taken on faith was perfect from the beginning and that it did not grow with the passage of time.

**Objection 3:** The operation of grace proceeds in no less orderly a way than does the operation of nature. But as Boethius says in *De Consolatione Philosophiae*, nature always takes its beginning from what is perfect (*a perfectis*). Therefore, it seems that the operation of grace has likewise taken its beginning from what is perfect, so that those who first handed down the Faith had the most perfect cognition of it (*perfectissime eam cognoverunt*).

**Objection 4:** Just as faith in Christ has come to us through the apostles, so, too, in the Old Testament the cognition of the Faith came to later fathers through earlier fathers—this according to Deuteronomy 32:7 ("Ask your father and he will proclaim it to you"). But the apostles were most fully instructed concerning the mysteries, since, as a Gloss on Romans 8:23 ("We ourselves, who have the first fruits of the Spirit") says, "Just as they received them prior in time, so, too, they received them more

abundantly than the others.” Therefore, it seems that the cognition of what is to be taken on faith did not grow with the passage of time.

**But contrary to this:** Gregory says, “The knowledge of the holy fathers increased as time went on ... and the closer they were to our Savior’s coming, the more fully they perceived the mysteries of salvation.”

**I respond:** The articles of the Faith play a role within the doctrine of the Faith like the role that principles that are known *per se* play within doctrine that is had through natural reason. A certain ordering is found among these principles in the sense that some are contained implicitly in others—in the way that, as the Philosopher makes clear in *Metaphysics* 4, all the principles are traced back to the following as a first principle: *It is impossible to affirm and deny at the same time*. Similarly, all the articles are implicitly contained in certain first things to be taken on faith (*in aliquibus primis credibilibus*), viz., that it is taken on faith that God exists and exercises providence over the salvation of men—this according to Hebrews 11:6 (“One who approaches God must believe that He exists and that He rewards those who seek after Him”). For God’s existence includes all the things which we take on faith to exist in God eternally and in which our beatitude exists, whereas faith in providence includes all the things which have been dispensed by God in time for human salvation and which constitute the way to beatitude. And this is likewise the way in which some subsequent articles are contained in others; for instance, faith in human redemption implicitly contains Christ’s incarnation and his passion and other things of this sort.

So, then, one should reply that as far as the substance of the articles of the faith is concerned, they have not increased with the passage of time, since whatever later fathers have taken on faith was contained in the faith of the earlier fathers, at least implicitly. But with respect to their unfolding (*quantum ad explicationem*), the number of articles has grown, since those who came later had an explicit cognition of things that those who came earlier did not have an explicit cognition of. Hence, in Exodus 6:2-3 the Lord says to Moses, “I am the God of Abraham, the God of Isaac, and the God of Jacob, and my name, Adonai, I did not show them.” And David says, “I have understood beyond the ancients” (Psalm 108:100). And in Ephesians 3:5 the Apostle says, “To other generations the mystery of the Christ was not known in the way that it has now been revealed to His holy apostles and prophets.”

**Reply to objection 1:** The same things were always to be hoped for by everyone. However, since men arrived at hoping for these things only through Christ, the more remote in time they were from Christ, the further off they were from acquiring the things hoped for. Hence, in Hebrews 11:13 the Apostle says, “All of them died in accord with the Faith, when the things promised had not been received, beholding them from afar.” But the farther the distance from which something is seen, the less distinctly it is seen. And so those who were close to Christ’s coming had a more distinct cognition of the things to be hoped for.

**Reply to objection 2:** There are two ways in which progress in cognition (*profectus cognitionis*) can occur:

In one way, on the part of the *teacher*, whether one or many, who progresses in cognition with the passage of time. And this is the explanation of increase in the sciences which have been invented by human reason.

In the second way, on the part of the *learner*, in the sense that a teacher who knows the entire art does not hand down the entire art to his student from the beginning, since the student would be unable to grasp it; instead, he passes it on little by little, reaching down to the student’s level (*condescendens eius capacitati*). And this is the way in which men progress in their cognition of the Faith with the passage of time. Hence, in Galatians 3:24 the Apostle compares the status of the Old Testament to childhood.

**Reply to objection 3:** Two sorts of causes are required for natural generation, viz., *agent* causes and *material* causes.

Thus, as regards the ordering of *agent* causes, it is the naturally prior cause that is the more perfect

cause, and this is the sense in which nature takes its beginning from what is perfect. For imperfect things are led to perfection only through preexistent perfect things.

By contrast, as regards the ordering of *material* causes, it is the naturally prior cause that is more imperfect, and on this score nature proceeds from the imperfect to the perfect.

Now in the manifestation of the Faith God is like an agent who has perfect knowledge from eternity, whereas man is like the matter that receives the influence of God the agent. And so it was necessary that the cognition of the Faith in men should proceed from the imperfect to the perfect. And even though, among men, some behaved in the manner of an agent cause, given that they were teachers (*doctores*) of the Faith, still, as 1 Corinthians 12:7 says, the manifestation of the Spirit is given to such men for the common good (*ad utilitatem communem*). And so cognition of the Faith was given to the fathers who were instructors in the Faith to the extent that it was necessary at that time for the Faith to be handed down to the people, either plainly or in figures (*vel nude vel in figura*).

**Reply to objection 4:** The final consummation of grace was accomplished by Christ, and this is why, in accord with Galatians 4:4, His time is called the time of fullness (*tempus plenitudinis*). And so those who were closer to Christ—either before Him, like John the Baptist, or after Him, like the apostles—had a fuller cognition of the mysteries of the Faith. For we likewise see, as regards the state of a man, that perfection occurs in young adulthood (*in iuventute*), and that a man has a more perfect state, either beforehand or afterwards, the closer he is to young adulthood.

## Article 8

### Are the articles of the Faith appropriately enumerated?

It seems that the articles of the Faith are not appropriately enumerated:

**Objection 1:** As was explained above (a. 5), what can be known scientifically by demonstrative reasoning does not belong to the Faith in the sense of being something that is taken on faith by everyone. But it can be known scientifically through demonstration that there is one God; hence, the Philosopher proves this in *Metaphysics* 12, and many other philosophers as well have adduced demonstrations for this. Therefore, that there is one God should not be posited as an article of the Faith.

**Objection 2:** Just as it is by a necessity of faith that we take it on faith that God is omnipotent (*omnipotens*), so, too, it is likewise by a necessity of faith that we take it on faith that He knows all things and that He has providence over all things. But with respect to each of these latter two points some have erred. Therefore, among the articles of the Faith mention should have been made of God's wisdom and providence as well as of His omnipotence.

**Objection 3:** Knowledge of the Father is the same as knowledge of the Son—this according to John 14:9 (“He who sees me also sees the Father”). Therefore, there should be just one article of the Faith concerning the Father and the Son—and, for the same reason, concerning the Holy Spirit.

**Objection 4:** The person of the Father is not less than the person of the Son or the person of the Holy Spirit. But several articles are posited about the person of the Holy Spirit and, likewise, about the person of the Son. Therefore, more articles should be posited about the person of the Father.

**Objection 5:** Just as something is appropriated to the person of the Father and to the person of the Holy Spirit, so, too, something is likewise appropriated to the person of the Son with respect to His divine nature (*secundum divinitatem*) (cf. *ST* 1, q. 39, aa. 7-8). But in the articles a certain work, viz., the work of creation, is appropriated to the Father and, similarly, a certain work, viz., that He has spoken through the prophets, is appropriated to the Holy Spirit. Therefore, among the articles of the Faith some work should be appropriated to the Son with respect to His divine nature.

**Objection 6:** The sacrament of the Eucharist poses a special difficulty over and beyond many of

the articles. Therefore, a special article should have been posited concerning it. Therefore, it does not seem that enough articles are enumerated (*non articuli sufficienter enumerentur*).

**But contrary to this** is the authority of Church, which enumerates the articles in the way they are enumerated.

**I respond:** As has been explained (aa. 4 and 6), what belongs to the Faith *per se* are those things (a) the vision of which we will enjoy in eternal life and (b) through which we will be led to life everlasting.

Now there are two things proposed to us to be seen in eternal life, viz., the secret of the divine nature (*occultum divinitatis*), the vision of which beatifies us (*cuius visio nos beatos facit*), and the mystery of Christ's human nature, through which, as Romans 5:2 says, "we have access to the glory" of the sons of God. Hence, John 17:13 says, "This is eternal life, to know you, the true God, and Jesus Christ, whom you have sent."

And so the first distinction among the things to be taken on faith is that some of them pertain to God's majesty, whereas others of them pertain to the mystery of Christ's human nature, which, as 1 Timothy 3:16 puts it, is "the mystery of godliness" (*sacramentum pietatis*).

As regards the majesty of God's nature, three things are proposed to us to be taken on faith:

The first is *the oneness of God's nature*, and the first article has to do with this.

The second is the *Trinity of persons*, and concerning this there are three articles corresponding to the three persons.

Third, *the works proper to the divine nature* are proposed to us. The first of these has to do with the existence of *nature*, and so an article about creation is proposed to us. The second has to do with the existence of *grace*, and there are proposed to us, under one article, all the things pertaining to human sanctification. The third has to do with the existence of *glory*, and another article is posited about the resurrection of the dead and life everlasting.

And so there are seven articles having to do with the divine nature.

Similarly, seven articles are likewise posited concerning Christ's human nature.

The first of these has to do with Christ's incarnation or conception. The second has to do with Christ's being born of a virgin. The third has to do with His passion, death, and burial. The fourth has to do with His descent into hell (*descensus ad inferos*). The fifth has to do with His resurrection. The sixth has to do with His ascension. The seventh has to do with His coming for judgment.

And so there are fourteen articles in all.

However, there are some who distinguish twelve articles of the Faith, six having to do with the divine nature and six having to do with the human nature. For they condense the three articles about the three persons into one, since the cognition of the three persons is the same, whereas they divide the work of glorification into two, viz., the resurrection of the flesh and the glory of the soul. Similarly, they merge the articles about the conception and the birth into one.

**Reply to objection 1:** We take many things on faith about God that the philosophers have been unable to investigate by natural reason, viz., concerning His providence and omnipotence, along with the fact that He alone is to be worshiped. All of these are contained in the article concerning the oneness of God.

**Reply to objection 2:** As was explained in the First Part (*ST* 1, q. 13, a. 8), the very name 'divinity' (*nomen divinitatis*) implies a sort of foresight. On the other hand, in the case of beings that have an intellect, power does not operate except through will and cognition. And so God's omnipotence in some sense includes knowledge of and providence over all things. For it would not be possible for Him to will to act among lower things unless He had cognition of them and had providence over them.

**Reply to objection 3:** There is just a single cognition of the Father, Son, and Holy Spirit with respect to the oneness of their essence, which pertains to the first article.

Now with respect to the distinction among the persons, which stems from the relations of origin,

the cognition of the Son is in some sense included in the cognition of the Father, since the Father would not be the Father if He did not have a Son, and the nexus between them is the Holy Spirit. And on this score, those who posited a single article concerning the three persons were well motivated.

However, since, with respect to each single person, we need to attend to certain things concerning which error is possible, three articles can be posited about the three persons to take care of this (*quantum ad hoc*). For instance, Arius believed that the Father is almighty and eternal, but he did not believe that the Son is coequal to and consubstantial with the Father, and so it was necessary to posit an article about the Son in order to fix this point conclusively (*ad hoc determinandum*). For the same reason, it was necessary to posit, against Macedonius, a third article concerning the person of the Holy Spirit.

Similarly, it is likewise the case that, according to one line of argument, Christ's conception and birth, along with His resurrection and life everlasting can all be included in a single article, and yet according to another line of argument, they can be distinguished insofar as, taken separately, each poses special difficulties.

**Reply to objection 4:** It belongs to the Son and the Holy Spirit to be sent on mission in order to sanctify creatures, and concerning this there are several things to be taken on faith. And so more articles are enumerated about the person of the Son and the person of the Holy Spirit than about the person of the Father, who, as was explained in the First Part (*ST* 1, q. 43, a. 4), is never sent on mission.

**Reply to objection 5:** The sanctification of a creature by grace and the consummation of this sanctification by glory are accomplished (a) by the gift of charity, which is appropriated to the Holy Spirit, and (b) by the gift of wisdom, which is appropriated to the Son. And so both of these works belong through appropriation to both the Son and the Holy Spirit, but in diverse ways.

**Reply to objection 6:** There are two things that can be thought about in the sacrament of the Eucharist. One is that it is a sacrament, and this point has the same explanation as the other effects of sanctifying grace. The other is that Christ's body is miraculously contained there, and this is included under omnipotence in the same way as all the other miracles that are attributed to God's omnipotence.

## Article 9

### Is it appropriate for the articles to be placed in a creed?

It seems that it is inappropriate for the articles to be placed in a symbol or creed (*inconvenienter symbolo ponantur*):

**Objection 1:** Sacred Scripture is the rule of faith and nothing is allowed to be added to it or subtracted from it; for Deuteronomy 4:2 says, "You shall not add to the word that I speak to you, neither shall you take away from it." Therefore, it was illicit to set up a creed as a rule of faith after the promulgation of Sacred Scripture (*post sacram Scripturam editam*).

**Objection 2:** As the Apostle says in Ephesians 4:5, there is "one faith." But a creed is a profession of faith. Therefore, it is inappropriate that several creeds should be handed down.

**Objection 3:** The profession of faith that is contained in the creed pertains to all the faithful. But it is not appropriate for all the faithful to have faith in God; rather, this belongs only to those who have faith informed [by charity]. Therefore, it was inappropriate for the creed of the Faith to be handed down in the form of the words, "I believe in one God" (*credo in unum Deum*).

**Objection 4:** As was noted above (a. 8), the descent into hell is one of the articles. But in the Nicene Creed (*symbolum patrum*) no mention is made of the descent into hell. Therefore, that creed seems inadequately put together.

**Objection 5:** As Augustine says in his exposition of John 14:1 ("You believe in God; believe also in me"), "We believe Peter or Paul, but we are not said to believe *in* anyone but God (*non dicimur*

*credere nisi in Deum*). Therefore, since the Catholic Church is a purely created thing, it seems inappropriate to say, “I believe *in* one, holy, catholic, and apostolic Church.”

**Objection 6:** The creed is handed down in order to be a rule of faith. But a rule of faith ought to be proposed publicly and to everyone. Therefore, every creed ought to be sung at Mass, in the way that the Nicene Creed (*symbolum patrum*) is. Therefore, the promulgation of the articles of the Faith in the creed does not seem to be adequate.

**But contrary to this:** The universal Church cannot err, since it is governed by the Holy Spirit, who is the Spirit of truth. For our Lord promised this to His disciples in John 16:13 when He said, “When the Spirit of truth comes, He will teach you all truth.” But the creed is promulgated by the authority of the universal Church. Therefore, nothing inappropriate is contained in it.

**I respond:** As the Apostle says in Hebrews 11:6, “One who approaches God must believe that He exists.” But no one can have faith with respect to anything unless the truth that he has faith with respect to is proposed to him. Therefore, it was necessary for the truth of the Faith to be collected together so that it might more easily be proposed to everyone, and so that no one would fall short of the truth of the Faith because of ignorance. And the name ‘symbol’ (*nomen symboli*) is derived from this sort of collection of the determinations of the Faith (*ab huiusque collectione sententiarum fidei*).

**Reply to objection 1:** The truth of the Faith is contained in Sacred Scripture in a diffuse manner and in various modes, and in some cases obscurely, with the result that in order to extract the truth of the Faith from Sacred Scripture long study and practice are required. Not everyone who has to have cognition of the truth of the Faith is able to accomplish this; most of them, occupied with other affairs, are unable to free up time for study. And so it was necessary for something clear, in the form of a summary, to be collected together from the passages of Sacred Scripture which might be proposed to everyone for belief. This is not, to be sure, something *added* to Sacred Scripture, but instead something *taken from* Sacred Scripture.

**Reply to objection 2:** The same truth of the Faith is taught in all the creeds. But where errors rise up, the people have to be instructed more diligently in the truth of the Faith, lest the faith of simple people be corrupted by heretics. And this was the reason why it was necessary to issue more creeds. These creeds differ from one another only in that one explicates more fully what is implicitly contained in another, to the extent that this was required by the obstinance of the heretics.

**Reply to objection 3:** The profession of the Faith is handed down in the creed by, as it were, the person of the whole Church, which is united through the Faith. Now the faith of the Church is faith informed [by charity], since such faith is found in all those who belong to the Church both in number and in merit. And so the profession of the Faith is handed down in the creed insofar as it is appropriate for informed faith, but also so that if any of the faithful do not have informed faith, they might strive to attain this form.

**Reply to objection 4:** No error arose from heretics concerning the descent into hell, and so it was unnecessary for an explication to be made with respect to it. And for this reason it was not reiterated in the Nicene Creed (*in symbolo patrum*); instead, it was presupposed as already having been fixed in the Apostles’ Creed (*in symbolo apostolorum*). For as has been explained, a later creed does not abolish an earlier creed, but instead elaborates on it.

**Reply to objection 5:** If one says “*in* the holy Catholic Church,” this should be taken to mean that our Faith is traced back to the Holy Spirit, who sanctifies the Church—so that the sense is, “I believe in the Holy Spirit, who sanctifies the Church.”

However, it is better, and in accord with common usage, not to say “*in*” here, but just to say, “I believe the holy Catholic Church,” as Pope Leo likewise asserts.

**Reply to objection 6:** It is because the Nicene Creed (*symbolum patrum*) clarifies the Apostles’ Creed (*symbolum apostolorum*) and because it was established when the Faith was already well-known and the Church was at peace that it is publicly sung at Mass.

By contrast, the Apostles' Creed, which was promulgated during a time of persecution and when the Faith was not yet widely known, is said silently at Prime and Compline—directed, as it were, against the darkness of past and future errors.

## Article 10

### Does it belong to the Supreme Pontiff to put together a creed of the Faith?

It seems that it does not belong to the Supreme Pontiff to put together a creed of the Faith (*fidei symbolum ordinare*):

**Objection 1:** As has been explained (a. 9), the new promulgation of a creed is necessary in order to explicate the articles of the Faith. But as has been explained (a. 7), in the Old Testament the articles of the Faith were explicated more and more with the passage of time in order to make the truth of the Faith more manifest as the time of Christ came closer. Therefore, given the absence of this sort of cause in the New Law, there should not have to be more and more explication of the articles of the Faith. Therefore, the new promulgation of a creed does not seem to belong to the Supreme Pontiff's authority.

**Objection 2:** What has been condemned under pain of anathema (*sub anathemate interdictum*) by the universal Church does not fall within the power of any man. But the new promulgation of a creed has been forbidden by the authority of the universal Church. For in the Acts of the First Council of Ephesus it says, "After the symbol of the Nicene council had been read through, the holy synod decreed that it was unlawful to utter, write, or draw up any other creed beyond that which was defined by the Fathers assembled together with the Holy Spirit at Nicea." And the same thing is reiterated in the Acts of the Council of Chalcedon. Therefore, it seems that the new promulgation of a creed does not belong to the Supreme Pontiff's authority.

**Objection 3:** Athanasius was the Patriarch of Alexandria and not the Supreme Pontiff. And yet he put together a creed that is sung in the Church. Therefore, the promulgation of a creed does not belong to the Supreme Pontiff more than to others.

**But contrary to this:** The promulgation of a creed is done in a general council (*in synodo generali*). But as *Decretals*, dist. 17 has it, a council of this sort can be convened by the authority of Supreme Pontiff alone. Therefore, the promulgation of a creed belongs to the authority of the Supreme Pontiff.

**I respond:** As was explained above (a. 9), the new promulgation of a creed is necessary to avoid errors that arise. Therefore, the promulgation of a creed belongs to the authority of the one who has the authority to fix, in the form of sentences, the things that belong to the Faith (*ea quae sunt fidei*), so that they might be held by everyone with an unshakable faith.

Now this belongs to the authority of the Supreme Pontiff, "to whom," as *Decretals*, dist. 17 says, "the greater and more difficult questions in the Church are referred." Hence, in Luke 22:32 our Lord said to Peter, whom He set up as Supreme Pontiff, "I have prayed for you, Peter, that your faith might not fail; and when you have been converted, strengthen your brothers."

And the reason for this is that the Faith ought to be one for the whole Church—this according to 1 Corinthians 1:10 ("... that you should all profess the same thing, and that there not be schisms among you"). But this condition could not be preserved unless a question about the Faith that arises from the Faith were determined by someone who presides over the whole Church in such a way that his decision (*sententia*) is held firmly by the whole Church.

And so the new promulgation of a creed belongs solely to the authority of the Supreme Pontiff, just like all the other things that pertain to the Church as a whole, such as convening a general council and other things of this sort.

**Reply to objection 1:** The truth of the Faith is sufficiently explained in the teaching of Christ and of the apostles. But because, as 2 Peter 3:16 says, bad men corrupt the apostolic teaching and the rest of the Scriptures “to their own destruction,” the explication of the Faith becomes necessary against the errors that arise as time goes on.

**Reply to objection 2:** The council’s prohibition and decision extends to private persons, who do not have the role of making determinations about the Faith. Nor does this sort of decision by a general council undermine the power of a subsequent council to make a new edition of the creed—not, to be sure, a creed that contains a different Faith, but the same creed explicated more fully. For each council has taken into account that a later council will explicate something beyond the point that a preceding council had explicated it, and this because of the necessity imposed by some heresy that has arisen. Hence, the power to promulgate a creed belongs to the Supreme Pontiff, by whose authority the council is convened and its decisions are confirmed.

**Reply to objection 3:** As is apparent from his very way of speaking, Athanasius composed an exposition of the Faith not in the manner of a creed, but more in the manner of teaching. But since his teaching contained the whole truth of the Faith in summary form (*breviter continebat*), it was accepted by the authority of the Supreme Pontiff in order that it might be held as a sort of rule of Faith.

## QUESTION 2

### The Interior Act of Faith

Next we have to consider the act of faith: first, the interior act (question 2) and, second, the exterior act (question 3).

On the first topic there are ten questions: (1) What is it to believe or to take something on faith (*credere*), which is the interior act of faith? (2) In how many ways is *to believe* used? (3) Is it necessary for salvation to take on faith something that lies beyond reason? (4) Is it necessary to take on faith what natural reason is able to arrive at? (5) Is it necessary for salvation to take some things on faith explicitly? (6) Is everyone equally obligated to take some things on faith explicitly? (7) Is it at all times necessary for salvation to have explicit faith concerning Christ? (8) Is it necessary for salvation to have explicit faith concerning the Trinity? (9) Is the act of faith meritorious? (10) Does human reasoning diminish the merit of faith?

#### Article 1

##### Is the act of faith (or the act of believing) the same as the act of thinking something through with assent?

It seems that the act of faith (or the act of believing) (*credere*) is not the same as the act of thinking something through with assent (*cum assensione cogitare*):

**Objection 1:** ‘Act of thinking something through’ (*cogitatio*) implies a sort of inquiry; for to think something through (*cogitare*) is, as it were, to turn it over all together (*simul agitare*). But in *De Fide Orthodoxa* 4 Damascene says that faith is “consent without inquiry” (*non inquisitus consensus*). Therefore, the act of thinking something through is not relevant to the act of faith.

**Objection 2:** As will be explained below (q. 4, a. 2), the act of faith exists in reason (*fides in ratione ponitur*). But as was explained in the First Part (*ST* 1, q. 78, a. 4), the act of thinking something through is an act of the cogitative power, which belongs to the sentient part of the soul. Therefore, the act of thinking something through is not relevant to the act of faith.

**Objection 3:** The act of faith is an act of the intellect, since its object is what is true. But assenting seems to be an act of the will and not an act of the intellect—just like consenting, as was explained above (*ST* 1-2, q. 15, a. 1). Therefore, the act of faith is not the act of thinking something through with assent.

**But contrary to this:** This is how Augustine defines the act of faith in *De Praedestinatione Sanctorum*.

**I respond:** There are three senses of ‘the act of thinking something through’ (*cogitare*):

In one sense, it is taken *generally* for any sort of act of considering on the part of the intellect; as Augustine puts it in *De Trinitate* 14, “What I am here calling ‘discernment’ (*intelligentia*) is the act by which we discern something while thinking it through” (*qua intelligimus cogitantes*).

In a second sense, the act of thinking something through is, more properly, the intellect’s act of considering something, accompanied by a sort of inquiry, in the time before it reaches the perfection of understanding the thing through a certitude of vision. In accord with this sense, Augustine says in *De Trinitate* 15, “The Son of God is called the *Word* (*verbum*) of the Father and not the *Thinking* (*cogitatio*) of the Father.” Indeed, when our own thinking arrives at what we know scientifically and is then fully informed (*formata*), we have our own true word. And so in this sense God’s Word should be understood as involving no act of thinking something through, since it does not have anything which is able to become fully informed and able to be unformed (*non aliquid habens formabile quod possit esse informe*). Accordingly, the act of thinking something through is properly speaking a movement of the soul during the time in which it is deliberating and in which it has not yet been brought to perfection through a full vision of the truth.

However, since such a movement can belong to the soul either (a) when it is deliberating with respect to universal intentions, which belong to the intellective part of the soul, or (b) when it is deliberating with respect to particular intentions, which belong to the sentient part of the soul, it follows that ‘the act of thinking something through’ (*cogitare*) is taken in the second sense for an act of the deliberating *intellect*, whereas ‘the act of thinking something through’ is taken in a third sense for an act of the *cogitative power*.

Therefore, if ‘the act of thinking something through’ is taken broadly (*communiter*), in accord with the *first sense*, then the act of thinking something through with assent does not express the whole character of what it is to have an act of faith. For in this sense even someone who is considering what he knows scientifically or what he understands intellectually is thinking something through with assent.

However, if ‘the act of thinking something through with assent’ is taken in the *second sense*, then it expresses the whole character of that act which is the act of faith. For some acts belonging to the intellect involve firm assent without an act of thinking something through in this sense—as when someone is considering what he knows scientifically or what he understands intellectually, given that a consideration of this sort is already fully informed (*iam est formata*). On the other hand, some acts of the intellect involve an act of thinking something through that is unformed and without firm assent—whether (a) these acts lean (*declinent*) toward neither part [of a contradiction], as happens with someone who has *an act of hesitating or doubting* (*sicut accidit dubitanti*), or whether (b) they lean more toward one part but are held on some slight evidence (*tenentur aliquo levi signo*), as happens with someone who has *an act of suspecting* (*sicut accidit suspicanti*); or whether (c) they adhere to one part and yet with a fear of the other part, as happens with someone who has *an act of having an opinion* (*quod accidit opinanti*).

By contrast, the act which is the act of faith (a) involves *firm adherence to one part*, which the act of faith shares in common with the act of scientific knowing and the act of intellective understanding [of first principles], and yet (b) *its cognition is not brought to perfection by a clear vision*, and this it shares in common with the act of hesitating, the act of suspecting, and the act of having an opinion.

This is the sense in which it is proper to one who is having an act of faith that he is thinking something through with assent. And it is in this way that the act which is the act of faith is distinguished from all the other acts of the intellect that have to do with what is true and what is false.

**Reply to objection 1:** Faith does not involve an inquiry of natural reason in the sense that reason demonstrates the things that are taken on faith. However, it does involve a sort of inquiry into those things by which a man is induced to these take things on faith, viz., because they have been spoken by God and confirmed by miracles.

**Reply to objection 2:** As has been explained, the act of thinking something through is being understood here insofar as it belongs to the intellect and not as an act of the cogitative power.

**Reply to objection 3:** The intellect of the one who has an act of faith is directed toward a single object (*determinatur ad unum*) by the will and not by reason. And so ‘assent’ is being taken here for an act of the intellect insofar as that act is directed toward a single object by the will.

## Article 2

### Is it appropriate to divide the act of faith into *believing God*, *believing that God ...*, and *believing in God*?

It seems that it is not appropriate to divide the act of faith into *believing God* (*credere Deo*), *believing that God ...* (*credere Deum*), and *believing in God* (*credere in Deum*):

**Objection 1:** A single habit has a single act. But faith is a single habit, since it is a single virtue. Therefore, it is inappropriate to posit more than one act for it.

**Objection 2:** What is common to every act of faith should not be posited as a particular act of faith. But *believing God (credere Deo)* is found universally in every act of faith, since faith depends upon the First Truth. Therefore, it seems inappropriate to distinguish it from other acts of faith.

**Objection 3:** What is appropriate even for non-believers should not be posited as an act of faith. But *believing that God ...* also belongs to non-believers. Therefore, it should not be posited among the acts of faith.

**Objection 4:** Being moved toward an end belongs to the will, the object of which is the good and the end. But *believing or having faith* is an act of the intellect and not of the will. Therefore, *believing in God*, which implies movement toward an end, should not be posited as one of the divisions of faith.

**But contrary to this:** Augustine posits the division in question in *De Verbis Domini* and *Super Ioannem*.

**I respond:** The acts of a power or habit are understood by reference to the ordering of the power or habit to its object. Now there are three possible ways to think of the object of faith. For since, as has been explained (a. 1), the act of faith (*credere*) belongs to the intellect insofar as the intellect is moved by the will to assent, the object of faith can be taken either (a) on the side of the intellect itself or (b) on the side of the will insofar as it moves the intellect.

If it is taken on the side of the *intellect*, then, as was explained above (q. 1, a. 1), there are two things that can be thought of in the object of faith:

The *first* of these is the *material object of faith*. And this is the sense in which the act of faith is posited as *believing that God ... (credere Deum ...)*. For as was explained above (q. 1, a. 1), nothing is proposed to us to be taken on faith except insofar as it pertains to God.

The *second* is the *formal object of faith*, which is like a middle term in virtue of which one assents to what is to be taken on faith. And this is the sense in which the act of faith is posited as *believing God (credere Deo)*. For, as was explained above (q. 1, a. 1), the formal object of faith is the First Truth, to which a man adheres in order to assent to what he takes on faith because of it.

On the other hand, if the object of faith is thought of in the *third* way, insofar as the intellect is *moved by the will*, then in this sense the act of faith is posited as *believing in God (credere in Deum)*, since the First Truth is related to the will insofar as the First Truth has the character of an end.

**Reply to objection 1:** It is not three diverse acts of faith that are designated by these three expressions, but rather one and the same act having diverse relations to the object of faith.

**Reply to objection 2:** This likewise makes clear the reply to the second objection.

**Reply to objection 3:** *Believing that God ...* does not belong to non-believers with the same character with which the act of faith is posited (*sub ea ratione qua ponitur actus fidei*). For they do not believe that there is a God under the conditions that are fixed by the Faith (*non credunt Deum esse sub his conditionibus quas fides determinat*). And so they do not truly believe that God exists (*nec vere credunt Deum*), since, as the Philosopher explains in *Metaphysics* 9, in the case of things that are simple, the only sort of defect in cognition is to fail to grasp them at all (*in simplicibus defectus cognitionis solum non attingendo totaliter*).

**Reply to objection 4:** As was explained above (*ST* 1, q. 82, a. 4 and *ST* 1-2, q. 9, a. 1), the will moves the intellect and the other powers of the soul toward their end. This is why *believing in God* is posited as an act of faith.

### Article 3

#### Is the act of faith necessary for salvation?

It seems that the act of faith is not necessary for salvation (*credere non sit necessarium ad*

*salutem*):

**Objection 1:** What belongs to any given entity in accord with its nature seems sufficient for its salvation and perfection. But the things that belong to the Faith exceed man's natural reason, since, as was explained above (q. 1, a. 4), these things are not apparent. Therefore, the act of faith does not seem to be necessary for salvation.

**Objection 2:** It is dangerous for a man to assent to something when he is unable to judge (*iudicare*) whether what is proposed to him is true or false—this according to Job 12:11 (“Does not the ear judge (*diudicat*) words?”). But a man cannot have such a judgment in the case of the things that belong to the Faith, since a man is unable to resolve these things into first principles, through which we pass judgment on everything. Therefore, it is dangerous to have faith with respect to such things. Therefore, the act of faith is not necessary for salvation.

**Objection 3:** Man's salvation consists in God—this according to Psalm 36:39 (“The salvation of the just is from the Lord”). But as Romans 1:20 says, “The invisible things of God are seen through those things that are understood, and His everlasting power and divinity as well.” Now what is seen by the intellect is not taken on faith. Therefore, it is not necessary for salvation that a man should take anything on faith.

**But contrary to this:** Hebrews 11:6 says, “Without faith it is impossible to please God.”

**I respond:** In the case of all natures that are ordered, one finds that two things come together for the perfection of a lower nature, one *in accord with its own proper movement*, and the other *in accord with the movement of a higher nature*. For instance, in accord with its own proper movement water moves toward the center [of the earth], but in accord with the movement of the moon it moves around the center by ebb and flow (*secundum fluxum et refluxum*); similarly, by their proper movements the planets move in their orbits from west to east, whereas by the movement of the first orbit they move from east to west.

Now only a rational created nature is immediately ordered toward God. For the other creatures attain only to something particular and not to anything universal, participating only in God's goodness and in existence, as in the case of inanimate things, or in life and the cognition of singulars as well, as in the case of plants and animals. By contrast, a rational nature, insofar as it has cognition of the universal character of goodness and being, has an immediate ordering to the universal principle of being. Therefore, the perfection of a rational creature consists not only in what belongs to him in accord with his nature, but also in what accrues to him from a sort of supernatural participation in God's goodness.

Hence, it was explained above (*ST* 1, q. 12, a. 1 and *ST* 1-2, q. 3, a. 8) that a man's ultimate beatitude consists in the supernatural vision of God. But a man cannot reach this vision except in the manner of someone being taught by God the Teacher (*per modum addiscentis a Deo doctor*)—this according to John 6:45 (“Everyone who hears the Father and learns from Him comes to me”). Now a man participates in this learning successively and not all at once, in accord with the mode of his nature. But every such student must have faith (*oportet quod credat*) in order to arrive at perfect scientific knowledge. Hence, in order for a man to arrive at the perfect vision of beatitude it is necessary for him to believe God (*credat Deo*) in the way that a student must believe the master who teaches him.

**Reply to objection 1:** Since a man's nature depends on a higher nature, his natural cognition is not sufficient for his perfection; instead, as has been explained, what is required is a sort of supernatural cognition (*quaedam supernaturalis*).

**Reply to objection 2:** Just as a man assents to principles by the natural light of the intellect (*per naturale lumen intellectus*), so a virtuous man, through the habit of a virtue, has correct judgment about what is appropriate for that virtue. And in this way, too, a man, through the light of faith that is divinely infused into the man, assents to the things that belong to the Faith and not to their contraries. And so “there is no” danger or “condemnation for those who are in Christ Jesus” (Romans 8:1), illuminated by Him through faith.

**Reply to objection 3:** With respect to many things (*quantum ad plura*), faith perceives the invisible things of God in a higher mode than does natural reason, which proceeds from creatures to God. Hence, Ecclesiasticus 3:25 says, “Many things have been shown to you beyond the understanding of man.”

#### Article 4

##### Is it necessary to take on faith what can be proved by natural reason?

It seems that it is not necessary to take on faith what can be proved by natural reason:

**Objection 1:** There is nothing superfluous in the works of God, even less so than in the works of nature. But if something can be done by one thing, it is superfluous for a second thing to be assigned to it. Therefore, it is superfluous to take on faith what can be known through natural reason (*ea quae per naturalem rationem cognosci possunt*).

**Objection 2:** It is necessary to take on faith those things that the Faith is about. But as was established above (q. 1, a. 5), scientific knowledge and faith are not about the same thing. Therefore, since scientific knowledge is about all the things that can be known through natural reason, it seems unnecessary to take on faith what is proved by natural reason.

**Objection 3:** All knowable things (*scibilia*) seem to share in the same character (*esse unius rationis*). Therefore, if some of them are proposed to man as things to be taken on faith, then by parity of reasoning it is necessary to take all things of this sort on faith. But this is false. Therefore, it is not necessary to take on faith what can be known through natural reason.

**But contrary to this:** It is necessary to take on faith that there is one God and that God is incorporeal, both of which are proved by philosophers through natural reason.

**I respond:** It is necessary for man to accept on faith not only what lies beyond reason but also what can be known through reason. There are three reasons for this:

First, in order that man might come *more quickly* to the cognition of God. For the science to which it belongs to prove that there is a God and other things of this sort about God is the last one to be proposed to men to learn, since it presupposes many other sciences. And in this way a man would arrive at the cognition of God only after a long stretch of his life.

Second, in order that the cognition of God might be *more widespread* (*communior*). For there are many who are unable to be proficient in the study of science, either because of mental dullness (*propter hebetudinem ingenii*), or because of the other occupations and necessities of temporal life, or even because of laziness in learning. And they would be completely deprived of the cognition of God if the things of God were not proposed to them through the mode of faith.

Third, for the sake of *certitude*. For in divine matters human reason is quite deficient (*multum deficiens*). An indication of this is that the philosophers, in investigating human matters by natural reason, have fallen into many errors and have disagreed among themselves. Therefore, in order that men might have unshakable and certain cognition of God, it was necessary that divine matters be handed down to them through the mode of faith—spoken, as it were, by God, who cannot lie.

**Reply to objection 1:** Natural reason’s investigation is not sufficient for the human race even with respect to the cognition of those divine things that can be shown by reason. And so it is not superfluous that such things should be taken on faith.

**Reply to objection 2:** Scientific knowledge and faith cannot be about the same thing in the case of one and the same individual. But as was explained above (q. 1, a. 5), what is known scientifically by one individual can be taken on faith by some other individual.

**Reply to objection 3:** Even if all knowable things (*scibilia*) share the character *scientific*

*knowledge (in ratione scientiae)*, there is nonetheless something they do not share, viz., equally ordering a man toward beatitude. And so not all knowable things are equally proposed as things to be taken on faith.

## Article 5

### Is a man obligated to take anything explicitly on faith?

It seems that a man is not obligated to take anything explicitly on faith (*non teneatur homo ad credendum explicito*):

**Objection 1:** No one is obligated to do what is not within his power. But it is not within a man's power to take something explicitly on faith; for as Romans 10-14-15 says, "How will they believe Him of whom they have not heard? And how will they hear without someone to preach to them? And how shall they preach unless they are sent?" Therefore, a man is not obligated to take anything explicitly on faith.

**Objection 2:** Just as we are ordered toward God by faith, so, too, by charity. But a man is not obligated to keep the commandment of charity; instead, as Augustine explains in the *De Sermone Domini in Monte*, it is sufficient merely that he make his mind ready (*sufficit sola praeparatio animi*), as is clear in the case of the precept of our Lord that is posited in Matthew 5:39 ("If someone strikes you on one cheek, then offer him the other cheek) and other precepts of this sort. Therefore, a man is likewise not obligated to accept anything explicitly on faith; instead, it is sufficient that he have a mind that is ready to accept on faith whatever is proposed to him by God.

**Objection 3:** The good of faith consists in a sort of obedience—this according to Romans 1:5 ("... to obey the Faith in all nations"). But the virtue of obedience does not require that a man observe any determinate precept; instead, it is sufficient for him to have a mind that is ready to obey—this according to Psalm 118:60 ("I am ready and am not troubled, that I may keep Your precepts"). Therefore, it seems that it is likewise sufficient for faith that a man have a mind that is ready to accept on faith whatever might be proposed to him by God—and this without taking anything explicitly on faith.

**But contrary to this:** Hebrews 11:6 says, "One who approaches God must believe that He exists and that He rewards those who seek after Him."

**I respond:** The precepts of the law that a man is obligated to fulfill are given with respect to those acts of the virtues that are the way to attaining salvation.

Now as was explained above (q. 2, a. 2), the act of a virtue is understood by reference to the habit's relation to its object. But in the object of any virtue there are two things that can be considered, viz., (a) what is *properly and per se* the virtue's object and must be present in every act of the virtue, and, again, (b) what is related to the proper character of the object *incidentally or as a consequence (per accidens sive consequenter)*. For instance, what pertains properly and *per se* to the object of fortitude is to withstand the danger of death and to attack the enemy in the face of danger for the sake of the common good; on the other hand, the fact that the a man is armed or strikes his foe with a sword in a just war, or that he does something else of this sort is, to be sure, traced back to fortitude's object, but *incidentally*. Therefore, the virtuous act's being directed to its proper and *per se* object falls under a necessity of precept, as does the act itself of the virtue. By contrast, a virtuous act's being directed to what is related incidentally or secondarily to its proper and *per se* object does not fall under a necessity of precept except for *this* time and *this* place (*non cadit sub necessitate precepti nisi pro loco et tempore*).

Therefore, one should reply, as was explained above (q. 1, a. 6), that the *per se* object of faith is that through which a man arrives at beatitude. And what is related to the object of faith incidentally or secondarily are all the things handed down by God which are contained in Scripture, e.g., that Abraham had two sons, that David was the son of Jesse, and other things of this sort.

As regards the first sort of things to be taken on faith, i.e., the articles of the Faith, a man is obligated to accept them explicitly on faith, just as he is obligated to have faith.

As regards the other things to be taken on faith, a man is obligated to take them on faith not explicitly, but only implicitly or with a readiness of mind (*in praeparatione animi*) in the sense that he is ready to accept on faith whatever is contained in Sacred Scripture. The only time that one is obligated to take something of this sort explicitly on faith is when it has become clear to him that the thing in question is contained in the teachings of the Faith.

**Reply to objection 1:** If something is said to be within a man's power when the help of grace is left out of consideration, then a man is obligated to do many things which he is unable to do without healing grace, e.g., to love God and neighbor—and, similarly, to accept on faith the articles of the Faith. Still, a man is able to do this with the help of grace. As Augustine explains in *De Correptione et Gratia*, when this help is given to someone by God, it is given out of mercy (*misericorditer datur*), whereas when it is not given, it is out of justice that it is not given (*ex iustitia non datur*)—and this as a punishment for previous sin, at least original sin.

**Reply to objection 2:** A man is obligated to love determinately those lovable things that are properly and *per se* objects of charity, viz., God and neighbor. By contrast, the objection goes through for those precepts of charity that belong to the object of charity as a sort of consequence (*quasi consequenter*).

**Reply to objection 3:** The virtue of obedience exists properly in the will. And so for the act of obedience it is sufficient that there be a promptitude on the part of the will that is subject to the one issuing the precepts—which is the proper and *per se* object of obedience.

By contrast, the precept in question here (*hoc praeceptum*) is related incidentally or as a consequence to the proper and *per se* object of obedience.

## Article 6

### Is everyone equally obligated to have explicit faith?

It seems that everyone is equally obligated to have explicit faith (*ad habendum fidem explicitam*):

**Objection 1:** As is clear from the case of the precepts of charity, everyone is equally obligated with respect to what is necessary for salvation. But as has been explained (a. 5), it is necessary for salvation to make explicit the things that have to be taken on faith. Therefore everyone is equally obligated to have explicit faith.

**Objection 2:** No one should be tested concerning what he is not obligated to have explicit faith about. But sometimes even simple people are examined concerning the least central articles of the Faith (*de minimis articulis fidei*). Therefore, everyone is obligated to have explicit faith with respect to everything.

**Objection 3:** If ordinary people (*minores*) were obligated to have only implicit faith and not explicit faith, then it would be necessary for them to have implicit faith in the faith of the preeminent people (*maiores*). But this seems to be dangerous, since it could happen that the preeminent are in error. Therefore, it seems that the ordinary people should likewise have explicit faith. So, then, everyone is equally obligated to have explicit faith.

**But contrary to this:** Job 1:14 says, “The oxen were ploughing, and the asses feeding beside them,” because, as Gregory explains in *Moralia 2*, the ordinary people, who are signified by the asses, should cling to the preeminent people, signified by the oxen, in matters of faith (*in credendis*).

**I respond:** It is divine revelation that makes explicit what is to be taken on faith, since the things taken on faith exceed natural reason. Now, by a certain divine ordering, divine revelation comes to those

who are lower through those who are higher, e.g., it comes to men through the angels, and to the lower angels through the higher angels, as is clear from Dionysius in *De Caelesti Hierarchia*. And so, by parity of reasoning, it is through preeminent men that the Faith is made explicit to ordinary men. And so just as the higher angels who illuminate the lower angels have, as Dionysius explains in *De Caelesti Hierarchia*, chap. 12, fuller knowledge of divine things than do the lower angels, so, too, preeminent men, who have the role of teaching others, are obligated to have a fuller knowledge of what is to be taken on faith and to have a more explicit faith (*et magis explicite credere*).

**Reply to objection 1:** Making explicit what is to be taken on faith is not equally necessary for salvation in all cases, since the preeminent men, who play the role of instructing others, are obligated to take more things explicitly on faith than are the others.

**Reply to objection 2:** Simple people should not be examined on the subtleties of the Faith except when there is a suspicion that they have been corrupted by heretics, who are wont to corrupt the faith of simple people in matters pertaining to the subtleties of the Faith.

**Reply to objection 3:** Ordinary people do not have implicit faith in the faith of the preeminent except to the extent that the preeminent adhere to divine teaching. Hence, in 1 Corinthians 4:16 the Apostle says, “Be imitators of me, as I am of Christ.” Thus, it is divine truth, and not human truth, that is the rule of the Faith. And if some of the preeminent people fail with respect to this rule, this does not prejudice the faith of the simple people who believe the preeminent to have the correct Faith—unless, that is, they stubbornly adhere to the particular errors of the preeminent in opposition to the Faith of the universal Church, which is unable to go astray. For our Lord says in Luke 22:32, “I have prayed for you, Peter, that your faith may not fail.”

## Article 7

### Is it necessary for salvation in the case of everyone to have explicit faith in the mystery of Christ?

It seems that it is not necessary for salvation in the case of everyone to have explicit faith in the mystery of Christ (*credere explicite mysterium Christi non sit de necessitate salutis apud omnes*):

**Objection 1:** A man is not obligated to have explicit faith with respect to what the angels are ignorant of, since the Faith is made explicit by divine revelation (*explicatio fidei fit per revelationem divinam*), which, as has been explained (a. 6 and *ST* 1, q. 111, a. 1), comes to men through the mediation of the angels. But even the angels were ignorant of the mystery of the Incarnation; thus, according to Dionysius’ commentary in *De Caelesti Hierarchia*, chap. 7, it is the angels who are asking in Psalm 23:8, “Who is the king of glory?” and in Isaiah 63:1, “Who is this that comes from Edom?” Therefore, men are not obligated to have explicit faith in the mystery of the Incarnation.

**Objection 2:** It is clear that Blessed John the Baptist was among the preeminent (*de maioribus*) and very close to Christ; our Lord says of him in Matthew 11:11, “Among those born of women no greater has arisen than he.” But John the Baptist does not seem to have had explicit cognition of the mystery of Christ, since he asked Christ, “Are you he who is to come, or do we look for another?” (Matthew 11:3). Therefore, even the preeminent are not obligated to have explicit faith concerning Christ.

**Objection 3:** As Dionysius says in *De Caelesti Hierarchia*, chap. 9, many gentiles attained salvation through the ministry of the angels. But the gentiles, it seems, did not have either explicit or implicit faith concerning Christ, since no revelation had been made to them. Therefore, it seems that it is not necessary for salvation in the case of everyone to have explicit faith in the mystery of Christ.

**But contrary to this:** In *De Correptione et Gratia* Augustine says, “That faith is sound by which

we believe that no man, young or old, is delivered from the contagion of death and the bonds of sin, except by the one Mediator between God and men, Jesus Christ.”

**I respond:** As was explained above (a. 5), what belongs properly and *per se* to the object of faith is that through which a man attains beatitude. But for men the way of coming to beatitude is the mystery of Christ’s Incarnation and Passion; for Acts 4:12 says, “There is no other name given to men whereby we must be saved.” And so the mystery of Christ’s Incarnation must in some way be accepted on faith by everyone at every time—but in different ways corresponding to the diversity of times and persons.

For *before the state of sin* the man had explicit faith concerning Christ’s Incarnation insofar as it was ordered toward the consummation of glory, but not insofar as it was ordered toward liberation from sin through the Passion and Resurrection, since the man did not foreknow the future sin. But it seems that he did foreknow Christ’s Incarnation, given that he said, “For this reason a man will leave his father and mother and cling to his wife” (Genesis 2:24), and given that the Apostle says in Ephesians 5:32, “This is a great mystery (*sacramentum magnum*) ... in Christ and the Church.” And it is unbelievable that the first man was unaware of this mystery.

Now *after the sin* the mystery of Christ was explicitly taken on faith not only with respect to the Incarnation, but also with respect to the Passion and Resurrection, by which the human race was liberated from sin and death. Otherwise, man would not have prefigured Christ’s Passion by various sacrifices, both before the Law and after the Law. The preeminent people (*maiores*) knew explicitly what these sacrifices signified, whereas the ordinary people in some way knew it under the veil of these sacrifices, believing them to have been arranged by God in reference to the Christ to come. And as was explained above (q. 1, a. 7), the closer they were to the Christ, the more distinctly they understood what belonged to the mystery of the Christ.

But *after the time of grace* was revealed, both the ordinary people and the preeminent were obligated to have explicit faith concerning the mysteries of Christ, mainly with respect to what was universally solemnized within the Church and publicly proposed, as were the articles on the Incarnation that were discussed above (q. 1, a. 8). On the other hand, as far as more subtle considerations about the articles on the Incarnation are concerned, some are obligated to hold them on faith more or less explicitly, depending on what is appropriate to each one’s status and role.

**Reply to objection 1:** As Augustine says in *Super Genesim ad Litteram* 5, the mystery of the Kingdom of God was not entirely hidden from the angels. However, they understood the reasons for this mystery more perfectly once Christ had revealed them.

**Reply to objection 2:** John the Baptist did not ask about Christ’s coming in the flesh as if he were ignorant of it, since, in John 1:34 he himself had expressly confessed it, saying, “I have seen, and I have given testimony that this is the Son of God.” Hence, he did not ask, “Are you he who has come?” but instead asked, “Are you he who is to come?” He was asking about the future and not about the past. For he had said, “Behold the Lamb of God, who takes away the sins of the world” (John 1:39), announcing Christ’s future immolation ahead of time. And, along with this, other prophets had predicted it beforehand, as is especially clear from Isaiah 53.

Therefore, once can reply that, as Gregory says, he asked his question because he did not know whether or not Christ would descend into hell in His own person (*in propria persona*). However, John did know that the power of His Passion was to be extended to those who were being detained in Limbo—this according to Zachariah 9:11 (“You also, in the blood of Your covenant, has sent forth Your prisoners out of the pit, wherein there is no water”). And he was not obligated to hold explicitly on faith, before it had been fulfilled, that Christ was to descend in His own person.

An alternative reply is that, as Ambrose says in *Super Lucam*, he asked his question not out of doubt or ignorance, but rather out of piety.

Another alternative reply is that, as Chrysostom explains, he asked the question not because he himself did not know the answer, but rather in order to satisfy his disciples on this point through Christ.

This is why Christ, in order to instruct those disciples, pointed to the evidence of His works.

**Reply to objection 3:** A revelation about the Christ was made to many of the gentiles, as is clear from what they predicted. For instance, Job 19:25 says, “I know that my redeemer lives.” Similarly, as Augustine points out, the Sybil announced beforehand certain things about the Christ. Likewise, one finds in the histories of the Romans that at the time of Augustus Constantinus and his mother Irene a certain tomb was discovered in which lay a man with a golden breast plate on which it was written, “The Christ will be born of a virgin and I believe in him. Oh, sun, during the time of Irene and Constantinus you will see me again.”

Still, if some were saved to whom no revelation had been made, they were not saved without faith in a mediator. For even if they did not have explicit faith, they still had an implicit faith in divine providence and believed that God is man’s liberator in accord with ways that please Him and insofar as He had made a revelation to some people who understood the truth—this according to Job 35:11 (“Who teaches us more than the beasts of the earth”).

## Article 8

### Was it necessary for salvation to have explicit faith in the Trinity?

It seems that it was not necessary for salvation to have explicit faith in the Trinity (*credere Trinitatem explicite non fuerit de necessitate salutis*):

**Objection 1:** In Hebrews 11:6 the Apostle says, “One who approaches God must believe that He exists and that He rewards those who seek after Him.” But one can accept this much on faith without having faith in the Trinity. Therefore, it was not necessary to have explicit faith in the Trinity.

**Objection 2:** In John 17:5-6 our Lord says, “I have manifested Your name to men.” In commenting on this passage Augustine says, “Not the name by which You are called God, but the name by which You are called my Father.” And later on he adds, “In the fact that God made this world, He is known in all the nations; in the fact that He is not to be worshiped along with false gods, He is known in Judea; in the fact that He is the Father of this Jesus through whom He takes away the sin of the world—this name of His, previously hidden, He has now made known to them.” Therefore, before Christ’s coming it was not known that in God there is Paternity and Filiation. Therefore, the Trinity was not explicitly believed in.

**Objection 3:** We are obligated to believe explicitly of God that He is the object of beatitude. But the object of beatitude is the highest good, and this can be understood of God without a distinction among the persons. Therefore, it was not necessary to have explicit faith in the Trinity.

**But contrary to this:** In the Old Testament the Trinity of persons was expressed in many ways. For instance, right at the beginning, in Genesis 1:26, it says, “Let us make man in our image and likeness.” Therefore, from the beginning it was necessary for salvation to have faith in the Trinity.

**I respond:** One cannot have explicit faith in the mystery of Christ without faith in the Trinity, since the mystery of Christ contains the fact that (a) the Son of God has assumed flesh, that (b) He renewed the world by the grace of the Holy Spirit, and that (c) He was conceived by the Holy Spirit. And so in the same way that the preeminent people had explicit faith in Christ before Christ, whereas the ordinary people had implicit and, as it were, shadowy faith, so also with the mystery of the Trinity.

And so, likewise, after the time of publicly revealed grace (*post tempus gratiae divulgatae*), everyone is obligated to have explicit faith in the mystery of the Trinity. And everyone who is reborn in Christ attains this status through the invocation of the Trinity—this according to Matthew 28:19 (“Go out, therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Spirit”).

**Reply to objection 1:** It was necessary for everyone and at all times to have faith in God with respect to these two points. But this was not sufficient at all times and for everyone.

**Reply to objection 2:** Before Christ's coming, faith in the Trinity was hidden in the faith of the preeminent. But through Christ it has been manifested to the world by the apostles.

**Reply to objection 3:** Given the manner in which God's supreme goodness is understood in this life through its effects, it can be understood without the Trinity of persons. But insofar as it is understood in itself, as it is seen by the blessed in heaven, it cannot be understood without the Trinity of persons.

Again, it is the very mission of the divine persons that leads us to beatitude (cf. *ST* 1, q. 43).

## Article 9

### Is the act of faith meritorious?

It seems that the act of faith is not meritorious (*credere non sit meritorium*):

**Objection 1:** As was explained above (*ST* 1-2, q. 114, a. 4), the principle of meriting is charity. But faith is preliminary to charity (*praeambula ad caritatem*), just as one's nature is. Therefore, just as an act of the nature is not meritorious (since we do not merit by our natural powers), so, too, neither is an act of faith.

**Objection 2:** The act of faith lies in the middle between having an opinion and knowing scientifically, i.e., considering what is known scientifically. But considering a science is not meritorious and, similarly, neither is having an opinion. Therefore, the act of faith is not meritorious, either.

**Objection 3:** One who assents to something by an act of faith either has a cause that is sufficient to induce him to have faith, or he does not. If he has a sufficient cause that induces the act of faith, then it does not seem that this act is meritorious for him, since he is not then free to have the act of faith or not to have it. On the other hand, if he does not have a sufficient cause that induces the act of faith, then his faith is frivolous (*levitatis est credere*)—this according to Ecclesiasticus 19:4 (“He who is hasty to believe has a capricious heart”)—and so it does not seem to be meritorious. Therefore, the act of faith is in no way meritorious.

**But contrary to this:** Hebrews 11:33 says that the saints “by faith ... obtained promises.” This is so only if they merited by their acts of faith. Therefore, the act of faith is itself meritorious.

**I respond:** As was explained above (*ST* 1-2, q. 114, aa. 3-4), our acts are meritorious to the extent that they proceed from free choice moved by God through grace. Hence, every human act that is subject to free choice can be meritorious if it is referred back to God (*si sit relatus in Deum*).

Now the act of faith (*credere*) is itself an act of the intellect that assents to divine truth at the command of the will, which is moved by God through grace; and so the act of faith is subject to free choice in relation to God. Hence, the act of faith can be meritorious.

**Reply to objection 1:** Nature is related to charity, which is the principle of meriting, in the way that *matter* is related to form. By contrast, faith is related to charity as a *disposition* that precedes the final form. Now it is clear that a subject or matter—and the same holds for a preexistent disposition—cannot act in the power of a form before that form has come to the subject. But after the form has arrived, both the subject and the preexistent disposition act in the power of the form, which is the principal principle of acting—in the way that the heat of a fire acts in the power of the fire's substantial form. So neither nature nor the act of faith can produce a meritorious act without charity, but once charity arrives, the act of faith becomes meritorious through the charity, just as does the act of the nature and of natural free choice.

**Reply to objection 2:** There are two things that can be considered in scientific knowledge, viz., (a)

the knower's very assent to the thing known and (b) the act of considering the thing known.

Now the assent involved in scientific knowledge is not subject to free choice, since the knower is compelled to assent by the efficaciousness of the demonstration. And so the assent involved in scientific knowledge is not meritorious.

By contrast, the act of considering something known scientifically is subject to free choice, since it is within a man's power to consider the thing or not to consider it. And so the act of considering involved in scientific knowledge can be meritorious if it is referred back to the end of charity, i.e., honoring God or helping one's neighbor (*ad honorem Dei vel utilitatem proximi*).

By contrast, in the case of faith both items are subject to free choice. And so the act of faith can be meritorious in both ways.

On the other hand, opinion does not involve a firm assent, for according to the Philosopher in *Posterior Analytics* 1, it is something weak and unstable. Hence, it does not seem to proceed from a perfect act of will. And so it does not much seem to have the character of merit. But it can have merit on the part of the act of considering (*ex parte considerationis actualis*).

**Reply to objection 3:** The one who has an act of faith has a sufficient cause that induces him to have the act of faith, since he is induced by the authority of divine teaching that has been confirmed by miracles and, what is more, he is induced by an interior impulse from God who is inviting him. Hence, his act of faith is not frivolous. And yet he does not have a sufficient cause that leads him to know scientifically [what he takes on faith]. And so the character of merit is not completely destroyed.

## Article 10

### Does reasoning adduced for what belongs to the Faith diminish the merit of the act of faith?

It seems that reasoning adduced for what belongs to the Faith diminishes the merit of the act of faith (*ratio inducta ad ea quae sunt fidei diminuat meritum fidei*):

**Objection 1:** In one of his homilies Gregory says, "An act of faith does not have merit if human reasoning offers proof for it." Therefore, if human reasoning, in offering sufficient proof, totally rules out the merit of the act of faith, then it seems that any sort of human argument that is adduced for what belongs to the Faith diminishes the merit of the act of faith.

**Objection 2:** Whatever diminishes the character of virtue diminishes the character of merit, since, as the Philosopher says in *Ethics* 1, "The happiness of virtue is a reward." But human reasoning seems to diminish the character of virtue that belongs to the very act of faith, since, as has been explained (q. 1, aa. 4-5) it is part of the character of faith that faith is of things that are not apparent. But the more reasons adduced for something, the less non-apparent it is. Therefore, human reasoning adduced for what belongs to the Faith diminishes the merit of the act of faith.

**Objection 3:** The causes of contraries are contraries. But whatever induces one toward a contrary of the act of faith increases the merit of the act of faith, whether it be a persecution aimed at compelling a man to give up the Faith or, again, some argument urging this. Therefore, an argument that assists the faith diminishes merit.

**But contrary to this:** I Peter 3:15 says, "Always be ready to satisfy anyone who asks you the reason for the faith and hope that are in you." But the apostle would not urge this if the merit of the act of faith were diminished by it. Therefore, reasoning does not diminish the merit of the act of faith.

**I respond:** As has been explained (a. 9), the act of faith can be meritorious insofar as it is subject to the will not only with respect to its use, but also with respect to its assent. Now there are two possible ways in which human reasoning adduced for what belongs to the Faith is related to the believer's act of

will:

In one way, as *preceding* it, viz., when someone is such that, if human reasoning were not adduced, he either would not will to have an act of faith or would not will it promptly (*aut non haberet voluntatem, aut non haberet promptam voluntatem ad credendum*). In such a case, the adduced human reasoning diminishes the merit of the act of faith—just as it was likewise explained above (*ST* 1-2, q. 24, a. 3) that, in the case of the moral virtues, a passion that precedes the choice diminishes the praiseworthiness of a virtuous act. For just as a man should exercise acts of the moral virtues because of reason's judgment and not because of a passion, so, too, a man ought to believe what belongs to the Faith not because of human reasoning but because of God's authority.

In the second way, human reasoning can be related *consequently* to the believer's act of will. For when the man has a prompt act of will for believing, he loves the truth that is accepted on faith, and he pores over it and he embraces whatever arguments he can find for it. And in such a case human reasoning does not rule out the merit of faith, but is instead a sign of greater merit—in the same way that, as was explained above (*ST* 1-2, q. 24, a. 3) for the case of the moral virtues, a consequent passion is a sign of a prompter act of will. An indication of this is found in John 4:42, when the Samaritans said to the woman, who is a figure of human reasoning, "We no longer believe because of your words."

**Reply to objection 1:** Gregory is talking about a case in which a man has an act of willing to believe only because of the adduced reasoning. However, when a man has an act of willing to believe the things that belong to the Faith only because of God's authority, then even if he has a demonstrative argument for some of them, e.g., that there is a God, the merit of his act of faith is not destroyed or diminished because of this.

**Reply to objection 2:** Arguments adduced for *the authority of the Faith* are not demonstrations that can lead the human intellect to an intelligible vision. And so the arguments do not cease to be non-apparent. Rather, they remove impediments to faith by showing that what is proposed in the Faith is not impossible. Hence, neither the merit of faith nor the character of faith is diminished by such arguments.

On the other hand, as regards demonstrative arguments adduced for *the things that belong to the Faith* and yet are preambles to the articles: Even if these arguments diminish the character of faith in the sense that they make what is proposed apparent, they nonetheless do not diminish the character of charity, through which the will is prompt in accepting things on faith even if they are not apparent. And so the character of merit is not diminished.

**Reply to objection 3:** Things that are opposed to the Faith, whether in a man's thoughts or in exterior persecution, increase the merit of faith to the extent that one's will is shown to be more prompt and firm in faith. And so the martyrs had more merit of faith by not giving up the Faith in the face of persecutions, and the wise likewise have more merit of faith by not giving up the Faith in the face of the arguments adduced by philosophers or heretics against the Faith.

On the other hand, things agreeable to the Faith do not always diminish the will's promptitude in believing. And so they do not always diminish the merit of faith.

## QUESTION 3

### The Exterior Act of Faith

Next we have to consider the exterior act of faith, i.e., confessing or professing (*confessio*). And on this topic there are two questions: (1) Is confessing an act of faith? (2) Is confessing necessary for salvation?

#### Article 1

##### Is confessing an act of faith?

It seems that confessing or professing (*confessio*) is not an act of faith:

**Objection 1:** It is not the case that the same act belongs to diverse virtues. But confessing belongs to repentance (*confessio pertinet ad poenitentiam*), which it is posited as a part of. Therefore, confessing is not an act of faith.

**Objection 2:** A man is sometimes kept from confessing the Faith by fear or even because of some sort of confusion; hence, in Ephesians 6:19 the Apostle asks for prayers for himself in order that it might be granted to him “to make known with confidence the mystery of the Gospel.” But it belongs to fortitude, which moderates fear and daring, not to withdraw from a good because of confusion or fear. Therefore, it seems that confessing is more an act of fortitude or constancy than an act of faith.

**Objection 3:** Just as one is induced by the fervor of his faith to confess the Faith outwardly, so he is induced to do other good works as well; for Galatians 5:16 says, “Faith operates through love” (*per dilectionem*). But these other exterior good works are not posited as acts of faith. Therefore, neither is confessing.

**But contrary to this:** A Gloss on 2 Thessalonians 1:11 (“... and the work of faith in power”) says, “That is, confessing, which is properly a work of faith.”

**I respond:** Exterior acts are properly the acts of the virtue to whose ends they are related by their species; for instance, fasting is related by its species to abstinence, which is the taming of the flesh, and so fasting is an act of abstinence.

Now confessing what belongs to the Faith is by its species ordered, as to an end, toward what belongs to the Faith—this according to 2 Corinthians 4:13 (“Having the same spirit of faith, we have faith and, because of this, we speak”). For exterior speaking (*exterior locutio*) is ordered toward signifying what is conceived in the heart (*ad significandum id quod in corde concipitur*). Hence, just as the interior conceiving of what belongs to the Faith is properly an act of faith, so, too, the exterior confessing is likewise an act of faith.

**Reply to objection 1:** There are three sorts of confessing that are praised in the Scriptures:

The first is the confessing of *what belongs to the Faith*. And this is a proper act of faith, since, as has been explained, it is related to the end of faith.

The second is the confessing of *thanksgiving or praise*. And this is an act of worship (*actus latriae*), since it is ordered toward outwardly showing honor to God, which is the end of worship.

The third is the confessing of *sins*, and this is ordered toward the remission of sin (*ad deletionem peccati*), which is the end of repentance (*finis poenitentiae*). Hence, it belongs to repentance.

**Reply to objection 2:** As is clear from the Philosopher in *Physics* 8, removing an obstacle is a *per accidens* cause and not a *per se* cause. Hence, fortitude, which removes an impediment to confessing, viz., fear or embarrassment, is a cause of confessing not properly and *per se*, but, as it were, *per accidens*.

**Reply to objection 3:** By the mediation of elective love (*mediante dilectione*), interior faith causes all the exterior acts of the [other] virtues by the mediation of those other virtues, and it does this by *commanding* the acts and not by *eliciting* them. By contrast, it produces confessing as its own proper act, without the mediation of any other virtue.

## Article 2

### Is confessing the Faith necessary for salvation?

It seems that confessing the Faith (*confessio fidei*) is not necessary for salvation:

**Objection 1:** It seems to be sufficient for salvation that a man attain the end of virtue. But the proper end of faith is the joining of the human mind to divine truth, and this can happen even without exterior confessing. Therefore, confessing the Faith is not necessary for salvation.

**Objection 2:** By an exterior confession a man makes his faith known to another man. But this is necessary only for those who have to instruct others in the Faith. Therefore, it seems that ordinary people (*minores*) are not obliged to confess their faith.

**Objection 3:** What can tend to scandalize and trouble others is not necessary for salvation; for in 1 Corinthians 10:32 the Apostle says, “Be without offense to the Jews and to the gentiles and to the Church of God.” But non-believers are sometimes disquieted (*ad perturbationem provocantur*) by a confession of the Faith. Therefore, confessing the Faith is not necessary for salvation.

**But contrary to this:** In Romans 10:10 the Apostle says, “With the heart one believes unto justification, whereas with the mouth one confesses unto salvation.”

**I respond:** What is necessary for salvation falls under the precepts of divine law. But since confessing the Faith is something affirmative, it can fall only under an affirmative precept. Hence, confessing the Faith belongs to what is necessary for salvation in the sense in which what is necessary for salvation can fall under an affirmative precept.

Now as was explained above (*ST* 1-2, q. 100, a. 10, *ad* 2), affirmative precepts do not obligate for all times, even if they always obligate; instead, they obligate for *this* time and *this* place and in accord with the other appropriate circumstances according to which a human act has to be regulated (*limitari*) in order for it to be an act of virtue. So, then, to confess the Faith is not always or in every place necessary for salvation; instead, it is necessary for *some* time and place, viz., when the honor due to God, or even the advantage owed to one’s neighbors, would be undercut by the omission of such a confession—as, for instance, if someone, when questioned about the Faith, were to remain silent and if, because of this, others came to believe that he did not hold the Faith or that the Faith was not true, or if, because of his silence, others were turned away from the Faith. For in cases like this, confessing the Faith is necessary for salvation.

**Reply to objection 1:** The end of faith, as of the other virtues, has to be related to the end of charity, which is the love of God and neighbor. And so when God’s honor or our neighbor’s advantage demands this, a man must not be content with being joined to divine truth through his faith, but must confess the Faith outwardly.

**Reply to objection 2:** In a case of necessity, where the Faith is under attack (*periclitatur*), everyone is obliged to make his faith known to others, either in order to instruct or confirm other believers or in order to turn back the attacks of non-believers.

However, at other times it does not pertain to all believers to instruct men concerning the Faith.

**Reply to objection 3:** If the disquiet of the non-believers arose from an open confession of the Faith without any advantage to the Faith or to believers, then it would not be praiseworthy in such a case to confess the Faith publicly; hence, in Matthew 7:6 our Lord says, “Do not give what is holy to dogs, neither cast your pearls before swine ... lest turning upon you, they tear you to pieces.”

On the other hand, if some advantage to the Faith is hoped for or at hand, then, scorning the disquiet of non-believers, a man should publicly confess the Faith. Hence, Matthew 15:12 says, that when the disciples had told our Lord that the Pharisees, having heard His words, were scandalized, our Lord replied, “Leave them [i.e., the disquieted] alone; they are blind and leaders of the blind.”

## QUESTION 4

### The Virtue Itself of Faith

Next we have to consider the virtue itself of faith: first, faith itself (question 4); second, those who have faith (question 5); third, the cause of faith (question 6); and, fourth, the effects of faith (question 7).

On the first topic there are eight questions: (1) What is faith? (2) In which power of the soul does faith exist as in a subject? (3) Is charity the form of faith? (4) Is informed faith numerically the same as unformed faith? (5) Is faith a virtue? (6) Is faith a single virtue? (7) What is faith's ordering with respect to the other virtues? (8) How does the certitude of faith compare with the certitude of the intellectual virtues?

### Article 1

#### What is faith?

It seems that the definition the Apostle posits in Hebrews 11:1 is inappropriate (*incompetens*), viz., "Faith is the substance of things to be hoped for, the evidence of things that are not apparent" (*Est autem fides substantia sperandarum rerum, argumentum non apparentium*):

**Objection 1:** No quality is a substance. But faith is a quality, since, as was explained above (*ST* 1-2, q. 62, a. 3), it is a theological virtue. Therefore, faith is not a substance.

**Objection 2:** Diverse virtues have diverse objects. But a thing to be hoped for is an object of hope. Therefore, *thing to be hoped for* should not be posited in the definition of faith as an object of faith.

**Objection 3:** Faith is perfected by charity rather than by hope, since, as will be explained below (a. 3), charity is the form of faith. Therefore, *thing to be loved* (*res diligenda*) should have been posited in the definition of faith rather than *thing to be hoped for*.

**Objection 4:** The same thing should not be posited in diverse genera. But *substance* and *evidence* are diverse genera that are not posited as subalterns. Therefore, it is inappropriate for faith to be called both a substance and evidence.

**Objection 5:** Through evidence (*per argumentum*) the truth of what the evidence is adduced for is made manifest. But a thing is said to be apparent when its truth is made manifest. Therefore, the phrase *evidence of things that are not apparent* seems to imply an opposition. Therefore, faith is not being appropriately described.

**But contrary to this:** The Apostle's authority is sufficient.

**I respond:** Even though some claim that the words cited above from the Apostle are not a definition of faith, still, if one considers the matter rightly, all the things on the basis of which faith can be defined are touched upon in the cited description, despite the fact that the words are not arranged in the form of a definition—just as, among the philosophers, the principles of syllogisms are touched upon even when the syllogistic form is omitted.

To see this clearly, notice that since habits are known through their acts, and since the acts are known through their objects, it follows that since faith is a habit, it should be defined by reference to its proper act in relation to the act's proper object. Now the act of faith is to have faith or to believe (*credere*), and this act, as was explained above (q. 2, aa. 1, 2, and 9), is an act of the intellect insofar as the intellect is determined to one [part of a contradiction] by the will's command (*actus est intellectus determinati ad unum ex imperio voluntatis*). So, then, the act of faith has an ordering both to *the will's object*, which is the good and the end, and also to *the intellect's object*, which is the true. And since faith—given that, as was explained above (*ST* 1-2, q. 62, a. 2), it is a theological virtue—has the same thing for its object and end, it is necessary that faith's object and its end should correspond to it proportionately (*proportionaliter sibi correspondeant*).

Now it was explained above (q. 1, aa. 1 and 4) that the First Truth is the object of faith insofar as the First Truth itself and the things which are adhered to because of it are not seen. Accordingly, the First Truth must itself be related to the act of faith in the manner of an end, under the character of something that is not seen. But this belongs to the nature of a thing to be hoped for—this according to the Apostle in Romans 8:25 (“We hope for what we do not see”). For to see a truth is to possess it, whereas one does not hope for what he already possesses; instead, as was explained above (ST 1-2, q. 67, a. 4), hope is concerned with what is not possessed. So, then, the relation of the act of faith to its end, i.e., *the will’s object*, is signified by saying, “Faith is the substance of things to be hoped for.” For ‘substance’ is normally used for the first beginnings of a thing (*prima inchoatio cuiuscumque rei*), and especially when the entire thing that follows is virtually contained in that first beginning (*in primo principio*). For instance, we might say that the first indemonstrable principles are the ‘substance’ of scientific knowledge, because principles of this sort are the first thing in us that has to do with a science, and the whole of the science is virtually contained in them (*et in eis virtute continetur tota scientia*). This, then, is the sense in which it is said that *faith is the substance of things to be hoped for*, viz., that the first beginnings within us of the things to be hoped for is the assent of faith, which virtually contains all the things to be hoped for. For we hope to be beatified by seeing with a clear vision the truth which we now adhere to by faith; this is clear from what was said above (ST 1-2, qq. 3 and 4) about happiness (*de felicitate*).

On the other hand, the relation of the act of faith to *the intellect’s object*, insofar as it is the object of faith, is designated by the phrase “the evidence of things that are not apparent” (*argumentum non apparentium*). For ‘evidence’ (*argumentum*) is being used here for the *effect* of evidence, since through evidence the intellect is induced to adhere to something true. Hence, an alternative text has ‘conviction’ (*convictio*), since it is by God’s authority that the believer’s intellect is convinced to assent to what he does not see.

Therefore, if one wanted to reduce these words to the form of a definition, he could say, “Faith is a habit of the mind by which eternal life has its beginnings in us and which makes the intellect assent to things that are not apparent.”

In this way faith is distinguished from all the other acts that belong to the intellect:

(a) Through the word ‘evidence’, faith is distinguished from the act of having an opinion (*ab opinione*), from the act of suspecting (*a suspicione*), and from the act of hesitating (*a dubitatione*), since these acts do not involve a primary and firm adherence of the intellect to anything.

(b) Through ‘non-apparent’ faith is distinguished from the act of knowing scientifically (*a scientia*) and from the act of understanding [first principles] (*ab intellectu*), since by these acts something becomes apparent.

(c) Through ‘the substance of things to be hoped for’ the virtue of faith is distinguished from faith in the ordinary sense, which is not ordered toward the beatitude that is hoped for.

All the other definitions of faith that are given, whatever they may be, are explications of this definition that the Apostle posits. For instance, what Augustine says, viz., that faith is “the virtue by which things that are not seen are believed in,” and what Damascene says, viz., that faith is “consent without inquiry”, and what others say, viz., that faith is “the mind’s certitude regarding absent things, higher than opinion and lower than scientific knowledge,” amount to the same thing as the Apostle’s saying “the evidence of things that are not apparent.” On the other hand, what Dionysius says in *De Divinis Nominibus*, chap. 7, viz., that faith is “the foundation of believers, placing them in the truth and placing the truth in them,” amounts to the same thing as “the substance of things to be hoped for.”

**Reply to objection 1:** ‘Substance’ is being understood here not in the sense in which *substance* is the most general genus divided off from the other genera, but in the sense in which some likeness of substance is found in every genus, viz., insofar as the first thing in every genus, which virtually contains the other things within itself, is called the ‘substance’ of those things.

**Reply to objection 2:** Since faith belongs to the intellect insofar as the intellect is moved by the will, it has to be ordered, as to an end, toward the objects of those virtues by which the will is perfected. Among those virtues is hope, as will be explained below (q. 18, a. 1). And this is why the object of hope is posited in the definition of faith.

**Reply to objection 3:** Elective love (*dilectio*) can be had both with respect to what is seen and with respect to what is not seen, both with respect to what is present and with respect to what is absent. And for this reason ‘things to be loved’ is not as properly adapted to faith as ‘things to be hoped for’. For hope is always had with respect to what is absent and not seen.

**Reply to objection 4:** Insofar as they are posited in the definition of faith, ‘substance’ and ‘evidence’ do not imply diverse genera of faith or diverse acts. Instead, as has been explained, they imply diverse relations of a single act with respect to diverse objects.

**Reply to objection 5:** Evidence that is taken from the proper principles of a thing makes that thing apparent. But evidence that is taken from God’s authority does not make a thing apparent in itself. And it is this latter sort of evidence that is posited in the definition of faith.

## Article 2

### Does faith exist in the intellect as in a subject?

It seems that faith does not exist in the intellect as in a subject:

**Objection 1:** In *De Praedestinatione Sanctorum* Augustine says, “Faith exists in the will of believers.” But the will is a power distinct from the intellect. Therefore, faith does not exist in the intellect as in a subject.

**Objection 2:** The assent of faith in believing something by faith stems from a will that is obeying God. Therefore, all the praise due to faith seems to stem from obedience. But obedience exists in the will. Therefore, so does faith. Therefore, faith does not exist in the intellect.

**Objection 3:** The intellect is either the speculative intellect or the practical intellect. But faith does not exist in the speculative intellect, which is such that since, as *De Anima* 3 says, it “has nothing to say about what can be imitated and what is to be avoided,” it is not a principle of operation, whereas faith is something that “operates through love,” as Galatians 5:6 puts it. Again, neither does faith exist in the practical intellect, whose object is the true insofar as it can be made or done (*verum contingens factibile vel agibile*). For as was explained above (q. 1, a. 1), the object of faith is the eternal truth. Therefore, faith does not exist in the intellect as in a subject.

**But contrary to this:** Faith is succeeded by the act of seeing in heaven (*visio patriae*)—this according to 1 Corinthians 13:12 (“We see now through a glass darkly, but then face to face”). But the act of seeing exists in the intellect. Therefore, so does faith.

**I respond:** Since faith is a virtue, its act has to be perfect. But what is required for the perfection of an act that proceeds from two active principles is that each of the two active principles be perfected; for instance, sawing cannot be done well unless both (a) the one who is doing the sawing has the relevant art or craft (*secans habeat artem*) and also (b) the saw is well-disposed for cutting (*serra sit bene disposita ad secandum*).

Now as was explained above (*ST* 1-2, q. 49, a. 4), a disposition for acting well that exists in those powers of the soul which are related to opposites is a *habit*. And so an act that proceeds from two such powers must be perfected by habits that pre-exist in each of the two powers. But it was explained above (q. 2, aa. 1 and 2) that the act of having faith (*credere*) is an act of the intellect insofar as the intellect is moved by the will to assent, since an act of this sort proceeds both from the will and from the intellect. According to what was explained above (*ST* 1-2, q. 50, aa. 4 and 5), both of these powers are apt to be

perfected by habits. And so there has to be both a habit in the will and also a habit in the intellect if the act of faith is to be perfect—just as, in order for an act of the concupiscible part of the soul to be perfect, there has to be a habit of prudence in reason and a habit of temperance in the concupiscible part.

Now the act of having faith is directly an act of the intellect, since this act's object is the true, which properly pertains to the intellect. And so faith, which is the proper principle of this act, has to exist in the intellect as in a subject.

**Reply to objection 1:** Augustine is here taking 'faith' for the *act* of faith, which is said to exist in the will of believers insofar as it is because of the will's command that the intellect assents to the things that are to be taken on faith.

**Reply to objection 2:** Not only is it the case that the will has to be prompt in obeying, but also that the intellect has to be well-disposed toward following the will's command—just as the concupiscible part has to be well-disposed toward following reason's command. And so there has to be a habit of virtue not only in the will that commands, but also in the intellect that assents.

**Reply to objection 3:** As is manifestly clear from the object of faith, faith exists in the speculative intellect as in a subject. But because the First Truth, which is the object of faith, is, as is clear from Augustine in *De Trinitate* 1, the end of all our desires and actions, it follows that faith operates through love—in just the way that, as *De Anima* 3 points out, the speculative intellect is likewise practical by extension.

### Article 3

#### Is charity the form of faith?

It seems that charity is not the form of faith (*caritas non sit forma fidei*):

**Objection 1:** Each thing receives its species through its form. Therefore, as regards things that are divided by opposites as diverse species of a single genus, it is not the case that one of them can be the form of the other. But according to 1 Corinthians 13:13, faith and charity are divided by opposites as diverse species of virtue. Therefore, charity cannot be the form of faith.

**Objection 2:** The form and that of which it is the form exist in the same thing, since something that is one absolutely speaking comes to be from them. But faith exists in the intellect, whereas charity exists in the will. Therefore, charity is not the form of faith.

**Objection 3:** A form is a principle of a thing. But, on the part of the will, the principle of the act of having faith seems to be obedience rather than charity—this according to Romans 1:5 (“... to obey the Faith in all nations”). Therefore, it is obedience rather than charity that is the form of faith.

**But contrary to this:** Each thing operates through its form. But faith operates through love (*per dilectionem*). Therefore, the love that belongs to charity (*dilectio caritatis*) is the form of faith.

**I respond:** As is clear from what was said above (*ST* 1-2, q. 1, a. 3 and q. 18, a. 6), voluntary acts take their species from their end, which is the object of the will. But that from which a thing receives its species stands to it as matter stands to form among natural things. And so the form of any sort of voluntary act is in some sense the end toward which it is ordered, both because the act receives its species from its end and also because an action's mode (*modus actionis*) must correspond proportionately to its end.

Now it is clear from what has been said (a. 1) that the act of faith is ordered toward the will's object, i.e., toward the good, as toward an end. But this good which is faith's end, viz., the divine good, is the proper object of charity. And so charity is called the 'form' of faith insofar as the act of faith is perfected and informed by charity.

**Reply to objection 1:** Charity is called the form of faith insofar as it informs the act of faith. But

nothing prevents a single act from being informed by diverse habits and, accordingly, from being reduced in a certain order to diverse species. This was explained above (*ST* 1-2, q. 18, aa. 6-7 and q. 61, a. 2) when we were talking about human acts in general.

**Reply to objection 2:** This objection is talking about intrinsic form. However, charity is the form of faith not in this sense, but, as has been explained, in the sense that it informs the act of faith.

**Reply to objection 3:** As will become clear below (q. 23, a. 8), obedience, along with hope and any other virtue that could precede an act of faith, is likewise formed by charity. And so it is charity itself that is posited as the form of faith.

#### Article 4

##### Does unformed faith become informed faith, and vice versa?

It seems not to be the case that unformed faith becomes informed faith, or vice versa (*fides informis non fiat formata, nec e converso*):

**Objection 1:** As 1 Corinthians 13:10 says, “When what is perfect has come, what is partial will be done away with.” But unformed faith is imperfect in relation to informed faith. Therefore, when informed faith arrives, unformed faith is excluded, so that they are not numerically the same habit (*ut non sit unus habitus numero*).

**Objection 2:** What is dead does not come to life. But unformed faith is dead—this according to James 2:20 (“Faith without works is dead”). Therefore, unformed faith cannot come to be informed faith.

**Objection 3:** When God’s grace arrives, it does not have less of an effect in a believing man than in a non-believer. But when grace comes to a non-believing man, it causes the habit of faith in him. Therefore, likewise, when grace comes to a believing man who previously had the habit of unformed faith, it causes in him another habit of faith.

**Objection 4:** As Boethius says, “Accidents cannot themselves be altered.” But faith is a certain accident. Therefore, it cannot be the case that the same faith is at one time informed and at another time unformed.

**But contrary to this:** A Gloss on James 2:20 (“Faith without works is dead”) says, “That is, the works by which it comes back to life.” Therefore, faith that was previously dead comes to be informed and alive.

**I respond:** There have been different opinions about this matter:

For some have claimed that the habit of informed faith is different from the habit of unformed faith (*alius est habitus fidei formatae et informis*), and that when informed faith arrives, unformed faith is removed. Similarly, when a man sins mortally after having had informed faith, the informed faith is succeeded by a different habit of unformed faith that is infused by God.

But it seems absurd that the grace coming to a man should exclude some gift of God, or, again, that some gift of God should be infused in a man *because of* mortal sin.

And so others have claimed that the habits of informed faith and unformed faith are diverse from one another, but that, nonetheless, when informed faith arrives, the habit of unformed faith is not removed; instead, it remains together in the same individual with the habit of informed faith.

But it seems likewise absurd that the habit of unformed faith should remain unemployed in someone who has informed faith.

Therefore, we should reply in an alternative way that the habit of informed faith is the same as the habit of unformed faith. The reason for this is that a habit is diversified by what belongs to the habit *per se*. Now since faith is a perfection of the intellect, what belongs *per se* to faith is what belongs to the

intellect, whereas what belongs to the will does not belong *per se* to faith in the sense that the habit could be diversified by it. But the distinction between informed faith and unformed faith has to do with what belongs to the will, i.e., with charity, and not with what belongs to the intellect. Hence, informed faith and unformed faith are not diverse habits.

**Reply to objection 1:** What the Apostle says should be understood to apply when the imperfection belongs to the nature of the imperfect thing (*quando imperfectio est de ratione imperfecti*). For then it must be the case that when what is perfect arrives, what is imperfect is excluded. For instance, when clear vision arrives, then faith is excluded, since it is of the nature of faith that it is of things that are not apparent.

On the other hand, when the imperfection does not belong to the nature of the imperfect thing, then numerically the same thing that was imperfect becomes perfect; for instance, childhood does not belong to the nature of a man, and so numerically the same entity that was a boy becomes a man. Now as has been explained, faith's being unformed does not belong to the nature of faith but is related to it *per accidens*. Hence, it is the unformed faith itself that comes to be informed.

**Reply to objection 2:** What makes an animal alive (*id quod facit vitam animalis*) belongs to the animal's nature, since it is the animal's essential form, viz., its soul. And so a dead thing cannot come to life; instead, what is dead differs in species from what is alive. By contrast, what makes for faith's being informed or alive does not belong to the essence of faith. And so the arguments are not parallel.

**Reply to objection 3:** Grace effects faith not only when faith begins to exist *de novo* in a man, but also for as long as the faith endures. For it was explained above (*ST* 1-2, q. 104, a. 1 and q. 109, a. 9) that God is always effecting a man's justification, just as the sun is always effecting the illumination of the atmosphere. Hence, grace does no less in coming to a believer than it does in coming to a non-believer, since in both cases grace effects faith, in the one by strengthening and perfecting faith and in the other by creating faith *de novo*.

An alternative reply is that the fact that grace does not cause faith in someone who already has faith is incidental, viz., due to the subject's disposition. In the same way, conversely, a second mortal sin does not remove grace from someone who has already lost it through a previous mortal sin.

**Reply to objection 4:** It is not faith itself that is changed when unformed faith becomes informed faith; instead, what changes is the subject of faith, i.e., the soul, which at one time has faith without charity and at another time has faith along with charity.

## Article 5

### Is faith a virtue?

It seems that faith is not a virtue:

**Objection 1:** A virtue is ordered toward the good, since as the Philosopher says in *Ethics* 2, "A virtue makes the one who has it good." But faith is ordered toward the true. Therefore, faith is not a virtue.

**Objection 2:** An infused virtue is more perfect than an acquired virtue. But as is clear from the Philosopher in *Ethics* 6, faith, because of its imperfection, is not posited among the acquired intellectual virtues. Therefore, *a fortiori* it cannot be posited as an infused virtue.

**Objection 3:** As has been explained (a. 4), informed faith and unformed faith belong to the same species. But unformed faith is not a virtue, since it does not have connectedness with the other virtues. Therefore, informed faith is not a virtue, either.

**Objection 4:** Gratuitous graces (*gratia gratis data*) and the fruits [of the Holy Spirit] are distinct from the virtues. But faith (*fides*) is numbered among the gratuitous graces in 1 Corinthians 12:9 and it is

numbered among the fruits in Galatians 5:23. Therefore, faith is not a virtue.

**But contrary to this:** It is through virtues that a man is justified, since, as *Ethics 5* says, “Justice is the totality of virtue” (*iustitia est tota virtus*). But it is through faith that a man is justified—this according to Romans 5:1 (“Therefore, having been justified by faith, let us have peace, etc.”). Therefore, faith is a virtue.

**I respond:** As is clear from what was said above (*ST* 1-2, q. 56, a. 3), a human virtue is [a habit] through which a human act is rendered good. Hence, if any habit is always a principle of a good act, then it can be called a human virtue. But informed faith is this sort of habit.

Now since to have faith is an act of the intellect, which assents, and yet at the command of the will, two things are required in order for this act to be perfect. The one is that the intellect tend infallibly toward its own good, which is the true, whereas the other is that it be ordered infallibly toward the ultimate end for the sake of which the will assents to the true (*propter quem voluntas assentit vero*).

Now both of these things are found in the act of informed faith. For it is by the nature of faith itself that the intellect is always borne toward the true, since, as was established above (q. 1, a. 3), what is false cannot fall under faith, whereas it is by charity, which informs faith, that the soul is such that its will is infallibly ordered toward a good end. And so informed faith is a virtue.

By contrast, unformed faith is not a virtue, since even if it has the due perfection of the act of unformed faith on the part of the intellect (*etsi habeat perfectionem debitam actus fidei informis ex parte intellectus*), it nonetheless does not have the due perfection on the part of the will. Likewise, in the same way, if temperance existed in the concupiscible part of the soul and prudence did not exist in the rational part, then, as was explained above (*ST* 1-2, q. 65, a. 1), the temperance would not be a virtue. For an act of temperance requires both an act of reason and an act of the concupiscible part, just as an act of faith requires both an act of the will and an act of the intellect.

**Reply to objection 1:** The true itself is the good of the intellect, because it is the intellect’s perfection. And so insofar as the intellect is determined to the true by faith, faith has an ordering toward a certain good. But, further, insofar as faith is informed by charity, it also has an ordering to the good insofar as the good is an object of the will.

**Reply to objection 2:** The faith of which the Philosopher is speaking relies on human reasoning that does not reach its conclusion by necessity, and the false can fall under this sort of reasoning. And so this sort of faith is not a virtue.

By contrast, the sort of faith that we are talking about relies on divine truth, which is infallible, and so what is false cannot fall under it. And so this sort of faith can be a virtue.

**Reply to objection 3:** Informed faith and unformed faith do not differ in species in the sense that they exist in diverse species, but they do differ as the perfect and the imperfect within the same species. Hence, since unformed faith is imperfect, it does not attain to the complete character of virtue, since, as *Physics 7* says, “Virtue is a certain perfection.”

**Reply to objection 4:** Some claim that the ‘faith’ (*fides*) which is counted among the gratuitous graces is unformed faith.

But it is wrong to say this, since the gratuitous graces that are enumerated in the place in question are not common to all the members of the Church. Hence, in that place the Apostle says, “There is a diversity of graces,” and, again, “To one this grace is given, and to another that grace is given.” By contrast, unformed faith is common to all members of the Church, since being unformed does not belong to the substance insofar as it is a gratuitous gift.

Hence, one should reply that ‘faith’ is being taken in this place for a certain excellence of faith in the sense of a constancy of faith, as a Gloss says, or in the sense of discourse about the faith.

On the other hand, faith is posited as a fruit insofar as there is a certain delight in its act by reason of its certitude. Hence, in a Gloss on Galatians 5, where the fruits are enumerated, faith is explained as “certitude concerning invisible things.”

## Article 6

### Is faith a single thing?

It seems that faith is not a single thing (*non sit una fides*):

**Objection 1:** Just as faith is a gift of God, as Ephesians 2:8 says, so too, as is clear from Isaiah 11:2, wisdom and knowledge are counted among the gifts of God. But as is clear from Augustine in *De Trinitate* 12, wisdom and knowledge differ in that wisdom is of eternal things, whereas knowledge is of temporal things. Therefore, since faith concerns both eternal things and certain temporal things, it seems that faith is not a single thing, but is instead divided into parts.

**Objection 2:** As was explained above (q. 3, a. 1), confessing the Faith is an act of faith. But it is not the case that there is one and the same confession of Faith for everyone. For what we ourselves confess as having been accomplished the ancient fathers confessed as future—this is clear from Isaiah 7:14 (“Behold, a virgin shall conceive”). Therefore, faith is not a single thing.

**Objection 3:** Faith is common to all of Christ’s faithful. But a single accident cannot exist in diverse substances. Therefore, there cannot be a single faith that belongs to all the faithful.

**But contrary to this:** In Ephesians 4:5 the Apostle says, “One Lord, one faith.”

**I respond:** If faith is taken as a habit, then it can be thought of in two ways:

In one way, *on the part of its object*, and in this sense faith is a single thing, since the formal object of faith is the First Truth, by adhering to which we take on faith whatever is contained under the Faith.

In a second way, *on the part of its subject*, and in this sense faith is diversified insofar as it belongs to diverse individuals.

Now it is clear that faith, like any other habit, has its species from the formal character of its object, whereas it is individuated because of its subject. And so if faith is taken as a habit by which we have faith, then faith is one in species and differs numerically in diverse individuals.

On the other hand, if faith is taken for what is held on faith, then there is likewise a single Faith. For what is believed by everyone is the same thing, and even if there are diverse things to be believed which everyone believes in common, all of them are nonetheless traced back to one thing.

**Reply to objection 1:** As was explained above (q. 1, a. 1), the temporal things which are proposed by the Faith belong to the object of faith only in their relation to something eternal, which is the First Truth. And so there is a single faith with respect to temporal and eternal things.

The situation is otherwise with respect to [the gifts of] wisdom and knowledge, which consider temporal and eternal things in accord with their proper characters.

**Reply to objection 2:** As was also established above (*ST* 1-2, q. 103, a. 4), the differences *past* and *future* arise not because of the diversity of the thing believed, but because of the diverse relation of the believers to the single thing believed.

**Reply to objection 3:** This argument goes through with respect to the numerical diversity of faith.

## Article 7

### Is faith the first among the virtues?

It seems that faith is not the first among the virtues:

**Objection 1:** A Gloss on Luke 12:4 (“I say to you, my friends ...”) says, “Fortitude is the foundation of faith.” But a foundation is prior to what it is the foundation of. Therefore, faith is not the first virtue.

**Objection 2:** A certain Gloss on Psalm 36:1 (“Do not emulate ...”) says, “Hope leads to faith.”

But as will be explained below (q. 17, a. 1), hope is a virtue. Therefore, faith is not the first among the virtues.

**Objection 3:** It was explained above (a. 2 and q. 2, a. 9) that the believer's intellect is inclined by obedience to God toward assenting to what belongs to the Faith. But obedience is likewise a virtue. Therefore, faith is not the first virtue.

**Objection 4:** It is not *unformed* faith, but *informed* faith, that is the foundation, as a Gloss on 1 Corinthians 3:11 points out. But as was explained above (a. 3), faith is informed by charity. Therefore, faith has from charity the fact that it is a foundation. Therefore, charity is more of a foundation than faith is, since the foundation is the first part of the building. And so it seems that charity is prior to faith.

**Objection 5:** The ordering of habits is understood from the ordering of their acts. But in the case of the act of faith, the act of will, which charity perfects, precedes the act of the intellect, which faith perfects, in the manner of a cause that precedes its effect. Therefore, charity precedes faith. Therefore, it is not the case that faith is the first among the virtues.

**But contrary to this:** In Hebrews 11:1 the Apostle says, "Faith is the substance of things to be hoped for." But a substance has the character of being first. Therefore, faith is the first among the virtues.

**I respond:** There are two possible ways in which one thing can be prior to another: (a) *per se* and (b) *per accidens*.

Faith is *per se* the first among all the virtues. For since, as was explained above (*ST* 1-2, q. 13, a. 5 and q. 57, a. 4), the end is the principle in the case of things to be done, the theological virtues, whose object is the ultimate end, have to be prior to the other virtues. But the ultimate end has to exist in the intellect before existing in the will, because the will is not drawn to anything except insofar as that thing is apprehended in the intellect. Hence, since the ultimate end exists in the will through hope and charity, whereas it exists in the intellect through faith, faith must be first among all the virtues. For natural cognition cannot attain to God insofar as He is the object of beatitude, and it is in this latter sense that hope and charity tend toward Him.

However, other virtues can be prior to faith *per accidens*, since a *per accidens* cause is *per accidens* prior. Now as is clear from the Philosopher in *Physics* 8, it belongs to a *per accidens* cause to remove an obstacle. Accordingly, certain virtues can be called prior to faith *per accidens* insofar as they remove impediments to the act of faith (*inquantum remouent impedimenta credendi*). For instance, fortitude removes the sort of disordered fear that impedes the act of faith, whereas humility removes pride, through which the intellect refuses to submit itself to the truth of the Faith. And the same thing can be said for certain other virtues—even though, as Augustine makes clear in *Contra Iulianum*, they are not genuine virtues (*non sint verae virtutes*) unless faith is presupposed.

**Reply to objection 1:** The reply to the first objection is clear from what was just said.

**Reply to objection 2:** Hope cannot in all cases lead to faith. For instance, hope cannot be had with respect to eternal beatitude unless eternal beatitude is believed to be possible, since, as is clear from what was said above (*ST* 1-2, q. 40, a. 1), what is impossible does not fall under hope.

Still, someone can be led by hope to persevere in faith or to firmly adhere to faith. And it is in this sense that hope is said to lead to faith.

**Reply to objection 3:** 'Obedience' is said in two ways:

Sometimes obedience implies an inclination of the will to fulfill divine commandments (*ad implemendum divina mandata*). And in this sense it is not a special virtue, but is instead included generally in every virtue, since, as was explained above (*ST* 1-2, q. 100, a. 2), all acts of the virtues fall under the precepts of divine law. And this is the sense in which obedience is required for faith.

In the second way, obedience can be taken insofar as it implies a certain inclination to fulfill commandments insofar as they have the character of something owed [to a superior] (*secundum quod habent rationem debiti*). And in this sense obedience is a special virtue and is a part of justice, since it

renders to a superior what is owed to him by obeying him. And in this sense obedience *follows upon* faith, through which it is made clear to a man that God is his superior and that he ought to obey Him.

**Reply to objection 4:** For the character of a foundation it is required not only that it be first but also that it be connected to the other parts of the building, since it would not be the foundation if the other parts of the building did not cohere with it. Now the connectedness of the spiritual building stems from charity—this according to Colossians 3:14 (“Above all things have charity, which is the bond of perfection”). And so faith without charity cannot be the foundation, and yet it does not have to be the case that charity is prior to faith.

**Reply to objection 5:** An act of the will is required for faith, but not an act of the will informed by charity. Rather, the latter sort of act *presupposes* faith, since the will cannot tend with perfect love toward God unless the intellect has the correct faith with respect to Him.

## Article 8

### Does faith have more certitude than scientific knowledge and the other intellectual virtues?

It seems that faith does not have more certitude than scientific knowledge and the other intellectual virtues (*fides non sit certior scientia et aliis virtutibus intellectualibus*):

**Objection 1:** Doubt or hesitation (*dubitatio*) is opposed to certitude, and what involves less hesitation seems to be more certain, just as what has less black mixed in is more white. But understanding [of first principles] (*intellectus*), scientific knowledge (*scientia*), and wisdom (*sapientia*) have no hesitation about the things they are concerned with, whereas someone who has an act of faith can sometimes undergo movements of hesitation and have doubts about what belongs to the Faith. Therefore, faith is not more certain than the intellectual virtues.

**Objection 2:** Seeing is more certain than hearing (*visio est certior auditu*). But “faith comes from hearing,” as Romans 10:17 says, whereas a sort of intellectual vision is involved in understanding, scientific knowledge, and wisdom. Therefore, understanding or scientific knowledge is more certain than faith.

**Objection 3:** The more perfect something is in what pertains to understanding, the more certain it is. But understanding is more perfect than faith, since it is through faith that one arrives at understanding—this according to the alternative reading of Isaiah 7:9 (“Unless you have faith, you will not understand”). And, likewise, in *De Trinitate* 14 Augustine says, “Faith is strengthened by scientific knowledge.” Therefore, it seems that understanding or scientific knowledge is more certain than faith.

**But contrary to this:** In 1 Thessalonians 2:13 the Apostle says, “When you had received of us the word of hearing”—that is, through faith—“you received it not as the word of men, but as—and so it truly is—the word of God.” But nothing is more certain than the word of God. Therefore, neither scientific knowledge nor anything else is more certain than faith.

**I respond:** As was explained above (*ST* 1-2, q. 57 aa. 4-5), two of the intellectual virtues, viz., prudence and art (or craft), have to do with contingent things. Faith surpasses them in certitude (*quibus praefertur fides in certitudine*) by reason of its subject matter, since it has to do with eternal things, which cannot be otherwise.

Now as was explained above (*ST* 1-2, q. 57, a. 5), the three remaining intellectual virtues, viz., wisdom (*sapientia*), scientific knowledge (*scientia*), and understanding [of first principles] (*intellectus*), have to do with what is necessary. But notice that ‘wisdom’, ‘knowledge’ (*scientia*), and ‘understanding’ are said in two senses: in one sense, insofar as they are posited as intellectual virtues by the Philosopher in *Ethics* 6, and in a second sense, insofar as they are posited as gifts of Holy Spirit (cf. *ST* 1-2, q. 68).

Thus, in the first sense, one should reply that there are two possible ways to think of certitude:

(a) In one way, *on the basis of its cause*, and in this sense what is said to be more certain is what has a more certain cause. On this score faith has more certitude than the three intellectual virtues in question, since faith relies on divine truth, whereas these three virtues rely on human reason.

(b) In the second way, certitude can be thought of *on the part of its subject*, and in this sense what is said to be more certain is what a man's intellect arrives at more fully. Accordingly, since what belongs to faith, but not what falls under the three virtues in question, lies beyond man's intellect, faith is on this score less certain.

However, since each thing is judged absolutely speaking (*simpliciter*) in accord with its cause, whereas it is judged relatively speaking (*secundum quid*) in accord with the subject's condition (*secundum dispositionem quae est ex parte subiecti*), it follows that faith is more certain absolutely speaking, whereas the others are more certain relatively speaking, viz., in our eyes (*quoad nos*).

Similarly, if wisdom, understanding, and knowledge are understood as gifts of the Holy Spirit that belong to our present life, then they are related to faith as to a principle that they presuppose. Hence, on this score faith is likewise more certain than they are.

**Reply to objection 1:** The hesitation is not on the part of the cause of faith, but rather in our eyes, insofar as we have not through our intellect fully attained to what belongs to the Faith.

**Reply to objection 2:** All other things being equal, seeing is more certain than hearing. But if the one from whom one hears far exceeds what is seen by the seer, then in such a case hearing is more certain than seeing. In the same way, someone with little scientific knowledge is more certain of what he hears from an expert in the science (*a scientissimo*) than of what he sees with his own power of reasoning. And, *a fortiori*, a man is more certain of what he hears from God, who cannot be mistaken, than of what he sees with his own reasoning power, which can be mistaken.

**Reply to objection 3:** The perfection of understanding and of scientific knowledge exceeds the cognition of faith with respect to greater evidentness (*quantum ad maiorem manifestationem*), but not with respect to more certain adherence.

For the whole certitude of understanding and knowledge, insofar as they are gifts [of the Holy Spirit], proceeds from the certitude of faith, in the same way that the certitude of a cognition of the conclusions proceeds from the certitude of the principles.

On the other hand, insofar as scientific knowledge, wisdom, and understanding are intellectual virtues, they rely on the natural light of reason, which falls short of the certitude of God's word, which faith relies on.

## QUESTION 5

### Those Who Have Faith

Next we have to consider those who have faith. And on this topic there are four questions: (1) Did an angel or a man have faith in his original condition? (2) Do the demons have faith? (3) Do heretics who are in error regarding one article of the Faith have faith with respect to the other articles? (4) Among those who have faith, does one have greater faith than another?

#### Article 1

##### In his original condition, did an angel or a man have faith?

It seems that in his original condition an angel or a man did not have faith (*in sua prima conditione fidem non habuerit*):

**Objection 1:** Hugo of St. Victor says, “Since man does not have an eye for contemplation (*oculum contemplationis non habet*), he is unable to see God and the things that exist in God.” But an angel in the state of his original condition, before either his confirmation or his fall, had “an eye for contemplation,” since, as Augustine says in *Super Genesim ad Litteram* 2, he saw things in the Word. And, similarly, in the state of innocence the first man seems to have had an eye open to contemplation (*oculum contemplationis apertum*). For in his *Sentences* Hugo of St. Victor says that in his original state “the man knew his creator not by a cognition that was outwardly perceived through hearing alone, but rather by a cognition that was ministered inwardly through inspiration, not by a cognition of the sort by which God is now sought by believers through faith as One who is absent, but a cognition by which He was discerned clearly through the presentness of contemplation.” Therefore, in the state of his original condition a man or an angel did not have faith.

**Objection 2:** The cognition had by faith is dark and obscure (*aenigmatica et obscura*)—this according to 1 Corinthians 13:13 (“We see now through a glass darkly”). But in the state of the original condition there was no obscurity either in a man or in an angel, since darkness (*tenebrositas*) is a punishment for sin. Therefore, in the state of the original condition faith could not have existed either in a man or in an angel.

**Objection 3:** In Romans 10:17 the Apostle says, “Faith comes from hearing.” But this had no place in the original state of either the angelic condition or the human condition, since there was no such thing as hearing something from another in that state. Therefore, in that state faith did not exist either in a man or in an angel.

**But contrary to this:** In Hebrews 11:6 the Apostle says, “One who approaches God must believe ... .” But in their original condition an angel and a man were in the state of approaching God. Therefore, they needed faith.

**I respond:** Some have claimed that faith did not exist in the angels before their confirmation and fall, or in man before sin, because of the clear contemplation that they had of divine things at that point. But since, according to the Apostle, faith is “the evidence of things that are not apparent,” and since, as Augustine puts it, “It is things that are not seen that are believed through faith,” this clarity, which renders apparent or seen the things that faith is principally about, by itself excludes the character of faith.

However, the principal object of faith is the First Truth, the vision of which beatifies [men and angels] and is the successor of faith (*cuius visio beatos facit et fidei succedit*). Therefore, since an angel before his confirmation, and a man before sin, did not have the beatitude by which God is seen through His essence, it is obvious that they did not have so clear a cognition (*non habuit sic manifestam cognitionem*) that the character of faith was excluded. Hence, unless they were totally ignorant of the things that faith is about, it could not have been the case that they did not have faith.

Again, if, as some claim, a man and an angel were created in a purely natural state (*in puris*

*naturalibus*), then one could perhaps hold that faith did not exist in an angel before his confirmation or in a man before sin, because the cognition that belongs to faith goes beyond the natural cognition of God that belongs not only to a man but even to an angel.

However, since we have already explained in the First Part (*ST* 1, q. 62, a. 3 and q. 95, a. 1) that men and angels were created with the gift of grace, one has to reply that through the grace that was received and not yet consummated [in glory] there existed in them the beginnings of the beatitude which was hoped for and which, as was explained above (q. 4, a. 7), begins in the will through hope and charity, and in the intellect through faith. And so one has to claim that before his confirmation an angel had faith, and that the same thing holds for a man before sin.

Still, notice that in the object of faith there is something *formal*, viz., the First Truth, that lies beyond all of a creature's natural cognition, and something *material*, viz., what we ourselves assent to by adhering to the First Truth. As regards the former, faith is shared in common by everyone who has cognition of God and has not yet attained the future beatitude—and this by virtue of his adhering to the First Truth. However, as regards the things that are proposed to be taken materially on faith, some things are taken on faith by one individual that are known clearly by another—even in our present state, as was explained above (q. 1, a. 5). Accordingly, one can also assert that an angel before his confirmation and a man before sin knew by a clear cognition certain divine mysteries which we are now unable to have cognition of except by taking them on faith.

**Reply to objection 1:** Even though Hugo of St. Victor's words are those of a teacher and do not have the strongest authority (*robur auctoritatis non habeant*), one can nonetheless reply that the sort of contemplation that removes the necessity for faith is the heavenly contemplation (*contemplatio patriae*) by which the supernatural Truth is seen through His essence. But this is not the sort of contemplation that an angel had before his confirmation or that a man had before sin.

Still, their contemplation was higher than ours, and, approaching God more closely through that contemplation, they were able to have clear cognition of more divine effects and mysteries than we are able to. Hence, the faith that existed in them was not a faith by which an absent God was sought in the way that an absent God is sought by us. For He was more present to them through the light of wisdom than He is to us, even though He was not present to them in the way that He is present to the blessed in heaven through the light of glory.

**Reply to objection 2:** In the state of the original condition of a man or an angel there was no obscurity of sin or punishment. Still, there was a certain natural obscurity in the human and angelic intellects, insofar as every creature is darkness in comparison with the immensity of the divine light. This sort of obscurity is sufficient for the character of faith.

**Reply to objection 3:** In the state of the original condition the hearing was not from a man who was speaking to one outwardly; instead, the hearing was of God who was inspiring one interiorly, just as the prophets heard—this according to Psalm 84:9 (“I hear what the Lord God is saying within me”).

## Article 2

### Does faith exist in the demons?

It seems that faith does not exist in the demons:

**Objection 1:** In *De Praedestinatione Sanctorum* Augustine says, “Faith exists in the will of believers.” But a will by which one wills to believe God (*credere Deo*) is a good will. Therefore, since, as was explained in the First Part (*ST* 1, q. 64, a. 2), there is no good and deliberated act of will in the demons, it seems that faith does not exist in the demons.

**Objection 2:** Faith is a gift of God's grace—this according to Ephesians 2:8 (“By grace you have

been saved through faith ... for it is a gift of God”). But the demons lost their gifts of grace through sin, as is explained in a Gloss on Hosea 3:1 (“They look to strange gods, and love the husks of the grapes”). Therefore, faith did not remain in the demons after their sin.

**Objection 3:** As is clear from Augustine’s comments on John 15:22 (“If I had not come and spoken to them, they would not have sin; but now they have no excuse for their sin”), unbelief (*infidelitas*) seems to be the gravest of sins. But the sin of unbelief exists in certain men. Therefore, if faith existed in the demons, then the sin of certain men would be more grave than the sin of the demons. But this seems absurd. Therefore, faith does not exist in the demons.

**But contrary to this:** James 2:19 says, “The demons believe, and they tremble.”

**I respond:** As has been explained above (q. 1, a. 4, and q. 2, aa. 1 and 9, and q. 4, aa. 1-2), the intellect of one who has faith assents to what he believes not because he sees it, either in itself or by resolving it into first principles that are seen in themselves, but rather because of the will’s command.

Now there are two possible ways in which the will moves the intellect to assent:

(a) from the ordering of the will toward the good, and on this score the act of faith (*credere*) is a praiseworthy act; or

(b) because the intellect is convinced to the point that it judges that what is being said should be believed, even though it is not convinced by the thing’s evidentness. For instance, if a prophet, in preaching the word of God, foretells some future event and performs a sign by raising a dead man, then the intellect of one who sees this is convinced by the sign he knows clearly that what was said was from God, who does not lie—even though the future event that is predicted is not evident in itself, so that the character of faith is not destroyed.

Thus, one should reply that in the case of Christ’s faithful ones, faith is praised in accord with the first way. And faith does not exist in the demons in this way; rather, it exists in them only in the second way. For they see many clear indications on the basis of which they perceive that the Church’s teaching is from God, even though they do not see the things themselves that the Church teaches, e.g., that God is three and one, or other things of this sort.

**Reply to objection 1:** The faith of the demons is in some sense compelled by the evidentness of the signs. And so the fact that they have faith does not make their act of will praiseworthy (*non pertinet ad laudem voluntatis ipsorum quod credunt*).

**Reply to objection 2:** The faith which is a gift of grace inclines a man to believe in accord with some affection for the good, even if the faith is unformed. Hence, the faith which is in the demons is not a gift of grace; rather, the demons are compelled to believe by the perspicacity of their natural intellect.

**Reply to objection 3:** It displeases the demons that the signs of the Faith are so evident that they are compelled to have faith because of them. And so their malice is in no way diminished by the fact that they have faith.

### Article 3

#### Can heretics who disbelieve one article of the faith have unformed faith with respect to the other articles?

It seems that heretics who disbelieve one article of the faith can have unformed faith with respect to the other articles:

**Objection 1:** A heretic’s natural intellect is no more powerful than a Catholic’s intellect. But a Catholic’s intellect needs to be aided by the gift of faith in order for him to take any article whatsoever on faith. Therefore, it seems that the heretic likewise cannot take any article on faith without the gift of unformed faith.

**Objection 2:** Just as many articles of the Faith are contained under faith, so, too, many conclusions are contained under a single science, e.g., geometry. But a man can have scientific knowledge of geometry with respect to some geometrical conclusions while being ignorant of other geometrical conclusions. Therefore, a man can have faith with respect to some articles of the Faith while not believing other articles of the Faith.

**Objection 3:** Just as a man obeys God in believing the articles of the Faith, so, too, he obeys God in fulfilling the commandments of the law. But a man can be obedient with respect to some commandments and not with respect to others. Therefore, he can have faith with respect to some articles and not with respect to others.

**But contrary to this:** Just as a mortal sin is contrary to charity, so, too, to disbelieve a single article is contrary to faith. But charity does not remain in a man after a single mortal sin. Therefore, neither does faith remain in a man once he disbelieves a single article of the Faith.

**I respond:** A heretic who disbelieves a single article of the Faith does not have either the habit of formed faith or the habit of unformed faith.

The reason for this is that the species of any habit depends on the formal character of its object, and when this is removed, the species of the habit cannot remain. Now the formal object of faith is the First Truth insofar as it is manifested in Sacred Scripture and the teaching of the Church. Hence, if someone does not adhere to the teaching of the Church as an infallible and divine rule that proceeds from the First Truth manifested in Sacred Scripture, then he does not have the habit of faith; instead, he holds what belongs to the Faith in a way different from holding it by faith. It is as if someone were to mentally hold some conclusion without knowing the middle term of its demonstration; in such a case, it is clear that he has only opinion, and not scientific knowledge, with respect to that conclusion.

By contrast, it is clear that one who adheres to the teaching of the Church as to an infallible rule assents to everything that the Church teaches. Otherwise, if, among the things that the Church teaches, he holds what he wills to hold and does not hold what he wills not to hold, then he is adhering to his own will and no longer adhering to Church teaching as to an infallible rule. And so it is clear that a heretic who obstinately disbelieves a single article is not prepared to follow the teaching of the Church in all things (for if he did not obstinately disbelieve, he would no longer be a heretic, but just someone with an erroneous belief). Hence, it is clear that someone who is a heretic with respect to one article does not have faith with respect to the other articles, but instead has a certain opinion with respect to the other articles in accord with his own will.

**Reply to objection 1:** A heretic does not hold the other articles, about which he is not in error, in the same way as one of the faithful holds them, viz., by adhering absolutely speaking to the First Truth—and for this a man needs to be aided by the habit of faith. By contrast, the heretic holds what belongs to the Faith by his own will and judgment.

**Reply to objection 2:** In the case of diverse conclusions that belong to a single science, the middle terms through which they are proved are diverse, and one of them can be known without another. And so a man can have scientific knowledge with respect to some of the conclusions of a single science while being ignorant of other conclusions.

By contrast, faith adheres to all the articles because of a single ‘middle term’ (*propter unum medium*), viz., because of the First Truth proposed to us in the Scriptures, which are understood correctly in accord with the teaching of the Church. And this is why anyone who falls away from this middle term lacks faith in its entirety (*qui ab hoc medio decidit totaliter fide caret*).

**Reply to objection 3:** Diverse precepts of the law can be referred either to (a) diverse proximate motives, in which case one can be fulfilled without another, or to (b) the single primary motive (*ad unum motivum primum*), which is to obey God perfectly, and whoever breaks a single commandment falls away from this motive—this according to James 2:10 (“He who offends in one point ... is guilty of all”).

#### Article 4

##### Can faith be greater in one individual than in another?

It seems that faith cannot be greater (*maior*) in one individual than in another:

**Objection 1:** A habit's quantity has to do with its objects. But anyone who has faith believes everything that belongs to the Faith, since, as was explained above (a. 3), whoever falls away from a single article loses faith in its entirety. Therefore, it seems that faith cannot be greater in one individual than in another.

**Objection 2:** What exists at a maximum (*ea quae sunt in summo*) does not admit of more and less. But the character of faith exists at a maximum, since it is required for faith that a man adhere to the First Truth above all things. Therefore, faith does not admit of *more* and *less*.

**Objection 3:** In the realm of grace-filled cognition (*in cognitione gratuita*) faith is like the understanding of principles in the realm of natural cognition; for, as is clear from what has been said (q. 1, a. 7), the articles of faith are the first principles of grace-filled cognition. But the understanding of principles is found equally in all men. Therefore, faith is likewise found equally in all the faithful.

**But contrary to this:** *More* and *less* is found wherever *little* and *great* is found. But *great* and *little* is found in the case of faith. For in Matthew 14:31 our Lord says to Peter, "Oh you of little faith, why did you doubt?" And in Matthew 15:28 He says to the woman, "How great your faith is!" Therefore, faith can be greater in one individual than in another.

**I respond:** As was explained above (*ST* 1-2, q. 52, aa. 1-2 and q. 112, a. 4), there are two possible ways to think of the quantity of a habit: (a) on the part of *the habit's object* and (b) as measured by *the subject's participation (secundum participationem subiecti)*. Moreover, there are two possible ways to consider the *object* of faith: (i) in accord with its *formal character* and (ii) in accord with what is proposed *materially* to be taken on faith.

Now as was explained above (q. 1, a. 1), the *formal object* of faith is singular and simple (*unum et simplex*), viz., the First Truth. Hence, as was explained above (q. 4, a. 6), on this score faith is not diversified among believers, but is instead one in species in all believers.

By contrast, there are many things that are proposed *materially* to be taken on faith, and they can be accepted either more or less explicitly. And on this score it is possible for one man to take more things explicitly on faith than another. And so in one individual there can be more faith as far as a greater explicitness of faith is concerned.

On the other hand, if faith is considered in accord with *the subject's participation*, this happens in two ways. For as was explained above (q. 1, aa. 1-2 and q. 4, a. 2), the act of faith proceeds both from the *intellect* and from the *will*.

Thus, in one sense faith can be called greater in someone on the part of the *intellect* because of a greater certitude and firmness, whereas it can be called greater in someone on the part of the *will* because of a greater promptness, i.e., devotion, or confidence.

**Reply to objection 1:** One who obstinately disbelieves something of what is contained under the Faith does not have the habit of faith, and yet the habit of faith is had by someone who does not believe everything explicitly but is prepared to believe everything explicitly. And, as has been explained, on this score one individual has greater faith than another on the part of the object, insofar as he believes more things explicitly.

**Reply to objection 2:** It belongs to the nature of faith that the First Truth should be preferred above all things. Still, among those who do prefer it above all things, some submit themselves to it with more certitude and devotion than do others. And on this score faith is greater in one individual than in another.

**Reply to objection 3:** The understanding of principles follows upon human nature itself, which is

found equally in everyone. By contrast, faith follows upon the gift of grace which, as was explained above (*ST* 1-2 , q. 112, a. 4), does not exist equally in everyone. And yet, because of a greater capacity for understanding, one individual understands the force of the principles more than another.

## QUESTION 6

### The Cause of Faith

Next we have to consider the cause of faith. And on this topic there are two questions: (1) Is faith infused in a man by God? (2) Is unformed faith a gift?

#### Article 1

##### Is faith infused in a man by God?

It seems that faith is not infused in a man by God:

**Objection 1:** In *De Trinitate* 14 Augustine says, “Faith is begotten, nurtured, defended, and strengthened in us by knowledge.” But what is begotten in us by knowledge seems to be acquired rather than infused. Therefore, faith does not seem to exist in us because of God’s infusing it.

**Objection 2:** What a man attains to by hearing and seeing seems to be acquired by the man. But a man attains to belief by seeing miracles and by hearing the faith taught. For John 4:53 says, “The father knew that it was at the same hour that Jesus had said to him, ‘Your son lives’. And he himself believed, and his whole household.” And Romans 10:17 says, “Faith comes from hearing.” Therefore, faith is had by a man as something acquired.

**Objection 3:** What exists in a man’s will can be acquired by the man. But as Augustine says in *De Praedestinatione Sanctorum*, “Faith exists in the will of believers.” Therefore, faith can be acquired by a man.

**But contrary to this:** Ephesians 2:8-9 says, “You have been saved by grace, and not from yourselves, that no one might glory; for it is a gift of God.”

**I respond:** Two things are required for faith. One of them is that the things to be believed be proposed to a man; this is required in order that the man might take something explicitly on faith. The other thing required for faith is the believer’s assent to what is proposed.

As regards the first of these, it is necessary for faith to come from God. For the things that belong to the Faith exceed human reason and hence cannot be included in a man’s contemplation unless God reveals them. To some they are revealed immediately by God, in the way that they were revealed to the apostles and the prophets, whereas to others they are proposed by God’s sending preachers of the Faith—this according to Romans 10:15 (“How will they preach, unless they are sent?”).

As regards the second, viz., a man’s assent to what belongs to the Faith, two causes can be considered:

One is a cause that induces *exteriorly*, e.g., a miracle that is seen, or persuasion by a man (*persuasio hominis*) who is inducing one toward faith. Neither of these is a sufficient cause. For among those who see one and the same miracle or hear the same preaching, some believe and some do not believe.

And so one must posit another, *interior*, cause that moves a man interiorly to assent to what belongs to the Faith.

Now the Pelagians posited man’s free choice alone as this interior cause, and because of this they claimed that the beginning of faith is from ourselves (*initium fidei est ex nobis*), viz., insofar as it is from ourselves that we are ready to assent to what belongs to the Faith, whereas the consummation of faith is from God, through whom the things we ought to believe are proposed to us.

But this is false. For since, in assenting to what belongs to the Faith, a man is elevated above his nature (*elevetur supra naturam suam*), this assent must exist in him from a supernatural principle moving him interiorly, and this is God. And so as regards the assent, which is the principal act of faith, faith is from God moving the man interiorly through grace.

**Reply to objection 1:** Faith is begotten and nurtured by knowledge in the manner of an exterior persuasion, which comes from some sort of knowledge. But the principal and proper cause of faith is

that which moves one interiorly to assent.

**Reply to objection 2:** This objection, too, is talking about a cause that proposes exteriorly what belongs to the Faith or that persuades one exteriorly to believe, either by word or by deed.

**Reply to objection 3:** The act of faith exists in the will of believers, but, as has been explained, a man's will has to be prepared by God through grace in order that it might be elevated to those things that lie above its nature.

## Article 2

### Is unformed faith a gift of God?

It seems that unformed faith is not a gift of God:

**Objection 1:** Deuteronomy 32:4 says, "The works of God are perfect." But unformed faith is something imperfect. Therefore, unformed faith is not a work of God.

**Objection 2:** Just as an act is called deformed because it lacks a due form, so, too, faith is called unformed because it lacks a due form. But as was explained above (*ST* 1-2, q. 79, a. 2), a deformed act of sin is not from God. Therefore, unformed faith is not from God, either.

**Objection 3:** Whatever God heals, He heals completely; for instance, John 7:23 says, "If a man receives circumcision on the Sabbath, so that the law of Moses might not be broken, are you angry with me because I have healed the whole man on the Sabbath?" But through faith a man is healed of unbelief. Therefore, whoever receives the gift of faith from God is at the same time healed of all his sins. But this is so only through informed faith. Therefore, only informed faith is a gift of God. Therefore, unformed faith is not a gift of God.

**But contrary to this:** A certain Gloss on 1 Corinthians 13:2 says, "Faith which exists without charity is a gift of God." But faith which exists without charity is unformed faith. Therefore, unformed faith is a gift of God.

**I respond:** Being unformed is a certain privation. But notice that a privation sometimes belongs to the nature of a species, whereas sometimes it does not belong to the nature of the species but is instead added to a thing (*supervenit rei*) that already has a proper species.

For instance, the privation of an appropriate balance of humors (*privatio debitae commensurationis humorum*) belongs to the very nature of illness, whereas darkness is added to, and does not belong to, the nature of the diaphanous itself. Since, therefore, when a cause of a given thing is being assigned, its cause is understood to be assigned insofar as that thing exists in its own proper species, it follows that what is not a cause of the privation cannot be said to be a cause of that thing to which the privation belongs in the sense of belonging to the nature of the species itself. For instance, what is not a cause of an imbalance of humors cannot be called a cause of the illness.

By contrast, something can be called a cause of a diaphanous body even though it not a cause of darkness, which does not belong to the nature of the species *diaphanous*. Now faith's being unformed does not belong to the nature of the species *faith* itself, since, as has been explained (q. 4, a. 4), faith is said to be unformed because of the lack of a certain form exterior to it (*propter defectum cuiusdam exterioris formae*). And so the cause of unformed faith is just the cause of faith simply speaking (*illud est causa fidei informis quod est causa fidei simpliciter dictae*). Hence, it follows that unformed faith is a gift of God.

**Reply to objection 1:** Even if unformed faith is not perfect absolutely speaking, i.e., with the perfection of virtue, it is nonetheless perfect with a certain perfection that is sufficient for the nature of faith.

**Reply to objection 2:** As was explained above (*ST* 1-2, q. 18, a. 5), the deformity of an act belongs

to the nature of the species of that act insofar as it is a moral act. For an act is said to be deformed because of the privation of an intrinsic form, viz., the appropriate balancing of the act's circumstances (*debita commensuratio circumstantiarum actus*). And so God, who is not a cause of the *deformity*, cannot be said to be a cause of a deformed act—even though He is a cause of the act insofar as it is an *act*.

An alternative reply is that 'deformity' implies not only the privation of a due form, but also a contrary disposition. Hence, a deformity is related to an act in the way that falsehood is related to the act of faith. And so just as a deformed act is not from God, so neither is any false act of faith. On the other hand, just as unformed faith is from God, so too are acts which are good in their species, even though they are not informed by charity—as happens very frequently in the case of sinners.

**Reply to objection 3:** One who receives faith without charity from God is not healed absolutely speaking of unbelief, since the guilt (*culpa*) of his previous unbelief is not removed; instead, he is healed in a certain respect (*sanatur secundum quid*), viz., that he desists from that sin. Now it frequently happens that someone desists from one act of sin—where God likewise effects this—even though, prompted by his own iniquity, he does not desist from the act of some other sin. And it is in this way that God sometimes grants to a man that he might have faith, and yet the gift of charity is not given to him—just as the gift of prophecy or something similar is likewise given to some individuals without charity.

## QUESTION 7

### The Effects of Faith

Next we have to consider the effects of faith. And on this topic there are two questions: (1) Is fear an effect of faith? (2) Is the purification of the heart an effect of faith?

#### Article 1

##### Is fear an effect of faith?

It seems that fear is not an effect of faith:

**Objection 1:** An effect does not precede its cause. But fear precedes faith; for Ecclesiasticus 2:8 says, “You who fear the Lord, believe in him.” Therefore, fear is not an effect of faith.

**Objection 2:** The same thing is not a cause of contraries. But as was explained above (*ST* 1-2, q. 23, a. 2), fear and hope are contraries, while, as a Gloss on Matthew 1:2 says, faith generates hope. Therefore, faith is not a cause of fear.

**Objection 3:** One contrary is not a cause of another contrary. But the object of faith is a certain good, viz., the First Truth, whereas, as was explained above (*ST* 1-2, q. 42, a. 1), the object of fear is something bad. But according to what was said above (*ST* 1-2, q. 18, a. 2) acts have their species from their objects. Therefore, faith is not a cause of fear.

**But contrary to this:** James 2:19 says, “The demons believe, and they tremble.”

**I respond:** As was explained above (*ST* 1-2, q. 41, a. 1 and q. 42, a. 1), fear is a certain movement of the appetitive power. Now the principle of all appetitive movements is either an apprehended good or an apprehended evil. Hence, the principle of fear and of all appetitive movements is some apprehension.

Now faith engenders in us an apprehension of the evils of punishment (*de quibus malis poenalibus*) that are inflicted in accord with God’s judgment, and in this way faith is a cause of a fear by which one fears being punished by God. This is *servile fear*.

Faith is also a cause of *filial fear*, by which one fears being separated from God, or by which one shrinks back from equating himself with God by reverencing Him. For through faith we make the judgment that God is an immense and sublime good, so that the worst thing is to be separated from Him and it is evil to want to be equal to Him.

Now it is unformed faith that is a cause of the first sort of fear, viz., servile fear. But the cause of the second sort of fear, viz., filial fear, is informed faith, which through charity makes a man adhere to God and subject himself to Him.

**Reply to objection 1:** The fear of God does not always precede faith, since if we are altogether ignorant of Him as regards the rewards and punishments about which we are instructed by the Faith, then we do not fear Him in any way.

By contrast, once we presuppose faith with respect to certain of the articles of the Faith, e.g., articles about God’s excellence, then what follows is a fear of reverence, and from this it follows further that a man subjects his intellect to God in believing everything that has been promised by God. Hence, the cited passage continues, “... and your reward will not be made void.”

**Reply to objection 2:** The same thing can be a cause of contraries in contrary respects, but the same thing cannot be a cause of contraries in the same respect. Now faith generates hope insofar as it gives us an estimation of the rewards that God awards to the just. And faith is a cause of fear insofar as it gives us an estimation of the punishments that He will inflict on sinners.

**Reply to objection 3:** The first and formal object of faith is the good which is the First Truth. But, materially speaking, certain bad things are also proposed to us to take on faith. For instance, it is bad not to submit oneself to God or to be separated from Him, and it is bad that sinners will undergo the evils of punishment from God. And it is in this way that faith can be a cause of fear.

## Article 2

### Is the purification of the heart an effect of faith?

It seems that the purification of the heart (*purificatio cordis*) is not an effect of faith:

**Objection 1:** Purity of heart consists mainly in an affection. But faith exists in the intellect. Therefore, faith does not cause the purification of the heart.

**Objection 2:** That which causes the purification of the heart cannot exist together with impurity. But faith can exist together with the impurity of sin, as is clear in the case of those who have unformed faith. Therefore, faith does not purify the heart.

**Objection 3:** If faith purified the human heart in any way, then it would especially purify a man's intellect. But faith does not purify the intellect of obscurity, since it is a dark cognition. Therefore, faith in no way purifies the heart.

**But contrary to this:** In Acts 15:9 Peter says, "Purifying their hearts by faith."

**I respond:** The impurity of any given thing consists in its being mixed with baser things. For instance, silver is said to be impure not when it is mixed with gold, through which it is made better, but rather when it is mixed with lead or tin.

Now it is clear that a rational creature has more dignity (*dignior est*) than all temporal and corporeal creatures. And so the rational creature is rendered impure by subjecting himself to temporal things through his love. He is purified of this impurity through a contrary movement, viz., when he tends toward what is above himself, i.e., toward God. In this movement faith is the first principle, since, as Hebrews 11:6 says, "One who approaches God must believe." And so the first principle of the purification of the heart is faith, which, if it is perfected by charity, causes a perfect purification.

**Reply to objection 1:** Things that exist in the intellect are principles of things that exist in the affections, viz., insofar as it is an apprehended good that moves the affections.

**Reply to objection 2:** Even unformed faith excludes a certain sort of impurity that is its opposite, viz., the impurity of error, which stems from the human intellect's adhering to things lower than it in a disordered way, when it wills to measure divine things by the standard of the natures of sensible things.

By contrast, when faith is informed by charity, then it is incompatible with any sort of impurity, since, as Proverbs 10:12 puts it, "Charity covers all sins."

**Reply to objection 3:** The darkness of faith belongs not to the impurity of sin, but rather to the natural defectiveness of the human intellect in the state of the present life.

## QUESTION 8

### The Gift of Understanding

Next we have to consider the gift of understanding (*donum intellectus*) (question 8) and the gift of knowledge (*donum scientiae*) (question 9).

As regards the gift of understanding, there are eight questions: (1) Is understanding a gift of the Holy Spirit? (2) Can the gift of understanding exist together with faith in the same individual? (3) Is the understanding which is a gift only speculative or also practical? (4) Does everyone who is in the state of grace (*qui sunt in gratia*) have the gift of understanding? (5) Is this gift found in some individuals who are not in the state of grace (*in aliquibus absque gratia*)? (6) How is this gift related to the other gifts? (7) What in the beatitudes corresponds to this gift? (8) What in the fruits [of the Holy Spirit] corresponds to this gift?

### Article 1

#### Is understanding a gift of the Holy Spirit?

It seems that understanding (*intellectus*) is not a gift of the Holy Spirit:

**Objection 1:** The gifts of grace (*dona gratuita*) are distinct from natural gifts, since they are added to them. But *understanding* (*intellectus*) is a certain natural habit in the soul by which, as is clear from *Ethics* 6, we have cognition of naturally known principles. Therefore, understanding should not be posited as a gift of the Holy Spirit.

**Objection 2:** As is clear from Dionysius in *De Divinis Nominibus*, creatures participate in God's gifts according to their capacity and mode (*secundum earum proportionem et modum*). But as is clear from Dionysius in *De Divinis Nominibus*, chap. 7, the mode of human nature is to have cognition of the truth not *simply*, which belongs to the character of *understanding*, but *discursively*, which is proper to *reason*. Therefore, the divine cognition that is given to men should be called the gift of *reasoning* (*donum rationis*) rather than the gift of *understanding*.

**Objection 3:** As is clear from *De Anima* 3, among the powers of the soul, the intellect or understanding (*intellectus*) is divided off from the will (*voluntas*). But no gift of the Holy Spirit is called the gift of willing. Therefore, no gift of the Holy Spirit should be called the gift of understanding.

**But contrary to this:** Isaiah 11:2 says, "The Spirit of the Lord will rest upon him, the Spirit of wisdom and understanding" (*spiritus sapientiae et intellectus*).

**I respond:** The name *intellectus* (understanding) implies a sort of intimate cognition (*cognitio intima*), since *intelligere* (to understand) is, as it were, *intus legere* (to read inwardly). This is manifestly clear when we consider the difference between understanding (*intellectus*) and sensing (*sensus*). For sentient cognition is taken up with sensible exterior qualities, whereas intellectual cognition penetrates to the essence of a thing, since, as *De Anima* 3 says, the object of the intellect is what a thing is (*quod quid est*).

Now there are many types of things which lie hidden within and which man's cognition has to penetrate interiorly, so to speak. For instance, the substantial nature of things lies hidden under their accidents; and what words signify (*significata verborum*) lies hidden under the words; and prefigured truth lies hidden under similitudes and figures; and, again, intelligible things are in some sense interior with respect to the sensible things that are sensed exteriorly; and effects lie hidden in their causes, and vice versa. Hence, we can speak of *understanding* (*potest dici intellectus*) with respect to all these things.

But since a man's cognition begins with the sensory power—from the outside, as it were—it is clear that the stronger the light of understanding is, the further it is able to penetrate into what is interior (*tanto potest magis ad intima penetrare*). Now the natural light of our intellect (*lumen naturale nostri*

*intellectus*) has limited power (*est finitae virtutis*) and so there is some fixed thing (*ad determinatum aliquid*) that it is able to reach through to. Therefore, a man needs a supernatural light in order to penetrate further, so that he might have cognition of certain things that he is unable to have cognition of by the natural light. And this supernatural light that is given to a man is called the gift of understanding.

**Reply to objection 1:** Through the natural light that is instilled in us we have cognition of certain common principles that are naturally known. But since, as was explained above (*ST* 1-2, q. 3, a. 8), man is ordered toward supernatural beatitude, a man must further attain certain higher principles. And this is what the gift of understanding is required for.

**Reply to objection 2:** Discursive reasoning always begins with understanding and ends with understanding, since we reason discursively by proceeding from things that are understood, and discursive reasoning is completed when we arrive at the point of understanding what we were previously ignorant of. Therefore, whatever we reason discursively to proceeds from some prior understanding.

By contrast, a gift of grace does not proceed from the natural light but is instead added to it in the sense of perfecting it. And so this addition is not called *reason*, but is instead called *understanding*, since this added light is related to the things that become known to us supernaturally in the way that the natural light is related to the things that we have cognition of from the beginning.

**Reply to objection 3:** ‘Will’ (*voluntas*) names the appetitive power absolutely speaking, without specifying any excellence. By contrast, ‘intellect’ or ‘understanding’ names the cognitive excellence of penetrating to what is within. And this is why a supernatural gift is named by the name ‘understanding’ rather than by the name ‘will’.

## Article 2

### Is the gift of understanding had together with faith?

It seems that the gift of understanding is not had together with faith:

**Objection 1:** In *83 Quaestiones* Augustine says, “What is understood is limited by the comprehension of the one who understands.” But what one takes on faith is not comprehended—this according to the Apostle in Philippians 3:12 (“Not that I had already comprehended or was already perfect”). Therefore, it seems that faith and understanding cannot exist together in the same individual.

**Objection 2:** Everything that is understood is seen by the intellect. But as was explained above (q. 1, a. 4 and q. 4, a. 1), faith is had with respect to things that are not apparent. Therefore, faith cannot exist together with understanding in the same individual.

**Objection 3:** Understanding is more certain than scientific knowledge (*intellectus est certior quam scientia*). But as was established above (q. 1, a. 5), there cannot be scientific knowledge and faith with respect to the same thing. Therefore, *a fortiori*, there cannot be understanding and faith with respect to the same thing.

**But contrary to this:** In *Moralia* Gregory says, “Understanding illuminates the mind about the things that have been heard.” But someone who has faith can be mentally illuminated about the things that he has heard; thus, Luke 24:45 says that our Lord “opened the meaning of the Scriptures to His disciples, in order that they might understand them.” Therefore, understanding can exist together with faith.

**I respond:** Two distinctions are necessary here, one on the part of *faith*, and the other on the part of *understanding*.

On the part of *faith*, the distinction is that certain things fall *per se* and directly under the Faith, viz., those which exceed natural reason, e.g., that God is three and one and that the Son of God has become incarnate, whereas other things fall under the Faith in the sense that they are ordered toward the former in

some way, e.g., all the things contained in the divine Scriptures.

On the part of *understanding*, the distinction is that there are two ways in which we can be said to understand given things:

In one way, we understand them *perfectly*, viz., we attain to a cognition of the essence of the understood thing in its own right, and of the very truth of the understood proposition in its own right (*secundum quod in se est*). And we are unable to understand what falls directly under the Faith in this way for as long the state of having faith remains, though we are able to understand in this way some of those other things that are ordered toward the Faith.

In the second way, something can be understood *imperfectly*, viz., when there is no cognition of the very essence of the thing or of the truth of the proposition, i.e., no cognition of what the thing is or how it is, and yet it is understood that what appears outwardly is not contrary to that truth; more specifically, a man understands that he should not withdraw from what belongs to the Faith because of what appears outwardly. Accordingly, nothing prevents one, during the time in which he has faith, from understanding in this sense even the things that fall *per se* under the Faith.

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the replies to the objections. For the first three arguments are talking about something that is understood perfectly, whereas the last argument [from Gregory] is talking about the understanding of things that are ordered toward the Faith.

### Article 3

#### Is the understanding which is posited as a gift of the Holy Spirit only speculative, or is it practical as well?

It seems that the understanding which is posited as a gift of the Holy Spirit is not practical, but only speculative:

**Objection 1:** As Gregory says in *Moralia* 1, “Understanding penetrates certain higher things.” But the things that pertain to the practical intellect are very low and not high, viz., singular things, which actions have to do with. Therefore, the understanding which is posited as a gift of the Holy Spirit is not practical understanding.

**Objection 2:** The understanding which is a gift of the Holy Spirit is something more dignified than the understanding which is an intellectual virtue. But as is clear from the Philosopher in *Ethics* 6, the understanding which is an intellectual virtue is directed only toward necessary things. Therefore, *a fortiori*, the understanding which is a gift is directed only toward necessary things. By contrast, the practical intellect has to do not with necessary things, but with contingent things which can be otherwise and which can be done by human action. Therefore, the understanding which is a gift is not practical understanding.

**Objection 3:** The gift of understanding illuminates the mind with respect to things that exceed natural reason. But human actions, which the practical intellect has to do with, do not exceed natural reason, which, as is clear from what was said above (*ST* 1-2, q. 58, a. 2 and q. 71, a. 6), directs one in things to be done. Therefore, the understanding which is a gift is not practical understanding.

**But contrary to this:** Psalm 110:10 says, “... a good understanding for all who do it.”

**I respond:** As was explained above (a. 2), the gift of understanding has to do not only with those things that fall under the Faith principally and in the first place, but also with all the things that are ordered toward the Faith.

Now certain good operations are ordered toward the Faith, since, as the Apostle says in Galatians 5:6, “Faith operates through love.” And so the gift of understanding extends even to certain

actions—not, to be sure, as what it is principally concerned with, but insofar as, according to Augustine in *De Trinitate* 12, we are regulated in our actions “by the eternal conceptions (*rationibus aeternis*), which higher reason adheres to by looking to them and consulting them.” And it is higher reason that is perfected by the gift of understanding.

**Reply to objection 1:** Human actions, considered in themselves, do not have the height of excellence. But insofar as they are referred to the rule of eternal law and to the end of divine beatitude, they have a height such that understanding can have to do with them.

**Reply to objection 2:** The very fact that the gift which is understanding considers eternal and necessary intelligible things not only as they exist in their own right, but also insofar as they are certain rules for human acts, pertains to its dignity. For the more things a cognitive power extends itself to, the more noble it is.

**Reply to objection 3:** As was explained above (*ST* 1-2, q. 71, a. 6), the rule of human acts is both human reason and the eternal law. But the eternal law exceeds natural reason. And so a cognition of human acts insofar as they are regulated by eternal law exceeds natural reason and requires the supernatural light of a gift of the Holy Spirit.

#### Article 4

##### Does the gift of understanding exist in all men who have grace?

It seems that the gift of understanding does not exist in all men who have grace:

**Objection 1:** In *Moralia* 2 Gregory says that the gift of understanding is given “to counter dullness of mind” (*contra hebetudinem mentis*). But many who have grace still suffer from dullness of mind. Therefore, the gift of understanding does not exist in everyone who has grace.

**Objection 2:** Among the things that pertain to cognition, only faith seems to be necessary for salvation, since it is “through faith that Christ dwells in our hearts,” as Ephesians 3:17 says. But not everyone who has faith has the gift of understanding—in fact, as Augustine says in *De Trinitate*, “Those who believe should pray that they might understand.” Therefore, the gift of understanding is not necessary for salvation. Therefore, the gift of understanding does not exist in everyone who has grace.

**Objection 3:** What is common to everyone who has grace is never removed from those who have grace. But the grace of understanding and of the other gifts sometimes removes itself to our advantage (*se utiliter subtrahit*); for as Gregory says in *Moralia* 2, “Sometimes when the mind elevates itself to elation by the understanding of sublime things, it becomes sluggish with a heavy dullness in lowly and ordinary matters” (*in rebus imis et vilibus*). Therefore, the gift of understanding does not exist in everyone who has grace.

**But contrary to this:** Psalm 81:5 says, “They have not known or understood; they walk in darkness.” But no one who has grace walks in darkness—this according to John 8:12 (“He who follows me walks not in darkness”). Therefore, no one who has grace lacks the gift of understanding.

**I respond:** It is necessary for there to be rectitude of will in everyone who has grace, since, as Augustine says, “It is through grace that a man’s will is prepared for the good.” But the will cannot be correctly ordered toward the good except by a prior cognition of the true, since, as *De Anima* 3 says, the object of the will is a good that is understood.

Now just as through the gift of charity the Holy Spirit orders a man’s will so that it is directly moved toward a supernatural good, so, too, through the gift of understanding He illuminates a man’s mind so that it has cognition of the supernatural truth toward which a rightly ordered will has to tend. And so just as the gift of charity exists in everyone who has sanctifying grace (*gratia gratum faciens*), so, too, does the gift of understanding.

**Reply to objection 1:** Some who have sanctifying grace can suffer from dullness with respect to certain things that lie beyond the necessity for salvation. But with respect to what is necessary for salvation they are sufficiently instructed by the Holy Spirit—this according to 1 John 2:27 (“His anointing teaches you all things”).

**Reply to objection 2:** Even though not all who have faith fully understand the things that are proposed to be taken on faith, they nonetheless understand that these things are to be taken on faith and that there should be no deviations from them for any reason.

**Reply to objection 3:** The gift of understanding never removes itself from the saints with respect to what is necessary for salvation. However, it does remove itself with respect to other things, with the result that the saints are not able to penetrate all things clearly with their intellects (*non omnia ad liquidum per intellectum penetrare possunt*)—and this in order that an occasion for pride (*materia superbiae*) might be removed.

## Article 5

### Does the gift of understanding exist in individuals who do not have sanctifying grace?

It seems that the gift of understanding exists even in individuals who do not have sanctifying grace:

**Objection 1:** Commenting on Psalm 118:20 (“My soul longs to desire your justifications”), Augustine says, “The intellect flies ahead, and slow affection, or no affection, follows.” But in everyone who has sanctifying grace the affections are prompt, because of charity. Therefore, the gift of understanding can exist in individuals who do not have sanctifying grace.

**Objection 2:** Daniel 10:1 says, “There is a need for discernment (*intelligentia*) in the case of a prophetic vision,” and so it seems that prophecy does not exist without the gift of understanding (*intellectus*). But prophecy can exist without sanctifying grace; this is clear from Matthew 7:22-23, where to those who say, “We prophesied in your name,” the reply is, “I never knew you.” Therefore, the gift of understanding can exist without sanctifying grace.

**Objection 3:** The gift of understanding corresponds to the virtue of faith—this according to Isaiah 7:9, alternative text (“If you do not believe, you will not understand”). But faith can exist without sanctifying grace. Therefore, the gift of understanding can, too.

**But contrary to this:** In John 6:45 our Lord says, “Everyone who has listened to the Father and learned comes to me.” But as is clear from Gregory in *Moralia* 1, it is through understanding that we learn more deeply, or penetrate into, what we have heard. Therefore, whoever has the gift of understanding comes to Christ. But one does not come to Christ without sanctifying grace. Therefore, the gift of understanding does not exist without sanctifying grace.

**I respond:** As was explained above (*ST* 1-2, q. 68, aa. 1-3), the gifts of the Holy Spirit perfect the soul in the sense that it becomes easily moveable by the Holy Spirit (*secundum quod est bene mobile a spiritu sancto*). So, then, the gift of understanding is posited as an intellectual light of grace insofar as man’s intellect becomes easily moveable by the Holy Spirit.

Now the thinking (*consideratio*) involved in this movement lies in a man’s apprehending the truth concerning his end. Hence, unless the human intellect is moved by the Holy Spirit to the point of having a correct estimation of its end, it has not yet received the gift of understanding—no matter how much it understands about certain preambles [to the Faith] because of the illumination of the Holy Spirit.

Now a correct estimation of the final end is had only by someone who is not mistaken about the end and who adheres firmly to it as the best. But this belongs only to one who has sanctifying grace—just as, in moral matters, it is through the habit of virtue that a man has a correct estimation of the end. Hence, no one has the gift of understanding without sanctifying grace.

**Reply to objection 1:** Augustine is using the name ‘intellect’ for any sort of intellectual illumination. But intellectual illumination does not reach the complete character of a gift unless a man’s mind is led to the point that the man has a correct estimation of his end.

**Reply to objection 2:** The discernment (*intelligentia*) that is necessary for prophecy is a certain illumination of the mind with respect to those things that are revealed to the prophets. But this is not an illumination concerning a correct estimation of the ultimate end, which is what is pertinent to the gift of understanding.

**Reply to objection 3:** Faith involves only an assent to the things that are proposed. But understanding involves a certain sort of perception of the truth, which, as has been explained, cannot be had about the end except in the case of one who has sanctifying grace. And so the arguments concerning faith and understanding are not parallel.

## Article 6

### Does the gift of understanding differ from the other gifts?

It seems that the gift of understanding does not differ from the other gifts:

**Objection 1:** If their opposites are the same, then the things themselves are the same. But as is clear from Gregory in *Moralia 2*, *wisdom* is opposed to foolishness, *understanding* is opposed to dullness of mind, *counsel* is opposed to precipitateness, and *knowledge* is opposed to ignorance. But foolishness, dullness of mind, ignorance, and precipitateness do not seem to differ from one another. Therefore, neither is understanding distinct from these other gifts.

**Objection 2:** The understanding which is posited as an intellectual virtue differs from the other intellectual virtues by the fact that it is proper to it that it has to do with principles that are known in their own right (*per se nota*). But the gift of understanding does not have to do with any principles that are known in their own right, since the natural habit with respect to first principles is sufficient for things that are naturally known in their own right, whereas faith is sufficient for things that are supernatural; for, as has been explained (q. 1, a. 7), the articles of the faith are like first principles in the realm of supernatural cognition. Therefore, the gift of understanding is not distinct from the other intellectual gifts.

**Objection 3:** Every intellectual cognition is either speculative or practical. But as has been explained (a. 3), the gift of understanding is related to both. Therefore, it is not distinct from the other intellectual gifts, but includes them all.

**But contrary to this:** Things that are enumerated together must in some way be distinct from one another. But as is clear from Isaiah 11:2-3, the gift of understanding is enumerated together with the other gifts. Therefore, the gift of understanding is distinct from the other gifts.

**I respond:** The distinction between the gift of *understanding* and three of the other gifts, viz., *piety*, *fortitude*, and *fear*, is clear, since the gift of understanding belongs to the cognitive power, whereas the three gifts just named belong to the appetitive power. However, the difference between this gift of understanding and the other three gifts, viz., *wisdom*, *knowledge*, and *counsel*, is not so clear.

Now it seems to some that the gift of understanding is distinguished from the gifts of knowledge and counsel by the fact that the latter two belong to practical cognition, whereas the gift of understanding belongs to speculative cognition. On the other hand, it is distinguished from the gift of wisdom, which likewise belongs to speculative cognition, in that judgment belongs to wisdom, whereas what belongs to understanding is the capacity for understanding the things that are proposed, i.e., a penetration of their depths (*sive penetratio ad intima eorum*). This was how we ourselves accounted for the number of the gifts above (*ST 1-2*, q. 68, a. 4).

However, to one who studies the matter diligently, the gift of understanding, as has been explained (a. 3), deals not only with matters to be speculated about, but also with things to be done (*non solum habet se circa speculanda sed etiam circa operanda*); and, similarly, as will be explained below (q. 9, a. 3), the gift of knowledge also deals with both. And so the distinction among the gifts has to be thought about in a different way.

All four of the gifts under discussion are ordered toward supernatural cognition, which has its foundation in us through faith. But “faith comes from hearing,” as Romans 10:17 says. Hence, it is necessary that some things should be proposed to a man not as something seen, but as something heard, and that he assent to these things through faith. Now faith has to do primarily and principally with the First Truth, and it has to do secondarily with certain things that have to be considered concerning creatures. And, as is clear from what was said above (a. 3 and q. 4, a. 2), faith extends itself further to the direction of human acts as well, insofar as it operates through love.

So, then, there are two requirements on our part with respect to those things that belong to the Faith and are proposed to us to be taken on faith. The first is that they be penetrated or grasped by our intellect, and this belongs to the gift of *understanding*. Secondly, a man has to have right judgment concerning these things (*de eis*), so that he judges that certain things are to be adhered to and their opposites withdrawn from. Thus, as regards divine things, this judgment belongs to the gift of *wisdom*; as regards created things, it belongs to the gift of *knowledge*; and in its application to singular actions, it belongs to the gift of *counsel*.

**Reply to objection 1:** The distinction just explained among the four gifts fits in with the distinction that Gregory posits among their opposites.

For dullness (*hebetudo*) is opposed to sharpness (*acuitas*), and understanding is called sharp by a similitude when it is able to penetrate to the depths of the things that are proposed (*penetrare ad intima eorum quae proponuntur*). Hence, dullness of mind is that because of which the mind is not sufficient to penetrate to the depths.

One is called foolish (*stultus*) from the fact that he judges in a perverse way about the common end of life. And so foolishness is properly opposed to wisdom (*sapientia*), which makes correct judgments concerning the universal cause.

Ignorance (*ignorantia*) involves a defect of mind with respect to any given sort of particular thing as well. And so it is opposed to knowledge (*scientia*), through which a man makes correct judgments concerning particular causes, i.e., concerning creatures.

On the other hand, precipitateness (*praecipitatio*) is clearly opposed to counsel (*consilium*), in virtue of which a man does not rush into action prior to reason’s deliberation.

**Reply to objection 2:** The gift of understanding has to do with the first principles of grace-filled cognition, but in a way different from faith. For it belongs to faith to assent to these principles, whereas it belongs to the gift of understanding to mentally penetrate the things that are spoken.

**Reply to objection 3:** The gift of understanding is relevant to both sorts of cognition, viz., speculative and practical, not with respect to judgment but rather with respect to apprehension, so that the things that are spoken might be grasped.

## Article 7

### **Does the sixth beatitude, viz., “Blessed are the clean of heart, for they shall see God,” correspond to the gift of understanding?**

It seems that the sixth beatitude, viz., “Blessed are the clean of heart, for they shall see God,” does not correspond to the gift of understanding:

**Objection 1:** Cleanness of heart (*munditia cordis*) seems to have to do especially with the affections. But the gift of understanding has to do rather with the intellective power and not with the affections. Therefore, the beatitude in question does not correspond to the gift of understanding.

**Objection 2:** Acts 15:9 says, "... purifying your hearts with faith." But cleanness of heart is acquired through the purification of the heart. Therefore, the beatitude in question pertains to the virtue of faith rather than to the gift of understanding.

**Objection 3:** The gifts of the Holy Spirit perfect a man in the present life. But seeing God does not belong to the present life, since, as was established above (*ST* 1, q. 12, a. 1 and *ST* 1-2, q. 3, a. 8), it beatifies men (*beatos facit*). Therefore, the sixth beatitude, which contains the vision of God, does not pertain to the gift of understanding.

**But contrary to this:** In *De Sermone Domini in Monte* Augustine says, "The sixth operation of the Holy Spirit, i.e., understanding, belongs to the clean of heart, who, with their eye cleansed, can see what the eye does not see."

**I respond:** As was explained above (*ST* 1-2, q. 69, a. 2), there are two things contained in the sixth beatitude, as in the others as well: one in the mode of *merit*, viz., cleanness of heart, and the other in the mode of *reward*, viz., seeing God. And both of them pertain in some way to the gift of understanding.

For there are two sorts of cleanness. The one sort, which cleans the affective part of the soul of disordered affections, prepares and disposes an individual for seeing God. And this sort of cleanness of heart is effected through the virtues and gifts that belong to the appetitive power. By contrast, the other sort of cleanness of heart is a cleanness which brings the vision of God to completion, as it were (*quae est quasi completiva respectu visionis divinae*), and this is the cleanness of a mind that has been purged of phantasms and errors, with the result that what is proposed about God is not taken in the manner of corporeal phantasms or according to heretical perversions. It is this sort of cleanness that the gift of understanding effects.

Similarly, there are two types of vision of God. The one, through which God's essence is seen, is perfect. The other, imperfect vision is such that through it, even if we do not see what God is, we at least see what He is not, and our cognition of God is the more perfect in this life to the extent that we understand more and more that He exceeds whatever is comprehended by our understanding.

Both types of vision of God belong to the gift of understanding. The first belongs to the consummated gift of understanding as it will exist in heaven; the second belongs to the inchoate gift of understanding as it is had in this life (*secundum habetur in via*).

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the reply to the objections. For the first two arguments are talking about the first sort of cleanness. On the other hand, the third argument is talking about the perfect vision of God, whereas the gifts perfect us even in the present life (*et hic*) in a certain inchoative manner, and, as has been explained, these gifts will be brought to completion in the future.

## Article 8

### Among the fruits of the Holy Spirit, does faith correspond to the gift of understanding?

It seems that, among the fruits of the Holy Spirit, it is not faith (*fides*) that corresponds to the gift of understanding:

**Objection 1:** Understanding is a fruit of faith; for Isaiah 7:9 says, "If you do not believe, you will not understand" (*non intelligetis*). (This is an alternative text, where what we have is, "If you do not believe, you will not remain [in power]" (*non permanebitis*.) Therefore, it is not the case that faith is a fruit of understanding.

**Objection 2:** What is prior is not a fruit of what is posterior. But faith seems to be prior to understanding, since, as was explained above (q. 4, a. 7), faith is the foundation of the whole spiritual building. Therefore, faith is not a fruit of understanding.

**Objection 3:** There are more gifts that belong to the intellect than to the appetite. But among the fruits there is only one that belongs to the intellect, viz., faith, whereas all the others belong to the appetite. Therefore, faith does not seem to correspond more to understanding than to wisdom or knowledge or counsel.

**But contrary to this:** The end of each thing is its fruit. But the gift of understanding seems mainly ordered toward the certitude of faith, which is posited as a fruit; for a Gloss on Galatians 5:22 says that the faith which is a fruit is “certitude with respect to invisible things.” Therefore, among the fruits of the Holy Spirit, it is faith that corresponds to the gift of understanding.

**I respond:** As was explained above when we were talking about the fruits (*ST* 1-2, q. 70, a. 1), the fruits of the Spirit are certain ultimate and delectable things that come to exist in us by the power of the Holy Spirit. Now what is ultimate and delectable has the character of an end, which is the proper object of the will. And so what is ultimate and delectable in the will must in some sense be the fruit of everything else that belongs to the other powers.

So, then, there are two possible fruits of a gift or virtue that perfects a power, one which belongs to its own power, and the other of which is, as it were, ultimate and belongs to the will.

Accordingly, one should reply that *faith*, i.e., the certitude of faith, corresponds to the gift of understanding as its own proper fruit, whereas *joy*, which belongs to the will, corresponds to it as its ultimate fruit.

**Reply to objection 1:** Understanding is a fruit of the faith which is a virtue. But this is not how ‘faith’ is being taken when faith is called a fruit. Rather, it is being taken for faith’s certitude, which a man arrives at through the gift of understanding.

**Reply to objection 2:** Faith cannot in all cases (*universaliter*) precede understanding, since a man could not assent by belief to anything proposed to him unless he in some sense understood it. However, the perfection of understanding does follow upon the faith which is a virtue, and the certitude of faith follows upon this perfection of understanding.

**Reply to objection 3:** The fruit of practical cognition cannot exist in practical cognition itself, since this sort of cognition is known not for its own sake but for the sake of something else. By contrast, speculative cognition has its fruit within itself, viz., the certitude of the things that it is concerned with. And so there is no proper fruit that corresponds to the gift of counsel, which belongs solely to practical cognition.

On the other hand, there is just one fruit, viz., the certitude signified by the name ‘faith’, that corresponds to the gifts of wisdom, understanding, and knowledge, which can belong to speculative cognition as well as to practical cognition.

By contrast, several fruits are posited that belong to the appetitive part of the soul, since, as has already been explained, the character of an end, which is implied by the name ‘fruit’, belongs more to the appetitive power than to the intellectual power.

## QUESTION 9

### The Gift of Knowledge

Next we have to consider the gift of knowledge (*donum scientiae*). On this topic there are four questions: (1) Is knowledge a gift [of the Holy Spirit]? (2) Does the gift of knowledge have to do with divine things? (3) Is the gift of knowledge speculative or practical? (4) Which beatitude corresponds to the gift of knowledge?

#### Article 1

##### Is knowledge a gift [of the Holy Spirit]?

It seems that knowledge (*scientia*) is not a gift [of the Holy Spirit]:

**Objection 1:** The gifts of the Holy Spirit exceed our natural capacity (*naturalem facultatem excedunt*). But 'knowledge' implies an effect of natural reason; for in *Posterior Analytics* 1 the Philosopher says, "A demonstration is a syllogism that gives knowledge" (*syllogismus faciens scire*). Therefore, knowledge is not a gift of the Holy Spirit.

**Objection 2:** As was explained above (*ST* 1-2, q. 68, a. 5), the gifts of the Holy Spirit are common to all the sanctified (*communia omnibus sanctis*). But in *De Trinitate* 14 Augustine says, "Most of the faithful are not capable of knowledge, even though they are capable of faith itself." Therefore, knowledge is not a gift.

**Objection 3:** As was explained above (*ST* 1-2, q. 68, a. 8), a gift is more perfect than a virtue. Therefore, a single gift is sufficient for perfecting a single virtue. But as was explained above (q. 8, a. 5), the gift of understanding corresponds to the virtue of faith. Therefore, the gift of knowledge does not correspond to the virtue of faith. Nor does it appear to correspond to any other virtue. Therefore, since, as was explained above (*ST* 1-2, q. 68, aa. 1-2), the gifts are perfections of virtues, it seems that knowledge is not a gift.

**But contrary to this:** In Isaiah 11:2-3 knowledge is counted among the seven gifts.

**I respond:** Grace is more perfect than nature, and so grace is not lacking in anything in which a man can be perfected through nature. Now when through natural reason a man assents to some truth with his intellect, there two ways in which he is perfected with respect to that truth: first, because he *grasps* it (*capit eam*) and, second, because he has *firm judgment* concerning it (*de ea certum iudicium habet*).

And so two things are required for a man's intellect to assent perfectly to the truth of the Faith. One of them is that he should correctly *grasp* the things that are proposed, and this, as was explained above (q. 8, a. 6), belongs to the gift of *understanding*. But the other is that he should have *firm and correct judgment* about those things, viz., by distinguishing things that are to be believed from things that are not to be believed. And for this the gift of *knowledge* is necessary.

**Reply to objection 1:** The certitude of cognition is found in diverse ways in diverse natures, in accord with the different condition of each nature.

For instance, a man acquires firm judgment about the truth through discursive reasoning (*per discursum rationis*), and so human scientific knowledge is acquired through demonstrative reasoning.

By contrast, as was explained in the First Part (*ST* 1, q. 14, a. 7), in God there is firm judgment through simple intuitive vision (*per simplicem intuitum*), without any sort of discursive reasoning (*absque omni discursu*); and so God's knowledge is not discursive or ratiocinative, but is instead absolute and simple. The knowledge which is posited as a gift of the Holy Spirit is similar to God's knowledge, since it is a certain participative similitude of it.

**Reply to objection 2:** There are two kinds of knowledge that can be had with respect to what is to be taken on faith (*circa credenda*).

One is a knowledge by which a man knows what he ought to take on faith (*scit quid credere*

*debeat*), distinguishing things that are to be taken on faith from things that are not to be taken on faith. On this score, knowledge is a gift [of the Holy Spirit] and is common to all the sanctified.

The other is a knowledge of what is to be taken on faith through which a man not only knows what ought to be taken on faith, but also knows how to make the Faith manifest, how to induce others to believe, and how to refute those who contradict the Faith. And this sort of knowledge is posited among the gratuitously given graces (*ista scientia ponitur inter gratias gratis datas*), and it is given to some but not to everyone. Hence, after the cited passage Augustine adds, “It is one thing to know only what a man ought to believe; it is another thing to know how it might be enriched for the pious and defended against the impious.”

**Reply to objection 3:** The gifts are more perfect than the moral and intellectual virtues, but they are not more perfect than the theological virtues. Rather, all the gifts are ordered toward perfecting the theological virtues as toward their end. And so there is nothing wrong with diverse gifts being ordered toward a single theological virtue.

## Article 2

### Does the gift of knowledge have to do with divine things?

It seems that the gift of knowledge has to do with divine things:

**Objection 1:** In *De Trinitate* 14 Augustine says, “Faith is begotten, nurtured, defended, and strengthened in us by knowledge.” But faith has to do with divine things, since, as was established above (q. 1, a. 1), the object of faith is the First Truth. Therefore, the gift of knowledge likewise has to do with divine things.

**Objection 2:** The gift of knowledge has more dignity than acquired scientific knowledge. But some acquired scientific knowledge, such as the science of metaphysics, has to do with divine things. Therefore, *a fortiori*, the gift of knowledge has to do with divine things.

**Objection 3:** Romans 1:20 says, “The invisible things of God ... are clearly seen, being understood through the things that are made.” Therefore, if [the gift of] knowledge has to do with created things, it seems that it has to do with divine things as well.

**But contrary to this:** In *De Trinitate* 14 Augustine says, “The science of divine things is properly named *wisdom*, whereas the science of human things properly bears the name *knowledge*.”

**I respond:** A firm or certain judgment (*certum iudicium*) about an entity is taken especially from its cause. And so it is necessary for the ordering of judgments to follow the ordering of causes. For just as a primary cause is a cause of a secondary cause, so one judges about the secondary cause through the first cause (*per causam primam iudicatur de causa secunda*). By contrast, the first cause cannot be judged through any other cause (*per aliam causam*). And so a judgment that is made through the first cause is the first and most perfect sort of judgment.

Now in those cases in which something is the most perfect, the common name of the genus is appropriated to what falls short of being the most perfect, while some special name is appropriated to the most perfect thing itself. This is clear in logic. For instance, in the genus of convertible names, that which signifies the ‘what-ness’ of a thing (*quod quid est*) is called by the special name *definition* (*definitio*), whereas the convertible names that fall short of being definitions retain for themselves the common name; more specifically, they are called *properties* (*propria*).

Therefore, since, as has been explained (a. 1), the name *knowledge* (*scientia*) implies a firmness or certitude of judgment (*importat quandam certitudinem iudicii*), if this firmness of judgment comes through the highest cause, then it has a special name, viz., *wisdom*. For the one who is called ‘wise’ with respect to any given genus is he who knows the highest cause of that genus and can judge everything

through it. And the one who is called ‘wise’ absolutely speaking is he who knows the highest cause absolutely speaking, viz., God. And so the cognition of divine things (*cognitio divinarum rerum*) is called *wisdom*.

On the other hand, the cognition of human matters (*cognitio rerum humanarum*) is called ‘knowledge’ in the sense that this common name implies a firmness of judgment appropriate for a judgment that is made through secondary causes. And so if we take the name *knowledge* in this way, then knowledge is posited as a gift distinct from the gift of wisdom. Hence, the gift of knowledge has to do with human things, or with created things.

**Reply to objection 1:** Even though the things that faith has to do with are divine and eternal things, still, faith itself is something temporal in the mind of the believer. And so to know what is to be taken on faith belongs to the gift of knowledge.

On the other hand, to know the things themselves that are taken on faith through a sort of union with those things belongs to the gift of wisdom. Hence, the gift of wisdom corresponds more to charity, which unites a man’s mind to God.

**Reply to objection 2:** This argument is talking about the name ‘knowledge’ taken generally. However, knowledge is posited as a special gift not in this sense, but insofar as it is restricted to the judgment that is made through created things.

**Reply to objection 3:** As was explained above (q. 1, a. 1), every cognitive habit is directed *formally* toward the medium through which there is a cognition of something, whereas it is directed *materially* toward what is known through that medium. And since what is formal is more powerful, it follows that those sciences which draw conclusions from mathematical principles about material nature are grouped with the mathematical sciences, since they are more similar to them—even though they agree more with natural science as far as their matter is concerned, and even though because of this *Physics 2* says that they are instead natural sciences.

And so when a man has cognition of God through created things, this seems to belong more to *knowledge*, to which it pertains *formally*, than to *wisdom*, to which it pertains *materially*. And, conversely, when we make judgments about created things according to divine things (*secundum res divinas*), this seems to belong more to *wisdom* than to *knowledge*.

### Article 3

#### Is the knowledge which is posited as a gift practical knowledge?

It seems that the knowledge which is posited as a gift is practical knowledge:

**Objection 1:** In *De Trinitate* 12 Augustine says, “The action by which we use exterior things is allotted to knowledge.” But the knowledge to which action is allotted is practical. Therefore, the knowledge which is a gift is practical knowledge.

**Objection 2:** In *Moralia* 1 Gregory says, “There is no knowledge if it does not have the advantage of piety, and piety is completely useless if it lacks the discretion of knowledge.” From this it follows that knowledge directs piety. But this role cannot belong to speculative knowledge. Therefore, the knowledge which is a gift is practical and not speculative.

**Objection 3:** As was established above (q. 8, a. 5), the gifts of the Holy Spirit are had only by the just. But speculative knowledge can be had even by the unjust—this according to James 4:17 (“To one who knows the good and does not do it, it is to him a sin.”) Therefore, the knowledge which is a gift is practical and not speculative.

**But contrary to this:** In *Moralia* 1 Gregory says, “Knowledge on her own day prepares a feast, because she overcomes the fast of ignorance in the belly of the mind.” But ignorance is totally removed

only by both kinds of knowledge, viz., speculative and practical. Therefore, the knowledge which is a gift is both speculative and practical.

**I respond:** As was explained above (a. 1 and q. 8, a. 8), the gift of knowledge, like the gift of understanding, is ordered toward the firmness or certitude of faith. Now faith consists primarily and principally in a speculative act (*in speculatione*), insofar as it adheres to the First Truth. But since the First Truth is also the ultimate end for the sake of which we act, it likewise follows that faith extends itself to action—this according to Galatians 5:6 (“Faith operates through love”).

Hence, the gift of knowledge must likewise have to do primarily and principally with speculation, viz., insofar as a man knows what ought to be taken on faith. But, secondarily, it also extends itself to action, insofar as we are directed in our acting by our knowledge of what is taken on faith and of those things that follow from what is taken on faith.

**Reply to objection 1:** Augustine is talking about the gift of knowledge insofar as it extends itself to action. For he attributes action to it, but not action alone or primarily. And it likewise directs piety in this way.

**Reply to objection 2:** This makes clear the answer to the second objection.

**Reply to objection 3:** Just as it has been explained (q. 8, a. 5), in the case of the gift of understanding, that not everyone who understands has the gift of understanding, but only he who understands because of the habit of grace (*ex habitu gratiae*), so, too, in the case of the gift of knowledge, one should understand that the only individuals who have the gift of knowledge are those who, because of the infusion of grace, have a firm judgment with respect to what is to be taken on faith and what is to be done, where this judgment does not stray in any way from the rectitude of justice. And this is the knowledge of holy things of which Wisdom 10:10 says, “The Lord led the just man through the right ways and gave him the knowledge of holy things.”

#### Article 4

##### Does the third beatitude, viz., “Blessed are they who mourn, for they shall be comforted,” correspond to [the gift of] knowledge?

It seems that the third beatitude, viz., “Blessed are they who mourn, for they shall be comforted,” does not correspond to [the gift of] knowledge:

**Objection 1:** Just as evil is a cause of sadness and mourning, so, too, good is a cause of joy. But through [the gift of] knowledge what is principally made known are goods more than evils, which are known through the goods; for as *De Anima* 1 says, “What is straight is the judge both of itself and of what is crooked.” Therefore, the beatitude in question does not appropriately correspond to [the gift of] knowledge.

**Objection 2:** The act of knowledge is the consideration of truth. But there is no sadness in the consideration of truth; rather, there is great joy, since Wisdom 8:16 says, “Her conversation has no bitterness, nor her company any tedium, but joy and gladness.” Therefore, the beatitude in question does not appropriately correspond to the gift of knowledge.

**Objection 3:** The gift of knowledge consists in speculation before action. But insofar as it consists in speculation, it “says nothing about what is imitable and what is to be avoided,” as *De Anima* 3 says. Therefore, neither does it say anything joyful or sad. Therefore, the beatitude in question is not appropriately posited as corresponding to the gift of knowledge.

**But contrary to this:** In *De Sermone Domini in Monte* Augustine says, “Knowledge belongs to mourners, who have learned which evils they have been conquered by that they had sought as goods.”

**I respond:** Correct judgment about creatures properly pertains to knowledge. But a man is

sometimes turned away from God by creatures—this according to Wisdom 14:11: “Creatures have become an abomination and a snare to the feet of the unwise,” i.e., to the feet of those who do not have right judgment with respect to creatures, thinking that their perfect good lies in them. Hence, setting creatures up as their end, they sin and lose the true good.

Now this loss is made known to a man through correct judgment with respect to creatures, which is had through the gift of knowledge. And this is why the [third] beatitude, which has to do with mourning, is said to correspond to the gift of knowledge.

**Reply to objection 1:** Created goods do not excite spiritual joy except to the extent that they are referred to the divine good, from which spiritual joy properly arises. And so spiritual peace, and the consequent joy, correspond directly to the gift of wisdom.

On the other hand, what corresponds to the gift of knowledge is, first of all, mourning over past mistakes and, after that, consolation, when a man orders creatures toward the divine good through the right judgment of knowledge. And so in the beatitude in question mourning is posited as the *merit*, and the consequent consolation is posited as the *reward*, which begins in this life and is brought to perfection in the future life.

**Reply to objection 2:** A man rejoices over the consideration of truth, but he can sometimes be saddened by the reality about which he is considering the truth. And this is why mourning is attributed to knowledge.

**Reply to objection 3:** No beatitude corresponds to [the gift of] knowledge insofar as knowledge consists in speculation, since a man’s beatitude consists in the contemplation of God and not in the consideration of creatures. However, a man’s beatitude does in some sense consist in the appropriate use of creatures and in well-ordered affections with respect to creatures—here I am talking about the sort of beatitude that belongs to the present life.

And so no beatitude that pertains to contemplation is attributed to [the gift of] *knowledge*; instead, those beatitudes are attributed to [the gifts of] *understanding* and *wisdom*, which have to do with divine things.

## QUESTION 10

### Unbelief in General

Next we have to consider the opposed vices: first, unbelief (*infidelitas*), which is opposed to faith (questions 10-12); second, blasphemy (*blasphemia*), which is opposed to confessing [the Faith] (questions 13-14); and, third, ignorance (*ignorantia*), which is opposed to [the gifts of] knowledge and understanding (question 15).

As regards [unbelief], we have to consider unbelief in general (question 10); second, heresy (*haeresis*) (question 11); and, third, apostasy from the Faith (*apostasia a fide*).

On the first topic there are twelve questions: (1) Is unbelief a sin? (2) In what does unbelief exist as in a subject? (3) Is unbelief the greatest of sins? (4) Is every action of a non-believer a sin? (5) What are the species of unbelief? (6) How are the species of unbelief related to one another? (7) Should one dispute with non-believers about the Faith? (8) Should non-believers be compelled to the Faith? (9) Should [the faithful] commune with non-believers (*utrum sit eis communicandum*)? (10) Can non-believers be in charge of the Christian faithful (*possint Christianis fidelibus praeesse*)? (11) Should the rites of non-believers be tolerated? (12) Should the children of non-believers be baptized against their parents' wishes?

### Article 1

#### Is unbelief a sin?

It seems that unbelief (*infidelitas*) is not a sin:

**Objection 1:** As is clear from Damascene in *De Fide Orthodoxa* 2, every sin is contrary to nature. But unbelief does not seem to be contrary to nature; for in *De Praedestinatione Sanctorum* Augustine says, "The ability to have faith, just as the ability to have charity, belongs to the nature of men, but having faith or having charity belongs to the grace of the faithful." Therefore, not having faith, i.e., being a non-believer, is not a sin.

**Objection 2:** No one sins in what he is unable to avoid, since every sin is voluntary. But it does not lie within a man's power to avoid unbelief, which one cannot avoid except by having faith; for in Romans 10:14 the Apostle says, "How will they believe Him of whom they have not heard? And how will they hear without someone to preach to them?" Therefore, unbelief does not seem to be a sin.

**Objection 3:** As was explained above (*ST* 1-2, q. 84, a. 4), there are seven capital vices to which all sins are traced back. But unbelief does not seem to fall under any of them. Therefore, unbelief is not a sin.

**But contrary to this:** What is contrary to a virtue is a vice. But faith is a virtue, and unbelief is contrary to it. Therefore, unbelief is a sin.

**I respond:** 'Unbelief' can be taken in two ways:

In one way, as a *pure negation*, so that someone is called a non-believer from the mere fact that he does not have faith.

In the second way, unbelief can be understood as *having contrariety with respect to the Faith* (*secundum contrarietatem ad fidem*), viz., because someone refuses to hear about the Faith or even disdains it—this according to Isaiah 53:1 ("Who has believed our report?"). This contrariety is what properly brings the character of unbelief to completion, and it is in this sense that unbelief is a sin.

By contrast, if unbelief is taken as a pure negation, as in the case of those who have never heard of the Faith, then it has the character not of a *sin*, but rather of a *punishment*, since this sort of ignorance of divine things follows from the sin of the first parent. Those who are non-believers in this sense are damned because of other sins, which cannot be remitted without faith, but they are not damned because of the sin of unbelief. Hence, in John 15:22 our Lord says, "If I had not come and spoken to them, they

would not have sin.” In commenting on this passage Augustine says, “He is talking about that sin by which they did not believe in the Christ.”

**Reply to objection 1:** Having faith does not belong to human nature (*non est in natura humana*), but it does belong to human nature that a man’s mind should not reject its interior instinct for the truth or the exterior preaching of the truth. Hence, unbelief is in this sense contrary to nature.

**Reply to objection 2:** This argument is talking about unbelief insofar as it implies a simple negation.

**Reply to objection 3:** Insofar as unbelief is a sin, it stems from pride (*superbia*), because of which it happens that a man wills not to subject his intellect to the rules of the faith and the sound understanding that belongs to the Fathers. Hence, in *Moralia* 31 Gregory says, “The presumption that belongs to novelties arises from vainglory.”

However, one could reply that just as the theological virtues are not reduced to the cardinal virtues but are instead prior to them, so, too, the vices opposed to the theological virtues are not reduced to the capital vices.

## Article 2

### Does unbelief exist in the intellect as in a subject?

It seems that unbelief does not exist in the intellect as in a subject:

**Objection 1:** As Augustine says in *De Duabus Animabus*, every sin exists in the will. But as has been explained (a. 1), unbelief is a sin. Therefore, unbelief exists in the will and not in the intellect.

**Objection 2:** Unbelief has the character of a sin from the fact that the preaching of the Faith is disdained (*praedicatio fidei contemnitur*). But disdain (*contemptus*) belongs to the will. Therefore, unbelief exists in the will.

**Objection 3:** A Gloss on 2 Corinthians 11:14 (“Satan transforms himself into an angel of light”) says, “If a bad angel pretends to be good, then even if he is believed to be good, it is not a dangerous or unhealthy error, as long as the angel says and does things that befit a good angel.” The explanation for this seems to be the rectitude of will of the one who clings to him, given that he intends to cling to a good angel. Therefore, the whole sin of unbelief seems to lie in a perverse will. Therefore, unbelief does not exist in the intellect as in a subject.

**But contrary to this:** Contraries exist in the same subject. But faith, which unbelief is contrary to, exists in the intellect as in a subject. Therefore, unbelief likewise exists in the intellect.

**I respond:** As was explained above (*ST* 1-2, q. 74, aa. 1-2), a sin is said to exist in the power that is a principle of the sin. But a sinful act can have two principles:

One is a *first and general principle* (*primum et universale*) that *commands* all sinful acts; and this principle is the *will*, since every sin is voluntary.

The other principle of a sinful act is the *proximate and proper principle* (*proprium et proximum*) that *elicits* the sinful act. For instance, the concupiscible power is the principle of acts of gluttony and lust, and, accordingly, gluttony and lust are said to exist in the concupiscible power.

Now the act of dissenting (*dissentire*), which is the proper act of unbelief, is, like the act of assenting, an act of the intellect but as moved by the will. And so unbelief, like belief, exists in the intellect as in its proximate subject, but in the will as in its first mover (*sicut in primo motivo*). And it is in this sense that every sin exists in the will.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** The will’s disdain causes the intellect’s dissent, in which the character of unbelief is brought to completion. Hence, the cause of unbelief exists in the will, but the unbelief itself

exists in the intellect.

**Reply to objection 3:** One who believes that a bad angel is good does not dissent from what belongs to the Faith. For as a Gloss on that same passage says, “His body’s sensory power makes a mistake, but his mind does not withdraw from a true and correct judgment.”

By contrast, if he were to cling to Satan when he began to be led toward Satan’s own things, i.e., toward what is evil and false, then, as it says in the same place, he would not be lacking in sin.

### Article 3

#### Is unbelief the greatest of sins?

It seems that unbelief is not the greatest of sins (*non sit maximum peccatorum*):

**Objection 1:** Augustine says (and this is contained in *Decretals* 5, q. 1), “I dare not rush to judgment about whether we should prefer a Catholic with very bad morals to a heretic in whose life men find nothing reprehensible beyond the fact that he is a heretic.” But a heretic is a non-believer. Therefore, one should not claim without qualification (*simpliciter*) that unbelief is the greatest of sins.

**Objection 2:** What diminishes or excuses a sin does not seem to be the greatest sin. But unbelief excuses or diminishes a sin; for in 1 Timothy 1:13 the Apostle says, “I was a blasphemer before, and a persecutor and insolent; but I obtained mercy because I did it ignorantly in unbelief.” Therefore, unbelief is not the greatest sin.

**Objection 3:** A greater sin should deserve a greater punishment—this according to Deuteronomy 25:2 (“According to the measure of the sin shall the measure also of the stripes be”). But the punishment is owed to believers who sin is greater than that owed to non-believers—this according to Hebrews 10:29 (“How much more, do you think, he deserves worse punishments, who has trampled on the Son of God, and has reckoned the blood of the covenant unclean, by which he was sanctified?”). Therefore, unbelief is not the greatest sin.

**But contrary to this:** In commenting on John 15:22 (“If I had not come and spoken to them, they would not have sin”) Augustine says, “He means a great sin to be understood here by the general name ‘sin’. For this is a sin [read: unbelief] by which all sins are bound together.” Therefore, unbelief is the greatest of all sins.

**I respond:** As was explained above (*ST* 1-2, q. 71, a. 6), every sin consists formally in a turning away from God (*consistit in aversione a Deo*). Hence, the more a man is separated from God by a given sin, the more grave the sin is.

Now a man is especially (*maxime*) distanced from God by unbelief, since he does not have a true cognition of God, and through his false cognition of Him he is more distanced from Him and does not approach Him. Nor is it possible for one who has a false opinion about God to understand Him in any respect; for what he has an opinion about is not God.

Hence, it is clear that the sin of unbelief is greater than any of the sins that involve moral perversity (*maius omnibus peccatis quae contingunt in perversitate morum*). However, as will be explained below (q. 34, a. 2 and q. 39, a. 2), this does not hold in the case of sins that are opposed to the other theological virtues.

**Reply to objection 1:** Nothing prevents a sin from being more grave in its genus but less grave because of certain circumstances. It is because of this that Augustine does not want to rush to judgment about the bad Catholic and the heretic who does not commit other sins. For even if the heretic’s sin is more grave in its genus, it can nonetheless be extenuated by some circumstance, and, conversely, the Catholic’s sin can be aggravated by some circumstance.

**Reply to objection 2:** Unbelief has both (a) an ignorance conjoined to it and also (b) a resistance

to what belongs to the Faith, and it is on this last score that it has the character of a very grave sin. By contrast, on the part of the ignorance it has the character of an excuse (*habet rationem excusationis*), and especially when, as was the case with the Apostle, one does not sin out of malice.

**Reply to objection 3:** Just considering the genus of the sin, a non-believer is punished more gravely for the sin of unbelief than another sinner is punished for any other sin. However, in the case of some other sin, e.g., adultery, if this sin is committed by a believer and by a non-believer, then, all other things being equal, the believer sins more gravely than does the non-believer, both because of the knowledge of the truth he has from the Faith, and also because of the sacraments of the Faith with which he has been imbued and which he shows contempt for by sinning.

#### Article 4

##### Is every action of a non-believer a sin?

It seems that every action of a non-believer is a sin:

**Objection 1:** A Gloss on Romans 14:23 (“Everything that is not of faith is sin”) says, “The whole life of the non-believer is a sin.” But everything that non-believers do belongs to their life. Therefore, every action of a non-believer is a sin.

**Objection 2:** Faith directs one’s intention. But there cannot be anything good that is not from an upright intention. Therefore, in the case of non-believers, no action can be good.

**Objection 3:** When what is prior is corrupted, what is posterior is corrupted. But the act of faith is prior to the acts of all the virtues. Therefore, since there is no act of faith in non-believers, they cannot do any good work, but instead they sin in each of their acts.

**But contrary to this:** It is said (Acts 10:4) that while Cornelius was still a non-believer, his almsgiving was acceptable to God (*acceptae erant Deo elemosynae eius*). Therefore, not every action of a non-believer is a sin, but some of his actions are good.

**I respond:** As was explained above (*ST* 1-2, q. 85, aa. 2 and 4), a mortal sin removes sanctifying grace (*tollit gratiam gratum facientem*) but does not totally corrupt the good of the nature. Hence, since unbelief is a mortal sin, non-believers do, to be sure, lack grace, and yet some good of the nature remains in them.

Hence, it is clear that non-believers cannot do good works that stem from grace, i.e., meritorious works, and yet they can in some way do good works for which the good of the nature is sufficient. Thus, it does not have to be the case that they sin in each of their actions; however, whenever they do a work that stems from their unbelief (*ex infidelitate*), then they sin. For just as someone who has faith can sometimes commit a sin in an act which he does not refer to faith as an end—and this by sinning venially or even mortally—so, too, a non-believer can effect a good act in a matter which he does not refer to unbelief as an end.

**Reply to objection 1:** This passage should be taken to mean either that (a) a non-believer’s life cannot be without sin, since sins are not removed without faith, or that (b) whatever non-believers do out of unbelief is a sin. Hence, in the same place this is added: “... since everyone living or acting with unbelief (*infideliter vivens vel agens*) sins grievously.”

**Reply to objection 2:** Faith directs one’s intention with respect to the ultimate supernatural end. But even the light of natural reason can direct one’s intention with respect to some connatural end.

**Reply to objection 3:** Natural reason is not totally corrupted in non-believers in such a way that there remains in them no cognition of the truth by which they are able to do works that are good in their genus.

**Reply to argument for the contrary:** As for Cornelius, note that he was not a non-believer;

otherwise, his act would not have been acceptable to God, whom no one can please without faith. To the contrary, he had implicit faith (*habebat fidem implicitam*) at the time when the truth of the Gospel had not yet been made clear to him. Hence, Peter is sent to him in order to instruct him fully in the Faith.

## Article 5

### Are there several species of unbelief?

It seems that there are not several species of unbelief:

**Objection 1:** Since faith and unbelief are contraries, they must have to do with the same thing. But the formal object of faith is the First Truth, from which faith has its oneness, even though it believes many things materially. Therefore, the object of unbelief is likewise the First Truth, whereas the things that the unbeliever disbelieves are related materially to unbelief. But a specific difference (*differentia secundum speciem*) has to do with formal principles and not with material principles. Therefore, there are not diverse species of unbelief corresponding to the diversity of the things about which non-believers are mistaken.

**Objection 2:** There are infinitely many ways in which someone can deviate from the truth of the Faith. Therefore, if diverse species of unbelief are assigned in a way corresponding to the diversity of the errors, it seems to follow that there are infinitely many species of unbelief. And so species of this sort should not be taken account of.

**Objection 3:** The same being does not exist in diverse species. But it is possible for someone to be a non-believer by being mistaken about diverse things. Therefore, a diversity of errors does not make for diverse species of unbelief. So, then, there are not several species of unbelief.

**But contrary to this:** There are several species of vice opposed to each virtue; for, as is clear from Dionysius, *De Divinis Nominibus*, chap. 4 and from the Philosopher in *Ethics 2*, “Good occurs in one way, whereas evil occurs in many ways.” But faith is a virtue. Therefore, there are several species of unbelief is opposed to it.

**I respond:** As was explained above (*ST 1-2*, q. 64), every virtue consists in being conformed to some rule of human cognition or operation (*consistit in hoc quod attingat regulam aliquam cognitionis vel operationis humanae*). Now there is a single way to be conformed to a rule with respect to a single subject matter, whereas there are many ways in which one can deviate from the rule. And this is why many vices are opposed to a single virtue.

Now there are two possible ways to think of the diversity of the vices that are opposed to each virtue:

In one way, *according to their diverse relations to the virtue*. On this score, there are certain determinate species of vices that are opposed to the virtue, in the way that one vice is opposed to a moral virtue because of excess with respect to the virtue and another vice is opposed by falling short of the virtue.

In the second way, the diversity of vices opposed to a given virtue can be thought of as involving *the corruption of the diverse things that are required for the virtue*. On this score, infinitely many vices are opposed to a single virtue, e.g., temperance or fortitude, since there are infinitely many ways for the diverse circumstances of the virtue to be corrupted in such a way as to recede from the virtue’s rectitude. This is why the Pythagoreans claimed that evil is infinite.

So, then, one should reply that if unbelief is thought of in comparison with faith, then the species of unbelief are diverse and determinate in number. For since the sin of unbelief consists in resisting the Faith (*consistat in renitendo fidei*), there are two ways in which this can happen. For either (a) one resists the Faith when the Faith has not already been accepted, and this is the unbelief of the pagans and

gentiles, or (b) one resists the Christian Faith after it has been accepted either (i) in its prefiguration, and this is the unbelief of the Jews, or (ii) in the very manifestation of the truth, and this is the unbelief of the heretics. Hence, these three species of unbelief can be assigned in general.

On the other hand, if the species of unbelief are distinguished by errors in the diverse matters which pertain to the Faith, then the species of unbelief are not determinate, since, as is clear from Augustine in *De Haeresibus*, the errors can be multiplied *ad infinitum*.

**Reply to objection 1:** There are two possible ways to understand the formal character of a given sin:

In one way, according to *the intention of the sinner*, and in this sense what the sinner is *turning toward* is the formal object of the sin, and its species are differentiated by this.

In the second way, according to *the character of the evil*, and in this sense the good that the sinner is *withdrawing from* is the formal object of the sin. But on this score a sin does not have a species; indeed, this is a privation of a species.

So, then, one should reply that the formal object of unbelief in the sense of that *from which* unbelief is withdrawing is the First Truth. However, its formal object in the sense of that *toward which* it is turning is the false judgment which it follows, and it is on this score that its species are diversified. Hence, just as charity is a single virtue that adheres to the highest good, whereas there are diverse vices opposed to charity, which withdraw from the highest good by turning toward diverse temporal goods and, again, in accord with diverse disordered relations to God, so, too, faith is a single virtue because of which one adheres to the First Truth, but the species of unbelief are many, because non-believers follow diverse false judgments.

**Reply to objection 2:** This objection is talking about the distinction among the species of unbelief that corresponds to the diverse things in which one is mistaken.

**Reply to objection 3:** Just as faith is one because it believes many things in relation to one thing, so unbelief is one even if there are many things in which it errs, insofar as it has a relation to one thing. But nothing prevents a man from erring by diverse species of unbelief, just as it is likewise possible for one man to be subject to diverse vices or diverse corporeal sicknesses.

## Article 6

### Is the unbelief of the gentiles or pagans more grave than the others?

It seems that the unbelief of the gentiles or pagans is more grave than the others:

**Objection 1:** Just as a corporeal sickness is more grave to the extent that it is contrary to the health of a more important bodily member, so a sin seems to be more grave to the extent that it is contrary to what is more important in a virtue. But what is more important in faith is the faith in God's oneness, which the gentiles fall short of because they believe in a multitude of gods. Therefore, their sort of unbelief is the most grave.

**Objection 2:** Among the heretics, the heresy of some is more detestable to the extent that they contradict the truth of the Faith in more ways and in more important ways—in the way that the heresy of Arius, which separated off the divine nature [from Christ], was more detestable than the heresy of Nestorius, which separated off the human nature from the person of the Son of God. But the gentiles recede from the Faith in more ways and in more important ways than do the Jews and the heretics, because the gentiles accept nothing at all of the Faith. Therefore, their unbelief is the most grave.

**Objection 3:** Every good diminishes evil. But there is some good in the Jews, because they confess that the Old Testament is from God; and there is likewise some good in the heretics, because they venerate the New Testament. Therefore, [the Jews and the heretics] sin less than do the gentiles, who

detest both Testaments.

**But contrary to this:** 2 Peter 2:21 says, “It would have been better for them not to know the way of justice, than to turn back after having known it.” But the gentiles did not know the way of justice, whereas the heretics and Jews in some sense deserted it knowingly (*cognoscentes*). Therefore, their sin is the more grave.

**I respond:** As was explained above (a. 5), there are two things to consider in unbelief:

One of them is *the relation of unbelief to the Faith*. And on this score someone who resists the Faith which he has already accepted sins more gravely than someone who resists the Faith without ever having accepted it, just as someone who does not fulfill what he has promised sins more gravely than if he does not fulfill what he never promised. Accordingly, the unbelief of heretics, who profess the Faith of the Gospel and resist it by corrupting it, sin more gravely than the Jews, who never accepted the Faith of the Gospel. But because they accepted its prefigurement in the Old Law, which they corrupted by badly interpreting it, it likewise follows that their unbelief is a graver sin than the unbelief of the gentiles, who did not in any way accept the Faith of the Gospel.

The other thing to consider in unbelief is *the corruption of what belongs to the Faith*. And on this score, since the gentiles err in more things than the Jews, and the Jews in more things than the heretics, the unbelief of the gentiles is worse than that of the Jews, and the unbelief of the Jews is worse than that of the heretics—except perhaps of certain heretics, e.g., the Manicheans, who also err with respect to what is to be taken on faith more than the gentiles do.

However, of these two sorts of graveness it is the first that preponderates over the second with respect to the character of guilt. For as was explained above (a. 1), unbelief has the character of a sin more from the fact that it resists the Faith than from the fact that it does not hold what belongs to the Faith. For, as was explained above (a. 1), the latter sort of unbelief seems to have more of the character of a punishment (*hoc videtur magis ad rationem poenae pertinere*); hence, absolutely speaking, the unbelief of the heretics is the worst.

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the reply to the objections.

## Article 7

### Should one dispute in public with non-believers?

It seems that one should not dispute in public with non-believers:

**Objection 1:** 2 Timothy 2:14 says, “Do not contend with words. For it is of no use except for subverting the listeners.” But one cannot have a public disputation with non-believers without verbal contention. Therefore, one should not dispute in public with non-believers.

**Objection 2:** The law of Marcianus Augustus, confirmed by the canons, says this: “It is an insult to the judgment of the most religious synod, if anyone ventures to debate or dispute in public about matters which have once been judged and rightly disposed.” But everything that belongs to the Faith has been determined by the holy Councils. Therefore, if anyone presumes to dispute in public about the things that belong to the Faith, then he sins gravely by insulting the synod.

**Objection 3:** A dispute is carried on by means of arguments. But an argument is a line of reasoning that effects faith about a doubtful matter. Now since what belongs to the Faith is most certain, it should not be given over to doubt. Therefore, one should not dispute in public about what belongs to the Faith.

**But contrary to this:** Acts 9 says, “Saul grew in strength and confounded the Jews” (9:22) and “He spoke to the gentiles and disputed with the Greeks” (9:29).

**I respond:** In disputing about the Faith, there are two things that should be considered, one on the part of *the one who is disputing* and the other on the part of *those who are listening*.

On the part of *the one who is disputing*, his intention must be considered. For if he is disputing as one who doubts the Faith, and if he is not presupposing the truth of the Faith as something certain but intends to put the Faith to the test with his arguments, then there is no question that he sins as one who is doubtful about the Faith and a non-believer. By contrast, if someone is disputing about the Faith in order to refute errors, or even in order to exercise his faith, then this is praiseworthy.

On the part of *those who are listening*, one has to consider whether those who are listening to a disputation are instructed and firm in the Faith, or whether they are untutored and faltering in their faith (*simplices et in fide titubantes*). There is no danger in disputing about the Faith in the presence of the wise who are firm in their faith. But as regards the untutored, a distinction must be drawn. For either (a) they are being stirred up or pressured by non-believers (*sollicitati sive pulsati ab infidelibus*), e.g., Jews or heretics or pagans, who are trying to corrupt their faith, or (b) they are not in any way being stirred up for this purpose, as in lands in which there are no non-believers. In the first case, it is necessary to dispute in public about the Faith, as long as there are some who are sufficient for this and suited to it and who can refute the errors. For the untutored will thereby be strengthened in their faith, and the ability of the non-believers to deceive them will be undermined; moreover, the very silence of the ones who should be resisting those who subvert the truth of the Faith would be a confirmation of their error. Hence, in *Pastoralis 2* Gregory says, “Just as incautious speech leads to error, so indiscreet silence abandons in error those who could have been instructed.” By contrast, in the second case it is very dangerous to publicly dispute about the Faith in the presence of the untutored, whose faith is more firm because they have heard nothing different from those who believe. And so it is not expeditious for them to hear the words of non-believers who are debating against the Faith.

**Reply to objection 1:** The Apostle is not totally prohibiting disputation; rather, he is prohibiting disordered disputation, which is characterized more by verbal contentiousness than by firmness of judgment (*magis fit contentione verborum quam firmitate sententiae*).

**Reply to objection 2:** The law in question prohibits the sort of public disputation about the Faith which proceeds by putting the Faith in doubt, but not the sort of public disputation which is aimed at conserving the Faith.

**Reply to objection 3:** One should dispute about the things that belong to the Faith not by putting them into doubt, but rather for the sake of manifesting their truth and refuting errors. For in order to confirm the Faith, it is sometimes necessary to dispute with non-believers, in some cases by defending the Faith—this according to 1 Peter 3:15 (“Always be ready to satisfy anyone who asks you the reason for the hope and faith that is in you”)—and in some cases in order to convince those who are in error—this according to Titus 1:9 (“... that he might be able to exhort in sound doctrine and to convince the gainsayers”).

## Article 8

### Should non-believers be compelled to the Faith?

It seems that non-believers should in no way be compelled to the Faith:

**Objection 1:** In Matthew 13:28-29 the servants of the householder in whose field the weeds had been sown asked him, “Do you want us to go and gather up the weeds?” And he replied, “No, lest in gathering up the weeds, you uproot the wheat with them.” Chrysostom comments on this passage, “Our Lord said this in order to forbid killings from being perpetrated. Neither should you kill heretics, since if you kill them, then many of the saints will necessarily be destroyed along with them.” Therefore, it

seems that, by parity of reasoning, neither should any non-believers be compelled to the Faith.

**Objection 2:** In *Decretals* 45 it says, “Concerning the Jews, the holy synod commands that from now on no one should use force to make them believe.” Therefore, by parity of reasoning, neither should other non-believers be compelled to the Faith.

**Objection 3:** Augustine says that it is possible for an unwilling man to do other things, but that it is impossible for him to have faith unless he wills to. But the will cannot be coerced. Therefore, it seems that non-believers should not be compelled to the Faith.

**Objection 4:** Ezechiel 18:23 says under the personage of God, “I do not wish the death of the sinner.” But as was explained above (*ST* 1-2, q. 19, aa. 9 and 10), we ought to conform our will to God’s will. Therefore, we likewise should not will that non-believers be killed.

**But contrary to this:** Luke 14:23 says, “Go out into the roads and hedges and compel them to enter, in order that my house might be filled up.” But men enter into the house of God, i.e., into the Church, through faith. Therefore, some should be compelled to the Faith.

**I respond:** There are some, like the gentiles and Jews, who have never accepted the Faith. And such individuals should in no way be compelled to the Faith in order that they might believe, since having faith belongs to the will. However, they should be compelled by the faithful, if it is possible, not to impede the Faith by their blasphemies or evil persuasions or even by open persecutions. And for this reason Christ’s faithful frequently make war against non-believers—not, to be sure, in order to compel them to have faith (since even if they were to conquer them and hold them captive, they would leave it up to their freedom whether they wished to believe), but in order to compel them not to impede the Faith of Christ.

By contrast, there are other non-believers, such as heretics or apostates, who at one time accepted the Faith and professed it. Non-believers such as these should be compelled—even corporeally—to fulfill what they promised and to hold to what they once accepted.

**Reply to objection 1:** As is clear from the quote adduced from Chrysostom, some have interpreted this passage as prohibiting not the excommunication of heretics, but the killing of heretics. And in *Ad Vincentum* Augustine says of himself, “At first it was my view that no one should be forced to be one with Christ, that this should be done with words and fought by means of disputations. However, this opinion of mine is defeated not by the words of those who contradict me, but by the examples of those who convince me. For the fear of laws is so profitable that many say, ‘Thank God, who has broken our chains!’”

Thus, the way in which we should interpret what our Lord said, viz., “Let both grow until the harvest,” is clear from what it is then added, “... lest perhaps in collecting the weeds, they might uproot the wheat along with them.” As Augustine puts it in *Contra Epistolam Parmeniani*, “These words show clearly that when this sort of fear is not present, i.e., when someone’s crime is so widely known and appears so despicable to everyone that he has no defenders at all or, at least, no defenders by whom a schism might be caused, then severity of discipline should not slacken.”

**Reply to objection 2:** If Jews have in no way accepted the Faith, then they should not be compelled to the Faith. However, if they have accepted the Faith, then they must be forced by necessity to retain the Faith, as is stated in the same chapter.

**Reply to objection 3:** Just as vowing belongs to the will, whereas keeping the vow belongs to necessity, so accepting the Faith belongs to the will, but holding to what has already been accepted belongs to necessity. And so heretics should be compelled to hold the Faith. For in *Ad Bonifacium Comitem* Augustine says, “Where is it that they used to cry out, ‘One is free to believe or not to believe. Whom did Christ compel?’ Let them acknowledge that in the case of Paul, Christ first compelled him and afterwards taught him.”

**Reply to objection 4:** As Augustine says in the same letter, “None of us wishes for a heretic to perish. But David’s house would not have deserved to have peace if his son Absalom had not been

snuffed out in the war that he was waging against his father. So, too, if the Catholic Church gathers some because others perish, she heals the sadness of her maternal heart by the liberation of so many peoples.”

## Article 9

### Is it possible to commune [licitly] with non-believers?

It seems that it is possible to commune [licitly] with non-believers:

**Objection 1:** In 1 Corinthians 10:27 the Apostle says, “If a non-believer invites you to dinner and you are willing to go, eat whatever is set before you.” And Chrysostom says, “We permit you, without any prohibition, to eat with pagans if you wish to go.” But to go to dinner with someone is to commune with him. Therefore, it is permissible to commune with non-believers.

**Objection 2:** 1 Corinthians 5:12 says, “What is it to me to judge those who are outsiders?” But non-believers are outsiders (*foris sunt infideles*). Therefore, since it is through the judgment of the Church that the faithful are kept from communing with given individuals, it seems that the faithful should not be kept from communing with non-believers.

**Objection 3:** A master cannot make use of a servant unless he communes with him at least verbally. But Christians can have non-believing servants, whether Jews or pagans or Muslims (*vel Iudaeos vel etiam paganos vel Sacracenos*). Therefore, they can licitly commune with them.

**But contrary to this:** Deuteronomy 7:2-3 says, “You shall enter into no agreement with them or show mercy to them; nor shall you make marriages with them.” And a Gloss on Leviticus 13:22 (“A woman whose monthly time returns ...”) says, “It is necessary to abstain from idolatry, so that we have no contact with idolaters or their disciples, and have no communion with them.”

**I respond:** There are two ways in which communion with some person is forbidden to the faithful: in one way, as a *punishment* for the one who is cut off from communion with the faithful and, in the second way, as a *precaution* for those who are forbidden from communing with the other. And both of these causes can be taken from the Apostle’s words in 1 Corinthians 5. For after he has pronounced the sentence of excommunication, he adds by way of giving a reason, “Do you not know that a little leaven corrupts the whole mass?” And afterwards he adds a reason for the punishment inflicted by the judgment of the Church, when he says, “Do you not pass judgment on those who are insiders (*qui intus sunt*)?”

Therefore, in the *first* way the Church does not forbid the faithful from having communion with those who have in no way accepted the Christian Faith, viz., pagans or Jews, since it is up to them to judge not by a spiritual judgment, but only by a temporal judgment in cases in which pagans or Jews living among Christians commit some crime and are temporally punished by the faithful. By contrast, in this first way, viz., the one having to do with punishment, the Church forbids the faithful to have communion with those non-believers who have strayed from the Faith after having accepted it, either by corrupting the Faith, as in the case of heretics, or even by totally withdrawing from the Faith, as in the case of apostates. For on both of these sorts of non-believers the Church pronounces the sentence of excommunication.

As for the *second* way, on the other hand, it seems that distinctions have to be drawn according to the different conditions of persons, situations, and times. For instance, if certain of the faithful are firm in the Faith, so that from their communing with non-believers there can be more expectation that the non-believers will be converted than that the faithful will turn away from the Faith, then the faithful should not be prohibited from communing with non-believers who have never accepted the Faith, viz., the pagans and the Jews—especially if there is some urgent necessity. On the other hand, if the faithful in question are simple and weak in their faith, so that their subversion can be feared with some probability, then they should be prohibited from communing with non-believers, and especially from

having any great familiarity with them or communing with them in the absence of necessity.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** The Church does not have judgment over non-believers as regards inflicting spiritual punishments on them. However, it does have judgment over some non-believers as regards inflicting temporal punishments. And in this respect the Church does in some cases, because of certain special sins, remove communion with the faithful from certain non-believers.

**Reply to objection 3:** It is more probable that the servant, who is governed by his master's rule, will be converted to the Faith of a faithful master, than vice versa. And so the faithful are not forbidden to have non-believers as servants.

However, if there is an imminent danger to the master posed by his communion with such a servant, then he ought to let him go—this according to our Lord's command in Matthew 5:30 and 18:8 ("If your foot scandalizes you, then cut it off and cast it from yourself").

**Reply to the argument for the contrary:** The Lord gave this command with respect to those gentiles whose lands the Jews were entering. For the Jews were themselves prone to idolatry, and so it was to be feared that through continuous commerce with the gentiles they would be alienated from the Faith. This is why it is added in the same place (Deuteronomy 7:4), "For she will seduce your son, lest he follow me."

## Article 10

### Can non-believers be in charge of or have dominion over the faithful?

It seems that non-believers can be in charge of or have dominion over the faithful (*possit habere praelationem vel dominium supra fideles*):

**Objection 1:** In 1 Timothy 6:1 the Apostle says, "Whoever are servants under the yoke, let them think of their masters as worthy of all honor," and the fact that he is talking about non-believers is clear from what he adds, "But those who have masters who are believers should not despise them." And 1 Peter 2:18 says, "Servants, be subject to your masters with all fear, not only to the good and gentle ones, but also to the irritable ones." But these commands would not be given by apostolic teaching unless non-believers could be in charge of the faithful. Therefore, it seems that non-believers can be in charge of the faithful.

**Objection 2:** Anyone who belongs to the family of a ruler is subject to him. But some of the faithful belonged to the families of non-believing rulers; hence, Philippians 4:22 says, "All the saints greet you, especially those who belong to the household of Caesar," i.e., Nero, who was a non-believer. Therefore, non-believers can be in charge of the faithful.

**Objection 3:** As the Philosopher says in *Politics* 1, a servant is the instrument of his master in those matters that pertain to human life, in the way that the craftsman's assistant is the craftsman's instrument in matters that pertain to carrying out his craft. But in cases such as the latter, a believer can be subject to a non-believer; for instance, it is possible for believers to farm for non-believers. Therefore, non-believers can have authority over the faithful, even with respect to dominion.

**But contrary to this:** It belongs to the one who is in charge to have judgment over those he is in charge of. But non-believers cannot have judgment over the faithful; for in 1 Corinthians 6:1 the Apostle says, "Do any of you, having a matter against another, dare to be judged before the unjust," i.e. non-believers, "and not before the saints?" Therefore, it seems that non-believers cannot be in charge of the faithful.

**I respond:** With respect to this matter there are two possible ways to speak.

In one way, we can talk about a dominion or authority of non-believers over the faithful *that is*

*going to be instituted de novo.* This should in no way be permitted. For it results in scandal and in danger for the Faith, since those who are subject to the jurisdiction of others can easily be changed by those to whom they are subject so as to follow their rule—unless these subjects have great virtue. Similarly, non-believers despise the Faith if they come to recognize the defects of believers; this is why the Apostle forbade the faithful to contend judicially in front of a non-believing judge. And so the Church does not in any way permit non-believers to acquire dominion over the faithful, or to have authority over them in any official position (*in aliquo officio*).

In the second way, we can talk about an *already existing authority or dominion.* Notice here that the dominion and authority have been introduced by human law, whereas the distinction between the faithful and the non-believers comes from divine law. Now divine law, which stems from grace, does not remove human law, which stems from natural reason. And so the distinction between the faithful and the non-believers, considered in its own right, does not remove the dominion and authority of non-believers over the faithful. Yet through the judgment or ordination of the Church, which has the authority of God, such a law of dominion or authority can be justly removed, since non-believers, by virtue of their unbelief, deserve to lose their power over the faithful, who are transformed into children of God.

However, the Church does this at some times and not at others. For instance, in the case of those non-believers who are subject to the Church and its members by a temporal subjection, the law of the Church has decreed that someone who is a servant of Jews, immediately upon becoming a Christian, is freed from servitude with no recompense paid, if he is a ‘vernaculus’, i.e., someone who was born into servitude or, similarly, if he was bought for service while still a non-believer. However, if he was bought to be sold, then he must be offered for sale within three months. The Church inflicts no injury in this, because, given that the Jews are themselves servants of the Church, the Church can dispose of their belongings, just as secular rulers have likewise issued many laws with respect to their subjects in favor of their freedom. By contrast, in the case of non-believers who are not subject temporally to the Church or its members, the Church has not established the law just mentioned, even though *de iure* she could have established it. And she acts in this way to avoid scandal—just as in Matthew 17:24 our Lord showed that He could have excused Himself from paying the tribute because the children [of the king] go free, but nonetheless commanded that the tribute be paid in order to avoid scandal. So, too, with Paul. After he had said that servants should honor their masters, he added, “... lest the name of the Lord and his teaching should be blasphemed.”

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** Caesar’s rule preceded the distinction between the faithful and the non-believers, and so it was not ended by the conversion of some to the Faith. And it was useful for some of the faithful to find a place in the emperor’s family, in order to defend the other faithful, in the way that St. Sebastian strengthened the spirits of the Christians whom he saw to be faltering under torture, even while he was still hiding under his military cloak in the house of Diocletian.

**Reply to objection 3:** Servants are subject to their masters for their whole lives, and they are subject to those who have authority over them with respect to all their dealings. By contrast, the assistants of craftsmen are subject to the craftsmen with respect to certain special actions. Hence, it is more dangerous that non-believers should have dominion or authority over the faithful than it is that they should receive assistance from the faithful in some craft. This is why the Church allows that Christians can cultivate the lands of Jews; for this does not involve the necessity of living with them. As 3 Kings 5:6 reports, Solomon likewise asked the king of Tyre for master workers to cut down trees.

Still, if the subversion of the faithful were feared because of communion or dealings of this sort, it should be altogether forbidden.

## Article 11

### Should the rites of non-believers be tolerated?

It seems that the rites of non-believers should not be tolerated:

**Objection 1:** It is clear that non-believers sin in their rites by observing them. But someone who does not forbid a sin when he is able to forbid it seems to consent to it—as is established in a Gloss on Romans 1:32 (“... not only those who commit [such acts], but also those who consent to those who commit them”). Therefore, those who tolerate their rites commit a sin.

**Objection 2:** The rites of the Jews are comparable to idolatry, since a Gloss on Galatians 5:1 (“Do not be held again under the yoke of servitude”) says, “This servitude of the Law is no lighter than that of idolatry.” But it would not be permissible (*non sustineretur*) for anyone to carry out an idolatrous rite—at the very least, as Augustine reports in *De Civitate Dei* 18, Christian rulers brought about at first the closing of the temples of the idols and afterwards their destruction. Therefore, the rites of the Jews should likewise not be tolerated.

**Objection 3:** As was explained above (a. 3), the sin of unbelief is the gravest of sins. But other sins are not tolerated; rather, adultery, theft and other sins of this sort are punished by law. Therefore, the rites of non-believers should likewise not be tolerated.

**But contrary to this:** Commenting on *Decretals* 45, Canon *Qui sincera*, Gregory says of the Jews, “They should have free license to observe and celebrate all their feasts in the ways in which they worship to this day and in which their fathers worshiped for long ages.”

**I respond:** Human government is derived from divine government and should imitate it. But even though God is almighty and supremely good, He nonetheless permits many bad things to occur in the universe which He could prohibit—lest, if those bad things were suppressed, greater goods should be removed or even worse bad things should follow. As Augustine puts it in *De Ordine* 2, “Remove prostitutes from human affairs, and you will convulse the world with lust.”

So, then, even though non-believers sin in their rites, these rites can be tolerated either for the sake of some good that comes from them or for the sake of some evil that is avoided.

Now the good that comes from the fact that the Jews observe their rites, which in times past prefigured the truth of the Faith that we hold, is that we have testimony for our Faith from our enemies in the sense that what we believe is represented to us in prefiguration. And so the Jews are tolerated in their rites.

As for the rites of other non-believers, which do not involve any truth or usefulness, they should not in any way be tolerated except, perhaps, to avoid something bad—more specifically, to prevent the scandal or discord that might stem from this, or to prevent an obstacle to the salvation of those who might, when thus tolerated, little by little be converted to the Faith. It is for this reason that the Church has at times tolerated the rites even of heretics and pagans, when there was a great number of non-believers.

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the replies to the objections.

## Article 12

### Should the children of Jews and of other non-believers be baptized against their parents’ wishes?

It seems that the children of Jews and of other non-believers should be baptized against their

parents' wishes (*parentibus invitis*):

**Objection 1:** The marriage bond (*vinculum matrimoniale*) is stronger than the right of a father's power (*ius patriae potestatis*), since the right of a father's power can be set aside by man when a son of the family is declared free and independent (*cum filiusfamilias emancipatur*), whereas the marriage bond cannot be dissolved by man—this according to Matthew 19:6 (“What God has joined together, let no man put asunder”). But the marriage bond is dissolved by unbelief; for in 1 Corinthians 7:15 the Apostle says, “If the non-believer leaves, then let him leave; for a brother or sister is not subject to compulsion in such cases” (*non servituti subiectus*). And a canon says, “If a non-believing spouse, without insult to his creator, does not wish to stay with the other, the other spouse does not have to live with him.” Therefore, *a fortiori*, the right of a father's power over his children is removed because of unbelief. Therefore, the children of non-believers can be baptized against their parents' wishes.

**Objection 2:** One is more bound to aid a man because of the danger of eternal death than because of the danger of temporal death. But if someone were to see a man in danger of temporal death and did not help him, he would sin. Therefore, since the children of the Jews and of other non-believers are in danger of eternal death if they are left to their parents, who form them in unbelief, it seems that they should be carried away and baptized and instructed in the Faith.

**Objection 3:** The children of servants are themselves servants and in the power of the master. But Jews are the servants of the kings and the princes. Therefore, so are their children. Therefore, kings and princes have the power to do what they want to with the children of the Jews. Therefore, there will be no injury or injustice (*nulla erit iniuria*) if they baptize them against their parents' wishes.

**Objection 4:** Each man belongs more to God, from whom he has his soul, than to his carnal father, from whom he has his body. Therefore, it is not unjust if the children of the Jews are taken from their carnal parents and consecrated to God through Baptism.

**Objection 5:** Baptism is more efficacious for salvation than preaching is, since through Baptism the stain of sin and the condition of deserving punishment are immediately removed, and the gate of heaven is opened. But if danger follows from a lack of preaching, it is imputed to the one who did not preach—this according to Ezechiel 3:18 and 33:6, in the passage about the one “who saw the sword coming and did not sound the trumpet.” Therefore, *a fortiori*, if the children of the Jews are damned because of a lack of Baptism, it is imputed as a sin to those who could have baptized them and did not baptize them.

**But contrary to this:** Injury or injustice (*iniuria*) should not be done to anyone. But injustice would be done to the Jews if their children were baptized against their wishes, since they would lose a father's right over his now believing children. Therefore, the children should not be baptized against their parents' wishes.

**I respond:** The Church's custom, which is to be emulated in all cases, has the greatest authority. For the teaching of the Catholic doctors itself has its authority from the Church. Hence, one should abide by the authority of the Church more than by the authority of Augustine or Jerome or any of the doctors. Now it has never been the practice of the Church (*Ecclesiae usus numquam habuit*) to baptize the children of the Jews against the wishes of their parents, even though in past times there have been many powerful Catholic rulers, such as Constantine and Theodosius, with whom very holy bishops were on familiar terms, like Sylvester with Constantine and Ambrose with Theodosius, and even though these bishops would in no way have failed to ask the rulers for this favor if it had been consonant with reason. And so it seems dangerous to introduce the assertion *de novo*, as something that lies outside the custom of the Church observed until now, that the children of the Jews should be baptized against the wishes of their parents;

There are two reasons for this:

The first is that it is dangerous to the Faith. For if children who do not yet have the use of reason were to receive Baptism, then afterwards, when they had come of age (*ad perfectam aetatem*

*pervenirent*), they could easily be induced by their parents to abandon what they had received in ignorance, and this would be detrimental to the Faith.

The second reason is that [this practice] conflicts with natural justice. For a child naturally belongs to his father. Indeed, at first he is not distinct in body, for as long as he is carried in his mother's womb. But later, after he has left the womb but before he has the use of reason, he is under his parents' care as under a sort of spiritual womb, because as long as a child does not have the use of reason, he does not differ from a non-rational animal. Hence, just as, in accord with civil law, an ox or a horse belongs to someone in the sense that he uses it when he wants to as his own instrument, so, in accord with natural law, a child, before he has the use of reason, is under the care of his father. Hence, it would be contrary to natural justice if, before a child has the use of reason, he were taken away from the care of his parents or something were ordained for him against his parents' wishes. However, after he has begun to have the use of reason, then he begins to belong to himself (*iam incipit esse suus*) and can provide for himself with respect to those things that belong to divine or natural law. And at that time he should be led toward the faith not by coercion, but by persuasion, and he can even consent to the Faith and be baptized against his parents' wishes—though not before he has the use of reason. Hence, it is said of the children of the fathers of old that “they were saved in the faith of their parents”—which means that it belongs to the parents to provide for their children as regards their salvation, especially before they have the use of reason.

**Reply to objection 1:** In the case of the marriage bond both spouses have the use of free choice and each can assent to the Faith against the wishes of the other. But this has no place in the case of a child before he has the use of reason. However, after he has the use of reason, then the parallel holds if he wishes to convert.

**Reply to objection 2:** No one should be snatched from natural death in a way contrary to the order of civil law. For instance, if someone is condemned to temporal death by his judge, then no one should violently snatch him away. Hence, neither should anyone violate the order of the natural law, by which a child is under the care of his father, in order to free him from the danger of eternal death.

**Reply to objection 3:** The Jews are servants of the rulers by a *civil* servitude, but this does not remove the order of *natural law* or *divine law*.

**Reply to objection 4:** A man is ordered toward God by reason, through which he is able to have cognition of Him. Hence, before a child has the use of reason, he is ordered by a natural ordering toward God through the reason of his parents, to whose care he is naturally subject, and it is according to their disposition that divine things are to be done with respect to him.

**Reply to objection 5:** The danger that follows upon neglected preaching threatens only those to whom the role of preaching has been committed. Hence, in Ezechiel it says before this, “I have given you as a watchman to the children of Israel” (3:17). Now it belongs to the parents of the children of non-believers to provide for their children as regards the sacraments of salvation. Hence, the danger threatens the parents, if, because they have withheld the sacraments, their children suffer the loss of salvation.

## QUESTION 11

### Heresy

Next we have to consider heresy. On this topic there are four questions: (1) Is heresy (*haeresis*) a species of unbelief? (2) What is the subject matter of heresy? (3) Should heretics be tolerated? (4) Should those who revert from heresy be welcomed back [by the Church]?

#### Article 1

##### Is heresy a species of unbelief?

It seems that heresy (*haeresis*) is not a species of unbelief:

**Objection 1:** As was explained above (q. 10, a. 2), unbelief exists in the intellect. But heresy seems to belong not to the intellect but rather to the appetitive power. For Jerome says (and this is in *Decretals* 24, q. 3), “‘Heresy’ (*haeresis*) is taken from the Greek for ‘choice’ (*electio*)—more specifically, that each one chooses for himself that teaching (*eam sibi unusquisque eligat disciplinam*) which he thinks is best.” But as was explained above (*ST* 1 -2, q. 15, a. 1), choosing is an act of the appetitive power. Therefore, heresy is not a species of unbelief.

**Objection 2:** A vice takes its species principally from its end; hence, in *Ethics* 5 the Philosopher says, “He who commits adultery in order that he might steal is more a thief than an adulterer.” But the end of heresy is temporal advantage, especially preeminence and glory, and this pertains to the vice of pride or of covetousness; for in *De Utilitate Credendi* Augustine says, “A heretic is one who, for the sake of temporal advantage, and especially for the sake of glory and preeminence, either produces false and novel opinions or subscribes to them.” Therefore, heresy is a species not of unbelief, but instead of pride.

**Objection 3:** Since unbelief exists in the intellect, it does not seem to belong to the flesh. But heresy belongs to the works of the flesh; for in Galatians 5:19-20 the Apostle says, “The works of the flesh are manifest, which are fornication, uncleanness ...,” and among the others he later adds “dissensions (*dissensiones*) and sects (*sectae*),” which are the same as heresies. Therefore, heresy is not a species of unbelief.

**But contrary to this:** Falsity is opposed to truth. But a heretic is “one who ... either produces false and novel opinions or subscribes to them.” Therefore, heresy is opposed to truth, on which faith is founded. Therefore, it is contained under unbelief.

**I respond:** As has been pointed out, the name ‘heresy’ (*haeresis*) implies a choice (*electionem importat*). But as was explained above (*ST* 1-2, q. 13, a. 3), an act of choosing has to do with the means to an end, with the end presupposed. Now as is clear from what was said above (q. 4, aa. 3 and 5), in the case of the things to be taken on faith, the will assents to something as its proper good. Hence, that which is the principal true thing (*principale verum*) has the character of an ultimate end, while the true things that are secondary (*secundaria*) have the character of the means to that end. But since anyone who takes something on faith assents to someone’s word (*alicuius dicto assentit*), in each case of faith (*in unaquaque credulitate*) the principal true thing and, as it were, the end seems to be *the one whose word is assented to*, whereas the secondary true things are *the things which are such that, by holding to them, one wills to assent to someone*. So, then, one who has Christian faith in the right way assents with his will to Christ in those things that truly belong to His teaching.

Therefore, there are two possible ways in which someone can deviate from the rectitude of Christian faith:

In one way, *by not willing to assent to Christ Himself*, and this individual has, as it were, a bad act of willing with respect to the end itself (*habet quasi malam voluntatem circa ipsum finem*). This is pertinent to the species of unbelief that belongs to the pagans and Jews.

In the other way, the individual intends, to be sure, to assent to Christ, but he *fails in choosing the things by which to assent to Christ*; for he does not choose those things that have truly been handed down by Christ, but instead chooses things which his own mind suggests to him.

And so heresy is the species of unbelief that belongs to those who profess the Faith of Christ but corrupt its dogmas.

**Reply to objection 1:** An act of choosing belongs to unbelief in the way that, as was explained above (q. 2, a. 1), an act of willing belongs to faith.

**Reply to objection 2:** Vices have their species from their *proximate* end, whereas they have their genus and their cause from their *remote* end. For instance, when someone commits adultery in order to steal, here the species *adultery* is taken from the proper end and object, whereas what is revealed by the ultimate end is that the adultery arises from the theft and is contained under it as an effect is contained under its cause or as a species is contained under its genus. This is clear from what was said above about actions in general (*ST* 1-2, q. 18, a. 7).

Similarly, in the case under discussion the proximate end of heresy is adhering to one's own false judgment, and the act has its species from this. On the other hand, what is revealed by the remote end is the cause of heresy, viz., that it arises from pride or from covetousness.

**Reply to objection 3:** Just as 'heresy' comes from 'choosing', so, as Isidore says in *Etymologia*, 'sect' (*secta*) comes from 'sectioning' (*a sectando*), and this is why a heresy and a sect are the same thing. And both belong to the 'works of the flesh'—not, to be sure, with respect to the act itself of unbelief as regards its proximate object, but rather by reason of their cause, which is either (a) a desire for a disordered end, to the extent that they arise, as has been said, from pride or covetousness, or (b) some imaginative illusion, which is a principle of going wrong, as the Philosopher likewise notes in *Metaphysics* 4. Now the imagination in some sense belongs to the flesh, insofar as its act exists with a corporeal organ.

## Article 2

### Does heresy have to do properly with what belongs to the Faith?

It seems that heresy does not have to do properly with what belongs to the Faith:

**Objection 1:** As Isidore points out in *Etymologia*, just as there are heresies and sects among Christians, so, too, there were heresies and sects among the Jews and the Pharisees. But their dissensions did not have to do with what belongs to the Faith. Therefore, heresy does not have to do with what belongs to the Faith as its proper subject matter.

**Objection 2:** The subject matter of the Faith is constituted by the *things* that are believed. But heresy has to do not only with *things*, but also with *words* and the explanations of Sacred Scripture. For instance, Jerome says, "If anyone understands Scripture in a way different from what is urged upon us by the intent of the Holy Spirit (*sensus spiritus sancti*), by whom Scripture was written, then even if he has not withdrawn from the Church, he can still be called a heretic." And in another place he says, "Heresies arise from words spoken irregularly" (*ex verbis inordinate prolatis fit haeresis*). Therefore, heresy does not properly have to do with the subject matter of Faith.

**Objection 3:** Sometimes the sacred doctors disagree even about the things that belong to the Faith—e.g., Jerome and Augustine on the cessation of the observances of the Law (*circa cessationem legalium*). And yet they do this without the vice of heresy. Therefore, heresy does not have to do properly with the subject matter of the Faith.

**But contrary to this:** In *Contra Manicheos* Augustine says, "Those who, in the Church of Christ, savor what is sick and depraved, and if corrected in order that they might savor what is healthy and

upright, do not want to amend their destructive and death-dealing dogmas, but persist in defending them, are the heretics.” But destructive and death-dealing dogmas are nothing other than dogmas that are opposed to the dogmas of the Faith, through which, as Romans 1:17 says, “the just man lives.” Therefore, heresy has to do with what belongs to the Faith as its proper subject matter.

**I respond:** In the present context we are speaking of heresy insofar as ‘heresy’ implies the corruption of the Christian Faith. Now it is irrelevant to the corruption of the Christian Faith if someone holds a false opinion in matters that do not belong to the Faith, e.g., in geometrical matters or others of this sort, which cannot in any way pertain to the Faith. Rather, it is relevant only when someone has a false opinion with respect to the things that belong to the Faith.

As was explained above (q. 1, a. 6, *ad 1*), there are two ways in which something belongs to the Faith: (a) *directly and principally*, such as the articles of the Faith, and (b) *indirectly and secondarily*, such as the things from which the corruption of some article follows. There can be heresy with respect to both of these, just as there is faith with respect to both.

**Reply to objection 1:** Just as the heresies of the Jews and Pharisees had to do with certain opinions pertinent to Judaism or Phariseism, so, too, the heresies of Christians have to do with those things that are pertinent to the Faith of Christ.

**Reply to objection 2:** Someone is said to explain Sacred Scripture “in a way different from the what is urged upon us by the intent of the Holy Spirit” when he twists the explanation of Sacred Scripture to something contrary to what has been revealed by the Holy Spirit. Hence, Ezechiel 13:6 says of the false prophets, “They have persisted in confirming their words,” viz., through false explanations of Scripture. Similarly, it is also through the words which one speaks that he professes the Faith, since, as was explained above (q. 3, a. 1), confessing is an act of faith. And so if there is irregular speech with respect to the things that belong to the Faith, the corruption of the Faith can thereby occur. Hence, in a letter to Proterius, the Bishop of Alexandria, Pope Leo writes, “Since the enemies of the cross of Christ lie in wait for our every word and syllable, let us give them no occasion—not even a slight one—for deceitfully claiming that we agree with the Nestorian understanding.”

**Reply to objection 3:** As Augustine says (and this is contained in *Decretals* 14, q. 3), “If they defend their position, albeit a false and perverse position, without any obstinate animosity, and if they seek the truth with cautious care, and if they are prepared to be corrected, then they should in no way be counted among the heretics.” For, to be more specific, they are not making a choice to contradict the teaching of the Church. So, then, certain doctors seem to have disagreed either (a) with respect to things such that it makes no difference to the Faith whether one holds the one side or the other, or (b) even in certain matters that do belong to the Faith but had not yet been decided by the Church. However, after such matters have been decided by the authority of the universal Church, then if anyone rejected this sort of determination, he would be judged a heretic.

Now this authority resides principally in the Supreme Pontiff (*principaliter residet in summo pontifice*). For *Decretals* 24, q. 1 says, “Whenever the meaning of the Faith is in dispute (*quoties fidei ratio ventilatur*), I think that all our brothers and fellow bishops should turn to none other than Peter, i.e., to the authority of his name. Neither Jerome nor Augustine nor any of the sacred doctors defended his own opinion in opposition to the authority of Peter.” Hence, Jerome says, “This is the faith, most holy Pontiff, that we have learned in the Catholic Church. If anything herein has by chance been asserted with insufficient skill or with too little caution, then we want to be corrected by you, who hold the Faith and the chair of Peter. However, if this our confession meets with the approval of your apostolic judgment, then if anyone wishes to fault me, he will prove himself to be ignorant or malevolent, or even not a Catholic but a heretic.”

### Article 3

#### Should heretics be tolerated?

It seems that heretics should be tolerated:

**Objection 1:** In 2 Timothy 2:24-25 the Apostle says, “The servant of God should be mild-mannered, correcting with modesty those who resist the truth, in the hope that at some time God might grant them the repentance to acknowledge the truth and they might free themselves from the snares of the devil.” But if heretics are not tolerated and are instead handed over to death, the possibility of repenting is removed from them. Therefore, this seems to be contrary to the Apostle’s precept.

**Objection 2:** What is necessary in the Church should be tolerated. But heresies are necessary in the Church; for in 1 Corinthians 11:19 the Apostle says, “There have to be heresies, in order that those who are reprovved might be made manifest to you.” Therefore, it seems that heretics should be tolerated.

**Objection 3:** In Matthew 13:30 the master ordered his servants to let the weeds grow until harvest time—which is the end of the world, as is explained in the same place. But according to the explanation given by the saints, it is heretics who are signified by the weeds. Therefore, heretics should be tolerated.

**But contrary to this:** In Titus 3:10-11 the Apostle says, “After the first and second corrections, avoid the man who is a heretic, knowing that one who is of this sort has been subverted.”

**I respond:** There are two things that should be taken into account concerning heretics, one on their part and the other on the Church’s part:

On the part of the heretics there is a sin in virtue of which they deserve not only to be separated from the Church by excommunication but also to be excluded from the world by death. For it is much more grievous to corrupt the faith, through which the soul has life, than to counterfeit money, through which temporal life is underwritten. Hence, if those who counterfeit money or other malefactors are promptly and justly handed over to death by secular rulers, then, *a fortiori*, heretics, immediately upon being convicted of heresy, are able not only to be excommunicated but to be justly killed as well.

However, on the part of the Church there is mercy or compassion (*miser cordia*), aimed at the conversion of those who go astray. And so the Church condemns them not immediately, but after a first correction and second correction, as the Apostle teaches. After that, however, if the heretic is found to persist in his stubbornness, the Church, having given up hope for the heretic’s conversion (*de eius conversione non sperans*), provides for the salvation of the others by separating the heretic from the Church by the sentence of excommunication, and, beyond that, leaves him to a secular tribunal (*relinquit eum iudicio saeculari*) to be cut off from the world through death. For Jerome says (and this is in *Decretals* 14, q. 3), “Decayed flesh should be cut off, and mangy sheep should be driven from the fold, lest the whole house, the whole lump of dough, the whole body, the whole flock, burn, perish, rot, die. Arius was but one spark in Alexandria, but because that spark was not immediately snuffed out, its flame laid waste to all the world.”

**Reply to objection 1:** What is pertinent to the modesty in question is that the heretic is corrected a first time and a second time. But as is clear from the passage adduced from the Apostle, if he refuses to retract, than he is taken to have been subverted.

**Reply to objection 2:** The advantage that stems from heresies lies outside of the intention of the heretics. For this advantage is, as the Apostle says, that the constancy of the faithful is put to the test, and, as Augustine says, “that we shake off our sluggishness and study the divine Scriptures more carefully.” By contrast, what is intrinsic to their intention is to corrupt the Faith, which involves the greatest harm.

And so one should look at what is *per se* in their intention, so as to exclude them, rather than at what falls outside their intention, so as to put up with them.

**Reply to objection 3:** As it says in *Decretals* 24, q. 3, “Excommunication is one thing, and

eradication is another.” For as the Apostle puts it (1 Corinthians 5:5), someone is excommunicated “in order that his spirit might be saved on the day of the Lord.”

However, even if heretics are eradicated through death, neither is this contrary to our Lord’s command, which should be taken to apply to a case in which it is impossible for the weeds to be extirpated without extirpating the wheat, as was explained above when we were talking about non-believers in general (q. 10, a. 8).

#### Article 4

##### Should those who revert from heresy be welcomed back by the Church in all cases?

It seems that those who revert from heresy should in all cases be welcomed back by the Church (*revertentes ab haeresi sint omnino ab Ecclesia recipiendi*):

**Objection 1:** Jeremiah 3:1 says under the personage of the Lord, “You have fornicated with many lovers, but come back to me, says the Lord.” But the Church’s judgment is God’s judgment—this according to Deuteronomy 1:17 (“You shall hear the lowly as well as the great; neither shall you respect any man’s person, because it is the judgment of God”). Therefore, even if some have fornicated through unbelief, which is spiritual fornication, they should nonetheless be welcomed back.

**Objection 2:** In 18:22 our Lord commanded Peter to forgive his sinning brother not just seven times but “seventy times seven times,” by which He means, according to Jerome’s explanation, that “someone should be forgiven no matter how many times he has sinned.” Therefore, no matter how many times someone sins by relapsing into heresy, he should be taken back by the Church.

**Objection 3:** Heresy is a type of unbelief. But other non-believers who will to be converted are welcomed back by the Church. Therefore, heretics should likewise be welcomed back by the Church.

**But contrary to this:** A decretal says, “Those who, after retracting their error, have fallen back into the heresy they retracted, should be left to a secular tribunal” (*saeculari iudicio sunt reliquendi*). Therefore, they should not be welcomed back by the Church.

**I respond:** In accord with its institution by our Lord, the Church extends her charity to everyone, not only to her friends but also to her enemies and persecutors—this according to Matthew 5:44 (“Love your enemies; do good to those who hate you”).

It pertains to charity that one both will good for one’s neighbor and do good for one’s neighbor. Now there are two sorts of good:

The one is the *spiritual* good, viz., the salvation of the soul, which is what charity mainly has to do with, since this is what everyone should will for another out of charity. Hence, on this score, reverting heretics, no matter how many times they have relapsed, are welcomed back by the Church for repentance, through which the way to salvation is laid out for them.

The other sort of good is that which charity has to do with secondarily, viz., the *temporal* good, including bodily life, worldly possessions, good reputation, and secular and ecclesiastical authority (*dignitas ecclesiastica sive saecularis*). Now we are not bound by charity to will this good for others except in relation to their eternal salvation and the eternal salvation of others. Hence, if some good of this type can pose an obstacle to eternal salvation for many individuals, then it is not necessary for us to will a good of this sort out of charity; just the opposite, we should will that he lack this good, both because eternal salvation is to be preferred to the temporal good, and also because the good of many is to be preferred to the good of a single individual.

Now if reverting heretics were always welcomed back in such a way that their life and other temporal goods were preserved, then this could be detrimental to the salvation of others, both because they might infect the others if they relapsed [into heresy], and also because if they got away without any

punishment, then others might feel more secure in relapsing into heresy (*alii securius in haeresim relaberentur*). For Ecclesiastes 8:11 says, “Because sentence was not passed quickly on the evildoers, the children of men perpetrated evil without fear.”

And so the Church not only welcomes back for repentance those reverting from heresy for the first time, but also preserves their lives, and sometimes restores them by dispensation to the ecclesiastical status that they previously had, if they seem to have been truly converted. One reads that this has been done frequently to promote the good of peace. However, when those who have been welcomed back fall again [into heresy], this seems to be an indication of their inconstancy with respect to the Faith. And so those returning yet again are, to be sure, welcomed back to repentance, but they are nonetheless not freed from the sentence of death.

**Reply to objection 1:** In God’s judgment those who return are always welcomed back, since God scrutinizes hearts and He knows those who are truly returning—but this the Church cannot imitate. Rather, the Church presumes that those who, having been welcomed back, fall [into heresy] again, have not truly reverted [from heresy]. And so she does not deny them the way to salvation, but she does not protect them from the danger of death.

**Reply to objection 2:** Our Lord is speaking to Peter about a sin committed against oneself, which is always to be forgiven, in order to spare the returning brother.

However, He should not be understood to be speaking about a sin committed against one’s neighbor or against God—which, as Jerome points out, it is not up to our discretion to forgive. Rather, in this sort of case a procedure has been established by law that befits the honor of God and the advantage of our neighbors.

**Reply to objection 3:** When other non-believers, who have never accepted the Faith, have not yet been converted to the Faith, they are not showing any sign of inconstancy with respect to the Faith, in the way that relapsed heretics do. And so the arguments are not parallel in the two cases.

## QUESTION 12

### Apostasy

Next we have to consider apostasy. On this topic there are two questions: (1) Does apostasy pertain to unbelief? (2) Should subjects be freed from the dominion of apostate leaders because of their apostasy from the faith?

#### Article 1

##### Does apostasy pertain to unbelief?

It seems that apostasy (*apostasia*) does not pertain to unbelief:

**Objection 1:** That which is a principle of every sin does not seem to pertain to unbelief, since many sins exist without unbelief. But apostasy seems to be a principle of every sin; for Ecclesiasticus 10:14 says, “The beginning of man’s pride is apostasy from God.” And later on it adds, “The beginning of every sin is pride” (10:15). Therefore, apostasy does not pertain to unbelief.

**Objection 2:** Unbelief exists in the intellect. But apostasy seems rather to consist in an exterior act or pronouncement, or even in an interior act of will; for Proverbs 6:12-14 says, “A man that is an apostate, an unprofitable man, walking with a perverse mouth. He winks with his eyes, presses with his foot, speaks with his finger. With a wicked heart he devises evil, and at all times he sows discord.” In addition, if anyone were to circumcise himself or to worship the tomb of Mohammed, he would be considered an apostate. Therefore, apostasy does not pertain directly to unbelief.

**Objection 3:** Since heresy pertains to unbelief, it is a certain determinate species of unbelief. Therefore, if apostasy pertained to unbelief, it would follow that it is a certain determinate species of unbelief. But this does not seem to be the case, given what was said above (q. 10, a. 5). Therefore, apostasy does not pertain to unbelief.

**But contrary to this:** John 6:67 says, “Many of His disciples went back ...,” i.e., apostatized, and our Lord had previously said of them, “There are some of you who do not believe” (6:65). Therefore, apostasy pertains to unbelief.

**I respond:** Apostasy implies some sort of backing away from God (*importat retrocessionem quandam a Deo*). This happens in different ways, corresponding to the different ways in which a man is joined to God. For a man is joined to God, *first*, through *faith*; *second*, through a *fitting and submissive act of willing to obey His commands*; and *third*, through *certain special things pertaining to supererogation*, e.g., religious life, the clerical state, or Holy Orders. If what is later among these is removed, what is prior remains, but not vice versa.

Thus, it is possible for someone to apostatize from God by withdrawing from the religious life that he has professed, or from the Orders that he has received, and this is called ‘apostasy from religious life’ or ‘apostasy from Orders’.

It is likewise possible for someone to apostatize from God through a mental rebellion against God’s commands (*per mentem repugnantem divinis mandatis*).

However, if he withdraws from faith, then he seems to be backing away from God altogether. And so apostasy, simply and absolutely speaking, is that through which one walks away from faith; and this is called ‘apostasy of faithlessness’ (*apostasia perfidei*). And it is in this sense that apostasy, absolutely speaking, pertains to unbelief.

**Reply to objection 1:** This objection is talking about the second sort of apostasy, which implies a act of willing to recoil from God’s commands and which is found in every mortal sin.

**Reply to objection 2:** What pertains to faith is not only the ‘belief of the heart’ (*credulitas cordis*), but also the public declaration of interior faith through words and deeds; for instance, confessing is an act of faith. And, likewise, certain exterior words or works belong to unbelief insofar as they are signs of

unbelief, in the way that what is healthy is a sign of health.

Now even if the adduced passage can be understood to apply to all sorts of apostasy, it nonetheless applies most truly to apostasy from faith. For since faith is the “first foundation of the things to be hoped for,” and since “without faith it is impossible to please God” (Hebrews 11:1 and 6), when faith is removed, nothing profitable (*nihil utile*) for eternal salvation remains in a man. And it is because of this that the passage says, first of all, “The man who is an apostate, an unprofitable man” (*homo apostata vir inutilis*). Faith is also the life of the soul—this according to Romans 1:17 (“The just man lives through faith”). Therefore, just as, when bodily life is removed, all the members and parts of a man withdraw from their fitting disposition, so when the life of justice, which exists through faith, is removed, then disorder appears in all the members: first of all, in the mouth, through which the heart is especially manifested; second, in the eyes; third, in the instruments of movement; and fourth, in the will, which tends toward what is bad. And from this it follows that “he sows discord,” intending to separate others from faith, just as he himself has withdrawn.

**Reply to objection 3:** The species of a quality or form is not diversified by its being the *terminus a quo* or the *terminus ad quem* of a movement, but rather, conversely, the species of the movements follow upon their endpoints.

Now apostasy is related to unbelief insofar as unbelief is the *terminus ad quem* of the movement of one who is withdrawing from faith. Hence, apostasy does not constitute a determinate species of unbelief, but is instead a certain aggravating circumstance of unbelief—this according to 2 Peter 2:21 (“It would have been better for them not to have known the truth than, once having known it, to turn back”).

## Article 2

### Does a ruler, because of his apostasy, lose dominion over his subjects in such a way that they are not obligated to obey him?

It seems that a ruler, because of his apostasy, does not lose dominion over his subjects in such a way that they are not obligated to obey him:

**Objection 1:** Ambrose says, “Even though the Emperor Julian was an apostate, he still had Christian soldiers under him, and when he said to them, ‘Draw your battle line in defense of the republic’, they obeyed him.” Therefore, subjects are not freed from a ruler’s dominion because of his apostasy.

**Objection 2:** An apostate from the Faith is a non-believer. But some holy men have faithfully served non-believing rulers, in the way that Joseph served Pharaoh and Daniel served Nebuchadnezzar and Mordechai served Ahasuerus. Therefore, one should reject the notion that a ruler need not be obeyed by his subjects because of his apostasy from the Faith.

**Objection 3:** Just as one withdraws from God through apostasy from the Faith, so one withdraws from God through any sin whatsoever. Therefore, if rulers lost their right to command believing subjects because of their apostasy from the Faith, then, by parity of reasoning, they would lose it because of other sins. But this is clearly false. Therefore, one should not stop obeying rulers because of their apostasy from the Faith.

**But contrary to this:** Gregory says, “Holding to the statutes of our holy predecessors, we, by our apostolic authority, absolve from their oath those who owe allegiance through loyalty or oath to excommunicated individuals, and we forbid them to maintain loyalty to them in any way until such time as they have made satisfaction.” But as the Decretal *Ad abolendam* states, apostates from the Faith are, like heretics, excommunicated. Therefore, one should not obey rulers who have apostatized from the Faith.

**I respond:** As was explained above (q. 10, a. 10), unbelief is not in its own right incompatible with dominion, because dominion was introduced through the law of the nations, i.e., human law, whereas the distinction between the faithful and the non-believers follows upon divine law, which does not remove human law. However, someone who sins through unbelief can be officially sentenced to lose the right of dominion (*potest sententialiter ius dominii amittere*), as sometimes happens because of sins other than unbelief.

Now it does not belong to the Church to punish unbelief in those individuals who have never accepted the Faith—this according to the Apostle in 1 Corinthians 5:12 (“What is it to me to judge those who are outsiders?”). However, she is able to punish by official determination (*sententialiter*) the unbelief of those who have accepted the Faith. And it is appropriate that they be punished by not being able to rule over the faithful among their subjects, since such rule could lead to a great corruption of the Faith. For as has been explained (a. 1), “A man that is an apostate ... devises evil in his heart and sows discord,” intending to separate men from the Faith. And so as soon as someone is pronounced, by an official sentence, to be excommunicated because of his apostasy from the Faith, then by that very fact his subjects are freed from his dominion and from the oath of fidelity by which they are bound to him.

**Reply to objection 1:** At the time in question, the Church in her youthfulness did not yet have the power to hold rulers in check. And so she tolerated the faithful obeying Julian the Apostate in those matters that were not contrary to the Faith, and this in order that a greater danger to the Faith might be avoided.

**Reply to objection 2:** As has been explained, there is a different line of reasoning for the case of non-believers who have never accepted the faith.

**Reply to objection 3:** As has been explained (a. 1), apostasy from the Faith totally separates a man from God. This does not occur with any other sins.

## QUESTION 13

### Blasphemy

Next we have to consider the sin of blasphemy (*blasphemia*), which is opposed to the act of confessing the Faith (*quod opponitur confessioni fidei*). And we will consider, first, blasphemy in general (question 13) and, second, the sort of blasphemy that is called a sin against the Holy Spirit.

On the first topic there are four questions: (1) Is blasphemy opposed to the act of confessing the Faith? (2) Is blasphemy always a mortal sin? (3) Is blasphemy the greatest of sins? (4) Does blasphemy exist in the damned?

### Article 1

#### Is blasphemy opposed to the act of confessing the Faith?

It seems that blasphemy is not opposed to the act of confessing the Faith (*blasphemia non opponatur confessioni fidei*):

**Objection 1:** To blaspheme is to give expression to some insult or reproach as an affront to the creator (*blasphemare est contumeliam vel aliquod convicium inferre in inuriam creatoris*). But this belongs more to malevolence toward God than to unbelief. Therefore, blasphemy is not opposed to the act of confessing the Faith.

**Objection 2:** A Gloss on Ephesians 4:31 (“Let blasphemy be far removed from you”) says, “[blasphemy], which is perpetrated against the saints or against God. But an act of confessing the Faith seems to have to do only with what pertains to God, who is the object of faith. Therefore, blasphemy is not always opposed to the act of confessing the Faith.

**Objection 3:** Some claim that there are three species of blasphemy, one of which occurs when something that does not befit God is attributed to Him, the second of which occurs when something that befits God is denied of Him, and the third of which occurs when something proper to God is attributed to a creature (*cum attribuitur creaturae quod Deo appropriatur*). And so it seems that blasphemy is directed not only toward God but also toward creatures. But faith has God for its object. Therefore, blasphemy is not opposed to the act of confessing the Faith.

**But contrary to this:** In 1 Timothy 1:13 the Apostle says, “Previously I was a blasphemer and a persecutor.” And later he adds, “I did it ignorantly in my unbelief.” From this It seems that blasphemy pertains to unbelief.

**I respond:** The name ‘blasphemy’ (*blasphemia*) seems to imply the denigration of some excelling goodness and especially of God’s goodness. Now, as Dionysius says in *De Divinis Nominibus*, chap. 1, God is the very essence of goodness. Hence, whatever belongs to God pertains to His goodness, and whatever does not belong to Him is far removed from the character of perfect goodness, which is His essence. Therefore, if anyone either denies of God something that befits Him or asserts of Him something that does not befit Him, then he denigrates God’s goodness.

There are two ways in which this can happen: (a) by a merely intellectual opinion, and (b) by an intellectual opinion joined to an affective hatred—just as, on the opposite side, faith in God is perfected by love of God. Thus, the denigration of God’s goodness is either solely intellectual or affective as well.

If the denigration exists only in the heart, it is *blasphemy of the heart*. But if it proceeds exteriorly into speech, it is *blasphemy of the mouth*, and it is blasphemy of the mouth that is opposed to the act of confessing (... *est oris blasphemia, et secundum hoc blasphemia confessioni opponitur*).

**Reply to objection 1:** One who speaks against God, intending to give expression to a reproach, denigrates God’s goodness not only with respect to the truth of the intellect, but also with respect to a depravity of will that detests God’s honor and impedes it as much as possible. This is consummate blasphemy (*quod est blasphemia perfecta*).

**Reply to objection 2:** Just as God is praised in His saints insofar as the works effected by God in the saints are praised, so, too, blasphemy which is aimed at the saints redounds upon God as a consequence.

**Reply to objection 3:** Diverse species of the sin of blasphemy cannot properly speaking be distinguished by the three things mentioned here. For attributing to God what does not befit him and denying of Him what does befit Him differ only with respect to affirmation and negation. This sort of diversity of habit does not make for distinct species, since it is through the same knowledge that the falsity of affirmations and negations is made known, and it is through the same ignorance that one errs in both affirmations and negations; for as *Posterior Analytics* 1 establishes, the negation is proved through the affirmation. On the other hand, attributing to creatures things that are proper to God seems to amount to the same thing as attributing to God something that does not befit Him. For whatever is proper to God is God Himself, and so to attribute what is proper to God to a creature is to say that God Himself is the same as a creature.

## Article 2

### Is blasphemy always a mortal sin?

It seems that blasphemy is not always a mortal sin:

**Objection 1:** A Gloss on Colossians 3:8 (“Now you should put away ...”) says, “After having prohibited the greater [sins], he now prohibits the lesser sins.” And yet he then adds blasphemy. Therefore, blasphemy is counted among the lesser sins, which are venial sins.

**Objection 2:** Every mortal sin is opposed to some precept of the Decalogue. But blasphemy does not seem to be opposed to any of them. Therefore, blasphemy is not a mortal sin.

**Objection 3:** Sins that are committed without deliberation are not mortal sins, and for this reason first movements are not mortal sins. For, as is clear from what was said above (*ST* 1-2, q. 74, aa. 3 and 10), these first movements precede reason’s deliberation. But blasphemy sometimes occurs without deliberation. Therefore, blasphemy is not always a mortal sin.

**But contrary to this:** Leviticus 24:16 says, “If anyone blasphemes the name of the Lord, let him die the death.” But the punishment of death is inflicted only for a mortal sin. Therefore, blasphemy is a mortal sin.

**I respond:** As was explained above (*ST* 1-2, q. 72, a. 5), a mortal sin is a sin through which a man is separated from the first principle of the spiritual life, which is God’s charity. Hence, whatever is incompatible with charity is by its genus a mortal sin. But blasphemy is by its genus incompatible with God’s charity, since, as has been explained (a. 1), it denigrates God’s goodness, which is the object of charity. And so blasphemy is by its genus a mortal sin.

**Reply to objection 1:** This Gloss should not be understood to be saying that *all* the things that are added are lesser sins. Rather, it should be understood to be saying that since he has expressly mentioned only major sins above, afterwards he adds some lesser sins, among which he also posits certain of the greater sins.

**Reply to objection 2:** Since, as has been explained (a. 1), blasphemy is opposed to the act of confessing the Faith, its prohibition is traced back to the prohibition of unbelief that is understood when it is said, “I am the Lord your God, etc.”

Alternatively, it is prohibited when it is said, “You shall not take the name of your God in vain.” For one who asserts something false about God takes God’s name in vain more than does one who affirms something false in the name of God.

**Reply to objection 3:** There are two ways in which blasphemy can sneak up on someone unawares

without deliberation (*absque deliberatione ex subreptione*):

In one way, when he does not advert to the fact that what he is saying is blasphemous. This can happen when, because of some passion, someone erupts suddenly into words which are suggested by his imagination (*in verba imaginata*) and whose meaning he is not thinking about. In such a case the sin is venial and does not properly have the character of blasphemy.

In a second way, when he adverts to the fact that this is blasphemy, taking into consideration the meaning of the words. And in such a case he is not excused from mortal sin, just as one is not excused from mortal sin if, because of a sudden movement of anger, he kills someone seated next to him.

### Article 3

#### Is blasphemy the greatest sin?

It seems that blasphemy is not the greatest sin:

**Objection 1:** According to Augustine in *Enchiridion*, evil is that which does harm. But the sin of homicide, which extinguishes a man's life, does more harm than does the sin of blasphemy, which cannot inflict any harm on God. Therefore, the sin of homicide is more grave than the sin of blasphemy.

**Objection 2:** Whoever perjures himself invokes God as a witness to a falsehood, and so he seems to assert that God is a deceiver (*ita videtur eum asserere esse falsum*). But not every blasphemer goes so far as to assert that God is a deceiver. Therefore, perjury is a more grave sin than blasphemy.

**Objection 3:** A Gloss on Psalm 74:4-5 ("Lift not up your horn on high") says, "The greatest vice is that making excuses for one's sin (*maximum est vitium excusationis peccati*). Therefore, blasphemy is not the greatest sin.

**But contrary to this:** A Gloss on Isaiah 18:2 ("To a terrible people ...") says, "Compared to blasphemy, every sin is less serious."

**I respond:** As was explained above (a. 1), blasphemy is opposed to the act of confessing the Faith. And so it contains within itself the graveness of unbelief. Moreover, the sin is aggravated if the will's hatred (*si superveniat destestatio voluntatis*) is added to it and, still more, if it breaks out into words—just as the praiseworthiness of faith is augmented by love and by confessing (*augetur per dilectionem et confessionem*). Hence, since, as was explained above (q. 10, a. 3) unbelief is the greatest sin by its genus, it follows that blasphemy is the greatest sin, since it belongs to the same genus and aggravates it.

**Reply to objection 1:** If homicide and blasphemy are compared with respect to the objects in which one sins, then it is clear that blasphemy, which is a sin directly against God, outweighs homicide, which is a sin against one's neighbor. On the other hand, if they are compared with respect to the effect of doing harm, then homicide is weightier, since homicide harms one's neighbor more than blasphemy harms God.

However, as is clear from what was said above (*ST* 1-2, q. 73, 8), since in the assessment of the gravity of a sin the intention of a perverted will is more important than the act's effect, it follows that since blasphemy intends to inflict harm on God's honor, blasphemy is absolutely speaking more grave a sin than homicide is. Yet, as far as punishments are concerned, homicide holds first place among sins committed against one's neighbor.

**Reply to objection 2:** A Gloss on Ephesians 4:31 ("Let blasphemy be far removed from you") says that it is worse to blaspheme than to perjure oneself. For an individual who perjures himself does not, as a blasphemer does, say or think anything false about God; instead, he introduces God as a witness to a falsehood—not as one who thinks that God is a false witness, but as one who hopes that God will not testify about the matter in question through any evident sign.

**Reply to objection 3:** Making excuses for one's sin is a circumstance that aggravates every sin, even blasphemy itself. And it is said to be the greatest sin in the sense that it makes every sin greater.

#### Article 4

##### Do the damned blaspheme?

It seems that the damned do not blaspheme (*damnati non blasphemant*):

**Objection 1:** Some bad individuals are even now restrained from blaspheming because of their fear of future punishments. But the damned are experiencing these punishments and hence abhor them even more. Therefore, the damned are all the more held back from blaspheming.

**Objection 2:** Since blasphemy is the gravest sin, it is maximally demeritorious. But in the future life there is no state of meriting or state of demeriting. Therefore, there will be no place for blaspheming.

**Objection 3:** Ecclesiastes 11:3 says, "In whatever place the tree falls, it shall be there." From this it is clear that after this life neither merit nor sin accrues to a man which he did not have in this life. But many will be damned who in this life were not blasphemers. Therefore, they will not blaspheme in the future life, either.

**But contrary to this:** Apocalypse 16:9 says, "The men were scorched with great heat, and they blasphemed the name of the Lord, who had power over those plagues." A Gloss on this passage says, "Even though those in hell know that they are being punished deservedly, they nonetheless will lament that God has so much power as to inflict plagues on them." But this would be blasphemy in the present life. Therefore, it will be blasphemy in the future life as well.

**I respond:** As has been explained (aa. 1-3), hatred of God's goodness belongs to the character of blasphemy. Now those who are in hell retain their perverted will, which is turned away from God's justice, in loving the things for which they are being punished, and they would will to make use of those things if they could, and they hate the punishments that are being inflicted on them for these sins. Still, they lament the sins that they have committed—not because they hate those sins, but because they are being punished for them.

So, then, this sort of hatred of God's justice in them is the interior blasphemy of the heart. And it is believable that after the resurrection there will also be vocal blasphemy in them, just as there will be vocal praise of God in the saints.

**Reply to objection 1:** Men are deterred from blasphemy in the present life by fear of the punishments which they think they will evade. But the damned in hell do not hope that they will be able to evade the punishments. And so in their despair they are carried away to everything which their perverted will suggests to them.

**Reply to objection 2:** Meriting and demeriting belong to the state of the present life. Hence, in the case of those who are in the present life, good things are meritorious, whereas bad things are demeritorious. However, in the blessed in heaven good things are not meritorious, but instead belong to their reward of beatitude. And, likewise, bad things in those who are damned are not demeritorious, but belong to the punishment of damnation.

**Reply to objection 3:** Anyone who dies in mortal sin brings along with him a will that detests God's justice with respect to something. Accordingly, blasphemy will be able to exist in him.

## QUESTION 14

### Blasphemy, i.e., Sin, Against the Holy Spirit

Next we have to consider specifically the sin of blasphemy against the Holy Spirit (*blasphemia in spiritum sanctum*). And on this topic there are four questions: (1) Is blasphemy against the Holy Spirit, or a sin against the Holy Spirit, the same as a sin done committed from fixed malice? (2) What are the species of sin against the Holy Spirit? (3) Is a sin against the Holy Spirit unforgivable? (4) Can someone sin against the Holy Spirit at the beginning, before he commits any other sins?

#### Article 1

##### Is a sin against the Holy Spirit the same as a sin committed from fixed malice?

It seems that a sin against the Holy Spirit is not the same as a sin committed from fixed malice (*peccatum in spiritum sanctum non sint idem quod peccatum ex certa malitia*):

**Objection 1:** As is clear from Matthew 12:32, a sin against the Holy Spirit is a sin of blasphemy. But not every sin committed from fixed malice is a sin of blasphemy, since it is possible for other types of sin to be committed from fixed malice. Therefore, a sin against the Holy Spirit is not the same as a sin committed from fixed malice.

**Objection 2:** Sins committed from fixed malice are divided off from sins committed from ignorance and sins committed from weakness (cf. *ST* 1-2, qq. 75-78). But as is clear from Matthew 12:32, sins against the Holy Spirit are divided off from sins against the Son of Man. Therefore, sins against the Holy Spirit are not the same as sins committed from fixed malice; for sins whose opposites are diverse are themselves likewise diverse.

**Objection 3:** *Sin against the Holy Spirit* is a certain genus of sin whose species are determinately marked. But *sin committed from fixed malice* is not a special genus of sin; rather, it is a certain general condition or circumstance which can exist with respect to all genera of sins. Therefore, a sin against the Holy Spirit is not the same as a sin committed from fixed malice.

**But contrary to this:** In *Sentences* 2, dist. 43 the Master says, "One who sins against the Holy Spirit is such that the malice pleases him for its own sake." Therefore, a sin committed from fixed malice seems to be the same as a sin against the Holy Spirit.

**I respond:** There are three ways in which authors have talked about sin, or blasphemy, against the Holy Spirit.

The ancient doctors, viz., Athanasius, Hilary, Ambrose, Jerome and Chrysostom, claim that a sin against the Holy Spirit occurs when, literally, something blasphemous is said against the Holy Spirit, regardless of whether 'Holy Spirit' is taken as a name of the *essence* that belongs to the whole Trinity, each person of which is a spirit and holy, or as the *personal* name of one person in the Trinity. And it is in this sense that in Matthew 12 blasphemy against the Holy Spirit is distinguished from blasphemy against the Son of Man. For Christ did some things in a human way (*humanitus*), e.g., by eating and drinking and doing other things of this sort, and He did some things in a divine way (*divinitus*), e.g., by casting out demons, raising the dead, and other things of this sort that He did both by the power of His own divinity and through the operation of the Holy Spirit, with whom He was filled with respect to His humanity. Now the Jews at first uttered blasphemy against the Son of Man, when they claimed that He was "a glutton, a drinker of wine, and a lover of tax collectors" (Matthew 11:19). But afterwards they blasphemed against the Holy Spirit when they attributed to the prince of demons the works that Christ was doing by the power of His own divinity and through the operation of the Holy Spirit. And it is because of this that they are said to have blasphemed against the Holy Spirit.

However, in *De Verbis Domini* Augustine claims that blasphemy, or sin, against the Holy Spirit is final impenitence, viz., when someone persists in mortal sin right up until death. This is effected not

only by the spoken word, but also by the word of the heart and by the ‘word’ of action (*non solum verboris sed etiam verbo cordis et operis*)—not by just one word, but by many. Now this word, so understood, is said to be contrary to the Holy Spirit because it is contrary to the forgiveness of sins, which is effected by the Holy Spirit, who is the charity of the Father and the Son (*qui est caritas patris et filii*). Nor did our Lord say this to the Jews in the sense that they themselves were sinning against the Holy Spirit, since they were not at that time impenitent in their final moments (*nondum enim erant finaliter impenitentes*). Rather, He was admonishing them, lest, by talking in this way, they should arrive at the point at which they would be sinning against the Holy Spirit. And this is the way to understand Mark 3:29-30, where, after He had said, “Whoever blasphemes against the Holy Spirit ...,” the evangelist adds, “For they were saying, ‘He has an unclean spirit’.”

By contrast, others have a different understanding. They claim that sin, or blasphemy, against the Holy Spirit occurs when someone sins against the appropriated goodness of the Holy Spirit (*appropriatum bonum spiritus sancti*), to whom *goodness* is appropriated in the way that *power* is appropriated to the Father and *wisdom* to the Son (cf. *ST* 1, q. 39, aa. 7-8). Hence, they claim that sin against the Father occurs when one sins from *weakness*, sin against the Son occurs when one sins from *ignorance*, and sin against the Holy Spirit occurs when one sins from *fixed malice*, i.e., from the very choice of evil, as was explained above (*ST* 1-2, q. 78, aa. 1 and 3). This happens in two ways:

(a) it happens because of the inclination of a vicious habit, which is called ‘malice’, and in this sense sinning from malice is not the same as sinning against the Holy Spirit;

(b) it happens because, out of contempt, what could have impeded the choice is rejected and removed; for instance, hope is rejected through despair, and fear is rejected through presumption, along with certain other things of this sort, as will be explained below (a. 2). For all these things that impede the choice of a sin are effects of the Holy Spirit in us. And so this is the sense in which sinning from malice is sinning against the Holy Spirit.

**Reply to objection 1:** Just as the act of confessing the Faith consists not only in bearing witness with one’s mouth but also in bearing witness with one’s action (*non solum consistit in protestatione oris, sed etiam in protestatione operis*), so, too, blasphemy against the Holy Spirit can be considered in speech (*in ore*), in the heart (*in corde*), and in action (*in opere*).

**Reply to objection 2:** According to the third explanation, blasphemy against the Holy Spirit is distinguished from blasphemy against the Son of Man insofar as the Son of Man is also the Son of God, i.e., the power of God and the wisdom of God. Hence, on this score sin against the Son of Man is sin from ignorance or sin from weakness.

**Reply to objection 3:** Insofar as it proceeds from the inclination of a habit, sin from fixed malice is not a special sin but a certain general condition of sin. However, insofar as it proceeds from special contempt for the Holy Spirit’s effect in us, it has the character of a special sin; and in this way *sin against the Holy Spirit* is likewise a special genus of sin.

Something similar can be said according to the first explanation.

On the other hand, according to the second explanation, *sin against the Holy Spirit* is not a special genus of sin, since final impenitence can be a circumstance of any genus of sin.

## Article 2

### Is it appropriate to assign six species of sin against the Holy Spirit?

It seems that it is not appropriate to assign six species of sin against the Holy Spirit, viz., despair (*desperatio*), presumption (*praesumptio*), impenitence (*impenitentia*), obstinacy (*obstinatio*), impugning acknowledged truth (*impugnatio veritatis agnitae*), and envy of fraternal grace (*invidentia fraternae*

*gratiae*)—which are the species posited by the Master in *Sentences* 2, dist. 43:

**Objection 1:** To deny (*negare*) God’s justice or mercy belongs to unbelief. But it is through despair that one rejects (*reiicit*) God’s mercy, whereas it is through presumption that one rejects His justice. Therefore, each of the two is a species of unbelief rather than a species of sin against the Holy Spirit.

**Objection 2:** Impenitence seems to have to do with past sin, whereas obstinacy seems to have to do with future sin. But *past* and *future* do not diversify species of virtue or vice; for instance, it is by the same faith that we believe that Christ *has been* born and that the ancients believed that He *would be* born. Therefore, obstinacy and impenitence should not be posited as two species of sin against the Holy Spirit.

**Objection 3:** As John 1:17 says, “Truth and grace came through Jesus Christ.” Therefore, it seems that impugning acknowledged truth and envy of fraternal grace belong more to blasphemy against the Son of Man than to blasphemy against the Holy Spirit.

**Objection 4:** In *De Dispensatione et Praecepto* Bernard says, “To will not to obey is to resist the Holy Spirit.” Likewise, a Gloss on Leviticus 10:16 says, “Simulated repentance is blasphemy against the Holy Spirit.” Again, schism seems to be directly opposed to the Holy Spirit, through whom the Church is united. And so it seems that not enough species of sin against the Holy Spirit are listed here.

**But contrary to this:** In *De Fide ad Petrum* Augustine says, “Those who despair of forgiveness for their sins, or who presume upon God’s mercy without merits, sin against the Holy Spirit.” And in *Enchiridion* he says, “One who closes out his last day in obstinacy of mind is guilty of a sin against the Holy Spirit.” And in *De Sermone Domini in Monte* he says, “To impugn fraternity with faces of envy is to sin against the Holy Spirit.” And in *De Unico Baptismo* he says, “Anyone who despises the truth is either ill-willed toward his brothers, to whom the truth is revealed, or ungrateful to God, by whose inspiration the Church is instructed,” and so, it seems, he sins against the Holy Spirit.

**I respond:** If we interpret *sin against the Holy Spirit* in the third way (cf. a. 1), then the species mentioned above are appropriately assigned to it. They are distinguished by the removal of, or contempt for, the things through which a man can be impeded from choosing sin. These things exist either on the part of *God’s judgment*, or on the part of *His gifts*, or also on the part of *the sin itself*.

For in considering *God’s judgment*, which combines justice with mercy, a man is turned away from choosing sin both (a) through hope, which arises from considering that mercy forgives sins and rewards what is good, and this hope is removed by *despair*, and also (b) through fear, which arises from considering that God’s justice punishes sin, and this fear is removed by *presumption*, viz., when someone presumes that he will attain glory without merits or forgiveness without repentance.

On the other hand, there are two *gifts of God* by which we are drawn away from sin. One of them is acknowledgment of the truth (*agnitio veritatis*), against which is posited *impugning acknowledged truth*, viz., when someone impugns the acknowledged truth of the Faith in order that he might sin in a more unrestrained way (*licentius*). The second gift is the assistance of interior grace, against which is posited *envy of fraternal grace*, viz., when someone not only envies the person of his brother, but also envies God’s grace increasing in the world.

Now on the part of *sin itself* there are two things that can draw a man away from sin. One of them is the disorder and shamefulness of the act, a consideration of which tends to induce in a man repentance for the sins he has committed. And against this is posited *impenitence*—not, to be sure, in the sense in which ‘impenitence’ implies persistence in sin right up to death, in the way that it was understood above (a. 1), since this would be not a special sin but a certain circumstance of sin. Rather, ‘impenitence’ is being understood here to imply the resolve not to repent (*importat propositum non poenitendi*). The second thing is the triviality and transitoriness of the good one seeks in sinning (*parvitas et brevitatis boni quod quis in peccato quaerit*)—this according to Romans 6:21 (“What fruit did you have in those things of which you are now ashamed?”). The consideration of this point tends to induce a man to be less firm in his will to sin (*inducere solet hominem ad hoc quod eius voluntas in peccato non firmetur*). And this

is removed through *obstinacy*, viz., when a man firms up his resolve to adhere to sin. Of these two sins Jeremiah 8:6 says, with respect to the first, “There is no one who does penance for his sin, saying, ‘What have I done?’” and, with respect to the second, “They have all turned to their own course like a horse rushing into battle.”

**Reply to objection 1:** The sins of despair and presumption consist not in disbelieving in God’s justice or mercy, but in disdaining them.

**Reply to objection 2:** Obstinacy and impenitence differ not only with respect to *past* and *future*, but also, as has been explained, with respect to certain formal characteristics stemming from diverse ways of thinking about the things that can be considered in sins.

**Reply to objection 3:** Christ effects grace and truth through the gifts of the Holy Spirit that He gave to men.

**Reply to objection 4:** Willing not to obey belongs to obstinacy; simulating repentance belongs to impenitence; and schism belongs to the envy of fraternal grace, through which the members of the Church are united.

### Article 3

#### Is a sin against the Holy Spirit unforgivable?

It seems that a sin against the Holy Spirit is not unforgivable (*non sit irremissibile*):

**Objection 1:** In *De Verbis Domini* Augustine says, “We should despair of no one, as long our Lord’s patience is leading him toward repentance.” But if any sin were unforgivable, then we would have to despair of some sinners. Therefore, a sin against the Holy Spirit is not unforgivable.

**Objection 2:** No sin is forgiven except by a soul’s being healed by God. But as a Gloss on Psalm 102:3 (“Who heals all your diseases”) says, “For the omnipotent physician no disease is incurable.” Therefore, a sin against the Holy Spirit is not unforgivable.

**Objection 3:** Free choice is related to what is good and what is bad. But as long as the state of the present life remains, someone can fall from any virtue, since even angels fell from heaven; hence, Job 4:18-19 says, “In His angels He found wickedness; how much more in those who dwell in clay houses?” Therefore, by parity of reasoning, one can return to the state of justice from any sin whatsoever. Therefore, a sin against the Holy Spirit is not unforgivable.

**But contrary to this:** Matthew 12:32 says, “If anyone speaks against the Holy Spirit, it shall not be forgiven him, either in this world or in the world to come.” And in *De Sermone Domini in Monte* Augustine says, “The downfall involved in this sin is so great that one cannot submit to the humiliation of asking for pardon.”

**I respond:** Corresponding to the different understandings of a sin against the Holy Spirit (cf. a. 1), there are different senses in which such a sin is unforgivable.

For instance, if one claims that the sin against the Holy Spirit is final impenitence, then it is called unforgivable because it is not forgiven in any way. For since a mortal sin which a man persists in until death is not forgiven through his repentance, it will not be remitted in the future, either.

By contrast, on the other two understandings of a sin against the Holy Spirit it is called unforgivable not because it is in no way forgiven, but because, taken in its own right, it deserves not to be forgiven (*quantum est de se habet meritum ut non remittatur*)—and this in two ways:

In one way, with respect to the *punishment*. For when someone sins from ignorance or weakness, he merits a lesser punishment, whereas someone who sins from fixed malice does not have any excuse in light of which his punishment might be lessened. Similarly, even someone who blasphemed against the Son of Man when His divinity had not yet been revealed could have had an excuse in light of the

weakness of the flesh which he saw in the Son of Man, and in such a case he merited a lesser punishment. By contrast, someone who blasphemed the divine nature itself, attributing the works of the Holy Spirit to the devil, had no excuse in light of which his punishment might be diminished. And this is why it is said, according to Chrysostom's explanation, that this sin is not forgiven the Jews either in this world or in the future, because they have suffered punishment for it both in the present life at the hands of the Romans and in the future world in the punishment of hell. Athanasius likewise cites the example of their ancestors, who at first contended with Moses because they lacked bread and water, and the Lord patiently tolerated this because they had an excuse based on the weakness of the flesh. But afterwards they sinned more gravely and blasphemed, as it were, against the Holy Spirit, by attributing to their idol the favors of the God who had led them out of Egypt, when they said, "These are your gods, O Israel, who led you out of the land of Egypt" (Exodus 32:4). And so the Lord both (a) punished them temporally, for "about three thousand men died on that day" (Exodus 32:28). and (b) threatened them with future punishment, saying, "On the day of vengeance I will visit this sin of theirs" (Exodus 32:34).

In a second way, the point in question can be understood with respect to *guilt*. For just as a disease is called incurable by the nature of the disease, because it destroys that by which a disease can be cured—for instance, because the disease destroys the power of the nature or because it induces a loathing of food and drink—even though God can cure even this sort of disease, so, too, a sin against the Holy Spirit is unforgivable by its nature insofar as it excludes the things through which the forgiveness of sin is effected. Yet a way of forgiving and healing is not thereby closed off to God's omnipotence and mercy, through which such individuals are sometimes spiritually healed by a miracle, as it were.

**Reply to objection 1:** Taking into account God's omnipotence and mercy, we should despair of no one in this life. But when we consider the nature of the sin, some individuals are called "children of disobedience," as Ephesians 2:2 puts it.

**Reply to objection 2:** This argument proceeds on the basis of God's omnipotence and not according to the nature of the sin.

**Reply to objection 3:** To be sure, in the present life free choice always remains open to change. Yet sometimes it casts off from itself, as much as it can, that through which it can be turned toward the good. Hence, on its own part the sin is unforgivable, even though God can forgive it.

#### Article 4

##### Can a man sin first against the Holy Spirit, with no other sins presupposed?

It seems that a man cannot sin first against the Holy Spirit, with no other sins presupposed:

**Objection 1:** A natural ordering is such that one moves from what is imperfect to what is perfect (*ab imperfecto ad perfectum quis moveatur*). And this is obvious in the case of goods—this according to Proverbs 4:18 ("The path of the just, as a shining light, goes forward and increases even unto the perfect day"). But as is clear from the Philosopher in *Metaphysics* 5, in the case of bad things the 'perfect' is the greatest evil. Therefore, since a sin against the Holy Spirit is the gravest sin, it seems that a man arrives at this sin by means of other lesser sins.

**Objection 2:** To sin against the Holy Spirit is to sin from fixed malice, i.e., by choosing to. But a man cannot do this immediately, before he has sinned many times; for in *Ethics* 5 the Philosopher says, "Even though a man can do unjust things, he is not immediately able to act as the unjust man does," i.e., by choosing what is unjust. Therefore, it seems that a sin against the Holy Spirit cannot be committed until after other sins have been committed.

**Objection 3:** Repentance and impenitence have to do with the same thing. But repentance has to do only with past sins. Therefore, impenitence, which is a species of sin against the Holy Spirit, has

likewise to do only with past sins. Therefore, a sin against the Holy Spirit presupposes other sins.

**But contrary to this:** As Ecclesiasticus 11:23 says, “In the sight of God it is easy to make a poor man rich all of a sudden.” Therefore, conversely, it is possible, given the malice of a demon suggesting it, that someone should be immediately induced to commit the gravest sin, i.e., a sin against the Holy Spirit.

**I respond:** As has been explained (a. 1), to sin against the Holy Spirit is, in one sense, to sin from fixed malice. But as has likewise been explained (a. 1), there are two ways in which one can sin from fixed malice:

In one way, because of the inclination of a habit, which is not properly speaking to sin against the Holy Spirit. And it is impossible to sin from fixed malice at the beginning in this way, since there have to be previous acts of sin by which a habit inclining one to sin is caused.

In the second way, someone can sin from fixed malice by rejecting through contempt those things through which a man is held back from sin—and this, as has been explained (a. 1) is properly speaking to sin against the Holy Spirit. In the vast majority of cases (*plerumque*), this likewise presupposes other sins, since, as Proverbs 18:3 puts it, “When the wicked man arrives at the depths of his sins, he shows disdain.” Yet it can happen that someone sins through contempt against the Holy Spirit in his first sinful act, because of free choice and also because of many previous dispositions, or even because of a strong movement toward evil accompanied by the man’s weak affection for the good.

And so in perfected men it is scarcely or never possible for them to sin against the Holy Spirit right at the beginning. Hence, in *Periarchon* 1 Origen says, “I do not think that anyone who is in the highest and perfect grade leaves it or falls away all of a sudden; rather, he must fall away little by little or one part at a time.”

The same line of reasoning holds if ‘sin against the Holy Spirit’ is taken literally for blasphemy against the Holy Spirit. For blasphemy of the sort our Lord is talking about always proceeds from the contempt associated with malice.

On the other hand, if by ‘sin against the Holy Spirit’ one means final impenitence in the way that Augustine understands it, then the question does not arise (*questionem non habet*), because a sin against the Holy Spirit requires persistence in sin right up the end of one’s life.

**Reply to objection 1:** In the case of both good and evil, it almost always (*ut in pluribus*) goes from the imperfect to the perfect, in the way that a man makes progress either in good or in evil. And yet in both cases, one individual can start from a greater [good or evil] than another does. And so that from which someone starts can be perfect by its genus in good or in evil—even though it is imperfect with respect to the sequence of a man’s movement as he progresses toward becoming better or worse.

**Reply to objection 2:** This argument is talking about a sin committed from fixed malice when this happens because of the inclination of a habit.

**Reply to objection 3:** If ‘final impenitence’ is being taken in the way that Augustine understands it, so that it implies a persistence in sinning right up to the end, then it is obvious that impenitence presupposes previous sins, just as repentance does.

However, if we are speaking of habitual impenitence insofar as it is posited as a sin against the Holy Spirit, then it is clear that impenitence can exist even before other sins. For someone who has never sinned can have either the resolve to repent or the resolve not to repent if it should happen that he sins.

## QUESTION 15

### Blindness of Mind and Dullness of Sense

Next we have to consider the vices opposed to knowledge and understanding. Since we treated ignorance, which is opposed to knowledge, above (*ST* 1-2, q. 76) when we were talking about the causes of sin, we have to inquire here about blindness of mind (*caccias mentis*) and dullness of sense (*hebetudo sensus*), which are opposed to the gift of understanding. And on this topic there are three questions: (1) Is blindness of mind a sin? (2) Is dullness of sense a sin distinct from blindness of mind? (3) Do these vices arise from carnal sins?

#### Article 1

##### Is blindness of mind a sin?

It seems that blindness of mind is not a sin (*caccias mentis non sit peccatum*):

**Objection 1:** What excuses one from sin does not seem to be a sin. But blindness excuses one from sin; for John 9:41 says, “If you were blind, you would not have sin.” Therefore, blindness of mind is not a sin.

**Objection 2:** The punishment (*poena*) differs from the sin (*culpa*). But blindness of mind is a certain punishment, as is clear from what is established in Isaiah 6:10 (“Make the heart of this people blind”). For since blindness is an evil, it would not be from God unless it were a punishment. Therefore, blindness of mind is not a sin.

**Objection 3:** As Augustine says, every sin is voluntary. But blindness of mind is not voluntary; for as Augustine says in *Confessiones* 10, “Everyone loves to have cognition of illuminating truth.” And Ecclesiastes 11:7 says, “Light is sweet, and it is delightful for the eyes to see the sun.” Therefore, blindness of mind is not a sin.

**But contrary to this:** In *Moralia* 31 Gregory posits blindness of mind among the vices that are caused by lust (*inter vita quae causantur ex luxuria*).

**I respond:** Just as corporeal blindness is the privation of that which is a principle of corporeal vision, so, too, blindness of mind is the privation of that which is a principle of mental or intellectual vision.

Now there are three principles of mental or intellectual vision:

One is *the light of natural reason*. Since this light belongs to the species *rational animal*, the soul is never deprived of it. However, as is clear in those who are mindless or furious, this light is sometimes kept from its proper act by obstacles posed by the lower powers, which, as was explained in the First Part (*ST* 1, q. 84, aa. 7-8), the human intellect needs in order to have intellectual understanding.

The second principle of intellectual vision is *a certain habitual light added to the natural light of reason*. The soul is sometimes deprived of this light, and such a privation is a blindness that is a punishment, insofar as the privation of the light of grace is posited as a punishment. Hence, Wisdom 2:21 says of some individuals, “Their malice blinded them.”

The third principle of intellectual vision is *an intelligible principle through which a man understands other things*. Now a man’s mind can either attend to or not attend to this sort of intelligible principle (*cui principio mens hominis potest intendere vel non intendere*). There are two ways in which it happens that the mind does not attend to it:

Sometimes it is because the mind has an act of will that spontaneously turns it away from considering such a principle—this according to Psalm 35:4 (“He did not want to understand in order to act well”).

In the other way, it happens because of the mind’s preoccupation with other things which it loves more and because of which it is turned away from paying attention to such a principle—this according to

Psalm 57:9 (“The fire”—i.e., concupiscence—“fell upon them, and they did not see the sun”).

Blindness of mind is a sin in both of these ways.

**Reply to objection 1:** The sort of blindness which excuses from sin is that which occurs by a natural defect on the part of one who is unable to see.

**Reply to objection 2:** This argument is talking about the second sort of blindness, which is a punishment.

**Reply to objection 3:** Having cognition of the truth is something lovable in its own right to everyone. However, it can be *per accidens* detestable to someone, viz., insofar as through such a cognition one is impeded from other things that he loves more.

## Article 2

### Is dullness of sense distinct from blindness of mind?

It seems that dullness of sense (*hebetudo sensus*) is not distinct from blindness of mind (*cacitas mentis*):

**Objection 1:** A single thing is the contrary to a single thing. But as is clear from Gregory in *Moralia* 2, dullness of sense is opposed to the gift of understanding; and yet blindness of mind is also opposed to it, because ‘understanding’ designates a certain principle of vision. Therefore, dullness of sense is the same as blindness of mind.

**Objection 2:** In *Moralia* 31 Gregory, in speaking of dullness, calls it “dullness of sense with respect to understanding” (*nominat eam hebetudinem sensus circa intelligentiam*). But to be dull of sense with respect to understanding seems to be nothing other than being deficient in understanding—which belongs to blindness of mind. Therefore, dullness of sense is the same as blindness of mind.

**Objection 3:** If they differ in anything, they seem especially to differ in the fact that, as was explained above (a.1), blindness of mind is voluntary, whereas dullness of sense is natural. But a natural defect is not a sin. Therefore, on this score dullness of sense would not be a sin. But this is contrary to Gregory, who numbers dullness of sense among the vices that arise from gluttony (*ex gula*).

**But contrary to this:** Diverse causes have diverse effects. But in *Moralia* 31 Gregory says that dullness of mind (*hebetudo mentis*) arises from gluttony, whereas blindness of mind arises from lust. Therefore, they are diverse vices.

**I respond:** *Dull* (*hebes*) is opposed to *sharp* (*acutum*). Now something is called ‘sharp’ because it is penetrative. Hence, something is called ‘dull’ because it is blunt and unable to penetrate.

Now a corporeal sensory power is said to penetrate a medium by means of a certain likeness insofar as it perceives its object from some distance or insofar as it is able to perceive by penetrating, as it were, to the inmost aspects of a thing. Hence, in the case of corporeal things, someone is said to have a sharp sensory power if he is able to perceive a sensible thing from afar, either by seeing it or hearing it or smelling it. And, conversely, he is said to be dull of sense if he perceives only those sensible things that are close by and large.

By way of similarity to a corporeal sense, there is likewise something called ‘sense’ with respect to intelligence, and, as *Ethics* 6 says, it has to do with certain “first terms,” just as a sensory power likewise has cognition of sensible things as certain principles of cognition. Now the sort of sense that has to do with understanding perceives its object not through the medium of corporeal distance, but rather through certain other media, as when someone perceives the essence of a thing through its property or a cause through its effects.

Therefore, someone is said to have a ‘sharp sense’ with respect to understanding (a) insofar as he

comprehends the nature of a thing immediately upon apprehending a property of it or even an effect of it, and (b) insofar as he gets to the point of considering the thing's least important aspects (*usque ad minimas conditiones rei considerandas pertingit*). By contrast, someone is said to be dull with respect to understanding insofar as he is unable to attain to a cognition of the truth about a thing except by having many things explained to him, and even then he is unable to get to the point of considering completely everything that belongs to the nature of the thing.

So, then, dullness of sense with respect to understanding implies a certain weakness of mind with respect to the consideration of spiritual goods, whereas blindness of mind implies a complete privation of the cognition of spiritual goods. And both of them are opposed to the gift of understanding, through which a man has cognition of spiritual goods by apprehending them and penetrates with subtlety to their hidden details. Hence, dullness has the character of a sin in the same way that blindness of mind does, viz., to the extent that it is voluntary, as is clear in the case of someone who, affectively drawn to carnal things, disdains or neglects the subtle consideration of spiritual things.

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the replies to the objections.

### Article 3

#### Do blindness of mind and dullness of sense arise from the carnal vices?

It seems that blindness of mind and dullness of sense do not arise from the carnal vices:

**Objection 1:** In *Retractationes* Augustine, retracting what he had said in *Soliloquia* ("God, who wishes only the clean to know the truth ..."), says, "One could reply that many unclean individuals likewise know many truths." But men are especially made unclean by the carnal vices. Therefore, blindness of mind and dullness of sense are not caused by the carnal vices.

**Objection 2:** Blindness of mind and dullness of sense are defects with respect to the intellectual part of the soul, whereas the carnal vices have to do with the corruption of the flesh. But the flesh does not act on the soul; rather, it is just the opposite. Therefore, the carnal vices do not cause blindness of mind and dullness of sense.

**Objection 3:** Each thing is acted upon more by what is closer than by what is farther away. But the spiritual vices are closer to the mind than the carnal vices are. Therefore, mental blindness and dullness of sense are caused more by the spiritual vices than by the carnal vices.

**But contrary to this:** In *Moralia* 31 Gregory says that dullness of sense with respect to understanding arises from gluttony, and that blindness of mind arises from lust.

**I respond:** The perfection of an intellectual operation in a man consists in a certain sort of abstraction from sensible phantasms. And so the more free a man's intellect is from phantasms of this sort, the better he is able to think about intelligible things and to order all sensible things—just as Anaxagoras likewise claimed that the intellect has to be 'unmixed' in order to command, and just as an agent has to be dominant over matter in order to be able to move it.

Now it is obvious that pleasure directs one's attention to the things that he takes pleasure in. Hence, in *Ethics* 10 the Philosopher says that each individual does those things best that he takes pleasure in, whereas the contrary things he does feebly or not at all. Now the carnal vices, viz., gluttony and lust, have to do with the pleasures of touch, viz., the pleasures of food and sex, which are the most vehement among all the corporeal pleasures. And so through these vices a man's attention is especially directed to corporeal things and, as a result, the man's operation with respect to intelligible things is weakened—and more through lust than through gluttony, to the extent that the pleasures of sex are more vehement than those of food.

And so lust gives rise to blindness of mind, which, as it were, totally excludes the cognition of spiritual goods, whereas gluttony gives rise to dullness of sense, which renders a man weak with respect to intelligible things of this sort. Conversely, the opposite virtues, viz., abstinence [from food] and chastity, especially dispose a man toward the perfection of intellectual operation. Hence, Daniel 1:17 says, “To these young men,” viz., those who abstained [from meat] and were continent, “God gave knowledge and learning in every book, and wisdom.”

**Reply to objection 1:** Even though certain individuals who are subject to the carnal vices can sometimes think subtly about intelligible things because of the excellence of their natural genius or habits added on, still, it is necessary that because of corporeal pleasures their attention is in most cases drawn back from this sort of subtlety of contemplation. And so the unclean can know some truths, but they are impeded in this by their uncleanness.

**Reply to objection 2:** The flesh acts on the intellective part of the soul not by altering it, but by impeding its operation in the way explained above.

**Reply to objection 3:** It is because the carnal vices are more remote from the mind that they do more to draw its attention away toward more remote things. Hence, they impede the mind’s operation more.

## QUESTION 16

### The Precepts that Pertain to Faith, Knowledge, and Understanding

Next we have to consider the precepts that pertain to what has gone before. And on this topic there are two questions: (1) What are the precepts pertaining to faith? (2) What are the precepts pertaining to the gifts of knowledge and understanding?

#### Article 1

#### Should precepts about having faith been given in the Old Law?

It seems that precepts about having faith should have been given in the Old Law (*in veteri lege dari debuerint praecepta credendi*):

**Objection 1:** A precept has to do with what is fitting and necessary. But it is especially necessary for a man to have faith—this according to Hebrews 11:6 (“Without faith it is impossible to please God”). Therefore, it is especially necessary for precepts about faith to be given.

**Objection 2:** As has been explained above (*ST* 1-2, a. 107, a. 3), the New Testament is contained in the Old Testament in the way that what is prefigured is contained in its figure. But explicit commandments about faith are posited in the New Testament, as is clear from John 14:1, “You believe in God, believe also in me.” Therefore, it seems that some precepts about faith should likewise have been given in the Old Law.

**Objection 3:** Commanding an act of virtue has the same character as prohibiting the opposed vices. But in the Old Law there are many precepts that prohibit unbelief. For instance, Exodus 20:3 says, “You shall not have strange gods before me.” And, again, Deuteronomy 13:1-3 commands that the people not listen to the words of any prophet or dreamer who wishes to divert them from faith in God. Therefore, in the Old Law precepts about faith should likewise have been given.

**Objection 4:** As was explained above (q. 3, a. 1), confessing is an act of faith. But precepts about confessing and promulgating the Faith are given in the Old Law. For instance, in Exodus 12:26-27 it is commanded that they give an explanation of the Paschal observance when their children ask about it; and in Deuteronomy 13 it is commanded that anyone who spreads a teaching contrary to the Faith should be killed. Therefore, the Old Law should have contained precepts about faith.

**Objection 5:** All the books of the Old Testament are contained under the Old Law; hence, in John 15:25 our Lord says that it is written in the Law, “They have hated me without cause,” even though this is written in one of the Psalms (34:19). But Ecclesiasticus 2:8 says, “You who fear the Lord, believe Him.” Therefore, precepts about faith should have been given in the Old Law.

**But contrary to this:** In Romans 3:27 the Apostle calls the Old Law the “law of works” and divides it off from the “law of faith.” Therefore, it was not the case that in the Old Law there should be precepts handed down about faith.

**I respond:** A law is imposed by a lord only on his own subjects, and so the precepts of any law presuppose that the recipient of the law is subject to the one who is giving the law.

Now the first sort of subjection of a man to God is through faith—this according to Hebrews 11:6 (“One who approaches God must believe that He exists”). And so faith is presupposed by the precepts of the Law. This is why in Exodus 20:2 what pertains to faith is given before the precepts of the Law, when it says, “I am the Lord your God, who led you out of the land of Egypt.” And, similarly, Deuteronomy 6:4 first says, “Listen, O Israel, the Lord your God is one,” and immediately thereafter begins to talk about the precepts.

However, since there are many things contained in the Faith that are ordered to the faith by which we believe that God exists—which, as has been explained (q. 1, a. 7), is the first and most important of all the things to taken on faith (*est primum et principale inter omnia credibilia*)—it follows that, once

faith in God, through which the human mind submits to God, is presupposed, precepts can be given about the other things to be taken on faith.

Thus, Augustine, commenting on John 15:2 (“This is my commandment”) in *Super Ioannem*, points out that we have received many commandments about faith (*quod plurima sunt nobis de fide mandata*). However, in the Old Law there were no hidden aspects of the Faith that had to be explained to the people (*non erant secreta fidei populo exponenda*). And so, with faith in the one God assumed, there were no other precepts given in the Old Law about what is to be taken on faith.

**Reply to objection 1:** Faith is necessary as a starting point (*principium*) of the spiritual life. And so it is presupposed by the reception of the Law.

**Reply to objection 2:** Here our Lord is likewise (a) *presupposing* something about faith, viz., the faith in the one God, when He says, “You believe in God,” and (b) *commanding* something, viz., faith in the Incarnation, through which there is one who is God and man. Now this explication of faith belongs to the Faith of the New Testament; and this is why He adds, “Believe also in me.”

**Reply to objection 3:** The precepts containing prohibitions (*praecepta prohibitiva*) have to do with sins that corrupt virtue. But as was explained above (q. 10, a. 5), virtues are corrupted by particular defects. And so, presupposing faith in the one God, the Old Law had to give precepts containing prohibitions through which men would be held back from those particular defects by which their faith could be corrupted.

**Reply to objection 4:** Confessing or teaching the Faith likewise presupposes a man’s submission to God through faith. And so in the Old Law precepts about confessing and teaching the Faith could be handed down instead of precepts about faith itself.

**Reply to objection 5:** In the cited passage the faith through which we believe that God exists is likewise being presupposed. Hence, the passage begins with, “You who fear the Lord...,” and this fear cannot exist without faith. What is then added, viz., “... believe Him,” should be thought of as referring to certain specific things to be taken on faith, and principally those things that God promises to those who obey Him. Hence, it adds, “... and your reward shall not be made void.”

## Article 2

### Are the precepts pertaining to knowledge and understanding handed down appropriately in the Old Law?

It seems that the precepts pertaining to knowledge and understanding are not handed down appropriately in the Old Law:

**Objection 1:** Knowledge and understanding have to do with cognition. But cognition precedes and directs action. Therefore, precepts pertaining to knowledge and understanding should precede precepts pertaining to action. Therefore, since the precepts of the Law are the precepts of the Decalogue, it seems that there should have been some precepts pertaining to knowledge and understanding handed down among the precepts of the Decalogue

**Objection 2:** Learning (*disciplina*) precedes teaching (*doctrina*), since a man learns from another before he teaches another. But in the Old Law some precepts are given about teaching, both affirmative—e.g., Deuteronomy 4:9 commands, “You shall teach your children and your children’s children”—and negative—e.g., Deuteronomy 4:2 says, “You shall not add to the word which I speak to you, and you shall not take away from it.” Therefore, it seems that some precepts which induce a man to learn should have been given.

**Objection 3:** Knowledge and understanding seem more necessary for a priest than for a king. Hence, Malachi 2:7 says, “The lips of the priests safeguard knowledge, and they seek the Law from his

mouth.” And Hosea 4:6 says, “Because you have rejected knowledge, I will likewise reject you, lest you execute your priesthood for me.” But as is clear from Deuteronomy 17:18-19, the king is commanded to acquire knowledge of the Law. Therefore, it should have been commanded all the more in the Law that the priests learn the Law.

**Objection 4:** Meditation on what pertains to knowledge and understanding cannot take place in one’s sleep (*meditatio non potest esse in dormiendo*). It is likewise impeded by extraneous actions. Therefore, it was inappropriate for Deuteronomy 6:7 to command, “You shall meditate on these things while sitting in your house and walking on your journey, while you are sleeping and while you are rising.” Therefore, the precepts pertaining to knowledge and understanding are not appropriately handed down in the Old Law.

**But contrary to this:** Deuteronomy 4:6 says, “Everyone who hears these precepts will say, ‘Behold a wise and discerning people!’”

**I respond:** There are three things that can be considered concerning knowledge and understanding: (a) their *acquisition*, (b) the *use* made of them, and (c) their *conservation*.

The *acquisition* of knowledge and understanding comes about through teaching and learning. And both of these are commanded in the Law. For instance, Deuteronomy 6:6 says, “These words that I command you shall be in your heart,” and this has to do with learning, since it belongs to a learner (*discipulus*) that he should fix his heart on what is being said. On the other hand, what is added, “And you will tell them to your children,” has to do with teaching.

Now the *use* of knowledge or understanding consists in meditating on what one knows or understands. And it is on this score that it is added, “You shall meditate on these things while sitting in your house, etc.”

On the other hand, *conservation* is effected through memory. And on this score it adds, “And you shall tie them as a sign on your hand, and they shall exist and move between your eyes, and you shall write them on your doorpost and on the doors of your house.” All these things signify the perpetual memory of God’s commandments, since it is impossible for things to slip from our memory when they are continually present to our senses—either by touch, as with things that we hold in our hand, or by sight, as with things that we have continually before our mind’s eye—or when they are things to which we have to return often, like the door of our house. And Deuteronomy 4:9 says more explicitly, “Do not forget the words your eyes have seen, and do not let them slip from your heart all the days of your life.”

And these commandments are found even more abundantly in the New Testament, both in the teaching of the Gospel and in the apostolic teaching.

**Reply to objection 1:** As Deuteronomy 4:6 says, “This is your wisdom and your understanding before the peoples,” from which we gather that the knowledge and understanding of God’s faithful ones has to do with the precepts of the Law. And so first the precepts of the Law had to be proposed, and then afterwards men had to be led to the knowledge and understanding of them. And so the precepts in question here did not have to be posited among the precepts of the Decalogue, which come first.

**Reply to objection 2:** As has been explained, in the Law there are precepts that have to do with learning. Still, teaching is commanded in a more explicit way than learning is. For teaching belongs to the preeminent people (*maiores*), who are their own masters (*sunt sui iuris*) existing directly under the Law and to whom the precepts of the Law have to be given. Learning, on the other hand, belongs to the ordinary people, to whom the precepts of the Law have to come by the mediation of the preeminent people (*per maiores*).

**Reply to objection 3:** Knowledge of the Law is so closely connected with the office of the priest that being called to that office is understood together with also being called to have knowledge of the Law. And so it was unnecessary for special precepts to be given about the instruction of the priests.

By contrast, the teaching of the Law of God is not as closely joined to the kingly office, since it is in temporal matters that the king is set over the people. And so it is specifically commanded that the king

be instructed by the priests about what belongs to God's Law.

**Reply to objection 4:** The precept in question should be understood to be saying not that a man is to meditate on God's law while sleeping (*quod homo dormiendo meditetur de lege Dei*), but that he is to meditate on God's law while sleepy, i.e., while going to sleep (*dormiens, idest vadens dormitum*). For men have better phantasms because of this, since, as the Philosopher explains in *Ethics* 1, the relevant movements pass from being waking movements to being movements in sleep (*pertranseunt motus ab vigilantibus ad dormientes*).

Similarly, it is likewise commanded that one is to meditate on the Law in each of his acts, not in the sense that he is always to be thinking of the Law in actuality, but in the sense that everything that he does is to be moderated by the Law.

## QUESTION 17

### Hope

After faith, we next have to consider hope (*spes*): first, hope itself (questions 17-18); second, the gift of fear (question 19); third, the opposed vices (questions 20-21); and, fourth, the precepts that pertain to this matter (question 22).

As regards the first topic, we will first consider hope itself (question 17) and, second, what the subject of hope is (question 18).

On the first topic there are eight questions: (1) Is hope a virtue? (2) Is the object of hope eternal beatitude? (3) Can a man hope for someone else's beatitude through the virtue of hope? (4) Can a man licitly put his hope in a man? (5) Is hope a theological virtue? (6) How is hope distinguished from the other theological virtues? (7) What is hope's ordering with respect to faith? (8) What is hope's ordering with respect to charity?

### Article 1

#### Is hope a virtue?

It seems that hope is not a virtue (*spes non sit virtus*):

**Objection 1:** As Augustine says in *De Libero Arbitrio*, "No one uses a virtue badly." But some use hope badly, since there can be a mean and extremes with respect to the passion of hope, just as with respect to the other passions. Therefore, hope is not a virtue.

**Objection 2:** No virtue proceeds from merits, since, as Augustine says, "God works virtue in us without us." But as the Master says in *Sentences* 3, dist. 26, "Hope comes from grace and merits." Therefore, hope is not a virtue.

**Objection 3:** As *Physics* 7 says, "A virtue is a disposition that belongs to what is perfect." But hope is a disposition that belongs to what is imperfect—more specifically, to someone who does not have what he hopes for. Therefore, hope is not a virtue.

**But contrary to this:** In *Moralia* 1 Gregory says that the three daughters of Job signify the three virtues, faith, hope, and charity. Therefore, hope is a virtue.

**I respond:** According to the Philosopher in *Ethics* 2, "The virtue of any given thing is what makes the thing having it good and renders its work good (*quae bonum facit habentem et opus eius bonum reddit*)." Therefore, whenever there is a good human act, it has to correspond to some human virtue. Now in all regulated and measured things (*in omnibus regulatis et mensuratis*) the good is thought of as something's attaining its proper rule; for instance, we say that a coat is good when it neither exceeds nor falls short of its due measure.

Now as was explained above (*ST* 1-2, q. 71, a. 6), there are two measures of human acts, one of which is proximate and homogeneous, viz. reason, and the other of which is supreme and surpassing, viz. God. And so every human act that attains to reason or to God Himself is good.

Now the act of hope, in the sense in which we are now speaking of hope, attains to God. For as was explained above when we were talking about the passion of hope (*ST* 1-2, q. 40, a. 1), the object of hope is a future arduous good that it is possible to have. Now as is clear from *Ethics* 3, there are two ways in which something is possible for us: (a) through our very own selves and (b) through others. Therefore, insofar as we hope for something that is possible for us through God's help, our hope attains to God Himself, whose help is being relied on. And so it is clear that hope is a virtue, since it makes a man's act good and makes it attain to the appropriate rule.

**Reply to objection 1:** In the case of the passions the mean of a virtue is taken to be where right reason is attained (*accipitur per hoc quod attingitur ratio recta*), and the nature of the virtue consists in this. Hence, in the case of hope the good of the virtue is likewise taken to be that a man, in hoping,

attains the appropriate rule, viz., God. And so no one can make bad use of a hope that attains to God, just as no one can make bad use of a moral virtue that attains to reason, since the good use of a virtue is just attaining to reason.

Still, as will become clear below (a. 5), the sort of hope that we are now talking about is not a passion, but is instead a habit of the mind.

**Reply to objection 2:** Hope is said to come from merits either (a) as regards *the very thing hoped for* (*quantum ad ipsam rem expectatam*), insofar as one hopes to attain beatitude because of grace and merits; or (b) as regards the *act* of hope when hope is informed [by charity] (*quantum ad actum spei formatae*).

However, the very *habit* of hope, through which one looks forward to beatitude, is caused not by merits but purely by grace.

**Reply to objection 3:** One who has hope is imperfect when we take into account what he hopes to obtain and does not have, but he is perfect with respect to already attaining his proper rule, viz., God, whose help he relies on.

## Article 2

### Is eternal beatitude the proper object of hope?

It seems that eternal beatitude is not the proper object of hope:

**Objection 1:** A man does not hope for what exceeds every movement of his mind, since the act of hope is a certain movement of the mind (*quidam animi motus*). But eternal beatitude exceeds every movement of the human mind; for in 1 Corinthians 2:9 the Apostle says, “It has not entered into the heart of man ... .” Therefore, beatitude is not the proper object of hope.

**Objection 2:** Asking is an expression of hope (*petitio est spei interpretativa*); for Psalm 36:5 says, “Disclose your way to the Lord, and trust in Him, and He will do it.” But a man licitly asks God not only for eternal beatitude but also for goods of the present life, both spiritual and temporal—and also, as is clear from the Lord’s prayer (Matthew 6), for deliverance from evils, which will not be present in eternal beatitude. Therefore, eternal beatitude is not the proper object of hope.

**Objection 3:** The object of hope is something arduous. But in relation to a man, there are many other arduous things besides eternal beatitude. Therefore, eternal beatitude is not the proper object of hope.

**But contrary to this:** In Hebrews 6:19 the Apostle says that we have hope “that enters in,” i.e., that makes us enter “inside the veil,” i.e., into heavenly beatitude, as a Gloss on this passage explains. Therefore, the object of hope is eternal beatitude.

**I respond:** As has been explained (a. 1), the hope we are talking about here attains to God, relying on His help to obtain the good that is hoped for. Now an effect is proportioned to its cause. And so the good that we should properly and principally hope for from God is an infinite good, which is proportioned to the power of God in helping us. For it is proper to an infinite power to lead us to an infinite good. But this good is eternal life, which consists in enjoying God Himself, since nothing less should be hoped for from Him than what He Himself is. For the goodness by which he communicates goods to a creature is no less a goodness than His essence. And so the proper and principal object of hope is eternal beatitude.

**Reply to objection 1:** Eternal beatitude enters into the heart of a man not in the sense that in this life a man can have a cognition of what eternal beatitude is and of what it is like, but rather in the sense that it can come under human apprehension with its general notion, i.e., the notion of a perfect good. And it is in this way that the movement of hope rises up toward eternal beatitude. Hence, the Apostle

expressly says that hope “enters in, even inside the veil,” since what we hope for is still veiled from us.

**Reply to objection 2:** We should seek other goods from God only in relation to eternal beatitude. Hence, hope has to do principally with eternal beatitude, whereas other things are sought from God in a secondary way, in relation to eternal beatitude. Similarly, as was explained above (q. 1, aa. 1 and 6), faith has to do principally with God and secondarily with what is ordered toward God.

**Reply to objection 3:** To a man who aspires to something great, everything else less than that thing seems of little account. And this is why to a man who hopes for eternal life, nothing else seems arduous when compared with that hope (*habito respectu ad istam spem*).

By contrast, when compared with power of the one who has the hope, many other things can likewise seem arduous to him. And on this score, there can be hope for those things in relation to the principal object.

### Article 3

#### Can one hope for someone else’s eternal beatitude?

It seems that one can hope for someone else’s eternal beatitude:

**Objection 1:** In Philippians 1:6 the Apostle says, “Confident of this very thing, that He who has begun a good work in you will perfect it up to the day of Jesus Christ.” But the perfection of that day will be eternal beatitude. Therefore, one can hope for someone else’s eternal beatitude.

**Objection 2:** What we ask from God we hope to obtain from Him. But we ask from God that He will lead others to eternal beatitude—this according to James 5:16 (“Pray for one another that you might be saved”). Therefore, we can hope for the eternal beatitude of others.

**Objection 3:** Hope and despair have to do with the same thing. But one can despair of someone else’s eternal beatitude; otherwise, it would have been pointless for Augustine to say in *De Verbis Domini*, “Despair of no one as long as he is alive.” Therefore, one can likewise hope for someone else’s eternal beatitude.

**But contrary to this:** In *Enchiridion* Augustine says, “Hope is only for things that pertain to the one who is supposed to harbor hope for them.”

**I respond:** There are two ways for someone to have hope: (a) *absolutely speaking*, and on this score hope is only for an arduous good that pertains to oneself; and (b) *with something else presupposed*, and on this score one can also hope for things that pertain to someone else.

To make this clear, notice that love and hope differ in the fact that love implies the union of the lover with what is loved, whereas hope implies the appetite’s moving or stretching out toward some arduous good. Now a union belongs to things that are distinct from one another, and so love can relate directly to another, whom one unites to himself through love and whom he cherishes as himself (*habens eum sicut seipsum*). By contrast, a movement always tends toward a proper terminus that is proportioned to the thing that is moving, and so hope directly relates to one’s own good and not to what pertains to someone else.

However, if the union of the lover to another is presupposed, then one can desire and hope for something for another as for himself. And on this score one can hope for someone else’s eternal beatitude insofar as he is united to him through love. And just as it is the same virtue of charity by which one loves God, himself, and his neighbor, so, too, it is the same virtue of hope by which one has hope for himself and for another.

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the replies to the objections.

#### Article 4

##### Can someone licitly put his hope in a man?

It seems that one can licitly put his hope in a man (*aliquis possit licite sperare in homine*):

**Objection 1:** The object of hope is eternal beatitude. But we are helped in attaining eternal beatitude by the patronage of the saints (*patrociniis sanctorum*); for instance, in *Dialogi* 1 Gregory says, “Predestination is helped by the prayers of the saints.” Therefore, one can put his hope in a man.

**Objection 2:** If it were not the case that one can put his hope in a man, then it could not be thought a vice in a man that no one can put his hope in him. But there are some in whom this is said to be a vice, as is clear from Jeremiah 9:4, “Let every man guard himself from his neighbor, and let him not put his trust in any brother of his.” Therefore, someone may licitly put his hope in a man.

**Objection 3:** As has been said (a. 2), asking is an expression of hope. But one can licitly ask for something from a man. Therefore, he can licitly put his hope in him.

**But contrary to this:** Jeremiah 17:5 says, “Cursed be the man who puts his trust in a man.”

**I respond:** As has been explained (*ST* 1-2, q. 40, a. 7 and q. 42, aa. 1 and 4), there are two things that hope is related to, viz., (a) the *good* that one intends to obtain and (b) the *help* through which that good is obtained. Now the good that one hopes will be obtained has the character of a final cause, whereas the help through which one hopes to obtain that good has the character of an efficient cause. And in both of these genera of causes, one finds a principal cause and a secondary cause. For the principal end is the ultimate end, whereas a secondary end is a good that is ordered toward the [principal] end. Similarly, the principal agent cause is the first agent, whereas a secondary efficient cause is an instrumental secondary agent.

Now hope has eternal beatitude as its ultimate end, whereas it has God’s help as the first cause that leads one toward beatitude. Therefore, just as one is not permitted to hope for some good other than beatitude as an ultimate end, but is instead permitted to hope for such a good only as something that is ordered toward the end of beatitude, so, too, one is not permitted put his hope in any man, or in any creature at all, as the first cause that moves one toward beatitude. However, it is licit to put one’s hope in some man, or in some creature, as a secondary or instrumental cause by which one might be helped in obtaining any good that is ordered toward beatitude. And this is the sense in which we turn to the saints, and in which we seek certain things from men, and in which those whom one cannot trust to provide help are blamed.

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the replies to the objections.

#### Article 5

##### Is hope a theological virtue?

It seems that hope is not a theological virtue:

**Objection 1:** A theological virtue is a virtue that has God for its object. But hope has for its object not just God, but also other goods that we hope to obtain from God. Therefore, hope is not a theological virtue.

**Objection 2:** As was established above (*ST* 1-2, q. 64, a. 4), a theological virtue does not consist in a mean between two vices. But hope consists in a mean between presumption and despair. Therefore, hope is not a theological virtue.

**Objection 3:** Expectation (*expectatio*) belongs to longsuffering (*longanimitas*), which is a part of

fortitude. Therefore, since hope is a certain sort of expectation, it seems that it is a moral virtue and not a theological virtue.

**Objection 4:** The object of hope is something arduous. But tending toward what is arduous belongs to magnanimity, which is a moral virtue. Therefore, hope is a moral virtue and not a theological virtue.

**But contrary to this:** In 1 Corinthians 13 hope is enumerated along with faith and charity, which are theological virtues.

**I respond:** Since specific differences divide a genus *per se*, we must pay attention to why hope has the character of a virtue in order to find out under just which difference of [the genus] *virtue* it is located.

Now it was explained above (a. 1) that hope has the character of a virtue from the fact that it attains to the highest rule of human acts. And this rule is attained to both as the *first efficient cause*, insofar as one relies on His help, and also as the *ultimate final cause*, insofar as one looks forward to beatitude in the enjoyment of Him. And so it is clear that the principal object of hope, insofar as it is a virtue, is God.

Therefore, since, as was explained above (ST 1-2, q. 62, a. 1), the nature of a theological virtue consists in its having God as its object, it is obvious that hope is a theological virtue.

**Reply to objection 1:** As has been explained (a. 4), everything else that hope looks forward to acquiring is such that it hopes for it in relation to God as its ultimate end and as its first efficient cause.

**Reply to objection 2:** In the case of things that are regulated and measured, the mean is understood as that in accord with which the rule or measure is attained (*secundum quod regula vel mensura attingitur*). Now insofar as one overshoots the rule, there is too much (*superfluum*), whereas insofar as one falls short of the rule, there is too little (*diminutum*). But in the rule or measure itself there is no mean or extremes.

Now a moral virtue has as its proper object what is regulated by reason, and so it belongs to a moral virtue *per se* to lie in the middle as regards its proper object. By contrast, a theological virtue has the first rule itself—not regulated by any other rule—as its proper object. And so it does not belong to a theological virtue *per se*, or with respect its proper object, to lie in the mean.

However, this can belong to it *per accidens*, by reason of its being ordered toward its principal object. For instance, faith cannot have a mean and extremes in relying on the First Truth, which no one can rely on too much. However, it can have a mean and extremes in the things which it believes, in the sense that a truth lies in the middle between two falsehoods. Similarly, hope does not have a mean and extremes on the part of its principal object, since no one can rely too much on God's help. However, as regards the things which one is confident that he will obtain, there can be a mean and extremes, insofar as either (a) he presumes that he will obtain something that lies beyond what is proportioned to him or (b) he despairs of obtaining what is proportioned to him.

**Reply to objection 3:** The sort of expectation that is posited in the definition of hope does not imply delay in the way that the expectation that belongs to longsuffering does. Rather, it implies a relation to God's help, regardless of whether what is hoped for is delayed or not delayed.

**Reply to objection 4:** Magnanimity tends toward an arduous good while hoping for something which is within one's power. Hence, it has to do properly with the accomplishment of great deeds. By contrast, as has been explained, hope, insofar as it is a theological virtue, has to do with attaining what is arduous by the help of someone else.

## Article 6

### Is hope a virtue distinct from the other theological virtues?

It seems that hope is not a virtue distinct from the other theological virtues:

**Objection 1:** As was explained above (*ST* 1-2, q. 54, a. 2), habits are distinguished from one another by their objects. But the object of hope is the same as the object of the other theological virtues. Therefore, hope is not distinct from the other theological virtues.

**Objection 2:** In the creed of the Faith, in which we profess the Faith, it says, “I look forward to the resurrection of the dead and the life of the world to come.” But as was explained above (a. 5), it belongs to hope to look forward to future beatitude. Therefore, hope is not distinct from faith.

**Objection 3:** Through hope a man tends toward God. But tending toward God belongs properly to charity. Therefore, hope is not distinct from charity.

**But contrary to this:** Where there is no distinction, there is no numbering. But hope is numbered along with the other theological virtues; for instance, in *Moralia* 1 Gregory says that the virtues are three, viz., faith, hope, and charity. Therefore, hope is a virtue distinct from the other theological virtues.

**I respond:** A virtue is called ‘theological’ from the fact that it has God as the object to whom it adheres. But there are two ways in which someone can adhere to a thing: (a) for the thing’s own sake and (b) insofar as something else comes from it.

Thus, charity makes a man adhere to God for His own sake, uniting the man’s mind to God through the affect of love.

By contrast, hope and faith make a man adhere to God as a source from which certain things accrue to us (*sicut cuidam principio ex quo aliqua nobis proveniunt*). Now what accrues to us from God are (a) cognition of the truth and (b) the attainment of perfect beatitude:

Thus, faith makes a man adhere to God insofar as He is the source of our cognition of the truth; for we believe those things to be true which have been spoken to us by God.

On the other hand, hope makes us adhere to God because He is the source of perfect beatitude for us, viz., insofar as through hope we rely on God’s help to obtain beatitude.

**Reply to objection 1:** As has been explained, God is the object of these virtues in different respects (*secundum aliam et aliam rationem*). But as was established above (*ST* 1-2, q. 54, a. 2), different aspects (*diversa ratio*) of an object are sufficient for a distinction among habits.

**Reply to objection 2:** Looking forward is posited in the creed of the Faith not because it is an act proper to faith, but insofar as the act of hope presupposes faith, as will be explained below (a. 7). And so the act of faith is made manifest by the act of hope.

**Reply to objection 3:** Hope makes us tend toward God as a certain final good to be obtained and as an efficacious aid to help us. By contrast, charity properly makes a man tend toward God by uniting his affections to God—so that, namely, the man lives not for himself but for God.

## Article 7

### Is hope prior to faith?

It seems that hope is prior to faith:

**Objection 1:** A Gloss on Psalm 36:3 (“Hope in the Lord, and do good”) says, “Hope is the entry to faith and the beginning of salvation.” But salvation comes by faith, through which we are justified. Therefore, hope is prior to faith.

**Objection 2:** What is posited in a thing’s definition is prior to that thing and better known than it. But hope is posited in the definition of faith, as is clear from Hebrews 11:1 (“Faith is the substance of things to be hoped for”). Therefore, hope is prior to faith.

**Objection 3:** Hope precedes a meritorious act; for in 1 Corinthians 9:10 the Apostle says, “He who plows should plow in the hope of receiving fruit.” But the act of faith is meritorious. Therefore, hope is prior to faith.

**But contrary to this:** Matthew 1:2 says, “Abraham begot Isaac”—that is, says a Gloss, “Faith begot hope.”

**I respond:** Faith is absolutely speaking prior to hope. For the object of hope is an arduous future good that it is possible to have. Therefore, in order for someone to have hope, it is required that the object of hope be proposed to him as something possible. But as is clear from what has been said (aa. 2 and 6), the object of hope is in one sense eternal beatitude and in another sense God’s help. And both of these are proposed to us by faith, through which we come to know that we are able to attain eternal life and that God’s help has been prepared for us—this according to Hebrews 11:6 (“One who approaches God must believe that He exists and that He rewards those who seek after Him”). Hence, it is clear that faith is prior to hope.

**Reply to objection 1:** As the Gloss adds in the same place, hope is called ‘the entry to faith’, i.e., to what is believed, “in the sense that through hope one enters into seeing what is believed.”

Alternatively, one can reply that hope is the entry to faith in the sense that through it a man enters into being stabilized and perfected in faith.

**Reply to objection 2:** ‘Thing to be hoped for’ is posited in the definition of faith because the proper object of faith is not apparent in its own right. Hence, it was necessary that it be designated, through a sort of circumlocution, by that which follows upon faith.

**Reply to objection 3:** Not every meritorious act has hope preceding it. Rather, it is sufficient if the act has hope concomitant with it or consequent upon it.

## Article 8

### Is charity prior to hope?

It seems that charity is prior to hope:

**Objection 1:** In commenting on Luke 17:6 (“If you had faith the size of a mustard seed ...”) Ambrose says, “From faith comes charity and from charity hope.” But faith is prior to charity. Therefore, charity is prior to hope.

**Objection 2:** In *De Civitate Dei* 14 Augustine says, “Good movements and affections come from love and holy charity.” But to hope, insofar as it is the act of hope, is a certain good movement of the mind. Therefore, it is derived from charity.

**Objection 3:** In *Sentences* 3, dist. 26 the Master says that hope comes from merits, which precede not only the thing hoped for but even hope itself, and which charity precedes by its nature. Therefore, charity is prior to hope.

**But contrary to this:** In 1 Timothy 1:5 the Apostle says, “The end of the precept is charity from a pure heart and from a good conscience,” and a Gloss says, “that is, from hope.” Therefore, hope is prior to charity.

**I respond:** There are two sorts of orderings. One is an ordering according to the way of *generation and matter*, and in accord with this ordering what is imperfect is prior to what is perfect. The other is an ordering according to *perfection and form*, and in accord with this ordering what is perfect is naturally prior to what is imperfect.

Now according to the *first* sort of ordering, hope is prior to charity. This is obvious as follows: As was established above when we were talking about the passions (*ST* 1-2, q. 27, a. 4 and q. 28, a. 6 and q. 40, a. 7), hope—and every appetitive movement—is derived from love. But some sorts of love are perfect and some are imperfect. A perfect love is that by which someone is loved in his own right (*secundum se*), as when someone loves the good for him, in the way that a man loves his friend. Imperfect love is that by which someone loves something not in its own right but in order that some good

might come to him himself, in the way that a man loves a thing that he has a sensory desire for (*sicut homo amat rem quam concupiscit*). Now the first sort of love of God pertains to charity, which adheres to God in His own right. By contrast, hope has to do with the second sort of love, since he who hopes intends to obtain something for himself. And so in the *path of generation* hope is prior to charity. For as Augustine puts it in *Super Primam Canonicam Ioannis*, just as someone is led to love God by the fact that, fearing punishment from Him, he stops sinning, so, too, hope leads to charity insofar as, hoping to be rewarded by God, someone is incited to love God and to keep His commandments.

By contrast, in accord with the *ordering of perfection*, charity is naturally prior. And so, when charity arrives, hope is rendered more perfect, since we especially place our hope in our friends (*quia de amicis maxime speramus*). And it is in this sense that Ambrose says that hope comes from charity.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** Hope, and every appetitive movement, proceeds from some sort of love, viz., a love by which someone loves a good that he looks forward to. But not every instance of hope proceeds from charity; instead, the only hope that proceeds from charity is that by which someone hopes for a good from God as from a friend.

**Reply to objection 3:** The Master is talking here about hope informed [by charity] (*loquitur de spe formata*), which charity, along with the merits caused by charity, is naturally prior to.

## QUESTION 18

### The Subject of Hope

We next have to consider the subject of hope. On this topic there are four questions: (1) Does the virtue of hope exist in the will as its subject? (2) Does hope exist in the blessed in heaven (*in beatis*)? (3) Does hope exist in the damned? (4) Does hope have certitude as it exists in those who are in this life (*in viatoribus*)?

#### Article 1

##### Does hope exist in the will as its subject?

It seems that hope does not exist in the will as its subject:

**Objection 1:** As was explained above (q. 17, a. 1 and *ST* 1-2, q. 40, a. 1), the object of hope is an arduous good. But what is arduous is the object of the irascible power and not of the will. Therefore, hope exists in the irascible power and not in the will.

**Objection 2:** In a case in which one thing is sufficient, it is pointless to posit a second thing. But charity, which is the most perfect among the virtues, is sufficient for perfecting the power of the will. Therefore, hope does not exist in the will.

**Objection 3:** It is impossible for a single power to have two acts at the same time (*una potentia non potest simul esse in duobus actis*); for instance, the intellect is unable to have intellectual understanding of many things at the same time. But an act of hope can exist together with an act of charity. Therefore, since an act of charity obviously belongs to the will, an act of hope does not belong to the will. Therefore, hope does not exist in the will.

**But contrary to this:** The soul has a capacity for God only with respect to its mind (*non nisi secundum mentem*), which, as is clear from Augustine in *De Trinitate*, contains the memory (*memoria*), the intelligence (*intelligentia*), and the will (*voluntas*). But hope is a theological virtue that has God as its object. Therefore, since hope exists in neither the memory nor the intelligence, which belong to the cognitive power, it follows that it exists in the will as its subject.

**I respond:** As is clear from what was explained above (*ST* 1, q. 87, a. 2), habits are known from their acts. But an act of hope is a movement of the appetitive part of the soul, since its object is a good.

Now since, as was established in the First Part (*ST* 1, q. 82, a. 5), there are two appetites in a man, viz., (a) the *sentient appetite*, which is divided into the *irascible appetite* and the *concupiscible appetite*, and (b) the *intellective appetite*, which is called the will, it follows that, as was explained above (*ST* 1, q. 82, a. 5 and *ST* 1-2, q. 22, a. 3), movements similar to those that exist in the lower appetite along with a passion exist in the higher appetite without any passion.

Now an act of the virtue of hope cannot belong to the sentient appetite, since the good that is an object of this virtue is not any sensible good, but is instead the divine good. And so hope exists in the higher appetite, which is called the will, as its subject, and not in the lower appetite, which the irascible part of the soul belongs to.

**Reply to objection 1:** The object of the irascible power is something arduous and *sensible*. By contrast, the object of the virtue of hope is something arduous and *intelligible*—or, better, something that exists beyond understanding (*supra intellectum existens*).

**Reply to objection 2:** Charity perfects the will sufficiently with respect to one act, viz., the act of elective love (*diligere*). But another virtue is required to perfect the will with respect to its other act, viz. the act of hope (*sperare*).

**Reply to objection 3:** As is clear from what was said above (q. 17, a. 8), the movement of hope and the movement of charity have an ordering with respect to one another. Hence, nothing prevents both of them from existing together in a single power.

In the same way, as was explained in the First Part (*ST* 1, q. 58, a. 2 and q. 85, a. 4), the intellect is

able to have simultaneous intellectual understanding of many things that are ordered with respect to one another.

## Article 2

### Does hope exist in the blessed in heaven?

It seems that hope exists in the blessed in heaven (*spes sit in beatis*):

**Objection 1:** Christ was a perfect ‘comprehender’ [of the divine essence] (*comprehensor*) from the beginning of His conception. But He had hope, since, as a Gloss explains it, in Psalm 30:1 it is by His person that it is said, “In you, O Lord, have I hoped.” Therefore, hope can exist in the blessed in heaven.

**Objection 2:** Just as the attainment of beatitude is an arduous good, so is its continuation. But before men attain beatitude, they have the hope of attaining beatitude. Therefore, after they have attained beatitude, they can hope for the continuation of beatitude.

**Objection 3:** As was explained above (q. 17, a. 3), through the virtue of hope one can hope for beatitude not only for himself but also for others. But the blessed who are in heaven hope for beatitude for others; otherwise, they would not pray for them. Therefore, hope can exist in the blessed in heaven.

**Objection 4:** It is not just the glory of the soul, but also the glory of the body that belongs to beatitude. But as is clear from Apocalypse 6:9 and from *Super Genesim ad Litteram* 12, the souls of the saints who are in heaven still look forward to the glory of the body. Therefore, hope can exist in the blessed in heaven.

**But contrary to this:** In Romans 8:24 the Apostle says, “Why would someone hope for what he sees?” But the blessed in heaven enjoy the vision of God. Therefore, there is no room in them for hope.

**I respond:** When that which gives the species to a thing is taken away, then the species is destroyed and the thing cannot remain as the same thing; for instance, when the form of a natural body is removed, the body does not remain the same in species.

Now as was explained above (q. 17, aa. 5-6), hope receives its species from its principal object, just as the other virtues do. But, as has been explained (q. 17, a. 2), its principal object is eternal beatitude insofar as it can be had by God’s help. Therefore, since an arduous and possible good does not fall under the notion of hope except insofar as it is future, it follows that when beatitude is present and no longer future, the virtue of hope cannot exist there. And so hope, like faith, is put aside in heaven, and neither of them can exist in the blessed in heaven.

**Reply to objection 1:** Even though Christ was a comprehender [of the divine essence] and was, as a result, one of the blessed as regards the enjoyment of God, He was nonetheless at the same time a wayfarer (*viator*) as regards His [human] nature’s passibility, which He was still subject to (*quam adhuc gerebat*). And so He was able to hope for the glory of impassibility and immortality—yet not in such a way that He had the virtue of hope, which looks to the enjoyment of God and not to the glory of the body as its principal object.

**Reply to objection 2:** The beatitude of the saints is called ‘eternal life’ because by the fact that they enjoy God, the saints are in a certain sense made participants in God’s eternity, which surpasses all of time. And so the continuity of beatitude is not divided into present, past, and future (*continuatio beatitudinis non diversificatur per praesens, praeteritum et futurum*). Therefore, the blessed in heaven do not have hope with respect to the continuation of beatitude; rather, they have the reality itself, since there is no notion of what is future in this case.

**Reply to objection 3:** As long as the virtue of hope endures, it is by the same hope that one hopes for beatitude for himself and for others. But when the hope by which they had hoped for beatitude for themselves is put aside in the blessed in heaven, then they hope for beatitude for others—and yet not by

the virtue of hope, but rather out of the love of charity. In the same way, one who has charity with respect to God loves his neighbor by that same charity, and yet someone can love his neighbor by some other sort of love without having the virtue of charity.

**Reply to objection 4:** Since hope is a theological virtue that has God as its object, the principal object of hope is the glory of the soul, which consists in the enjoyment of God, and not the glory of the body. Again, even if the glory of the body has the character of something arduous in relation to human nature, it nonetheless does not have the character of something arduous for someone who has the glory of the soul—both because (a) the glory of the body is something very small (*minimum quiddam*) in comparison with the glory of the soul, and also because (b) one who has the glory of the soul already has a sufficient cause of the glory of the body.

### Article 3

#### Does hope exist in the damned?

It seems that hope exists in the damned (*in damnatis sit spes*):

**Objection 1:** The devil is both damned and the prince of the damned—this according to Matthew 25:41 (“Depart you cursed into the everlasting fire, which was prepared for the devil and his angels”). But the devil has hope—this according to Job 40:28 (“Behold, his hope shall fail him”). Therefore, it seems that the damned have hope.

**Objection 2:** Just as faith can be either informed or unformed, so, too, with hope. But unformed faith can exist in the demons and the damned—this according to James 2:19 (“The demons believe, and they tremble”). Therefore, it seems that unformed hope can likewise exist in the damned.

**Objection 3:** No man is able after death to accrue merit or demerit that he did not have in this life—this according to Ecclesiastes 11:3 (“If the tree falls to the south, or to the north, in whatever place it falls, there shall it be”). But many who will be damned will have had hope in this life without ever despairing. Therefore, in the future life they will likewise have hope.

**But contrary to this:** Hope is a cause of joy—this according to Romans 12:12 (“... rejoicing in hope”). But the damned exist in sorrow and grief and not in joy—this according to Isaiah 65:14 (“My servants will give praise for joyfulness of heart, and you will cry for sorrow of heart, and you will howl for grief of spirit”). Therefore, hope does not exist in the damned.

**I respond:** Just as it belongs to the nature of beatitude that the will comes to rest in it, so it belongs to the nature of punishment that what is inflicted by way of punishment is repugnant to the will.

Now what one is ignorant of is such that it cannot either bring the will to rest or be repugnant to it. This is why Augustine says in *Super Genesim ad Litteram* that in their initial state the angels could not have been either perfectly happy before being confirmed in the good (*ante confirmationem*) nor perfectly unhappy before their fall, since they did not have foreknowledge of how things would turn out for them (*cum non essent praescii sui eventus*). For what is required for true and perfect beatitude is that one should be certain of the perpetuity of his beatitude; otherwise, his will would not come to rest. Similarly, since the perpetuity of damnation belongs to the punishment of the damned, it would not truly have the character of punishment unless it were repugnant to the will—which it could not be if the damned were ignorant of the perpetuity of their damnation. And so it belongs to the state of unhappiness had by the damned that they themselves know that there is no possible way for them to escape damnation and arrive at beatitude; hence, Job 5:22 says, “He does not believe that he can turn back from the darkness to the light.”

Hence, it is clear that the damned cannot apprehend beatitude as a *possible* good, just as the blessed in heaven cannot apprehend beatitude as a *future* good. And so hope can exist neither in the blessed in

heaven nor in the damned. Rather, hope can exist in the wayfarers (*in viatoribus*), whether they are in this life or in purgatory, since in both cases they apprehend beatitude as something both *future* and *possible*.

**Reply to objection 1:** As Gregory says in *Moralia* 33, the words of Job 40:28 are being said of the devil with respect to his members, whose hope will be nullified.

Alternatively, if the words are understood to apply to the devil himself, they can be referred to the hope by which he hopes that he will win victory over the saints—this according to what came before [in Job 40:18] (“He has confidence that the Jordan will run into his mouth”). But this is not the sort of hope of which we are speaking here.

**Reply to objection 2:** In *Enchiridion* Augustine says, “Faith has to do with bad things and good things, with past and present and future things, with one’s own things and those of others. By contrast, hope has to do only with good future things that pertain to oneself.” And so it is possible for there to be unformed faith in the damned rather than hope, since divine goods are not something future and possible for them, but are instead removed from them (*eis absentia*).

**Reply to objection 3:** The lack of hope in the damned does not alter their demerit, just as the absence of hope in the blessed does not increase their merit. Rather, in both cases the lack of hope occurs because of a change in their status.

#### Article 4

##### Does the hope of those who are in this life have certitude?

It seems that the hope of those who are in this life does not have certitude (*spes viatorum non habet certitudinem*):

**Objection 1:** Hope exists in the will as in a subject. But certitude belongs to the intellect and not to the will. Therefore, hope does not have certitude.

**Objection 2:** As was explained above (q. 17, a. 1), hope proceeds from grace and merits. But, as was explained above (*ST* 1-2, q. 112, a. 5), in this life we cannot know with certitude that we have grace. Therefore, the hope of someone in this life does not have certitude.

**Objection 3:** Certitude cannot have to do with anything that is able to fail. But many individuals in this life who have hope fail to acquire beatitude. Therefore, the hope of those who are in this life does not have certitude.

**But contrary to this:** As the Master says in *Sentences* 3, dist. 26, “Hope is the certain expectation (*certa expectatio*) of future beatitude.” This can be based on what is said in 2 Timothy 1:12 (“I know Him whom I have believed, and I am certain that He is able to preserve what I have committed to Him”).

**I respond:** There are two ways in which certitude is found in a thing, viz., (a) *essentially* (*essentialiter*) and (b) *by participation* (*participative*). Certitude is found essentially in a cognitive power and by participation in everything that is moved infallibly to its end by the cognitive power.

The latter is the sense in which it is said that nature operates with certitude (*natura certitudinaliter operatur*), insofar as nature is moved by God’s intellect, which moves each thing toward its end with certitude. Likewise, it is in this same sense that the moral virtues are said to operate with more certitude (*certius*) than an art or craft does, insofar as the moral virtues are moved by reason to their acts in the manner of nature. And it is likewise in this sense that hope tends with certitude toward its end, participating, as it were, in the certitude had by faith (*participans certitudinem a fide*), which exists in a cognitive power.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** Hope depends principally not on grace that is already had, but rather on

God's omnipotence and mercy, through which even someone who does not have grace is able to acquire it, so that he might in this way arrive at eternal life. But whoever has faith is certain of God's omnipotence and of His mercy.

**Reply to objection 3:** The fact that some individuals who have hope fail to attain beatitude stems from a defect of free choice, which puts up an obstacle of sin, and not from a defect in God's omnipotence or mercy, on which hope depends. Hence, this fact does not undermine the certitude of hope.

## QUESTION 19

### The Gift of Fear

We next have to consider the gift of fear. On this topic there are twelve questions: (1) Should God be feared? (2) Is fear appropriately divided into filial fear, initial fear, servile fear, and worldly fear? (3) Is worldly fear always bad? (4) Is servile fear good? (5) Is servile fear the same in substance as filial fear? (6) Is servile fear excluded when charity arrives? (7) Is fear the beginning of wisdom? (8) Is initial fear the same in substance as filial fear? (9) Is fear a gift of the Holy Spirit? (10) Does fear increase as charity increases? (11) Does fear remain in heaven? (12) What in the beatitudes and the fruits [of the Holy Spirit] corresponds to fear?

#### Article 1

##### Can God be feared?

It seems that God cannot be feared (*timeri non possit*):

**Objection 1:** As was established above (*ST* 1-2, q. 41, a. 2 and q. 42, a. 1), the object of fear is something that is bad and future. But God is devoid of everything bad, since He is goodness itself. Therefore, God cannot be feared.

**Objection 2:** Fear is opposed to hope. But we have hope with respect to God. Therefore, we cannot simultaneously fear Him.

**Objection 3:** In *Rhetoric 2* the Philosopher says, “We fear those things from which evils come to us.” However, evils come to us not from God, but from ourselves—this according to Hosea 13:9 (“Destruction, O Israel, is yours, whereas your help is from me”). Therefore, God should not be feared.

**But contrary to this:** Jeremiah 10:7 says, “Who will not fear you?” And Malachi 1:6 says, “If I am the master, where is the fear of me?”

**I respond:** Just as hope has two objects, one of which is the future good itself, the acquisition of which one looks forward to, whereas the other is the help of someone through whom one expects to acquire what he hopes for, so, too, fear can have two objects, one of which is the bad thing itself that a man seeks refuge from, whereas the other is that from which this bad thing can come.

Thus, God, who is goodness itself, cannot be an object of fear in the first way.

However, God can be an object of fear in the second way, viz., insofar as something bad can threaten us that is *from Him* or that is *bad in comparison to Him*.

More specifically, the *evil of punishment (malum poenae)*, which is not an evil absolutely speaking but is good absolutely speaking and evil in a certain respect, can threaten us *from Him*. For since *good* is said as ordered toward an end, whereas *evil* implies a privation of this ordering, what is evil absolutely speaking is what excludes being ordered by the final end, and this is the evil of sin (*malum culpae*). By contrast, the evil of punishment is, to be sure, bad insofar as it deprives one of some particular good, but it is good absolutely speaking insofar as it depends on an ordering toward the ultimate end.

On the other hand, *in comparison with God*, what can come to us is the *evil of sin*, if we separate ourselves from Him (*si ab eo separemur*).

And so this is how God can be and should be feared.

**Reply to objection 1:** This argument goes through insofar as the object of fear is something that is bad.

**Reply to objection 2:** In the case of God one must consider both His *justice*, in accord with which He punishes those who sin, and also His *mercy*, in accord with which He liberates us. Thus, if we consider His justice, fear arises in us, whereas if we consider His mercy, hope arises in us. And so it is with respect to diverse notions that God is the object of hope and of fear.

**Reply to objection 3:** The evil of sin is not from God as its author, but is instead from us ourselves insofar as we withdraw from God.

By contrast, the evil of punishment is, to be sure, from God as its author insofar as it has the nature of something good, viz., because it is just. But the fact that punishment is justly inflicted on us stems in its origins from what is deserved because of our sin. It is in this sense that Wisdom 1:13 and 1:16 says, “God did not make death ... but the wicked with works and words have called it upon themselves.”

## Article 2

### Is fear appropriately divided into *filial* fear, *initial* fear, *servile* fear, and *worldly* fear?

It seems that fear is not appropriately divided into *filial* fear (*timor filialis*), *initial* fear (*timor initialis*), *servile* fear (*timor servilis*), and *worldly* fear (*timor mundanus*):

**Objection 1:** In *De Fide Orthodoxa* 2 Damascene posits six species of fear, viz., sluggishness (*segnities*), shamefacedness or embarrassment (*erubescencia*), and the others which were discussed above (*ST* 1-2, q. 41, a. 4) and which are not mentioned in the division just enumerated. Therefore, it seems that this division of fear is inappropriate.

**Objection 2:** Each of these sorts of fear is either good or bad. But there is a sort of fear, viz., *natural* fear, which is neither (a) morally good, since it exists in the demons—this according to James 2:19 (“They believe, and they tremble”)—nor (b) morally bad, since it existed in Christ—this according to Mark 14:33 (“Jesus began to fear and to be heavy”). Therefore, fear is not appropriately divided in the way in question.

**Objection 3:** The relation of a child to his father, of a wife to her husband, and of a servant to his master are different from one another. But filial fear, which is the fear of a child in relation to his father, is distinct from servile fear, which is the fear of a servant in relation to his master. Therefore, *chaste fear*, which seems to be the fear of a wife in relation to her husband, ought to be distinguished from all the sorts of fear listed above.

**Objection 4:** Just as servile fear is afraid of punishment, so initial and worldly fear are afraid of punishment, too. Therefore, these sorts of fear should not be distinguished from one another.

**Objection 5:** Just as sentient desire (*concupiscentia*) is directed toward something good, so fear is directed toward something bad. But concupiscence of the eyes, by which one has a sentient desire for a worldly good, is different from concupiscence of the flesh, by which one has a sentient desire for one’s own pleasure. Therefore, *worldly* fear, by which one is afraid of losing exterior goods, is likewise different from *human* fear, by which one is afraid of the loss of his own person.

**But contrary to this** is the authority of the Master in *Sentences* 3, dist. 34.

**I respond:** We are at present talking about fear insofar as through it we are in some sense turned toward God or turned away from Him.

For since the object of fear is something bad, sometimes a man withdraws from God because of bad things that he fears, and this is called *human* or *worldly* fear.

By contrast, sometimes a man turns toward God and adheres to Him because of something bad that he fears. Now there are two sorts of bad things, viz., the evil of punishment and the evil of sin. Thus, if someone is turned toward God and adheres to Him because of his fear of punishment, then this will be *servile* fear. On the other hand, if he does this because of his fear of sinning, then this will be *filial* fear, for it belongs to children to be afraid of offending their father (*filiorum est timere offensam patris*). And if he does this for both reasons, then this is *initial* fear, which lies between servile fear and filial fear. Now when we were discussing the passion of fear above (*ST* 1-2, q. 42, a. 3), it was established that the evil of sin can be feared.

**Reply to objection 1:** Damascene is dividing fear insofar as it is a passion of the soul. However, as has been explained, the present division is of fear as ordered toward God.

**Reply to objection 2:** The moral good consists principally in turning toward God, whereas what is morally bad consists principally in turning away from God. And so all the kinds of fear in question imply either moral goodness or moral badness. On the other hand, natural fear is presupposed by moral goodness and moral badness. And this is why it is not enumerated among these sorts of fear.

**Reply to objection 3:** The relation of a servant to his master stems from the power of the master, who subjects the servant to himself, whereas the relation of a child to his father or of a wife to her husband stems, conversely, from the affection of the child, who submits himself to his father, or from the affection of the wife, who joins herself to her husband by a union of love.

Hence, filial fear and chaste fear are of a piece with one another (*pertinent ad idem*). For through the love of charity God becomes our Father—this according to Romans 8:15 (“You have received the spirit of adoption of sons, in which we cry out, ‘Abba’”). And it is in accord with the same charity that he is even called our spouse—this according to 2 Corinthians 11:2 (“I have espoused you to one husband, in order to present you as a chaste virgin to Christ”).

By contrast, servile fear is something else, since it does not include charity in its nature.

**Reply to objection 4:** Three of the types of fear noted here have to do with punishment, but in different ways. For worldly or human fear has to do with punishment that turns one away from God and which is sometimes inflicted or threatened by the enemies of God. By contrast, servile fear and initial fear have to do with the punishment by which men are attracted to God and which is inflicted or threatened by God. This is the punishment which servile fear principally has to do with, whereas initial fear has to do with it in a secondary way.

**Reply to objection 5:** It is for the same reason that a man is turned away from God because of his fear of losing worldly goods and because of his fear of losing the soundness of his own body; for exterior goods belong to the body. And so the two sorts of fear are being counted here as the same thing, even though the evils that they are afraid of are diverse, just as the goods that they desire are diverse. To be sure, sins that are diverse in species stem from this diversity, and yet it is common to all these sins that they lead one away from God.

### Article 3

#### Is worldly fear always bad?

It seems that worldly fear is not always bad:

**Objection 1:** It seems to belong to human fear that we should revere men. But some are blamed for not revering men, as is clear from what Luke 18:2 says of the unjust judge, “He neither feared God nor revered men.” Therefore, it seems that worldly fear is not always bad.

**Objection 2:** Punishments that are inflicted by secular powers seem to be relevant to worldly fear. But we are motivated to act well by such punishments—this according to Romans 13:3 (“Do you want not to be afraid of the power? Do what is good, and you shall have praise from it”). Therefore, worldly fear is not always bad.

**Objection 3:** What is in us naturally does not seem to be bad, because natural things exist in us from God. But it is natural for a man to fear damage to his own body and the loss of the temporal goods by which the present life is sustained. Therefore, it seems that worldly fear is not always bad.

**But contrary to this:** In Matthew 10:28 our Lord says, “Do not fear those who kill the body,” where it is worldly fear that is being prohibited. But nothing is prohibited by God unless it is bad. Therefore, worldly fear is bad.

**I respond:** As is clear from what was said above (*ST* 1-2, q. 18, a. 2 and q. 54, a. 2), moral acts and habits have both their species and their name from their object. On the other hand, every appetitive

movement is specified and named from its proper end. For instance, if one were to call the love of work greed (*cupiditas*), given that men work because of greed, then he would not have named it correctly, since those who are greedy seek work not as an end but as a means to an end, whereas they seek riches as their end. Hence, it is the desire for or love of riches, which is bad, that is correctly called greed.

In the same way, it is the love by which someone depends on the world as an end that is properly called worldly love. And worldly love, so taken, is always bad. Now as is clear from Augustine in 83 *Quaestiones*, fear takes its origin from love, since a man is afraid of losing what he loves. And so worldly fear is the fear that stems from worldly love as from a bad root. And because of this worldly love is likewise always bad.

**Reply to objection 1:** There are two possible ways for someone to revere men:

In one way, insofar as there is something divine in them, viz., the good of grace or the good of virtue or, at least, the good of being a natural image of God; and it is in this sense that someone who does not revere men is blamed.

In a second way, someone can hold revere men insofar as they are opposed to God. And in this sense those who do not revere men are praised—this according to Ecclesiasticus 48:13 in speaking of Elijah or Elisha (“In his days he did not fear the ruler”).

**Reply to objection 2:** When secular powers inflict punishments in order to draw individuals back from sin, in so doing they are ministers of God—this according to Romans 13:4 (“For he is God’s minister, an avenger to execute wrath upon him that does evil”). And in this sense fearing the secular power belongs not to worldly fear, but to servile fear or initial fear.

**Reply to objection 3:** It is natural that a man should flee from damage to his own body or even from the loss of temporal things, but it is contrary to natural reason that a man should recede from justice because of these things. Hence, in *Ethics* 3 the Philosopher likewise says that there are certain things, viz., works of sin, which a man should not be forced into by any sort of fear, since it is worse to commit such sins than to suffer any sort of punishment.

#### Article 4

##### Is servile fear good?

It seems that servile fear is not good:

**Objection 1:** If the use of a thing is bad, then the thing itself is bad. But the use of servile fear is bad; for a Gloss on Romans 8:15 says, “If a man does anything through fear, even if what he does is good, it is not well done.” Therefore, servile fear is not good.

**Objection 2:** What stems from a root of sin is not good. But servile fear stems from a root of sin, since in commenting on Job 3:11 (“Why did I not die in the womb?”), Gregory says, “When present punishment is feared because of sin and the lost face of God is not loved, the fear stems from pride (*ex tumore*) and not from humility.” Therefore, servile fear is bad.

**Objection 3:** Just as mercenary love is opposed to the love of charity, so servile fear seems to be opposed to chaste fear. But mercenary love is always bad. Therefore, so is servile fear.

**But contrary to this:** Nothing bad is from the Holy Spirit. But servile fear is from the Holy Spirit, since a Gloss on Romans 8:15 (“You have not received a spirit of bondage”) says, “There is one Spirit who effects two sorts of fear, viz., servile fear and chaste fear.” Therefore, servile fear is not bad.

**I respond:** On the part of its being servile (*ex parte servilitatis*), servile fear has something that is bad. For servitude is opposed to freedom. Hence, since, as is said at the beginning of the *Metaphysics*, one who is free exists in his own right (*causa sui est*), a servant is one who does not act in his own right but acts in the sense of being moved by something extrinsic. Now if one does something out of love,

then he acts, as is were, on his own (*ex seipso*), since he is moved to act by his own inclination. And so it is contrary to the nature of what is servile that one should act out of love. So then, servile fear, insofar as it is servile, is contrary to charity.

Therefore, if being servile were part of the nature of fear, then servile fear would have to be bad absolutely speaking, in the same way that adultery is absolutely bad because something that is opposed to charity belongs to the species of adultery. But the sort of servileness in question does not belong to the species of servile fear, just as being unformed does not belong to the species of unformed faith. For the species of a moral habit or act is taken from its object. But the object of servile fear is punishment, and it happens either that (a) the good which is opposed to this punishment is loved as an ultimate end and, as a result, the punishment is feared as the principal evil—this is what happens in the case of one who does not have charity—or that (b) the punishment is ordered toward God as an end and, as a result, it is not feared as the principal evil—this is what happens in one who has charity. For the species of a habit is not destroyed by the fact that its object or end is ordered toward some more ultimate end. And so servile fear is good in its substance, but its being servile is bad.

**Reply to objection 1:** This passage from Augustine should be understood to apply to the case of one who does something out of servile fear insofar as it is servile, i.e., one who does not love justice but only fears punishment.

**Reply to objection 2:** Servile fear does not in its substance stem from pride. Rather, its being servile is born of pride, viz., insofar as a man does not through love will to subject his affections to the yoke of justice.

**Reply to objection 3:** A mercenary love is one which loves God for the sake of temporal goods and is contrary to charity in its own right. And so mercenary love is always bad.

By contrast, servile love does not in its substance imply anything but fear of punishment, regardless of whether or not it is feared as the principal evil (*sive timeatur ut principale malum sive non timeatur ut malum principale*).

## Article 5

### Is servile fear the same in substance as filial fear?

It seems that servile fear is the same in substance as filial fear:

**Objection 1:** Filial fear seems to be related to servile fear in the way that informed faith is related to unformed faith, one of which exists along with mortal sin, whereas the other does not. But informed faith and unformed faith are the same in substance (cf. q. 4, a. 4). Therefore, servile fear and filial fear are likewise the same in substance.

**Objection 2:** Habits are diversified by their objects. But the object of servile fear is the same as the object of filial fear, since it is God who is feared by both sorts of fear. Therefore, servile fear and filial fear are the same in substance.

**Objection 3:** Just as a man hopes to enjoy God and also to obtain benefits from Him, so, too, he fears being separated from God and suffering punishments from Him. But as has been explained (q. 17, aa. 2-3), it is the same hope by which we hope to enjoy God and by which we hope to obtain benefits from Him. Therefore, it is likewise the case that the filial fear by which we fear separation from God is the same as the servile fear by which we fear being punished by Him.

**But contrary to this:** In *Super Primum Canonicum Ioannis* [*In Epistolam Ioannis Ad Parthos*] Augustine says that there are two sorts of fear, the one servile and the other filial or chaste.

**I respond:** The object of fear is properly speaking something evil. And since, as is clear from what has been said (*ST* 1-2, q. 18, a. 5 and q. 54, a. 2), acts and habits are distinguished by their objects,

the types of fear differ in species in a way corresponding to the diversity of evils.

Now as is clear from what was said above (a. 1), the evil of punishment, which servile fear flees from, differs in species from the evil of sin, which filial fear flees from. Hence, it is clear that servile fear and filial fear differ from one another in species and are not the same in substance.

**Reply to objection 1:** Informed faith and unformed faith do not differ in their object, since both sorts of faith believe God and believe that God ... (cf. q. 2, a. 2), whereas they differ only because of something extrinsic, viz., the presence or absence of charity. And so they do not differ in substance.

By contrast, servile fear and filial fear differ in their objects. And so the lines of reasoning are not parallel.

**Reply to objection 2:** Servile fear and filial fear do not have the same relation to God. For servile fear looks to God as a principle that inflicts punishment, whereas filial fear looks to God not as an active principle of sin, but rather as the terminus that it fears being separated from by sin. And so they do not get an identity of species from this object which is God. For natural movements are also diversified in species by their relation to a given terminus; for instance, a movement toward whiteness is not the same in species as a movement away from whiteness.

**Reply to objection 3:** Hope looks to God as a principle both with respect to the enjoyment of God and with respect to every other benefit. But it is not this way with fear. And so the lines of reasoning are not parallel.

## Article 6

### Does servile fear remain when charity is present?

It seems that servile fear does not remain when charity is present (*non remaneat cum caritate*):

**Objection 1:** In *Super Primum Canonicum Ioannis* [*In Epistolam Ioannis Ad Parthos*] Augustine says, “When charity begins to live there, fear, which had prepared a place for it, is repelled.”

**Objection 2:** As Romans 5:5 says, “God’s charity is diffused in our hearts through the Holy Spirit, who has been given to us.” But as 2 Corinthians 3:17 puts it, “Where the Spirit of the Lord dwells, there is freedom.” Therefore, since freedom excludes servitude, it seems that servile fear is expelled when charity arrives.

**Objection 3:** Servile fear is caused by love of oneself, insofar as punishment diminishes one’s own good. But the love of God expels love of self, since it makes one disdain himself—this is clear from the passage in Augustine’s *De Civitate Dei* 14 (“Love of God to the point of contempt for oneself builds up the city of God”). Therefore, it seems that when charity comes, servile fear is destroyed.

**But contrary to this:** As was claimed above (a. 4), servile fear is a gift of the Holy Spirit. But gifts of the Holy Spirit, through which the Holy Spirit dwells in us, are not destroyed when charity arrives. Therefore, servile fear is not destroyed when charity arrives.

**I respond:** Servile fear is caused by love of oneself, since it is a fear of punishment and punishment is to the detriment of one’s own good. Hence, fear of punishment is compatible with charity in the same sense in which love of self is compatible with charity; for the fact that a man desires his own good is of a piece (*eiusdem rationem*) with the fact that he fears being deprived of that good.

Now there are three ways in which the love of self can be related to charity:

In one way, it is *contrary to* charity, viz., to the extent that someone sets up his end in the love of his own good.

In a second way, it is *included within* charity, insofar as a man loves himself because of God and in God.

In the third way, love of self is, to be sure, *distinct from* charity but *not contrary to* charity, viz.,

when someone loves himself with respect to the notion of his own good, but in such a way that he does not set up his end in this proper good of his—just as there can likewise be some other special love of one’s neighbor over and beyond the love of charity, which is founded in God, when a neighbor is loved by reason of consanguinity or some other human condition, which it is nonetheless possible to refer to charity (*quae tamen referibilis sit ad caritatem*).

So, then, there is one way in which the fear of punishment is included within charity. For being separated from God is a punishment that charity especially flees from. Hence, this belongs to *chaste* fear.

However, in a second way the fear of punishment is contrary to charity, insofar as someone flees from a punishment contrary to his own natural good as the *principal* evil opposed to the good that is loved as an [ultimate] end. And in this sense the fear of punishment does not exist along with charity.

In a third way, the fear of punishment is distinct in substance from chaste fear, because the man fears the evil of punishment (*malum poenale*) not because it involves being separated from God (*non ratione separationis a Deo*), but because it is harmful to his own good—and yet his [ultimate] end is not set up in his own good, and so the evil in question is not feared as the *principal* evil. And such a fear of punishment can exist with charity. But as is clear from what has been said (a. 4), this sort of fear of punishment is not called ‘servile’ unless the punishment is feared as the *principal* evil.

And so insofar as it is servile, fear does not remain when charity is present; however, the *substance* of servile fear can remain when charity is present, just as love of self can remain when charity is present.

**Reply to objection 1:** Augustine is talking about fear insofar as it is servile.

**Reply to objection 2 and objection 3:** The other two arguments are likewise talking about fear insofar as it is servile.

## Article 7

### Is fear the beginning of wisdom?

It seems that fear is not the beginning of wisdom (*timor non sit initium sapientiae*):

**Objection 1:** A thing’s beginning is part of the thing (*initium est aliquid rei*). But fear is not a part of wisdom, since fear exists in the appetitive power, whereas wisdom exists in the intellective power. Therefore, it seems that fear is not the beginning of wisdom.

**Objection 2:** Nothing is a principle or beginning of its very own self (*nihil est principium sui ipsius*). But as Job 28:28 says, “The fear of God is itself wisdom.” Therefore, it seems that the fear of God is not the beginning of wisdom.

**Objection 3:** There is nothing prior to a principle or beginning (*principio non est aliquid prius*). But there is something prior to fear, since faith precedes fear. Therefore, it seems that fear is not the beginning of wisdom.

**But contrary to this:** Psalm 110:10 says, “The fear of the Lord is the beginning of wisdom (*initium sapientiae*).”

**I respond:** There are two ways in which something can be said to be the beginning of wisdom: (a) because it is the beginning of wisdom itself with respect to its *essence*, or (b) because it is the beginning of wisdom with respect to its *effect*. In the same way, the principles from which an art or craft proceeds are the beginning of the art with respect to its essence, whereas the beginning of the art with respect to its effect is that from which the art begins to operate—in the way we say that the principle or beginning of the art of building is the foundation, since it is with the foundation that the builder begins to operate.

Now since, as will be explained below (q. 45, a. 1), wisdom is the cognition of what is divine, it is thought of in one way by us and in another way by the philosophers. For since our life is ordered and

directed toward the enjoyment of God by a certain participation in God's nature that occurs through grace, it follows that, according to us, wisdom is thought of not only as giving us cognition of God (*non solum consideratur ut est cognoscitiva Dei*), in the way that it is thought of by the philosophers (*sicut apud philosophos*), but also as directing human life (*sed etiam ut est directiva humanae vitae*), which, as is clear from Augustine in *De Trinitate* 12, is directed not only by human reasons but also by divine reasons.

So, then, the first principles of wisdom, i.e., the articles of the faith, are the beginning of wisdom with respect to its *essence*. And on this score *faith* is called the beginning of wisdom.

But as regards its *effect*, the beginning of wisdom is that from which wisdom begins to operate; and on this score *fear* is the beginning of wisdom. However, servile fear is one thing and filial fear is another. For *servile* fear is something like an outside principle *disposing one toward* wisdom, insofar as someone withdraws from sin because of the fear of punishment and in this way becomes susceptible to the effect of wisdom—this according to Ecclesiasticus 1:27 (“The fear of the Lord drives away sin”). On the other hand, *chaste* or *filial* fear is the beginning of wisdom in the sense of being the first *effect* of wisdom. For since it is part of wisdom that human life should be regulated in accord with divine reasons, it must have its beginning in a man's revering God and subjecting himself to Him. For thus, in what follows, he will be regulated by God in all things.

**Reply to objection 1:** This argument shows that fear is not the principle or beginning of wisdom with respect to the essence of wisdom.

**Reply to objection 2:** The fear of God is related to the whole of a human life that is regulated by God's wisdom as a root is related to a tree; hence, Ecclesiasticus 1:25 says, “The root of wisdom is to fear the Lord, for its branches are long-lived.” And so just as a root is said to be the whole tree virtually, so the fear of God is said to be wisdom.

**Reply to objection 3:** As has been explained, faith is the principle or beginning of wisdom in one sense and fear in another sense. Hence, Ecclesiasticus 25:16 says, “The fear of God is the beginning of love of Him, and the beginning of faith is to be glued to Him.”

## Article 8

### Does initial fear differ in substance from filial fear?

It seems that initial fear differs in substance from filial fear:

**Objection 1:** Filial fear is caused by elective love (*dilectio*). But initial fear is a principle of elective love—this according to Ecclesiasticus 25:16 (“The fear of the Lord is the beginning of love”). Therefore, initial fear is different from filial fear.

**Objection 2:** Initial fear is afraid of punishment, which is the object of servile fear, and so it seems that initial fear is the same as servile fear. But servile fear is different from filial fear. Therefore, initial fear is likewise different in substance from filial fear.

**Objection 3:** What lies in the middle differs in the same way from each of the extremes. But initial fear lies in the middle between servile fear and filial fear. Therefore, it differs both from filial fear and from servile fear.

**But contrary to this:** *Perfect* and *imperfect* do not diversify the substance of a thing. But as is clear from Augustine in *Super Primum Canonicum Ioannis [In Epistolam Ioannis Ad Parthos]*, initial fear and filial fear differ with respect to perfection and imperfection in charity. Therefore, initial fear does not differ in substance from initial fear.

**I respond:** The name ‘initial fear’ is taken from that which is the beginning. But since both servile fear and filial fear are in some sense the beginning of wisdom, both can in some sense be called ‘initial

fear'. However, 'initial' is not being taken in this way when initial fear is distinguished from servile fear and filial fear.

Instead, 'initial' is being taken insofar as it belongs to the state of beginners, in whom a sort of filial fear has taken root through a beginning of charity (*in quibus inchoatur quidam timor filialis per inchoationem caritatis*)—and yet filial fear does not exist in them perfectly, since they have not yet arrived at the fullness of charity (*nondum pervenerunt ad perfectionem caritatis*). And so initial fear, taken in this sense, is related to filial fear in the way that imperfect charity is related to perfect charity.

Now perfect charity and imperfect charity differ not in their essence but only in their state (*solum secundum statum*). And so one should reply that initial fear, as it is being understood here, does not differ in its essence from filial fear.

**Reply to objection 1:** The fear that is the beginning of elective love is *servile* fear, which brings in charity "in the way that a needle brings in the thread," as Augustine puts it.

Alternatively, if the passage is taken to be referring to *initial* fear, it is being called 'the beginning of elective love' not absolutely speaking, but with respect to the state of perfect charity.

**Reply to objection 2:** Initial fear fears punishment not as its proper object but insofar as it has something of servile fear adjoined to it. This latter fear does, to be sure, remain with charity when the servileness has been removed, but its act remains with *imperfect* charity in someone who is moved to act well not only by a love of justice but also by a fear of punishment. However, this act ceases in someone who has perfect charity, which "casts out fear," as 1 John 4:18 says.

**Reply to objection 3:** Initial fear lies in the middle between filial fear and servile fear not in the way that something lies between two things which belong to the same genus, but in the way that, as *Metaphysics 2* says, what is imperfect lies between perfect being and non-being—even though it is the same in substance as perfect being and is totally different from non-being.

## Article 9

### Is fear a gift of the Holy Spirit?

It seems that fear is not a gift of the Holy Spirit:

**Objection 1:** No gift of the Holy Spirit is opposed to virtue, which is also from the Holy Spirit; otherwise, the Holy Spirit would be opposed to Himself. But fear is opposed to hope, which is a virtue. Therefore, fear is not a gift of the Holy Spirit.

**Objection 2:** It is proper to a theological virtue to have God as its object. But fear has God as its object insofar as God is feared. Therefore, fear is a theological virtue and not a gift.

**Objection 3:** Fear follows upon love (*timor ex amore consequitur*). But love (*amor*) is posited as a sort of theological virtue. Therefore, fear is likewise a theological virtue that pertains, as it were, to the same thing.

**Objection 4:** In *Moralia 2* Gregory says that fear is given to counter pride. But the virtue of humility is opposed to pride. Therefore, fear is likewise included among the virtues.

**Objection 5:** The gifts are more perfect than the virtues, since, as Gregory says in *Moralia 2*, the gifts are given to assist the virtues. But hope is more perfect than fear, since hope has to do with what is good, whereas fear has to do with what is bad. Therefore, since hope is a virtue, one should not claim that fear is a gift.

**But contrary to this:** In Isaiah 11:3 the fear of the Lord is numbered among the seven gifts of the Holy Spirit.

**I respond:** As was explained above (a. 2), there are many sorts of fear:

As Augustine points out in *De Gratia and Libero Arbitrio*, *human* fear is not a gift of God, since

it is out of this sort of fear that Peter denied Christ. Instead, this fear is that of which it was said, “Fear him who can throw body and soul in Gehenna” (Matthew 10:28 and Luke 12:5).

Similarly, *servile* fear is not numbered among the seven gifts of the Holy Spirit, even though it is from the Holy Spirit. For as Augustine says in *De Natura et Gratia*, servile fear can have a will to sin joined to it (*potest habere annexam voluntatem peccandi*), whereas the gifts of the Holy Spirit cannot exist with a will to sin, since, as has been explained (*ST* 1-2, q. 68, a. 5), they cannot exist without charity.

Hence, what remains is that the fear of God which is numbered among the gifts of the Holy Spirit is *filial* or *chaste* fear. For it was explained above (*ST* 1-2, q. 68, aa. 1 and 3) that the gifts of the Holy Spirit are habitual perfections of the powers of the soul by which those powers are rendered easily moveable (*bene mobiles*) by the Holy Spirit, in the way that through the moral virtues the appetitive powers are rendered easily moveable by reason. Now in order for something to be easily moveable by another, the first thing required is that it be subject to it and not contrary to it, since movement is impeded by the moveable thing’s being contrary to the mover (*ex repugnantia mobilis ad movens impeditur motus*). But filial or chaste fear fulfills this requirement insofar as through it we revere God and seek to submit ourselves to Him. And so, as Augustine explains in *De Sermone Domini in Monte*, filial fear occupies the first place in ascending order among the gifts of the Holy Spirit and the last place in descending order.

**Reply to objection 1:** Filial fear is not opposed to the virtue of hope. For it is not the case that through filial fear we fear failing to obtain what we hope for by God’s help; instead, what we fear is withdrawing ourselves from this help. And so filial fear and hope cohere with one another and perfect one another.

**Reply to objection 2:** The proper and principal object of fear is something bad that one flees from. And in this sense, as was explained above (a. 1), God cannot be an object of fear. However, He is in this sense an object of hope and of the other theological virtues. For through the virtue of hope we not only rely on God’s help to obtain other goods, but we principally rely on His help to obtain God Himself as the principal good. And the same thing is clear in the case of the other theological virtues.

**Reply to objection 3:** From the fact that love is a principle of fear it does not follow that the fear of God is not a habit distinct from charity (*caritas*), which is the love of God (*amor Dei*). For love is a principle of all the affections, and yet we are perfected in diverse habits with respect to diverse affections.

Yet the reason why love has more of the character of a virtue than fear does is that love has to do with what is good, which, as is clear from what was said above (*ST* 1-2, q. 55, aa. 3-4), virtue is principally ordered toward as regards its proper nature. And for this reason hope is likewise posited as a virtue. By contrast, fear has to do principally with what is bad and implies fleeing from what is bad. This is why it is something less than a theological virtue.

**Reply to objection 4:** As Ecclesiasticus 10:44 says, “The beginning of the pride of man is to fall away from God,” i.e., to will not to submit to God. This is opposed to filial fear, which turns back toward God. And so fear excludes the beginning of pride, and it is because of this that it is given to counter pride.

Yet it does not follow that fear is the same as the virtue of humility. Rather, what follows is that fear is a principle of humility. For as has been explained (*ST* 1-2, q. 68, a. 4), the gifts of the Holy Spirit are principles of the intellectual and moral virtues, while, as was established above [in the same place], the theological virtues are principles of the gifts.

**Reply to objection 5:** From this the reply to the fifth objection is clear.

## Article 10

### Does fear decrease as charity increases?

It seems that fear decreases as charity increases (*cresecente caritate diminuatur timor*):

**Objection 1:** In *Super Primum Canonicum Ioannis [In Epistolam Ioannis Ad Parthos]* Augustine says, “Fear decreases to the extent that charity increases.”

**Objection 2:** Fear decreases when hope increases. But as was established above (q. 17, a. 8), hope increases when charity increases. Therefore, fear decreases when charity increases.

**Objection 3:** Love (*amor*) implies union, whereas fear implies separation. But separation decreases when union increases. Therefore, fear decreases when the love of charity increases.

**But contrary to this:** In *83 Quaestiones* Augustine says, “The fear of God not only initiates wisdom, it also perfects wisdom, i.e., the wisdom that loves God to the highest degree and one’s neighbor as oneself.

**I respond:** As has been explained (a. 2), there are two sorts of fear of God: (a) *filial* fear, by which one fears offending God or being separated from Him (*timet offensam ipsius vel separationem ab ipso*), and (b) *servile* fear, by which one fears punishment.

Now filial fear has to increase when charity increases, in the way that an effect increases when its cause increases. For the more one loves someone, the more he fears offending him and being separated from him.

By contrast, servile fear, as regards its servileness, is totally removed when charity arrives, though, as has been explained (a. 6) it remains in its substance as fear of punishment. And this fear decreases as charity increases, especially with respect to its act, since to the extent that someone loves God more, he fears punishment less—first of all, because he pays less attention to his own good, which punishment is contrary to, and, second, because adhering to God more firmly, he is more confident of his reward and, consequently, fears punishment less.

**Reply to objection 1:** Augustine is talking about the fear of punishment.

**Reply to objection 2:** It is the fear of punishment that decreases as hope increases. But when hope increases, filial fear increases, since to the extent that someone expects with more certitude the attainment of a good with another’s help, he is more afraid of offending him or of being separated from him.

**Reply to objection 3:** Filial fear does not imply a separation; rather, it implies submitting to [God], whereas it flees from being separated from submission to Him.

However, it does in a certain sense imply separation by the fact that one does not presume himself to be equal [to God], but instead submits himself to Him. For this sort of separation is found even in charity, insofar as one loves God above himself and above all things. Hence, an increased love of charity does not diminish the reverence of fear, but adds to it.

## Article 11

### Does fear remain in heaven?

It seems that fear does not remain in heaven:

**Objection 1:** Proverbs 1:33 says, “He will enjoy abundance, without fear of evils,” which is meant to apply to a man who is already enjoying wisdom in eternal beatitude. But every sort of fear is of something evil, since, as has been explained (aa. 2 and 5 and *ST* 1-2, q. 42, a. 1), the object of fear is something bad. Therefore, there will be no fear at all in heaven.

**Objection 2:** In heaven men will be conformed to God—this according to 1 John 3:2 (“When He appears, we will be like unto him”). But God fears nothing. Therefore, in heaven men will not have any fear at all.

**Objection 3:** Hope is more perfect than fear, since hope has to do with what is good and fear has to do with what is bad. But hope will not exist in heaven. Therefore, fear will not exist in heaven, either.

**But contrary to this:** Psalm 18:10 says, “Holy fear of the Lord remains forever.”

**I respond:** Servile fear, i.e., fear of punishment, will in no way exist in heaven, since such fear is excluded by eternal beatitude’s security, which, as was explained above (q. 18, a. 3 and *ST* 1-2, q. 5, a. 4), is part of the nature of beatitude itself.

However, just as filial fear increases when charity increases, so, too, it is perfected when charity is perfected. Hence, filial fear will not have in heaven altogether the same act that it has now.

To see this clearly, notice that the proper object of fear is a possible evil, just as the proper object of hope is a possible good. And since the movement of fear is, as it were, a withdrawal (*fuga*), fear implies a withdrawal from some arduous and possible evil, since small evils do not induce fear. Now just as the good of each thing is that it should stay within its own order, so the evil of each thing is that it should desert its own order. But the order of a rational creature is that he should exist under God and above other creatures. Hence, just as it is bad for a rational creature to subject himself to a lower creature through love, so it is likewise bad for him not to subject himself to God but instead to presumptuously assail Him or disdain Him. Now this evil is possible for a rational creature, considered in his nature, because of the natural flexibility of free choice (*propter naturalem liberi arbitrii flexibilitatem*), but it becomes impossible for the blessed in heaven because of the perfection of glory. Therefore, what will exist in heaven is the avoidance of the evil of not being subject to God as an evil that is possible for nature but impossible in the state of beatitude.

This is why, in *Moralia* 17, Gregory, commenting on Job 26:11 (“The pillars of heaven tremble, and dread at His nod”), says, “The powers of heaven themselves, which look upon Him without ceasing, tremble in their contemplation. But this trembling, far from being penal, is a trembling of admiration and not of fear, since they admire God as being beyond themselves and incomprehensible to them.” In *De Civitate Dei* 14, Augustine likewise posits fear in heaven in this same way, even though he leaves the matter in doubt. “If,” he says, “that chaste fear that endures forever will exist in the future age, it will not be a fear that is afraid of an evil that can occur; rather, it will be a fear that holds firm in a good that cannot be lost. For when the love of an acquired good is immutable, then most assuredly the fear of avoiding evil, if we can speak this way, is secure. In fact, the name ‘chaste fear’ signifies a will by which it will be necessary for us to will not to sin—not with any worry about weakness, lest we might perhaps sin, but willing to avoid sin with the tranquility of charity. Or, if no sort of fear at all will be able to exist there, perhaps fear is said to remain forever in the sense that what fear itself leads us to will remain forever.”

**Reply to objection 1:** What is excluded from the blessed in heaven in the quoted passage is a fear that involves worry and guarding against evil ahead of time, but not a “secure fear,” as Augustine puts it.

**Reply to objection 2:** As Dionysius says in *De Divinis Nominibus*, chap. 9, “The same things are both similar to God and dissimilar from Him, similar in the manner of a contingent imitation of what is not imitable”—i.e., insofar as they are able to imitate God, who is not perfectly imitable—“dissimilar because the things that are caused have less from the cause, falling short of His infinite and incomparable measure.” Hence, it is not necessary that if fear does not befit God, since He has no superior to whom He is subject, then for this reason it does not befit the blessed in heaven, whose beatitude consists in perfect subjection to God.

**Reply to objection 3:** Hope implies a certain defect, viz., beatitude’s being future, which is

removed by its becoming present (*quae tollitur per eius praesentiam*). By contrast, fear implies a natural defect on the part of a creature, insofar as the creature is infinitely distant from God, and this will remain even in heaven. And so fear will not be totally eradicated.

## Article 12

### Is being poor in spirit the beatitude which corresponds to the gift of fear?

It seems that being poor in spirit (*paupertas spiritus*) is not the beatitude which corresponds to the gift of fear:

**Objection 1:** As is clear from what has been said (a. 7), fear is the beginning of the spiritual life. But poverty belongs to the perfection of the spiritual life—this according to Matthew 19:21 (“If you want to be perfect, go and sell everything you have and give it to the poor”). Therefore, being poor in spirit does not correspond to the gift of fear.

**Objection 2:** Psalm 118:120 says, “Pierce my flesh with your fear,” from which it seems that it belongs to fear to repress the flesh. But it is the beatitude that has to do with sorrow that seems especially to pertain to the repression of the flesh. Therefore, the beatitude that has to do with sorrow corresponds to the gift of fear more than the beatitude that has to do with being poor.

**Objection 3:** As has been explained (a. 9), the gift of fear corresponds to the virtue of hope. But what seems especially to correspond to hope is the last beatitude, i.e., “Blessed are the peacemakers, for they shall be called children of God” (Matthew 5:9); for as Romans 5:2 says, “We glory in the hope of the glory of the children of God.” Therefore, it is this beatitude, rather than being poor in spirit, that corresponds to the gift of fear.

**Objection 4:** It was explained above (*ST* 1-2, q. 70, a. 2) that the fruits [of the Holy Spirit] correspond to the beatitudes. But there is nothing in the fruits that corresponds to the gift of fear. Therefore, there is nothing in the beatitudes that corresponds to it, either.

**But contrary to this:** In *De Sermone Domini in Monte* Augustine says, “The fear of God befits the humble, of whom it is said, ‘Blessed are the poor in spirit.’”

**I respond:** Being poor in spirit properly corresponds to fear. For since it belongs to filial fear to show reverence for God and to be subject to Him, whatever follows upon this sort of subjection belongs to the gift of fear. But by the fact that someone subjects himself to God, he stops seeking to be made great (*desinit quaerere magnificari*) in himself or in anything else except in God, since this would be incompatible with perfect subjection to God. Hence, Psalm 19:8 says, “Some call upon chariots and some call upon horses, but we call upon the name of our God.”

And so from the fact that someone fears God perfectly, it follows that he will not seek to be made great *in himself* through pride, nor will he seek to be made great *in exterior goods* such as honors and riches, where both of these are relevant to being poor in spirit, insofar as being poor in spirit can be thought of either (a) as the emptying of an inflated and proud spirit, as Augustine explains it, or (b) as the renunciation of temporal things which is effected by the Spirit, i.e., by one’s own will at the instigation of the Holy Spirit, as Ambrose and Jerome explain it.

**Reply to objection 1:** Since beatitude is an act of perfect virtue, all the beatitudes belong to the perfection of the spiritual life. The beginning of this perfection seems to be that in tending toward a perfect participation in spiritual goods one disdains earthly goods, in just the way that fear has first place among the gifts. Now the perfection does not consist in the rejection of temporal goods itself; instead, this is a path toward perfection. However, as was explained above (a. 7), filial fear, which the beatitude about being poor corresponds to, also exists with the perfection of wisdom.

**Reply to objection 2:** The undue magnification of a man either in himself or in other things is

more directly opposed to submission to God, which filial fear effects, than is extraneous delight. Still, this sort of delight is opposed to fear as a consequence, since one who reveres God and is subject to Him does not delight in things apart from God (*non delectatur in aliis a Deo*).

Nonetheless, delight does not have the character of something arduous, which fear has to do with, in the way that magnification does. And so the beatitude about being poor corresponds directly to fear, whereas the beatitude that has to do with sorrow corresponds to fear as a consequence.

**Reply to objection 3:** Hope implies a movement along with a relation to the terminus that it tends toward, but fear implies instead a movement along with the relation of withdrawing from a terminus. And so the last beatitude, which is the terminus of spiritual perfection, corresponds fittingly with hope in the manner of its ultimate object, but the first beatitude, which occurs through a withdrawal from exterior things that impede one's subjection to God, fittingly corresponds with fear.

**Reply to objection 4:** Among the fruits, those which have to do with the moderate use of or abstinence from temporal things, e.g., modesty, continence, and chastity, seem to belong to the gift of fear.

## QUESTION 20

### Despair

We next have to consider the vices opposed to hope: first, despair (*desperatio*) (question 20) and, second, presumption (*praesumptio*) (question 21).

On the first topic there are four questions: (1) Is despair a sin? (2) Can despair exist without unbelief? (3) Is despair the greatest of sins? (4) Does despair arise from listlessness (*acedia*)?

#### Article 1

##### Is despair a sin?

It seems that despair is not a sin (*desperatio not sit peccatum*):

**Objection 1:** As is clear from Augustine in *De Libero Arbitrio*, every sin involves turning toward some changeable good, combined with turning away from the unchangeable good. But despair does not involve turning toward any changeable good. Therefore, it is not a sin.

**Objection 2:** What arises from a good root does not seem to be a sin, since, as Matthew 7:18 says, “A good tree cannot bring produce bad fruits.” But despair seems to proceed from a good root, viz., fear of God, or horror at the magnitude of one’s sins. Therefore, despair is not a sin.

**Objection 3:** If despair were a sin, then, in the case of the damned, their despairing would be a sin. But this is not imputed to them as a sin (*non imputatur eis ad culpam*); instead, it is imputed to their being damned. Therefore, it is not imputed as a sin to those who are in this life, either (*neque viatoribus imputatur ad culpam*). And so despair is not a sin.

**But contrary to this:** That through which men are induced to sin seems to be not only a sin, but a principle of sins. But despair is like this; for in Ephesians 4:19 the Apostle says of certain men, “Despairing, they have given themselves up to lasciviousness, unto the working of all uncleanness and covetousness.” Therefore, despair is not only a sin, but a principle of other sins.

**I respond:** According to the Philosopher in *Ethics* 6, what affirmation and negation are to the intellect, pursuit and withdrawal are to the appetite, and what true and false are to the intellect, good and bad are to the appetite. And so every appetitive movement that conforms itself to a true understanding (*conformiter se habens intellectui vero*) is good in its own right, whereas every appetitive movement that conforms itself to a false understanding is bad in its own right.

Now as regards God, it is a true intellectual estimate that the salvation of men comes from Him and that forgiveness is granted by Him to sinners—this according to Ezechiel 18:23 (“I desire not the death of the sinner, but that he should be converted and live”). On the other hand, it is a false opinion that He denies forgiveness to a repentant sinner, or that He does not turn sinners toward Himself through justifying grace.

And so just as the movement of hope, which conforms itself to the true estimate, is laudable and virtuous, so the opposite movement of despair, which conforms itself to a false estimate about God, is vicious and sinful.

**Reply to objection 1:** All mortal sins involve turning away from the unchangeable good and turning toward a changeable good, but in different ways.

For sins that are opposed to the theological virtues—e.g., hatred of God, despair, and unbelief—consist principally in turning away from the unchangeable good, whereas they involve turning toward a changeable good as a consequence of that (*ex consequenti*), insofar as a soul that deserts God must turn toward other things as a consequence.

By contrast, other sins consist principally in turning toward a changeable good, and they involve turning away from the unchangeable good as a consequence of that. For instance, it is not the case that someone who fornicates intends to withdraw from God; instead, he intends to enjoy carnal pleasure, from which it follows as a consequence that he withdraws from God.

**Reply to objection 2:** There are two ways in which something can proceed from a root of virtue:

In one way, *directly* on the part of the virtue itself, in the way that an act proceeds from a habit, and in this sense it is impossible for a sin to proceed from a virtuous root. This is the sense in which Augustine says in *De Libero Arbitrio*, “No one makes bad use of a virtue.”

In the second way, something proceeds from a virtue *indirectly* or *as an occasion (occasionaliter)*. And in this sense there is nothing to prevent a sin from proceeding from some virtue, in the way that some individuals are sometimes proud of their virtues—this according to Augustine (“Pride lies in wait for virtuous works, that they might perish”). And this is the way in which despair can arise from the fear of God or from horror at one’s own sins, viz., insofar as one uses these good things badly and takes them as an occasion for despairing.

**Reply to objection 3:** It is because of the impossibility of turning back toward beatitude that the damned are not in a state of having hope. And so the fact that they do not have hope is not imputed to them as a sin but is instead part of their damnation. Likewise, even in the state of the present life, if someone despairs with respect to something that he is not apt to acquire or that he is not supposed to acquire, then this would not be a sin—for instance, if a physician were to despair of curing some sick man, or if someone despaired of ever becoming rich.

## Article 2

### Can despair exist without unbelief?

It seems that despair cannot exist without unbelief:

**Objection 1:** The certitude of hope is derived from faith. But as long as the cause remains, the effect is not removed. Therefore, if faith has not been taken away, then one cannot lose the certitude of hope by despairing.

**Objection 2:** To prefer one’s own sin to God’s goodness or mercy is to deny the unlimitedness of God’s mercy or goodness—which amounts to unbelief. But one who despairs prefers his own sin to God’s mercy or goodness—this according to Genesis 4:13 (“My iniquity is greater than that I may deserve pardon”). Therefore, anyone who despairs is a non-believer.

**Objection 3:** Anyone who falls into a condemned heresy is a non-believer. But one who despairs seems to fall into a condemned heresy, viz., the heresy of the Novatians, who claim that sins are not forgiven after Baptism. Therefore, it seems that anyone who despairs is a non-believer.

**But contrary to this:** What is prior is not removed when what is posterior is removed. But as was explained above (q. 17, a. 7), hope is posterior to faith. Therefore, faith can remain when hope is removed. Therefore, it is not the case that anyone who despairs is a non-believer.

**I respond:** Unbelief belongs to the intellect, whereas despair belongs to the appetitive power. But the intellect has to do with universals (*intellectus universalium est*), whereas the appetitive power is moved toward particulars, since an appetitive movement is from the soul toward the things, which are in themselves particular.

Now it is possible for someone who has a correct *general* judgment (*habentem rectam existimationem in generali*) not to be correctly related to the appetitive movement because his *particular* judgment has been corrupted (*corrupta eius aestimatione in particulari*). For as *De Anima* 3 explains, from a general judgment one arrives at the desire for a particular thing by the mediation of a particular judgment—just as from a universal proposition one infers a particular conclusion only by assuming a particular proposition. And so it is that someone who has correct faith in general falls short in an appetitive movement toward a particular because his particular judgment has been corrupted by a habit or a passion. For instance, someone who fornicates, in choosing fornication as good for himself right now,

has a corrupt particular judgment, even though he might retain the true general judgment that belongs to the Faith, viz., that fornication is a mortal sin.

Similarly, while retaining a true general judgment regarding the Faith, viz., that there is forgiveness of sins in the Church, someone can undergo a movement of despair, as if he should not hope for forgiveness for himself in the state that he exists in, because his assessment of this particular has been corrupted. And in this way there can be despair without unbelief, just as other mortal sins can exist without unbelief.

**Reply to objection 1:** An effect is removed not only when its first cause has been removed, but also when a secondary cause has been removed. Hence, the movement of hope can be removed not only when a general judgment about the Faith, which is the first cause of the certitude of hope, has been removed, but also when a particular judgment, which is like a secondary cause, has been removed.

**Reply to objection 2:** If anyone thought in general that God's mercy is not unlimited, then he would be a non-believer. However, someone who despairs does not think this; instead, he thinks that in *this* state, because of some particular disposition, he should not hope for God's mercy.

**Reply to objection 3:** Similarly, one should reply to the third objection that the Novatians denied in general that the forgiveness of sins is effected in the Church.

### Article 3

#### Is despair the greatest of sins?

It seems that despair is not the greatest of sins:

**Objection 1:** As has been explained (a. 2), despair can exist without unbelief. But unbelief is the greatest of sins, since it undermines the foundation of the spiritual edifice. Therefore, despair is not the greatest of sins.

**Objection 2:** As is clear from the Philosopher in *Ethics* 8, a greater evil is opposed to a greater good. But as 1 Corinthians 13:13 says, charity is greater than hope. Therefore, hatred is a greater sin than despair.

**Objection 3:** The sin of despair involves only a disordered turning away from God. But in other sins there is not only a disordered turning away, but also a disordered turning toward. Therefore, the sin of despair is less grave than the others and not more grave.

**But contrary to this:** An incurable sin seems to be the most grave—this according to Jeremiah 30:12 (“Your bruise is incurable, your wound is very grievous”). But the sin of despair is incurable—this according to Jeremiah 15:18 (“My hopeless wound refuses to be cured”). Therefore, despair is the most grievous of sins.

**I respond:** The sins that are opposed to the theological virtues are more grave in their genus than other sins. For since the theological virtues have God as their object, the sins opposed to them involve turning away from God directly and principally. Now each mortal sin is such that its graveness and the principal reason for its badness comes from the fact that one turns away from God. For if there could be a turning toward some changeable good without a turning away from God, then even if the turning toward were disordered, there would not be a mortal sin. And so that which primarily and *per se* involves turning away from God is the most grave among the mortal sins.

Now unbelief, despair, and hatred of God are opposed to the theological virtues. If, among these three sins, hatred and unbelief are compared with despair, they will be found to be more grave in their own right, i.e., with respect to the character of their proper species. For unbelief stems from a man's not believing God's truth itself (*ipsam Dei veritatem non credit*), and hatred of God stems from a man's will opposing God's goodness itself, whereas despair stems from a man's not hoping that he himself will

participate in God's goodness. From this it is clear that unbelief and hatred of God are contrary to God as He is in Himself, whereas despair is contrary to God insofar as His goodness is participated in by us. Hence, it is a greater sin in its own right (*secundum se loquendo*) not to believe God's truth or to hate God than not to hope to acquire glory from Him.

On the other hand, if despair is compared with those other two sins from our perspective (*ex parte nostra*), then despair is more dangerous, since it is through hope that we are called back from evils and brought to pursue goods. And so, when hope is removed, unrestrained men fall into vices and withdraw from good works. Hence, a Gloss on Proverbs 24:10 ("If, being weary, you lose hope on the day of distress, your fortitude will be diminished") says, "Nothing is more execrable than despair, since he who has it loses his constancy both in the general works of this life and, what is worse, in the certitude of faith." And in *De Summo Bono* Isidore says, "To commit a crime is the death of the soul, but to despair is to descend into hell."

**Reply to objection 1 and objection 2 and objection 3:** From this the replies to the objections are clear.

#### Article 4

##### Does despair arise from listlessness?

It seems that despair does not arise from listlessness (*desperatio ex acedia non oriatur*):

**Objection 1:** It is not the case that the same thing comes from diverse causes. But as Gregory says in *Moralia* 31, despair about the future age comes from lust. Therefore, despair does not come from listlessness (*acedia*).

**Objection 2:** Just as despair is opposed to hope, so listlessness is opposed to spiritual joy. But spiritual joy proceeds from hope—this according to Romans 12:12 ("... rejoicing in hope"). Therefore, listlessness proceeds from despair and not vice versa.

**Objection 3:** Contraries are causes of contraries. But hope, which despair is opposed to, seems to proceed from considering God's benefits and especially from considering the Incarnation. For in *De Trinitate* 12 Augustine says, "Nothing was so necessary to raise our hope than that we should be shown how much God loves us. Now what greater indication of this is there than that the Son of God should have deigned to enter into a participation in our nature?" Therefore, despair seems to proceed more from neglecting this sort of consideration than from listlessness.

**But contrary to this:** In *Moralia* 31 Gregory enumerates despair among the things that proceed from listlessness.

**I respond:** As was explained above (q. 17, a. 1 and *ST* 1-2, q. 40, a. 1), the object of hope is an arduous good that is possible either through oneself or through someone else (*vel per se vel per alium*). Therefore, there are two possible ways in which the hope for attaining beatitude can fail in someone: (a) because he does not think of it as an *arduous good*, or (b) because he does not consider it as something it is *possible* to obtain either through himself or through someone else.

Now we are led to the point that spiritual goods do not strike us as goods, or do not seem like great goods to us, mainly by having our affections infected by the love of corporeal pleasures, among which the main ones are the pleasures of sex. For because of an affection for these pleasures it happens that a man is disdainful of spiritual goods and does not hope for them as certain *arduous goods*. And on this score despair is caused by *lust* (*luxuria*).

On the other hand, it is by excessive dejection (*nimia deiectione*) that one is led to the point of not regarding some arduous good as *possible* for him to attain, either through himself or through someone else. When this excessive dejection dominates a man's affections, it seems to him that it will never be

possible for him to be raised up to any good. And since listlessness is a certain sort of sadness which makes the spirit dejected, it follows that on this score despair is generated from *listlessness (acedia)*. But this is the *proper* object of hope, viz., that the good be *possible*, since what is good and what is arduous belong to other passions as well. Hence, despair arises especially from listlessness—even though it can arise from lust, as has already been explained.

**Reply to objection 1:** From this the reply to the first objection is clear.

**Reply to objection 2:** As the Philosopher says in *Rhetoric* 2, just as hope effects delight, so, too, men who are delighted are made more hopeful. And in the same way, men who are sad more easily fall into despair—this according to 2 Corinthians 2:7 (“... lest anyone of this sort be swallowed up by greater sorrow”).

Still, since the object of hope is a good and since the appetite naturally tends toward what is good, whereas it does not naturally withdraw from what is good, but withdraws from it only because of some supervening obstacle, it follows that joy more directly arises from hope, whereas, conversely, despair more directly arises from sadness.

**Reply to objection 3:** The very fact that someone neglects to consider God’s benefits arises from listlessness. For a man who is affected by a passion mainly thinks about things that pertain to that passion. Hence, a man who is saddened does not easily think about great and pleasant things; instead, he thinks only about sad things, unless by a great effort he turns away from sad things.

## QUESTION 21

### Presumption

We next have to consider presumption (*praesumptio*). And on this topic there are four questions: (1) What is the object of presumption in the sense of what it relies on? (2) Is presumption a sin? (3) What is presumption opposed to? (4) Which vice does presumption arise from?

#### Article 1

##### **Does the presumption that is a sin against the Holy Spirit rely on God or on one's own power?**

It seems that the presumption that is a sin against the Holy Spirit relies on one's own power and not on God (*non innitatur Deo sed propriae virtuti*):

**Objection 1:** The weaker a power is (*quanto minor est virtus*), the more one sins in relying on it too much. But human power is weaker than God's power. Therefore, someone who is presumptuous about human power sins more gravely than someone who is presumptuous about God's power. But a sin against the Holy Spirit is the gravest of sins. Therefore, the presumption that is posited as a species of sin against the Holy Spirit adheres to human power rather than to God's power.

**Objection 2:** Other sins arise from a sin against the Holy Spirit, since what is called a sin against the Holy Spirit is the malice from which one sins. But other sins arise from the sort of presumption by which a man is presumptuous about himself rather than from the sort of presumption by which a man is presumptuous about God; for as is clear from Augustine in *De Civitate Dei* 14, love of self is the principle of sinning. Therefore, it seems that the presumption that is a sin against the Holy Spirit relies especially on human power.

**Objection 3:** Sin comes from a disordered turning toward a changeable good. But presumption is a certain sin. Therefore, it comes from turning toward human power, which is a changeable good, rather than from turning toward God's power, which is an unchangeable good.

**But contrary to this:** Just as by despair one disdains God's mercy, which hope relies on, so by presumption one disdains God's justice, which punishes sinners. But just as mercy exists in God, so, too, justice likewise exists in Him. Therefore, just as despair occurs through a turning away from God, so presumption occurs through a disordered turning toward God.

**I respond:** Presumption seems to imply a sort of immoderation with respect to hope (*importare quandam immoderantiam spei*).

Now the object of hope is a good that is arduous and possible. But there are two ways in which something is possible for a man, viz., (a) through his own power and (b) only through God's power. And there can be presumption through immoderation with respect to both sorts of hope.

For as regards the hope by which one trusts in his own power, presumption arises from his striving for, as possible for himself, something that exceeds his power—this according to Judith 6:15 (“You humble those who presume of themselves”) And this sort of presumption is opposed to the virtue of magnanimity, which holds to the mean in hope of this sort.

On the other hand, as regards the hope by which one adheres to God's power, there can be presumption through immoderation in someone's striving for, as possible through God's power and mercy, something that is not possible—as when someone hopes that he will obtain forgiveness without repentance or glory without merits. Now this sort of presumption is properly speaking a species of sin against the Holy Spirit, because through this sort of presumption what is destroyed or disdained is that assistance of the Holy Spirit by which a man is called back from sinning.

**Reply to objection 1:** As was explained above (q. 20, a. 3 and *ST* 1-2, q. 73, a. 3), a sin that is opposed to God is more grave in its genus than other sins. Hence, the presumption by which someone relies on God in a disordered way is a graver sin than the presumption by which someone relies on his

own power. For the fact that someone relies on God's power to obtain something that is unbecoming to God amounts to belittling God's power (*hoc est diminuere divinam virtutem*). But it is clear that someone who belittles God's power sins more gravely than someone who exaggerates his own power.

**Reply to objection 2:** The very presumption by which one is presumptuous about God in a disordered way also includes a love of self by which one desires his own good in a disordered way. For what we greatly desire we take to be such that it can come to us easily through others, even if this is impossible.

**Reply to objection 3:** Presumption with respect to God's mercy involves both (a) a turning toward a changeable good, insofar as it proceeds from a disordered desire for one's own proper good, and (b) a turning away from the unchangeable good, insofar as it attributes to God's power what does not belong to it—for a man thereby turns himself away from God's truth.

## Article 2

### Is presumption a sin?

It seems that presumption is not a sin:

**Objection 1:** No sin is a reason why a man is heard by God. But some are heard by God because of their presumption; for Judith 9:17 says, "Hear me, a poor wretch, making supplication to you and presuming on your mercy." Therefore, being presumptuous about God's mercy is not a sin.

**Objection 2:** Presumption implies an excess of hope. But there cannot be an excess in the hope that one has in God, since his power and mercy are unlimited. Therefore, it seems that presumption is not a sin.

**Objection 3:** What is itself a sin does not excuse one from sin. But presumption excuses one from sin; for in *Sentences* 2, dist. 22, the Master says, "Adam sinned less because he sinned with the hope of forgiveness"—and this seems to pertain to presumption. Therefore, presumption is not a sin.

**But contrary to this:** Presumption is posited as a species of sin against the Holy Spirit (cf. q. 14, a. 2).

**I respond:** As was explained above concerning despair (q. 20, a. 1), every appetitive movement that conforms itself to a false understanding is bad in itself and a sin. Now presumption is a certain appetitive movement, since it implies a sort of disordered hope. But it conforms itself to a false understanding, just as despair does; for just as it is false that God is not indulgent with sinners or that He does not turn sinners toward repentance, so it is false that He gives forgiveness to those who persist in sin and that He bestows glory on those who desist from good work—which is the judgment that the movement of presumption conforms itself to.

And so presumption is a sin. However, it is a lesser sin than despair to the extent that, because of His infinite goodness, it is more proper to God to have mercy and to spare than to punish. For the former belongs to Him in His own right, whereas the latter belongs to Him because of our sins.

**Reply to objection 1:** 'To be presumptuous' (*praesumere*) is sometimes used for 'to hope' (*sperare*) because the upright hope which is had in God seems like presumption if it is measured by the human condition (*si menseatur secundum conditionem humanam*). However, it is not in fact presumption if the immensity of God's goodness is taken into account.

**Reply to objection 2:** Presumption implies an excess of hope not in the sense that someone hopes in God too much, but in the sense that he hopes to receive from God something that does not befit God—which, as has been explained, is to hope even less in God, because in a certain sense it involves belittling His power.

**Reply to objection 3:** What belongs to presumption is to sin with the intention of persisting in sin,

even while hoping for forgiveness (*sub spe veniae*). This increases the sin and does not diminish it.

However, it is not presumption to sin while hoping to receive forgiveness at some time and planning to abstain from sin and to repent of it (*peccare sub spe veniae quandoque percipiendae cum proposito abstinendi a peccato et poenitendi de ipso*); instead, this diminishes the sin, since one thereby seems to have a will that is less firm in sinning.

### Article 3

#### Is presumption opposed more to fear than to hope?

It seems that presumption is opposed more to fear than to hope (*magis opponatur timori quam spei*):

**Objection 1:** A disorder with respect to fear is opposed to an upright fear. But presumption seems to involve a disorder with respect to fear; for Wisdom 17:10 says, “A troubled conscience always presumes harsh things,” and in the same place it says, “Fear is a cure for presumption.” Therefore, presumption is opposed to fear rather than to hope.

**Objection 2:** Contraries are maximally distant from one another. But presumption is more distant from fear than from hope, since presumption implies a movement toward a thing, whereas fear implies a movement away from a thing. Therefore, presumption is opposed to fear more than to hope.

**Objection 3:** Presumption totally excludes fear, whereas it does not totally exclude hope; instead, it excludes only rectitude on the part of hope. Therefore, since opposites are things that do away with one another, it seems that presumption is opposed more to fear than to hope.

**But contrary to this:** Two vices that are opposed to one another are contrary to a single virtue, in the way that timidity and rashness are contrary to fortitude. But the sin of presumption is contrary to the sin of despair, which is directly opposed to hope. Therefore, it seems that presumption is likewise directly opposed to hope.

**I respond:** As Augustine says in *Contra Iulianum* 4, “All virtues are such that not only are there vices that are contrary to them by a clear distinction, in the way that temerity is contrary to prudence, but there are also vices that are in some sense close to them, not in truth but in a deceitfully similar appearance, in the way that cunning is opposed to prudence.” And in *Ethics* 2 the Philosopher likewise says that a virtue seems to agree more with one of its opposed vices than with the other, in the way that temperance agrees with insensibility and fortitude with rashness.

Thus, presumption seems to have a clear opposition to fear—mainly servile fear, which has to do with the punishment which comes from God’s justice and the remission of which presumption hopes for. But in accord with a sort of false similarity, it is in fact more opposed to hope, since it implies a sort of disordered hope in God. And since things that belong to the same genus are more directly opposed to one another than are things that belong to diverse genera (for contraries are in the same genus), it follows that presumption is more directly opposed to hope than to fear. For both presumption and hope have the same object on which they rely—hope in an well-ordered way (*ordinate*) and presumption in a disordered way (*inordinate*).

**Reply to objection 1:** Just as ‘hope’ is improperly used with respect to something bad and properly used with respect to something good, so, too, with ‘presumption’. And it is in this improper sense that presumption is said to be a disorder with respect to fear.

**Reply to objection 2:** The contraries that are maximally distant from one another are in the same genus. But presumption and hope imply movements of the same genus, which can be either well-ordered or disordered. And so presumption is more directly contrary to hope than to fear, since it is contrary to hope by reason of its proper specific difference, in the way that what is disordered is contrary to what is

well-ordered, whereas it is contrary to fear by reason of the difference of its genus, viz., *movement that belongs to hope*.

**Reply to objection 3:** Since presumption is opposed to fear by an opposition of genus, whereas it is contrary to the virtue of hope by an opposition of specific difference, it follows that presumption totally excludes fear even with respect to its genus, whereas it excludes hope only by reason of its specific difference, by excluding hope's well-orderedness.

#### Article 4

##### Is presumption caused by vainglory?

It seems that presumption is not caused by vainglory (*non causetur ex inani gloria*):

**Objection 1:** Presumption seems to rely especially on God's mercy. But mercy has to do with misery, which is opposed to glory. Therefore, presumption does not arise from vainglory.

**Objection 2:** Presumption is opposed to despair. But as has been explained (q. 20, a. 4), despair arises from sadness. Therefore, since the causes of opposites are opposites, it seems that presumption arises from pleasure. And so it seems that presumption arises from the carnal vices, the pleasures of which are stronger.

**Objection 3:** The vice of presumption consists in one's tending toward a good that is not in fact possible as if it were possible. But the fact that someone takes what is impossible to be possible arises from ignorance. Therefore, presumption comes more from ignorance than from vainglory.

**But contrary to this:** In *Moralia* 31 Gregory says that the "presumption of novelties" (*praesumptio novitatum*) is the daughter of vainglory.

**I respond:** As was explained above (a. 1), there are two kinds of presumption.

The one is a presumption that relies on one's own power, viz., striving after something as if it were possible for oneself when it exceeds one's own power. And this sort of presumption clearly proceeds from vainglory. For because one desires great glory, it follows that he strives for things beyond his powers in order to attain glory. And these things are mainly new things, which bring greater admiration. This is clearly why Gregory posited the "presumption of novelties" as the daughter of vainglory.

By contrast, the second kind of presumption is that which relies in a disordered way on God's mercy or power, through which one hopes to attain glory without merits and forgiveness without repentance. And this sort of presumption seems to arise directly from pride (*superbia*), as if the individual thinks so highly of himself that God will not punish him or exclude him from glory even as a sinner.

**Reply to objection 1 and objection 2 and objection 3:** This makes clear the replies to the objections.

## QUESTION 22

### The Precepts that Pertain to Hope and Fear

We next have to consider the precepts that pertain to hope and fear. And on this topic there are two questions, the first about the precepts pertaining to hope, and the second about the precepts pertaining to fear.

#### Article 1

##### Should any precept be given pertaining to the virtue of hope?

It seems that no precepts should be given that pertain to the virtue of hope:

**Objection 1:** What can be effected sufficiently by one thing is such that it is unnecessary for anything else to be brought in for it. But a man is sufficiently induced to hope for the good by natural inclination itself. Therefore, it is unnecessary for a man to be induced to this by a precept of the Law.

**Objection 2:** When precepts are given about the acts of the virtues, the main precepts should be given about acts of the principal virtues. But among all the virtues the most important are the three theological virtues, viz., hope, faith, and charity. Therefore, since the main precepts of the Law are the precepts of the Decalogue, which, as was established above (*ST* 1-2, q. 100, a. 3), all other precepts are traced back to, it seems that if a precept were to be given about hope, it should be contained among the precepts of the Decalogue. But no such precept is contained there. Therefore, it seems that no precept in the Law should be given about the act of hope.

**Objection 3:** Commanding an act of a virtue is of a piece with prohibiting the act of an opposed vice. But no precept is given by which despair, which is the opposite of hope, is prohibited. Therefore, it likewise seems inappropriate that any precept about hope should be given.

**But contrary to this:** In commenting on John 15:12 (“This is my commandment, that you love one another”), Augustine says, “So many things have been demanded of us concerning faith, and so many concerning hope!” Therefore, it seems appropriate that some precepts be given about hope.

**I respond:** Among the precepts found in Sacred Scripture, some belong to the *substance* of the Law, whereas others are *preambles* to the Law.

The preambles to the Law are those precepts which are such that if they do not exist, then there can be no place for the Law. Precepts about the act of faith and the act of hope are of this sort, since it is through the act of faith that a man’s mind is inclined toward recognizing the author of the Law as being such that one should submit oneself to Him, whereas it is through a man’s hope for a reward that he is induced to observe the precepts of the Law.

On the other hand, the precepts that belong to the substance of the Law are those which are imposed on a man who is already a subject and prepared to obey, and they have to do with the rectitude of one’s life. And so precepts of this sort are proposed immediately in the manner of precepts in the very giving of the law (*in ipsa legis latione*).

Now it is not the case that the precepts about hope and faith should have been proposed in the manner of precepts; for if a man did not already believe and hope, then it would be useless for the Law to be proposed to him. Instead, just as it was the case that the precept about faith had to be proposed, as was explained above (q. 16, a. 1), in the manner of a proclamation or of a remembrance (*per modum denuntiationis vel commemorationis*), so, too, the precept about hope had to be proposed in the initial giving of the Law in the manner of a promise which promised rewards to those who are obedient and which thereby served as an incitement to hope. Hence, all the promises that are contained in the Law are incitements to hope. However, once the Law has already been posited, it is up to the wise not only to induce men to observe the precepts but also, much more, to conserve the foundation of the Law; thus, in many instances in Sacred Scripture after the initial giving of the Law men are induced to have hope in the manner of an admonition or precept as well and not only, as in the Law itself, in the manner of a promise.

This is clear from Psalm 61:9 (“Hope in Him, all you assemblies of the people”) and from many other places in Scripture.

**Reply to objection 1:** Nature sufficiently inclines one toward hoping for a good that is proportioned to human nature. But in order for a man to hope for a supernatural good, it was necessary that he be induced by the authority of divine law, in part by its promises and in part by its admonitions or precepts.

And yet as regards even those things that natural reason inclines one toward, e.g., the acts of the moral virtues, it was necessary for the precepts of divine law to be given for the sake of greater steadfastness and especially because man’s natural reason had been clouded by sinful desires (*per concupiscentias peccati*).

**Reply to objection 2:** The precepts of the Decalogue belong to the initial giving of the Law. And so it is not the case that a precept about hope should have been given among the precepts of the Decalogue. Instead, as is clear from the first and fourth commandments, it was sufficient to induce men to hope through certain promises posited in the Decalogue.

**Reply to objection 3:** In those cases in which a man is obliged to obey by reason of what he owes (*ex ratione debiti*), it suffices for an affirmative precept to be given about what is to be done, and in these cases the prohibition of the things to be avoided is understood. For instance, a precept is given about honoring one’s parents, whereas dishonoring one’s parents is not prohibited except by the fact that a punishment is applied in the Law to those who dishonor their parents. And since for human salvation it is owed by man that he should have hope in God, man had to be induced to this affirmatively, as it were, in some of the ways mentioned above, and the prohibition of the opposite was thereby understood.

## Article 2

### Should a precept about fear have been given in the Law?

It seems that a precept about fear should not have been given in the Law:

**Objection 1:** The fear of God belongs to the things that are preambles to the Law, since it is the beginning of wisdom. But what belongs to the preambles to the Law does not fall under the precepts of the Law. Therefore, no precept about fear should have been given in the Law.

**Objection 2:** When a cause is posited, its effect is posited. But love is a cause of fear, since, as Augustine says, “Every sort of fear proceeds from some sort of love.” Therefore, given that a precept about love had been posited, it would have been superfluous to command fear.

**Objection 3:** Presumption is in some sense opposed to fear. But no prohibition of presumption is given in the Law. Therefore, it seems that no precept about fear should have been given, either.

**But contrary to this:** Deuteronomy 10:12 says, “And now, O Israel, what does the Lord your God require of you, but that you fear the Lord your God?” Therefore, it falls under a precept that one should fear God.

**I respond:** There are two sorts of fear, viz., *servile* fear and *filial* fear.

Now just as someone is induced to obey the precepts of the Law by his hope for rewards, so, too, he is induced to obey the Law by his fear of punishments, i.e., by his *servile* fear. And so just as, according to what was said above (a. 1), it was not the case that a precept about the act of hope had to be given in the very giving of the Law, but instead men were to be induced by promises, so, too, it was not the case that a precept should have been given about the sort of fear which is related to punishment, but instead men were to be induced by the threat of punishment. This was done both in the very precepts of the Decalogue and, afterwards, as a consequence, in the secondary precepts of the Law. However, just as, afterwards, the wise men and prophets, intending that men should become steadfast in their obedience to

the Law, handed down teachings about hope in the manner of an admonition or precept, so too with fear.

By contrast, *filial* fear, which shows reverence to God, is, as it were, a kind of fear which is directed toward the love of God and which is a beginning of everything that is observed in reverence of God. And so precepts about filial fear are given in the Law in the same way that precepts about love are given, since both of them are preambles to the exterior acts which are commanded in the Law and which the precepts of the Decalogue pertain to. And so in the passage from the Law quoted above fear is required of man, both in order that he walk in the ways of God by worshiping Him and in order that he love Him.

**Reply to objection 1:** Filial fear is a certain preamble to the Law not in sense of being something extrinsic but in the sense of being a beginning of the Law, just as love likewise is. And so precepts that are, as it were, common principles of the whole Law are given about both.

**Reply to objection 2:** Filial fear follows from love, just as other good works that are done out of charity likewise follow from love. And so just as precepts are given about the other acts of the virtues after the precept about charity, so, too, the precepts about fear and about the love of charity are given at the same time—just as, in the case of the demonstrative sciences, it is not sufficient to posit the first principles unless the conclusions that follow from those principles, either proximately or remotely, are likewise posited.

**Reply to objection 3:** An inducement to fear is sufficient for excluding presumption, in the same way that, as has been explained (a. 1), an inducement to hope is likewise sufficient for excluding despair.

## QUESTION 23

### Charity in its own right

We next have to consider charity: first, charity itself (questions 23-44) and, second, the gift of wisdom, which corresponds to charity (questions 45-46).

Concerning the first topic we have to consider five things: first, charity itself (question 23-24); second, the object of charity (questions 25-26); third, the acts of charity (questions 27-33); fourth, the vices opposed to charity (questions 34-43); and, fifth, the precepts that pertain to charity (question 44).

Concerning the first topic, there are two things to consider: first, charity itself in its own right (question 23) and, second, charity in relation to its subject (question 24).

On the first topic there are eight questions: (1) Is charity friendship? (2) Is charity something created that exists in the soul? (3) Is charity a virtue? (4) Is charity a specific virtue? (5) Is charity a single virtue? (6) Is charity the greatest of the virtues? (7) Can any genuine virtue exist without charity? (8) Is charity the form of the virtues?

### Article 1

#### Is charity friendship?

It seems that charity is not friendship (*caritas non sit amicitia*):

**Objection 1:** As the Philosopher says in *Ethics* 8, nothing is as proper to friendship as sharing one's life with one's friend (*convivere amico*). But charity belongs to a man with respect to God and the angels, whose lives, as Daniel 2:11 says, are not with men. Therefore, charity is not friendship.

**Objection 2:** As *Ethics* 8 says, friendship does not exist without reciprocity (*non est sine reamatione*). But charity is had even with respect to one's enemies—this according to Matthew 5:44 (“Love your enemies”). Therefore, charity is not friendship.

**Objection 3:** According to the Philosopher in *Ethics* 8, there are three species of friendship: friendship of *pleasure* (*amicitia delectabilis*), friendship of *utility* (*amicitia utilis*), and friendship of *virtue* (*amicitia honesti*). But charity is neither friendship of utility nor friendship of pleasure; for in *Epistola ad Paulinum*, which is placed at the beginning of his Bible, Jerome says, “A true relationship (*vera necessitudo*), joined by the glue of Christ, is where men are drawn together not by the usefulness of familial matters, or by mere bodily presence, or by crafty and cajoling flattery, but by the fear of God and the study of the divine Scriptures.” Again, charity is likewise not a friendship of virtue, since by charity we love even sinners, whereas a friendship of virtue, as *Ethics* 8 says, exists only with the virtuous. Therefore, charity is not friendship.

**But contrary to this:** John 15:15, “I no longer call you servants, but my friends.” But this was said to them only by reason of charity. Therefore, charity is friendship.

**I respond:** According to the Philosopher in *Ethics* 8, not every sort of love has the character of friendship; rather, friendship is a love that exists with *benevolence* (*cum benevolentia*)—more specifically, when we love someone in such a way as to will the good for him. By contrast, if we do not will the good for what we love, but instead will for ourselves the very good that belongs to them, then this is a love of concupiscence and not a love of friendship. For it is ridiculous to claim that someone has friendship with wine or friendship with a horse.

However, benevolence is not sufficient for the character of friendship; instead, a certain mutual loving is required, since a friend is a friend to his friend.

Now this sort of mutual benevolence is founded upon something shared in common (*fundatur super aliqua communicatione*). Therefore, since man shares something in common with God insofar as God communicates His own beatitude to us, it must be the case that some sort of friendship is founded upon this sharing. 1 Corinthians 1:9 says of this sharing, “... the faithful God, by whom you have been called into the fellowship of His Son.” But the sort of love built on this sharing is charity. Hence, it is clear

that charity is a certain sort of friendship of man with God.

**Reply to objection 1:** There are two kinds of human life:

One is the *exterior* life, in accord with our sentient and corporeal nature, and as regards this kind of life, there is no sharing or commonality between us and God or the angels.

The other kind of human life is man's *spiritual* life in accord with his mind. And as regards this kind of life, we have a shared life both with God and with the angels—imperfectly in our present state, which is why Philippians 3:20 says, “Our true life is in heaven.” But this shared life will be perfected in heaven, when God's servants will serve Him and see His face, as Revelations 22:3-4 says. And so charity is imperfect here, but will be perfected in heaven.

**Reply to objection 2:** There are two ways in which friendship is extended to someone:

In one way, with respect to his very self, and in this sense there is never friendship except with respect to a friend.

In a second way, it is extended to someone with respect to another person; for instance, if someone has a friendship with a man, then by reason of that friendship he loves all those who belong to that man, whether his children or his servants or those who are related to him in any way whatsoever. And the love for a friend can be such that, because of one's friend, those who belong to him are loved even if they offend us or hate us. And it is in this way that the love of charity extends even to our enemies, whom we love out of charity in relation to God, with whom the love of friendship is had principally.

**Reply to objection 3:** A friendship of virtue is had only with respect to one who is virtuous as with respect to the principal person, but for his sake those who belong to him are loved even if they are not themselves virtuous. And in this sense charity, which is friendship of virtue to the highest degree, extends to sinners, whom we love out of charity for God's sake.

## Article 2

### Is charity something created that exists in the soul?

It seems that charity is not something created that exists in the soul (*non sit aliquid creatum in anima*):

**Objection 1:** In *De Trinitate* 8 Augustine says, “If someone loves his neighbor, it follows that he loves Love itself.” But God is Love. Therefore, it follows that he principally loves God. And in *De Trinitate* 15 he says, “It was said, ‘God is charity’, just as it was said, ‘God is Spirit’.” Therefore, charity is God Himself and is not something created that exists in the soul.

**Objection 2:** God is spiritually the life of the soul in the same way that the soul is the life of the body—this according to Deuteronomy 30:20 (“He is your life”). But the soul vivifies the body through itself. Therefore, God vivifies the soul through Himself. But He vivifies the soul through charity—this according to 1 John 3:14 (“We know that we have passed from death to life, because we love our brethren”). Therefore, God is charity itself.

**Objection 3:** Nothing created has infinite power, but instead every creature is emptiness (*vanitas*). But charity is not emptiness; instead, it is opposed to emptiness and has infinite power, since it leads a man's soul to an infinite good. Therefore, charity is not something created that exists in the soul.

**But contrary to this:** In *De Doctrina Christiana* Augustine says, “By charity I mean the mind's movement toward enjoying God for His own sake.” But a movement of the mind is something created that exists in the soul. Therefore, charity is likewise something created that exists in the soul.

**I respond:** The Master examines this question thoroughly in *Sentences* 1, dist. 17, and he claims that charity is not something created that exists in the soul, but is instead the Holy Spirit inhabiting the mind. Now he does not mean that this movement of love by which we love God is the Holy Spirit

Himself; instead, he means that this movement of love is from the Holy Spirit but not by the mediation of any habit in the way in which other virtuous acts are from the Holy Spirit by the mediation of the habits of the other virtues, e.g., by the mediation of the habit of hope or of faith or of some other virtue. And he makes this claim because of the excellence of charity.

However, if one considers the matter correctly, this view redounds to the detriment of charity. For it is not the case that the movement of charity proceeds from the Holy Spirit, who is moving the human mind, in such a way that the human mind is only moved and is in no sense a principle of this movement, in the way that a body is moved by an exterior mover. For as was explained above (*ST* 1-2, q. 6, a. 1), this is contrary to the character of the voluntary, the principle of which has to exist in the thing itself. Hence, it would follow that the act of loving (*diligere*) is not voluntary. This implies a contradiction, since love (*amor*) by its nature implies that it is a voluntary act (*actus voluntatis*).

Similarly, one cannot claim that the Holy Spirit moves the will to an act of loving in the way that an instrument is moved, since even though an instrument is a principle of an act, it is nonetheless not within its power to act or not to act. For the character of the voluntary would likewise be removed in such a case and the character of merit would be excluded—and yet it was established above (*ST* 1-2, q. 114, a. 4) that the love of charity is the root of meriting.

Instead, the will has to be moved by the Holy Spirit toward an act of loving in such a way that it itself also effects the act. But no act is perfectly produced by an active power unless the act is connatural to the power through some form that is a principle of the act. Hence, God, who moves all things toward their fitting ends, endows individual things with forms through which they are inclined toward the ends instituted for them by God, and it is in this way that “He disposes all things sweetly,” as *Wisdom* 8:1 puts it. But it is clear that an act of charity exceeds the nature of the power of willing. Therefore, if no form were added to the natural power by which one is inclined toward an act of elective love, then the act would thereby be less perfect than natural acts and the acts of the other virtues; nor would it be easy and delightful. But this is clearly false, since no virtue has as great an inclination toward its act as charity does; nor does any virtue act with as much delight.

Hence, for an act of charity, it is absolutely necessary for there to exist in us some habitual form which (a) is added to our natural power, which (b) inclines that power toward the act of charity, and which (c) makes it operate promptly and with delight.

**Reply to objection 1:** God’s essence is itself charity, just as it is likewise wisdom and goodness. Hence, just as we are called good by the goodness which is God and wise by the wisdom which is God, because the goodness by which we are formally good is a certain participation in God’s goodness, and the wisdom by which we are formally wise is a certain participation in God’s wisdom, so, too, the charity by which we formally love our neighbor is a certain participation in God’s charity. For this mode of speaking was common among the Platonists, whose teachings Augustine was imbued with—though some who did not realize this have taken his words as an occasion for going wrong.

**Reply to objection 2:** It is as an *efficient cause* (*effective*) that God is the life both of the soul through charity and of the body through the soul, but it is as a *formal cause* (*formaliter*) that charity is the life of the soul, just as the soul is likewise *formally* the life of the body. Hence, one can thereby conclude that just as the soul is immediately united to the body, so charity is immediately united to the soul.

**Reply to objection 3:** Charity operates as a formal cause (*operatur formaliter*). However, the efficacy of a form is in accord with the power of the agent that induces the form. And so the fact that charity is not emptiness, but instead brings about an infinite effect when it conjoins the soul to God by justifying the soul, demonstrates the infinity of God’s power, which is the source of charity.

### Article 3

#### Is charity a virtue?

It seems that charity is not a virtue:

**Objection 1:** Charity is a certain sort of friendship. But friendship is not posited as a virtue by the philosophers, as is clear from the *Ethics*; nor is it numbered among either the moral virtues or the intellectual virtues. Therefore, charity is not a virtue, either.

**Objection 2:** As *De Caelo* 1 says, “A virtue is the ultimate limit (*ultimum*) of a power.” But charity is not an ultimate limit; instead, it is joy and peace that are the ultimate limit. Therefore, it seems that it is not charity that is a virtue, but joy and peace.

**Objection 3:** Every virtue is a certain habit that is an accident (*est quidam habitus accidentalis*). But charity is not a habit that is an accident. For charity is more noble than the soul itself, and no accident is more noble than its subject. Therefore, charity is not a virtue.

**But contrary to this:** In *De Moribus Ecclesiae* Augustine says, “Charity is a virtue which, when our affections are absolutely upright, joins us to God, and by which we love Him.”

**I respond:** Human acts have goodness insofar as they are regulated by an appropriate rule and measure, and so human virtue, which is a principle of all good human acts, consists in attaining to the rule of human acts. Now, as was explained above (q. 17, a. 1), there are two such rules, viz., (a) human reason and (b) God Himself. Hence, just as a moral virtue is defined as being in accord with right reason—this is clear from *Ethics* 2—so, too, attaining to God constitutes the nature of a virtue, as was likewise explained above in the case of faith and hope (q. 4, a. 5 and q. 17, a. 1).

Hence, since, as is clear from the passage cited from Augustine, charity attains to God by joining us to God, it follows that charity is a virtue.

**Reply to objection 1:** The Philosopher does not deny in *Ethics* 8 that friendship is a virtue; instead, he says that it is “either a virtue or accompanied by virtue” (*virtus vel cum virtute*).

One could claim that friendship is a moral virtue having to do with operations that concern others (*operationes quae sunt ad alium*), though in a way that differs from justice. For justice has to do with operations that concern others under the concept *legal debt*, whereas friendship—as is clear from the Philosopher in *Ethics* 8—has to do with operations that concern others under the concept *amicable and moral debt* or, better, under the concept *gratuitous favor*.

On the other hand, one could claim that friendship is not in its own right a virtue distinct from the others. For it has the nature of something praiseworthy and upright only from its object, viz., insofar as it is based upon the uprightness of the virtues. This is clear from the fact that not every type of friendship has the nature of something praiseworthy and upright, as is clear in the case of friendship of pleasure and friendship of utility. Hence, virtuous friendship is more like something that *follows upon* the virtues rather than being itself a virtue. However, it is not like this with charity, which is founded mainly upon God’s goodness and not upon human virtue.

**Reply to objection 2:** It belongs to the same virtue to love someone and to rejoice over him, since, as was explained above when we were discussing the passions (*ST* 1-2, q. 25, a. 2), joy follows upon love. And so love is posited as the virtue rather than joy, which is an effect of love.

Now ‘ultimate limit’, as posited in the definition of a virtue, means not that which is last in the order of *effects*, but rather that which is last in the order of *exceeding*, in the way that a hundred pounds exceeds sixty pounds.

**Reply to objection 3:** With respect to its *esse*, every accident is inferior to a substance, since a substance is a being in its own right (*ens per se*), whereas an accident is a being-in-another (*ens in alio*).

On the other hand, with respect to the *nature of its species*, an accident that is caused by the principles of its subject has, to be sure, less dignity than its subject, in the way that an effect has less

dignity than its cause. However, an accident that is caused by participation in some higher nature has more dignity than its subject insofar as it is a likeness (*similitudo*) of that higher nature, in the way that light (*lux*) is more dignified than a diaphanous body. And it is in this latter way that charity has more dignity than the soul, insofar as charity is a certain sort of participation in the Holy Spirit.

#### Article 4

##### Is charity a specific virtue?

It seems that charity is not a specific virtue (*virtus specialis*):

**Objection 1:** Jerome says, “Let me briefly summarize the whole definition of virtue: Virtue is charity, by which one loves God and neighbor.” And in *De Moribus Ecclesiae* Augustine says, “Virtue is an ordering of love (*ordo amoris*).” But no specific virtue is posited in the definition of virtue in general. Therefore, charity is not a specific virtue.

**Objection 2:** Something that extends to the works of all the virtues cannot itself be a specific virtue. But charity extends to the works of all the virtues—this according to 1 Corinthians 13:4 (“Charity is patient, is kind, etc.”). Likewise, it extends to all human works—this according to 1 Corinthians 16:14 (“Let all your works be done in charity”).

**Objection 3:** The commandments of the Law correspond to the acts of the virtues. But in *De Perfectione Iustitiae Humanae* Augustine says, “The general command is: ‘You must love’ (*diliges*), and the general prohibition is, ‘Do not covet’ (*ne concupisces*).” Therefore, charity is a general virtue.

**But contrary to this:** Nothing general is enumerated with what is specific. But charity is enumerated with specific virtues, viz., with faith and hope—this according to 1 Corinthians 13:13 (“Now there remain faith, hope, and charity, these three.”) Therefore, charity is a specific virtue.

**I respond:** As is clear from what was said above (*ST* 1-2, q. 18, a. 2 and q. 54, a. 2), acts and habits are specified by their objects, and so where there is a specific sort of good, there is a specific sort of love. But the divine good, insofar as it is the object of beatitude, is a specific sort of good. And so the love of charity, which is the love of this good, is a specific sort of love. Hence, charity is likewise a specific virtue.

**Reply to objection 1:** Charity is posited in the definition of all virtue not because it is by its essence every virtue, but rather because, as will be explained below (a. 7), all the virtues in some sense depend on it. In the same way, as is clear from *Ethics* 2 and 6, prudence is posited in the definition of the moral virtues because the moral virtues depend on prudence.

**Reply to objection 2:** A virtue or art (*ars*) that the ultimate end belongs to rules over the virtues or arts that other secondary ends belong to—in the way that, as is explained in *Ethics* 1, the military art rules over the equestrian art. And so, since charity has as its object the ultimate end of human life, viz., eternal beatitude, it extends to the acts of all of human life in the manner of a command and not in the sense that it directly elicits all the acts of the virtues.

**Reply to objection 3:** The commandment that has to do with loving is said to be a general command because all the other commandments are traced back to loving as an end—this according to 1 Timothy 1:5 (“The end of the commandment is love”).

## Article 5

### Is charity a single virtue?

It seems that charity is not a single virtue:

**Objection 1:** Habits are distinguished by their objects. But there are two objects of charity, God and neighbor, which are infinitely distant from one another. Therefore, charity is not a single virtue.

**Objection 2:** As was explained above (q. 17, a. 6 and *ST* 1-2, q. 54, a. 2), diverse conceptions of an object make for diverse habits, even if the object is one and the same thing in reality. But there many conceptions of loving God, since we are debtors to His love for each one of His perceived favors. Therefore, charity is not a single virtue.

**Objection 3:** Friendship toward one's neighbor is included under charity. But in *Ethics* 8 the Philosopher posits diverse species of friendship. Therefore, charity is not a single virtue, but is instead multiplied into diverse species.

**But contrary to this:** Just as God is the object of faith, so too He is the object of charity. But faith is a single virtue because of the oneness of divine truth—this according to Ephesians 4:5 (“... one faith ...”). Therefore, charity is likewise a single virtue because of the oneness of God's goodness.

**I respond:** As has been explained (a. 1), charity is a sort of friendship of man with God.

Now, in one way, the diverse species of friendship are taken from the diversity of the ends, and in this sense there are three species of friendship, viz., (a) friendship of utility, (b) friendship of pleasure, and (c) friendship of virtue (*amicitia honesti*).

In a second way, the diverse species of friendship are taken from the diversity of the sorts of commonality upon which the friendships are based. For instance, the species of friendship that belongs to relatives is different from the species of friendship that belongs to fellow citizens or fellow travelers, since the one is founded upon a natural communion, whereas the others are founded upon a civil communion or upon the common life of a journey. This is clear from the Philosopher in *Ethics* 8.

However, charity cannot be divided into many virtues in either of these ways. For there is a single end of charity, viz., God's goodness. There is likewise a single communion of eternal beatitude, upon which this friendship is founded. Hence, what follows is that charity is a single virtue absolutely speaking and is not distinguished into more than one species.

**Reply to objection 1:** This argument proceeds on the assumption that God and neighbor are objects of charity in equivalent ways (*ex aequo*). But this is not true. Rather, God is the principal object of charity, whereas one's neighbor is loved out of charity for the sake of God.

**Reply to objection 2:** God is loved out of charity because of Himself (*propter seipsum*). Hence, there is only a single reason for loving that is principally attended to by charity, viz., God's goodness, which is His substance—this according to Psalm 105:1 (“Give glory to the Lord, for He is good”).

Now the other reasons that induce one toward love, or that make for an obligation to love, are secondary and consequent upon this first reason.

**Reply to objection 3:** Human friendship—which is the sort of friendship the Philosopher is talking about—has diverse ends and diverse types of association. As has been explained, there is no room for this sort of diversity in the case of charity. And so the arguments are not parallel.

## Article 6

### Is charity the most excellent virtue?

It seems that charity is not the most excellent virtue:

**Objection 1:** A higher virtue belongs to a higher power, just as a higher operation does. But the intellect is higher than the will and directs it. Therefore, faith, which exists in the intellect, is more excellent than charity, which exists in the will.

**Objection 2:** That through which a thing operates seems to be lower than that thing itself, in the way that a minister through whom a lord operates is lower than the lord. But as Galatians 5:6 says, “Faith works through love.” Therefore, faith is more excellent than charity.

**Objection 3:** What comes about through an addition to another thing seems to be more perfect than that other thing. But hope seems to come about through an addition to charity, since the object of charity is *the good*, whereas the object of hope is *the arduous good*. Therefore, hope is more perfect than charity.

**But contrary to this:** 1 Corinthians 13:13 says, “The greatest of these is charity.”

**I respond:** Since in human acts the good arises from the fact that the acts are regulated by an appropriate rule, human virtue, which is a principle of good acts, must consist in attaining to the rule for human acts. But as was explained above (a. 3), there are two rules for human acts, viz., human reason and God. However, the *primary* rule is God—even human reason has to be regulated by this rule. And so the theological virtues, which consist in attaining to that primary rule by virtue of the fact that their object is God, are more excellent than the moral or intellectual virtues, which consist in attaining to human reason. Because of this, it must be the case that, among the theological virtues, the one that attains to God to a greater degree is the greater.

Now that which is such-and-such in its own right (*per se*) is always greater than that which is such-and-such through something else (*per aliud*). But faith and hope attain to God insofar as the cognition of the true or the acquisition of the good come to us from Him, whereas charity attains to God Himself insofar as He exists in Himself and not insofar as something comes to us from Him. And so charity is more excellent than faith and hope—and, as a result, it is more excellent than all the other virtues. In the same way, prudence, which attains to reason in its own right, is more excellent than the other moral virtues, which attain to reason insofar as a mean is set by reason in human operations or passions.

**Reply to objection 1:** The intellect’s operation is brought to completion insofar as what is understood exists in the one who has the act of understanding, and so the nobility of an intellectual operation arises from the measure of the thing as understood (*attenditur secundum mensuram intellectus*).

By contrast, the operation of the will—or of any appetitive power—is perfected in the inclination of that which has the appetite toward the real entity which is the terminus of the appetite (*perficitur in inclinatione appetentis ad rem sicut ad terminus*). Therefore, the dignity of an appetitive operation arises from the real entity that is the object of its operation.

Now things that are lower than the soul exist in the soul in a way that is more noble than the way in which they exist in themselves; for, as the *Liber de Causis* explains, one thing exists in another in the manner of the thing in which it exists. By contrast, things that are higher than the soul exist in themselves in a way that is more noble than the way in which they exist in the soul.

Therefore, the cognition of things that are lower than us is more noble than the love of them. That is why the Philosopher places the intellectual virtues above the moral virtues. By contrast, the love of things above us—and especially the love of God—is preferable to the cognition of those things. And that is why charity is more excellent than faith.

**Reply to objection 2:** Faith does not operate through love as through an instrument, in the way that a master acts through his servant. Rather, faith operates through love as through its proper form. And so the argument does not go through.

**Reply to objection 3:** The very same good is the object of both charity and hope. But charity implies union with that good, whereas hope implies a certain distance from it. And this is why charity

does not relate to that good as an arduous good, in the way that hope relates to it. For what is already united does not have the nature of the arduous. And from this it is clear charity is more perfect than hope.

## Article 7

### Can any genuine virtue exist without charity?

It seems that genuine virtue can exist without charity:

**Objection 1:** It is proper to a virtue to produce a good act. But those who do not have charity perform certain good acts, e.g., when they clothe the naked, feed the hungry, and do other similar things. Therefore, some genuine virtue can exist without charity.

**Objection 2:** Charity cannot exist without faith, since it proceeds from “unfeigned faith,” as the Apostle puts it in 1 Timothy 1:5. But genuine chastity can exist in non-believers when they control their sensual desires, and genuine justice can exist in them when they adjudicate correctly. Therefore, genuine virtue can exist without charity.

**Objection 3:** As is clear from *Ethics* 6, scientific knowledge and art are virtues. But virtues of this sort are found in men who are sinners and do not have charity. Therefore, genuine virtue can exist without charity.

**But contrary to this:** In 1 Corinthians 13:3 the Apostle says, “If I should distribute all my goods to the poor, and if I should deliver my body to be burned, but not have charity, it profits me nothing.” But genuine virtue profits one greatly—this according to Wisdom 8:7 (“She teaches temperance and justice, prudence and virtue, which are such that men do not have anything more profitable in life”). Therefore, genuine virtue cannot exist without charity.

**I respond:** As has been explained (*ST* 1-2, q. 55, a. 4), virtue is ordered toward the good. But the good is mainly the end, since the means to the end are called good only in relation to the end. Therefore, just as there are two sorts of end, one ultimate and the other proximate, so, too, there are two sorts of good, one ultimate and the other proximate and particular.

The ultimate and principal end for man is the enjoyment of God—this according to Psalm 72:28 (“It is good for me to adhere to God”). It is toward this end that a man is ordered by charity.

On the other hand, there are two possible kinds of secondary and, as it were, particular ends for man, (a) one of which is genuinely good because in its own right it can be ordered toward the principal good, i.e., toward the ultimate end, and (b) the other of which is an apparent and not genuine good, since it leads one away from the final good.

So, then, it is clear that a genuine virtue, absolutely speaking, is one that orders a man toward his principal good. In the same way, in *Physics* 7 the Philosopher says, “A virtue is a disposition of what is perfect toward what is best.” And so no genuine virtue can exist without charity.

However, if one takes ‘virtue’ as it is used in relation to a particular end, then some virtue can be said to exist without charity, insofar as it is ordered toward a particular good.

Still, if that particular good is an apparent good and not a genuine good, then the sort of virtue which is ordered toward that good will not be genuine virtue, but will instead be a false likeness of a virtue—in the same way that, as Augustine explains in *Contra Julianum*, “In the avaricious it is not the genuine virtue of *prudence* by which they think up different ways to make a profit, and it is not the genuine virtue of *justice* by which, because of their fear of punishment, they judge the property of others not to be worth bothering about, and it is not the genuine virtue of *temperance* by which they restrain their appetite for luxurious things because they are too expensive, and it is not the genuine virtue of *fortitude* by which, as Horace puts it, ‘he braves the sea, he crosses mountains, he goes through fire, in

order to avoid poverty’.”

On the other hand, if the particular good in question is a genuine good, e.g., the preservation of the city or something of that sort, then there will be, to be sure, a genuine virtue, but it will be an incomplete virtue (*virtus imperfecta*) unless it is referred back to the final and complete good.

And this is the sense in which there cannot be any genuine virtue, absolutely speaking, without charity.

**Reply to objection 1:** There are two possible sorts of act that belong to someone who lacks charity:

One sort accords with his lack of charity in the sense that he does something ordered toward that which makes for a lack of charity. This sort of act is always bad; as Augustine explains in *Contra Julianum* 4, an act that belongs to a non-believer insofar as he is a non-believer is always a sin, even if he clothes the naked, or does anything else of this sort, while ordering it toward the end of his unbelief.

But, as was explained above (q. 10, a. 4 and *ST* 1-2, q. 85, a.2), there can be a second sort of act that (a) belongs to someone who lacks charity not insofar as he lacks charity, but insofar as he possesses some other gift from God—whether faith or hope or even some natural good—and that (b) is not completely corrupted by sin. And in this sense, in the absence of charity there can be an act which is good by its nature—and yet not perfectly good, since it lacks the appropriate ordering toward the ultimate end.

**Reply to objection 2:** Since the end in practical matters is like the principle in speculative matters, it follows that just as there cannot be genuine scientific knowledge absolutely speaking unless there is a correct estimation of first and indemonstrable principles, so, too, there cannot be genuine justice or genuine chastity absolutely speaking unless there is a proper ordering toward the end, which comes through charity—even if one is correctly situated with respect to everything else.

**Reply to objection 3:** As was explained above (*ST* 1-2, q. 56, a. 3) scientific knowledge and art imply by their very nature an ordering toward some particular good and not toward the ultimate end of human life. In this they are unlike the moral virtues, which make a man good absolutely speaking.

## Article 8

### Is charity the form of the virtues?

It seems that charity is not the form of the virtues:

**Objection 1:** The form of a real entity is either an exemplary form or an essential form. But charity is not the exemplary form of the other virtues, since in that case the other virtues would have to belong to the same species that charity belongs to. Likewise, it is not the essential form of the other virtues, either, since in that case it would not be distinct from them. Therefore, there is no sense in which charity is the form of the virtues.

**Objection 2:** Charity is related to the other virtues as their root and foundation—this according to Ephesians 3:17 (“... rooted and grounded in love ...”). But a root or foundation does not have the nature of a form. Rather, it has the nature of matter, which is the first part in an act of generating. Therefore, charity is not the form of the virtues.

**Objection 3:** As is clear from *Physics* 2, the form and the end and the efficient cause do not coincide in something numerically the same. But charity is called the end and the mother of the virtues. Therefore, it should not be called the form of the virtues.

**But contrary to this:** Ambrose claims that charity is the form of the virtues.

**I respond:** In moral matters the form of an act is taken mainly from the end. The reason for this is that the principle of moral acts is the will, whose object and, as it were, form is the end. Now the form of an act always follows upon the form of the agent. Hence, it has to be the case that, in moral matters,

whatever gives the act its ordering toward the end also gives it its form. But it is clear from what has been said (a. 7) that it is through charity that the acts of all the virtues are ordered toward the ultimate end. Accordingly, charity itself gives the form to the acts of all the other virtues. And it is said to be the form of the virtues to the extent that they themselves are called virtues in relation to their informed acts.

**Reply to objection 1:** Charity is said to be the form of the other virtues neither as their exemplar nor as their essence, but rather as an efficient cause, i.e., insofar as imposes its form on all of them in the way explained above.

**Reply to objection 2:** Charity is compared to a foundation and root insofar as all the other virtues are sustained and nurtured by it—and not in the sense in which a foundation and root has the nature of a material cause.

**Reply to objection 3:** Charity is called the end of the other virtues because all the other virtues order one toward its end. And by reason of the fact that the mother is the one who conceives within herself from another, charity is called the mother of all virtues. For from the desire for the end it conceives the acts of the other virtues by commanding them.

## QUESTION 24

### The Subject of Charity

We next have to consider charity in relation to its subject. On this topic there are twelve questions: (1) Is charity in the will as in a subject? (2) Is charity caused in a man by his previous acts or by God's infusing it? (3) Is charity infused in proportion to the capacity of a man's natural gifts (*secundum capacitatem naturalium*)? (4) Does charity increase in the one who has it? (5) Does charity increase by addition? (6) Is charity increased by every act [of charity]? (7) Does charity increase *ad infinitum*? (8) Can charity in this life be perfect? (9) What are the different stages of charity? (10) Can charity decrease? (11) Can charity once had be lost? (12) Is charity lost through a single act of mortal sin?

#### Article 1

##### Is the will the subject of charity?

It seems that the will is not the subject of charity:

**Objection 1:** Charity is a certain type of love. But according to the Philosopher, love (*amor*) is in the concupiscible appetite. Therefore, charity is likewise in the concupiscible appetite and not in the will.

**Objection 2:** As was explained above (q. 23, a. 6), charity is the most important of the virtues. But reason is the subject of virtues. Therefore, it seems that charity is in reason and not in the will.

**Objection 3:** Charity extends to all human acts—this according to 1 Corinthians 16:14 (“Let all your deeds be done in charity”). Therefore, it seems that charity resides especially in free choice as in a subject, and not in the will.

**But contrary to this:** The object of charity is the good, which is likewise the object of the will. Therefore, charity exists in the will as in a subject.

**I respond:** Since, as was established in the First Part (*ST* 1, q. 80, a. 2), there are two appetites, viz., the sentient appetite and the intellective appetite, which is called the will, the good is the object of both of them, but in different ways. For the object of the sentient appetite is the good as apprehended through the senses, whereas the object of the intellective appetite, or will, is the good under the common concept *good*, insofar as it can be apprehended by the intellect.

Now the object of charity is not a good that can be sensed, but is instead the divine good, which only the intellect has cognition of. And so the subject of charity is the intellective appetite, i.e., the will, and not the sentient appetite.

**Reply to objection 1:** As was shown in the First Part (*ST* 1, q. 81, a. 2), the concupiscible appetite is part of the sentient appetite, but not part of the intellective appetite. Hence, the love that exists in the concupiscible appetite is love of a good that can be sensed. However, the concupiscible appetite does not extend to the divine good, which is intelligible; only the will does. And so the concupiscible appetite cannot be the subject of charity.

**Reply to objection 2:** According to the Philosopher in *De Anima* 3, the will exists in reason. And so by the fact that charity is in the will, charity is not alien to reason.

Still, reason is not the rule of charity in the way that it is of the other virtues; instead, charity is regulated by God's wisdom and exceeds the rule of human reason—this according to Ephesians 3:19 (“... the charity of Christ, which surpasses scientific knowledge”). Hence, charity is not in reason as in its subject, in the way that prudence is; nor is it in reason as in that which regulates it, in the way that justice and temperance are. Instead, it is ‘in reason’ only because of the will's affinity to reason.

**Reply to objection 3:** As was explained in the First Part (*ST* 1, q. 83, a. 4), free choice is not a power different from the will. And yet charity does not exist in the will under the concept *free choice*. For [the power of] free choice, the act of which is to choose, is directed towards the means to an end, whereas the will (*voluntas*), as is explained in *Ethics* 3, is directed toward the end itself. Hence, charity,

whose object is the ultimate end, should be said to exist in the will rather than in free choice.

## Article 2

### Is charity caused in us by being infused?

It seems that charity is not caused in us by being infused (*non causetur in nobis ex infusione*):

**Objection 1:** What is common to all creatures exists naturally in men. But as Dionysius says in *De Divinis Nominibus* 4, “What is lovable and delectable (*diligibile et amabile*) to all things is the divine good,” which is the object of charity. Therefore, charity exists in us naturally and not by being infused.

**Objection 2:** A thing can be loved more easily to the extent that it is more lovable. But God is maximally lovable, since He is the greatest good. Therefore, it is easier to love Him than to love other things. But we do not need an infused habit in order to love other things. Therefore, neither do we need an infused habit in order to love God.

**Objection 3:** In 1 Timothy 1:5 the Apostle says, “The end of the commandment is charity from a good heart and a pure conscience and an unfeigned faith.” But these three things belong to human acts. Therefore, charity is caused in us by our previous acts and not by being infused.

**But contrary to this:** In Romans 5:5 the Apostle says, “Charity is poured into our hearts by the Holy Spirit, who is given to us.”

**I respond:** As was explained above (q. 23, a. 1) charity is a certain sort of friendship of man with God, founded on God’s sharing eternal beatitude (*fundata super communicationem beatitudinis aeternae*). However, according to Romans 6:23 (“The grace of God is eternal life”), this sharing has to do not with natural goods, but with the gifts of grace (*dona gratuita*). Hence, charity itself likewise exceeds the capacity of nature (*facultatem naturae excedit*).

Now what exceeds the capacity of nature cannot be natural and cannot be acquired by means of natural powers. For a natural effect does not transcend its cause. Hence, charity cannot exist naturally in us and is not acquired by our natural powers. Instead, it is acquired by an infusion of the Holy Spirit (*per infusionem Sancti Spiritus*), who is the love of the Father and the Son; and, as was explained above (q. 23, a. 2), created charity is itself our participation in that love (*et cuius participatio in nobis est ipsa caritas creata*).

**Reply to objection 1:** Dionysius is talking about the sort of love of God that is based upon the sharing of natural goods, and so this sort of love exists naturally in us. By contrast, charity is based on a supernatural sharing. Hence, the arguments are not parallel.

**Reply to objection 2:** Just as God is in Himself maximally knowable and yet not maximally knowable to us—and this because of the weakness of our cognition, which depends on things that can be sensed—so, too, God is maximally lovable in His own right insofar as He is the object of beatitude, but He is not in this way maximally lovable to us—and this because of our affective inclination toward visible goods. Hence, it is necessary for charity to be infused into our hearts in order for us to love God to the highest degree.

**Reply to objection 3:** When charity is said to proceed in us “from a good heart and a pure conscience and an unfeigned faith,” this should be taken to refer to the *act* of charity, which is aroused by these things when they precede it.

An alternative reply is that this assertion is made because acts of the sort in question dispose a man to receive the infusion of charity. Again, one should say about this (a) what Augustine says, viz., that “fear leads to charity,” and (b) what is said in a Gloss on Matthew 1:2, viz., that “faith generates hope, and hope generates charity.”

### Article 3

#### Is charity infused in proportion to the quantity of one's natural powers?

It seems that charity is infused in proportion to the quantity of one's natural powers (*secundum quantitatem naturalium*):

**Objection 1:** Matthew 25:15 says, "He gave to each one in proportion to his virtue." But there is no virtue or power that precedes charity besides natural virtue or power (*virtus naturalis*), since, as has been explained (q. 23, a. 7), without charity there is no virtue. Therefore, charity is infused in a man by God in proportion to his natural power.

**Objection 2:** Among all the things that are ordered to one another, the second is proportioned to the first; for instance, we see that (a) in material things the form is proportioned to the matter and that (b) among the gifts of grace, glory is proportioned to [habitual] grace. But since charity is the perfection of nature, it is related to one's natural capacity in the way that a second thing is related to a first thing. Therefore, it seems that charity is infused in proportion to the capacity of one's natural powers.

**Objection 3:** Men and angels participate in charity in the same way, since in both there is a similar sort of beatitude—this according to Matthew 22:30 and Luke 20:36. But, as the Master explains in *Sentences* 3, dist. 2, in the case of the angels charity and the other gifts of grace are given in proportion to the capacity of their natural powers. Therefore, the same thing seems likewise to hold true in the case of men.

**But contrary to this:** John 3:8 says, "The Spirit breathes where He will." And 1 Corinthians 12:11 says, "All these things are done by one and the same Spirit, apportioning to each as He will." Therefore, charity is given not in proportion to the capacity of one's natural powers, but rather according to the will of the Spirit who distributes His gifts.

**I respond:** The quantity of any given thing depends on the thing's proper cause, since a more universal cause produces a greater effect. Now since, as has been explained (a. 2), charity exceeds any proportion to human nature, it does not depend on any natural power but only on the grace of the Holy Spirit who infuses it. And so the quantity of charity does not depend on the nature's condition or on the capacity of its natural power; instead, it depends only on the will of the Holy Spirit distributing His gifts as He will. This is why, in Ephesians 4:7, the Apostle says, "Every one of us is given grace according to the measure of the giving of Christ."

**Reply to objection 1:** The power in accord with which God gives His gifts to everyone is the antecedent disposition or preparation, i.e., the effort (*conatus*) of the one who is receiving the grace. But the Holy Spirit likewise initiates (*praevenit*) this disposition or effort as well, moving the man's mind either more or less according to His will. Hence, in Colossians 1:12 the Apostle also says, "He has made us worthy to participate in the lot of the saints in light."

**Reply to objection 2:** A form does not exceed the measure of its matter; instead, they are of the same kind. Similarly, grace and glory are of the same kind (*ad idem genus referuntur*), since [habitual] grace is nothing other than a beginning of glory in us. By contrast, grace and nature are not of the same kind. Therefore, the two cases are not parallel.

**Reply to objection 3:** As was explained in the First Part (*ST* 1, q. 61, a. 6), an angel has an intellectual nature, and it belongs to him by his status (*secundum suam conditionem*) to enter fully into whatever he enters into. And so among the higher angels there was both a stronger striving (*conatus*) for the good in those who persevered and also a stronger striving for evil in those who fell.

By contrast, a man is a rational nature, and it belongs to a rational nature to be at some times in potentiality and at some times in act. And so a man does not have to enter fully into whatever he enters into. Instead, someone who has greater natural powers can make less of an effort (*minor conatus*), and vice versa. And so the two cases are not parallel.

## Article 4

### Can charity increase?

It seems that charity cannot increase:

**Objection 1:** The only thing that increases is a thing with quantity (*nisi quantum*). But there are two sorts of quantity, viz., (a) *dimensive* quantity and (b) quantity of *power* (*quantitas virtualis*). The first does not belong to charity, since charity is a spiritual perfection. And the quantity of a power has to do with [the number of] its objects. But charity does not grow in this regard, since even the least charity loves all the things that are to be loved out of charity. Therefore, charity does not increase.

**Objection 2:** What is already at the limit (*in termino*) does not receive an increase. But charity is at the limit, since it is the greatest of the virtues and the highest sort of love of the highest good. Therefore, charity cannot increase.

**Objection 3:** Increase is a certain sort of change (*quidam motus*). Therefore, that which increases is changed. Therefore, what is increased in essence (*essentialiter*) changes in essence. But a thing is not changed in essence unless it is either corrupted or generated. Therefore, charity cannot increase in essence, unless perhaps it were being generated or corrupted—which is absurd.

**But contrary to this:** In *Super Ioannem* Augustine says, “Charity deserves (*meretur*) to increase, so that, having increased, it might likewise deserve to be perfected.”

**I respond:** The charity of this life (*caritas viae*) can increase. For we are called ‘wayfarers’ (*viatores*) by reason of the fact that we are travelling toward God, who is the ultimate end of our beatitude. But in this life, the more progress we make, the closer we come to God, who is approached not by bodily steps but by the affections of the mind. But it is charity that effects this approach, since it is through charity that the mind is united to God. And so the charity of this life is by nature such that it can increase; for if it could not increase, then our progress in this life would cease. This is why the Apostle calls charity a “way,” when in 1 Corinthians 12:31 he says, “I now point out to you a still more excellent way.”

**Reply to objection 1:** Only quantity of power—and not *dimensive* quantity—belongs to charity. However, this sort of quantity has to do not only with the *number of objects*, viz., in the sense that more objects or fewer objects are loved, but also with the *intensity of the act*, in the sense that something is loved more or loved less. And it is in this latter sense that the quantity of charity increases.

**Reply to objection 2:** Charity is at the summit with respect to its object, viz., insofar as its object is the highest good; and it is from this that it follows that charity is more excellent than the other virtues. But it is not the case that every instance of charity is at the summit as regards the intensity of its act.

**Reply to objection 3:** Some have claimed that charity increases only with respect to its rootedness in its subject, or with respect to its fervor, and not with respect to its essence. However, these people did not understand what they were saying (*propriam vocem ignoraverunt*).

For since charity is an accident, its being is to-be-in-another (*eius esse est inesse*). Hence, for it to increase with respect to its essence is nothing other than for it to exist in its subject to a greater degree, i.e., to be more deeply rooted in its subject.

Again, charity is by its essence (*essentialiter*) a virtue that is ordered toward its act, and so its increasing with respect to its essence is the same as its having efficacy in producing an act of more fervent love.

Therefore, charity increases in its essence not in the sense that it begins to exist or ceases to exist in its subject—as the objection imagines—but rather in the sense that it begins to exist in its subject to a greater degree.

## Article 5

### Does charity increase by addition?

It seems that charity increases by addition:

**Objection 1:** An increase with respect to quantity of power is just like an increase with respect to corporeal quantity. But an increase with respect to corporeal quantity is effected by addition; for in *On Generation and Corruption* 1 the Philosopher says, “Increase is an addition to a preexistent magnitude.” Therefore, an increase of charity, which is an increase with respect to a quantity of power, will likewise be by addition.

**Objection 2:** According to 1 John 2:10 (“He who loves his brother abides in the light”), charity in the soul is a sort of spiritual light. But light grows in the air by addition; for instance, light grows in a house when another candle is lit. Therefore, charity grows in the soul by addition.

**Objection 3:** According to 2 Corinthians 9:10 (“He will increase the growth of the fruits of your justice”), it belongs to God to make charity increase. But by infusing charity in the first place, God makes something in the soul that was previously not there. Therefore, by increasing charity God likewise makes something in the soul that was previously not there. Therefore, charity increases by addition.

**But contrary to this:** Charity is a simple form. But as is proved in *Physics* 4, when what is simple is added to what is simple, it does not make something bigger. Therefore charity does not increase by addition.

**I respond:** Every addition is an addition *of* something *to* something. Hence, in the case of every addition, one has to presuppose, prior to the addition, at least the distinction between the things, the one of which is added to the other. Therefore, if charity is added to charity, one must presuppose that the added charity is distinct from the charity to which it is added—not, to be sure, that it is distinct with respect to its *esse*, but at least that it is *understood* as distinct (*secundum intellectum*). By way of example, God could likewise increase a corporeal quantity by adding some magnitude that was created at that moment, not having previously existed, and yet even though it did not previously exist in reality, it would still in itself be such that one could *understand* its distinctness from the quantity to which it is added. Therefore, if charity is added to charity, one must presuppose—at least with respect to *understanding*—the distinctness of the one charity from the other.

Now in the case of forms there are *two* sorts of distinction, the *one* with respect to *species* and the *other* with respect to *number*. Among habits the distinction with respect to species has to do with a diversity in the *objects*, whereas the distinction with respect to number has to do with a diversity in the *subjects*.

Thus, a habit can grow by addition when it is extended to objects which it previously did not extend to, and it is in this sense that the scientific knowledge of geometry increases in someone who begins to know *de novo* geometrical matters that he previously did not know.

However, this cannot be said about charity, since even the most minimal instance of charity (*minima caritas*) extends to everything that should be loved out of charity. Therefore, in the case of an increase in charity, the addition cannot be understood as presupposing a distinction in species between the added charity and the charity to which it is added.

What remains, then, is that if an addition is made of charity to charity, then it is made on the presupposition that there is a distinction with respect to number—i.e., with respect to a diversity of subjects, in the way that whiteness increases when one white thing is added to another, even though it is not the case that by this increase something becomes more white.

But neither can this be said in the case under discussion. For the subject of charity is a rational mind, and so the sort of increase of charity described above could be effected only if by means of it one rational mind were added to another—which is impossible. Again, even if this sort of increase were

possible, it would effect a greater thing that loves and not a thing that loves to a greater degree.

Therefore, it follows that there is no way in which charity can increase by the addition of one charity to another, as some have claimed.

So, then, charity increases only by its subject's participating in charity to greater and greater degrees (*magis et magis participat caritatem*), i.e., only insofar as its subject is more easily led to acts of charity (*magis reducitur in actum illius*) and is more subordinated to charity. For this is the mode of increase that is proper to any form that is intensified, since being a form of this sort consists wholly in inhering in what is susceptible to it. And so since the magnitude of a thing follows upon its *esse*, for the form to be greater is for it to exist to a greater degree in what is susceptible to it (*formam esse maiorem hoc est eam magis inesse susceptibili*), and not for another form to arrive. For the latter would occur if the form had a certain quantity in its own right (*ex seipsa*) and not in relation to its subject.

So, then, charity increases by being intensified in its subject—and this is for it to increase with respect to its *essence*—and not by one charity being added to another.

**Reply to objection 1:** A corporeal quantity has (a) something insofar as it is a *quantity* and (b) something insofar as it is an *accidental form*:

Insofar as it is a *quantity*, it is distinct with respect to its location or distinct in its number. And so it is in this sense that an increase in quantity is thought of as being by addition, as is clear in the case of animals.

On the other hand, insofar as a quantity is an *accidental form*, it can be distinct only with respect to its subject. And it is in this sense that it has increase properly speaking (*habet propriam augmentum*) by way of its intensification within its subject (*per modum intensificationis eius subiecto*), in the same way that other accidental forms do. This is clear in case of things that become rarified, as the Philosopher shows in *Physics* 4.

Similarly, scientific knowledge (*scientia*), insofar as it is a *habit*, has quantity on the part of its *objects*; and in this sense it grows through addition insofar as someone comes to know more things. Likewise, insofar as it is an *accidental form*, it also has quantity by the fact that it *exists in a subject*; in this sense it grows in someone who now knows the same knowable things with more certitude (*certius*) than he had before.

Charity likewise has two sorts of quantity. But, as has been explained, it does not increase in the quantity that is taken from the objects. Hence, it follows that charity increases only through intensification.

**Reply to objection 2:** The addition of light to light can be understood to occur in the air because of the diversity of the light-sources that are causing the light. But this sort of distinction has no place in the case under discussion, since there is just one light-source that causes the light of charity.

**Reply to objection 3:** The *infusion* of charity implies a change with respect to *having charity* and *not having charity*, and so it must be the case that something arrives that had previously not existed in the subject. By contrast, an *increase* of charity implies a change with respect to *having less* and *having more*. And so it does not have to be the case that something now exists that previously had not been infused; rather, it has to be the case that what had previously existed in the subject to a lesser degree now exists to a greater degree. And this is what God effects by increasing charity, viz., that it now exists [in the subject] to a greater degree, and that the likeness of the Holy Spirit is participated in more fully in the soul.

## Article 6

### Does charity increase with every act of charity?

It seems that charity increases with every act of charity:

**Objection 1:** What is capable of a greater effect is capable of a lesser effect. But every act of charity merits eternal life, which is greater than a simple increase of charity, since eternal life includes the perfection of charity. Therefore, *a fortiori*, every act of charity increases charity.

**Objection 2:** Just as a habit among the acquired virtues is generated by acts, so too an increase of charity is caused by acts of charity. But every virtuous act contributes to the generation of a virtue. Therefore, every act of charity likewise contributes to an increase of charity.

**Objection 3:** Gregory says, “On the way to God, to stand still is to go backwards.” But no one goes backwards when he is moved by an act of charity. Therefore, anyone who is moved by an act of charity makes progress on the way to God. Therefore, charity increases with every act of charity.

**But contrary to this:** An effect does not exceed the power of its cause. But sometimes an act of charity is done with lukewarmness (*tepor*) or lack of intensity (*remissio*). Therefore, it does not lead to a more excellent charity, but instead disposes one toward a lesser charity.

**I respond:** A spiritual increase of charity is in some way similar to a corporeal increase. However, corporeal increase in animals and plants is not a continuous movement in the sense that if something increases to such-and-such an extent in such-and-such a temporal interval, then something is added proportionally in each part of that temporal interval, as happens in local motion. Instead, for a time nature operates to dispose the plant or animal for the increase and does not increase anything in actuality, and afterwards it produces the effect that it had disposed the subject for by increasing the plant or animal.

So, too, not every act of charity increases charity in actuality, but every act of charity does dispose one for an increase of charity, insofar as by one act of charity a man is rendered more prompt to act out of charity once again. And as this facility increases, the man breaks out into a more fervent act of love by which he strives to make progress in charity; and it is at that point that charity increases in actuality.

**Reply to objection 1:** Every act of charity merits eternal life—to be procured not immediately, but in its own proper time. Similarly, every act of charity merits an increase of charity, and yet charity does not increase immediately, but increases when one strives for such an increase.

**Reply to objection 2:** Even in the case of the generation of an acquired virtue, not every act brings the generation of the virtue to completion; instead, every act contributes to the generation by disposing one for it; and it is the last act, which is more perfect and acts in the power of all the previous acts, that brings the generation to actuality—just as in the case of the many drops of water that hollow out a stone.

**Reply to objection 3:** One is making progress on the way to God not only when his charity is actually increasing, but also as long as he is disposed for an increase.

## Article 7

### Does charity increase *ad infinitum*?

It seems that charity does not increase *ad infinitum*:

**Objection 1:** As *Metaphysics 2* explains, every movement is toward some terminus and end. But an increase of charity is a sort of movement. Therefore, it tends toward some end and terminus. Therefore, it is not the case that charity increases *ad infinitum*.

**Objection 2:** No form exceeds the capacity of its subject. But the capacity of a rational creature, which is the subject of charity, is finite. Therefore, charity cannot increase *ad infinitum*.

**Objection 3:** Every finite thing is such that through continuous increase it can attain the quantity of another finite thing, no matter how big the latter is—unless, perchance, what accrues to it through the increase is ever-diminishing (*id quod accrescit per augmentum semper sit minus et minus*). For as the Philosopher explains in *Physics* 3, if we add to one line what is taken from a second line that is being divided *ad infinitum*, and if these additions are made *ad infinitum*, we will never reach any determinate quantity which is composed of the two lines, i.e., the line that is being divided and the line to which what is subtracted from the divided line is being added. However, this does not occur in the case under discussion, since a second increase in charity does not have to be less than the previous increase; rather, it is more probable that it is equal to the previous increase or greater than it. Therefore, since charity in heaven is a limit, if charity in this life could increase *ad infinitum*, it would follow that the charity in this life could be made equal to the charity in heaven—which is absurd. Therefore, it is not the case that charity in this life can increase *ad infinitum*.

**But contrary to this:** In Philippians 3:12 the Apostle says, “Not that I have already attained it or already become perfect, but I pursue it in the hope that I might possess it.” A Gloss on this passage says, “None of the faithful, even if he has made great progress, says, ‘That is enough for me.’ For anyone who says this has left the road before reaching the end.” Therefore, in this life charity can always increase more and more.

**I respond:** There are three ways in which a terminus can be fixed for the increase of a form:

In *one* way, on the basis of *the nature of the form itself*, which has a fixed measure that is such that, once it is reached, the increase cannot go any further in the form, and if it does go further, then one arrives at a different form. This is clear in the case of grayness, the limits of which one crosses by means of continuous alteration, arriving at either whiteness or blackness.

In the *second* way, on the part of *the agent*, whose power does not extend to increasing the form any further within the subject.

In the third way, on the part of *the subject*, which is not capable of any greater perfection.

Now in none of these ways is a limit imposed on the increase of charity in this life:

Charity does not itself have a limit of increase according to the proper nature of its species, since it is a sort of participation in unlimited charity, i.e., in the Holy Spirit (*participatio quaedam infinitae caritatis, quae est Spiritus Sanctus*). Similarly, the cause that effects an increase in charity has unlimited power (*est infinitae virtutis*), viz., God. Again, a limit to such an increase cannot be fixed even on the part of the subject, since it is always the case that when charity grows, the capacity for further increase grows.

Hence, it follows that no limit to an increase of charity can be fixed in this life.

**Reply to objection 1:** An increase in charity is ordered toward some limit, but that limit exists in the future life and not in this life.

**Reply to objection 2:** The capacity of a spiritual creature increases through charity, since the heart is enlarged through charity—this according to 2 Corinthians 6:11 (“Our heart is enlarged”). And so further capacity still remains for a greater increase.

**Reply to objection 3:** This objection goes through for those things that have quantity of the same type, but not for things which have a diverse sort of quantity. For instance, no matter how much a line increases, it does not attain the quantity of a surface. But the quantity of charity in this life, which follows upon the cognition of faith, is not of the same type as the quantity of the charity in heaven, which follows upon clear vision. And so the argument is invalid.

## Article 8

### Can charity be perfect in this life?

It seems that charity cannot be perfect in this life:

**Objection 1:** This sort of perfection would have existed especially in the apostles. But it did not exist in them; for in Philippians 3:12 the Apostle says, “Not that I have already attained it or already become perfect ...” Therefore, charity cannot be perfect in this life.

**Objection 2:** In *83 Quaestiones* Augustine says, “The nourishment of charity equals the diminishment of disordered desire (*diminutio cupiditatis*); the perfection of charity equals the absence of disordered desire.” But the latter cannot occur in this life, in which we are unable to live without sin—this according to 1 John 1:8 (“If we say that we have no sin, we are deceiving ourselves”). Now every sin proceeds from some sort of disordered desire. Therefore, charity cannot be perfect in this life.

**Objection 3:** What is already perfect cannot grow any further. But as has been explained (a. 7), in this life charity can always increase. Therefore, charity cannot be perfect in this life.

**But contrary to this:** In *Super Primum Canonicum Ioannis [In Epistolam Ioannis Ad Parthos]* Augustine says, “When charity has been strengthened, it is perfected; and when it has arrived at perfection, it says, ‘I want to be dissolved and to be with Christ’.” But this is possible in this life; for instance, it occurred in the case of Paul. Therefore, charity can be perfect in this life.

**I respond:** There are two ways in which to understand the perfection of charity: (a) on the part of *what is lovable* and (b) on the part of *the one who does the loving*.

On the part of what is lovable, charity is perfect insofar as a thing is loved to the extent that it is lovable. But God is as lovable as He is good, and His goodness is infinite. Therefore, He is infinitely lovable. But no creature can love Him to an infinite degree, since every created power is finite. Hence, the charity of a creature cannot be perfect in this sense; instead, only the charity by which God loves Himself can be perfect in this sense.

By contrast, on the part of *the one doing the loving*, charity is called perfect when someone loves with all his capacity (*quando aliquis secundum totum suum posse diligit*). There are three ways in which this can happen:

(a) In one way, a man’s whole heart is borne toward God in actuality. And this is the perfection of *charity in heaven*, which is not possible in this life. For in this life it is impossible, because of the infirmity of life, to always be thinking in actuality about God or to be always moved in actuality by love for Him.

(b) In a second way, a man directs his efforts to leaving time for God and divine things, setting aside other things except insofar as the necessity of the present life requires them. And this is the perfection of charity that is possible in this life, even though it is not common to everyone who has charity.

(c) In a third way, a man puts his whole heart in God habitually, so that he does not think about or will anything that is contrary to divine love. And this is the perfection common to everyone who has charity.

**Reply to objection 1:** The Apostle is denying that he has the perfection of heaven. Hence, a Gloss on that passage says, “He was a perfect wayfarer, but had not yet arrived at the perfection aimed at by the journey itself.”

**Reply to objection 2:** He says this because of venial sins. Venial sins are contrary to the *act* of charity, but not to the *habit* of charity, and so they are incompatible with the perfection of heaven, but not with the perfection of this life.

**Reply to objection 3:** The perfection of this life is not perfection absolutely speaking. And so it is always such that it may increase.

### Article 9

#### Is it appropriate to distinguish three stages of charity, viz. *beginning* charity, *proficient* charity, and *perfect* charity?

It seems that it is inappropriate to distinguish three stages of charity, viz., *beginning* charity, *proficient* charity, and *perfect* charity:

**Objection 1:** Between beginning charity and its ultimate perfection there are many stages in the middle. Therefore, one should not posit just one middle stage.

**Objection 2:** As soon as charity begins to exist, it likewise begins to progress. Therefore, proficient charity should not be distinguished from beginning charity.

**Objection 3:** As has been explained (a. 7), no matter how perfect the charity one has in this world, his charity can increase. But for charity to increase is for it to become proficient. Therefore, perfect charity should not be distinguished from proficient charity. Therefore, the three stages in question are not appropriately assigned.

**But contrary to this:** In *Super Primum Canonicum Ioannis [In Epistolam Ioannis Ad Parthos]* Augustine says, “After charity has been born, it is nurtured, and this belongs to the *beginners*; when it has been nurtured, it becomes stronger, and this belongs to the *proficient*; when it has been strengthened, it is perfected, and this belongs to the *perfect*.” Therefore, there are three stages of charity.

**I respond:** The spiritual increase of charity can be thought of as somewhat similar to a man’s corporeal growth. Even though the latter can be divided into many parts, it nonetheless has some determinate divisions according to the determinate actions or pursuits which a man attains to through growth. For instance, a man’s age is called infancy before he has the use of reason; after that, the man’s second stage is distinguished when he begins to speak and to use reason; again, his third stage is the stage of puberty, when he begins to be able to generate, and so on up to the point where he reaches perfection.

So, too, diverse stages of charity are distinguished by the diverse endeavors to which a man is led by an increase of charity. For at first the principal endeavor that falls to a man is to withdraw from sin and to resist those desires of his that move him in a direction contrary to charity. And this belongs to *beginners*, in whom charity must be nourished or kept warm in order not to be corrupted. A second endeavor follows, viz., that the man principally intends that he should make progress in the good. And this endeavor belongs to the *proficient*, who principally intend that charity should be strengthened in them by increasing. And the third endeavor is that a man should principally intend to adhere to God and enjoy Him. And this belongs to the *perfect*, who “want to be dissolved and to be with Christ.” In the same way, we see in the case of a corporeal movement that first there is a withdrawal from the terminus [*a quo*], and, second, there is a drawing near to the other terminus, and, third, there is rest in that terminus.

**Reply to objection 1:** Every determinate distinction that can be made within the increase of charity is included under the three stages that have been explained. In the same way, as the Philosopher explains in *On the Heavens* 1, every division of continuous things is included under the triad of *beginning*, *middle*, and *end*.

**Reply to objection 2:** For those in whom charity is beginning, even if they are making progress, the main immediate concern is to resist sins, by whose attacks they are disquieted. But afterwards, sensing that these attacks have lessened and that they are now more secure, as it were, they undertake to become proficient (*ad profectum intendunt*)—“on the one hand doing the work, and on the other holding a sword,” as Esdras 2 [Nehemiah] 4:17 says of those who were building Jerusalem.

**Reply to objection 3:** The perfect are also making progress (*proficiunt*) in charity, but this is not their principal concern; instead, they turn their efforts especially toward adhering to God. And even though the beginners and proficient likewise seek this, they nonetheless experience concern for other

things; the beginners are concerned about avoiding sins, and the proficient are concerned about making progress in the virtues.

## Article 10

### Can charity decrease?

It seems that charity can decrease (*possit diminui*):

**Objection 1:** Contraries are apt to be effected with respect to the same thing. But decrease and increase are contraries. Therefore, since, as has been explained (a. 4), charity increases, it seems that it can likewise decrease.

**Objection 2:** In *Confessiones* 10, in speaking to God, Augustine says, “He loves You less who loves something else along with You.” And in *83 Quaestiones* he says, “What nourishes charity decreases disordered desire (*cupiditas*),” and from this it seems that, conversely, an increase of disordered desire decreases charity. But disordered desire, by which something other than God is loved, can grow in a man. Therefore, charity can decrease.

**Objection 3:** In *Super Genesim ad Litteram* 8 Augustine says, “It is not the case that God makes a man just by justifying him in such a way that if he turns away from God, what God did remains in the now absent man.” From this one can gather that in conserving charity in a man, God operates in the same way that He operates when He first infuses charity into him. But in the first infusion of charity, God infuses less charity in a man who has prepared himself less for it. Therefore, in the conservation of charity He conserves less charity in a man who has prepared himself less for it. Therefore, charity can decrease.

**But contrary to this:** In Scripture, charity is compared to fire—this according to *Canticle* 8:6 (“Its torches (i.e., charity’s torches) are fire and flames”). But as long as fire remains, it is always ascending. Therefore, as long as charity remains, it is able to ascend but not able to descend, i.e., to decrease.

**I respond:** The quantity that charity has in relation to its proper *object* cannot decrease—in the same way that, as was explained above (a. 4), it cannot increase, either. However, since charity increases in the quantity that it has in relation to its *subject*, here we have to consider whether it can decrease in this respect.

Now if it decreases, then it must decrease either (a) through some act or (b) merely through the cessation of its own act.

Now as was explained above (*ST* 1-2, q. 53, a. 3), virtues that are acquired by acts decrease—and are sometimes even corrupted—through the cessation of their act. Hence, in *Ethics* 8 the Philosopher says of friendship that lack of communication (*inappellatio*), i.e., not calling on or talking with one’s friend, dissolves many friendships. And the reason for this is that the conservation of a thing depends on its cause, and the cause of an acquired virtue is the human act; hence, when the human acts cease, an acquired virtue diminishes and in the end is totally corrupted.

However, this sort of thing has no place in the case of charity, since, as was explained above (a. 2), charity is caused solely by God and not by human acts. Hence, it follows that even if its act ceases, it is neither decreased nor corrupted by this if there is no sin involved in the cessation. Therefore, it follows that a decrease of charity can be caused only by God or by some sin. But no defect is caused in us by God except by way of punishment, in accord with which He takes grace away as a punishment for sin. Hence, it is appropriate for Him to decrease grace only by way of punishment. Hence, it follows that if charity decreases, the cause of its decrease is sin, either as an efficient cause or as a meritorious cause.

However, *mortal sin* does not decrease charity in either of these ways; instead, it totally corrupts it—both (a) as an *efficient* cause, since, as will be explained below (a. 12), every mortal sin is contrary to

charity, and also (b) as a *meritorious* cause, since if someone does something contrary to charity by committing a moral sin, then he deserves to have God take charity away from him.

Similarly, neither can charity decrease through *venial sin*, either as an efficient cause or as a meritorious cause. Not as an *efficient* cause, because venial sin does not touch charity itself. For charity has to do with the ultimate end, whereas venial sin is a sort of disorder with respect to the means to the end. But love for the end does not decrease by one's doing something disordered with respect to the means to the end—just as it sometimes happens that sick people who mightily love health are disordered when it comes to observing their diet, and just as, in the case of speculative matters, false opinions concerning matters that are inferred from the principles do not decrease the certitude of the principles. Similarly, venial sin likewise does not *merit* a decrease of charity. For when someone is delinquent in a lesser matter, he does not deserve to suffer a greater loss, and God does not turn away from a man to a greater degree than that to which the man turns away from Him. Hence, someone who is disordered with respect to the means to the end does not deserve to suffer a loss of charity, through which he is ordered toward the ultimate end.

Hence, the result is that charity can in no way decrease, speaking *directly*. However, a disposition toward the corruption of charity, which is effected either by venial sins or by ceasing to exercise the works of charity, can *indirectly* be called a decrease of charity.

**Reply to objection 1:** Contraries have to do with same thing when the subject is related in equal ways to both contraries. But charity is not related in the same way to increase and decrease, since, as has been explained, it is able to have a cause that increases it, but it is unable to have a cause that decreases it. Hence, the objection does not go through.

**Reply to objection 2:** There are two types of disordered desire (*cupiditas*):

(a) By the *first* of them the end is set up in creatures. And this type of disordered desire totally kills charity, since, as Augustine says in *Confessiones* 10, it is poisonous. And this makes it the case that God is loved less—that is, that He is loved less than He ought to be loved by charity—by a total destruction of charity and not just by a decrease of charity. And this is how one ought to understand the claim that “He loves You less who loves something else along with You.” This occurs only in the case of mortal sin and not in the case of venial sin, since what is loved in venial sin is loved for the sake of God in *habit*, even if not in *act*.

(b) The *second* type is the disordered desire that belongs to venial sin, and this type of disordered desire is always decreased by charity, but, as has already been explained, it cannot decrease charity.

**Reply to objection 3:** As was explained above (*ST* 1-2, q. 113, a. 3), a movement of free choice is required in the infusion of charity. And so whatever decreases the intensity of free choice operates dispositively in such a way that less charity is to be infused. By contrast, a movement of free choice is not required for the conservation of charity; otherwise, charity would not remain in those who are sleeping. Hence, charity does not decrease because of any obstacle having to do with the intensity of a movement of free choice.

## Article 11

### Can charity once had be lost?

It seems that charity once had cannot be lost:

**Objection 1:** If charity is lost, it is lost only because of sin. But he who has charity cannot sin; for 1 John 3:9 says, “He who is born of God does not commit sin, since His seed abides in him, and he cannot sin, because he is born of God.” But only the children of God have charity, since, as Augustine says in *De Trinitate* 15, charity is what distinguishes “the children of the Kingdom from the children of

perdition.” Therefore, one who has charity cannot lose it.

**Objection 2:** In *De Trinitate* 8 Augustine says, “If love is not true, it should not be called love.” But as he himself says in *Epistola ad Julianum Comitem*, “Love that can be deserted was never true love.” Therefore, neither was it charity. Therefore, if charity is once had, then it is never lost.

**Objection 3:** In a homily on Pentecost, Gregory says, “The love of God does great things if it exists; if it ceases to operate, it is not charity.” But no one loses charity by doing great things. Therefore, if charity is present, it cannot be lost.

**Objection 4:** Free choice is inclined toward a sin only through some motive for sinning. But charity excludes every motive for sinning—love of self, disordered desire, and anything else of this sort. Therefore, charity cannot be lost.

**But contrary to this:** Apocalypse 2:4 says, “I have a few things against you, that you have abandoned your first charity.”

**I respond:** As is clear from what was said above (a. 2), through charity the Holy Spirit dwells in us. Therefore, there are three ways in which we can think about charity.

In the *first* way, on the part of the *Holy Spirit* moving the soul to love God. On this score charity has impeccability by the power of the Holy Spirit, who unfailingly does whatever He wills. Hence, it is impossible for these two things to be true simultaneously: (a) that the Holy Spirit moves someone to an act of charity and (b) that this individual loses charity by sinning. For the gift of perseverance is counted among those benefits of God by which, as Augustine puts it in *De Praedestinatione Sanctorum*, “whoever is liberated is liberated with most certainty.”

In the *second* way, charity can be thought of in *its proper nature*, and in this sense charity is just that which belongs to the nature of charity. Hence, charity cannot sin in any way—just as heat cannot effect cooling, and just as injustice cannot effect anything good, as Augustine points out in *De Sermone Domini in Monte*.

In the *third* way, charity can be thought of on the part of the *subject*, which is variable in keeping with its freedom of choice. Now the relation of charity to its subject can be thought of both (a) in the general way in which a *form* is related to its *matter* and (b) in the specific way in which a *habit* is related to its *power*.

Now a *form* is by its nature such that it exists in the subject in a “lose-able” way when it does not fulfill the whole potentiality of its matter. This is clear in the case of the forms of things that are generable and corruptible; for the matter of such things receives one form in such a way that the potentiality for another form remains in it, as if the whole potentiality of the matter were not fulfilled by the one form. And so the one form can be lost through the reception of the other form. By contrast, the form of a celestial body, which fulfills that whole potentiality of the matter in the sense that there does not remain in it the potential for another form, exists in its subject in such a way that it cannot be lost.

So, then, the charity of heaven, which fulfills the whole potentiality of a rational mind, viz., insofar as all its actual movements are carried toward God, is had in such a way that it cannot be lost. By contrast, the charity of this life does not fulfill the potentiality of its subject in this way, since its subject is not always being carried toward God in actuality. Hence, when it is not being carried toward God in actuality, something can occur through which charity is lost.

On the other hand, it is proper to a *habit* that it should incline the power to do what is appropriate to the habit insofar as (a) it makes what is appropriate to the habit seem good and (b) it makes what is incompatible with the habit seem bad. For just as the sense of taste judges flavors according to its own disposition, so too a man’s mind judges something to be done according to his own habitual disposition. Hence, in *Ethics* 3 the Philosopher says, “As each one is, so will such-and-such an end seem to him.” Therefore, charity is had in such a way that it cannot be lost when what is appropriate for charity cannot but seem good, and this is in heaven, where God is seen through His essence, which is the very essence of goodness. And this is why charity cannot be lost in heaven. But charity can be lost in this life,

wherein one does not see God's very essence, which is the essence of goodness.

**Reply to objection 1:** This passage is talking about the power of the Holy Spirit, who, by His conservation of charity, renders immune from sin those whom He moves as He will.

**Reply to objection 2:** Charity that can be deserted by the very nature of charity is not true charity. For this would occur if someone had in his love something which he loved for a time and afterwards ceased to love—something that would not belong to genuine love.

On the other hand, if charity is lost because of the mutability of the subject and contrary to the intention of charity, which is included within the act of charity, then this would not be opposed to the genuineness of the charity.

**Reply to objection 3:** The love of God always does great things *in its intention*, which belongs to the nature of charity. However, because of the condition of the subject, charity does not always accomplish great things *in actuality*.

**Reply to objection 4:** By the nature of its act, charity excludes every motive for sinning. But sometimes it happens that charity is not doing anything in actuality. And at such a time it is possible for some motive for sinning to intervene, and if this motive is consented to, then charity is lost.

## Article 12

### Is charity lost through a single act of mortal sin?

It seems not to be the case that charity is lost through a single act of mortal sin:

**Objection 1:** In *Periarchon* Origen says, "When self-satisfaction seduces a man away from those things that have put him at the highest and most perfect stage, I do not think that he will become empty or fall away suddenly; rather, he has to fall little by little and gradually." But a man falls by losing charity. Therefore, it is not the case charity is lost just through a single act of mortal sin.

**Objection 2:** In *Sermo de Passione*, Pope Leo, addressing Peter, says, "The Lord saw that in you faith had not been conquered and love had not been turned away, but that constancy had been shaken. Tears abounded where affection never failed, and the fount of charity washed away the words that stemmed from fear." Bernard took this to mean that "charity had been lulled to sleep in Peter but not extinguished." But in denying Christ, Peter sinned mortally. Therefore, it is not the case that charity is lost through a single act of mortal sin.

**Objection 3:** Charity is stronger than an acquired virtue. But the habit of an acquired virtue is not destroyed by a single contrary act of sin. Therefore, *a fortiori*, charity is not destroyed by a single contrary act of mortal sin.

**Objection 4:** Charity involves love of God and neighbor. But someone who commits a mortal sin retains, it seems, his love of God and neighbor, since, as was explained above (a. 10), a disordered affection for the means to an end does not destroy one's love for the end. Therefore, charity with respect to God can remain even when a mortal sin is committed because of a disordered affection for some temporal good.

**Objection 5:** The object of a theological virtue is the ultimate end. But it is not the case that the other theological virtues, viz., faith and hope, are excluded through a single act of mortal sin; to the contrary, they remain as unformed. Therefore, charity, too, can remain as unformed even when a mortal sin has been perpetrated.

**But contrary to this:** Through mortal sin a man comes to be deserving of eternal death—this according to Romans 6:23 ("The wages of sin is death"). But everyone who has charity merits eternal life. For John 14:21 says, "He who loves me is loved by my Father, and I love him, and I will manifest

myself to him”—and eternal life consists in this manifestation, according to John 17:3 (“This is eternal life, that they know You, the true God, and the one whom you have sent, Jesus Christ”). But no one can be simultaneously worthy of eternal life and deserving of eternal death. Therefore, it is impossible for someone to have charity along with a mortal sin. Therefore, charity is destroyed through a single act of mortal sin.

**I respond:** The one contrary is destroyed when the other contrary supervenes. But every act of mortal sin is contrary to charity according to the proper nature of charity, which consists in God’s being loved above all things and in a man’s totally subjecting himself to God by referring all things to Him. Therefore, it is of the nature of charity that a man loves God in such a way that he wills to subject himself to Him in all things and to follow the rule of His precepts in all things. For whatever is contrary to His precepts is clearly contrary to charity and, hence, can in its own right exclude charity.

To be sure, if charity were an acquired habit that depended on its subject’s own power, then it would not be immediately destroyed by a single contrary act. For an act is directly contrary to an act and not to a habit, whereas the conservation of a habit in a subject does not require a continuous act (*non requirit continuitatem actus*); and so an acquired habit is not directly excluded by a supervening contrary act.

However, since charity is an infused habit, it depends on the action of God infusing it, and, as has been explained (a. 10), in infusing and conserving charity God behaves like the sun illuminating the air. And so, just as light would immediately cease to exist in the air if some obstacle were posed to the sun’s illumination of the air, so too charity immediately ceases to exist in the soul if some obstacle is posed to charity’s being infused into the soul by God. But it is clear that through every mortal sin, which is contrary to God’s precepts, an obstacle is posed to the aforementioned infusion, since by the very fact that a man, in choosing the sin, prefers it to friendship with God, which requires that we follow God’s will, it follows that the habit of charity is immediately lost through a single act of mortal sin. Hence, in *Super Genesim ad Litteram* 8 Augustine says, “A man is illuminated when God is present, but when God is absent, he is continually in the dark; for one recedes from Him not by spatial distances but by turning away from His will.”

**Reply to objection 1:** In one way, what Origen says can be taken to mean that a man who is in a perfect state does not suddenly fall into an act of mortal sin but is instead disposed for this by some sort of antecedent negligence. This is why venial sins are called a disposition for mortal sin, as was explained above (*ST* 1-2, q. 88, a. 3). Nonetheless, it is still through a single act of mortal sin, if he commits it, that he falls and loses charity.

However, given that Origen himself adds, “If a brief lapse occurs and he quickly recovers, then he does not seem to fall completely,” an alternative reply is that Origen means that someone “becomes empty and falls” when he falls in such a way as to sin out of malice. This does not happen all at once in a man who was perfect to begin with.

**Reply to objection 2:** There are two ways in which charity is lost:

(a) in one way, *directly*, through actual contempt, and Peter did not lose charity in this way.

(b) in a second way, *indirectly*, when an act contrary to charity is committed because of the passion of desire or of fear. And it is in this way, acting contrary to charity, that Peter lost charity. But he regained it quickly.

**Reply to objection 3:** [*There is no reply here to objection 3; see the body of the article.*]

**Reply to objection 4:** Not every disordered affection that has to do with the means to the end, i.e., with created goods, constitutes a mortal sin. This occurs only when the affection is such that it is incompatible with God’s will; and, as has been explained, this is directly contrary to charity.

**Reply to objection 5:** Charity implies a certain union with God, but faith and hope do not. Now as was explained above (q. 20, a. 3 and *ST* 1-2, q. 72, a. 5), sin consists in a turning away from God. And this is why every mortal sin is contrary to charity. However, not every mortal sin is contrary to faith or to

hope; only certain determinate sins are, viz., those by which the *habit* of faith or the *habit* of hope is destroyed—in just the way that the *habit* of charity is destroyed by every mortal sin. Hence, it is clear that charity cannot remain in an unformed state, since, as has been explained, it itself is the ultimate form of the virtues because it relates to God as the ultimate end (*in ratione finis ultimi*).

## QUESTION 25

### The Object of Charity

We next have to consider the object of charity. On this topic there are two things that have to be considered: first, the things that are to be loved out of charity (question 25) and, second, the ordering of the things to be loved (question 26).

On the first topic there are twelve questions: (1) Is God alone to be loved out of charity, or one's neighbor as well? (2) Is charity to be loved out of charity? (3) Are non-rational creatures to be loved out of charity? (4) Can one love himself out of charity? (5) Can one love his own body out of charity? (6) Are sinners to be loved out of charity? (7) Do sinners love themselves? (8) Are one's enemies to be loved out of charity? (9) Should enemies be shown signs of friendship? (10) Are the angels to be loved out of charity? (11) Are the demons to be loved out of charity? (12) How should one enumerate the things to be loved out of charity?

### Article 1

#### Does the love of charity stop with God, or does it extend to our neighbor?

It seems that the love of charity stops with God and does not extend to our neighbor:

**Objection 1:** Just as we must love God, so too we must fear Him—this according to Deuteronomy 10:12 (“And now, Israel, what does the Lord your God require of you except that you fear Him and love Him?”). But the fear by which a man is feared and which is called *human* fear is different from the fear by which God is feared and which, as was explained above (q. 19, a. 2), is called either *servile* fear or *filial* fear. Therefore, the love that belongs to charity, by which God is loved, is likewise different from the love by which our neighbor is loved.

**Objection 2:** In *Ethics* 8 the Philosopher says that to be loved is to be honored. But the honor that is owed to God, which is the honor of *latría*, is different from the honor that is owed to a creature, which is the honor of *dulia*. Therefore, the love by which God is loved is likewise different from the love by which our neighbor is loved.

**Objection 3:** As is said in a Gloss on Matthew 1:2, hope generates charity. But hope is had in God in such a way that those hoping in men are reprehended—this according to Jeremiah 17:5 (“Cursed be the man who places his trust in man”). Therefore, charity is owed to God in such a way that it does not extend to our neighbor.

**But contrary to this:** 1 John 4:21 says, “This commandment we have from God, that he who loves God should also love his brother.”

**I respond:** As was explained above (q. 17, a. 6; q. 19, a. 3; *ST* 1-2, q. 54, a. 3), habits are diversified only by that which changes the species of the act, since all the acts of a single species belong to the same habit. But given that the species of an act is taken from its object in accord with the object's formal character (*secundum formalem rationem ipsius*), an act that is directed toward an object's [formal] character and an act that is directed toward the object under such a character (*sub tali ratione*) must be the same in species—in the way that an act of seeing by which light is seen is the same in species as an act of seeing by which a color is seen in accord with the character *light* (*secundum luminis rationem*).

Now the [formal] character that belongs to loving one's neighbor is God, since we ought to love in our neighbor the fact that he exists in God. Hence, it is clear that an act by which God is loved (*diligitur*) is the same in species as an act by which our neighbor is loved. And it is because of this that the habit of charity extends not only to love (*dilectio*) of God, but also to love of neighbor.

**Reply to objection 1:** There are two ways in which our neighbor can be feared, just as there are likewise two ways in which our neighbor can be loved.

In one way, it is because of *what is proper to himself*—as, for instance, when someone fears a

tyrant because of his cruelty, or when he loves (*amat*) someone out of a desire to acquire something from him. And this sort of human fear is distinct from the fear of God, and the same holds in the case of love.

In the second way, a man is feared and loved because of *what there is of God existing in him*—as when a secular power (a) is feared because of the divine ministry which he has of punishing evildoers and (b) is loved for the sake of justice. And this sort of fear of a man is not distinct from the fear of God, and neither is this sort of love (*amor*) distinct from the love of God.

**Reply to objection 2:** Love (*amor*) has to do with the good in general (*respicit bonum in communi*), whereas honor has to do with the proper good of the one who is honored, since it is bestowed on someone as a testimony to his own proper virtue. And so love is not diversified in species by the different quantities of goodness had by diverse things, as long as those things are all referred back to a unified general good, whereas honor is diversified according to the proper goods of individuals.

Hence, we love all our neighbors by the same love of charity, insofar as they are referred back to one common good, i.e., God, whereas we bestow different honors on different individuals in accord with the proper virtue of each one. And, similarly, we show to God the singular honor of *latría*, because of His singular virtue.

**Reply to objection 3:** The ones being blamed are those who hope in man as the principal source of salvation, not those who hope in man as helping them ministerially under God. Similarly, if someone loved (*diligere*) his neighbor as the principal end, this would be reprehensible, but not if someone loved his neighbor for the sake of God—which belongs to charity.

## Article 2

### Is charity to be loved out of charity?

It seems not to be the case that charity is to be loved out of charity:

**Objection 1:** As is clear from Matthew 22:37-39, what is to be loved out of charity is inferred from the two precepts of charity. But charity is not contained under either of these precepts, since charity is neither God nor our neighbor. Therefore, it is not the case that charity is to be loved out of charity.

**Objection 2:** As was explained above (q. 23, a. 1), charity is based upon a sharing in beatitude. But charity cannot participate in beatitude. Therefore, it is not the case that charity is to be loved out of charity.

**Objection 3:** As was explained above (q. 23, a. 1), charity is a sort of friendship. But no one can have a friendship with charity or with any accident, since things of this sort cannot reciprocate love—which, as is explained in *Ethics* 8, is part of the nature of friendship. Therefore, it is not the case that charity is to be loved out of charity.

**But contrary to this:** In *De Trinitate* 8 Augustine says, “He who loves his neighbor must, as a consequence, likewise love love itself (*etiam ipsam dilectionem diligit*).” But one’s neighbor is loved out of charity. Therefore, as a consequence, charity is likewise loved out of charity.

**I respond:** Charity is a certain sort of love (*amor*).

But by the nature of *the power* of which it is an act, love is such that it can be reflected back upon itself. For since the object of the will is the universal good, whatever is contained under the notion *good* can fall under an act of willing; and since an act of willing is itself something good (*ipsum velle est quoddam bonum*), one can will to will—just as, likewise, the intellect, whose object is the true, understands that it understands, since this, too, is something true.

However, it is also the case that, by reason of *its own species*, love is such that it is reflected back upon itself, since it is a spontaneous movement on the part of the lover toward what is loved. Hence, by the very fact that someone loves, he loves that he loves.

Still, as was explained above (q. 23, a. 1), charity (*caritas*) is not simple love (*amor*) but instead has the character of friendship (*amicitia*). Now there are two ways in which something is loved by friendship:

In one way, something is loved *as the friend* with whom we have the friendship and for whom we will good things.

In the second way, something is loved *as a good that we will for our friend*. And it is in this way, and not in the first way, that charity is loved out of charity. For charity is a good that we wish for everyone whom we love out of charity. And the same line of reasoning holds for beatitude and for the other virtues.

**Reply to objection 1:** God and our neighbor are those with whom we have friendship. But our love for them includes loving charity, because we love our neighbor and God insofar as we love it for ourselves and our neighbor to love God, i.e., to have charity.

**Reply to objection 2:** Charity is the very sharing of the spiritual life through which one arrives at beatitude. And so it is desired as a good for everyone whom we love out of charity.

**Reply to objection 3:** This argument goes through insofar as what is loved through friendship are those with whom we have friendship.

### Article 3

#### Are even non-rational creatures to be loved out of charity?

It seems that even non-rational creatures (*creaturae irrationales*) are to be loved out of charity:

**Objection 1:** It is through charity that we are especially conformed to God. But God loves non-rational creatures out of charity; for as Wisdom 11:25 says, He loves “all things that exist,” and whatever He loves, He loves by His very self, and He is charity.

**Objection 2:** Charity is mainly directed toward God and extends to other things insofar as they pertain to God. But just as the rational creature pertains to God insofar as he has the likeness of an *image* (*similitudo imaginis*), so too the non-rational creature has the likeness of a *trace* (*similitudo vestigii*) (cf. *ST* 1, q. 93). Therefore, charity extends even to non-rational creatures.

**Objection 3:** Just as God is the object of charity, so He is also the object of faith. But faith extends to non-rational creatures insofar as we believe that heaven and earth are created by God, and that the fish and the birds are produced from the waters, and that plants and walking animals are produced from the earth. Therefore, charity likewise extends to non-rational creatures.

**But contrary to this:** The love of charity (*dilectio caritatis*) extends only to God and our neighbor. But by the name ‘neighbor’ one cannot mean a non-rational creature, since non-rational animals do not share in the life of reason with man (*non communicant cum homine in vita rationali*). Therefore, charity does not extend to non-rational creatures.

**I respond:** As was explained above (a. 2), charity is a certain sort of friendship, and what is loved through friendship is, in the first sense, the friend with whom the friendship is had and, in the second sense, the goods that are wished for one’s friend.

Thus, no non-rational creature can be loved in the first sense out of charity—and this for three reasons.

Two of these reasons have to do with *friendship in general*, which cannot be had with non-rational creatures:

First, because friendship is had with someone for whom we will the good. But I cannot properly will the good for a non-rational creature, because only a rational creature, who is in charge of using the good that he has through free choice, and not a non-rational creature, properly possesses his own good

(*est eius proprie habere bonum*). That is why, in *Physics 2*, the Philosopher says, “It is only by a similitude that we say that something happens well or badly for entities of this sort.”

Second, because every friendship is based upon some sharing of life; for, as is clear from the Philosopher in *Ethics 8*, nothing is so proper to friendship as sharing one another’s lives. But non-rational creatures cannot share in human life, which has to do with reason (*quae est secundum rationem*). Hence, no friendship can be had with non-rational creatures—except, perhaps, metaphorically (*nisi forte secundum metaphoram*).

The third [main] reason is *proper to charity*. For charity is based upon the sharing of eternal beatitude, which a non-rational creature is not capable of. Hence, the friendship of charity cannot be had with a non-rational creature.

Still, non-rational creatures can be loved out of charity as goods which we will for others, viz., insofar as out of charity we will them to be conserved for the honor of God and for their usefulness to men. And this is likewise the sense in which God loves them out of charity.

**Reply to objection 1:** The response to the first objection is clear from this.

**Reply to objection 2:** The similitude of a *vestige* does not cause the capacity for eternal life in the way that the similitude of an *image* does. Hence, the arguments are not parallel.

**Reply to objection 3:** Faith can extend to all things that are in any way true. But the friendship of charity extends only to those things that are apt to have eternal life. And so the arguments are not parallel.

#### Article 4

##### Does a man love himself out of charity?

It seems that a man does not love himself out of charity:

**Objection 1:** In a certain homily Gregory says, “Charity cannot be had between fewer than two individuals.” Therefore, no one has charity with respect to himself.

**Objection 2:** As is clear from *Ethics 8*, friendship by its nature implies reciprocal love and equality, which are not possible for a man with respect to himself. But as has been explained, charity is a certain sort of friendship. Therefore, it cannot be the case that someone has charity with respect to himself.

**Objection 3:** What belongs to charity cannot be blameworthy, since, as 1 Corinthians 13:4 says, charity does not do wrong. But to love oneself is blameworthy, since 2 Timothy 3:1-2 says, “In the last days dangerous times will come, and men will be lovers of self.” Therefore, a man cannot love himself out of charity.

**But contrary to this:** Leviticus 19:18 says, “You shall love your neighbor as yourself.” But we love our friend out of charity. Therefore, we should also love ourselves out of charity.

**I respond:** Since, as has been explained (q. 23, a. 1), charity is a certain sort of friendship, there are two possible ways in which we can talk about charity:

(a) in one way, *under the common notion of friendship*. And on this score we should say that, properly speaking, what is had with respect to oneself is not friendship, but something greater than friendship. For friendship implies a certain type of *union*—for instance, Dionysius says, “Love is a unitive virtue”—whereas what each individual has with respect to himself is *unity*, which is stronger than union. Hence, just as unity is a principle of union, so the love by which one loves himself is the form and root of friendship, since we have friendship with respect to others by the fact that we relate to them as we relate to ourselves. For *Ethics 9* says, “The friendly regard (*amicabilia*) directed toward the other comes from the friendly regard that is directed toward oneself.” In the same way, with respect to principles one

does not have knowledge (*scientia*) but instead has something greater, viz., understanding (*intellectus*).

(b) In a second way, we can speak of charity *as regards its proper notion*, viz., insofar as it is the friendship of a man mainly with respect to God and, consequently, with respect to the things that belong to God. Among those things is included the man himself who has charity. And so among the other things that he loves out of charity as belonging to God, he loves even himself out of charity.

**Reply to objection 1:** Gregory is talking about charity under the common notion of friendship.

**Reply to objection 2:** On this same interpretation, the second argument goes through.

**Reply to objection 3:** Those who love themselves are blamed insofar as they love themselves with respect to their sentient nature, which they conform to. But this is not to love oneself truly with respect to one's rational nature, i.e., in such a way that one loves those goods that contribute to the perfection of reason. And it is in this latter sense that loving oneself belongs mainly to charity.

## Article 5

### Should a man love his own body out of charity?

It seems that a man should not love his own body out of charity:

**Objection 1:** We do not love what we do not will to share a common life with. But men who have charity flee from association with the body—this according to Romans 7:24 (“Who will free me from the body of this death?”) and according to Philippians 1:23 (“... having a desire to be dissolved and to be with Christ”). Therefore, our body is not to be loved out of charity.

**Objection 2:** The friendship of charity is based upon a sharing in the enjoyment of God. But our body cannot participate in this enjoyment. Therefore, our body is not to be loved out of charity.

**Objection 3:** Since charity is a certain sort of friendship, it is directed toward those who can reciprocate our love. But our body cannot love us out of charity. Therefore, it is not to be loved out of charity.

**But contrary to this:** In *De Doctrina Christiana* 1 Augustine claims that four things are to be loved out of charity, and included among them is one's own body.

**I respond:** There are two ways in which our body can be thought of: (a) with respect to *its nature* and (b) with respect to the *corruption of sin and punishment*.

Now the nature of our body comes not from any created evil principle, as the Manicheans imagine, but from God. Hence, we can use it in the service of God—this according to Romans 6:13 (“Present your members to God as instruments of justice”). And so out of the love of charity, by which we love God, we should likewise love our own body.

On the other hand, we should not love the infection of sin and the corruption of punishment in our body, but should instead strive for their removal.

**Reply to objection 1:** The Apostle did not flee from association with the body as regards the body's nature; in fact, in this regard he did not want to be deprived of it—this according to 2 Corinthians 5:4 (“We wish not to be unclothed, but to be overclothed”). But he did wish to lack the infection of excessive desire (*volebat carere infectione concupiscentiae*), which remains in the body, and its corruption, which prevents the soul from being able to see God. This is why he explicitly says “... from the body of this death.”

**Reply to objection 2:** Even though our body cannot enjoy God by knowing and loving Him, nonetheless, through the works that we do with our body we can attain the perfect enjoyment of God. Hence, a certain sort of beatitude redounds upon the body from the soul's enjoyment, viz., “the strength (*vigor*) of health and incorruption,” as Augustine puts it in his letter to Dioscorus. And so since the body in some sense participates in beatitude, it can be loved with the love of charity.

**Reply to objection 3:** Reciprocal love has a place in the friendship that is with respect to another, but not in the friendship that one has with respect to himself, as regards either the soul or the body.

## Article 6

### Are sinners to be loved out of charity?

It seems that sinners are not to be loved out of charity:

**Objection 1:** Psalm 118:113 says, “I have hated the wicked.” But David had charity. Therefore, sinners are more to be hated out of charity than loved out of charity.

**Objection 2:** As Gregory says in a homily for Pentecost, “The proof of love is in the exhibiting of the deed.” But the just do not exhibit deeds of love to sinners, but instead they seem to exhibit deeds of hatred—this according to Psalm 100:8 (“In the morning I put to death all the sinners of the land”). And in Exodus 22:18 the Lord commanded, “Do not allow the evildoers to live.” Therefore, sinners are not to be loved out of charity.

**Objection 3:** It belongs to friendship that we will and desire good things for our friends. But out of charity the saints desire evil things for sinners—this according to Psalm 9:18 (“Let the wicked be turned to Hell”). Therefore, sinners are not to be loved out of charity.

**Objection 4:** It is proper to friends to rejoice over the same things and to will the same things. But charity does not make one will what sinners will; nor does it make one rejoice over what sinners rejoice over. Rather, it brings about just the opposite of this. Therefore, sinners are not to be loved out of charity.

**Objection 5:** As *Ethics* 8 says, it is proper to friends to share their lives. But one should not share his life with sinners—this according to 2 Corinthians 6:17 (“Withdraw from their presence”). Therefore, sinners are not to be loved out of charity.

**But contrary to this:** In *De Doctrina Christiana* 1 Augustine says, “When it is said, ‘Love your neighbor’, it is clear that every man is to be counted as a neighbor.” But sinners do not cease to be men, since sin does not destroy their nature. Therefore, sinners are to be loved out of charity.

**I respond:** There are two things to think about in the case of sinners, viz., (a) their *nature* and (b) their *sin*.

As regards their *nature*, which they have from God, they are capable of beatitude and, as was explained above (q. 23, aa. 1 and 5), charity is based upon the sharing of beatitude. And so, as regards their nature, they are to be loved out of charity.

By contrast, their *sin* is opposed to God and is an obstacle to beatitude. Hence, with respect to their sin, by which they are opposed to God, every sinner is to be hated—even, as Luke 14:26 has it, one’s father and mother and relatives. For in the case of sinners we ought to hate the fact that they are sinners and love the fact that they are men capable of beatitude. And this is what it is to truly love them out of charity because of God.

**Reply to objection 1:** The prophet hated the wicked insofar as they are wicked, hating their iniquity, i.e., their evil. And this is the perfect hatred of which he says, “I have hated them with a perfect hatred.” Now hating someone’s evil is of a piece with loving his good. Hence, this perfect hatred likewise belongs to charity.

**Reply to objection 2:** As the Philosopher says in *Ethics* 9, the benefits of friendship are not to be withheld from friends who are sinners as long as there is hope of their being cured; instead, they are to be assisted in recovering their virtue more than in recovering their money if they have lost it, inasmuch as virtue is more closely related to friendship than money is.

However, when they fall into very great wickedness and become incurable, then the familiarity of

friendship should not be accorded them. And that is why sinners of this sort, from whom harm to others is more to be expected than a mending of their ways, are ordered to be put to death according to both divine law and human law. Yet a judge does this not out of hatred of them, but out of the love of charity by which the public good is preferred to an individual person's life. Still, death imposed by a judge benefits the sinner—whether he is converted, in which case his sin is expiated, or not converted, in which case his sinning is terminated, since through his death the power to sin further is removed from him.

**Reply to objection 3:** There are three possible ways to understand imprecations of this sort that are found in Sacred Scripture:

(a) as *predictions* rather than desires, so that the meaning is, "Let the sinners depart for Hell," i.e., they will depart for Hell.

(b) as *desires*, but in such a way that the desire of the one who wishes it is referred back not to the punishment of the men, but to *the justice of the punisher*—this according to Psalm 57:11 ("The just man will rejoice when he sees the vindication"). For as Wisdom 1:13 says, God Himself, who does the punishing, likewise "does not rejoice in the destruction of the wicked," but rejoices instead in His justice, since "the Lord is just and has loved justice" (Psalm 10:8).

(c) as *desires* that are referred back to the *removal of the sin* and not to the punishment itself—viz., so that the desire is that the sins should be destroyed and the men remain.

**Reply to objection 4:** We love sinners out of charity not in order that we might will what they themselves will or in order that we might rejoice over what they themselves rejoice over, but in order that we might bring it about that they will what we will and rejoice over what we rejoice over. Hence, Jeremiah 15:19 says, "They will be turned to you (*convertentur ad te*), and you will not be turned to them."

**Reply to objection 5:** Living together with sinners is indeed to be avoided by the weak because of the danger that threatens them of being subverted by the sinners. However, for the perfect, whose corruption is not a matter of concern, it is praiseworthy to have commerce with sinners, so that they might convert them. For as Matthew 9:11-13 relates, our Lord ate and drank with sinners in this way.

Still, the company of sinners is to be avoided by everyone as far as association in their sin is concerned. And this is why 2 Corinthians 6:17 says, "Withdraw from their midst and do not touch the unclean," viz., by consenting to their sin.

## Article 7

### Do sinners love themselves?

It seems that sinners love themselves:

**Objection 1:** The source (*principium*) of sin is found especially in sinners. But love of self is the source of sin; for in *De Civitate Dei* 14 Augustine says, "It builds up the city of Babylon." Therefore, sinners especially love themselves.

**Objection 2:** Sin does not destroy one's nature. But it belongs to each thing by its nature to love itself; hence, even non-rational creatures naturally seek their own good, viz., the conservation of their being and other such things. Therefore, sinners love themselves.

**Objection 3:** As Dionysius says in *De Divinis Nominibus*, chap. 4, the good is lovable to all things. But many sinners think of themselves as good. Therefore, many sinners love themselves.

**But contrary to this:** Psalm 10:6 says, "Whoever loves iniquity hates his own soul."

**I respond:** In one sense, loving oneself is common to everyone; in a second sense, it is proper to those who are good; and in a third sense, it is proper to those who are bad.

For it is common to everyone that he loves what he takes himself to be. However, there are two

ways in which a man is said to be something:

In one way, according to his *substance and nature*. And on this score all men take it to be a general good that they are what they are, viz., composites of soul and body. And on this score all men, both good and bad, also love themselves insofar as they love the conservation of themselves.

In the second way, a man is said to be something in accord with *what is preeminent in him (secundum principalitatem)*, in the way that the ruler of a city is said to be the city, so that what the ruler does, the city is said to do. Now in this sense not everyone thinks himself to be what he in fact is. For the principal thing in a man is his rational mind, whereas what is secondary in him is his sentient and corporeal nature. As is clear from 2 Corinthians 4:16, the Apostle calls the first of these the ‘interior man’ and the second the ‘exterior man’. Now good men think that what is preeminent in them is the rational nature or interior man, and hence they think themselves to be what they in fact are. By contrast, bad men think that what is predominant in them is the sentient and corporeal nature, viz., the exterior man. Hence, not having a correct understanding of themselves, they do not truly love themselves, but instead love what they take themselves to be. Good men, on the other hand, having a correct understanding of themselves, truly love themselves.

The Philosopher proves this in *Ethics* 9 by reference to five things that are proper to friendship. For, first of all, each friend wills that his friend exist and live; second, he wills goods for him; third, he does good things to him; fourth, he finds it pleasant to live with him; fifth, he is in agreement with him, taking pleasure in the same things and being pained by the same things.

Accordingly, good men love themselves with respect to the interior man, since they will the interior man to be preserved in his integrity; and it is pleasant for them to enter into their own heart, since they find there good thoughts in the present, the memory of good things in the past, and the hope of future goods—and pleasure is caused by all of these. Similarly, good men do not suffer dissension of the will within themselves, since their whole soul tends in a single direction (*tendit in unum*).

By contrast, bad men do not will that the integrity of the interior man should be preserved. Nor do they desire the spiritual goods of the interior man or act for this end. Nor is it pleasant for them to live with themselves by entering into their own heart, since they find there bad things—present, past, and future—which they abhor. Nor, because of their tormenting conscience, do they agree with themselves—this according to Psalm 49:21 (“I will reprove you and stand firm against your face”). And by these same things it can be proved that bad men love themselves with respect to the corruption of the exterior man. But this is not the way in which good men love themselves.

**Reply to objection 1:** As is explained in the same place, the love of self which is the source of sin is the sort of love which is proper to bad men and which ends up in contempt for God. For bad men desire exterior goods in such a way that they disdain spiritual goods.

**Reply to objection 2:** Even if natural love is not totally removed from bad men, it is nonetheless perverted in them in the way already explained.

**Reply to objection 3:** Insofar as bad men take themselves to be good, they have some participation in love of self. Still, this is only apparent love of self and not genuine love of self. Still, even this sort of love is not possible in those who are extremely bad.

## Article 8

### Is it necessary for one’s enemies to be loved out of charity?

It seems not to be necessary for one’s enemies to be loved out of charity:

**Objection 1:** In *Enchiridion* 73 Augustine says, “So great a degree of goodness,” viz., to love one’s enemies, “does not belong to such a great multitude as we believe are heard when, in prayer, they

say, ‘Forgive us our trespasses’.” But no one’s sin is forgiven without charity, since, as Proverbs 10:12 says, “Charity covers all sins.” Therefore, it is not necessary for one’s enemies to be loved out of charity.

**Objection 2:** Charity does not destroy one’s nature. But every entity, even non-rational ones, naturally hate their contrary, in the way that the sheep hates the wolf and that water hates fire. Therefore, charity does not bring it about that one’s enemies are loved.

**Objection 3:** Charity does not do wrong. But it seems perverse that one should love his enemies, just as it seems perverse that one should hate his friends. Hence, in 2 Kings 19:6 Joab reproaches David saying, “You love those who hate you and hate those who love you.” Therefore, charity does not bring it about that one’s enemies are loved.

**But contrary to this:** In Matthew 5:44 our Lord says, “Love your enemies.”

**I respond:** There are three possible ways to think of love of one’s enemies:

First, that one’s enemies are loved *insofar as they are enemies*. This is perverse and contrary to charity, since it is to love what is bad in the other person.

In the second way, love of one’s enemies can be understood as directed toward *the nature*, but *in general*. And love of one’s enemies in this sense necessarily belongs to charity (*est de necessitate caritatis*), so that, namely, one who loves God and neighbor does not exclude his enemies from the general love of one’s neighbor (*ab illa generalitate dilectionis proximi*).

In the third way, love of one’s enemies can be thought of *specifically (in speciali)*, in the sense that one is moved by a movement of love specifically toward an enemy (*in speciali ... ad inimicum*). And this does not belong to charity with absolute necessity (*non est de necessitate caritatis absolute*), since to be moved with a movement of love specifically toward any given man individually likewise does not belong to charity with necessity; for this would be impossible. Yet it does indeed belong to charity with necessity as regards one’s being mentally prepared (*secundum praeparationem animi*)—so that, namely, a man has a mind ready to love a particular enemy if the necessity arises.

However, it belongs to the *perfection* of charity that a man should, in addition, actually accomplish loving his enemy for the sake of God outside of a time of necessity. For since one’s neighbor is loved out of charity for the sake of God, to the extent that someone loves God more, he will also show more love to his neighbor without any enmity hindering him—just as, if someone loves a man more, he will love that man’s children even if they are unfriendly to him. And this is what Augustine is talking about.

**Reply to objection 1:** The reply to the first objection is thus clear.

**Reply to objection 2:** Each entity naturally hates what is contrary to itself insofar as it is contrary, and enemies are contrary to us insofar as they are enemies. Hence, we ought to hate this in them, since it ought to displease us that they are our enemies. But they are not contrary to us insofar as they are men and capable of beatitude. And on this score we ought to love them.

**Reply to objection 3:** It is blameworthy to love our enemies insofar as they are enemies. And, as has been explained, charity does not do this.

## Article 9

### Does it necessarily belong to charity that a man should show the signs or effects of love to his enemy?

It seems that it necessarily belongs to charity that a man should show the signs or effects of love to his enemy:

**Objection 1:** 1 John 3:18 says, “Let us love not in word or in speech, but in deed and in truth.” But one loves in deed by showing to the one loved the signs and effects of love. Therefore, it necessarily belongs to charity that one show signs and effects of this sort to one’s enemies.

**Objection 2:** In Matthew 5:44 says “Love your enemies” along with “Do good to those who hate you.” But loving one’s enemies necessarily belongs to charity. Therefore, so does doing good to one’s enemies.

**Objection 3:** By charity one loves not only God, but also his neighbor. But in a homily for Pentecost Gregory says, “The love of God cannot be idle, since it does great things if it exists. If it ceases to operate, it is not love.” Therefore, charity that is had with respect to one’s neighbor cannot exist without the effects of its operation. But it necessarily belongs to charity that every neighbor is loved, even one’s enemy. Therefore, it necessarily belongs to charity that we should extend the signs and effects of love to our enemies.

**But contrary to this:** A Gloss on Matthew 5:44 (“Do good to those who hate you”) says, “To do good to one’s enemies is the summit of charity. But what belongs to the *perfection* of charity does not belong to it *with necessity*. Therefore, showing the signs and effects of love to one’s enemies does not belong to charity with necessity.

**I respond:** The effects and signs of charity proceed from an interior act of love (*ex interiori dilectione*) and are proportioned to it. And as was explained above (a. 8), an interior act of love for one’s enemy in general falls under the necessity of a precept absolutely speaking, whereas an interior act of love specifically for one’s enemy falls under the necessity of a precept not absolutely speaking, but rather as regards one’s being mentally prepared for it. The same thing, then, should be said about showing an effect or sign of love exteriorly.

For there are certain works and signs of love (*beneficia et signa dilectionis*) which are shown to our neighbors in general—for instance, when one prays for all the faithful or for the whole people, or when one bestows a favor on the whole community. And it falls under the necessity of precept to show such acts or signs of love to one’s enemies, since if they were not shown to one’s enemies, this would smack of the ill-will of vindictiveness—contrary to what is said in Leviticus 19:18 (“Do not seek revenge; and do not hold in memory the injuries wrought by your fellow citizens”).

By contrast, there are other works or signs of love that one shows to particular persons. And showing such acts or signs of love to one’s enemies is not necessary for salvation except with respect to being mentally prepared to come to their assistance in time of necessity—this according to Proverbs 25:21 (“If your enemy is hungry, feed him; if he is thirsty, give him drink”) But for someone to show good works of this sort to his enemies outside of a time of necessity belongs to the *perfection* of charity, through which one is not only wary of being conquered by evil, which belongs to *necessity*, but also wills to conquer evil with good, which belongs to *perfection*—that is, as long as he is not only wary of being dragged down into hatred because of the injury inflicted on him, but also intends by his own good works to draw his enemy toward loving him.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from this.

## Article 10

### Do we have to love the angels out of charity?

It seems that we do not have to love the angels out of charity:

**Objection 1:** In *De Doctrina Christiana* 1, Augustine says, “The love of charity is twofold, viz., love of God and love of neighbor.” But love of the angels is not contained under love of God, since the angels are created substances. Nor does love of the angels seem to be contained under love of neighbor, since they do not share the same species with us. Therefore, it is not the case that the angels are to be loved out of charity.

**Objection 2:** Brute animals have more in common with us than do the angels, since we and the brute animals are in the same proximate genus. But as was explained above (a. 3), we do not have charity with respect to the brute animals. Therefore, neither do we have charity with respect to the angels.

**Objection 3:** As *Ethics* 8 explains, nothing is more proper to friends than to share their lives (*convivere*). But angels do not share their lives with us, and we cannot even see them. Therefore, we are unable to have the friendship of charity with respect to them.

**But contrary to this:** In *De Doctrina Christiana* 1 Augustine says, “Now if anyone to whom we are bound to offer a favor of mercy or who is bound to offer a favor of mercy to us is correctly called our neighbor, then it is clear that the holy angels, from whom we receive many favors of mercy, are also included under the precept by which we are commanded to love our neighbor.

**I respond:** As was explained above (q. 23. a. 1), the friendship of charity is based upon the sharing of eternal beatitude, participation in which men share with the angels. For Matthew 22:30 says, “In the resurrection men will be like the angels in heaven.” And so it is clear that the friendship of charity extends to the angels as well.

**Reply to objection 1:** Someone is called a ‘neighbor’ not only because of sharing a species but also because of sharing in the blessings that pertain to eternal beatitude. For it is upon this sort of sharing that the friendship of charity is based.

**Reply to objection 2:** Brute animals agree with us in a proximate genus by reason of their sentient nature. But we participate in eternal beatitude not by reason of our sentient nature, but by reason of our rational mind, which we share in common with the angels.

**Reply to objection 3:** Angels do not share their life with us by exterior intercourse, which belongs to us in accord with our sentient nature. However, as was explained above (q. 23, a. 1), we share our life with the angels by our minds—imperfectly, to be sure, in this life, but perfectly in heaven.

## Article 11

### Do we have to love the demons out of charity?

It seems that we have to love the demons out of charity:

**Objection 1:** The angels are neighbors to us insofar as we share our lives with them in our rational mind. But the demons also share their lives with us in this way, since, as is explained in *De Divinis Nominibus*, chap. 4, their natural gifts remain undiminished—viz., their being (*esse*), their life (*vivere*), and their understanding (*intelligere*). Therefore, we have to love the demons out of charity.

**Objection 2:** The demons differ from the blessed angels by the difference *sin*, in the same way that men who are sinners differ from just men. But just men love men who are sinners out of charity. Therefore, they likewise have to love the demons out of charity.

**Objection 3:** As is clear from the passage from Augustine adduced above (a. 9), those by whom we are given favors ought to be loved by us out of charity as neighbors. But as Augustine points out in *De Civitate Dei* 11, the demons are useful to us in many ways, since “by tempting us they fashion crowns for us.” Therefore, the demons are to be loved out of charity.

**But contrary to this:** Isaiah 28:18 says, “Your covenant with death shall be abolished, and your pact with hell shall not stand.” But the perfection of a covenant and a pact comes through charity. Therefore, it is not the case that we have to have charity with respect to the demons, who are the inhabitants of Hell and the overseers of death.

**I respond:** As was explained above (a. 6), in the case of sinners we have to love their nature out of charity and hate their sin out of charity. Now the name ‘demon’ signifies a nature deformed by sin. And

so the demons are not to be loved out of charity.

However, if this meaning is not given to the name, and the question is instead referred to those spirits who are called demons, whether they are to be loved out of charity, then one should reply, in accord with what was said above (a. 2), that there are two ways in which something is loved out of charity:

In one way, as someone with whom friendship is had. And on this score we cannot have the friendship of charity with those spirits. For it belongs to the nature of friendship that we will the good for our friends. But we cannot will out of charity the good of eternal life, which charity has to do with, for those spirits who have been damned for eternity by God. For this would be incompatible with charity for God, through which we give our approval to His justice.

In the second way, something is loved as that which we will to endure as the other's good. As was explained above (a. 3), this is the way in which we love non-rational animals out of charity insofar as we will them to endure for the glory of God and for their usefulness to men. And it is in this way, too, that we can love the demons out of charity, viz., insofar as we will those spirits to be conserved with their natural gifts for the glory of God.

**Reply to objection 1:** It is not impossible for the mind of the angels to have eternal beatitude, in the way that this is impossible for the mind of the demons. And so the friendship of charity, which is based upon the sharing of eternal life rather than upon the sharing of a nature, is had with the angels but not with the demons.

**Reply to objection 2:** Men who are sinners in this life have the possibility of attaining eternal beatitude. This possibility is not had by those men who are damned in Hell; on this score, the line of reasoning is the same for these men as it is for the demons.

**Reply to objection 3:** The usefulness that accrues to us from the demons derives not from their own intention but from the ordering of divine providence. And so we are not induced by this usefulness to have friendship with them; instead, we are induced to be friends of God, who turns their perverse intention to our advantage.

## Article 12

### **Are the things to be loved by us out of charity correctly enumerated as these four: God, our neighbor, our body, and ourselves?**

It seems that the things to be loved by us out of charity are not correctly enumerated as these four: God, our neighbor, our body, and ourselves:

**Objection 1:** As Augustine says in *Super Ioannem*, "Anyone who does not love God does not love himself, either." Therefore, the love of oneself is included in the love of God. Therefore, it is not the case that the love of oneself is one thing and the love of God another thing.

**Objection 2:** A part ought not to be divided over against its whole. But our body is a certain part of ourselves. Therefore, our body ought not to be divided, as another lovable thing, from ourselves.

**Objection 3:** Just as we have a body, so, too, does our neighbor. Therefore, just as the love by which one loves his neighbor is distinct from the love by which he loves himself, so, too, the love by which one loves his neighbor's body is distinct from the love by which he loves his own body. Therefore, the four things to be loved out of charity are not appropriately distinguished.

**But contrary to this:** In *De Doctrina Christiana* Augustine says, "There are four things to be loved: one which is above us," viz., God; "another which we ourselves are; a third which is next to us," viz., our neighbor; "and a fourth which is below us," viz., our own body.

**I respond:** As has been explained (q. 23, a. 1), the friendship of charity is based upon the sharing

of beatitude. In this sharing, there is one thing that is thought of as the source who pours forth beatitude, viz., God; there is a second thing that directly participates in beatitude, viz., the man or the angel; and there is a third thing into which beatitude streams through a certain sort of overflow, viz., the human body.

That which pours fourth beatitude is for that reason lovable, since He is the cause of beatitude. That which participates in beatitude can be lovable for two reasons, either because he is identical with ourselves or because he is joined to us in participating in beatitude—and on this score there are two things lovable out of charity, viz., insofar as a man loves both himself and his neighbor.

**Reply to objection 1:** The different relations of the lover to different lovable things makes for the diverse character of lovability. Accordingly, since the relation that a man who loves has to God is different from the relation that he has to himself, two lovable things are posited; for the love of the one is a cause of the love of the other. This is why when the one is removed, the other is removed.

**Reply to objection 2:** The subject of charity is the rational mind, which can be capable of beatitude, whereas the body does not directly attain to beatitude, but instead attains to it only through a sort of overflow. And so in accord with his rational mind, which is the principal thing in man, a man loves himself out of charity in a way different from the way in which he loves his own body.

**Reply to objection 3:** A man loves his neighbor both with respect to his soul and with respect to his body by reason of a certain fellowship in beatitude. And so in the case of one's neighbor the love has a single character. Hence, our neighbor's body is not posited as a special lovable thing.

## QUESTION 26

### The Order of Charity

We next have to consider the order of charity. And on this topic there are thirteen questions: (1) Is there an order of charity? (2) Should a man love God more than his neighbor? (3) Should a man love God more than himself? (4) Should a man love himself more than his neighbor? (5) Should a man love his neighbor more than his own body? (6) Should a man love one neighbor more than another? (7) Should a man love a better neighbor more than someone connected with himself? (8) Should a man love someone connected with him as a blood relative more than someone connected with him by other close ties? (9) Should a man love his children more than his parents out of charity? (10) Should a man love his mother more than his father? (11) Should a man love his wife more than his father or mother? (12) Should a man love his benefactor more than his beneficiary? (13) Does the order of charity remain in heaven?

#### Article 1

##### Is there an order of charity?

It seems that there is not an order of charity:

**Objection 1:** Charity is a certain virtue. But in the case of the other virtues there is no assigned order. Therefore, neither is there any assigned order in the case of charity.

**Objection 2:** Just as the object of faith is the first truth, so the object of charity is the highest good. But no order is posited in the case of faith; rather all things are believed equally. Therefore, neither should any order be posited in the case of charity.

**Objection 3:** Charity exists in the will. But it is reason that orders, and not the will. Therefore, no order should be attributed to charity.

**But contrary to this:** *Canticle of Canticles* 2 says, "He brought me into the wine cellar; he gave order to the charity within me."

**I respond:** As the Philosopher explains in *Metaphysics* 5, 'before' (*prius*) and 'after' (*posterius*) are said in relation to some principle. But an ordering includes within itself some sort of 'before' and 'after'. Hence, wherever there is a principle, there must also be an ordering.

Now it was explained above (q. 23, a. 1 and q. 25, a. 12) that the love of charity tends toward God as the principle of beatitude and that the friendship of charity is based upon the sharing of beatitude. And so among the things that are loved out of charity there has to be an ordering according to their relation to the first principle of this love, i.e., God.

**Reply to objection 1:** Charity tends toward the ultimate end under the character *ultimate end* and, as was explained above (q. 23, a. 6), this feature does not belong to any other virtue. But as was explained above (*ST* 1-2, q. 1) the end has the nature of a principle among things that are desirable and doable. And so charity especially implies a relation to the first principle. And so in the case of charity the ordering is thought about most of all in relation to the first principle.

**Reply to objection 2:** Faith belongs to a cognitive power whose operation exists insofar as the things known exist in the knower (*res cognitae sunt in cognoscente*). By contrast, charity exists in an appetitive power whose operation consists in the soul's tending toward the things themselves. Now an ordering is more chiefly found in the things themselves, and it flows from them to our cognition. And this is why an ordering is more appropriate for charity than for faith.

Still, there is an ordering in the case of faith as well, insofar as faith is principally about God, whereas it is secondarily about the other things that are referred back to God.

**Reply to objection 3:** An order belongs to reason insofar as it is reason that does the ordering, but it belongs to the appetitive power insofar as it is the appetitive power that is ordered. And it is in this

latter way that an order is posited in the case of charity.

## Article 2

### Is God to be loved more than one's neighbor?

It seems that God is not to be loved more than one's neighbor:

**Objection 1:** 1 John 4:20 says, "If one does not love his brother, whom he sees, then how can he love God, whom he does not see?" From this it seems that what is more visible is more lovable, since, as *Ethics* 9 says, seeing is the beginning of love (*principium amoris*). But God is less visible than our neighbor. Therefore, He is also less lovable by charity.

**Objection 2:** Similarity is a cause of love—this according to Ecclesiasticus 13:19 ("Every animal loves its like"). But the similarity of a man to his neighbor is greater than his similarity to God. Therefore, a man loves his neighbor out of charity more than God.

**Objection 3:** As is clear from Augustine in *De Doctrina Christiana* 1, what one loves in his neighbor is God. But God does not exist more in Himself than in one's neighbor. Therefore, it is not the case that God ought to be loved more than one's neighbor.

**But contrary to this:** What is to be loved more is such that certain things are to be hated because of it. But neighbors are to be hated because of God, viz., if they lead one away from God—this according to Luke 14:26 ("If anyone comes to me and does not hate his father and mother and wife and children and brothers and sisters, then he cannot be my disciple"). Therefore, God is to be loved out of charity more than one's neighbor.

**I respond:** A friendship has to do mainly with that thing wherein is principally found the good which is such that the friendship is based on the sharing of it. For instance, political friendship has to do mainly with the city's ruler, on whom the entire common good of the city depends; hence, it is likewise the case that trust and obedience are especially owed to him by the citizens.

Now the friendship of charity is based upon the sharing of beatitude, which consists essentially in God as the first principle from whom it flows into everyone who is capable of beatitude. And so it is God who is mainly and especially to be loved out of charity, whereas our neighbor is to be loved as one who participates along with us in beatitude from God.

**Reply to objection 1:** There are two ways in which something is a cause of love.

In one way, as a *reason for loving* (*ratio diligendi*). And this is the way in which the good is a cause of love, since each thing is loved insofar as it has the character of goodness (*rationem boni*).

In a second way, because it is a sort of *path to acquiring an act of loving*. And this is the way in which vision is a cause of love—not, to be sure, in such a way that something is lovable by reason of the fact that it is visible, but because it is through vision that we are led toward love.

Therefore, it does not have to be the case that what is more visible is more lovable; instead, what is more visible occurs first for us to love. And this is the way the apostle argues. For since our neighbor is more visible to us, he appears first for us to love; as Gregory puts it in a certain homily, "From the things that the mind knows it learns to love what is unknown." Hence, if one does not love his neighbor, it can be argued that he will not love God, either—not because his neighbor is more lovable, but because he appeared first to be loved. However, God is more lovable because of His greater goodness.

**Reply to objection 2:** The similarity that we have to God is prior to and a cause of the similarity that we have to our neighbor. For we are made similar to our neighbor because it is from God that we participate in that which our neighbor likewise has from Him. And so by reason of similarity we ought to love God more than our neighbor.

**Reply to objection 3:** If we think of God's substance, then He is equal in everything in which He

exists, since He is not diminished by the fact that He exists in a thing. But it is still not the case that our neighbor has God's goodness to the same degree (*equaliter*) that God has it. For God has goodness by His essence (*essentialiter*), whereas our neighbor has it by participation (*participative*).

### Article 3

#### Should a man love God out of charity more than himself?

It seems not to be the case that a man should love God out of charity more than himself:

**Objection 1:** In *Ethics* 9 the Philosopher says, "The friendly regard (*amicabilia*) directed toward the other comes from the friendly regard that is directed toward oneself." But a cause is more powerful than its effect. Therefore, the friendship of a man with himself is greater than his friendship with anyone else. Therefore, he should love himself more than God.

**Objection 2:** Each thing is loved to the extent that it is one's own good. But the reason for loving is loved more than that which is loved for that reason—in the same way that principles, which are the reason for knowing, are themselves better known. Therefore, a man loves himself more than any other loved good. Therefore, it is not the case that he loves God more than himself.

**Objection 3:** One enjoys God to the extent that he loves Him. But one loves himself to the extent that he loves enjoying God, since this is the highest good that anyone can will for himself. Therefore, it is not the case that one ought to love God out of charity more than himself.

**But contrary to this:** In *De Doctrina Christiana* 1 Augustine says, "If you ought to love even yourself not for your own sake but for the sake of Him in whom is found the most appropriate end of your love, then let no other man be irritated if you love him, too, for the sake of God." But that for the sake of which a thing is such-and-such is itself more such-and-such (*propter quod unumquodque, illud magis*). Therefore, a man should love God more than himself.

**I respond:** We are able to receive a twofold good from God, viz., (a) the good of *nature* and (b) the good of *grace*.

*Natural love* is based upon the sharing (*communicatio*) of natural goods with us that is brought about by God. By this natural love it is not only man in the integrity of his nature that loves God above all things and more than himself, but every creature in its own way, i.e., by intellectual love or rational love or animal love or at least by natural love, as with rocks and other things that lack cognition. For every part naturally loves the common good of the whole more than its own proper particular good. This is evident from what it does (*ex opere*). For each part has its main inclination toward common action for the advantage of the whole. This is likewise apparent in the case of the political virtues, in accord with which citizens, for the sake of the common good, sometimes sustain losses both to their own property and to their own persons.

Hence, this is true *a fortiori* in the case of the friendship of charity, which is based upon a sharing in the *gifts of grace*. And so out of charity a man ought to love God, who is the common good of all things, more than himself, since beatitude exists in God as the common and originating principle of everyone who is able to participate in beatitude.

**Reply to objection 1:** The Philosopher is talking about friendly regard for another in whom the good that is the object of friendship is found in some *particular* mode, but not about friendly regard for another in whom this good is found with the character of the *whole*.

**Reply to objection 2:** Each part loves the good of the whole insofar as it is appropriate for itself—not in such a way that it refers the good of the whole back to itself, but rather in such a way that it refers himself back to the good of the whole.

**Reply to objection 3:** The fact that someone wills to enjoy God pertains to the love by which God

is loved with the love of concupiscence (*amor concupiscentiae*). But we love God with the love of friendship (*amor amicitiae*) more than with the love of concupiscence, since the good of God is greater in itself than what we are able to participate in by enjoying Him. And so, absolutely speaking, a man loves God out of charity more than himself.

#### Article 4

##### Should a man love himself out of charity more than his neighbor?

It seems not to be the case that a man should love himself out of charity more than his neighbor:

**Objection 1:** As was explained above (a. 2), the main object of charity is God. But sometimes a man has a neighbor who is more closely joined to God than he himself is. Therefore, one ought to love such a neighbor more than himself.

**Objection 2:** The more we love someone, the more we avoid what is detrimental to him. But out of charity a man suffers what is detrimental to himself for the good of his neighbor (*pro proximo*)—this according to Proverbs 12:26 (“A man who disregards harm to himself for the sake of his friend is just”).

**Objection 3:** 1 Corinthians 13:5 says that charity “does not seek what belongs to it.” But we especially love someone whose good we seek to the highest degree. Therefore, it is not the case that out of charity a man loves himself more than his neighbor.

**But contrary to this:** Leviticus 19:18 and Matthew 22:39 say, “Love your neighbor as yourself.” From this it seems that a man’s love for himself is, as it were, the exemplar of the love which he has for another. But the exemplar is better than what it is an exemplar of. Therefore, a man ought to love himself out of charity more than his neighbor.

**I respond:** There are two things in a man, viz., (a) his *spiritual* nature and (b) his *corporeal* nature.

As was explained above (q. 25, a. 7), a man is said to love himself by the fact that he loves himself in accord with his *spiritual* nature. And on this score, after God, a man should love himself more than anyone else. This is clear from the very nature of loving. For as was explained above (a. 2), God is loved as the source of the good that the love of charity is based upon. And a man loves himself out of charity by reason of the fact that he participates in that good, whereas his neighbor is loved by reason of their fellowship in that good.

Now the fellowship is a reason for loving as regards a certain sort of union in relation to God. Hence, just as *unity* is stronger than *union*, so, too, a man’s own participation in the divine good is a stronger reason for him to love than is another’s being associated with him in this participation. And so a man ought to love himself out of charity more than his neighbor. An indication of this is that a man should not undertake a sinful evil that is contrary to his own participation in beatitude in order to free his neighbor from sin.

**Reply to objection 1:** The love of charity has quantity not only on the part of its object, which is God, but also on the part of the one who loves, i.e., the man himself who has charity—just as the quantity of any action depends in some way on the subject itself. And so even if a better neighbor is closer to God, nonetheless, since he is not as close to the one who has charity as the latter is to himself, it does not follow that anyone ought to love his neighbor more than himself.

**Reply to objection 2:** A man ought to suffer bodily detriment for the sake of his friend, and in this very way he is loving himself with respect to his spiritual mind. For this pertains to the perfection of virtue, which is a good of the mind. By contrast, as has already been explained, in spiritual matters it is not the case that a man should suffer what is detrimental, viz., by sinning, in order that he might free his neighbor from sin.

**Reply to objection 3:** In *Regula* Augustine says, “When it is said, ‘Charity does not seek what

belongs to it,' this should be understood to mean that charity places what is held in common ahead of what is private." But it is always the case that the common good is more lovable to each individual than his own private good—in the same way that, as has been explained (a. 3), the good of the whole is more lovable to each part than the partial good that belongs to it itself.

### Article 5

#### Should a man love his neighbor more than his own body?

It seems not to be the case that a man should love his neighbor more than his own body:

**Objection 1:** Our neighbor's body is understood in our notion of our neighbor. Therefore, if a man ought to love his neighbor more than his own body, then it follows that he should love his neighbor's body more than his own body.

**Objection 2:** As has been explained (a. 4), a man loves his own soul more than his neighbor. But our own body is closer to our soul than our neighbor is. Therefore, we ought to love our own body more than our neighbor.

**Objection 3:** Everyone exposes what he loves less to risk before he exposes what he loves more to risk. But not every man is obligated to expose his own body to risk for his neighbor's safety; rather, that is something that perfect individuals do—this according to John 15:13 ("Greater charity no one has than to lay down his life (*anima*) for his friends"). Therefore, a man is not obligated to love his neighbor more out of charity than his own body.

**But contrary to this:** In *De Doctrina Christiana* 1 Augustine says, "We ought to love our neighbor more than our own body."

**I respond:** As has been explained (aa. 2 and 4), what is to be loved more out of charity is that which has more of the character of what is lovable out of charity. Now fellowship in full participation in beatitude, which is the reason for loving one's neighbor, is a stronger reason for loving than is participation in beatitude by way of overflow, which is the reason for loving our own body. And so, out of charity, we ought to love our neighbor, as regards the salvation of his soul, more than our own body.

**Reply to objection 1:** According to the Philosopher in *Ethics* 9, each thing seems to be what is preeminent in it (*praecipuum in ipso*). When it is claimed that our neighbor is to be loved more than our own body, this is understood to have to do with his soul, which is the more important part of him.

**Reply to objection 2:** It is with respect to the constitution of our nature that our body is closer to our own soul than our neighbor is. But with respect to participation in beatitude, the fellowship of our neighbor's soul with our soul is even greater than the fellowship of our own body with our soul.

**Reply to objection 3:** Taking care of his own body is of concern to every man, but taking care of his neighbor's safety is not of concern to every man, except perhaps in an emergency. And so there is no necessity of charity that a man expose his own body to risk for his neighbor's safety, except in cases in which he is obligated to provide for his neighbor's safety. Rather, it pertains to the perfection of charity that someone should of his own accord offer himself for this.

### Article 6

#### Should one neighbor be loved more than another?

It seems not to be the case that one neighbor should be loved more than another:

**Objection 1:** In *De Doctrina Christiana* 1 Augustine says, "All men are equally to be loved. But

since you are unable to do good to all of them, you have to take into account especially those who, given the circumstances of time and place and other such things, are more closely connected with you, as it were, by happenstance.” Therefore, it is not the case that one neighbor is to be loved more than another.

**Objection 2:** Where the reason for loving different individuals is one and the same, then the love should not be unequal. But as is clear from Augustine in *De Doctrina Christiana* 1, there is a single reason for loving all our neighbors, viz., God. Therefore, we ought to love all our neighbors equally.

**Objection 3:** As is clear from the Philosopher in *Rhetoric* 2, to love is to will the good for someone. But we will an equal good for all our neighbors, viz., eternal life. Therefore, we should love all our neighbors equally.

**But contrary to this:** Someone should be loved more to the extent that one who acts contrary to loving him sins more grievously. But one who acts contrary to the love of certain neighbors sins more grievously than one who acts contrary to the love of other neighbors. Hence, Leviticus 20:9 commands, “Let whoever curses his father or mother die the death”—which is not commanded in the case of those who curse other men. Therefore, some of our neighbors are such that we ought to love them more than others.

**I respond:** On this matter there are two opinions.

Some have asserted that all neighbors are to be loved equally out of charity as regards *affection*, but not as regards *exterior effects*. They say that the ordering of love must be understood as having to do with *exterior good works*, which we ought to confer more on those who are close to us than on strangers, but not as having to do with *interior affection*, which we should confer equally on all, even our enemies.

However, this claim is unreasonable. For the affections that belong to charity, which is an inclination of grace, are no less ordered than those that belong to natural appetite, which is an inclination of nature, since both inclinations proceed from God’s wisdom. Now we see in the case of natural things that a natural inclination is proportioned to an act or movement that befits the nature of the thing; for instance, earth has a greater inclination of gravity than water has, since it belongs to earth to exist below water. Therefore, it must be the case that the inclination of grace, i.e., the affection of charity, is likewise proportioned to what is to be done externally—so that, namely, we have a more intense affection of charity toward those to whom it is more fitting for us to be beneficent.

And so one should reply that even with respect to affection it is necessary to love one of our neighbors more than another. And the reason is that since the principle of love is (a) God along with (b) the one who is himself doing the loving (*ipse diligens*), it must be the case that the affection of love (*dilectionis affectus*) is greater in proportion to a greater proximity to one or the other of these principles. For as was explained above (a. 1), in everything in which a principle is found, the ordering has to do with the relation to that principle.

**Reply to objection 1:** There are two ways in which love can be unequal.

In one way, on the part of *the good that we wish for our friend*. And in this regard, we love every man equally out of charity, since we wish for all of them the same generic good, viz., eternal beatitude.

In the second way, love is called greater because of *a more intense act of loving*. And in this regard, it is not necessary to love all men equally.

An alternative reply is that there are two ways in which love can be had unequally with respect to certain individuals.

In one way, from the fact that some individuals are loved and others are not loved. And it is necessary to preserve this sort of inequality as regards *good deeds (in beneficentia)*, because we cannot do good to everyone. However, this sort of inequality of love should not be had as regards *good will (in benevolentia)*.

The other sort of inequality of love stems from the fact that some are loved more than others.

Therefore, Augustine intends to exclude the first sort of inequality and not this second sort, as is clear from what he says about good deeds (*de beneficentia*).

**Reply to objection 2:** Not all neighbors are equally related to God; instead, some are closer to Him because of their greater goodness. These are more to be loved out of charity than others who are less close to Him.

**Reply to objection 3:** This argument goes through in the case of quantity of love on the part of the good that we wish for our friends.

### Article 7

#### Should we love those who are better more than those who are more closely connected with us?

It seems that we should love those who are better more than those who are more closely connected with us:

**Objection 1:** It seems that what should not be hated for any reason is to be loved more than what is such that there is some reason why it should be hated—just as what is more white is less mixed with black. But there are reasons why persons connected with us should be hated—this according to Luke 14:26 (“If anyone comes to me and does not hate his father and mother ...”)—whereas there is no reason why good men should be hated. Therefore, it seems that those who are better are to be loved more than those who are more closely connected with us.

**Objection 2:** It is by charity that a man is especially conformed to God. But God loves more what is better. Therefore, through charity a man should likewise love one who is better more than one who is more connected with him.

**Objection 3:** As regards any friendship, what is to be loved more is what the friendship is based upon. For by natural friendship we love more those who are more closely connected with us by nature—for instance, our parents or children. But the friendship of charity is based upon a sharing of beatitude, to which being better is more relevant than being more closely connected with us. Therefore, out of charity we should love those who are better more than those who are more closely connected with us.

**But contrary to this:** 1 Timothy 5:8 says, “If any man does not take care of his own, and especially of those who belong to his own household, then he has denied the faith and is worse than a non-believer.” But the interior affection of charity should correspond to its exterior effect. Therefore, charity should be had more with respect to those who are closer to us than to those who are better.

**I respond:** Every act must be proportioned both to its *object* and to its *agent*. But from its *object* it has its species, whereas from the power of its *agent* it has the mode of its intensity. For instance, a movement has its species from its *terminus ad quem*, whereas it has its intensity from (a) the disposition of the thing that is moved (*ex dispositione mobilis*) and (b) the power of the thing that effects the movement (*ex virtute moventis*).

So, then, an act of loving (*dilectio*) has its species from its object, whereas it has its intensity from the one who has the act of loving (*ex parte ipsius diligentis*). Now the object of charity’s act of loving is God, whereas it is the man who has the act of loving.

Therefore, as far as its *species* is concerned, the diversity of the act of loving that belongs to charity should, in the case of neighbors to be loved, be thought of as corresponding to their *relation to God*—so that, namely, out of charity we will a greater good for a neighbor who is closer to God. For even though the good that charity wills for everyone, viz., eternal beatitude, is a single good in its own right (*unum secundum se*), it nonetheless has different degrees corresponding to the different [individual] participations in beatitude. And it belongs to charity to will that God’s justice be preserved, according to which those who are better participate more perfectly in beatitude. This has to do with the species of the

act of loving, because the different species of the act of loving correspond to the different goods that we wish for those whom we love.

By contrast, the *intensity* of the act of loving should be thought of as having to do with the *relation to the man who is doing the loving*. Accordingly, the man loves those who are closer to him with a more intense affection with respect to the good concerning which he loves them than he loves better men with respect to a greater good.

There are also other differences here that have to be taken into consideration. For instance, some neighbors are closer to us by natural origin, which they cannot withdraw from, since they are what they are because of their natural origin. By contrast, as was explained above (q. 24, aa. 4 and 10-11), the goodness of virtue, by which some draw near to God, can come and go, increase and decrease. And so out of charity I can will that this man, who is connected with me, should be better than some other man and so be able to attain a higher degree of beatitude.

And there are yet other ways in which we can out of charity love more intensely those who are more closely connected with us, since we love them in many ways. For with those who are not connected with us we have only the friendship of charity, whereas with those who are connected with us we have other types of friendship corresponding to the sort of connection they have with us. But since the good upon which any other sort of upright friendship is based is ordered toward the good that charity is based upon as its end, it follows that charity regulates (*imperet*) the act of any other friendship, in the way that a craft that has to do with the end regulates a craft that has to do with the means to that end. And so charity can regulate our loving someone because he is a relative or because he is connected with us or because he is our fellow citizen or because of any other licit bond of this sort that can be ordered toward the end of charity. And so out of charity, eliciting and regulating in many ways, we love those who are connected with us more.

**Reply to objection 1:** In the case of those close to us we are not commanded to hate that they are close to us; rather, we are commanded to hate only that they keep us from God. And in doing so they are not our relatives, but our enemies—this according to Micah 7:6 (“A man’s enemies are those of his own household”).

**Reply to objection 2:** Charity brings it about that a man is conformed to God according to a certain proportion, viz., in such a way that the man is related to what is his own in the way that God is related to what is His own. For as was established above (*ST* 1-2, q. 19, a. 10), as long as this is done with a goodness of will, we are able out of charity to will certain things, because they are fitting for us, which God nonetheless does not will, because it is not fitting for Him to will them.

**Reply to objection 3:** As has been explained, charity elicits an act of loving not only in accord with the notion of the object but also in accord with the notion of the one doing the loving. Because of the latter, it happens that what is more closely connected with us is loved more.

## Article 8

### Should we especially love those who are connected with us by carnal origin?

It seems not to be the case that we should especially love those who are connected with us by carnal origin:

**Objection 1:** Proverbs 18:24 says, “A man amiable in society will be more a friend than a brother is.” And Maximus Valerius says, “The bond of friendship is very strong and in no way weaker than ties of blood. This is likewise more certain and tested: The lottery of birth yielded a fortuitous result, whereas it was by solid judgment that each individual’s uncoerced will contracted the bond of friendship.” Therefore, it is not the case that those who are connected with us by blood are to be loved

more than others.

**Objection 2:** In *De Officiis* 1 Ambrose says, “I love you whom I have begotten in the Gospel no less than if I had begotten you in marriage. For nature is no more vigorous in loving than grace is. We should love more firmly those whom we think will be with us forever than those who will be with us just in this world.” Therefore, it is not the case that our blood relatives are to be loved more than those with whom we are connected in other ways.

**Objection 3:** As Gregory says in a homily, “The proof of love is in the exhibiting of the deed.” But there are some individuals on whom we ought to confer the works of love more than on even our own relatives, in the way that in the military one’s commander is more to be obeyed than one’s father. Therefore, it is not the case that those who are connected with us by blood are to be loved in a more special way.

**But contrary to this:** As is clear from Exodus 20:12, honoring one’s parents is specifically commanded in the precepts of the Decalogue. Therefore, those who are joined to us by carnal origin are to be loved by us in a more special way.

**I respond:** As has been explained (a. 7), those who are more closely connected with us are to be loved more out of charity, both because they are loved more intensely and also because they are loved for more reasons.

Now the intensity of an act of loving stems from the connection of what is loved with the lover. And so the love for different individuals is to be measured by the different types of connection—so that, namely, an individual is loved more in what pertains to the connection in accord with which he is loved. And, further, one act of loving is to be compared to another by comparing the one connection with the other.

So, then, one should reply that the friendship among blood relatives is based upon the connection of natural origin, whereas the friendship among fellow citizens is based upon civic sharing, and the friendship among fellow soldiers is based upon sharing in battle. And so in matters that pertain to nature we ought to love our blood relatives more, whereas in matters that pertain to civic life we ought to love our fellow citizens more, and in matters of battle we should love our fellow soldiers more. This is why in *Ethics* 9 the Philosopher says, “What is proper and fitting should be rendered to each individual. And this is what people seem to do. For instance, they invite their relatives to weddings, and it will seem especially necessary to honor their parents and provide them with support.” And something similar holds for the other cases.

But if we are comparing one sort of connection with another, it is clear that the connection of natural origin is prior and more fixed, since it has to do with what belongs to the substance, whereas other connections supervene on it and can be removed. And so the friendship among blood relatives is more stable. But other friendships can be stronger as regards what is proper to each friendship.

**Reply to objection 1:** Since one’s friendship with associates is contracted by one’s own choice, it follows that in those things that fall under our choice, for instance, matters of action, this sort of love takes precedence over our love of our blood relatives, with the result that we agree more with these friends in matters of action.

However, our friendship with relatives is more stable, because it is more natural, and it prevails in matters that have to do with nature. Hence, we are more bound to our blood relatives in providing for necessities.

**Reply to objection 2:** Ambrose is talking about love as regards good deeds that have to do with the sharing of grace, viz., instruction in morals. For in this matter a man ought to help to a greater degree his spiritual children, whom he has given birth to spiritually, than his corporeal children, whom he ought to provide for more in matters of corporeal support.

**Reply to objection 3:** The fact that in matters of battle a soldier obeys his commander more than his father proves not that his father is loved less absolutely speaking, but only that he is loved less in a

certain respect, i.e., with respect to the love based upon sharing in battle.

### Article 9

#### Should a man love his children out of charity more than his parents?

It seems that a man should love his children (*filium*) out of charity more than his parents (*pater*):

**Objection 1:** We ought to love more those whom we are more obligated to do good to. But we are more obligated to do good to our children (*filiis*) than to our parents (*parentibus*). Therefore, children are to be loved more than parents.

**Objection 2:** Grace perfects nature. But as the Philosopher says in *Ethics* 8, parents naturally love their children more than they are loved by their children. Therefore, we ought to love our children more than our parents.

**Objection 3:** Through charity a man's affections are conformed to God. But God loves his children more than He is loved by them. Therefore, we should likewise love our children more than our parents.

**But contrary to this:** Ambrose says, "God is to be loved first; second, one's parents; next, one's children; after that, the members of one's household."

**I respond:** As was explained above (aa. 4 and 7), there are two ways to think about the degrees of love:

In one way, on the part of the *object*. And on this score, what is to be loved more is that which has a greater sort of good and is more similar to God. And in this sense one's parents are to be loved more than one's children, since, we love our parents under the concept *principle*, which has the character of a more eminent good and is more similar to God.

In the second way, the degrees of love are calculated on the part of the *one doing the loving*. And in this sense what is loved more is what is more closely connected. On this score, as the Philosopher explains in *Ethics* 8, one's child is to be loved more than one's father. First, because parents love their children as something of their own, whereas a father is not something of his child. Second, because parents know with more certainty that some individuals are their children than vice versa. Third, because a child is closer to his parent, since he is a part, than a father is to his children, to whom he bears the relation *principle of*. Fourth, because parents have loved for a longer time, since a parent begins to love his child immediately, whereas the child begins to love his parents as time goes on. But love is stronger to the extent that it has lasted longer—this according to Ecclesiasticus 9:14 ("Do not forsake an old friend, for the new one will not be like to him").

**Reply to objection 1:** Honor and the submission of reverence are owed to the principle, whereas to the effect it is correspondingly fitting to receive the principle's influence and its provision. Because of this, what children owe more to their parents is honor, whereas what parents owe more to their children is concern about providing for them.

**Reply to objection 2:** Parents naturally love their children more by reason of the children's connection with them. But by reason of a more eminent good children naturally love their parents more.

**Reply to objection 3:** As Augustine says in *De Doctrina Christiana* 1, "God loves us to our advantage and for His own honor." And so because parents are related to us by the relation *principle of*, in the way that God is, it properly belongs to parents that honor be shown to them by their children, whereas what belongs to the children to their advantage is to be provided for by their parents—even though in a case of necessity children are obligated, from the benefits they have received, to provide especially for their parents.

## Article 10

### Should a man love his mother more than his father?

It seems that a man should love his mother more than his father:

**Objection 1:** As the Philosopher says in *De Generatione Animalium* 1, “the female provides the body in generation.” But as was explained in the First Part (*ST* 1, q. 90, a. 2 and q. 118, a. 2), a man has his soul not from his father, but from God through creation. Therefore, a man has more from his mother than from his father. Therefore, he ought to love his mother more than his father.

**Objection 2:** A man ought to love more the one who loves him more. But a mother loves her children more than a father does; for in *Ethics* 9 the Philosopher says, “Mothers have greater love for their children. For generation is more laborious for the mothers, and mothers know more surely than fathers do that the children are theirs.” Therefore, the mother is to be loved more than the father.

**Objection 3:** More affection of love is owed to the one who has worked harder for us—this according to Romans 16:6 (“Greet Mary, who has labored much among you”). But the mother labors more in generation and education than the father does; hence, Ecclesiasticus 7:29 says, “Do not forget the groaning of your mother.” Therefore, a man should love his mother more than his father.

**But contrary to this:** In *Super Ezechiel* Jerome says, “After God, the Father of all, one’s father is to be loved.” And it is afterwards that he adds the mother.

**I respond:** What is said in these comparisons is to be understood ‘in its own right’ (*per se*), so that the question is understood to be whether one’s father *insofar as he is a father* is to be loved more than one’s mother *insofar as she is a mother*. For as the Philosopher points out in *Ethics* 8, in all cases of this sort there is such a range of goodness and badness that the friendship might be lessened or destroyed. This is why, as Ambrose puts it, “Good servants are to be preferred to bad children.”

However, speaking *per se*, the father is to be loved more than the mother. For the father and mother are loved as certain principles of natural origin. But the father is a principle in a more excellent way, since the father is a principle in the mode of an *agent*, whereas the mother is a principle in the mode of a *patient* and of *matter*. And so, speaking *per se*, the father is to be loved more.

**Reply to objection 1:** In human generation the mother supplies the body’s unformed matter, whereas the matter is formed through the formative power that exists in the father’s semen. And even though this sort of power cannot create a rational soul, it nonetheless disposes the bodily matter to receive this type of form.

**Reply to objection 2 [and objection 3]:** This argument pertains to the other reason for love, since the species of friendship by which we love someone who loves us is different from the species of friendship by which we love someone who has generated us. But here we are speaking of the friendship which is owed to the father and the mother in accord with the notion of generation.

## Article 11

### Should a husband love his wife more than his father and mother?

It seems that a husband should love his wife more than his father and mother:

**Objection 1:** No one puts a thing aside except for something that is loved more. But Genesis 2:24 says, “A man leaves his father and mother because of his wife.” Therefore, a husband should love his wife more than his father or mother.

**Objection 2:** In Ephesians 5:28 and 33, the Apostle says that husbands should love their wives as themselves. But a man should love himself more than his parents. Therefore, a husband should likewise

love his wife more than his parents.

**Objection 3:** Where there are multiple reasons for love, there ought to be a greater love. But there are multiple reasons for love in the case of the friendship which is had with one's wife; for as the Philosopher says in *Ethics* 8, "In the case of this friendship, it seems to be *useful*, and *pleasant*, and for the sake of *virtue*, as long as the spouses are virtuous." Therefore, there should be more love for one's wife than for one's parents.

**But contrary to this:** As Ephesians 5:28-29 says, "A husband ought to love his wife as his own flesh." But as was explained above (a. 5), a man ought to love his own body less than his neighbor. But among our neighbors it is our parents that we ought to love more, Therefore, we should love our parents more than our spouse.

**I respond:** The degree of love can have to do with both (a) the character of the good and (b) the connection with the one who is doing the loving.

Therefore, in accord with the character of the good, i.e., the object of the act of loving, parents are to be loved more than spouses, since they are loved under the notion of a principle and of a more eminent good.

However, in accord with the notion of connection, one's wife is to be loved more, since a wife is joined to the man and they exist as one flesh—this according to Matthew 19:6 ("And they are no longer two, but one flesh"). And so one's wife is loved more intensely, while more reverence is to be shown to the parents.

**Reply to objection 1:** One's father and mother are not deserted in all respects because of his wife, since in certain respects a man ought to assist his parents more than his wife. Rather, having left his parents, a man adheres to his wife with respect to the union of carnal intercourse and the union of living together.

**Reply to objection 2:** The Apostle's words should be taken to mean not that a man should love his wife as much as he loves himself; instead, it should be taken to mean that the love which he has for himself is the reason for loving that he has with respect to the wife who is joined to him.

**Reply to objection 3:** Multiple reasons are likewise found in the friendship with one's parents, and in some respects they take precedence over the reasons for loving which are had with respect to one's spouse—this has to do with the character of the good, even though the latter reasons take precedence with respect to the character of the connection.

**Reply to the argument for the contrary:** This passage is not to be understood in such a way that the phrase 'as he loves his own body' implies equality of love; rather, it implies the reason for loving. For a husband loves his wife principally by reason of their carnal union.

## Article 12

### Should a man love his benefactor more than his beneficiary?

It seems that a man should love his benefactor more than his beneficiary:

**Objection 1:** As Augustine says in *De Catechizandis Rudibus*, "There is no greater incentive for someone to love you than for you to love him first; for he must have a hard mind indeed who, even if he does not will to offer love, wills not to return love."

**Objection 2:** Someone is more to be loved to the extent that a man sins more gravely if he ceases to love him or if he acts contrary to love. But one who does not love his benefactor or acts against him sins more gravely than if he ceases to love someone whom he has benefited up to now. Therefore, benefactors are to be loved more than beneficiaries.

**Objection 3:** As Jerome says, among all the things to be loved, God is especially to be loved and,

after Him, one's father. But these are our greatest benefactors. Therefore, a benefactor is to be loved most of all (*maxime*).

**But contrary to this:** In *Ethics* 9 the Philosopher says, "Benefactors seem to love those whom they benefit more, rather than vice versa."

**I respond:** As was explained above (aa.7, 9 and 11), there are two ways in which something is loved: in one way because it has the character of a more excellent good; in the second way, by reason of a closer connection.

Therefore, in the first way a benefactor is to be loved more. For since he is a principle of good in the one to whom he does good, he has the character of a more excellent good—just as was explained above in the case of a parent.

However, in the second way we love more those to whom we do good. The Philosopher proves this in *Ethics* 9 by means of four arguments.

First, because someone to whom good is done is, as it were, a sort of handiwork of the benefactor, and thus it is customary to say of someone that he will have been 'made' by his benefactor. But it is natural for everyone to love his own handiwork, just as we see that poets love their poems. And the reason why is that each thing loves its own being and its own life, and this is especially clear in its action.

Second, because each individual naturally loves that in which he sees his own good. To be sure, it is true both that the benefactor has some good in the one whom he benefits and also vice versa, but the benefactor sees in the one he benefits his own *upright* good, whereas the one who benefits sees in the benefactor his own *useful* good. But an upright good is considered more pleasant than a useful good, both because an upright good is longer-lasting—for usefulness quickly passes and the pleasure of the memory is not like the pleasure of something present—and also because we recall our own upright goods with more pleasure than the useful goods that have come to us from others.

Third, because it pertains to a lover to *act*, since he wills and does good for the one he loves, whereas it pertains to the one loved to *receive*. And so to love belongs to him who is more excellent.

Fourth, because it is more difficult to bestow benefits than to receive them. But we love more those things which we work hard at, whereas we easily look down upon what comes easily to us.

**Reply to objection 1:** There is in the benefactor something such that the one who receives the benefit is incited to love him. But the benefactor loves the one he benefits not because he is, as it were, incited by him, but because he is moved by himself. But what is from oneself (*ex se*) is better than what is through another (*per aliud*).

**Reply to objection 2:** The beneficiary's love for his benefactor is more of an obligation, and so its contrary has the character of a greater sin. By contrast, the benefactor's love for his beneficiary is more spontaneous, and so it has greater promptitude.

**Reply to objection 3:** God likewise loves us more than we love Him, and parents love their children more than they are loved by them. And yet it does not have to be the case that we love every one of those we benefit more than we love any of our benefactors. For we prefer the benefactors from whom we receive the greatest benefits—viz., God and our parents—to those individuals on whom we have bestowed lesser benefits.

## Article 13

### Does the order of charity remain in heaven?

It seems that the order of charity does not remain in heaven:

**Objection 1:** In *De Vera Religione* Augustine says, "Perfect charity is that we love greater goods more and lesser goods less." But in heaven there will be perfect charity. Therefore, someone will love

one who is better more than himself or more than those connected with him.

**Objection 2:** Someone to whom we will a greater good is loved more. But everyone who is in heaven wills a greater good to one who has more good. Otherwise, his will would not be conformed to God's will in everything. But the one who is better has more good. Therefore, in heaven everyone will love the better individual more. And so he will love the other more than himself, and he will love someone unconnected with him more than one who is close to him.

**Objection 3:** God will be the whole reason for loving in heaven, since at that point there will be a fulfillment of what is said in 1 Corinthians 15:28 ("God will be all things in all things"). Therefore, one who is closer to God will be loved more. And so one will love someone who is better more than himself, and he will love someone unconnected with him better than someone connected with him.

**But contrary to this:** Nature is not destroyed by grace, but is perfected by grace. But the order of charity posited above proceeds from nature itself. And all things naturally love themselves more than other things. Therefore, this particular ordering of charity (*iste ordo caritatis*) will remain in heaven.

**I respond:** The order of charity has to remain in heaven to the extent that God must be loved above all things. This will absolutely be the case when a man perfectly enjoys Him.

But as regards the ordering of oneself to others, it seems that a distinction must be made. For as was explained above, the degree of love can be distinguished either (a) according to the difference among the goods that one wishes for the other or (b) according to the intensity of the love.

In the first mode, one will love those who are better more than himself and those who are less good less than himself. For each one of the blessed shall will each individual to have what is due to him according to God's justice—and this because of the perfect conformity of his human will to God's will. Nor will there then be time for making progress through merit for a greater reward—as occurs now, when a man can desire both the virtue and the reward of a better man. Instead, at that time the will of each individual will rest within what has been determined by God.

However, in the second mode one will love himself more than his neighbor, even a better neighbor. For as was explained above (a. 7), the intensity of an act of loving stems from the side of the subject who loves. And the gift of grace is conferred on each individual by God (a) primarily in order that he might order his own mind toward God, and this belongs to love of oneself, and (b) secondarily in order that he might will the ordering of other things toward God or even bring this about in his own way.

On the other hand, as regards the ordering of one's neighbors to one another absolutely speaking, the better someone is, the more he will love him, in accord with the love of charity. For the whole of the beatified life consists in ordering the mind toward God. Hence, the whole order of love among the beatified will be observed in relation to God—so that, namely, one who is closer to God will be loved more and held by everyone to be more closely connected (*propinquior*) with himself. For at that time the provision will cease that is necessary in the present life, by which everyone, for whatever sort of necessity, provides more for those connected with him than for strangers. It is by reason of this provision that in this life a man, by the very inclination of charity, loves more someone who is connected with him and on whom he must bestow the effect of charity.

Still, in heaven it will happen that someone will love for many reasons those who are connected with him, since the upright causes of love will not cease in the mind of someone who is beatified. However, the reason for loving that is taken from closeness to God will be incomparably preferred to all these reasons.

**Reply to objection 1:** This argument should be conceded as regards those who are connected with oneself. But as regards himself, someone has to love himself more than others—more so to the extent that his charity is more perfect—since the perfection of charity orders a man perfectly to God and, as has been explained, this is relevant to his love of himself.

**Reply to objection 2:** This argument is about the ordering of love according to the level of the good that someone wills for the beloved.

**Reply to objection 3:** God will be the total reason for loving for each individual, because God is the total good for a man. For if we granted, *per impossibile*, that God were not a man's good, then the man would have no reason to love. And so in the ordering of love it must be the case that after God, a man loves himself the most.

## QUESTION 27

### The Principal Act of Charity, i.e., the Act of Loving

We next have to consider the act of charity and, first of all, the principal act of charity, which is the act of loving (*dilectio*) (question 27), and, second, the other acts or effects that follow upon the act of loving (questions 28-33).

On the first topic there are eight questions: (1) Which is more proper to charity, to be loved or to love (*amari vel amare*)? (2) Is the act of loving (*amare*) the same thing as the act of willing the good (*benevolentia*)? (3) Is God to be loved because of Himself (*propter seipsum*)? (4) Can God be loved directly (*immediate*) in this life? (5) Can God be wholly (*totaliter*) loved? (6) Does the love of God have a mode or fixed quantity (*habet modum*)? (7) Which is better, to love a friend or to love an enemy? (8) Which is better, to love God or to love one's neighbor?

#### Article 1

#### Which is more proper to charity, loving or being loved?

It seems that it is more proper to charity to be loved rather than to love:

**Objection 1:** Charity is found to be better in better individuals. But better individuals ought to be loved. Therefore, it is more proper to charity to be loved.

**Objection 2:** What is found to be the case in most instances seems to be more fitting for the nature and, as a result, better. But as the Philosopher says in *Ethics* 8, "Many wish to be loved more than to love, and for this reason the lovers of flattery are many." Therefore, it is better to be loved than to love and, as a result, this is more fitting for charity.

**Objection 3:** That for the sake of which each thing is such-and-such is itself more such-and-such. But it is for the sake of being loved that men love; for in *De Catechizandis Rudibus* Augustine says, "There is no greater incentive for someone to love you than for you to love him first." Therefore, charity consists in being loved more than in loving.

**But contrary to this:** In *Ethics* 8 the Philosopher says, "Friendship lies more in loving than being loved." But charity is a certain sort of friendship. Therefore, charity consists more in loving than in being loved.

**I respond:** Loving is appropriate to charity insofar as it is charity. For since charity is a virtue, it has by its essence an inclination to its proper act. However, to be loved is not an act of charity belonging to the one who is loved; instead, the act of charity belongs to one who does the loving, whereas being loved belongs to the one who is loved in accord with the common character of the good, viz., insofar as another is moved toward his good through an act of charity. Hence, it is clear that loving belongs to charity more than being loved does, since what belongs to each thing is what belongs to it in its own right (*per se*) and in its substance rather than what belongs to it through another (*per aliud*).

There are two indications of the claim that loving belongs to charity more than being loved does. First, friends are praised more for loving than for being loved—at the very least, they are blamed if they are loved and do not love. Second, mothers, who love the most, seek more to love than to be loved; for as the Philosopher says in the same book, "Some mothers entrust their children to a nanny—they do love them, to be sure, but they do not seek to be loved in return if it does not happen."

**Reply to objection 1:** By the very fact that they are better, better individuals are more lovable. But by the very fact that charity is more perfect in them, they are more loving, yet correspondingly loved. For a better individual does not love what is below him less than it is lovable, but someone who is less good does not attain to loving a better individual to the extent that he is lovable.

**Reply to objection 2:** As the Philosopher says in the same place, "Men want to be loved insofar as they want to be honored." For just as honor is bestowed on someone as a sort of testimony to the

goodness that exists in the one who is honored, so by the fact that someone is loved some good is shown to exist in him, since only what is good is lovable. So, then, men seek to be loved and to be honored for the sake of something else, viz., for the manifestation of the good that exists in the one who is loved. But those who have charity seek to love in their own right, since this is the very good of charity, just as every act of a virtue is the good of that virtue. Hence, it belongs more to charity to want to love than to want to be loved.

**Reply to objection 3:** Some love for the sake of being loved, not in such a way that being loved is the aim of their loving, but because being loved is a sort of path that induces a man to love.

## Article 2

### Is loving, insofar as it is the act of charity, nothing other than willing the good?

It seems that *loving (amare)*, insofar as it is the act of charity, is nothing other than *willing the good (benevolentia)*:

**Objection 1:** In *Rhetoric 2* the Philosopher says, “To love is to will good things for someone.” But this is to will the good (*benevolentia*). Therefore, the act of charity is nothing other than willing the good.

**Objection 2:** An act belongs to what its habit belongs to. But as was explained above (q. 24, a. 1), the habit of charity exists in the power of the will. Therefore, the act of charity is likewise an act of the will. But it tends toward nothing other than the good, which is to will the good. Therefore, the act of charity is nothing other than willing the good.

**Objection 3:** In *Ethics 9* the Philosopher posits five things that belong to friendship: the first is that a man wills the good for his friend; the second is that he wills him to exist and to live (*velit ei esse et vivere*); the third is that he shares his life with him; the fourth is that he chooses the same things; the fifth is that they grieve together and rejoice together. But the first two pertain to willing the good (*benevolentia*). Therefore, the first act of charity is willing the good.

**But contrary to this:** In the same book the Philosopher says, “Willing the good is neither friendship nor loving (*amatio*); instead, it is a source (*principium*) of friendship.” But as was explained above (q. 23, a. 1), charity is friendship. Therefore, willing the good (*benevolentia*) is not the same thing as loving (*dilectio*).

**I respond:** Willing the good (*benevolentia*) is properly said to be an act of the will by which we will the good for another. Now this act of the will differs from an act of loving (*differt a actuali amore*) both (a) when the latter exists in the sentient appetite and also (b) when it exists in the intellectual appetite, i.e., the will.

For the love that exists *in the sentient appetite* is a passion. Now every passion inclines one with a sort of impetus toward its object. However, the passion of love is such that it does not arise suddenly, but instead arises through a constant inspection of the thing that is loved. And this is why, in *Ethics 9*, the Philosopher, in showing the difference between willing the good and the love that is a passion, says that willing the good does not involve reaching out and desiring, i.e., it does not have any impetus of inclination; instead, a man wills the good for another solely by a judgment of reason. Similarly, this type of love arises from familiarity, whereas willing the good sometimes arises suddenly, as happens to us at a boxing match when we will victory for one of the boxers.

On the other hand, the love that exists *in the intellectual appetite* likewise differs from willing the good. For this sort of love implies a certain union of affection on the part of the lover with the one who is loved, viz., insofar as the lover thinks of the one who is loved as being in some sense one with himself or as belonging to himself, and so he is moved toward him. By contrast, willing the good is a simple act

of the will by which we will the good for someone even without presupposing the sort of union of affection just mentioned.

So, then, willing the good (*benevolentia*) is included in the act of loving (*dilectio*) insofar as it is an act of charity, but the act of loving (*dilectio sive amor*) adds the affection of union. And this is the reason why the Philosopher says that willing the good is a *source* of friendship.

**Reply to objection 1:** In this place the Philosopher defines love not by giving its entire nature (*totam rationem ipsius*), but by giving something that belongs to its nature and in which the act of loving is especially clear.

**Reply to objection 2:** The act of loving (*dilectio*) is an act of the will that tends toward the good but is accompanied by a union with the one who is loved—something that is not implied by willing the good.

**Reply to objection 3:** What the Philosopher says in this place is relevant to friendship to the extent that it arises from the love that someone has for himself, as he says in the same place—so that, namely, one does all these things to his friend as to himself. This pertains to the affective union mentioned above.

### Article 3

#### Is God loved out of charity because of Himself or because of something else?

It seems that God is loved out of charity not because of Himself but because of something else:

**Objection 1:** In a homily Gregory says, “From the things that the mind knows it learns to love what is unknown.” But he is calling intelligible and divine things ‘unknown’ and things that can be sensed ‘known’. Therefore, God is to be loved because of other things.

**Objection 2:** Love follows upon cognition. But God is known through another—this according to Romans 1:20 (“The invisible things of God are clearly seen, having been understood through the things that have been made”). Therefore, He is likewise to be loved because of another and not because of Himself.

**Objection 3:** As a Gloss on Matthew 1:2 says, “Hope generates charity.” Fear likewise leads to charity, as Augustine says in *Super Primum Canonicum Ioannis Tractatus*. But hope looks for something to be acquired from God, whereas fear withdraws from something that can be inflicted by God. Therefore, it seems that God is to be loved because of some hoped for good or because of some evil to be feared. Therefore, He is not to be loved because of Himself.

**But contrary to this:** In *De Doctrina Christiana* 1 Augustine says, “To enjoy is to adhere to someone by love because of himself.” But as he says in the same book, God is to be enjoyed. Therefore, God is to be loved because of Himself.

**I respond:** The preposition ‘because of’ or ‘for the sake of’ (*propter*) implies a relation to a cause. Now there are four genera of causes, viz., *final*, *formal*, *efficient*, and *material*; in addition, a *material disposition*, which is not a cause absolutely speaking, but rather a cause in a certain respect (*secundum quid*), is traced back to the material cause. And it is with respect to these four genera of causes that something is said to be loved because of one thing or another:

- (a) with respect to the genus *final cause*, in the way that we love medicine because of health;
- (b) with respect to the genus *formal cause*, in the way that we love a man because of his virtue—since, namely, by his virtue he is formally good and hence lovable;
- (c) with respect to the genus *efficient cause*, in the way that we love certain individuals because they are the children of *this* father;
- (d) with respect to a disposition that is traced back to the genus *material cause*, as when we are said

to love someone because of something that has disposed us toward loving him—for instance, because of certain benefits that have been received—even if, after we have already begun to love him, we come to love our friend not because of those benefits, but because of his virtue.

Hence, in the first three ways we love God for Himself and not because of anything else. For He is not ordered toward anything else as His end; instead, He Himself is the ultimate end of all things. Nor is He informed by anything else in order to be good; instead, His substance is goodness itself, according to which all things are good as likenesses (*exemplariter*). Nor, again, does His goodness exist in Him from another; instead, it is from Him that goodness exists in all other things.

However, in the fourth way He can be loved because of something else—namely, since we are disposed by certain other things to progress in our love of God—for instance, by the benefits that we receive from Him or, again, by the rewards that are hoped for or by the punishments that we intend to avoid through Him.

**Reply to objection 1:** From the things that the mind knows it learns to love what is unknown, not because the things known are the reason for loving the unknown things in the manner of a formal cause or final cause or efficient cause, but because through the things that are known a man is disposed to love what is unknown.

**Reply to objection 2:** The cognition of God is, to be sure, acquired from other things, but afterwards, once God is known, He is known not through other things but through Himself—this according to John 4:42 (“We now believe not because of what you told us: for we have seen for ourselves, and we know that this is truly the savior of the world”).

**Reply to objection 3:** As is clear from what was said above (q. 17, a. 8 and q. 19, a. 7), hope and fear lead to charity in the manner of dispositions.

#### Article 4

##### Can God be loved directly in this life?

It seems that God cannot be loved directly (*immediate*) in this life:

**Objection 1:** As Augustine says in *De Trinitate* 10, “What is unknown cannot be loved.” But we do not have a direct cognition of God in this life, since “we see now through a mirror, darkly,” as 1 Corinthians 13:12 says. Therefore, neither can we love Him directly.

**Objection 2:** One who is incapable of what is lesser is incapable of what is greater. But it is greater to love God than to know Him, since, as 1 Corinthians 6:17 puts it, one who adheres to God through love becomes “one spirit with Him.” But a man cannot have a direct cognition of God. Therefore, *a fortiori*, he cannot love Him directly.

**Objection 3:** A man is cut off from God through sin—this according to Isaiah 59:2 (“Your sins have caused a division between you and your God”). But sin exists in the will more than in the intellect. Therefore, a man is less able to love God directly than to know Him directly.

**But contrary to this:** As is clear from 1 Corinthians 13:9ff, since the cognition of God is mediated, it is called “dark” and it “passes away” in heaven. But, as 1 Corinthians 13:8 says, “Charity does not pass away.” Therefore, charity in this life (*caritas viae*) adheres directly to God.

**I respond:** As was explained above (q. 26, a. 1), the act of a cognitive power is perfected by the fact that the thing known exists in the knower, whereas the act of an appetitive power is perfected by the fact that the appetite is inclined toward the thing itself. And so the movement of an appetitive power is toward the things in accord with the condition of the things themselves, whereas the act of a cognitive power is in accord with the mode of the one having the cognition.

Now the very order of things is in its own right such that God is knowable and lovable because of

Himself (*propter seipsum*), insofar as He is by His essence (*essentialiter*) truth itself and goodness itself, through which other things are both known and loved. But as regards us, since our cognition arises from sensation, the things that are first knowable are those that are closer to the senses, and the ultimate terminus of cognition lies in what is maximally removed from the senses.

Accordingly, one should reply that (a) the act of love (*dilectio*), which is the act of an appetitive power, even in this life tends first toward God and then flows from Him to other things, and that, accordingly, (b) the act of charity loves God directly and loves other things through God (*mediante Deo*).

By contrast, it is the opposite with cognition—viz., we know God through other things as a cause is known through its effects, or else in the mode of preeminence or of negation (*vel per modum eminentiae aut negationis*), as is clear from Dionysius in *De Divinis Nominibus*.

**Reply to objection 1:** Even though what is unknown cannot be loved, nonetheless, it is not necessary for the order of cognition to be the same as the order of love. For love is the terminus of cognition. And so where cognition ceases, viz., in the thing itself that is known through another, love is able to begin immediately.

**Reply to objection 2:** Since the love of God is something greater than the cognition of God, especially in the state of the present life (*maxime secundum statum viae*), it presupposes the cognition of God. And since cognition does not come to rest in created things but tends through them toward something else, love begins with this cognition and through it flows to other things—in the manner of a circle—as long as (a) the cognition, beginning from creatures, tends toward God and (b) the love, beginning from God as the ultimate end, flows toward creatures.

**Reply to objection 3:** The aversion from God that comes through sin is removed by charity and not by cognition alone. And so it is charity that, by loving, joins the soul directly to God by a bond of spiritual union.

## Article 5

### Can God be wholly loved?

It seems that God cannot be wholly (*totaliter*) loved:

**Objection 1:** Love follows upon cognition. But God cannot be wholly known by us, since this would be to comprehend Him. Therefore, He cannot be wholly loved by us.

**Objection 2:** As is clear from Dionysius, *De Divinis Nominibus*, chap. 4, love is a sort of union. But a man's heart cannot be wholly united with God, since, as 1 John 3:20 says, "God is greater than our heart. Therefore, God cannot be wholly loved.

**Objection 3:** God wholly loves Himself. Therefore, if He is wholly loved by someone else, then someone else loves God as much as He loves Himself. But this is absurd. Therefore, God cannot be wholly loved by any creature.

**But contrary to this:** Deuteronomy 6:5 says, "You shall love the Lord your God with your whole heart."

**I respond:** Since love is thought of as lying between the lover and what is loved, when one asks whether God can be wholly loved, there are three ways in which the question can be taken:

(a) In one way, insofar as the mode of totality is referred back to the entity that is loved. And in this sense God is to be wholly loved, since a man ought to love the whole that belongs to God.

(b) In the second way, the question can be understood so that the totality is referred back to the one doing the loving. And in this sense, too, God ought to be wholly loved, since a man ought to love God with his whole strength (*ex toto posse*), and he ought to order whatever he has toward the love of God—this according to Deuteronomy 6:5 ("You shall love the Lord your God with your whole heart").

(c) In the third way, the question can be understood in accord with a comparison of the one loving to the thing loved, so that it means: Is the mode of the one who is loving equal to the mode of the thing loved? And this is impossible. For since each thing is lovable to the extent that it is good, God, whose goodness is infinite, is infinitely lovable, whereas no creature can love God to an infinite degree. For every power that belongs to a creature—whether that power is natural or infused—is finite.

**Reply to objection 1 and objection 2 and objection 3 and to the argument for the contrary:** The replies to the objections are clear from what has been said. For the first three objections go through for the third way, and the argument for the contrary goes through for the second way.

## Article 6

### Is there some mode or determinate quantity of the love of God that should be had?

It seems that there is some mode or determinate quantity (*modus*) of the love of God that should be had:

**Objection 1:** As is clear from Augustine in *De Natura Boni*, the nature of the good (*ratio boni*) consists in “mode, species, and order” (*in modo, specie et ordine*). But the love of God is the best thing in a man—this according to Colossians 3:14 (“Above all things have charity”). Therefore, the love of God should have a mode or determinate quantity.

**Objection 2:** In *De Moribus Ecclesiae* Augustine says, “Tell me, I ask you, what is the mode of loving? For I fear being either more inflamed or less inflamed with desire and love for my Lord than I ought to be.” But it would be useless for anyone to seek a mode unless there were some mode of the love of God. Therefore, there is a mode or determinate quantity of the love of God.

**Objection 3:** In *Super Genesim ad Litteram* 4 Augustine says, “Mode (*modus*) is what its own proper measure (*propria mensura*) fixes for each thing.” But the measure of the human will, as well as of exterior action, is reason. Therefore, just as there has to be a quantity fixed by reason in the case of the exterior effect of charity—this according to Romans 12:1 (“... your reasonable service ...”)—so, too, the interior act of loving God must itself have a determinate quantity.

**But contrary to this:** In *De Diligendo Deum* Bernard says, “The cause of loving God is God; the mode or determinate quantity is to love without mode or determinate quantity.”

**I respond:** As is clear from the passage just cited from Augustine, ‘mode’ (*modus*) implies a certain determination of measure. Now this determination is found both (a) in the measure and (b) in the thing measured, though in different ways.

In the *measure* it is found *in its essence (essentialiter)*, since a measure is in its own right (*secundum seipsam*) such that it determines and moderates other things, whereas in *the things that are measured* the measure is found in relation to another (*secundum aliud*)—that is, insofar as those things attain to the measure. And so within the measure nothing can be taken as unmodified (*immodificatum*), whereas the thing that is measured is such that unless it attains to the measure, it is unmodified—regardless of whether it falls short of the measure or exceeds the measure.

Now in all desirable and doable things the measure is *the end*, since, as is clear from the Philosopher in *Physics* 2, we must take from the end the proper conception of what we desire and what we do. And so the end has a mode or quantity in its own right (*secundum seipsam*), whereas the means to the end have their mode or quantity from being proportioned to the end. And so, as the Philosopher says in *Politics* 1, “In every art the desire for the end is without a limit or terminus, whereas there is a limit to the desire for the means to the end.” For instance, a physician does not impose any limit on health, but effects it as completely as he can. By contrast, he does impose a limit on the medicine. For he does not give as much medicine as he can, but instead doles out the medicine in proportion to health; if the

medicine were to exceed that proportion or fall short of it, then it would be immoderate.

Now the end of all human action and affection is the love of God, through which, as was explained above (q. 17, a. 6 and q. 23, a. 6), we especially attain to the ultimate end. And so with the love of God there cannot be a mode (*modus*) in the way that a mode exists in *a thing that is measured*, where it is possible for there to be too much or too little (*plus et minus*). Rather, with the love of God the mode is found as it exists in *a measure*, in which there cannot be excess; instead, the greater the degree to which the rule (*regula*) is attained, the better it is. And so the more God is loved, the better the love is.

**Reply to objection 1:** What is *per se* is better than what is *through another (per aliud)*. And so the goodness of a measure that has a mode or quantity *per se* is better than the goodness of the thing measured, which has a mode or quantity through another. And so charity, which has a mode or quantity in the way that a measure does, is likewise preeminent over the other virtues, which have a mode or fixed quantity in the way that things that are measured do.

**Reply to objection 2:** In the same place Augustine adds that the mode or quantity of loving God is that He be loved with one's whole heart, i.e., that He be loved as much as He can be. And this has to do with the mode or quantity that is appropriate for a measure.

**Reply to objection 3:** An affection whose object is subject to the judgment of reason is to be measured by reason. But the object of the love of God—that is, God—exceeds the judgment of reason. And He is not measured by reason, but instead exceeds reason.

Nor is there a parallel between the interior act of charity and its exterior acts. For the interior act of charity has the character of an end, since a man's ultimate good consists in his soul's adhering to God—this according to Psalm 72:28 (“It is good for me to adhere to God”). By contrast, the exterior acts are, as it were, ordered toward the end, and so they are to be measured both by charity and by reason.

## Article 7

### Is it more meritorious to love one's enemy than to love one's friend?

It seems that it is more meritorious to love one's enemy than to love one's friend:

**Objection 1:** Matthew 5:46 says, “If you love those who love you, what reward will you have?” Therefore, to love one's friend does not merit a reward. But as is shown in the same place, to love one's enemy does merit a reward. Therefore, it is more meritorious to love one's enemies than to love one's friends.

**Objection 2:** The greater the charity something proceeds from, the more meritorious it is. But as Augustine says in *Enchiridion*, to love one's enemy belongs to “the perfect children of God,” whereas to love one's friend belongs also to imperfect charity. Therefore, to love one's enemy is of greater merit than to love one's friend.

**Objection 3:** Where there is a greater effort for the good, there seems to be greater merit, since, as 1 Corinthians 3:8 says, “Each one will receive his own reward according to his labor.” But a man needs a greater effort for loving his enemy than for loving his friend, since it is more difficult. Therefore, it seems that to love one's enemy is more meritorious than to love one's friend.

**But contrary to this:** What is better is more meritorious. But it is better to love one's friend, since it is better to love someone who is better. But one's friend, who loves, is better than one's enemy, who hates. Therefore, to love one's friend is more meritorious than to love one's enemy.

**I respond:** As was explained above (q. 25, a. 1), the reason for loving one's neighbor out of charity is God. Therefore, when it is asked which is better, or more meritorious, to love one's friend or to love one's enemy, there are two ways in which these acts of love can be compared: (a) on the part of the neighbor who is loved and (b) on the part of the reason for which he is loved.

In the first way, the love of one's friend surpasses the love of one's enemy. For a friend is both better and more closely connected; hence, he is a more fitting 'matter' for love and, because of this, the act of loving that passes into this matter is better. Hence, its opposite is, accordingly, worse; for it is worse to hate one's friend than to hate one's enemy.

In the second way, however, the love of one's enemy is preeminent, and this for two reasons. First, there can be some reason other than God for the love of one's friend, but God is the only reason for love of one's enemy. Second, assuming that both are loved because of God, the love of God is proven stronger when a man's mind extends to more remote things—more specifically, right up to the love of one's enemy—just as the power of a fire is shown to be stronger by the fact that it diffuses its heat to more remote places. Again, the love of God is shown to be stronger to the extent that we accomplish more difficult tasks because of it, just as, once again, the power of a fire is stronger to the extent that it is able to ignite matter that is less combustible.

But just as the same fire acts more strongly on nearby things than on remote things, so, too, charity loves more fervently those who are connected with one more than those who are remote. And on this score, the love of one's friends, considered in its own right, is more fervent and better than the love of one's enemies.

**Reply to objection 1:** Our Lord should be understood to be speaking *per se*. For the love of one's friends has no reward in God's eyes when they are loved solely because they are one's friends, and this seems to happen when one's friends are loved in such a way that one's enemies are not loved. However, the love of one's friends is meritorious if they are loved because of God and not just because they are one's friends.

**Reply to objection 2 and objection 3 and the argument for the contrary:** The reply to these objections is clear from what has been said. For the next two arguments go through on the part of the reason for loving, whereas the last argument goes through on the part of those who are loved.

## Article 8

### Is it more meritorious to love one's neighbor than to love God?

It seems that it is more meritorious to love one's neighbor than to love God:

**Objection 1:** What the Apostle prefers (*magis elegit*) seems to be more meritorious. But the Apostle prefers love of neighbor over love of God—this according to Romans 9:3 (“I wished myself to be cursed by Christ for the sake of my brothers”). Therefore, it is more meritorious to love one's neighbor than to love God.

**Objection 2:** As has been explained (a. 7), it seems less meritorious in some sense to love one's friend. But God is especially one's friend, who “loved us first,” as 1 John 4:10 says. Therefore, it seems less meritorious to love Him.

**Objection 3:** What is more difficult seems to be more virtuous and more meritorious, since, as *Ethics 2* says, “Virtue has to do with what is difficult and good.” But it is easier to love God than to love one's neighbor, both because (a) all things love God naturally and also because (b) in God there is nothing that is not to be loved—something that is not the case with one's neighbor. Therefore, it is more meritorious to love one's neighbor than to love God.

**But contrary to this:** That because of which each thing is such-and-such is itself more such-and-such. But the love of one's neighbor is meritorious only because one's neighbor is loved because of God. Therefore, the love of God is more meritorious than the love of one's neighbor.

**I respond:** This comparison can be understood in two ways:

In one way, insofar as the two sorts of love are considered *separately*. And in that case there is no

doubt that the love of God is more meritorious. For a reward is due for it because of itself, since the ultimate reward is to enjoy God, toward whom the movement of the love of God tends. Hence, in John 14:21 a reward is promised to one who loves God: “If anyone loves me, he will be loved by my Father, and I will manifest myself to him.”

Second, the comparison can be considered insofar as ‘love of God’ is taken to mean that God alone is being loved, whereas ‘love of neighbor’ is taken to mean that one’s neighbor is loved because of God. And in this sense the love of one’s neighbor includes the love of God, whereas the love of God does not include the love of one’s neighbor. Hence, there will be a comparison of the perfect love of God, which also extends to one’s neighbor, with a love of God that is insufficient and imperfect by reason of the fact that “this commandment we have from God: that he who loves God should also love his brother” (1 John 4:21). And in this sense the love of one’s neighbor is preeminent.

**Reply to objection 1:** According to one explanation in a Gloss, the Apostle did not wish this—namely, that he should be separated from Christ for the sake of his brothers—when he was in the state of grace, but instead he had wished it when he was in the state of unbelief. Hence, he is not to be imitated on this point.

A possible alternative reply, following Chrysostom in *De Compunctione*, is that this passage does not show that the Apostle loved his neighbor more than God, but instead shows that he loved God more than himself. For he willed to be deprived of the enjoyment of God for a time (which pertains to his love of himself) in order that God’s honor might be procured among his neighbors (which pertains to the love of God).

**Reply to objection 2:** The love of one’s friend is sometimes less meritorious because the friend is loved because of himself, and so the love falls short of the genuine reason for the friendship of charity, which is God. And so the fact that God is loved because of Himself does not diminish the merit; instead, it constitutes the whole character of merit.

**Reply to objection 3:** It is the good of virtue, rather than its difficulty, that contributes more to the character of merit. Hence, it does not have to be the case that whatever is more difficult is more meritorious; rather, what is more meritorious is what is more difficult in such a way that it is also better.

## QUESTION 28

### Joy

We next have to consider the effects that follow upon the principal act of charity, which is the act of loving: first of all, the interior effects (questions 28-30) and, second, the exterior effects (questions 31-33). On the first topic there are three effects to be considered: joy (*gaudium*) (question 28), peace (*pax*) (question 29), and mercy (*miser cordia*) (question 30).

On the first topic there are four questions: (1) Is joy an effect of charity? (2) Is joy of this sort compatible with sadness? (3) Can this sort of joy be full (*plenum*)? (4) Is this sort of joy a virtue?

### Article 1

#### Is joy an effect of charity within us?

It seems that joy (*gaudium*) is not an effect of charity within us:

**Objection 1:** Sadness (*tristitia*), rather than joy, follows from the absence of what is loved. But God, whom we love through charity, is absent to us as long as we live in this life, since, as 2 Corinthians 5:6 says, “As long as we are in the body, we are absent from the Lord.” Therefore, within us charity causes sadness rather than joy.

**Objection 2:** Through charity we especially merit beatitude. But among the things through which it is claimed that we merit beatitude is sorrow (*luctus*)—this according to Matthew 5:5 (“Blessed are they who mourn, for they shall be comforted”). Therefore, sadness, rather than joy, is an effect of charity.

**Objection 3:** As is clear from what was said above (q. 17, a. 6), charity is a virtue distinct from hope. But joy is caused by hope—this according to Romans 12:2 (“... rejoicing in hope”). Therefore, joy is not caused by charity.

**But contrary to this:** As Romans 5:5 says, “The charity of God is diffused in our hearts by the Holy Spirit, who has been given to us.” But joy is caused within us by the Holy Spirit—this according to Romans 14:17 (“The kingdom of God is not food and drink, but justice and peace and joy in the Holy Spirit”). Therefore, charity is a cause of joy.

**I respond:** As was explained above when we were discussing the passions (*ST* 1-2, q. 25, a. 3), joy (*gaudium*) and sadness (*tristitia*) arise from love (*amor*), but in different ways.

For joy is caused by love either (a) because of the presence of the thing that is loved or also (b) because in the very thing that is loved, that thing’s own proper good exists and is conserved. Accordingly, the latter pertains to the love of benevolence (*ad amorem benevolentiae*), through which someone rejoices over his friend’s prospering, even if his friend is absent.

By contrast, sadness is caused by love either (a) because of the absence of what is loved or (b) because someone for whom we will the good is deprived of his own good or oppressed by some evil.

Now charity is the love of God, whose good is unchangeable, since He is His own goodness. And by the fact that He is loved He exists in the one who loves Him through His most noble effect—this according to 1 John 4:16 (“He who abides in charity abides in God, and God in him”). And so spiritual joy, which is had from God, is caused by charity.

**Reply to objection 1:** As long as we are in the body, we are said to be “absent from the Lord” in comparison with that presence by which He is present to some through the ‘vision of sight’. This is why the Apostle adds in the same place, “We walk by faith and not by sight.” However, He is also present to those who love Him in this life through the indwelling of grace (*per gratiae inhabitationem*).

**Reply to objection 2:** The sorrow that merits beatitude is over things that are contrary to beatitude. Hence, the fact that such sorrow is caused by charity has the same explanation as the fact that spiritual joy over God is caused by charity, since rejoicing over a good has the same explanation as being saddened by things that are incompatible with that good.

**Reply to objection 3:** There are two ways in which there can be spiritual joy over God: (a) insofar as we rejoice over the divine good considered in its own right and (b) insofar as we rejoice over the divine good as participated in by us. Now the first sort of joy is better, and it is this that principally proceeds from charity. But the second sort of joy proceeds also from hope, through which we look forward to the enjoyment of the divine good—though the enjoyment itself, whether perfect or imperfect, is obtained according to the measure of our charity.

## Article 2

### Does the spiritual joy that is caused by charity receive an admixture of sadness?

It seems that the spiritual joy that is caused by charity receives an admixture of sadness:

**Objection 1:** It belongs to charity to rejoice together over the goods of one's neighbor—this according to 1 Corinthians 13:6 (“Charity does not rejoice over wickedness, but rejoices together over the truth”). But such joy receives an admixture of sadness—this according to Romans 12:15 (“Rejoice with those who rejoice; weep with those who weep”). Therefore spiritual joy takes on an admixture of sadness.

**Objection 2:** As Gregory says, “Penitence is to weep over evils that have previously been done and not to commit again acts that have to be wept over.” But true penitence does not exist without charity. Therefore, the joy that belongs to charity has an admixture of sorrow.

**Objection 3:** Because of charity it happens that one desires to be with Christ—this according to Philippians 1:23 (“... having the desire to be dissolved and to be with Christ”). But a certain sadness follows upon this desire—this according to Psalm 119:5 (“Woe is me that my sojourn here has been prolonged”). Therefore, the joy that belongs to charity receives an admixture of sadness.

**But contrary to this:** The joy that belongs to charity is joy over God's wisdom. But joy of this sort does not have any sadness mixed in—this according to Wisdom 8:16 (“Her conversation has no bitterness”). Therefore, the joy that belongs to charity does not receive an admixture of sadness.

**I respond:** As was explained above (a. 1), there are two sorts of joy over God that are caused by charity.

One is the principal joy, which is proper to charity and by which we rejoice over the divine good considered in its own right. And this sort of joy that belongs to charity does not suffer from any admixture of sadness, just as the good over which there is joy cannot have any admixture of evil, either. And this is why the Apostle says in Philippians 4:4, “Rejoice in the Lord always.”

On the other hand, the second sort of joy that belongs to charity is that by which one rejoices over the divine good insofar as it is participated in by us. However, this participation can be impeded by something contrary to it. And so on this score the joy that belongs to charity can have an admixture of sadness, viz., insofar as someone is saddened by what works against participation in the divine good either in us or in our neighbors, whom we love as ourselves.

**Reply to objection 1:** The tears of our neighbors are only over some evil. But every evil implies a defect in one's participation in the highest good. And so charity makes one sad for his neighbor to the extent that participation in the divine good is impeded in him.

**Reply to objection 2:** As Isaiah 59:2 says, sin causes a division between us and God. And this is a reason for sorrowing over our own past sins as well as over the past sins of others, insofar as we are impeded by those sins from participating in the divine good.

**Reply to objection 3:** Even though we in some way participate in the divine good through cognition and love even in the dwelling of our present unhappiness, the unhappiness of this life nonetheless keeps us from a perfect participation in the divine good of the sort that will exist in heaven.

And so this sadness by which one mourns the delay of glory likewise has to do with an impediment to his participation in the divine good.

### Article 3

#### Is the spiritual joy that is caused by charity able to be made full in us?

It seems that the spiritual joy that is caused by charity is not able to be made full in us (*non possit in nobis impleri*):

**Objection 1:** God's joy is made more full in us to the extent that we have more joy over Him. But we can never rejoice over God to the extent that He is worthy of being rejoiced over. For it is always the case that His goodness, which is infinite, exceeds a creature's joy, which is finite. Therefore, joy over God can never be full in a creature.

**Objection 2:** What is made full cannot be made greater. But even the joy of the blessed in heaven can be greater, since the joy that belongs to one of the blessed is greater than the joy that belongs to another. Therefore, joy over God cannot be made full in a creature.

**Objection 3:** Comprehension seems to be nothing other than a fullness of cognition. But just as a creature's cognitive power is finite, so, too, is a creature's appetitive power. Therefore, since God cannot be comprehended by any creature, it seems that a creature's joy over God cannot be made full.

**But contrary to this:** In John 15:11 our Lord said to His disciples, "... that my joy may be in you, and your joy may be made full."

**I respond:** Fullness of joy (*plenitudo gaudii*) can be understood in two ways.

In one way, on the part of *the thing over which there is rejoicing*, so that, namely, there is as much rejoicing over it as it is worthy of being rejoiced over. And in this sense only God's joy over Himself is full, since (a) God's joy is infinite and (b) His infinite goodness is wholly worthy of this (*hoc est condignum infinitae bonitati Dei*). By contrast, the joy of any creature has to be finite.

In the second way, fullness of joy can be thought of on the part of *the one who is rejoicing*. Now as was explained above when we were talking about the passions (*ST* 1-2, q. 25, aa. 1-2), joy is related to desire in the way that rest is related to movement. But there is full rest when nothing remains of the movement. Hence, there is full joy when nothing any longer remains to be desired. But as long as we are in this world, the movement of desire does not come to a rest within us, since, as is clear from what was said above (q. 24, aa. 4 and 7), it still remains that we might get closer to God through grace. Now when perfect beatitude will have been reached, then nothing will remain to be desired, since then there will be full enjoyment of God and in this enjoyment a man will obtain whatever he has desired in other goods—this according to Psalm 102:5 ("... who satisfies your desire with good things"). And so desire will come to a rest—not only the desire by which we desire God, but there will likewise be rest with respect to all desires. Hence, the joy of the blessed in heaven is perfectly full—and, indeed, more than full, since they will obtain more than they have been content to desire (*plus obtinebunt quam desiderare suffecerint*). For as 1 Corinthians 2:9 says, "... nor has it entered into the heart of man what God has prepared for those who love Him." And this is why Luke 6:38 says, "Good measure ... and overflowing they shall give into your bosom."

However, since no creature is capable of a joy over God that is wholly worthy of Him, it follows that the sort of joy that is altogether full joy is not 'grasped' by a man; rather, the man 'enters into' it—this according to Matthew 25:21 ("Enter into the joy of your lord").

**Reply to objection 1:** This argument goes through for fullness of joy on the part of the thing that is rejoiced over.

**Reply to objection 2:** When beatitude has been arrived at, each one will attain the limit fixed for

him by divine predestination, and there will remain nothing further that is tended toward—even though in that end state one will attain a greater closeness to God and another will be less close to Him. And so the joy of each one will be full on the part of the one who is rejoicing, since the desire of each one will be put fully to rest, and yet the joy of one individual will be greater than the joy of another because of a fuller participation in God’s beatitude.

**Reply to objection 3:** Comprehension implies a fullness of cognition on the part of the thing known, so that, namely, it is known to the extent that it can be known. However, cognition also has a fullness on the part of the knower, just as has been explained for the case of joy. Hence, in Colossians 1:9 the Apostle says, “... that you may be filled with the knowledge of His will, in all wisdom, and spiritual understanding.”

#### Article 4

##### Is joy a virtue?

It seems that joy is a virtue:

**Objection 1:** A vice is contrary to a virtue. But as is clear in the case of *acedia* (*acedia*) and envy (*invidia*), sadness is posited as a vice. Therefore, joy ought likewise to be posited as a virtue.

**Objection 2:** Just as love (*amor*) and hope (*spes*) are certain passions whose object is the good, so too with joy. But love and hope are posited as virtues. Therefore, joy should be posited as a virtue, too.

**Objection 3:** Precepts of the Law are handed down concerning acts of the virtues. But it is commanded that we rejoice over God—this according to Philippians 4:4 (“Rejoice in the Lord always”). Therefore, joy is a virtue.

**But contrary to this:** As is clear from what was said above (*ST* 1-2, qq. 57, 60 and 62), joy is not enumerated either among the theological virtues or among the moral virtues or among the intellectual virtues.

**I respond:** As was established above (*ST* 1-2, q. 55, aa. 2 and 4), a virtue is a certain sort of operative habit and so by its proper nature has an inclination toward some act. Now it is possible for many ordered acts of the same character to arise from a single habit, with one of the acts following upon another. And since the later acts proceed from the habit of the virtue only through a prior act, it happens that the virtue is defined or named only from the prior act, even though the other acts also follow from it.

Now it is clear from what was said above about the passions (*ST* 1-2, q. 25, aa. 1-3) that love (*amor*) is the first affection of an appetitive power and that desire and joy follow upon it. And so it is the same habit of virtue that inclines one (a) to love and (b) to desire the good that is loved and (c) to rejoice over it. But since love (*dilectio*) is the first among these acts, it happens that the virtue is named (*denominatur*) not from joy or desire, but instead from love; and the virtue is called charity.

So, then, joy is not a virtue distinct from charity, but is a certain act or effect of charity. And because of this, it is numbered among the fruits [of the Holy Spirit], as is clear from Galatians 5:22.

**Reply to objection 1:** The sadness that is a vice is caused by a disordered love of oneself, which, as was explained above (*ST* 1-2, q. 77, a. 4), is not a specific vice but instead a sort of general root of the vices. And so one has to posit particular sorts of sadness as specific vices, since they flow from a general vice and not from any specific vice.

By contrast, the love of God is a specific virtue, viz., charity, and, as has been explained, it is to charity that joy is traced back as an act proper to it.

**Reply to objection 2:** Hope follows from love in the same way that joy does, but hope adds a certain specific character on the part of the object, viz., that the object is both difficult to obtain and possible to obtain. By contrast, joy does not add, over and beyond love, any special character on the part

of the object that could give rise to a special virtue.

**Reply to objection 3:** A precept of the Law is handed down about joy insofar as joy is an act of charity, though it is not the first act of charity.

## QUESTION 29

### Peace

We next have to consider peace. And on this topic there are four questions: (1) Is peace (*pax*) the same as concord (*concordia*)? (2) Do all things seek peace? (3) Is peace an effect of charity? (4) Is peace a virtue?

#### Article 1

##### Is peace the same as concord?

It seems that peace (*pax*) is the same as concord (*concordia*):

**Objection 1:** In *De Civitate Dei* 19 Augustine says, “Peace among men is ordered concord.” But we are speaking here of nothing other than peace among men. Therefore, peace is the same as concord.

**Objection 2:** Concord is a certain union of wills. But the essence of peace (*ratio pacis*) consists in such a union; for in *De Divinis Nominibus*, chap. 11 Dionysius says, “Peace is what unifies all and is an operative consensus.” Therefore, peace is the same as concord.

**Objection 3:** Things that have the same opposite are the same as one another. But the same thing, viz., dissension (*dissensio*), is opposed both to concord and to peace; hence, 1 Corinthians 14:33 says, “He is not a God of dissension, but a God of peace.” Therefore, peace is the same as concord.

**But contrary to this:** There can be concord among wicked men with respect to something evil. But as Isaiah 48:22 says, “There is no peace for the wicked.” Therefore, peace is not the same as concord.

**I respond:** Peace includes concord and adds something else to it. Hence, if the name ‘peace’ is being taken properly, then wherever there is peace, there is concord, but it is not the case that wherever there is concord, there is peace.

For concord, taken properly, is had in relation to someone else (*ad alterum*)—more specifically, it is had insofar as the acts of will of different hearts come together at the same time in a single consensus (*inquantum diversorum cordium voluntates simul in unum consensum conveniunt*).

In addition, it happens that the heart of an individual man tends toward diverse things, and this in two ways:

One corresponds to diverse appetitive powers, in the way that the sentient appetite very often tends toward what is contrary to the intellective appetite—this according to Galatians 5:17 (“The flesh lusts against the spirit”).

In a second way, insofar as one and the same appetitive power tends toward diverse desirable things which cannot be attained simultaneously. Hence, there has to be conflict among the appetitive movements. Now the union of such movements is of the essence of peace (*de ratione pacis*); for even if a man possesses something that he wants, he does not have a peaceful heart (*pacatum cor*) as long as there is still something that he wants and cannot have at the same time.

By contrast, this sort of union of movements is not of the essence of concord. Hence, concord implies a union of desires among different individuals (*unionem appetituum diversorum appetentium*), whereas, over and beyond this union, peace implies a union of desires within a single individual.

**Reply to objection 1:** Augustine is here talking about the peace that exists between one man and another. And he says that this peace is concord—not just any sort of concord, but concord that is ordered by the fact that the one man agrees with the other on something that is fitting for both. For if one man agrees with another not by a spontaneous willing but by being, as it were, coerced by the fear of some imminent evil, then such a concord is not genuine peace, since the order within the two who are agreeing is not preserved, but is instead disrupted by whatever inflicts the fear. And this is why Augustine, before this, had said that peace is a tranquility of order, and this sort of tranquility consists in all the appetitive

movements within an individual man being at rest together.

**Reply to objection 2:** If one man consents to the same thing as another man, his agreement is not altogether unified unless all of his own appetitive movements likewise agree with one another.

**Reply to objection 3:** There are two sorts of dissension, viz., (a) dissension between a man and himself and (b) dissension between one man and another. It is only the second sort of dissension that is opposed to concord.

## Article 2

### Do all things seek peace?

It seems that not all things seek (*appetant*) peace:

**Objection 1:** According to Dionysius, peace is a “consensus that makes for unity” (*unitiva consensus*). But in things that lack cognition there cannot be a unified consensus. Therefore, things of this sort cannot seek peace.

**Objection 2:** An appetitive power does not tend toward contraries at the same time. But there are many who desire war and dissension. Therefore, not everyone desires peace.

**Objection 3:** Only what is good is desirable. But a certain sort of peace seems to be bad; otherwise, our Lord would not say in Matthew 10:34, “I have not come to bring peace.” Therefore, not all things seek peace.

**Objection 4:** What all things seek seems to be the highest good, which is the ultimate end. But peace is not this sort of thing, since it is had even in the present life; otherwise, in Mark 9:49 it would have been useless for our Lord to command, “Have peace among you.” Therefore, not all things seek peace.

**But contrary to this:** In *De Civitate Dei* 19 Augustine says that all things seek peace. And Dionysius says the same thing in *De Divinis Nominibus*, chap. 11.

**I respond:** From the very fact that a man desires something, it follows that he desires the attainment of what he desires and, as a result, he desires the removal of anything that can impede that attainment. Now the attainment of a desired good can be impeded by a contrary desire either on the man’s own part or on the part of others and, as was explained above (a. 1), both of these obstacles are removed by peace. And so it must be the case that anything that has an appetitive power seeks peace, viz., insofar as everything that has an appetitive power seeks to arrive with tranquility and without impediment at that which it seeks—and this is what peace, which Augustine defines as “a tranquility of order,” consists in.

**Reply to objection 1:** Peace implies not only a unification of the intellectual (or rational) appetite or a unification of the animal appetite, both of which have to do with a consensus, but also a unification of natural appetite. This is why Dionysius says that peace “effects both consensus and connaturality,” so that ‘consensus’ implies a unification of appetitive powers that proceed from cognition, and ‘connaturality’ implies a unification of natural appetitive powers.

**Reply to objection 2:** Those who seek war and dissension desire only a peace which they do not think that they have. For as has been explained, it is not peace if someone agrees with another against something that he wills to a greater degree. And so by making war, men seek to shatter this latter sort of concord as something lacking in peace, in order that they might arrive at a peace in which nothing is contrary to their will. And for this reason, all those who make war seek to arrive through war at a more perfect peace than they previously had.

**Reply to objection 3:** Since peace consists in the quieting and unification of the appetitive power, it follows that just as a desire can be either for the good absolutely speaking or for a merely apparent

good, so too peace can be both genuine and apparent. There cannot be a genuine peace unless what is desired is a genuine good (*nisi circa appetitum veri boni*), since every evil, even if it appears good in some respect and hence partly quiets the appetite, nonetheless has many defects because of which the appetitive power remains restless and perturbed. Hence, a true peace can exist only in good individuals and among good individuals. By contrast, the peace that belongs to bad individuals is an apparent peace and not a genuine peace. Hence, Wisdom 14:22 says, “Those living in a great war of ignorance took so many evils, and such great evils, to be peace.”

**Reply to objection 4:** Since genuine peace exists only with respect to the good, it follows that just as a true good is had in two ways, viz., perfectly and imperfectly, so there are two sorts of genuine peace.

One is *perfect peace*, which consists in the perfect enjoyment of the highest good and through which all desires are unified by coming to rest in a single good. And that is the ultimate end of a rational creature—this according to Psalm 147:3 (“He has made peace within your borders”).

The other is *imperfect peace*, which is had in this world. For even though the principal movement of the soul comes to rest in God, there are nonetheless conflicts, both interior and exterior, which disturb this peace.

### Article 3

#### Is peace a proper effect of charity?

It seems that peace is not a proper effect of charity:

**Objection 1:** Charity is not had without habitual grace (*sine gratia gratum faciente*). But peace is had by some individuals who do not have habitual grace; for instance, the gentiles sometimes have peace. Therefore, peace is not an effect of charity.

**Objection 2:** Something whose contrary can exist with charity is not an effect of charity. But dissension, which is contrary to peace, can exist with charity. For we see that even the sacred doctors, e.g., Jerome and Augustine, disagree in some of their opinions, and it is written in Acts 15:37 that even Paul and Barnabas disagreed. Therefore, it seems that peace is not an effect of charity.

**Objection 3:** It is not the case that the same thing is the proper effect of diverse things. But peace is an effect of justice—this according to Isaiah 32:17 (“The work of justice is peace”). Therefore, it is not an effect of charity.

**But contrary to this:** Psalm 118:165 says, “Much peace have they who love your Law.”

**I respond:** As has been explained (a. 1), there are two unifications that are of the essence of peace. One of them has to do with the ordering of one’s own appetitive powers into a unity, while the other has to do with unifying one’s own appetite with the appetite of another. And charity effects both of these unifications.

It effects the first unification insofar as God is loved with our whole heart—so that, namely, we refer all things to God and so all our desires are brought together into a unity.

Charity effects the second unification insofar as we love our neighbor as ourselves, and from this it happens that a man wills to fulfill the will of his neighbor as he wills to fulfill his own will. And it is because of this that sameness of choices is posited as one of the signs of friendship, as is clear from *Ethics* 9; and in his book *De Amicitia* Tully says, “It belongs to friends to like and dislike the same things.”

**Reply to objection 1:** No one falls away from habitual grace except because of sin, by which it happens that a man is turned away from his due end and sets up his end in something unfitting. And on this score his appetitive power adheres principally to an apparent final good instead of to the true final good. And this is why there can only be apparent peace, and not true peace, in the absence of habituating

grace.

**Reply to objection 2:** As the Philosopher says in *Ethics* 9, it is not agreement on opinions that pertains to friendship, but rather agreement on the goods that contribute to life—particularly the big goods, since to disagree on some small matters seems, as it were, not to amount to dissension. And because of this, nothing prevents individuals who have charity from disagreeing in their opinions. Nor is this incompatible with peace, since these opinions belong to the intellect, which precedes the appetitive power that is unified by peace.

Similarly, when there is agreement on important goods, disagreement in small matters is not contrary to charity. For such disagreement proceeds from a diversity of opinions, where one of the individuals thinks the matter over which there is disagreement is relevant to the good on which they agree, and the other individual thinks that it is not relevant. Accordingly, such disagreement over trifles and over opinions is, to be sure, incompatible with perfect peace, in which the truth will be known fully and every desire will be fulfilled, but it is not incompatible with imperfect peace of the sort that is had in this life.

**Reply to objection 3:** Peace is *indirectly* the work of justice, viz., insofar as justice removes obstacles to peace. But peace is *directly* the work of charity, since charity by its proper nature is a cause of peace. For as Dionysius says in *De Divinis Nominibus*, chap. 4, love is a “unifying force” and peace is the unification of the appetitive inclinations.

#### Article 4

##### Is peace a virtue?

It seems that peace is a virtue:

**Objection 1:** Precepts are handed down only with respect to acts of the virtues. But as is clear from Mark 9:49 (“Have peace among you”), precepts are handed down about having peace. Therefore, peace is a virtue.

**Objection 2:** We merit only by acts of the virtues. But it is meritorious to make peace—this according to Matthew 5:9 (“Blessed are the peacemakers, for they shall be called children of God”). Therefore, peace is a virtue.

**Objection 3:** Vices are opposed to virtues. But dissension, which is opposed to peace, is numbered among the vices, as is clear from Galatians 5:20. Therefore, peace is not a virtue.

**But contrary to this:** A virtue is not itself the ultimate end but is instead a path to the ultimate end. But peace is in some sense the ultimate end, as Augustine explains in *De Civitate Dei* 19. Therefore, peace is not a virtue.

**I respond:** As was explained above (q. 28, a. 4), when all the acts follow upon one another, proceeding from the agent according to the same reason, then all acts of this sort proceed from a single virtue or power (*ab una virtute procedunt*); nor do the individual acts have individual virtues from which they proceed. This is clear in the case of corporeal entities. For instance, when fire, by giving heat, liquefies and rarefies, there does not exist in the fire one liquefying power and another rarefying power; instead, the fire effects all these acts through its single heating power. Therefore, since, as has been shown (a. 3), peace is caused by charity in accord with the very nature of the love of God and neighbor, it follows that, just as in the case of joy, there is not a virtue other than charity of which peace is a proper act.

**Reply to objection 1:** The reason that a precept is handed down for having peace is that it is an act of charity. And because of this it is also a meritorious act. And this is why it is posited among the beatitudes, which, as was explained above (*ST* 1-2, q. 69, a. 3), are acts of perfect virtue. Likewise, it is

posited among the fruits [of the Holy Spirit] insofar as it is a sort of final good having spiritual sweetness.

**Reply to objection 2:** The reply to the second objection is clear from what was just said.

**Reply to objection 3:** Many vices are opposed to a single virtue in accord with the virtue's diverse acts. And, on this score, opposed to charity is not just (a) *hate*, by reason of the *act of loving*, but also (b) *acedia* and *envy*, by reason of *joy*, and (c) *dissension*, by reason of *peace*.

## QUESTION 30

### Mercy

We next have to consider mercy or pity (*miser cordia*). And on this topic there are four questions:  
(1) Is the cause of mercy or pity something bad that belongs to the one on whom we have mercy or pity?  
(2) Over what sorts of things does one have mercy or pity (*quorum sit misereri*)? (3) Is mercy a virtue?  
(4) Is mercy the greatest of the virtues?

### Article 1

#### Is something bad properly speaking the motive for mercy?

It seems that something bad is not properly speaking the motive for mercy or pity (*miser cordia*):

**Objection 1:** As was shown above (q. 19, a.1 and q. 48, a.6), sin is a greater evil than punishment. But sin evokes indignation rather than mercy or pity. Therefore, it is not what is bad that evokes mercy or pity.

**Objection 2:** What is cruel or detestable (*crudelia seu dira*) seems to have a certain excess of evil. But in *Rhetoric 2* the Philosopher says that what is detestable is different from what is pitiable and expels pity. Therefore, what is bad is not as such a motive for mercy or pity.

**Objection 3:** Indications of bad things are not themselves genuinely bad. But as is evident from *Rhetoric 2*, indications of bad things evoke pity. Therefore, it is not what is bad that properly speaking evokes mercy or pity.

**But contrary to this:** In *De Fide Orthodoxa 2* Damascene says that mercy or pity is a species of sadness. But the motive for sadness is something bad. Therefore, the motive for mercy or pity is something bad.

**I respond:** As Augustine says in *De Civitate Dei 9*, “Mercy or pity (*miser cordia*) is compassion in our heart for another’s unhappiness (*alienae miseriae in nostro corde compassio*), by which we are compelled to help if we are able to.” For it is called ‘*miser cordia*’ from the fact that one has a saddened heart (*miserum cor*) over the unhappiness of another (*super miseria alterius*). But misery or unhappiness (*miseria*) is opposed to happiness (*felicitas*), and it is of the nature of beatitude or happiness (*de ratione beatitudinis sive felicitatis*) that one gets what he wants. For as Augustine says in *De Trinitate 13*, “The one who is happy (*beatus*) has all that he wants and wants nothing bad.” And so, contrariwise, it belongs to misery or unhappiness that a man undergoes something that he does not want to undergo.

Now there are three ways in which someone wants something: In one way, he wants it by a *natural desire*, in the way that all men want to exist and to live. In a second way, he wants something by *choice stemming from premeditation*. In a third way, a man *wants something not in its own right but in its cause*; for instance, when someone wants to eat what is harmful to him, we say that he in some sense wants to be sick.

So, then, the motive for mercy or pity, insofar as it pertains to unhappiness, is in the first instance what is contrary to the natural desire of the one who is doing the willing, viz., corruptive and sorrowful evils whose contraries men desire naturally. Hence, in *Rhetoric 2* the Philosopher says, “Pity is a certain sadness over an apparent corruptive or sorrowful evil.”

Second, bad things of this sort are more effective in evoking pity when they are contrary to choices one has willed. Hence, in the same place the Philosopher says that bad things make for unhappiness “when their cause is fortune, as when something bad occurs where something good was being hoped for.”

Third, bad things cause still more unhappiness when they are contrary to whatever someone wills (*contra totam voluntatem*), e.g., when a particular individual has always pursued good things, and bad things keep happening to him. And so in the same book the Philosopher says, “The greatest degree of

pity is over evils that someone suffers undeservedly.”

**Reply to objection 1:** It is part of the nature of sin that it is voluntary, and on this score it has the character of something to be punished rather than the character of something *miserable*. But since sin can in some sense itself be a punishment, viz., insofar as it has something joined to it that is contrary to the sinner’s will, it can on this score have the character of something miserable. Accordingly, we pity sinners and have compassion for them; as Gregory says in a homily, “Genuine justice has compassion for sinners and not disdain.” And Matthew 9:36 says, “Jesus, seeing the crowds, had compassion on them, because they were troubled and lying about, like sheep without a shepherd.”

**Reply to objection 2:** Since mercy or pity is compassion over another’s unhappiness, it is properly directed toward another and not toward oneself, except by a sort of similitude—just like justice, insofar as the diverse parts are thought of within a man, as *Ethics* 5 points out. Accordingly, Ecclesiasticus 30:24 says, “Have pity on your own soul, pleasing God.”

Therefore, just as it is pain or sorrow (*dolor*)—and not pity or mercy—that is properly speaking directed toward oneself, as when we suffer something detestable within ourselves, so, too, if certain persons are so closely connected to us that they are, as it were, part of ourselves, e.g., children or parents, then we feel pain at their evils and not pity, just as we do in the case of our own wounds. And this is the sense in which the Philosopher says that what is detestable drives out pity.

**Reply to objection 3:** Just as pleasure follows upon the expectation of good things and the memory of good things, so, too, sadness follows upon the expectation of bad things and the memory of bad things—though not as vehemently as from sensing them in the present. And so insofar as indications of bad things represent unhappy bad things as present to us, they move us to have pity.

## Article 2

### Is some defect on the part of the one who has mercy a reason for his having mercy?

It seems that a defect (*defectus*) on the part of the one who has mercy or pity is not a reason for having mercy or pity:

**Objection 1:** It is proper to God to have mercy; hence, Psalm 144:9 says, “His tender mercies are over all His works.” But there are no defects in God. Therefore, a defect cannot be a reason for having mercy.

**Objection 2:** If some defect is a reason for having pity, then those who have the biggest defects should especially have pity. But this is false; for in *Rhetoric* 2 the Philosopher says, “Those who have been totally ruined have no pity.” Therefore, it is not the case that a defect on the part of the one who has pity is a reason for having pity.

**Objection 3:** Sustaining some sort of abuse involves a defect. But in the same place the Philosopher says that those who have an abusive disposition do not have pity. Therefore, a defect on the part of the one who has pity is not a reason for having pity.

**But contrary to this:** Mercy is a certain sort of sadness. But a defect is a reason for sadness; this is why, as was explained above (*ST* 1-2, q. 47, a. 3), the sick are easily saddened. Therefore, a reason for having mercy is a defect on the part of the one who has mercy.

**I respond:** Since, as was explained above (a. 1), mercy or pity is compassion over another’s unhappiness, it follows that someone has mercy or pity because it happens that he is sorry about another’s unhappiness. Now since sadness or sorrow is directed toward something bad that belongs to oneself, it follows that someone is sorry about, or is saddened by, another’s unhappiness to the extent that he perceives the other’s unhappiness as his own. Now there are two ways in which this can happen.

In one way, because of a *union of affection*, which is effected by love (*amor*). For since the lover thinks of his friend as himself, he thinks of the evil that belongs to his friend as his own evil, and so he is sorry about his friend's evil as about his own. This is why, in *Ethics* 9, the Philosopher posits among the signs of friendship that one suffers along with one's friend. And in Romans 12:15 the Apostle says, "Rejoice with those who rejoice, weep with those who weep."

In the second way, it happens because of a *real union*, as when something bad that belongs to certain individuals is close enough that it passes from them to us. And so the Philosopher says in *Rhetoric* 2 that men have pity on those who are connected with them and are similar to them, since they are thereby made to think that they themselves are likewise able to undergo similar bad things. And this is why the old and the wise, who realize that they are able to come unexpectedly upon evils, along with the weak and the fearful, are more merciful. By contrast, others, who think themselves happy and powerful enough that they think that they are unable to be afflicted by anything bad, are not so merciful.

So, then, defects are always the reason for having pity or mercy, either insofar as one thinks of another's defect as his own because of a union of love, or because of the possibility of undergoing similar evils.

**Reply to objection 1:** God is merciful only because of love, insofar as He loves us as something of His own.

**Reply to objection 2:** Those who are already immersed in the worst evils do not fear that they will suffer anything worse, and so they do not have pity or mercy. Similarly, neither do those who are extremely fearful, since they are so intent on their own suffering that they do not pay attention to the unhappiness of others.

**Reply to objection 3:** Those who have an abusive disposition—whether because they have suffered abuse or because they want to afflict abuse on others—are moved to anger and audacity, which are passions of virility that lift a man's mind to deal with what is difficult. Hence, these passions draw a man's mind away from the thought that something will be suffered in the future. Hence, as long as such individuals are in this disposition, they have no mercy—this according to Proverbs 27:4 ("Anger has no mercy, nor fury when it erupts").

For a similar reason, the proud, who look down upon others and think them bad, do not show mercy. This is why Gregory says that false justice, i.e., the false justice of the proud, harbors disdain and not compassion.

### Article 3

#### Is mercy a virtue?

It seems that mercy is not a virtue:

**Objection 1:** As is clear from the Philosopher in the *Ethics*, the main thing in a virtue is choice. But as is explained in the same book, an act of choosing is an inclination toward what has already been deliberated about (*appetitus praeconsiliati*). Therefore, what impedes deliberation cannot be called a virtue. But mercy or pity impedes deliberation—this according to Sallust ("All men who take counsel need to be free from anger and pity, since the mind does not easily see the truth when these things stand in the way"). Therefore, mercy is not a virtue.

**Objection 2:** Nothing contrary to a virtue is praiseworthy. But as the Philosopher says in *Rhetoric* 2, *nemesis* is contrary to mercy. But as *Ethics* 2 says, *nemesis* is a praiseworthy virtue. Therefore, mercy is not a virtue.

**Objection 3:** As was explained above (q. 28, a. 4 and q. 29, a. 4), since joy and peace follow upon charity, they are not special virtues. But mercy likewise follows upon charity, since it is out of charity

that we “weep with those who weep,” in the same way that we “rejoice with those who rejoice.” Therefore, mercy is not a special virtue.

**Objection 4:** Since mercy belongs to the appetitive power, it is not an intellectual virtue. Neither is it a theological virtue, since it does not have God as its object. Similarly, it is not a moral virtue, either. For it does not have to do with operations, since this pertains to justice; nor does it have to do with the passions, since it is not traced back to any of the twelve ‘means’ that the Philosopher posits in *Ethics 2*. Therefore, mercy is not a virtue.

**But contrary to this:** In *De Civitate Dei 9* Augustine says, “In praising Caesar, Cicero spoke much better and more humanely and more in keeping with pious sensibilities when he said, ‘None of your virtues is more admirable or gracious than your mercy.’” Therefore, mercy is a virtue.

**I respond:** Mercy implies sorrow over the unhappiness of another.

Now this sorrow can, in one sense, denominate a movement of the sentient appetite. And on this score mercy or pity is a passion and not a virtue.

However, in a second sense it can denominate a movement of the intellective appetite, insofar as an individual is displeased by what is bad for someone else. Now this movement can be regulated by reason and, in accord with this movement regulated by reason, the movement of the lower appetite can be regulated. Hence, in *De Civitate Dei 9* Augustine says, “This movement of the soul”—viz., mercy—“serves reason when mercy is offered in such a way that justice is preserved, whether one is giving to the needy or forgiving the penitent.” And because, as was shown above (*ST 1-2*, q. 56, a. 4 and q. 59, a. 4 and q. 60, a. 5 and q. 66, a. 4), the nature of a human virtue consists in the mind’s movements being regulated by reason, it follows that mercy is a virtue.

**Reply to objection 1:** This passage from Sallust is taken to be about mercy insofar as it is a passion unregulated by reason. For as an unregulated passion it impedes reason’s deliberation when it makes for a departure from justice.

**Reply to objection 2:** Here the Philosopher is speaking of mercy and *nemesis* insofar as both of them are passions. And, to be sure, they have a contrariety as to the estimation they have of the bad things that happen to others. The one who experiences mercy is sorry about those bad things to the extent that he thinks that an individual is suffering them undeservedly, whereas the one who experiences *nemesis* (a) rejoices over them to the extent that he thinks that the individuals are suffering them deservedly and (b) is saddened if things go well for the undeserving. And as is said in the same place, “Both of the passions are praiseworthy and derive from the same moral disposition.”

However, as will be explained below (q. 36, a. 3), it is envy that is properly opposed to mercy.

**Reply to objection 3:** Joy and peace add nothing to the character of the good which is the object of charity, and so they do not require virtues other than charity. By contrast, mercy has to do with a special reason, viz., the unhappiness of the individual to whom mercy is shown.

**Reply to objection 4:** Insofar as it is a virtue, mercy is a moral virtue that has to do with the passions, and it is traced back to the mean that is called *nemesis*, since it proceeds from the same moral disposition, as *Rhetoric 2* explains. To be sure, the Philosopher does posit these means as passions and not as virtues, since they are praiseworthy even insofar as they are passions. However, nothing prevents them from arising from an elective habit. And in this respect they assume the character of a virtue.

#### Article 4

##### Is mercy the greatest of the virtues?

It seems that mercy is the greatest of the virtues:

**Objection 1:** Divine worship seems especially relevant to virtue. But mercy is placed higher than

divine worship—this according to Hosea 6:6 and Matthew 12:7 (“I desire mercy, and not sacrifice”). Therefore, mercy is the greatest of the virtues.

**Objection 2:** In his Gloss on 1 Timothy 4:8 (“Godliness (*pietas*) is profitable to all things”), Ambrose says, “The whole summit of the Christian way of life lies in mercy and piety.” But the Christian way of life includes every virtue. Therefore, the summit of the whole of virtue consists in mercy.

**Objection 3:** A virtue is something that makes the one having it good. Therefore, a virtue is better to the extent that it makes a man more similar to God, since a man is better by being more similar to God. But it is mercy that especially does this, since in Psalm 144:9 it is said of God that “His tender mercies are over all His works.” Hence, in Luke 6:36 our Lord says, “Be merciful, even as your Father is merciful.” Therefore, mercy is the greatest of the virtues.

**But contrary to this:** In Colossians 3:12, after the Apostle had said, “Put on, as the beloved of God, the bowels of mercy ...,” he later added, “... above all, have charity.” Therefore, mercy is not the greatest of the virtues.

**I respond:** There are two ways in which a virtue can be the greatest virtue: (a) in its own right (*secundum se*) and (b) in relation to the one who has it.

In its own right mercy is the greatest. For it belongs to mercy to be bountiful to others and, what’s more, to alleviate the needs of others—and this belongs especially to someone who is higher (*est superioris*). That is why being merciful is posited as proper to God, and it is in this that His omnipotence is especially manifested.

However, as regards the one who has the virtue, mercy is not the greatest unless the one who has it is the greatest and has no one above him, but instead has everyone below him. For one who has someone above him is such that it is greater and better for him to be connected to someone above him than to supply what is needed to someone below him. And so, as regards a man, who has God above him, charity, through which he is united to God, is better than mercy, through which he supplies what is needed by his neighbors (*per quam defectus proximorum supplet*).

Still, among all the virtues that pertain to one’s neighbor, mercy is the best, just as its act likewise belongs to one who is better. For to supply what is needed by another belongs, as such, to someone who is higher and better.

**Reply to objection 1:** It is not because of God that we worship Him with exterior sacrifices and gifts; it is because of ourselves and because of our neighbors. For He does not need our sacrifices, but instead He wants them to be offered for the sake of our devotion and for the sake of the advantage of our neighbors. And so mercy, by which the needs of others are supplied, is a sacrifice more acceptable to Him, because it works more closely to the advantage of our neighbors—this according to Hebrews 13:16 (“Do not forget to do good and to share; for by such sacrifices God’s favor is obtained”).

**Reply to objection 2:** The summit of the Christian religion consists in mercy as regards its exterior works. However, the interior affection of charity, by which we are joined to God, is greater than both love and mercy with respect to our neighbors.

**Reply to objection 3:** It is through charity that we are assimilated to God as united to Him through affection. And so charity is greater than mercy, through which we are assimilated to God as regards a similarity in operation.

## QUESTION 31

### Beneficence

We next have to consider the exterior acts or effects of charity (questions 31-33): first, beneficence (question 31); second, almsgiving, which is a certain part of beneficence (question 32); and, third, fraternal correction, which is a certain sort of almsgiving (question 33).

On the first topic there are four questions: (1) Is beneficence an act of charity? (2) Is it necessary to do good to everyone? (3) Should good be done more to those who are more closely connected with us? (4) Is beneficence a special virtue?

### Article 1

#### Is beneficence an act of charity?

It seems that beneficence, or the act of doing good to someone (*beneficentia*), is not an act of charity:

**Objection 1:** Charity is had especially in relation to God. But we are not able to do God any good—this according to Job 35:7 (“What will you give Him? Or what will He receive from your hand?”). Therefore, beneficence is not an act of charity.

**Objection 2:** Beneficence consists especially in the giving of gifts. But this belongs to [the virtue of] generosity (*liberalitas*). Therefore, beneficence is an act of generosity and not of charity.

**Objection 3:** Everything that one gives is given either (a) as something owed (*debitum*) or (b) as something not owed. But a benefit that is given as something owed pertains to justice, whereas a benefit given as something not owed is given gratuitously and accordingly pertains to mercy. Therefore, every act of doing good (*omnis beneficentia*) is either an act of justice or an act of mercy. Therefore, it is not an act of charity.

**But contrary to this:** As has been explained (q. 23, a. 1), charity is a sort of friendship. But in *Ethics* 9, one of the acts of friendship that the Philosopher posits is “doing good to one’s friends,” i.e., benefitting one’s friends (*amicis benefacere*).

**I respond:** Beneficence implies nothing other than doing good to someone. But the good in question can be thought of in two ways.

In one way, it can be thought of in accord with the *general notion* of the good. And this belongs to the *general notion* of beneficence, which is an act of friendship and thus of charity. For as was explained above (q. 23, a. 1 and q. 27, a. 2), benevolence, through which one wills good for his friend, is included in the act of loving. Now the will effects what it wills, if the ability to do so is present. And so, as a result, doing good to one’s friend follows from the act of loving. For this reason, beneficence in its general notion is an act of friendship or of charity.

However, if the good that one does to another is taken under some *specific notion* of the good, then beneficence will take on this specific notion and pertain to some special virtue.

**Reply to objection 1:** As Dionysius says in *De Divinis Nominibus*, chap. 4, “Love moves the things that are ordered toward a mutual relationship, and it turns the lower things toward the higher things in order that they might be perfected by them, and it moves the higher things to provide for the lower things.” And it is in this last respect that beneficence is an effect of love. And so our role is not to do good to God, but instead to honor Him by being subject to Him, whereas His role is to do good to us out of His love.

**Reply to objection 2:** There are two things to consider in the giving of gifts: one of them is the thing given exteriorly, whereas the other is the interior passion which one who is pleased with his wealth has toward that wealth.

Now it belongs to generosity to moderate the interior passion, so that one is not excessive in his

desire for and love of wealth; for a man thereby becomes more prompt in bestowing gifts. Hence, if a man makes some large donation and yet has the desire to keep that gift for himself, then his giving is not generous.

On the other hand, as regards the exterior thing that is given, the giving of a benefit pertains in general to friendship or charity. Hence, it does not detract from friendship if someone wishes to retain the thing that he gives to someone out of love; instead, the perfection of his friendship is shown by this.

**Reply to objection 3:** Just as, in the benefits given, friendship or charity looks to the common notion of the good, so justice looks to the notion of what is owed, whereas mercy looks to the notion of alleviating unhappiness or need.

## Article 2

### Is it necessary to do good to everyone?

It seems that it is not necessary to do good to everyone (*non sit omnibus benefaciendum*):

**Objection 1:** In *De Doctrina Christiana* 1 Augustine says, “We cannot benefit everyone.” But a virtue does not incline us toward what is impossible. Therefore, it is not necessary to do good to everyone.

**Objection 2:** Ecclesiasticus 12:5 says, “Give to the good and receive not the sinner.” But many men are sinners. Therefore, it is not necessary to do good to everyone.

**Objection 3:** As 1 Corinthians 13:4 puts it, “Charity does not act perversely.” But to do good to everyone is to act perversely—for instance, if one does good to the enemies of the republic, or if one does good to someone who has been excommunicated, since he thereby communicates with him. Therefore, since to do good is an act of charity, it is not necessary to do good to everyone.

**But contrary to this:** In Galatians 6:10 the Apostle says, “While we have time, let us do good to all men.”

**I respond:** As was explained above (a. 1), beneficence follows upon love in that aspect of love by which it moves higher things to provide for lower things. Now among men the levels are not unchangeable, as they are among the angels, since men are able to suffer from multiple defects, and so someone who is higher in one respect is or is able to be lower in some other respect. And so, since the love of charity extends to everyone, beneficence likewise ought to extend to everyone, yet at the appropriate times and places. For all the acts of the virtues are fixed in accord with the appropriate circumstances.

**Reply to objection 1:** Absolutely speaking, we are unable to do good to everyone individually (*in speciali*)—and yet everyone is such that a situation might occur in which it is necessary to do good to him even as an individual. And so charity requires that even if a man does not actually do good to someone, he nonetheless prepares his mind in such a way that he will do good to anyone if the time for it arrives.

Still, there are some benefits that we are indeed able to offer to everyone—if not individually, at least in general—as when we pray for all believers and non-believers.

**Reply to objection 2:** There are two things in a sinner, viz., his sin and his nature. Therefore, the sinner is to be helped with respect to sustaining his nature, but he is not to be helped with respect to fomenting his sin. For the latter would be to do something bad to him rather than something good.

**Reply to objection 3:** Benefits should be taken away from excommunicants and the enemies of the republic to the extent that these individuals are thereby prevented from sinning. However, if some exigency were threatening the demise of their nature, they would have to be helped, though in an appropriate manner—for instance, if they were going to die of starvation or thirst, or if they were going

to suffer some other loss of that sort, unless this suffering were in accord with the order of justice.

### Article 3

#### Should those who are more closely connected with us be benefitted more?

It seems that those who are more closely connected with us should not be benefitted more:

**Objection 1:** Luke 14:12 says, “When you hold a lunch or a dinner, do not invite your friends or relatives or those you are acquainted with.” But these are the individuals who are connected with us in special ways. Therefore, it is not those who are more closely connected with us who should be benefitted, but rather needy strangers. For the passage continues, “But when you hold a banquet, invite the poor, the crippled ...”

**Objection 2:** The greatest benefit is to help someone in war. But a soldier in battle ought to help a stranger who is fighting on his side rather than a relative who is fighting for the enemy. Therefore, benefits are not to be bestowed more on those who are more closely connected with us.

**Objection 3:** Debts should be repaid before gratuitous benefits are bestowed. But it is because of a debt that one should offer a benefit to someone from whom he has received a benefit. Therefore, one should do good to his benefactors more than to those close to him.

**Objection 4:** As was explained above (q. 26, a. 9), parents are to be loved more than children. But as 2 Corinthians 12:14 says, the children are more to be benefitted, because “children ought not to save up for their parents.” Therefore, it is not the case that those who more closely connected are to be benefitted more.

**But contrary to this:** In *De Doctrina Christiana* 1 Augustine says, “Since you are unable to do good to everyone, you ought mainly to consider those who, by reason of place and time or of some other circumstance, are—as it were, by lot—closely connected with you.”

**I respond:** Grace and virtue imitate the natural order, which has been instituted by God’s wisdom. But the natural order is such that every natural agent first of all diffuses its action more intensely to the things that are closer to it, in the way that fire gives warmth to a greater degree to a thing that is closer to it. And, similarly, God diffuses the gifts of His goodness in the first place and more copiously to the substances that are closer to Him; this is clear from Dionysius in *De Caelesti Hierarchia*, chap. 4.

Now the giving of benefits is an act of charity that is directed toward others. And so we must be more beneficent to those who are more closely connected with us. But the closeness of one man to another can be thought of as relative to the diverse ways in which men share their lives with one another, e.g., as relatives by natural sharing, as citizens in a city, as believers in spiritual matters, and so on for the others. And corresponding to these diverse connections, there are different benefits to be given in different ways. For, absolutely speaking, each individual is to be given more of the benefit that pertains to that matter according to which he is more closely connected with us. Yet this can vary, depending on the time and place and situation. For in some instances a stranger should be helped more than even one’s own father—say, if the stranger is in extreme need and one’s father is not suffering such great need.

**Reply to objection 1:** Our Lord is not commanding us absolutely speaking not to invite our friends and relatives to dinner; rather, He is commanding us not to invite them with the intention of “having them invite you in return.” For this would be disordered desire (*cupiditas*) and not charity. Still, it can happen in a given case that, because of greater need, strangers are more to be invited.

For one must understand that those who are more connected with us should be benefitted more, *all other things being equal*. But if one of two individuals is more closely connected with us and the other is more needy, then there is no universal rule by which it can be determined which one should be helped more, since there are diverse degrees of both need and closeness. Rather, this requires the judgment of

prudence.

**Reply to objection 2:** The common good of the many is more divine than the good of a single individual. Hence, it is virtuous for one to expose even his own life to danger for the sake of the common good of the republic, whether the spiritual republic or the temporal republic. And so, since common life in the military is ordered toward the conservation of the republic, a soldier who offers assistance to his fellow soldier offers it to him as someone who is helping the whole republic and not as someone who is helping a private person. And so it is no surprise that in this case a stranger is preferred to a blood relative (*coniuncto secundum carnem*).

**Reply to objection 3:** There are two types of debt.

One type of debt is to be counted not among the goods that belong to the one who owes the debt, but rather among the goods of the one to whom the debt is owed. For instance, if someone has money or some other property that belongs to another, regardless of whether it has been stolen or received as a loan or as a deposit or in some similar way, then the man is more obligated to pay the debt than to use it to do good to someone who is connected with him, unless perhaps there were such a great need that he would be permitted to use even the property of another in order to help the one who was experiencing the need—unless, again, the one to whom the debt is owed were himself in similar need. Yet in this latter case the condition of both of them, with their different circumstances, would have to be taken into account by the judgment of a prudent man, since, as the Philosopher says in *Ethics* 9, in such matters no universal rule can be given because of the variety of the individual cases.

The other type of debt is a debt that is counted among the goods that belong to the one who owes the debt and not to the one to whom the debt is owed—as, for instance, if the debt is owed not out of an obligation of justice, but out of a certain sort of moral equity, as happens in the case of benefits that are received gratuitously. Now no benefactor's gift is as great as that of one's parents, and so in the repayment of benefits one's parents are to be preferred over all others—unless a need from another source takes precedence—or some other consideration, e.g., the common advantage (*communis utilitas*) of the Church or of the republic. However, in other cases an estimation has to be made of both the closeness of the connection and the benefit that has been received. This, once again, cannot be determined by a general rule.

**Reply to objection 4:** Parents are like higher individuals, and so the parents' love is ordered toward doing good, whereas the children's love is ordered toward honoring their parents. And yet in a case of extreme necessity it would be permissible to leave one's children on their own (*deserere filios*) rather than one's parents, whom it is not in any way permissible to leave on their own, because of the obligation incurred by benefits received. This is clear from the Philosopher in *Ethics* 8.

#### Article 4

##### Is beneficence a special virtue?

It seems that beneficence is a special virtue:

**Objection 1:** As is explained in *Ethics* 2, precepts are ordered toward the virtues, because legislators intend to make men virtuous. But precepts are given from above concerning beneficence and love; for Matthew 5:44 says, "Love your enemies, do good to those who have hated you." Therefore, beneficence is a virtue distinct from charity.

**Objection 2:** Vices are opposed to the virtues. But opposed to beneficence are certain special vices through which harm is inflicted on one's neighbor, e.g., plundering, theft, and other vices of this sort. Therefore, beneficence is a special virtue.

**Objection 3:** It is not the case that charity is divided into many species. But beneficence seems to

be divided into many species, corresponding to the different species of benefits. Therefore, beneficence is a virtue distinct from charity.

**But contrary to this:** An interior act and exterior act do not require diverse virtues. But beneficence and benevolence differ only as an exterior act and interior act, since beneficence is the execution of benevolence. Therefore, just as benevolence is not a virtue distinct from charity, so neither is beneficence.

**I respond:** Virtues are distinguished in a way that corresponds to the diverse notions of their objects. Now the formal notion of the object of charity is the same as the formal notion of the object of beneficence, since, as is clear from what was said above (a. 1), both have to do with the common notion of the good. Hence, beneficence is not a virtue distinct from charity, but denominates a certain act of charity.

**Reply to objection 1:** The precepts are given about acts and not about the habits of the virtues. And so the diversity of the precepts signifies diverse acts and not diverse habits of the virtues.

**Reply to objection 2:** Just as, insofar as all the benefits given to one's neighbor are thought of under the common notion of the good, they are traced back to love, so, too, insofar as all the harms are considered under the common notion of the bad, they are traced back to hate.

On the other hand, insofar as benefits and harms are thought of in a way corresponding to certain special notions of the good or the bad, they are traced back to special virtues or vices. And it is in this regard that there are diverse species of benefits.

**Reply to objection 3:** The reply to the third objection is clear from this.

## QUESTION 32

### The Works of Mercy (Almsgiving)

We next have to consider almsgiving or the works of mercy. And on this topic there are ten questions: (1) Is almsgiving or doing a work of mercy (*eleemosynae largitio*) an act of charity? (2) How are the works of mercy divided? (3) Which are the most important acts of mercy, the spiritual or corporal? (4) Do the corporal works of mercy have a spiritual effect? (5) Does doing the works of mercy fall under a precept? (6) Should a corporal work of mercy be done from resources that are necessary for one to live on? (7) Should a corporal work of mercy be done from resources that have been unjustly acquired? (8) Whose role is it to do the works of mercy? (9) To whom should the works of mercy be done? (10) How should the works of mercy be done?

#### Article 1

##### Is almsgiving or doing a work of mercy an act of charity?

It seems that almsgiving or doing a work of mercy (*dare eleemosynam*), is not an act of charity:

**Objection 1:** An act of charity cannot exist in the absence of charity. But almsgiving can exist in the absence of charity—this according to 1 Corinthians 13:3 (“If I should distribute all my goods to feed the poor ... but do not have charity ...”). Therefore, almsgiving or doing a work of mercy is not an act of charity.

**Objection 2:** The works of mercy (*eleemosyna*) are numbered among the acts of satisfaction—this according to Daniel 4:24 (“Redeem your sins with alms, and your iniquities with works of mercy for the poor”). Therefore, almsgiving is an act of justice and not of charity.

**Objection 3:** To offer sacrifice to God is an act of worship (*actus latriae*). But to do a work of mercy is to offer sacrifice to God—this according to Hebrews 13:16 (“Do not forget to do good and to share, for God is merited by such sacrifices”). Therefore, a work of mercy is an act of worship and not an act of charity.

**Objection 4:** To give something for the sake of some good is an act of generosity (*actus liberalitatis*). But this is especially done in almsgiving or doing a work of mercy. Therefore, almsgiving or doing a work of mercy is not an act of charity.

**But contrary to this:** 1 John 3:17 says, “How does the charity of God abide in one who has the substance of this world and sees his brother in need and does not have compassion on him?”

**I respond:** Exterior acts are referred back to the virtue that the motive for doing such acts is related to. Now the motive for a work of mercy is to alleviate need for someone who is enduring it. Hence, there are some who, in defining almsgiving (*definientes eleemosynam*), say that almsgiving is a work by which something is given to someone who is needy out of compassion because of God. This motive, as was explained above (q. 30, a. 4), belongs to mercy.

Hence, it is clear that to give alms is properly speaking an act of mercy. This is apparent from the name itself. For in Greek ‘*eleemosynae*’ comes from ‘pity’ (*eleos*), just as in Latin ‘*miseratio*’ comes from ‘pity’ (*miser cordia*). And since, as was shown above (q. 30, a. 2), mercy is an effect of charity, it follows that almsgiving is an act of charity, mediated by mercy.

**Reply to objection 1:** There are two ways in which something is said to be an act of a given virtue.

In one way, *materially*, in the way that the act of justice is to do what is just (*facere iusta*). And such an act of virtue can exist without the virtue. For many who do not have the habit of justice do what is just, either by natural reason or out of fear or out of the hope of acquiring something.

In the second way, something is said to be an act of virtue *formally*, in the way that an act of justice is a just act done in the way that a just individual does it, viz., promptly and with pleasure. And an act of a virtue in this sense does not exist in the absence of the virtue.

Accordingly, almsgiving can exist *materially* in the absence of charity, whereas to give alms formally, i.e., because of God and promptly and in all the other appropriate ways, does not exist in the absence of charity.

**Reply to objection 2:** Nothing prevents an act that properly belongs to one virtue as its elicited act (*elicitive*) from being attributed to another virtue as commanding that act and ordering it toward its own end. And it is in this way that almsgiving is posited among the works of satisfaction, insofar as commiserating with the need of a sufferer is ordered toward satisfaction for one's sins. Now insofar as the act is ordered toward pleasing God, it has the nature of a sacrifice and as such it is commanded by [the virtue of] worship.

**Reply to objection 3:** The reply to the third objection is clear from this.

**Reply to objection 4:** Almsgiving belongs to generosity insofar as generosity removes an impediment to almsgiving that could arise from an excessive love of wealth, resulting in one's becoming too protective of his wealth.

## Article 2

### Are the works of mercy appropriately divided?

It seems that the works of mercy are not appropriately divided:

**Objection 1:** Seven corporal works of mercy are posited, viz., (a) feeding the hungry (*pascere esurientem*), (b) giving drink to the thirsty (*potare sitientem*), (c) clothing the naked (*vestire nudum*), (d) sheltering the homeless (*recolligere hospitem*), (e) visiting the sick (*visitare infirmum*), (f) ransoming the captive (*redimere captum*), and (g) burying the dead (*sepelire motuum*). These are contained in the verse: '*Visito, poto, cibo, redimo, tego, colligo, condo*'.

Likewise, seven spiritual works of mercy are posited, viz. (a) instructing the ignorant (*docere ignorantem*), (b) counseling the doubtful (*consulere dubitanti*), (c) comforting the sorrowful (*consolari tristem*), (d) correcting the sinner (*corrigere peccantem*), (e) forgiving the one who offends us (*remittere offendenti*), (f) bearing burdens and wrongs (*portare onerosos et graves*), and (g) praying for everyone (*pro omnibus orare*). These are likewise contained in a verse, '*Consule, castiga, solare, remitte, fer, ora*', but in such a way that counseling and instructing are both understood under '*consule*'.

However, it seems that these works of mercy are not appropriately divided. For a work of mercy is ordered toward helping one's neighbor. But burying one's neighbor does not help him in any way; otherwise, what our Lord says in Matthew 10:28 ("Do not fear those who kill the body and after that do not have anything further that they might do") would not be true. Hence, in Matthew 25:35-36:42, our Lord, in recalling the works of mercy, does not mention burying the dead. Therefore, it seems that these works of mercy are not appropriately divided.

**Objection 2:** As has been explained (a. 1), alms are given in order to alleviate the needs of one's neighbor. But there are many needs of human life besides those mentioned above; for instance, the blind man needs someone to lead him, the lame man needs something to lean on, the poor man needs wealth. Therefore, the works of mercy mentioned above are not appropriately enumerated.

**Objection 3:** Almsgiving is an act of mercy. But correcting the delinquent seems to belong more to severity than to mercy. Therefore, it ought not to be counted among the spiritual works of mercy.

**Objection 4:** Almsgiving is ordered toward alleviating deficiencies (*ad subveniendum defectui*). But there is no man who does not suffer the deficiency of ignorance in some matters. Therefore, it seems that each individual ought to instruct everyone who is ignorant of what he himself knows.

**But contrary to this:** In a certain homily Gregory says, "Let him who has understanding take care not to remain altogether silent; let him who is affluent be careful not to become tired of the generosity of

mercy; let him who has a skill by which he is guided be most eager to share its use and usefulness with his neighbor; let him who has the opportunity to speak with a rich man fear damnation for hiding his talent if, when he is able to, he does not intercede with him on behalf of the poor.” Therefore, the works of mercy mentioned above are appropriately distinguished according to the things in which men abound or are deficient.

**I respond:** The division of the works of mercy laid out above is appropriately made in a way that corresponds to the diverse needs of one’s neighbors. Some of these needs belong to the soul, and the spiritual works of mercy are directed toward them, whereas others belong to the body, and the corporal works of mercy are directed toward them.

For a corporeal need occurs either during one’s life or after one’s life. If it occurs during one’s life, then it is either a common need for things that everyone needs, or it is a special need because of some supervening accident. If the first, then the need is either interior or exterior. There are two sorts of interior needs, one of which, viz., hunger, is relieved by solid nourishment, and on this score *feeding the hungry* is posited; the other interior need, viz., thirst, is relieved by liquid nourishment, and on this score *giving drink to the thirsty* is posited. On the other hand, there are two common exterior needs, one of which has to do with clothing, and in this regard *clothing the naked* is posited; the other has to do with shelter, and in this regard *sheltering the homeless* is posited. Similarly, if the need is a special need, then it derives either from an intrinsic cause, and in this regard *visiting the sick* is posited, or from an extrinsic cause, and in this regard *ransoming the captive* is posited. After life, what is given to the dead is *burial*.

Similarly, there are two ways in which spiritual needs are alleviated by the spiritual acts of mercy. In one way, by asking God for help, and in this regard what is posited is prayer by which one is *praying for others*. In the other way, by employing human help, and this in three ways. In one way, as regards the needs of the intellect, and if it is a need that belongs to the speculative intellect, then the remedy is applied through *instructing*, whereas if it is a need that belongs to the practical intellect, then the remedy is applied through *counseling*. In the second way, there is a need that stems from a passion of the appetitive power, among which the greatest problem is sadness, which is alleviated through *comforting*. In the third way, the need stems from a disordered act, which can be thought of in three ways. In one way, on the part of the sinner himself, insofar as the act proceeds from his disordered will, and here the remedy is applied through *correcting*. In the second way, the need belongs to the one against whom the sin is committed, and so if the sin is against us, then we apply the remedy by *forgiving* the offense; on the other hand, if the sin is against God or our neighbor, then, as Jerome points out in *Super Matthaem*, it does not fall within our discretion to forgive it. In the third way, on the part of the aftermath of the disordered act itself, by which those living with the sinner are burdened, even beyond the sinner’s intention, and so the remedy is applied by *bearing* the injury, especially in the case of those individuals who sin out of weakness—this according to Romans 15:1 (“We who are stronger must bear the weaknesses of others”)—and not only insofar as the weak are troublesome because of their disordered acts, but also all of their burdens whatsoever are to be borne—this according to Galatians 6:2 (“Bear one another’s burdens”).

**Reply to objection 1:** The burial of a dead man does not confer on him any sort of sensation that a corpse might have after death. And this is why our Lord says that those who kill the body “do not have anything further that they might do.” And it is also because of this that our Lord does not number burial among the other works of mercy; instead, He enumerates only those things that involve a more evident need.

Still, what is done to a dead man’s corpse belongs to him, both (a) because he lives in the memories of men, and so his honor is sullied if he remains unburied, and also (b) because of the affection which he had for his body while he was still alive and which the affections of the pious ought to conform themselves to after his death. Accordingly, as is clear from Augustine in *De Cura Pro Mortuis Agenda*, some individuals, e.g., Tobias and those who buried our Lord, are commended for burying the dead.

**Reply to objection 2:** All the other needs are traced back to these. For instance, blindness and lameness are certain infirmities, and directing the blind and holding up the lame are traced back to *visiting the sick*. Similarly, to help a man in the face of any sort of oppression inflicted exteriorly is traced back to *ransoming the captive*. And wealth, which alleviates poverty, is sought only to alleviate the needs mentioned above, and so no special mention has to be made concerning this particular need.

**Reply to objection 3:** As regards the very execution of the act, correcting sinners seems to contain the severity of justice. But as regards the intention of the one giving the correction, who wishes to free the man from the evil of sin, the act belongs to mercy and the affection of love—this according to Proverbs 27:6 (“Better the wounds inflicted by one who loves you than the deceitful kisses given by one who hates you”).

**Reply to objection 4:** It is not just any instance of ignorance that pertains to a man’s need, but rather the ignorance by which one does not know what it is important for him to know; and it belongs to a work of mercy to alleviate this need. Still, the appropriate circumstances of person and time and place must be observed, just as in the case of other virtuous acts.

### Article 3

#### Are the corporal works of mercy more important than the spiritual works of mercy?

It seems that the corporal works of mercy are more important (*potiores*) than the spiritual works of mercy:

**Objection 1:** It is more praiseworthy to do a work of mercy for someone who is more needy, since a work of mercy has its praise from the fact that it helps someone in need. But the body, which is helped by the corporal works of mercy, has a more needy nature than does the spirit, which is helped by the spiritual works of mercy. Therefore, the corporal works of mercy are more important.

**Objection 2:** Repayment for benefits diminishes their praise and merit; this is why in Luke 14:12 our Lord says, “When you make a lunch or dinner, do not invite your neighbors who are rich, lest perhaps they return the invitation.” But there is always repayment in the case of the spiritual works of mercy, since those who pray for others always profit from it themselves—this according to Psalm 34:13 (“My prayer shall be turned back into my bosom”)—and, in addition, one who teaches another makes progress in knowledge himself. But this does not happen with the corporal works of mercy. Therefore, the corporal works of mercy are more important than the spiritual works of mercy.

**Objection 3:** It is part of the praise of a work of mercy that the poor man is consoled by the work of mercy done for him; hence, Job 31:20 says, “If his limbs have not blessed me ...,” and in Philemon 7 the Apostle says, “The hearts of the saints have been refreshed by you, brother.” But sometimes a poor man is more grateful for a corporal work of mercy than for a spiritual work of mercy. Therefore, a corporal work of mercy is more important than a spiritual work of mercy.

**But contrary to this:** In *De Sermone Domini in Monte*, commenting on the passage “Give to him who asks of you,” Augustine says, “You should give in such a way as to do harm neither to yourself nor to another; and when you refuse what someone asks for, you must indicate your justification, lest you send him away empty. And sometimes you will give something better, after you have corrected an individual who has asked unjustly.” But correction is a spiritual work of mercy. Therefore, the spiritual works of mercy are to be preferred to the corporal works of mercy.

**I respond:** There are two possible ways to think about the comparison between these works of mercy.

In one way, *absolutely speaking*, and on this score the spiritual works of mercy are preeminent, and this for three reasons. First, because what is given is more noble, viz., a spiritual gift, which is better

than a corporeal gift—this according to Proverbs 4:2 (“I will give you a good gift; forsake not my Law”). Second, *by reason of the thing that is helped*, since the spirit is more noble than the body. Hence, just as a man ought to provide for himself more as regards his spirit than as regards his body, so also for his neighbor, whom he ought to love as himself. Third, *with respect to the acts themselves by which one helps his neighbor*, since spiritual acts are more noble than corporeal acts, which are in some sense servile.

In the second way, the works of mercy can be compared with respect to a particular case in which some corporal work of mercy is preferable to some spiritual work of mercy. For instance, someone who is dying of hunger should be fed rather than instructed, just as, according to the Philosopher in *Topics* 3, “it is better for a needy man to acquire money than to philosophize,” even though the latter is better absolutely speaking.

**Reply to objection 1:** All other things being equal, it is better to give to someone who is needy. But if a less needy individual is better and needs what is better, then it is better to give to him. And this is how it is in the case under discussion.

**Reply to objection 2:** If repayment is not intended, then it does not diminish the merit and praise that belong to a work of mercy, just as human glory, if it is not intended, likewise does not diminish the nature of a virtue. As Sallust says of Cato, “The more he fled from glory, the more glory pursued him.” And this is what happens with the spiritual works of mercy. And yet intending spiritual goods does not diminish merit, just as intending good corporeal goods does not diminish merit.

**Reply to objection 3:** The merit of one who does a work of mercy has to do with what the will of the one who receives it should come to rest in according to reason, and not with what it comes to rest in if it is disordered.

#### Article 4

##### Do the corporal works of mercy have a spiritual effect?

It seems that the corporal works of mercy do not have a spiritual effect:

**Objection 1:** An effect is not more potent than its cause. But spiritual goods are more potent than corporeal goods. Therefore, the corporal works of mercy do not have spiritual effects.

**Objection 2:** To give something corporeal in return for something spiritual is the vice of simony. But this vice is altogether to be avoided. Therefore, works of mercy should not be offered in order to obtain spiritual effects.

**Objection 3:** When the cause is multiplied, the effect is multiplied. Therefore, if a corporal work of mercy caused a spiritual effect, then it would follow that a greater work of mercy would bring about more spiritually. But this is contrary to what we read in Luke 21:2ff. about the widow who gave two brass coins to the treasury and who, in our Lord’s view, gave more than everyone. Therefore, a corporal work of mercy does not have a spiritual effect.

**But contrary to this:** Ecclesiasticus 17:22 says, “A man’s works of mercy ... shall preserve the man’s grace as the apple of His eye.”

**I respond:** A corporal work of mercy can be thought of in three ways.

In one way, *with respect to its own substance*. And on this score it has only a corporeal effect, viz., insofar as it alleviates the needs of one’s neighbor.

In the second way, it can be thought of *as regards its cause*, viz., insofar as someone does a corporal work of mercy because of his love of God and neighbor. And in this regard it bears spiritual fruit—this according to Ecclesiasticus 29:13-14 (“Lose your money for your brother. Put your treasure in the precepts of the Most High, and that will profit you more than gold”).

In the third way, it can be thought of *as regards its effect*. And in this way it likewise bears spiritual fruit, viz., insofar as one's neighbor, who is helped by the corporal work of mercy, is moved to pray for his benefactor. Hence, in the same passage it is added, "Store your alms in the heart of the poor man, and it will save you from every evil."

**Reply to objection 1:** This argument goes through for a corporal work of mercy with respect to its own substance.

**Reply to objection 2:** Someone who does a corporal work of mercy does not intend to purchase something spiritual through the corporeal, since he realizes that spiritual goods infinitely exceed corporeal goods. Rather, he intends to merit a spiritual fruit through the affection of charity.

**Reply to objection 3:** The widow, who gave less as far as quantity is concerned, gave more in proportion. Because of this, the affection of charity is thought of as being greater in her, and it is because of this affection that the corporal work of mercy has a spiritual effect.

## Article 5

### Is doing a work of mercy contained in a precept?

It seems that doing a work of mercy is not contained in a precept (*non sit in praecepto*):

**Objection 1:** Counsels are distinguished from precepts. But it is a counsel to perform works of mercy—this according to Daniel 4:24 ("Let my counsel please the king, and redeem your sins with works of mercy"). Therefore, doing a work of mercy is not contained in a precept.

**Objection 2:** Everyone is permitted to use his own property and to keep it. But if someone keeps his own property, then he will not do works of mercy. Therefore, it is permitted not to do works of mercy. Therefore, doing a work of mercy is not contained in a precept.

**Objection 3:** What falls under a precept is such that at certain times it makes transgressors liable to mortal sin, since affirmative precepts impose obligations for determinate times. Therefore, if doing a work of mercy fell under a precept, it would be possible to determine some time at which a man would sin mortally unless he did a work of mercy. But this does not seem to be the case, since one can always calculate that the poor man can probably be helped in some other way, and that the resources that would have to be expended for works of mercy could be necessary for oneself either in the present or in the future. Therefore, it seems that doing a work of mercy is not contained in a precept.

**Objection 4:** All precepts are traced back to the precepts of the Decalogue. But there is nothing contained in those precepts about doing works of mercy. Therefore, doing a work of mercy does not fall under a precept.

**But contrary to this:** No one is punished with an eternal punishment for failing to do something that does not fall under a precept. But some are punished with an eternal punishment for failing to do works of mercy—this according to Matthew 25. Therefore, doing a work of mercy is contained in a precept.

**I respond:** Since the love of one's neighbor is contained in a precept, everything without which the love of one's neighbor is not preserved must fall under a precept.

Now it belongs to the love of our neighbor not only that we *will* the good for our neighbor but also that we *do* good for him—this according to 1 John 3:18 ("Let us love not in word or with our tongue, but in deed and in truth"). But in order for us to will the good and to do good for someone, it is required that we alleviate his needs, and this is accomplished by doing works of mercy. And so doing works of mercy is contained in a precept.

However, because precepts are given concerning the acts of the virtues, the gift of a work of mercy has to fall under a precept insofar as it is necessary for the virtue, i.e., insofar as right reason requires it.

And in accord with right reason, there is something to consider on the part of the one who does the work of mercy, and something to consider on the part of the one for whom the work of mercy is to be done.

On the part of *the one who does the work*, it must be considered whether the resources that have to be expended in doing the work of mercy are from his surplus—this according to Luke 11:41 (“Give alms from that which remains”). And I say ‘surplus’ not only with respect to his own self, i.e., not only that which is over and beyond what is necessary for an individual, but also with respect to those others whose care is incumbent upon him. For it is first necessary that each individual should provide for himself and for those whose care is incumbent upon him (we say that the latter are ‘necessary to the person’ insofar as ‘person’ implies his important function (*dignitas*)), and afterwards he may alleviate the needs of others from what is left over—just as nature first takes for itself, in order to sustain its own body, what is necessary for the role of the nutritive power, whereas it expends the surplus for the generation of another individual through the generative power.

As for *the recipient*, what is required is that he have a need; otherwise, there would be no reason why a work of mercy should be done for him. But since it is not possible for any one individual to help all of those who have a need, not every need imposes an obligation under the precept, but only a need which is such that the one enduring it cannot sustain himself without help. What Ambrose says applies in such a case: “Feed the man who is dying of hunger; if you are not worried about him, you are killing him.”

So, then, doing works of mercy out of one’s surplus is contained in a precept, along with doing a work of mercy for anyone who is in extreme need. For the rest, doing a work of mercy falls under a counsel, just as counsels are handed down concerning any better good.

**Reply to objection 1:** Daniel was speaking to a king who was not subject to God’s Law. And so even those things that belong to the precepts of the Law, which he did not profess, were to be proposed to him in the manner of counsels.

An alternative reply is that Daniel was speaking in a situation in which doing a work of mercy was not contained under a precept.

**Reply to objection 2:** Temporal goods, which are divinely bestowed on a man, belong to him as far as *ownership* is concerned, but as far as *use* is concerned, they ought to belong not only to him but also to others who can be sustained by them when taken from his surplus. Hence, Basil says, “If you claim that [your temporal goods] have come to you from God, is God unjust in distributing them unequally? Why do you have an abundance while that other man goes begging, except in order that you might gain the merit of good stewardship, while he is adorned with the rewards of patience? It is the hungry man’s bread that you are holding on to, the naked man’s cloak that you are keeping in your closet, the barefoot man’s shoes that are rotting away in your house, the indigent man’s silver that you openly possess. And so you injure as many as you are able to help.” And Ambrose says the same thing in *Decreta*, dist. 47.

**Reply to objection 3:** It is possible to designate a time when someone sins mortally in failing to do a work of mercy: *on the part of the recipient*, when the need appears to be evident and urgent and no one is at hand who might help him; *on the part of the giver*, when he has extra resources that are not needed by him in his present situation, insofar as this can be estimated with probability. Nor is it necessary for him to take into account all the cases that can occur in the future, for this is to give thought to tomorrow, which our Lord prohibits in Matthew 6:34. Instead, he should make judgments about what is surplus and what is necessary in accord with what occurs with probability and in most cases.

**Reply to objection 4:** Every instance of helping one’s neighbor is traced back to the precept about honoring one’s parents. For this is the Apostle’s interpretation in 1 Timothy 4:8 when he says, “Godliness (*pietas*) is useful to all things, holding the promise of the life that now is and the life that is to come.” He says this because a promise is added to the precept about honoring one’s parents, “that you may live long upon the earth.” Every instance of doing a work of mercy is included here under

‘godliness’.

## Article 6

### Should one do a corporal work of mercy with resources that are necessary for himself?

It seems that one should not do a work of mercy with resources that are necessary for himself (*non debet eleemosynam dare de necessario*):

**Objection 1:** The order of charity has no less to do with the effect of beneficence than with the interior affection of beneficence. But someone sins if he reverses the order of charity (*si praepostere agit in ordine caritatis*), since the order of charity is contained in a precept. Therefore, since, in keeping with the order of charity, one ought to love himself more than his neighbor, it seems that he sins if he takes away what is necessary for himself in order to give it to someone else.

**Objection 2:** If someone gives out of what is necessary for himself, then he dissipates his own substance, and, as is clear from *Ethics* 4, this belongs to the prodigal individual. But one ought not to do a vicious deed. Therefore, a work of mercy is not to be done with resources that are necessary for oneself.

**Objection 3:** In 1 Timothy 5:8 the Apostle says, “If any man does not take care of his own—and especially of his household—then he has denied the faith and is worse than a non-believer.” But for someone to give of what is necessary for himself or for his own seems to detract from the care that he ought to exercise for himself and his own. Therefore, if someone does a work of mercy with necessary resources, then he sins gravely.

**But contrary to this:** In Matthew 19:21 our Lord says, “If you want to be perfect, go and sell all that you have and give it to the poor.” But one who gives all that he has to the poor not only gives from his surplus but also gives away what is necessary. Therefore, a man can do a work of mercy with resources that are necessary for himself.

**I respond:** There are two senses of ‘necessary’.

In one sense, the necessary is that in the absence of which something cannot be. And, in this sense of ‘necessary, a work of mercy should absolutely not be done with resources that are necessary—for instance, if someone in dire need had only what made it possible for his children and others belonging to him to be sustained. For to perform an act of mercy with resources that are necessary in this sense is to take life itself away from himself and those who belong to him. But I say this only as long as there is no imminent situation such that in taking resources from himself, he would be giving them, say, to some important person through whom the Church or the republic would be sustained; for it would be praiseworthy to expose himself and those who belong to him to the danger of death for the sake of liberating such a person, since the common good is to be preferred to one’s own good.

In a second sense, something is said to be necessary when without it life cannot be lived in a way that befits the condition or status of a given person himself and the other persons whose care is incumbent upon him. The limit of this sort of necessity is not fixed at any indivisible point; instead, even when many things have been added, it cannot be judged that one is beyond necessity of this sort, and even when many things have been taken away, there is still enough that one might be able to live his life in a way that befits his status. Thus, it is good to perform a work of mercy with resources that are necessary in this sense, and this falls under a counsel and not a precept. On the other hand, it would be disordered if someone took so much away from his own proper goods in order to give it to others that he would not be able to live on what remains in a way befitting his proper status and ordinary business. For no one is obligated to live in an unfitting way.

However, three exceptions have to be made to this rule.

The first is when someone changes his status, viz., by entering religious life (*per religionis ingressum*). For in such a case, giving away everything for the sake of Christ, he does a work of perfection by placing himself in a different state.

Second, when, even if what he takes away from himself is necessary for a fitting life, it can nonetheless be easily restored, so that the worst sort of unfittingness (*maximum inconueniens*) does not ensue.

Third, when some private person experiences extreme need, or when even the republic experiences great need. For in these cases someone would be praiseworthy for foregoing what would seem to be suitable for his status in order to alleviate a major need.

**Reply to objection 1 and objection 2 and objection 3:** On the basis of what has been said, the replies to the objections are easily seen.

## Article 7

### Can a corporal work of mercy be done with illicitly acquired resources?

It seems that a work of mercy can be done with illicitly acquired resources:

**Objection 1:** Luke 16:9 says, “Make friends with the mammon of iniquity.” But ‘mammon’ signifies wealth. Therefore, one can, with wickedly acquired wealth, make spiritual friends for himself by doing works of mercy.

**Objection 2:** All filthy lucre seems to be illicitly acquired. But what is acquired from prostitution is filthy lucre, and so a sacrifice or oblation should not be offered to God out of this sort of wealth—this according to Deuteronomy 23:18 (“Do not offer a prostitute’s fee in the house of your God”). Similarly, what is acquired through gambling is filthy, since, as the Philosopher says in *Ethics* 4, “We take such gains from our friends, to whom we ought to be giving instead.” Most filthy of all is what is acquired by simony, through which one does injury to the Holy Spirit. And yet works of mercy can be done with resources of these sorts. Therefore, someone can do a work of mercy from badly acquired resources.

**Objection 3:** Greater evils are more to be avoided than lesser evils. But the holding of something that belongs to another is less a sin than is homicide, which one incurs unless he helps an individual who is in extreme need. This is clear from Ambrose, who says, “Feed the one who is dying of hunger, since if you are not worried about him, you are killing him.” Therefore, in some cases one can do a work of mercy from badly acquired resources.

**But contrary to this:** In *De Verbis Domini* Augustine says, “Do works of mercy from the resources gained by your just labors. For you will not corrupt Christ the judge, so that He does not hear you along with the poor whom you rob ... Do not do works of mercy from the proceeds of interest and usury. I am speaking to believers, to whom we distribute the Body of Christ.”

**I respond:** There are three ways in which something can be illicitly acquired.

In one way, what is illicitly acquired by someone is owed as a debt to the one from whom it has been acquired and it cannot be kept by the one who acquired it—as happens with pillaging and theft and usury. And since the man is obligated to make restitution, a work of mercy cannot be done with such resources.

In a second way, something is illicitly acquired because the one who acquired it cannot keep it, and yet it is not owed as a debt to the one from whom he acquired it, because he received it in a way contrary to justice and the other gave it in a way contrary to justice—as happens in the case of simony, in which both the giver and the receiver act against the justice of God’s law. Hence, restitution does not have to be made to the giver; instead, what was illicitly acquired should be given away for works of mercy. And the same line of reasoning holds in similar cases, i.e., cases in which both the giving and the receiving is

against the law.

In the third way, something is illicitly acquired not, to be sure, because the very acquisition of it is illicit, but rather because that from which it is acquired is illicit—as is clear in the case of what a woman acquires through prostitution. And this is what is properly called ‘filthy lucre’ (*turpe lucrum*). By the fact that the woman practices prostitution, she acts in a shameful way and contrary to God’s law, but she does not act unjustly or against the law in taking what she acquires. Hence, what is illicitly acquired in this way can be kept and a work of mercy can be done with it.

**Reply to objection 1:** As Augustine says in *De Verbis Domini* (Sermon 113), “There are those who, misinterpreting these words of our Lord, plunder the property of others and give something from it to the poor, and think that they are doing what our Lord has commanded. This interpretation has to be corrected.” Instead, “all wealth (*omnes divitiae*) is being called ‘the mammon of iniquity’,” as he puts it in *De Quaestionibus Evangelii*, “since mammon belongs only to the iniquitous, who put their hope in it.”

Alternatively, according to Ambrose, “He says ‘mammon of iniquity’ (*mammon iniquitatis*) because the enticement of riches tempts our affections.”

Alternatively, as Basil says, “Among the many predecessors whom you have succeeded with their patrimony, someone will be found who unjustly usurped the property of others, even though you do not know of it.”

Alternatively, all mammon (*divitiae*) is said to be ‘of iniquity’, i.e., of inequality, because goods are not equally distributed to everyone; instead, one individual is poor and another wealthy.

**Reply to objection 2:** It has already been explained how a work of mercy can be done from what is acquired through prostitution. However, a sacrifice or oblation is not to be made from such resources at the altar, both because of scandal and also because of reverence for the sacred. Likewise, a work of mercy can be done from what is acquired through simony, since these resources are not owed to the one who gave them and yet one deserves to lose them.

By contrast, what is acquired through games of chance seems to be something illicit by divine law, viz., (a) that someone should profit from those who cannot give over their own property, e.g., minors and madmen and others of this sort, and (b) that he entices them because of their disordered desire to profit from a game, and (c) that he profits at their expense through fraud. In such cases one is obligated to make restitution, and so he cannot do a work of mercy from his gains.

Moreover, what is acquired through games of chance seems further to be something illicit by positive civil law, which universally prohibits such gain. However, since civil law does not obligate everyone, but obligates only those who are subject to the relevant laws, and, again, since civil law can be abrogated by disuse, it follows that among those who are restricted by laws of this sort, the ones who profit are without exception obligated to make restitution—unless, perhaps, a contrary custom prevails or unless one is enriched at the expense of someone who lured him into the game. In a case like that, he is not obligated to make restitution, since the one who lost the money is unworthy to get it back. But neither can the winner licitly retain what he has acquired, as long as this sort of positive law remains in effect. Hence, he ought to do a work of mercy from his winnings in such a case.

**Reply to objection 3:** In a case of extreme need all things are held in common (*omnia sunt communia*). Hence, it is permissible for someone who experiences such a need to take from another for his own survival, if he does not find anyone who wants to give to him. And for the same reason, it is permissible to hold on to something that belongs to another—and even to take what belongs to another—and to do a work of mercy with it, if there is no other possible way to help someone suffering extreme need. However, if this can be done without danger, he ought to provide for the poor man who is suffering from extreme need after having requested the consent of the owner of the property.

## Article 8

### Can someone who is under the power of another do works of mercy?

It seems that someone who is under the power of another can do a work of mercy:

**Objection 1:** Religious are under the power of those to whom they have vowed obedience. But if they were not permitted to do acts of mercy, then they would suffer a loss from the religious state, since, as Ambrose puts it, “The summit of the Christian life consists in piety, which is especially set off by the doing of works of mercy.” Therefore, those who are under the power of another can do works of mercy.

**Objection 2:** As Genesis 3:16 says, a wife is “under the power of her husband.” But a wife can do works of mercy after she is assumed into the society of her husband; hence, it is said of St. Lucy that she did works of mercy without her spouse knowing about it. Therefore, the fact that one is under the power of another does not prevent him from being able to do works of mercy.

**Objection 3:** There is a certain natural subjection of children to their parents; hence, in Ephesians 6:1 the Apostle says, “Children, obey your parents in the Lord.” But, it seems, children can do works of mercy with their father’s property, since it in some way belongs to them, because they are his heirs. And since they are able to use that property for the advantage of their own bodies, it seems, *a fortiori*, that they can use it to do works of mercy as a remedy for their souls. Therefore, those who are under the power of another can do works of mercy.

**Objection 4:** Servants are under the power of their masters—this according to Titus 2:9 (“Servants are to be subject to their masters”). Still, they are permitted to do what is advantageous for their master, and this is accomplished in the best way of all if they do works of mercy on their master’s behalf. Therefore, those who are under the power of another can do works of mercy.

**But contrary to this:** Works of mercy should not be done with resources that belong to another, but instead each one should do works of mercy “from his own just labors,” as Augustine puts it in *De Verbis Domini*. But if those who are subject to others do a work of mercy, then this is from someone else’s resources. Therefore, those who are under the power of others cannot do works of mercy.

**I respond:** One who is under the power of another should as such be regulated by the power of his superior. For it is the natural order that the lower should be regulated by the higher. And so in those matters in which someone lower is subject to someone higher, he must not act otherwise than he has been commissioned to by his superior.

So, then, one who is under the power of another with respect to some matter in which he is subject to his superior should not do a work of mercy except insofar as he has been permitted to by his superior. On the other hand, if one has some resources with respect to which he is not subject to his superior’s power, then he is in that respect not subject to a power, but is in this matter his own law. And he is able to do a work of mercy from those resources.

**Reply to objection 1:** If a monk has a dispensation commissioned by his prelate, then he can do a work of mercy from the monastery’s resources, insofar as this has been commissioned to him. On the other hand, if he does not have a dispensation, then since he has nothing that belongs to him as an individual, he cannot do a work of mercy without the abbot’s permission, either expressly given or presumed with high probability—except perhaps in a case of extreme necessity of the sort in which it would be permissible for him to steal in order to do the work of mercy.

Nor is a religious for this reason put in a worse position, since as *De Ecclesiasticis Dogmatibus* says, “It is a good thing to give one’s property to the poor little by little, but it is better still to give everything all at once with the intention of following our Lord and, having been freed from care, to be needy with Christ.”

**Reply to objection 2:** If a wife has other property—i.e., over and beyond her dowry, which is ordered toward taking care of the burdens of matrimony—regardless of whether this extra property is

from her own earnings or from some other licit source, she can do works of mercy from it even without requesting her husband's assent—though moderate works of mercy, lest she impoverish her husband by the excessiveness of those works.

Otherwise, a wife should not do works of mercy without either the express or presumed consent of her husband, just as was explained above in the case of a monk. For even though the woman is an equal in the act of matrimony, nonetheless, in matters that pertain to the running of the home the husband is “the head of his wife” according to the Apostle in 1 Corinthians 11:3.

Now St. Lucy was engaged to be married and as yet had no husband. Hence, she was able to do works of mercy with her mother's consent.

**Reply to objection 3:** What belongs to the children belongs to the father. And so the children cannot do works of mercy—except perhaps modest ones, which one can assume the father approves of—unless perhaps there were some portion of property that they were commissioned by their father to be the dispensers of. And the same thing holds for servants.

**Reply to objection 4:** The answer to the fourth objection is clear from this.

## Article 9

### Should works of mercy be done more for those who are closer to oneself?

It seems that works of mercy should not be done more for those who are closer to oneself:

**Objection 1:** Ecclesiasticus 12:4-6 says, “Give to the merciful and uphold not the sinner ... Do good to the humble and give not to the ungodly.” But it sometimes happens that those close to us are sinners and ungodly. Therefore, works of mercy are not to be done more for them.

**Objection 2:** Works of mercy are to be done in order that one might receive an eternal reward in return—this according to Matthew 6:18 (“And your Father, who sees what is hidden, will reward you”). But the reward of eternal life is acquired especially through works of mercy that are done for the saints—this according to Luke 16:9 (“Make friends with the mammon of iniquity, that when you shall fail, they may receive you into everlasting dwellings”), which, in *De Verbis Domini* (Sermon 113), Augustine expounds by saying, “Who are the ones who will have everlasting dwellings, if not the saints of God? And who are the ones who will be received by them into their tents, if not those who serve them in their need?” Therefore, works of mercy should be done for those who are holier more than for those who are closer.

**Objection 3:** A man is closest of all to himself. But a man cannot do works of mercy for himself. Therefore, it seems that works of mercy are not to be done more for a person who is more closely connected with oneself.

**But contrary to this:** In 1 Timothy 5:8 the Apostle says, “If any man does not take care of his own—and especially of his own household—then he has denied the faith and is worse than a non-believer.”

**I respond:** As Augustine says in *De Doctrina Christiana* 1, those who are more closely connected with us come to us, as it were, by happenstance, so that we ought to provide for them more.

However, on this matter reasons for discretion have to be applied according to differences in the connection, in holiness, and in usefulness. For works of mercy are to be done much more for a holier individual, and more for an individual who is useful to the common good than for a person who is close to us—especially if that person is not very close to us or someone whose special care is incumbent upon us, and if that person is not suffering from great need.

**Reply to objection 1:** A sinner is not to be helped insofar as he is a sinner, i.e., in order that through this help he is supported in his sin. Rather, he is to be helped insofar as he is a man, i.e., in order

that his nature might be sustained.

**Reply to objection 2:** There are two ways in which a work of mercy contributes to the reward of eternal recompense.

In one way, *from the root of charity*. And on this score a work of mercy is meritorious as long as it preserves the order of charity, according to which we should, all other things being equal, take more care of those who are more closely connected with us. Hence, in *De Officio* 1 Ambrose says, “This generosity is shown by your not despising your blood relatives if you know them to be in need. For it is better that you yourself should help your own people, for whom it would be shameful to request something from others.”

In a second way, a work of mercy contributes to the recompense of eternal life *by the merit of the one for whom it is done*, who prays for the one who has done the work of mercy. Augustine speaks along these lines in the same place.

**Reply to objection 3:** Given that almsgiving is a work of mercy, just as mercy is not properly directed toward oneself except by a certain similitude, as was explained above (q. 30, a. 1), so too, properly speaking, no one does a work of mercy for himself—except perhaps when he acts in the person of another. For instance, when someone is appointed as a distributor of works of mercy, he is able to receive one for himself if he needs it, along the same lines as when he ministers to others.

## Article 10

### Should works of mercy be done in abundance?

It seems that works of mercy should not be done in abundance:

**Objection 1:** Works of mercy ought to be done especially for those who are more closely connected with oneself. But works of mercy should not be done for them in such a way “that they want to become rich thereby,” as Ambrose puts it in *De Officio* 1. Therefore, works of mercy should not be done in abundance for others, either.

**Objection 2:** In the same place Ambrose says, “Our riches should not be poured out all at once, but dispensed in degrees.” But an abundance of works of mercy is a pouring out of riches. Therefore, works of mercy ought not to be done in abundance.

**Objection 3:** In 2 Corinthians 8:13 the Apostle says, “... not that others should have it easy,” i.e. live off of your resources idly, “and you be troubled,” i.e., impoverished. But this would happen if works of mercy were done abundantly. Therefore, works of mercy are not to be done in abundance.

**But contrary to this:** Tobias 4:9 says, “If you have a lot, then give in abundance.”

**I respond:** Abundance in works of mercy can be thought of in two ways, viz., (a) on the part of the giver and (b) on the part of the recipient.

On the part of the *giver*, viz., when someone gives a lot in proportion to his resources. And in this sense it is praiseworthy to give abundantly. Hence, in Luke 21:3-4 our Lord praised the widow, who “out of her want, has cast in all the living that she had”—as long as one observes the points explained above (a. 6) about doing works of mercy with resources that are necessary for oneself.

On the part of the *recipient*, there are two senses of abundant works of mercy. In one sense, what is abundant is what is sufficient to take care of his need. And in this sense it is praiseworthy to do works of mercy abundantly. In the other sense, what is abundant is excessive. And this is not praiseworthy; instead, it is better to give to a greater number of needy individuals. Hence, in 1 Corinthians 13:3 the Apostle says, “If I should distribute food to feed the poor ...,” where a Gloss says, “By this a cautionary note is taught about works of mercy, in order that they might be done not for just one individual but for many, in order to help a greater number of individuals.”

**Reply to objection 1:** This argument goes through for abundance that exceeds the need of the recipient of the work of mercy.

**Reply to objection 2:** This passage is talking about an abundance of works of mercy on the part of the giver. But one should understand that God did not want all our riches to be poured out at once, except in the case of a change of state. Hence, he adds in the same place, "... except perhaps in the way that Elisha killed his oxen and fed the poor out of what he had, in order not to be obliged by any domestic cares."

**Reply to objection 3:** The cited passage, as far as the phrase "not that the others should have it easy or refreshing ..." is concerned, is speaking about an abundance of works of mercy that exceeds the needs of the recipient, who is to be granted works of mercy not in order that he might become rich, but in order that he might be sustained. Still, discretion is to be applied in such cases because of the diverse conditions of men, some of whom, having been nurtured on more delicate things, need more delicate foods and clothes. Hence, in *De Officio* Ambrose says, "When you are giving, you have to take age and weakness into consideration, and sometimes even the shame which betrays noble origins or the fact that someone has fallen from riches to poverty through no fault of his own."

As regards what is added, "... and you be troubled," he is talking about abundance on the part of the giver. But as a Gloss on this passage puts it, "He does not say this because abundant giving would not be better; instead, he is worried about those who are weak and whom he is warning to give in such a way as not to suffer from need themselves."

## QUESTION 33

### Fraternal Correction

We next have to consider fraternal correction. And on this topic there are eight questions: (1) Is fraternal correction an act of charity? (2) Is fraternal correction contained in a precept? (3) Does this precept extend to everyone or does it exist only for prelates? (4) Are those subject to prelates obligated by this precept to correct them? (5) Is a sinner able to give a correction? (6) Should someone be corrected if he is going to become worse because of correction? (7) Should a private correction (*secreta correctio*) precede a denunciation? (8) Should witnesses be called in prior to a denunciation?

#### Article 1

##### Is fraternal correction an act of charity?

It seems that fraternal correction is not an act of charity:

**Objection 1:** A Gloss on Matthew 18:15-18 (“If your brother sins against you, go and tell him his fault between you and him alone. If he listens to you, you have won over your brother. If he does not listen, take one or two others along with you, so that every fact may be established on the testimony of two or three witnesses. If he refuses to listen to them, tell the church. If he refuses to listen even to the church, then treat him as you would a gentile or a tax collector”) says, “One’s brother should be reprovved out of a zeal for justice. But justice is a virtue distinct from charity. Therefore, fraternal correction is not an act of charity.

**Objection 2:** A fraternal correction is made by a private admonition (*per secretam admonitionem*). But an admonition is a certain sort of counsel, which belongs to prudence; for as *Ethics* 6 says, it belongs to the prudent man “to undertake counsel well.” Therefore, fraternal correction is an act of prudence and not an act of charity.

**Objection 3:** Contrary acts do not belong to the same virtue. But to support a sinner is an act of charity—this according to Galatians 6:2 (“Bear one another’s burdens and you will fulfill the law of Christ, which is the law of charity”). Therefore, it seems that correcting a brother who sins, which is contrary to supporting him, is not an act of charity.

**But contrary to this:** To correct a wrongdoer (*corripere delinquentem*) is a spiritual work of mercy. But as was explained above (q. 32, a. 1), a work of mercy is an act of charity. Therefore, fraternal correction is likewise an act of charity.

**I respond:** The correction of a wrongdoer is a certain remedy that should be applied against his sin. Now there are two ways in which to think of someone’s sin: (a) insofar as it is harmful to the one who sins, and (b) insofar as it tends to harm others who are hurt or scandalized by his sin, and also insofar as it tends to harm the common good, the justice of which is disturbed by a man’s sin.

Therefore, there are two sorts of correction of a wrongdoer.

The *first* is a correction that applies the remedy to the sin insofar as there is a certain badness in the sinner himself; and this is fraternal correction properly speaking, which is ordered toward the improvement of the wrongdoer. Now removing someone’s badness is the same as procuring the good for him. But procuring a brother’s good belongs to charity, through which we will the good for our friend and do good for him. Hence, fraternal correction is likewise an act of charity, since through it we repel our brother’s badness, viz., his sin. The removal of his badness belongs to charity even more than the removal of an exterior loss or of corporeal damage, by as much as the contrary good of virtue is more closely related to charity than is either the good of one’s body or the good of exterior things. Hence, fraternal correction is more an act of charity than is the healing of bodily illness or the sort of help by which exterior need is eliminated.

The *second* sort of correction is one that applies the remedy to the wrongdoer’s sin insofar as that

sin is bad for others and also mainly insofar as it damages the common good. And this sort of correction is an act of justice, whose aim is to preserve the rectitude of justice between one individual and another.

**Reply to objection 1:** The Gloss in question is talking about the second type of correction, which is an act of justice.

Alternatively, if the Gloss is talking about the first type of correction, then, as will be explained below (q. 58, a. 5), justice is being understood here insofar as it is a universal virtue, in the same way that “every sin is iniquity” (2 John 3:4) in the sense that it is contrary to justice.

**Reply to objection 2:** As the Philosopher says in *Ethics* 6, prudence effects rectitude in the case of the means to an end, concerning which there is counsel or deliberation and choice. Yet since through prudence we do something rightly for the end of a moral virtue, say, temperance or fortitude, the act is principally an act of that virtue toward whose end it is ordered. Therefore, since an admonition which is made in fraternal correction is ordered toward removing our brother’s sin, which has to do with charity, it is clear that such an admonition is principally an act of charity in the sense that charity commands it, whereas it is secondarily an act of prudence in the sense that prudence executes and directs the act.

**Reply to objection 3:** Fraternal correction is not opposed to supporting the weak, but instead follows from it. For someone supports a sinner to the extent that he is not stirred up against him but instead preserves his benevolence toward him. And from this it happens that he takes the trouble to improve him.

## Article 2

### Is fraternal correction contained in a precept?

It seems that fraternal correction is not contained in a precept:

**Objection 1:** Nothing that is impossible falls under a precept—this according to Jerome (“Cursed be he who claims that God has commanded something impossible”). But Ecclesiastes 7:14 says, “Consider the works of God, that no one can correct someone whom he despises.” Therefore, fraternal correction is not contained in a precept.

**Objection 2:** All the precepts of divine law are traced back to the Decalogue. But fraternal correction does not fall under any of the precepts of the Decalogue. Therefore, it does not fall under a precept.

**Objection 3:** Failing to fulfill a divine precept is a mortal sin, and so it is not found in saintly men. But failing to give fraternal correction is found in the saints and in spiritual men. For instance, in *De Civitate Dei* 1 Augustine says, “Not only lower individuals, but also those who occupy a higher level of life keep themselves from reprimanding others—and this because of the shackles of excessive desire and not because of the proper duties of charity.” Therefore, fraternal correction does not fall under a precept.

**Objection 4:** What is contained in a precept has the character of something owed (*habet rationem debiti*). Therefore, if fraternal correction fell under a precept, we would owe it to our brothers to correct them when they sin. But one who owes a corporeal debt to someone, e.g., money, ought not to be content with his creditor coming to him, but should instead seek out his creditor in order to pay the debt. Therefore, it would be necessary for a man to seek out those who need correction in order to correct them. But this seems absurd, both because of the great number of sinners, for whose correction an individual man could not be sufficient, and also because it would be necessary for those in religious life to leave their cloisters in order to correct men, which is inappropriate. Therefore, it is not the case that fraternal correction is contained in a precept.

**But contrary to this:** In *De Verbis Domini* (sermon 82) Augustine says, “If you neglect to correct, then you become worse than the one who has sinned.” But this would not be the case unless through

negligence of this sort one were failing to fulfill a precept. Therefore, fraternal correction is contained in a precept.

**I respond:** Fraternal correction falls under a precept.

However, notice that just as a negative precept prohibits acts of sin, so an affirmative precept leads one toward acts of virtue. Now the acts of sin are bad in their own right and can in no way be done well at any time or in any place, since they are connected to a bad end in their own right, as *Ethics 2* explains. And so negative precepts always obligate one, and they obligate him for all times.

By contrast, acts of virtue ought not to be done in just any way at all; instead, they are to be done observing the appropriate circumstances that are required in order for there to be a virtuous act, viz., that the act be done where it should be done, and when it should be done, and in the way it should be done. And since the disposition of the means to an end corresponds to the character of the end, it is the character of the end, which is the good of the virtue, that must be mainly attended to among the circumstances of a virtuous act. Therefore, if there is an omission of some circumstance of a virtuous act which is such that it totally destroys the good of the virtue, then this is contrary to the precept. On the other hand, if there is some defectiveness in a circumstance which does not totally destroy the virtue, then even though the act does not perfectly attain to the good of the virtue, it is not contrary to the precept. Hence, in *Ethics 2* the Philosopher likewise says that if one deviates a little from the mean, this is not contrary to the virtue, whereas if one deviates a lot from the mean, then the virtue is corrupted in its act.

Now fraternal correction is ordered toward the improvement of one's brother. And so it falls under a precept to the extent that it is necessary for that end, but not in such a way that a delinquent brother is corrected in just any place or at just any time.

**Reply to objection 1:** In all good deeds a man's operation is effective only if God's assistance is present, and yet a man ought to do what he is capable of (*debet facere quod in se est*). Hence, in *De Correptione et Gratia* Augustine says, "Without knowing who belongs to the number of the predestined and who does not belong, we should be moved by the affection of charity in such a way that we wish all to be saved." And so we ought to offer the favor of fraternal correction to everyone, hoping for God's assistance.

**Reply to objection 2:** As was explained above (q. 32, a. 5), all precepts that pertain to offering some benefit to one's neighbor are traced back to the precept about honoring one's parents.

**Reply to objection 3:** There are three ways in which one can fail to do fraternal correction (*correctio fraterna tripliciter omitti potest*).

In the first way, one fails to do it *meritoriously*. For in *De Civitate Dei 1* Augustine says, "If someone refrains from rebuking and correcting those who act badly because he is looking for a more opportune time, or because he fears that if he does so, either they will become worse because of it or they will hinder, pressure, and turn away from the Faith others who are weak and need to be instructed to live a good and pious life, then such an omission seems to result not from disordered desire, but from the counsel of charity."

In a second way, fraternal correction is omitted in such a way as to *incur mortal sin (praetermittitur cum peccato mortali)*, viz., when, as Augustine explains in the same place, "one is afraid of being judged by ordinary people or even afraid of bodily pain or death," and these fears so dominate in his mind that they preempt his fraternal love. And this seems to happen when one presumes with some probability that he could draw his brother back from the sin and yet fails to do so because of fear or disordered desire.

In the third way, an omission of this sort is a *venial sin*, viz., when fear and disordered desire make a man slower to correct his brother's offenses, and yet not in such a way that if it were clear to him that he could draw his brother back from sin, he would still fail to do so because of fear or disordered desire, which he places fraternal charity ahead of in his mind. And it is in this way that holy men sometimes neglect to correct wrongdoers.

**Reply to objection 4:** What is owed to a determinate particular person, whether it be a corporeal good or a spiritual good, is such that it is necessary for us to offer it to him without expecting that he will come to us; instead, we must take due care to seek him out. Hence, just as one who owes money to a creditor should seek him out when the time arrives in order to repay the debt, so, too, one who has spiritual care of another should seek him out in order to correct him concerning his sin.

By contrast, those benefits that are owed not to a determinate person but to all our neighbors in general, whether they be corporeal or spiritual benefits, are such that it is not necessary for us to seek out those to whom we offer the benefits; instead, it is enough that we offer them when they come to us. For this should be taken to be something that occurs “as it were, by happenstance,” as Augustine puts it in *De Doctrina Christiana* 1. It is for this reason that in *De Verbo Domini* (sermon 82) he says, “Our Lord warns us not to neglect one another’s sins—not that you are to seek out what you might reprimand, but rather that you are to notice what you might correct.” Otherwise, we would be prying into the lives of others (*efficeremur exploratores vitae aliorum*), contrary to what Proverbs 24:15 says (“Do not seek after wickedness in the house of the just man, or spoil his rest”). Hence, it is clear that those in religious life would not have to leave the cloister in order to correct wrongdoers.

### Article 3

#### Does fraternal correction belong only to prelates?

It seems that fraternal correction belongs only to prelates:

**Objection 1:** Jerome says, “Let priests endeavor to fulfill this Gospel passage: ‘If your brother sins against you, etc.’” But it was prelates, who have care for others, that used to be signified by the name ‘priests’. Therefore, it seems that fraternal correction belongs to prelates alone.

**Objection 2:** Fraternal correction is one of the spiritual works of mercy. But doing corporal works of mercy belongs to those who are superior in temporal affairs, viz., the rich. Therefore, fraternal correction likewise belongs to those who are superior in spiritual affairs, viz., prelates.

**Objection 3:** One who corrects another moves him for the better by his admonition. But in natural entities the lower are moved by the higher. Therefore, similarly, in the order of virtue, which follows the order of nature, correcting the lower individuals belongs to the prelates alone.

**But contrary to this:** *Decreta* 24, q. 3 says, “Both priests and the rest of the faithful should have the greatest care for those who are perishing, so that by the reprimands of the priests and the faithful the sinners are either corrected or, if they appear to be incorrigible, separated off from the Church.”

**I respond:** As has been explained (a. 1), there are two types of correction.

The one is an act of charity and tends specifically toward the improvement of a delinquent brother through a simple admonition. And making this sort of correction belongs to anyone who has charity, whether he be a prelate or someone subject to a prelate.

The other sort of correction is an act of justice and is such that the common good is intended by it. This sort of correction is procured not only by admonishing a brother but sometimes by punishing him as well, in order that others might desist from the sin out of fear. And making this sort of correction belongs to prelates alone, who have not only the power to admonish but also the power to correct by punishing.

**Reply to objection 1:** As Augustine points out in *De Civitate Dei* 1, even in the case of fraternal correction, which belongs to everyone, the care exercised by prelates is weightier. For just as one ought to bestow temporal benefits more on those for whom he has temporal care, so, too, one ought likewise to bestow spiritual benefits—e.g., correction, doctrine, etc.—on those who have been committed to him for spiritual care. Therefore, Jerome means to say not that the precept about fraternal correction applies to

priests alone, but rather that it applies to them in a special way.

**Reply to objection 2:** Just as one who has the resources whereby he can give corporeal help is rich in this regard, so, too, one who has the sane judgment of reason, whereby he can correct the sin of another, should be thought of as superior in this regard.

**Reply to objection 3:** Even among natural entities some act mutually on one another, since each is such that there is some respect in which he is superior to another, i.e., insofar as each is in some way in potentiality and in some way in actuality with respect to the other. Similarly, insofar as someone has the sane judgment of reason in matters concerning which the other is delinquent, he is able to correct him, even if he is not superior to him absolutely speaking.

#### Article 4

##### Is one obligated to correct his own prelate?

It seems that one is not obligated to correct his own prelate:

**Objection 1:** Exodus 19:19 says, “The beast that touches the mountain will be stoned,” and 2 Kings 6:6-7 says that Oza was struck dead by the Lord because he touched the ark. But prelates are signified by the mountain and the ark. Therefore, prelates should not be corrected by those who are subject to them.

**Objection 2:** A Gloss on Galatians 2:11 (“I resisted him to his face”) says, “as an equal.” Therefore, since one who is subject to a prelate is not an equal of the prelate, he should not correct him.

**Objection 3:** Gregory says, “Only one who thinks better of himself presumes to correct the life of holy individuals.” But one should not think better of himself than of his prelate. Therefore, prelates are not to be corrected.

**But contrary to this:** In *Regula* Augustine says, “Have mercy not only on yourselves but also on him,” i.e., your prelate, “who is in greater danger to the extent that he is in a higher position.” But fraternal correction is a work of mercy. Therefore, even prelates are to be corrected.

**I respond:** The sort of correction which is an act of justice through the coercion of punishment does not belong to the subjects with respect to their prelate.

However, fraternal correction, which is an act of charity, belongs to everyone with respect to each person for whom he ought to have charity, if something correctable is found in that person. For an act that proceeds from a habit or power extends to all the things that are contained under the object of that power or habit, just as vision extends to all the things that are contained under the object of the visual power.

However, a virtuous act has to be moderated by appropriate circumstances, and so in a correction by which the subjects correct their prelates a fitting manner must be applied, in order that the prelates might be corrected with mildness and reverence and not with impudence and severity. Hence, in 1 Timothy 5:1 the Apostle says, “Do not rebuke an older man, but treat him as a father.” And the reason why Dionysius found fault with the monk Demophilus is that he had corrected a priest irreverently, striking him and throwing him out of a church.

**Reply to objection 1:** A prelate seems to be treated in a disordered way when he is chastised irreverently or, again, when he is spoken ill of. And this is what is signified by the touching of the mountain and the touching of the ark that are condemned by God.

**Reply to objection 2:** To resist someone to his face in front of everyone exceeds the mode of fraternal correction, and so Paul would not have reprimanded Peter in this way unless he were in some sense his equal with respect to defending the faith. But even someone who is not an equal is able to admonish in private and reverently. Hence, in Colossians 4:17 Paul writes that they should admonish

their own prelate when he says, “Say to Archippus: Fulfill your ministry.”

However, note that when a danger to the Faith is threatening, then prelates should be accused by their subjects even in public. Hence, Paul, who was subject to Peter, publicly rebuked Peter because of an imminent danger of scandal with respect to the Faith. And as Augustine’s Gloss on Galatians 2:14 says, “Peter himself gave an example to superiors, that if at any time they should stray from the right path, they should not disdain to be reproved even by those who are subject to them.”

**Reply to objection 3:** To presume oneself to be better than one’s prelate absolutely speaking seems to belong to presumptuous pride. But to think oneself better with respect to something or other does not smack of presumption, since there is no one in this life who does not have defects.

Again, consider that when someone warns a prelate with charity, he does not thereby think himself greater but instead is giving help to one “who is in greater danger to the extent that he is in a higher position,” as Augustine puts it in *Regula*.

## Article 5

### Should a sinner correct a wrongdoer?

It seems that a sinner should correct a wrongdoer:

**Objection 1:** No one is excused from obeying a precept because of a sin that he has committed. But as has been explained (a. 2), fraternal correction falls under a precept. Therefore, it seems that one should not fail to make a fraternal correction because of a sin that he himself has committed.

**Objection 2:** A spiritual work of mercy is more important than a corporal work of mercy. But one who is in a state of sin should not refrain from doing corporal works of mercy. Therefore, *a fortiori*, he should not abstain, because of some previous sin of his own, from correcting a wrongdoer.

**Objection 3:** 1 John 1:8 says, “If you say that you do not have sin, then you are deceiving yourself.” Therefore, if one is prevented from making a fraternal correction by his own sin, then there will be no one who can correct a wrongdoer. But this consequent is absurd. Therefore, the antecedent is, too.

**But contrary to this:** In *De Summo Bono* Isidore says, “One who is subject to vices should not correct the vices of others.” And Romans 2:1 says, “In what you judge another for, you condemn yourself; for you do the same things that you are judging him for.”

**I respond:** As has been explained (a. 3), the correction of a wrongdoer belongs to someone insofar as the right judgment of reason is strong in him. Now as was explained above (*ST* 1-2, q. 85, a. 2), sin does not destroy the entire good of nature in such a way that nothing of the right judgment of reason remains in someone who sins. Accordingly, reprimanding another’s sin can belong to him.

Still, a certain obstacle to this sort of correction is brought to bear by previous sin, and this for three reasons.

First, because by previous sin one is rendered *unworthy* to correct another. And if he has committed a greater sin, then he is especially unworthy to correct another individual’s lesser sin. Hence, Jerome, in commenting on Matthew 7:3 (“Why do you notice the splinter ...”), says, “He is speaking of those who, while they are themselves liable to punishment for mortal sin, do not allow for the lesser sins of their brothers.”

Second, the correction is rendered inappropriate because of *scandal*, which follows from the correction if the sin of the one making the correction is manifest. For then it seems that the one making the correction is doing it not out of charity, but rather for show. Hence, Chrysostom expounds Matthew 7:4 (“How is it that you say to your brother ...”) as follows: “With what intention? Is it out of charity, that you might save your neighbor? No, because then you would be saving yourself first. You wish not

to save the others, but to conceal your bad acts behind good doctrine and to seek praise from men for your knowledge.”

Third, because of the *pride* of the one making the correction, viz., insofar as, while playing down his own sins, he prefers himself to his neighbor in his own heart and judges his neighbor’s sins with an austere severity, as if he himself were just. Hence, in *De Sermone Domini in Monte* Augustine says, “To accuse someone of vices is the function of good men, but when bad men do it, they are playing the part of another.” And so as Augustine says in the same place, “When necessity forces us to reprimand someone, let us think about whether the vice is such that we have ever had it, and we will then realize that we are men and could have had that vice—or that we have had such a vice and no longer have it—and at that point our common weakness will touch our memory, so that mercy, and not hate, will precede the correction. But if we find ourselves to be in the grips of that same vice, then let us not reprimand, but let us instead sigh and invite him to repent together with us.”

From these considerations it is clear that if a sinner corrects a wrongdoer with humility, then he does not sin or bring a new condemnation upon himself—even though he thereby shows himself, either in his brother’s conscience or at least in his own conscience, to be subject to condemnation for his past sin.

**Reply to objection 1 and objection 2 and objection 3:** From this the replies to the objections are clear.

## Article 6

### Should one back away from a correction for fear that the individual will become worse?

It seems that one should not back away from a correction for fear that the individual will become worse:

**Objection 1:** A sin is a sort of sickness of the soul—this according to Psalm 6:3 (“Have mercy on me, O Lord, for I am sick”). But one who is taking care of a sick man does not back away because of the sick man’s contrariness or contempt, since in that case a greater danger threatens, as is clear in the case of those who are delirious. Therefore, *a fortiori*, a man ought to correct a sinner, no matter how much the sinner dislikes it (*graviter ferat*).

**Objection 2:** According to Jerome, “life-giving truth (*veritas vitae*) is not to be dismissed because of scandal.” But God’s precepts pertain to life-giving truth. Therefore, since, as has been explained (a. 2), fraternal correction falls under a precept, it seems that it is not to be dismissed because of scandal on the part of the one who is corrected.

**Objection 3:** According to the Apostle in Romans 3:8, “evil things are not to be done in order that good things might come of them.” Therefore, by parity of reasoning, good things should not be omitted in order that evil things not come of them. But fraternal correction is a certain good. Therefore, it should not be omitted for fear that the one who is corrected might become worse.

**But contrary to this:** Proverbs 9:8 says, “Do not rebuke the scorner, lest he hate you,” about which a Gloss says, “One should not fear that the detractor, when rebuked, will inflict insults, but one should rather take care lest, drawn to hatred, he becomes worse from it.” Therefore, one should back away from fraternal correction when one fears that the individual will become worse because of it.

**I respond:** As has been explained (a. 1), there are two types of correction of a wrongdoer.

One type belongs to prelates, and it is ordered toward the common good and has coercive power. Such a correction is not to be backed away from because of the consternation of the one who is corrected—both because (a) if he does not wish to be bettered by his own will, then he should be coerced by punishments to desist from sinning, and also because (b) if he is incorrigible, then this is the way to

provide for the common good, as long as the order of justice is preserved, and to deter others by the example of the one. Hence, a judge does not fail to carry out a sentence of condemnation on a sinner because of fear of the sinner's consternation or that of his friends.

The other type of correction is fraternal correction, whose end is the improvement of the wrongdoer and which involves a simple admonition and not coercion. And in a case where it is estimated with some probability that the sinner will not accept the admonition, but will fall into worse things, one should back away from a correction of this sort, since the means to the end should be regulated in accord with what the character of the end demands.

**Reply to objection 1:** A physician uses a certain sort of coercion on the delirious individual who does not wish to receive the cure. And the correction made by prelates, which has coercive force, is similar to this. But fraternal correction is not.

**Reply to objection 2:** A precept is given about fraternal correction insofar as fraternal correction is an act of virtue. But it is an act of virtue insofar as it is proportioned to the end of the virtue. And so when that end is impeded, e.g., when the man is made worse, the act no longer pertains to life-giving truth, nor does it fall under the precept.

**Reply to objection 3:** The means to an end have the character of goodness from their relation to the end. And so when a fraternal correction impedes the end, i.e., the improvement of one's brother, then it no longer has the character of something good. And so when one backs away from a correction of this sort, it is not the case that he is backing away from something good in order that an evil might not occur.

## Article 7

### In a fraternal correction, does the precept require that a private admonition should precede a denunciation?

It seems that, in a fraternal correction the precept does not require that a private admonition should precede a denunciation:

**Objection 1:** By the works of charity we ought mainly to imitate God—this according to Ephesians 5:1-2 (“Be imitators of God as dearly beloved children, and walk in love”). But God sometimes publicly punishes a man for his sin without any antecedent private warning. Therefore, it seems that it is not necessary for a private admonition to precede a denunciation.

**Objection 2:** In *Contra Mendacium* Augustine says, “It is from the acts of the saints that one can see how the precepts of Sacred Scripture are to be understood.” But in the acts of the saints one finds public denunciations of hidden sins without a previous private admonition. For instance, in Genesis 37:2 we read that Joseph “accused his brothers of a terrible crime in the presence of their father,” and Acts 5:3-4 says that without any previous private admonition, Peter publicly denounced Ananias and Saphira for fraudulently hiding the price of their land. Even our Lord Himself is not said to have admonished Judas in private before denouncing him. Therefore, the precept does not require that a private admonition should precede a public denunciation.

**Objection 3:** An accusation is more serious than a denunciation. But one can proceed to a public accusation without any previous private admonition; for in *Decreta* it is laid down [only] that “an inscription must precede an accusation.” Therefore, it seems that the precept does not require that a private admonition should precede a public denunciation.

**Objection 4:** It does not seem probable that the common customs of those in religious life are contrary to a precept of Christ's. But it is customary among religious that in chapters the faults of some are recited without any previous private admonition. Therefore, it seems that the precept does not require this.

**Objection 5:** Those in religious life are bound to obey their prelates. But sometimes a prelate commands either everyone in general or someone in particular to tell him if he knows of anything that needs to be corrected. Therefore, it seems that they are obligated to tell the prelate even before a private admonition. Therefore, the precept does not require that a private admonition should precede a public denunciation.

**But contrary to this:** In *De Verbis Domini* (sermon 82) Augustine, in commenting on Matthew 18:15 (“Go and tell him his fault between you and him alone”), says, “Eager for his correction, sparing him the shame. For perhaps on account of shame he begins to defend his own sin, and the one whom you wish to make better, you make worse.” But we are bound by the precept of charity to fear that our brother might be made worse. Therefore, the order of fraternal correction falls under the precept.

**I respond:** A distinction must be drawn regarding public denunciation. For the sins are either public or hidden.

If the sins are *public*, then the remedy is to be applied not only to the one who has sinned, but also to the others who have come to have knowledge of it, in order that they not be scandalized. And so sins of this sort are to be publicly reprimanded—this according to the Apostle in 1 Timothy 5:20 (“Reprove the sinner in front of everyone, so that the rest might have fear”). This means public sins, as Augustine explains in *De Verbis Domini*.

By contrast, if the sins are *hidden*, then what our Lord says seems to be relevant, viz., “If your brother sins against you ...” (Matthew 18:15). For when he offends you publicly in front of others, then he sins against the others whom he disturbs and he no longer sins only against you.

However, since even in the case of hidden sins there can be offenses against one’s neighbors, a further distinction needs to be drawn.

For there are some hidden sins that *do harm, either corporeal or spiritual, to one’s neighbors*, e.g., if someone secretly plots how the city might be handed over to its enemies, or if a heretic privately turns men away from the Faith. And since in such a case the one who sins secretly sins not only against you but also against others, it is necessary to proceed immediately to a denunciation, in order that harm of the sort in question might be blocked—unless, perhaps, someone thinks on solid grounds that the evils in question can be stopped immediately by a private admonition.

On the other hand, there are sins that *do evil only to the sinner and yourself*, against whom he is sinning, because you are injured by the sinner or at least by the knowledge alone of his sin. And in such a case one should intend only to help his sinning brother. And just as a corporeal physician confers health, if possible, without removing any bodily part—though if this is not possible, then he removes the bodily part that is least necessary for the conservation of the life of the whole—so, too, one who is eager to make his brother better should, if possible, correct his brother with respect to his conscience in such a way that his reputation is preserved. This is advantageous, first of all, to the very individual who sins, not only in temporal affairs, in which a man suffers a detriment in many things if he loses his reputation, but even in spiritual affairs, since many draw back from sin for fear of becoming infamous and so, when they see themselves as infamous, they sin without restraint. Hence, Jerome says, “A brother should be corrected in private (*seorsum*), lest, having once suffered shame or embarrassment, he remain in his sin.” Second, the reputation of the sinning brother ought to be preserved, both because (a) when one individual is defamed, others are defamed as well—this according to Augustine, *Epistola ad Plebem Hipponensem* (“When something criminal has been reported falsely or proved to be true of individuals who profess the Holy Name, people earnestly insist upon the issue and make a fuss and bustle about so that this might be believed about everyone who professes the Holy Name”)—and also because (b) others are provoked to sin by the publicized sin of a single person.

Still, because conscience is to be preferred to reputation, our Lord wished that at least at the cost of a brother’s reputation his conscience might be freed from sin through a public denunciation.

Hence, it is clear that the precept requires that a private admonition should precede a public

denunciation.

**Reply to objection 1:** All the hidden things are known to God. And so in this sense hidden sins are related to God's judgment in the same way that public sins are related to human judgment. And yet oftentimes God rebukes sinners with a private admonition, as it were, by inspiring them interiorly, whether they are awake or asleep—this according to Job 33:15ff. (“By a dream in a vision by night, when deep sleep falls upon men ... then He opens the ears of men and, teaching them, instructs them with His teaching, that He may withdraw a man from the things he is doing”).

**Reply to objection 2:** Our Lord, as God, treated the sin of Judas as a public sin. Hence, He was able to proceed immediately to a denunciation. Yet He Himself did not make it public; instead, He admonished him about his sin with enigmatic words.

Peter made public the hidden sin of Ananias and Saphira as the agent of God, by whose revelation he knew of the sin.

As for Joseph, one should believe that he had at some time admonished his brothers, even though this was not written down. Alternatively, one can claim that the sin was public among his brothers; this is why it says in the plural, “He accused his brothers ...”

**Reply to objection 3:** When danger threatens the multitude, then these words of our Lord do not apply, since in such a case your brother who sins is not sinning only against you.

**Reply to objection 4:** Recitals of the sort in question that are made in the chapters of religious are about less serious matters that do not detract from one's reputation. Hence, they are more like the recital of forgotten faults rather than accusations or denunciations.

However, if they were nonetheless such that a brother's reputation would suffer from them, then anyone who made a brother's sin public in this way would be acting against our Lord's precept.

**Reply to objection 5:** A prelate is not to be obeyed when it is contrary to a divine precept—this according to Acts 5:29 (“It is necessary to obey God rather than men”). And so when a prelate commands that he be told whatever is known by anyone to need correction, the command is to be understood in a sound way that preserves the order of fraternal correction, regardless of whether the command is issued generally to everyone or to someone in particular.

However, if the prelate expressly issued a command contrary to the order of fraternal correction set out by our Lord, then a sin would be committed both by the one who issued the command and by anyone who might obey it, since he would be acting contrary to our Lord's precept. Hence, the prelate should not be obeyed. For it is God alone, and not the prelate, who is the judge of what is hidden, and so the prelate does not have the power to issue any commands about what is hidden except insofar as it is made manifest by certain indications, e.g., through reports or certain suspicions. In cases like these, the prelate can issue commands in the same way that a secular or ecclesiastical judge can require an oath of truth-telling.

## Article 8

### Do witnesses have to be brought in prior to a public denunciation?

It seems that witnesses do not have to be brought in prior to a public denunciation:

**Objection 1:** Hidden sins are not to be made manifest to others, since in that case the man would be, as Augustine puts it, more like “one who is promulgating a judicial decision” (*proditor criminis*) than like “one who is correcting his brother.” But one who brings in witnesses makes his brother's sin manifest to another. Therefore, in the case of hidden sins, witnesses do not have to be brought in prior to a public denunciation.

**Objection 2:** A man ought to love his neighbor as himself. But no man brings in witnesses for his

own hidden sins. Therefore, neither should he bring in witnesses for his brother's hidden sins.

**Objection 3:** Witnesses are brought in to prove something. But in the case of hidden things proof cannot be effected through witnesses. Therefore, it is useless to bring in witnesses of this sort.

**Objection 4:** In *Regula* Augustine says, "It should be made known to the superior prior to the witnesses." But to make it known to the superior or prelate is to "tell it to the Church." Therefore, witnesses do not have to be brought in prior to a public denunciation.

**But contrary to this** is what our Lord says in Matthew 18:15-18 [see a. 1, obj. 1].

**I respond:** It is appropriate to pass through the middle when one is going from one endpoint to the other. Now in the case of fraternal correction, our Lord wanted its beginning to be private, as one brother corrected another brother between themselves alone, whereas He wanted the end to be public, so that, namely, [a recalcitrant brother] would be denounced to the Church. And what is appropriately posited in the middle is bringing in witnesses, so that in the first place the brother's sin might be indicated to a few, who might be able to help him and not harm him—in order that at least he might be improved without being disgraced before the multitude.

**Reply to objection 1:** Some have understood the order of fraternal correction to be preserved in such a way that (a) the brother is first corrected in private, and if he listens, then all is well, but (b) if he does not listen, then if the sin is altogether hidden, they claim, one should proceed no further. However, if his sin is already beginning to come to the attention of many by various indications, then one ought to proceed further in the way that our Lord mandates.

But this opinion is contrary to what Augustine says in *Regula*, viz., that a brother's sin ought not to be hushed up, "lest it rot in his heart."

And so one should reply alternatively that after a private admonition has been given either once or more than once, as long as hope for the correction is held onto with some probability, one should [continue to] proceed by means of private admonition. However, once we can know with some probability that private admonitions are not going to work, we should then proceed further to bring in witnesses, no matter how hidden the sin might be—unless perhaps one were to judge with some probability that this will not contribute to the brother's improvement but that he will thereby be rendered worse. For, as was explained above (a. 6), this is a reason for totally backing away from the correction.

**Reply to objection 2:** A man does not need witnesses in order to correct his own sin, and yet this can be necessary for the correction of his brother's sin. Hence, the arguments are not parallel.

**Reply to objection 3:** There are three possible reasons for bringing in witnesses: (a) to show that what one is being rebuked for is indeed a sin, as Jerome says; (b) to give proof of the act, if the act is being repeated, as Augustine says in *Regula*; (c) "to testify that the brother making the admonition has done what he can," as Chrysostom says.

**Reply to objection 4:** Augustine means that the prelate should be told prior to the witnesses because the prelate is an individual person who is able to do more good than the others; but he does not mean that it should be told to the prelate as to the Church, i.e., in his abiding role of judge.

## QUESTION 34

### Hatred

We next have to consider the vices opposed to charity: first, hatred, which is opposed to charity itself (question 34); second, acedia and envy, which are opposed to the joy of charity (questions 35-36); third, discord and schism, which are opposed to peace (questions 37-42); fourth, scandal and giving offense, which are opposed to beneficence and fraternal correction (question 43).

On the first topic there are six questions: (1) Can God be hated? (2) Is hating God the greatest of sins? (3) Is hating one's neighbor always a sin? (4) Is hating one's neighbor the greatest of the sins against one's neighbor? (5) Is hatred a capital vice? (6) From which of the capital sins does hatred arise?

### Article 1

#### Can God be hated?

It seems that no one can hate God (*Deum nullus odio habere possit*):

**Objection 1:** In *De Divinis Nominibus*, chap. 4, Dionysius says, "What is itself good and beautiful is lovable and delectable to everyone." But God is goodness itself and beauty itself. Therefore, He cannot be hated by anyone.

**Objection 2:** In the apocryphal books of Esdra it says, "All things call forth truth and do well in its works." But as John 14:6 says, God is truth itself. Therefore, everyone loves God and no one can hate Him.

**Objection 3:** Hatred is a certain sort of aversion. But as Dionysius says in *De Divinis Nominibus*, chap. 4, God "turns all things toward Himself." Therefore, no one can hate Him.

**But contrary to this:** Psalm 73:23 says, "The pride of those who hate You ascends continually," and John 15:24 says, "But now they have both seen and hated me and my Father."

**I respond:** As is clear from what was said above (*ST* 1-2, q. 29, a. 1), hatred is a certain movement of the appetitive power, which is moved only by something that is apprehended. Now there are two ways in which God can be apprehended by a man: (a) *in Himself*, viz., when He is seen through His essence; and (b) *through His effects*, viz., when "the invisible things of God are seen clearly, having been understood through the things that have been made" (Romans 1:20).

Now through His essence God is goodness itself, which no man can hate, since it is of the nature of the good that it be loved. And so it is impossible that anyone who sees God through His essence should hate him.

On the other hand, some of His effects are such that they cannot in any way be contrary to the human will, since *existing (esse)*, *being alive (vivere)*, and *understanding (intelligere)* are desirable and lovable by everyone and are certain effects of God's. Hence, insofar as God is apprehended as the author of those effects, He cannot be hated.

However, there are certain effects of God's that are repugnant to a disordered will—e.g., the inflicting of punishment and, again, the inhibiting of sins through divine law, which are repugnant to a will that has been depraved by sin. And given the consideration of such effects, God can be hated by some individuals, i.e., insofar as He is apprehended as one who prohibits sins and inflicts punishments.

**Reply to objection 1:** This argument goes through for the case of those who see God's essence, which is the very essence of goodness.

**Reply to objection 2:** This argument goes through with respect to God's being apprehended as the cause of those effects that are naturally loved by men, among which are "the works of truth" that give men the knowledge of God.

**Reply to objection 3:** God turns all things to Himself insofar as He is the source of being, since all

things, insofar as they exist, tend toward a likeness of God, who is *Esse* itself.

## Article 2

### Is hating God the greatest of sins?

It seems that hating God is not the greatest of sins (*odium Dei non sit maximum peccatorum*):

**Objection 1:** The most serious sin is a sin against the Holy Spirit, which, as Matthew 12:31-32 says, is unforgivable. But as is clear from what was said above (q. 14, a. 2), hating God is not counted among the species of sins against the Holy Spirit. Therefore, hating God is not the most serious sin (*non sit gravissimum peccatorum*).

**Objection 2:** Sin consists in putting oneself at a distance from God. But a non-believer, who does not have knowledge of God, seems to be at a greater distance from God than a believer who, even if he hates God, at least has knowledge of Him. Therefore, it seems that the sin of unbelief is a more serious sin than hating God.

**Objection 3:** God is hated only because of those effects of His that are repugnant to the will, the chief among which is punishment. But hating punishment is not the greatest of sins. Therefore, hating God is not the greatest of sins.

**But contrary to this:** As is clear from the Philosopher in *Ethics* 8, what is worst is opposed to what is best. But hating God is opposed to loving God, which is the best thing for a man. Therefore, hating God is the worst sin for a man.

**I respond:** As was explained above (q. 10, a. 3), the defect of sin consists in turning away from God. But this sort of turning away would not have the character of a sin if it were not voluntary. Hence, the nature of sin consists in a voluntary turning away from God.

Now this voluntary turning away from God is involved in its own right (*per se*) in the hatred of God, whereas in other sins it is involved, as it were, by participation and with respect to something else (*participative et secundum alium*). For just as the will adheres in its own right to what it loves, so it flees in its own right from what it hates. Hence, when someone hates God, his will is turned away from God by that very fact (*secundum se*).

By contrast, in the case of other sins—e.g., when someone commits fornication—the will is turned away from God not in its own right, but with respect to something else, viz., insofar the will desires a disordered pleasure, which has the turning away from God annexed to it.

But it is always the case that what is such-and-such in its own right is more central than what is such-and-such with respect to another. Hence, hating God is more serious than other sins.

**Reply to objection 1:** In *Moralia* 25 Gregory says, “It is one thing not to do good, it is another to hate the giver of what is good, just as it is one thing to sin precipitately and another to sin deliberately.” From this one can see that to hate God, the giver of all that is good, is to sin deliberately, which is a sin against the Holy Spirit. Hence, it is clear that hating God is especially a sin against the Holy Spirit, insofar as ‘sin against the Holy Spirit’ names a special genus of sin. Yet the reason why it is not numbered among the species of sins against the Holy Spirit is that it is found generally in every species of sin against the Holy Spirit.

**Reply to objection 2:** Unbelief does not itself have the character of a sin unless it is voluntary. And the more voluntary it is, the more serious it is. But unbelief’s voluntariness arises from someone’s hating the truth that is being proposed to him. Hence, it is clear that the character of sin in unbelief arises from hating God, whose truth faith has to do with. Therefore, in the way that a cause is more powerful than its effect, so hating God is a greater sin than unbelief.

**Reply to objection 3:** Not everyone who hates punishments hates God, the author of punishments,

since many hate the punishments that they nonetheless bear patiently out of reverence for God's justice. Hence, in *Confessiones* 10 Augustine says that God "commands that we tolerate the evils associated with punishment, not that they be loved."

However, to break out into hatred of God because He punishes is to harbor hatred for God's justice itself, and this is a very serious sin. Hence, in *Moralia* 25 Gregory says, "Just as it is sometimes more grievous to love sin than to perpetrate it, so it is more wicked to have hated justice than not to have done it."

### Article 3

#### Is every instance of hating one's neighbor a sin?

It seems that not every instance of hating one's neighbor is a sin (*non omne odium proximi sit peccatum*):

**Objection 1:** No sin is found in the precepts or counsels of divine law—this according to Proverbs 8:8 ("All my words are just, there is nothing wicked or perverse in them"). But Luke 14:26 says, "If anyone comes to me and does not hate his father and mother, he cannot be my disciple". Therefore, not every instance of hating one's neighbor is a sin.

**Objection 2:** To the extent that we are imitating God, nothing we do can be a sin. But if we imitate God, then we hate certain individuals. For instance, Romans 1:30 says, "Detractors, hateful to God." Therefore we can hate some individuals without sinning.

**Objection 3:** Nothing that is natural is a sin, since, as Damascene says in *De Fide Orthodoxa* 2, sin is "a withdrawal from what is in accord with nature." But it is natural for each thing to hate what is contrary to itself and to aim at its destruction. Therefore, one's hating his enemy does not seem to be a sin.

**But contrary to this:** 1 John 2:9 says, "Whoever hates his brother is in darkness." But sins are spiritual darkness. Therefore, hatred of one's neighbor cannot exist without sin.

**I respond:** As was explained above (*ST* 1-2, q. 29, a. 1), hatred is opposed to love. So hatred has the character of something bad only to the extent that the corresponding love has the character of something good.

Now love is owed to one's neighbor with respect to what he has from God, i.e., his nature and grace, but love is not owed to him with respect to what he has from himself and the devil, i.e., his sin and lack of justice. And so it is permissible to hate in one's brother his sin and everything that belongs to his lack of divine justice, but no one can hate without sin his brother's nature and grace.

Now the fact that we hate the sin and lack of goodness in our brother is part of our love of our brother, since loving someone's good is of the same nature as hating what is bad in him. Hence, if hatred of one's brother is taken in an absolute sense, then it is always a sin.

**Reply to objection 1:** As is clear from Exodus 20:12, our parents are to be honored by us according to God's command, because of our nature and because of the closeness by which they are joined to us. But they are to be hated to the extent that they put up obstacles to our reaching the perfection of divine justice.

**Reply to objection 2:** God hates the sin in the detractors and not their nature. And it is in this way that we ourselves can hate the detractors without sinning.

**Reply to objection 3:** Men are not opposed to us with respect to the goods that they have from God, and hence in this regard they are to be loved.

On the other hand, they are opposed to us insofar as they treat us with hostility, which belongs to their sin, and in this regard they are to be hated. For we ought to hate in them the fact that they are

enemies to us.

#### Article 4

##### Is hating one's neighbor the most serious sin that is committed against one's neighbor?

It seems that hating one's neighbor is the most serious sin that is committed against one's neighbor:

**Objection 1:** 1 John 3:15 says, "Everyone who hates his brother is a murderer." But homicide is the most serious of the sins that are committed against one's neighbor. Therefore, hatred is, too.

**Objection 2:** What is worst is opposed to what is best. But the best of the things we show to our neighbor is love (*amor*), since everything else is traced back to love (*ad dilectionem*). Therefore, the worst thing is hatred.

**But contrary to this:**

1. According to Augustine in *Enchiridion*, what is bad is what does harm. But someone harms his neighbor more through other sins than through hatred, e.g., through theft and murder and adultery. Therefore, hatred is not the most serious sin.

2. In expounding Matthew 5:19 ("He who breaks one of these least commandments ...") Chrysostom says, "The commandments of Moses—'You shall not kill', 'You shall not commit adultery'—are rewarded modestly but the sins against them are great (*in remuneratione modica sunt, in peccato autem magna*), whereas the commandments of Christ—'You shall not be angry', 'You shall not covet'—are rewarded greatly but the sins against them are small." But hatred belongs to an interior movement, as do anger and covetousness. Therefore, hatred of one's neighbor is a lesser sin than homicide.

**I respond:** A sin that is committed against one's neighbor has the character of badness in two ways: (a) from the disorder that belongs to the one who sins, and (b) from the harm that is inflicted on the one against whom the sin is directed.

In the first way, hatred is a greater sin than the exterior acts that are harmful to one's neighbor, since through hatred a man's will, which is the most important thing in a man and from which comes the root of sin, is disordered. Hence, if the disordered exterior acts existed without the will's disorder, there would be no sins, as when someone kills a man unknowingly or out of an ardent desire for justice. And if there is anything sinful in the exterior sins that are committed against one's neighbor, then all of it comes from the interior hatred.

On the other hand, as regards the harm that is inflicted on one's neighbor, the exterior sins are worse than the interior hatred.

**Reply to objection 1 and objection 2 and the arguments for the contrary:** From this the replies to the objections are clear.

#### Article 5

##### Is hatred a capital vice?

It seems that hatred is a capital vice (*vitium capitale*):

**Objection 1:** Hatred is directly opposed to charity. But charity is the most important of the virtues and the mother of the other virtues. Therefore, hatred especially is a capital vice and a principle of all the other capital vices.

**Objection 2:** Sins arise in us because of the inclination of the passions—this according to Romans

7:5 (“The passions of sins work in our members to bring forth fruit unto death”). But as is clear from what was explained above (*ST* 1-2, q. 27, a. 4), among the passions of the soul, all the others seem to follow from love and hatred. Therefore, hatred should be posited among the capital vices.

**Objection 3:** A vice is a moral evil. But hatred has more to do with evil than does any other passion. Therefore, it seems that hatred should be posited as a capital vice.

**But contrary to this:** In *Moralia* 31 Gregory does not enumerate hatred among the seven capital sins.

**I respond:** As was explained above (*ST* 1-2, q. 84, aa. 3-4), a capital vice is one from which other vices very often arise. Now a vice is contrary to a man’s nature insofar as he is a rational animal. And in the case of those things that are done contrary to nature, what belongs to the nature is little by little corrupted. Hence, one must first recede from what is less in accord with nature and ultimately from what is most in accord with nature, since what is first in construction is last in decomposition.

Now what is first and foremost natural to a man is that he loves what is good, and principally the divine good and the good of his neighbor. And so the hatred that is opposed to this love is the last thing—and not the first thing—in the destruction of virtue that comes about through vice. And so hatred is not a capital vice.

**Reply to objection 1:** As *Physics* 7 explains, “the virtue of each thing consists in its being well-disposed in accord with its nature.” And so in the case of the virtues, what is first and foremost has to be what is first and foremost in the natural order. And it is because of this that charity is posited as the most important of the virtues. And, as has been explained, by this same line of reasoning hatred cannot be first among the vices.

**Reply to objection 2:** Hatred of the sort of evil that is contrary to the natural good is first among the passions of the soul, just as the love of the natural good is. But hatred of the connatural good cannot be first; instead, it has the character of what is last, since this sort of hatred attests to a corruption of nature that has already taken place, just as love of a strange good (*amor extranei boni*) does, too.

**Reply to objection 3:** There are two sorts of evil.

Some evils are genuine evils, since they are incompatible with the natural good; and hatred of this sort of evil has the character of priority among the passions.

On the other hand, some evils are apparent evils and not genuine evils, viz., those that are genuine and natural goods but are thought of as evils because of the corruption of one’s nature. Hatred of this sort of evil must happen at the end. This hatred is vicious, but it is not first.

## Article 6

### Does hatred arise from envy?

It seems that hatred does not arise from envy:

**Objection 1:** Envy is sadness about the goods of others. But hatred does not arise from sadness; just the opposite, we are sad about the presence of evils that we hate. Therefore, hatred does not arise from envy.

**Objection 2:** Hatred is opposed to love. But as has been established (q. 25, a. 1), loving one’s neighbor is referred back to loving God. Therefore, hating one’s neighbor is referred back to hating God. But hatred of God is not caused by envy; for as is clear from the Philosopher in *Rhetoric* 2, we envy those who seem close to us and not those who are greatly distant from us. Therefore, hatred is not caused by envy.

**Objection 3:** There is a single effect of a single cause. But hatred arises from anger; for in *Regula* Augustine says, “Anger grows into hatred.” Therefore, it is not the case that hatred is caused by envy.

**But contrary to this:** In *Moralia* 31 Gregory says that hatred arises from envy.

**I respond:** As has been explained (a. 5), hating one's neighbor is the last step in the progression of sin, since this hatred is opposed to the love by which one's neighbor is naturally loved. But the fact that one recedes from what is natural occurs because he intends to avoid what is naturally to be fled from.

Now as is clear from the Philosopher in *Ethics* 7 and 10, every animal flees from sadness, in the same way that it seeks pleasure. And so just as love is caused by pleasure, so hatred is caused by sadness; for just as we are moved to love the things we take delight in, since by that very fact they are taken to be good (*accipiuntur sub ratione boni*), so we are moved to hate the things that sadden us, since by that very fact they are taken to be bad. Hence, since envy is sadness about our neighbor's good, it follows that our neighbor's good is rendered odious to us. And so it is that hatred arises from envy.

**Reply to objection 1:** Since, like the apprehensive power, the appetitive power reflects on its own acts, it follows that there is a circular movement in the acts of the appetitive power. Therefore, in the initial progression of an appetitive movement, desire follows upon love, and delight follows from desire when one has attained what he was desiring. And since the very fact that he is delighting in the good that he loves has the nature of goodness, it follows that delight causes love. And by the same line of reasoning it follows that sadness causes hatred.

**Reply to objection 2:** The character of love is different from the character of hatred. For the object of love is the good, which flows from God into creatures, and so love is first of all love of God and then love of one's neighbor. But hatred is hatred of evil, which has a place in God's effects but has no place within God Himself. Hence, it was likewise explained above (a.1) that God is hated only insofar as He is apprehended in His effects. And so hatred of one's neighbor is prior to hatred of God. Hence, since envy with respect to one's neighbor is the mother of the hatred that is directed toward one's neighbor, it follows that it is a cause of the hatred that is directed toward God.

**Reply to objection 3:** Nothing prevents a thing from arising from diverse causes with respect to diverse notions. And, accordingly, hatred can arise from both anger and envy.

Yet hatred arises more directly from envy, through which the very good of one's neighbor is rendered something to be saddened by and thus hated.

By contrast, hatred arises from anger because of a certain sort of increase. For through anger we at first desire evil for our neighbor in a given measure, insofar as this measure has the character of vindication. But afterwards, through the continuation of the anger, it gets to the point that a man desires evil for his neighbor absolutely speaking, and this has the character of hatred.

Hence, it is clear that hatred is caused by envy formally according to the very character of the object of envy, whereas anger causes a disposition toward hatred (*odium causatur ex ira autem dispositive*).

## QUESTION 35

### Acedia

We next have to consider the vices opposed to the joy of charity, both (a) to joy with respect to the divine good, and acedia is opposed to this joy, and (b) to joy with respect to our neighbor's good, and envy is opposed to this joy. Hence, we must first consider acedia (question 35) and then envy (question 36).

On the first topic there are four questions: (1) Is acedia a sin? (2) Is acedia a special vice? (3) Is acedia a mortal sin? (4) Is acedia a capital vice?

### Article 1

#### Is acedia a sin?

It seems that acedia is not a sin:

**Objection 1:** According to the Philosopher in *Ethics* 2, the passions are such that we are neither praised for them nor blamed for them. But as Damascene points out, and as was established above (*ST* 1-2, q. 35, a. 8), acedia is a passion, since it is a species of sadness or sorrow (*tristitia*). Therefore, acedia is not a sin.

**Objection 2:** No corporeal defect that occurs at fixed hours has the character of a sin. But acedia is like this. For in *De Institutis Monasteriorum* 10 Cassian says, "The monk is troubled with acedia chiefly around noontime (*circa horam sextam*). It is like a fever that attacks at a fixed time and that inflicts the sick soul with hot flashes that flare up at regular and fixed hours." Therefore, acedia is not a sin.

**Objection 3:** What proceeds from a good root does not seem to be a sin. But acedia proceeds from a good root; for in the same book Cassian says that acedia "comes from one's lamenting that he does not have spiritual fruit and from his extolling in his mind monasteries that are located at some distance from his." But this seems to belong to humility. Therefore, acedia is not a sin.

**Objection 4:** Every sin is to be avoided—this according to Ecclesiasticus 21:2 ("Flee from sins as from the face of a serpent"). But in the same book Cassian says, "Experience has shown that the onslaught of acedia is not to be avoided by fleeing, but to be overcome by resisting." Therefore, acedia is not a sin.

**But contrary to this:** Whatever is forbidden in Sacred Scripture is a sin. But acedia is like this; for Ecclesiasticus 6:26 says, "Bow down your shoulder and carry her," i.e., spiritual wisdom, "and be not saddened (*non acedieris*) in her bonds."

**I respond:** According to Damascene, acedia is "a sort of heavy sadness" (*quaedam tristitia aggravans*) that presses down on a man's mind in such a way that no activity pleases him (*ut nihil ei agere libeat*), in the same way that what is sour also lacks heat (*sicuti ea quae sunt acida etiam frigida sunt*). And so acedia involves a sort of weariness with respect to acting (*taedium operandi*), as is clear from this Gloss on Psalm 106:18 ("Their soul hated every sort of food"): "And some say that acedia is a listlessness of mind (*torpor mentis*) that neglects to undertake good things."

Now a sadness of this sort is always bad, sometimes even in its own right (*etiam secundum seipsam*), and sometimes in its effect (*secundum effectum*).

The sadness is bad in its own right when it is sadness over what appears bad but is genuinely good, just as, contrariwise, delight is bad when it is delight over what appears good but is genuinely bad. Therefore, since a spiritual good is genuinely good, sadness over a spiritual good is bad in its own right (*secundum se*).

However, even a sadness over what is genuinely bad is bad in its effect if it burdens a man in such a way that it draws him back totally from good works; hence, in 2 Corinthians 2:7 the Apostle says that he

does not want one who is repenting to be “too engrossed” with sorrow over his sins.

Therefore, since acedia, as it is being understood here, names a sadness over a spiritual good, it is bad in two ways, both (a) in its own right and (b) in its effect. And so acedia is a sin, since, as is clear from what was said above (q. 10, a. 2), something bad in an appetitive movement is what we call a sin.

**Reply to objection 1:** The passions are not sins in their own right; however, insofar as they are applied to something bad, they are blameworthy, just as they are likewise praiseworthy when applied to something good. Hence, sadness does not in itself name anything either praiseworthy or blameworthy. Instead, moderate sadness over what is bad denominates something praiseworthy, whereas sadness over what is good and, again, immoderate sadness, denominate something blameworthy. And it is in this way that acedia is posited as a sin.

**Reply to objection 2:** The passions of the sentient appetite both (a) are able to be venial sins in their own right, and (b) incline the soul toward mortal sin. And since the sentient appetite has a corporeal organ, it follows that because of certain corporeal changes a man becomes more prone to certain sins. And so it can happen that, corresponding to corporeal changes that take place at fixed times, certain sins assail us more.

Now every corporeal defect in its own right disposes us toward sadness. And so, around noontime, those who are fasting, when they now begin to feel hunger and to be oppressed by the heat of the sun, are more assailed by acedia.

**Reply to objection 3:** What belongs to humility is that a man, considering his own defects, should not extol himself. But it does not belong to humility that one should disdain the goods that he has from God; instead, this belongs to ingratitude. And acedia follows from this sort of disdain; for we are saddened by things that we think of as bad or vile.

Therefore, one must extol the goods of others in such a way that he nonetheless does not disdain the goods that have been provided to him by God, since in that case they would be rendered sorrowful to him.

**Reply to objection 4:** Sin is always to be fled, but a sin’s attack has to be overcome sometimes by fleeing and sometimes by resisting:

(a) *by fleeing*, when continuous thought increases one’s incentive to sin, as in the case of lust, and this is why 1 Corinthians 6 says, “Flee from fornication;” and

(b) *by resisting*, when persevering in thought removes the incentive to sin, where this incentive arises from superficial apprehension.

It is the latter that occurs in the case of acedia, since the more we think about spiritual goods, the more they become pleasing to us; and with this acedia ceases.

## Article 2

### Is acedia a special sin?

It seems that acedia is not a special sin:

**Objection 1:** What belongs to every vice does not constitute a special type of vice. But every vice makes a man to be saddened by the opposite spiritual good; for instance, lust makes a man to be saddened by the good of continence, and gluttony makes him to be saddened by the good of fasting. Therefore, since, as has been explained (a. 1), acedia is sadness over a spiritual good, it seems that acedia is not a special sin.

**Objection 2:** Since acedia is a certain type of sadness, it is opposed to joy. But joy is not posited as a special virtue. Therefore, neither should acedia be posited as a special vice.

**Objection 3:** Since *spiritual good* is a certain general good that virtue desires and vice flees from,

it does not constitute a special type of virtue or vice except because of something added to it that narrows it down. But if acedia is a special vice, there does not seem to be anything except labor (*nisi labor*) that narrows *spiritual good* down to acedia. For some flee from spiritual goods because they are laborious, and this is why acedia is a sort of weariness. Now to flee from labors and to seek corporeal rest seem to pertain to the same thing, viz., laziness (*ad pigritiam*). Therefore, acedia is nothing other than laziness. But this seems false, since being lazy is opposed to being solicitous (*pigritia sollicitudini opponitur*), whereas acedia is opposed to joy. Therefore, acedia is not a special vice.

**But contrary to this:** In *Moralia* 31 Gregory distinguishes acedia from other vices. Therefore, it is a special sin.

**I respond:** Since acedia is sadness over a spiritual good, if *spiritual good* is taken generally, acedia will not have the character of a special vice, since, as has been said (obj. 1), every vice flees from the spiritual good that belongs to its opposed virtue.

Similarly, one cannot reply that acedia is a special vice insofar as it flees from a spiritual good because that spiritual good is laborious, i.e., either troublesome to the body or an obstacle to the body's pleasure. For this would not differentiate acedia from the carnal vices by which one seeks rest and pleasure for the body.

And so one should reply that there is a certain ordering among spiritual goods. For all the spiritual goods that exist in the singular acts of the virtues are ordered toward the one spiritual good which is the divine good, with respect to which there is a special virtue, viz., charity. Hence, it belongs to each virtue to rejoice over its own spiritual good, which consists in its own act, but the spiritual good by which one rejoices over the divine good belongs specifically to charity.

Similarly, the sadness by which one is saddened by the spiritual good that exists in the acts of the individual virtues belongs not to a specific vice, but to all the vices. By contrast, to be saddened by the divine good, over which charity rejoices, belongs to a special vice that is called acedia.

**Reply to objection 1 and objection 2 and objection 3:** From this the replies to the objections are clear.

### Article 3

#### Is acedia a mortal sin?

It seems that acedia is not a mortal sin:

**Objection 1:** Every mortal sin is contrary to a precept of God's Law. But acedia does not seem to be contrary to any precept, as is clear to one who runs through the precepts of the Decalogue. Therefore, acedia is not a mortal sin.

**Objection 2:** Within the same genus, a sin of deed is not a lesser sin than a sin of the heart (cf. *ST* 1-2, q. 72, a. 7). But to back away by deed from a spiritual good that leads to God is not a mortal sin; otherwise, everyone who did not observe the counsels would thereby commit a mortal sin (*mortaliter peccaret*). Therefore, to back away in one's heart because of sadness from spiritual works of this sort is not a mortal sin. Therefore, it is not the case that acedia is a mortal sin.

**Objection 3:** No mortal sin is found in perfected men. But acedia is found in perfected men; for in *De Institutis Coenobiorum* 10 Cassian says that acedia "is known more to those who live solitary lives and is a frequent and vexatious enemy of the hermit." Therefore, acedia is not a mortal sin.

**But contrary to this:** 2 Corinthians 7:10 says, "The sadness of the world works unto death" (*mortem operatur*). But sadness of this sort is acedia, since it is not sadness in accord with God, which is contrasted with the sadness of the world, which works unto death. Therefore, acedia is a mortal sin.

**I respond:** As was explained above (*ST* 1-2, q. 72, a. 5 and q. 88, aa. 1-2), a sin is called mortal

when it takes away one's spiritual life, which exists by means of the charity through which God lives within us. Hence, a sin is mortal by its genus when it is contrary to charity in its own right and because of its proper character.

Now acedia is a sin of this type. For, as was explained above (q. 28, a. 1), rejoicing over God (*gaudium de Deo*) is a proper effect of charity, whereas acedia is sadness over spiritual good insofar as it is the divine good. Hence, by its own genus acedia is a mortal sin.

Still, one must take note of the fact that, in the case of all sins that are mortal by their genus, they are mortal sins only when they attain their completeness (*suam perfectionem consequuntur*). But the consummation of a sin lies in the consent of reason; for we are speaking here of human sin, which consists in a human act, and the principle of a human act is reason. Hence, if there is a beginning of sin just in the sentient appetite and it does not attain to the consent of reason, then the sin is venial because of the incompleteness of the act. For instance, in the genus *adultery* a disordered desire that exists just in the sentient appetite is a venial sin, whereas if it reaches all the way to the consent of reason, then it is a mortal sin. So, too, the movement of acedia sometimes exists just in the sentient appetite, and this because of the flesh's repugnance toward the spirit, and in that case acedia is a venial sin. However, sometimes it reaches all the way to reason, which consents to fleeing from, and finding abhorrent, and detesting the divine good, with the flesh prevailing altogether over the spirit. And in such a case it is clear that acedia is a mortal sin.

**Reply to objection 1:** Acedia is contrary to the precept about keeping holy the Sabbath, which, insofar as it is a moral precept, commands the mind's resting in God, and which the mind's sadness over the divine good is contrary to.

**Reply to objection 2:** Acedia is a mental withdrawal not from just any spiritual good, but from the divine good, which the mind has to adhere to by necessity. Hence, if one is saddened by the fact that someone urges him to do acts of virtue that he is not obligated to do, this is not the sin of acedia. Rather, the sin of acedia occurs when one is saddened over what he needs to do because of God.

**Reply to objection 3:** In saintly men one finds some incomplete movements of acedia, which nonetheless do not reach all the way to the consent of reason.

#### Article 4

##### Should acedia be posited as a capital sin?

It seems that acedia should not be posited as a capital sin:

**Objection 1:** As was established above (*ST* 1-2, q. 84, aa. 3-4), a capital vice is a vice that moves one toward acts of sin. But acedia does not move one to act, but instead draws one back from acting. Therefore, it should not be posited as a capital vice.

**Objection 2:** A capital sin has children assigned to it. Now in *Moralia* 31 Gregory assigns six children to acedia, viz., wickedness (*malitia*), rancor (*rancor*), small-mindedness (*pusillanimitas*), despair (*desperatio*), listlessness with respect to precepts (*torpor circa praecepta*), and the mind's wandering about into illicit things (*vagatio mentis circa illicita*). But these do not seem to arise properly from acedia. For instance, rancor seems to be the same thing as hatred, which, as was explained above (q. 34, a. 6), arises from envy. Wickedness is a genus with respect to all vices, and the same holds for the mind's wandering about into illicit things. Listlessness with respect to precepts seems to be the same thing as acedia, whereas small-mindedness and despair can arise from any kind of sin whatsoever. Therefore, acedia is not appropriately posited as a capital vice.

**Objection 3:** In *De Summo Bono* Isidore distinguishes the vice of acedia from the vice of sadness, explaining that the vice is sadness insofar as one *draws back from* something serious and laborious to

which he is obligated, whereas it is acedia insofar as he *turns himself toward* undue rest. And he claims that rancor, small-mindedness, acrimoniousness (*amaritudo*), and despair arise from sadness, whereas idleness (*otiositas*), sluggishness (*somnolentia*), mental importunity (*importunitas mentis*), corporeal restlessness (*inquietudo corporis*), instability (*instabilitas*), talkativeness (*verbositas*), and idle curiosity (*curiositas*) arise from acedia. Therefore, it seems that either Gregory or Isidore incorrectly designates acedia as a capital vice with its children.

**But contrary to this:** In *Moralia* 31 Gregory claims that acedia is a capital vice and has the children enumerated above.

**I respond:** As was explained above (*ST* 1-2, q. 84, aa. 3-4), a vice is called a capital vice when other vices are prompt to arise from it in its role as a final cause (*secundum rationem causae finalis*). Now just as men do many things because of pleasure, both in order to attain pleasure and also having been moved by its impetus to do something, so, too, they do many things because of sadness, either in order to avoid it or by rushing into doing certain things because of its burden. Hence, since, as was explained above (a. 1), acedia is a certain sort of sadness, it is appropriately posited as a capital sin.

**Reply to objection 1:** By weighing down a man's mind, acedia keeps him from doing those deeds that cause the sadness. But it nonetheless leads his mind toward doing certain things, either things that are consonant with the sadness, such as crying (*sicut ad plorandum*), or things by which the sadness is avoided.

**Reply to objection 2:** Gregory correctly designates the children of acedia. For since, as the Philosopher points out in *Ethics* 8, no one can remain for a long time without pleasure and with sadness, it is necessary for something to arise from the sadness—and this in two ways: (a) the man withdraws from what causes the sadness, and (b) he passes on to other things in which he takes pleasure, in the way that, as the Philosopher notes in *Ethics* 10, those who cannot rejoice in spiritual delights shift toward corporeal pleasures. In fleeing from sadness, the process is such that a man first flees from what causes the sadness and, second, he fights against what engenders the sadness.

Now the spiritual goods that acedia is saddened by include both the end and the means to the end. Fleeing from the end is effected by *despair*, whereas fleeing from the goods that are the means to the end is effected (a) by *small-mindedness* as regards the arduous goods that fall under the counsels, and (b) by *listlessness with respect to precepts* as regards those goods that belong to justice in general. As for fighting against the spiritual goods that cause the sadness, sometimes this battle is against men who are leading one toward the spiritual goods, and this is *rancor*, whereas sometimes it extends to the spiritual goods themselves, and this is *wickedness* properly speaking. And insofar as one passes on to exterior pleasurable goods because of the sadness, *wandering about into illicit things* is posited as a child of acedia.

This makes clear the response to the objections concerning the individual children of acedia. For wickedness is being taken here in the way just explained and not as a genus of vices. Again, rancor is being taken here for a certain sort of indignation, as has been explained, and not for hatred in general. And the same thing should be said about the others.

**Reply to objection 3:** In *De Institutis Coenobiorum* Cassian likewise distinguishes sadness from acedia, whereas Gregory more appropriately calls acedia sadness. For as was explained above (a. 2), sadness is not a vice distinct from others insofar as one withdraws from serious and laborious work or insofar as one is saddened by any other causes, but only insofar as one is saddened by the divine good. But this belongs to the nature of acedia, which turns to an inappropriate rest to the extent that it rejects the divine good.

Now the things that Isidore posits as arising from sadness and acedia are traced back to the things that Gregory posits. For instance, *acrimoniousness*, which Isidore posits as arising from sadness, is a certain effect of *rancor*, whereas *idleness* and *sluggishness* are traced back to *listlessness with respect to precepts*, which someone who is idle overlooks entirely, and which someone who is sluggish fulfills in a

negligent way. All five of the other things that he posits as arising from acedia have to do with the *mind's wandering about into illicit things*. Insofar as it resides inside a mind that wills inappropriately to diffuse itself to diverse things, it is called *mental importunity*; insofar as it belongs to the cognitive power, it is called *idle curiosity*; insofar as it pertains to speech, it is called *talkativeness*; insofar as it belongs to the body's not remaining in the same place, it is called *corporeal restlessness*, viz., when through the disordered movement of his members one exhibits the mind's wandering; and insofar as one moves to diverse places, it is called *instability*. (Alternatively, instability can be taken for constantly changing one's mind (*secundum mutabilitatem proposito*)).

## QUESTION 36

### Envy

We next have to consider envy (*invidia*). And on this topic there are four questions: (1) What is envy? (2) Is envy a sin? (3) Is envy a mortal sin? (4) Is envy a capital vice, and what are its children?

#### Article 1

##### Is envy a type of sadness?

It seems that envy is not a type of sadness (*invidia non sit tristitia*):

**Objection 1:** The object of sadness is something bad. But the object of envy is something good; for in *Moralia* 5, in speaking of the envious man, Gregory says, “His mind, pining away, is wounded by its own pain and is tormented by the happiness of another.” Therefore, envy is not a type of sadness.

**Objection 2:** Similarity is a cause of delight rather than of sadness. But similarity is a cause of envy; for in *Rhetoric* 2 the Philosopher says, “Men will envy those who are similar to them in birth or in family connections or in stature or in disposition or in reputation.” Therefore, envy is not a type of sadness.

**Objection 3:** Sadness is caused by some need (*defectus*). Hence, as was explained above when we were talking about the passions (*ST* 1-2, q. 47, a. 3), those who are in great need are prone to sadness. But as is clear from the Philosopher in *Rhetoric* 2, the envious are those to whom little is lacking and who love honor and who are reputed to be wise. Therefore, envy is not a type of sadness.

**Objection 4:** Sadness is opposed to delight, and opposites cannot have the same cause. Therefore, since, as was explained above (*ST* 1-2, q. 32, a. 3), the memory of goods that have been possessed is a cause of delight, it will not be a cause of sadness. However, the memory of goods that have been possessed is a cause of envy; for in *Rhetoric* 2 the Philosopher says that a man envies those who possess or have possessed what was fitting for himself or what he himself possessed at one time. Therefore, envy is not a type of sadness.

**But contrary to this:** In *De Fide Orthodoxa* 2 Damascene posits three species of sadness and claims that envy is sadness over the goods of others.

**I respond:** The object of sadness is what is bad for oneself (*malum proprium*). But it is possible for what is good for someone else (*alienum bonum*) to be apprehended as bad for oneself. And this is how one can be saddened by another’s good.

However, there are two ways in which this happens:

(a) in one way, when someone is saddened by another’s good insofar as the danger of some harm threatens him because of that good, as when a man is saddened by the elevation of his enemy, fearing that his enemy will do him harm. As the Philosopher points out in *Rhetoric* 2, this sort of sadness is not envy, but is instead an effect of fear;

(b) in a second way, the other’s good is thought of as bad for oneself insofar as it diminishes one’s own glory or excellence. And this is the way in which envy is saddened by another’s good. And so, as the Philosopher points out in *Rhetoric* 2, men are envious especially of those goods in which there is glory and in which men love to be honored and reputed (*amant honorari et in opinione esse*).

**Reply to objection 1:** Nothing prevents what is good for one individual from being apprehended as bad for another individual. It is in this way, as has been explained, that one can be saddened by something good.

**Reply to objection 2:** Since envy has to do with another’s glory insofar as it diminishes the glory that the envious man desires, it follows that envy is had only with respect to those whom the man wants to equal or surpass in glory. But this does not occur with respect to those who are far removed from him; for no one except a madman desires to equal or surpass in glory those who are far greater than he is. For

instance, an ordinary man does not envy a king; nor, for that matter, does a king envy an ordinary man, whom he far surpasses. And so a man does not envy those who are far removed from himself either in place or in time or in status, but instead he envies those who are close to him and whom he is trying to equal or surpass. For when such man surpass us in glory, this happens to our disadvantage, and sadness is thereby caused.

On the other hand, similarity causes delight insofar as it is agreeable to the will.

**Reply to objection 3:** No one strives for what he is highly deficient in. And so when someone exceeds him in some such thing, he does not envy him. But if he is just a little deficient, it seems that he is able to attain his goal, and so he strives for it. Hence, if his attempt is frustrated because of someone else's abundant glory, he is saddened. And so it is that those who love honor are more envious. Similarly, small-minded individuals are also envious, because they regard all things as great, and whenever any good accrues to someone else, they think that they themselves have been surpassed in greatness. Hence, Job 5:2 says, "Envy kills the little one." And in *Moralia* 5 Gregory says, "We can envy only those whom we deem better than us in some respect."

**Reply to objection 4:** The memory of past goods, insofar as they were actually possessed, causes delight, but insofar as they have been lost, causes sadness. And insofar as they are possessed by others, they cause envy, since this especially seems to detract from one's own glory. And so in *Rhetoric* 2 the Philosopher says, "The old envy the young, and those who have spent a lot to get something envy those who have obtained that same thing with little expense. For they sorrow over the loss of their own goods and over the fact that others have obtained the goods."

## Article 2

### Is envy a sin?

It seems that envy is not a sin:

**Objection 1:** In *Ad Laetam de Instructione Filiae* Jerome says, "Let her have friends with whom she might learn, whom she might envy, and who are such that she is stung when they are praised." But no one should be encouraged to sin. Therefore, envy is not a sin.

**Objection 2:** As Damascene says, envy is "sadness over the goods of others." But this sometimes happens in a praiseworthy way; for Proverbs 29:2 says, "When the wicked take power, the people groan." Therefore, envy is not always a sin.

**Objection 3:** Envy names a certain sort of zeal or jealousy (*zelum*). But some sorts of zeal are good—this according to Psalm 68:10 ("Zeal for your house consumed me"). Therefore, envy is not always a sin.

**Objection 4:** Punishment (*poena*) is divided off from sin (*culpa*). But envy is a certain sort of punishment; for in *Moralia* 5 Gregory says, "When the rottenness of the sore [of envy] corrupts the vanquished heart, the exterior signs indicate how gravely the madness stirs up the mind. One's color is affected by pallor, the eyes are weighed down, the mind is inflamed, the limbs freeze up, there is frenzy in the thoughts, the teeth are grating." Therefore, envy is not a sin.

**But contrary to this:** Galatians 5:26 says, "Let us not become desirous of vainglory, provoking one another, envying one another."

**I respond:** As has been explained (a. 1), envy is sadness over the goods of others. But there are four ways in which this sort of sadness can occur:

(a) In one way, when someone is saddened by another's good because he fears some harm from it either to himself or to other goods. As was explained above (a. 1), this sort of sadness is not envy and it can exist without sin. Hence, in *Moralia* 22 Gregory says, "It very often happens that, without our losing

charity, the ruin of our enemy gladdens us, and, again, without any sin of envy, his glorification saddens us; for when he falls, we believe it to be good that certain others should rise up, and when he prospers, we fear that many will suffer unjustly.”

(b) In a second way, we can be saddened by another’s good not because he has the good, but because we lack the good that he has. And as the Philosopher explains in *Rhetoric* 2, this is, properly speaking, zeal or jealousy (*zelum*). If this zeal is had with respect to upright goods, then it is praiseworthy—this according to 1 Corinthians 14:1 (“Be zealous for spiritual goods”). On the other hand, if it has to do with temporal goods, then it can exist either with or without sin.

(c) In a third way, one is saddened by another’s good insofar as the one to whom the good accrues is undeserving of it. This sort of sadness cannot arise from the upright goods by which one becomes just. Rather, as the Philosopher points out in *Rhetoric* 2, it arises from riches and such goods that can come to both the deserving and the undeserving. And according to the Philosopher, this sort of sadness is called *nemesis* and belongs to good morals. However, he makes this claim because he is considering temporal goods in their own right, insofar as they can seem like great goods to those who do not take eternal goods into account. By contrast, according to the teaching of the Faith, temporal goods that accrue to the undeserving by God’s just ordination are disposed either toward their correction or toward their damnation, and goods of this sort are, as it were, nothing in comparison the future goods that are set aside for those who are good. And that is why sadness of this sort is forbidden in Sacred Scripture—this according to Psalm 36:1 (“Do not emulate evildoers or be jealous of the wicked”); and, again, according to Psalm 72:2-3 (“My steps had almost slipped, for I was jealous of the wicked when I saw the prosperity of sinners”).

(d) In a fourth way, someone is saddened by another’s goods insofar as the other exceeds him in those goods. And this is envy, properly speaking. And this is always wrong, as the Philosopher likewise explains in *Rhetoric* 2, since one is saddened by something that he should take joy in, viz., his neighbor’s good.

**Reply to objection 1:** ‘Envy’ is here being taken for the zeal or jealousy by which one ought to be motivated to make progress along with his betters.

**Reply to objection 2:** This argument goes through for the first mode of sadness over the goods of others.

**Reply to objection 3:** As has been explained, envy differs from jealousy or zeal. Hence, some kinds of jealousy can be good, whereas envy is always bad.

**Reply to objection 4:** As was explained above when sin was being discussed (*ST* 1-2, q. 87, a. 2) nothing prevents a sin from being a punishment by reason of something else added to it.

### Article 3

#### Is envy a mortal sin?

It seems that envy is not a mortal sin:

**Objection 1:** Since envy is a type of sadness, it is a passion of the sentient appetite. But as is clear from Augustine in *De Trinitate* 12, there is mortal sin only in reason and not in the sentient appetite. Therefore, envy is not a mortal sin.

**Objection 2:** Mortal sin cannot exist in infants. But envy can exist in them; for in *Confessiones* 1 Augustine says, “I myself have seen and experienced a jealous child; he did not yet speak, but he was livid with anger when he saw another infant at the breast.” Therefore, envy is not a mortal sin.

**Objection 3:** Every mortal sin is contrary to some virtue. But envy is not contrary to any virtue; instead, as is clear from the Philosopher in *Rhetoric* 2, it is contrary to *nemesis*, which is a certain

passion. Therefore, envy is not a mortal sin.

**But contrary to this:** Job 5:2 says, “Envy kills the little one.” But nothing kills spiritually except a mortal sin. Therefore, envy is a mortal sin.

**I respond:** Envy is a mortal sin by its genus. For the genus of a sin is taken from its object. But by reason of its object, envy is contrary to charity, through which the soul’s spiritual life exists—this according to 1 John 3:14 (“We know that we have passed from death to life, because we love our brothers”). For the object of both charity and envy is the good of our neighbor, but in accord with contrary movements, since, as is clear from what was said above (aa. 1-2), charity rejoices in our neighbor’s good, whereas envy is saddened by that same good. Hence, it is clear that envy is a mortal sin by its genus.

But as was explained above (q. 35, a. 3), in every genus of mortal sin one finds certain incomplete movements which exist in the sentient appetite and which are venial sins; for instance, in the genus *adultery* there is a first movement of disordered desire, and in the genus *homicide* there is a first movement of anger. So, too, in the genus *envy* one finds—sometimes even in perfected men—certain first movements that are venial sins.

**Reply to objection 1:** The movement of envy insofar as it is a passion of the sentient appetite is something incomplete in the genus of human acts, whose principle is reason. Hence, this sort of envy is not a mortal sin. And a similar line of reasoning holds for the envy that belongs to infants, in whom there is no use of reason.

**Reply to objection 2:** From this the reply to the second objection is clear.

**Reply to objection 3:** According to the Philosopher in *Rhetoric* 2, envy is opposed both to *nemesis* and to mercy, but in different ways.

Envy is *directly* opposed to mercy because of the contrariety of their principal objects, since the envious man is saddened by his neighbor’s good, whereas the merciful man is saddened by what is bad for his neighbor. Hence, as the Philosopher says in the same place, envious individuals are not merciful and merciful individuals are not envious.

By contrast, envy is opposed to *nemesis* by reference to the one whose good the envious man is saddened by; for someone with *nemesis* is saddened by the good of those who act unworthily—this according to Psalm 72:3 (“I was jealous of the wicked when I saw the prosperity of sinners”)—whereas an envious individual is saddened by the good of those who are deserving of that good.

Hence, it is clear that the first contrariety is more direct than the second. But mercy is a virtue and the proper effect of charity. Hence, envy is opposed to mercy and to charity.

## Article 4

### Is envy a capital vice?

It seems that envy is not a capital vice:

**Objection 1:** Capital vices are distinct from the children of capital sins. But envy is a child of vainglory; for in *Rhetoric* 2 the Philosopher says that it is “lovers of honor and glory who are more envious.” Therefore, envy is not a capital sin.

**Objection 2:** The capital vices seem to be less serious sins than the other vices that arise from them; for in *Moralia* 31 Gregory says, “The first vices enter into a deceived mind under some pretext, whereas those that come later, as they draw the mind to every type of insanity, confound the mind with their wild outcry.” But envy seems to be the most serious sin of all; for in *Moralia* 5 Gregory says, “Even though the venom of our ancient enemy is infused into the human heart by every vice that is perpetrated, still, in the case of this particular type of wickedness the serpent stirs all his innards and

spews forth the venom of engraving malice.” Therefore, envy is not a capital vice.

**Objection 3:** It seems that Gregory incorrectly designates the children of envy in *Moralia* 31, when he says, “From envy there arise hatred (*odium*), gossip (*susurratio*), detraction (*detractio*), exultation over our neighbor’s misfortune (*exultatio in adversis proximii*), and sadness over our neighbor’s good fortune (*afflictio in prosperis*).” For as is clear from what has been said previously, exultation over our neighbor’s misfortunes and sadness over his good fortune seem to be the same thing as envy. Therefore, they should not be posited as children of envy.

**But contrary to this** is the authority of Gregory, *Moralia* 31, where he posits envy as a capital vice and assigns the children just mentioned to it.

**I respond:** Just as acedia is sadness over the divine spiritual good, so envy is sadness over our neighbor’s good. It was explained above (q. 35, a. 4) that acedia is a capital vice by reason of the fact that a man is impelled by acedia to do other things either in order to avoid the sadness or in order to make up for the sadness. Hence, for the same reason envy is posited as a capital vice.

**Reply to objection 1:** As Gregory says in *Moralia* 31, “The capital vices are conjoined by such a close connection that the one emerges from the other. For instance, the first offshoot of pride is vainglory, which, as it corrupts the oppressed mind, gives rise to envy; for as long as it craves the power of an empty name, it languishes with the fear that someone else will be able to acquire that power.” Therefore, it is not contrary to the character of a capital vice that it itself should arise from another capital vice; rather, what is contrary to its character is not having any standard way of producing from itself many kinds of sins.

Still, perhaps it is because envy clearly arises from vainglory that it is not listed as a capital vice by either Isidore in *De Summo Bono* or by Cassian in *De Institutis Coenobiorum*.

**Reply to objection 2:** From this passage it follows not that envy is the greatest of sins, but that when the devil suggests envy, he induces men to what he himself chiefly has in his own heart. For as it says in a passage cited later on in the same place by Gregory, “death came into the world because of the devil’s envy” (Wisdom 2:24).

Nonetheless, there is a certain sort of envy which is indeed counted among the most serious of sins, viz., envy of a brother’s grace, insofar as one is saddened not just by his neighbor’s good, but by the very increase of God’s grace. Hence, this sort of envy is posited as a sin against the Holy Spirit, since through this sort of envy a man in some sense envies the Holy Spirit, who is glorified in His works.

**Reply to objection 3:** The number of envy’s children can indeed be understood in the way laid out in the objection. For in the impulse of envy (*in conatu invidiae*) there is something at the beginning, something in the middle, and something at the end.

The beginning occurs when one belittles the glory of another, either (a) in secret, in which case there is *gossip*, or (b) in the open, in which case there is *detractio*.

The middle is that one who seeks to diminish the glory of the other either (a) is able to do it, in which case there is *exultation over our neighbor's misfortune*, or (b) is unable to do it, in which case there is *sadness over our neighbor's good fortune*.

The end consists in *hatred* itself, since, as was explained above (q. 34, a. 6), just as a good that gives delight is a cause of love, so sadness is a cause of hatred.

Now sadness over our neighbor’s good fortune can in one sense be envy itself, viz., when one is saddened by another’s good fortune insofar as that good fortune includes a sort of glory. But in another sense it is a child of envy, insofar as the neighbor’s good fortune happens contrary to the efforts of an envious individual who is trying to prevent that good fortune.

On the other hand, exultation over our neighbor’s misfortune is not directly the same thing as envy, but instead it follows from envy; for from sadness over our neighbor’s good there follows exultation over what is bad for that same individual.

## QUESTION 37

### Discord

We next have to consider the sins that are opposed to peace: first, discord (*discordia*), which is a sin of the heart (question 37); second, contentiousness (*contentio*), which is a sin of the mouth (question 38); and, third, sinful deeds, viz., schism (*schisma*) (question 39), strife (*rixa*) (question 41), and war (*bellum*) (question 40).

On the first topic there are two questions: (1) Is discord a sin? (2) Is discord a child of vainglory?

### Article 1

#### Is discord a sin?

It seems that discord is not a sin:

**Objection 1:** To be discordant with someone is to withdraw from his will. But this does not seem to be a sin, since it is only God's will, and not our neighbor's will, that is the rule or standard (*regula*) for our own will. Therefore, discord is not a sin.

**Objection 2:** If someone induces another to sin, then he himself likewise sins. But to induce discord among certain individuals does not seem to be a sin; for Acts 23:6-7 says, "Paul, knowing that the one part were Sadducees and the other Pharisees, cried out in the council, 'Men, brothers, I am a Pharisee, the son of Pharisees; it is concerning the hope and resurrection of the dead that I am called into question.'" Therefore, discord is not a sin.

**Objection 3:** Sin, especially mortal sin, is not found among holy men. But discord is found among holy men; for Acts 15:39 says, "A disagreement arose between Paul and Barnabas ... with the result that they took their leave from one another." Therefore, discord is not a sin, and especially not a mortal sin.

**But contrary to this:** In Galatians 5:20, dissensions, i.e., instances of discord, are posited among the works of the flesh, concerning which it is added, "Those who do such things do not attain the kingdom of God." But nothing except mortal sin excludes one from the kingdom of God. Therefore, discord is a mortal sin.

**I respond:** Discord is opposed to concord. But as was explained above (q. 29, a.3), concord is caused by charity, viz., insofar as charity joins the hearts of many individuals in some one thing, which is principally the divine good and secondarily the good of our neighbor. Therefore, discord is a sin insofar as it is contrary to this sort of concord.

Notice, however, that there are two ways in which concord of this sort is undermined by discord, (a) *per se* and (b) *per accidens*.

(a) In human acts and movements, what is said to be *per se* is what is in accord with one's intention. Hence, someone is discordant with his neighbor *per se* when he knowingly and deliberately dissents from the divine good and from that good of his neighbor which he is obliged to consent to. This is a mortal sin by its genus, because it is contrary to charity—even though the first movements of this sort of discord are venial sins because of the incompleteness of the act.

(b) In human acts, what is considered to be *per accidens* is what lies outside one's intention. Hence, when (a) the intention of two individuals is aimed toward the good that belongs to the honor of God and the advantage of one's neighbor, but (b) one thinks that *this* is good while the other has a contrary opinion, discord in such a case is opposed *per accidens* to the divine good or the good of one's neighbor. And this sort of discord is not a sin and is not incompatible with charity, unless it is accompanied by error concerning what is necessary for salvation or by undue stubbornness. For it was explained above (q. 29, aa. 1 and 3) that the concord which is an effect of charity is a unity of wills and not a unity of opinions.

From this it is clear that discord is sometimes a sin that belongs to one of the individuals, viz., when

the one individual wills the good and the other knowingly resists the good, whereas sometimes the discord is accompanied by sin on both their parts, e.g., when each dissents from the good of the other and loves his own private good instead (*uterque diligit bonum proprium*).

**Reply to objection 1:** Considered in its own right, the will of one man is not a rule or standard for the will of another man. However, to the extent that the will of one's neighbor adheres to the will of God, it thereby becomes a rule or standard regulated by the First Rule. And so to be discordant with such a will is a sin, since one is thereby discordant with the divine rule.

**Reply to objection 2:** Just as the will of a man who is adhering to God is a sort of upright rule (*regula recta*) which it is a sin to be discordant with, so, too, a human will that is contrary to God is a sort of perverse rule which it is good to be discordant with. Therefore, to bring about an instance of discord by which the right sort of concord that charity effects is destroyed is a serious sin; hence, Proverbs 6:16 says, "There are six things that the Lord hates, and a seventh that His soul detests," and Proverbs 6:19 posits as this seventh thing "the one who sows discord among his brethren."

However, it is praiseworthy to cause an instance of discord by which a bad concord is destroyed, i.e., concord in a bad will. And in this sense it was praiseworthy for Paul to cause a disagreement among those who were concordant in evil. For in Matthew 10:34 our Lord says, "I have come to bring not peace, but the sword."

**Reply to objection 3:** The discord between Paul and Barnabas was *per accidens* and not *per se*, since both intended the good, but to the one *this* seemed to be good and to other something else seemed to be good. This had to do with human defectiveness, since the controversy was not about what is necessary for salvation—even though the disagreement was itself ordained by divine providence for the sake of the advantage that resulted therefrom.

## Article 2

### Is discord a child of vainglory?

It seems that discord is not a child of vainglory:

**Objection 1:** Anger is a vice distinct from vainglory. But discord seems to be a child of anger—this according to Proverbs 15:18 ("An angry man stirs up strife"). Therefore, it is not a child of vainglory.

**Objection 2:** In *Super Ioannem* Augustine, in commenting on John 7:39 ("As yet the Spirit had not been given"), says, "Spite (*livor*) separates, whereas charity unites." But discord is nothing other than a certain separation of wills. Therefore, discord proceeds from spite, i.e., envy, more than from vainglory.

**Objection 3:** What many bad things arise from seems to be a capital vice. But discord is like this, since in *Super Matthaem* 12:25 ("Every kingdom divided against itself shall be made desolate") Jerome says, "In the same way that small things grow by concord, so great things are brought to ruin by discord." Therefore, discord itself should be posited as a capital vice rather than as a child of vainglory.

**But contrary to this** is the authority of Gregory in *Moralia* 31.

**I respond:** Discord implies a certain division of wills, viz., insofar as one individual's will insists on one thing and a second individual's will insists on something else. Now the fact that someone's will insists on his own position stems for his preferring what belongs to him over what belongs to others. When this is done in a disordered way, it pertains to pride and vainglory. And so discord, through which one follows his own way and withdraws the other's way, is posited as a child of vainglory.

**Reply to objection 1:** Strife (*rixa*) is not the same thing as discord (*discordia*). For strife consists in an exterior deed and hence is appropriately caused by anger, which moves the mind to harm one's neighbor. By contrast, discord consists in a disunity of movements of will and is caused by pride or

vainglory in the way already explained.

**Reply to objection 2:** In the case of discord, what is considered to be the *terminus a quo* is the withdrawal from the other's will, and in this respect it is caused by envy. On the other hand, what is taken to be the *terminus ad quem* is the movement toward what is proper to oneself, and in this respect it is caused by vainglory. And since in every movement the *terminus ad quem* is more significant than the *terminus a quo* (for the end is more significant than the starting point), discord is posited as a child of vainglory more than as a child of envy—even though, as has been explained, it can arise from both of them in different respects.

**Reply to objection 3:** The reason why big things grow by concord and are made desolate by discord is (a) that the more united a power is, the stronger it is, and (b) that a power is diminished by separation. This is explained in the *Liber de Causis*. Hence, it is clear that this feature pertains to discord's *proper effect*, i.e., the division of wills, but it does not involve the *origin of diverse vices* from discord through which discord might have the character of a capital vice.

## QUESTION 38

### Contention

We next have to consider contention (*contentio*). And on this topic there are two questions: (1) Is contention a mortal sin? (2) Is contention a child of vainglory?

#### Article 1

##### Is contention a mortal sin?

It seems that contention is not a mortal sin:

**Objection 1:** Mortal sin is not found in spiritual men. Yet contention is found among spiritual men—this according to Luke 22:24 (“A dispute arose among the disciples of Jesus about which of them was the greatest”). Therefore, contention is not a mortal sin.

**Objection 2:** No well-disposed individual should be pleased by a mortal sin in his neighbor. But in Philippians 1:17 the Apostle says, “Some preach Christ out of contentiousness”—and afterwards he adds, “In this also I rejoice and will rejoice.” Therefore, contention is not a mortal sin.

**Objection 3:** It is possible for individuals to contend in a judicial proceeding or in a disputation without any malignant intentions but instead with good intentions, e.g., those who contend by disputing against heretics. Hence, a Gloss on 1 Kings 14:1 (“It came to pass one day that ...”) says, “Once they are challenged to a contest, Catholics set about contending with heretics.” Therefore, contention is not a mortal sin.

**Objection 4:** Job seems to have contended with God—this according to Job 39:32 (“Will he who contends with God be so easily silenced?”). And yet Job did not commit a mortal sin, since the Lord says of him, “You [Eliphaz] have not spoken uprightly before me, as my servant Job has” (Job 42:7). Therefore, contention is not always a mortal sin.

**But contrary to this:** Contention is contrary to the Apostle’s command in 2 Timothy 2:14, “Do not contend with words.” And in Galatians 5:20 contention is numbered among the works of the flesh which are such that “those who do them do not possess the kingdom of God,” as it says in the same place. But everything that excludes one from the kingdom of God and that violates a precept is a mortal sin. Therefore, contention is a mortal sin.

**I respond:** To contend is to tend against someone (*contendere est contra aliquem tendere*). Hence, just as discord involves a kind of contrariety in the will, so contention involves a kind of contrariety in speech. Because of this, when someone’s speech makes ample use of contraries (*per contraria se diffundit*), it is called ‘contention’, which is posited as one of the ‘colors’ of rhetoric by Tully, who puts it this way: “Contention exists when one’s speech is put together out of contraries—as, for instance, if one says, ‘Flattering assent has pleasant beginnings and leads to very bitter outcomes.’”

Now there are two ways in which contrariety in speech can be thought of: (a) with respect to the *intention* of the one who contends, and (b) with respect to the *mode* or *manner* of contention.

As for the intention, one needs to consider whether the individual opposes the truth, which is blameworthy, or whether he instead opposes falsehood, which is praiseworthy.

As for the mode or manner, one needs to consider whether the manner of contending is fitting for both the persons involved and also the matter at hand, since this is praiseworthy—hence, in *Rhetorica* 3 Tully says, “Contention is sharply worded speech fit for confirming and confuting”—or whether instead the manner lies outside what is appropriate for the persons involved and the matter at hand, in which case the contentiousness is blameworthy.

Thus, if contention is understood to involve attacking the truth in a disordered manner, then it is a mortal sin. And it is in this way that Ambrose defines contention when he says, “Contention is attacking the truth with clamorous confidence.”

On the other hand, if contention is understood to involve attacking falsehood with an appropriate level of acrimony, then contention is praiseworthy.

Again, if contention is understood to involve attacking falsehood in a disordered way, then it can be a venial sin—unless perhaps the disorder in contending is so great that it generates scandal for others. Hence, in 2 Timothy 2:14, after the Apostle has said, “Do not contend with words,” he adds, “For it is good for nothing except subverting the listeners.”

**Reply to objection 1:** Among the disciples of Christ there was no contention with the intention of attacking the truth, since each one defended what seemed to him to be true. However, there was disorder in their contentions, since they contended about what should not have been contended about, viz., the primacy of honor. For as a Gloss on the same passage says, “They were not yet spiritual.” For this reason, our Lord held them in check after that.

**Reply to objection 2:** Those who were preaching Christ out of contentiousness were reprehensible, since even though they were not attacking the truth of the Faith but were instead preaching the Faith, they were nonetheless fighting against the truth in the sense that they intended to “raise affliction” for the Apostle, who was preaching the truth of the Faith. Hence, the Apostle was rejoicing not over their contentiousness, but over the fruit that was coming from it, viz., that Christ was being preached. For at times something good comes even from what is bad.

**Reply to objection 3:** According to the *complete concept* of contention insofar as it is a *mortal sin*, the one who ‘contends’ in a judicial proceeding is someone who is fighting against the truth of justice, and the one who ‘contends’ in a disputation is someone who intends to attack the truth of doctrine. And in this sense it is not the case Catholics contend against heretics—just the opposite.

However, if contention in a judicial proceeding or in a disputation is taken in an incomplete sense, viz., just insofar as it involves sharply worded speech, then it is not always a mortal sin.

**Reply to objection 4:** Contention is being taken in this objection generally for disputation. For Job had said, “I am speaking to the Almighty, and I wish to have a dispute with God” (Job 13:3). Nonetheless, he did not intend either (a) to fight against the truth, but instead wanted to make an inquiry, or (b) to make use of any disorder of intention or of speech in this inquiry.

## Article 2

### Is contention a child of vainglory?

It seems that contention is not a child of vainglory:

**Objection 1:** Contention has an affinity to jealousy or zeal; hence, 1 Corinthians 3:3 says, “Since there is jealousy and contention among you, are you not carnal, and walk in an ordinary human way?” But jealousy has to do with envy. Therefore, contention arises more from envy.

**Objection 2:** Contention is accompanied by a sort of clamor. But as is clear from Gregory in *Moralia* 31, clamor arises from anger. Therefore, contention likewise arises from anger.

**Objection 3:** Among other things, knowledge seems chiefly to be the matter of pride and vainglory—this according to 1 Corinthians 7:1 (“Knowledge inflates”). But contention very often arises from a lack of the knowledge through which the truth is known and is not attacked. Therefore, contention is not a child of vainglory.

**But contrary to this** is the authority of Gregory in *Moralia* 31.

**I respond:** As was explained above (q. 37, a. 2), discord is a child of vainglory because each of two discordant individuals insists on his own position, and the one does not acquiesce to the other; but it is proper to pride and vainglory to seek one’s own excellence.

Now just as individuals are discordant because they insist *with their heart* on their own position, so

individuals are said to contend because each of them defends *with his words* what seems to him to be correct. And so contention is posited as a child of vainglory for the very same reason that discord is.

**Reply to objection 1:** Contention, like discord, has an affinity to envy as regards the withdrawal of the individual from the one whom he is discordant with and contends with. However, as regards what the one who contends insists on, contention agrees with pride and vainglory—viz., as has been explained, insofar as he stands firm on his own position.

**Reply to objection 2:** Clamor is presupposed by the sort of contention we are talking about, which has the purpose of attacking the truth. Hence, clamor is not the main element in contention. And so it is not necessary that the contention should be derived from the same source that the clamor is derived from.

**Reply to objection 3:** Pride and vainglory are occasioned mainly by goods—even by the goods that are opposed to them, as when someone takes pride in his own humility. For derivations of this sort are *per accidens* and not *per se*, and in this mode of derivation nothing prevents one contrary from having its source in the other contrary.

And so nothing prevents things that have their source *per se* in pride and vainglory from being caused by contraries of those things from which pride sometimes arises.

## QUESTION 39

### Schism

We next have to consider the vices that are opposed to peace and that involve deeds: schism (*schisma*) (question 39); strife (*rixa*) (question 41); sedition (*seditio*) (question 42); and war (*bellum*) (question 40).

On the first topic there are four questions: (1) Is schism a special sin? (2) Is schism a more serious sin than unbelief? (3) Do schismatics have any power? (4) Are schismatics appropriately punished with excommunication?

### Article 1

#### Is schism a special sin?

It seems that schism is not a special sin:

**Objection 1:** As Pope Pelagius says, “Schism (*schisma*) sounds like scissor (*scissura*).” But every sin effects some sort of cutting off—this according to Isaiah 59:2 (“Your sins have cut you off from your God”). Therefore, schism is not a special sin.

**Objection 2:** Schismatics seem to be individuals who do not obey the Church. But a man becomes disobedient to the precepts of the Church through every sin, since sin, according to Ambrose, “is disobedience with respect to the celestial commandments.” Therefore, every sin is an instance of schism.

**Objection 3:** Heresy likewise cuts a man off from the unity of the Faith. Therefore, if the name ‘schism’ implies being cut off, then schism does not seem to differ as a special sin from the sin of unbelief.

**But contrary to this:** In *Contra Faustum* Augustine distinguishes schism from heresy as follows: “Schism is believing the same things as the others and worshiping with the same rites, but being content merely to split the congregation, whereas heresy is believing things that are diverse from what the Catholic Church believes.” Therefore, schism is not a general sin.

**I respond:** As Isidore says in *Etymologia*, the name ‘schism’ “comes from a division of minds” (*scissura animorum*). But division is opposed to unity. Hence, the sin of schism is directly and *per se* opposed to unity. For just as what is *per accidens* does not constitute a species among natural entities, so, too, neither does it constitute a species among moral entities, in the case of which what is intended is *per se*, whereas what follows outside of the intention is, as it were, *per accidens*. And so the sin of schism is properly speaking a special sin by the fact that one intends to separate himself from the unity effected by charity, which not only unites one person to another by the spiritual bond of love, but also unites the Church as a whole in a unity of the Spirit (*in unitate spiritus*). And so, properly speaking, schismatics are those who by their own will and intention separate themselves from the unity of the Church, which is the most important unity. For the particular unity of individuals with one another is ordered toward the unity of the Church, just as the composition of the individual members in a natural body is ordered toward the unity of the whole body.

Now the unity of the Church is thought of in two ways, viz., in the connection, or common life, of the members of the Church with one another, and, again, in the ordering of all the members of the Church to the one Head—this according to Colossians 2:18-19 (“... puffed up by the sense of his flesh, and not holding closely to the Head, from whom the whole body, supported and held together by its ligaments and bonds, achieves the growth that comes from God”). Now this Head is Christ Himself, in whose stead the supreme Pontiff acts within the Church. And so schismatics are those who refuse to be subject to the supreme Pontiff and who refuse to be in communion with the members of the Church subject to him.

**Reply to objection 1:** A man who sins does not intend to be cut off from God through his sin; instead, this happens outside of his intention because he turns toward a mutable good in a disordered

way. And so he is not a schismatic, properly speaking.

**Reply to objection 2:** The character of schism is constituted by refusing to obey the precepts with a certain rebelliousness (*cum rebellione quadam*). Now I say ‘with a certain rebelliousness’, since a schismatic stubbornly scorns the precepts of the Church and refuses to submit to her judgment. And this is not done by just any sinner. Hence, it is not the case that every sin is an instance of schism.

**Reply to objection 3:** Heresy and the schism are distinguished by what each is opposed to *per se* and directly. For heresy is opposed *per se* to faith, whereas schism is opposed *per se* to the ecclesiastical unity of charity. And so just as faith and charity are diverse virtues, even though anyone who lacks faith lacks charity, so, too, schism and heresy are diverse vices, even though anyone who is a heretic is also a schismatic, though not vice versa. And this is view that Jerome expounds in *In Epistolam ad Galatas*: “I think that the difference between schism and heresy is that heresy has perverted doctrine, whereas schism separates from the Church.”

Yet just as the loss of charity is a path to losing faith—this according to 1 Timothy 1:6 (“From these things [read: charity and other virtues of this sort] some are straying and being turned toward vain babbling”)—so, too, schism is a path to heresy. Hence, in the same place Jerome adds, “At the beginning schism can in some way be understood to be different from heresy, and yet there is no schism that does not invent some heresy for itself in order to make it seem that it was right to have withdrawn from the Church.”

## Article 2

### Is schism a more serious sin than unbelief?

It seems that schism is a more serious sin than unbelief:

**Objection 1:** A greater sin is punished with a more severe punishment—this according to Deuteronomy 25:2 (“According to the measure of the sin shall the measure also of the stripes be”). But the sin of schism is punished more severely than even the sins of unbelief or idolatry. For Exodus 32:27-28 says that because of idolatry some individuals were killed by the sword with human hands, whereas Numbers 16:30 says, “If the Lord does something new, and the earth opens her mouth and swallows them up along with everything that belongs to them, and they go down alive into hell, you will know that they have blasphemed the Lord.” Now, as 4 Kings 17:20ff. relates, the ten tribes that withdrew from David’s kingdom though the vice of schism were punished most severely of all. Therefore, the sin of schism is more serious than the sin of unbelief.

**Objection 2:** As is clear from the Philosopher in *Ethics* 8, the good of the multitude is greater and more divine than the good of a single individual. But schism is contrary to the good of the multitude, i.e., contrary to ecclesiastical unity, whereas unbelief is contrary to the particular good of one individual, i.e., the faith of one single man. Therefore, it seems that schism is a more serious sin than unbelief.

**Objection 3:** As is clear from the Philosopher in *Ethics* 8, a greater good is opposed to a greater evil. But schism is opposed to charity, which, as is clear from what was said above (q. 23, a. 6), is a greater virtue than faith, which unbelief is opposed to. Therefore, schism is a more serious sin than unbelief.

**But contrary to this:** What is related as an addition to something else is greater than that thing either in goodness or in evil. But heresy is related to schism as an addition. For as is clear from the passage cited above from Jerome, it adds perverted doctrine. Therefore, schism is a less serious sin than unbelief.

**I respond:** The seriousness of a sin can be thought of in two ways, either in terms of the *species of the sin* or in terms of the *circumstances of the sinful act*. And since the circumstances are particular and

can vary in infinitely many ways, when one asks in general which of two sins is the more serious, the question should be understood to be asking about the seriousness that attends the sin's genus.

Now as is clear from what has been said above (*ST* 1-2, q. 72, a. 1 and q. 73, a. 3), the genus or species of a sin depends on its object. And so the sin that is contrary to a greater good is by its genus more serious, e.g., a sin against God is more serious than a sin against one's neighbor. Now it is clear that unbelief is a sin against God Himself, insofar as He is in His own right the first truth that faith relies on. By contrast, schism is a sin against ecclesiastical unity, which is a certain participated good and so is something less than God Himself. Hence, it is clear that the sin of unbelief is by its genus more serious than the sin of schism—even though it can happen that a given schismatic sins more grievously than a given unbeliever, either because of greater contempt, or because of the greater danger that he induces, or because of some other circumstance of this sort.

**Reply to objection 1:** It was already clear to that people through the Law they had received that there was one God and that other gods were not to be worshiped, and this was confirmed in their sight by many signs. And so it was unnecessary for those who sinned against faith by idolatry to be punished by any unusual or extraordinary punishment; just ordinary punishment was enough. By contrast, it was not as obvious to them that Moses should always be their leader. And so those who rebelled against his leadership had to be punished by unusual and miraculous punishments.

An alternative reply is that the sin of schism was sometimes more severely punished among that people because that people was quick to undertake sedition and schism; for 1 Esdra 4:19 says, "From days of old this city has rebelled against its king and stirred up sedition and battles within itself." Now as was established above (*ST* 1-2, q. 105, a. 2), sometimes a more severe punishment is inflicted for a more customary sin, since punishments are a sort of medicine for curbing men from sin. Hence, where there is a stronger tendency to sin, a more severe punishment should be applied.

Moreover, as is explained in the same place, the ten tribes were punished not only for the sin of schism but also for the sin of idolatry.

**Reply to objection 2:** Just as the good of the multitude is greater than the good of an individual who is part of that multitude, so the good of the multitude is less than the extrinsic good to which the multitude itself is ordered; for instance, the good of an army's order is less than the good of the leader. Similarly, the good of ecclesiastical unity, which schism is opposed to, is less than the good of divine truth, which unbelief is opposed to.

**Reply to objection 3:** Charity has two objects: (a) a principal object, viz., the divine goodness, and (b) another, secondary, object, viz., the good of our neighbor. Now schism and the other sins committed against our neighbor are opposed to charity as regards the secondary good, which is a lesser good than the object of faith, which is God Himself. And so these sins are lesser sins than unbelief. However, the hatred of God, which is opposed to charity as regards its principal object, is not a lesser sin than unbelief.

Yet among the sins that are committed against one's neighbor, the sin of schism seems to be the greatest, since it is contrary to the spiritual good of the multitude.

### Article 3

#### Do schismatics have any power?

It seems that schismatics do have some power:

**Objection 1:** In *Contra Donatistas* Augustine says, "Just as those returning to the Church who were baptized before they left are not re-baptized, so those returning to the Church who were ordained before they left are not once again ordained." But Holy Orders (*ordo*) are a sort of power. Therefore, schismatics have some power, since they retain Holy Orders.

**Objection 2:** In *De Unico Baptismo* Augustine says, “One who is separated can confer a sacrament, just as he can receive a sacrament.” But the power to confer the sacraments is the greatest power of all. Therefore, schismatics, who are separated from the Church, have spiritual power.

**Objection 3:** Pope Urban says, “As for those who have been consecrated by bishops who were at one time ordained as Catholics but are in schism, separated from the Roman Church: when they return to the unity of the Church, we command that they be received mercifully, with their own Holy Orders preserved, as long as their knowledge and way of life commend them.” But this would not be the case if spiritual power did not remain in the schismatics. Therefore, schismatics have spiritual power.

**But contrary to this:** As Cyprian writes in a certain letter, and as is contained in *Decreta* 7, q. 1: “Novatian, who does not observe either the unity of the Spirit or the concord of peace, and who separates himself from the bond of the Church and the college of priests, cannot have either the power or honor of a bishop.”

**I respond:** There are two kinds of spiritual power: (a) *sacramental* power and (b) *jurisdictional* power.

*Sacramental* power is what is conferred by a consecration. Now all of the Church’s consecrations are unchanging as long as the entity that is consecrated remains in existence. This is clear in the case of inanimate entities; for instance, once an altar is consecrated, it is not consecrated again, unless it has been broken up. And so this sort of power by its essence remains in a man who has obtained it by a consecration for as long as he lives, regardless of whether or not he falls into schism or heresy. This is clear from the fact that when he returns to the Church, he is not consecrated again. However, since, as is clear in the case of natural entities, a lower power ought not to proceed into act (*non debet exire in actum*) unless it is moved by a higher power, it follows that such individuals lose the *use* of their power, so that they are not permitted to use their power. Still, if they do indeed use it, their power has its effect in sacramental contexts, since in those contexts a man operates only as God’s instrument. Hence, the sacramental effects are not excluded by any sin on the part of the one who confers the sacrament.

On the other hand, *jurisdictional power* is conferred on a man by a simple injunction. And such power does not inhere in an individual unchangeably. Hence, this sort of power does not remain in schismatics or heretics, and so they cannot absolve or excommunicate or effect indulgences or other things of this sort, and if they were to do them, their actions would amount to nothing.

Therefore, when it is claimed that schismatics and heretics do not have spiritual power, this must either be understood of the second sort of power or, if it is referring to the first sort of power, then it must be referring to the *legitimate use* of the power and not to the very *essence* of the power.

**Reply to objection 1 and objection 2 and objection 3:** From this the reply to the objections is clear.

#### Article 4

##### Is it an appropriate punishment for schismatics that they be excommunicated?

It seems that it is not an appropriate punishment for schismatics that they be excommunicated:

**Objection 1:** Excommunication above all separates a man from sharing in the sacraments. But in *Contra Donatistas* Augustine says that baptism can be received from a schismatic. Therefore, it seems that excommunication is not an appropriate punishment for schism.

**Objection 2:** It belongs to Christ’s faithful that they should bring back those who have been dispersed; hence, Ezechiel 34:4 says against certain individuals, “You have not brought back again what departed, you have not sought after what was lost.” But schismatics are more appropriately brought back by someone who is in communion with them. Therefore, it seems that they should not be

excommunicated.

**Objection 3:** Two punishments should not be inflicted for the same sin—this according to Nahum 1:9 (“God will not judge the same thing a second time”). But some individuals are punished with a temporal punishment for schism; this is set down in *Decreta* 23, q. 5., where it says, “Divine and worldly laws have decreed that those who are separated from unity with the Church and disturb her peace should be held in check by the secular powers.” Therefore, they should not be punished by excommunication.

**But contrary to this:** Numbers 16:26 says, “Withdraw from the tents of impious men”—viz., those who have created a schism—“and do not touch anything that has to do with them, lest you be drawn into their sins.”

**I respond:** As Wisdom 11:17 says, one ought to be punished by the things through which he sins. Now as is clear from what has been said, a schismatic sins in two ways:

In one way, he sins because he separates himself from the communion that belongs to the members of the Church. And on this score, an appropriate punishment for schismatics is that they be excommunicated.

In the other way, he sins because he refuses to be subject to the head of the Church. And so, since they do not wish to be coerced by the spiritual power of the Church, it is just for them to be coerced by the temporal powers.

**Reply to objection 1:** It is not permitted to receive baptism from schismatics except in the case of necessity, since it is better to leave this life with the sign of Christ, no matter who it is given by—even if it be a Jew or a pagan—than to leave this life without the sign of Christ, which is conferred through baptism.

**Reply to objection 2:** Excommunication does not prohibit the sort of communion by which someone might, by wholesome warnings, bring back into unity with the Church those who have been separated. Yet the very separation itself in some sense leads them back, when, confounded by their own separation, they are sometimes led to repent.

**Reply to objection 3:** The punishments of this life are medicinal, and so when one punishment is not enough to coerce a man, another is added to it, just as physicians use other corporeal medicines when a given medicine is not effective. And so when certain individuals are not sufficiently repressed by excommunication, the Church applies the coercion of the secular arm. But if the one punishment is sufficient, then another should not be applied.

## QUESTION 40

### War

We next have to consider war (*bellum*). And on this topic there are four questions: (1) Is any sort of war permitted (*licitum*)? (2) Are clerics permitted to engage in war? (3) Are those engaging in war permitted to use insidious tactics (*uti insidiis*)? (4) Is it permissible to engage in war on feast days?

### Article 1

#### Is engaging in war always a sin?

It seems that engaging in war is always a sin (*bellare semper sit peccatum*):

**Objection 1:** A punishment is inflicted only for a sin. But a punishment for those who wage war is made known by our Lord—this according to Matthew 26:52 (“Everyone who takes up the sword will perish by the sword”). Therefore, every war is impermissible.

**Objection 2:** Whatever is contrary to a divine precept is a sin. But to engage in war is contrary to a divine precept; for Matthew 5:39 says, “I say to you, do not resist evil,” and Romans 12:19 says, “Do not defend yourselves, dearly beloved, but leave room for the wrath [of God].” Therefore, engaging in war is always a sin.

**Objection 3:** Nothing except a sin is contrary to an act of virtue. But war is contrary to peace. Therefore, war is always a sin.

**Objection 4:** As is clear in the case of training in the sciences, a training exercise for what is permitted is itself permitted (*exercitium ad rem licitam est licitum*). But the training exercises for wars that take place in tournaments are prohibited by the Church, since those who die in training of this sort are denied a Church burial. Therefore, war seems to be a sin absolutely speaking.

**But contrary to this:** In his sermon *De Puero Centurionis* Augustine says, “If the Christian way of life faulted war altogether, then in the Gospel those seeking advice about salvation would have been told to abandon their weapons and remove themselves altogether from the military. Instead, they are told, ‘Do violence to no one, and be satisfied with your pay’ (Luke 3:14). He was not forbidding military service to those whom he told that their pay should suffice.”

**I respond:** In order for a war to be just, three things are required.

First, *the authority of the ruler* by whose command the war is to be waged. For it does not belong to a private person to start a war, because he can pursue his own claim (*ius suum*) in the tribunal of a superior; again, and similarly, it does not belong to a private person to convene a multitude, which has to be done in the case of a war. Since the care of the republic is committed to the rulers, it belongs to them to safeguard the republic that is subject to them, whether it be a city or a kingdom or a province. So just as the rulers are permitted to defend the republic by the material sword against internal disturbances when they punish malefactors—this according to Romans 13:4 (“Not without cause does he carry the sword; for he is God’s minister, an avenger of God’s anger against those who do evil”)—so, too, it belongs to them to protect the republic from external enemies with the sword of war. Hence, in Psalm 81:4 the rulers are told, “Rescue the poor man, and liberate the needy man from the hand of the sinner.” This is why Augustine says in *Contra Faustum*, “The natural order, as accommodated to peace among mortal men, demands that the authority to undertake war and the planning for war should lie with the rulers.”

Second, *a just cause* is required, so that, namely, those who are brought under attack deserve the attack because of some fault. Hence, in *Quaestiones in Heptateuch* Augustine says, “Just wars are normally defined as wars that avenge injuries, where the nation or city to be punished is one that has either neglected to make amends for what was done unjustly by its subjects or refused to restore what was lost through injury.”

Third, it is required that *those who engage in the war have an upright intention (ut sit intentio bellantium recta)*—more specifically, one by which they intend to promote the good and to avoid evil. Hence, in *De Verbis Domini* Augustine says, “In the eyes of the true worshipers of God, those wars are peaceful which are waged not out of disordered desire or out of cruelty, but with a zeal for peace, so that evil men might be restrained and good men might be lifted up.” Now it can happen that even if the authority of the one declaring the war is legitimate and the cause is just, the war is nonetheless rendered impermissible because of a depraved intention. For in *Contra Faustum* Augustine says, “A disordered desire to do harm, a cruel thirst for vengeance, a restless and implacable mind, a savage spirit of rebellion, a lust for domination, and other such things: these are the sorts of things that are rightly condemned in war.”

**Reply to objection 1:** As Augustine says in *Contra Manicheos 2*, “He who ‘takes up the sword’ is the one who arms himself to spill someone’s blood without any higher or legitimate authority either ordering him to do it or permitting him to do it.” By contrast, when someone who uses the sword (a) on the authority of a ruler or judge (in the case of a private person) or (b) out of a zeal for justice and, as it were, by God’s authority (in the case of a public person), he is not ‘taking up’ the sword himself but is using the sword that has been commissioned to him by someone else. Hence, he ought not to be punished.

Still, it is not the case that even those who use the sword with sin are always *killed by the sword*. However, they do always *perish by their very sword*, since, unless they repent, they are punished eternally for the sin of the sword.

**Reply to objection 2:** As Augustine says in *De Sermone Domini in Monte*, the precepts are always to be preserved in preparing one’s mind, so that, namely, a man is always prepared not to resist or not to defend himself, if this is required. But he must sometimes act otherwise for the sake of the common good and even for the sake of the good of those with whom he is fighting. Hence, in *Epistola ad Marcellinum* Augustine says, “Many things have to be done against the will of those whom we have to punish with a certain benign harshness. For one from whom the license of wickedness is snatched away is being conquered to his own advantage, since nothing is more unhappy than the ‘happiness’ of sinners, which nourishes a punishable impunity and strengthens a bad will like an internal enemy.”

**Reply to objection 3:** Those who wage just wars intend peace. And so those wars are opposed only to the sort of bad peace that, as Matthew 10:34 points out, our Lord did not come to bring into the world. Hence, in *Ad Bonifacium* Augustine says, “It is not the case that peace is sought in order that war might be waged; rather, war is waged in order that peace might be acquired. Therefore, be peaceful when engaging in war, in order that, by subduing those whom you are fighting against, you might lead them to the benefits of peace.”

**Reply to objection 4:** Not all training exercises for war that men engage in are prohibited, but just those exercises that are disordered and dangerous and result in killing and plundering. Now as is clear from Jerome in one of his letters, among the ancients there were training exercises for war without dangers of the sort in question, and so they were called ‘preparations for arms’ or ‘wars without blood’.

## Article 2

### Are clerics and bishops permitted to fight in a war?

It seems that clerics and bishops are permitted to fight in a war (*clericis et episcopis liceat pugnare*):

**Objection 1:** As has been explained (a. 1), wars are just and permitted to the extent that they safeguard the poor and the whole republic from being injured by enemies. But this seems to pertain to

prelates most of all; for in one of his homilies Gregory says, “The wolf comes upon the sheep when any unjust and rapacious man oppresses any of the faithful and the humble. But he who was thought to be a shepherd, and was not, leaves the sheep and flees, because when he fears danger for himself from the wolf, he does not undertake to resist its injustice.” Therefore, it is permissible for prelates and clerics to fight.

**Objection 2:** In *Decreta* 23, q. 8 Pope Leo writes, “When adverse news was coming more and more frequently from the side of the Saracens, some said that the Saracens would come to the port of Rome secretly and covertly. For this reason, we ordered our people to congregate and told them to go down to the seashore.” Therefore, it is permissible for bishops to go into war.

**Objection 3:** It seems that a man’s doing something is the same in nature as his consenting to someone else’s doing it—this according to Romans 1:32 (“Not only are those who do these things worthy of death, but also those who consent to their doing them”). And someone who induces others to do something consents most of all. But it is permissible for bishops and clerics to induce others to engage in war; for *Decreta* 23, q. 8 says, “At the urging and supplication of Adrian, the bishop of Rome, Charles went to war against the Lombards.” Therefore, it is likewise permissible for them to fight.

**Objection 4:** What is upright and meritorious in its own right is permissible for prelates and clerics. But to engage in war is sometimes both upright and meritorious; for *Decreta* 23, q. 8 says, “If a man has died for the truth of the Faith, or to save his country, or in the defense of Christians, He will receive from God a heavenly reward.” Therefore, it is permissible for bishops and clerics to engage in war.

**But contrary to this:** In Matthew 26:52 Peter, who is standing in for bishops and clerics, is told, “Put your sword back into its sheath.” Therefore, they are not permitted to fight.

**I respond:** Many things are necessary for the good of a human society. Now as is clear from the Philosopher in his *Politics*, diverse roles are better and more expeditiously played by diverse individuals rather than by one individual. And certain roles are in such tension (*sunt adeo sibi repugnantia*) with one another that they cannot be appropriately played simultaneously. And so lesser things are forbidden to those who are entrusted with greater things; for instance, according to human laws, soldiers, who are entrusted with the exercise of war, are forbidden to engage in commerce.

Now the exercise of war is especially in tension with the roles that are assigned to bishops and clerics, and this for two reasons.

The first, and more *general*, reason is that the exercise of war is accompanied by a very high degree of disquiet, and so it greatly impedes the mind from contemplating divine things and praising God and praying for the people, all of which belong to the role of a cleric. And so just as commerce is forbidden to clerics because it ties one’s mind up too much, so too is the exercise of war—this according to 2 Timothy 2:4 (“No man who is fighting for God ties himself up in secular matters”).

Second, this is so for a *special* reason. For all the orders of clerics are ordered toward the ministry of the altar, in which Christ’s passion is represented under the sacrament—this according to 1 Corinthians 11:26 (“As often as you eat this Bread and drink this Cup, you proclaim the death of the Lord, until He comes”). And so it does not befit clerics to kill or to spill blood; instead, it befits them to be prepared for the pouring out of their own blood for the sake of Christ, in order that they might imitate in deed what they do by their ministry. And for this reason it has been decreed that those who spill blood, even without sin, are irregular. But no one who is assigned an office is permitted to do what renders him unfit for his office. Hence, clerics are not at all permitted to engage in war, which is ordered toward the spilling of blood.

**Reply to objection 1:** Prelates must resist not only the wolves who kill their flock spiritually, but also pillagers and tyrants who harm them corporeally. However, they do this by using spiritual weapons and not by using material weapons in their own person—this according to the Apostle in 2 Corinthians 10:4 (“The weapons of our warfare are not bodily, but spiritual”). The spiritual weapons in question are,

for instance, beneficial admonitions, devout prayers, and the sentence of excommunication against those who are obstinate.

**Reply to objection 2:** Prelates, along with clerics by the authority of their superior, are able to be involved in wars—not that they might fight with their own hands, but in order that they might, by their exhortations, absolutions, and other types of spiritual help, give spiritual assistance to those fighting a just war (*iuste pugnantis*)—just as in the Old Law it was mandated that the priests should sound the sacred trumpets in battle (Numbers 10:9). It was for this reason that bishops or clerics were first permitted to proceed into battle. However, it is an abuse of this permission for any of them to fight with his own hands.

**Reply to objection 3:** As was established above (q. 23, a. 4), every power or skill or virtue to which the end pertains has to dispose the means to that end. But within a faithful people, carnal wars must be referred to the divine spiritual good as an end, and clerics are assigned to the divine spiritual good. And so it belongs to the clerics to dispose and induce others to fight just wars. For they are prohibited from engaging in war not because it is a sin to engage in war, but because such an exercise on their part does not befit their public persona (*personae non congruit*).

**Reply to objection 4:** Even though it is meritorious to take part in a just war, it is nonetheless rendered impermissible for clerics because they are assigned to more meritorious works. In the same way, the marriage act is able to be meritorious, and yet it is rendered damnable for those who have vowed virginity, and this because of their obligation to a greater good.

### Article 3

#### Is it permissible to use insidious tactics in war?

It seems that it is not permissible to use insidious tactics (*uti insidiis*) in war:

**Objection 1:** Deuteronomy 16:20 says, “You shall pursue justly that which is just.” But since insidious tactics are a kind of fraud, it seems that they are unjust. Therefore, insidious tactics should not be used even in a just war.

**Objection 2:** Insidious tactics and fraud seem to be opposed to trustworthiness (*fidelitas*), in the same way that lying (*mendacia*) is. But as is clear from Augustine in *Contra Mendacium*, since we ought to keep faith with everyone, we should not lie to any man. Therefore, since, as Augustine says in *Ad Bonifacium*, “faith is to be kept with one’s enemy,” it seems that one should not use insidious tactics against one’s enemies.

**Objection 3:** Matthew 7:12 says, “Do unto men what you want them to do unto you,” and this is to be observed with respect to all our neighbors. But our enemies are our neighbors. Therefore, since no one wants insidious tactics or frauds to be prepared against themselves, it seems that no one ought to engage in war with insidious tactics.

**But contrary to this:** In *Quaestiones in Heptateuch* Augustine says, “When a just war is undertaken, it does not matter at all to justice whether one fights openly or with insidious tactics.” And he proves this by the authority of the Lord, who commanded Joshua to set up an ambush against the inhabitants of the city Ai (Joshua 8:2).

**I respond:** Insidious tactics are ordered toward deceiving one’s enemies. Now there are two ways in which one can be deceived by another’s word or deed.

In one way, because he is told something false or because a promise is not kept. This is always impermissible, and no one should deceive his enemies in this way. For as Ambrose explains in *De Officio*, there are certain “rights of war,” and pacts are to be honored even among enemies themselves.

In the second way, someone can be deceived by our word or deed because we do not reveal to him

our purpose or meaning. We are not always obligated to do this, since even in sacred doctrine many things are to be hidden, especially from non-believers, lest they ridicule them—this according to Matthew 7:6 (“Do not give what is holy to the dogs”). Hence, *a fortiori*, what we prepare in order to engage our enemies should be hidden from them. Hence, among other military documents, this is said especially with respect to plans that must be kept secret, so that they do not fall into the hands of our enemies—as is clear from Frontinus’ *Book of Strategies*. And this sort of secretiveness belongs to the nature of the insidious tactics which it is permissible to use in just wars.

Insidious tactics of this sort are not properly called fraudulent; nor are they incompatible with justice or with a well-ordered will. For one’s will would be disordered if he wanted nothing to be hidden from him by others.

**Reply to objection 1 and objection 2 and objection 3:** From this the replies to the objections are clear.

#### Article 4

##### Is it permissible to engage in war on feast days?

It seems that it is impermissible to engage in war on feast days:

**Objection 1:** Feast days are ordered toward making leisure for divine things, and hence they are implicit (*intelliguntur*) in the observance of the Sabbath that is commanded in Exodus 20:8; for ‘Sabbath’ means ‘rest’. But war involves very great disquietude. Therefore, one should not in any way fight on feast days.

**Objection 2:** In Isaiah 58:3-4 certain individuals are criticized because on the days of fast “they exact what is owed to them and start quarrels, striking with their fist.” Therefore, *a fortiori*, it is impermissible to engage in war on feast days.

**Objection 3:** Nothing is to be done in a disordered way in order to avoid temporal disadvantage. But to engage in war on a feast day seems to be disordered in its own right. Therefore, one ought not to engage in war on a feast day out of a need to avoid temporal disadvantage.

**But contrary to this:** 1 Maccabees 2:41 says, “The Jews thought things through in a praiseworthy way, saying, ‘Let us fight against any man whatsoever who comes against us on the day of the Sabbath’.”

**I respond:** The observance of feast days does not interfere with what is ordered toward man’s well-being, even his corporeal well-being. This is what our Lord argued about with the Jews, saying in John 7:23, “Are you indignant at me because I have made a man whole on the Sabbath?” And this is why physicians can licitly heal men on a feast day. But more than the health of a single individual, one must preserve the well-being of the republic, which prevents the killing of many along with innumerable evils, both temporal and spiritual.

And so for the safety of the faithful of the republic it is permissible to wage just wars on feast days, as long as necessity demands this; for it would be tempting God if someone, with such necessity present, willed to abstain from war. However, once the necessity passes, then it is not permitted to engage in war on feast days, and this for the reasons adduced in the objections.

**Reply to objection 1 and objection 2 and objection 3:** From this the replies to the objections are clear.

## QUESTION 41

### Strife

We next have to consider strife (*rixa*). And on this topic there are two questions: (1) Is strife a sin? (2) Is strife a child of anger?

#### Article 1

##### Is strife always a sin?

It seems that strife is not always a sin:

**Objection 1:** Strife (*rixa*) seems to be a sort of contention; for in *Etymologia* Isidore says, “‘Pugnacious individual’ (*rixosus*) seems to come from ‘dog’s snarling’ (*rictus caninus*), since the pugnacious individual is always ready to argue (*semper ad contradicendum paratus est*), and he enjoys quarreling and provokes the one he contends with.” But contention is not always a sin. Therefore, neither is strife.

**Objection 2:** Genesis 26:21 says that Isaac’s servants “dug another well, and they fought over this as well.” But it is unbelievable that Isaac’s family should have fought in public without his correcting them, if this were a sin. Therefore, strife is not a sin.

**Objection 3:** Strife seems to be a sort of ‘particular’ war. But war is not always a sin. Therefore, strife is not always a sin.

**But contrary to this:** In Galatians 5:20-21 strifes are numbered among the works of the flesh, which are such that “those who do them do not attain the kingdom of God.”

**I respond:** Just as contention implies a certain conflict of words, so strife implies a certain conflict of deeds. Hence, a Gloss on Galatians 5:20 says that strife occurs “when individuals strike one another out of anger.” And so strife seems to be a sort of private war that is waged among private persons, not by appeal to any public authority, but instead because of a disordered will.

So strife always involves sin. And it is a mortal sin in the one who attacks another unjustly, since inflicting harm on one’s neighbor, even just with one’s hands, does not occur without mortal sin. On the other hand, in the one who is defending himself strife can occur either without sin, or sometimes with a venial sin, or sometimes even with a mortal sin, depending on the different motives he might have (*secundum diversum motum eius*) and on the different ways in which he might defend himself. For if he defends himself only with the intention of repelling the injury being inflicted on him, and if he does so with due moderation, then there is no sin, and it cannot properly be called strife on his part. By contrast, if he defends himself with a spirit of revenge or hatred, or if he does it without due moderation (*cum excessu debitae moderationis*), then it is always a sin, either (a) a venial sin when some slight movement of hatred or revenge is mixed in, or when he does not go too far beyond a moderate defense, or (b) a mortal sin when, with his mind firmly set against the one he is fighting, he goes at him with the intention of killing him or gravely wounding him.

**Reply to objection 1:** ‘Strife’ does not simply name contention; instead, in the words quoted from Isidore three things are posited that clarify the disorder involved in strife. First, a readiness of mind to contend, which he signifies when he says “always ready to argue”—regardless of whether the other individual speaks or acts well or badly. Second, he delights in disagreement itself, and hence it follows that he “enjoys quarreling.” Third, he provokes others to argue, and hence it follows that he “provokes the one he contends with.”

**Reply to objection 2:** This passage does not mean that Isaac’s servants were quarreling, but that the local inhabitants were struggling against them. Hence, the latter sinned, but Isaac’s servants, who suffered the false accusation (*calumnia*), did not sin.

**Reply to objection 3:** As was explained above (q. 40, a. 1), in order for a war to be just, it is required that it come about by the authority of a public power. By contrast, strife is effected by a private

affection of anger or hatred. For if the ministers of a ruler or judge, by virtue of their public power, attack certain individuals who then defend themselves, it is not the ministers who are said to be guilty of strife, but rather those who are resisting a public power. And so it is not the attackers who are guilty of strife and sin, but rather those who are defending themselves in a disordered way.

## Article 2

### Is strife the child of anger?

It seems that strife is not the child of anger:

**Objection 1:** James 4:1 says, “Where do the wars and contentions among you come from? Is it not from the excessive desires (*ex concupiscentiis*) that battle among your members?” But anger does not belong to the concupiscible appetite. Therefore, strife is not a child of anger (*non est filia irae*), but instead a child of excessive desire (*filia concupiscentiae*).

**Objection 2:** Proverbs 28:25 says, “The one who boasts and puffs himself up incites quarrels.” But strife seems to be the same thing as a quarrel. Therefore, it seems that strife is a child of pride and vainglory, which boasting and puffing oneself up belong to.

**Objection 3:** Psalm 18:6 says, “The lips of the fool mix in with strife.” But foolishness differs from anger, since it is opposed to wisdom and prudence rather than to mildness (*mansuetudo*). Therefore, strife is not a child of anger.

**Objection 4:** Proverbs 10:12 says, “Hatred incites strife.” But as Gregory says in *Moralia* 31, hatred arises from envy. Therefore, strife is a child of envy and not of anger.

**Objection 5:** Proverbs 17:19 says, “He who contemplates discord plants strife.” But as was explained above (q. 37, a. 2), discord is a child of vainglory. Therefore, strife is, too.

**But contrary to this:** In *Moralia* 31 Gregory says, “Strife arises from anger.” And Proverbs 15:18 and 29:22 say, “The angry man provokes strife.”

**I respond:** As has been explained (a. 1), strife involves a certain sort of disagreement that results in deeds, when the one tries to hurt the other. Now there are two ways in which one individual might intend to hurt another.

In one way, by intending without any qualification what is bad for him. And this sort of harm belongs to hatred, which intends to hurt one’s enemy, whether it be openly or in a way that is hidden.

In the second way, the one intends to hurt the other on condition that the other realizes this and fights back—and this is what is implied by the name ‘strife’. This belongs properly to anger, which is a desire for vindication. For it is not enough for the angry individual that he should harm the one he is angry with in a hidden way. Instead, as is clear from what was said above about the passion of anger (*ST* 1-2, q. 46, a. 6), the one who is angry wants the other individual to understand this and to suffer something contrary to his will in return for what he has done. And it is in this way that strife arises from anger.

**Reply to objection 1:** As was explained above (*ST* 1-2, q. 25, a. 1), all the irascible passions arise from the concupiscible passions. Accordingly, what arises from anger likewise arises from excessive desire as its primary root.

**Reply to objection 2:** Boasting and puffing oneself up, which are effected by pride or vainglory, lead to quarreling and strife not directly but as an occasion, viz., insofar as anger is aroused by this when someone takes as an injury to himself the fact that another individual prefers himself to him, and in this way quarreling and strife arise from anger.

**Reply to objection 3:** As was explained above (*ST* 1-2, q. 48, a. 3), anger impedes reason’s judgment, and this is why it bears a similarity to foolishness. And from this it follows that they have a

common effect, since from a defect in reason it happens that one tries to hurt another individual in a disordered way.

**Reply to objection 4:** Even if strife sometimes arises from hatred, it is nonetheless not the *proper* effect of hatred, since it lies beyond the intention of one who hates that he should harm his enemy openly and by means of strife. For sometimes one who hates seeks to do harm in a hidden way, but when he sees himself prevailing, he intends to do harm by means of strife and quarreling.

Still, as has already been explained, to harm someone by means of strife is the proper effect of anger.

**Reply to objection 5:** Hatred and discord arise from strife in the hearts of those engaged in strife (*in cordibus rixantium*). And so someone who “contemplates discord,” i.e., who intends to sow discord among certain individuals, takes care that they engage in strife with one another.

In the same way, any sin is able to command the act of another sin by ordering it toward its own end. However, from this it does not follow that strife is the child of vainglory properly speaking and directly.

## QUESTION 42

### Sedition

We next have to consider sedition (*seditio*). And on this topic there are two questions: (1) Is sedition a special sin? (2) Is sedition a mortal sin?

#### Article 1

##### Is sedition a special sin distinct from other sins?

It seems that sedition is not a special sin distinct from other sins:

**Objection 1:** As Isidore says in *Etymologia*, “The seditious individual is someone who creates dissension among minds and engenders discord.” But when someone provokes a sin, he does not sin by any genus of sin other than the one that he provokes. Therefore, it seems that sedition is not a special sin distinct from discord.

**Objection 2:** Sedition implies a certain sort of division. But as was explained above (q. 39, a. 1), the name ‘schism’ is similarly taken from ‘scissor’. Therefore the sin of sedition does not seem to be distinct from the sin of schism.

**Objection 3:** Every special sin that is distinct from other sins either is itself a capital vice or takes its origin from some capital sin. But as is clear from *Moralia* 31, where both sorts of vices are enumerated, sedition is counted neither among the capital vices nor among the vices that arise from the capital vices. Therefore, sedition is not a sin distinct from other sins.

**But contrary to this:** In 2 Corinthians 12:20 acts of sedition (*seditiones*) are distinguished from other sins.

**I respond:** Sedition is a special sin that shares something in common with war and strife, but differs from them in certain respects.

It agrees with them in implying a sort of disagreement (*importat quandam contradictionem*).

On the other hand, it differs from them in two ways:

First, war and strife imply actual mutual fighting, whereas something can be called sedition regardless of whether there is actual fighting of this sort or just a preparation for such fighting. Hence, a Gloss on 2 Corinthians 12:20 says that acts of sedition are “disturbances leading up to fighting,” viz., when someone prepares himself to fight and intends to fight.

Second, they differ because war properly speaking is against strangers and enemies, and it involves, as it were, a multitude against a multitude, whereas strife is one against one or a few against a few. Sedition, on the other hand, occurs between the parts of a single multitude disagreeing among themselves, e.g., when one part of a city is incited to a disturbance against another part.

And so the reason why sedition is a special sin is that it has a special good to which it is opposed, viz., the unity and peace of a multitude.

**Reply to objection 1:** A seditious individual is one who engenders sedition. And given that sedition involves a type of discord, the seditious individual is one who creates not just any kind of discord, but discord between the parts of a given multitude. Moreover, the sin of sedition exists not only in the one who plants the seeds of discord, but also in those who dissent from one another in a disordered way.

**Reply to objection 2:** There are two ways in which sedition differs from schism.

First, schism is opposed to the spiritual unity of a multitude, i.e., ecclesiastical unity, whereas sedition is opposed to the temporal or secular unity of a multitude, viz., the unity of a city or of a kingdom.

Second, schism does not imply any preparation for a corporeal fight but implies only spiritual dissension, whereas sedition involves preparing for a corporeal fight.

**Reply to objection 3:** Sedition, like schism, falls under discord. For both of them are types of

discord, not of one individual with respect to another individual, but of the parts of a multitude with respect to one another.

## Article 2

### Is sedition always a mortal sin?

It seems that sedition is not always a mortal sin:

**Objection 1:** As is clear from the Gloss cited above (a. 1), sedition implies a disturbance that tends toward fighting. But as was established above (q. 40, a. 1 and q. 41, a. 1), fighting is sometimes just and permissible and not always a mortal sin. Therefore, *a fortiori*, sedition can exist without mortal sin.

**Objection 2:** As has been explained (a. 1), sedition is a certain type of discord. But discord can exist without mortal sin and sometimes even without venial sin. Therefore, the same holds for sedition.

**Objection 3:** Those who liberate a multitude from a tyrannical power are praised. But this cannot be easily done without some dissension within the multitude, where one part of the multitude is trying to retain the tyrant, while another part is trying to overthrow him. Therefore, sedition can be committed without sin.

**But contrary to this:** 2 Corinthians 12:20 prohibits acts of sedition along with other things that are mortal sins. Therefore, sedition is a mortal sin.

**I respond:** As has been explained (a. 1), sedition is opposed to the unity of a multitude, i.e., of a people or city or kingdom. Now in *De Civitate Dei* 2 Augustine says the wise define a people to be “not just any assembly of a multitude, but an assembly united by a consensus of law and a communion of welfare.” Hence, it is clear that the unity that sedition is opposed to is a unity of law and communal welfare. It is therefore clear that sedition is opposed to both justice and the common good. And so it is a mortal sin by its genus, and it is a graver sin to the extent that the common good, which is attacked by sedition, is a greater good than a private good, which is attacked by strife.

Now the sin of sedition belongs first and principally to those who provoke the sedition and who sin the most seriously, whereas it belongs in the second place to the ones who follow them and disturb the common good. By contrast, those who resist them and defend the common good should not be called seditious—in the same way that, as noted above (q. 41, a. 1), those who defend themselves are not called pugnacious (*rixosi*).

**Reply to objection 1:** As was explained above (q. 40, a. 1) the sort of fighting that is permissible is done on behalf of the common good. But sedition is perpetrated against the common good of the multitude. Hence, it is always a mortal sin.

**Reply to objection 2:** Discord with respect to what is not manifestly good can exist without sin. But discord with respect to what is manifestly good cannot exist without sin. And sedition is this sort of discord; for sedition is opposed to the welfare of the multitude (*opponitur utilitati multitudinis*), which is manifestly good.

**Reply to objection 3:** As is clear from Philosopher in *Politics* 3 and *Ethics* 8, a tyrannical regime is not a just regime, since it is ordered not toward the common good, but toward the private good of the ruler. And disturbing this sort of regime does not have the character of sedition—unless perhaps when the tyrant’s regime is disturbed in such a disordered way that the multitude suffers a greater loss from the ensuing chaos than it does from the tyrant’s rule. It is instead the tyrant who is seditious and who feeds discord and sedition among the people subject to him, so that he can more securely dominate them. For a regime is tyrannical when it is ordered toward the proper good of the ruler accompanied by harm to the multitude.

## QUESTION 43

### Scandal

What remains is that we have to consider the vices opposed to beneficence. Whereas others among these vices pertain to the nature of justice, viz., those by which one harms his neighbor unjustly, scandal seems to be specifically opposed to charity. And so in this place we have to consider scandal.

On this topic there are eight questions: (1) What is scandal? (2) Is scandal a sin? (3) Is scandal a special sin? (4) Is scandal a mortal sin? (5) Does it belong to those who are perfect to be scandalized? (6) Does it belong to those who are perfect to give scandal? (7) Should one forego spiritual goods in order to avoid scandal (*propter scandalum*)? (8) Should one forego temporal goods in order to avoid scandal?

### Article 1

#### Is scandal appropriately defined as “a less upright word or deed that presents someone with an occasion for a downfall”?

It seems that scandal is not appropriately defined as “a less upright word or deed that presents someone with an occasion for a downfall” (*dictum vel factum minus rectum praebens occasionem ruinae*):

**Objection 1:** As will be explained below (a. 2), scandal is a sin. But according to Augustine in *Contra Faustum* 12, a sin is “a word or deed or desire (*concupitum*) contrary to God’s law.” Therefore, the definition in question is insufficient, since it omits ‘thought’ (*cogitatum*) or ‘desire’.

**Objection 2:** Since, among virtuous or upright acts, one is more virtuous or more upright than another, the only thing that is not “less upright” seems to be that which is maximally upright (*rectissimum*). Therefore, if scandal were a less upright word or deed, then it would follow that every virtuous act except for the very best act would be an instance of scandal.

**Objection 3:** An occasion is a *per accidens* cause. But what is *per accidens* should not be posited in a definition, because it does not yield a species. Therefore, ‘occasion’ is inappropriately posited in the definition of scandal.

**Objection 4:** Any deed whatsoever done by another is such that someone might take it as an occasion for a downfall, since *per accidens* causes are indeterminate. Therefore, if scandal is what “presents someone with an occasion for a downfall,” then any word or deed whatsoever can constitute a scandal—which seems absurd.

**Objection 5:** An occasion for a downfall is presented to one’s neighbor when he is offended or weakened. But scandal is distinct from an offense or a weakness; for in Romans 14:21 the Apostle says, “It is good not to eat meat or drink wine, or anything else by which your brother is offended or scandalized or weakened.” Therefore, the definition of scandal laid out above is inappropriate.

**But contrary to this:** In commenting on Matthew 15:12 (“Do you know that the Pharisees, when they heard this word, were scandalized?”), Jerome says, “When we read, ‘Anyone who scandalizes ...’, we understand, ‘Anyone who by word or deed presents someone with an occasion for a downfall.’”

**I respond:** As Jerome says in the same place, “When the Greek says *skandalon*, we can say ‘offense’ (*offensio*) or ‘downfall’ (*ruina*) or ‘stumbling block’ (*impactio pedis*).” For it happens that sometimes an obstacle is placed in someone’s corporeal path and when he comes upon it, he is disposed to fall down; and such an obstacle is called a ‘scandal’. Similarly, in walking along the spiritual path someone might be disposed toward a downfall by the word or deed of another, viz., insofar as some individual, by his advice or inducement or example, draws another individual toward sinning. And this is what is properly called scandal.

Now there is nothing that by its proper nature disposes one toward a spiritual downfall unless it has

some deficiency in uprightness, since what is perfectly upright fortifies a man against a fall rather than leading him to ruin. And so it is appropriate to say that scandal is “a less upright word or deed that presents someone with an occasion for a downfall.”

**Reply to objection 1:** A thought or a desire for what is bad lies hidden in the heart, and hence it is not being proposed to another individual as an obstacle that disposes him toward a downfall. And because of this, a thought or desire cannot have the character of scandal.

**Reply to objection 2:** ‘Less upright’ is being used here not in the sense of being surpassed in rectitude by something else, but rather in the sense either (a) of having some deficiency in rectitude, or (b) of being bad in its own right, like a sin, or (c) of having the appearance of something bad, as when someone sits down to eat in the temple of an idol. For even though this last act is not in its own right a sin as long as one does it without a corrupt intention, still, because it has a certain appearance of, or similarity to, venerating an idol, it can present another individual with an occasion for a downfall. This is why, in 1 Thessalonians 5:22, the Apostle warns, “You should abstain from every appearance of evil.” And so “less upright” is correctly used in the definition in order to include both things that are bad in their own right and things that have the appearance of being bad.

**Reply to objection 3:** As was established above (*ST* 1-2, q. 75, aa. 1-2 and q. 80, a. 1), nothing except a man’s own will can be a sufficient cause for him of sin, i.e., of spiritual ruin. And so the words or deeds of another man can be only an incomplete cause that in some way or other leads him toward a downfall. For this reason, the definition does not say, “presents him with a cause for a downfall,” but instead says, “presents him with an occasion for a downfall,” where the latter signifies an incomplete cause and not always a *per accidens* cause.

Yet nothing prevents what is *per accidens* from being posited in certain definitions. For what is incidental to one thing can belong *per se* to something else, in the way that, in *Physics* 7, ‘*per accidens* cause’ is posited in the definition of fortune.

**Reply to objection 4:** There are two ways in which the word or deed of another can be a cause of one’s sinning: (a) *per se* and (b) *per accidens*.

It is a cause *per se* when, by his own bad word or deed, one intends to induce someone else to sin—or when, even if he does not intend this, the deed itself is such that by its very nature it induces the other to sin, e.g., when one publicly does something that is a sin or that has the appearance of being a sin. In that case, the one who does an act of this sort properly speaking provides an occasion for a downfall, and so this is called active scandal.

On the other hand, the word or deed of one individual is a cause *per accidens* of another’s sinning when, beyond the intention of the agent and beyond the nature of the act, someone who is badly disposed is induced to sin by this sort of act, e.g., when someone envies the goods of others. And in such a case one who does an upright act of this sort does not provide an occasion, as far as he himself is concerned, but instead the other individual takes it as an occasion to sin—this according to Romans 7:8 (“Sin taking occasion by the commandment ...”). And so this is passive scandal without active scandal, since the one who acts in an upright way, as far as he himself is concerned, does not provide an occasion for the downfall that the other individual experiences.

Therefore, sometimes it happens that there is simultaneously active scandal in the one individual and passive scandal in the other, viz., when the second individual sins at the inducement of the first individual. Again, sometimes there is active scandal without passive scandal, viz., when someone induces another to sin by word or by deed, but the latter does not consent. And sometimes there is passive scandal without active scandal, in the way just explained.

**Reply to objection 5:** ‘Weakness’ names a readiness for scandal, whereas ‘offense’ names one’s indignation against someone who sins (and this can sometimes occur without a downfall), and ‘scandal’ implies the stumbling itself to a downfall.

## Article 2

### Is scandal a sin?

It seems that scandal is not a sin:

**Objection 1:** Sins do not occur by necessity, since, as was established above (*ST* 1-2, q. 71, a. 6 and q. 74, a. 1 and q. 80, a.1), every sin is voluntary. But Matthew 18:7 says, “It is necessary for scandals to occur.” Therefore, scandal is not a sin.

**Objection 2:** No sin proceeds from an affection of piety, since, as Matthew 7:18 says, “No good tree can bear bad fruit.” But some instances of scandal arise from an affection of piety. For in Matthew 16:23 our Lord says to Peter, “You are a scandal to me,” and Jerome comments on this passage, “The apostle’s mistake, arising from an affection of piety, does not at all seem to be incited by the devil.” Therefore, not every instance of scandal is a sin.

**Objection 3:** Scandal implies a certain sort of stumbling. But not everyone who stumbles falls. Therefore, scandal can exist without sin, which is a spiritual fall.

**But contrary to this:** Scandal is “a less upright word or deed ...” (a. 1). But by the fact that an act is deficient in rectitude, it has something of the character of a sin. Therefore, scandal always exists with sin.

**I respond:** As has already been explained above (a. 1), there are two types of scandal, viz., *passive scandal* in the one who is scandalized, and *active scandal* in the one who gives scandal and provides the occasion for a downfall.

Therefore, passive scandal is always a sin in the one who is scandalized, since he is scandalized only insofar as he in some way falls into spiritual ruin, i.e., into sin. However, there can be passive scandal without sin on the part of the one by whose deed someone is scandalized, as when one individual is scandalized because of things that the other individual does in an upright way (*de his quae alius bene facit*).

Similarly, active scandal is always a sin in the one who gives scandal. For either (a) the deed that he does is a sin or else (b), if his deed has the appearance of a sin, he should always forego it because of charity for his neighbor. For out of charity each individual tries to provide for his neighbor’s salvation, and so one who does not forego such a deed acts against charity. On the other hand, as was explained above (a. 1), there can be active scandal without the one who is scandalized having any sin.

**Reply to objection 1:** The words, “It is necessary for scandals to occur,” should be understood to imply not absolute necessity, but rather a conditional necessity, more specifically, a necessity by which it is necessary that what is foreknown or foretold by God should occur (*necesse est praescita vel praenuntiata a Deo evenire*)—as long as this is taken in the composed sense (*si tamen coniunctim accipiatur*), as was explained in the First Part (*ST* 1, q. 14, a. 13).

An alternative reply is that it is by a necessity of the end that scandals necessarily occur, since scandals are useful “in order that they who are approved may be made manifest” (1 Corinthians 11:19).

An alternative reply is that scandals will necessarily occur given the condition of men, who are not on their guard against sin. In the same way, if a physician, seeing those who have an inappropriate diet, says, “Such people will necessarily get sick,” this is to be understood under the condition that they will not change their diet. Similarly, scandals will necessarily occur if men do not change their evil way of life.

**Reply to objection 2:** In the passage in question ‘scandal’ is being used broadly for any sort of obstacle. For Peter wanted to prevent Christ’s passion because of his affection of piety for Christ.

**Reply to objection 3:** No one stumbles spiritually unless his progress in the way of God is in some way retarded, and this occurs at least through venial sin.

### Article 3

#### Is scandal a special sin?

It seems that scandal is not a special sin:

**Objection 1:** Scandal is “a less upright word or deed ...” (a. 1). But every sin is of this sort. Therefore, every sin is scandal. Therefore, scandal is not a special sin.

**Objection 2:** As *Ethics* 5 says, every special sin, or every special sort of injustice, is found to exist separately from the other sins. But scandal is not found to exist separately from the other sins. Therefore, scandal is not a special sin.

**Objection 3:** Every special sin is constituted by something that gives a species to the moral act. But the nature of scandal is constituted by someone’s sinning before the eyes of others (*coram aliis*), and even if sinning openly (*in manifesto peccare*) is an aggravating circumstance, it does not seem to constitute a species. Therefore, scandal is not a special sin.

**But contrary to this:** A special sin is opposed to a special virtue. But scandal is opposed to a special virtue, viz., charity; for Romans 14:15 says, “If your brother is grieved because of what you are eating, then you are already not walking in accord with charity.” Therefore, scandal is a special sin.

**I respond:** As was explained above (aa. 1-2), there are two sorts of scandal, viz., active scandal and passive scandal.

To be sure, passive scandal cannot be a special sin, since one can fall into a sin of any genus because of the word or deed of someone else. Nor does the very fact that one takes an occasion for sinning from the word or deed of another constitute a special type of sin, since it does not imply a special deformity that is opposed to a special virtue.

On the other hand, active scandal can be understood in two ways, viz., *per se* and *per accidens*.

*Per accidens* active scandal occurs when the scandal lies outside of the agent’s intention, as when someone does not intend by his disordered deed or word to give anyone an occasion for a downfall, but intends only to fulfill his own will. Active scandal in this sense is not a special sin, since what exists *per accidens* does not constitute a species.

By contrast, *per se* active scandal occurs when one intends by his disordered word or deed to draw someone else toward a sin. And this constitutes a special type of sin because of the intending of a special end; for as was explained above (*ST* 1-2, q. 1 and 3, and q. 18, aa. 4 and 6), the end confers a species in moral matters. Hence, just as theft or homicide is a special sin because of the special sort of harm to one’s neighbor which is intended, so, too, scandal is a special sin because it intends a special sort of harm to one’s neighbor. And it is directly opposed to fraternal correction, in which there is the removal of a special harm.

**Reply to objection 1:** Materially speaking, every sin can be related to active scandal. But as has been explained, it is possible to get the formal character of a special sin from the intending of its end.

**Reply to objection 2:** Active scandal can indeed be found to exist separately from other sins, as when someone scandalizes his neighbor by a deed which is not in its own right a sin but has the appearance of evil.

**Reply to objection 3:** Scandal does not have the character of a special sin from the circumstance alluded to in the objection; rather, as has been explained, it has that character from the intending of its end.

## Article 4

### Is scandal a mortal sin?

It seems that scandal is a mortal sin:

**Objection 1:** As was explained above (q. 35, a. 3), every sin that is contrary to charity is a mortal sin. But as has been shown (aa. 2-3), scandal is contrary to charity. Therefore, scandal is a mortal sin.

**Objection 2:** The punishment of eternal damnation is not deserved for any sin except a mortal sin. But the punishment of eternal damnation is deserved for scandal—this according to Matthew 18:6 (“Whoever scandalizes one of these little ones who believe in me, it is better for him to have a great millstone hung around his neck and to be drowned in the depths of the sea”). For, as Jerome says, “It is much better to receive a brief punishment for a sin than to undergo eternal torments.” Therefore, scandal is a mortal sin.

**Objection 3:** Every sin that is committed against God is a mortal sin, since only a mortal sin turns a man away from God. But scandal is a sin against God; for in 1 Corinthians 8:12 the Apostle says, “When you wound the weak conscience of your brothers, you sin against Christ.” Therefore, scandal is always a mortal sin.

**But contrary to this:** Inducing someone to sin venially can be a venial sin. But this belongs to the nature of scandal. Therefore, scandal can be a venial sin.

**I respond:** As was explained above (a. 1), scandal involves a sort of stumbling by which one is disposed toward ruin.

And so passive scandal can sometimes be a venial sin—involving, as it were, only the stumbling—as when someone is moved by a movement of venial sin because of the disordered word or deed of another. Sometimes, however, it is a mortal sin—having, as it were, the ruin along with the stumbling—as when someone, because of the disordered word or deed of another, proceeds all the way to a mortal sin.

On the other hand, active scandal, if it is *per accidens*, can sometimes be a venial sin, as when one either commits an act of venial sin or else an act which is not a sin in its own right but which has the appearance of evil along with some slight indiscretion. However, sometimes it is a mortal sin, either because one commits an act of mortal sin or because he shows disdain for his neighbor’s salvation, in the sense that he does not forego doing what pleases him for the sake of preserving it.

What’s more, if the active scandal is *per se*, viz., when one intends to induce the other to sin, then if he intends to induce him to sin mortally, it is a mortal sin. And the same thing holds if, through an act of mortal sin, he intends to induce his neighbor to sin venially. And if he intends to induce his neighbor to sin venially through an act of a venial sin, then it is a venial sin.

**Reply to objection 1 and objection 2 and objection 3:** The reply to the objections is clear from what has been said.

## Article 5

### Can passive scandal occur even to the perfect?

It seems that passive scandal can occur to the perfect (*possit etiam in perfectos cadere*):

**Objection 1:** Christ was the most perfect of all. But He said to Peter, “You are a scandal to me.” Therefore, *a fortiori*, other perfect individuals can be subject to scandal.

**Objection 2:** Scandal implies an obstacle which is posed for someone in the spiritual life. But even perfected men can be impeded in living out the spiritual life—this according to 1 Thessalonians

2:18 (“We wanted to come to you—I, Paul, more than once—but Satan hindered us”). Therefore, even perfected men can be subject to scandal.

**Objection 3:** Venial sins can be found even in perfected men—this according to 1 John 1:8 (“If we say that we have no sin, we deceive ourselves”). Therefore, passive scandal can be found even in perfected men.

**But contrary to this:** In commenting on Matthew 18:6 (“Whoever scandalizes one of these little ones ...”), Jerome says, “Notice that the one who is scandalized is little, since the greater ones are not subject to scandal.”

**I respond:** Passive scandal implies a certain movement of the mind away from the good in the one who is subject to the scandal. But no one who is firmly adhering to something immovable undergoes movement. Now the greater individuals, i.e., the perfect, adheres to God alone, whose goodness is unchangeable, since even if they adhere to their prelates, they adhere to them only insofar as they adhere to Christ—this according to 1 Corinthians 4:16 (“Be imitators of me, as I am of Christ”). Hence, no matter how many times they see others behaving in a disordered way in word or deed, they themselves do not recede from their own rectitude—this according to Psalm 124:1-2 (“Those who trust in the Lord are like Mount Sion; the one who lives in Jerusalem is not moved forever”). And so scandal is not found in those who adhere completely (*perfecte*) to God through love—this according to Psalm 118:165 (“Great peace have those who love Your law, and there is no scandal in them”).

**Reply to objection 1:** As was explained above (a. 2), ‘scandal’ is used broadly in this passage for any sort of impediment. Hence, our Lord says to Peter, “You are a scandal to me,” because Peter was trying to impede His intentions with regard to undergoing His passion.

**Reply to objection 2:** Perfected men can be impeded in their exterior acts. But in their interior will they are not prevented by the words or deeds of others from tending toward God—this according to Romans 8:38-39 (“Neither death nor life can separate us from the charity of God”).

**Reply to objection 3:** Perfected men occasionally fall into venial sins because of the weakness of the flesh, but they are not scandalized by the words or deeds of others in the true sense of scandal. However, a certain approximation to scandal can exist in them—this according to Psalm 72:2 (“My feet have almost stumbled”).

## Article 6

### Can active scandal be found in perfected men?

It seems that active scandal can be found in perfected men:

**Objection 1:** An instance of being act upon (*passio*) is the effect of an action. But certain individuals are passively scandalized by the words and deeds of the perfect—this according to Matthew 15:12 (“Do you know that the Pharisees were scandalized upon hearing this statement?”). Therefore, active scandal can be found in perfected men.

**Objection 2:** Peter was in the state of the perfect after having received the Holy Spirit. But he later scandalized the gentiles; for Galatians 2:14 says, “After I had seen that they were not walking uprightly according to the truth of the Gospel, I said to Cephas [i.e., Peter] before them all, ‘If you, though a Jew, live like the gentiles and not like the Jews, how is it that you compel the gentiles to live like the Jews?’” Therefore, active scandal can exist in perfected men.

**Objection 3:** Active scandal is sometimes a venial sin. But venial sins can exist even in perfected men. Therefore, active scandal can exist in perfected men.

**But contrary to this:** Active scandal is in more tension (*plus repugnant*) with perfection than passive scandal is. But passive scandal cannot be found in perfected men. Therefore, *a fortiori*, neither

can active scandal.

**I respond:** Active scandal properly speaking occurs when someone says or does something which is *of itself* such that it is apt to induce another toward a downfall, and this is only something that is done or said in a disordered way.

By contrast, it belongs to the perfect to order what they do in accord with the rule of reason—this according to 1 Corinthians 14:40 (“Let all things be done among you in an upright way and with order”). And they exercise this caution especially in matters in which they might not only offend others, but even give the appearance of offense to others. And if they lack moderation in their manifest words or deeds, this stems from human weakness, and in this respect they fall short of perfection. Yet they do not fall short to such a degree that they recede very far from the order of reason; rather, they recede a little bit and in slight matters, i.e., in a way that is not so great that another individual could reasonably take an occasion of sinning from it.

**Reply to objection 1:** Passive scandal is always caused by active scandal, but not always by another’s active scandal. Sometimes it is caused by the active scandal of the same individual, because, namely, he scandalizes himself.

**Reply to objection 2:** To be sure, Peter sinned and was blameworthy—this according to the opinion of Augustine and of Paul himself—because he removed himself from the gentiles in order to avoid scandalizing the Jews. For he did this in some sense incautiously, so that the gentiles who had been converted to the Faith were scandalized.

Yet Peter’s deed was not so grave a sin that the others could have been rightly scandalized. Hence, they were subject to passive scandal, but active scandal did not exist in Peter.

**Reply to objection 3:** The venial sins of the perfect principally consist in sudden movements which, since they are hidden, cannot give scandal. But if they do commit some venial sins in their exterior words or deeds, these sins are so slight that they do not of themselves have the power to give scandal.

## Article 7

### Should one forego spiritual goods for the sake of avoiding scandal?

It seems that one should forego spiritual goods for the sake of avoiding scandal (*propter scandalum*):

**Objection 1:** In *Contra Epistolam Parmeniani* Augustine teaches that when the danger of schism is feared, the punishment of sinners should come to a stop. But the punishment of sinners is something spiritual, since it is an act of justice. Therefore, one should forego a spiritual good because of scandal.

**Objection 2:** Sacred doctrine seems to be especially spiritual. But one should stop teaching it because of scandal—this according to Matthew 7:6 (“Do not give to dogs what is holy, neither cast your pearls before swine, lest having turned, they tear you”). Therefore, one should forego spiritual goods because of scandal.

**Objection 3:** Since fraternal correction is an act of charity, it is a certain spiritual good. But, as Augustine points out in *De Civitate Dei* 1, sometimes one forgoes it for the sake of charity, in order to avoid scandalizing others. Therefore, one should forego a spiritual good because of scandal.

**Objection 4:** Jerome says that, to avoid scandal, one should forego everything that can be omitted while still preserving the “threefold truth,” viz., the truth “of life, of justice, and of doctrine.” But the fulfillment of the counsels and the giving of alms can on many occasions be omitted while preserving this threefold truth; otherwise, everyone would always sin in omitting them. And yet these are the greatest among the spiritual works. Therefore, spiritual works ought to be omitted because of scandal.

**Objection 5:** The avoidance of a sin is a certain spiritual good, since each sin inflicts some spiritual loss on the one who commits it. But it seems that one ought sometimes to commit a venial sin in order to avoid giving scandal to his neighbor, e.g., when by committing a venial sin he prevents a mortal sin on the part of the other. For a man ought to prevent the damnation of his neighbor to the extent that he can without the loss of his own salvation, which is not lost through a venial sin. Therefore, a man should forego some spiritual goods for the sake of avoiding scandal.

**But contrary to this:** In *Super Ezechiel* Gregory says, “If scandal is taken concerning the truth, it is more advantageous for a scandal to be born than for the truth to be abandoned.” But spiritual goods have to do especially with the truth. Therefore, one should not forego spiritual goods because of scandal.

**I respond:** Given that there are two kinds of scandal, viz., active and passive, the present question has no place in the case of active scandal; for since active scandal is “a less upright word or deed,” nothing should be done that involves active scandal.

However, the question does have a place if it is understood with respect to passive scandal. Therefore, we have to consider what one should forego in order that someone else might not be scandalized.

Now we have to draw a distinction among spiritual goods. For some of them are necessary for salvation, and one cannot forego such goods without mortal sin. But it is clear that no one should commit a mortal sin in order to prevent someone else’s sin, since in accord with the ordering of charity a man ought to love his own spiritual salvation more than that of anyone else. And so one must not forego what is necessary for salvation in order to prevent scandal.

On the other hand, in the case of those spiritual goods that are not necessary for salvation, it seems that we must draw a distinction.

For scandal that arises from spiritual goods of this sort sometimes proceeds from *malice*, viz., when someone wills to prevent spiritual goods of this sort by piling up scandals, and this is ‘the scandal of the Pharisees’, who were scandalized by our Lord’s teaching. In Matthew 15:14 our Lord teaches that this sort of scandal is not to be feared (*esse contemnendum*).

By contrast, sometimes the scandal proceeds from *weakness* or *ignorance*, and scandal of this sort is ‘the scandal of the little ones’. And it is because of this sort of scandal that spiritual goods are to be hidden or sometimes even deferred when no [spiritual] danger is imminent, up until the point where, after an explanation has been given, scandal of this sort ceases. However, if the scandal endures after an explanation is given, then at that point it seems to stem from malice, and so one should not forego any spiritual goods of the sort in question because of it.

**Reply to objection 1:** The infliction of punishments is not to be sought for its own sake; instead, punishments are inflicted as a certain sort of medicine for restraining sins. And so they have the character of justice to the extent that sins are restrained because of them. However, if it is clear that because of the infliction of punishment more sins and greater sins will ensue, then the infliction of punishments will not be contained under justice. And it is of this sort of case that Augustine is speaking. More specifically, when the danger of schism threatens because of the excommunication of certain individuals, then it does not belong to the truth of justice to carry out the excommunication.

**Reply to objection 2:** Concerning doctrine, there are two things to consider, viz., (a) the truth that is being taught and (b) the act of teaching it. The first of these is necessary for salvation in the sense that one may not teach contrary to the truth; however, someone to whom the duty of teaching falls may propose the truth in a way that fits the time and the people. And so there is no scandal such that, for the sake of avoiding it, a man ought to forego the truth and teach falsehood instead. But as was explained above (q. 32, a. 2), the act itself of teaching is numbered among the spiritual acts of mercy. And so the same reasoning holds for teaching as for the other works of mercy, and this will be explained in a moment.

**Reply to objection 3:** As was explained above (q. 33, a. 1), fraternal correction is ordered toward

our brother's improvement. And so it is to be counted among the spiritual goods to the extent that it is able to attain this—which does not happen if our brother is scandalized by the correction. And so if one foregoes a correction because of scandal, then it is not the case that one is foregoing a spiritual good.

**Reply to objection 4:** It is not just what is necessary for salvation that is included in the truth “of life, of doctrine, and of justice,” but also that through which salvation is arrived at in a more perfect way—this according to 1 Corinthians 12:31 (“Strive after the greater gifts”). Hence, it is not the case that because of scandal one should forego, absolutely speaking, even the counsels or even the works of mercy; instead, as has been explained, they are sometimes to be hidden or deferred because of the scandal of the little ones.

Still, in some cases the observance of the counsels or even the fulfillment of the works of mercy is necessary for salvation. This is clear in the case of those who have already vowed the counsels and in cases in which one has an obligation to supply the needs of others, regardless of whether those needs lie in temporal things, e.g., feeding the hungry, or in spiritual things, e.g., instructing the ignorant, and regardless of whether the obligation arises because of some enjoined office, as is clear in the case of prelates, or because of necessity on the part of the needy individual. And in such a case the same line of reasoning holds for acts of this sort as for others that are necessary for salvation.

**Reply to objection 5:** Some have claimed that venial sin should be committed in order to avoid scandal.

However, this position implies contraries. For if something should be done, then it is already not bad or a sin; for a sin cannot be worthy of being chosen (*eligibile*). Still, it is possible for something that, because of some circumstance, is not a venial sin to be such that, if that circumstance were removed, then it would be a venial sin. For instance, a joke is a venial sin when it is told without any usefulness, but if it is told for some reasonable cause, it is neither idle nor a sin.

Moreover, even though the grace by which a man is saved is not destroyed by a venial sin, still, insofar as a venial sin disposes one toward mortal sin, it inclines one toward a loss of salvation.

## Article 8

### Should one forego temporal goods in order to avoid scandal?

It seems that one should forego temporal goods in order to avoid scandal (*propter scandalum*):

**Objection 1:** We should love the spiritual salvation of our neighbor, which is impeded by scandal, more than any temporal goods. But what we love less, we forego for the sake of what we love more. Therefore, we ought to forego temporal goods in order to avoid scandalizing our neighbor.

**Objection 2:** According to the rule of Jerome, one should forego because of scandal everything that he can forego while preserving the threefold truth. But one can forego temporal goods while preserving the threefold truth. Therefore, one ought to forego them because of scandal.

**Objection 3:** Among temporal goods, nothing is more necessary than food. But one ought to forego food because of scandal—this according to Romans 14:15 (“Do not by your food destroy him for whom Christ died”). Therefore, *a fortiori*, one ought to forego all other temporal goods because of scandal.

**Objection 4:** We can conserve or recover temporal goods in no better way than through judicial proceedings. But it is not permissible to use judicial proceedings, and especially when they involve scandal (*et praecipue cum scandalo*); for Matthew 5:40 says, “If anyone would go to law with you and take your tunic, give him your cloak as well.” And 1 Corinthians 6:7 says, “It is altogether a defect in you that you have lawsuits among yourselves. Why not rather suffer wrong? Why not rather be defrauded?” Therefore, it seems that one should forego temporal goods because of scandal.

**Objection 5:** Among all temporal goods, the ones we should forego the least seem to be those that are annexed to spiritual goods. But we should forego these goods because of scandal; for as 1 Corinthians 9:12 makes clear, the Apostle, when sowing spiritual goods, did not accept temporal stipends, “lest we offer hindrance to the Gospel of Christ.” And, for similar reasons, in some lands the Church does not require tithes for the sake of avoiding scandal. Therefore, *a fortiori*, one should forego other temporal goods because of scandal.

**But contrary to this:** Blessed Thomas of Canterbury reclaimed the property of the Church and so scandalized the king.

**I respond:** We have to draw a distinction concerning temporal goods. For they are either our own goods or they are goods that have been entrusted to us to preserve for others, in the way that the goods of the Church are committed to prelates and in the way that common goods are committed to certain rulers of the republic. And the preservation of such goods, like the preservation of goods that have been deposited with one, is necessarily incumbent on those to whom they have been committed. And so these individuals should not forego such goods because of scandal, in the same way that one should not forego those other goods that are necessary for salvation.

On the other hand, as for those other goods which we ourselves have control over, sometimes we should forego them because of scandal—either by donating them, if we have them in our possession, or by not reclaiming them if they are in the possession of others—and sometimes we should not forego them.

For if the scandal were going to arise out of ignorance or weakness—what we called above ‘the scandal of the little ones’—then either we should totally forego the temporal goods or put the scandal to rest in some other way, e.g., by some sort of friendly explanation (*per aliquam admonitionem*). Hence, in *De Sermone Domini in Monte* Augustine says, “You should give as much as you can lend without harming either yourself or the other man; and if you turn down his request, you should indicate to him what justice demands, and you will give an individual who is making an unjust request something better when you correct him.”

By contrast, sometimes the scandal arises from malice; this is the ‘scandal of the Pharisees’. One should not forego temporal goods because of those who stir up scandals in this way. For this would harm both (a) the common good, since it would provide wicked men with an occasion to plunder, and (b) the plunderers themselves, who would remain in sin by keeping what belongs to others. Hence, in *Moralia* Gregory says, “Sometimes those who rob us of our temporal goods are to be tolerated, whereas sometimes they are to be stopped in order to preserve equity—out of care not only that our goods should not be lost, but also that those who are stealing them should not destroy themselves.”

**Reply to objection 1:** The reply to the first objection is clear from what has been said.

**Reply to objection 2:** If bad men were randomly allowed to steal what belongs to others, it would tend toward the loss of the truth of life and of justice. And so one should not forego temporal goods in order to avoid just any scandal at all.

**Reply to objection 3:** It is not the Apostle’s intention to advise that one should totally forego food because of scandal, since to take food is necessary for one’s welfare; rather, he intends to advise that one should forego particular sorts of food (*talis cibus*) because of scandal—this according to 1 Corinthians 8:13 (“I will never eat meat, lest I should scandalize my brother”)

**Reply to objection 4:** According to Augustine in *De Sermone Domini in Monte*, this precept of the Lord should be taken to apply to the preparation of one’s mind, so that, namely, a man is prepared from the beginning to suffer injury or fraud rather than to submit to judicial proceedings, if this is expedient. Sometimes, however, it is not expedient, as has been explained. And the words of the Apostle should be understood in this same way.

**Reply to objection 5:** The scandal that the Apostle was avoiding stemmed from the ignorance of the gentiles, who were not used to this practice. And so he had to abstain [from taking stipends] at the

time, in order that they might first be instructed that this was owed to him. And for a similar reason the Church abstains from demanding tithes in lands in which it is not customary to pay tithes.

## QUESTION 44

### The Precepts that Pertain to Charity

Next we have to consider the precepts or commandments that pertain to charity (*praecepta caritatis*). And on this topic there are eight questions: (1) Should precepts be given concerning charity? (2) Is there just one precept, or are there two? (3) Are two precepts sufficient? (4) Is it appropriate to command that God be loved with one's whole heart? (5) Is it appropriate to add "and with one's whole mind, etc."? (6) Can this precept be fulfilled in this life? (7) Was it appropriate to give the precept, "You shall love your neighbor as yourself"? (8) Does the ordering of charity fall under the precept?

#### Article 1

##### Should any precepts be given concerning charity?

It seems that no precepts should be given concerning charity:

**Objection 1:** As was explained above (q. 23, a. 8), since charity is the form of the virtues, it imposes a mode on the acts of all the virtues concerning which precepts are given. But as is commonly said, "The mode is not contained in the precept." Therefore, precepts should not be given concerning charity.

**Objection 2:** Charity, which is poured into our hearts by the Holy Spirit, makes us free, since, as 2 Corinthians 3:17 says, "Where the Holy Spirit is, there freedom is." But obligation, which arises from precepts, is opposed to liberty, since it imposes necessity. Therefore, precepts should not be given concerning charity.

**Objection 3:** As is clear from what was said above (*ST* 1-2, q. 100, a. 9), charity is the most important of all the virtues toward which the precepts are ordered. Therefore, if precepts are given concerning charity, then they ought to be posited among the most important precepts, which are the precepts of the Decalogue. But they are not posited there. Therefore, no precepts are to be given concerning charity.

**But contrary to this:** What God requires of us falls under a precept. But as Deuteronomy 10:12 says, God requires of a man "that he love Him." Therefore, precepts are to be given concerning the love of charity, i.e., concerning the love of God.

**I respond:** As was explained above (*ST* 1-2, q. 100, a. 5), 'precept' involves the notion of what is owed. Therefore, something falls under a precept to the extent that it has the character of what is owed. Now there are two ways in which something is owed, viz., (a) *in its own right (per se)* and (b) *because of something else (per aliud)*.

What is owed *in its own right* in each case is that which is the end, since the end has the character of something good in its own right, whereas what is owed *because of something else* is that which is ordered toward the end. For instance, for a physician what is owed in its own right is that he bring about healing, whereas what is owed because of something else is that he dispense medicine in order to bring about healing.

Now the end of the spiritual life is that a man be united with God, which is brought about through charity; and everything that belongs to the spiritual life is ordered toward this as its end. Hence, in 1 Timothy 1:5 the Apostle says, "The end of the commandment is charity from a pure heart, a good conscience, and an unfeigned faith." For all the virtues whose acts precepts are given for are ordered either (a) toward purifying the heart of the agitations of the passions, as in the case of the virtues that have to do with the passions, or at least (b) toward having a good conscience, as in the case of the virtues that have to do with operations, or (c) toward having upright faith, as in the case of those things having to do with divine worship. And those three things are required in order to love God. For an impure heart is drawn away from the love of God by passions that incline it toward earthly things, and a bad conscience

makes one bristle at God's justice because of the fear of punishment, whereas a feigned faith draws one's affections toward what it imagines about God, thus deviating from the truth about God.

Now in the case of each thing, what exists in its own right is more important than what exists because of something else. And so, as Matthew 22:38 says, "the greatest commandment" has to do with charity.

**Reply to objection 1:** As was said above when we were discussing the commandments (*ST* 1-2, q. 100, a. 10), the mode of love does not fall under the precepts that are given concerning the other acts of the virtues; for instance, the commandment 'Honor your father and your mother' does not include that this should be done out of charity. However, the act of loving does fall under special precepts.

**Reply to objection 2:** The obligation imposed by a commandment is opposed to freedom only in someone whose mind has been turned away from what is commanded, as is clear in the case of those who keep the commandments only out of fear. However, the precept of love can be fulfilled only by one's own will, and so it is not in tension with freedom.

**Reply to objection 3:** All the commandments of the Decalogue are ordered toward the love of God and the love of one's neighbor. And so the precepts of charity did not have to be numbered among the commandments of the Decalogue, but were included in all of them.

## Article 2

### Did two precepts have to be given concerning charity?

It seems not to be the case that two precepts had to be given concerning charity:

**Objection 1:** As has been explained (a. 1), the precepts of the law are ordered toward virtue. But as is clear from what was said above (q. 23, a. 5), charity is a single virtue (*una virtus*). Therefore, only one precept had to be given concerning charity.

**Objection 2:** In *De Doctrina Christiana* 1 Augustine says that charity loves only God in our neighbor. But we are sufficiently ordered toward loving God by the precept 'You shall love the Lord your God'. Therefore, it was unnecessary to add another precept concerning the love of neighbor.

**Objection 3:** Diverse sins are opposed to diverse precepts. But as long as someone does not fail to love God, he does not sin by failing to love his neighbor—to the contrary, Luke 14:26 says, "If you come to me and do not hate your father and your mother, you cannot be my disciple." Therefore, the precept concerning love of God is not a different precept from the precept concerning love of neighbor.

**Objection 4:** In Romans 13:8 the Apostle says, "One who loves his neighbor fulfills the law." But the law is fulfilled only by observing all the commandments. Therefore, all the commandments are contained in the love of neighbor. Therefore, the one commandment concerning love of neighbor is sufficient. Therefore, there should not be two precepts concerning charity.

**But contrary to this:** 1 John 4:21 says, "This commandment we have from God, that one who loves God should love his brother as well."

**I respond:** As was explained above when we were discussing the commandments (*ST* 1-2, q. 91, a. 3), precepts in the law behave like propositions in the speculative sciences, in which the conclusions are virtually contained within the first principles. Hence, one who knew the principles perfectly in all their power would not have to have the conclusions proposed to him separately. But since not everyone who has cognition of the principles is capable of seeing whatever is virtually contained in the principles, it is necessary for the sake of such individuals that in the sciences the conclusions be deduced from the principles.

Now as was explained above (*ST* 1-2, q. 91, a. 3), in matters of action, wherein the precepts of the law direct us, the end has the character of a principle. But the love of God is the end toward which the

love of one's neighbor is ordered. And so for the sake of less capable individuals, who would not easily see that the one of these precepts is contained within the other, it is necessary to give not only a precept concerning the love of God, but also a precept concerning the love of neighbor.

**Reply to objection 1:** Even though charity is a single virtue, it nonetheless has two acts, one of which is ordered toward the other as its end. But precepts are given concerning the acts of the virtues. And so it was necessary for there to be more than one precept of charity.

**Reply to objection 2:** God is loved in one's neighbor as an end is loved in what is ordered toward the end. And yet, for the reason already explained, it was necessary that precepts be given explicitly for both.

**Reply to objection 3:** What is ordered toward the end has the character of something good from its relation to the end. And this is why receding from what is ordered toward the end has the character of something bad—and not for any other reason.

**Reply to objection 4:** The love of God is included in the love of neighbor in the way that an end exists in the means to the end, and vice versa. And yet, for the reason already explained, it was necessary that both precepts be given explicitly.

### Article 3

#### Are two precepts concerning charity enough?

It seems that two precepts of charity are not enough:

**Objection 1:** Precepts are given concerning the acts of the virtues. But acts are distinguished by their objects. Therefore, since, as is clear from what was said above (q. 25, a. 12), there are four things a man ought to love out of charity—viz., God, himself, his neighbor, and his own body—it seems that there should be four precepts concerning charity. And so two are not enough.

**Objection 2:** The acts of charity include not only the act of elective love (*dilectio*), but joy (*gaudium*), peace (*pax*), and beneficence (*beneficentia*) as well. But precepts should be given concerning the acts of the virtues. Therefore, two precepts concerning charity are not enough.

**Objection 3:** Just as doing good belongs to a virtue, so, too, does turning away from evil. But we are induced to do good by the affirmative precepts and to turn away from evil by the negative precepts. Therefore, not just affirmative precepts, but also negative precepts should have been given concerning charity. And so the two precepts mentioned above are not enough.

**But contrary to this:** Matthew 22:40 says, “On these two commandments depend the whole Law and the Prophets.”

**I respond:** As was explained above (q. 23, a. 1), charity is a certain type of friendship. But friendship is with respect to another. Hence, in one of his homilies Gregory says, “Charity cannot be had among fewer than two individuals.” And it was explained above (q. 25, a. 4) how someone loves himself out of charity.

Now since love (*amor*) and elective love (*dilectio*) are of the good, whereas the good is either an end or a means to the end, it is fitting that two precepts should be enough concerning charity—more specifically, one by which we are induced to love God as the end, and another by which we are induced to love our neighbor because of God as the end (*propter Deum sicut propter finem*).

**Reply to objection 1:** In *De Doctrina Christiana* Augustine says, “Given that there are four things that are to be loved out of charity, no precepts had to be given for the second and fourth”—i.e., for love of self and love of one's own body—“since no matter how far a man falls away from the truth, he retains his love for himself and his love for his own body.”

However, the mode of this love has to be prescribed for man, so that he might love himself and his

body in a well-ordered way, and this is accomplished by his loving God and his neighbor.

**Reply to objection 2:** As is clear from what was said above (q. 28, a. 4 and q. 29, a. 3), the other acts of charity follow from the act of elective love (*ex actu dilectionis*) in the way that an effect follows from a cause. Hence, precepts concerning the other acts are virtually included in the precepts of love.

Still, because of those who are slower [to grasp this], one finds precepts that have been handed down explicitly concerning each of these other acts—concerning *joy* in Philippians 4:4 (“Rejoice in the Lord always”); concerning *peace* in Hebrews 12:14 (“Pursue peace with everyone”), and concerning *beneficence* in Galatians 6:10 (“While we have time, let us do good to everyone”). And as is clear to anyone who looks into the matter diligently, precepts concerning each of the parts of beneficence are found to be handed down in Sacred Scripture.

**Reply to objection 3:** Doing good involves more than avoiding evil. And so the negative precepts are virtually contained in the affirmative precepts.

Nonetheless, precepts are given explicitly against the vices opposed to charity. For instance, contrary to *hate* Leviticus 19:17 says, “You shall not hate your brother in your heart.” And against *acedia* Ecclesiasticus 6:26 says, “Do not be morose in her chains.” And against *envy* Galatians 5:26 says, “Let us not become desirous of vainglory, provoking one another, envying one another.” Against *discord* 1 Corinthians 1:10 says, “May all of you say the same thing, and let there be no schisms among you.” And against *scandal* Romans 14:13 says, “Do not put an obstacle or scandal in the way of your brother.”

#### Article 4

##### Is it inappropriate to command that God be loved with one’s whole heart?

It seems inappropriate to command that God be loved with one’s whole heart:

**Objection 1:** As is clear from what was said above (*ST* 1-2, q. 100, a. 9), a precept does not contain the mode of the virtuous act. But the phrase “with all one’s heart” designates a mode of loving God. Therefore, it is inappropriate to command that God be loved with one’s whole heart.

**Objection 2:** As *Physics* 3 says, what is whole and complete (*totum et perfectum*) is lacking in nothing. Therefore, if it is part of the precept that God be loved with one’s whole heart, then if someone does something that does not pertain to loving God, he is acting against the precept and consequently committing a mortal sin. But a venial sin does not pertain to the love of God. Therefore, a venial sin will be a mortal sin—which is absurd.

**Objection 3:** To love God with one’s whole heart belongs to perfection, since, according to the Philosopher, *whole* (*totum*) and *perfect* (*perfectum*) are the same thing. But what belongs to perfection falls under a counsel and not under a precept. Therefore, it should not be commanded that God be loved with one’s whole heart.

**But contrary to this:** Deuteronomy 6:5 says, “You shall love the Lord your God with your whole heart.”

**I respond:** Since the precepts are given concerning acts of the virtues, a given act falls under a precept with the mode by which it is an act of that virtue. But it is required for an act of virtue not only that the act have to do with the appropriate matter, but also that it be adorned with circumstances appropriate for it to be proportioned to that matter.

Now God is to be loved as the ultimate end, whom all things are to be referred back to. And so a certain sort of totality had to be designated with respect to the precept concerning the love of God.

**Reply to objection 1:** A mode that the act of a given virtue has from another, higher virtue does not fall under the precept that is given concerning the act of the virtue in question. However, the mode

which belongs to the nature of its own virtue does fall under the precept. And this is the sort of mode that is signified when one says, “with one’s whole heart.”

**Reply to objection 2:** There are two ways in which it is possible to love God with one’s whole heart.

In one way, *in actuality (in actu)*, i.e., so that a man’s whole heart is always moved toward God in actuality. This is the perfection of heaven.

In the second way, a man’s whole heart is moved *habitually* toward God, so that a man’s heart receives nothing that is contrary to God. And this is the perfection of this life (*perfectio viae*). Venial sin is not contrary to this sort of perfection, since it does not destroy the habit of charity; for venial sin does not tend toward an object opposed to charity, even though it does impede the use of charity.

**Reply to objection 3:** The perfection of charity toward which the counsels are ordered lies between the two sorts of perfection just mentioned, so that insofar as this is possible, a man removes himself from temporal things, even those that are permitted, which, by occupying the mind, impede the heart’s actual movement toward God.

## Article 5

### Is it inappropriate for Deuteronomy 6:5 to have added “and with all your soul and with all your strength” to “You shall love the Lord your God with all your heart”?

It seems that it is inappropriate for Deuteronomy 6:5 to have added “and with all your soul (*ex tota anima*) and all your strength (*ex tota fortitudine*)” to “You shall love the Lord your God with all your heart” (*ex toto corde*):

**Objection 1:** ‘Heart’ is not to be taken here for a corporeal part of the body, since loving God is not a bodily act. Therefore, one must take ‘heart’ in a spiritual sense. But heart, taken in a spiritual sense, is either the soul itself or some aspect of the soul. Therefore, it was redundant to posit both of them.

**Objection 2:** A man’s strength depends mainly on his heart, whether this is taken in a spiritual sense or a corporeal sense. Therefore, after it had said, “You shall love the Lord your God with all your heart,” it was superfluous to add “and with all your strength.”

**Objection 3:** Matthew 22:37 says, “with all your mind,” which is not posited in Deuteronomy 6:5. Therefore, the precept is given in an inappropriate way in Deuteronomy 6.

**But contrary to this** is the authority of Sacred Scripture.

**I respond:** The precept in question is handed down in diverse ways in various places. For as has been pointed out, Deuteronomy 6:5 posits three things, viz., “with your whole heart and with your whole soul and with your whole strength.” Matthew 22:37 posits two of these, viz., “with your whole heart and with your whole soul,” omits “and with your whole strength,” and adds “and with your whole mind (*ex toto mente*).” On the other hand, Mark 12:30 posits four things, viz., “with your whole heart, and with your whole soul, and with your whole mind, and with all your power (*ex tota virtute*),” which is the same as “and with your whole strength.” And these four are also mentioned in Luke 10:27, since in place of “strength” or “power” it says, “with all your might” (*ex omnibus viribus*). And so we need to assign reasons for four of these, since the reason that one of them is omitted in some places is that it is understood from the others.

Therefore, we must consider that elective love is an act of the will, and the will is signified by ‘heart’. For just as the corporeal heart is the principle of all corporeal movements, so, too, the will—especially with respect to the intending of the ultimate end, which is the object of charity—is the

principle of all spiritual movements.

Now there are three principles of action that are moved by the will, viz., (a) the intellect, which is signified by ‘mind’, (b) the lower appetite, which is signified by ‘soul’, and (c) the external executive power, which is signified by ‘strength’ or ‘power’ or ‘might’.

Therefore, we are commanded (a) that our whole intention be moved toward God, which is to love God *with our whole heart*; and (b) that our intellect be submitted to God, which is to love God *with our whole mind*; and (c) that our appetite be regulated by God, which is to love God *with our whole soul*; and (d) that our exterior acts be obedient to God, which is to love God *with our whole strength* or *with all our power* or *with all our might*.

However, in *Super Matthaem* Chrysostom interprets ‘heart’ and ‘soul’ in a way opposite to that which has just been put forth. By contrast, in *De Doctrina Christiana* 1 Augustine takes ‘heart’ for thoughts (*cogitationes*), ‘soul’ for life, and ‘mind’ for intellect, whereas some say that “with all your heart” means the intellect, “with all your soul” means the will, and “with all your mind” means memory.

Alternatively, according to Gregory of Nyssa, ‘heart’ signifies the vegetative soul, ‘soul’ signifies the sentient soul, and ‘mind’ signifies the intellective soul; for we ought to refer back to God the fact that we are nourished, the fact that we have sensation, and the fact that we have understanding.

**Reply to objection 1 and objection 2 and objection 3:** From this the replies to the objections are clear.

## Article 6

### Can the commandment concerning love of God be kept in this life?

It seems that the commandment concerning love of God can be kept in this life:

**Objection 1:** In *Expositio Catholicae Fidei* Jerome says, “Cursed be anyone who claims that God has commanded the impossible.” But God has given the commandment in question, as is clear from Deuteronomy 6. Therefore, this commandment can be fulfilled in this life.

**Objection 2:** Whoever fails to fulfill a precept sins mortally, since, according to Ambrose, sin is nothing other than “a transgression of God’s law and disobedience to heavenly commandments.” Therefore, if the commandment in question cannot be kept in this life, it follows that no one is able to exist in this life without mortal sin. But this is contrary to what the Apostle says in 1 Corinthians 1:8 (“He will confirm you unto the end without crime”) and in 1 Timothy 3:10 (“Let them minister, having no crimes”).

**Objection 3:** Precepts are given in order to direct men into the way of salvation—this according to Psalm 18:9 (“The law of the Lord is clear, enlightening our eyes”). But it is in vain for someone to be directed toward the impossible. Therefore, it is not impossible for the precept in question to be kept in this life.

**But contrary to this:** In *De Perfectione Iustitiae Hominis* Augustine says, “It is in the fullness of the charity of heaven that the commandment, “You shall love the Lord your God, etc.” will be fulfilled. For since there is still something of carnal concupiscence that is restrained by continence, God is not altogether loved with one’s whole soul.”

**I respond:** There are two ways in which a given precept can be fulfilled, (a) *perfectly* and (b) *imperfectly*. A precept is fulfilled *perfectly* when one arrives at the end intended by the one who gives the precept, whereas it is fulfilled *imperfectly* when, even if one does not arrive at the end intended by the one who gives the precept, he nonetheless does not withdraw from being ordered toward that end. In the same way, if the general of an army commands his soldiers to fight, the one who fulfills the command perfectly is the one who conquers the enemy by fighting, which is what the general intended, whereas the

one who fulfills the command imperfectly is the one whose fighting does not attain victory, even though he does nothing contrary to military discipline.

Now through the precept in question God intends that a man be totally united with God, which will occur in heaven, when “God will be all things in all things,” as 1 Corinthians 15:28 puts it. And so the precept will be fulfilled fully and perfectly in heaven. By contrast, in this life (*in via*) it is fulfilled, but imperfectly. And in this life one individual fulfills the precept more perfectly than another to the extent that he comes closer, through a certain similarity, to the perfection of heaven.

**Reply to objection 1:** This argument proves that the precept can be fulfilled in some sense in this life, though not perfectly.

**Reply to objection 2:** Just as a soldier who fights in the right way, even if he does not conquer, is not blamed and does not merit punishment, so, too, one who fulfills the precept in this life by not doing anything contrary to divine love does not sin mortally.

**Reply to objection 3:** As Augustine says in *De Perfectione Iustitiae Homnis*, “Why shouldn’t this perfection be prescribed for a man, even though no man attains it in this life? For one does not run straight if he does not know where he is supposed to run to. But how will he know if there are no precepts to show him?”

## Article 7

### Is it appropriate for a precept to be given concerning love of one’s neighbor?

It seems that it is inappropriate for a precept to be given concerning love of one’s neighbor:

**Objection 1:** As is clear from Matthew 5:44, the love of charity extends to all men, even to one’s enemies. But the name ‘neighbor’ (*proximus*) implies a certain closeness (*propinquitias*), which one does not seem to have with respect to all men. Therefore, it seems inappropriate for this precept to be given.

**Objection 2:** According to the Philosopher in *Ethics* 9, “The friendly regard (*amicabilia*) directed toward the other comes from the friendly regard that is directed toward oneself.” And from this it seems that love of oneself is a principle of love of one’s neighbor. But the principle is more important than what follows from the principle. Therefore, it is not the case that a man should love his neighbor as himself.

**Objection 3:** A man loves himself, but not his neighbor, by nature (*naturaliter*). Therefore, it is inappropriate for a man to be commanded to love his neighbor as himself.

**But contrary to this:** Matthew 22:39 says, “The second commandment is similar to the first: You shall love your neighbor as yourself.”

**I respond:** It is appropriate for this precept to be handed down, since it touches upon both the *reason for loving* and the *mode of loving*.

The *reason for loving* is touched upon by the use of ‘neighbor’ or ‘someone close’ (*proximus*). For we ought to love others because they are close to us both (a) in being the natural image of God and (b) in their capacity for glory. And it does not matter whether such an individual is called a ‘neighbor’ (*proximus*) or a ‘brother’ (*frater*), as 1 John 4:20-21 has it, or a ‘friend’ (*amicus*), as Leviticus 19:18 has it; for the same closeness or affinity (*affinitas*) is designated by all of these names.

The *mode of loving* is touched upon when it says “as yourself.” This is to be understood not in the sense that someone should love his neighbor *as much as he loves himself*, but that he should love his neighbor *in a way similar to the way in which he loves himself*—and this in three ways:

First, on the part of *the end*, so that, namely, one loves his neighbor because of God, just as he ought to love himself because of God. In this sense, one’s love of his neighbor is *holy*.

Second, on the part of *the rule of love*, so that, namely, one gives way to his neighbor not in

anything bad, but only in the good, just as a man ought to fulfill his own will only in good things. In this sense, one's love of his neighbor is *just*.

Third, on the part of *the reason for loving*, so that, namely, one loves his neighbor not for the sake of his own advantage or pleasure, but in the sense that he wills his neighbor's good just as he wills his own good. In this sense, one's love of his neighbor is *true*. For when one loves his neighbor for the sake of his own advantage or pleasure, he is loving himself and not truly loving his neighbor.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear.

## Article 8

### Does the ordering of charity fall under the precept?

It seems that the ordering of charity (*ordo caritatis*) does not fall under the precept:

**Objection 1:** Whoever transgresses a precept does harm (*inuriam facit*). But if someone loves a given individual as much as he should, and there is someone else whom he loves more, then he does not do harm to anyone. Therefore, the precept is not transgressed. Therefore, the ordering of charity does not fall under the precept.

**Objection 2:** What falls under the precept is handed down to us clearly enough in Sacred Scripture. But the ordering of charity that was posited above (q. 26) is nowhere handed down to us in Sacred Scripture. Therefore, the ordering of charity does not fall under the precept.

**Objection 3:** An ordering involves a certain sort of distinction. But love of neighbor is commanded without distinctions, since it says, "You shall love your neighbor as yourself." Therefore, no ordering of charity falls under the precept.

**But contrary to this:** God has taught us through the precepts of the law what He effects in us through grace—this according to Jeremiah 31:33 ("I will give my law in their hearts"). But God causes the ordering of charity within us—this according to Canticle of Canticles 2:4 ("He has ordered the charity within me"). Therefore, the ordering of charity falls under the precept of the law.

**I respond:** As has been explained (a. 4), the mode that belongs to the nature of a virtuous act falls under the precept that is given concerning the act of that virtue. But the ordering of charity belongs to the very nature of the virtue, since, as is clear from what was said above (q. 26, aa. 4 and 7-9), the ordering is taken from one's proportioning his love to what is lovable. Hence, it is clear that the ordering of charity should fall under the precept.

**Reply to objection 1:** A man gives a greater degree of satisfaction to someone he loves to a greater degree. And so if he were to love less someone whom he ought to love more, he would be willing to give more satisfaction to someone whom he ought to give less satisfaction to. And so he would be doing harm to the one whom he ought to love more.

**Reply to objection 2:** The ordering of the four things to be loved out of charity is expressly given in Sacred Scripture. For when it is commanded that we love God with our whole heart, we are given to understand that we should love God above all things, whereas when it is commanded that one should love his neighbor as himself, the love of oneself is preferred to the love of neighbor. Similarly, when it is commanded in 1 John 3:16 that we "ought to lay down our soul," i.e., our corporeal life, for our brother, we are given to understand that we should love our neighbor more than our own body. Similarly, when it is commanded in Galatians 6:10 that we should "do good to those who belong to the family of the Faith," and when, in 1 Timothy 5:8 holds as blameworthy one who does not take care of what is his own, and especially his own family, we are given to understand that, among our neighbors, we ought to love more those who are better and those who are closer to us.

**Reply to objection 3:** From the phrase "You shall love your neighbor" (*diliges proximum tuum*), we are given to understand as a consequence that those who are closer to us are to be loved more.

## QUESTION 45

### The Gift of Wisdom

Next we have to consider the gift of wisdom, which corresponds to charity: first, wisdom itself (question 45) and, second, the opposite vice (question 46).

On the first topic there are six questions: (1) Should wisdom be numbered among the gifts of the Holy Spirit? (2) Which subject does wisdom exist in? (3) Is wisdom speculative only, or also practical? (4) Can the wisdom which is a gift exist along with mortal sin? (5) Does wisdom exist in everyone who has habitual grace (*gratia gratum faciens*)? (6) Which of the beatitudes does wisdom correspond to?

#### Article 1

##### Should wisdom be numbered among the gifts of the Holy Spirit?

It seems that wisdom should not be numbered among the gifts of the Holy Spirit:

**Objection 1:** As was explained above (*ST* 1-2, 68, a. 8), the gifts are more perfect than the virtues. But a virtue is related only to what is good; hence, in *De Libero Arbitrio* Augustine says, “No one uses the virtues badly.” Therefore, *a fortiori*, the gifts of the Holy Spirit are related only to what is good. But wisdom is related to what is bad as well; for James 3:15 says that a certain sort of wisdom is “worldly (*terrena*), animalistic (*animalis*), diabolical (*diabolica*).” Therefore, wisdom should not be posited among the gifts of the Holy Spirit.

**Objection 2:** In *De Trinitate* 14 Augustine says, “Wisdom is the cognition of divine things.” But the cognition of divine things that a man can have by his natural powers belongs to the sort of wisdom that is an intellectual virtue, whereas the supernatural cognition of divine things belongs to faith, which, as is clear from what was said above (q. 1, a. 1), is a theological virtue. Therefore, wisdom should be called a virtue rather than a gift.

**Objection 3:** Job 28:27 says, “Behold, the fear of the Lord is itself wisdom, and to withdraw from evil is itself understanding”—where, the Septuagint, which Augustine uses, has, “Behold, piety is itself wisdom.” But both fear of the Lord and piety are posited as gifts of the Holy Spirit. Therefore, wisdom should not be numbered among the gifts of the Holy Spirit as a gift distinct from the others.

**But contrary to this:** Isaiah 11:2 says, “The Spirit of the Lord will rest upon him, the spirit of wisdom and understanding ...”

**I respond:** According to the Philosopher at the beginning of the *Metaphysics*, it belongs to wisdom to consider the highest cause, by reference to which one judges with certainty about other things and in accord with which all things have to be ordered.

Now ‘highest cause’ can be taken in two senses, either (a) absolutely speaking (*simpliciter*) or (b) within some genus (*in aliquo genere*).

Therefore, one who has cognition of the cause that is highest within some genus, and who is able to judge and order all things belonging to that genus by reference to it, is said to be wise within that genus, e.g., in medicine or in architecture—this according to 1 Corinthians 3:10 (“As a wise architect, I have laid the foundation”).

Now one who has cognition of the highest cause absolutely speaking, i.e., God, is said to be wise absolutely speaking, insofar as he is able to judge and order all things by reference to divine norms (*per regulas divinas*). But a man attains judgment of this sort through the Holy Spirit—this according to 1 Corinthians 2:15, “The spiritual man judges all things,” because, as it says in the same place, “the Spirit scrutinizes all things, yes, the deep things of God.”

Hence, it is clear that wisdom is a gift of the Holy Spirit.

**Reply to objection 1:** ‘Good’ is said in two ways. In one way, something is said to be good when it is *truly* good and *absolutely* perfect. In the second way, as is clear from the Philosopher in

*Metaphysics 5*, something is said to be good when, in accord with a certain similarity, it is perfect in badness, as when someone is called a ‘good’ thief or a ‘perfect’ thief. And just as, with respect to what is truly good, there is a highest cause, i.e., the highest good, which is the ultimate end and through the cognition of which a man is called truly wise, so, too, among bad things there is something which other things are referred back to as their ultimate end, and through the cognition of this thing a man is said to be ‘wise’ in doing what is bad—this according to Jeremiah 4:22 (“They are wise in doing evil, but they do not know how to do good”).

Anyone who turns away from an end that is obligatory (*a fine debito*) must set up for himself some unsuitable end (*aliquem finem indebitum*), since every agent acts for the sake of an end. If he sets up for himself an end in worldly things, then the corresponding wisdom is called ‘worldly’, whereas if he sets it up in corporeal things, the wisdom is called ‘animalistic’, and if he sets it up in some sort of excellence, then the wisdom is called ‘diabolical’, because it imitates the pride of the devil that is spoken of in Job 41:25 (“He is king over all the children of pride”).

**Reply to objection 2:** The wisdom that is posited as a gift differs from the wisdom that is posited as an acquired intellectual virtue. For the latter is acquired by human study, whereas the former “descends from above,” as James 3:15 puts it.

Similarly, the gift of wisdom differs from faith. For faith *assents* to divine truth in its own right, whereas what belongs to wisdom is *judgment* in accord with divine truth. And so the gift of wisdom presupposes faith, since, as *Ethics 1* says, “each individual judges well what he has cognition of.”

**Reply to objection 3:** Just as piety, which pertains to the worship of God, makes faith manifest insofar as we profess our faith through our worship of God, so, too, piety makes wisdom manifest. And this is why it is said that piety is wisdom.

The same line of reasoning holds for fear. For the fact that a man fears and worships God shows that he has correct judgment concerning divine things.

## Article 2

### Does wisdom exist in the intellect as its subject?

It seems that wisdom does not exist in the intellect as its subject:

**Objection 1:** In *De Gratia Novi Testamenti* Augustine says, “Wisdom is the charity of God.” But as was established above (q. 24, a. 1), charity exists in the will as its subject and not in the intellect. Therefore, wisdom does not exist in the intellect as its subject.

**Objection 2:** Ecclesiasticus 6:23 says, “The wisdom that belongs to doctrine is like her name.” But the name ‘wisdom’ (*sapientia*) means, as it were, ‘tasty knowledge’ (*sapida scientia*), which seems to pertain to affection, and affection has to do with experiencing spiritual pleasure and sweetness. Therefore, wisdom exists in the affections rather than in the intellect.

**Objection 3:** The intellective power is sufficiently perfected by the gift of understanding. But it is superfluous to posit more than one thing for what can be brought about by one thing. Therefore, wisdom does not exist in the intellect.

**But contrary to this:** In *Moralia 2* Gregory says that wisdom is contrary to foolishness or stupidity (*stultitia*). But foolishness exists in the intellect. Therefore, wisdom does, too.

**I respond:** As was explained above (a. 1 and q. 8, a. 6), wisdom implies a certain rectitude of judgment by reference to divine things. Now rectitude of judgment can occur in two ways: (a) by a perfect use of reason or (b) by a certain connaturality with the things concerning which one has now to judge. For instance, one who learns moral science judges rightly through the inquiry of reason about the things that pertain to chastity, whereas one who has the habit of chastity judges rightly about those things

through a sort of connaturality.

So, then, it belongs to the wisdom that is an intellectual virtue to have right judgment about divine things by the inquiry of reason, whereas it pertains to wisdom as a gift of the Holy Spirit to have right judgment about those things by a sort of connaturality with them. For instance, in *De Divinis Nominibus*, chap. 2, Dionysius says that Herotheus is perfect in divine matters, “not only in learning divine things, but also in experiencing them (*sed et patiens divina*).” Now this sort of connaturality or communion of affection (*compassio*) in divine things is effected by charity, which unites us to God—this according to 1 Corinthians 6:17 (“He who adheres to God is one spirit”).

So, then, the wisdom that is a gift has a cause in the will, viz., charity, but it has its essence in the intellect, the act of which, as was established above (*ST* 1, q. 79, a. 3), is to judge rightly.

**Reply to objection 1:** Augustine is speaking about wisdom as regards its cause. The name ‘wisdom’ (*sapientia*) is likewise taken from this, insofar as wisdom implies a sort of tasting (*saporem quendam importat*.)

**Reply to objection 2:** From this the reply to the second objection is clear, if what it says is indeed the meaning of the text in question.

However, it does not seem to be the meaning of the text, since this sort of exposition applies only to the name that wisdom has in Latin, whereas it does not belong to the name that wisdom has in Greek or perhaps in any other language. Hence, it seems better to take “the name of wisdom” here for wisdom’s reputation (*fama*), for which it is commended by all.

**Reply to objection 3:** The intellect has two acts, viz., to grasp (*percipere*) and to judge (*iudicare*). The gift of *understanding* is ordered toward the first act, whereas the gift of *wisdom* is ordered toward the second act when one is working from divine reasons (*secundum rationes divinas*), and the gift of *knowledge* is ordered toward it when one is working from human reasons (*secundum rationes humanas*).

### Article 3

#### Is wisdom just speculative or practical as well?

It seems that wisdom is just speculative and not practical:

**Objection 1:** The gift of wisdom is more excellent than wisdom insofar as it is an intellectual virtue. But wisdom insofar as it is an intellectual virtue is just speculative. Therefore, *a fortiori*, the wisdom that is a gift is speculative and not practical.

**Objection 2:** The practical intellect has to do with actions, which are contingent. But wisdom has to do with divine things, which are eternal and necessary. Therefore, wisdom cannot be practical.

**Objection 3:** In *Moralia* 6 Gregory says, “In contemplation one seeks the principle, which is God, whereas in action one labors under a heavy burden of necessity.” But the vision of divine things belongs to wisdom, to which it does not belong to labor under any burden of necessity; for as Wisdom 8:16 says, “Her conversation has no bitterness, nor does her company have any weariness.” Therefore, wisdom is just contemplative and not practical or active.

**But contrary to this:** Colossians 4:5 says, “Walk with wisdom toward those who are outside.” But this pertains to action. Therefore, wisdom is not just speculative, but also practical.

**I respond:** As Augustine says in *De Trinitate* 12, the higher part of reason is assigned to wisdom, whereas the lower part is assigned to scientific knowledge. Now as he himself says in the same book, higher reason is intent on “seeing and consulting heavenly reasons,” i.e., the divine reasons—*seeing* insofar as it contemplates divine things in themselves, and *consulting* insofar as it judges human things by reference to divine things, directing human acts by reference to divine rules. So, then, wisdom, insofar as it is a gift, is not only speculative but also practical.

**Reply to objection 1:** As is established in the *Liber de Causis*, a virtue is higher to the extent that it extends to more things. Hence, from the fact that the wisdom which is a gift is more excellent than the wisdom which is an intellectual virtue, in the sense that it gets closer to God, viz., through a certain union of the soul to God, it has the character of directing one not only in contemplation but also in action.

**Reply to objection 2:** Divine things are, to be sure, necessary and eternal in their own right, but they are rules for the contingent matters that underlie human acts.

**Reply to objection 3:** To consider something in itself is prior to comparing it to something else. Hence, the contemplation of divine things, i.e., the vision of the principle, belongs to wisdom first of all, and after that what belongs to it is to direct human acts by reference to divine reasons. And yet no bitterness or weariness arises in human acts from wisdom's directing them; instead, bitterness is turned into sweetness because of wisdom, and labor into rest.

#### Article 4

##### Can wisdom exist in the absence of grace and along with mortal sin?

It seems that wisdom can exist in the absence of grace and along with mortal sin:

**Objection 1:** The saints especially take glory in those things that cannot be had along with mortal sin—this according to 2 Corinthians 1:12 (“Our glory is this, the testimony of our conscience”). But one ought not to glory in wisdom—this according to Jeremiah 9:23 (“Let the wise man not glory in his wisdom”). Therefore, wisdom can exist in the absence of grace and along with mortal sin.

**Objection 2:** As has been explained (a. 1), wisdom involves the cognition of divine things. But someone who has mortal sin can have cognition of divine truth—this according to Romans 1:18 (“They retain the truth of God in their injustice”). Therefore, wisdom can exist along with mortal sin.

**Objection 3:** In speaking of charity in *De Trinitate* 15 Augustine says, “There is nothing more excellent than this gift from God, which alone is what divides the children of the eternal kingdom from the children of eternal perdition.” But wisdom differs from charity. Therefore, it does not divide the children of the kingdom from the children of perdition. Therefore, it can exist along with mortal sin.

**But contrary to this:** Wisdom 1:4 says, “Wisdom will not enter into a malevolent soul, nor dwell in a body subject to sins.”

**I respond:** As has been explained (aa. 2-3), the wisdom that is a gift of the Holy Spirit brings about rectitude of judgment with respect to divine things or, through divine rules, with respect to other things, out of a sort of connaturality or union with divine things. This occurs through charity, as has been explained (a. 2). But as is clear from what was said above (q. 24, a. 12), charity cannot exist along with mortal sin. Hence, it follows that the wisdom of which we are now speaking cannot exist along with mortal sin.

**Reply to objection 1:** The last passage should be understood to apply to wisdom in worldly matters, or even to wisdom in divine matters by reference to human reasons. This is not what the saints glory in, but is instead something that they claim not to have—this according to Proverbs 30:2 (“The wisdom of men is not with me”). But they do indeed glory in divine wisdom—this according to 1 Corinthians 1:30 (“Christ Jesus has been made wisdom unto us by God”).

**Reply to objection 2:** This argument goes through for the cognition of divine things which is had through reason's study and inquiry. This sort of cognition can be had along with mortal sin, but not the wisdom of which we are now speaking.

**Reply to objection 3:** Even though wisdom differs from charity, it nonetheless presupposes charity, and because of this it divides the children of perdition from the children of the kingdom.

## Article 5

### Does wisdom exist in all who have grace?

It seems that wisdom does not exist in all who have grace:

**Objection 1:** It is greater to have wisdom than to hear wisdom. But it belongs only to the perfect to hear wisdom—this according to 1 Corinthians 2:6 (“We speak wisdom among the perfect”). Therefore, since not everyone who has grace is perfect, it seems all the less true that everyone who has grace has wisdom.

**Objection 2:** As the Philosopher says at the beginning of the *Metaphysics*, “It belongs to the wise man to order.” And James 3:17 says that the wise “judge without dissimulation.” But it does not belong to everyone who has grace to pass judgment on others or to order others; this belongs only to those in authority (*solum prelatorum est*). Therefore, it does not belong to everyone who has grace to have wisdom.

**Objection 3:** As Gregory says in *Moralia* 2, wisdom is opposed to folly or foolishness. But many who have grace are naturally foolish, as is clear in the case of mindless individuals who are baptized, or those who fall into mindlessness afterwards in the absence of sin. Therefore, wisdom does not exist in everyone who has grace.

**But contrary to this:** If an individual is without mortal sin, then he is loved by God; for he has charity, by which he loves God, and, as Proverbs 8:17 says, “God loves everyone who loves Him.” But Wisdom 7:28 says, “God does not love anyone who does not dwell with wisdom.” Therefore, wisdom exists in everyone who has grace and who is without mortal sin.

**I respond:** As has been explained (aa. 1 and 3), the wisdom of which we are speaking implies a certain rectitude of judgment concerning divine things that are to be seen and consulted. As regards both of these, there are some who, because of their union with divine things, receive wisdom of varying degrees.

For instance, some receive wisdom with respect to right judgment only to the extent that it is necessary for salvation, both in the contemplation of divine things and in the ordering of human things by reference to divine rules. And this much is not lacking to anyone who, through habitual grace (*per gratiam gratum facientem*), does not have mortal sin; for if nature does not fall short in what is necessary, much less will grace fall short in what is necessary. Hence, 1 John 2:27 says, “His anointing teaches you about everything.”

However, there are others who receive the gift of wisdom to a higher degree, both (a) with respect to contemplating divine things, insofar as they have cognition of certain deeper mysteries and can make them manifest to others, and also (b) with respect to directing human things by reference to divine rules, insofar as they are able to order not only themselves but also others by reference to those rules. And this level of wisdom is not common to everyone who has habitual grace, but is instead one of the gratuitous graces (*gratiae gratis datae*) that the Holy Spirit distributes as He wills—this according to 1 Corinthians 12:8 (“... to another the word of wisdom is given through the Spirit ...”).

**Reply to objection 1:** In this passage the Apostle is talking about wisdom insofar as it extends to the hidden mysteries of divine things, just as he says in the same place, “We speak God’s wisdom, hidden in mystery.”

**Reply to objection 2:** Even though ordering other men and passing judgment on them belongs to authorities alone, still, ordering one’s own acts and passing judgment on them belongs to each individual. This is clear from Dionysius in his letter to Demophilus.

**Reply to objection 3:** Like baptized children, mindless individuals who have been baptized have the *habit* of wisdom insofar as it is a gift of the Holy Spirit, but they do not have the *act* of that habit because of a corporeal impediment by which the use of reason is impeded in them.

## Article 6

### Does the seventh beatitude correspond to the gift of wisdom?

It seems that the seventh beatitude does not correspond to the gift of wisdom:

**Objection 1:** The seventh beatitude is ‘Blessed are the peacemakers, for they shall be called children of God’. Now both parts belong immediately to charity. For Psalm 118:165 says of peace, “Much peace is had by those who love your law.” And as the Apostle says in Romans 5:5, “The charity of God is poured into our hearts by the Holy Spirit, who is given to us and who is the Spirit of filial adoption (*spiritus adoptionis filiorum*), in which we cry, ‘Abba, Father’.” Therefore, the seventh beatitude should be attributed to charity rather than to wisdom.

**Objection 2:** Each thing is such that it is made more manifest by its proximate effect than by its remote effect. But the proximate effect of wisdom seems to be charity—this according to Wisdom 7:27 (“Through the nations she conveys herself into holy souls; she creates friends of God and prophets”)—whereas peace and filial adoption seem to be wisdom’s remote effects, since, as has been explained (q. 19, a. 2 and q. 29, a. 3), they proceed from charity. Therefore, the beatitude corresponding to wisdom should be determined more by the love of charity than by peace.

**Objection 3:** James 3:17 says, “But the wisdom from above is first of all chaste (*pudica*), then gentle (*pacifica*), moderate (*modesta*), easily persuadable (*suadibilis*), in agreement with what is good (*bonis consentiens*), full of mercy and good fruits (*plena misericordia et fructis bonis*), judging without false pretense (*iudicans sine simulatione*).” Therefore, the beatitude that corresponds to wisdom should not be taken from peace more than from the other effects of heavenly wisdom.

**But contrary to this:** In *De Sermone Domine in Monte* Augustine says, “Wisdom befits the peaceable, in whom there is conformity to reason and no rebellious movement.”

**I respond:** The seventh beatitude is fittingly adapted to the gift of wisdom, both with respect to its *merit* and with respect to its *reward*.

The phrase “Blessed are the peacemakers” pertains to the *merit*. Now peacemakers are those who ‘make peace’, either within themselves or among others as well. Both of these occur because the things in which peace is constituted are brought back to their appropriate order; for as Augustine says in *De Civitate Dei* 19, “Peace is the tranquility of order.” But as is clear from the Philosopher at the beginning of the *Metaphysics*, it belongs to wisdom to bring order. And so being a peacemaker is appropriately attributed to wisdom.

On the other hand, the phrase “they will be called children of God” pertains to the *reward*. Now individuals are called children of God insofar as they participate in a similarity to the only-begotten and natural Son—this according to Romans 8:29, “... whom He foreknew ... to be conformed to the image of His Son,” who is Wisdom Begotten. And so in receiving the gift of wisdom, a man attains divine filiation.

**Reply to objection 1:** To *have* peace belongs to charity, but to *make* peace belongs to wisdom bringing order (*est sapientiae ordinantis*). Similarly, the Holy Spirit is called the “spirit of adoption” to the extent that through Him we are made similar to (*datur nobis similitudo*) the natural Son, who is Wisdom Begotten.

**Reply to objection 2:** This passage should be understood to apply to Uncreated Wisdom, who as the First Wisdom unites Himself to us through the gift of charity and thereby reveals to us the mysteries, the cognition of which is infused wisdom. And so infused wisdom, i.e., the gift of wisdom, is not a cause of charity but instead its effect.

**Reply to objection 3:** As has already been explained (a. 3), it belongs to wisdom, insofar as it is a gift, not only to contemplate divine things, but also to regulate human acts. In this direction of human acts, there first occurs a withdrawal from the evils that are contrary to wisdom; hence, fear is said to be

the beginning of wisdom insofar as it makes one withdraw from evils. But the ultimate, i.e., the end, is that everything should be brought back to an appropriate order, which pertains to peace. And so James appropriately says that the wisdom that is from above and is a gift of the Holy Spirit is, first of all, *chaste*, in the sense of avoiding the seduction of sin, and then *gentle*, which is the final effect of wisdom and that because of which the beatitude is posited.

However, at this point everything that follows [in the quoted passage] makes manifest the things through which wisdom arrives at peace, and in the correct order. For in the case of a man who is withdrawing from corruption through *chastity*, the first thing that occurs with him is that, as much as he can, he holds to the mean (*modum teneat*) in all things, and in this respect he is called *moderate*. Second, in things in which he himself is not sufficient, he acquiesces in the advice of others, and in this respect it is added that he is *easily persuadable*. These two things pertain to a man's attaining peace within himself. But further, in order for him to be a peacemaker for others as well, it is required, first, that he not oppose their good, and in this respect it is added that he is *in agreement with what is good*. Second, he both (a) has compassion on the needs of his neighbors in what he feels and (b) helps them in what he effects, and in this respect it is added that he is *full of mercy and good works*. Third, it is required that he take the trouble to correct sins in a charitable way, and in his regard it is added that he *judges without false pretense*—i.e., lest, pretending to give correction, he should intend to satisfy his hatred instead.

## QUESTION 46

### Foolishness

Next we have to consider foolishness or folly (*stultitia*), which is opposed to wisdom. And on this topic there are three questions: (1) Is foolishness opposed to wisdom? (2) Is foolishness a sin? (3) Which capital sin is foolishness traced back to?

#### Article 1

##### Is foolishness opposed to wisdom?

It seems that foolishness is not opposed to wisdom:

**Objection 1:** It seems that being unwise (*insipientia*) is directly opposed to wisdom (*sapientia*). But foolishness does not seem to be the same thing as being unwise, since being unwise, like wisdom, seems to have to do only with divine things, whereas foolishness has to do with both divine and human things. Therefore, foolishness is not opposed to wisdom.

**Objection 2:** It is not the case that one of two opposites is a way of arriving at the other opposite. But foolishness is a way of arriving at wisdom; for 1 Corinthians 3:18 says, “If anyone among you seems to be wise in this world, let him become foolish, in order that he might be wise.” Therefore, foolishness is not opposed to wisdom.

**Objection 3:** It is not the case that one of two opposites is a cause of the other. But wisdom is a cause of foolishness. For Jeremiah 10:14 says, “Every man has become a fool from his knowledge”—and wisdom is a certain sort of knowledge. Again, Isaiah 47:10 says, “Your wisdom and your knowledge, this is what has deceived you”—and being deceived pertains to foolishness. Therefore, foolishness is not opposed to wisdom.

**Objection 4:** In *Etymologia* Isidore says, “The fool is one who is not moved to sadness by disgrace, and who is not moved by injury.” But as Gregory points out in *Moralia* 10, these are marks of spiritual wisdom. Therefore, foolishness is not opposed to wisdom.

**But contrary to this:** In *Moralia* 2 Gregory says that the gift of wisdom is given to guard against foolishness.

**I respond:** The name *stultitia* seems to be taken from ‘stupor’ or ‘dullness’ (*stupor*), and this is why in the *Etymologia* Isidore says, “One who is foolish (*stultus*) remains through dullness unmoved.” And as he says in the same place, foolishness (*stultitia*) differs from fatuousness (*fatuitas*) because foolishness implies dullness of the heart and bluntness of sensibility (*importat hebetudinem cordis et obtusionem sensuum*), whereas fatuousness implies the total lack of spiritual sensibility.

And so foolishness is appropriately opposed to wisdom. For as Isidore says in the same place, *sapientia* is taken from ‘sapid’ or ‘tasty’ (*sapor*), since just as the sense of taste (*gustus*) is able to distinguish the flavor of different foods, so the wise man has the power to make distinctions among things and among causes. Hence, it is clear that foolishness is opposed to wisdom as its contrary, whereas fatuousness is opposed to wisdom as its pure negation. For the fatuous man lacks a sense of judgment, whereas the foolish man has a sense of judgment, but a dull one, and the wise man has a subtle and perspicacious sense of judgment.

**Reply to objection 1:** As Isidore says in the same place, “the unwise man (*insipiens*) is contrary to the wise man (*sapiens*) because he does not have a taste for discretion and good sense.” This is why a lack of wisdom (*insipientia*) seems to be the same as foolishness (*stultitia*).

Still, someone seems to be foolish mainly when he is deficient in rendering judgments that have to do with the highest cause. For if someone is deficient in a judgment concerning some ordinary matter, then he is not called ‘foolish’ because of this.

**Reply to objection 2:** Just as, in the way explained above (q. 45, a. 1), there is a bad wisdom,

which is called ‘the wisdom of the world’ because it takes some earthly good as the highest cause and ultimate end, so, too, there is likewise a ‘good foolishness’, opposed to this bad wisdom, through which one disdains earthly things. And it is this sort of foolishness that the Apostle is talking about.

**Reply to objection 3:** As is clear from the Apostle in 1 Corinthians 3:19, the wisdom of the world is a ‘wisdom’ that deceives one and makes him a fool in the sight of God.

**Reply to objection 4:** Not being moved by injuries sometimes happens because a man has a taste only for heavenly things and not for earthly things. Hence, this pertains not to ‘worldly foolishness’ (*pertinet ad stultitiam mundi*), but to the wisdom of God, as Gregory points out in the same place.

On the other hand, sometimes this happens because a man is simply foolish or stupid with respect to everything, as in the case of the mindless, who do not recognize what an injury is. And this pertains to foolishness absolutely speaking.

## Article 2

### Is foolishness a sin?

It seems that foolishness is not a sin:

**Objection 1:** No sin exists in us by nature. But some individuals are naturally foolish. Therefore, foolishness is not a sin.

**Objection 2:** As Augustine explains, every sin is voluntary. But foolishness is not voluntary. Therefore, it is not a sin.

**Objection 3:** Every sin is opposed to a divine precept. But foolishness is not opposed to any precept. Therefore, foolishness is not a sin.

**But contrary to this:** Proverbs 1:32 says, “The prosperity of fools will destroy them.” But no one is destroyed except by sin. Therefore, foolishness is a sin.

**I respond:** As has been explained (a. 1), foolishness implies a certain dullness of sensibility in judging (*stupor sensus in iudicando*), and mainly with respect to the highest cause, which is the ultimate end and highest good. Now there are two ways in which a man can suffer from a dullness in judging:

In the first way, from a *natural indisposition*, as is clear in the case of mindless individuals. And this sort of foolishness is not a sin.

In the second way, insofar as a man immerses his sensibilities in earthly things, because of which his sensibility is rendered incapable of perceiving divine things—this according to 1 Corinthians 2:14, “The animalistic man does not perceive the things that belong to the spirit of God,” in the same way that sweet things are not appetizing to a man whose sense of taste has been infected by a bad humor. And this sort of foolishness is a sin.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** Even though no individual wills foolishness, he does nonetheless will things which result in his being foolish, viz., by drawing his sensibility away from spiritual things and immersing it in earthly things. The same thing happens in the case of other sins as well. For instance, the lustful individual wills the pleasure without which there is no sin—even though he does not will the sin absolutely speaking, since he wills to enjoy the pleasure without the sin.

**Reply to objection 3:** Foolishness is opposed to the precepts that are given concerning the contemplation of truth. We talked about these precepts above when we were discussing [the gifts of] knowledge and understanding (q. 16).

### Article 3

#### Is foolishness a child of lust?

It seems that foolishness is not a child of lust (*stultitia non est filia luxuriae*):

**Objection 1:** In *Moralia* 31 Gregory enumerates the children of lust, but foolishness is not contained among them. Therefore, foolishness does not proceed from lust.

**Objection 2:** In 1 Corinthians 3:19 the Apostle says, “The wisdom of this world is foolishness in the sight of God.” But as Gregory says in *Moralia* 10, “The wisdom of the world is to cover the heart with contrivances,” and this belongs to duplicity. Therefore, foolishness is more a child of duplicity than a child of lust.

**Objection 3:** Out of anger some individuals mainly turn to fury and madness, which belong to foolishness. Therefore, foolishness arises from anger rather than from lust.

**But contrary to this:** Proverbs 7:22 says, “Immediately he follows her,” viz., the prostitute, “not knowing that he is being drawn like a fool to bonds.”

**I respond:** As has been explained (a. 2), foolishness, insofar as it is a sin, comes from one’s spiritual sensibility being blunted, so that one is unable to judge spiritual things. But a man’s sensibility is especially plunged into earthly things by lust, which has to do with the greatest of pleasures, by which the soul is absorbed most of all. And so the foolishness that is a sin arises especially from lust.

**Reply to objection 1:** It belongs to foolishness that a man has an aversion to God and His gifts. This is why Gregory enumerates two children of lust that pertain to foolishness, viz., the hatred of God and despair about the future life (*desperatio futuri saeculi*), thus dividing foolishness into two parts, as it were.

**Reply to objection 2:** The passage from the Apostle should be understood to be talking about the essence of foolishness and not its cause (*non est intelligendum causaliter, sed essentialiter*), because the wisdom of the world is itself foolishness in the sight of God. Hence, it is unnecessary for anything pertaining to the wisdom of the world to be a cause of this foolishness.

**Reply to objection 3:** As was explained above (*ST* 1 2, q. 48, a. 2), anger by its sharpness changes the nature of the body most of all. Hence, it especially causes the sort of foolishness which arises from a corporeal impediment.

However, as has been explained, the sort of foolishness which arises from a spiritual impediment, viz., from the mind’s immersion in earthly things, comes especially from lust.

## QUESTION 47

### Prudence in its own right

After the theological virtues, what we first need to consider, concerning the cardinal virtues, is prudence: first, prudence in its own right (question 47); second, the parts of prudence (questions 48-51); third, the gift that corresponds to prudence (question 52); fourth, the opposed vices (questions 53-55); and, fifth, the precepts that pertain to prudence (question 56).

On the first topic there are sixteen questions: (1) Does prudence exist in the will or in reason? (2) If prudence exists in reason, does it exist just in the practical reason or also in the speculative reason? (3) Does prudence have cognition of singular things? (4) Is prudence a virtue? (5) Is prudence a specific virtue? (6) Does prudence set the end for the moral virtues? (7) Does prudence establish the mean in the moral virtues? (8) Is commanding (*praecipere*) the proper act of prudence? (9) Does care or solicitude (*sollicitudo*) belong to prudence? (9) Does prudence extend to the governance of a multitude? (11) Is the prudence that has to do with one's own proper good the same in species as the prudence that extends to the common good? (12) Does prudence exist in the subjects or only in their rulers? (13) Is prudence found in bad individuals? (14) Is prudence found in all good individuals? (15) Does prudence exist in us by nature? (16) Is prudence lost through forgetfulness?

### Article 1

#### Does prudence exist in a cognitive power or in an appetitive power?

It seems that prudence exists in an appetitive power and not in a cognitive power:

**Objection 1:** In *De Moribus Ecclesiae* Augustine says, "Prudence is love choosing wisely the things by which one is aided instead of the things by which one is hindered." But love exists in an appetitive power and not in a cognitive power. Therefore, prudence exists in an appetitive power.

**Objection 2:** As is clear from the definition just mentioned, it belongs to prudence to choose wisely. But as was established above (*ST* 1, q. 83, a. 3 and *ST* 1-2, q. 13, a. 1), choosing is an act of an appetitive power. Therefore, prudence exists in an appetitive power and not in a cognitive power.

**Objection 3:** In *Ethics* 6 the Philosopher says, "In the case of an art or craft, it is better (*eligibilior*) to make a mistake on purpose; but this is not so in the case of prudence, just as it is not so in the case of the virtues." But the moral virtues, which he is talking about here, exist in the appetitive part of the soul, whereas an art or craft exists in reason. Therefore, prudence exists in the appetitive part of the soul rather than in reason.

**But contrary to this:** In *83 Quaestiones* Augustine says, "Prudence is the cognition of what should be desired and what should be avoided."

**I respond:** As Isidore says in *Etymologia*, "The prudent individual is one who sees, as it were, from afar, since he is perspicacious and sees how things that are uncertain will turn out." But seeing belongs to a cognitive power and not to an appetitive power. Hence, it is clear that prudence belongs directly to a cognitive power.

However, prudence does not belong to a sentient power, since the things known through a sentient power are just those that are present (*praesto sunt*) and offered to the senses. By contrast, to have cognition of what is future on the basis of what is present and past—and this is what prudence has to do with—belongs properly to reason. For such cognition is accomplished through a certain sort of comparison.

Hence, it follows that prudence exists properly in reason.

**Reply to objection 1:** As was explained above (*ST* 1, q. 82, a. 4 and *ST* 1-2, q. 9, a. 1), the will moves all the powers to their own acts; and as was also explained above (*ST* 1, q. 20, a. 1 and *ST* 1-2, q. 25, aa. 1-3), the first act of an appetitive power is love. So, then, prudence is called love not, to be

sure, by its essence (*non quidem essentialiter*), but rather insofar as love moves one to an act of prudence. This is why Augustine adds afterwards, “Prudence is love distinguishing correctly those things by which one is aided in moving toward God from those things by which one is hindered”—where love is said to make distinctions insofar as it moves reason to make distinctions.

**Reply to objection 2:** The prudent individual considers things that are a long way off insofar as they are ordered toward helping or hindering what is to be done at the present moment. Hence, it is clear that the things considered by prudence are ordered toward other things as their end. But it is reason’s deliberating (*consilium in ratione*) and the appetite’s choosing (*electio in appetitu*) that have to do with the means to an end. And of these two things, it is the act of deliberating that more properly belongs to prudence; for in *Ethics* 6 the Philosopher says that the prudent individual “deliberates well” (*est bene consiliativus*). However, since an act of choosing presupposes an act of deliberating—for, as *Ethics* 3 says, an act of choosing is a desire for what has been deliberated about beforehand (*appetitus praeconsiliati*)—it follows that choosing can be attributed to prudence as its consequence, viz., insofar as prudence directs an act of choosing through its act of deliberating.

**Reply to objection 3:** The value of prudence (*laus prudentiae*) consists not just in thinking, but in the application of the thinking to an action (*in applicatione ad opus*), which is the end of practical reason. And so if a defect occurs in the application of the thinking to an action, then this is especially contrary to prudence, since just as the end is the most important thing in any matter, so, too, a defect with respect to the end is the worst sort of defect. Hence, in the same place the Philosopher adds that prudence “does not exist only with reason,” as an art or a craft does; for, as has been explained, prudence has an application to an action, and this is effected through the will.

## Article 2

### Does prudence have to do only with practical reason or with speculative reason as well?

It seems that prudence has to do not only with practical reason but with speculative reason as well:

**Objection 1:** Proverbs 10:23 says, “Wisdom is prudence for a man.” But wisdom consists mainly in contemplation. Therefore, so does prudence.

**Objection 2:** In *De Officiis* 1 Ambrose says, “Prudence is concerned with investigating the truth, and it infuses one with a desire for a fuller knowledge.” But this has to do with speculative reason. Therefore, prudence consists in speculative reason as well as in practical reason.

**Objection 3:** As is clear from *Ethics* 6, the Philosopher places art and prudence in the same part of the soul. But as is clear from the case of the liberal arts, art is not only practical but also speculative. Therefore, prudence is likewise both practical and speculative.

**But contrary to this:** In *Ethics* 6 the Philosopher says that prudence is right reason with respect to things that can be done. But this pertains only to practical reason. Therefore, prudence exists only in practical reason.

**I respond:** In *Ethics* 6 the Philosopher says, “It belongs to the prudent individual to be able to deliberate well.” And deliberation concerns things that we must do in relation to some end. But reason with respect to what is to be done for the sake of an end is practical reason. Hence, it is clear that prudence consists only in practical reason.

**Reply to objection 1:** As was explained above (q. 45, a. 1), wisdom considers the highest cause absolutely speaking. Hence, in any given genus, considering the highest good belongs to wisdom with respect to that genus.

Now in the genus of human acts the highest cause is the end that is common to the whole of human life. And this is the end that prudence looks to; for in *Ethics* 6 the Philosopher claims that just as one

who reasons well with respect to some particular end—say, victory—is said to be prudent with respect to a certain genus—in this case, matters of war—and not prudent absolutely speaking, so one who reasons well with respect to living a whole life well is said to be prudent absolutely speaking.

Hence, it is clear that prudence is wisdom in human affairs, but not wisdom absolutely speaking, since it does not have to do with the highest cause absolutely speaking. For it has to do with the human good, and man is not the best of the things that exist. And this is why the passage explicitly says that prudence is “wisdom for a man” —and not wisdom absolutely speaking.

**Reply to objection 2:** Ambrose, and Tully as well, take the name ‘prudence’ in a broader sense for any sort of human cognition, both speculative and practical—though one could concede that insofar as the act of speculative reason is voluntary, speculative reason falls under choice and deliberation as far as its *exercise* is concerned and, as a result, falls under the ordering that belongs to prudence. However, as regards its *species*, i.e., in relation to its object, which is necessary truth, speculative reason does not fall under either deliberation or prudence.

**Reply to objection 3:** Every application of right reason to something that can be *made* belongs to an art or craft.

By contrast, what belongs to prudence is nothing other than the application of right reason to those matters about which there is deliberation. And as *Ethics* 3 points out, these matters are such that there are no determinate ways of arriving at the end.

Therefore, since speculative reason *makes* certain things—e.g., syllogisms, propositions, and things of this sort—in which one proceeds along fixed and determinate paths, it follows that the character of an *art* can be preserved with respect to these things, but that the character of *prudence* cannot be preserved with respect to them. And so there are speculative arts, but there is no such thing as speculative prudence.

### Article 3

#### Does prudence have cognition of singular things?

It seems that prudence does not have cognition of singular things (*non sit cognoscitiva singularium*):

**Objection 1:** As has been explained (a. 1), prudence exists in reason. But as *Physics* 1 says, “Reason has to do with universals.” Therefore, prudence has cognition only of universals.

**Objection 2:** There are infinitely many singular things. But reason cannot comprehend infinitely many things. Therefore, prudence, which is right reason, does not have to do with singular things.

**Objection 3:** The cognition of singular things comes through the senses. But prudence does not exist in the senses, since many individuals who have very sharp exterior senses are not prudent. Therefore, prudence does not have to do with singular things.

**But contrary to this:** In *Ethics* 6 the Philosopher says, “Prudence has to do not only with universals; instead, it must have cognition of singular things as well.”

**I respond:** As was explained above (a. 1), what belongs to prudence is not only reason’s consideration, but also its application to an act, which is the end of practical reason. But no one can appropriately apply one thing to another unless he has cognition of both of them, viz., that which is to be applied and that to which it is to be applied. But actions (*operationes*) have to do with singular things. And so the prudent individual must have cognition of the universal principles of reason and must also have cognition of the singulars that his actions have to do with.

**Reply to objection 1:** To be sure, reason has to do first and principally with universals, and yet it is able to apply universal concepts to particulars (thus, the conclusions of syllogisms are not only

universal but also particular). For as *De Anima* 3 says, the intellect extends to matter by a sort of turning back (*per quamdam reflexionem*).

**Reply to objection 2:** Human reason cannot comprehend infinitely many singulars, and this is why, as Wisdom 9:14 puts it, “our counsels are uncertain.” Still, through experience the infinitely many singulars are reduced to a finite number which occur in a great number of cases (*ut in pluribus accidunt*) and the cognition of which suffices for human prudence.

**Reply to objection 3:** As the Philosopher says in *Ethics* 6, prudence is seated not in the exterior senses by which we have cognition of proper sensibles, but rather in the interior sense, which is perfected by memory and experience in order to make prompt judgments about experienced particulars—not, however, in the sense that prudence has the interior sense as its principal subject. Instead, it exists principally in reason and reaches the interior sense through a sort of application.

#### Article 4

##### Is prudence a virtue?

It seems that prudence is not a virtue:

**Objection 1:** In *De Libero Arbitrio* 1 Augustine says that prudence is “knowledge (*scientia*) of what should be desired and what should be avoided.” But as is clear from the *Categories*, knowledge is divided off as a contrary from virtue (*contra virtutem dividitur*). Therefore, prudence is not a virtue.

**Objection 2:** A virtue does not belong [accidentally] to a virtue (*virtutis non est virtus*). But as the Philosopher says in *Ethics* 6, virtue belongs [accidentally] to art (*artis est virtus*). Therefore, an art is not a virtue. But there is prudence in an art; for 2 Paralipomenon 2:14 says of Hiram that he knew “how to do all kinds of engraved work and to devise prudently whatever is necessary for the work.” Therefore, prudence is not a virtue.

**Objection 3:** No virtue can be immoderate. But prudence is immoderate; otherwise, it would be useless for Proverbs 23:4 to say, “Set a limit to your prudence.” Therefore, prudence is not a virtue.

**But contrary to this:** In *Moralia* 2 Gregory claims that prudence, temperance, fortitude, and justice are four virtues.

**I respond:** As was explained above when we were talking about the virtues in general (*ST* 1-2, q. 55, a. 3 and q. 56, a. 1), a virtue is something that makes the one having it good and renders his act good. But there are two ways in which ‘good’ is said, viz. (a) *materially*, for that which is good, and (b) *formally*, for the character of goodness (*secundum rationem boni*).

Now the good is, as such, the object of an appetitive virtue. And so if there are habits that effect the correct thinking on the part of reason without having a relation to rectitude of appetite, then they have less of the character of a virtue because they order one toward the good *materially*—i.e., to what is good, but not insofar as it is good. By contrast, habits that have a relation to rectitude of appetite have more of the character of a virtue because they look to the good not only *materially*, but also *formally*, i.e., to that which is good under the character of the good.

Now as was explained above (a. 1 and a. 3), what belongs to prudence is the application of right reason to an act, and this does not happen without an upright appetite. And so prudence not only has the character of virtue had by the other intellectual virtues, but it also has the character of virtue had by the moral virtues, among which it is likewise numbered.

**Reply to objection 1:** Augustine was here taking ‘knowledge’ (*scientia*) in a broad sense for any instance of right reason.

**Reply to objection 2:** The Philosopher claims that virtue “belongs [accidentally]” to art (*artis esse virtutem*) because art does not imply rectitude of appetite. And so in order for a man to use an art or

craft in an upright way, he must have virtue, which effects rectitude of appetite.

However, prudence does not have a place among those things that belong to an art, both because (a) an art or craft is ordered toward some particular end, and also because (b) an art or craft has determinate means through which it reaches its end.

Nonetheless, one is said to operate ‘prudently’ in what pertains to an art or craft through a certain sort of similitude. For in some of the arts, because of the lack of fixity in those things by which it arrives at its end, deliberation is necessary, e.g., in the medical art and in the navigational art, as *Ethics* 3 points out.

**Reply to objection 3:** This passage is to be understood not in such a way that prudence itself needs to be moderated, but rather in the sense that moderation is to be imposed on other things in accord with prudence.

## Article 5

### Is prudence a specific virtue?

It seems that prudence is not a specific virtue:

**Objection 1:** No specific virtue is posited in the general definition of a virtue. But prudence is posited in the general definition of a virtue, given that in *Ethics* 2 virtue is defined as “an elective habit that exists in the mean determined by reason for our own case (*quoad nos*), in the way that a wise man will determine it.” But as *Ethics* 6 points out, reason is understood to be right when it accords with prudence. Therefore, prudence is not a specific virtue.

**Objection 2:** In *Ethics* 6 the Philosopher says, “Moral virtue makes one act in the right way with respect to the end, whereas prudence does so with respect to the means to the end.” But in every virtue there are some things to be done for the sake of the end. Therefore, prudence exists in every virtue whatsoever. Therefore, it is not a specific virtue.

**Objection 3:** A specific virtue has a specific object. But prudence does not have a specific object. For as *Ethics* 6 says, prudence is right reason with respect to things that can be done, but the things that can be done are all the acts of the virtues. Therefore, prudence is not a specific virtue.

**But contrary to this:** Prudence is distinguished from the other virtues and counted among them. For Wisdom 8:7 says, “She teaches temperance (*sobrietas*) and prudence, justice and virtue.”

**I respond:** Since, as is clear from what was said above (*ST* 1-2, q. 18, a. 2 and q. 54, a. 2), acts and habits take their species from their objects, a habit to which there corresponds a specific object, distinct from other objects, is a specific habit, and if it is a good habit, then it is a specific virtue.

Now as is clear from what was said above (*ST* 1-2, q. 54, a. 2), an object is called specific not as a result of considering it materially (*non secundum materialem considerationem ipsius*), but rather according to its *formal* character. For one and the same entity falls under the acts of diverse habits—and even under the acts of diverse powers—in accord with diverse characters (*secundum rationes diversas*). Moreover, a greater diversity of object is required for a diversity of power than for a diversity of habit, since, as was explained above (*ST* 1-2, q. 54, a. 1), several habits may be found in a single power. Therefore, the sort of diversity in an object’s character that diversifies a power is much greater than the sort of diversity in an object’s character that diversifies a habit.

So, then, one should reply that since, as has been explained (a. 1), prudence exists in reason, it is diversified from the other intellectual virtues by a material diversity in their objects. For wisdom, scientific knowledge, and understanding have to do with what is necessary, whereas art and prudence have to do with what is contingent. Again, art has to do with things that are *makeable* and that are, more specifically, constituted in an exterior matter, e.g., a house, a knife, and other such things, whereas

prudence has to do with things that are *doable* and that, more specifically, as was established above (ST 1-2, q. 57, a. 4), exist within the one who operates. On the other hand, prudence is distinguished from the moral virtues by the distinctive formal character of the powers, viz., the *intellective* power, in which prudence exists, and the *appetitive* power, in which moral virtue exists.

Hence, it is clear that prudence is a specific virtue distinct from all the other virtues.

**Reply to objection 1:** This definition is given not for virtue in general, but for moral virtue; and within the definition of moral virtue it is appropriate to posit an intellectual virtue, viz., prudence, which shares its subject matter with moral virtue. For just as the subject of moral virtue is something that participates in reason, so moral virtue has the character of virtue insofar as it participates in an intellectual virtue.

**Reply to objection 2:** This objection establishes that prudence assists all the virtues and operates within them. But this is not sufficient to show that prudence is not a specific virtue. For nothing prevents there being in a given genus a species that in some way operates within all the species of that same genus—in the way that the sun in some way has an influence on all corporeal entities.

**Reply to objection 3:** Things that are doable are the subject matter of prudence insofar as they are an object of reason, i.e., insofar as they fall under the character *true*, whereas they are the subject matter of the moral virtues insofar as they are the object of an appetitive power, i.e., insofar as they fall under the character *good*.

## Article 6

### Does prudence set the end for the moral virtues?

It seems that prudence sets the end for the moral virtues:

**Objection 1:** Since prudence exists in reason, whereas a moral virtue exists in an appetitive power, it seems that prudence is related to moral virtue in the way that reason is related to an appetitive power. But reason sets the end for an appetitive power. Therefore, reason sets the end for the moral virtues.

**Objection 2:** A man exceeds non-rational entities by his reason, but he shares other things in common with them. So, then, the other parts of a man are related to reason in the way that non-rational creatures are related to man. But as *Politics* 1 explains, man is the end of non-rational creatures. Therefore, the other parts of a man are ordered toward reason as their end. However, as has been explained (a. 2), prudence is right reason with respect to what is doable. Therefore, all doable things are ordered toward prudence as their end. Therefore, prudence sets the end for all the moral virtues.

**Objection 3:** It is proper to a virtue, art, or power to which an end belongs that it should command the other virtues or arts that pertain to the means to that end. But prudence orders (*disponit*) the other moral virtues and commands (*praecipit*) them. Therefore, it sets their end.

**But contrary to this:** In *Ethics* 6 the Philosopher says, “Moral virtue effects an upright intending of the end, whereas prudence makes the means to this end upright.” Therefore, it belongs to prudence not to set the end for the moral virtues, but only to determine the means to the end (*solum disponere de his quae sunt ad finem*).

**I respond:** The end of the moral virtues is the human good. But as is clear from Dionysius in *De Divinis Nominibus*, chap. 4, the good of the human soul is to be in accord with reason. Hence, the ends of the moral virtues preexist in reason.

Now just as, in the case of speculative reason, there are (a) certain things which are naturally known and with respect to which there is *understanding* (*intellectus*) and (b) certain things which are known through them, viz., conclusions, and with respect to which there is scientific knowledge (*scientia*), so, too, in the case of practical reason, there preexist (a) certain things which are naturally known

principles and among which are the ends of the moral virtues—for, as was established above (*ST* 1-2, q. 57, a. 4), among doable things the end behaves in the way that a principle does among speculative things—and (b) certain things that exist in practical reason as conclusions—and among them are the means to the end—which we arrive at from the ends themselves. And prudence has to do with the latter, applying universal principles to particular conclusions about things to be done.

And so it belongs to prudence not to set the end for the moral virtues but only to determine the means to the end.

**Reply to objection 1:** As was established in the First Part (*ST* 1, q. 79, a. 12), what sets the end for the moral virtues is *natural reason*, which is called *synderesis*—and not *prudence*, for the reason just explained.

**Reply to objection 2:** This likewise makes clear the reply to the second objection.

**Reply to objection 3:** The end belongs to the moral virtues not in the sense that they themselves set the end, but in the sense that they tend toward an end set by natural reason. They are assisted in this by prudence, which prepares the way for them by determining the means to the end. Hence, it follows that prudence is more noble than the moral virtues and moves them. But *synderesis* moves prudence in the same way that the understanding of principles (*intellectus principiorum*) moves scientific knowledge (*scientia*).

## Article 7

### Does it belong to prudence to find the mean in the moral virtues?

It seems that it does not belong to prudence to find the mean in the moral virtues:

**Objection 1:** It is the end of the moral virtues to attain the mean. But as has been shown (a. 6), prudence does not set the end for the moral virtues. Therefore, it does not find the mean in them.

**Objection 2:** What exists in its own right (*est per se*) does not seem to have a cause; instead, its very being (*esse*) is a cause of itself, since each thing is said to exist through its cause. But as is clear from what has been said (a. 5), to exist in the mean belongs to a moral virtue in its own right as something posited in its definition. Therefore, it is not the case that prudence causes the mean in the moral virtues.

**Objection 3:** Prudence operates in the manner of *reason*. But a moral virtue tends toward the mean in the manner of a *nature*; for as Tully says in *Rhetoric* 2, “A virtue is a habit consonant with reason in the manner of a nature.” Therefore, prudence does not set the mean for the moral virtues.

**But contrary to this:** In the definition of moral virtue posited above it says that a moral virtue “exists in the mean determined by reason ... in the way that a wise man will determine it.”

**I respond:** The very state of being conformed to right reason is the end proper to every moral virtue. For instance, temperance intends this, lest a man deviate from reason because of excessive desires; and, similarly, fortitude intends it, lest a man deviate from right reason because of fear or audacity. And this is the end set for a man by natural reason, since natural reason dictates to each individual that he operate in accord with reason.

But how, and through what means, a man in his acting attains to the mean of reason belongs to the determination of prudence (*pertinet ad dispositionem prudentiae*). For even though attaining the mean is the end of a moral virtue, it is nonetheless the case that the mean is found through the correct determination of the means to that end.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** Just as a natural agent brings it about that the form exists in the matter without bringing it about that what exists *per se* in the matter agrees with that form, so, too, prudence sets

the mean for passions and actions without bringing it about that seeking the mean belongs to the virtue.

**Reply to objection 3:** It is in the manner of a nature that moral virtue tends toward arriving at the mean. But since the mean is not the same in everyone (*non eodem modo invenitur in omnibus*), the inclination of the nature, which always operates in the same way, is not sufficient for this; rather, the character of prudence is required.

## Article 8

### Is commanding the principal act of prudence?

It seems that commanding (*praecipere*) is not the principal act of prudence:

**Objection 1:** Commanding has to do with good things that have to be done. But in *De Trinitate* 14 Augustine claims that the act of prudence “guards against snares” (*praecavere insidias*). Therefore, commanding is not the principal act of prudence.

**Objection 2:** In *Ethics* 6 the Philosopher says, “It seems to belong to the prudent man to deliberate well.” But as is clear from what was said above (*ST* 1-2, q. 57, a. 6), deliberating and commanding seem to be different acts. Therefore, commanding is not the principal act of prudence.

**Objection 3:** Commanding or giving an order (*praecipere vel imperare*) seems to belong to the will, which moves the other powers of the soul and the object of which is the end. But prudence exists in reason and not in the will. Therefore, commanding is not an act that belongs to prudence.

**But contrary to this:** In *Ethics* 6 the Philosopher says, “Prudence gives precepts” (*prudentia praeceptiva est*).

**I respond:** As has been explained (a. 2), prudence is right reason with respect to what is doable. Hence, the main act of prudence has to be the main act of reason with respect to what is doable.

Now there are three relevant acts of reason. The first is to *deliberate* or *take counsel* (*consiliari*), and this pertains to discovery, since, as was established above (*ST* 1-2, q. 14, a. 1), to deliberate is to seek out. The second act is to *pass judgment about what has been discovered* (*iudicare de inventis*), and this is where speculative reason stops (*hic sistit speculativa ratio*). However, practical reason, which is ordered toward action, proceeds further, and its third act is to *command*; this act consists in the application of what has been deliberated and judged about to acting. And since this act is closer to the end of practical reason, it follows that it is the principal act of practical reason and, consequently, of prudence.

An indication of this is that the perfection of an art consists in judging and not in commanding. This is why an artist is reputed to be a better artist, in the sense of having correct judgment, if he goes wrong intentionally in his art than if he goes wrong unintentionally, where the latter seems to stem from a defect in his judgment. By contrast, it is just the opposite with prudence, as *Ethics* 6 points out. For someone who sins intentionally—failing, as it were, in the main act of prudence, which is to command—is more imprudent than someone who goes wrong unintentionally.

**Reply to objection 1:** The act of commanding extends both to goods that ought to be pursued and to evils that ought to be avoided. Still, Augustine attributes guarding against snares to prudence not because this is its principal act, but rather because this act of prudence does not remain in heaven.

**Reply to objection 2:** Goodness of deliberation is required in order that what is correctly discovered might be applied to action. And this is why commanding belongs to prudence, which involves deliberating well.

**Reply to objection 3:** To effect movement belongs to the will absolutely speaking. But commanding implies movement along with a certain ordering. And so, as was explained above (*ST* 1-2, q. 17, a. 1), it is an act of reason.

## Article 9

### Does solicitude belong to prudence?

It seems that care or solicitude (*sollicitudo*) does not belong to prudence:

**Objection 1:** Solicitude implies a certain sort of unrest; for in *Etymologia* Isidore says, “The one who is called solicitous is restless.” But movement belongs especially to an appetitive power. Therefore, so does solicitude. But as was established above (a. 1), prudence exists in reason and not in an appetitive power. Therefore, solicitude does not belong to prudence.

**Objection 2:** Certitude in the truth seems to be opposed to solicitude; hence, in 1 Kings 9:20 Samuel said to Saul, “Do not be solicitous about the asses that you lost three days ago, since they have been found.” But certitude in the truth belongs to prudence, since it is an intellectual virtue. Therefore, solicitude is opposed to prudence instead of belonging to it.

**Objection 3:** In *Ethics* 4 the Philosopher says that the magnanimous individual is “slow and leisurely” (*pigrum et otiosum*). But solicitude is opposed to slowness. Therefore, since prudence is not opposed to magnanimity—given that, as the *Categories* explain, one good is not the contrary of another—it seems that solicitude does not belong to prudence.

**But contrary to this:** 1 Peter 4:7 says, “Be prudent ... and be watchful in your prayers.” But watchfulness is the same as solicitude. Therefore, solicitude belongs to prudence.

**I respond:** As Isidore says in *Etymologia*, “An individual is called solicitous (*sollicitus*) in the sense that he is clever and alert (*solers citus*),” i.e., insofar as, with a certain alertness, he is quick to pursue what needs to be done. But this belongs to prudence, the principal act of which is to give commands about what needs to be done that are based on what has been deliberated about and judged beforehand. Hence, in *Ethics* 6 the Philosopher says, “One must deliberate slowly, but one must act quickly on what has been deliberated.” And this is why care or solicitude belongs properly to prudence. It is because of this that in *De Moribus Ecclesiae* Augustine says, “The vigilance and watchfulness of prudence are diligent, lest, little by little, we be misled unawares by bad advice.”

**Reply to objection 1:** Movement belongs to an appetitive power as the principle that effects the movement, but in accord with the direction and command of reason, in which the character of solicitude resides.

**Reply to objection 2:** According to the Philosopher in *Ethics* 1, “Certitude is not to be sought in similar ways in all things, but is to be sought in each subject matter according to its proper mode.” But since the subject matter of prudence consists of singular contingent things with respect to which there are human operations, the certitude that belongs to prudence cannot be such that all solicitude is removed.

**Reply to objection 3:** The magnanimous individual is said to be “slow and leisurely” not because he is not solicitous about anything, but rather because he is not unnecessarily solicitous about many things; instead, he puts his trust in what he should put his trust in and is not unnecessarily solicitous about those things. For unnecessary fear and timidity make for unnecessary worry, given that, as was explained above when we were talking about fear (*ST* 1-2, q. 44, a. 2), fear makes individuals deliberate.

## Article 10

### Does prudence extend to the rule of a multitude?

It seems that prudence extends only to the rule of oneself and not to the rule of a multitude:

**Objection 1:** In *Ethics* 5 the Philosopher says that the virtue related to the common good is justice. But prudence differs from justice. Therefore, prudence is not directed toward the common good.

**Objection 2:** A prudent individual seems to be one who seeks the good, and acts, for himself. But it is often the case that those who seek common goods neglect their own goods. Therefore, they are not prudent.

**Objection 3:** Prudence is divided off at the same level from temperance and fortitude (*dividitur contra temperantiam et fortitudinem*). But temperance and fortitude seem to be predicated only in relation to one's own proper good. Therefore, the same holds for prudence as well.

**But contrary to this:** In Matthew 24:45 our Lord says, "Who, do you think, is a faithful and prudent servant whom the lord has set over his family?"

**I respond:** As the Philosopher explains in *Ethics* 6, some have claimed that prudence extends only to one's own proper good and not to the common good—and this because they were thinking that a man need not seek any good except his own proper good.

But this way of thinking is incompatible with *charity*, which, as 1 Corinthians 13:5 says, "does not seek what is her own." Hence, in 1 Corinthians 10:33 the Apostle likewise says of himself, "... not seeking what is advantageous to me, but rather what is advantageous to the many, that they might be saved."

Again, this way of thinking is incompatible with *right reason*, which judges that the common good is better than the good of an individual.

Therefore, since it belongs to prudence to deliberate, judge, and command in an upright manner concerning those things that lead to the appropriate end, it is clear that prudence has to do not only with the private good of an individual man (*bonum privatum unius hominis*), but also with the common good of the multitude (*bonum commune multitudinis*).

**Reply to objection 1:** The Philosopher is speaking here about moral virtue. Now just as all the moral virtues as related to the common good are called 'legal justice', so, too, prudence as related to the common good is called 'political prudence', with the result that political prudence is related to legal justice in the same way that prudence simply speaking is related to the moral virtues.

**Reply to objection 2:** One who seeks the common good of the multitude also seeks his own good as a consequence—and this for two reasons:

First, because his own good cannot exist without the common good either of the family or of the city or kingdom. This is why Valerius Maximus says of the ancient Romans, "They preferred to be paupers in a rich empire than rich men in a poor empire."

Second, because, given that a man is a part of a household and of a city, he must think about what his own good is on the basis of his being prudent with respect to the good of the multitude. For the good disposition of a part has to do with its relation to the whole, since, as Augustine says in *Confessiones* 3, "Any part that is not congruent with its whole is unseemly."

**Reply to objection 3:** Even temperance and fortitude can be referred back to the common good, and this is why, as *Ethics* 5 points out, precepts of law are given for their acts. Yet this applies even more to prudence and justice, since they belong to the rational part of the soul, which what is common pertains to in the same way that what is singular pertains to the sentient part of the soul.

## Article 11

### Is the prudence that has to do with one's proper good the same in species as the prudence that extends to the common good?

It seems that the prudence that has to do with one's proper good is the same in species as the prudence that extends to the common good:

**Objection 1:** In *Ethics* 6 the Philosopher says, "Prudence and political prudence are the same

habit, but their *esse* is not the same.”

**Objection 2:** In *Politics* 3 the Philosopher says, “The virtue of the good man is the same as the virtue of the good ruler.” But political prudence exists especially in the ruler, in whom it is architectural, so to speak. Therefore, since prudence is the virtue of the good man, it seems that prudence and political prudence are the same habit.

**Objection 3:** Things that are such that one is ordered toward the other do not make for a diversity in the species or substance of habits (*non diversificant speciem aut substantiam habitus*). But one’s own good, which pertains to prudence simply speaking, is ordered toward the common good, which pertains to political prudence. Therefore, prudence and political prudence differ in neither the species nor the substance of the habit.

**But contrary to this:** *Political science*, which is ordered toward the common good of a city, and *economic science*, which has to do with what belongs to the common good of a household or family, and *monastic science*, which has to do with the good of an individual person, are diverse sciences. Therefore, by parity of reasoning, there are likewise diverse species of *prudence* corresponding to this diversity of subject matters.

**I respond:** As was explained above (*ST* 1-2, q. 54, a. 2), the species of habits are diversified by the diversity of their objects, which has to do with their formal character. And as was explained above (*ST* 1-2, q. 1, intro.), the formal character of everything that is ordered toward an end has to do with the end. And so species of habits have to be diversified by their relation to diverse ends.

Now (a) the proper good of a single individual (*bonum proprium unius*), (b) the good of the family (*bonum familiae*), and (c) the good of the city and of the kingdom (*bonum civitatis et regni*) are diverse ends. Hence, it must be the case that prudence differs in species according to the differences among these ends—so that, namely, there is (a) *prudence simply speaking*, (b) *economic prudence*, which is ordered toward the common good of a household or family, and (c) *political prudence*, which is ordered toward the common good of a city or kingdom.

**Reply to objection 1:** The Philosopher meant to claim not that political prudence is the same habit in substance as just any sort of prudence, but rather that it is the same as the prudence that is ordered toward the common good. This sort of prudence is said to be in accord with the general notion of prudence, viz., insofar as it is a certain sort of right reason with respect to what is doable, but it is called ‘political prudence’ insofar as it is ordered toward the common good.

**Reply to objection 2:** As the Philosopher says in the same place, “It belongs to the good man to be able to rule well and to be able to be ruled well.” And this is why even the virtue of the ruler is included in the virtue of the good man. But the virtue of the ruler and the virtue of the subject differ in species—in the same way, as is explained in this same place, that the virtue of a male and the virtue of a female differ in species.

**Reply to objection 3:** Even diverse ends which are such that one is ordered toward the other make for diverse species of habit, in the way that military equestrianism and civilian equestrianism differ in species, even though the end of the one is ordered toward the end of the other. Similarly, even though the good of an individual is ordered toward the good of the multitude, this does not prevent it from being the case that such diversity makes the habits differ in species. But from this it follows that the habit that is ordered toward the last end is more central and rules the other habits.

## Article 12

### Does prudence exist in the subjects or only in the rulers?

It seems that prudence exists only in the rulers and not in their subjects:

**Objection 1:** In *Politics* 3 the Philosopher says, “Prudence alone is the proper virtue of a ruler, whereas the other virtues are common to the subjects and the ruler. Moreover, it is not prudence that is the virtue of the subject, but rather true opinion.”

**Objection 2:** *Politics* 1 says, “A servant does not have anything at all to deliberate about.” But as *Ethics* 2 says, “Prudence makes individuals deliberate well.” Therefore, prudence does not belong to servants or to subjects.

**Objection 3:** As was explained above (a. 8), prudence gives precepts. But commanding belongs only to rulers and not to servants or to subjects. Therefore, prudence exists only in rulers and not in subjects.

**But contrary to this:** In *Ethics* 6 the Philosopher says that there are two species of political prudence: (a) one of which “makes laws” (*est legum positiva*), and this belongs to the rulers; and (b) the other of which retains the general name ‘political’ and has to do with singular matters. But to deal with singular matters of this sort belongs also to the subjects. Therefore, prudence belongs not only to the rulers but also to their subjects.

**I respond:** Prudence exists in reason, and it belongs to reason to rule and to govern well. And so to the extent that each individual participates in ruling and governing, it is appropriate for him to have reason and prudence.

Now it is clear that insofar as a subject is a subject, or a servant a servant, it does not belong to him to rule and to govern; instead, it belongs to him to be ruled and to be governed. And so prudence is not a virtue of a servant insofar as he is a servant, or of a subject insofar as he is a subject. However, since each man, insofar as he is rational, has some participation in ruling according to the judgment of his reason, it is appropriate for him to have prudence. Hence, as *Ethics* 6 explains, it is clear that prudence exists in the ruler in the manner of the architectural art, whereas in the subjects prudence exists in the manner of an art or craft that belongs to one who works with his hands.

**Reply to objection 1:** In this passage the Philosopher should be interpreted as speaking *per se*, since the virtue of prudence is not a virtue of the subject as a subject.

**Reply to objection 2:** A servant is not deliberative insofar as he is a servant, for in that role he is an instrument of his master. And yet he is deliberative insofar as he is a rational animal.

**Reply to objection 3:** Through prudence a man not only commands others but commands himself as well, viz., insofar as reason is said to command the lower powers.

### Article 13

#### Can prudence exist in sinners?

It seems that prudence can exist in sinners:

**Objection 1:** In Luke 16:8 our Lord says, “The children of this world are more prudent than the children of light in their own generation.” But the children of this world are sinners. Therefore, prudence can exist in sinners.

**Objection 2:** Faith is a more noble virtue than prudence. But faith can exist in sinners. Therefore, prudence can, too.

**Objection 3:** As *Ethics* 6 says, “We say that the work of the prudent man is especially to deliberate well.” But many sinners are good at deliberating (*sunt boni consilii*). Therefore, many sinners have prudence.

**But contrary to this:** In *Ethics* 6 the Philosopher says, “It is impossible to be prudent if one is not good.” Therefore, no sinner is prudent.

**I respond:** ‘Prudence’ is said in three ways:

For there is a certain sort of prudence which is *false prudence* and which is called ‘prudence’ by appeal to a similitude. For given that a prudent individual is good at determining what should be done in pursuit of some good end, someone who, in pursuit of a bad end, arranges things in a way congruent with that end has false prudence, insofar as what he takes as his end is not truly good but good by a similitude, in the way that someone is called a ‘good thief’. For instance, a thief who discovers methods that are appropriate for stealing can be called ‘prudent’ by appeal to a similitude. And this is the sort of prudence about which the Apostle says in Romans 8:6, “The prudence of the flesh is death”—viz., because it sets its ultimate end in the pleasures of the flesh.

The second sort of prudence is *genuine prudence (prudentia vera)*, since it discovers methods accommodated to a genuinely good end, but it is *imperfect*—and this in one of two ways:

(a) in one way, because the good that it accepts as an end is not the common end of human life, but instead the good of some specific sort of activity; for instance, when someone discovers methods appropriate for doing business or for sailing, he is called a prudent businessman or a prudent sailor.

(b) in a second way, because the prudence falls short in the principal act of prudence—as, for instance, when someone deliberates well and judges correctly even concerning things that pertain to his whole life, but does not command efficaciously with respect to them.

The third sort of prudence is *prudence that is both genuine and perfect*, and it deliberates, judges, and commands correctly with respect to the good end of the whole of life. And this sort of prudence is the only one that is called *prudence simply speaking*, and it cannot exist in sinners. On the other hand, the first sort of prudence exists only in sinners, whereas imperfect prudence is common to both good and bad individuals, especially prudence which is imperfect because it has a particular, [and not common], end. For the prudence which is imperfect because of a defect in its principal act likewise does not exist except in bad men.

**Reply to objection 1:** This passage from our Lord is interpreted as being about the first sort of prudence. Hence, He does not say just that they are prudent, but that they are prudent “in their own generation.”

**Reply to objection 2:** In its own essence (*in sui ratione*) faith does not imply any conformity to an appetite for upright actions; instead, the essence of faith consists in cognition alone. By contrast, prudence implies an ordering toward upright appetite. There are two reasons for this:

First, the principles of prudence are the ends of doable things, and one has a correct estimation of these ends through the habits of the moral virtues, which rectify one’s appetite (*quae faciunt appetitum rectum*). Hence, as was shown above (*ST* 1-2, q. 58, a. 5), prudence cannot exist without the moral virtues.

Second, prudence commands upright acts, and this does not occur unless there is an upright appetite. Hence, even though faith is more noble than prudence because of its object, prudence by its own character is nonetheless more opposed to sin, which stems from a perverted appetite (*ex perversitate appetitus*).

**Reply to objection 3:** Sinners can, to be sure, deliberate well with respect to a bad end or with respect to some particular good, but they do not deliberate well or perfectly with respect to the good end of a whole life. For deliberation does not guarantee the effect (*consilium ad effectum non perducunt*). Hence, prudence, which is related only to the good, does not exist in sinners; instead, as the Philosopher says in *Ethics* 6, what exists in such individuals is either *deinotika*, i.e. natural diligence, which is related to both the good and the bad, or *cunning (astutia)*, which is related only to what is bad and which we called ‘false prudence’ or ‘the prudence of the flesh’ above.

## Article 14

### Does prudence exist in all who have grace?

It seems that prudence does not exist in all who have grace:

**Objection 1:** A certain sort of diligence (*industria*) is required for prudence, and by means of this diligence individuals know how to provide well for what should be done. But many who have grace lack this sort of diligence. Therefore, not everyone who has grace has prudence.

**Objection 2:** As has been explained (aa. 8 and 13), a prudent individual deliberates well. But many who have grace do not deliberate well, but instead have to be guided by someone else's deliberation (*necesse habent regi consilio alieno*). Therefore, not everyone who has grace has prudence.

**Objection 3:** In *Topics* 3 the Philosopher says, "It is not clear that young people are prudent." Therefore, prudence is not found in everyone who has grace.

**But contrary to this:** No one has grace unless he is virtuous. But no one can be virtuous unless he has prudence. For in *Moralia* 2 Gregory says, "If the other virtues do not do prudently what they desire, then they cannot in any way be virtues." Therefore, everyone who has grace has prudence.

**I respond:** As was shown above (*ST* 1-2, q. 65), the virtues must be connected, so that anyone who has one virtue has them all. But if someone has grace, then he has charity. Hence, he must have all the other virtues. And so, since, as has been shown (a. 4), prudence is a virtue, he must have prudence.

**Reply to objection 1:** There are two kinds of diligence (*industria*):

One of them suffices for what is necessary for salvation. And this sort of diligence is given to all who have grace and whom "His anointing teaches all things," as 1 John 2:27 puts it.

The other kind of diligence is more full, and through it one is able to provide for himself and others not only in those matters that are necessary for salvation, but also in everything that pertains to human life. And this sort of diligence is not found in everyone who has grace.

**Reply to objection 2:** If those who need to be guided by someone else's deliberation have grace, then they at least know by their own counsel that they require the counsel of others and that they should distinguish good advice from bad advice (*et discernant consilia bona a malis*).

**Reply to objection 3:** Acquired prudence is caused by the exercise of the acts, and so, as *Ethics* 2 explains, "it needs experience and time in order to be generated." Hence, it cannot be found in young people, either as a habit or in its act.

By contrast, the prudence given with grace (*prudencia gratuita*) is caused by God's infusing it, and so in baptized children who do not yet have the use of reason prudence exists as a habit but not in its act; it is like this also in those who are mindless (*in amentibus*).

Now in those who already have the use of reason, prudence exists also in its act with respect to what is necessary for salvation, but through its exercise it merits an increase up to the point of its being perfected, just as in the case of the other virtues. Hence, in Hebrews 5:14 the Apostle says, "Solid food is for the perfect, who by rote have their senses exercised for distinguishing between what is good and what is bad."

## Article 15

### Does prudence exist in us by nature?

It seems that prudence exists in us by nature:

**Objection 1:** In *Ethics* 6 the Philosopher says that what belongs to prudence "seems to be natural," e.g., *synesis*, *gnome*, and things of this sort (cf. q. 51, aa. 3 and 4, and *ST* 1-2, q. 57, a. 6), whereas this is

not the case with what belongs to speculative reason. But the character of the origin of things that belong to a single genus is the same. Therefore, prudence likewise exists in us by nature.

**Objection 2:** What varies by age stems from nature (*aetatum variatio est secundum naturam*). But prudence follows upon age—this according to Job 12:12 (“In the elderly is wisdom, and in length of days prudence”). Therefore, prudence is natural.

**Objection 3:** Prudence belongs to human nature more than to the nature of non-rational animals. But as is clear from the Philosopher in *De Historia Animalium* 8, non-rational animals have certain kinds of natural prudence. Therefore, prudence is natural.

**But contrary to this:** In *Ethics* 2 the Philosopher says, “For the most part, intellectual virtue has its generation and increase from teaching, and so it needs experience and time.” But as was established above (a. 1 and *ST* 1-2, q. 57, a. 5), prudence is an intellectual virtue. Therefore, prudence exists in us by teaching and experience and not by nature.

**I respond:** As is clear from what has gone before (a. 3), prudence includes the cognition both of universals and of the singular acts to which prudence applies the universal principles.

Therefore, as regards the *universal cognition*, the character of prudence is the same as that of speculative scientific knowledge. For as is clear from what was said above (a. 6), in both cases the first universal principles are naturally known—though the common principles of prudence are more connatural to a man (*magis connaturalia homini*). For as the Philosopher says in *Ethics* 10, “A life that is led in accord with speculative reason (*secundum speculationem*) is better than a life that is human (*secundum hominem*).” However, other universal principles that are posterior, regardless of whether they belong to speculative reason or to practical reason, are had not by nature, but are instead had either through discovery by way of experience or through teaching.

Moreover, as regards the *particular cognition* of the things the actions have to do with, we must again draw a distinction. For an action has to do with something either as an end or as a means to an end. Now the ends of an upright human life are determinate, and so there can be a natural inclination with respect to those ends—in the way that, as was explained above (*ST* 1-2, q. 51, a. 1 and q. 63, a. 1), some individuals have by natural disposition certain virtues by which they are inclined to the correct ends and, as a result, they also have by nature correct judgment about those ends. By contrast, the means to the end in human affairs are not determinate, but are instead diversified by the diversity of persons and human affairs. Hence, since an inclination of nature is always directed toward something determinate, this sort of cognition cannot exist in a man naturally, even though by natural disposition one individual is more able to discern such things than another is—as likewise happens with the conclusions of the speculative sciences.

Therefore, since, as was established above (a. 6 and *ST* 1-2, q. 57, a. 5), prudence has to do not with ends, but with the means to an end, it follows that prudence is not natural.

**Reply to objection 1:** The Philosopher is speaking here about the things that belong to prudence insofar as they are ordered toward the ends; hence, he had previously said that the principles belong to that which is “for the sake of which,” i.e., the end. And because of this he does not mention *euboulia*, which has to do with deliberating about the means to the end (cf. q. 51, a. 1, and *ST* 1-2, q. 57, a. 6).

**Reply to objection 2:** Prudence exists more in older people not only because of a natural disposition, once the movements of the sentient passions have been quieted, but also because of their experience over a long time.

**Reply to objection 3:** In non-rational animals there are determinate ways of reaching an end; hence, we see that all animals of the same species operate in a similar way. But this cannot be the case with man because of his reason, which, since it has cognition of universals, extends to infinitely many singulars.

## Article 16

### Can prudence be lost through forgetfulness?

It seems that prudence can be lost through forgetfulness (*per oblivionem*):

**Objection 1:** Since scientific knowledge is of what is necessary, it is more certain than prudence, which has to do with contingent actions. But scientific knowledge is lost through forgetfulness. Therefore, *a fortiori*, so is prudence.

**Objection 2:** In *Ethics 2* the Philosopher says, “Virtue is generated and corrupted by the same things, but occurring in contrary ways.” But what is necessary for the generation of prudence is experience, which, as the beginning of the *Metaphysics* points out, comes to be from many memories. Therefore, since forgetfulness is opposed to remembering, it seems that prudence can be lost through forgetfulness.

**Objection 3:** Prudence does not exist without the cognition of universals. But the cognition of universals can be lost through forgetfulness. Therefore, so can prudence.

**But contrary to this:** In *Ethics 6* the Philosopher says, “Forgetfulness belongs to art and not to prudence.”

**I respond:** Forgetfulness has to do only with cognition. And so through forgetfulness one can lose an art or craft totally—and the same thing holds for scientific knowledge, which exists in reason. By contrast, prudence does not exist in cognition alone, but in the appetite as well. For as has been explained (a. 8), the principal act of prudence is to command, i.e., to apply the cognition that one has to desiring and acting.

And so prudence is not directly destroyed by forgetfulness, but is instead corrupted by the passions. For in *Ethics 6* the Philosopher says, “What is pleasurable and what is sorrowful pervert prudence’s thinking.” Hence, Daniel 13:56 says, “Pleasing appearances have deceived you, and excessive desire has subverted your heart.” And Exodus 23:8 says, “Do not accept bribes, which blind even the prudent.”

Still, forgetfulness can impede prudence insofar as prudence proceeds to its command on the basis of a cognition that can be wiped out by forgetfulness.

**Reply to objection 1:** Scientific knowledge exists only in reason. Hence, as was explained above, there is different line of reasoning with respect to it.

**Reply to objection 2:** The experience that belongs to prudence is not acquired by memory alone, but is also acquired by the exercise of commanding in an upright way.

**Reply to objection 3:** As has been explained, prudence consists mainly not in the cognition of universals, but in their application to actions. And so forgetfulness concerning universal cognition does not corrupt what is most important in prudence, but, as has been explained, it does impede it.

## QUESTION 48

### The Parts of Prudence in General

Next we have to consider the parts of prudence. And on this topic there are four things to inquire into: first, what sorts of parts prudence has; second, what the quasi-integral parts of prudence are; third, what the subjective parts of prudence are; and, fourth, what the potential parts of prudence are.

### The Only Article

#### Are the parts of prudence appropriately assigned?

It seems that the parts of prudence are not appropriately assigned:

**Objection 1:** In *Rhetoric* 2 Tully posits three parts of prudence, viz., memory (*memoria*), intelligence (*intelligentia*), and foresight (*providentia*). On the other hand, Macrobius, according to Plotinus's opinion, attributes six parts to prudence, viz., reasoning (*ratio*), understanding (*intellectus*), circumspection (*circumspectio*), foresight (*providentia*), docility (*docilitas*), and caution (*cautio*). By contrast, in *Ethics* 6 Aristotle says that good deliberation (*euboulia*), good common judgment (*synesis*), and good particular judgment (*gnome*) belong to prudence; and in connection with prudence he also mentions quick-wittedness (*eustochia*), shrewdness (*solertia*), good sense (*sensus*), and understanding (*intellectus*). And a certain other Greek philosopher claims that prudence involves ten things, viz., good deliberation (*euboulia*), shrewdness (*solertia*), foresight (*providentia*), ruling prudence (*regnativa*), military prudence (*militaris*), political prudence (*politica*), economic prudence (*oeconomica*), dialectical prudence (*dialectica*), rhetorical prudence (*rhetorica*), and physical prudence (*physica*). Therefore, it seems either that one of these assignments is excessive or that another is deficient.

**Objection 2:** Prudence is divided off as a contrary to science. But the political, the economic, the dialectical, the rhetorical and the physical are types of science. Therefore, they are not parts of prudence.

**Objection 3:** The parts do not exceed the whole. But intellectual memory (*memoria intellectiva*), i.e., intelligence (*intelligentia*), reasoning (*ratio*), good sense (*sensus*), and docility (*docilitas*) belong not only to prudence but to all cognitive habits. Therefore, they should not be posited as parts of prudence.

**Objection 4:** Just as *deliberating* (*consiliari*), *judging* (*iudicare*), and *commanding* (*praecipere*) are acts of practical reason, so, too, as was established above (*ST* 1-2, q. 16, a. 1), is *using* (*uti*). Therefore, just as good deliberation (*euboulia*), which pertains to deliberating, is adjoined to prudence, and just as good common judgment (*synesis*) and good particular judgment (*gnome*), which pertain to judgment, are adjoined to prudence, so, too, something pertaining to use should likewise have been posited.

**Objection 5:** As was established above (q. 47, a. 9), solicitude belongs to prudence. Therefore, solicitude should have been posited as one of the parts of prudence.

**I respond:** There are three kinds of parts: (a) *integral parts*, in the way that the walls, roof, and foundation are parts of a house; (b) *subjective parts*, in the way that *ox* and *lion* are parts of *animal*; and (c) *potential parts*, in the way that the nutritive and the sentient are parts of the soul. Therefore, there are three ways in which parts can be assigned to a virtue:

(a) First, by way of a similarity to *integral parts*, viz., in the sense that what are called the parts of the virtue are the things that must come together for a complete or perfect act of that virtue (*quae necesse est concurrere ad perfectum actum virtutis illius*). And in this sense one can designate eight parts of prudence from all the things enumerated above, viz., the six parts that Macrobius enumerates; a seventh that is added to them, viz., memory (*memoria*), posited by Tully; and quick-wittedness or shrewdness (*eustochia sive solertia*), posited by Aristotle. (For 'good sense' (*sensus*) is also called 'understanding' (*intellectus*), and this is why in *Ethics* 6 the Philosopher says, "Of these it is necessary to have good sense (*sensus*), i.e., understanding (*intellectus*).")

Now five of these eight parts have to do with prudence insofar as it is *cognitive*, viz., memory (*memoria*), reasoning (*ratio*), understanding (*intellectus*), docility (*docilitas*), and shrewdness (*solertia*), whereas the other three have to do with prudence insofar as prudence *gives commands* by applying the cognition to an action, viz., foresight (*providentia*), circumspection (*circumspectio*), and caution (*cautio*).

The reason for this diversity is clear from the fact that there are three things to think about concerning *cognition*:

The first is *the cognition itself*. If the cognition is about things that are past, then it is *memory*, whereas if it is about things that are present—regardless of whether they are necessary or contingent—it is called *understanding* (*intellectus*) or *intelligence* (*intelligentia*).

The second is *the acquisition of the cognition*. This acquisition occurs either through teaching, and *docility* (*docilitas*) is relevant to this, or through discovery, and *quick-wittedness* (*eustochia*), i.e., *good guessing* (*bona coniecturatio*), is relevant here. As *Ethics* 6 points out, part of the latter is *shrewdness* (*solertia*), which, as *Posterior Analytics* 1 explains, is the quick guessing of the middle terms [of syllogisms].

The third thing to consider is *the use of the cognition*, viz., insofar as, on the basis of the things that are known, one proceeds to have cognition of, or to judge, other things. And this belongs to reasoning (*ratio*).

On the other hand, in order that reason might *give commands* correctly, it should have three things:

The first is that it should command (*ordinet*) something that is appropriate to the end, and this pertains to *foresight* (*providentia*).

The second is that it should pay attention to the circumstances of the matter at hand, and this pertains to circumspection (*circumspectio*).

Third, it has to avoid obstacles, and this pertains to *caution* (*cautio*).

(b) Now the *subjective parts* of a virtue are its diverse species. And in this sense the parts of prudence, taken properly, are the prudence by which one *governs himself* (*regit seipsum*) and the prudence by which one *governs a multitude* (*regit multitudine*); these two differ in species, as has been explained (q. 47, a. 11).

Again, the prudence by which one governs a multitude is divided into diverse species in keeping with the diverse kinds of multitudes.

There are some multitudes that are brought together for some special task; for instance, an army is assembled in order to fight, and it is governed by *military prudence* (*prudencia militaris*). On the other hand, there are multitudes united for the whole of life, e.g., the multitude of a household or family, which is governed by *economic prudence*, or the multitude of a city or kingdom, which is directed by *kingly prudence* in the ruler and what is called *political prudence* simply speaking in the subjects.

Now as was explained above (q. 47, a. 2), if ‘prudence’ is taken so broadly as to include even speculative science, then one may also posit as parts of prudence *dialectical prudence*, *rhetorical prudence*, and *physical prudence*, in accord with the three modes of proceeding in the sciences. One of them, viz., physical prudence, is for effecting scientific knowledge through demonstration. The second mode, which belongs to dialectical prudence, is for fashioning opinions from what is more probable. And the third mode, viz., *rhetorical prudence*, is for inducing impressions (*suspiciones*) from conjectures or for persuading in some way. However, these three species of prudence can belong even to prudence properly speaking, which reasons sometimes from things that are necessary, sometimes from things that are more probable, and sometimes from conjectures.

(c) Now the *potential parts* of a given virtue are adjoining virtues that are ordered toward certain secondary acts or subject matters—not having, as it were, the full power of the principal virtue. And in this sense the parts of prudence are *good deliberation* (*euboulia*), which has to do with deliberating; *good common judgment* (*synesis*), which has to do with situations that commonly occur; and *good particular judgment* (*gnome*), which has to do with situations in which one must sometimes depart from the

common law. By contrast, prudence has to do with the principal act, which is to command.

**Reply to objection 1:** The diverse assignments of parts differ insofar as different kinds of parts are being posited, or, alternatively, insofar as many parts of one assignment are being included within one part of another assignment. For instance, Tully includes caution and circumspection under foresight, and reason, docility, and shrewdness under intelligence.

**Reply to objection 2:** The economic and the political are not being taken here as sciences, but are instead being taken insofar as they are types of prudence. The reply to the other three examples is clear from what has been said.

**Reply to objection 3:** All these things are posited as parts of prudence not in all their generality but according to the relation they have to the things that pertain to prudence.

**Reply to objection 4:** To command correctly and to use correctly are always concomitant with one another, since the obedience of the lower powers, which pertain to use, follows upon reason's command.

**Reply to objection 5:** Solicitude is included in the notion of foresight.

## QUESTION 49

### The Integral Parts of Prudence

Next we have to consider each of the quasi-integral parts of prudence. And on this topic we will inquire into these eight parts: (1) memory; (2) understanding (or intelligence); (3) docility; (4) shrewdness; (5) reasoning; (6) foresight (or providence); (7) circumspection; and (8) caution.

#### Article 1

##### Is memory a part of prudence?

It seems that memory is not a part of prudence:

**Objection 1:** As the Philosopher shows, memory exists in the sentient part of the soul. But as is clear from *Ethics* 6, prudence exists in the reasoning part. Therefore, memory is not a part of prudence.

**Objection 2:** Prudence is acquired through, and progresses by means of, experience. But memory exists in us by nature. Therefore, memory is not a part of prudence.

**Objection 3:** Memory is about past things. But as *Ethics* 6 explains, prudence has to do with future actions about which there is deliberation. Therefore, memory is not a part of prudence.

**But contrary to this:** In *Rhetorica* 2 Tully posits memory among the parts of prudence.

**I respond:** As has been explained (q. 47, a. 5), prudence has to do with contingent actions (*est circa contingentia operabilia*). Now in these matters a man cannot be guided by what is true absolutely speaking and with necessity, but is instead guided by what occurs in most cases (*in pluribus*). For as *Ethics* 6 explains, the principles must be proportionate to the conclusions, and from principles of a certain sort one reaches conclusions of that sort.

Now it is through experience that one must come to examine what is true for the most part, and this is why in *Ethics* 2 the Philosopher says that intellectual virtue derives its generation and increase from time and experience. But as is clear from *Metaphysics* 1, experience is composed of many memories (*experimentum est ex pluribus memoriis*). Hence, it follows that having memory of many things is required for prudence. This is why memory is appropriately posited as a part of prudence.

**Reply to objection 1:** As has been explained (q. 47, aa. 3 and 6), prudence applies universal cognition to the particulars of which there is sensation. Hence, many things that belong to the sentient part of the soul are required for prudence, and among them is memory.

**Reply to objection 2:** Just as there is an aptitude for prudence by nature, whereas its perfection (*completio*) comes from exercise or grace, so, too, as Tully explains in his *Rhetorica*, memory does not only proceed from nature, but also involves a lot of skill and diligence. There are four ways in which a man makes progress in remembering well:

The first is to think of appropriate, but not altogether common, similitudes of the things he wants to remember; for we are more struck with wonder at what is uncommon, and so the mind lingers longer and more intensely over those things—which is why we remember to a greater degree things that we saw in childhood. Therefore, finding similitudes or images of what we want to remember is necessary; for simple and spiritual ideas slip away from the mind unless they are, as it were, tied down to it by certain corporeal similitudes, since human cognition is more powerful with respect to things that can be sensed. This is also why a power to remember is posited in the sentient part of the soul.

Second, a man must arrange in an orderly way the things that he wishes to hold in his memory, so that he might easily proceed from one remembered thing to another. Hence, in *De Memoria* the Philosopher says, “Sometimes individuals seem to remember things by their positions (*a locis*); this is the reason why they quickly pass from the one to the other.”

Third, a man must proceed with solicitude and apply his affections to those things that he wants to remember, since the more something is impressed on the mind, the less it slips away. Hence, in his

*Rhetorica* Tully says, “Solicitude preserves the figures of images entire.”

Fourth, we must frequently think about what we want to remember. Hence, in *De Memoria* the Philosopher says that “meditating preserves memory,” since, as is explained in the same book, “custom is like a nature. This is why we remember quickly what we have thought about many times, proceeding in a quasi-natural order from one thing to another.”

**Reply to objection 3:** It is necessary for us to make an argument, as it were, from past things to future things (*ex praeteritis oportet nos quasi argumentum sumere de futuris*). And so the memory of past things is necessary for us to deliberate well about future things.

## Article 2

### Is understanding a part of prudence?

It seems that understanding (*intellectus*) is not a part of prudence:

**Objection 1:** Among things that are divided off as opposites, one is not a part of the other. But as is clear from *Ethics* VI, understanding is posited as an intellectual virtue divided off from prudence. Therefore, understanding should not be posited as a part of prudence.

**Objection 2:** Understanding is posited among the gifts of the Holy Spirit and, as was established above (q. 8, aa. 1 and 8), it goes with [the virtue of] faith. But as is clear from what was said above (q. 4, a. 8 and *ST* 1-2, q. 62, a. 2), prudence is a virtue distinct from faith. Therefore, understanding does not belong to prudence.

**Objection 3:** As is explained in *Ethics* 6, prudence has to do with singular actions. But as is clear from *De Anima* 3, understanding involves the cognition of things that are universal and immaterial. Therefore, understanding is not a part of prudence.

**But contrary to this:** Tully posits intelligence (*intelligentia*) as a part of prudence, and Macrobius posits understanding (*intellectus*), which amounts to the same thing.

**I respond:** ‘Understanding’ is not being taken here for an intellective power, but is instead being taken as implying a correct estimation of a last principle (*aliquid extremum principium*) that is taken as known in its own right—just as we are likewise said to understand the first principles of a demonstration. Now every deduction of reason proceeds from certain things that are taken as primary. Hence, every process of reasoning proceeds from something that is understood. Therefore, since prudence is right reason with respect to actions, it follows that the whole process of prudence must be derived from understanding. And it is for this reason that understanding is posited as a part of prudence.

**Reply to objection 1:** Prudence’s reasoning terminates in a particular action (*ad particulare operabile*) as a conclusion, and, as is clear from what has been said, it applies universal cognition to the action. Now in a syllogism a singular conclusion comes from a universal proposition and a singular proposition. Hence, prudence’s reasoning must proceed from two sorts of understanding:

One of them has cognition of universals. This belongs to the sort of understanding that is posited as an intellectual virtue, since what are naturally known to us are not just universal *speculative* principles, but also, as is clear from what was said above (q. 47, a. 6), universal *practical* principles, e.g., *Evil is not to be done to anyone*.

By contrast, the other sort of understanding is that which, as is explained in *Ethics* 6, involves cognition of the *last* principle, i.e., of some first singular and contingent action, viz., the minor premise, which, as has been explained (q. 47, a. 6), has to be a singular proposition in prudence’s syllogism. As is explained in the same place, this first singular item is a singular end (*singularis finis*). Hence, the sort of understanding that is posited as a part of prudence is the correct estimation of some particular end.

**Reply to objection 2:** As is clear from what was said above (q. 8, a. 1), the sort of understanding

that is posited as a gift of the Holy Spirit is a certain sharp perception of divine things. But as has been explained, it is in a different sense that understanding is posited as a part of prudence.

**Reply to objection 3:** The correct estimation of a particular end is itself called (a) ‘understanding’ insofar as it has to do with some principle and (b) ‘good sense’ (*sensus*) insofar as it is particular. This is what the Philosopher says in *Ethics* 6: “With respect to these things,” viz., singular things, “one must have good sense, i.e., understanding.” However, this should be thought of as applying to the *interior sense* by which we pass judgment on particulars and not to the *particular senses* by which we have cognition of proper sensibles.

### Article 3

#### Should docility be posited as a part of prudence?

It seems that docility (*docilitas*) should not be posited as a part of prudence:

**Objection 1:** What is required for every intellectual virtue should not be appropriated to any one of them. But docility is necessary for every intellectual virtue. Therefore, it should not be posited as a part of prudence.

**Objection 2:** The things that are relevant to the human virtues are within our power (*sunt in nobis*), since we are praised or blamed according to what is within our power. But it is not within our power to become docile; rather, this happens to some individuals because of their natural disposition. Therefore, it is not part of prudence.

**Objection 3:** Docility belongs to a student (*discipulus*). But since prudence gives precepts (*est praeceptiva*), it seems instead to belong to teachers. Therefore, docility is not a part of prudence.

**But contrary to this:** According to Plotinus’s opinion, Macrobius posits docility among the parts of prudence.

**I respond:** As was explained above (a. 2 and q. 47, aa. 3-6), prudence has to do with particular actions. Since there can be, as it were, an infinite diversity among such actions, they cannot all be sufficiently taken into account by a man. Hence, in those matters that pertain to prudence a man especially needs to learn from others, and especially from older people who have acquired a sound understanding concerning the ends in matters of action (*sanum intellectum adepti sunt circa fines operabilium*).

This is why the Philosopher says in *Ethics* 6, “It is necessary to pay attention to the indemonstrable pronouncements and opinions of people who are experienced and older and prudent no less than to their demonstrations, since they have insight into principles because of their experience.” Hence, Proverbs 3:5 says, “Do not depend on your own prudence,” and Ecclesiasticus 6:15 says, “Stand in the multitude of the prudent presbyters”—i.e., the prudent older people—“and join yourself from your heart to their wisdom.”

Now one’s being readily receptive to teaching (*bene disciplinae susceptivus*) pertains to docility. And so docility is appropriately posited as a part of prudence.

**Reply to objection 1:** Even though docility is indeed useful for every intellectual virtue, it is especially useful for prudence, for the reason already explained.

**Reply to objection 2:** Like the other things that belong to prudence, docility is from nature as regards one’s aptitude for it, but as regards its perfection human effort is much more important, viz., when a man solicitously, frequently, and respectfully applies his mind to the teachings of the learned (*documentis maiorum*), not neglecting them out of laziness or despising them out of pride.

**Reply to objection 3:** As has been explained (q. 47, a. 12), through prudence one issues precepts not only to others, but even to his very self. Hence, as was explained above (q. 47, a. 12), this likewise

plays a role in the case of the subjects [of rulers], and so docility belongs to their prudence.

However, even the rulers themselves must be docile with respect to some things; for as has been explained, in the matters that fall under prudence, no one is sufficient unto himself with respect to all of them.

#### Article 4

##### Is shrewdness a part of prudence?

It seems that shrewdness (*solertia*) is not a part of prudence:

**Objection 1:** As is clear from *Posterior Analytics* 1, shrewdness has to do with easily finding middle terms in demonstrations. But prudence's reasoning is not demonstrative, since it has to do with contingent things. Therefore, shrewdness does not belong to prudence.

**Objection 2:** As *Ethics* 6 explains, it belongs to prudence to deliberate well. But in deliberating well there is no room for shrewdness, which is a certain sort of quick-wittedness (*eustochia*) or good guessing (*bona coniecturatio*), and which occurs quickly and without discursive reasoning. By contrast, as *Ethics* 6 points out, deliberation has to be slow. Therefore, shrewdness should not be posited as a part of prudence.

**Objection 3:** As has been explained (q. 48), shrewdness is a certain sort of good guessing. But it is proper to rhetoricians to make use of conjectures. Therefore, shrewdness belongs more to rhetoric than to prudence.

**But contrary to this:** In *Etymologia* Isidore says, "The solicitous individual is one who is shrewd (*solers*) and quick (*citius*)." But as was explained above, solicitousness belongs to prudence. Therefore, so does shrewdness.

**I respond:** A prudent individual has a correct estimation of what is to be done. Now in matters of action, as in speculative matters, a correct estimation or opinion is acquired in two ways: (a) by discovering it on one's own and (b) by learning it from another. And just as docility has to do with a man's doing well in acquiring a correct estimation from another, so shrewdness has to do with a man's doing well in acquiring a correct estimation on his own.

However, this is so on the assumption that shrewdness (*solertia*) is being taken for quick-wittedness (*eustochia*), which it is a part of. For quick-wittedness is good guessing with respect to anything whatsoever, whereas shrewdness is easy and prompt guessing with respect to finding a middle term—as is explained in *Posterior Analytics* 1. Yet the philosopher who posits shrewdness as a part of prudence is taking shrewdness for the whole of quick-wittedness (*eustochia*), and this is why he says, "Shrewdness is the habit which acts quickly to find what is appropriate."

**Reply to objection 1:** As the Philosopher explains in the same place, shrewdness has to do with finding the middle term not only in demonstrative matters, but also in matters of action—as, for instance, when someone, upon seeing that certain men have become friends, guesses that they are enemies of the same individual. It is in this sense that shrewdness belongs to prudence.

**Reply to objection 2:** In *Ethics* 6 the Philosopher sets forth a sound argument to show that *euboulia*, which is good demonstration, is not *eustochia*, the value of which lies in quick thinking about what is needed. By way of contrast, someone can be good at deliberating even if his deliberation takes a longer time or is more drawn out.

However, this does not rule out good guessing being an aid to good deliberating. Sometimes the good guessing is necessary, viz., when something that needs to be done comes up unexpectedly. This is why shrewdness is appropriately posited as a part of prudence.

**Reply to objection 3:** Rhetoric likewise thinks about actions. Hence, nothing prevents the same

thing from belonging to both rhetoric and prudence. And yet ‘making guesses’ (*coniecturationes*) is being taken here not only insofar as it pertains to the sort of conjectures that rhetoricians make use of, but insofar as a man is said to guess the truth in any sort of matter.

## Article 5

### Is reason (or good reasoning) a part of prudence?

It seems that reason (or good reasoning) (*ratio*) is not a part of prudence:

**Objection 1:** The subject of an accident is not a part of the accident. But as *Ethics* 6 explains, prudence has reason for its subject. Therefore, reason should not be posited as a part of prudence.

**Objection 2:** What is common to many things should not be posited as a part of any of them—or, if it is posited as a part, then it should be posited as a part of the one which it best fits. Now reason is necessary for every intellectual virtue, and especially for scientific knowledge (*scientia*) and wisdom (*sapientia*), which make use of demonstrative reason. Therefore, reason should not be posited as a part of prudence.

**Objection 3:** As was established above (*ST* 1-2, q. 79, a. 8), reason (*ratio*) does not differ in its essence from the intellect (*intellectus*). Therefore, if understanding (*intellectus*) is posited as a part of prudence, then it was superfluous to add reason as a part of prudence.

**But contrary to this:** According to the opinion of Plotinus, Macrobius numbers reason among the parts of prudence.

**I respond:** As *Ethics* 6 says, “It belongs to the prudent individual to deliberate well.” But deliberation (*consilium*) is a certain sort of inquiry that proceeds from certain things to other things. But this is the work of reason. Hence, for prudence it is necessary that a man reason well (*sit bene ratiocinativus*). And since those things that are needed for the perfection of prudence are called ‘required parts’ or ‘quasi-integral parts’ of prudence, it follows that reason ought to be numbered among the parts of prudence.

**Reply to objection 1:** ‘Reason’ is being taken here not for *the power itself* of reason, but instead for *the good use* of reason.

**Reply to objection 2:** The certitude of reason comes from understanding (*ex intellectu*), but the necessity for reason comes from a lack of understanding (*ex defectu intellectus*). For beings such as God and the angels, in whom the intellective power exists in its full vigor (*plenarie viget*), do not need reason or reasoning (*ratione non indigent*).

Now the particular actions that are directed by prudence are especially remote from the condition of being intelligible (*recedunt praecipue ab intelligibilium conditione*), and the greater the distance, the less certain or determinate they are. For instance, as *Ethics* 3 explains, even though the things that belong to an art or skill are singulars, they are nonetheless more certain or determinate, and so there is no deliberation involved in most of them because of their certitude. And so even though in certain other intellectual virtues the reasoning is more certain than prudence is, nonetheless, what is required for prudence is that a man reason well, in order that he might be able to do well in applying universal principles to particulars, which are diverse and uncertain.

**Reply to objection 3:** Even though reason and the intellect are not diverse powers, nonetheless, they are named from diverse acts. For the name ‘intellect’ (*intellectus*) is taken from an inward penetration of the truth, whereas the name ‘reason’ is taken from inquiry and discourse. And so, as is clear from what has been said, both are posited as parts of prudence.

## Article 6

### Should foresight be posited as a part of prudence?

It seems that foresight or providence (*providentia*) should not be posited as a part of prudence:

**Objection 1:** Nothing is a part of itself. But foresight seems to be the same thing as prudence, since as Isidore says in *Etymologia*, “The one who is called prudent sees far off,” and, as Boethius points out at the end of *De Consolatione Philosophiae*, it is from this that the name ‘providence’ (*providentia*) comes. Therefore, foresight is not a part of prudence.

**Objection 2:** Prudence is solely practical. But foresight can also be speculative, since vision, which the name ‘providence’ is taken from, belongs more to the speculative part of the soul than to the operative part. Therefore, foresight is not a part of providence.

**Objection 3:** The primary act of prudence is to command or give precepts (*praecipere*), whereas its secondary acts are to pass judgment (*iudicare*) and to deliberate or take counsel (*consiliari*). But none of these acts seems to be properly implied by the name ‘foresight’. Therefore, foresight is not a part of prudence.

**But contrary to this** is the authority of Tully and Macrobius, who, as is clear from what has been said (q. 48, a. unicus), posit foresight as a part of prudence.

**I respond:** As was explained above (q. 47, aa. 1 and 6 and 13), prudence has properly to do with the means to an end, and what belongs properly to its function is that the means should be appropriately ordered toward the end. And even though it is true that certain necessary things that are subject to God’s providence exist for the sake of an end, only contingent actions that can be done by man for the sake of an end are subject to human prudence.

Now past things pass into a certain sort of necessity insofar as they are past, since what has been done is such that it is impossible for it not to have been done. Similarly, present things, insofar as they are present, also have a certain sort of necessity; for instance, while Socrates is sitting, it is necessary that he be sitting. Hence, it follows that what pertains to prudence are future contingents, insofar as they can be ordered by a man toward the end of human life.

Now both of these points are implied by the name ‘foresight’ or ‘providence’ (*providentia*). For ‘foresight’ (*providentia*) implies a certain sort of relation to something distant which things that occur in the present have to be ordered toward.

**Reply to objection 1:** Whenever many things are required for some single thing, it has to be the case that one of those many things is the principal one and all the others are ordered toward it. Hence, it is likewise the case with any whole that one part is the formal and predominant part by virtue of which the whole has unity. Accordingly, foresight is the more principal part among all the parts of prudence, because all the other things that are required for prudence are necessary for something’s being correctly ordered toward an end. And so the very name ‘prudence’ (*prudentia*) is derived from ‘providence’ (*providentia*) as from its principal part.

**Reply to objection 2:** Speculative inquiry (*speculatio*) has to do with things that are universal and things that are necessary; such things are by their very nature not far off (*secundum se non procul*), since they exist always and everywhere—even if they are distant as far as we are concerned, insofar as we fall short in our cognition of them. Hence, foresight is properly spoken of only in practical matters and not in speculative matters.

**Reply to objection 3:** Being correctly ordered toward an end, which is included in the character of foresight, implies rectitude of deliberation, judgment, and precept, without which there cannot be a correct ordering toward the end.

## Article 7

### Can circumspection be a part of prudence?

It seems that circumspection (*circumspectio*) cannot be a part of prudence:

**Objection 1:** Circumspection seems to be a certain sort of consideration of the surrounding circumstances (*consideratio quaedam eorum quae circumstant*). But there are infinitely many such circumstances, and they cannot be comprehended by reason, in which prudence exists. Therefore, circumspection should not be posited as a part of prudence.

**Objection 2:** Circumstances seem to be more relevant to the moral virtues than to prudence. But circumspection seems to be nothing other than a consideration of the circumstances (*respectus circumstantiarum*). Therefore, circumspection seems to belong to the moral virtues rather than to prudence.

**Objection 3:** One who can see what is far off is *a fortiori* able to see things that surround him. But through foresight a man is capable of perceiving things that are far off. Therefore, foresight itself is sufficient for considering the things that surround one. Therefore, it is unnecessary to posit circumspection as a part of prudence over and beyond foresight.

**But contrary to this** is the authority of Macrobius, as was asserted above (q. 48, a. unicus).

**I respond:** As has been explained (a. 6), what mainly pertains to prudence is to order something toward an end. This is done correctly only if (a) the end is a good one and (b) the means to the end are likewise good and are appropriate to the end.

However, since, as has been explained (a. 3), prudence has to do with singular actions in which many things come together, it is possible that something that is good and appropriate to the end when considered in its own right (*secundum se*) is nonetheless rendered bad or inappropriate for the end by something that comes together with it. For instance, to show signs of love to someone, considered in its own right, seems appropriate for attracting that individual's affections toward love, but if pride or a suspicion of flattery occurs in that individual's mind, then showing signs of love will not be appropriate for the end. And so circumspection is necessary for prudence, viz., in order that a man might compare what is ordered toward the end with the circumstances as well.

**Reply to objection 1:** Even though there are infinitely many possible circumstances, nonetheless, there are not infinitely many actual circumstances; instead, there are a certain few that might change reason's judgment about what should be done.

**Reply to objection 2:** Circumstances belong to prudence insofar as prudence fixes them, whereas they belong to the moral virtues insofar as the moral virtues are perfected through the fixing of the circumstances.

**Reply to objection 3:** Just as it belongs to foresight to perceive what is appropriate *in its own right* for the end, so it belongs to circumspection to consider whether that same thing is appropriate, *given the relevant circumstances*, for the end,. Both of these pose a special difficulty. And so each of them is posited separately as a part of prudence.

## Article 8

### Should caution be posited as a part of prudence?

It seems that caution (*cautio*) should not be posited as a part of prudence:

**Objection 1:** In those cases in which nothing bad can exist there is no need for caution. But as is explained in *De Libero Arbitrio*, no one uses the virtues badly. Therefore, caution is irrelevant to

prudence, which directs the virtues.

**Objection 2:** It belongs to the same thing to provide for good things and avoid bad things; for instance, it belongs to the same art to bring about health and to cure sickness. But providing for good things belongs to foresight. Therefore, avoiding bad things belongs to it, too. Therefore, caution should not be posited as a part of prudence distinct from foresight.

**Objection 3:** No prudent individual attempts the impossible. But no one can take precautions to avoid all the bad things that can happen. Therefore, caution does not belong to prudence.

**But contrary to this:** In Ephesians 5:15 the Apostle says, “See how cautiously you should walk.”

**I respond:** Prudence has to do with contingent actions (*contingentia operabilia*), in the case of which, just as what is true can be mixed in with what is false, so what is bad can be mixed in with what is good. This is because of the multiple forms of such actions (*propter multiformitatem huiusmodi operabilium*), in which good things are often impeded by bad things and in which bad things have the appearance of being good. And so caution is necessary for prudence in order that what is good might be taken in such a way that what is bad is avoided.

**Reply to objection 1:** In moral acts caution is necessary not in order for someone to guard himself against acts of virtue, but in order for him to guard himself against things by which acts of virtue can be impeded.

**Reply to objection 2:** Pursuing things that are good has the same character (*est eiusdem rationis*) as guarding against the opposite evils. However, it is a different matter to avoid *extrinsic impediments*. And this is why caution is distinct from foresight, even though both belong to the single virtue of prudence.

**Reply to objection 3:** Among the evils that a man has to avoid, there are some that are wont to occur for the most part (*ut in pluribus*). And such evils can be comprehended by reason. It is against these evils that caution is directed, either in order to avoid them completely or in order for them to do less harm.

By contrast, there are some evils that occur in fewer cases and incidentally (*ut in paucioribus et casualiter*). And since there are infinitely many of these, they cannot be comprehended by reason. Nor can a man take sufficient precautions against them—though, through the exercise of prudence, a man can guard against all the vicissitudes of fortune so as to suffer less harm.

## QUESTION 50

### The Subjective Parts of Prudence

Next we have to consider the subjective parts of prudence. And since the prudence through which one directs himself has already been explained, what remains is to explain the species of prudence by which a multitude is governed. On this topic there are four questions: (1) Should *lawmaking* (*legispositiva*) be posited as a species of prudence? (2) Should *political* (*politica*) be posited as a species of prudence? (3) Should *economic* (*oeconomica*) be posited as a species of prudence? (4) Should *military* (*militaris*) be posited as a species of prudence?

#### Article 1

#### Should *kingly* be posited as a species of prudence?

It seems that *kingly* (*regnativa*) should not be posited as a species of prudence:

**Objection 1:** What is *kingly* is ordered toward preserving justice, since, as *Ethics* 5 says, “The ruler (*princeps*) is the guardian of justice.” Therefore, *kingly* belongs to justice rather than to prudence.

**Objection 2:** According to the Philosopher in *Politics* 3, a kingdom (*regnum*) is one of the six types of political regime (*est una sex politarum*). But no species of prudence is posited for the other five types of political regime, viz., aristocracy, polity (which also goes by the name ‘timocracy’), tyranny, oligarchy, and democracy. Therefore, neither should *kingly* prudence be posited for a kingdom.

**Objection 3:** As is clear from Isidore in *Etymologia*, making laws belongs not only to kings (*reges*) but also to certain other types of ruler, and even to the people. But in *Ethics* 4 the Philosopher posits lawmaking prudence as a part of prudence. Therefore, it is inappropriate for *kingly* prudence to be posited instead of lawmaking prudence.

**But contrary to this:** In *Politics* 3 the Philosopher says, “Prudence is the proper virtue of a ruler.” Therefore, *kingly* prudence must be a special kind of prudence.

**I respond:** As is clear from what was said above (q. 47, aa. 8-12), it belongs to prudence to rule and to give commands. And where one finds a special type of rule and command within human acts, there one also finds a special type of prudence.

Now it is clear that in the case of someone who has to rule not only himself but the complete community of a city or kingdom, one finds a special and perfect type of rule. For a type of political regime (*regimen*) is more complete to the extent that it is more universal, extending to many and attaining to a more ultimate end. And so prudence belongs with a special and more complete character to a king (*rex*), who has to direct a city or kingdom. And it is because of this that *kingly* prudence is posited as a species of prudence.

**Reply to objection 1:** Everything that belongs to the moral virtues pertains to prudence as that which directs them. And as was explained above (q. 47, a. 5 and *ST* 1-2, q. 58, a. 2), this is why the right reason of prudence is posited in the definition of a moral virtue. And so the execution that belongs to justice, insofar as it is ordered toward the common good, which has to do with the role of a king (*quae pertinet ad officium regis*), likewise needs the direction of prudence. Hence, the two virtues of prudence and justice are especially proper to a king—this according to Jeremiah 23:5 (“A king shall reign and shall be wise, and shall execute justice and judgment on earth”)

Still, because directing belongs more to the king, whereas executing belongs to his subjects, *kingly* is posited as a species of prudence, which has to do with directing, rather than as species of justice, which has to do with execution.

**Reply to objection 2:** As *Ethics* 6 claims, a kingdom is the best sort of government as compared with the other types of political regime. And this is why the relevant species of prudence should be named from the kingdom. However, this is done in such a way that all other upright types of government are included under *kingly* prudence—though not the perverse types of government, which are opposed to

virtue and hence have nothing to do with prudence.

**Reply to objection 3:** The Philosopher named kingly prudence from the principal act of the king, which is to make laws. And even if this act belongs to others as well, it belongs to them only insofar as they participate to some extent in a king's governing power.

## Article 2

### *Is political appropriately posited as a part of prudence?*

It seems that *political* is not appropriately posited as a part of prudence:

**Objection 1:** As has been explained (a. 1), kingly prudence is a part of political prudence. But a part should not be divided off against its whole. Therefore, political prudence should not be posited as a separate part of prudence.

**Objection 2:** The species of habits are distinguished by diverse objects. But what the king commands has to be the same as what the subject executes. Therefore, to the extent that political prudence belongs to the subjects, it should not be posited as a species of prudence distinct from kingly prudence.

**Objection 3:** Each of the subjects is an individual person. But each individual person can direct himself sufficiently through prudence in the general sense. Therefore, it is unnecessary to posit another species of prudence that is called 'political prudence'.

**But contrary to this:** In *Ethics* 6 the Philosopher says, "Of the types of prudence which have to do with the city, one kind is, as it were, architectonic law-making prudence, whereas the kind bears the common name 'political' and has to do with singular things."

**I respond:** A servant is moved by his master's command and a subject by his ruler's command, yet in a way that is different from the way in which non-rational and inanimate beings are moved by their movers. For inanimate and non-rational beings are driven solely by something else, and they do not move themselves, since they do not have dominion over their acts through free choice. And so in their case, rectitude of governance is not within their power, but is instead solely within the power of their movers. By contrast, men who are servants or who are in any way subjects are moved by others through commands (*aguntur ab aliis per praeceptum*) in such a way that they nonetheless move themselves through free choice. And so a certain rectitude of governance is required in them through which they direct themselves in obeying their rulers. And this is what the species of prudence called 'political prudence' has to do with.

**Reply to objection 1:** As has been explained (a. 1), kingly prudence is the most perfect species of prudence. And so the prudence that belongs to the subjects, which falls short of kingly prudence, retains the common name, so that it is called 'political prudence'—just as, in matters of logic, a term that is convertible [with the essence] but does not signify the essence retains for itself the common name 'proper'.

**Reply to objection 2:** As is clear from what was said above (q. 47, a. 5 and *ST* 1-2, q. 54, a. 2), it is diverse characters in the object that diversify the habit into its species. Now the very same things to be done are thought of by the king with a more universal character than that with which they are thought of by the subject who obeys. For many individuals obey the one king in diverse roles. And so kingly prudence is related to the sort of political prudence we are speaking of here in the way that an architectonic art or skill is related to an art or skill that operates by manual labor.

**Reply to objection 3:** By prudence in the general sense a man governs himself in relation to his own proper good, whereas by political prudence of the sort we are speaking of here a man governs himself in relation to the common good.

### Article 3

#### Should *economic* be posited as a species of prudence?

It seems that *economic* should not be posited as a species of prudence:

**Objection 1:** As the Philosopher says in *Ethics* 6, prudence is ordered toward “living the whole of life well.” But as *Ethics* 1 explains, the economic is ordered toward a particular end, viz., one’s wealth. Therefore, economic prudence is not a species of prudence.

**Objection 2:** As has been established (q. 47, a. 13), prudence belongs only to those who are good. But the economic can also belong to those who are bad; for many sinners are foresighted in governing their families. Therefore, economic prudence should not be posited as a species of prudence.

**Objection 3:** Just as in a kingdom one finds someone who rules and someone who is a subject, so too in a household. Therefore, if economic prudence were a species of prudence in the way that political prudence is, then one would also have to posit paternal prudence just as one posits kingly prudence. But paternal prudence is not posited. Therefore, neither should economic prudence be posited as a species of prudence.

**But contrary to this:** In *Ethics* 6 the Philosopher says, “Among these”—i.e., among the types of prudence that have to do with governing a multitude—“there is economic prudence, law-making prudence, and political prudence.”

**I respond:** The character of an object that is diversified as *universal* and *particular*, or as *whole* and *part*, diversifies the arts and virtues, and in accord with this sort of diversity, the one art or virtue is the principal one with respect to the other. Now it is clear that a household occupies a middle ground between a singular person and a city or kingdom. For a single household is part of a city or a kingdom in the same way that a singular person is part of a household. And so just as *prudence generally speaking*, which governs a single person, is distinct from *political prudence*, so *economic prudence* is distinct from both of them.

**Reply to objection 1:** As *Politics* 1 explains, wealth is related to economic prudence not as an ultimate end, but as a certain instrument. By contrast, the ultimate end of economic prudence is living the whole of life well as regards domestic affairs (*secundum domesticam conversationem*).

However, in *Ethics* 1 the Philosopher posits wealth as an example of an end of economic prudence because of most people’s intense interest in wealth.

**Reply to objection 2:** Certain sinners are able to behave with foresight with respect to some of the things that have to be taken care of in their households, but not with respect to living well the totality of domestic life. For what is especially required for the latter is a virtuous life.

**Reply to objection 3:** As *Ethics* 8 points out, within a household the father has a certain sort of similarity to the king of a principality, and yet he does not have the complete power of governance in the way that a king does. And for this reason no fatherly species of prudence is posited separately in the way that kingly prudence is posited.

### Article 4

#### Should *military* be posited as a species of prudence?

It seems that *military* should not be posited as a species of prudence :

**Objection 1:** As *Ethics* 6 explains, prudence is divided off from an art or a skill. But as is clear from the Philosopher in *Ethics* 3, the military seems to be an art with respect to matters of war.

Therefore, military prudence should not be posited as a species of prudence.

**Objection 2:** Just as military affairs are contained under the political, so are many other sorts of affairs, e.g., buying and selling, the manufacture of artifacts, and other things of this sort. But species of prudence are not posited for these other sorts of affairs which go on in the city. Therefore, no species of prudence should be posited for military affairs, either.

**Objection 3:** The fortitude of the soldiers counts for a lot in matters of war. Therefore, *military* belongs to fortitude rather than to prudence.

**But contrary to this:** Proverbs 24:6 says, “War is managed by due ordering, and there shall be safety where there are many deliberations.” But deliberations belong to prudence. Therefore, a species of prudence, which is called military prudence, is especially necessary for matters of war.

**I respond:** What is done through art and reason has to conform to that which exists according to nature and which has been instituted by God’s reason. But nature aims at two things: (a) governing each entity in its own right, and (b) resisting extrinsic agents that attack and corrupt it. For this reason nature has given animals not only a concupiscible power, through which they are moved toward what is accommodated to their welfare, but also an irascible power, through which an animal resists what attacks it.

Hence, in those matters that are in accord with reason, it is necessary for there to be not only political prudence, through which things that belong to the common good are appropriately disposed, but also military prudence, through which the incursions of enemies are repelled.

**Reply to objection 1:** The military can be an art insofar as it has rules for correctly using certain exterior things, e.g., arms and horses. However, insofar as it is ordered toward the common good, it has the character of prudence instead.

**Reply to objection 2:** The other kinds of affairs that take place in a city are ordered toward certain particular advantages, whereas military affairs are ordered toward protecting the whole common good.

**Reply to objection 3:** The execution of military prudence pertains to fortitude, but the directing belongs to prudence, and principally insofar as it exists in the leader of the military forces.

## QUESTION 51

### The Potential Parts of Prudence

Next we have to consider the virtues which are adjoined to prudence and which are, as it were, its potential parts. And on this topic there are four questions: (1) Is good deliberating (*euboulia*) a virtue? (2) Is good deliberating a special virtue distinct from prudence? (3) Is good common judging (*synesis*) a special virtue? (4) Is good particular judging (*gnome*) a special virtue?

#### Article 1

#### Is good deliberating (*euboulia*) a virtue?

It seems that good deliberating (*euboulia*) is not a virtue:

**Objection 1:** According to Augustine in *De Libero Arbitrio*, “No one uses virtues badly.” But there are those who use *euboulia*, i.e., good deliberating, badly, either because (a) they contrive good deliberations in order to pursue bad ends, or because (b) they order certain sins toward the pursuit of good ends, e.g., when someone steals in order that he might give alms. Therefore, good deliberating is not a virtue.

**Objection 2:** As *Physics 7* explains, “A virtue is a certain perfection.” But good deliberating has to do with deliberating, which implies questioning and inquiring, and these involve imperfection. Therefore, good deliberating is not a virtue.

**Objection 3:** As was established above (*ST 1-2*, q. 65), the virtues are connected with one another. But good deliberating is not connected with any other virtues, since there are many sinners who deliberate well and many just individuals who are dull in their deliberations (*sunt in consiliis tardi*). Therefore, good deliberating is not a virtue.

**But contrary to this:** As the Philosopher puts it in *Ethics 6*, “*Euboulia* is rectitude in deliberation.” But right reason brings to completion the definition of *virtue*. Therefore, *euboulia* is a virtue.

**I respond:** As was explained above (q. 47, a. 4), it is part of the definition of a human virtue that it makes a man’s act good. Now among the other acts of a man, it is proper to him to deliberate, since this implies a certain inquiry on the part of reason about things which are to be done and in which a human life consists; for as *Ethics 10* explains, the speculative life lies beyond man.

Now *euboulia* implies goodness in deliberating, since it is taken from ‘*eu*’, which means good, and ‘*boule*’, which means deliberation, so that it is a good process of deliberating or, better, it is to deliberate well. Hence, it is clear that *euboulia* is a human virtue.

**Reply to objection 1:** There is no good deliberating if someone either sets up a bad end for himself in his deliberation or discovers evil paths toward a good end. Likewise, in speculative matters there is no good discursive reasoning if one reaches a false conclusion or if one draws a true conclusion from false premises, since he is not using an appropriate middle term (*quia non utitur convenienti medio*). And so as the Philosopher explains in *Ethics 6*, both of the cases mentioned are contrary to the definition of *euboulia*.

**Reply to objection 2:** Even if a virtue is by its essence a certain perfection, it does not have to be the case that everything that serves as the matter for that virtue implies perfection. For it is everything human that has to be perfected by the virtues—not only acts of reason, among which is deliberating, but also the passions of the sentient appetite, which are more imperfect still.

An alternative reply is that a human virtue is a perfection in the mode of a human being, who is unable to comprehend the truth with certitude by simply seeing things—especially in the case of things that are doable, which are contingent.

**Reply to objection 3:** *Euboulia* is not found in any sinner insofar as he is a sinner. For every sin is contrary to good deliberating, since to deliberate well requires not only discovering or thinking about

what is advantageous for the end, but also another circumstance, viz., the right amount of time, so that the time spent in deliberating is neither too long nor too short—along with the mode of deliberating, so that one is firm in his deliberation, and other due circumstances of this sort that a sinner does not pay attention to when he sins. By contrast, every virtuous individual deliberates well in those matters that are ordered toward the end of virtue—even if in other particular matters he does not deliberate well, e.g., in business dealings or in matters of war or in some other such matter.

## Article 2

### Is good deliberating a virtue distinct from prudence?

It seems that good deliberating (*euboulia*) is not a virtue distinct from prudence:

**Objection 1:** As the Philosopher says in *Ethics* 6, “The prudent individual seems to be good at deliberating.” But as has been explained (a. 1), this pertains to *euboulia*. Therefore, *euboulia* is not distinct from prudence.

**Objection 2:** As was established above (*ST* 1-2, q. 1, a. 3 and q. 18, a. 6), human acts, toward which the human virtues are ordered, receive their species mainly from their end. But good deliberating and prudence are ordered toward the same end; more specifically, as *Ethics* 6 explains, they are ordered not toward a particular end but toward the general end of the whole of life. Therefore, good deliberating is not a virtue distinct from prudence.

**Objection 3:** In the case of the speculative sciences, inquiry and the making of determinations (*inquirere et determinare*) belong to the same science. Therefore, by parity of reasoning, in the practical sciences they belong to the same virtue. But to inquire belongs to *euboulia*, whereas to make determinations belongs to prudence. Therefore, *euboulia* is not a virtue that is different from prudence.

**But contrary to this:** As *Ethics* 6 explains, prudence issues commands (*est praeceptiva*). But this does not belong to *euboulia*. Therefore, *euboulia* is a virtue different from prudence.

**I respond:** As was explained above (q. 47, a. 4 and *ST* 1-2, q. 55, aa. 2-3), a virtue is properly ordered toward its act, which it renders good. And so virtues must be distinct in a way that corresponds to their diverse acts, and they must be distinct especially when it is not the case that the same character of goodness exists in their acts. For if the same character of goodness existed in them, then the diverse acts would belong to the same virtue. For instance, the goodness of love (*amor*), desire (*desiderium*), and joy (*gaudium*) depends on the same thing, and this is why all of them belong to the virtue of charity.

Now the acts of reason that are ordered toward a deed (*ad opus*) are diverse, and they do not have the same character of goodness, since it is by different sorts of goodness that a man is good at deliberating, good at judging, and good at giving commands. This is clear from the fact that these three things are sometimes separated from one another. And so it must be the case that *euboulia*, through which a man is good at deliberating, is a virtue distinct from prudence, through which a man is good at giving commands. And just as deliberating is ordered toward giving commands as something that is more principal than itself, so, too, *euboulia* is ordered toward prudence as a virtue which is more principal than it itself is and without which it itself would not even be a virtue—just as the moral virtues likewise would not exist without prudence, and just as the rest of the virtues would not exist without charity.

**Reply to objection 1:** What belongs to prudence is to deliberate well in an imperative manner, whereas what belongs to *euboulia* is to elicit good deliberation.

**Reply to objection 2:** The diverse acts are ordered toward a single ultimate end, viz., living the whole of life well, in a way that corresponds to different steps. For deliberating comes first, followed by judging, and the last step is commanding (*ultimum est praeceptum*), which is related *immediately* to the

ultimate end, whereas the other two acts are related *remotely* to the ultimate end. However, those two acts have certain proximate ends: deliberating has as a proximate end the discovery of what needs to be done, whereas judgment has certitude or firmness (*certitudo*) as a proximate end.

Hence, it does not follow from this that *euboulia* and prudence are not diverse virtues; what follows is that *euboulia* is ordered toward prudence in the way that a secondary virtue is ordered towards its principal virtue.

**Reply to objection 3:** Even among the speculative sciences, one rational science is dialectical and ordered toward an inquiry of discovery (*ad inquisitionem inventivam*), while another is demonstrative and determines the truth (*est veritatis determinativa*).

### Article 3

#### Is good judging [in ordinary cases] (*synesis*) a virtue?

It seems that good judging in ordinary cases (*synesis*) is not a virtue:

**Objection 1:** As *Ethics* 2 says, “Virtues do not exist in us by nature.” But *synesis* exists in some individuals by nature, as the Philosopher explains in *Ethics* 6. Therefore, *synesis* is not a virtue.

**Objection 2:** As it says in the same book (*Ethics* 6), *synesis* has to do only with judgment (*est solum iudicativa*). But judgment alone, without command, can also exist in bad actions. Therefore, since virtue exists only in good actions, it seems that *synesis* is not a virtue.

**Objection 3:** There is never a mistake in commanding unless there is a mistake in judging, at least in the case of a particular action, which is what every bad individual errs in. Therefore, if *synesis* is posited as a virtue of judging well, it seems that no other virtue is necessary for commanding well. And so prudence will be superfluous—which is absurd. Therefore, *synesis* is not a virtue.

**But contrary to this:** Judging is more perfect than deliberating. But *euboulia*, which is good deliberating, is a virtue. Therefore, *a fortiori*, *synesis*, which is good judging, is a virtue.

**I respond:** *Synesis* implies correct judgment not with respect to speculative matters, but rather with respect to the particular actions that prudence likewise has to do with. This is why from *synesis* certain men are called ‘*syneti*’ in Greek, i.e., men of sense, or ‘*eusyneti*’, i.e., men of good sense—just as, contrariwise, those who lack this virtue are called ‘*asyneti*’, i.e., lacking in good sense.

Now a diversity in virtues must correspond to a difference among acts that are not traced back to the same cause. But it is clear that being good at deliberating and being good at judging are not traced back to the same cause, since many individuals are good at deliberating but do not have good sense, i.e., do not judge correctly. Likewise, in speculative matters, there are some who are good at inquiring, because their reason is quick to run through different things—this seems to stem from the condition of their imaginative power, which is able to form diverse phantasms easily—and yet it sometimes happens that individuals of this sort are not good at judging, and this is due to a defect in their intellect and occurs especially because of a bad disposition on the part of the common sensory power of the one who is not good at judging. And so it must be the case that beyond *euboulia* there is another virtue, viz., being good at judging. And this virtue is called *synesis*.

**Reply to objection 1:** Correct judgment consists in the cognitive power’s apprehending a thing as it is in itself (*apprehendat rem aliquam secundum quod in se est*). This stems from a correct disposition on the part of the apprehensive power. In the same way, the forms of corporeal things are impressed on a mirror in the way that they are when the mirror is well disposed, whereas if the mirror is badly disposed, then what appear are images which are distorted and badly constituted.

Now a cognitive power’s being well disposed for receiving things as they are stems in its origins from nature and in its completion from exercise or from a gift of grace—and this in two ways:

In one way, *directly* on the part of the cognitive power itself, viz., because it is imbued with true and correct conceptions and not with bad ones, and this belongs to *synesis* insofar as it is a special virtue.

In the second way, *indirectly*, from the good disposition of the appetitive power, from which it follows that a man judges well concerning things that are desirable. And it is in this way that the good judgment that belongs to a virtue follows upon the habits of the moral virtues; but this sort of good judgment has to do with the ends, whereas *synesis* has to do rather with the means to the end.

**Reply to objection 2:** In bad individuals there can, to be sure, be correct judgment in general, but, as was established above (q. 47, a. 13), their judgment is always corrupted in the case of a particular action.

**Reply to objection 3:** It sometimes happens that what has been judged correctly is deferred or else carried out negligently or in a disordered way. And so following upon the virtue of being good at judging there has to be a final, principal, virtue, viz., being good at commanding—and this virtue is prudence.

#### Article 4

##### Is good judging in exceptional cases (*gnome*) a special virtue?

It seems that good judging in exceptional cases (*gnome*) is not a special virtue:

**Objection 1:** Because of *synesis*, one is said to be good at judging. But no one can be called good at judging unless he judges well in all matters. Therefore, *synesis* extends to passing judgment on everything. Therefore, there is no other virtue of judging well that is called '*gnome*'.

**Objection 2:** Judging falls between deliberating and commanding. But there is only one virtue that is good deliberating, viz., *euboulia*; and there is only one virtue that is good commanding, viz., prudence. Therefore, there is only one virtue that is good judging, viz., *synesis*.

**Objection 3:** Matters which occur rarely and in which one has to depart from common laws seem to be matters of chance, with respect to which, as *Physics 2* explains, there is nothing to reason about (*quorum non est ratio*). But all the intellectual virtues have to do with correct reasoning. Therefore, there is no intellectual virtue with respect to the matters just mentioned.

**But contrary to this:** In *Ethics 6* the Philosopher comes to the conclusion that *gnome* is a special virtue.

**I respond:** Cognitive habits are distinguished by higher or lower principles; for instance, in speculative matters wisdom (*sapientia*) takes into account higher principles than does scientific knowledge (*scientia*), and this is why they are distinct from one another. And so the same thing must also hold in matters of action.

Now it is clear that what lies beyond the order of a lower principle or cause is sometimes traced back to the order of a higher principle; for instance, abnormalities in the parts of animals (*monstruosi partus animalium*) lie outside the order of the active power in the semen, and yet they fall under the order of a higher principle, viz., of a celestial body or, further on, of divine providence. Hence, one who studied the active power in the semen could not judge with certitude about abnormalities of this sort, and yet they can be judged by taking divine providence into account (*secundum considerationem divinae providentiae*).

Now at times it happens that something has to be done outside of the common rules of action, e.g., that something one has been entrusted with should not be returned as long as one's homeland is under attack, or something else of this sort. And so one must pass judgment about such things by reference to principles that are higher than the common rules by reference to which *synesis* judges. And these higher principles require a higher virtue of judging, and this higher virtue is called *gnome*, which implies a sort

of perspicacity in judging.

**Reply to objection 1:** *Synesis* judges truly of all things that occur in accord with the common rules. But as has already been explained, there are certain other things that have to be judged outside of the common rules.

**Reply to objection 2:** A judgment should be based on a thing's proper principles, whereas an inquiry (*inquisitio*) is made by appeal to common principles as well. Hence, it is likewise the case that in speculative matters, dialectic, which has to do with inquiry, proceeds from general principles, whereas demonstrative science, which has to do with judgment, proceeds from proper principles. And so *euboulia*, which the inquiry of deliberation pertains to, is a single virtue for everything, whereas *synesis*, which has to do with judgment, is not. Command, on the other hand, looks to a single character of the good in all things, and so prudence is just a single virtue.

**Reply to objection 3:** The consideration of *everything* that can happen outside the common course of things belongs solely to God's providence, but among men the one who is more clear-sighted can judge many of these things by his own reason. And this is what *gnome* has to do with, since it implies a certain clear-sightedness of judgment.

## QUESTION 52

### The Gift of Counsel

Next we have to consider the gift of counsel (*donum consilii*), which corresponds to prudence. And on this topic there are four questions: (1) Should counsel be posited among the seven gifts of the Holy Spirit? (2) Does the gift of counsel correspond to the virtue of prudence? (3) Does the gift of counsel remain in heaven? (4) Does the fifth beatitude, i.e., “Blessed are the merciful,” correspond to the gift of counsel?

#### Article 1

##### Should counsel be posited among the gifts of the Holy Spirit?

It seems that counsel (*consilium*) should not be posited among the gifts of the Holy Spirit:

**Objection 1:** As is clear from Gregory in *Moralia* 2, the gifts of the Holy Spirit are given to assist the virtues. But as is clear from what has been said above (q. 47, a. 1 and q. 51, aa. 1-2), a man is sufficiently perfected in deliberating or taking counsel (*ad consiliandum*) by the virtue of prudence—or even by the virtue of *euboulia*. Therefore, counsel should not be posited among the gifts of the Holy Spirit.

**Objection 2:** The difference between the seven gifts of the Holy Spirit and gratuitously given grace (cf. *ST* 1-2, q. 111, a. 1) seems to be that gratuitously given grace is not given to everyone but is instead distributed to different individuals, whereas the gifts of the Holy Spirit are given to everyone who has the Holy Spirit. But counsel seems to be one of those things that is given by the Holy Spirit in a special way to certain individuals—this according to 1 Maccabees 2:65 (“Behold Simon your brother; he is a man of counsel”). Therefore, counsel should be posited among the gratuitously given graces rather than among the seven gifts of the Holy Spirit.

**Objection 3:** Romans 8:14 says, “Those who are led by the Spirit of God are the sons of God.” But counsel does not belong to those who are led by another. Therefore, since the gifts of the Holy Spirit belong to the sons of God, who have received the spirit of adoption as sons, it seems that counsel should not be posited among the gifts of the Holy Spirit.

**But contrary to this:** Isaiah 11:2 says, “The Spirit of counsel and fortitude rests upon him.”

**I respond:** As was explained above (*ST* 1-2, q. 68, a. 1), the gifts of the Holy Spirit are certain dispositions by which the soul is rendered easily moveable by the Holy Spirit.

Now God moves each thing in accord with the mode of the thing that is moved; for instance, as Augustine puts it in *Super Genesim ad Litteram*, “He moves a corporeal creature through time and place, whereas he moves a spiritual creature through time and not place.” But it is proper to a rational creature to be moved to do something through the inquiry of deliberation (*per inquisitionem consilii*). And so the Holy Spirit moves a rational creature in the mode of counsel. And it is for this reason that counsel is posited among the gifts of the Holy Spirit.

**Reply to objection 1:** Prudence or *euboulia*, whether acquired or infused, directs a man in the inquiry of deliberation in accord with what reason is able to comprehend. Hence, through prudence or *euboulia* a man comes to be good at deliberating for himself or for another.

However, because human reason is unable to comprehend all the singular and contingent things that can occur (*non potest comprehendere singularia et contingentia quae occurre possunt*), it turns out that, as Wisdom 9:14 says, “the thoughts of mortals are timid, and our counsels are uncertain.” And so a man needs to be directed in the inquiry of deliberation by God, who comprehends all things. This occurs through the gift of counsel, through which a man is directed, as it were, by counsel that he receives from God—just as, in human affairs, those who are not sufficient unto themselves in the inquiry of deliberation likewise require counsel from those who are wiser.

**Reply to objection 2:** The fact that someone is so good at deliberating that he offers his counsel to

others can be associated with a gratuitously given grace. But it is common to all who are holy (*commune omnium sanctorum*) that they have from God the counsel as to what should be done in matters that are necessary for salvation

**Reply to objection 3:** The sons of God are led by the Holy Spirit according to their own mode, viz., preserving free choice, which is a faculty of the will and of reason. And so to the extent that reason is instructed by the Holy Spirit with respect to what needs to be done, the gift of counsel belongs to the sons of God.

## Article 2

### Does counsel fittingly correspond to the virtue of prudence?

It seems that counsel does not fittingly correspond to the virtue of prudence.:

**Objection 1:** As is clear from Dionysius in *De Divinis Nominibus*, chap. 7, what is lower is such that at its highest it touches what is higher—in the way that man touches the angel by his intellect. But as was established above (*ST* 1-2, q. 68, a. 8), a cardinal virtue is lower than its gift. Therefore, since deliberating is the first and lowest act of prudence, whereas its highest act is to command and its middle act is to judge, it seems that the gift corresponding to prudence is not counsel or deliberation (*non sit consilium*), but rather judgment or command.

**Objection 2:** Assistance is sufficiently offered to a single virtue by a single gift, since, as is proved in *Liber de Causis*, to the extent that something is higher, it is more unified. But assistance to prudence is offered through the gift of knowledge, which, as was established above (q. 9, a. 3), is not just speculative but practical as well. Therefore, the gift of counsel does not correspond to the virtue of prudence.

**Objection 3:** As has been established (q. 50, a. 1), it belongs properly to prudence to direct. But as has been explained (a. 1), it belongs to the gift of counsel that a man be directed by God. Therefore, the gift of counsel does not belong to the virtue of prudence.

**But contrary to this:** The gift of counsel concerns things that have to be done for the sake of an end. But prudence likewise has to do with such things. Therefore, prudence and the gift of counsel correspond to one another.

**I respond:** A lower principle of movement is assisted and perfected mainly through being moved by a higher principle of movement, in the way that a body is assisted and perfected through being moved by a spirit.

Now it is clear that the rectitude of human reason is related to God's reason in the way that a lower principle of movement is related to a higher principle; for eternal reason is the highest rule of all human rectitude. And so prudence, which implies the rectitude of reason, is perfected and assisted especially insofar as it is regulated and moved by the Holy Spirit. And, as has been explained, this involves the gift of counsel. Hence, the gift of counsel corresponds to prudence in the sense that it assists and perfects it.

**Reply to objection 1:** Judgment and command belong not to what is moved but rather to what effects movement. And since, as was explained above (a. 1 and *ST* 1-2, q. 68, a. 1), in the case of the gifts of the Holy Spirit, the human mind behaves not as what effects movement but instead as what is moved, it follows that it would not be appropriate for the gift corresponding to prudence to be called either command or judgment. Instead, it is appropriately called 'counsel', which can signify the mind's being counseled by another who counsels it.

**Reply to objection 2:** Since the gift of knowledge exists in the speculative part of the soul, it does not directly correspond to prudence, but it does assist prudence by a certain extension. By contrast, the gift of counsel directly corresponds to prudence insofar as it has to do with the same things that prudence

has to do with.

**Reply to objection 3:** A moved mover effects movement by the fact that it is moved. Hence, by the very fact that the human mind is directed by the Holy Spirit, it is able to direct itself and others.

### Article 3

#### Does the gift of counsel remain in heaven?

It seems that the gift of counsel does not remain in heaven (*non maneat in patria*):

**Objection 1:** Counsel concerns things that have to be done for the sake of an end. But in heaven nothing will have to be done for the sake of an end, since men will be enjoying the ultimate end there. Therefore, the gift of counsel does not exist in heaven.

**Objection 2:** Counsel or deliberation (*consilium*) implies hesitation, since, as is evident from the Philosopher in *Ethics* 3, in matters that are clear it is ridiculous to deliberate. But in heaven all hesitation will be done away with. Therefore, there is no counsel in heaven.

**Objection 3:** In heaven the saints are especially conformed to God—this according to 1 John 3:2 (“When He appears, we shall be like Him”). But deliberation does not belong to God—this according to Romans 11:34 (“Who was His counselor?”). Therefore, neither does the gift of counsel belong to the saints in heaven.

**But contrary to this:** In *Moralia* 32 Gregory says, “When either the guilt or the righteousness of each nation is brought into the counsel of the highest court, the head of that nation is presented as having won in the struggle or as not having won.”

**I respond:** As has been explained (a. 1 and *ST* 1-2, q. 68, a. 1), a gift of the Holy Spirit has to do with a rational creature’s being moved by God. Now there are two things that have to be taken into account concerning the moving of the human mind by God:

The *first* is that the disposition of that which is moved *while it is being moved* is different from its disposition *when it is at the end of the movement*. When what is effecting a movement is just a principle of effecting the movement, then as soon as the movement ceases, the mover’s action ceases on the thing moved, which has now arrived at the terminus. For instance, after a house has been built, then it is no longer being built by the builder. By contrast, when what is effecting a movement is not just a cause of effecting the movement, but is also a cause of the very form toward which the movement is aimed, then the action of what effects the movement does not cease even after the acquisition of the form. For instance, the sun illuminates the air even after the air has been illuminated. And it is in this latter way that God causes both virtue and cognition in us, not only when we first acquire them but also for as long as we persevere in them. And so in the blessed of heaven God causes cognition of what is to be done, not as if He were causing it in those who are ignorant, but in the sense of prolonging in them the cognition of what is to be done.

However, there are certain things which the blessed in heaven—whether angels or men—do not have cognition of and which are not part of the essence of beatitude, but instead have to do with the governance of things in accord with divine providence. And in this regard, there is a *second* thing that has to be taken into account, viz., that the minds of the blessed in heaven are moved by God in a way different from that in which the minds of those in this life are moved by God. For the minds of those in this life are moved by God in matters of action through having an anxiety of hesitation seated in them beforehand. By contrast, in the minds of the blessed in heaven there is a simple lack of knowledge of things they have no cognition of (a lack of knowledge that the angels are likewise cleansed by, according to Dionysius in *De Ecclesiastica Hierarchia*, chap. 6), and there is no inquiry borne of hesitation in them, but instead a simple turning to God. And this is what it is for God to counsel them. As Augustine puts it

in *Super Genesim ad Litteram* 5, the angels “take counsel with God (*Deum consulunt*) about lower things,” and this is why the instruction by which they are instructed by God on these matters is called ‘counsel’.

Accordingly, the gift of counsel exists in the blessed in heaven, both insofar as their cognition of what they already know is prolonged and insofar as they are illuminated about what they do not know regarding what needs to be done.

**Reply to objection 1:** Even in the blessed in heaven there are some acts ordered toward an end, either in the sense that these acts proceed from the attainment of their end, as when they praise God, or in the sense that by those acts they draw others toward the end that they themselves have attained, as is the case with the ministry of the angels and the prayers of the saints. And in this regard the gift of counsel has a place in them.

**Reply to objection 2:** Hesitation belongs to deliberation or counsel in the state of the present life, but it does not belong to counsel insofar as it exists in heaven. In the same way, the cardinal virtues likewise do not have altogether the same acts in heaven as in this life.

**Reply to objection 3:** Counsel exists in God not as in one who receives counsel but as in one who gives counsel. And the saints in heaven are conformed to God as the one who receives is conformed to the one who gives (*sicut recipiens influenti*).

#### Article 4

##### Does the fifth beatitude, which is about mercy, correspond to the gift of counsel?

It seems that the fifth beatitude, which is about mercy, does not correspond to the gift of counsel:

**Objection 1:** As was established above (*ST* 1-2, q. 69, a. 1), all the beatitudes are acts of the virtues. But through counsel our acts are directed in *all* of the virtues. Therefore, the fifth beatitude does not correspond to counsel more than any other beatitude does.

**Objection 2:** Precepts are given concerning those things that are necessary for salvation, whereas a counsel is given concerning things that are not necessary for salvation. Now mercy is necessary for salvation—this according to James 2:13 (“Judgment without mercy to him who has not shown mercy”)—whereas poverty is not necessary for salvation but instead, as is clear from Matthew 19:21, has to do with a life’s perfection. Therefore, it is the beatitude concerning poverty, rather than the beatitude concerning mercy, that corresponds to the gift of counsel.

**Objection 3:** The fruits [of the Holy Spirit] follow upon the beatitudes, since they involve a certain spiritual delight that follows upon perfect acts of the virtues. But as is clear from Galatians 5:22-23, nothing corresponding to the gift of counsel is posited among the fruits. Therefore, the beatitude about mercy likewise does not correspond to the gift of counsel.

**But contrary to this:** In *De Sermone Domini in Monte* Augustine says, “Counsel befits the merciful, since forgiving others and giving to them is the only remedy for rooting out such great evils.”

**I respond:** Counsel has to do, properly speaking, with what is useful for an end. Hence, what is especially useful for an end ought especially to correspond to the gift of counsel. But such is mercy—this according to 1 Timothy 4:8 (“Compassion (*pietas*) is useful for all things”). And so counsel corresponds to the beatitude concerning mercy, not in the sense that it elicits mercy, but in the sense that it directs mercy.

**Reply to objection 1:** Even if counsel directs all acts of the virtues, it nonetheless especially directs the operations of charity, and for the reason already explained.

**Reply to objection 2:** Insofar as counsel is a gift of the Holy Spirit, it directs us in *all the things* that are ordered toward the end of eternal life, whether or not they are necessary for salvation.

Still, not every work of mercy is necessary for salvation.

**Reply to objection 3:** A fruit implies something ultimate. However, in practical matters what is ultimate lies not in cognition but in operation, viz., the end. And so nothing pertaining to practical cognition is posited among the fruits; instead what is posited is that which belongs to the operations that practical cognition directs. Among these are goodness and kindness, which correspond to mercy.

## QUESTION 53

### Imprudence

Next we have to consider the vices opposed to prudence. Now in *Contra Iulianum* 4 Augustine says, “In the case of all the virtues, there are not just vices that are contrary by an obvious distinction, in the way that temerity or recklessness (*temeritas*) is contrary to prudence, but there are also vices that are in some sense close to the virtue—not in reality, but in the sense that they are similar by a certain deceptive appearance, in the way that craftiness (*astutia*) is similar to prudence itself.” Therefore, we have to consider, first, the vices which have an obvious contrariety to prudence and which are vices stemming from a lack of prudence or of what is required for prudence (questions 53-54), and then, second, we have to consider vices which have a certain deceptive similarity to prudence and which occur through the misuse of what is required for prudence (question 55).

Now since solicitude belongs to prudence, there are two topics to be considered under the first point: the first is imprudence (question 53) and the second is negligence, which is opposed to solicitude (question 54).

As regards the first topic, there are six questions: (1) Is imprudence (*imprudentia*) a sin? (2) Is imprudence a special sin? (3) Is precipitateness (*praecipitatio*), i.e., temerity or recklessness (*temeritas*), a sin? (4) Is not taking account of things (*inconsideratio*) a sin? (5) Is inconstancy (*inconstantia*) a sin? (6) What is the origin of these vices?

### Article 1

#### Is imprudence a sin?

It seems that imprudence (*imprudentia*) is not a sin:

**Objection 1:** As Augustine points out, every sin is voluntary. But imprudence is not something voluntary, since no one wills to be imprudent. Therefore, imprudence is not a sin.

**Objection 2:** No sin except original sin is born with a man. But imprudence is born with a man; that is why young people are imprudent. And imprudence is not original sin, which is opposed to original justice. Therefore, imprudence is not a sin.

**Objection 3:** Every sin is removed through repentance (*per poenitentiam*). But imprudence is not removed through repentance. Therefore, imprudence is not a sin.

**But contrary to this:** The spiritual treasure of grace is destroyed only by sin. But it is destroyed by imprudence—this according to Proverbs 21:20 (“There is a treasure to be desired, and oil in the dwelling of the just, and the foolish man (*homo imprudens*) will waste it”).

**I respond:** There are two ways in which imprudence can be taken: (a) as a *privation* (*privative*) and (b) as a *contrary* (*contrarie*). However, it is not properly taken as a *negation* (*negative*), i.e., in a way that implies a simple lack of prudence, since a simple lack of prudence can exist without sin.

Imprudence is taken as a *privation* insofar as someone lacks the prudence that he is able to have and ought to have. Taken in this sense, imprudence is a sin by reason of the *negligence* because of which one does not make the effort to have prudence.

Imprudence is taken as a *contrary* insofar as reason acts or is moved in a way that is contrary to prudence. For instance, if the rectified reason (*recta ratio*) that belongs to prudence acts by deliberating, the imprudent individual spurns the deliberation—and so on for the other things that have to be attended to in an act of prudence. And imprudence in this sense is a sin with respect to the proper nature of prudence. For it cannot happen that a man acts contrary to prudence except by departing from the rules by which the reasoning that belongs to prudence is rectified. Hence, if this happens through a turning away from divine rules, it is a mortal sin—as when someone acts precipitately by disdain and repudiating divine teachings. On the other hand, if he acts outside these teachings without contempt and

without detriment to what is necessary for salvation, then it is a venial sin.

**Reply to objection 1:** No one wills the deformity of imprudence, but a temerarious individual, who wills to act precipitately, wills an act of imprudence. Hence, in *Ethics* 4 the Philosopher says, “One who sins willfully against prudence is less commended.”

**Reply to objection 2:** This argument goes through with respect to imprudence insofar as imprudence is taken as a negation.

Still, notice that the absence of prudence—along with the absence of every virtue—is included within the absence of original justice, which had perfected the whole soul. And in this sense every absence of a virtue can be traced back to original sin.

**Reply to objection 3:** Infused prudence is restored through repentance, and in that way the lack of this sort of prudence ceases. However, acquired prudence is not restored by repentance as far as the habit is concerned; instead, the contrary act, which the sin of imprudence properly consists in, is removed.

## Article 2

### Is imprudence a special sin?

It seems that imprudence is not a special sin:

**Objection 1:** Everyone who sins acts against right reason, i.e., against prudence. But as has been explained (a. 1), imprudence consists in one’s acting against prudence. Therefore, imprudence is not a special sin.

**Objection 2:** Prudence is more akin to moral acts than scientific knowledge is. But ignorance, which is opposed to scientific knowledge, is posited among the general causes of sin. Therefore, *a fortiori*, imprudence should be posited among the general causes of sin.

**Objection 3:** Sins occur because the circumstances for the virtues are corrupted; this is why Dionysius says in *De Divinis Nominibus*, chap. 4, “Evil occurs because of singular defects.” But many things are required for prudence, e.g., reasoning, understanding, docility, and the rest of the things that were posited above (qq. 48-49). Therefore, there are many species of imprudence. Therefore, imprudence is not a special sin.

**But contrary to this:** As has been explained (a. 1), imprudence is contrary to prudence. But prudence is a single special virtue. Therefore, imprudence is a single special vice.

**I respond:** There are two ways in which a vice or sin can be called general: in the *first* way, *absolutely speaking*, viz., because it is general with respect to *all* sins; and, in the *second* way, because it is general *relative to* certain vices that are its species.

Now in the *first* mode there are two ways in which a vice can be called general:

(a) in the first way, *by its essence*, viz., because it is predicated of all sins. And imprudence is not a general sin in this sense, just as prudence is not a general virtue in this sense, since they have to do with specific acts, viz., with the very acts of reason.

(b) in the second way, *by participation*. And in this sense imprudence is a general sin. For just as prudence participates in some way in all the virtues insofar as it directs them, so, too, imprudence participates in some way in all vices and sins. For no sin can occur unless there is a defect in some act of reason as directing, and this pertains to imprudence.

On the other hand, if imprudence is being called a general sin *relative to some genus* and not absolutely speaking, viz., because it contains many species under itself, then in this sense imprudence is a general sin. For there are three ways in which it contains diverse species:

(a) *by being opposed to the different subjective parts of prudence*. For in the same way that, as was established above (q. 48), prudence is divided into *monastic prudence* (*prudencia monastica*), which

guides a single individual, and into other species of prudence which guide a multitude, so the same thing holds for imprudence.

(b) *with respect to the potential parts of prudence*, which are adjoined virtues and are enumerated according to the diverse acts of reason. Accordingly, with respect to a defect in *deliberating*, concerning which there is [the virtue of] *euboulia*, the species of imprudence is *precipitateness* or *recklessness* (*praecipitatio sive temeritas*), whereas with respect to a defect in *judging*, concerning which there are [the virtues of] *synesis* and *gnome*, the species of imprudence is *not taking account of things* (*inconsideratio*), and with respect to a defect in *commanding* itself, which is the proper act of prudence, the species of imprudence are inconstancy (*inconstantia*) and negligence (*negligentia*).

(c) *by being opposed to what is required for prudence*, i.e., *to the integral parts, as it were, of prudence*. But since all of these parts are directed toward the three acts of reason just mentioned, it follows that all the opposed defects are traced back to the four species (*partes*) named above. For instance, a lack of caution (*incautela*) and a lack of circumspection (*incircumspectio*) are included under not taking account of things, while the fact that one falls short in docility or memory or reasoning pertains to precipitateness, and a lack of foresight (*improvidentia*) and failures of understanding and shrewdness (*defectus intelligentiae et solertiae*) pertain to negligence and inconstancy.

**Reply to objection 1:** This argument goes through for the sort of generality that involves participation.

**Reply to objection 2:** Since scientific knowledge is more remote from moral acts than prudence is, in keeping with the proper nature of each of them, it follows that ignorance has the nature of a mortal sin not in its own right, but only by reason of a previous negligence or an ensuing effect. And this is the reason why ignorance is posited among the general causes of sin. By contrast, imprudence involves moral vice by its own nature, and this is why it is instead posited as a special sin.

**Reply to objection 3:** When the corruption of the different circumstances has the same motive, then the species of a sin is not diversified; for instance, someone's taking something that does not belong to him *where* he ought not to is a sin of the same species as his taking something that does not belong to him *when* he ought not to. By contrast, if there were different motives, then there would be different species of sin—for instance, if one individual took something *where* he ought not to in order to inflict damage on a sacred place, which would make for the species *sacrilege*, whereas another did it *when* he ought not to just because of his excessive desire for it, which would be simple *avarice*.

And so, as has been explained, defects in the things required for prudence do not make for different species except insofar as they are ordered toward diverse acts of reason.

### Article 3

#### Is precipitateness (*praecipitatio*) a sin contained under imprudence?

It seems that precipitateness (*praecipitatio*) is not a sin contained under imprudence:

**Objection 1:** Imprudence is opposed to the virtue of prudence. But precipitateness is opposed to the gift of counsel; for in *Moralia* 2 Gregory says that the gift of counsel is given in opposition to precipitateness. Therefore, precipitateness is not a sin contained under imprudence.

**Objection 2:** Precipitateness seems to belong to temerity or recklessness (*videtur ad temeritatem pertinere*). But temerity implies presumption, which belongs to pride. Therefore, precipitateness is not a vice contained under prudence.

**Objection 3:** Precipitateness seems to involve a sort of disordered hurriedness (*videtur importare quandam inordinatam festinationem*). But in the case of deliberating, it is possible for there to be a sin not only because one is in a hurry, but also if one is excessively slow, with the result that the opportunity

for acting is lost. Therefore, precipitateness should not be posited as a sin contained under prudence more than slowness is—or any other thing of this sort that involves a disorder in deliberating.

**But contrary to this:** Proverbs 4:19 says, “The way of the wicked is dark, they know not where they fall.” But the darkness of the way of wickedness has to do with imprudence. Therefore, to fall, i.e., to go over the precipice (*corruere sive praecipitari*), pertains to imprudence.

**I respond:** In the case of acts of the soul, precipitateness is predicated metaphorically in accord with a similarity taken from corporeal movement. In the case of corporeal movement, to fall precipitately is for something to arrive at the lowest places from the highest with a certain vehemence that derives either from its own movement or from something that impels it—and not by descending gradually in an orderly fashion. Now the highest point of the soul is reason itself and the lowest point is an operation exercised through the body, whereas the middle places, through which one must descend in an orderly fashion, include the *memory* of past things, the *understanding* of present things, *shrewdness* in considering future events, *reasoning* that connects one thing to another, and *docility*, through which one acquiesces in the opinions of those in charge. And by these steps one descends in an orderly fashion by rightly deliberating. By contrast, if one falls into an action through an impulsive movement of will or of passion, skipping over steps of this sort, there will be precipitateness. Therefore, since a disorder in deliberating pertains to imprudence, it is clear that the vice of precipitateness is contained under imprudence.

**Reply to objection 1:** As was explained above (q. 52, a. 2), rectitude in deliberating involves both the gift of counsel and the virtue of prudence, though in different ways. And so precipitateness is contrary to both of them.

**Reply to objection 2:** Things are said to be done temerarily (*temere*) when they are not directed by reason. There are two ways in which this can happen: (a) because of an impulsive movement of will or of passion; and (b) out of contempt for the directing rule. And it is the second way that properly involves temerity (*temeritas*). This is why temerity or recklessness seems to have its root in pride, which refuses to be subject to the direction of another.

Now precipitateness is related to both of these. Hence, temerity is contained under precipitateness, even though precipitateness has more to do with the first way above.

**Reply to objection 3:** In the inquiry that belongs to deliberating there are many particular things that have to be taken account of, and this is why, in *Ethics* 6, the Philosopher says, “One must deliberate slowly.” Hence, precipitateness is more directly opposed to rectitude of deliberating than is excessive slowness, which has a sort of similarity to correct deliberating.

#### Article 4

##### Is not taking account of things (*inconsideratio*) a special sin contained under imprudence?

It seems that not taking account of things (*inconsideratio*) is not a special sin contained under imprudence:

**Objection 1:** Divine law does not induce us toward any sin—this according to Psalm 18:8 (“The law of the Lord is unspotted”). But it does induce us toward not taking account of things—this according to Matthew 10:19 (“Do not give thought to how you will speak or what you are to say”). Therefore, not taking account of things is not a sin.

**Objection 2:** Whoever deliberates must take account of many things. But precipitateness occurs through a defect in deliberating and, as a result, from a defect in taking account of things. Therefore, precipitateness is contained under not taking account of things. Therefore, not taking account of things is not a special sin.

**Objection 3:** Prudence consists in acts of practical reason, viz., deliberating, judging about what has been deliberated, and commanding. But taking account of things precedes all these acts, since it belongs to the speculative intellect as well. Therefore, not taking account of things is not a special sin contained under imprudence.

**But contrary to this:** Proverbs 4:25 says, “Let your eyes look straight ahead, and let your gaze precede your steps”—which has to do with prudence. But the contrary of this occurs by not taking account of things. Therefore, not taking account of things is a special sin contained under imprudence.

**I respond:** Taking account of something involves an act of the intellect grasping the truth of a thing. Now in the same way that inquiring has to do with reasoning, judging has to do with understanding. Hence, in speculative matters demonstrative science is called *adjudicative* insofar as, through a resolution into first intelligible principles, one passes judgment on the truth of what is inquired into. And so taking account of things belongs especially to judgment.

Thus, a defect in right judgment has to do with the vice of not taking account of things, viz., insofar as one falls short in judging rightly because he disdains or neglects to attend to those things from which a correct judgment proceeds. Hence, it is clear that not taking account of things is a sin.

**Reply to objection 1:** Our Lord does not prohibit taking account of things that are to be done or said when a man has the opportunity to do so. Instead, in the cited passage He is giving the disciples confidence that when the opportunity is lacking, either because of their inexperience or because they are overtaken suddenly, they may trust in God’s guidance alone; for, as 2 Paralipomenon 20:12 says, “When we do not know what we have to do, all we have left is to turn our eyes to God.” Otherwise, if a man fails to do what he can and just looks for divine assistance, he seems to be tempting God.

**Reply to objection 2:** The whole consideration of what is attended to in deliberating is ordered toward judging rightly, and so taking account of things is brought to completion in judging. Hence, not taking account of things is likewise opposed especially to rectitude of judgment.

**Reply to objection 3:** ‘Not taking account of things’ is being understood here with respect to a determinate subject matter, i.e., with respect to human actions, in which more things have to be attended to in judging correctly than in the case of speculative matters. For operations have to do with singulars.

## Article 5

### Is inconstancy (*inconstantia*) a vice contained under imprudence?

It seems that inconstancy (*inconstantia*) is not a vice contained under imprudence:

**Objection 1:** Inconstancy seems to consist in a man’s not persisting in some difficulty. But persisting in difficulties pertains to fortitude. Therefore, inconstancy is opposed to fortitude rather than to prudence.

**Objection 2:** James 3:16 says, “Where jealousy and contention exist, there is inconstancy and every evil deed.” But jealousy pertains to envy. Therefore, inconstancy pertains not to prudence, but to envy instead.

**Objection 3:** It seems that the inconstant individual is one who does not persevere in what he had proposed to do. But as *Ethics* 6 explains, in matters of pleasure this belongs to someone who is *incontinent*, whereas in matters of pain it belongs to someone who is *soft* or *squeamish* (*ad mollem sive delicatum*). Therefore, inconstancy does not belong to imprudence.

**But contrary to this:** It belongs to prudence to prefer a greater good to a lesser good. Therefore, to withdraw from what is better belongs to imprudence. But this is inconstancy. Therefore, inconstancy pertains to imprudence.

**I respond:** Inconstancy implies a sort of retreat from a good that had been intended and fixed

(*recessum a bono proposito et definito*). Now a retreat of this sort does, to be sure, have a beginning in the appetitive power, since one does not retreat from a good that had been intended beforehand except because of something that pleases him in a disordered way. However, this retreat is brought to completion only through a defect in reason, which mistakenly repudiates what it had rightly accepted, and which, because it is able to resist the impulsive movement of passion, is such that if it does not resist it, this stems from its own weakness in not holding on firmly to the good that had been conceived. And so as far as its consummation is concerned, inconstancy involves a defect of reason.

Now just as every instance of the rectitude of practical reason belongs in some way to prudence, so every defect in the rectitude of practical reason belongs to imprudence. And so, as regards its consummation, inconstancy belongs to imprudence. And just as precipitateness stems from a defect in the act of deliberating, and just as not taking account of things stems from a defect in the act of judging, so inconstancy stems from a defect in the act of commanding. For someone is called inconstant from the fact that reason fails to command what has been deliberated and judged.

**Reply to objection 1:** The good of prudence participates in all the moral virtues and, accordingly, persistence in the good pertains to all the moral virtues—though mainly to fortitude, which undergoes a stronger impulse toward the contrary.

**Reply to objection 2:** Envy—along with anger, which is a source of contention—make for inconstancy on the part of the *appetitive* power; and, as has been explained, the beginnings of inconstancy lie in the appetitive power.

**Reply to objection 3:** Continence and perseverance seem to exist only in reason and not in the appetitive power. For the continent individual undergoes perverse sense desires and the persevering individual undergoes serious sorrows, which are signs of a defect in the appetitive power, whereas it is reason that firmly persists—the reason of the continent individual against the sense desires, and the reason of the persevering individual against the sorrows. Hence, continence and perseverance seem to be species of constancy that belong to reason, and it is likewise to reason that inconstancy belongs.

## Article 6

### Do the vices just discussed arise from lust?

It seems that the vices just discussed do not arise from lust (*ex luxuria*):

**Objection 1:** As has been explained, inconstancy arises from envy. But envy is a vice distinct from lust. Therefore, the vices just discussed do not arise from lust.

**Objection 2:** James 1:8 says, “A double-minded man is inconstant in all his ways.” But double-mindedness seems to pertain not to lust, but rather to cunning (*dolositas*), which, according to Gregory in *Moralia* 31, is a child of avarice. Therefore, the vices just discussed do not arise from lust.

**Objection 3:** The vices just discussed have to do with a defect in reason. But spiritual vices are closer to reason than carnal vices are. Therefore, the vices just discussed arise more from spiritual vices than from carnal vices.

**But contrary to this:** In *Moralia* 31 Gregory asserts that the vices just discussed arise from lust.

**I respond:** As the Philosopher says in *Ethics* 6, “It is especially pleasure that corrupts the judgment of prudence (*delectatio maxime corrumpit existimationem prudentiae*)”—and mainly the pleasure that exists in sexual activity, which occupies the whole soul and draws one toward sensual pleasure. Hence, since, as has been established (aa. 2 and 5), the vices just discussed involve a defect in prudence and practical reason, it follows that they arise especially from lust.

**Reply to objection 1:** Envy and anger cause inconstancy by drawing reason toward some other thing, but lust causes inconstancy by totally extinguishing the judgment of reason. Hence, in *Ethics* 7 the

Philosopher says, “The individual who is incontinent because of anger listens to reason, yet not perfectly, whereas an individual who is incontinent because of lust does not listen to it at all.”

**Reply to objection 2:** Double-mindedness is likewise something that follows upon lust, just as inconstancy does, insofar as double-mindedness involves the mind’s fluctuating between diverse things. Hence, in *Eunuchus* Terence says, “In love there is war, and likewise peace and armistice.”

**Reply to objection 3:** Carnal vices extinguish the judgment of reason to a greater degree insofar as they lead one further away from reason.

## QUESTION 54

### Negligence

Next we have to consider negligence. And on this topic there are three questions: (1) Is negligence (*negligentia*) a specific sin? (2) Which virtue is negligence opposed to? (3) Is negligence a mortal sin?

#### Article 1

##### Is negligence a specific sin?

It seems that negligence (*negligentia*) is not a specific sin:

**Objection 1:** Negligence is opposed to diligence (*diligentia*). But diligence is required in *every* virtue, in the same way that wise choosing (*eligentia*) is. Therefore, negligence is not a specific sin.

**Objection 2:** Something that is found in every sin is not a specific sin. But negligence is found in every sin, since everyone who sins neglects that by which he might withdraw from the sin, and everyone who persists in a sin neglects to be contrite with respect to that sin. Therefore, negligence is not a specific sin.

**Objection 3:** Every specific sin has a determinate subject matter. But negligence does not seem to have a determinate subject matter. For it does not have to do with what is bad or indifferent, since failing to do such things is not imputed to anyone as negligence; similarly, it does not have to do with what is good, since if good things are done negligently, then they are no longer good. Therefore, it seems that negligence is not a specific vice.

**But contrary to this:** Sins that are committed out of negligence are distinct from sins that are committed out of contempt.

**I respond:** Negligence implies a lack of due care or solicitude (*importat defectum debitae sollicitudinis*). But every instance of the lack of a due act has the nature of a sin. Hence, it is clear that negligence has the nature of a sin; and in the same way that care or solicitude is the act of a specific virtue, it must be the case that negligence is a specific sin.

For some sins are specific because they have to do with a specific subject matter, in the way that lust has to do with sexual matters; but other vices are specific because of the specificity of an act that extends to every subject matter. All the vices that have to do with acts of reason are of this latter type, since every type of act of reason extends to every moral subject matter whatsoever. And so, since, as was established above (q. 47, a. 9), care or solicitude is a specific act of reason, it follows that negligence, which involves a lack of care or solicitude, is a specific sin.

**Reply to objection 1:** Diligence (*diligentia*) seems to be the same thing as solicitude, because we show greater solicitude for things that we love (*diligimus*). Hence, diligence, like solicitude, is required for every virtue insofar as the due acts of reason are required in every virtue.

**Reply to objection 2:** In every sin there has to be some defect in an act of reason, e.g., a defect in deliberating, etc. Hence, just as precipitateness, even though it can be found in every genus of sin, is a specific sin because of the omission of a specific act of reason, viz., deliberating, so, too, negligence, even though it is in some sense found in all sins, is a specific sin because of the lack of the specific act of reason which is care or solicitude.

**Reply to objection 3:** The subject matter of negligence consists in the good things that one ought to do—not in the sense that the things themselves are good when they are done negligently, but in the sense that a lack of goodness accrues to them through negligence, either because the due act is totally omitted because of a lack of solicitude or because some due circumstances of the act are omitted.

## Article 2

### Is negligence opposed to prudence?

It seems that negligence is not opposed to prudence:

**Objection 1:** As is clear from Gregory in *Moralia* 31, negligence seems to be the same thing as laziness (*pigritia*) or listlessness (*torpor*), which have to do with acedia. But as was explained above (q. 35, a. 3), acedia is opposed not to prudence, but instead to charity. Therefore, negligence is not opposed to prudence.

**Objection 2:** Every sin of omission seems to belong to negligence. But a sin of omission is opposed not to prudence, but instead to the moral virtues that involve the execution of deeds (*virtutibus moralibus executivis*). Therefore, negligence is not opposed to prudence.

**Objection 3:** Imprudence has to do with acts of reason. But *negligence* does not imply a defect in deliberating, since *precipitateness* is a failure in deliberating; nor does it imply a defect in judging, since *not taking account of things* is a failure in judging; nor does it imply a defect in commanding, since *inconstancy* is a failure in commanding (cf. q. 53). Therefore, negligence does not have to do with prudence.

**Objection 4:** Ecclesiastes 7:19 says, “He who fears God does not neglect anything.” But each sin is principally excluded by the opposite virtue. Therefore, negligence is opposed to fear [of the Lord] rather than to prudence.

**But contrary to this:** Ecclesiasticus 20:7 says, “One who is licentious and imprudent will not observe the proper time.” But this has to do with negligence. Therefore, negligence is opposed to prudence.

**I respond:** Negligence is directly opposed to care or solicitude. But solicitude pertains to reason, and rectitude in solicitude pertains to prudence. Hence, contrariwise, negligence pertains to imprudence.

And this is likewise evident from the name itself. For as Isidore says in *Etymologia*, “The negligent individual (*negligens*) is one who does not choose, either (*nec eligens*).” But the correct choice of the means to an end pertains to prudence. Hence, negligence pertains to imprudence.

**Reply to objection 1:** Negligence consists in the failure of an interior act to which choice likewise pertains. By contrast, laziness (*pigritia*) and listlessness (*torpor*) pertain more to execution, though in such a way that laziness implies a slowness to execute, whereas listlessness implies a certain lack of intensity in the execution itself. And so listlessness is properly born of acedia, since acedia is a heavy sadness, i.e., something that impedes the mind from operating.

**Reply to objection 2:** Omission pertains to the exterior act, since there is an omission when some due act is omitted. And so omission is opposed to justice and is an effect of negligence—just as the execution of a just work is likewise an effect of right reason.

**Reply to objection 3:** Negligence has to do with the act of commanding, which care or solicitude also has to do with. However, the negligent individual falls short in this act in one way and the inconstant individual in a different way. For the inconstant individual fails in commanding in the sense that he is impeded from the act, whereas the negligent individual fails through the lack of a prompt will (*per defectum promptae voluntatis*).

**Reply to objection 4:** Every sort of sin is such that the fear of God works toward avoiding it; for as Proverbs 15:27 says, “By the fear of the Lord everyone turns away from what is bad.” And so fear makes one avoid negligence—not in such a way that negligence is directly opposed to fear, but rather insofar as fear incites a man toward acts of reason. Hence, it was likewise established above, when we were discussing the passions (*ST* 1-2, q. 44, a. 2), that fear makes one deliberative.

### Article 3

#### Is it possible for negligence to be a mortal sin?

It seems impossible for negligence to be a mortal sin:

**Objection 1:** In a Gloss on Job 9:28 (“I feared my works ...”), Gregory says, “It [read: negligence] is exaggerated by a lesser love of God.” But wherever there is mortal sin, the love of God is totally removed. Therefore, negligence is not a mortal sin.

**Objection 2:** A Gloss on Ecclesiasticus 7:34 (“Purge yourself of negligence with a few things”) says, “Even if your offering is small, it purges negligence with respect to many sins.” But this would not be the case if negligence were a mortal sin. Therefore, negligence is not a mortal sin.

**Objection 3:** As is clear from Leviticus, under the Law sacrifices were mandated for mortal sins. But no sacrifice was mandated for negligence. Therefore, negligence is not a mortal sin.

**But contrary to this:** Proverbs 19:16 says, “He who neglects his own life will die.”

**I respond:** As was explained above (a. 1), negligence proceeds from a certain remission of the will because of which it happens that reason does not take care to command what ought to be commanded or to command it in the way in which it should be commanded. Therefore, there are two ways in which it can happen that negligence is a mortal sin:

(a) *on the part of what is omitted out of negligence:* If what is omitted is necessary for salvation, regardless of whether it is an act or a circumstance, then the sin will be mortal.

(b) *on the part of the cause:* If the will is remiss regarding what belongs to God to such an extent that it falls totally short of charity with respect to God, then negligence of this sort is a mortal sin. And this happens mainly when the negligence flows from contempt.

Otherwise, if the negligence consists in the omission of some act or circumstance that is not necessary for salvation, or if the negligence flows not from contempt, but instead from a lack of fervor—where fervor is sometimes impeded by a venial sin—then the negligence is a venial sin and not a mortal sin.

**Reply to objection 1:** There are two ways to understand ‘a lesser love of God’

(a) In one sense, a love of God is lesser through a defect in the fervor of charity, and negligence caused in this way is a venial sin.

(b) In the second sense, a love of God is lesser through a lack of charity itself, in the sense in which it is called ‘a lesser love’ when someone loves God only with a natural love. And in that case what is caused is the sort of negligence that is a mortal sin.

**Reply to objection 2:** “A small offering made with a humble mind and with pure love,”—to quote from the same place—washes away not only venial sins but mortal sins as well.

**Reply to objection 3:** When the negligence consists in the omission of what is necessary for salvation, then it becomes another, more manifest, genus of sin. For sins that consist in interior acts are more hidden. And so for the latter no fixed sacrifices were enjoined in the Law, since the offering of sacrifices was a sort of public admission of sin, which did not have to be given in the case of a hidden sin.

## QUESTION 55

### The Vices opposed to Prudence that are Similar to it

Next we have to consider those vices opposed to prudence that bear a similarity to it. And on this topic there are eight questions: (1) Is prudence of the flesh (*prudentia carnis*) a sin? (2) Is prudence of the flesh a mortal sin? (3) Is craftiness (*astutia*) a special sin? (4) What about guile (*dolus*)? (5) What about fraud (*fraus*)? (6) What about care or solicitude with respect to temporal things (*sollicitudo temporalium rerum*)? (7) What about care or solicitude with respect to future things (*sollicitudo futurorum*)? (8) What is the origin of these vices?

#### Article 1

##### Is prudence of the flesh a sin?

It seems that prudence of the flesh (*prudentia carnis*) is not a sin:

**Objection 1:** Prudence is a more noble virtue than the other moral virtues because it directs all the virtues. But no sort of justice or temperance is a sin. Therefore, neither is any sort of prudence a sin.

**Objection 2:** It is not a sin to act prudently for an end that is licitly loved. But the flesh is licitly loved, since, as Ephesians 5:29 says, “For no one ever hated his own flesh.” Therefore, prudence of the flesh is not a sin.

**Objection 3:** Just as a man is tempted by the flesh, so he is likewise tempted by the world, as well as by the devil. But no sort of prudence of the world is posited among the sins, and neither is any sort of prudence of the devil. Therefore, neither should any sort of prudence of the flesh be posited among the sins.

**But contrary to this:** No one is an enemy of God except because of iniquity—this according to Wisdom 14:9 (“To God the wicked individual and his wickedness are hateful alike”). But as Romans 8:7 says, “Prudence of the flesh is inimical to God.” Therefore, prudence of the flesh is a sin.

**I respond:** As was explained above (q. 47, a. 13), prudence has to do with the means to the end of a whole life. And so we speak properly of prudence of the flesh insofar as someone takes the goods of the flesh as the ultimate end of his life. Now it is clear that this is a sin, since a man is thereby disordered with respect to his ultimate end, which, as was established above (*ST* 1-2, q. 2, a. 5), does not consist in the goods of the body. And so prudence of the flesh is a sin.

**Reply to objection 1:** Justice and temperance imply in their very concept the reason why the virtue is praised, viz., equality on the one hand and the restraining of disordered sentient desires on the other (*scilicet aequalitatem et concupiscentiarum refrenationem*); and so they are never taken for something that is bad. By contrast, as was explained above (q. 49, a. 6), the name ‘prudence’ is taken from ‘provide for’, which can be extended even to bad things. And so even though prudence absolutely speaking is taken for something good, it can be taken for something bad when an addition is made to it. And it is in this way that prudence of the flesh is said to be a sin.

**Reply to objection 2:** The flesh exists for the sake of the soul in the way that matter exists for the sake of form and in the way that an instrument exists for the sake of its principal agent. And so the flesh is licitly loved insofar as it is ordered toward the good of the soul as its end. However, if one’s ultimate end is set up as the good of the flesh itself, then the love of the flesh will be disordered and illicit. And this is the way in which prudence of the flesh is ordered toward the love of the flesh.

**Reply to objection 3:** The devil tempts us not in the manner of something that is desirable, but rather in the manner of someone who makes suggestions. And so, since prudence implies an ordering toward an end that is desirable, one does not say ‘prudence of the devil’ in the sense of a prudence with respect to a bad end, in the way that the world and the flesh tempt us, viz., insofar as the goods of the world or the flesh are proposed for us to desire. And so one says ‘prudence of the flesh’ and even

‘prudence of the world’—this according to Luke 16:8 (“The children of this world are more prudent in their own generation ...”). Moreover, the Apostle is including everything under the name ‘prudence of the flesh’, since we desire even the exterior things of the world because of the flesh.

Still, one could reply that since, as was explained above (q. 47, a. 2), prudence is in some sense called wisdom, it follows that one can discern three sorts of prudence corresponding to the three types of temptation. Hence, James 3:15 says that wisdom is “worldly, animalistic, diabolical”—as was explained above (q. 45, a. 1) when we were talking about wisdom.

## Article 2

### Is prudence of the flesh a mortal sin?

It seems that prudence of the flesh is a mortal sin:

**Objection 1:** To rebel against God’s law is a mortal sin, since the Lord is thereby disdained. But, as Romans 8:7 says, “The prudence of the flesh is not subject to God’s law.” Therefore, prudence of the flesh is a mortal sin.

**Objection 2:** Every sin against the Holy Spirit is a mortal sin. But prudence of the flesh seems to be a sin against the Holy Spirit. For as Romans 8:7 says, it cannot be “subject to God’s law,” and so it seems to be an unforgivable sin—something that is proper to a sin against the Holy Spirit. Therefore, prudence of the flesh is a mortal sin.

**Objection 3:** As is clear from *Ethics* 8, the greatest evil is opposed to the greatest good. But prudence of the flesh is opposed to prudence, which is the greatest of the moral virtues (*principua inter virtutes morales*). Therefore, prudence of the flesh is the greatest of the moral sins (*principuum inter peccata moralia*). And so it is a mortal sin.

**But contrary to this:** What diminishes a sin does not in its own right imply the nature of a mortal sin. But to pursue with caution what pertains to the care of the flesh, which seems to belong to prudence of the flesh, diminishes a sin. Therefore, prudence of the flesh does not by its nature involve a mortal sin.

**I respond:** As was explained above (q. 47, a. 2 and a. 13), there are two ways in which someone is said to be prudent: (a) *absolutely speaking*, viz., in relation to the end of a whole life; and (b) *in a certain respect*, viz., in relation to some particular end—as, for instance, in the way that an individual is called prudent in business affairs or in something of that sort.

Therefore, if ‘prudence of the flesh’ is taken in accord with the absolute notion of prudence, so that the ultimate end of the whole of one’s life is placed in the care of the flesh, then this is a mortal sin, since through it a man turns away from God. For as was established above (*ST* 1-2, q. 1, a. 5), it is impossible for there to be more than one ultimate end.

On the other hand, if ‘prudence of the flesh’ is taken in accord with the notion of a particular prudence, then prudence of the flesh is a venial sin. For it sometimes happens that one is fixed upon some pleasure of the flesh without turning away from God through a mortal sin. In such a case, one does not set the end of one’s whole life in the pleasures of the flesh.

By contrast, if one actually relates the care of the flesh to some upright end, as when someone pursues food for the sake of sustaining his body, then this is not called ‘prudence of the flesh’, since in such a case the man is using the care of the flesh as a means to an end.

**Reply to objection 1:** The Apostle is speaking of prudence of the flesh insofar as one places the end of his whole human life in goods of the flesh. And in this sense it is a mortal sin.

**Reply to objection 2:** Prudence of the flesh does not involve a sin against the Holy Spirit. For the claim that it cannot be subject to God’s law should not be taken to mean that one who has prudence of

the flesh cannot turn back and submit to God's law; rather, it should be taken to mean that prudence of the flesh cannot itself be subject to God's law. In the same way, injustice cannot be just and heat cannot be cold, even though that which is hot is capable of being cold.

**Reply to objection 3:** Every sin is opposed to prudence in the same way that prudence participates in every virtue. But this does not mean that every sin opposed to prudence is a very grave sin. Rather, this is true only when the sin is opposed to prudence in some very important matter.

### Article 3

#### Is craftiness a special sin?

It seems that craftiness (*astutia*) is not a special sin:

**Objection 1:** The words of Sacred Scripture do not induce one to sin. But they do induce one to be crafty—this according to Proverbs 1:4 (“... in order that craftiness might be imparted to the little ones”). Therefore, craftiness is not a sin.

**Objection 2:** Proverbs 13:16 says, “The crafty man does all things with deliberation.” Therefore, he does all things either for a good end or for a bad end. If for a good end, then this does not seem to be a sin. If for a bad end, then this seems to belong to prudence of the flesh or prudence of the world. Therefore, craftiness is not a special sin distinct from prudence of the flesh.

**Objection 3:** In *Moralia* 10, commenting on Job 12:4 (“The simplicity of the just man is laughed to scorn”), Gregory says, “The wisdom of this world is to hide one's affections by artifice, to conceal one's meaning by words, to exhibit what is false as true, to present what is true as false.” And later he adds, “This sort of prudence is acquired by the young, it is learned at a price by children.” But what is said here seems to pertain to craftiness. Therefore, craftiness is not distinct from prudence of the flesh or prudence of the world, and so it does not seem to be a special sin.

**But contrary to this:** 2 Corinthians 4:2 says, “But we renounce the hidden things of dishonesty, not walking in craftiness or adulterating the word of God.” Therefore, craftiness is a sin.

**I respond:** Prudence is right reason with respect to things that can be done (*recta ratio agibilium*), just as scientific knowledge (*scientia*) is right reason with respect to things that can be known (*recta ratio scibilium*).

Now there are two ways in which one can sin against this rectitude in speculative matters: (a) by reason's being led to a false conclusion that seems true; and (b) by reason's proceeding from something false that seems to be true to either a true conclusion or a false conclusion.

So, too, there can be a sin against prudence that has a certain similarity to prudence—and this in two ways:

(a) because reason's effort is ordered toward an end that is not genuinely good but appears to be good; and this belongs to prudence of the flesh.

(b) because, in pursuing an end, whether good or bad, one uses insincere and deceptive methods rather than straightforward methods (*utitur non veris viis sed simulatis et apparentibus*); and this belongs to the sin of craftiness. And it is in this latter way that craftiness is a sin that is opposed to prudence but is distinct from prudence of the flesh.

**Reply to objection 1:** As Augustine says in *Contra Iulianum* 4, just as ‘prudence’ is sometimes taken improperly for something bad, so ‘craftiness’ is sometimes taken for something good—and this because of the similarity of the one to the other. However, as the Philosopher likewise points out in *Ethics* 6, ‘craftiness’ is properly taken for something bad.

**Reply to objection 2:** Craftiness can deliberate with respect to both good and bad ends, and one must arrive at a good end by straightforward methods and not by deceptive and insincere methods (*falsis*

*viis et simulatis*). Hence, craftiness is a sin even if it is ordered toward a good end.

**Reply to objection 3:** Gregory includes under ‘prudence of the world’ everything that can belong to false prudence. Hence, craftiness is also included under ‘prudence of the world’.

#### Article 4

##### Is guile a sin that belongs to craftiness?

It seems that guile (*dolus*) is not a sin that belongs to craftiness:

**Objection 1:** Sin, especially mortal sin, is not found in perfected men. But guile is found in them—this according to 2 Corinthians 12:16 (“Since I am crafty, I caught you by guile”).

**Objection 2:** Guile seems to belong especially to the tongue—this according to Psalm 5:11 (“They wagged their tongues with much guile (*dolose*)”). But craftiness, like prudence, exists in the very act of reason. Therefore, guile does not belong to craftiness.

**Objection 3:** Proverbs 12:20 says, “Guile is in the heart of those who think evil thoughts.” But not every evil thought belongs to craftiness. Therefore, guile does not seem to belong to craftiness.

**But contrary to this:** Craftiness is ordered toward circumlocution (*ad circumveniendum*)—this according to the Apostle in Ephesians 4:14 (“In craftiness, for the circumlocution of error”). Guile is also ordered toward this. Therefore, guile belongs to craftiness.

**I respond:** As was explained above (a. 3), it belongs to craftiness to adopt methods that are insincere and deceptive and not straightforward, and to do this in the pursuit of some end, whether good or bad. Now there are two possible ways to consider the adoption of these methods:

In one way, we can consider *the very concocting of such methods*, and this belongs properly to *craftiness*, just as concocting upright methods for a due end belongs to prudence.

In the second way, we can consider the adoption of such methods as regards *the execution of the deed*, and in this regard it belongs to *guile*.

And so guile involves some sort of execution of craftiness. And this is the way in which it belongs to craftiness.

**Reply to objection 1:** Just as craftiness is properly taken for something bad and improperly taken for something good, so too with guile, which is the execution of craftiness.

**Reply to objection 2:** As is clear from Augustine in *De Doctrina Christiana*, the execution of craftiness aimed at deceiving is primarily and principally accomplished through words, which hold the first place among the signs by which one man signifies something to another. This is why guile is attributed especially to speech.

However, guile can also exist in deeds—this according to Psalm 104:25 (“And they acted with guile against His servants”). Guile also exists in the heart—this according to Ecclesiasticus 19:23 (“His interior is full of guile”). But that has to do with someone concocting modes of guile (*secundum quod aliquis dolos excogitat*)—this according to Psalm 37:13 (“They thought about modes of guile all day long”).

**Reply to objection 3:** Those who think of something evil to do have to concoct methods to fulfill their goals, and most of the time they think up modes of guile by which they might more easily achieve their goals.

However, it sometimes happens that men do evil openly and by violence, without any craftiness or guile. But since this involves more difficulty, it occurs in fewer instances.

## Article 5

### Does fraud belong to craftiness?

It seems that fraud (*fraus*) does not belong to craftiness:

**Objection 1:** It is not laudable that one should allow himself to be deceived, which is what craftiness tends toward. But it is laudable that one should allow himself to be defrauded—this according to 1 Corinthians 6:7 (“Why do you not rather allow yourselves to be defrauded?”). Therefore, fraud does not belong to craftiness.

**Objection 2:** Fraud seems to involve the illicit taking or receiving of exterior things; for Acts 5:1-2 says, “A man named Ananias, with Saphira his wife, sold a piece of land, and by fraud kept back part of the price of the land.” But to take or retain exterior things illicitly belongs to injustice or to a lack of generosity. Therefore, fraud does not belong to craftiness, which is opposed to prudence.

**Objection 3:** No one uses craftiness against himself. But the frauds perpetrated by some men are against themselves; for Proverbs 1:18 says of certain men that “they undertake frauds against their own souls.” Therefore, fraud does not belong to craftiness.

**But contrary to this:** Fraud is ordered toward deception—this according to Job 13:9 (“Shall he be deceived like a man by your frauds?”). And craftiness is ordered toward the same thing. Therefore, fraud belongs to craftiness.

**I respond:** Just as guile consists in the execution of craftiness, so does fraud as well. They seem to differ in that guile belongs to the execution of craftiness in every case, regardless of whether this execution is done through words or through deeds, whereas fraud belongs more properly to the execution of craftiness insofar as this is done through deeds.

**Reply to objection 1:** The Apostle is not encouraging the faithful to be deceived in cognition; rather, he is encouraging them to bear patiently the effects of deception when they sustain the harm inflicted upon them by fraud.

**Reply to objection 2:** The execution of craftiness can be accomplished through some other vice, just as the execution of prudence is accomplished through the virtues. And in this sense nothing prevents fraud from belonging to avarice or to a lack of generosity.

**Reply to objection 3:** Those who commit fraud do not by their own intention undertake anything contrary to themselves or their souls; instead, by God’s just judgment it happens that what they undertake against others is turned back upon themselves—this according to Psalm 7:16 (“He falls into the pit he has dug”).

## Article 6

### Is it permissible to have solicitude for temporal things?

It seems that it is permissible to have solicitude for temporal things:

**Objection 1:** It belongs to one who is in charge of something to be solicitous for the things he is in charge of—this according to Romans 12:8 (“... he who is in charge, with solicitude ...”). But it is by divine ordination that man is in charge of temporal things—this according to Psalm 8:8 (“You have subjected all things under his feet, sheep and oxen ...”). Therefore, man should have solicitude for temporal things.

**Objection 2:** Each individual is solicitous about the end for the sake of which he acts. But it is permissible for a man to act for the sake of temporal things; hence, in 2 Thessalonians 3:10 the Apostle says, “If someone does not work, he should not eat.” Therefore, it is permissible to be solicitous about

temporal things.

**Objection 3:** Solicitude about the works of mercy is laudable—this according to 2 Timothy 1:17 (“When he came to Rome, he carefully sought me out”). But solicitude for temporal things sometimes involves the works of mercy, e.g., when someone shows solicitude for the affairs of orphans and of the poor. Therefore, solicitude for temporal things is not impermissible.

**But contrary to this:** In Matthew 6:31 our Lord says, “Do not be solicitous, saying, ‘What shall we eat or what shall we drink, or how shall we dress?’” But these things especially are necessities (*quae maxime necessaria*).

**I respond:** Solicitude implies a certain effort applied to attaining something. Now it is clear that greater effort is applied when there is a fear of falling short, and so when one is assured of attaining the thing, then there is less solicitude.

Therefore, there are three possible ways in which solicitude for temporal things can be impermissible:

In one way, *on the part of what we are solicitous about*, viz., if we are seeking after temporal things as an end. Hence, in *De Operis Monachum* Augustine says, “When our Lord says, ‘Do not be solicitous, etc.’, He says this in order that they not pay attention to those things or do for the sake of those things whatever they are commanded to do in the preaching of the Gospel.”

In the second way, solicitude about temporal things can be impermissible *because of the excessive effort that is allotted to procuring temporal things*, for the sake of which a man draws back from the spiritual things that he should be more principally devoted to. And this is why Matthew 13:22 says, “The cares of this world suffocate the word.”

In the third way, *because of excessive fear*, viz., when one fears that if he does what he ought to be doing, he will lack what is necessary for him. Our Lord rules this out in three ways. First, because of the greatness of the benefits that have been divinely bestowed on a man without his solicitude, viz., his body and his soul. Second, because of the assistance by which, without any human work, God aids plants and animals in a way that befits their natures. Third, because of divine providence, due to the ignorance of which the gentiles are mainly solicitous about seeking temporal goods.

And so he concludes that our solicitude should mainly have to do with spiritual goods, hoping that if we do what we ought to be doing, then temporal things will also come to us for our necessities.

**Reply to objection 1:** Temporal goods are subject to man in order that he might use them for necessities, and not in order that he might place his end in them and be excessively solicitous about them.

**Reply to objection 2:** The solicitude of someone who acquires bread by corporeal labor is moderate and not excessive. And this is why Jerome says, “Work is to be done and solicitude removed [read: excessive solicitude that disquiets the mind].”

**Reply to objection 3:** Solicitude for temporal goods within the works of mercy is ordered toward the end of charity. And so it is not an impermissible solicitude unless it is excessive.

## Article 7

### Should one be solicitous about the future?

It seems that one should be solicitous about the future:

**Objection 1:** Proverbs 6:6-8 says, “Go to the ant, O sluggard, and consider her ways, and learn wisdom: Although she has no leader or master, she provides food for herself in the summer, and she gathers what she will eat in the fall harvest.” But this is what it is to be solicitous about the future. Therefore, solicitude about future things is praiseworthy.

**Objection 2:** Solicitude belongs to prudence. But prudence is mainly about future things, since, as

was explained above (q. 49, a. 6), its main part is providence with respect to future things. Therefore, it is virtuous to be solicitous about future things.

**Objection 3:** If one saves something to preserve it for later, he is being solicitous for the future. But in John 12:6 Christ Himself is said to have had a money bag that Judas kept. And as Acts 4:35 reports, the Apostles likewise saved the proceeds from real estate that had been “placed at their feet.” Therefore, it is permissible to be solicitous about the future.

**But contrary to this:** In Matthew 6:34 our Lord says, “Do not worry about tomorrow.” But as Jerome says, ‘tomorrow’ is here being used for ‘the future’.

**I respond:** No deed can be virtuous unless it is adorned with the right circumstances, one of which is the appropriate time—this according to Ecclesiastes 8:6 (“There is a time and opportunity for every business”). This is relevant not only to exterior deeds but also to interior solicitude. For to each time there belongs a proper sort of solicitude; for instance, during the summertime there is solicitude for reaping crops, whereas during the fall there is solicitude for gathering grapes. Therefore, if someone were already in the summertime solicitous about gathering grapes, he would be prematurely occupied to an excessive degree with solicitude for a future time. Hence, it is this sort of solicitude that our Lord proscribes as excessive when He says, “Do not worry about tomorrow.” That is why He adds, “For tomorrow will be solicitous about itself”—that is, it will have its own proper solicitude, which will be distressing enough for the mind. This is what He means when He adds, “The evil of the day is sufficient,” i.e., the distress of solicitude.

**Reply to objection 1:** The ant has a solicitude that is appropriate for the time, and this is what is being proposed to us for imitation.

**Reply to objection 2:** What belongs to prudence is an appropriate providence for future things. But there would be a disordered providence or solicitude for future things if one sought temporal things, for which we use the terms ‘past’ and ‘future’, as ends, or if one sought excessive things beyond what is necessary for the present life, or if one were prematurely occupied with solicitude.

**Reply to objection 3:** As Augustine says in *De Sermone Domini in Monte*, “When we see a servant of God looking ahead lest he lack necessities, we do not judge that he is worrying about tomorrow. For our Lord Himself deigned to possess a money bag by way of example, and in the Acts of the Apostles we read that what was necessary for sustenance was procured for the future because of an imminent famine. Therefore, our Lord does not disapprove of one’s procuring these things according to human custom; rather, what He disapproves of is one’s opposing God because of these things.”

## Article 8

### Do vices of this sort arise from avarice?

It seems that vices of this sort do not arise from avarice:

**Objection 1:** As has been explained (q. 53, a. 6), reason suffers the greatest loss of its rectitude from lust. But vices of the sort under discussion are opposed to right reason, viz., to prudence. Therefore, vices of this sort arise mainly from lust—especially given that in *Ethics 7* the Philosopher says, “Venus is full of guile, and her laces are many-colored,” and “One who is incontinent with disordered sentient desire acts with insidious tactics (*ex insidiis agit incontinens concupiscentiae*).”

**Objection 2:** As has been explained (a. 3), the vices under discussion bear a certain similarity to prudence. But since prudence exists in reason, it is spiritual vices such as pride and vainglory that seem to be closer to it. Therefore, vices of the sort in question seem to arise from pride rather than from avarice.

**Objection 3:** A man uses insidious tactics not only in snatching away the goods of others, but also

in devising murders—where the former belongs to avarice and latter to anger. But the use of insidious tactics pertains to craftiness, guile, and fraud. Therefore, the vices under discussion arise not only from avarice, but also from anger.

**But contrary to this:** In *Moralia* 31 Gregory claims that fraud is a child of avarice.

**I respond:** As has been explained (q. 49, a. 6), prudence of the flesh and craftiness, along with guile and fraud, bear a certain similarity to prudence in the way in which they make use of reason. Now among the other moral virtues the use of reason is most apparent mainly in the case of justice, which exists in the rational appetite. And so the disordered use of reason is especially apparent in the vices that are opposed to justice. But avarice is the vice that is especially opposed to justice. And so the vices under discussion arise especially from avarice.

**Reply to objection 1:** Because of the vehemence of pleasure and disordered desire, lust totally suppresses reason, so that it does not produce its act. By contrast, in the case of the vices under discussion there is a use of reason, though a disordered use. Hence, the vices in question do not arise directly from lust.

Now when the Philosopher says that Venus is “full of guile,” he says this by way of a certain similitude, viz., insofar as lust seizes a man quickly, in the way that guile does—not through craftiness, but rather through the violent nature of disordered desire and pleasure. This is why he adds that Venus “steals even the wisest man’s intellect.”

**Reply to objection 2:** To act with insidious tactics seems to belong to a certain sort of faintheartedness (*pusillanimitas*), since, as the Philosopher points out in *Ethics* 4, a magnanimous individual wants to be above-board in all matters. And so since pride has (or feigns) a certain similarity to magnanimity, it follows that vices of the sort in question, which make use of fraud and guile, do not arise directly from pride. This instead pertains to avarice, which seeks its own advantage and places little value on excellence.

**Reply to objection 3:** Anger involves a sudden movement, and so it acts precipitately and without deliberation; the vices under discussion make use of deliberation, albeit in a disordered way. And the fact that some individuals use insidious tactics for murdering others proceeds not from anger but rather from hatred, since, as the Philosopher points out in *Rhetoric* 2, an angry individual desires to be overt in doing harm.

## QUESTION 56

### The Precepts that Pertain to Prudence

Next we have to consider the precepts that pertain to prudence. And on this topic there are two questions: first, about the precepts pertaining to prudence; second, about the precepts pertaining to the vices opposed to prudence.

#### Article 1

##### Should there have been precepts about prudence among the precepts of the Decalogue?

It seems that there should have been precepts about prudence among the precepts of the Decalogue:

**Objection 1:** The more important precepts should be given about the more important virtues. But the most important precepts of the Law are the precepts of the Decalogue. Therefore, since prudence is the most important of the moral virtues, it seems that there should have been precepts about prudence among the precepts of the Decalogue.

**Objection 2:** The teachings of the Gospel contain a Law especially with respect to the precepts of the Decalogue. But as is clear from Matthew 10:16 (“Be prudent as serpents”), in the teachings of the Gospel there is a precept about prudence. Therefore, among the precepts of the Decalogue the act of prudence should have been commanded.

**Objection 3:** The other books of the Old Testament are ordered toward the precepts of the Decalogue; hence, Malachi 4:4 says, “Remember the Law of my servant Moses ... that I commanded him at Horeb.” But in the other books of the Old Testament there are precepts concerning prudence—for instance, Proverbs 3:5, “Do not rely upon your own prudence,” and later in 4:25, “Let your eyelids precede your steps.” Therefore, there should have been precepts about prudence in the Law, and especially among the precepts of the Decalogue.

**But the contrary to this** is clear to one who enumerates the precepts of the Decalogue.

**I respond:** As was explained above when we were talking about precepts (*ST* 1-2, q. 100, a. 3), just as the precepts of the Decalogue were given to the whole people, so, too, they also fall into everyone’s thinking in the sense that they belong to natural reason.

Now what are mainly of concern in the dictates of natural reason are the ends of human life, which, as is clear from what was said above (q. 47, a. 6), are related to matters of action in the way that naturally known principles are related to speculative matters. On the other hand, as is likewise clear from what was said above (q. 47, a. 6), prudence has to do not with the end but with the means to the end. And this is why it was not appropriate for any precept pertaining directly to prudence to be posited among the precepts of the Decalogue.

Still, all the precepts of the law do indeed pertain to prudence insofar as prudence directs all virtuous acts.

**Reply to objection 1:** Even though prudence is, absolutely speaking, more important than the other moral virtues, nonetheless, justice deals in a more important way with the nature of what is owed—which, as was explained above (q. 44, a. 1), is what is needed for a precept. And this is why the main precepts of the law, viz., the precepts of the Decalogue, had to pertain to justice rather than to prudence.

**Reply to objection 2:** The teaching of the Gospel is a doctrine of perfection, and so it was necessary for a man to be instructed perfectly in that doctrine concerning all the things that pertain to uprightness of life, whether they be ends or means to ends. This is why it was necessary for there to be precepts about prudence, too, in the teaching of the Gospel.

**Reply to objection 3:** Just as the other teachings of the Old Testament are ordered toward the precepts of the Decalogue as their end, so, too, it was appropriate that in the subsequent books of the Old

Testament men should be instructed about the act of prudence, which has to do with the means to that end.

## Article 2

### Were prohibitive precepts about the vices opposed to prudence proposed in the Old Law in an appropriate way?

It seems that prohibitive precepts about the vices opposed to prudence were not proposed in the Old Law in an appropriate way:

**Objection 1:** The vices that have a direct opposition to prudence, such as imprudence and its parts, are no less opposed to prudence than are the vices that have a similarity to prudence, such as craftiness and the vices that belong to it. But these latter vices are prohibited in the Law; for instance, Leviticus 19:13 says, “You shall not commit calumny against your neighbor,” and Deuteronomy 25:13 says, “You shall not have in your bag two different weights, a large and a small.” Therefore, some prohibitive precepts should also have been given about the vices that are directly opposed to prudence.

**Objection 2:** Fraud can be perpetrated in many matters other than buying and selling. Therefore, it was inappropriate for the Law to forbid fraud only in cases of buying and selling.

**Objection 3:** The reason for commanding an act of a given virtue is the same as the reason for prohibiting an act of an opposed vice. But acts of prudence are not commanded in the Law. Therefore, neither should any of the opposed vices have been prohibited in the Law.

**But the contrary to this** is clear from the precepts of the Law that have been cited.

**I respond:** As was explained above (a. 1), justice has to do especially with the nature of what is owed, which is what is required for a precept, since, as will be explained below (q. 58, a. 2), justice is the rendering of what is owed to another. Now as has been explained (q. 55, a. 8), craftiness, as regards its execution, is committed especially in matters that justice has to do with. And so it was appropriate that prohibitive precepts be given in the Law about the execution of craftiness insofar as it pertains to injustice—as, for instance, when by guile or fraud one individual commits calumny against another or steals his goods.

**Reply to objection 1:** The vices that are directly opposed to prudence with a manifest contrariety do not pertain to injustice in the way that the execution of craftiness does. And so they are not prohibited in the Law in the way that fraud and guile, which pertain to injustice, are.

**Reply to objection 2:** Every instance of fraud or guile that is committed in matters pertaining to justice can be understood as prohibited in the prohibition of calumny in Leviticus 19:13.

However, fraud and guile are usually exercised mainly in buying and selling—this according to Ecclesiasticus 26:28 (“A huckster shall not be innocent from the sins of his lips”). Because of this, a specific prohibitive precept is given in the Law about fraud committed in cases of buying and selling.

**Reply to objection 3:** All the precepts about acts of justice that are given in the Law pertain to the execution of prudence, just as the prohibitive precepts about theft, calumny, and fraudulent selling pertain to the execution of craftiness.

## QUESTION 57

### The Right

After prudence, we next have to consider justice. On this topic there are four things to be considered: (a) justice (questions 57-60); (b) the parts of justice (questions 61-120); (c) the gift [of the Holy Spirit] that belongs to justice (question 121); and (d) the precepts that pertain to justice (question 122)

As for justice, there are four things to consider: (a) the right (*ius*) (question 57); (b) justice itself (question 58); (c) injustice (question 59); and (d) judgment (question 60).

On the first topic there are four questions: (1) Is the right (*ius*) the object of justice? (2) Is the right appropriately divided into the natural right and the positive right? (3) Is the right of nations (*ius gentium*) the same as the natural right? (4) Should the right of dominion and the paternal right be distinguished as species?

### Article 1

#### Is the right the object of justice?

It seems that the right (*ius*) is not the object of justice (*iustitia*):

**Objection 1:** Celsus the Jurist says, “The right (*ius*) is the art of the good and the fair (*ars boni et aequi*).” But an art is *per se* an intellectual virtue and not the object of justice. Therefore, the right is not the object of justice.

**Objection 2:** In *Etymologia* Isidore says, “Law is a species of the right.” However, law is the object not of justice, but instead of prudence; this is why the Philosopher posits a lawmaking part of prudence. Therefore, the right is not the object of justice.

**Objection 3:** Justice mainly subjects a man to God; for in *De Moribus Ecclesiae* Augustine says, “Justice is the love that serves God alone, and because of this it orders well the other things that are subject to a man.” Now the right pertains not to divine things but only to human things; for in *Etymologia* Isidore says, “The religious (*fas*) is divine law, whereas the right (*ius*) is human law.”

**But contrary to this:** In the same place Isidore says, “Something is called the right (*ius*) because it is just.” But the just is the object of justice; for as the Philosopher says in *Ethics* 5, “Everyone wants to call ‘justice’ the habit whereby just things are done.” Therefore, the right is the object of justice.

**I respond:** It is proper to justice, among all the virtues, to order a man in those matters that pertain to others. For as the name itself (*iustitia*) makes clear, justice implies a certain sort of equality or balance (*aequalitas*), since things that are balanced off (*ea quae adaequantur*) are commonly said to be ‘made right’ or ‘justified’ (*iustari*). But equality or balance is had with respect to something else.

Now the other virtues perfect a man only in those things that belong to him within himself (*secundum seipsum*). So, then, what is upright (*rectum*) in the works of the other virtues, i.e., what the virtue’s inclination tends toward as its proper object, is understood only in relation to the agent. By contrast, what is upright in a work of justice, over and beyond its relation to the agent, is constituted by its relation to something else. For what is said to be just in our act is what corresponds to some sort of equality or balance with something else—for instance, a payment owed in return for a service rendered.

So, then, something is called just when it has the rectitude of justice in which the act of justice is terminated, even without taking into account *the way in which* the act is done by the agent. By contrast, in the case of the other virtues, something is not fixed as upright except in accord with *the way in which* it is done by the agent. And for this reason the act of justice, more than with the other virtues, is specifically determined by its object, which is called *the just* (*iustum*). But this is *the right* (*ius*). Hence, it is clear that the right is the object of justice.

**Reply to objection 1:** It is common for names to be switched from their primary imposition in

order to signify other things. For instance, the name ‘medicine’ was first imposed to signify a remedy given in order to heal someone who is sick, but was later switched to signifying the art by which healing is accomplished. So, too, the name ‘*ius*’ was first imposed to signify the just thing itself, but (a) was afterwards switched to signifying the art by which one knows what is just and (b), further on, was turned to signifying the place in which justice (*ius*) is rendered, as when someone is said to appear in a court of justice (*comparere in iure*), and, further on, (c) ‘*ius*’ is also used for the judgment rendered by someone whose office is to deliver justice, even if what he decrees is unjust (*iniquum*).

**Reply to objection 2:** Just as a plan regarding things that are done externally preexists in the craftsman’s mind, so, too, a certain plan—a rule of prudence, as it were—preexists in the mind regarding a work of justice that reason decides upon. And this plan is called a law if it is written down; for according to Isidore, a law is “a written regulation” (*constitutio scripta*). And so the law is not, properly speaking, the right itself, but is instead a sort of plan for the right (*ratio iuris*).

**Reply to objection 3:** Justice implies equality or balance, whereas we are unable to repay God in full (*Deo non possumus aequivalens recompensare*). This is why we cannot render to God what is just in a complete sense. And it is for this reason that the right is not properly called divine law; rather, the religious (*fas*) is properly called divine law, since it satisfies God that we fulfill it to the extent that we are able to.

Nonetheless, justice tends toward a man’s compensating God as much as he can by totally subjecting his soul to Him.

## Article 2

### Is it appropriate for the right to be divided into the natural right and the positive right?

It seems that it is not appropriate for the right to be divided into the natural right (*ius naturale*) and the positive right (*ius positivum*):

**Objection 1:** What is natural is immutable and the same for everyone. But no such thing exists in human affairs, since all the rules belonging to the human right fail in certain cases, and they do not have the same force everywhere. Therefore, there is no such thing as the natural right.

**Objection 2:** What is called ‘positive’ is such that it proceeds from the human will. But it is not because it proceeds from the human will that something is called just. Otherwise, there could be no such thing as an unjust human will. Therefore, since the just is the same thing as the right, it seems that there is no such thing as the positive right.

**Objection 3:** The divine right is not the natural right, since it exceeds human nature. Similarly, the divine right is likewise not the positive right, since it depends on God’s authority and not on any human authority. Therefore, it is inappropriate to divide the right into the natural right and the positive right.

**But contrary to this:** In *Ethics* 5 the Philosopher says, “Some of what is politically just is natural, whereas some is legal, i.e., posited by law.”

**I respond:** As has been explained (a. 1), the right, i.e., the just, is a work that is adequate for or commensurated to someone else with respect to some mode of balance or equality (*opus adaequatum alteri secundum aliquem aequalitatis modum*).

Now there are two ways in which something can be commensurated to a man:

First, *by the very nature of the thing*, as when someone gives *this* much in order that he might receive just as much in return. And this is called *the natural right*.

In the second way, something is made equal or commensurate by a *pact or mutual agreement* (*ex conducto sive ex communi placito*), so that one regards himself as satisfied if he receives just *this* much. There are two ways in which this can happen:

In one way, *through a private pact (per aliquod privatum condictum)*, in the sense of something that is confirmed by a contract among private persons (*firmitur aliquo pacto inter privatas personas*).

In the other way, *through a public contract (ex condicto publico)*, as when an entire people agrees that something is, as it were, adequate for and commensurate with another, or as when this is ordained by a leader who is entrusted with the care of the people and acts in their stead. And this is called *the positive right*.

**Reply to objection 1:** What is natural to something that has an immutable nature must be such that it obtains everywhere and at every time. But a man's nature is mutable. And so what is natural to a man can sometimes fail to obtain. For instance, there is a natural equality or balance in returning what is held on deposit to the one who deposited it, and if human nature were always morally upright (*recta*), then this rule would always have to be observed. But since it sometimes happens that a man's will is depraved, there are some cases in which what has been deposited should not be returned, lest a man with a depraved will use that thing badly—as, for instance, if a furious man or an enemy of the republic were to demand his deposited weapons back.

**Reply to objection 2:** The human will can do something just by mutual agreement in matters that are not in their own right incompatible with natural justice. And in such matters there is room for the positive right. Hence, in *Ethics 5* the Philosopher says that the legally just is such that “at the beginning it does not matter whether it is the one way or the other, but it does matter once it is set in place.”

However, if there is something that is in itself incompatible with the natural right, then it cannot be made just by a human decision—as, for instance, if it were decreed that stealing or adultery is permissible. Hence, Isaiah 10:1 says, “Woe to those who make wicked laws.”

**Reply to objection 3:** What is called the divine right is that which is divinely promulgated. And the divine right is partly about things that are naturally just (even if their being just lies hidden from men), but also partly about things which are made just by divine institution. Hence, the divine right can likewise be divided into two, just as the human right can be. For in divine law certain things are commanded because they are good and prohibited because they are bad, whereas there are other things that are good because they are commanded and bad because they are prohibited.

### Article 3

#### Is the right of nations the same as the natural right?

It seems that the right of nations is the same as the natural right:

**Objection 1:** It is only in what is natural to them that all men agree. But all men agree as regards the right of nations; for the Jurist says, “The right of nations is what the human nations make use of.” Therefore, the right of nations is the natural right.

**Objection 2:** Servitude (*servitus*) is natural among men, since, as the Philosopher proves in *Politics 1*, some men are naturally servants. But as Isidore points out, types of servitude (*servitutes*) belong to the right of nations. Therefore, the right of nations is the natural right.

**Objection 3:** As has been explained (a. 2), the right is divided into the natural right and the positive right. But the right of nations is not the positive right, since it is not the case that all nations ever concurred in establishing something by common agreement. Therefore, the right of nations is the natural right.

**But contrary to this:** Isidore says, “The right is either the natural right or the civic right or the right of nations.” And so the right of nations is distinct from the natural right.

**I respond:** As has been explained (a. 2), the natural right, i.e., the natural just, is by its very nature adequate for or commensurated to another. Now there are two ways in which this can happen:

In the first way, *by considering the thing absolutely*, in the way that a male is by his very nature commensurated to a female in order that he might generate from her, and in the way that a parent is commensurated to her child in order that she might feed him.

In the second way, one thing is commensurated to another not by its nature absolutely speaking, but instead *with respect to something that follows upon the nature*, e.g., the ownership of possessions. For instance, if a field is considered absolutely, then there is no reason why it should belong to *this* individual rather than to *that* one; however, as is clear from the Philosopher in *Politics* 2, if the field is considered with respect to the opportunity to cultivate it and use it peaceably, then it is commensurated to belonging to the one individual rather than the other.

Now to apprehend something absolutely belongs not only to man but to other animals as well. And so the right that is called natural in the first sense above is common to us and the other animals. But as the Jurist points out, the right of nations falls short of the natural right in this sense, because only what is common to all animals is common to men among themselves.

By contrast, to consider something by comparing it to that upon which it follows is proper to reason. And so what reason dictates is natural to man in accord with natural reason. This is why Gaius the jurist says, “Among all men natural reason puts in place what is preserved among all the nations, and this is called the right of nations.”

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** Absolutely considered, *this* man’s being a servant rather than *that* man’s being a servant does not have a natural explanation, but only an explanation on the basis of some sort of resultant usefulness—given that, as *Politics* 1 says, it is useful for *this* man to be governed by someone wiser and for *that* man to be assisted by *this* man. And so the servitude that belongs to the right of nations is natural in the second sense, but not in the first sense.

**Reply to objection 3:** Since natural reason dictates the things that belong to the right of nations, viz., as having a conformity by their proximity to reason, it follows that they do not need any special institution; rather, natural reason itself institutes them, as was pointed out in the passage quoted above.

#### Article 4

##### Should the paternal right and the right of dominion be viewed as distinct species [of the right]?

It seems that the paternal right (*ius paternum*) and the right of dominion (*ius dominativum*) should not be viewed as distinct species [of the right]:

**Objection 1:** As Ambrose puts it in *De Officiis*, “It belongs to justice to render to each individual what is his own.” But as has been explained (a. 1), the right is the object of justice. Therefore, the right has to do with each individual equally. And so one should not view the right of the father and the right of the master as distinct species [of the right].

**Objection 2:** As has been explained (a. 1), law is a plan for the right (*ratio iuris*). But law has to do with the *common* good of a city and kingdom and not with the *private* good of an individual or even of an individual family. Therefore, there should be no specific right or just that is the right or the just of the master or of the father (*iustum dominativum vel paternum*), since, as *Politics* 1 has it, *master* and *father* pertain to a household.

**Objection 3:** There are many other differences of rank among men, so that some are soldiers, some priests, some rulers, etc. Therefore, one would also have to designate a species of the just for each of them.

**But contrary to this:** In *Ethics* 5 the Philosopher says that the dominative just and the paternal

just and others of this sort are distinct in species from the political just.

**I respond:** The right, i.e., the just, bespeaks a commensuration or balance with respect to another. But there are two senses of ‘another’:

(a) The first is ‘another’ *absolutely speaking*, in the sense that the other is altogether distinct, as in a case involving two men, neither of whom is subject to the other, but both of whom are subject to the one ruler of the city. And according to the Philosopher in *Ethics* 8, between such men the just exists in an absolute sense (*inter tales est simpliciter iustum*).

(b) In the second way, ‘another’ bespeaks someone else not in an absolutely sense, but as something that belongs to one (*quasi aliquid eius existens*). And thus in human affairs the child is something belonging to the father (*filius est aliquid patris*), since, as *Ethics* 3 says, the child is in some sense a part of the father; again, the servant is something belonging to the master, since, as *Politics* 1 says, the servant is the master’s instrument.

And so the relation of a father to his child is unlike the his relation to another in an absolute sense, and for this reason in this case the just does not exist in an absolute sense; instead, the just is of a certain sort, viz., the paternal just (*quoddam iustum, scilicet paternum*). And, for the same reason, the just does not exist in an absolute sense between a master and his servant; rather, the dominative right exists between them.

However, even though a wife is something belonging to her husband, nonetheless, because, as is clear from the Apostle in Ephesians 5:28, he is related to her as to his own body, she is more distinct from her husband than a child is from his father or a servant from his master. For she is taken up into the kind of life of companionship that belongs to marriage (*assumiter enim in quandam sociale vitam matrimonii*). And so, as the Philosopher points out, there is more of the essence of justice between a husband and wife than between a father and child or between a master and servant. However, since, as is clear from *Politics* 1, husband and wife have an immediate relation to the domestic community, it follows that what exists between them is not the political just absolutely speaking, but is instead the just that belongs to the household (*iustum oeconomicum*).

**Reply to objection 1:** It belongs to justice to render to each individual what is the right for him (*reddere ius suum unicuique*), but this presupposes that there is a diversity between the one individual and the other (*supposita tamen diversitate unius ad alterum*). For if someone gives *himself* what is owed to him, this is not properly called the just. Further, since what belongs to the child belongs to the father, and since what belongs to the servant belongs to the master, it follows that there is no justice properly speaking of a father with respect to his child or of a master with respect to his servant.

**Reply to objection 2:** A child, insofar as he is a child, is something belonging to his father, and a servant, insofar as he is a servant, is something belonging to his master.

However, both the child and the servant, considered as human beings, are things that subsist in their own right. And so insofar as both of them are human beings, there is in a certain sense justice with respect to them. For this reason, certain laws are handed down about matters that pertain to the father with respect to the child and to the master with respect to the servant. However, to the extent that both are something belonging to another, the complete nature of the just or the right is lacking here.

**Reply to objection 3:** All the other types of diversity of persons that exist in the city have an immediate relation to the community of the city and to its ruler. And so with respect to those persons the just exists in its complete essence.

Still, the just itself is divided according to the diverse roles. Hence, there is the military right, or the right for magistrates or for priests—not because of something that falls short of the just in an absolute sense, as happens in the case of the paternal right and the right of dominion, but because something specific is due to each position that belongs to a person in accord with his proper role.

## QUESTION 58

### Justice

Next we have to consider justice. And on this topic there are twelve questions: (1) What is justice? (*iustitia*)? (2) Does justice always have to do with others? (3) Is justice a virtue? (4) Does justice have the will as the subject in which it exists? (5) Is justice a general virtue? (6) To the extent that it is a general virtue, is justice the same in essence as every virtue? (7) Is there any such thing as particular justice? (8) Does particular justice have its own proper subject matter? (9) Does particular justice have to do with the passions or only with operations? (10) Is the mean of justice the mean of the thing itself? (11) Is the act of justice to render to each individual what is his own? (12) Is justice preeminent over the other moral virtues?

### Article 1

#### Is justice appropriately defined by jurists as “the steadfast and perpetual will to give to each individual what is the right for him”?

It seems that justice is inappropriately defined by jurists as “the steadfast and perpetual will to give to each individual what is the right for him” (*constans et perpetua voluntas ius suum unigue tribuens*):

**Objection 1:** According to the Philosopher in *Ethics* 5, justice is “a *habit* from which flow certain acts of just individuals and by which they do and will just things.” But ‘will’ (*voluntas*) names the *power* [of willing] or even the *act* [of willing]. Therefore, it is inappropriate for justice to be called a will.

**Objection 2:** Rectitude of the will is not the will; otherwise, if the will were its own rectitude, then no will would be perverse. But according to Anselm in *De Veritate*, “Justice is rectitude.” Therefore, justice is not a will.

**Objection 3:** Only God’s will is steadfast, since it is immutable. Therefore, if justice is a fixed will (*voluntas perpetua*), then justice will exist only in God.

**Objection 4:** Everything that is perpetual (*perpetuum*) is steadfast (*constans*). Therefore, it is superfluous to posit both ‘perpetual and ‘steadfast’ in the definition of justice.

**Objection 5:** It belongs to the ruler to render to each individual what is the right for him. Therefore, if justice is giving to each individual what is the right for him, then it will follow that justice exists only in the ruler.

**Objection 6:** In *De Moribus Ecclesiae* Augustine says, “Justice is love serving God alone.” Therefore, it does not render to each individual what is the right for him”

**I respond:** The definition of justice in question is appropriate as long as it is correctly understood.

For since every virtue is a habit that is a principle of good acts, a virtue has to be defined by reference to a good act with respect to the virtue’s proper subject matter. But as will become clear below (aa. 2 and 8), justice is concerned with what has to do with another as its proper subject matter. And so the act of justice is touched upon by reference to its object and proper subject matter when one says, “... to each individual what is the right for him.” For as Isidore says in *Etymologia*, “A man is called just because he safeguards the right (*iustus dicitur quia ius custodit*).”

Now in order for an act to be virtuous with respect to a given subject matter, what is required is that the act be voluntary (*voluntarius*) and that it be stable and firm (*stabilis et firmus*); for in *Ethics* 2 the Philosopher says that for a virtuous act it is required, first, that one act knowingly (*sciens*); second, that he act by choice and for the sake of a fitting end (*eligens et propter debitum finem*); and, third, that he act firmly (*immobilititer*). The first of these is included in the second, since, as *Ethics* 3 explains, what is done through ignorance is involuntary; and so in the definition of justice one first posits the will in order to show that an act of justice has to be voluntary. Then one adds the part about steadfastness and perpetuity in order to designate the act’s firmness.

And so the definition of justice cited above is a complete definition, except that the act [of willing] is posited instead of the habit that is specified by the act; for a habit is a habit with respect to an act.

And if one wanted to reduce this definition to the normative form of a definition, he could put it this way: “Justice is the habit in accord with which someone, by a steadfast and perpetual will, gives to each individual what is the right for him.” And this is nearly the same definition that the Philosopher posits in *Ethics* 5 when he says, “Justice is the habit by which someone is said to operate in accord with the choice of a just individual.”

**Reply to objection 1:** ‘Will’ here names the *act* [of willing] and not the *power*. However, it is customary among the authors for the habit to be defined by reference to the act. For example, in *Super Ioannem* Augustine says, “Faith (*fides*) is having faith in (*credere*) what you do not see.”

**Reply to objection 2:** Justice is rectitude (*rectitudo*) not in its essence (*neque essentialiter*), but only in what it causes (*sed causaliter tantum*); for it is a habit according to which one wills and operates in an upright way (*recte*).

**Reply to objection 3:** There are two ways in which a will can be called perpetual (*perpetua*):

(a) on the part of *the act itself*, which endures perpetually. And in this sense only God’s will is perpetual.

(b) on the part of *the object*, in the sense that one wills to do something perpetually. And this is what is required for the nature of justice. For it is not sufficient for the nature of justice that one will to preserve justice for the time being in some particular transaction (*ad horam in aliquo negotio*), since there is hardly anyone who wills to act unjustly in *all* matters. Rather, what is required is that a man have the will to preserve justice perpetually and in all matters.

**Reply to objection 4:** Since ‘perpetual’ (*perpetuum*) is not being taken here in the sense of the perpetual duration of the *act* of will, ‘steadfast’ (*constans*) is not added superfluously—with the result that, just as saying ‘perpetual will’ indicates that someone acts with the intention of preserving justice perpetually, so, too, saying ‘steadfast’ indicates that he perseveres in that intention with firmness.

**Reply to objection 5:** A judge renders what is the right in the manner of one who *commands* and *directs*, since, as *Ethics* 5 says, “The judge is the just in action (*iustum animatum*),” and “The ruler is the guardian of the just (*custos iusti*).” On the other hand, those subject to them render to each individual what is the right for him in the manner of *execution*.

**Reply to objection 6:** Just as, in keeping with what was explained above (q. 25, a. 1), the love of neighbor is included within the love of God, so, too, a man’s rendering to each individual what is his due is included in his serving God.

## Article 2

### Does justice always have to do with others?

It seems that justice does not always have to do with others (*iustitia not semper sit ad alterum*):

**Objection 1:** In Romans 3:22 the Apostle says, “The justice of God is through faith in Jesus Christ.” But faith does not bespeak a relation of one man to another. Therefore, neither does justice.

**Objection 2:** According to Augustine in *De Moribus Ecclesiae*, because justice serves God, it pertains to justice “to rule over the other things that are subject to man.” But a man’s sentient appetite is subject to him; this is clear from Genesis 4:7, where it says, “The desire for it, viz., sin, will be close by you, and you must master it.” Therefore, it belongs to justice to master one’s own desires. And so there will be justice with respect to oneself.

**Objection 3:** God’s justice is eternal. But nothing else was co-eternal with God. Therefore, having to do with others is not part of the essence of justice.

**Objection 4:** Just as operations with respect to others need to be rectified, so do operations with respect to oneself. But operations are rectified by justice—this according to Proverbs 11:5 (“The justice of the blameless man directs his path”). Therefore, justice is not just about matters that have to do with others; instead, it is also about matters that have to do with oneself.

**But contrary to this:** In *De Officiis* 1 Tully says that the nature of justice is to be “that by which the society of men among themselves is maintained, along with their common life (*est qua societas hominum inter ipsos et vitae communitas continetur*).” But this implies a relation to others. Therefore, justice involves only those things that have to do with others.

**I respond:** As was explained above (q. 57, a. 1), since the name ‘justice’ implies equality or balance (*aequalitatem importet*), justice by its nature has a relation to others. For nothing is equal to or balanced with itself; rather, it is equal to or balanced with something else. And since, as has been explained, it belongs to justice to rectify human acts, it must be the case that this otherness that justice requires belongs to diverse individuals with powers of acting. For actions belong to supposita and whole individuals and not, properly speaking, to parts and forms, i.e., to powers, since, properly speaking, it is not the hand that strikes, but the man who strikes by means of his hand. Nor, properly speaking, is it heat that gives warmth; rather, it is the fire that gives warmth by means of its heat. Yet such things are nonetheless asserted because of a certain similitude. Therefore, properly speaking, justice requires a diversity of supposita, and so it belongs only to one man with respect to another.

However, because of a certain similitude diverse principles of action within one and the same man are treated like diverse agents, e.g., reason, the irascible part, and the concupiscible part. And so justice is metaphorically said to exist within one and the same man, insofar as reason commands the irascible and concupiscible parts, and insofar as the latter obey reason—and, more generally, insofar as what is appropriate for each part of a man is rendered to it. That is why, in *Ethics* 5, the Philosopher calls this justice “according to a certain metaphor.”

**Reply to objection 1:** The justice that exists in us through faith is the justice through which a sinner is justified (*per quam iustificatur impius*) and which consists in the parts of the soul being appropriately ordered in the way that was explained above when we were talking about the justification of the sinner (*ST* 1-2, q. 113, a. 1). Now this pertains to justice in the metaphorical sense, which can be found even in someone who is leading a solitary life.

**Reply to objection 2:** This makes clear the reply to the second objection.

**Reply to objection 3:** God’s justice is from eternity as regards His act of will and eternal intention (*secundum voluntatem et propositum aeternum*), and this is what His justice mainly consists in—even though His justice is not eternal as regards its effect, since nothing is co-eternal with God.

**Reply to objection 4:** A man’s actions with respect to himself are sufficiently rectified when the passions are rectified by the other moral virtues. By contrast, his actions with respect to another stand in need of a special sort of rectification, not only in relation to the agent himself, but also in relation to the one toward whom those actions are directed. And so with respect to such actions there is a special virtue, viz., justice.

### Article 3

#### Is justice a virtue?

It seems that justice is not a virtue:

**Objection 1:** Luke 17:10 says, “When you have done all that is commanded you, say, ‘We are unprofitable servants; we have done what we were obligated to do.’” But it is not unprofitable (*inutile*) to do the work of a virtue; for in *De Officiis* 2 Ambrose says, “We are speaking about profit—not the

estimation of monetary wealth, but the acquisition of piety.” Therefore, to do what one is obligated to do is not a work of virtue. But it *is* the work of justice. Therefore, justice is not a virtue.

**Objection 2:** What is done out of necessity is not meritorious. But to render to someone what is his own, which belongs to justice, is a matter of necessity. Therefore, it is not meritorious. But we merit by means of acts of virtue. Therefore, justice is not a virtue.

**Objection 3:** Every virtue has to do with things that can be *done* (*est circa agibilia*). But as is clear from the Philosopher in *Metaphysics* 9, things that are constituted externally are *made* and not *done*. Therefore, since it belongs to justice to make a work that is just in its own right (*facere aliquod opus secundum se iustum*), it seems that justice is not a moral virtue.

**But contrary to this:** In *Moralia* 2 Gregory says, “The whole structure of a good work arises within the four virtues,” viz., temperance, prudence, fortitude and justice.

**I respond:** A human virtue is one that renders a human act good and that makes the man himself good. And this indeed belongs to justice.

For a man’s act is rendered good by attaining the rule of reason, according to which human acts are rectified. Hence, since justice rectifies human operations, it is clear that it renders a man’s work good.

Further, as Tully says in *De Officiis* 1, “It is mainly because of justice that men are called good.” Thus, as he says in the same place, “The splendor of virtue shines forth the most in justice.”

**Reply to objection 1:** When someone does what he is obligated to do, it does not afford monetary profit to the one for whom he does what he is obligated to do; instead, it only keeps the latter from incurring a loss. Yet he does profit himself to the extent that he does with a spontaneous and prompt will what he is obligated to do—which is what it is to act virtuously. Hence, Wisdom 8:7 says that God’s wisdom “teaches temperance and justice, prudence and fortitude (*virtus*), than which nothing is more profitable to men,” viz., to virtuous men.

**Reply to objection 2:** There are two sorts of necessity:

One is *the necessity of coercion* (*necessitas coactionis*), and because this sort of necessity is incompatible with the will, it removes the possibility of merit (*tollit rationem meriti*).

The other sort is *the necessity of obligation* imposed either by a command or by the necessity of an end (*necessitas ex obligatione praecepti sive ex necessitate finis*), viz., when one cannot attain the end of a virtue unless he does *this very thing*. And this sort of necessity does not exclude the possibility of merit, because someone does voluntarily what is necessary in this sense. However, it does exclude the glory of supererogation—this according to 1 Corinthians 9:16 (“If I preach the gospel, there is no glory for me, since a necessity lies upon me”).

**Reply to objection 3:** Justice does not consist in exterior things in the sense that it *makes* them; this belongs to an art or a skill. Rather, justice consists in exterior things in the sense that it makes use of them with respect to others (*utitur eis ad alterum*).

#### Article 4

##### Does justice have the will as the subject in which it exists?

It seems that justice does not have the will as the subject in which it exists (*iustitia non est in voluntate sicut in subiecto*):

**Objection 1:** Justice is sometimes called the truth. But truth belongs to the intellect and not to the will. Therefore, justice does not have the will as the subject in which it exists.

**Objection 2:** Justice concerns things that have to do with another. But to order something toward another belongs to reason. Therefore, justice has reason—and not the will—as the subject in which it exists.

**Objection 3:** Justice is not an intellectual virtue, since it is not ordered toward cognition. Hence, it follows that it is a moral virtue. But as is clear from the Philosopher in *Ethics* 1, the subject of a moral virtue is rational by participation, i.e., the irascible part [of the soul] and the concupiscible part. Therefore, justice has the irascible and concupiscible parts—and not the will—as its subject.

**But contrary to this:** Anselm says, “Justice is the rectitude of the will preserved for its own sake (*iustitia est rectitudo voluntatis propter se servata*).”

**I respond:** The power that is the subject of a virtue is such that the virtue is ordered toward rectifying the act of that power.

Now justice is not ordered toward directing any cognitive act; for we are not called just from the fact that we have cognition of something in the right way. And so the subject of justice is not the intellect or reason, which is a cognitive power.

On the other hand, since we are called just because we do something in the right way, and since the proximate principle of an act is an appetitive power, it must be the case that justice has an appetitive power as its subject.

Now there are two sorts of appetite, viz., (a) the will, which exists in reason, and (b) the sentient appetite, which follows upon sensory apprehension and which, as was established in the First Part (*ST* 1, q. 81, a. 2), is divided into the irascible appetite and the concupiscible appetite. But to render to each individual what is the right for him cannot proceed from the sentient appetite, since sentient apprehension does not extend to being able to consider the proportion between one thing and another (*non extendit ad hoc quod considerare possit proportionem unius ad alterum*); rather, this is proper to reason.

Hence, justice cannot have the irascible appetite or concupiscible appetite as its subject; instead, it exists only in the will. And this is why the Philosopher defines justice by appeal to an act of will, as is clear from what was said above (a. 1).

**Reply to objection 1:** The reason why the rectitude of reason, which is called truth and which is impressed on the will because of the will’s proximity to reason, retains the name ‘truth’ is that the will is a rational appetite. And this is why justice is sometimes called truth.

**Reply to objection 2:** The will tends toward its object following upon reason’s apprehension. And so, since reason orders the will toward another, the will is able to will something in relation to another—which pertains to justice.

**Reply to objection 3:** As *Ethics* 1 explains, it is not just the irascible and concupiscible parts [of the soul] that are rational by participation, but the whole of the appetitive part, since every appetitive power obeys reason. But the will is included under the appetitive part. And so the will can be the subject of a moral virtue.

## Article 5

### Is justice a general virtue?

It seems that justice is not a general virtue:

**Objection 1:** As is clear from Wisdom 8:7 (“It teaches temperance and justice, prudence and fortitude”), justice is co-divided off from the other virtues. But a general virtue is not co-divided off from or enumerated with the species contained under that general virtue. Therefore, justice is not a general virtue.

**Objection 2:** Just as justice is posited as a cardinal virtue, so, too, are temperance and fortitude. But neither temperance nor fortitude is posited as a general virtue. Therefore, neither should justice be in any sense posited as a general virtue.

**Objection 3:** As has been explained (a. 2), justice always has to do with others. But a sin against

one's neighbor is not a general sin; instead, it is divided off from a sin by which a man sins against himself. Therefore, neither is justice a general virtue.

**But contrary to this:** In *Ethics* 5 the Philosopher says, "Justice is all the virtues."

**I respond:** As has been explained (a. 2), justice orders a man in relation to others. There are two ways in which this can happen: (a) in relation to others considered *individually* and (b) in relation to others *in general*, viz., insofar as one who gives service to a community serves all the men who are contained within that community. Thus, justice can exist with its proper nature in relation to both of these.

Now it is clear that everyone who is contained within a community is related to the community as a part to its whole. But a part is something that belongs to the whole, and so the good of each part is ordered toward the good of the whole. Accordingly, then, the good of each virtue, whether it is ordering a man toward himself or ordering him toward other singular persons, can be referred to the common good, toward which justice orders him. Because of this, acts of all the virtues can belong to justice, and in this regard justice is called a general virtue. And since, as was established above (*ST* 1-2, q. 90, a. 2), it pertains to the law to order things toward the common good, this sort of justice, which is general in the way just explained, is called *legal justice*, viz., because through it a man is harmonized with a law that orders the acts of all the virtues toward the common good.

**Reply to objection 1:** Justice is co-divided off from, i.e., enumerated with, the other virtues not insofar as it is a general virtue, but insofar as it is a special or specific virtue. This will be explained below (a. 7).

**Reply to objection 2:** Temperance and fortitude exist in the sentient appetite—more specifically, in the concupiscible and irascible appetites. Now powers of this sort are desirous of particular goods, just as the senses have cognition of particulars. By contrast, justice has as its subject an intellectual appetite which is capable of the universal good apprehended by the intellect (*qui potest esse universalis boni cuius intellectus est apprehensivus*). And so justice is better able to be a general virtue than is temperance or fortitude.

**Reply to objection 3:** Things that have to do with oneself can be ordered toward others, especially toward the common good. Hence, insofar as legal justice orders one toward the common good, it can be called a general virtue. And, for the same reason, injustice can be called a general sin (*peccatum commune*); hence, 1 John 3:4 says, "Every sin is an imbalance (*omne peccatum est iniquitas*)."

## Article 6

### Is justice, insofar as it is a general virtue, the same by its essence as every virtue?

It seems that justice, insofar as it is a general virtue, is the same by its essence as every virtue (*idem per essentiam cum omni virtute*):

**Objection 1:** In *Ethics* 5 the Philosopher says that virtue and legal justice "are the same in every virtue, and yet their *esse* is not the same." But things that differ only in their *esse*, i.e., only in their concept, do not differ in their essence (*illa quae differunt solum secundum esse, vel secundum rationem, non differunt secundum essentiam*). Therefore, justice is the same by its essence as every virtue.

**Objection 2:** Every virtue that is not the same by its essence as every virtue is a part of virtue. But as the Philosopher says in the same place, justice of the sort in question is the whole of virtue and not a part of virtue. Therefore, justice of the sort in question is essentially the same as every virtue.

**Objection 3:** A virtue does not change its species of habit by the fact that it orders its own act toward some higher end. For instance, the habit of temperance remains the same habit in essence even if its act is ordered toward the divine good. But it belongs to legal justice that the acts of all the virtues are

ordered to a higher end, viz., the common good of the multitude, which takes precedence over the good of one single person. Therefore, it seems that legal justice is in its essence every virtue.

**Objection 4:** Every good that belongs to a part can be ordered toward the good of the whole. Hence, if it is not ordered toward the good of the whole, then it seems to be empty and useless (*videtur esse vanum et frustra*). But what exists in accord with a virtue cannot be like this. Therefore, it seems that no act can belong to a virtue that does not belong to general justice, which orders it toward the common good. And so it seems that general justice is the same in essence as every virtue.

**But contrary to this:** In *Ethics* 5 the Philosopher says, “Many are able to act virtuously in matters affecting themselves, but are unable to act virtuously in matters relating to others.” And in *Politics* 3 he says, “The virtue of the good man is not the same absolutely speaking as the virtue of the good citizen.” But the virtue of the good citizen is general justice, through which one is ordered toward the common good. Therefore, general justice is not the same thing as ordinary virtue; instead, the one can be had without the other.

**I respond:** There are two senses in which something is called general:

In one sense, something is called general *by predication* (*per praedicationem*), in the way that *animal* is general with respect to *man* and *horse* and other things of this sort. What is general in this sense must be the same in essence (*oportet quod sit idem essentialiter*) as the things with respect to which it is general, since the genus belongs to the essence of the species and appears in the definition of the species.

In a second sense, something is called general *by its power* (*generale per virtutem*), in the way that a universal cause is general with respect to all its effects, e.g., the sun with respect to all the bodies that are illuminated or changed by its power. What is general in this sense does not have to be the same in essence as the things with respect to which it is general, since the essence of the cause is not the same as the essence of its effect.

Now in accord with what has already said (a. 5), it is in this latter sense that legal justice is said to be a general virtue, viz., insofar as it orders the acts of the other virtues to its own end—which is to move all the other virtues by its command (*movere per imperium omnes alias virtutes*). For just as charity is said to be a general virtue insofar as it orders the acts of all the virtues toward the divine good, so, too, legal justice is said to be a general virtue insofar as it orders the acts of all the virtues toward the common good. Therefore, just as charity, which has the divine good as its proper object, is a specific virtue as far as its essence is concerned, so, too, legal justice is a specific virtue as regards its essence, because it has the common good as its proper object. And so legal justice exists principally and, as it were, architectonically, in the ruler, whereas in the ruler’s subjects it exists secondarily and, as it were, ministerially.

However, *any* virtue, insofar as it is ordered toward the common good by a virtue of the sort in question—i.e., by a virtue that is specific in its essence but general in its power—can itself be called legal justice. And it is in this manner of speaking that legal justice is the same in essence as every virtue and differs only in concept. And this is the manner in which the Philosopher is speaking.

**Reply to objection 1 and objection 2:** This makes clear the replies to the first and second objections.

**Reply to objection 3:** This argument, too, is talking about legal justice in the sense that a virtue commanded by legal justice is itself called legal justice.

**Reply to objection 4:** Every virtue is such that by its proper nature it orders its own act toward the proper end of that virtue. The fact that this act is ordered toward a further end—whether always or sometimes—is something that it does not have from its proper nature. Instead, there must be some other, higher virtue by which it is ordered toward that further end. And so there has to be a higher virtue that orders all the virtues toward the common good. And this is legal justice, and it is different in its essence from every [other] virtue.

## Article 7

### Is there particular justice over and beyond general justice?

It seems that there is no such thing as particular justice (*iustitia particularis*) over and beyond general justice (*praeter iustitiam generalem*):

**Objection 1:** Among the virtues there is nothing superfluous, just as there is nothing superfluous in nature. But general justice sufficiently orders a man concerning everything that has to do with others. Therefore, no sort of particular justice is needed.

**Objection 2:** *One* and *many* do not make for different species of virtue. But as is clear from what was said above (aa. 5-6), legal justice orders one man toward another with respect to what belongs to the multitude. Therefore, there is no other species of justice that orders a man toward others in those matters that pertain to one single person.

**Objection 3:** The ‘household multitude’ lies between one single person and the multitude of the city. Therefore, if, besides general justice, there is some other sort of particular justice in relation to an individual person, then by parity of reasoning there should be some other sort of ‘household justice’ (*iustitia oeconomica*) that orders a man toward the common good of an individual family. But no one makes this claim. Therefore, neither is there any sort of particular justice over and beyond legal justice.

**But contrary to this:** In commenting on Matthew 5:6 (“Blessed are they who hunger and thirst for justice”) Chrysostom says, “What He is calling ‘justice’ is either the universal virtue or else the particular virtue that is contrary to avarice.”

**I respond:** As has been explained (a. 6), legal justice is not in its essence every virtue; rather, it is necessary that, over and beyond legal justice, which orders a man immediately toward the common good, there be other virtues that immediately order a man with respect to particular goods.

Now these particular goods can have to do either (a) with oneself or (b) with another individual person. So just as, over and beyond legal justice, there have to be certain particular virtues, e.g., temperance and fortitude, that order a man within himself, so, too, over and beyond legal justice there has to be some sort of particular justice that orders a man in matters that have to do with another individual person.

**Reply to objection 1:** Legal justice does, to be sure, sufficiently order a man *immediately* in those matters that have to do with others as regards the common good, but as regards the good of a singular individual person, legal justice orders him *mediately*. And so there has to be some sort of particular justice that *immediately* orders a man toward the good of another individual person.

**Reply to objection 2:** The common good of the city and the individual good of a single person differ not only with respect to *many* and *few*, but also with respect to a *formal* difference; for the concept of the common good is different from the concept of the good of an individual, in the way that the concept of the whole differs from the concept of a part. This is why, in *Politics* 1, the Philosopher says, “They do not speak correctly who claim that the city and the home and other things of this sort differ only with respect to *many* and *few* and not with respect to their species.

**Reply to objection 3:** According to the Philosopher in *Politics* 1, a household multitude is distinguished by three relationships, viz., *wife and husband*, *father and child*, and *master and servant*, in which one of the persons is, as it were, something that belongs to the other. And so, as *Ethics* 5 explains, with respect to a person of this sort there is no justice absolutely speaking, but a sort of species of justice, viz., household justice (*iustitia oeconomica*).

## Article 8

### Does particular justice have its own specific subject matter?

It seems that particular justice does not have its own specific subject matter (*non habeat materiam specialem*):

**Objection 1:** A Gloss on Genesis 2:14 (“The fourth river is Euphrates”) says, “Euphrates’ means fertile. And it does not say where it flows, since justice belongs to all the parts of the soul.” But this would not be the case if it had a specific subject matter, since every specific subject matter belongs to some special power. Therefore, particular justice does not have a specific subject matter.

**Objection 2:** In 83 *Quaestiones* Augustine says, “There are four virtues of the soul by which one lives spiritually in this life, viz., prudence, temperance, fortitude, and justice.” And he explains that the fourth is justice, “which is diffused through all of them.” Therefore, particular justice, which is one of the four cardinal virtues, does not have a specific subject matter.

**Objection 3:** Justice directs a man sufficiently in matters that have to do with others. But a man can be ordered toward others in all the subject matters that belong to this life. Therefore, the subject matter of justice is general and not specific.

**But contrary to this:** In *Ethics* 5 the Philosopher posits particular justice specifically with respect to matters that pertain to the sharing of life (*ad communicationem vitae*).

**I respond:** Anything whatever that can be set right by reason is the subject matter of moral virtue, which, as is clear from the Philosopher in *Ethics* 2, is defined by right reason. Now things that can be made right by reason include (a) the interior passions of the soul, (b) exterior actions, and (c) exterior entities that are used by men. Now the relations of one man to another involve exterior actions and the exterior entities by which men are able to have a common life with one another, whereas the rectification of a man within himself has to do with his interior passions.

And so, since justice is ordered toward others, it does not have to do with the *entire* subject matter of moral virtue, but instead has to do only with exterior actions and exterior entities under the specific notion of its object, viz., insofar as one man is mutually related to another through these actions and entities.

**Reply to objection 1:** Justice belongs in its essence to the one part of the soul that it has as its subject, viz., the will, which by its command moves all the other parts of the soul. And so justice belongs to all the parts of the soul not *directly* but, as it were, by a sort of *overflow* (*quasi per quandam redundantiam*).

**Reply to objection 2:** As was explained above (*ST* 1-2, q. 61, aa. 3-4), there are two ways in which the cardinal virtues are understood: (a) as *specific virtues* having determinate subject matters, and (b) as signifying certain *general modes* of virtue.

It is in this latter way that Augustine is talking here. For he says that *prudence* is “cognition of things to be desired and things to be avoided,” and that *temperance* is “holding excessive desire back from things that temporarily give delight,” and that *fortitude* is “firmness of mind in the face of things that are temporarily troublesome,” and that *justice* is “that which is diffused throughout the others, love of God and love of neighbor,” —i.e., that which is the general root of our relation to others.

**Reply to objection 3:** The interior passions, which are a part of the moral subject matter, are not in their own right ordered toward others; this instead belongs to the specific nature of justice. However, the effects of the interior passions, viz., exterior operations, can be ordered toward others. Hence, it does not follow that the subject matter of justice is general.

## Article 9

### Does justice have to do with the passions?

It seems that justice has to do with the passions:

**Objection 1:** In *Ethics 2* the Philosopher says, “Moral virtue has to do with pleasures and pains” (*est circa voluptates et tristitias*). But as was established above when we were talking about the passions (*ST 1-2*, q. 23, a. 4 and q. 35, a. 1), pleasure (*voluptas*), i.e., enjoyment (*delectatio*), and pain are passions. Therefore, since justice is a moral virtue, it will have to do with the passions.

**Objection 2:** Operations with respect to others are made right by justice. But operations of this sort cannot be made right unless the passions are rectified, since disorder in these operations stems from disorder among the passions. For instance, one engages in adultery because of the desire for sexual pleasure, and one engages in theft because of the desire for money. Therefore, justice must have to do with the passions.

**Objection 3:** Just as particular justice is ordered toward others, so, too, is legal justice. But legal justice has to do with the passions; otherwise, it would not extend to all the virtues, some of which clearly have to do with the passions. Therefore, justice has to do with the passions.

**But contrary to this:** In *Ethics 5* the Philosopher says that justice has to do with operations.

**I respond:** The truth about this question is apparent from two things:

First, *from the very subject itself of justice*, i.e., from the will, whose movements or acts are not passions, as was established above (*ST 1-2*, q. 22, a. 3 and q. 59, a. 4); instead, it is only the movements of the sentient appetite that are called passions. And so justice does not have to do with the passions in the way that temperance and fortitude, which belong to the irascible and concupiscible appetites, have to do with the passions.

Second, *on the part of the subject matter*. Justice has to do with things that are ordered toward others. But we are not ordered immediately toward others by the interior passions. And so justice does not have to do with the passions.

**Reply to objection 1:** Not every moral virtue has to do with pleasures and pains as its subject matter; for instance, fortitude has to do with fear and audacity (*est circa timores et audacias*). On the other hand, every moral virtue is ordered toward pleasure and pain as certain consequent ends; for as the Philosopher says in *Ethics 8*, “Pleasure and pain are the principal end with respect to which we say of each thing that *this* one is bad and *this* one is good.” And this is the sense in which pleasure and pain belong to justice; for as *Ethics 1* says, “There is no just man who does not rejoice in just operations.”

**Reply to objection 2:** Exterior operations are a sort of middle ground between the exterior things that serve as their subject matter (*materia*) and the interior passions that are their starting points (*principia*). Now sometimes there is a defect in one of these without there being a defect in the other—as, for instance, when someone snatches something that belongs to another individual not because he wants to have it, but because he wants to harm that individual, or, conversely, when someone desires a thing that he nonetheless does not want to steal.

Therefore, the rectification of operations belongs to justice insofar as those operations are terminated in exterior things, whereas their rectification with respect to what arises from the passions belongs to the other moral virtues that have to do with the passions. Hence, *justice* prevents the stealing of what belongs to another insofar as this is contrary to establishing the right balance (*contra aequalitatem constituendam*) among exterior things, whereas *generosity* (*liberalitas*) prevents it insofar as it proceeds from an excessive desire for wealth. However, since exterior operations take their species from the exterior things that are their objects, and not from the interior passions, it follows that, speaking *per se*, exterior operations are more the subject matter of justice than they are of the other moral virtues.

**Reply to objection 3:** The common good is the end of individual persons who live in a

community, just as the good of the whole is the good of each part. But the good of one individual person is not the good of another individual person.

And so legal justice, which is ordered toward the common good, is more able to extend to the interior passions by which a man is disposed in such-and-such a way within himself, than is particular justice, which is ordered toward the good of another individual person. This is so, even though legal justice principally extends to the other virtues with respect to their exterior operations—viz., to the extent that, as *Ethics 5* points out, “the law commands one to do the acts of a brave individual ... and the acts of a temperate individual ... and the acts of a gentle individual.”

## Article 10

### Is the mean of justice the mean of the thing itself?

It seems that the mean of justice is not the mean of the thing itself (*non sit medium rei*):

**Objection 1:** The nature of a genus is preserved in all its species. But in *Ethics 2* virtue is defined as “an elective habit which exists in a mean (*in medietate*) determined by reason with respect to us.” Therefore, in the case of justice there exists a mean of reason and not a mean of the thing itself.

**Objection 2:** In things that are good simply speaking (*bona simpliciter*) there is no room for *too much* and *too little* (*non est accipere superfluum et diminutum*); as *Ethics 2* says, this is clear in the case of the virtues. But as *Ethics 5* says, justice has to do with things that “are good simply speaking.” Therefore, in the case of justice there is no mean of the thing itself.

**Objection 3:** The reason why, in the case of the other virtues, one says that there is a mean of reason and not a mean of the thing itself is that the mean is taken in different ways in relation to different persons; for as *Ethics 2* says, what is too much for one person is too little for another person. But this is likewise seen in the case of justice; for someone who strikes the ruler is not punished by the same punishment as someone who strikes a private person. Therefore, it is likewise the case that justice has a mean of reason and not a mean of the thing itself.

**But contrary to this:** In *Ethics 5* the Philosopher assigns a mean to justice according to an arithmetical ratio that is the mean of the thing itself.

**I respond:** As was explained above (*ST 1-2*, q. 60, a. 2), the other virtues have to do mainly with the passions, the rectification of which occurs only in relation to *this particular man* whose passions they are, i.e., so that he is as indignant or desirous as he should be, given his different circumstances. And so with virtues of this sort the mean is taken not from the proportion of one thing to another thing, but solely in relation to the virtuous individual himself. Because of this, in the case of these virtues the only mean is *in accord with reason as regards us* (*est medium solum secundum rationem quoad nos*).

By contrast, the subject matter of justice is an exterior operation insofar as it itself, or the thing that it makes use of, has an appropriate proportion to some other person. And so the mean of justice consists in a certain balance or equality of proportion (*consistit in quadam proportionis aequalitate*) on the part of the exterior thing with respect to an exterior person. But as *Metaphysics 10* explains, balance or equality is a certain mean between *more* and *less*. Therefore, justice has a mean belonging to the thing itself.

**Reply to objection 1:** This mean of the thing is also a mean of reason. And so the definition of a moral virtue is preserved in the case of justice.

**Reply to objection 2:** There are two senses of *good simply speaking*.

In one sense, what is good simply speaking is something that is good in all respects, in the way that the virtues themselves are good. And there is no such thing as a mean or extremes in the case of things that are good simply speaking in this way.

In the second sense, something is called good simply speaking because it is good without

qualification (*absolute bonum*) when it is considered in its own nature, although it can become bad because of misuse; this is clear in the case of riches and honors. And with respect to such things, there can be too much, or too little, or a mean with respect to men (*in talibus potest accipi superfluum, diminutum, et medium quantum ad homines*), who are able to use things either well or badly. And it is in this sense that justice is said concern things that are good simply speaking.

**Reply to objection 3:** Injuries inflicted on a ruler have a different proportion than do injuries inflicted on a private person. And so it is necessary to make up for (*adaequare*) the injuries in different ways through punishment. This pertains to a diversity in the thing and not just to a diversity in reason.

## Article 11

### Is the act of justice to render to each individual what is his own?

It seems not to be case that the act of justice is to render to each individual what is his own (*reddere unicuique quod suum est*):

**Objection 1:** In *De Trinitate* 14 Augustine attributes “assisting the needy” to justice. But in assisting the needy we do not give them what is theirs; instead, we give them what is ours. Therefore, it is not the case that the act of justice is to give each individual what is his own.

**Objection 2:** In *De Officiis* 1 Tully says, “Beneficence, which can be called benignity or generosity, belongs to justice.” But it belongs to generosity to give what is one’s own to another and not to give to someone what belongs to him. Therefore, it is not the case that the act of justice is to render to each individual what is his own.

**Objection 3:** It belongs to justice not only to dispense things in the appropriate way, but also to hold in check injurious actions such as homicide, adultery, and others of this sort. But rendering to someone what is his own seems to be relevant only to dispensing things. Therefore, the act of justice is not adequately made known by claiming that its act is to render to each individual what is his own.

**But contrary to this:** In *De Officiis* 1 Ambrose says, “It is justice that renders to each individual what is his own and that does not claim what belongs to someone else; it disregards its own profit in order to safeguard communal harmony (*ut communem aequitatem custodiat*).”

**I respond:** As was explained above (aa. 8 and 10), the subject matter of justice is an exterior operation insofar as it itself, or the things that we make use of through it, is proportioned to another person toward whom we are ordered by justice. But that which is owed to each person in accord with a balance of proportion is said to “his own.” And so the proper act of justice is nothing other than rendering to each individual what is his own.

**Reply to objection 1:** Since justice is a cardinal virtue, certain other secondary virtues are joined to it, for instance, mercy, generosity, and others of this sort, as will be explained below (q. 80). And so assisting the needy, which belongs to mercy or piety, and doing good deeds generously, which belongs to generosity, are attributed to justice by tracing them back to it (*per quandam reductionem*) as a principal virtue.

**Reply to objection 2:** The reply to the second objection is clear from this.

**Reply to objection 3:** As the Philosopher explains in *Ethics* 5, every excess in matters that pertain to justice is called a ‘profit’ (*lucrum*) by an extended meaning, just as everything that comes up less is called a ‘loss’ (*damnum*). The reason for this is that justice is first an exercise, and it is most commonly exercised in the voluntary exchange of things, as in buying and selling, in which the names ‘profit’ and ‘loss’ are used properly. And from there these names are extended to everything that justice can have to do with. What’s more, the same line of reasoning holds for the phrase ‘to render to each individual what is his own’.

## Article 12

### Is justice preeminent over all the moral virtues?

It seems that justice is not preeminent over all the moral virtues:

**Objection 1:** It pertains to justice to render to another what is his own. On the other hand, it belongs to generosity (*liberalitas*) to give from what is one's own, which is more virtuous. Therefore, generosity is a greater virtue than justice.

**Objection 2:** Nothing is made ornate except by something more becoming than it. But *Ethics 4* says, "Magnanimity is the ornament of both justice and all the virtues." Therefore, magnanimity (*magnanimitas*) is more noble than justice.

**Objection 3:** As *Ethics 2* says, virtue has to do with "what is difficult" and "what is good." But as *Ethics 3* points out, fortitude has to do with more difficult things than justice does, viz., with the dangers of death. Therefore, fortitude is more noble than justice.

**But contrary to this:** In *De Officiis 1* Tully says, "The splendor of virtue shines forth most brightly in justice, from which good men take their name."

**I respond:** If we are speaking of *legal justice*, then it is clear that justice is the most outstanding of all the moral virtues, insofar as the common good is preeminent over the individual good of a single person. Accordingly, in *Ethics 5* the Philosopher says, "The brightest of the virtues seems to be justice, and neither Hesperus (*Hesperus*) nor Phosphorous (*Lucifer*) is as admirable."

But even if we are speaking of *particular justice*, justice is preeminent among all the moral virtues, and this for two reasons:

The first reason can be taken from the *subject* of justice, viz., because justice exists in a more noble part of the soul, viz., in the rational appetite or will, whereas the other moral virtues exist in the sentient appetite that the passions, which are the subject matter of the other moral virtues, belong to.

The second reason is taken from the *object* of justice. For the other virtues are praised only with respect to the good of the virtuous individual himself. Justice, by contrast, is praised insofar as a virtuous individual treats someone else well, and so, as *Ethics 5* points out, justice is in some sense the good of the other. This is why, in *Rhetoric 1*, the Philosopher says, "It must be the case that the greatest virtues are those which are the best for other people, since a virtue is a power that does good. The reason why people honor brave men and just men the most is that fortitude is useful to others in battle, whereas justice is useful to others in both war and peace."

**Reply to objection 1:** Even though generosity gives from what is one's own, still, it does this insofar as one is considering the good of his own virtue in this. By contrast, justice gives to another what is his own as if it is considering the common good.

Furthermore, justice is observed with respect to everyone, whereas generosity cannot be extended to everyone.

Again, generosity, which gives from what is one's own, is founded upon justice, through which what is his own is preserved for each individual.

**Reply to objection 2:** Insofar as it supervenes upon justice, magnanimity adds to its goodness, but without justice it would not even have the nature of a virtue.

**Reply to objection 3:** Fortitude has to do with things that are more difficult, but it does not have to do with better things. For as has been explained, fortitude is useful only in war, whereas justice is useful in both peace and in war.

## QUESTION 59

### Injustice

Next we have to consider injustice (*iniustitia*). And on this topic there are four questions: (1) Is injustice a special vice? (2) Is doing what is unjust proper to one who is unjust? (3) Can someone willingly suffer what is unjust? (4) Is injustice by its genus a mortal sin?

#### Article 1

##### Is injustice a special vice?

It seems that injustice is not a special vice (*vitium speciale*):

**Objection 1:** 1 John 3:4 says, “Every sin is an imbalance (*iniquitas*.)” But an imbalance seems to be the same thing as an injustice (*iniustitia*); for justice seems to be a certain sort of balance or equality (*aequalitas quaedam*), and so an injustice seems to be the same thing as an inequality (*inaequalitas*), i.e., an imbalance (*iniquitas*). Hence, injustice is not a special sin.

**Objection 2:** No special sin is opposed to every virtue. But injustice is opposed to every virtue; for as regards adultery, it is opposed to chastity, and as regards homicide, it is opposed to mildness, and so on for the others. Therefore, injustice is not a special sin.

**Objection 3:** Injustice is opposed to justice, which exists in the will. But as Augustine explains, “Every sin exists in the will.” Therefore, injustice is not a special sin.

**But contrary to this:** Injustice is opposed to justice. But justice is a special virtue. Therefore, injustice is a special vice.

**I respond:** There are two sorts of injustice:

One is *anti-legal injustice* (*illegalis iniustitia*), which is opposed to *legal justice*. This is indeed by its essence a special vice insofar as it looks to a special *object*, viz., the common good, which it disdains. However, as regards its *intention* (*quantum ad intentionem*), it is a general vice, since through contempt for the common good a man can be led into every sin. In the same way, every vice, insofar as it is incompatible with the common good, has the nature of injustice in the sense of being derived from injustice—just as was explained above (q. 58, aa. 5-6) concerning justice.

The other sort of injustice bespeaks an *imbalance in relation to someone else*, as when a man wills to have more of the good things, e.g., riches and honors, and less of the bad things, e.g., drudgery and losses. And injustice in this sense has a special subject matter and is a particular vice opposed to particular justice.

**Reply to objection 1:** Just as legal justice is called ‘legal’ in relation to the common human good, so divine justice is called ‘divine’ in relation to the divine good, which is incompatible with every sin. And it is in this sense that every sin is called an imbalance.

**Reply to objection 2:** Even particular injustice is opposed *indirectly* to every virtue, viz., since, as was explained above (q. 58, a. 9, *ad 2*), exterior acts belong both to justice and to the other moral virtues, albeit in different ways.

**Reply to objection 3:** The will, like reason, extends to the entire moral subject matter, i.e., to the passions and to the exterior operations that involve others. But justice perfects the will only insofar as it extends to operations that involve others. And something similar holds for injustice.

## Article 2

### Is someone called unjust by reason of the fact that he does what is unjust?

It seems that someone is called unjust by reason of the fact that he does what is unjust:

**Objection 1:** As is clear from what was said above (*ST* 1-2, q. 54, a. 2), habits are specified by their objects. But the proper object of justice is the just, and the proper object of injustice is the unjust. Therefore, someone should be called just by reason of the fact that he does what is just, and someone should be called unjust by the fact that he does what is unjust.

**Objection 2:** In *Ethics* 5 the Philosopher labels as false the opinion of those who claim that (a) it is within a man's power to do what is unjust spontaneously and that (b) a just man is no less capable of doing what is unjust than an unjust man is. But this would not be so if doing what is unjust were not proper to an unjust man. Therefore, someone should be judged to be unjust by reason of the fact that he does what is unjust.

**Objection 3:** Every virtue is related to its proper act in the same way, and the same thing holds for the opposed vices. But anyone who does something intemperate is called intemperate. Therefore, anyone who does something unjust is called unjust.

**But contrary to this:** In *Ethics* 5 the Philosopher says that someone might do what is unjust and not be an unjust man (*aliquis facit iniustum et iniustus non est*).

**I respond:** Just as the object of justice is some sort of equality or balance among exterior things (*aliquid aequale in rebus exterioribus*), so, too, the object of injustice is some sort of inequality or imbalance (*aliquid inaequale*), as when more or less is given to someone than is appropriate for him (*prout scilicet alicui attribuitur plus vel minus quam sibi competat*).

Now the habit of injustice is related to this object by the mediation of its proper act, which is called the unjust act (*iniustificatio*). Therefore, there are two ways in which it can happen that someone who does what is unjust is not an unjust man:

In one way, because of a *failure in the pairing of the operation with its proper object*, where the operation receives its species and name from its *per se* object and not from any *per accidens* object. (In the case of those things that exist for the sake of an end, '*per se*' bespeaks something that is *intended*, whereas '*per accidens*' bespeaks something that lies *outside the intention*.) And so if someone does something unjust without intending to do something unjust—for instance, when he does this through ignorance, not thinking himself to be doing something unjust—then, he does not, speaking *formally* and *per se*, do what is unjust; instead, he does what is unjust only *per accidens* and, as it were, *materially*.

In the second way, this can happen because of a *failure in the relation of the operation itself to a habit*. For an unjust act can proceed sometimes from a passion, e.g., anger or sentient desire, and sometimes by choice, viz., when the unjust act pleases one in its own right; and it is in the latter case that it properly proceeds from a habit, since in the case of anyone who has the habit it is taken for granted (*secundum se acceptum*) that the operation belongs to that habit.

Therefore, it is proper to the unjust man to do what is unjust intentionally and by choice, and accordingly it is one who has the *habit* of injustice who is called an unjust man. However, someone without the habit of injustice is able to do what is unjust outside of his intention or from some passion.

**Reply to objection 1:** It is the object taken *formally* and *per se* that specifies the habit, and not the object taken *materially* and *per accidens*.

**Reply to objection 2:** It is not easy for just anyone to do what is unjust by choice, in the sense that what is unjust pleases him in its own right and not for the sake of something else. Rather, as the Philosopher points out in the same place, this is proper to someone who has the habit.

**Reply to objection 3:** The object of temperance, unlike the object of justice, is not something that is constituted exteriorly; instead, the object of temperance, i.e., the temperate, involves only the man

himself. And so what exists *per accidens* and outside one's intention cannot be called temperate either materially or formally; and the same thing holds for the intemperate. In this regard, justice is dissimilar from the other moral virtues.

However, as regards the relation of the operation to the habit, they are similar in all respects.

### Article 3

#### Can anyone willingly suffer what is unjust?

It seems that someone can willingly suffer what is unjust (*aliquis possit pati iniustum volens*):

**Objection 1:** As has been explained (a. 2), the unjust is the unequal or the unbalanced (*inaequale*). But someone recedes from balance by injuring himself, just as he does by injuring another. Therefore, someone can do what is unjust to himself as well as to another. But anyone who does what is unjust does it willingly. Therefore, someone can willingly suffer what is unjust, especially from himself.

**Objection 2:** No one is punished in accord with civil law except because he perpetrates some injustice. But as is clear from the Philosopher in *Ethics* 5, those who kill themselves were punished in accord with the laws of the cities, in that they were deprived from antiquity of the honor of burial. Therefore, someone can do what is unjust to himself. And so it is possible for someone to suffer what is unjust willingly.

**Objection 3:** No one does what is unjust except to someone who undergoes what is unjust. But it is possible for someone to do what is unjust to someone who wills this, e.g., if someone sells him an item for more than it is worth (*si vendat ei rem carius quam valeat*). Therefore, it is possible for someone to suffer what is unjust willingly.

**But contrary to this:** To suffer what is unjust is opposed to doing what is unjust. But no one does what is unjust except willingly. Therefore, conversely, no one suffers what is unjust except unwillingly.

**I respond:** An action by its nature proceeds from an agent, whereas an instance of being acted upon (*passio*) is by its proper nature from another (*ab alio*); hence, as *Physics* 3 and 8 explain, the thing acting (*agens*) and the thing acted upon (*patiens*) cannot be the same thing in the same respect.

Now in human beings the proper source of acting is the will. And so a man does properly and *per se* what he does willingly; and, conversely, a man properly suffers what he undergoes outside his own will. For insofar as he is willing, the principle is from himself, and so insofar as this is the case, he is more an agent (*agens*) than a patient (*patiens*).

Therefore, one should reply that, speaking formally and *per se*, (a) no one can do what is unjust except willingly and (b) no one can suffer what is unjust except unwillingly. However, speaking *per accidens* and, as it were, materially, someone is able either (a) to do unwillingly what is in itself unjust, as when someone acts outside his own intention, or (b) to suffer willingly what is unjust, as when someone by his own will gives to another more than he owes him.

**Reply to objection 1:** When someone by his own will gives to another what he does not owe him, he neither does an injustice nor creates an imbalance. For a man possesses things by his own will, and so no imbalance occurs if something is taken away from him by his own will, either by himself or by someone else.

**Reply to objection 2:** A singular person can be thought of in two ways.

In one way, *in his own right*. And if he is considered in this way, then if he inflicts an injury on himself, this can have the character of some other sin, e.g., intemperance or imprudence, but not the character of injustice. For in the same way that justice always involves others, so, too, does injustice.

In the second way, a man can be considered as *something that belongs to the city*, viz., a part of the city, or as *something that belongs to God*, viz., a creature of God and an image of God. And if he is

considered in this way, then one who kills himself inflicts an injury not on himself, but on the city and on God. And so he is punished both in accord with divine law and in accord with human law—in the same way that the Apostle says of the fornicator, “If anyone violates the temple of God, God will destroy him” (1 Corinthians 3:17).

**Reply to objection 3:** An instance of being acted upon (*passio*) is the effect of an exterior action. Now in the doing and suffering of what is unjust, what exists *materially* involves, as has been explained (a. 2), what is done externally insofar as it is considered in its own right, whereas what exists there *formally* and *per se* involves, as is clear from what has been said, the will of the agent and the will of the patient.

Therefore, one should reply that someone’s doing what is unjust is always concomitant, *materially* speaking, with someone else’s suffering what is unjust. However, if we are speaking *formally*, then someone can do what is unjust, intending to do what is unjust, even though no one else suffers what is unjust, because he suffers it willingly. And, vice versa, someone can suffer what is unjust if he suffers unwillingly what is unjust, even though the one doing what is unjust out of ignorance will not be doing what is unjust *formally*, but will be doing it only *materially*.

#### Article 4

##### Does everyone who does what is unjust commit a mortal sin?

It seems that not everyone who does what is unjust commits a mortal sin (*non quicumque facit iniustum peccet mortaliter*):

**Objection 1:** Venial sin is opposed to mortal sin. But sometimes it is a venial sin for someone to do what is unjust; for in *Ethics* 5 the Philosopher says of those who do unjust things, “Whatever sins they commit not only unknowingly, but even because of ignorance, are venial.” Therefore, not everyone who does what is unjust commits a mortal sin.

**Objection 2:** One who does what is unjust in some small matter deviates a little from the mean. But as is clear from the Philosopher in *Ethics* 2, this seems tolerable and should be counted among the least of evils. Therefore, not everyone who does what is unjust commits a mortal sin.

**Objection 3:** Charity is the mother of all virtues and such that a sin is called mortal because it is contrary to charity. But not every sin opposed to the other virtues is mortal. Therefore, neither is it the case that doing what is unjust is always a mortal sin.

**But contrary to this:** Whatever is contrary to God’s law is a mortal sin. But whoever does what is unjust is doing something contrary to a precept of God’s law, since, as will become clear in what follows (qq. 64-77), his act is traced back either to theft or to adultery or to homicide or to something else of this sort. Therefore, whoever does what is unjust commits a mortal sin.

**I respond:** As was explained above when we were talking about the differences among sins (*ST* 1-2, q. 72, a. 5), a mortal sin is contrary to the charity by which the soul’s [supernatural] life exists. But every harm inflicted on another is in its own right incompatible with charity, which moves us to will the good of the other. And so since injustice always consists in harm to another, it is clear that doing what is unjust is by its genus a mortal sin.

**Reply to objection 1:** This passage from the Philosopher is talking about ignorance of what has been done, which he calls “ignorance of the particular circumstances” and which deserves leniency; but he is not talking about ignorance of the law, which does not excuse. Now, as was explained above (a. 2), if someone unknowingly does what is unjust, then it is only *per accidens* that he does what is unjust.

**Reply to objection 2:** Someone who perpetrates an injustice in small matters falls short of the perfect or complete concept of doing what is unjust, insofar as his deed can be thought to be not entirely

contrary to the will of the one who suffers the deed—for instance, if someone snatches an apple or some such thing from someone who is probably not injured thereby or even displeased.

**Reply to objection 3:** Sins that are contrary to the other virtues do not always involve harm to someone else, but they do involve a certain disorder in the human passions. Hence, the two cases are not parallel.

## QUESTION 60

### Judgment

Next we have to consider judgment or the act of judging (*iudicium*). And on this topic there are six questions: (1) Is judgment an act of justice? (2) Is it permissible to judge? (3) Should one judge on the basis of his suspicions (*per suspiciones*)? (4) Should doubtful matters be construed in the best light? (5) Should judgment always be rendered on the basis of written laws? (6) Is judgment perverted by being usurped?

### Article 1

#### Is judgment an act of justice?

It seems that judgment (*iudicium*) is not an act of justice (*actus iustitiae*):

**Objection 1:** In *Ethics* 1 the Philosopher says, “Everyone judges well concerning what he knows,” and so judgment seems to belong to the cognitive power. But the cognitive power is perfected by prudence. Therefore, judgment belongs to prudence rather than to justice, which, as was explained above (q. 58, a. 4), exists in the will.

**Objection 2:** In 1 Corinthians 2:15 the Apostle says, “The spiritual man judges all things.” But a man is made spiritual especially by the virtue of charity, which, as Romans 5:5 says, “is diffused in our hearts by the Holy Spirit, who has been given to us.” Therefore, judgment belongs to charity rather than to justice.

**Objection 3:** Each virtue has right judgment regarding its own subject matter, since, according to the Philosopher in the *Ethics*, “The virtuous man is in each case the rule and measure.” Therefore, judgment does not belong to justice to a greater degree than it belongs to the other moral virtues.

**Objection 4:** Judgment seems to belong only to judges. But acts of justice are found in all just men. Therefore, since it is not only judges who are just, it seems that judgment is not the proper act of justice.

**But contrary to this:** Psalm 93:15 says, “... until justice is turned into judgment.”

**I respond:** ‘Judgment’, properly speaking, names the act of a judge insofar as he is a judge. But ‘judge’ (*iudex*) bespeaks, as it were, one who pronounces the right (*ius dicens*). Now as was established above (q. 57, a. 1), the right is the object of justice. And so, in accord with its primary imposition, ‘judgment’ implies fixing or determining what the just is, i.e., what the right is (*iudicium importat definitionem vel determinationem iusti sive iuris*).

Now in the case of virtuous works, one’s making a good determination proceeds from the virtue’s habit; for instance, it is the chaste man who correctly determines the things that pertain to chastity. And so judgment, which involves correctly determining what is just, properly belongs to justice. It is for this reason that in *Ethics* 5 the Philosopher says, “Men have recourse to the judge as a sort of living justice.”

**Reply to objection 1:** The name ‘judgment’, which in accord with its primary imposition signifies the correct determination of what is just, is extended to signify correct determination in all subject matters whatsoever, both speculative and practical.

However, in all these subject matters two things are required for a correct judgment:

One of them is the *power itself* that produces the judgment (*ipsa virtus proferens iudicium*). And in this sense a judgment is an act of reason, since it belongs to reason to fix or determine something.

The other is the *disposition of the one who judges*, because of which he is fit to judge correctly. And, in this sense, in those matters that pertain to justice the judgment proceeds from justice, just as in those matters that pertain to fortitude the judgment proceeds from fortitude.

So, then, a judgment is an act of *justice* insofar as justice is inclining one to judge correctly, whereas it is an act of *prudence* insofar as prudence produces the judgment. This is why, as was

explained above (q. 51, a. 3), *synesis*, which belongs to prudence, is called good judging.

**Reply to objection 2:** The “spiritual man” has from the habit of charity an inclination to judge all things correctly in accord with God’s standards (*secundum regulas divinas*), on the basis of which he pronounces his judgment through the gift of wisdom (cf. q. 45), just as the just man pronounces judgment through the virtue of prudence on the basis of the standards of the right (*ex regulis iuris*).

**Reply to objection 3:** The other virtues order a man within himself, but, as has been explained (q. 58, a. 2), justice orders a man toward others. Now man is the master of those matters that pertain to himself, but he is not the master of those matters that pertain to others.

And so those matters that involve the other virtues are such that the virtuous man’s judgment is all that is required for them—where, as has been explained, the name ‘judgment’ is being used in an extended sense.

By contrast, the matters that pertain to justice are such that a further judgment is required on the part of some superior, who is “able to reprove both of the men, and to put his hand between them” (Job 9:33). And this is why judgment belongs more especially to justice than to any other virtue.

**Reply to objection 4:** Justice in the ruler is, as it were, an *architectonic* virtue in the sense that it commands and prescribes what is just (*quasi imperans et praecipiens quod iustum est*), whereas justice in the subjects *executes* and *ministers*, as it were. And so judgment, which involves the determination of what is just, belongs to justice insofar as it exists in a more important way in the one who presides.

## Article 2

### Is it permissible to judge?

It seems that it is not permissible to judge (*non sit licitum iudicare*):

**Objection 1:** Punishment is inflicted only for something that is not permissible. But there is a punishment that threatens those who judge and that is avoided by those who do not judge—this according to Matthew 7:1 (“Judge not, in order that you might not be judged”). Therefore, it is not permissible to judge.

**Objection 2:** Romans 14:4 says, “Who are you to judge someone else’s servant? He stands or falls before his own lord.” But God is the Lord of everyone. Therefore, no man is permitted to judge.

**Objection 3:** No man is without sin—this according to 1 John 1:8 (“If we say we have no sin, we deceive ourselves”). But a sinner is not permitted to judge—this according to Romans 2:1 (“You have no excuse, O man, whoever you are, when you judge; for in judging another, you condemn yourself, because you are doing the very same things that you judge”). Therefore, no one is permitted to judge.

**But contrary to this:** Deuteronomy 16:18 says, “You shall appoint judges and magistrates at all your gates, in order that they might judge the people with just judgment.”

**I respond:** Judgment is permitted to the extent that it is an act of justice. Now as is clear from what was said above (a. 1), three things are required in order for a judgment to be an act of justice: (a) that it proceed from an inclination toward justice (*ut procedat ex inclinatione iustitiae*); (b) that it proceed from the authority of one who presides (*quod procedat ex auctoritate praesidentis*); and (c) that it be produced by the right reason that belongs to prudence (*quod proferatur secundum rectam rationem prudentiae*).

When any of these things is lacking, then the judgment is vicious and impermissible:

(a) first, when it is *contrary to the rectitude of justice*, in which case it is called a *perverse* or *unjust judgment* (*iudicium perversum vel iniustum*);

(b) second, when a man *judges in matters in which he does not have authority*, in which case it is called a *usurped judgment* (*iudicium usurpatum*);

(c) third, when *the certitude of reason is lacking*, as, for instance, when someone judges in matters that are doubtful or hidden by appealing to loose conjectures (*per aliquas leves coniecturas*), in which case it is called a *judgment based on suspicions* or a *rash judgment* (*iudicium suspiciosum vel temerarium*).

**Reply to objection 1:** Our Lord is here prohibiting rash judgment, which, as Augustine explains in *De Sermone Domini in Monte*, has to do with the intentions of the heart or other uncertain matters.

An alternative reply is that He is prohibiting judgment concerning divine matters, which, because they lie beyond us, we ought not to judge but simply to trust, as Hilary explains in *Super Matthaicum*.

Alternatively, He is prohibiting judgment that proceeds not from benevolence but from bitterness of mind, as Chrysostom claims.

**Reply to objection 2:** A judge is appointed as a minister of God. Hence, Deuteronomy 1:16 says, “Judge what is just,” and later it adds, “because it is the judgment of God.”

**Reply to objection 3:** As Chrysostom points out in commenting on Matthew 7:1 (“Do not judge ...”), those who abide in grave sins should not be judging those who abide in the same or lesser sins. This is mainly to be understood to apply when the sins in question are public, since this generates scandal in the hearts of others.

On the other hand, if the sins in question are hidden and not public, and if the necessity for judging is impending because of one’s position, then one can rebuke or judge the other with humility and fear.

Hence, in *De Sermone Domini in Monte* Augustine says, “If we find ourselves abiding in the same vice as the other man, then we should sigh deeply and invite him to try to do the same.” Still, the man doing the judging does not thereby acquire for himself a new reason for being condemned (*novum meritum condemnationis*); instead, in condemning the other man, he shows himself to be likewise condemnable because of the same sin or a similar one.

### Article 3

#### Is a judgment that proceeds on the basis of suspicions impermissible?

It seems that a judgment that proceeds on the basis of suspicions is not impermissible (*iudicium ex suspicione procedens non sit illicitum*):

**Objection 1:** A suspicion (*suspicio*) seems to be an uncertain opinion about something bad; hence, in *Ethics* 6 the Philosopher claims that a suspicion may be either true or false (*suspicio se habet et ad verum et ad falsum*). But an opinion about singular contingent things cannot help being uncertain. Therefore, since human judgment has to do with human acts, which included among singular and contingent things, it seems that no judgment would be permissible if it were not permissible to judge on the basis of suspicions.

**Objection 2:** An injury is done to one’s neighbor by an impermissible judgment. But a suspicion about some evil (*suspicio mala*) consists only in a man’s opinion, and so it does not seem to have anything to do with injury to another. Therefore, a judgment of suspicion is not impermissible.

**Objection 3:** If a judgment based on suspicions were impermissible, then this would have to be traced back to an injustice, since, as has been explained (a.1), judgment is an act of justice. But as was established above (q. 59, a. 4), injustice is by its genus always a mortal sin. Therefore, a judgment based on suspicions (*suspicionis iudicium*) would always be a mortal sin if it were impermissible. But this is false, since “we cannot avoid suspicions,” as it is put by a Gloss of Augustine’s on 1 Corinthians 4:5 (“Do not judge before the time”). Therefore, a judgment based on suspicions (*iudicium suspiciosum*) does not seem to be impermissible.

**But contrary to this:** In *Super Matthaicum* 7:1 (“Do not judge, etc.”) Chrysostom says, “By this

commandment our Lord does not prohibit Christians from reproving others out of benevolence; rather, He gives this commandment lest Christians come to despise Christians by boasting of their own righteousness and by hating and condemning others, most often on the basis of mere suspicions.”

**I respond:** As Tully explains, suspicion involves an opinion about something bad when this opinion proceeds from slight indications (*quando ex levibus indiciis procedit*).

There are three ways in which this happens:

In the first way, because *someone is bad within himself*. And by this very fact, as if conscious of his own badness, he easily thinks badly of others—this according to Ecclesiastes 10:3 (“The fool walking in the way, since he himself is a fool, thinks that everyone is a fool”).

In the second way, it arises from *someone’s having bad feelings toward another* (*aliquis male afficitur ad alterum*). For when one disdains or hates someone or is angry with him or envies him, then he thinks badly of him on the basis of the slightest indications, since everyone easily believes what he wants to believe (*quia unusquisque faciliter credit quod appetit*).

In the third way, it comes from *long experience*. Hence, in *Rhetoric 2* the Philosopher says, “Older people are especially suspicious, since they have experienced the defects of others many times.

Now the first two causes clearly involve a perversity of affection. By contrast, the third cause diminishes the character of suspicion insofar as experience contributes to certitude, which is contrary to the character of suspicion. And so suspicion involves a certain degree of vice, and the more intense the suspicion is, the more vicious it is (*quanto magis procedit suspicio, tanto magis est vitiosum*).

Now there are three degrees of suspicion:

The first degree occurs when on slight indications a man begins to doubt another’s goodness. This is a venial and slight sin, since it “pertains to a human temptation without which this life is not lived,” as a Gloss on 1 Corinthians 4:5 (“Do not judge before the time”) puts it.

The second degree occurs when one takes for certain the badness of another based on slight indications. And if this has to do with a grave matter, then it is a mortal sin, since it does not exist in the absence of contempt for one’s neighbor. Hence, the same Gloss adds, “Therefore, even if we are unable to avoid suspicions because we are men, nonetheless, we ought to refrain from judgments, i.e., from determinate and firm opinions.”

The third degree occurs when a judge proceeds on the basis of suspicions to condemn someone. And this belongs directly to injustice. Hence, it is a mortal sin.

**Reply to objection 1:** There is a sort of certitude in the case of human acts, not in the way there is certitude in demonstrative matters, but in a way that is appropriate for this subject matter—as when something is proved by suitable witnesses.

**Reply to objection 2:** By the very fact that someone has a bad opinion of another without sufficient cause, he disdains him in an inappropriate way. And so injury is done to him.

**Reply to objection 3:** Since, as has been explained (q. 58, aa. 8 and 10-11; q. 59, a. 1), justice and injustice have to do with exterior operations, it follows that a judgment based on suspicion (*iudicium suspiciosum*) belongs directly to injustice when it proceeds into an exterior act. And, in that case, as has been explained, it is a mortal sin.

On the other hand, an interior judgment pertains to justice because it is related to the exterior judgment in the way that interior acts are related to the corresponding exterior acts—for instance, in the way that disordered desire (*concupiscentia*) is related to fornication, or in the way that anger is related to homicide.

#### Article 4

##### Should doubtful matters be construed in the best light?

It seems that doubtful matters should not be construed in the best light (*dubia non sint in meliorem partem interpretanda*):

**Objection 1:** Judgment should be more about what happens in most cases (*esse debet de eo quod ut in pluribus accidit*). But in most cases it happens that someone acts badly, since, as Ecclesiastes 1:15 puts it, “The number of fools is infinite,” and as Genesis 8:21 says, “A man’s thoughts are prone to evil from his adolescence.” Therefore, we ought to construe doubtful matters in the worst light rather than in the best light (*dubia magis debemus interpretari in malum quam in bonum*).

**Objection 2:** Augustine says, “The one who lives piously and justly is a fair-minded evaluator (*integer aestimator*), not leaning toward either side.” But someone who construes what is doubtful in the best light leans toward one of the two sides. Therefore, this should not be done.

**Objection 3:** A man ought to love his neighbor as himself. But in his own case a man should construe doubtful matters in the worst light—this according to Job 9:28 (“I feared all my works”). Therefore, it seems that dubious matters concerning our neighbors should be construed in the worst light.

**But contrary to this:** A Gloss on Romans 14:3 (“Let him who does not eat not judge him who eats”) says, “Doubtful matters should be construed in the best light.”

**I respond:** As has been explained (a. 3), by the very fact that one has a bad opinion of someone else without sufficient cause, he inflicts an injury on that man and disdains him. But no one should disdain another, or inflict any sort of harm on him, without a compelling cause. And so where there are no clear indications of someone’s badness, we ought to think well of him (*debemus eum ut bonum habere*), construing what is doubtful in the best light.

**Reply to objection 1:** It can happen that someone who construes things in the best light is mistaken more often than not. But it is better for someone to be frequently mistaken while having a good opinion of a bad man than for him to less often be mistaken while having a bad opinion of a good man. For it is from the latter that injury comes to someone, and not from the former.

**Reply to objection 2:** It is one thing to make judgments about *things* and another to make judgments about *men*.

For in a judgment by which we judge about things, we do not pay attention to what is good or bad for the thing itself about which we judge and to which no harm comes, no matter how we judge it. Rather, we pay attention only to what is good for the one making the judgment if he judges truly, or to what is bad for him if he judges falsely. And so each individual ought to try to judge things as they are.

By contrast, in a judgment by we judge men, we pay attention mainly to what is good or bad for the one about whom we are judging, who is honorable by the very fact that he is judged to be good and contemptible if he is judged to be bad. And so in such judgments we ought rather to tend toward judging the man to be good, unless a clear reason for the contrary judgment is present.

As for the man himself who makes the judgment, a false judgment by which he thinks well of another is not bad for his intellect itself—just as having a true cognition of contingent singular things is irrelevant to the intellect’s perfection. Instead, this pertains to good affections.

**Reply to objection 3:** There are two senses in which something can be construed in a better or worse light.

In one sense, *by a presupposition*. And in this sense, when we have to apply a remedy to some evil, whether our own or someone else’s, it is expedient, in order for the remedy to be applied more confidently, to presuppose the worst, since a remedy that is effective against a greater evil will be all the more effective against a lesser evil.

In the other sense, we construe something in a good or bad light *by a definition or determination*.

And in this sense, as has been explained, in judging *things* one should try to construe everything as it is, whereas in judging *persons* one should try to construe everything in the best light.

## Article 5

### Should one always judge in accord with written laws?

It seems that one should not always judge in accord with written laws:

**Objection 1:** Unjust judgment should always be avoided. But sometimes written laws contain injustices—this according to Isaiah 10:1 (“Woe to those who make wicked laws and who, when they write, have written injustices”). Therefore, it is not always the case that one should judge in accord with written laws.

**Objection 2:** Judgment is necessarily about singular events. But as is clear from the Philosopher in *Ethics* 5, no written law can cover all singular events. Therefore, it seems that it is not always the case that one should judge in accord with written law.

**Objection 3:** Law is written down so that the decree of the lawgiver might be made clear. But it sometimes happens that if the giver of law were himself present, he would judge differently. Therefore, it is not always the case that one should judge in accord with written law.

**But contrary to this:** In *De Vera Religione* Augustine says, “In the case of temporal laws, even though men pass judgment on them when they institute them, nonetheless, once they have been instituted and fixed, judges will not be permitted to pass judgment on them, but only to judge in accord with them.”

**I respond:** As has been explained (a. 1), judging is nothing other than fixing or determining what is just.

Now as was established above (q. 57, a. 2), there are two ways in which something is made just: (a) *by the very nature of the thing*, and this is called *the natural right*; and (b) *by a sort of pact among men*, and this is called *the positive right*. Laws are written down in order to made manifest both sorts of the right, though in different ways.

For the writing of the law *contains* the natural right but does not *institute* it, since it has its strength (*robur*) not from the law but from nature. By contrast, the writing of the law both *contains* and *institutes* the positive right, giving it the strength of authority (*robur auctoritatis*).

And so it is necessary that judgment should be made in accordance with the writing of the law; otherwise, judgment would fall short of either the natural just or the positive just.

**Reply to objection 1:** Just as written law does not give strength to the natural right, so neither can it either diminish or augment that strength, since man’s will cannot change nature. And so if the written law (*scriptura legis*) contains anything contrary to the natural right, it is unjust and does not have the power to impose obligations (*nec habet vim obligandi*). For as was established above (q. 57, a. 2, *ad 2*), the positive right has a place in cases in which, as far as the natural right is concerned, “it does not matter whether it is done this way or some other way.” And so, as was explained above, no such writings are called laws; instead, they are called corruptions of the law. And so one should not judge in accord with them.

**Reply to objection 2:** Just as wicked laws are in themselves contrary to the natural right, either always or for the most part, so, in some cases even laws that are correctly posited fail in such a way that if the laws were observed in those cases, then this would be contrary to the natural right. And so in such cases one should not judge in accord with the letter of the law, but should instead have recourse to the equity or balance that the lawgiver intends. Hence, the Legal Expert says, “The liberality of equity does not allow us—and neither does any reason connected with the right—to take what is introduced beneficially for the welfare of men and turn it against their advantage by a harsh interpretation bordering

on severity.” In such cases, even the lawgiver would now judge in a different way, and, if he had taken these circumstances into account, he would have fixed this outcome by law.

**Reply to objection 3:** This makes clear the reply to the third objection.

## Article 6

### Is a judgment rendered perverse by being usurped?

It seems that a judgment is not rendered perverse by being usurped (*iudicium per usurpationem non reddatur perversum*):

**Objection 1:** Justice is a sort of rectitude in actions (*quaedam rectitudo in agendis*). But nothing is lost of the truth, no matter who speaks it; instead, it should be accepted from anyone. Therefore, similarly, nothing is lost of justice, no matter who determines what is just—and this determination belongs to the nature of judgment.

**Objection 2:** It pertains to judgment to punish sins. But we read of certain men who punished sins even though they did not have authority over those whom they punished. For instance, Moses killed an Egyptian (Exodus 2:11ff.); and Phinehas, the son of Eleazar, killed Zimri, the son of Salu (Numbers 25:7ff.), and “it was reputed to him unto justice” (Psalm 105:31). Therefore, the usurpation of judgment does not belong to injustice.

**Objection 3:** Spiritual powers are distinct from temporal powers. But sometimes prelates with spiritual power insert themselves into matters that pertain to the secular power. Therefore, usurped judgment is not impermissible.

**Objection 4:** As is clear from what was said above (aa. 1-2), just as authority is required in order to judge in an upright manner, so, too, are the justice and knowledge of the one who judges. But a judgment is not said to be unjust if the one judging does not have the habit of justice, or if he does not have knowledge of the right. Therefore, neither should it be the case that a usurped judgment, which is made with a lack of authority, will always be unjust.

**But contrary to this:** Romans 14:4 says, “Who are you to judge someone else’s servant?”

**I respond:** Since, as has been explained (a. 5), judgment should be rendered in accord with written laws, the one who passes judgment in some sense interprets what the law says, applying it to a particular matter. But given that it belongs to the same authority to interpret the law and to establish the law, just as the law can be established only by a public authority, so, too, judgment cannot be rendered except by a public authority that extends to those who are subject to the community. And so just as it would be unjust for someone to constrain others to follow a law that had not been sanctioned by a public authority, so, too, it is unjust for someone to compel another to carry out a judgment that is not rendered by a public authority.

**Reply to objection 1:** Pronouncing a truth does not involve compelling anyone to accept it; rather, each individual is free either to accept it or not to accept it, as he wills. By contrast, judgment involves a sort of compulsion. And so it is unjust for anyone to be judged by someone who does not have any public authority.

**Reply to objection 2:** Moses seems to have killed the Egyptian by divine inspiration, as it were, having acquired authority; this is apparent by what is said in Acts 7:25, viz., that “striking the Egyptian, he thought his brothers would understand that God would grant salvation to Israel by his hand.”

An alternative reply is that Moses killed the Egyptian while defending, by means of an inculpable defense, someone who had suffered an injury. Hence, in *De Officio* Ambrose says, “If someone does not stave off his friend’s injury when he can, then he is as much in the grip of vice as the one who inflicts the injury”—and he cites the example of Moses.

Alternatively, one can say, as Augustine does in *Quaestiones Exodi*, “Just as the earth, prior to useful seeds, was praised for the fertility of its unuseful plants, so this deed of Moses was vicious, but it bore a sign of great fertility, viz., insofar as it was a sign of that power by which the people would be liberated.”

Now as regards Phinehas, one should reply that he did this by divine inspiration, moved by his zeal for God.

Alternatively, even though he was not yet the high priest, he was nonetheless the son of the high priest, and this judgment belonged to him, just as to the other judges by whom this was commanded.

**Reply to objection 3:** Secular power is subject to spiritual power in the same way that the body is subject to the soul. And so there is no usurped judgment if a spiritual prelate inserts himself into temporal affairs to the extent that the secular power is subject to him in those affairs or insofar as the secular power has left those affairs to him.

**Reply to objection 4:** The habits of knowledge and justice are perfections of an individual person, and so a judgment is not said to be usurped by their absence, in the way that it *is* said to be usurped because of a lack of the public authority from which the judgment derives its power to compel.

## QUESTION 61

### The Parts of Justice

Next we have to consider the parts of justice: first, the *subjective parts*, which are the species of justice, viz., distributive justice and commutative justice (questions 61-78); second, the *integral parts*, as it were, of justice (question 79); and, third, the *subjective parts*, as it were, of justice, i.e., the virtues adjoined to justice (questions 80-122).

On the first topic there are two things to consider: first, the parts of justice themselves (questions 61-62); and, second, the opposed vices (questions 63-78).

And since restitution seems to be the act of commutative justice, we will first consider the distinction between commutative justice and distributive justice (question 61); and, second, restitution (question 62).

On the first topic there are four questions: (1) Are there two species of justice, viz., distributive justice and commutative justice? (2) Is the mean taken in the same way in both of them? (3) Are their subject matters uniform or multiple? (4) Is the just the same as reciprocity (*contrapassum*)?

### Article 1

#### Is it appropriate to posit two species of justice, viz., distributive justice and commutative justice?

It seems inappropriate to posit two species of justice, viz., distributive justice and commutative justice (*iustitia distributiva et commutativa*):

**Objection 1:** There cannot be a species of justice that harms the multitude, since justice is ordered toward the common good. But it harms the common good of the multitude to distribute common goods to the many, both because (a) the common resources are thereby exhausted, and also because (b) men's morals are corrupted; for in *De Officiis* Tully says, "He who receives becomes worse and more prepared to always expect the same thing." Therefore, distribution does not belong to any species of justice.

**Objection 2:** As was established above (q. 58, a. 2), the act of justice is render to each individual what is his own. However, in a distribution it is not the case that what is his own is rendered to someone; instead, what had been common is now newly appropriated to him. Therefore, this has nothing to do with justice.

**Objection 3:** As was established above (q. 58, a. 6), justice exists not only in the ruler, but also in his subjects. But it always belongs to the ruler to make a distribution. Therefore, what is distributed is irrelevant to justice.

**Objection 4:** As is explained in *Ethics* 5, the distributive just has to do with common goods. But common goods have to do with legal justice. Therefore, distributive justice is a species of legal justice and not a species of particular justice.

**Objection 5:** *One* and *many* do not make for diverse species of a virtue. But commutative justice consists in rendering something to *one* individual, whereas distributive justice consists in something's being given to *many* individuals. Therefore, they are not diverse species of justice.

**But contrary to this:** In *Ethics* 5 the Philosopher posits two parts of justice and explains, "One directs distributions (*distributiones*) and the other commutations or exchanges (*commutationes*)."

**I respond:** As has been explained (q. 58, a. 7), particular justice is ordered toward a private person who is related to the community as a part to a whole. Now there are two possible sorts of ordering toward a part:

One is *the ordering of one part toward another*, which is similar to the ordering of one private person toward another. Commutative justice directs this sort of ordering and has to do with those matters which are done mutually by two persons with one another.

The second is *the ordering of the whole toward the parts*, and this ordering includes the ordering of that which is common toward the individual persons. This ordering is directed by distributive justice, which distributes what is common proportionately.

And so there are two species of justice, viz., commutative and distributive.

**Reply to objection 1:** Just as moderation is commended in distributions made by private persons, whereas prodigality is frowned upon (*effusio culpatur*), so, too, moderation is to be preserved in the distribution of common goods that is directed by distributive justice.

**Reply to objection 2:** Just as the part and the whole are in some sense the same thing, so what belongs to the whole belongs in some sense to the part. And so when some of the common goods are distributed to the individuals, each in some sense receives what is his own.

**Reply to objection 3:** The act of distributing that involves common goods belongs to the one who presides over the common goods, even though (a) distributive justice exists in the subjects to whom the distribution is made insofar as they are made content by a just distribution, and even though (b) a distribution of common goods is sometimes made not to the city but to a family, where the distribution of these goods can be done by the authority of a private person.

**Reply to objection 4:** Movements receive their species from the *terminus ad quem*. And so it belongs to legal justice to order things that belong to private persons toward the common good, but, conversely, it belongs to particular justice to order the common good toward particular persons through distribution.

**Reply to objection 5:** Distributive justice and commutative justice are distinct not only with respect to *one* and *many*, but also with respect to the notion of what is owed. For what is common is owed to someone in a way different from that in which what belongs to him (*proprium*) is owed to him.

## Article 2

### Is the mean taken in the same way in distributive justice and commutative justice?

It seems that the mean is taken in the same way in distributive justice and commutative justice:

**Objection 1:** As has been explained (a. 1), both distributive justice and commutative justice are contained under particular justice. But in all the parts of temperance or fortitude the mean is taken in one way. Therefore, the mean must likewise be taken in the same way in distributive justice and commutative justice.

**Objection 2:** The form of a moral virtue consists in the mean that is determined in accord with reason. Therefore, since a single virtue has a single form, it seems that the mean must be taken in the same way in distributive justice and commutative justice.

**Objection 3:** In the case of distributive justice, the mean is taken by attending to the different levels of dignity among the persons (*attendo diversam dignitatem personarum*). But the dignity of persons is likewise attended to in commutative justice; for instance, in the case of punishments, someone who has struck the ruler is punished more than someone who has struck a private person. Therefore, the mean is taken in the same way in both species of justice.

**But contrary to this:** In *Ethics 5* the Philosopher says that in distributive justice the mean is taken “in accord with a geometrical proportion,” whereas in commutative justice the mean is taken “in accord with an arithmetical proportion.”

**I respond:** As has been explained, in the case of distributive justice something is given to a private person insofar as what belongs to the whole is owed to a part—where the greater the preeminence that the part itself has within the whole, the more it is given. And so in the case of distributive justice, the more preeminence a person has within the community, the more of the common goods he is given.

Now in an *aristocratic* community preeminence has to do with *virtue*, in an *oligarchic* community it has to do with *wealth*, in a *democratic* community it has to do with *freedom*, and in other sorts of community it has to do with other things. And so in the case of *distributive* justice, the mean is taken from a proportion of things to persons and not from a proportion of thing to thing, with the result that in the same way that one person exceeds another, so, too, the thing that is given to one person exceeds the thing that is given to another. This is why the Philosopher claims that this mean involves geometrical proportionality, in which *equality* or *balance* (*aequale*) involves not *quantity* but *proportion*. For instance, if we say that three is related to two as six is related to four—since in both cases there is a proportion of one and a half, in which the greater contains the lesser plus one-half of the lesser—then there is no equality of excess with respect to quantity, since six exceeds four by two, whereas three exceeds two by one.

By contrast, in exchanges or commutations (*in commutationibus*) something is rendered to a singular person because of a thing of his that has been received; this is especially clear in the case of buying and selling, where the notion of a commutation is found in the first instance. And so one must make a thing equal to a thing, with the result that to the extent that someone has more than what is his own from that which belongs to another, he restores to the latter what belongs to him. And in this sense what is brought about is an equality or balance (*aequalitas*) in accord with an arithmetical mean, which involves an equal excess of *quantity*. For instance, five is the mean between six and four, since it exceeds and is exceeded by one. Therefore, suppose that at the beginning the two individuals had five and that one of them received one of what belonged to the other—so that the one who received will have six and four will remain for the other. Then there will be justice if both of them return to the mean, so that one is received from him who has six, and one is given to him who has four. For in this way both will have five, which is the mean.

**Reply to objection 1:** In the case of the other virtues, the mean is taken in accord with reason and not in accord with the thing. But justice involves a mean of the thing, and so the mean is taken in diverse ways corresponding to the diversity of the things.

**Reply to objection 2:** The general form of justice is equality or balance (*aequalitas*), and distributive justice agrees with commutative justice in this. However, in the one case equality or balance is found in accord with a geometrical proportionality, whereas in the other it is found in accord with an arithmetical proportionality.

**Reply to objection 3:** In the case of actions and passions, the status of the person establishes the quantity of the thing, since it is a greater injury if a ruler is struck than if a private person is struck. And so the status of the person is involved in its own right in distributive justice, whereas in commutative justice it is involved to the extent that the things are diversified by it.

### Article 3

#### Are the subject matters of the two types of justice diverse?

It seems that the subject matters of the two types of justice are not diverse (*materia utriusque iustitiae non sit diversa*):

**Objection 1:** As is clear from the case of temperance and fortitude, a diversity of subject matter makes for a diversity of virtue (*diversitas materiae facit diversitatem virtutis*). Therefore, if distributive justice and commutative justice had diverse subject matters, it seems that they would not be contained under the same virtue, viz., justice.

**Objection 2:** As *Ethics* 5 explains, distribution, which belongs to distributive justice, “involves money or honor or anything else that can be distributed among those who live together in a community.”

But it is likewise the exchange of these same things among persons with one another that belongs to commutative justice. Therefore, the subject matter of distributive justice is not diverse from that of commutative justice.

**Objection 3:** If it is because they differ in species that the subject matter of distributive justice is different from the subject matter of commutative justice, then where there is no difference in species, there should not be a diversity of subject matters. But the Philosopher posits a single species of commutative justice that nonetheless has multiple subject matters. Therefore, it does not seem the species in question have multiple subject matters.

**But contrary to this:** *Ethics 5* says, “One species of justice directs distributions, and another species directs commutations.”

**I respond:** As was explained above (q. 58, aa. 8 and 10), justice has to do with exterior operations, viz., acts of distributing and exchanging that involve the use of exterior entities, either *things* or *persons* or even *works*—of *things*, as when someone either takes from or restores to another something that belongs to him; or of *persons*, as when someone inflicts an injury on a man’s very person, e.g., by striking him or reviling him or, again, as when someone shows reverence for another; or of *works*, as when someone justly demands some work from another or renders some work to another.

Therefore, if we take as the subject matter of both sorts of justice *those things that the operations make use of*, then the subject matters of distributive and commutative justice are the same. For things (*res*) can be distributed from what is common to the individuals, and they can also be transferred from one person to another. Likewise, there is a sort of distribution of works of labor, along with compensation.

By contrast, if we take as the subject matter of the two sorts of justice *the main actions themselves by which we make use of persons, things, and works*, then different subject matters are found in the two sorts of justice. For distributive justice directs *distributions*, whereas commutative justice directs *exchanges* that can occur between two persons.

Some of these exchanges are *involuntary*, and some are *voluntary*.

Exchanges or commutations are *involuntary* when someone makes use of another individual’s thing or person or work against his will. This sometimes happens in a hidden way by *fraud*, and sometimes openly by *violence*. Again, both of these happen either with respect to a *thing* or with respect to a *person in his own right* or with respect to a *person connected with him*.

In the case of a *thing*, if one individual takes a thing belonging to another in a stealthy way, it is called *theft (furtum)*; if he does it openly, it is called *robbery (rapina)*.

Against the *person in his own right*, it occurs either with respect to the very constitution of the person or with respect to his dignity. If it is with respect to the person’s constitution, then one is harmed either (a) secretly by a *crafty killing (dolosa occisio)* or by a *beating (percussio)* or by the *administering of poison (veneni exhibitio)*, or else (b) openly by an *evident killing (occisio manifesta)* or by *imprisonment (incarceratio)* or by *flogging or mutilating parts of the body (verberatio seu membri mutilatio)*. As regards the person’s dignity, one is harmed secretly by false witness (*falsum testimonium*) or detraction (*detractio*), by which one loses his reputation, and by other things of this sort, and one is harmed openly by being accused in court (*accusatio in iudicio*) or by being boisterously reproached (*convicii illatio*).

As regards *connected persons*, one is harmed in his wife, most often in secret, by *adultery (adulterium)*, and in his servant when someone induces him to leave his master (*seducit ut a domino discedat*)—and these can also be done openly. And the same line of reasoning applies to other connected persons, on whom injuries can be inflicted in all the ways that they can be inflicted on the principal person. Still, adultery and the inducement of a servant are properly speaking injuries against those persons themselves—though, because a servant is a sort of possession, the inducement of a servant is looked upon as *theft*.

On the other hand, exchanges or commutations are called *voluntary* when someone voluntarily transfers a thing of his own to another. And if he simply transfers a thing of his own to another in the absence of any debt, as with a gift or donation (*donatio*), then this is an act of generosity (*liberalitas*) and not of justice. But to the extent that something of the nature of a debt is involved, a voluntary transfer belongs to justice. There are three ways in which this happens:

In one way, someone simply transfers a thing of his own to another in return for another thing, as happens in the case of buying and selling.

In a second way, someone hands over a thing of his own to another, giving him the use of the thing along with the obligation of giving the thing back. If he gives him the use of the thing for free, this is called *usufruct* (*usufructus*), in the case of things that yield some sort of fruit, or simply *borrowing for use* and *lending for use* (*motuum vel accommodatum*), in the case of things that do not yield fruit, such as currency (*denarii*), vases, and other things of this sort. However, if the use itself of the thing is not given for free, then it is called *leasing* (*locatio*) or *hiring out* (*conductio*).

In the third way, someone hands over a thing of his own—as something to be given back—not for the sake of its use but (a) for the sake of *its being kept safe* (*conservatio*), as with a *deposit* (*depositum*), or (b) because of a *pledge* (*obligatio*), as when a man mortgages a thing of his own as a *security* (*cum aliquis rem suam pignori obligat*), or as when someone pledges a thing of his own as a *bond* for another (*aliquis pro alio fideiubet*).

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objection are clear from what has been said.

#### Article 4

##### Is the just the same thing absolutely speaking as reciprocity?

It seems that the just is the same thing absolutely speaking as reciprocity (*iustum sit simpliciter idem quod contrapassum*):

**Objection 1:** Divine judgment is the just absolutely speaking. But the form of divine judgment is that someone should undergo what he himself has done—this according to Matthew 7:2 (“For with what judgment you judge, you shall be judged, and with what measure you measure, it shall be measured to you again”). Therefore, the just is the same thing absolutely speaking as reciprocity.

**Objection 2:** In both sorts of justice something is given to someone in keeping with a certain equality or balance: (a) an equality or balance with respect to *the dignity of the person* in the case of distributive justice, which seems to attend to the dignity of the person especially in light of the works by which he has served the community; and (b) an equality or balance with respect to *the thing by which someone has been put into debt* in the case of commutative justice. But in the case of both sorts of equality or balance, someone is reciprocated according to what he himself has done. Therefore, it seems that the just is the same thing absolutely speaking as reciprocity.

**Objection 3:** It is especially because of the difference between the voluntary and the involuntary, that it seems unnecessary for someone to be reciprocated in accord with what he has done, since someone who inflicts an injury involuntarily is punished less. But *voluntary* and *involuntary*, which are taken from our side, do not diversify the mean of justice, which is a mean of the thing and not a mean with respect to us. Therefore, the just seems to be the same thing absolutely speaking as reciprocity.

**But contrary to this:** In *Ethics* 5 the Philosopher proves that the just is not reciprocity.

**I respond:** ‘Reciprocity’ (*contrapassum*) implies a compensatory instance of being acted upon that is equal to a preceding action (*contrapassum importat aequalem recompensationem passionis ad actionem praecedentem*).

‘Reciprocity’ is most properly used in the case of injurious sufferings by which someone damages *the person of his neighbor*—so that, for instance, if someone strikes his neighbor, then he himself is struck in return. And this, to be sure, is the just as determined in the Law: “He shall render a life for a life ... an eye for an eye ...” (Exodus 21:23ff.).

Again, since to take a *thing* that belongs to another is likewise to do something, ‘reciprocity’ is also used in a secondary sense in such cases—so that, namely, someone who has inflicted a loss is himself made to suffer a loss in what belongs to him. And this, too, is the just as contained in the Law: “If any man steals an ox or a sheep, and kills or sells it: he shall restore five oxen for one ox, and four sheep for one sheep” (Exodus 22:1).

But, third, the name ‘reciprocity’ is transferred to voluntary exchanges or commutations in which there is acting and being acted upon on both sides (*utrinque est actio et passio*)—even though, as has been explained (q. 59, a. 3), voluntariness dilutes the idea of being acted upon (*voluntarium diminuit de ratione passionis*).

According to the nature of commutative justice, in all of these cases compensation must be made as regards equality or balance, so that the compensated instance of being acted upon is equal to the action. However, the compensation would not always achieve balance or equality if someone were to undergo something of the very same species as what he had done.

For, first of all, when someone inflicts an injury on the person of someone preeminent, the action is greater than the passion of the same species that this person has suffered. And so someone who strikes a ruler is not just reciprocated, but is punished much more severely.

Similarly, even when one inflicts an involuntary loss on someone in what belongs to him, the action is greater than the passion would be if that thing had only been lost to him, since the one who inflicted the loss on him did not incur any loss at all in what belongs to him. And so the latter is punished by having to restore the thing several times over, since he inflicted a loss not only on a private person but also on the civil society (*respublica*) by weakening the security of its guardianship.

Similarly, it is not even the case in voluntary exchanges that there is always an equal or balanced passion if someone gives what belongs to him while receiving something that belongs to another. For that other thing might be worth much more than his thing is. And so it is necessary to make the passion equal to the action by some proportionate measure, and that is why money (*numismata*) was invented.

And this is the way in which *commutative justice* is reciprocity.

However, these considerations have no place in the case of *distributive justice*. For in distributive justice one does not attend to an equality or balance having to do with the proportion between *things* or the proportion between *passions* and *actions*. Hence, distributive justice is called reciprocity, but, as was explained above (a. 2), it is a reciprocity that involves a proportion of *things* to *persons*.

**Reply to objection 1:** The form of divine justice involves the idea of commutative justice, insofar as it gives rewards as compensation for merits and punishments as compensation for sins.

**Reply to objection 2:** If someone who had served the community were reimbursed for service rendered, this would belong to commutative justice and not to distributive justice. For in the case of distributive justice, one does not attend to the equality or balance between what someone receives and what he has given; rather, one attends to what someone else receives, given the status of both persons.

**Reply to objection 3:** When an injurious action is voluntary, the injury exceeds the action and so is received as a greater thing. Hence, a greater punishment must be given in return because of the difference in the things themselves—and not because of any difference from our side (*non secundum differentiam quoad nos, sed secundum differentiam rei*).

## QUESTION 62

### Restitution

Next we have to consider restitution (*restitutio*). And on this topic there are eight questions: (1) What is restitution an act of? (2) Is it necessary for salvation that restitution be made for everything that has been taken? (3) Must restitution be made for a thing many times over? (4) Must restitution be made for what one has not taken? (5) Must restitution be made to the one from whom the thing was taken? (6) Must it be the one who took the thing who makes restitution? (7) Must anyone else make restitution? (8) Must restitution be made immediately?

### Article 1

#### Is restitution an act of commutative justice?

It seems that restitution is not an act of commutative justice:

**Objection 1:** Justice is related to the notion of a debt. But just as a gift can be made of something that is not owed, so too can restitution be made of a thing that is not owed. Therefore, restitution is not an act of any part of justice.

**Objection 2:** Restitution cannot be made for what has already passed away and no longer exists. But justice and injustice have to do with certain actions and passions, which do not remain but pass away. Therefore, restitution does not seem to be an act of any part of justice.

**Objection 3:** Restitution is a sort of compensation for something that has been taken away. But something can be taken away from a man not only in an exchange or commutation, but also in a distribution—for instance, when the one distributing gives less to someone than he ought to have. Therefore, restitution is not more an act of commutative justice than of distributive justice.

**But contrary to this:** Making restitution (*restitutio*) is opposed to taking something (*ablatio*). But the taking of what belongs to another is an act of injustice having to do with exchanges or commutations. Therefore, the restitution of what has been taken is an act of justice that directs exchanges or commutations.

**I respond:** To make restitution seems to be nothing other than to establish someone as once again in possession of, or in control of, a thing that belongs to him. And so in an instance of restitution one attends to the balance of justice by the compensation of a thing for a thing—which has to do with commutative justice.

And so restitution is an act of commutative justice that takes place when a thing that belongs to one individual is being held by another, either in accord with the former's will, as in the case of a loan or a deposit, or against his will, as in the case of robbery or theft.

**Reply to objection 1:** What is not owed to another does not, properly speaking, belong to him, even if it did at one time belong to him. And so when one restores to another something that he does not owe him, it seems more like a new gift than an instance of restitution—even though it does have a certain similarity to restitution, since the thing is *materially* the same. Nonetheless, it is not the same thing as regards the *formal* notion that justice looks to, viz., its being a thing *that belongs to someone*. Hence, this is not properly called restitution.

**Reply to objection 2:** Insofar as it implies a certain sort of return, the name 'restitution' presupposes the identity of the thing. And so in keeping with the name's first imposition, restitution seems to have a place mainly in the case of exterior things, which, while remaining the same with respect both to substance and to the right of ownership (*secundum substantiam et secundum ius domini*), can pass from one individual to another.

However, just as the name 'commutation' has been transferred from things of this sort to actions or passions having to do with deferring to or injuring a person, i.e., to profiting or harming him, so, too, the

name ‘restitution’ is extended to things which, even though they do not remain in reality, nonetheless remain in their effect—either (a) in a corporeal effect, as when someone’s body is wounded by a beating, or (b) in men’s opinion, as when a man remains disgraced by reproachful language or simply diminished in his honor.

**Reply to objection 3:** The compensation that the one who distributes makes to someone to whom he has given less than he was owed is made in accord with a comparison of thing to thing, so that however much less he had than he was owed, that much more is given to him. And so this already has to do with commutative justice.

## Article 2

### Is it necessary for salvation to make restitution for what has been taken?

It seems that it is not necessary for salvation to make restitution for what has been taken:

**Objection 1:** What is impossible is not necessary for salvation. But sometimes it is impossible to make restitution for what has been taken—as, for instance, when someone has taken a limb or a life. Therefore, it does not seem to be necessary for salvation that an individual make restitution for what he has taken from another.

**Objection 2:** It is not necessary for salvation to commit any sin, since if it were, then a man would find himself in a dilemma (*quia sic homo esset perplexus*). But it is sometimes the case that what has been taken cannot be restored without sin—as, for instance, when someone has ruined a man’s reputation (*fama*) by speaking the truth. Therefore, making restitution for what has been taken is not necessary for salvation.

**Objection 3:** What has been done is such that it cannot be brought about that it has not been done. But sometimes someone loses the honor of his person by the very fact that he has been subjected to someone’s censuring him unjustly. Therefore, what has been taken away cannot be restored to him. And so it is not necessary for salvation to make restitution for what has been taken away.

**Objection 4:** One who prevents another from obtaining some good seems to take that good away from him, since, as the Philosopher says in *Physics* 2, “What is very close seems, as it were, to lack nothing at all.” But when someone prevents another from obtaining what was going to be offered to him or something of this sort, it does not seem that he is obligated to make restitution for what was going to be offered, since in some cases he would not be able to do this. Therefore, it is not necessary for salvation to make restitution for what has been taken.

**But contrary to this:** Augustine says, “The sin is not forgiven unless one makes restitution for what was taken.”

**I respond:** As has been explained (a. 1), making restitution is an act of commutative justice, which consists in a certain sort of equality or balance. And so to make restitution implies giving back the thing that has been taken unjustly, since equality or balance is restored by the thing’s being handed back. By contrast, if a thing has been taken justly, then there will be an inequality or imbalance if the thing is restored, since justice consists in equality or balance.

Therefore, since preserving justice is necessary for salvation, it follows that it is necessary for salvation to make restitution for what has been taken unjustly.

**Reply to objection 1:** In cases in which something equivalent cannot be restored, it is sufficient to repay what is possible—in the same way that this is clear, according to the Philosopher in *Ethics* 8, regarding the honor that is due to God and to one’s parents. And so when one cannot make restitution with something equal for what has been taken away, then compensation of a sort that is possible should be made. For instance, if one takes a body part away from someone, then he should compensate him with

money or with some honor, in accord with the decision of an upright man who takes into consideration the situation of each person.

**Reply to objection 2:** There are three ways in which someone's reputation (*fama*) can be ruined:

(a) *justly and by speaking the truth*—as, for instance, when an individual makes known someone's crime while preserving due order. And in such a case he is not obligated to make restitution for the other's reputation.

(b) *unjustly and by speaking falsehood*. And in such a case one is obligated to make restitution for the reputation to the extent that he can by confessing that what he said was false.

(c) *by speaking the truth but in an unjust way*—as, for instance, when an individual makes known someone's crime in a way contrary to due order. And in such a case he is obligated to restore the other's reputation to the extent that he can—but without lying—by claiming that he misspoke or that he defamed him unjustly (*utpote quod dicat se male dixisse vel quod iniuste eum diffamaverit*).

Alternatively, if it is impossible to restore the reputation, then he should compensate him in other ways, as has been explained for other cases (cf. *ad 1*).

**Reply to objection 3:** It is impossible for the action of inflicting contumely to be done in such a way that it has not been done. However, it can be done in such a way that its effect, viz., diminishing a person's dignity in the eyes of men, is repaired by a show of respect.

**Reply to objection 4:** There are different ways in which someone can prevent another from having what was going to be offered to him:

(a) *justly*—for instance, if, while intending to honor God or to serve the Church, someone procures what was to be given to a more elevated person. And in such a case he is in no way obligated to make restitution or to provide any sort of compensation.

(b) *unjustly*—for instance, if someone intends to do harm to the one whom he is hindering, out of hatred or vengeance or something of this sort. In such a case, if he prevents something from being offered to a person worthy of it, advising that it not be given before it has been determined that it will be given to him, then he is obligated to make some sort of compensation, in accord with the decision of a wise man who takes into account the situation of the persons and of the affair. However, he is not obligated to make *equal* compensation, since the man in question had not yet obtained the good and since he could have been prevented from doing so in any number of ways.

However, if it had already been determined that what was on offer was to be given to a certain individual, and if someone for an unjust reason procures the revocation of this determination, then this is the same as his taking away from the individual something that is already possessed. And so he has an obligation to make restitution of something equivalent (*tenetur ad restitutionem aequalis*), though in accord with his ability.

### Article 3

#### Is it sufficient to restore the exact amount that was unjustly taken?

It seems that it is not sufficient to restore the exact amount (*simplum*) that was unjustly taken:

**Objection 1:** Exodus 22:1 says, "If a man steals an ox or a sheep and kills or sells it, he shall restore five oxen for one ox, and four sheep for one sheep." But everyone is obligated to fulfill the commands of divine law. Therefore, one who steals is obligated to repay four or five times as much.

**Objection 2:** As Romans 15:4 says, "Whatever has been written has been written for our instruction." But in Luke 19:8 Zaccheus says to our Lord, "If I have defrauded anyone, I will repay him fourfold." Therefore, a man ought to restore many times over whatever he has taken unjustly.

**Objection 3:** Whatever a man is not obligated to give away is such that it cannot be justly taken

away from him. But a judge justly takes away from a thief more than he has stolen—for making amends (*pro emenda*). Therefore, the man is obligated to pay this. And so it is not sufficient to repay the exact amount.

**But contrary to this:** Restitution restores a balance where the taking made for an imbalance (*restitutio reducit ad aequalitatem quod inaequaliter ablatum est*). But someone restores the balance by returning exactly the amount he took. Therefore, he is obligated to restore only as much as he took.

**I respond:** When someone takes something unjustly from another, there are two relevant factors:

The first of them is an *inequality or imbalance on the part of the thing*, and this can sometimes occur without any injustice, as is clear in the case of loans.

The other is the *sin of injustice (culpa iniustitiae)*, which can occur even when there is a balance among the things—for instance, when someone intends to inflict violence on another but does not prevail over him.

Thus, as regards the first factor, the remedy is applied by means of restitution, insofar as the balance is restored by it, and for this it is sufficient that one restore as much as he has from the other.

However, as regards the sin, the remedy is applied through a penalty (*per poenam*), the imposition of which belongs to a judge. And so before he is convicted through a judgment, he is not obligated to restore more than he took, but after he is convicted, he is obligated to pay the penalty.

**Reply to objection 1:** This makes clear the reply to the first objection, since the law in question determines the penalty that is to be imposed by the judgment. And even though, as was established above (*ST* 1-2, q. 104, a. 3), no one after Christ's coming is obligated to observe the judicial precepts [of the Old Law], the same thing, or something similar, can nonetheless be established in human law, and the line of reasoning will be the same.

**Reply to objection 2:** Zaccheus said this in the sense that he wanted to go beyond his obligation (*quasi supererogare volens*). Hence, he had likewise prefaced the quoted remark with, "Behold, the half of my goods I give to the poor."

**Reply to objection 3:** When he convicts him, the judge can justly take something more for making amends (*loco emendae*)—but before he was convicted, he did not owe this.

#### Article 4

##### Does anyone have to make restitution for what he has not taken?

It seems that there are some who have to make restitution for what they have not taken:

**Objection 1:** One who inflicts a loss on another is obligated to remove that loss. But in some cases one causes a loss for another beyond what he has taken. For instance, when he digs up seeds, he causes a loss in the whole future harvest to the one who planted the seeds. And so it seems that he is obligated to make restitution for the whole harvest. Therefore, there are some who are obligated to make restitution for what they have not taken.

**Objection 2:** One who keeps a creditor's money beyond the antecedently fixed term seems to inflict a loss in the total profit that the latter could have made from the money. Yet he does not take that total profit. Therefore, it seems that there are some who are obligated to make restitution for what they did not take.

**Objection 3:** Human justice flows from divine justice. But one is obligated to give back to God more than he received from Him—this according to Matthew 25:26 ("You knew that I reap where I do not sow, and that I gather where I did not scatter"). Therefore, it is likewise just to make restitution to a man for something that one did not get.

**But contrary to this:** Compensation pertains to justice insofar as it makes for equality or balance.

But if someone were to make restitution for what he did not get, then this would not be equal or balanced. Therefore, it is not just for this sort of restitution to be made.

**I respond:** If anyone inflicts a loss on someone, it seems that he takes away from him that in which he caused him a loss. For according to the Philosopher in *Ethics* 5, the word ‘loss’ (*damnum*) is used because someone has less than he ought to have.

But there are two ways in which someone can incur a loss:

In the first way, someone has taken from another what the other *actually* possesses. For this sort of loss one must always make restitution by compensating the other individual with something that is equal. For instance, if someone inflicts a loss on another by destroying his house, then he is obligated to him for as much as the house is worth.

In the second way, someone inflicts a loss on another *by preventing him from acquiring what he was on the way to having* (*impediendo ne adipiscatur quod erat in via habendi*). This sort of loss does not have to be compensated for with something equal. For to have a thing *virtually* is less than to have it *in actuality*. But someone who is on the way to acquiring something has that thing only *virtually* or *in potentiality*. And so if restitution were rendered to him in such a way that he had that thing in actuality, then what was being restored to him would not be exactly what had been taken away, but would instead be that thing many times over. But as has been explained (a. 3), this is not necessary for restitution. Nonetheless, he is indeed obligated to make some sort of compensation, according to the situation with the persons and the things involved.

**Reply to objection 1 and objection 2:** This makes clear the replies to the first and second objections. For the one who scattered the seed in the field has a harvest only *virtually* and not yet *in actuality*; similarly, the one who has the money has a profit only *virtually* and not yet *in actuality*. And in each case the outcome can be prevented in any number of ways.

**Reply to objection 3:** God requires nothing of a man except the good that He Himself has planted in us. And so this passage is interpreted either (a) as being from the distorted perspective of the indolent servant, who supposed that he had not received anything from another, or (b) as meaning that God requires from us the *fruits* of His gifts, which are both from Him and from us, even though *the gifts themselves* come from God without us.

## Article 5

### Must restitution always be made to the one from whom something has been gotten?

It seems that it is not always necessary for restitution to be made to the one from whom something has been gotten (*ei a quo acceptum est aliquid*):

**Objection 1:** We ought to harm no one. But in some cases it might be to a man’s harm if what had been gotten from him were to be returned, or it might even be to the harm of others—as, for instance, if someone were to return a deposited sword to someone who was furious with anger. Therefore, it is not always the case that restitution must be made to the one from whom something has been gotten.

**Objection 2:** One who has given something away illicitly does not deserve to recover it. But in some cases someone illicitly gives away what someone else illicitly gets, as is apparent with those who give and those who receive in cases involving simony. Therefore, it is not always the case that one must make restitution to the one from whom he got the thing.

**Objection 3:** No one is obligated to do what is impossible. But in some cases it is impossible to make restitution to the one from whom the thing has been gotten, either because he is dead or because he is far away or because he is unknown. Therefore, it is not always the case that restitution has to be made to the one from whom the thing has been gotten.

**Objection 4:** A man ought to give greater compensation to someone from whom he has received a greater benefit. But a man receives a greater benefit from persons—his parents, for instance—other than those from whom he gets a loan or a deposit. Therefore, in some cases it is necessary to come to the aid of some other person rather than to make restitution to someone from whom something has been gotten.

**Objection 5:** It is useless to restore something that, through the restitution, comes into the possession of the one making the restitution. But if a prelate has unjustly taken something that belongs to the Church and then makes restitution for it, it comes into his possession, since he himself is the keeper of the things that belong to the Church. Therefore, he does not need to make restitution to the Church, from which he took it. And so it is not always the case that restitution should be made to the one from whom the thing was taken.

**But contrary to this:** Romans 13:7 says, “Render to all men what is due them: render tribute to the one to whom tribute is due; render taxes to the one to whom taxes are due.”

**I respond:** As has been explained (a. 2), restitution brings about a return to the equality or balance of commutative justice, which consists in things being balanced or made equal. But this sort of balancing can occur only if one who has less than what is his own is supplied with what he lacks. And in order for this supplying to take place, it is necessary that restitution be made to the one from whom something has been gotten.

**Reply to objection 1:** When it is apparent that the thing to be restored is seriously harmful to the one to whom restitution has to be made or to someone else, the thing ought not to be restored to him at that time, since restitution is ordered toward the advantage of the one to whom restitution is made. For all the things that one possesses fall under the concept *advantageous (sub ratione utilis cadunt)*. Still, one who retains a thing that belongs to another must not appropriate it for himself; instead, he ought either (a) to hold on to it so that he can restore it at a fitting time or (b) to transfer it somewhere else to be held on to more safely.

**Reply to objection 2:** There are two ways in which one gives something illicitly:

In one way, the *giving itself* is illicit and contrary to the law, as is clear with someone who has given something away in a case of simony. Such an individual deserves to lose what he has given away, and so restitution should not be made to him for such things. And since the one who got the thing likewise received it in a way contrary to the law, he should not retain it for himself, but should convert it to pious forms of use.

In the second way, someone gives illicitly in the sense that he gives something *for the sake of an illicit thing*, even though the giving is not itself illicit—as when someone gives something to a prostitute for the sake of fornicating. Hence, in the case both that (a) the woman can keep for herself what has been given to her, and that (b) if she has extracted something extra from him through fraud or deception, then she is obligated to make restitution to him.

**Reply to objection 3:** If the man to whom restitution should be made is altogether unknown, then one should make restitution to the extent that he can, viz., by giving alms for the unknown man’s salvation, whether he be living or dead. However, this should be preceded by a diligent inquiry into the identity of the one (*de persona eius*) to whom the restitution should be made.

On the other hand, if the one to whom restitution should be made is dead, then the restitution should be made to his heir, who is counted as the same person with him.

Now if the one to whom restitution should be made is far away, then what is owed to him should be sent to him—especially if the thing is of great value and if it can be conveniently sent. Otherwise, it should be deposited in a safe place in order to be preserved for him, and this should be made known to the owner.

**Reply to objection 4:** Out of what belongs to him, one should make more satisfaction to his parents or to those from whom he has received greater benefits. However, he should not compensate a benefactor out of what belongs to someone else, which is what would happen if he gave to the one of

them what he owed to the other—except perhaps in a case of extreme necessity, in which someone can, and even *should*, take what belongs to others in order to come to the aid of his father.

**Reply to objection 5:** There are three ways in which a prelate can pilfer a thing that belongs to the Church:

In one way, he might appropriate for himself a thing belonging to the Church that has been allotted not to himself but to another. For instance, a bishop might appropriate for himself a thing that belongs to the chapter [of a religious order]. In such a case it is obvious that he should make restitution by putting the thing into the hands of those to whom it belongs under the law.

In the second way, he might transfer to another—say, to a relative or a friend—the ownership of a thing which belongs to the Church and which has been allotted to his own care. In such a case he should make restitution to the Church and keep the thing under his own care, so that it might fall to his successor.

In the third way, a prelate might pilfer a thing that belongs to the Church in his intention alone (*solo animo*), viz., when he begins to harbor the intention of possessing it as his own and not in the name of the Church. In such a case he should make restitution by abandoning this intention.

## Article 6

### Is it always the case that the one who has gotten the thing is obligated to make restitution?

It seems that it is not always the case that the one who has gotten the thing is obligated to make restitution:

**Objection 1:** What is restored through restitution is the equality or balance of justice, which consists in something's being taken away from the one who has more and given to the one who has less. But it sometimes happens that the one who has taken the thing no longer has it; instead, it has fallen into the hands of another. Therefore, it is not the one who got it who is obligated to make restitution, but rather the other one who now has the thing.

**Objection 2:** No one is obligated to expose his own crime. But as is clear with theft, in some cases one exposes his own crime by making restitution. Therefore, it is not always the case that the one who has taken a thing is obligated to make restitution.

**Objection 3:** Restitution of the same thing need not be made many times over. But sometimes many individuals together pilfer a given thing and one of them has restored it in full. Therefore, it is not always the case that one whoever has gotten the thing is obligated to make restitution.

**But contrary to this:** One who sins is obligated to make satisfaction. But restitution pertains to satisfaction. Therefore, whoever has taken a thing is obligated to make restitution.

**I respond:** Two things have to be considered concerning someone who gets a thing that belongs to another, viz., *the very thing gotten* and *the very act of getting it*.

Now by reason of the *thing itself* one is obligated to make restitution for it as long as one has it in his possession, since what he possesses beyond that which is his own must be taken away from him and given to the one who lacks it, in accord with the form of commutative justice.

On the other hand, there are three ways in which the *very act of getting* what belongs to another can occur:

Sometimes the act of getting is *injurious*, i.e., contrary to the will of the one who owns the thing, as is clear in the case of theft and robbery. And in such a case one is obligated to make restitution not only *by reason of the thing*, but also *by reason of the injurious action*, even if the thing is no longer in his possession. For just as someone who strikes another is obligated to compensate for the injury to the

victim (*passus*), even though there is nothing that remains in his possession, so, too, one who steals or robs is obligated to compensate for the loss inflicted, even if he no longer possesses any of it, and, further, he must be punished for the injury inflicted.

In the second way, someone gets a thing belonging to another *to his own advantage without injury*, i.e., with the consent of the one to whom the thing belongs—as is clear in the case of loans. In such a case the one who gets the thing is obligated to make restitution for what he gets not only by reason of the thing, but also by reason of his getting it, even if he should lose that thing. For he is obligated to compensate the individual who did him a favor—which will not happen if that individual thereby incurs a loss.

In the third way, someone gets a thing belonging to someone else *without injury but not for his own advantage*, as is clear in the case of deposits. So the one who gets the thing in this way is not obligated by reason of the act of getting it—to the contrary, in taking the thing he is doing the other a favor—but he is obligated by reason of the thing. Because of this, if the thing is taken away from him without any fault on his part, then he is not obligated to make restitution. But it would be different if he were to lose the deposited thing through a serious fault on his own part.

**Reply to objection 1:** Restitution is primarily ordered not toward someone's ceasing to have more than he should have, but rather toward supplementing someone who has less than he should have. Hence, in the case of things that one can get from another without any loss to him, restitution has no place—for instance, when one receives a light from someone else's candle.

And so even if the one who took the thing does not now have what he received, but it has instead been transferred to someone else, nonetheless, since the other individual is deprived of his own thing, it is the case both that (a) the one who took the thing is obligated to make restitution, by reason of his injurious action, and that (b) the one who possesses the thing is obligated to make restitution, by reason of the thing itself.

**Reply to objection 2:** Even if a man is not obligated to reveal his own crime to *men*, he is nonetheless obligated to reveal his own crime to *God* in Confession. And so he can make restitution for something that belongs to someone else through the priest to whom he confesses.

**Reply to objection 3:** Since restitution is principally ordered toward removing the loss of the one from whom something was unjustly taken, it follows that after sufficient restitution has been made to him by one individual, the others are not obligated to make further restitution to him. Rather, they are obligated to give a refund to the one who made restitution, even though he can excuse them from doing so.

## Article 7

### Is anyone who did not get the thing obligated to make restitution?

It seems that those who did not get the thing are not obligated to make restitution:

**Objection 1:** Restitution is a sort of punishment for the one who gets the thing. But no one ought to be punished unless he has sinned. Therefore, no one ought to make restitution unless he got the thing.

**Objection 2:** Justice does not obligate anyone to augment another's property. But if not only the one who took the thing but also those who in any way cooperated with him in taking the thing were obligated to make restitution, then the property of the one from whom the thing was taken would thereby be augmented, both because (a) restitution would be made to him many times over, and also because (b) sometimes individuals cooperate in order to take something from someone and yet it is not in fact taken from him. Therefore, the others are not obligated to make restitution.

**Objection 3:** No one is obligated to expose himself to danger in order to save something that

belongs to another. But in some cases, by exposing a thief and resisting him, someone exposes himself to the danger of death. Therefore, no one is obligated to make restitution by reason of the fact that he does not expose a thief or does not resist him.

**But contrary to this:** Romans 1:32 says, “Not only are they who do such things worthy of death, but they also that consent to those who do them.” Therefore, by parity of reasoning, those who consent should likewise make restitution.

**I respond:** As was explained above (a. 6), one is obligated to make restitution not only by reason of the thing belonging to another that he has taken, but also by reason of the injurious act of taking it. And so anyone who is a cause of an unjust act of taking is obligated to make restitution.

Now there are two ways one can be a cause of an unjust act of taking, viz., *directly* and *indirectly*.

One is a cause *directly* when he induces someone else to take something. And there are three ways in which to do this:

(a) by moving someone to *the very act of taking*. This is done by commanding or advising or expressly consenting to or praising someone who is, as it were, enthusiastic (*aliquem strenuum*) about taking what belongs to another.

(b) *on the side of the one doing the taking*, specifically, by harboring him or giving him assistance in some way or other.

(c) *on the side of the thing taken*, specifically, by being a participant in the theft or robbery as a fellow malefactor.

It happens *indirectly* when someone does not in fact prevent the act when he can and should prevent it—either because (a) he withholds a command or piece of advice that would prevent the theft or robbery, or because (b) he withholds some form of assistance by which the act could be resisted, or because (c) he hides the malefactor after the fact.

All of these are included in the following verse:

“Command, counsel, consent, flattery, harboring (*Iussio, consilium, consensus, palpo, recursus*):

Participating, silent, not preventing, not revealing (*Participans, mutus, non obstans, non manifestans*).”

Now notice that five of these things obligate one in all cases to make restitution. First, *command*, because the one who gives the order is the principal mover, and so he himself is especially obligated to make restitution. Second, *consent*, in someone without whose consent the robbery cannot be perpetrated. Third, *harboring*, when someone receives thieves and offers them protection. Fourth, *participation*, when someone participates in the crime of theft and in its spoils. Fifth, one who does *not prevent* a crime when he ought to prevent it is obligated to make restitution; for instance, rulers who are obligated to safeguard justice in their lands, are obligated to make restitution if, because of their failures, robbers increase in number. For the land taxes (*redditus*) that they collect are, as it were, stipends instituted for the purpose of preserving justice in their land.

However, in the other cases enumerated above one is not always obligated to make restitution. For it is not always the case that advice or flattery or something else of this sort is an efficacious cause of robbery. Hence, an advisor or a ‘stroker’, i.e., a flatterer, is obligated to make restitution only when it can be estimated with high probability that the unjust taking followed from causes of this sort.

**Reply to objection 1:** It is not just the one who executes the sin who sins, but also anyone who is in any way a cause of the sin, whether by advising or by commanding or in any other way whatsoever.

**Reply to objection 2:** The one who is principally obligated to make restitution is the one who is the principal in the deed—in the first place the one who orders the deed, in the second place the one who executes the deed, and, after that, the others in order.

However, after one of them has made restitution to the individual who has suffered the loss, the others are not obligated to make restitution to the same individual. However, those who are the principals in the deed and to whom the thing taken accrued are obligated to make restitution to the others who have made restitution.

Moreover, when someone gives the command for an unjust taking that ends up not occurring, restitution does not have to be made, since restitution is mainly ordered toward restoring a thing that belongs to someone who has suffered a loss unjustly.

**Reply to objection 3:** It is not always the case that one who does not expose a thief is obligated to make restitution, or one who does not resist him, or one who does not cajole him. Restitution is required only when such actions are incumbent upon someone *ex officio*, as with the rulers of a land. Not much danger threatens them because of these actions, since they acquire public power in order to be guardians of justice.

## Article 8

### Is one obligated to make restitution immediately?

It seems that no one is obligated to make restitution immediately, but that instead one can licitly defer restitution:

**Objection 1:** An affirmative precept does not impose an obligation for every time. But the necessity for restitution depends on an affirmative precept. Therefore, a man is not obligated to make restitution immediately.

**Objection 2:** No one is obligated to do the impossible. But sometimes an individual is unable to make restitution immediately. Therefore, no one is obligated to make restitution immediately.

**Objection 3:** Restitution is a certain act of virtue, viz., an act of the virtue of justice. But time is one of the circumstances that are required for acts of virtue. Therefore, since the other circumstances are not determinate in the acts of virtue, but are instead determinable by the reasoning of prudence, it seems that neither in the case of restitution is there is a determinate time in the sense that one is obligated to make restitution immediately.

**But contrary to this:** The line of reasoning seems to be the same in the case of all things that require restitution. But one who hires workers for a wage (*ille qui conducit opera mercenarii*) cannot defer restitution—this according to Leviticus 19:13 (“The wages of your paid worker shall not remain with you until the morning”). Therefore, neither can delays be made in making retribution in other cases; instead, one should make restitution immediately.

**I respond:** Just as taking a thing that belongs to another is a sin against justice, so, too, is holding the thing back. For one’s holding back a thing belonging to another against the owner’s will prevents him from using what belongs to him and so inflicts an injury on him. But it is clear that one is not permitted to remain in sin for any length of time; instead, each individual is obligated to abandon his sin immediately—this according to Ecclesiasticus 21:2 (“Flee from sin as from the face of a serpent”). And so everyone is obligated either to make restitution immediately or to seek a delay from the one who can grant the use of the thing.

**Reply to objection 1:** Even though the precept about making restitution is affirmative in form, it nonetheless includes within itself a negative precept by which we are forbidden to hold back a thing that belongs to another.

**Reply to objection 2:** When someone does not have the power to make restitution immediately, this very lack of power absolves him from making restitution at that instant, just as he is totally absolved from making restitution if he altogether lacks the power to do so. Still, he ought to seek forgiveness or a

delay from the one to whom he owes retribution, and he should do this either on his own or through the mediation of someone else.

**Reply to objection 3:** If the omission of any circumstance is contrary to virtue, then that circumstance has be taken as fixed, and it is necessary to observe that circumstance. And since one commits a sin of unjust retention by delaying restitution, it is necessary for the time to be fixed in such a way that restitution is made immediately.

## QUESTION 63

### Regard for Persons

Next we have to consider the vices opposed to the parts of justice that have been explained above: first, regard for persons (*acceptio personarum*), which is opposed to distributive justice (question 63), and then the sins that are opposed to commutative justice (questions 64-79).

And on the first topic there are four questions: (1) Is regard for persons (*acceptio personarum*) a sin? (2) Does regard for persons have a place in the dispensation of spiritual benefits (*in dispensatione spiritualium*)? (3) Does regard for persons have a place in shows of honor? (4) Does regard for persons have a place in judicial determinations (*in iudiciis*)?

### Article 1

#### Is regard for persons a sin?

It seems that regard for persons (*acceptio personarum*) is not a sin:

**Objection 1:** The dignity or worthiness of a person (*dignitas personae*) is understood in the name ‘person’ (cf. *ST* 1, q. 29, a. 3, *ad* 2). But it belongs to distributive justice to take into account the sorts of dignity or worthiness that belong to persons (*considerare dignitates personarum pertinet ad distributivam iustitiam*). Therefore, regard for persons is not a sin.

**Objection 2:** In human affairs persons are more important than things (*personae sunt principaliores quam res*), since the things exist for the sake of the persons and not vice versa. But regard for things is not a sin. Therefore, *a fortiori*, regard for persons is not a sin.

**Objection 3:** There can be no sin or iniquity in the case of God. But God seems to have regard for persons, since sometimes, given two men sharing the same condition, He takes one of them through grace and leaves the other in sin—this according to Matthew 24:40 (“If two are in bed, the one will be taken and the other will be left”). Therefore, regard for persons is not a sin.

**But contrary to this:** Nothing except sin is forbidden in divine law. But regard for persons is forbidden in Deuteronomy 1:17, where it says, “... neither shall you have regard for any man’s person.” Therefore, regard for persons is a sin.

**I respond:** Regard for persons is opposed to distributive justice. For the balance or equality of distributive justice consists in diverse goods being allotted to diverse persons in proportion to the dignity or worthiness had by those persons (*secundum proportionem ad dignitates personarum*). Therefore, if someone takes account of that property of a person in virtue of which he *is worthy of* what is to be conferred on him (*propter quam id quod confertur est ei debitum*), then this will be regard *not* for the *person* but for the *cause*. Hence, a Gloss on Ephesians 6:9 (“With God there is no regard for persons”) says, “A just judge discerns *causes*, not *persons*.” For instance, if someone puts an individual forward for a professorship because his knowledge is adequate, he is taking into account a due *cause* and not the *person*. By contrast, if someone does not consider in an individual on whom he confers a benefit the cause for which what is being given to him is proportionate to him or appropriate for him, but instead considers only that he is *this* man, say Peter or Martin, then this is regard for persons. For the thing is not being given to him because of some cause that makes him worthy of that thing, but is simply being given to his person.

Now ‘person’ here includes any condition that does not contribute to a cause because of which the individual is worthy of the benefit in question. For instance, if someone puts an individual forward to be a prelate or a professor because he is wealthy or because he is a relative, then this is regard for persons.

Still, it is possible for some condition of a person to make him worthy of one thing and not of some other thing. For instance, being a relative makes someone worthy of being established as the heir of a patrimony, but not of having the office of an ecclesiastical prelate bestowed upon him. And so the same

condition of the person, when taken into account in the one affair, makes for regard of persons, but it does not do so when taken into account in the other affair.

So, then, it is clear that regard for persons is opposed to distributive justice because one acts in a way that is out of proportion. But nothing except a sin is opposed to a virtue. Hence, it follows that regard for persons is a sin.

**Reply to objection 1:** In instances of *distributive justice*, the conditions of persons that are taken into account are those which contribute to a cause of worthiness or of desert (*faciunt ad causam dignitatis vel debiti*). By contrast, as has been explained, in instances of *regard for persons*, conditions are taken into account that do not contribute to such a cause.

**Reply to objection 2:** Persons are proportioned to, and rendered worthy of, the things that are distributed to them because of certain features that belong to the person's condition, and so conditions of this sort have to be taken account of as proper causes. However, when the persons themselves are taken into account, a non-cause is being treated as a cause. And so it is clear that even though persons are more worthy [than things] absolutely speaking, they are nonetheless not more worthy in this respect.

**Reply to objection 3:** There are two kinds of giving:

The one kind pertains to *justice*, viz., a giving by which someone gives an individual what he is deserving of (*quod ei debetur*). And regard for persons has to do with giving of this kind.

The other kind is a giving that pertains to *generosity (liberalitas)*, viz., a giving by which something that is not owed to an individual is given to him gratuitously. The conferral of the gifts of grace, through which sinners are taken up by God, is of this kind. In this kind of giving there is no question of regard for persons, since each individual can, without injustice, give as much as he pleases to whom he pleases out of what belongs to him—this according to Matthew 20:14-15 (“Am I not permitted to do as I please? Take what is yours and go”).

## Article 2

### Does regard for persons have a place in the dispensing of spiritual benefits?

It seems that regard for persons does not have a place in the dispensing of spiritual benefits:

**Objection 1:** To confer an ecclesiastical dignity or benefit on someone because he is one's relative (*propter consanguinitatem*) seems to pertain to regard for persons, since being one's relative is not a cause that makes a man worthy of an ecclesiastical benefit. But this does not seem to be a sin, since the prelates of the Church habitually do this. Therefore, the sin of regard for persons does not seem to have a place in the dispensing of spiritual benefits.

**Objection 2:** As is clear from James 2:1, to prefer a rich man to a poor man seems to pertain to regard for persons. But the rich and the powerful are more readily given dispensations to contract matrimony within a prohibited degree of consanguinity. Therefore, the sin of regard for persons does not seem have a place in the dispensing of spiritual benefits.

**Objection 3:** According to the statutes it is sufficient to choose a good man, but it is not required that one choose the better man. But to prefer what is less good to something higher seems to belong to regard for persons. Therefore, regard for persons is not a sin in spiritual affairs.

**Objection 4:** According to the laws of the Church, a man is to be chosen from the bosom of the [local] Church. But this seems to pertain to regard for persons, since sometimes more adequate men will be found elsewhere. Therefore, regard for persons is not a sin in spiritual affairs.

**But contrary to this:** James 2:1 says, “Do not have the faith of our Lord Jesus Christ along with regard for persons.” Augustine's gloss on this text says, “Who could bear it if someone chose a rich man for a seat of honor in the Church while having contempt for a poor man who was more learned and more

holy?”

**I respond:** Respect for persons is a sin insofar as it is contrary to justice. But to the extent that someone transgresses justice in more important matters, he sins more gravely. Hence, since spiritual matters are more important than temporal matters, it is a graver sin to have regard for persons in dispensing spiritual benefits than in dispensing temporal benefits.

And since regard for persons occurs when something is bestowed on the person over and beyond what is proportionate to his worthiness, we must consider that there are two ways in which the dignity or worthiness (*dignitas*) of a person can be thought of:

In one way, *absolutely speaking and in its own right (simpliciter et secundum se)*, and in this sense the one who has greater dignity is he who abounds more in the spiritual gifts of grace.

In the second way, *in relation to the common good (per comparationem ad bonum commune)*. For it sometimes happens that one who is less holy and less knowledgeable can contribute more to the common good because of his worldly power and diligence, or because of something else of this sort. And since the dispensing of spiritual goods is ordered toward the common advantage—this according to 1 Corinthians 12:7 (“The manifestation of the Spirit is given to each individual unto profit”)—it follows that sometimes in the dispensing of spiritual benefits, those who are less good absolutely speaking are preferred—without any [sin of] regard for persons—to those who are better, just as God likewise sometimes confers gratuitously given graces on those who are less good (cf. *ST* 1-2, q. 111, a. 1).

**Reply to objection 1:** One must draw a distinction concerning the relatives of a prelate.

For sometimes they are less worthy both absolutely speaking and in relation to the common good. And if they are preferred to more worthy individuals in such a case, then this is a sin of regard for persons in the dispensing of spiritual benefits, of which an ecclesiastical prelate is not the *owner* in the sense that he can give them out as he pleases, but the *dispenser*—this according to 1 Corinthians 4:1 (“Let a man think of us as ministers of Christ and dispensers of the mysteries of God”).

On the other hand, sometimes an ecclesiastical prelate’s relatives are just as worthy as the others. And in such cases he can licitly, without any [sin of] regard for persons, prefer his own relatives, since they are preeminent at least in the sense that he can have more confidence that they will be of one mind with him in conducting the affairs of the Church. Still, he would have to forgo doing this because of scandal if others were going to take up his example and give the goods of the Church to relatives even beyond their worthiness.

**Reply to objection 2:** Dispensations to contract marriage have come to be given mainly in order to strengthen peace treaties, which, as regards high-ranking persons, is more necessary for the common advantage. So a dispensation is more easily granted in their case without the sin of regard for persons.

**Reply to objection 3:** In order for a choice not be able to be impugned in a judicial forum, it is sufficient to choose a good man. Nor is it necessary to choose the better man, since if it were necessary, then every choice could involve chicanery.

On the other hand, as regards the conscience of the one making the choice, it is necessary to choose the better man either absolutely speaking or in relation to the common good. For if it possible for one man to be more suited for a high office and for another man to be chosen over him, then it must be that this is for some cause. And if this cause is relevant to the matter at hand, then to that extent the very man who is chosen is more suited. On the other hand, if what is considered a cause is not relevant to the matter at hand, then this will clearly be a case of regard for persons.

**Reply to objection 4:** A man who has arisen “from the bosom of the [local] Church” has for the most part turned out to be more advantageous for the common good, since he has more love for the Church in which he was nurtured. It is because of this that Deuteronomy 17:15 likewise commands, “You may not make a man of another nation your king, who is not your brother.”

### Article 3

#### Does the sin of regard for persons have a place in shows of honor and respect?

It seems that the sin of regard for persons does not have a place in shows of honor and respect:

**Objection 1:** As is clear from the Philosopher in *Ethics* 1, honor seems to be nothing other than a certain sort of respect shown to someone in testimony of his virtue. But prelates and rulers should be honored even if they are bad men, just as parents, about whom Exodus 20:12 commands, “Honor your father and your mother,” are to be honored, and just as masters are to be honored by their servants, even if they are bad—this according to 1 Timothy 6:1 (“Let all who are under the yoke of a servant deem their masters worthy of honor”). Therefore, it seems that regard for persons is not a sin in shows of honor.

**Objection 2:** Leviticus 19:32 commands, “Stand up in the presence of the hoary head, and honor the person of an elderly man.” But this seems to pertain to regard for persons, since sometimes the elderly are not virtuous—this according to Daniel 13:5 (“Iniquity came from the elders of the people”). Therefore, regard for persons is not a sin in shows of honor.

**Objection 3:** A Gloss of Augustine’s on James 2:1 (“Do not have the faith of our Lord Jesus Christ along with regard for persons”) says, “If what James says—viz., ‘If a man with a golden ring comes into your assembly, etc.,’—is understood to be talking about our daily meetings, then who does not sin here, if yet he really does sin?” But to honor the rich because of their riches is regard for persons. For in a certain homily Gregory says, “Our pride makes us dull, since in men we honor not the nature by which they have been made to God’s image, but wealth instead.” And so since riches are not an appropriate cause for honor, this will pertain to regard for persons. Therefore, regard for persons is not a sin in shows of honor.

**But contrary to this:** A Gloss on James 2:1 says, “If anyone honors a rich man because of his riches, he sins.” And, by parity of reasoning, if anyone is honored for other causes that do not make him worthy of honor, this pertains to regard for persons. Therefore, regard for persons in shows of honor is a sin.

**I respond:** Honor is a sort of testimony of the virtue of the one who is being honored, and so virtue is the only appropriate cause for honor.

However, notice that someone can be honored not only because of his own virtue, but also because of the virtue of another. For instance, rulers and prelates are honored even if they are bad men insofar as they bear the person of God and of the community over which they have been placed in authority—this according to Proverbs 26:8 (“He who gives honor to a fool is like someone who throws stones onto the heap of Mercury”). Since the Gentiles attributed the keeping of accounts to Mercury, the heap of Mercury is a computation-pile onto which the merchant sometimes throws a pebble in place of one hundred marks. So the fool is honored in the same way, since he is being put in the place of God and in the place of the whole community. And, for the same reason, parents and masters are to be honored for because of their participation in the dignity of God, who is the father and master of everyone.

Now the elderly are to be honored because of the sign of virtue, i.e., old age, even if this sign is sometimes weak. Hence, as Wisdom 4:8-9 says, “For the old age that is to be honored is not that of a long period of time, nor is it counted by the number of years: but a man’s understanding is grey hairs, and a spotless life is old age.”

On the other hand, the rich are to be honored because they occupy an important place in communities. However, if they are honored *only* in view of their wealth, then this will be a sin of regard for persons.

**Reply to objection 1 and objection 2 and objection 3:** The response makes clear the replies to the objections.

#### Article 4

##### Does regard for persons have a place in judicial determinations?

It seems that regard for persons does not have a place in judicial determinations (*in iudiciis*):

**Objection 1:** As has been explained (a. 1), regard for persons is opposed to distributive justice. But judicial determinations seem mainly to belong to commutative justice. Therefore, regard for persons has no place in judicial determinations.

**Objection 2:** Punishments are imposed in accord with a judicial determination. But persons are, without any sin, taken account of in punishments, since those who inflict an injury on the persons of the rulers are punished more harshly than those who inflict an injury on the persons of other individuals. Therefore, [the sin of] regard for persons has no place in judicial determinations.

**Objection 3:** Ecclesiasticus 4:10 says, “In judging be merciful to orphaned children.” But this seems to be regard for the person of the one who is poor. Therefore, regard for persons is not a sin in judicial determinations.

**But contrary to this:** Proverbs 18:5 says, “To regard the person in judgments is not good.”

**I respond:** As was explained above (q. 60, a. 1), judgment or judicial determination is an act of justice, insofar as a judge reduces to equality or balance things that can cause an opposite inequality or imbalance.

Now regard for persons includes a sort of inequality or imbalance, insofar as something is given to a person beyond proportion, and it is in this proportion that the equality or balance of justice consists. And so it is clear that judgment or judicial determination is corrupted by regard for persons.

**Reply to objection 1:** There are two ways in which judicial determination can be thought about.

In one way, as regards *the matter that is judged*. And in this sense judicial determination belongs in common to both commutative justice and distributive justice. For by judicial determination it can be decided (a) how something common should be distributed among the many and (b) how one individual should make restitution to another for what he has gotten from him.

In the second way, judicial determination can be considered as regards *the form itself of the judgment*, viz., insofar as the judge—even in a case of commutative justice itself—takes from one individual and gives to another. And this pertains to distributive justice.

Accordingly, regard for persons has a place in any sort of judicial determination.

**Reply to objection 2:** When someone is punished more harshly because of an injury committed against a more important person, this is not regard for persons, since, as was explained above (q. 58, a. 10, *ad 3* and q. 62, a. 2, *ad 3*), the diversity among the persons, in this regard, makes for a diversity in the thing.

**Reply to objection 3:** In a judicial determination a man ought to help the poor as much as he can—but without harming justice. Otherwise, what is said in Exodus 23:3 would be relevant: “You shall not favor the poor in judgment.”

## QUESTION 64

### Homicide

Next we have to consider the vices opposed to commutative justice (questions 64-120). First, we have to consider sins that are committed in involuntary commutations (questions 64-76) and, second, sins that are committed in voluntary commutations (questions 77-78).

Now sins are committed in involuntary commutations by some harm's being inflicted on one's neighbor against his will. And this can be done in two ways, viz., by deed (questions 64-66) and by word (questions 67-76). By deed, when the neighbor is hurt either (a) in his proper person or a person conjoined to him (questions 64-65) or (b) in the things that belong to him (question 66).

Therefore, these topics have to be considered in order, and, first, homicide, by which one's neighbor is especially harmed. And on this topic there are eight questions: (1) Is it a sin to kill non-rational animals or even plants? (2) Is it licit to kill a sinner? (3) Is this licit for a private person or only for a public official? (4) Is it licit for a cleric? (5) Is anyone permitted to kill himself? (6) Is it licit to kill a just man? (7) Is one permitted to kill a man while defending himself? (8) Is accidental homicide a mortal sin?

### Article 1

#### Is it licit to kill any living thing whatsoever?

It seems that it is not licit to kill any living thing:

**Objection 1:** In Romans 13:2 the Apostle says, "He who resists God's ordination acquires damnation for himself." But it is through the ordination of God's providence that all living things are conserved—this according to Psalm 146:8-9 ("He produces grass on the mountains and gives the beasts of burden their food."). Therefore, to kill any living thing whatsoever seems to be illicit.

**Objection 2:** Homicide is a sin by which a man is deprived of life. But life is common to all animals and plants. Therefore, by the same line of reasoning it seems to be a sin to kill plants and non-rational animals.

**Objection 3:** In divine law special punishment is fixed only for sin. But as is clear from Exodus 22:1, a fixed punishment is established in divine law for one who kills an ox or a sheep. Therefore, the killing of non-rational animals is a sin.

**But contrary to this:** In *De Civitate Dei* 1 Augustine says, "When we hear, 'You shall not kill', we do not take what is said to be about plants (*de fructetis*), since they have no senses, or about non-rational animals, because do not associate with us through reason. What remains, then, is that we understand what is said, 'You shall not kill', to be about man."

**I respond:** No one sins by using a thing for the purpose for which it exists. Now in the order of things the less perfect exist for the sake of the more perfect, just as, in the path of generation, things proceed from being imperfect to being perfect. And so it is that just as in the generation of a man, there is first something alive, and then something that is an animal, and finally a human being, so, too, things that are just alive, like plants, exist in general for the sake of all the animals, and the animals exist for the sake of man. And so, as is likewise clear from the Philosopher in *Politics* 1, if a man uses plants to the advantage of animals and animals to the advantage of men, then this is not illicit.

Now among the other uses, the use that seems especially necessary is that animals use plants for food, and men use animals for food—which cannot be done without killing them. And so it is licit to kill plants for the use of animals and to kill animals for the use of men—and this by divine ordination itself. For Genesis 1:29-30 says, "Behold, I have given you every herb and all the trees, in order that they may be food for you and for all the animals." And Genesis 9:3 says, "Everything that moves and lives will be food for you."

**Reply to objection 1:** The life of animals and plants is conserved by God’s ordination not for their own sake, but for man’s sake. Hence, in *De Civitate Dei* 1 Augustine says, “By the most just ordination of the creator, both their life and their death serve our uses.”

**Reply to objection 2:** Plants and non-rational animals do not have a rational life by which they might act from themselves, but instead they always act, as it were, from another by a certain natural impulse. And this is a sign that they are naturally subservient and accommodated to being used by others.

**Reply to objection 3:** He who kills someone else’s ox sins not because he kills an ox, but because he inflicts a loss on the man in what belongs to him. Hence, this is not included under the sin of homicide, but under the sin of theft or robbery.

## Article 2

### Is it licit to kill men who are sinners?

It seems that it is not licit to kill men who are sinners:

**Objection 1:** In the parable in Matthew 13:29-30 our Lord commanded that they not uproot the cockle, which are “the children of the evil one” (*filiu nequam*), as it says in the same place. But everything that is forbidden by God is a sin. Therefore, it is a sin to kill the sinner.

**Objection 2:** Human justice is conformed to divine justice. But according to divine justice sinners are set aside for repentance—this according to Ezechiel 18:23 [and 33:11] (“I do not will the death of the sinner, but that he should be converted and live”). Therefore, it seems altogether unjust for sinners to be killed.

**Objection 3:** As is clear from Augustine in *Contra Mendacium* and from the Philosopher in *Ethics* 2, what is bad in its own right (*secundum se malum*) is not permitted to be done for any good end. But to kill a man is bad in its own right, since we ought to have charity with respect to all men and “we wish our friends to live and to be,” as *Ethics* 9 puts it. Therefore, it is no way permitted to kill a man who is a sinner.

**But contrary to this:** Exodus 22:18 says, “You shall not allow sorcerers to live” (*maleficos non patieris vivere*). And Psalm 100:8 says, “In the morning I put to death all the wicked of the land.”

**I respond:** As has been explained (a. 1), it is licit to kill non-rational animals insofar as they are naturally ordered toward human use, in the way that what is imperfect is ordered toward what is perfect. And so every part exists naturally for the sake of the whole. Because of this, we see that if cutting off some bodily limb expedites the health of the whole human body—for instance, if the limb is diseased and is corrupting the other parts—then it is praiseworthy and healthy for it to be amputated.

Now each individual person is related to the whole community as a part to a whole. And so if some man is extremely dangerous to the community and corrupts it because of some sin, then it is praiseworthy and healthy for him to be killed in order that the common good might be preserved; for as 1 Corinthians 5:6 says, “A little bit of leaven corrupts the whole mass.”

**Reply to objection 1:** Our Lord commanded that they abstain from uprooting the cockle so that the wheat, i.e., the good individuals, might be spared. As Augustine points out in *Contra Epistolam Parmeniani*, this is done when the bad men cannot be killed without the good being simultaneously killed—either because the bad men are hidden among the good men or because they have many followers, so that they cannot be killed without danger to the good men. Hence, our Lord teaches that the bad men should be allowed to live and that vengeance should be reserved for the last judgment rather than having the good men be killed at the same time. However, when killing the bad men does not pose a danger to the good men but instead protects and delivers them, then the bad men can be licitly killed.

**Reply to objection 2:** According to the order of His wisdom, God sometimes kills sinners

immediately in order to liberate the good people, whereas sometimes He grants them time to repent—insofar as He Himself knows what is expedient for His chosen ones. And human justice likewise imitates this as far as possible. For it kills those are extremely pernicious for the others, whereas it reserves for the sake of repentance those who sin without gravely harming others.

**Reply to objection 3:** By sinning, a man withdraws from the order of reason, and so he falls away from human dignity. More specifically, a man is naturally free and exists for his own sake (*propter seipsum existens*), and then in a certain sense he falls into the servitude of beasts, so that he is of himself ordered toward being useful for others. This is in accord with Psalm 48:21, “When man was in honor, he did not understand, now he is compared with the senseless beasts and has become like them.” And Proverbs 11:29 says, “The fool shall serve the wise.”

And so even though it is bad in its own right to kill a man who abides in his dignity, nonetheless, it can be good to kill a man who is a sinner, just as it can be good to kill a beast. For as the Philosopher points out in *Politics* 1 and *Ethics* 7, a bad man is worse than a beast and does more harm.

### Article 3

#### Is a private person permitted to kill a man who is a sinner?

It seems that a private person is permitted to kill a man who is a sinner:

**Objection 1:** Nothing illicit is commanded in divine law. But in Exodus 32:27 Moses commands, “Let each one kill his neighbor, his brother, and his friend,” because of the sin of the molten calf. Therefore, even private persons are permitted to kill the sinner.

**Objection 2:** As has been explained (a. 2), because of sin a man becomes comparable to the beasts. But any private person is permitted to kill a wild beast, especially one that is doing harm. Therefore, by parity of reasoning, any private person is permitted to kill a man who is a sinner.

**Objection 3:** It is praiseworthy for a man, even if he is a private person, to do what is advantageous to the common good. But as has been explained (a. 2), the killing of sorcerers (*occisio maleficorum*) is advantageous to the common good. Therefore, it is praiseworthy for even private citizens to kill evildoers (*malefactores*).

**But contrary to this:** In *De Civitate Dei* 1 Augustine says, “One who, outside the bounds of any public administration (*sine aliqua publica administratione*), kills an evildoer will be judged a murderer, and all the more fully, because he has not feared to usurp for himself a power not given to him by God.”

**I respond:** As has been explained (a. 2), killing an evildoer is good insofar as it is ordered toward the safety of the whole community. And so it belongs only to someone to whom the work of preserving the community is committed—just as it belongs to the physician to amputate a diseased limb when care for the health of the whole body has been committed to him. But care for the common good has been committed to the rulers who hold public authority. And so they alone—and not private persons—are permitted to kill evildoers.

**Reply to objection 1:** As is clear from Dionysius in *De Caelesti Hierarchia*, chap. 13, it is the one by whose authority a thing is done who does that thing. And so, as Augustine says in *De Civitate Dei* 1, “The killer is not the minister who has to carry out the [judge’s] order in the way that a sword serves the one who uses it.” Hence those who killed their neighbors at the Lord’s command do not seem to have done this themselves, but instead it was He by whose authority they did this, in the way that a soldier kills the enemy by the authority of the ruler or the minister kills the thief by the authority of the judge.

**Reply to objection 2:** A beast is distinct by nature from a man. Hence, on this matter no judgment is required about whether a beast should be killed if it is wild. On the other hand, if it is a domestic beast, than a judgment will be required not because of the beast itself but because of the loss to its master.

By contrast, a man who is a sinner is not distinct by nature from just men. And so one needs a public judicial determination as to whether he should be killed for the sake of the common safety.

**Reply to objection 3:** Any private person is permitted to do something that is for the common advantage and that does no harm. But if it involves harm to another, then it should not be done except in accord with a judicial determination made by someone to whom it belongs to judge what should be taken from the parts for the sake of the health of the whole.

#### Article 4

##### Are clerics permitted to kill evildoers?

It seems that clerics are permitted to kill evildoers (*malefactores*):

**Objection 1:** Clerics especially ought to fulfill what the Apostle says in 1 Corinthians 4:16, “Be imitators of me, as I am of Christ,” through which it is made known to us that we are to imitate God and His saints. But God Himself, whom we worship, kills evildoers—this according to Psalm 135:10 (“... who smote Egypt with their firstborn”). Likewise, as Exodus 32:28 tells us, Moses brought it about that 23,000 men were put to death by the Levites for worshiping the calf. And as Numbers 25:6-10 reports, Phinehas, a priest, killed the Israelite who went in with the Midianite woman. Samuel likewise killed Agag, the king of the Amalekites (1 Kings 15:33), and Elijah killed the priests of Baal (3 Kings 18:40), and Mathathias killed the man who had gone up to sacrifice (1 Maccabees 2:24). And in the New Testament, Peter killed Ananias and Saphira (Acts 5:3). Therefore, it seems that even clerics are permitted to kill evildoers.

**Objection 2:** Spiritual power is greater than temporal power, and it is more closely connected with God. But as Romans 13:4 points out, the temporal power licitly kills evildoers as a minister of God. Therefore, *a fortiori*, clerics, who are ministers of God with spiritual power, can licitly kill evildoers.

**Objection 3:** If someone licitly undertakes some office (*officium*), then he can do the things that belong to that office. But as has been explained (a. 3), it is the duty (*officium*) of a ruler of the earth to kill evildoers. Therefore, clerics who are rulers of the earth can licitly kill evildoers.

**But contrary to this:** 1 Timothy 3:2-3 says, “A bishop must be without crime, not given to wine, not violent.”

**I respond:** Clerics are not permitted to kill, and this for two reasons.

First, they have been chosen for the ministry of the altar, on which is represented the passion of the slain Christ, who, “when He was struck, did not strike back,” as 1 Peter 2:23 puts it. And so it is not fitting for clerics to be strikers or killers; for ministers must imitate their Lord—this according to Ecclesiasticus 10:2 (“As the judge of the people is, so also are his ministers”).

The second reason is that what is committed to the clerics is the ministry of the New Law, in which no punishment is determined that involves killing or bodily mutilation. And so, in order to be fitting ministers of the New Testament, clerics should abstain from such things.

**Reply to objection 1:** God always and in all matters does what is right, though in each case in accord with what is congruent with Him. And so each individual ought to imitate God in what is especially congruent with himself. Hence, even though God kills evildoers corporeally, it is nonetheless not necessary that everyone should imitate Him in this.

Now Peter did not slay Ananias and Saphira by his own proper authority or by his own hand; instead, he announced the divine sentence concerning their death. By contrast, the priests or Levites of the Old Testament were ministers of the Old Law, according to which corporal punishments were inflicted, and it was congruous for them to kill by their own hand.

**Reply to objection 2:** The ministry of clerics has to do with better things than corporeal killings,

viz., with things that pertain to spiritual health. And so it is incongruous for them to occupy themselves with lesser matters.

**Reply to objection 3:** The prelates of the Church accept the duties of the rulers of the earth not in order that they themselves might carry out the judgment of blood, but that by their authority this might be carried out by others.

## Article 5

### Is anyone permitted to kill himself?

It seems that some are permitted to kill themselves:

**Objection 1:** Homicide is a sin insofar as it is contrary to justice. But as is proved in *Ethics 5*, no one can do an injustice to himself. Therefore, no one sins by killing himself.

**Objection 2:** Those who have public authority (*publica potestas*) are permitted to kill evildoers. But sometimes an individual who has public authority is himself an evildoer. Therefore, he is permitted to kill himself.

**Objection 3:** One is permitted to endure a lesser danger voluntarily in order to avoid a greater danger. For instance, one is permitted even to amputate his own diseased bodily member in order that his body as a whole should be saved. But sometimes it is through killing himself that one avoids a greater evil—either a miserable life or the turpitude associated with some sin. Therefore, some are permitted to kill themselves.

**Objection 4:** As Judges 16:30 reports, Samson killed himself, and yet, as is clear from Hebrews 11:32, he is still numbered among the saints. Therefore, some are permitted to kill themselves.

**Objection 5:** 2 Maccabees 14:41ff. says that a certain Razias killed himself, “choosing to die nobly rather than to be subjected to sinners and to undergo torments contrary to his noble origins.” But nothing that is done nobly and courageously is illicit. Therefore, killing oneself is not illicit.

**But contrary to this:** In *De Civitate Dei* 1 Augustine says, “It follows that we understand what is being said, ‘You shall not kill’, to be about man. Either someone else, then, or yourself. For one who kills himself kills nothing other than a man.”

**I respond:** Killing oneself is altogether illicit, and this for three reasons.

First, each thing naturally loves itself, and to this it pertains that each thing naturally conserves itself in *esse* and resists things that corrupt it as much as it can. And so someone’s killing himself is contrary to a natural inclination and contrary to charity, by which everyone ought to love himself. And so killing oneself is always a mortal sin as being contrary to natural law and contrary to charity.

Second, each part as such belongs to a whole (*quaelibet pars id quod est est totius*). But each man is part of a community and so as such belongs to a community. Hence, as is clear from the Philosopher in *Ethics 5*, in killing himself a man does injury to the community.

Third, life is a gift given by God to man, and it is subject to the power of the one who “kills and makes to live” (cf. Deuteronomy 32:39). And so one who deprives himself of life sins against God—in the way that a stranger who kills a servant sins against the master whose servant he is, and in the way that one sins when he usurps for himself judgment over a thing that has not been entrusted to him. For the judgment concerning death and life belongs to God alone—this according to Deuteronomy 32:39 (“It is I who will kill and I who will make to live”).

**Reply to objection 1:** Homicide is a sin not only because it is contrary to justice, but also because it is contrary to the charity that one ought to have with respect to himself. And on this score, the killing of oneself is a sin in relation to himself.

On the other hand, because of one’s relation to the community and to God, it has the nature of a sin

also because of its opposition to justice.

**Reply to objection 2:** One who has public authority can licitly kill an evildoer because he is able to pass judgment on him (*potest de ipso iudicare*). However, no one is a judge of himself. Hence, one who has public authority is not permitted to kill himself because of any sin whatsoever, even though he is permitted to hand himself over to the judgment of others.

**Reply to objection 3:** A man is constituted as master of himself through free choice. And so a man can licitly take care of himself as regards those things which pertain to this life and which are governed by man's free choice. However, the transition from this life to another and happier life is subject to God's power and not to man's free choice. And so a man is not permitted to kill himself in order to pass on to a happier life

Again, a man is likewise not permitted to kill himself in order to evade all the miseries of this present life. For as is clear from the Philosopher in *Ethics* 3, death is the ultimate and most fearful evil of this life. And so to inflict death on oneself in order to evade the other miseries of this life is to embrace a greater evil in order to avoid a lesser evil.

Again, one is likewise not permitted to kill himself because of some sin he has committed, both (a) because he especially harms himself by depriving himself of the necessary time for repentance, and also (b) because he is not permitted to kill an evildoer except by the judgment of a public authority.

Likewise, it is not even the case that a woman is permitted to kill herself in order not to be violated by another. For she should not commit the greatest crime, which is the killing of oneself, in order to avoid a lesser crime on the part of another. (For the crime is not the woman's when she is violated by force without her consent (*non est crimen mulieris per violentiam violatae si consensus not adsit*), since, as St. Lucy put it, "The body is not stained except by the mind's consent.") Now it is clear that fornication or adultery is a lesser sin than killing—and especially the killing of oneself, which is very grave because it harms oneself, to whom one owes the greatest love. And it is also the most dangerous sin, because time does not remain for it to be expiated through repentance.

Similarly, no one is permitted to kill himself because he fears consenting to a sin. For what is evil is not to be done in order that something good might come from it or in order that evils might thereby be avoided, especially lesser and less certain evils. For it is uncertain whether someone will consent to a sin in the future, since God is able to free a man from sin, no matter what sort of temptation might come along.

**Reply to objection 4:** As Augustine says in *De Civitate Dei* 1, "Samson is excused for crushing himself along with his enemies in the ruins of the house only because the Holy Spirit, who worked miracles thereby, had in some hidden way commanded it." And he gives the same line of reasoning about certain holy women who killed themselves during a time of persecution and whose memory is celebrated by the Church.

**Reply to objection 5:** It pertains to fortitude that, because of the good of virtue and in order to avoid sin, one should not refuse to suffer death at another's hands. By contrast, inflicting death on oneself in order to avoid harsh torments has, to be sure, the *appearance* of fortitude—and because of this some, among whose number was Razias, have killed themselves, thinking that they were acting courageously—but it is not *genuine* fortitude. Instead, as is clear from the Philosopher in *Ethics* 3 and from Augustine in *De Civitate Dei* 1, it is a certain sort of weakness on the part of a mind unable to endure harsh torments.

## Article 6

### Are there cases in which one is permitted to kill the innocent?

It seems that in some cases one is permitted to kill the innocent:

**Objection 1:** The fear of God is not manifested through sin; just the opposite, “the fear of the Lord drives sin out,” as Ecclesiasticus 1:27 says. But Abraham was commended for fearing the Lord because he willed to kill his innocent son. Therefore, it is possible for someone to kill the innocent without sin.

**Objection 2:** In the genus of sins that are committed against one’s neighbor, something seems to be a greater sin to the extent that more harm is inflicted on the individual against whom one sins. But killing harms a sinner more than it does an innocent man, who passes by death from the misery of this life to heavenly glory. Therefore, since one is permitted in some cases to kill a sinner, *a fortiori*, one is permitted to kill someone who is innocent or just.

**Objection 3:** What is done according to the order of justice is not a sin. But one is sometimes forced, in accord with the order of justice, to kill an innocent man—for instance, when a judge, who has to make a judgment that accords with what has been adduced, condemns to death a man whom he knows is innocent but who has been convicted by false witnesses, and, similarly, the minister who, obeying the judge, puts to death the unjustly convicted man. Therefore, it is possible for someone to kill the innocent without sin.

**But contrary to this:** Exodus 23:7 says, “The innocent and just person you shall not put to death.”

**I respond:** Man can be considered in two ways: (a) in his own right (*secundum se*) and (b) in relation to another (*per comparationem ad aliud*).

If we consider man in his own right, then it is illicit to kill anyone, since in each individual, even in a sinner, we have to consider the nature which God has made and which is corrupted through killing.

However, as was explained above (a. 2), the killing of a sinner becomes licit in relation to the common good, which is corrupted by sin. But the life of just men preserves and promotes the common good, since they are the most important part of the multitude. And so it is in no way permitted to kill the innocent.

**Reply to objection 1:** God has dominion over death and life, since it is by His ordination that both sinners and the just die. And so one who kills the innocent at God’s command does not sin—and neither does God, whose executioner he is. And he shows that he fears God by being obedient to His commands.

**Reply to objection 2:** In weighing the gravity of a sin, one must consider what is *per se* rather than what is *per accidens*.

Hence, one who kills a just man sins more gravely than one who kills a sinner. First of all, because he harms someone whom he ought to love to a greater degree, and so he acts against charity to a greater degree. Second, because he inflicts injury on someone less deserving of it, and so he sins against justice to a greater degree. Third because he deprives the community of a greater good. Fourth, because he shows disdain for God—this according to Luke 10:16 (“Whoever rejects you, rejects me”).

By contrast, the fact a just man who is killed is led by God to glory is related *per accidens* to the killing.

**Reply to objection 3:** If the judge knows that someone who has been convicted by false witnesses is innocent, then he ought to examine the witnesses diligently in order to find a way of freeing the blameless man, as did Daniel (cf. Daniel 13:51). If this is not possible, then he should remand the man to a superior to be judged. But if this is likewise not possible, then he does not sin in imposing a sentence that accords with what has been adduced, since it is not he who is killing the innocent man, but instead those who claimed that he was guilty.

Now if the sentence contains an intolerable error, then the minister of the judge who has condemned the innocent man should not obey—otherwise, the executioners who killed the martyrs would

be excused. On the other hand, if the sentence does not contain a manifest injustice, then he does not sin by executing the command, since he does not have the power to subject his superior's sentence to an examination (*ipse non habet discutere superioris sententiam*). Nor is it *he* who is killing the innocent man; rather, it is the *judge*, whose minister he is.

## Article 7

### Is one permitted to kill someone in defending himself?

It seems that no one is permitted to kill someone in defending himself:

**Objection 1:** In *Ad Publicolam* Augustine says, “As for killing men lest one be killed by them, this resolution does not please me—unless perhaps it is a soldier or someone holding a public office, so that he is doing this not for himself but for the others, having received legitimate power if it befits his person.” But one who kills someone in defending himself kills in order not to be killed by him. Therefore, this seems to be illicit.

**Objection 2:** In *De Libero Arbitrio* 1 [Augustine] says, “How in the sight of Divine providence are they free from sin who are polluted by killing men for the sake of these things that should be disdained?” From what went before, it is clear that “these things” he claims should be disdained are those that men can lose unwillingly. But bodily life is one of those things. Therefore, no one is permitted to kill a man for the sake of preserving his own bodily life.

**Objection 3:** In the *Decretals*, dist. 1, Pope Nicholas says, “Concerning the clerics—viz., those who killed a pagan in defending themselves—on whose behalf you have asked us if they would afterwards be able through repentance to return to their former state or to ascend to a higher state, know that we give them no occasion, nor do we grant them any permission, to kill any man in any way.” But both clerics and laymen alike are obligated to keep the moral commandments. Therefore, laymen are likewise not permitted to kill someone in defending themselves.

**Objection 4:** Homicide is a more grave sin than simple fornication or adultery. But no one is permitted to commit simple fornication or adultery—or any other mortal sin—for the sake of preserving his own life, since spiritual life is to be preferred to bodily life. Therefore, no one is permitted, in defending himself, to kill another in order to preserve his own life.

**Objection 5:** As Matthew 5:12 points out, if a tree is bad, so is its fruit. But the very defense of oneself seems to be illicit—this according to Romans 12:19 (“Do not defend yourselves, my dearly beloved”). Therefore, the killing of a man that follows from this defense is not permitted.

**But contrary to this:** Exodus 22:2 says, “If a thief is found breaking into a house or digging underneath it, and if, having been wounded, he dies, the one who struck him shall not be guilty of blood.” But, *a fortiori*, one is permitted to defend his own life more than his own house. Therefore, likewise, if he kills someone for the sake of defending his own life, he will not be guilty of homicide.

**I respond:** There is nothing to prevent a single act from having two effects, only one of which falls within the intention, while the other one falls outside the intention. Now moral acts receive their species from what is intended, but not from what falls outside the intention; for as is clear from what was said above (q. 43, a. 3 and *ST* 1-2, q. 72, a. 1), what falls outside the intention is *per accidens*.

Therefore, it is possible for the act of someone who is defending himself to have two effects: (a) the preservation of his own life, and (b) the killing of the one who is attacking him. By the fact that the preservation of his own life is intended, an act of this sort does not have the nature of something illicit, since it is natural to each thing that it should preserve itself in *esse* to the extent that it can.

Still, an act that proceeds from a good intention can be rendered illicit if it is not proportionate to the end. And so if, in order to defend his own life, someone uses more violence than is necessary, the act

will be illicit. On the other hand, if he repels violence with moderation, it will be a licit defense, since, according to the statutes, “one is permitted to repel force with force within the limits of a blameless defense (*cum moderamine inculpatae tutelae*). Nor is it necessary for salvation that a man omit an act of moderate defense in order to avoid killing the other, since a man is more obligated to provide for his own life than for someone else’s life.

However, since, as is clear from what was said above (a. 3), killing a man is permitted only by a public authority and for the sake of the common good, a man is not permitted to *intend* to kill another man in order to defend himself—*except for* those who have public authority and who, when they intend to kill a man in their own defense, refer this to the public good, as is clear in the case of a soldier fighting against enemies and of a public servant fighting against criminals (*ut patet in milite pugnante contra hostes et in ministro iudicis pugnante contra latrones*). However, even they sin if they are moved by private disordered passions.

**Reply to objection 1 and objection 2:** This passage from Augustine should be interpreted to apply to a case in which someone intends to kill a man in order to free himself from death. The passage from *De Libero Arbitrio* should also be interpreted to apply to this sort of case. Hence, he is expressly talking about cases in which the *intention* is made clear. And from this the reply to the second objection is obvious.

**Reply to objection 3:** Irregularity [for clerics] follows upon an act of homicide, even if that act is without sin, as, for instance, in the case of a judge who justly condemns someone to death. And for this reason, if a cleric someone, even in defending himself, he becomes irregular even if he did not intend to kill his attacker and intended only to defend himself.

**Reply to objection 4:** An act of fornication or an act of adultery is not ordered toward preserving one’s life in extreme circumstances (*ex necessitate*), in the way that an act from which homicide sometimes follows is.

**Reply to objection 5:** What is forbidden in this passage is a defense that is accompanied by malice aimed at revenge. Hence, a Gloss on this passage says, “‘Not defending yourself’, that is, not thirsting to strike back at your adversaries.”

## Article 8

### Does one who accidentally kills a man incur the guilt of homicide?

It seems that one who accidentally kills a man incurs the guilt of homicide (*aliquis casualiter occidens hominem incurrat homicidii reatum*):

**Objection 1:** In Genesis 4:23-24 we read that Lamech killed a man thinking that he was killing a beast, and it was accounted to him as a homicide. Therefore, one who accidentally kills a man incurs the guilt of homicide.

**Objection 2:** Exodus 21:22-23 says, “If anyone strikes a pregnant woman and causes a miscarriage ... then if her death ensues, he shall render life for life.” But this can happen without any intention of killing. Therefore, accidental homicide carries the guilt of homicide.

**Objection 3:** In *Decretals*, dist. 1, there are several canons in which accidental homicides are punished. But punishment is due only for guilt. Therefore, one who accidentally kills a man incurs the guilt of homicide (*incurrit homicidii culpam*).

**But contrary to this:** In *Ad Pubicolam* Augustine says, “Let it not be the case that the things we do for the sake of what is good and licit are such that it is imputed to us if, through these things and outside of our intention, something bad should accidentally happen to someone.” But it sometimes happens that homicide follows accidentally when someone does something for the sake of what is good.

Therefore, the homicide is not imputed to the one who does this as his fault.

**I respond:** According to the Philosopher in *Physics 2*, chance or accident (*casus*) is a cause that acts outside of the intention. And so things that are accidental (*casualia*) are, absolutely speaking, neither intended nor voluntary. And since, according to Augustine, every sin is voluntary, it follows that things that are accidental are not sins.

However, it is possible for what is not willed or intended actually and *per se* to be willed and intended *per accidens*, insofar as a cause is called *per accidens* when it removes an obstacle. Hence, if someone does not remove the things from which a homicide follows when he ought to remove them, then the homicide is in some sense voluntary. This can happen in two ways:

(a) He incurs the homicide while being involved in illicit activities that he should have avoided.

(b) He incurs the homicide while not being careful enough (*quando non adhibet debitam sollicitudinem*).

And so, according to the statutes, if someone is involved in a licit activity, applying due diligence, and a homicide follows from this, then he does not incur the guilt of homicide. By contrast, if he is involved in some illicit matter, or if he is caring for something licit but not applying due diligence, then he does not escape the guilt of homicide if a man's death follows from what he does (*si ex eius opere mors hominis consequatur*).

**Reply to objection 1:** Lamech did not apply sufficient diligence to avoid homicide, and so he did not escape the guilt of homicide.

**Reply to objection 2:** One who strikes a pregnant woman is involved with something illicit. And so if the death of either the woman or the ensouled child ensues (*si sequatur mors vel mulieris vel puerperii animati*), then he does not escape the crime of homicide, especially since it is clear that death follows from such a blow.

**Reply to objection 3:** According to the canons, the punishment is imposed on those who accidentally kill while engaged in illicit matters or without applying due diligence.

## QUESTION 65

### Other Injuries Committed Against One's Person

Next we have to consider sins with regard to other injuries that are committed against someone's person. And on this topic there are four questions: (1) Is the mutilation of parts of the body licit? (2) Is beating or striking licit? (3) Is incarceration licit? (4) Is a sin involving harms of this sort made worse by being committed against a person who is connected to others.

#### Article 1

##### Is there any case in which it can be licit to mutilate parts of someone's body?

It seems that there is no case in which it can be licit to mutilate parts of someone's body (*mutilare aliquem membro in nullo casu possit esse licitum*):

**Objection 1:** In *De Fide Orthodoxa* 2 Damascene says that a sin is committed "by moving away from that which accords with nature toward that which is contrary to nature." But it accords with the nature instituted by God that a man's body should be complete in its parts, whereas it is contrary to nature that it should have a part taken away. Therefore, it seems always to be a sin to mutilate parts of someone's body.

**Objection 2:** As *De Anima* 2 says, the whole soul is related to the whole body as the parts of the soul are related to the parts of the body. But it is not licit to deprive someone of his soul by killing him, except by a public authority (*nisi publica potestate*). Therefore, it is likewise not licit to mutilate parts of someone's body, except perhaps in accord with a public authority.

**Objection 3:** The soul's health is to be preferred to bodily health. But one is not permitted to mutilate parts of his own body for the sake of his soul's health; for according to the statutes of the Nicene Council, those who have castrated themselves for the sake of preserving chastity are punished. Therefore, there is no cause for the sake of which one is permitted to mutilate parts of anyone's body.

**But contrary to this:** Exodus 21:24 says, "An eye for an eye, a tooth for a tooth, a hand for a hand, a foot for a foot."

**I respond:** Since a member (*membrum*) is a part of a whole human body, it exists for the sake of the whole in the way in which what is incomplete (*imperfectum*) exists for the sake of what is complete (*perfectum*). Hence, one should treat a member of the body in a way that is advantageous for the whole.

Now a part of the human body is *in its own right* (*per se*) advantageous for the good of the whole body, but it can happen *incidentally* (*per accidens*) that it is harmful—as, for instance, when a diseased member is corruptive of the whole body. Therefore, if a part of the body is healthy and in its natural condition, then it cannot be cut off or cut out without a loss to the whole man (*non potest praecidi absque totius hominis detrimento*).

However, since, as was explained above (q. 61, a. 1 and q. 64, aa. 2 and 5), the whole man is ordered toward the whole community of which he is a part, it can happen that the cutting away of some bodily part, even if this tends toward the detriment of the whole body, is ordered toward the good of the community insofar as it is inflicted on someone as a punishment aimed at stopping sins. And so just as through the public authority someone is licitly deprived totally of his life because of certain major crimes, so, too, someone is deprived of a bodily part because of certain lesser crimes. However, this is not licit for a private person, even if the one to whom the bodily part belongs is willing, since it involves a harm to the community to which the man himself and all his parts belong.

On the other hand, if because of disease the part is corruptive of the whole body, then it is licit, with the consent of the one to whom the bodily part belongs, to cut off or cut out the diseased member for the health of body (*licitum est putridum membrum praescindere propter salutem totius corporis*, since each one is charged with taking care of his own health. And the same line of reasoning holds if it is done

voluntarily by someone who is charged with taking care of the health of the one to whom the corrupted bodily part belongs.

But other than these cases, it is altogether illicit to mutilate parts of someone's body.

**Reply to objection 1:** There is nothing to prevent what is contrary to a particular nature from being in accord with nature in general (*secundum naturam universalem*); for instance, death and corruption among natural things is contrary to the particular nature that is corrupted, even though it accords with nature in general. Similarly, even if mutilating a part of someone's body is contrary to the particular nature of the one who is mutilated, it nonetheless accords with rational nature in relation to the common good.

**Reply to objection 2:** The life of a whole man is not ordered toward anything proper to the man himself; rather, all the things that belong to a man are ordered toward that life itself. And so to deprive someone of his life belongs in all cases to the public authority, which is entrusted with procuring the common good.

By contrast, cutting off or cutting out a bodily part can be ordered toward the proper health of an individual man, and so in some cases this can pertain to him.

**Reply to objection 3:** A bodily part is not to be cut off or cut out for the sake of the bodily health of the whole except when the whole cannot be helped in any other way. By contrast, spiritual health can always be helped in some way other than by cutting off a bodily part, since sin is subject to the will. And so there is no case in which it is licit to cut off a bodily part for the sake of avoiding some sin or other. Hence, in expounding Matthew 19:12 ("There are eunuchs who have castrated themselves for the sake of the kingdom of heaven") Chrysostom says, "Not by cutting off bodily parts, but by doing away with bad thoughts. For a man who cuts off a part is subject to a curse, because such a man takes for granted what is common to murderers." And further on he says: "Nor is lust thereby tamed—on the contrary, it becomes more troublesome. For the seed (*sperma*) in us has other sources and is chiefly from an incontinent intention and a negligent mind. And temptations are suppressed not so much by cutting off a bodily part as by curbing one's thoughts."

## Article 2

### Are fathers permitted to strike or beat their children or masters their servants?

It seems that fathers are not permitted to strike or beat their children (*non liceat patribus verberare filios*) and that masters are not permitted to strike or beat their servants (*non liceat dominis verberare servos*):

**Objection 1:** In Ephesians 6:4 the Apostle says, "You fathers, do not provoke your children to anger." And later on he adds, "You masters, do the same for your servants, forebear threatening." But it is because of beatings that some are provoked to anger. And beatings are more grave than threats. Therefore, fathers should not strike or beat their children, and masters should not strike or beat their servants.

**Objection 2:** In *Ethics* 10 the Philosopher says, "A father's words only admonish and do not coerce." But a sort of coercion results from beatings. Therefore, parents are not permitted to strike or beat their children.

**Objection 3:** Everyone is permitted to impart correction (*disciplinam impendere*) to another, since, as was explained above (q. 32, a. 2), this belongs to the spiritual works of mercy. Therefore, if parents are permitted to strike or beat their children for the sake of correction, then by parity of reasoning everyone is permitted to strike or beat anyone. But this is obviously false. Therefore, so is the antecedent (*primum*).

**But contrary to this:** Proverbs 13:24 says, “One who spares the rod hates his child,” and later at Proverbs 23:13-14 it says, “Withhold not correction from a child; for if you strike him with the rod, he shall not die. You shall beat him with the rod and free his soul from hell.” And Ecclesiasticus 33:28 says, “Torture and fetters for a malevolent servant.”

**I respond:** A certain amount of harm is inflicted through striking or beating on the body of the one who is struck or beaten, and yet it is different from the harm involved in mutilation, since mutilation destroys the body’s wholeness, whereas striking or beating only brings about sensory pain. Hence, the harm is much less than with the mutilation of a bodily part.

Now it is licit to inflict harm on someone only in the manner of a punishment for the sake of justice. But no one punishes anyone justly unless that individual is subject to his authority (*eius ditioni subiectum*). And so to strike or beat someone is not licit except for an individual who has some sort of power over the one who is being struck or beaten. And since children are subject to the power of their father and servants are subject to the power of their master, a father can licitly strike or beat his child—and a master can strike or beat his servant—for the sake of correction and discipline.

**Reply to objection 1:** As is clear from the Philosopher in *Rhetoric 2*, since anger is a desire for vengeance, anger is mainly excited when one thinks himself unjustly harmed. And so the fact that fathers are forbidden to provoke their children to anger does not prohibit them from striking or beating their children for the sake of correction. Instead, it prohibits them from afflicting their children immoderately with beatings.

What is quoted about masters, that they should forebear threatening, can be understood in one of two ways: (a) that they should be slow to use threats, which pertains to moderation in correction, or (b) that one should not always follow through with what has been threatened, which pertains to the fact that the judgment by which someone threatens a punishment should sometimes be tempered by the mercy of forgiveness.

**Reply to objection 2:** A greater authority should have a greater degree of coercion. Now just as the city is a complete community, so the ruler of the city has a complete power to coerce, and so he is able to inflict irreparable punishments, viz., killing and mutilation. On the other hand, a father and a master, who preside over the domestic family, which is an incomplete community, have an incomplete power to coerce in accord with lighter punishments, which do not inflict irreparable harm. And striking or beating is like this.

**Reply to objection 3:** It is licit to give correction to anyone who is willing. But to give correction to someone who is unwilling belongs only to someone one who has been charged with the care of the other. And this is what castigating someone with blows or beating pertains to.

### Article 3

#### Is it licit to incarcerate a man?

It seems that it is not licit to incarcerate a man:

**Objection 1:** As was explained above (*ST 1-2*, q. 18, a. 2), an act is evil by its genus when it has to do with inappropriate matter. But a man, having the natural freedom of choice, is inappropriate matter for incarceration, which is incompatible with freedom. Therefore, it is illicit to incarcerate anyone.

**Objection 2:** Human justice ought to be regulated by divine justice. But as Ecclesiasticus 15:14 says, “God left man in the hand of his own counsel.” Therefore, it seems that no one should be coerced with fetters or prison.

**Objection 3:** No one should be held back except from a bad act, from which everyone is able to impede another licitly. Therefore, if it were licit to incarcerate someone in order that he might be held

back from something evil, then everyone would be permitted to incarcerate someone. But this is obviously false. Therefore, so is the antecedent (*primum*).

**But contrary to this:** In Leviticus 24:11 we read that someone had been sent to prison because of the sin of blasphemy.

**I respond:** Among the goods of the body there are three that are thought of in [descending] order:

(a) *the integrity of the bodily substance*, a loss of which is brought about through killing or mutilation;

(b) *pleasure or the quieting of the senses*, to which striking or beating is opposed, along with anything else that brings sensory pain; and

(c) *movement and the use of the bodily parts*, which is impeded by one's being tied up or incarcerated, i.e., by some sort of detention.

And so incarcerating someone, or detaining him in any way, is illicit unless it is done in accord with the order of justice, either as a punishment or as a precaution for avoiding something bad.

**Reply to objection 1:** A man who misuses the power that has been given to him deserves to lose it. And so a man who, by sinning, has misused the free use of his bodily parts, is an appropriate matter for incarceration.

**Reply to objection 2:** In accord with the order of His wisdom, God sometimes prevents sinners from being able to complete their sins—this according to Job 5:12 (“He scatters the thoughts of the wicked, lest their hands be able to complete what they had begun”). On the other hand, sometimes He permits what they want to do. Similarly, in accord with human justice men are incarcerated not for any sin whatsoever, but for some sins.

**Reply to objection 3:** Everyone is permitted to detain a man for a time from immediately perpetrating some illicit act, as when someone prevents another from throwing himself off a precipice or from striking someone.

However, absolutely speaking, to sequester someone or tie him up belongs only to someone who has the power in general over the acts and life of another, since the that individual is thereby prevented not only from doing evil but also from doing good.

#### Article 4

##### **Is the sin made worse by the fact that harms of the sort just discussed above are inflicted on persons who are connected to others?**

It seems that the sin is not made worse by the fact that harms (*iniuriae*) of the sort just discussed above are inflicted on persons who are connected to others:

**Objection 1:** Harms (*iniuriae*) of this sort have the character of sins insofar as damage is inflicted on someone against his will. But an evil that is inflicted on his proper person is more contrary to a man's will than an evil that is inflicted on a person connected to him. Therefore, the harm inflicted on a connected person is less contrary to his will.

**Objection 2:** In Sacred Scripture the ones who are especially reprimanded are those who inflict harm on orphans and widows; hence, Ecclesiasticus 35:17 says, “He will not despise the prayers of the fatherless; nor the widow, when she pours out her complaint.” But the widow and the orphan are not persons connected to others. Therefore, the sin is not made worse by harm's being inflicted on persons who are connected to others.

**Objection 3:** The connected person has his own will, just as the principal person does. Therefore, there can be something that is voluntary for him which is contrary to the will of the principal person—as is clear in the case of adultery, which pleases the wife and displeases the husband. But harms of this sort

have the character of a sin insofar as they consist in an involuntary commutation. Therefore, harms of this sort have less of the character of a sin.

**But contrary to this:** Deuteronomy 28:32 says, as if making this worse, “Your sons and your daughters will be handed over to another people as your eyes look on.”

**I respond:** All other things being equal, to the extent that a given harm flows out to more individuals, the sin is more grave. And so it is that a sin is more grave if someone strikes a ruler rather than a private person, since, as was explained above (*ST* 1-2, q. 73, a. 9), this redounds to the harm of the whole multitude. Now when a harm is inflicted on a person who is in some way connected to another, the harm belongs to two persons. And so, all other things being equal, the sin is made worse by this.

However, it can happen, given certain circumstances, that a sin against a person connected to no one is more grave, either because of that person’s worthiness (*propter dignitatem personae*) or because of the magnitude of the harm.

**Reply to objection 1:** The harm inflicted on the connected person is less harmful to the person to whom he is connected than if it had been inflicted immediately on the latter, and on this score it is less a sin. However, the whole that pertains to the harm of the person to whom he is connected is added to the sin that one incurs from harming the other person in himself.

**Reply to objection 2:** Harms inflicted on widows and orphans are emphasized more, both because those harms are more opposed to mercy and also because the same harm inflicted on persons of this sort is more serious for them, since they do not have anyone to bring them relief.

**Reply to objection 3:** The fact that the wife voluntarily consents to the adultery lessens the sin and the harm from the side of the woman herself, since the sin would be greater if the adulterous man were to overcome her violently. However, this does not lessen the sin from the side of the husband, since, as 1 Corinthians 7:4 says, “The wife does not have the power of her own body, but the husband.” And the same line of reasoning holds for similar cases.

Below, in the tract on temperance (q. 154, a. 8), there will be a place to talk about adultery, which is opposed not only to justice but also to chastity.

## QUESTION 66

### Theft and Robbery

Next we have to consider sins which are opposed to justice and through which harm is inflicted on one's neighbor in the *things* he possesses (*infertur nocumentum proximo in rebus*), viz. theft (*furtum*) and robbery (*rapina*). And on this topic there are nine questions: (1) Is the possession of exterior things natural to man? (2) Is it licit for one to possess an entity as his own? (3) Is theft the furtive taking (*occulta acceptio*) of a thing that belongs to someone else? (4) Is robbery a sin that differs in species from theft? (5) Is every instance of theft a sin? (6) Is theft a mortal sin? (7) Is it licit to steal out of neediness (*in necessitate*)? (8) Is every instance of robbery a mortal sin? (9) Is robbery a more serious sin than theft?

#### Article 1

##### Is the possession of exterior things natural to man?

It seems that the possession of exterior things is not natural to man:

**Objection 1:** No one should attribute to himself what belongs to God. But dominion over all creatures belongs properly to God—this according to Psalm 23:1 (“The earth is the Lord’s ...”) Therefore, the possession of things is not natural to man.

**Objection 2:** In expounding the words of the rich man in Luke 12:18 (“I will gather all the things that are grown to me along with my goods”), Basil says, “Tell me, which things are your own? Where did you get them from and appropriate them into your life?” But one can correctly claim that the things which a man possesses by nature are his own. Therefore, the possession of exterior things is not natural to man.

**Objection 3:** In *De Trinitate* Ambrose says, “The name ‘lord’ or ‘owner’ (*dominus*) has to do with power.” But a man does not have power over exterior things, since he can change nothing that has to do with their nature. Therefore, the possession of exterior things is not natural to man.

**But contrary to this:** Psalm 8:8 says, “You have put all things under his [read: man’s] feet.”

**I respond:** There are two possible ways to think about an exterior thing:

(a) with respect to *the nature* of the thing, which is subject not to human power, but only to the power of God, whom all things obey at will;

(b) with respect to *the use* of the thing—and in this sense man has natural dominion over exterior things, since by his reason and will he can make use of exterior things for his own advantage as things made for his sake. For as was established above (q. 64, a. 1), things that are less perfect or less complete (*imperfectiora*) exist for the sake of things that are more perfect or more complete (*perfectiora*). And this is the line of reasoning by which the Philosopher proves in *Politics* 1 that the possession of exterior things is natural to man.

Now this natural dominion over other creatures that belongs to man in accord with his reason, in which the image of God consists, is made manifest in the very creation of man in Genesis 1:26, where it says, “Let us make man to our likeness and image and set him above the fish of the sea, etc.”

**Reply to objection 1:** God has the principal dominion over all things. And in accord with His providence He has ordered certain things toward the bodily sustenance of man. And for this reason man has a natural dominion over things as regards the power to use them.

**Reply to objection 2:** The rich man is reprimanded because he thought that the exterior goods were *principally* his own, in the sense that he had not received them from another, viz., from God.

**Reply to objection 3:** This argument is about a dominion over things as regards their natures—a dominion that, as has been explained, belongs to God alone.

## Article 2

### Is one permitted to possess a thing as his own?

It seems that no one is permitted to possess a thing as his own (*non liceat alicui rem aliquam quasi proprium possidere*):

**Objection 1:** Everything that is contrary to the natural right (*contra ius naturale*) is illicit. But in accord with the natural right, all things are held in common (*omnia sunt communia*), and the ownership of possessions (*possessionum proprietas*) is contrary to this commonality. Therefore, it is illicit for any man to appropriate an exterior thing for himself.

**Objection 2:** In expounding the aforementioned words of the rich man Basil says, “Just as someone who, getting to the show ahead of time, obstructs those who are arriving by appropriating for himself what is ordered toward common use, so the rich think that the common things they have previously accrued are their own.” But it would be illicit to close off to others the path to obtaining goods that are common. Therefore, it is illicit for one to appropriate for himself anything that is common.

**Objection 3:** Ambrose says (and this is found in *Decretals*, dist. 47, Canon “Just as they”), “Let no one call his own anything that is common.” But what he is calling ‘common’ are exterior things, as is clear from what he had said before this. Therefore, it seems to be illicit for anyone to appropriate for himself any exterior thing.

**But contrary to this:** In *De Haeresibus* Augustine says, “The ‘Apostolics’ are those who have arrogantly called themselves by this name because, like monks and many clerics that the Catholic Church includes, they do not admit into their communion those who are married or those who have their own possessions.” But the reason why they are heretics is that, separating themselves from the Church, they believe that there is no hope for those who take advantage of these things that they themselves lack. Therefore, it is erroneous to claim that a man is not permitted to possess his own things.

**I respond:** As regards exterior things, there are two things that belong to a man:

The *first* is the power to taking care of and managing exterior things (*potestas procurandi et dispensandi*). And on this score it is licit for a man to possess his own things. Indeed, there are three reasons why this is necessary for human life:

(a) because each individual is more solicitous about taking care of something that belongs to him alone than about taking care of what is common to everyone or common to many individuals. For each individual, shrugging off the work, leaves for someone else what pertains to everyone, as happens when there is a multitude of attendants.

(b) because human affairs are conducted in a more orderly way if the proper care of a thing that needs to be taken care of falls to individuals, whereas there would be confusion if everyone were supposed to take care of everything indiscriminately.

(c) because in this way a more peaceful condition is preserved among men, as each is content with his own possessions. Hence, we see that quarrels more frequently break out among those who possess something in common and in an undivided way.

The *second* thing that belongs to a man regarding exterior things is *the use of them*. And on this score a man should hold his exterior things not as his own but as common, viz., in order that he might freely share them when others are in need (*de facili aliquis ea communicet in necessitate aliorum*). Hence, in 1 Timothy 6:17-18 the Apostle says, “Charge the rich of this world to give freely, to share.”

**Reply to objection 1:** The commonality of things is attributed to the natural right not because the natural right dictates that all things are to be possessed in common and that nothing is to be possessed as one’s own, but because the distinction among possessions is not itself a matter of the *natural* right but rather a matter of human agreement, which, as was explained above (q. 57, aa. 2-3), pertains to the *positive* right. Hence, the ownership of possessions is not contrary to the natural right, but is added to the

natural right by the inventiveness of human reason.

**Reply to objection 2:** One who arrived at the show ahead of time and prepared the way for the others would not be acting illicitly; rather, he acts illicitly by blocking the others. Similarly, a rich man does not act illicitly if he gains possession of a thing that was common at the beginning and shares it with others; rather, he sins if he prevents others indiscriminately from making use of the thing. Hence, in the same place Basil says, “Why do you have abundance while he begs, except that you might gain the merit of good stewardship, whereas he might be crowned with the reward of patience?”

**Reply to objection 3:** When Ambrose says, “Let no one call his own what is common,” he is talking about ownership (*proprietas*) with respect to *use*. This is why he adds, “That which exceeds what is sufficient for an expenditure has been obtained through violence (*violenter*).”

### Article 3

#### Is it the nature of theft to take furtively a thing that belongs to someone else?

It seems that it is not the nature of theft to take furtively a thing that belongs to someone else (*non sit de ratione furti occulte accipere rem alienam*):

**Objection 1:** What lessens a sin does not seem to belong to the nature of that sin. But to sin furtively pertains to lessening the sin, just as, contrariwise, in order to magnify the sin of certain people, Isaiah 3:9 says, “They have broadcast their sin as Sodom did, nor did they hide it.” Therefore, it is not part of the nature of theft that the taking of what belongs to someone else be *furtive*.

**Objection 2:** Ambrose says (and this is found in *Decretals*, dist. 47), “It is no less of a crime to take from one who has than to refuse those who have not, when you are able to help them and equipped to help them.” Therefore, just as theft may consist in *taking a thing* that belongs to someone else, so too it may consist in *holding a thing back*.

**Objection 3:** A man can take furtively from someone else even what is his own—for instance, a thing which he had deposited with someone else or a thing which had been taken unjustly from him. Therefore, it is not part of the nature of theft that it is the furtive taking of *a thing that belongs to someone else*.

**But contrary to this:** In *Etymologia* Isidore says, “‘Thief’ (*fur*) is taken from ‘swarthy’ (*furvus*), i.e., from ‘dark’ (*fuscus*), since a thief makes use of the night time.”

**I respond:** Three things come together for the nature of theft:

The *first* is what belongs to it insofar as it is contrary to justice, which gives to each individual what is his own. And from this it belongs to theft that it involves *taking what belongs to someone else*.

The *second* belongs to the nature of theft insofar as it is distinct from sins that are against one’s person, such as homicide and adultery. And on this score, it belongs to theft that it has to do with *a thing that is possessed*. For if someone takes from someone else what belongs to him not as a possession but as a part (e.g., if he cuts off a bodily part) or as a connected person (e.g., if he takes his child or his wife), then this act does not, properly speaking, have the nature of theft.

The *third* difference is the one that brings the nature of theft to completion, viz., that it *furtively* takes what belongs to someone else.

Accordingly, the proper nature of theft is that it is *the furtive taking of a thing that belongs to someone else*.

**Reply to objection 1:** Furtiveness is sometimes a cause of a sin—for instance, when someone uses furtiveness in order to sin, as happens in cases of fraud and deceit. And in this sense it does not diminish the sin, but instead *constitutes the species* of the sin. And this is how it is with theft.

In other cases, furtiveness is a simple *circumstance* of a sin. And in such cases it diminishes the sin,

both because it is a sign of shame and also because it removes scandal.

**Reply to objection 2:** To hold back what is due to someone else involves the same sort of harm as taking it. And so the unjust holding back of a thing is likewise understood as included under *unjust taking*.

**Reply to objection 3:** Nothing prevents what belongs absolutely speaking to one individual from also belonging in some sense to someone else. For instance, a deposited thing belongs absolutely speaking to the one who deposits it, but it belongs to the one with whom it is deposited as regards its safekeeping (*sed est eius apud quem deponitur quantum ad custodiam*). And what is taken in a robbery belongs to the robber—not absolutely speaking, but as regards its being held back.

#### Article 4

##### Are theft and robbery sins that differ in species?

It seems that theft (*furtum*) and robbery (*rapina*) are not sins that differ in species:

**Objection 1:** Theft and robbery differ with respect to *furtive* and *open*, since theft involves furtive taking, whereas robbery involves open and violent taking. But in other genera of sins *furtive* and *open* do not make for diverse species. Therefore, theft and robbery are not sins that are diverse in species.

**Objection 2:** As was explained above (*ST* 1-2, q. 18, a. 6), moral acts receive their species from their end. But theft and robbery are ordered toward the same end, viz., to have what belongs to someone else. Therefore, they do not differ in species.

**Objection 3:** Just as a thing is taken by force (*rapitur*) in order to possess it, so a woman is taken by force (*rapitur*) in order to take pleasure in her. Hence, in the *Etymologia* Isidore says, “He who commits a rape is called a corrupter, and the one who is raped is said to be corrupted (*raptor dicitur corruptor et rapta corrupta*).” But it is called rape (*raptus*) whether the woman is carried off publicly or in secret. Therefore, a possessed thing is said to be taken by force (*rapi*) whether it is taken by force furtively or publicly. Therefore, theft and robbery do not differ.

**But contrary to this:** In *Ethics* 5 the Philosopher distinguishes theft from robbery, claiming that theft is furtive, whereas robbery is violent.

**I respond:** Theft and robbery are vices opposed to justice insofar as one does something unjust to someone else. But as is shown in *Ethics* 5, no one suffers what is unjust willingly. And so the reason why theft and robbery have the nature of a sin is that the taking is involuntary on the part of the one from whom something is taken. But as *Ethics* 3 establishes, there are two ways in which something is called involuntary, viz., because of *ignorance* and because of *violence*. And so robbery has one type of sinfulness and theft another (*aliam rationem peccati habet rapina et aliam furtum*). And because of this they differ in species.

**Reply to objection 1:** In the other genera of sins, the nature of the sin does not involve anything involuntary, in the way that this is involved in sins opposed to justice. And so where diverse types of involuntariness are present, there are diverse species of sin.

**Reply to objection 2:** The remote end is the same in the case of robbery and theft, but this is not sufficient for an identity of species, since there is a diversity in their proximate ends. For the robber wants to obtain the thing through his own power, whereas the thief wants to obtain it through cunning (*astutia*).

**Reply to objection 3:** The rape of a woman cannot be hidden on the part of the woman who is raped. And so even if it is hidden on the part of the others by whom she is raped, the nature of violence (*ratio rapinae*) still remains on the part of the woman on whom the violence is inflicted.

## Article 5

### Is theft always a sin?

It seems that theft is not always a sin:

**Objection 1:** No sin falls under a divine precept; for Ecclesiasticus 15:21 says, “He has not commanded anyone to act wickedly.” But God is seen to have commanded theft. For Exodus 12:35-36 says, “The children of Israel did as the Lord of Moses had commanded ... and despoiled the Egyptians.” Therefore, theft is not always a sin.

**Objection 2:** One who finds a thing that is not his own seems to commit theft, since he takes a thing that belongs to someone else. But as the jurists comment, this seems to be licit according to natural equity. Therefore, it seems that theft is not always a sin.

**Objection 3:** One who takes his own thing does not seem to sin, since he does not act contrary to justice, the balance of which he does not upset. But theft is committed even if someone furtively takes a thing which is his own and which is being held or guarded by someone else. Therefore, it seems that theft is not always a sin.

**But contrary to this:** Exodus 20:15 says, “You shall not steal (*non furtum facies*).”

**I respond:** If one thinks carefully about the nature of theft, he will find two types of sinfulness in it:

(a) *by reason of an opposition to justice*, which renders to each individual what is his own. And this is the way in which theft is opposed to justice, since theft is the taking of a thing that belongs to someone else.

(b) *by reason of deceit or fraud (ratione doli seu fraudis)*, which a thief commits by taking a thing that belongs to some else furtively and, as it were, by insidious means (*occulte et quasi ex insidiis*).

Hence, it is clear that every instance of theft is a sin.

**Reply to objection 1:** It is not theft to take a thing that belongs to someone else, whether furtively or openly, by the authority of a judge who issues a decree for this. For it becomes one’s due by the fact that it has been awarded to one by the decree. Hence, *a fortiori*, it was not theft for the children of Israel to take the spoils of the Egyptians at the command of the Lord, who issued this decree in light of the afflictions that the Egyptians had inflicted on them without cause. This is why Wisdom 10:19 says expressly, “The just took the spoils of the wicked.”

**Reply to objection 2:** One must draw a distinction with respect to things that are found.

Some of them were never included among anyone’s goods, e.g., precious stones and jewels that are found on the seashore. Such things are conceded to the one who takes possession of them. And the same thing applies to treasures from past times which are hidden underground and which now have no owner—except that, according to civil law, the finder is obligated to give half to the owner of the land if he has found it on some else’s land. Because of this, in the Gospel parable (Matthew 13:44) it says of the the finder of a treasure buried in a field that he bought the field, so that, as it were, he would have the right to possess the whole treasure (*quasi ut haberet ius possidendi totum thesaurum*).

By contrast, some things that are found were at some recent time included among someone’s goods. And in that case, if someone takes these things not with the intention of keeping them but with the intention of restoring them to their owner, who has not given them up for lost, then he does not commit theft. Similarly, if they have been given up for lost and the finder believes this, then even if he keeps the goods for himself, he does not commit theft.

In all other cases, the sin of theft is committed. Hence, in a one of his homilies Augustine says (and this is found in *Decretals* 14, q. 5), “If you have found something and not returned it, then you have stolen it (*rapuisti*).”

**Reply to objection 3:** Someone who furtively takes something of his own that has been deposited

with someone else is burdening the one with whom he deposited it, since the latter is obligated either to make restitution or to prove that he is innocent. Hence, it is clear that the one who takes the thing commits a sin and is obligated to ease the burden of the one with whom he deposited it.

On the other hand, one who furtively takes something of his own that is being kept unjustly by another does, to be sure, sin, but not because he is burdening the one who is keeping the thing, and so he is not obligated to restore it to him or to give him compensation. Rather, he sins against common justice when he appropriates to himself the judgment of his own case by bypassing the order of law. And so he is obligated to make satisfaction to God and to work at making the scandal to his neighbors subside if any scandal has arisen because of what he did.

## Article 6

### Is theft a mortal sin?

It seems that theft is not a mortal sin:

**Objection 1:** Proverbs 6:30 says, “The fault is not so great when someone has stolen.” But every mortal sin involves a great fault. Therefore, theft is not a mortal sin.

**Objection 2:** The punishment of death is due for a mortal sin. But the punishment of death is not inflicted for theft in the Law. Instead, only the punishment of a loss is inflicted—this according to Exodus 22:1 (“If someone has stolen an ox or a sheep, he shall restore five oxen for one oxen and four sheep for one sheep”). Therefore, theft is not a mortal sin.

**Objection 3:** Theft can be committed in small matters as well as in great matters. But it seems inappropriate for someone to be punished with eternal death for the theft of some small thing—say, a needle or a feather. Therefore, theft is not a mortal sin.

**But contrary to this:** No one is damned in accord with divine judgment except for a mortal sin. But someone is condemned for theft—this according to Zachariah 5:3 (“This is the curse that goes forth over the face of the whole earth: for every thief shall be condemned as is there written”). Therefore, theft is a mortal sin.

**I respond:** As was established above (q. 59, a. 4 and *ST* 1-2, q. 72, a. 5), a mortal sin is one that is contrary to charity insofar as charity is the spiritual life of the soul. Now charity consists principally in the love of God, whereas it consists secondarily in the love of neighbor, to which it pertains that we love and work for the good of our neighbor.

Now through theft a man inflicts harm on a neighbor in his possessions, and if men were to steal from one another indiscriminately, human society would perish. Hence, theft, as contrary to charity, is a mortal sin.

**Reply to objection 1:** There are two reasons why theft is said not to be “a great fault.”

First, because of the neediness (*propter necessitatem*) which induces someone to steal and which, as will be explained below (a. 7), diminishes or totally removes the fault. This is why he adds, “For he steals to fill his hungry soul.”

Second, theft is said not to be a great fault by comparison with the guilt of adultery, which is punished by death. Hence, he adds about the thief that “if found out, he will restore sevenfold ... but he that is an adulterer ... will destroy his own soul.”

**Reply to objection 2:** The punishments of the present life are medicinal rather than retributive; for retribution is reserved for God’s judgment, which is aimed at sinners “according to the truth” (Romans 2:2). And so in accord with the judgment of the present life, the punishment of death is not imposed for every mortal sin. Instead, it is imposed only for those mortal sins that inflict irreparable damage or at least for those that involve some horrible deformity.

And so in accord with the present judgment the punishment of death is not imposed for theft, which inflicts repairable damage, unless the theft is aggravated by some grave circumstance, as one sees in a case of sacrilege, which is the theft of a sacred thing, or in a case of the embezzlement, which, as is clear from Augustine in *Super Ioannem*, is the theft of a common thing, or in a case of kidnapping, which is the theft of a human being and for which, as is clear from Exodus 21:16, one is punished with death.

**Reply to objection 3:** Reason apprehends what is scanty as if it were nothing. And so in those matters that are minimal a man does not calculate that any harm has been inflicted on him, and the one who takes the thing can presume that this is not contrary to the will of the one to whom the thing belongs. Accordingly, if someone furtively takes minimal things of this sort, then he can be excused from a mortal sin.

Still, if one has the intention of stealing and inflicting harm on his neighbor, then there can be a mortal sin even in the case of such minimal things, just as there can be a mortal sin in thought alone through one's consent.

## Article 7

### Is one permitted to steal out of neediness?

It seems that one is not permitted to steal out of neediness (*propter necessitatem*):

**Objection 1:** A penance is not imposed on anyone except a sinner. But in *Extra, de furtis*, it says, "If anyone has stolen food or clothing or a beast because forced to do so by starvation or nakedness (*propter necessitatem famis aut nuditatis*), he shall do penance for three weeks." Therefore, one is not permitted to steal because of neediness.

**Objection 2:** In *Ethics 2* the Philosopher says, "Certain things, when named, are immediately associated with wickedness," and he posits theft among them. But what is bad in its own right (*secundum se malum*) cannot be made good because of a good end. Therefore, no one can licitly steal in order to relieve his own need.

**Objection 3:** A man ought to love his neighbor as himself. But as Augustine points out in *Contra Mendacium*, one is not permitted to steal in order to assist his neighbor with alms. Therefore, one is likewise not permitted to steal in order to relieve his own need.

**But contrary to this:** In times of need all things are held in common (*in necessitate sunt omnia communia*). And so it does not seem to be a sin if someone takes a thing which belongs to someone else but which has become common because of need.

**I respond:** Those things that fall under the *human* right cannot detract from the *natural* right or from the *divine* right. Now in accord with the natural order instituted by divine providence, lower things are ordered toward alleviating human need. And the division and appropriation of things, which proceeds by the human right, does not keep it from being the case that a man's need should be relieved by things of this sort. And so the things that some individuals have in abundance are owed by the natural right to sustaining the poor (*ex naturali iure debentur pauperum sustentationi*). Hence, Ambrose says (and this is found in *Decretals*, dist. 47), "It is the bread of those who are hungry that you are withholding; it is the clothing of the naked that you are storing away; the money that you bury in the earth is the price of the poor man's ransom and release."

However, since there are many who suffer need and since it is impossible for all of them to be helped from the same source (*ex eadem re*), the dispensation of each individual's own things in relieving those who suffer from need is committed to his own judgment. Still, if the need is urgent and evident to the point that it is clear that the need of the moment has to be relieved from sources that are available, then someone can licitly relieve his need from things that belong to someone else, whether those things

are taken openly or furtively. And this does not properly have the nature of either theft or robbery.

**Reply to objection 1:** The *Decretals* are speaking of cases in which the need is not urgent.

**Reply to objection 2:** To make use of a thing that has been taken furtively in a case of need does not have the nature of theft properly speaking. For because of such a need the thing that one takes in order to sustain his own life becomes his own.

**Reply to objection 3:** In a case of similar need one can likewise furtively take a thing that belongs to someone else in order to assist a neighbor who is in need in this sort of way.

## Article 8

### Can a robbery be carried out without sin?

It seems that a robbery can be carried out without sin:

**Objection 1:** Spoils are taken by violence, which, given what was said above, seems to pertain to robbery. But to take spoils from one's enemies is permitted; for in *De Patriarchis* Ambrose says, "Since spoils fall within the victor's power, it befits military discipline that they should all be reserved to the king, in order that he might distribute them." Therefore, in some cases robbery is licit.

**Objection 2:** It is licit to take from someone what does not belong to him. But the things that non-believers possess do not belong to them; for in the letter *Ad Vincentium Donatistam* Augustine says, "You falsely call those things yours which you not possess justly and which by the laws of earthly rulers you have been ordered to give up." Therefore, it seems that one can licitly rob non-believers.

**Objection 3:** The rulers of the earth violently extort many things from their subjects, and this seems to pertain to the nature of robbery. But it seems troublesome to claim that they sin in this, since if that were so, then almost all rulers would be damned. Therefore, in some cases robbery is licit.

**But contrary to this:** One can make a sacrifice or oblation to God of anything that has been taken licitly. But this cannot be done in the case of robbery—this according to Isaiah 61:8 ("I the Lord who loves judgment and who hates robbery in the holocaust"). Therefore, it is not licit to take anything by robbery.

**I respond:** Robbery implies a sort of violence and coercion through which, contrary to justice, what belongs to someone is taken away from him (*per quam, contra iustitiam, alicui aufertur quod suum est*). Now in human society no one has the power to coerce except through a public authority. And so if anyone takes something from someone else through violence and if he is a private person who is not using a public authority, then he acts illicitly and commits robbery, as is clear in the case of highwaymen (*in latronibus*).

By contrast, public authority is committed to rulers in order for them to be the guardians of justice. And so they are not permitted to use violence and coercion except in accord with the preservation of justice, either against enemies (*contra hostes*) by fighting them or against civil evildoers (*contra cives malefactores*) by punishing them. And what is taken away by this sort of violence does not have the nature of robbery, since it is not contrary to justice. However, if someone takes something violently through the public authority but in a way contrary to justice, then he acts illicitly and commits robbery, and he is obligated to make restitution.

**Reply to objection 1:** A distinction must be drawn concerning spoils.

For if those who are despoiling their enemies have a just war, the things that they acquire in the war through violence become their own. And this does not have the nature of robbery, and so they are not obligated to make restitution. Still, those who have a just war could sin in taking the spoils through a disordered desire stemming from a depraved intention, viz., if they are fighting mainly for the sake of the spoils and not for the sake of justice. For in *De Verbis Domini* Augustine says, "The military sin is for

the sake of the spoils.”

On the other hand, if those who take the spoils have an unjust war, then they commit robbery and are obligated to make restitution.

**Reply to objection 2:** Certain non-believers possess their things unjustly insofar as they have been ordered to give them up by the laws of earthly rulers. And so those things can be taken from them through violence—not by any private authority but by a public authority.

**Reply to objection 3:** If the rulers exact from their subjects what is due in justice for the sake of conserving the common good, then even if they use violence, it is not robbery.

However, if the rulers extort something through violence in an undue way, then it is robbery in the same sense that highway robbery is. Hence, in *De Civitate Dei* 4 Augustine says, “Once justice is removed, what are kingdoms other than big crime rings (*magna latrocinia*)? For what are crime rings other than little kingdoms?” And Ezechiel 22:27 says, “Her rulers in her midst are like wolves ravaging for spoils.” Hence, they are obligated to make restitution, just as robbers are. And they sin more gravely than robbers do to the extent that they act more dangerously and more pervasively against public justice, which they have been appointed to be guardians of.

## Article 9

### Is theft a more serious sin than robbery?

It seems that theft is a more serious sin than robbery:

**Objection 1:** Over and beyond the taking of a thing that belongs to someone else, theft has an added element of fraud and deceit, which is not found in robbery. But as was established above (q. 55, aa. 4-5), fraud and deceit have the nature of sin in their own right. Therefore, theft seems to be a more serious sin than robbery.

**Objection 2:** As *Ethics* 4 says, shame is fear concerning a base action. But men are more ashamed of theft than of robbery. Therefore, theft is more shameful (*turpius*) than robbery.

**Objection 3:** A sin seems to be more serious to the extent that it harms a greater number of individuals. But harm can be inflicted on both the great and the small by theft, whereas harm is inflicted by robbery only on the powerless, whom violence can be brought to bear on. Therefore, it seems that the sin of theft is more serious than the sin of robbery.

**But contrary to this:** According to the laws, robbery is punished more gravely than theft is.

**I respond:** As was explained above (a. 4), robbery and theft have the nature of sin because of the involuntariness that exists on the part of the one from whom something is taken, yet in such a way that the involuntariness stems from ignorance in the case of theft, whereas the it stems from violence in the case of robbery. But something is more involuntary through violence than through ignorance, since violence is more directly opposed to the will than ignorance is. And so robbery is a graver sin than theft.

There is also a second reason. For not only is a loss in the *things* he possesses inflicted on someone by robbery, but, in addition, robbery tends toward a sort of ignominy or injury on the part of the *person*. And this outweighs the fraud or deceit that belongs to theft.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** Men who cling to sensible things take more glory in exterior virtuosity (*de virtute exteriori*), which is manifested in robbery, than in interior virtue (*de interiori virtute*), which is destroyed by sin. And this is why they are less ashamed of robbery than of theft.

**Reply to objection 3:** Even if more individuals can be harmed by theft than by robbery, more serious harms can nonetheless be inflicted by robbery than by theft. Hence, this is another reason why robbery is more detestable.

## QUESTION 67

### Injustice on the part of a Judge in Judging

Next we have to consider the vices which are opposed to commutative justice and which consist in words by which one's neighbor is harmed: first, those vices have to do with judicial proceedings (*quae pertinent ad iudicium*) (questions 67-71) and, second, verbal harms (*nocumenta verborum*) that are done outside of judicial proceedings (questions 72-76).

On the first topic there are five things that need to be considered: first, injustice on the part of a judge in judging (question 67); second, injustice on the part of an accuser in accusing (question 68); third, injustice on the part of the defendant (*reus*) in his own defense (question 69); fourth, injustice on the part of a witness in testifying (question 70); and, fifth, injustice on the part of an attorney in offering a defense (question 71).

On the first topic there are four questions: (1) Can someone judge justly an individual who is not subject to him? (2) Is a judge permitted, because of what is presented before him, to deliver a judgment that runs contrary to a truth that he knows? (3) Can a judge justly condemn someone who has not been accused? (4) Can a judge licitly soften a punishment?

### Article 1

#### Can someone justly judge an individual who is not subject to him?

It seems that someone can justly judge an individual who is not subject to him:

**Objection 1:** Daniel 13:45ff. says that Daniel condemned by his own judgment the elders who had been convicted of false witness. But those elders were not subject to Daniel; in fact, they themselves were judges of the people. Therefore, someone can licitly pass judgment on an individual who is not subject to him.

**Objection 2:** Christ was not subject to any man; in fact, he was the King of kings and Lord of lords. But He gave Himself up to the judgment of a man. Therefore, it seems that someone can licitly judge an individual who is not subject to him.

**Objection 3:** In accord with the laws, each individual is assigned to a court (*forum*) according to the nature of his transgression (*delictum*). But sometimes the transgressor is not subject to the one who presides over the court of the place in question, e.g., when he belongs to another diocese or when he is exempt. Therefore, it seems that someone can judge an individual who is not subject to him.

**But contrary to this:** In commenting on Deuteronomy 23:25 ("If you go into your friend's corn ...), Gregory says, "You cannot put the sickle of judgment to a matter that seems to have been entrusted to another."

**I respond:** A judge's decree (*sententia iudicis*) is, as it were, a particular law made in a particular case. And so just as, according to the Philosopher in *Ethics* 10, a general law should have coercive force, so, too, a judge's decree should have a coercive force by which both parties are constrained to obey the judge's decree; otherwise, judgment would not be efficacious.

But in human affairs it is only someone who exercises public power who has coercive power licitly. And those who exercise such power are thought of as superior to those over whom, as over subjects, they receive the power—whether they have it as ordinary power or by being specially commissioned (*sive habeant potestate ordinare sive per commissionem*).

And so it is clear that no one can judge anyone unless the latter is in some way his subject, either through a special commission or through ordinary power.

**Reply to objection 1:** Daniel received the power to judge those elders as a power commissioned by a divine impulse (*quasi commissam ex instinctu divino*). This is signified by what it says in that place, viz., that "the Lord raised up the spirit of a young boy."

**Reply to objection 2:** In human affairs some individuals can of their own accord subject themselves to the judgment of others, even though those others are not superior to them; for instance, this is clear in the case of those who promise to abide by the judgments of arbiters. And the reason why it is necessary for an arbiter's judgment to be fortified by a penalty is that arbiters, who are not superiors, do not of themselves have a full power of coercion.

So, then, Christ by His own accord likewise subjected Himself to human judgment, just as Pope Leo likewise subjected himself to the judgment of the emperor.

**Reply to objection 3:** The bishop in whose diocese someone commits a transgression becomes that individual's superior by reason of the transgression, even if the individual is exempt—unless perhaps he commits his transgression in a matter that is exempt [from the bishop's authority], e.g., in the administration of the goods of an exempt monastery. However, if someone who is exempt commits theft or homicide or something else of this sort, then he can be justly convicted by the ordinary.

## Article 2

### Is a judge permitted, because of what is presented before him, to deliver a judgment that runs contrary to a truth that he knows?

It seems that a judge is not permitted, because of what is presented before him, to deliver a judgment that runs contrary to a truth that he knows:

**Objection 1:** Deuteronomy 17:9 says, "You shall come to the priests of the Levitical race and to the one who will be judge at that time, and you shall ask of them, and they will show you the truth of the judgment." But sometimes certain things are presented that are contrary to the truth, as when something is attested to by false witnesses. Therefore, a judge is not permitted to judge in accord with what is presented and argued for when it is contrary to a truth that he himself knows.

**Objection 2:** In judging, a man ought to be conformed to the divine judge, since, as Deuteronomy 1:17 says, "God is a judge." But as Romans 2:2 says, "God is a judge in accord with the truth," and in Isaiah 11:3-4 it is predicted of the Christ that "he will not judge according to the vision of the eyes, nor will he reprove according to the hearing of the ears; instead, he will judge the poor in justice and he will reprove the lowly of the earth with equity." Therefore, a judge ought not to issue a decree which accords with what is argued in his presence but which runs contrary to what he himself knows.

**Objection 3:** Arguments are required for judgment (*in iudicio probationes requiruntur*) in order that the judge might have confidence (*fides*) concerning the truth of the matter; hence, in matters that are more notorious judicial proceedings are not required—this according to 1 Timothy 5:24 ("Some of men's sins are manifest prior to judgment"). Therefore, if a judge knows the truth on his own, he does not have to pay attention to the arguments that are brought forward, but instead can deliver a decree that accords with the truth that he knows.

**Objection 4:** As was established in the First Part (*ST* 1, q. 79, a. 13), the name 'conscience' implies an application of knowledge to an action (*nomen conscientiae importat applicationem scientiae ad aliquid agibile*). But to act contrary to conscience is a sin. Therefore, a judge commits a sin if he delivers a decree in accord with what has been alleged and contrary to what he knows in conscience to be true (*contra conscientiam veritatis*).

**But contrary to this:** In commenting on Psalm 118 Augustine says, "A good judge does nothing by his own discretion, but instead makes his pronouncements according to the laws and in accord with the right." But this is to judge in accord with what is presented and proved in judicial proceedings. Therefore, a judge must judge in accord with things of this sort and not according to his own discretion.

**I respond:** As has been explained (a. 1), judging belongs to a judge insofar as he is administering

public power. And so in judging he should be informed not by what he knows as a private person, but by what is made known to him as a public person.

Now this is made known to him both *in general* and *in particular (in communi et in particulari)*:

(a) *in general*, through public laws, both divine and human, against which he should not allow any arguments.

(b) *in a particular matter*, through records (*instrumenta*) and witnesses (*testes*) and other legitimate documentation of this sort, which he ought to follow in judging rather than what he himself knows as a private person. However, he may be aided by what he knows as a private person in examining more stringently the arguments that have been brought forth, in order that he might be able to discover their weaknesses. Still, if he is unable to refute those arguments by legal standards (*eas non possit de iure repellere*), then, as has been explained, he must follow them in rendering his judgment.

**Reply to objection 1:** The first part of the quoted passage is about a question that is to be asked of the judges, in order that it might be understood that the judges should judge the truth in accord with what has been presented before them.

**Reply to objection 2:** It belongs to God to judge by His own proper power. And so in judging He is informed by the truth that He Himself knows and not by what He receives from others. The same line of reasoning holds for Christ, who is true God and true man.

Other judges, by contrast, do not judge by their own proper power. And so the arguments are not parallel.

**Reply to objection 3:** The Apostle is speaking of a case in which something is manifest not only to the judge but to the judge along with the others, so that the defendant can in no way deny the crime, but is immediately convicted by the very evidentness of his deed.

However, if it is manifest to the judge but not to the others, or to the others but not to the judge, then a judicial inquiry (*iudicii discussio*) is necessary.

**Reply to objection 4:** In those things that pertain to his own proper person, a man should inform his conscience from his own knowledge. However, in those things that pertain to the public power, he ought to inform his conscience in accord with what can be known in a public judicial procedure, etc.

### Article 3

#### Can a judge pass judgment on someone even if there is no other accuser?

It seems that a judge can pass judgment on someone even if there is no other accuser:

**Objection 1:** Human justice is derived from divine justice. But God judges sinners even if there is no accuser. Therefore, it seems that one man can condemn another man in a judgment even if no accuser is present.

**Objection 2:** An accuser is required in judicial proceedings in order to bring a crime before the judge. But sometimes a crime can come before a judge in some way other than by an accusation, e.g., by a denunciation or by a report or, again, if the judge sees it himself. Therefore, a judge can condemn a man in the absence of an accuser.

**Objection 3:** The deeds of the saints are narrated in Sacred Scripture as certain exemplars of human life. But as clear from Daniel 13, Daniel was both accuser and judge in opposition to the wicked elders. Therefore, it is not contrary to justice if (a) someone condemns another individual as a judge and (b) he himself is the accuser.

**But contrary to this:** In expounding what the Apostle says about fornication in 1 Corinthians 5:2, Ambrose comments, "It is not the judge's role to condemn in the absence of an accuser. For because Judas was not accused, our Lord did not cast him off, even though he had been a thief."

**I respond:** A judge is an interpreter of justice. This is why the Philosopher says in *Ethics* 5 that “people have recourse to a judge as to a sort of living justice (*ad quandam iustitiam animatam*).” But as was established above (q. 58, a. 2), justice is ordered toward another and not toward oneself. And so a judge must adjudicate between two individuals, and this occurs when one of them is the plaintiff (*actor*) and the other is the defendant (*reus*). And so in the case of crimes, a judge cannot condemn someone by a judgment unless that individual has an accuser (*accusator*)—this according to Acts 25:16: “[I answered them that] it is not the custom of the Romans to condemn a man until the one who is accused has his accusers present and gets the opportunity to defend himself, in order that he might clear away the crimes with which he has been charged (*locumque defendendi accipiat ad abluenda crimina quae ei obiiciebantur*).”

**Reply to objection 1:** In His own judgment God uses the conscience of the sinner as an accuser—this according to Romans 2:15 (“... with their thoughts accusing, or even defending, one another”).

Or else, God also uses the evidentness of the deed in its own right—this according to Genesis 4:10 (“The voice of your brother Abel’s blood cries out to me from the earth”).

**Reply to objection 2:** *Public infamy* takes the place of an accuser. Hence, a Gloss on that passage from Genesis 4 (“The voice of your brother Abel’s blood ...”) says, “The evidentness of the crime that has been committed does away with the need for an accuser.”

By contrast, as was explained above (q. 33, a. 7), in the case of a *denunciation* what is intended is not the punishment of the sinner, but his correction, and so nothing is being done *against* the one whose sin is denounced; instead, it is being done *for* him. And so no accuser is necessary in such a case.

Now punishment is inflicted for rebellion against the Church, which, since the rebellion is *manifest*, plays the role of an accuser.

However, a judge cannot, on the basis of *what he himself sees*, proceed to issue a decree except in accord with the order of public judicial proceedings.

**Reply to objection 3:** As was explained above (a. 2), in judging God proceeds from His own knowledge of the truth, but a man does not. And so a man cannot simultaneously be accuser, judge, and witness in the way that God is.

Now Daniel was an accuser at the same time that he was a judge in the sense, explained above (aa. 1-2), of being an administrator of the judgment of God, whose impulse he was moved by.

#### Article 4

##### Can a judge licitly soften a punishment?

It seems that a judge can licitly soften a punishment:

**Objection 1:** James 2:13 says, “Judgment without mercy to the one who does not practice mercy!” But no one is punished for not doing something that he is licitly able not to do. Therefore, any judge can licitly practice mercy by softening a punishment.

**Objection 2:** Human judgment ought to imitate divine judgment. But God softens the punishment of those who are repentant, since, as Ezechiel 18:23 says, “He does not will the death of a sinner.” Therefore, a human judge is likewise able to soften the punishment for someone who is repentant.

**Objection 3:** Each individual is permitted to do what is advantageous for someone and does not harm anyone. But to absolve a guilty individual from punishment is advantageous to him and does not harm anyone. Therefore, a judge can licitly absolve a guilty individual from punishment.

**But contrary to this:** Deuteronomy 13:8-9 says of the one who urges others to serve alien gods, “Neither let your eye spare him to pity and conceal him, but you shall presently put him to death.” And

Deuteronomy 19:12-13 says of the murderer, “He shall die, and you shall not have mercy on him.”

**I respond:** As is clear from what has been said (aa. 2-3), there are two things, insofar as they pertain to the proposed question, that have to be considered concerning a judge. One of them is that he has the role of adjudicating between the accuser and the defendant, whereas the other is that he makes a decree of judgment not on his own, but as a public authority.

Therefore, there are two ways in which a judge is prevented from being able to absolve a guilty party from punishment:

The first has to do with the *accuser*, since sometimes the right for the accuser has to do with the guilty party’s being punished—for instance, because of some injury that has been committed against him—and the softening of this punishment does not fall to the discretion of any judge, since every judge is obligated to render to each individual what is the right for him (*quilibet iudex tenetur ius suum reddere unicuique*).

In the second way, he is prevented by the *republic*, whose power he is administering and whose good involves the punishment of evildoers.

Still, in this regard lower judges differ from the highest judge, viz., the ruler, to whom the public authority has been committed in the most complete way (*cui est plenarie potestas publica commissa*). For a lower judge does not have the power to absolve a guilty party from punishment in a way that is contrary to the laws imposed upon him by a superior. Hence, in *Super Ioannem* 19:11 (“You would not have any power against me ...”) Augustine says, “God had given Pilate power such that he was under Caesar’s power, lest he should be altogether free to absolve the accused.”

By contrast, as long as the one who suffered the injury wishes to forgive it, the ruler, who has complete power within the republic, can licitly absolve the guilty party if he sees that this would not be harmful to the public welfare.

**Reply to objection 1:** A judge’s mercy has a place in those matters which are left to the judge’s own discretion and in which, as the Philosopher points out in *Ethics* 5, it belongs to a good man to tend toward meting out less punishment. However, in those matters that are determined by divine or human law, it is not the judge’s place to practice mercy.

**Reply to objection 2:** God has the supreme power of judging, and whatever is done sinfully against anyone pertains to Him. And so He is free to remit punishment, especially since sin deserves punishment mainly because it is against Him. However, He does not remit punishment except in accord with what befits His goodness, which is the root of all laws.

**Reply to objection 3:** If a judge remitted punishment in a disordered way, he would inflict harm on the *community*, for which it is expeditious that bad deeds be punished in order that sins might be avoided. Hence, Deuteronomy 13:11 adds, after the punishment of the seducer, “... in order that all Israel hearing may fear, and that no one might do anything like this any more.”

In addition, he would harm *the person on whom the injury had been inflicted* and who receives compensation through a sort of restitution of honor in the punishment of the one who inflicted the injury.

## QUESTION 68

### Injustice on the part of an Accuser in Accusing

Next we have to consider matters pertaining to unjust accusation. And on this topic there are four questions: (1) Is a man obligated to make an accusation? (2) Must an accusation be made in writing? (3) In what ways might an accusation be vicious? (4) How should those who make bad accusations be punished?

#### Article 1

##### Is a man obligated to make an accusation?

It seems that a man is not obligated to make an accusation:

**Objection 1:** No one is excused from fulfilling a divine precept because of a sin, since he would then be gaining a reward for his sin. But there are some who, because of their sin, are rendered ineligible to make an accusation, e.g., those who have been excommunicated, those who are disreputable, and those who have been accused of major crimes and have not yet been proved innocent. There are man is not obligated by a divine precept to make an accusation.

**Objection 2:** Every obligation (*debitum*) depends on charity, which is the end of the precept; this is why Romans 13:8 says, “Owe no man anything except to love one another.” But what belongs to charity is such that a man owes it to everyone, the great and the small, the subjects and the leaders. Therefore, since subjects ought not to make accusations against their leaders, nor the small against the great (as is proved by many chapters in *Decretals* 2, q. 7), it seems that no one is bound by an obligation to make an accusation.

**Objection 3:** No one is obligated to act contrary to the fidelity that he owes to his friend, since one ought not to do to another what he does not want done to himself. But to make an accusation against someone sometimes runs contrary to the fidelity that one owes to his friend; for Proverbs 11:13 says, “He who walks deceitfully reveals secrets, but he who is faithful conceals what has been entrusted to him by his friend.” Therefore, a man is not obligated to make an accusation.

**But contrary to this:** Leviticus 5:1 says, “If any one sins and hears the voice of one swearing and, though he is a witness, whether he has seen it himself or come to learn of it, he nonetheless does not speak, he shall bear his own iniquity.”

**I respond:** As was explained above (q. 67, a. 3), the difference between a denunciation and an accusation is that in the case of a denunciation one is focused on correcting his brother, whereas in the case of an accusation one is focused on punishing a crime.

Now the punishments of the present life are not sought for their own sake, since this is not the ultimate time of retribution; instead, they are sought to the extent that they are medicinal, contributing either to the *correction of the person* who sins or to the *good of the republic*, the tranquility (*quies*) of which is procured by the punishment of sinners. As was just pointed out, it is the first of these that is intended in the case of a denunciation, whereas the second properly belongs to a case of accusation.

And so if a crime is such that it verges toward the detriment of the republic—for instance, when someone’s sin verges toward the corporeal or spiritual corruption of the multitude—then a man is obligated to make an accusation as long as he can sufficiently prove it (which is part of the role of an accuser). However, if the sin is not such that it redounds upon the multitude, or, likewise, if the man cannot present sufficient proof, then he is not obligated to make an accusation; for no one is obligated to do what he cannot accomplish in an appropriate manner.

**Reply to objection 1:** Nothing prevents someone from being rendered powerless by his sin to do what men are obligated to do, e.g., to merit eternal life or to receive the sacraments of the Church. Nor is the man gaining any reward from this; just the opposite, it is a very grave punishment to fall short of

what he is obligated to do, since virtuous acts are a man's perfections.

**Reply to objection 2:** The subjects who are prohibited from making accusations against their leaders are those who seek, not out of the affection of charity but out of their perversity, to defame and reprehend the lives of the leaders—or, again, as one reads in *Decretals 2*, q. 7, if the subjects wishing to make an accusation are criminals.

Otherwise, if the subjects are in other ways eligible to make an accusation, then they are permitted to make accusations against their leaders out of charity.

**Reply to objection 3:** It is contrary to fidelity to reveal secrets to the detriment of a person, but not if those secrets are revealed for the sake of the common good, which is always to be preferred to a private good. And so one is not permitted to receive any secret that is contrary to the common good. But neither is what can be proved by reliable witnesses (*per sufficientes testes*) altogether secret.

## Article 2

### Must an accusation be made in writing?

It seems that it is unnecessary for an accusation to be made in writing:

**Objection 1:** Writing was invented in order to aid human memory about past events. But an accusation is made in the present. Therefore, an accusation does not need to be written down.

**Objection 2:** *Decretals 2*, q. 8 says, “No one who is absent can make an accusation, nor can one who is absent be accused by anyone.” But as is clear from Augustine in *De Trinitate 10*, writing seems to be useful for signifying something to those who are absent. Therefore, writing is not needed for an accusation, especially since the canon says that an accusation made against someone is not to be accepted as a written document (*per scripta*).

**Objection 3:** Just as someone's crime is made manifest through an accusation, so, too, it is made manifest through a denunciation. But writing is unnecessary in the case of a denunciation. Therefore, it seems to be unnecessary in the case of an accusation as well.

**But contrary to this:** *Decretals 2*, q. 7 says, “The accusation of a person is never accepted without writing.”

**I respond:** As was explained above (q. 67, a. 3), when in the case of crimes one proceeds in the mode of an accusation, the one making the accusation is constituted as a party in the sense that the judge becomes the medium (*medius*) between the accuser and the accused for the purpose of a judicial inquiry (*ad examen iustitiae*), in which it is necessary to proceed with certitude to the extent that this is possible. However, since things that are said with many words easily fall out of memory, it would not be possible for the judge, when he had to render a decision, to be certain about what had been said and how it had been said unless it were rendered in writing. And so it was reasonable to establish that an accusation, along with the other things that go on during a judicial proceeding, should be rendered in writing.

**Reply to objection 1:** It is difficult to retain individual words because of their multiplicity and variety. An indication of this is that if many individuals, upon hearing the same words, are then interrogated, they do not recall the words in the same way even after a brief period of time. And yet a small difference in the words alters the meaning. And so even if the judge's decision has to be promulgated after just a short time, it still enhances the certitude of the judgment if the accusation is rendered in writing.

**Reply to objection 2:** As has been pointed out, writing is necessary not only because of the absence of the person who is communicating something or of the person to whom something is being communicated, but also because of the passage of time. And so when the canon says, “No one's

accusation may be received as a written document (*per scripta*) ... ,” this should be understood to be referring to an accusation made by someone who is absent and who is sending his accusation by letter (*per epistolam*). However, this does not exclude its being the case that writing is necessary if the accuser is present.

**Reply to objection 3:** One who makes a denunciation does not undertake the obligation to prove anything, and so he is not punished if he is unable to provide proof. And it is for this reason that writing is not required in the case of a denunciation; rather, it is enough for someone to make a denunciation verbally to the Church, which will proceed in its own role to correct the brother.

### Article 3

#### Is an accusation rendered unjust by calumny, prevarication, or evasion?

It seems that an accusation is not rendered unjust by calumny (*calumnia*), prevarication (*praevaricatio*), or evasion (*tergiversatio*):

**Objection 1:** As it says in *Decretals* 2, q. 3, “To engage in calumny is to assert false crimes.” But sometimes one attributes a false crime to someone out of ignorance of what was done, and this excuses him. Therefore, it seems that an accusation is not always rendered unjust if it is calumnious.

**Objection 2:** To prevaricate is to hide a true crime. But this does not seem to be illicit, since, as was explained above (a. 1), a man is not obligated to reveal every crime. Therefore, it seems that an accusation is not rendered unjust by prevarication.

**Objection 3:** As is said in the same place alluded to above, “To evade is to withdraw from accusing altogether.” But this can be done without injustice, since in the same place it says, “If someone repents of having criminally made an accusation and inscription concerning something that he was unable to prove, then if he comes to an agreement with the innocent accused individual, let them absolve one another.” Therefore, an accusation is not rendered unjust by an evasion.

**But contrary to this:** In the same place it says, “The rashness (*temeritas*) of accusers is detected in three ways: for they engage either in calumny or in prevarication or in evasion.”

**I respond:** As has been explained (a. 1), an accusation is ordered toward the common good, which is what is intended by making a crime known (*per cognitionem criminis*). But no one should harm anyone unjustly in order to promote the common good. And so in the case of an accusation there are two possible ways for there to be a sin:

In one way, by someone’s acts unjustly *against the accused* by attributing false crimes to him, and this is to engage in *calumny*;

In the second way, against the republic whose good is principally intended in an accusation (*ex parte reipublicae, cuius bonum principaliter intenditur in accusatione*), when someone maliciously obstructs the punishment of the sin. There are two possible ways for this to occur:

First, by bringing fraud to bear in the accusation, and this pertains to *prevarication*, since “a prevaricator (*praevaricator*) is, as it were, a straddler (*varicator*) who aids the other side while betraying his own side.”

Second, by withdrawing totally from the accusation, and this is to engage in *evasion* (*quod est tergiversari*), since one desists from what he had begun in the sense that he seems to ‘turn his back’ on it (*quasi tergum vetere videtur*).

**Reply to objection 1:** A man should not proceed to make an accusation except about a matter which is altogether certain and in which ignorance of what has been done has no place.

Yet it is not the case that just any individual who attributes a false crime to someone is engaging in *calumny*; rather, this is true only of someone who rushes into an accusation out of malice. For it is

sometimes possible to proceed to make an accusation out of mental shallowness (*ex animi levitate*), viz., because one believes too readily what he has heard, and this pertains to *rashness* (*temeritas*). And sometimes someone is moved to make an accusation because of a justifiable error (*ex iusto errore*).

All these things need to be discerned in accord with the judge's prudence, lest he rush to the judgment that someone has engaged in calumny when in fact that individual has rashly made an accusation out of shallowness of mind or because of a justifiable error.

**Reply to objection 2:** Not everyone who conceals a real crime is engaging in prevarication; rather, one does this only if he fraudulently obscures the matter about which he is making the accusation and colludes with the defendant by hiding the proper proofs and introducing false excuses.

**Reply to objection 3:** To evade an accusation is to desist altogether by displacing the intention to make an accusation, not just in any way whatsoever, but in a disordered way.

Now there are two ways in which it is possible for someone to desist from making an accusation in a non-disordered way without any vice:

In one way, if, in the very process of making an accusation, he realizes that what he is making an accusation about is false, and if the accuser and defendant absolve each other by mutual consent.

In the second way, if the ruler, to whom belongs care for the common good—which is what is intended by the accusation—terminates the accusation.

#### Article 4

##### Is an accuser who fails to prove his accusation held to the punishment of retaliation?

It seems that an accuser who fails to prove his accusation is not held to the punishment of retaliation:

**Objection 1:** Sometimes it happens that one proceeds to make an accusation on the basis of a justifiable error, in which case, as *Decretals 2*, q. 3 says, the judge absolves the accuser. Therefore, it is not the case that an accuser who fails to prove his accusation is held to the punishment of retaliation.

**Objection 2:** If the punishment of retaliation is to be imposed on one who makes an accusation unjustly, then this will be because of an injury he has inflicted on someone. But it will not be because of an injury inflicted on the one who has been accused, since in that case the ruler would not be able to remit this punishment. Nor, again, is it because of an injury inflicted on the republic, since in that case the one who is accused would not be able to absolve the accuser. Therefore, the punishment of retaliation is not deserved by one who fails in his accusation.

**Objection 3:** It should not be the case that there are two punishments for the same sin—this according to Nahum 1:9 (“God shall not judge the same thing a second time”). But one who fails at proving his accusation incurs the punishment of infamy or disgrace (*infamia*), which even the Pope seems unable to remit—this according to Pope Gelasius (“Even though we are able to save souls through repentance, we are nonetheless unable to abolish infamy or disgrace”). Therefore, he is not held to the punishment of retaliation.

**But contrary to this:** Pope Hadrian says, “One who does not prove his accusation is to suffer the punishment that he would have inflicted.”

**I respond:** As was explained above (a. 2), in a case involving accusation the accuser is the party who intends the punishment of the accused. On the other hand, it belongs to the judge to establish the balance of justice between the two of them.

Now the balance of justice requires that one should himself suffer the harm that he intends for the another—this according to Exodus 21:24 (“An eye for an eye, a tooth for a tooth”). And so it is just that the one who by his accusation places someone in danger of a serious punishment should himself suffer a

similar punishment.

**Reply to objection 1:** As the Philosopher explains in *Ethics 5*, with justice it is not always the case that compensatory suffering (*contrapassum*) is appropriate absolutely speaking, since it makes a big difference whether it is voluntarily or involuntarily that someone harms another. Voluntary harm deserves punishment, but leniency is due for involuntary harm. And so when a judge recognizes that someone has made a false accusation not with the intention of doing harm, but involuntarily out of ignorance because of a justifiable error, he does not impose the punishment of retaliation.

**Reply to objection 2:** One who makes a bad accusation sins both against *the person of the one who is accused* and against *the republic*. Hence, he is punished for the sake of each of them.

Accordingly, Deuteronomy 19:18-19 says, “And when, after carrying out a thorough investigation with the utmost diligence, they discover that a false witness has told a lie against his brother, they shall render to him what he meant to do to his brother”—this pertains to the injury against *the person*.

And later (19:19-20), as regards the injury to *the republic*, it adds, “And you shall take the evil one out of your midst, in order that the others who hear this might become fearful and not dare to do such things themselves.”

Still, he especially injures the person of the accused if he makes a false accusation, and so if the accused person is innocent, he can absolve the accuser of his own injury—especially if the accuser made his accusation out of shallowness of mind and did not engage in calumny. By contrast, if he desists from accusing an innocent person because of collusion with an adversary, then he injures the republic, and he cannot be absolved of this by the one who is accused. Instead, he can be forgiven by the ruler, who exercises care for the republic.

**Reply to objection 3:** An accuser is deserving of the punishment of retaliation in return for the harm that he was trying to inflict on his neighbor, whereas he deserves the punishment of infamy or disgrace (*infamia*) because of the malice out of which he made his calumnious accusation against another.

Sometimes the ruler remits the punishment and does not abolish the infamy or disgrace, whereas sometimes he abolishes the infamy or disgrace as well. Hence, the Pope, too, is able to abolish infamy or disgrace of the sort in question, and what Pope Gelasius says—viz., “We are unable to abolish the infamy or disgrace”—should be taken either (a) to apply to infamy or disgrace that has already been effected, or (b) to mean that it is sometimes not expedient to abolish it. Or, alternatively, he might, as Gratian claims, be talking about disgrace that has been imposed by a civil judge.

## QUESTION 69

### Injustice on the part of the Accused in his own Defense

Next we have to consider sins that are contrary to justice on the part of the defendant (*ex parte rei*). And on this topic there are four questions: (1) Does a man commit a mortal sin by denying the truth through which he would be condemned? (2) Is one permitted to defend himself by chicanery (*calumniose*)? (3) Is one permitted to escape a judgment by appealing it (*iudicium subterfugere appellando*)? (4) Is someone who has been condemned [to death] permitted to defend himself by violence if he is able to?

#### Article 1

### Can one who has been accused deny without mortal sin the truth through which he would be condemned?

It seems that one who has been accused can deny without mortal sin the truth through which he would be condemned:

**Objection 1:** Chrysostom says, “I do not say that you should give yourself up publicly or accuse yourself before others.” But if an accused individual were to confess the truth in a judicial proceeding, he would be giving himself up and accusing himself. Therefore, he is not obligated to tell the truth. And so he does not commit a mortal sin if he lies in a judicial proceeding.

**Objection 2:** Just as a lie is ‘officious’ when someone lies in order to free someone else from death, so a lie seems to be officious when someone lies in order to free himself from death, since one is bound more closely to himself than to another. But an officious lie is counted as a venial sin and not as a mortal sin. Therefore, if an accused individual denies the truth in a judicial proceeding in order to free himself from death, he does not commit a mortal sin.

**Objection 3:** As was explained above (q. 24, a. 12), every mortal sin is contrary to charity. But it is not contrary to charity—either with respect to love of God or with respect to love of neighbor—for someone who has been accused to lie in order to exculpate himself of the sin he is charged with. Therefore, a lie of this sort is not a mortal sin.

**But contrary to this:** Everything that is contrary to God’s glory is a mortal sin, since, as is clear from 1 Corinthians 10:31, we are obligated by precept “to do everything for the glory of God.” But for a defendant to confess to something against himself pertains to God’s glory, as is clear from what Joshua said to Achar, “My son, give glory to the God of Israel, and confess and tell me what you have done and do not hide it” (Joshua 7:19). Therefore, it is a mortal sin to lie in order to excuse oneself of a sin.

**I respond:** As was explained above (q. 59, a. 4), whoever acts against a debt of justice (*contra debitum iustitiae*) commits a mortal sin. But it belongs to a debt of justice that one should obey his superior in those matters to which the right of leadership (*ius praelationis*) extends. Now as was explained above (q. 59, a. 4), a judge is a superior with respect to the one who is being judged. And so the accused is obligated by the due order of justice to reveal to the judge the truth that he requires of him according to the form of the law. And so if he does not will to confess the truth which he is obligated to tell (*si confiteri noluerit veritatem quam dicere teneter*), or if he denies it by lying (*si eam mendaciter negaverit*), then he commits a mortal sin.

However, if the judge demands something that he cannot demand according to the order of the law, then the accused is not obligated to respond to him, but instead he can escape the demand either by appealing it or by some other licit means. But he is not permitted to tell a lie.

**Reply to objection 1:** When someone is interrogated by a judge in accord with the order of law, he is not giving himself up but is instead being given up by another, as long as the necessity for responding is imposed by someone whom he is obligated to obey.

**Reply to objection 2:** To lie, with injury to someone, in order to free someone else from death is not just an ‘officious’ lie but instead has something pernicious mixed in with it. But when someone lies in a judicial proceeding in order to exculpate himself, he inflicts an injury on the one whom he is obligated to obey as long as he denies him what is due to him, viz., an acknowledgment of the truth (*confessionem veritatis*).

**Reply to objection 3:** One who lies in a judicial proceeding in order to exculpate himself does something that is contrary both (a) to the love of *God*, to whom judgment belongs, and (b) to love of *neighbor*, both with respect to the *judge*, to whom he denies what is due to him, and with respect to the *accuser*, who is punished if he fails to prove his case.

Hence, Psalm 140:4 says, “Incline not my heart toward words of malice, toward making excuses for my sins.” A Gloss on this verse says, “This is the way of the impudent, to excuse themselves with falsehoods when they have been found out.” And in *Moralia* 32 Gregory, in expounding Job 31:33 (“If I have hidden my sin as a man ...”), says, “It is a common vice of the human race (a) to commit a sin in secret (*latendo*), (b) to cover it up, once it has been committed, by denying it, and (c) to multiply it, once it has been proved, by defending it.”

## Article 2

### Is the accused permitted to defend himself by chicanery?

It seems that the accused is permitted to defend himself by chicanery (*accusato liceat calumniose se defendere*):

**Objection 1:** According to civil law, in a ‘blood case’ (*in causa sanguinis*) one is permitted to bribe his adversary (*licitum est cuiilibet adversarium corrumpere*). But this is a special instance of defending oneself by chicanery. Therefore, the accused in a blood case does not sin if he defends himself by chicanery.

**Objection 2:** As *Decretals* 2, q. 3 indicates, an accuser who colludes with the accused receives a punishment established by the laws, whereas no punishment is imposed on the accused for colluding with the accuser. Therefore, it seems that the accused is permitted to defend himself by chicanery.

**Objection 3:** Proverbs 14:16 says, “The wise man fears and shies away from what is bad; the fool leaps up and is confident.” But that which is effected by wisdom is not a sin. Therefore, if someone is liberating himself in any way whatsoever from what is bad, he is not sinning.

**But contrary to this:** As is established in *Extra, De iuramento calumniae, cap. Inhaerentes*, even in a criminal case the oath against chicanery has to be taken. But this would not be so if one were permitted to defend himself by chicanery. Therefore, the accused is not permitted to defend himself by chicanery.

**I respond:** It is one thing to remain silent about a truth and another thing to propose a falsehood. The first is permissible in some cases. For one is not obligated to acknowledge every truth, but only that truth which a judge can and ought to require of him in accord with the order of law, e.g., when notoriety about some crime has preceded the judicial proceeding, or when some obvious indications have emerged, or, again, when an incomplete proof has preceded. However, there is no case in which one is permitted to propose a falsehood.

Now one can proceed to what is licit either (a) by routes that are licit and appropriate for the intended end—this belongs to *prudence*—or (b) by routes that are illicit and incongruous with the intended end—this belongs to *craftiness (astutia)*, which, as was explained above (q. 55, a. 3), is exercised through *fraud* and *guile (quae exercetur per fraudem et dolum)*. The first of these routes is praiseworthy, whereas the second is vicious.

So, then, a defendant who is accused is permitted to defend himself by concealing in appropriate ways a truth that he is not obligated to acknowledge—for instance, by not responding to what he is not obligated to respond to. This is not defending himself by chicanery; instead, it is a prudent evasion (*prudenter evadere*).

However, he is not permitted either to tell a lie or to conceal a truth that he is obligated to acknowledge. Neither is he permitted to make use of any sort of fraud or guile, since fraud and guile have the force of a lie, and this would be to defend himself by chicanery.

**Reply to objection 1:** As is clear in the case of simple fornication, many things that are sins according to God’s judgment are left unpunished by human laws. For human law does not demand from a man perfect virtue (*non exigit ab homine omnimodam virtutem*), which belongs to the few and cannot be found in as great a multitude of people as human law has to sustain.

Now it belongs to perfect virtue that one not will to commit a sin in order to avoid corporeal death, the danger of which threatens the defendant in a blood case. For as *Ethics* 3 says, “Death is the most terrible of all temporal things.” And so if a defendant in a blood case bribes his adversary, he does indeed sin by inducing him to do something illicit, and yet civil law does not apply a punishment to this sin, and to that extent the act is said to be licit.

**Reply to objection 2:** If the accuser colludes with a defendant who is guilty, he incurs a punishment, and from this it is clear that he is sinning. Hence, since inducing someone to sin, or being a participant in a sin in any way, is itself a sin—given that the Apostle says that those who consent to sins are worthy of death (Romans 1:32)—it is manifest that the defendant sins as well when he colludes with his adversary. However, for the reason just explained, no punishment is imposed on him according to human laws.

**Reply to objection 3:** The wise hide themselves prudently and not by chicanery.

### Article 3

#### Is a defendant permitted to turn aside a judgment by appealing it?

It seems that a defendant is not permitted to turn aside a judgment by appealing it (*reo non liceat iudicium declinare per appellationem*):

**Objection 1:** In Romans 13:1 the Apostle says, “Let every soul be subject to higher powers.” But in making an appeal, a defendant is refusing to be subject to a higher power, viz., the judge. Therefore, he commits a sin.

**Objection 2:** Ordinary power is more binding than a power that we ourselves choose (*maius est vinculum ordinariae postestatis quam propriae electionis*). But as one reads in *Decretals* 2, q. 6, “One is not permitted to put under appeal judges who have been chosen by common agreement.” Therefore, all the less is one permitted to put ordinary judges under appeal.

**Objection 3:** That which is licit at some times is licit at all times. But it is not licit to appeal after the tenth day; nor is it licit to appeal for a third time on the same point. Therefore, it seems that making an appeal is illicit in its own right.

**But contrary to this:** As Acts 25:11 recounts, Paul appealed to Caesar.

**I respond:** There are two reasons why someone might make an appeal:

The first is his firm trust in a just cause, i.e., because he is being unjustly oppressed by the judge. And on this score it is licit to make an appeal, since this is a prudent evasion of the judgment. Hence, *Decretals* 2, q. 6 says, “Anyone who is oppressed is free to appeal to the judgment of the priests if he wants to, and let no one prohibit him from doing so.”

Second, someone might make an appeal in order to bring about a delay, lest a just sentence be

pronounced against him. And this is to defend himself by chicanery—which, as has been explained (a. 2), is illicit. For he inflicts an injury both on the judge, whose function he is impeding, and on his adversary, justice for whom he is perturbing to the extent that he can. And so as *Decretals 2*, q. 6 says, “The one whose appeal is declared unjust should be punished in every way.”

**Reply to objection 1:** One should be subject to a lower power to the extent that it serves the order of a higher power. And if it departs from that higher power, then one should not be subject to it—for instance, “if a proconsul were to order one thing and the emperor something else,” as is clear from a Gloss on Romans 13:2.

Now when a judge unjustly oppresses someone, then to that extent he is abandoning the order of the higher power in accord with which the requirement of judging justly is imposed upon him. And so one who is oppressed in a way contrary to justice is permitted to have recourse to the discretion of the higher power by making an appeal, either before the sentencing or afterwards.

Furthermore, since one does not assume that there will be rectitude where the true Faith is not present, a Catholic is not permitted to appeal to a non-believing judge—this according to *Decretals 2*, q. 6 (“A Catholic who appeals his cause, whether just or unjust, to a judge of another Faith is to be excommunicated”). For the Apostle likewise criticized those who were contending for judgments before non-believers (cf. 1 Corinthians 6:6).

**Reply to objection 2:** It is by one’s own defectiveness or negligence that he subjects himself freely to the judgment of another whose justice he does not have a firm trust in. It likewise seems to involve mental shallowness for someone not to persevere in what he has already agreed to. And so it is reasonable to deny the protection of making an appeal in a case involving arbitrators (*a iudicibus arbitrariis*), who have no power except by the consent of the litigants.

However, the power of an ordinary judge does not depend on the consent of the one who is subject to his judgment; instead, it depends on the authority of the king or ruler who appointed him. And so the law affords the protection of making an appeal against an unjust burden imposed by him, so that even if he were simultaneously an ordinary judge and an arbitrator, one would still be able to put him under appeal, since his ordinary power would seem to have provided the occasion for his being chosen as an arbitrator. And in this last sort of case an appeal should not be attributed to the defectiveness of an individual who has consented to someone as an arbitrator whom the ruler had appointed as an ordinary judge.

**Reply to objection 3:** The balance of the law assists one party in such a way as not to harm the other party. And so it has allowed a period of ten days for an appeal, and it has deemed this sufficient to inquire about whether it is expedient to appeal. On the other hand, if there were no determinate period during which an appeal is permitted, then the certitude of the judgment would always remain in suspense, and so the other party would suffer a loss.

Moreover, the reason why one is not permitted to make a third appeal on the same point is that it is unlikely that so many judges should fail to make the correct judgment.

#### Article 4

##### Is one who is condemned to death permitted to defend himself if he is able to?

It seems that one who is condemned to death is permitted to defend himself if he is able to (*liceat condemnato ad mortem se defendere si possit*):

**Objection 1:** What nature inclines one toward is always permitted in the sense that it belongs to the natural right (*quasi de iure naturali existens*). But nature’s inclination—not only among men and

animals, but even among non-sentient things—is to resist corrupting influences. Therefore, a condemned defendant is permitted to resist being handed over to death if he is able to.

**Objection 2:** Just as one might escape a death sentence imposed upon him by resisting, so too he might do so by fleeing. But it seems permissible for someone to free himself from death by fleeing—this according to Ecclesiasticus 9:18 (“Stay far away from a man who has the power to kill and not to give life”). Therefore, one is likewise permitted to resist.

**Objection 3:** Proverbs 24:11 says, “Rescue those who are being led to death, and do not stop freeing those who are being dragged to their demise.” But one is more obligated to himself than to someone else. Therefore, it is licit for someone who has been condemned to defend himself from being handed over to death.

**But contrary to this:** In Romans 13:2 the Apostle says, “Whoever resists the power resists God’s ordinance and acquires damnation for himself.” But in defending himself a condemned man is resisting the power in the form of what has been instituted by God to punish malefactors and to praise good men. Therefore, he sins in defending himself.

**I respond:** There are two ways in which someone is condemned to death:

In the first way, he is condemned *justly*. And in such a case the condemned man is not permitted to defend himself. For the judge is permitted to attack him if he resists, and so it follows that the warfare (*bellum*) is unjust on his part. Hence, there is no doubt that he sins.

In the second way, he is condemned *unjustly*. And this sort of judgment is like the violence perpetrated by robbers—this according to Ezechiel 22:27 (“Her rulers in the midst of her are like wolves ravaging their prey to draw blood”). And so just as one is permitted to resist robbers, so he is permitted to resist bad rulers in such a case—except perhaps in order to avoid scandal, since some great disturbance might be feared from it.

**Reply to objection 1:** Reason is given to a man in order that he might execute what nature inclines him toward not at random but according to the order of reason. And so not every sort of self-defense is permitted, but instead what is permitted is self-defense with the appropriate sort of moderation (*cum debito moderamine*).

**Reply to objection 2:** No one is condemned in such a way that he is to inflict death on himself; rather, he is to suffer death. And so he is not obligated *to do anything* from which death follows, i.e., to remain in the place from which he is to be led to death.

Nonetheless, he is obligated *not to resist an agent* in order not to suffer what it is just for him to suffer.

For instance, if someone is condemned to die by starvation, he does not commit a sin if he eats food that is secretly provided to him, since he would be killing himself by not eating it.

**Reply to objection 3:** This saying of the wise man should not induce anyone to free someone else from death in a way contrary to the order of justice. Hence, neither should anyone free himself from death in a way contrary to justice by resisting.

## QUESTION 70

### Injustice on the part of a Witness in Testifying

Next we have to consider injustice that belongs to the person of a witness (*de iniustitia pertinente ad personam testis*). And on this topic there are four questions: (1) Is a man obligated to give testimony (*utrum homo teneatur ad testimonium ferendum*)? (2) Is the testimony of two or three witnesses sufficient? (3) Might someone's testimony be refuted without his being at fault? (4) Is it a mortal sin to present false testimony (*perhibere falsum testimonium*)?

#### Article 1

##### Is a man obligated to give testimony?

It seems that a man is not obligated to give testimony (*non teneatur ad testimonium ferendum*):

**Objection 1:** In *Questiones in Heptateuchum libri septem* Augustine claims that Abraham, in saying of his wife, "She is my sister," wanted to conceal the truth without telling a lie. But in concealing the truth, one withholds his testimony. Therefore, one is not obligated to testify.

**Objection 2:** No one is obligated to act deceitfully (*fraudulenter*). But Proverbs 11:13 says, "He who walks deceitfully reveals secrets, but he who is faithful conceals the thing entrusted to him by his friend." Therefore, a man is not always obligated to give testimony, especially about things that have been entrusted to him by a friend.

**Objection 3:** Clerics and priests are obligated with respect to those things that are necessary for salvation. But clerics and priests are prohibited from offering testimony in a blood case. Therefore, testifying is not necessary for salvation.

**But contrary to this:** Augustine says, "He who hides the truth and he who tells a lie are both guilty, the one because he does not will to do good and the other because he desires to do harm."

**I respond:** Distinctions must be drawn with respect to giving testimony, since one's testimony is sometimes demanded and sometimes not demanded.

If what is demanded is the testimony of someone who is subject to a higher authority whom he is obligated to obey in matters that pertain to justice, then there is no doubt that he is obligated to give testimony about those things with respect to which, according to the order of justice, testimony is required of him, e.g., in matters that are manifest and in matters about which there has been antecedent notoriety (*in his de quibus infamia praecessit*).

However, if what is demanded of him is testimony in other matters, e.g., in hidden matters and matters in which there is no antecedent notoriety, then he is not obligated to testify.

On the other hand, if his testimony is demanded but not by an authority whom he is obligated to obey, then a distinction must be drawn.

For if a man's testimony is demanded in order to free someone either from an unjust death or from an unjust punishment of any sort, or from false notoriety, or from an unfair loss, then he is obligated to give testimony (*tenetur ad testificandum*). Even if his testimony is not demanded, he is obligated to do what he can to make the truth known to someone who can do some good with it. For Psalm 8:4 says, "Rescue the poor man, and deliver the needy man from the hand of the sinner." And Proverbs 24:11 says, "Deliver those who are being led to death." And Romans 1:32 says, "It is not only those who do these things that are worthy of death, it is also those who consent to those who are doing them"—where a Gloss says, "To consent is to remain silent when you are able to offer a disproof."

However, in matters that pertain to someone's condemnation, one is not obligated to offer testimony except when compelled to by a superior in accord with the order of justice. For if the truth concerning this sort of matter is hidden, no one incurs a special loss—or, if danger threatens the accuser, this is of no concern, since he has put himself into this danger by his own will, whereas the situation is

different with the defendant, whom danger threatens against his will.

**Reply to objection 1:** Augustine is talking about hiding the truth in a case in which (a) one is not compelled by the authority of a superior to divulge the truth and in which (b) hiding the truth is not specifically harmful to anyone.

**Reply to objection 2:** A man must not in any way offer testimony about what has been entrusted to him in secret in Confession, since he knows things of this sort not as a man but as God's minister, and the sacrament is more binding than any human precept.

As for things that are entrusted in secret to a man in other ways, we must draw a distinction:

Sometimes these things are such that as soon as they come to a man's knowledge, the man is obligated to reveal them, e.g., if the thing in question has to do with the spiritual or corporeal corruption of many people or with a grave loss to some person, or if it is something else of this sort that one is obligated to reveal either by testifying to it or by denouncing it. And in the face of this duty he cannot be obligated by the fact that he has been entrusted with a secret and would, in revealing it, be breaching the fidelity that he owes to another.

By contrast, sometimes the things in question are such that one is not obligated to reveal them. Hence, he can be obligated by the fact that these things are entrusted to him as secrets. And in such a case he is in no way obligated to reveal them, even by the command of a superior, since to it belongs to the natural right to keep faith, and nothing can be commanded of a man that is contrary to what belongs to the natural right.

**Reply to objection 3:** As was explained above (q. 40 a. 2 and q. 64, a. 40), effecting or cooperating in the killing of a man is inappropriate for the ministers of the altar. And so according to the order of the law they cannot be compelled to offer testimony in a blood case.

## Article 2

### Is the testimony of two or three witnesses sufficient?

It seems that the testimony of two or three witnesses is not sufficient (*non sufficiat duorum vel trium testimonium*):

**Objection 1:** Judgment requires certitude. But certitude with respect to the truth is not had through the testimony of two witnesses (*per dictum duorum testium*); for 3 Kings 21:9ff reports that Naboth was falsely condemned on the testimony of two witnesses. Therefore, the testimony of two or three witnesses is not sufficient.

**Objection 2:** There ought to be agreement about what is credible. But most of the time there is something about which there is disagreement in the testimony of two or three witnesses. Therefore, their testimony in a judicial proceeding is not effective for proving the truth.

**Objection 3:** *Decretals* 2, q. 4 says, "A bishop shall not be condemned unless there are seventy-two witnesses. A cardinal priest of the city of Rome shall not be deposed unless there are forty-four witnesses. A cardinal deacon of the city of Rome shall not be condemned unless there are twenty-eight witnesses.. A subdeacon, acolyte, exorcist, lector, or porter shall not be condemned unless there are seven witnesses." But a sin is more dangerous, and thus less to be tolerated, when it is committed by someone who has been established in a major office (*in maiori dignitate constitutus est*). Therefore, the testimony of two or three witnesses is likewise not sufficient for the condemnation of other individuals.

**But contrary to this:** Deuteronomy 17:6 says, "By the mouth of two or three witnesses shall he die that is to be killed." And further on, at 19:15, it says, "In the mouth of two or three witnesses every charge will stand."

**I respond:** According to the Philosopher in *Ethics* 1, one should not seek certitude in the same way in every subject matter. For in the case of human acts, concerning which judicial proceedings are set up and testimony is required, one cannot have demonstrative certitude, since judicial proceedings and testimony have to do with things that are contingent and variable. And so the certitude of likelihood (*probabilis certitudo*), which attains to the truth most of the time (*ut in pluribus*), is sufficient, even if it falls short of the truth in a few cases (*in paucioribus*). And so when the defendant is the lone individual denying something, whereas many witnesses assert the same thing as the accuser (*asserunt idem cum actore*), it has been plausibly established, by both the divine right and the human right, that one should side with the testimony of the witnesses.

Now there is a trio that includes every multitude, viz., (a) the beginning, (b) the middle, and (c) the end; this is why the Philosopher says in *De Caelo* 1, “We posit everything and the totality in three things.” And a trio of affirmers is constituted when two witnesses agree with the accuser (*cum actore*). And so what is required is a pair of witnesses—or, for greater certitude, let it be a trio, i.e., a completed multitude, just of witnesses. Hence, Ecclesiastes 4:12 says, “A threefold cord is not easily broken.”

On the other hand, in commenting on John 8:17 (“... the testimony of two men is true”), Augustine says, “In a mysterious way this is a commendation of the Trinity, in which there is an everlasting firmness of truth.”

**Reply to objection 1:** No matter what the number of witnesses might be set at (*quantacumque multitudo testium determinaretur*), it would still be possible for their testimony to be at times unjust. For Exodus 23:2 says, “You shall not follow the crowd in doing evil.” Still, as has been explained, it is not the case that because infallible certitude cannot be had in such matters, one should neglect the certitude of likelihood that can be had from two or three witnesses.

**Reply to objection 2:** Disagreement among the witnesses about certain important circumstances that change the substance of a deed—e.g., disagreement about the time or place or persons that are mainly being talked about—destroys the efficacy of the testimony. For if they disagree about such things, it seems that each is peculiar in his own testimony and that they are talking about different deeds. For instance, if one witness claims that the deed was done at one time or place and another witness claims that the deed was done at some other time or place, then they seem not to be talking about the same deed. However, their testimony is not compromised if the one witness says that he does not remember the time or place and the other witness claims that it was a specific time or place.

Moreover, if in such matters the witnesses for the accuser and the witnesses for the defendant disagree completely, and if they are equal in number and on a par with respect to their stature (*pares dignitate*), then the matter is settled in favor of the defendant (*statur pro reo*), since a judge should be more ready to acquit than to condemn—except perhaps in ‘favorable causes’ (*nisi forte in causis favorabilibus*), such as a case involving someone’s liberty or something of that sort.

On the other hand, if the witnesses for the same side disagree among themselves, then the judge should discern at his own discretion (*debet iudex ex motu sui animi percipere*) which party the matter should be settled in favor of, either because of the number of the witnesses, or because of their stature, or because of the favorability of the cause, or because of the nature of the case and what has been testified to. And the testimony of a witness is all the more rejected if he disagrees with himself when he is questioned about what he saw and what he knows—but not if disagrees with himself when he is questioned about an opinion or a rumor (*fama*), since he could have been moved to respond in diverse ways depending on various things he has seen and heard.

On the other hand, if there is disagreement in the testimony about certain circumstances that are not relevant to the substance of what was done—for instance, if the sky was cloudy or clear at the time in question, or if the house was painted or not, or something of this sort—then such disagreement does not undermine the testimony, since men do not normally much care about such things and so those things easily fall from memory. Just the opposite, some disagreement about such things renders the testimony

more credible, as Chrysostom points out in *Super Mattheum*, since if the witnesses agreed in everything, even the smallest details, they would seem to be contriving to offer the same story (*viderentur ex conducto eundem sermonem proferre*). Still, this is left for the judge's prudence to discern.

**Reply to objection 3:** These rules have a place specifically in the case of the bishops, priests, deacons, and clerics of the Church in Rome because of its importance—and this for three reasons.

First, because in that Church those who are appointed should be such that their holiness is more credible than the testimony of many witnesses.

Second, because men who are charged with judging others often, because of their justice, have many adversaries. Hence, one should not indiscriminately trust witnesses against them unless a great multitude of witnesses agrees.

Third, because the condemnation of one of them would detract in men's opinion from the dignity and authority of that Church. This is more dangerous than tolerating a sinner, except for a very public and manifest sinner from whom a great scandal will arise.

### Article 3

#### Should someone's testimony be disallowed only because of a fault on his part?

It seems that someone's testimony should be disallowed only because of a fault on his part (*alicuius testimonium non sit repellendum nisi propter culpam*):

**Objection 1:** As is clear in the case of those who are known as notorious (*qui infamia notantur*), it is imposed as a punishment on some individuals that they are not allowed to give testimony. But a punishment should not be imposed except for some fault. Therefore, it seems that one's testimony should not be disallowed except because of some fault.

**Objection 2:** Every individual should be presumed to be good unless the contrary becomes apparent. But it pertains to a man's goodness that he gives true testimony. Therefore, since the contrary could not be clear except because of some fault on his part, it seems that no one's testimony should be disallowed except because of some fault.

**Objection 3:** No one is rendered unworthy of what is necessary for salvation except because of some sin. But as was explained above (a. 1), giving testimony to the truth is necessary for salvation. Therefore, no one should be excluded from giving testimony except because of some fault.

**But contrary to this:** Gregory says (and this is contained in *Decretals* 2, q. 1), "As for the bishop who was accused by his servants, know that those servants should not have been listened to at all."

**I respond:** As has been explained (a. 2), testimony has the certitude of likelihood and not infallible certitude. And so anything that enhances the likelihood of a contrary claim renders a given piece of testimony ineffective. Now the contrary claim is rendered likely if one is not firm in testifying to the truth, sometimes *because of a fault*—as in the case of non-believers or of those who are notorious, and, again, in the case of those who are guilty of a public crime and who likewise cannot make an accusation—but sometimes *without fault*. This might happen (a) because of a *defectiveness in reasoning* (*ex defectu rationis*), as is clear in the case children, women, and those who have lost their mind, or (b) because of *passion* (*ex affectu*), as is clear in the case of enemies and of connected persons and domestic staff, or even (c) because of an *exterior condition* (*ex exteriori conditione*), as in the case of those who are poor or servants or who can be bossed around (*potest imperari*)—in all these cases it is likely that they can easily be induced to offer testimony that is contrary to the truth.

And so it is clear that the testimony of an individual may be rejected either because of his fault or without any fault on his part.

**Reply to objection 1:** Disallowing someone's testimony has more to do with being careful about

avoiding false testimony than with punishing him. Hence, the argument does not follow.

**Reply to objection 2:** Good is to be presumed of each individual unless the contrary becomes apparent—as long as there is no tendency toward danger to another. For caution is to be applied in order that not everyone be easily believed—this according to 1 John 4:1 (“Do not believe every spirit”).

**Reply to objection 3:** To give testimony is necessary for salvation, given the appropriateness of the witness and the order of justice (*supposita testis idoneitate et ordine iuris*). Hence, there is nothing to prevent certain individuals from being excused from offering testimony if they are not deemed fit according to the law.

#### Article 4

##### Is false testimony always a mortal sin?

It seems that false testimony is not always a mortal sin (*falsum testimonium non semper sit peccatum mortale*):

**Objection 1:** It is possible for someone to offer false testimony out of ignorance of the deed. But this sort of ignorance excuses one from mortal sin. Therefore, false testimony is not always a mortal sin.

**Objection 2:** A lie that benefits someone and harms no one is an ‘official lie’, which is not a mortal sin. But sometimes this sort of lie is involved in false testimony—e.g., when one presents false testimony in order to free someone from death or from an unjust sentence that threatens him because of other false witnesses or because of the perversity of the judge. Therefore, false testimony of this sort is not a mortal sin.

**Objection 3:** An oath is required of a witness in order that, because he swears, he might fear committing a mortal sin. But this would not be necessary if false testimony were in its own right a mortal sin. Therefore, false testimony is not always a mortal sin.

**But contrary to this:** Proverbs 19:5 says, “A false witness shall not go unpunished.”

**I respond:** False testimony has a threefold deformity:

First, because of the *perjury*, since witnesses are not admitted unless they are sworn in. And on this score false testimony is always a mortal sin.

Second, because of the *violation of justice*. And on this score false testimony is a mortal sin by its genus, just as every injustice is. And this is why false witness (*falsum testimonium*) is forbidden in those very words in a precept of the Decalogue, where Exodus 20:16 says, “You shall not bear false witness against your neighbor (*non loquaris contra proximum tuum falsum testimonium*).” For one does not act ‘against’ someone by preventing him from doing something injurious; instead, one acts ‘against’ someone only by undermining what is just for him (*sed solum qui ei suam iustitiam tollit*).

Third, because of the *falsehood itself*, since every lie is a sin. And on this score false testimony is not such that it is always a mortal sin.

**Reply to objection 1:** In giving testimony a man ought not to assert for certain, as if knowing it, what he is not certain of. Rather, he ought to put forward something doubtful as doubtful and to assert something that he is certain of as certain.

However, since it is possible because of the weakness of human memory for a man sometimes to think himself certain of something that is in fact false, if someone, thinking things over with due care, thinks himself to be certain about what is in fact false, he does not commit a mortal sin in asserting it, since he gives false testimony not *per se* and intentionally, but *per accidens* and contrary to what he intends.

**Reply to objection 2:** An unjust judicial proceeding (*iniustum iudicium*) is not a judicial proceeding. And so false testimony offered in an unjust judicial proceeding in order to prevent an

injustice has the nature of a mortal sin not by dint of the judicial proceeding, but only because of the broken oath.

**Reply to objection 3:** Men especially abhor as the most grievous sins those sins that are committed against God, among which is perjury. However, they do not abhor in this way sins that are committed against their neighbor. And this is why a witness's oath is required in order for the testimony to have greater certitude.

## QUESTION 71

### Injustice on the part of Advocates

Next we have to consider injustice that is effected in judicial proceedings by advocates (*de iniustitia quae fit in iudicio ex parte advocatorum*). And on this topic there are four questions: (1) Is an advocate (*advocatus*) obligated to defend the cause of the poor (*utrum advocatus teneatur praestare patrocinium causae pauperum*)? (2) Should any individual be excluded from the role of advocate (*utrum aliquis debeat arceri ab officio advocati*)? (3) Does an advocate sin by defending an unjust cause? (4) Does an advocate sin by accepting money for his defense?

#### Article 1

##### Is an advocate obligated to defend the cause of the poor?

It seems that an advocate is obligated to defend the cause of the poor (*advocatus teneatur patrocinium praestare causae pauperum*):

**Objection 1:** Exodus 23:5 says, “If you see the ass of him that hates you lying down underneath its burden, you shalt not pass by, but shall lift it up with him.” But no less of a danger threatens a poor man if his cause is being suppressed in a way contrary to justice than it would be if his ass were lying down under its burden. Therefore, an advocate is obligated to defend the cause of the poor.

**Objection 2:** In a certain homily Gregory says, “Let him who has understanding take care lest he remain altogether silent; let him who has an abundance of wealth take care lest he grow dull in showing mercy; let him who has a skill by which he directs himself share the exercise of that skill with his neighbor; let him who has the opportunity of speaking in the presence of the wealthy intercede on behalf of the poor. For the very least that each individual has received will be counted as a ‘talent’.” But as is clear from the punishment inflicted on the servant who hid his talent in Matthew 25:24ff., each individual is obligated to dispense faithfully—and not to hide—any talent that has been committed to him. Therefore, an advocate is obligated to defend the cause of the poor.

**Objection 3:** Since the precept about carrying out the works of mercy is an affirmative precept, it imposes an obligation for any time and place (*pro loco et tempore*), and this holds especially in cases of necessity. But the time of necessity seems to occur when the cause of someone poor is being suppressed. Therefore, in such circumstances it seems that an advocate is obligated to offer a defense.

**But contrary to this:** The need that an indigent man has for food is no less than the need he has for an advocate. But one who has the power to feed is not always obligated to feed a poor man. Therefore, neither is an advocate always obligated to defend the cause of the poor.

**I respond:** Since defending the cause of the poor belongs to the works of mercy, one should say the same thing here that was said above (q. 32, aa. 5 and 9) about other works of mercy. For no one is sufficient to do the works of mercy for all who are needy. And so as Augustine says in *De Doctrina Christiana* 1, “Since you are unable to do good for everyone, you should help those who, by reason of the opportunities provided by place and time, or by reason of the opportunities provided by anything whatsoever, are more closely connected to you by a sort of lottery, as it were (*quasi quadam sorte*).”

He says “by reason of the opportunities provided by place,” because a man is not obligated to search the world for needy individuals whom he might help; rather, it is sufficient if he does the works of mercy for those who cross his path (*qui occurrunt sibi*). Hence, Exodus 23:4 says, “If you run into an ox or ass that belongs to your enemy, take it back to him.”

He adds “and time,” because a man is not obligated to provide for someone else’s future needs; rather, it is sufficient if he takes care of the individual’s present need. Hence, 1 John 3:17 says, “If anyone sees his brother in need and closes his heart off from him, etc.”

What’s more, he adds “by anything whatsoever,” because a man ought especially to take care of

those connected to him by any necessity—this according to 1 Timothy 5:8 (“If anyone does not take care of his own, and especially of those who live with him, then he has denied the Faith”).

However, even with all these points in place, we still have to ask whether someone might suffer from such a great need that it is not immediately clear how he could be helped in any other way. And in such a case one is obligated to perform the act of mercy. On the other hand, if it is immediately clear how the individual could be helped in some other way, either by himself or by another person who is more closely connected to him or who is more capable helping, then one is not obligated by necessity to help the needy individual, i.e., obligated in such a way that he would sin by not doing it—even though, if he were to help him in the absence of any such necessity, he would be acting in a praiseworthy manner.

Hence, an advocate is not always obligated to defend the cause of the poor; instead, he is obligated to do so only when the conditions just explained come together. Otherwise, he would have to neglect all his other business and concentrate only on assisting the causes of the poor. And the same thing should be said about a physician as regards caring for the poor.

**Reply to objection 1:** When the ass is lying down under its burden, the individual in this case cannot be helped in any way other than to be helped by those who are passing by, and so they are obligated to give their help. However, they would not be obligated if assistance could be provided from elsewhere.

**Reply to objection 2:** A man is obligated to dispense in a useful way any talent that is entrusted to him, as long as the opportunities presented by place and time and other things are in place in the way that has been explained.

**Reply to objection 3:** Not every need engenders an obligation to help, but only needs of the sort explained above.

## Article 2

### Is it inappropriate for anyone to be excluded by law from the role of advocate?

It seems that it is inappropriate for anyone to be excluded by law from the role of advocate:

**Objection 1:** No one ought to be excluded from the works of mercy. But as has been explained (a. 1), presenting a defense for certain causes belongs to the works of mercy. Therefore, no one ought to be excluded from that role.

**Objection 2:** It does not seem that the same effect comes from contrary causes. But being given over to the things of God is contrary to be given over to sins. Therefore, it seems absurd for some individuals, e.g., clerics and monks, to be excluded from the role of advocate because of their religious commitments (*propter religionem*) and for other individuals, e.g., heretics and notorious individuals, to be excluded from the role of advocate because of their sins (*propter culpam*).

**Objection 3:** A man ought to love his neighbor as himself. But it is an effect of love that one should be an advocate in defense of some cause. Therefore, it is absurd that some individuals to whom the authority of being advocates has been granted for their own causes should be excluded from offering a defense for the causes of others.

**But contrary to this:** According to *Decretals* 3, q. 7, many persons are excluded from the role of being postulators (*arcentur ab officio postulandi*).

**I respond:** There are two ways in which someone is prevented from performing some act: (a) because of a lack of power (*propter impotentiam*) and (b) because of impropriety (*propter indecentiam*). Now a lack of power excludes one from the act absolutely speaking, whereas impropriety does not exclude one from the act absolutely speaking, since necessity can remove the impropriety.

So, then, certain individuals are prohibited from the office of advocate because of a *lack of power*, given that they are lacking in *sense*—either *interior sense*, as in the case of madmen and youths, or *exterior sense*, as in the case of the deaf and the mute. The reason for this is that an advocate needs both (a) *interior expertise*, by which he is able to show in a fitting way the justice of the cause, and also (b) *speech and hearing*, so that he is able both to speak in public and to hear what is being said to him. Hence, those who suffer from a deficiency in these things are altogether prevented from being advocates, either for themselves or for others.

On the other hand, there are two ways in which one's *propriety* for exercising this role can be undermined. First, it can be undermined by the fact that one is *tied to more important things* (*rebus maioribus obligatus*). Hence, it is unfitting for monks and priests to be advocates in any cause, or for clerics to play this role in secular judicial hearings, since persons of these types are restricted to the things of God. Second, it can be undermined by *personal deficiencies*, either (a) *corporeal deficiencies*, as is clear in the case of the blind, who cannot conveniently stand before a judge, or (b) *spiritual deficiencies*, since it is not appropriate for someone to be a defender of justice (*iustitiae patronus*) for another individual when he has shown so little esteem for justice in himself. And, for this reason, non-believers and those who are notorious and those who have been convicted of serious crimes are not fit to be advocates.

However, necessity takes precedence over this sort of impropriety. And for this reason persons of the kind in question can play the role of advocate for themselves or for persons who are closely connected with them. Hence, clerics are able to be advocates for their churches, and monks are able to be advocates for the cause of their monasteries if their abbot commands it.

**Reply to objection 1:** Some individuals are prevented from doing works of mercy at times because of a lack of power and also at times because of impropriety. For not all the works of mercy are fitting for everyone; for instance, it is not fitting for those who are foolish to give counsel or for those who are ignorant to give instruction.

**Reply to objection 2:** Just as a virtue is corrupted both by excess and by deficiency, so some individuals become unfit both by *being above* and by *being below* (*per maius et per minus*). And for this reason some individuals are prevented from presenting a defense in certain causes because they are *above* such a role, as with religious and clerics, whereas some are *below* what would make them fit for this role, as with the notorious and non-believers.

**Reply to objection 3:** The necessity for defending the causes of others is not as much a threat as the necessity for defending one's own causes, since the others can help themselves in other ways. Hence, the arguments are not parallel.

### Article 3

#### Does an advocate sin if he defends an unjust cause?

It seems that an advocate does not sin if he defends an unjust cause :

**Objection 1:** Just as a physician's expertise is shown if he cures a hopeless disease, so an advocate's expertise is shown if he is able to defend an unjust cause. But a physician is praised if he cures a hopeless disease. So, too, then, an advocate does not sin, but should rather be praised, if he defends an unjust cause.

**Objection 2:** Every sin is such that it is permissible to desist from it. But as *Decretals* 2, q. 3 has it, an advocate is punished if he abandons his cause (*punitur si causam suam prodiderit*). Therefore, an advocate does not sin in defending an unjust cause if has already undertaken the task of defending it.

**Objection 3:** If one used unjust means to defend a just cause, e.g., by producing false witnesses or

by adducing false laws, this would seem to be a greater sin than defending an unjust cause, since the former is *formally* a sin (*peccatum in forma*), whereas the latter is *materially* a sin (*peccatum in materia*). But it seems that an advocate is permitted to use shrewd tactics of this sort (*videtur advocato licere talibus astutiis uti*) in the way that a soldier is permitted to fight with insidious tactics (*sicut militi licet ex insidiis pugnare*) (cf. q. 40, a. 3). Therefore, it seems that an advocate does not sin if he defends an unjust cause.

**But contrary to this:** 2 Paralipomenon 19:2 says, “You offer help to the impious ... and thereby deserve the wrath of the Lord.” But an advocate who defends an unjust cause offers help to the impious. Therefore, he deserves the wrath of the Lord by sinning.

**I respond:** No one is permitted to cooperate in doing evil, whether by advising or by assisting or by consenting in any way. For one who advises or assists is in some sense doing evil, and in Romans 1:32 the Apostle says, “It is not only those who commit the sin who are worthy of death, but also those who consent to those committing the sin.” Hence, it was explained above (q. 62, a. 7) that all such individuals are obligated to make restitution.

Now it is clear that an advocate offers both assistance and advice to the one whose cause he is defending. Hence, if he knowingly defends an unjust cause, then without doubt he commits a grave sin, and he is obligated to make restitution for the loss which the other party incurs because of the injustice committed with his assistance. On the other hand, if he defends an unjust cause unknowingly, thinking it to be a just cause, then he is excused in the way in which ignorance can provide an excuse.

**Reply to objection 1:** A physician who takes on the task of curing a hopeless disease does no injury to anyone. By contrast, an advocate who takes on an unjust cause unjustly harms the one against whom he is presenting his defense. And so the arguments are not parallel. For even though he seems praiseworthy as regards expertise in his art, he still sins as regards the injustice of his will, by which he uses his art for something bad.

**Reply to objection 2:** If at the beginning an advocate believes that the cause is just and if afterwards, within the proceeding, it becomes clear that it is unjust, he ought not to abandon it in such a way as to help the other party or to reveal the hidden elements of his cause to the other party. However, he can and should give up the cause either by inducing the one for whose cause he is acting to cede his case or by inducing him to settle his case without loss to his adversary.

**Reply to objection 3:** As was explained above (q. 40, a. 3), in waging a just war, a soldier or commander is permitted to use insidious tactics, in the sense of prudently concealing what he will do, to do what he needs to do—though not in the sense of fraudulently resorting to falsehoods. For as Tully says in *De Officio* 3, one must keep faith with one’s enemy. Hence,, in defending a just cause, an advocate is likewise permitted to conceal prudently whatever his progress could be impeded by, but he is not permitted to make use of falsehoods.

#### Article 4

##### Is an advocate permitted to take money in return for his defense?

It seems that an advocate is not permitted to take money in return for his defense:

**Objection 1:** The works of mercy are not to be done with the thought of human remuneration—this according to Luke 14:12 (“When you give a dinner or a banquet, do not invite your friends or your brothers or your kinsmen or rich neighbors, lest they also invite you in return, and you be repaid”). But, as has been explained (a. 1), presenting a defense of someone’s cause has to do with acts of mercy. Therefore, an advocate is not permitted to take the payment of money in return for the defense he has presented.

**Objection 2:** The spiritual should not be traded for the temporal. But the presentation of a defense seems to be something spiritual, since it is an exercise of one's knowledge of the law. Therefore, an advocate is not permitted to take money in return for presenting a defense.

**Objection 3:** The person of the judge and the person of the witness are related to judgment in the same way that the person of an advocate is. But according to Augustine in *Ad Macedonium*, "A judge should not sell a just judgment, nor should a witness sell true testimony." Therefore, neither is an advocate able to sell a just defense.

**But contrary to this:** In the same place Augustine says, "An advocate licitly sells a just defense, and a legal expert licitly sells truthful advice."

**I respond:** One can justly accept payment in return for giving to another what he is not obligated to give him. But it is clear that an advocate is not always obligated to present a defense or to give advice for the causes of others. And so if he sells his defense or his advice, he is not acting in a way contrary to justice. And the same argument holds for a physician who gives help for healing and for all other persons of this sort, as long as they receive moderate compensation, taking into account the situation of the persons involved and of the matter at hand and of the labor, along with the customs of their native place.

However, if an advocate extorts something immoderately through wickedness, then he sins against justice. Hence, in *Ad Macedonium* Augustine says, "It is normal to demand from them restitution for what they have extorted by wicked immoderation, but not for what has been given to them in accord with tolerable custom."

**Reply to objection 1:** It is not always the case that what a man does mercifully is such that he is obligated to do it for free; otherwise, no one would be permitted to sell anything, since a man can give anything whatsoever mercifully. However, when he does give something mercifully, he should be seeking divine remuneration and not human remuneration.

Similarly, when an advocate mercifully defends the cause of the poor, he should desire divine remuneration and not human remuneration, even if he is not always obligated to provide the defense for free.

**Reply to objection 2:** Even if knowledge of the law is something spiritual, its exercise is nonetheless accomplished by a corporeal work. And so he is permitted to take money as his compensation; otherwise, no skilled individual one would be permitted to profit from his art.

**Reply to objection 3:** The judge and the witness are common to both parties, since the judge is obligated to issue a decision, and the witness is obligated to give true testimony—and justice and truth do not deviate toward one side rather than the other. And so for the judges there are stipends established publicly for their work, and the witnesses receive expenses, not as a prize for their testimony but as a stipend for their labor, either from both parties or from the party by whom they are called. For as 1 Corinthians 9:7 says, "No one ever serves as a soldier at his own expense (*suis stipendiis*)."

By contrast, an advocate defends one side only. And so he can licitly accept payment from the party whom he assists.

## QUESTION 72

### Vilification

Next we have to consider injuries that are inflicted by means of words outside of judicial proceedings (questions 72-76): first, vilification (*contumelia*) (question 72); second, detraction (*detractio*) (question 73); third, gossiping (*susurratio*) (question 74); fourth, derision (*derisio*) (question 75); and, fifth, cursing (*maledictio*) (question 76).

On the first topic there are four questions: (1) What is vilification? (2) Is every instance of vilification a mortal sin? (3) Should one resist those who vilify him (*utrum oporteat contumeliosos reprimere*)? (4) What is the source of vilification?

### Article 1

#### Does vilification consist in words?

It seems that vilification does not consist in words (*contumelia non consistat in verbis*):

**Objection 1:** Since vilification (*contumelia*) involves injustice, it implies a certain harm inflicted on one's neighbor. But words seem to inflict no harm at all on one's neighbor, either in his possessions or in his person (*nec in rebus nec in persona*). Therefore, vilification does not consist in words.

**Objection 2:** Vilification seems to involve a sort of dishonoring. But someone can be dishonored or vituperated more by deeds than by words. Therefore, it seems that vilification consists in deeds rather than in words.

**Objection 3:** Dishonor that is effected by words is called reproaching (*convicium*) or reviling (*improperium*). But vilifying someone seems to differ from reproaching or reviling him. Therefore, vilification does not consist in words.

**But contrary to this:** Nothing is perceived by hearing except words. But vilification is perceived by hearing—this according to Jeremiah 20:10 (“I have heard their reproaches ... on every side”). Therefore, vilification consists in words.

**I respond:** Vilification involves dishonoring someone (*contumelia importat dehonorationem alicuius*). Now there are two ways in which someone can be dishonored:

(a) Since honor follows upon some excellence, the first way in which one dishonors another is to deprive him of the excellence because of which he had the honor. This way of dishonoring someone is accomplished by the sorts of sinful deeds that were explained above (qq. 64-66).

(b) An individual is dishonored in a second way when someone brings to his attention and to the attention of others something that is contrary to his honor. And this is what vilification properly involves. To be sure, this is accomplished by means of certain signs. But as Augustine points out in *De Doctrina Christiana* 2, “Compared with words, there are very few other signs, since among men words have attained the most important place in signifying whatever the mind conceives.”

And so vilification, properly speaking, consists in words. Hence, in *Etymologia* Isidore says that someone is called a vilifier (*contumeliosus*) “because he is quick-witted and ready to burst out with injurious words (*velox est et tumet verbis iniuriae*).”

However, since something is likewise signified by certain deeds that have the force of meaningful words in what they signify, vilification is said in an extended sense to consist in deeds as well as in words. Hence, a Gloss on Romans 1:30 (“... vilifiers, proud ...”) says that the vilifiers are those “who inflict reproaches and foul abuse by word and deed.”

**Reply to objection 1:** Words by their essence, i.e., insofar as they are certain audible sounds, inflict no harm on another—except perhaps by injuring the hearing, as when someone speaks in an excessively high voice. However, insofar as they are signs that bring something to the attention of others, words are capable of inflicting many harms. One of them is that a man is harmed by damage to his honor

or by damage to the respect (*reverentia*) that should be shown to him by others.

And so the vilification is greater if one berates someone for his defects in the presence of others. However, there can still be an instance of vilification even if one speaks to him alone, to the extent that the one who is speaking is acting in a way that conflicts with his having respect for the listener.

**Reply to objection 2:** One dishonors an individual with deeds insofar as those deeds either (a) *do* something that is contrary to that individual's honor or (b) *signify* something that is contrary to that individual's honor.

The first of these has to do with the other species of injustice discussed above (qq. 64-66) and not with vilification. By contrast, the second has to do with vilification insofar as the deeds have the force of words in what they signify.

**Reply to objection 3:** Reproaching (*convicium*) and reviling (*improperium*) consist in words, just as vilification does, since all three of them exhibit (*representatur*) a defect in an individual to the detriment of that individual's honor. Now there are three kinds of defects:

(a) *defects of sin*, which are presented through the words of vilification (*contumelia*).

(b) *defects of sin and punishment in general*, which are exhibited through reproaching (*convicium* or *convitium*), since 'defect' (*vitium*) is commonly said not only of defects of the soul, but also of defects of the body. Hence, if one says injuriously that someone is blind, this is reproaching and not vilifying, whereas if one says injuriously to someone else that he is a thief, this involves not only reproaching but also vilifying.

(c) By contrast, one at times exhibits an individual's *defects of lowliness or neediness* (*repraesentat alicui alicui defectum minorationis sive indigentiae*), which likewise detracts from the honor that follows upon some excellence. And this is effected by words of reviling (*per verbum improprii*), which occurs, properly speaking, when someone injuriously brings to mind the assistance that he had given that individual when the latter was suffering some need. Hence, Ecclesiasticus 20:15 says, "He will give a few things and then he will revile a lot."

However, all these words are such that one of them is sometimes used for another.

## Article 2

### Is vilifying or reproaching a mortal sin?

It seems that vilifying (*contumelia*), or reproaching (*convicium*), is not a mortal sin:

**Objection 1:** No mortal sin is the act of a virtue. But reproaching is the act of a virtue, viz., the virtue of *eutrapelia*, which, according to the Philosopher in *Ethics* 4, involves witty reproaching (*bene conviciari*). Therefore, reproaching, or vilifying, is not a mortal sin.

**Objection 2:** There is no mortal sin in perfect men. But as is clear from the Apostle, who in Galatians 3:1 said, "O stupid (*insensati*) Galatians," perfect men sometimes utter reproaches or vilifications. And in Luke 24:25 our Lord says, "O foolish (*stulti*), and slow of heart to believe." Therefore, reproaching, or vilifying, is not a mortal sin.

**Objection 3:** As was established above (*ST* 1-2, q. 88, aa. 4 and 6), even though something that is a venial sin by its genus can become a mortal sin, it is not the case that something that is a mortal sin by its genus can become a venial sin. Therefore, if reproaching or vilifying were a mortal sin by its genus, then it would follow that it is always a mortal sin. But this seems false, as is clear in the case of someone who engages in vilifying speech lightheartedly and without deliberation (*leviter et ex subreptione*), or out of slight anger (*ex levi ira*). Therefore, it is not the case that vilifying or reproaching is a mortal sin by its genus.

**But contrary to this:** Nothing except mortal sin merits the eternal punishment of hell. But

reproaching or vilifying merits the punishment of hell—this according to Matthew 5:22 (“Whoever says to his brother ‘You fool!’ will be liable to the fire of Gehenna”). Therefore, reproaching or vilifying is a mortal sin.

**I respond:** As was explained above (a.1), words are harmful to others not insofar as they are certain sounds, but insofar as they signify something; and this signification proceeds from an interior disposition (*ex interiori affectu procedit*). And so in the case of verbal sins, it seems that one especially needs to consider the sort of disposition by which someone produces his words.

Therefore, given that reproaching (*convicium*), or vilifying (*contumelia*), implies by its definition a certain type of dishonoring, if the speaker’s intention is that someone should withhold honor from another because of the words that the speaker produces, then this is properly and *per se* an instance of what is called reproaching or vilifying. And this is a mortal sin, no less than theft or robbery is, because a man loves his own honor no less than the things that he possesses.

On the other hand, if someone speaks to another words of reproach or vilification, and yet not with the intention of dishonoring him, but perhaps for the sake of correcting him or for some such reason, then what he says counts as a reproach or as an instance of vilification not *formally* and *per se*, but [only] *materially* and *per accidens*, viz., insofar as he says something that *could be* a reproach or an instance of vilification. Hence, sometimes this can be a venial sin, and sometimes it involves no sin at all (*quandoque absque omni peccato*).

Still, in these matters discretion is necessary, in order that a man might use words of the relevant sort with moderation. For his reproach could be so serious that, because of a lack of caution in his speech, he destroys the honor of the individual against whom he speaks. And in such a case a man could commit a mortal sin even if he had not intended to dishonor individual in question—in the same way that if someone, incautiously striking another in a game, seriously injured him, he would not be without fault.

**Reply to objection 1:** *Eutrapelia* involves saying something slightly reproachful, not in order to dishonor or hurt the one to whom it is spoken, but instead for the sake of pleasure and amusement (*causa delectationis et ioci*). This can occur without sin if the required circumstances are observed. However, as the Philosopher points out in the same place, if someone is such that, as long as he might make others laugh, he is not worried about hurting the individual against whom a joking reproach of this sort is made, then this is vicious.

**Reply to objection 2:** Just as, for the sake of discipline, it is licit to chastise someone or to make him lose his property, so, too, one can, for the sake of discipline, deliver a verbal reproach to someone whom he has an obligation to reproach (*quem debet corrigere*). And it is in this way that our Lord called the disciples foolish and that the Apostle called the Galatians stupid.

Still, as Augustine puts it in *De Sermone Domini in Monte*, “Reproaches should be resorted to rarely and out of great necessity, and in these instances let us insist that it is the Lord who is being served and not ourselves.”

**Reply to objection 3:** Since the sin of reproaching or vilifying depends on the intention of the speaker, it is possible for there to be a venial sin if the reproach is slight, not dishonoring the man very much, and if it is spoken lightheartedly or out of slight anger, without the firm intention of dishonoring anyone—as, for instance, when one intends that the individual be slightly pained because of these words.

### Article 3

#### Should one put up with being vilified?

It seems that one should not put up with being vilified (*non debeat contumelias sibi illatas sustinere*):

**Objection 1:** One who puts up with being vilified feeds the audacity of the vilifier. But this should not be done. Therefore, a man should not put up with being vilified, but should rather reply to the vilifier.

**Objection 2:** A man should love himself more than he loves another. But one should not put up with someone else's being reproached (*non debet sustinere quod alteri convicium inferatur*); hence, Proverbs 26:10 says, "Imposing silence on a fool mitigates his anger." Therefore, one should likewise not put up with being vilified himself.

**Objection 3:** One is not permitted to avenge himself—this according to Hebrews 10:30 ("Vengeance belongs to me, I will repay"). But one avenges himself by not resisting vilification—this according to Chrysostom ("If you wish to avenge yourself, be silent and you have given him a deadly wound"). Therefore, one ought not to put up with vilifying remarks by remaining silent; rather, one should reply.

**But contrary to this:** Psalm 37:13 says, "Those who were seeking evil for me said vain things." And afterwards (37:14) it adds, "But I, like a deaf man, did not hear them, and, like a dumb man, did not open my mouth."

**I respond:** Just as patience is necessary in those things that are *done* against us, so, too, patience is necessary in those things that are *said* against us. Now the precepts of patience in those things that are done against us have to do with the preparedness that the soul should have—in the sense in which Augustine, in *De Sermone Domini in Monte*, expounds our Lord's command, "If someone hits you on one cheek, turn to him the other cheek," viz., that a man should be *prepared to do this* if it is necessary, but he is not always *obligated to do it in actuality*. For our Lord Himself did not do it; rather, as John 10:23 reports, after He had received a blow, He asked, "Why do you strike me?"

And so we should likewise think the same way about words of vilification that are spoken against us. For we are obligated to have a mind prepared to put up with vilification if this is expedient. However, at times it is necessary for us to repel the vilification that is inflicted on us, and this for two reasons especially:

(a) *for the good of the one who inflicts the vilification*, so that, namely, his audacity might be curbed and he not try such a thing on anyone else (*et de cetero talia non attentet*)—this according to Proverbs 26:5 ("Respond to a fool immediately upon his display of foolishness, lest he seem wise to himself").

(b) *for the good of the many*, whose progress might be impeded by the vilification inflicted on us. Hence, in *Super Ezechiel*, homily 9, Gregory says, "Those whose lives are put forward as examples for emulation should, if they can, curb the words of their detractors, lest the individuals who might possibly have listened to their teaching do not listen to it and, remaining in their corrupt morals, disdain living a good life."

**Reply to objection 1:** Someone should curb the audacity of the reproachful vilifier *in a moderate way*, i.e., because of the duty imposed by charity and not because of a disordered desire for one's own private honor (*scilicet propter officium caritatis, non propter cupiditatem privati honoris*). Hence, Proverbs 26:4 says, "Do not respond to a fool immediately upon his display of foolishness, lest you become like him."

**Reply to objection 2:** When one curbs vilification directed against someone else, an excessive desire for his own private honor is not to be feared to such a degree as when he repels vilification directed against himself; instead, his action seems to arise from the affection of charity (*ex caritatis affectu*).

**Reply to objection 3:** If someone were to remain silent with the intention that, by remaining silent, he might provoke the vilifier to anger, then this would indeed involve avenging himself. However, if he remains silent while "willing to make room for anger" (Romans 12:19), then this is praiseworthy. Hence, Ecclesiasticus 8:4 says, "Do not argue with a man who is loud of mouth, and do not heap wood on his fire."

#### Article 4

##### Does vilification arise from anger?

It seems that vilification (*contumelia*) does not arise from anger (*ex ira*):

**Objection 1:** Proverbs 11:2 says, “Where there is pride (*superbia*), there is vilification.” But anger is a vice distinct from pride. Therefore, vilification does not arise from anger.

**Objection 2:** Proverbs 20:3 says, “All fools meddle with reproaches.” But as was established above (q. 46, a. 1), foolishness (*stultitia*) is a vice opposed to wisdom, whereas anger is opposed to mildness (*mansuetudo*). Therefore, vilification does not arise from anger.

**Objection 3:** No sin is diminished by its cause. But the sin of vilifying is diminished if the words are spoken out of anger. For one sins more gravely if he inflicts vilification out of hatred than if he does it out of anger. Therefore, vilification does not arise from anger.

**But contrary to this:** In *Moralia* 31 Gregory says that vilification arises from anger.

**I respond:** Even though one sin can arise from diverse sources, the sin is said to have its most fundamental source (*dicitur principalius habere originem*) in that from which it customarily proceeds, because of that source’s proximity to the sin’s end.

Now vilification has a close proximity to the end of anger, which is vengeance, since no sort of vengeance is closer at hand to an angry individual than to inflict vilification on the other. And so vilification arises especially from anger.

**Reply to objection 1:** Vilification is not ordered toward the end of pride, which is loftiness (*celsitudo*), and so vilification does not arise directly from pride. Still, pride disposes one toward vilification insofar as those who think of themselves as superior are more ready to disdain others and to inflict injuries on them. They are also more easily angered, judging as intolerable whatever is done contrary to their will.

**Reply to objection 2:** According to the Philosopher in *Ethics* 7, anger does not perfectly listen to reason, and so an angry individual suffers from a defect in reason, on which score anger shares something in common with foolishness. And this is why vilification arises from foolishness in accord with the affinity it has with anger.

**Reply to objection 3:** According to the Philosopher in *Rhetoric* 2, an angry individual intends a public offense—something that a hateful individual does not care about. And so vilification, which involves a manifest injury, belongs more to anger than to hatred.

## QUESTION 73

### Detraction

Next we have to consider detraction (*detractio*). And on this topic there are four questions: (1) What is detraction? (2) Is detraction a mortal sin? (3) How does it compare to other sins? (4) Does someone commit a sin by listening to a detraction?

#### Article 1

##### Is detraction the denigration of someone else's reputation by furtive words?

It seems that detraction is not, as some have defined it, 'the denigration of someone else's reputation by furtive words (*denigratio alienae famae per occulta verba*)':

**Objection 1:** *Furtive (occultum)* and *open (manifestum)* are circumstances that do not constitute the species of a sin, since it is incidental that a sin should be known about by many or by few. But what does not constitute the species of a sin does not belong to the nature (*ratio*) of that sin and should not be placed in its definition (*definitio*). Therefore, it does not belong to the nature of detraction that it is done by means of furtive words.

**Objection 2:** Public knowledge (*publica notitia*) is relevant to the nature of a reputation (*ad rationem famae pertinet publica notitia*). Therefore, if someone's reputation were denigrated by detraction, then this could have been done only by words spoken in public (*in manifesto*) and not by furtive words.

**Objection 3:** Someone 'detracts' when he 'subtracts from' or 'diminishes' something that exists. But at times an individual's reputation is denigrated even if nothing is subtracted from the truth, e.g., when someone spreads news about that individual's real crimes. Therefore, not every instance of denigration counts as a detraction.

**But contrary to this:** Ecclesiastes 10:11 says, "If a serpent bites in silence, he is no worse than someone who detracts in secret." Therefore, to detract is to 'bite' someone's reputation furtively.

**I respond:** Just as there are two ways in which one individual harms another by *deeds*, viz., (a) *openly (manifeste)*, as with robbery (*rapina*) or any sort of inflicted violence (*quacumque violentia illata*), and (b) *furtively (occulte)*, as with theft and surreptitious beatings (*dolosa percussio*), so, too, there are two ways in which one individual wounds another by *words*, (a) *in public (in manifesto)*, and this, as has been explained (q. 72), is done through vilification, and (b) *furtively*, and this is done through detraction.

Now by the fact that one individual speaks openly against another, it is apparent that he thinks little of him, and so by that very fact the man is dishonored; and this is why vilification brings a loss of honor to the one against whom it is spoken.

By contrast, someone who speaks furtively against another individual appears to respect him rather than to think little of him. Hence, he directly inflicts a loss on his reputation (*fama*) rather than on his honor (*honor*). For just by the very fact that he speaks words of this sort furtively, he makes those who are listening to him form a bad opinion of the individual against whom he is speaking. For the detractor seems to intend, and aims at, having his words believed.

Hence, it is clear that detraction differs from vilification in two ways:

First, as regards the *way of speaking the words*, since the vilifier speaks against someone *openly*, whereas the detractor speaks against him *furtively*.

Second, as regards *the intended end, i.e., the harm to be inflicted*, since the vilifier diminishes someone's *honor*, whereas the detractor diminishes his *reputation*.

**Reply to objection 1:** In the case of involuntary exchanges—which is what all the harms inflicted on one's neighbor by word or deed amount to—*furtive* and *open* diversify the kinds of sin, since, as was

explained above (q. 66, a. 4), the nature of what is involuntary through violence is different from the nature of what is involuntary through ignorance.

**Reply to objection 2:** Words of detraction are called *furtive* not absolutely speaking, but relative to the individual about whom they are spoken, since they are spoken when he is absent and does not know about them (*eo absente et ignorante dicuntur*). By contrast, the vilifier speaks against a man face-to-face (*in faciem contra hominem loquitur*).

Hence, if someone speaks badly of another individual in front of many people when the individual himself is absent, it is *detraction*, whereas if he does this when that individual alone is present, it is *vilification*. Still, even if he speaks badly to just one individual about someone who is absent, he damages his reputation—not totally, but partially.

**Reply to objection 3:** Someone is said to engage in detraction not because he diminishes the truth, but because he diminishes the other individual's reputation. This sometimes happens *directly* and sometimes *indirectly*:

*Directly*, in four ways: (a) when he attributes something false to the other individual; (b) when he exaggerates the sin by his words; (c) when he reveals something hidden; and (d) when he claims that something that is good was done with a bad intention.

*Indirectly*, either (a) by denying something good about the other, or by maliciously remaining silent.

## Article 2

### Is detraction a mortal sin?

It seems that detraction is not a mortal sin:

**Objection 1:** No act of virtue is a mortal sin. But revealing a hidden sin, which, as has been explained (a. 1), pertains to detraction, is an act of virtue, either (a) an act of *charity*, as when someone denounces his brother's sin while intending his improvement, or (b) an act of *justice*, as when someone accuses his brother. Therefore, detraction is not a mortal sin.

**Objection 2:** A Gloss on Proverbs 24:21 ("Have nothing to do with detractors") says, "The whole human race is in peril because of this vice." But no mortal sin is found in the whole human race, since many abstain from mortal sin, whereas venial sins are found in everyone. Therefore, detraction is a venial sin.

**Objection 3:** In his homily *De Igne Purgatorii* Augustine claims it to be "among the small sins when we speak badly of another easily or with temerity"—which pertains to detraction. Therefore, detraction is a venial sin.

**But contrary to this:** Romans 1:30 says, "... detractors, who are hateful to God ...," and this is added, says a Gloss, "lest detraction be thought a slight sin because it consists in words."

**I respond:** As was explained above (q. 72, a. 2), sins involving words are to be judged especially on the basis of the speaker's intention.

Now detraction is by its nature ordered toward damaging someone's reputation. Hence, speaking *per se*, the one who engages in detraction is the one who speaks against an individual when that individual is absent, in order to damage his reputation. But diminishing someone's reputation is very grave, since among temporal possessions an individual's reputation seems to be very precious, and by having it damaged a man is prevented from doing many things well. For this reason Ecclesiasticus 41:15 says, "Take care of your good name. For this will remain with you longer than a thousand great and precious treasures." And so detraction is in its own right (*per se loquendo*) a mortal sin.

However, it sometimes happens that (a) one speaks certain words by which an individual's

reputation is damaged but that (b) he intends something else and not this. Now this counts as detraction only materially and, as it were, *per accidens*, and not *per se* and formally. And if it is for the sake of something good or necessary that someone utters words by which someone else's reputation is diminished, then, as long as the right circumstances are preserved, this is not a sin and cannot be called detraction. On the other hand, if he utters such words out of light-heartedness (*ex animi levitate*) or for the sake of something unnecessary, then this is not a mortal sin—unless, perhaps, the words he utters are so grave that he damages someone's reputation in an extraordinary way (*notabiliter famam alicuius laedet*), and especially in matters that have to do with latter's uprightness of life, since this has the nature of a mortal sin by the very genus of the words. And one is obligated to make restitution for a reputation, just as one must make restitution for any possession that has been taken away, in the manner that was explained above when we were talking about restitution (q. 62, a. 2).

**Reply to objection 1:** As has been explained, it is not detraction to reveal someone's hidden sin by denouncing him for the sake of his improvement or by accusing him for the sake of the good of public justice.

**Reply to objection 2:** The Gloss in question does not say that detraction is found in "*the whole*" human race, but instead adds "*almost*."

It makes this claim because (a) "the number of fools is infinite" (Ecclesiastes 1:15) and there are few who walk along the way of salvation (cf. Matthew 7:13-14), and also because (b) there are few individuals or none at all who do not sometimes say something light-heartedly that results in someone else's reputation being harmed in some aspect or in a slight way, since as James 3:2 says, "If there is any man who does not offend with his words, then he is a perfect man."

**Reply to objection 3:** Augustine is talking about cases in which someone says something slightly bad about another, not with the intention of harming him but light-heartedly or by a slip of the tongue.

### Article 3

#### Is detraction more serious than all the other sins that are committed against one's neighbor?

It seems that detraction is more serious than all the other sins that are committed against one's neighbor:

**Objection 1:** A Gloss on Psalm 108:4 ("Instead of loving me, they detracted me") says, "Those who engage in detraction against Christ in His members, because they kill the souls of future believers, do more damage than those who have destroyed the flesh, which is soon to rise." From this it is apparent that detraction is a more serious sin than homicide, to the extent that killing the soul is more serious than killing the body. But homicide is more serious than all the rest of the sins that are committed against one's neighbor. Therefore, detraction is the most serious, absolutely speaking, of all the sins that are committed against one's neighbor.

**Objection 2:** Detraction seems to be a more serious sin than vilification, since a man is able to repel a vilification but not a hidden detraction. But vilification seems to be a greater sin than adultery, because adultery unites two individuals in one flesh, whereas vilification divides those who were united into many. Therefore, detraction is a greater sin than adultery, which still has a great seriousness among the other sins that are directed against one's neighbor.

**Objection 3:** As is clear from Gregory in *Moralia* 31, vilification arises from anger, whereas detraction arises from envy. But envy is a greater sin than anger. Therefore, detraction is likewise a greater sin than vilification. And so the same conclusion as before follows.

**Objection 4:** A sin is more serious to the extent that it induces a more serious defect. But

detraction induces the greatest defect of all, viz., the blinding of the mind. For Gregory says, “What do detractors do other than blow on the dust and get dirt in their own eyes, so that they see less of the truth?” Therefore, detraction is the most serious of the sins that are committed against one’s neighbor.

**But contrary to this:** To sin by a deed is more serious than to sin by a word. But detraction is a sin involving words, whereas adultery, homicide, and theft are sins involving deeds. Therefore, detraction is not more serious than the other sins against one’s neighbor.

**I respond:** Sins that are committed against one’s neighbor have to weighed in their own right (*per se*) according to the harms that they inflict on the neighbor, since it is because of this that they have the nature of a sin (*rationem culpae*). And the harm is greater to the extent that a greater good is lost.

Now there are three types of human good (*bonum hominis*), viz., the *good of the soul* (*bonum animae*), the *good of the body* (*bonum corporis*), and the *good of exterior possessions* (*bonum exteriorum rerum*). The good of the soul, which is the greatest, cannot be taken away from an individual by anyone else except as an occasional cause (*nisi occasionaliter*)—e.g., by evil persuasion, which does not impose necessity—whereas the other two types of good, viz., the good of the body and the good of exterior possessions, can be taken away from an individual against his will by someone else (*possunt ab alio violenter auferri*).

Now since the good of the body is more important than the good of exterior possessions, the sins by which harms are inflicted on the body are more serious than the sins by which harm is inflicted on exterior possessions. Hence, the most serious of the sins committed against one’s neighbor is *homicide*, by which the life of a neighbor who is already actually existing is taken away; after that, there is *adultery*, which is contrary to the appropriate ordering of human generation, through which there is an entrance into life.

Next come the exterior goods. Among them, reputation (*fama*) is more important than wealth (*divitiae*) because it is closer to the spiritual goods. Hence, Proverbs 22:1 says, “A good name is better than a multitude of riches.” And so by its genus *detractio* is a greater sin than *theft*, though a lesser sin than *homicide* or *adultery*. However, there can be a different order because of aggravating or extenuating circumstances (*propter circumstantias aggravantes vel diminuentes*).

On the other hand, the incidental (*per accidens*) seriousness of a sin has to do with the sinner, who sins more grievously if he sins with deliberation than if he sins out of weakness or carelessness (*ex infirmitate vel incautela*). And on this score sins of speech are somewhat less serious (*habent aliquam levitatem*) because they proceed easily from slips of the tongue without much premeditation.

**Reply to objection 1:** Those who engage in detraction against Christ and impede the faith of His members derogate His divinity, on which the Faith depends. Hence, this is blasphemy and not simple detraction.

**Reply to objection 2:** Vilification is a more serious sin than detraction insofar as it harbors a greater contempt for one’s neighbor—in the same way that, as was explained above (q. 66, a. 9), robbery is a more serious sin than theft.

However, vilification is not a more serious sin than adultery, since the seriousness of adultery is calculated not on the basis of the conjoining of the bodies, but on the basis of the disordering of human generation.

Now the vilifier is not a sufficient cause of enmity in another individual; instead, he divides those who are united only as an occasional cause (*occasionaliter*), viz., insofar as, by presenting someone’s bad points, he separates others, to the extent that it is within his power, from friendship with that individual—even though they are not forced to this by his words. In the same way, a detractor is a murderer as an occasional cause, viz., insofar as by his words he provides someone else with an occasion to hate or disdain his neighbor. It is because of this that it says in *Epistola Clementis* that detractors are murderers, viz., as occasional causes, since, as 1 John 3:15 says, “He who hates his brother is a murderer.”

**Reply to objection 3:** As the Philosopher points out in *Rhetoric* 2, anger seeks to inflict vengeance openly, and so detraction, which is hidden, is not a child of anger in the way that vilification is. Rather, it is a child of envy, tries in some way or other to diminish the glory of one's neighbor.

However, it does not follow from this that detraction is more grievous than vilification, since a greater sin can arise from a lesser vice, in the way that homicide and blasphemy are begotten by anger. For the origin of a sin has to do with one's inclination toward the end, which concerns the 'turning-toward' (*est ex parte conversionis*), whereas the seriousness of a sin has rather to do with the 'turning-away' (*ex parte aversionis*).

**Reply to objection 4:** Since, as Proverbs 15:23 says, "A man rejoices in the word of his own mouth," someone who engages in detraction begins more and more to love and believe what he says—and, as a result, more and more to hate his neighbor and so more and more to recede from cognition of the truth. However, that effect can likewise follow from other sins involving hatred of one's neighbor.

#### Article 4

##### Does a listener who puts up with someone engaging in detraction commit a serious sin?

It seems that a listener who puts up with someone engaging in detraction does not commit a serious sin (*audiens qui tolerat detrahentem non graviter peccet*):

**Objection 1:** No one is obligated more to someone else than to himself. But it is praiseworthy if a man patiently puts up with his own detractors; for in *Super Ezechiel*, homily 9, Gregory says, "Just as we should not, by our curiosity, stimulate the tongues of detractors, lest they perish, so, too, we should tolerate those tongues with equanimity once they have been stimulated by their own malice, in order that our merit might increase." Therefore, one does not sin by not resisting other people's detractions.

**Objection 2:** Ecclesiasticus 4:30 says, "Do not contradict the word of truth in any way." But as was explained above (a. 1), one sometimes engages in detraction by speaking words of truth. Therefore, it seems that a man is not always obligated to resist detractions.

**Objection 3:** No one should impede what is advantageous for others. But detraction is frequently advantageous for those against whom a detraction is directed. For Pope Pius says, "Sometimes detraction is aroused against good men, with the result that the detraction makes humble those whom either the adulation of their families or the favor of others had exalted to the heights." Therefore, one should not hinder detractions.

**But contrary to this:** Jerome says, "Beware against having a prurient tongue or prurient ears, either by detracting others or by listening to those who detract others."

**I respond:** According to the Apostle in Romans 1:32, "It is not only those who commit the sins that are worthy of death, but also those who consent to those who commit the sins." This can happen in two ways: (a) *directly*, viz., when someone induces someone else to sin or is such that the sin pleases him, and (b) *indirectly*, viz., when someone does not resist the sin even though he is able to resist it; and this sometimes happens not because the sin pleases him, but because of some sort of human fear.

Now one should reply that if someone listens to detractions without resisting, it seems that he is consenting to the detractor, and so he becomes a participant in his sin. And if he induces him to engage in the detraction—or, at least, if the detraction pleases him because of his hatred for the individual against whom the detraction is directed—then he sins no less than the detractor, and sometimes more. Hence, Bernard says, "It is not easy for me to say which is more damnable: to detract or to listen to the detractor."

On the other hand, if the sin does not please him but he fails to repel the detractor because of fear

or negligence or even a certain sort of shame, then he does, to be sure, sin, but he sins much less than the detractor, and in most cases this is a venial sin. Still, sometimes it can be a mortal sin, either (a) because it is incumbent upon him in light of his position (*ex officio*) to correct the detractor, or (b) because of some danger that follows upon the detraction or (c) because of the source [of his omission], given that, as was established above (q. 19, a. 3), human fear can sometimes be a mortal sin.

**Reply to objection 1:** No one hears detractions against himself, since, as has been explained (a. 1), bad things that are said about someone who is listening are, properly speaking, vilifications and not detractions.

Still, detractions made against someone can come to his notice if he is told about them by others. And then it is up to his own judgment whether to put up with a loss of reputation—unless, as was explained above, this leads to danger for others. And so one can commend his patience, in that he puts up patiently with detractions against himself.

By contrast, it is not up to his own judgment whether to put up with a loss to someone else's reputation. And so it turns into a sin for him if he does not resist when he is able to resist—for the same reason that one is obligated, as Deuteronomy 22:4 commands, to lift up someone else's ass that is lying prone under its burden.

**Reply to objection 2:** It is not always the case that someone should resist a detractor by disputing with him about falsehood, especially if he knows that what is being said is true. Rather, he should counter (a) by pointing out that the detractor sins by engaging in detraction against his brother, or at least (b) by showing with a frown (*per tristitiam faciei*) that the detraction displeases him. For as Proverbs 25:23 says, "A north wind dissipates the rain, and a frown dissipates the detraction tongue."

**Reply to objection 3:** The advantages that emanate from a detraction fall outside of the intention of the detractor and occur by the ordination of God, who elicits good from every evil. And so detractors are no less to be resisted than robbers or those who oppress others, despite the fact that the merit of those who are oppressed or robbed increases because of their patience.

## QUESTION 74

### Gossiping

Next we have to consider gossiping or invidious whispering (*susurratio*). And on this topic there are two questions: (1) Is gossiping a sin distinct from detraction? (2) Is gossiping a more serious sin than detraction?

#### Article 1

##### Is gossiping or invidious whispering a sin distinct from detraction?

It seems that gossiping or invidious whispering (*susurratio*) is not a sin distinct from detraction (*detractio*):

**Objection 1:** In *Etymologia* Isidore says, “One is called a whisperer (*susurro*) from the sound of the word. For he speaks in someone’s ear (*auris*) rather than to his face, in order to detract (*detrahendo*).” But it belongs to detraction to speak about someone else by detracting him. Therefore, gossiping or whispering is not a sin distinct from detraction.

**Objection 2:** Leviticus 19:16 says, “You shall not be an accuser (*criminator*) or a whisperer (*susurro*) among the people.” But an accuser seems to be the same thing as a detractor. Therefore, gossiping or whispering does not differ from detraction.

**Objection 3:** Ecclesiasticus 28:15 says, “The whisperer (*susurro*) and the double-tongued man (*bilinguis*) are accursed.” But a double-tongued man seems to be the same thing as a detractor, since it belongs to the detractor to speak with two tongues, viz., with one tongue in the other’s absence and a different tongue in his presence. Therefore, the whisperer is the same as the detractor.

**But contrary to this:** A Gloss on Romans 1:29 (“... whisperers, detractors ...”) says, “Whisperers, who plant discord among friends; detractors, who deny or minimize the good points of others.”

**I respond:** Gossiping and detraction agree in their subject matter and also in their form or mode of speaking, since both say bad things about one’s neighbor in a furtive manner. Because of this similarity, the one is sometimes used for the other; hence, a Gloss on Ecclesiasticus 5:16 (“Do not be called a whisperer”) says, “... i.e., a detractor.”

However, they do differ in their aims (*differunt autem in fine*). A detractor intends to denigrate his neighbor’s reputation, and so he mainly proffers those bad points of his neighbor’s that his neighbor can be defamed by or at least have his reputation diminished by. By contrast, the gossipier intends to sever a friendship; this is clear from the Gloss quoted above and from what Proverbs 26:20 says, “When the gossipier is taken away, contentions die down.” And so the gossipier proffers about his neighbor the sort of bad points that can agitate the hearer’s mind against him—this according to Ecclesiasticus 28:11 (“The sinful man troubles friends and introduces enmity among those who are at peace”).

**Reply to objection 1:** Insofar as the whisperer speaks badly of another, he is said to engage in detraction. However, he differs from a detractor by virtue of the fact that he intends not simply to speak badly of someone, but to say anything that can agitate the mind of one individual against another—even if it is something good absolutely speaking and yet appears bad in the sense that it displeases the one he says it to.

**Reply to objection 2:** An accuser (*criminator*) differs from both a gossipier and a detractor. For an accuser is one who publicly charges others with crimes, either by making an accusation against them or by reproaching them (*vel accusando vel conviciando*), and neither of these pertain to the detractor or to the whisperer.

**Reply to objection 3:** A whisperer or gossipier is properly said to be ‘double-tongued’. For since a friendship is between two individuals, the gossipier tries to break up the friendship from both sides and so he uses two tongues for the two individuals, telling each what is bad about the other. This is why

Ecclesiasticus 28:15 says, “The whisperer (*susurro*) and the double-tongued man (*bilinguis*) are accursed,” and why it adds, “They trouble many who are at peace.”

## Article 2

### Is detraction a more serious sin than gossiping?

It seems that detraction is a more serious sin than gossiping:

**Objection 1:** Sins of the mouth consist in someone’s saying bad things. But a detractor says things that are bad *absolutely speaking* about his neighbor, since it is because of such things that infamy arises or that one’s reputation is diminished. By contrast, a gossip does not care about anything but bad *appearances*, i.e., things that displease the hearer. Therefore, detraction is a more serious sin than gossiping.

**Objection 2:** If one takes away someone’s reputation, then he takes away not just one friend, but many friends, since everyone avoids friendship with infamous persons. Hence, 2 Paralipomenon 19:2 says against some individual, “You are joined in friendship with those who hate the Lord.” By contrast, gossiping takes away just a single friend. Therefore, detraction is a more serious sin than gossiping.

**Objection 3:** James 4:11 says, “Whoever detracts his brother detracts the Law and, as a result, detracts God, who is the Lawgiver. And so the sin of detraction seems to be a sin against God, which, as was established above (q. 20, a. 3), is the most serious sort of sin. By contrast, gossiping is a sin against one’s neighbor. Therefore, the sin of detraction is a more serious sin than the sin of gossiping.

**But contrary to this:** Ecclesiasticus 5:17 says, “... and an evil mark of disgrace is on the double-tongued man, but there is hatred, enmity, and vilification for the gossip.”

**I respond:** As was explained above (q. 73, a. 3), a sin against one’s neighbor is more serious to the extent that it inflicts a greater harm on the neighbor, and the harm is greater to the extent that a greater good is taken away. Friends are preeminent among all the other exterior goods, since, as is clear from the Philosopher in *Ethics* 8, no one could live without friends. Hence, Ecclesiasticus 6 says, “There is nothing to compare with a faithful friend.” For even the best sort of reputation, which is taken away by detraction, is necessary mainly in order for a man to be fit for friendship.

And so gossiping is a greater sin than detraction—and a greater sin than vilification as well—because, as the Philosopher says in *Ethics* 8, “A friend is better than honor, and being loved is better than being honored.”

**Reply to objection 1:** The species and seriousness of a sin has to do more with its end than with its material object. And so by reason of its end gossiping is more serious, even though a detractor sometimes says worse things.

**Reply to objection 2:** A good reputation (*fama*) is a disposition for friendship, and a bad reputation (*infamia*) is a disposition for enmity. Now a disposition falls short of that for which it is a disposition. And so one who acts to bring about something that is a disposition for enmity sins less than one who acts directly to induce enmity.

**Reply to objection 3:** Someone who detracts his brother seems to detract the law to the extent that he disdains the precept concerning love of one’s neighbor; someone who tries to shatter a friendship acts directly against this precept. Hence, it is the latter sin that is directed against God in a special way, since, as 1 John 4:8 says, “God is love.” And because of this Proverbs 6:16 says, “Six things there are that the Lord hates, and the seventh his soul detests.” And verse 17 posits as the seventh thing “he who sows discord among his brothers.”

## QUESTION 75

### Derision

Next we have to consider derision (*derisio*). And on this topic there are two questions: (1) Is derision a special sin distinct from the other sins through which harm is inflicted on one's neighbor by words? (2) Is derision a mortal sin?

### Article 1

#### Is derision a special sin distinct from the other sins just discussed?

It seems that derision (*derisio*) is not a special sin distinct from the other sins just discussed:

**Objection 1:** Laughing someone to scorn (*subsannatio*) seems to be the same thing as derision. But laughing someone to scorn seems to belong to vilification (*contumelia*). Therefore, derision does not seem to be distinct from vilification.

**Objection 2:** One mocks (*irridetur*) only something shameful by which a man is embarrassed. But sins of this sort belong to vilification (*contumelia*) if they are said of someone openly, whereas they belong to detraction (*detractio*) or gossiping (*susurratio*) if they are said of someone furtively. Therefore, derision is not a vice distinct from the sins just discussed.

**Objection 3:** Sins of the sort in question are distinguished by the harms that are inflicted on one's neighbor. But no harm other than harm with respect to his honor or his reputation or a loss of friendship is inflicted on one's neighbor by derision. Therefore, derision is not a sin distinct from the sins just discussed.

**But contrary to this:** Mocking is done for fun (*irrisio fit ludo*); hence, it is called 'making fun of' (*illusio*). But none of the sins just discussed is done for fun; rather, they are done in all seriousness (*serio*). Therefore, derision differs from all the sins just discussed.

**I respond:** As was explained above (q. 72, a. 2), sins involving words are judged mainly according to the intention of the speaker. And so sins of this sort are distinguished by the different things the speaker intends against another individual.

Now just as someone who *vilifies* intends to deflate the honor of the one being vilified, and just as someone who *detracts* intends to diminish the good reputation of the one being detracted, and just as someone who *gossips* intends to destroy a friendship, so, too, someone who *mocks* intends that the one being mocked should be embarrassed. And since this end is distinct from the others, it follows that the sin of derision is likewise distinct from the sins just discussed.

**Reply to objection 1:** Mocking (*irrisio*) and derision (*derisio*) agree in their end but differ in their mode, since, as a Gloss on Psalm 2:4 ("He who lives in heaven will mock them"), explains, derision is done with the mouth, i.e., by words and by jeers, whereas laughing someone to scorn (*subsannatio*) is done with a wrinkled nose. Still, this sort of difference does not diversify the species.

However, both of them differ from vilification, in the way that embarrassment differs from being dishonored, since, as Damascene says, embarrassment is "the fear of being dishonored."

**Reply to objection 2:** For a virtuous act one merits respect and a good reputation in the eyes of others, and the glory of a good conscience in his own eyes—this according to 2 Corinthians 1:12 ("Our glory is this: the testimony of our conscience ...").

Hence, conversely, by a shameful, i.e., vicious, act a man's honor and reputation are destroyed in the eyes of others, and it is in service of this goal that the vilifier and the detractor speak out about another individual. But in his own eyes he loses, by the shameful things that are spoken about, the glory of conscience through a certain confusion and embarrassment, and this is why one who derides speaks of shameful things. And so it is clear that derision shares in the same subject matter as the vices already discussed, but differs in its end or goal.

**Reply to objection 3:** The security of conscience and its peacefulness (*quies*) are a great good—this according to Proverbs 15:15 (“A secure mind is like a continual feast”). And so one who disquiets an individual’s conscience by confounding him inflicts a special sort of harm on him. Hence, derision is a special sin.

## Article 2

### Is derision a mortal sin?

It seems that derision cannot be a mortal sin:

**Objection 1:** Every mortal sin is contrary to charity. But derision does not seem to be contrary to charity, since derision is sometimes acted out for fun among friends and so is also called ‘kidding’ (*delusio*). Therefore, derision cannot be a mortal sin.

**Objection 2:** The sort of derision that is the greatest is that which is done to insult God. But not every instance of derision that verges on insulting God is a mortal sin. Otherwise, anyone who fell back into a venial sin of which he had repented would commit a mortal sin; for Isidore says, “One who still does what he is repenting of is a mocker and not a penitent.” Similarly, it would follow that every instance of pretending (*simulatio*) is a mortal sin, since, as Gregory explains in *Moralia*, ‘ostrich’ (*struthio*) signifies the pretender who is mocking the horse (*equum*), i.e., the just man, and its rider (*ascensor*), i.e., God.

**Objection 3:** Vilification and detraction seem to be more serious sins than derision, since it is more significant to do something in all seriousness than to do it in jest. But not every instance of detraction or vilification is a mortal sin. Therefore, *a fortiori*, not every instance of derision is a mortal sin.

**But contrary to this:** Proverbs 3:34 says, “He scoffs at the scoffers (*ipse deridet illusores*).” But as is clear from what is said in Psalm 2:4 (“He who lives in heaven will mock them”), God’s scoffing is equivalent to punishing someone eternally for mortal sin. Therefore, derision is a mortal sin.

**I respond:** Mocking (*irrisio*) is done only with respect to someone’s bad points or defects. Now if a bad point is significant (*magnum*), then it is taken seriously and not in jest. Hence, if one turns to kidding (*lusum*) or laughter (*risum*)—from which the names ‘mock’ (*irrisio*) and ‘make fun of’ (*illusio*) are taken)—this is because the defect in question is being taken as something insignificant (*parvum*).

Now there are two ways in which a bad point can be taken to be insignificant, (a) in its own right (*secundum se*) or (b) by reason of the person (*ratione personae*):

(a) When someone mocks or makes fun of another person’s bad point or defect (*malum vel defectum in ludum vel risum ponit*) that is insignificant *in its own right*, then this by its genus is a venial and slight sin.

(b) But when a bad point is taken to be insignificant *by reason of the person*—in the way that we normally think of the defects of children and of those who are mentally slow (*sicut defectus puerorum et stultorum*)—then to mock or make fun of someone is to belittle him altogether and to think him so inferior that his bad points are not worth caring about, but should instead be held up to ridicule. And in such a case derision is a mortal sin. Indeed, it is worse than vilification, which is done similarly in the open, since vilification seems to take the other individual’s bad points seriously, whereas the mocker makes fun of them, and so the contempt and the dishonoring seem to be greater.

Accordingly, to mock someone is a grave sin, and it is more grave to the extent that more respect is due to the person who is being mocked. This is why it is most grievous to mock God and the things of God—this according to Isaiah 37:23: “Whom have you reproached? And whom have you blasphemed? And against whom have you raised your voice?” And later it adds: “Against the Holy One of Israel.”

Next in line is mocking one's parents. Hence, Proverbs 30:17 says, "Let the eye that mocks his father and despises his mother's giving birth to him be gouged out by the ravens of the rapids and eaten by the children of the eagle."

Next in gravity is deriding the just, since honor is the reward of virtue. And against derision of this sort Job 12:4 says, "The simplicity of the just man is laughed to scorn." Indeed, this kind of derision is especially harmful, since men are hindered by it from doing good—this according to Gregory ("... who, when they see good things arising in the acts of others, immediately pluck them out with the hand of a destructive reproach").

**Reply to objection 1:** Fun (*ludus*) does not imply anything contrary to charity with respect to an individual with whom one is having fun (*cum quo luditur*), and yet, as has been explained, it can imply something contrary to charity with respect to an individual whom one is making fun of out of contempt (*de quo luditur propter contemptum*).

**Reply to objection 2:** An individual who falls back into a sin of which he has repented, and an individual who is a pretender, are mocking God not expressly, but, as it were, interpretively, viz., insofar as they behave in the manner of one who is deriding. Nor is it the case that by committing a venial sin one is falling back or pretending absolutely speaking; rather, he is doing it dispositively and incompletely (*dispositive et imperfecte*).

**Reply to objection 3:** By its nature derision is something less serious than detraction or vilification, since it implies playfulness and not contempt. However, as has been explained, sometimes it contains more contempt than even vilification does. And in such a case it is a grave sin.

## QUESTION 76

### Malediction

Next we have to consider malediction or cursing (*maledictio*). And on this topic there are four questions: (1) Can one licitly engage in malediction against a man? (2) Can one licitly engage in malediction against a non-rational creature? (3) Is malediction a mortal sin? (4) How does malediction compare to the other sins [involving words]?

#### Article 1

##### Is it licit to engage in malediction against anyone?

It seems that it is not licit to engage in malediction against anyone:

**Objection 1:** It is not licit to depart from a command of the Apostle's in which, as 2 Corinthians 13:3 claims, Christ was speaking. But in Romans 12:14 he commands, "Bless, and do not curse." Therefore, it is not licit to engage in malediction against anyone.

**Objection 2:** Everyone is obligated to bless God—this according to Daniel 3:82 ("Bless the Lord, you children of men"). But as James 3:9ff. shows, blessing God and cursing men cannot proceed from the same mouth. Therefore, no one is permitted to engage in malediction against anyone.

**Objection 3:** Whoever curses another seems to will evil for him, either the evil of sin or the evil of punishment, since a curse (*maledictio*) seems to be an invocation of evil (*imprecatio*). But it is illicit to desire evil for another—just the opposite, it is necessary to pray that everyone be liberated from evil. Therefore, no one is permitted to engage in malediction.

**Objection 4:** Through his obstinance the Devil is especially subject to malice. But no one is permitted to curse the Devil, just as no one is permitted to curse himself; for Ecclesiasticus 21:30 says, "When the wicked man curses the Devil, he curses his own soul." Therefore, *a fortiori*, no one is permitted to engage in malediction against a man.

**Objection 5:** A Gloss on Numbers 23:8 ("How shall I curse him whom the Lord has not cursed?") says, "There cannot be a just cause for cursing when the sinner's sentiments (*affectus*) are unknown." But a man cannot know the sentiments of another man; nor can he know whether the other man has been cursed by God. Therefore, no one is permitted to engage in malediction against any man.

**But contrary to this:** Deuteronomy 27:26 says, "Cursed is he who does not remain within the words of the Law." Again, as 4 Kings 2:24 relates, Elijah cursed the boys who were mocking him.

**I respond:** Malediction (*maledicere*) is the same as speaking evil (*malum dicere*). Now there are three ways in which speaking is related to what is spoken:

(a) In one way, they are related by the *mode of enunciation*, as when someone expresses himself in the *indicative mood*. And in this sense speaking evil (*maledicere*) is nothing other than relating something bad about someone else—and this pertains to *detraction*. Hence, sometimes those who speak evil (*maledici*) are called detractors.

(b) In a second way, the speaking is related in the *mode of a cause* to what is spoken. To be sure, this belongs primarily and principally to God, who made all things by His word—this according to Psalm 32:9 ("He spoke, and they were made"). But it belongs in a derivative way (*consequenter*) to men, who by their word move others to do something by commanding them. And for this purpose verbs of the *imperative mood* were instituted.

(c) In the third way, the speaking is related to what is spoken as *the expression of a sentiment belonging to one who wishes for* what is expressed by the words. And for this purpose verbs of the *optative mood* were instituted.

Therefore, leaving aside the first way of speaking evil, which occurs through the simple enunciation of evil, we have to consider the other two ways. Here one should notice that, as is clear from what was

said above (*ST* 1-2, q. 20, a. 3), doing a thing and wishing for that thing track one another with respect to their goodness and badness. Hence, in those last two ways in which evil is spoken, viz., in the mode of one *commanding* what is evil and in the mode of one *wishing for* what is evil, something is licit or illicit for the same reason. For instance, if someone commands or wishes for something evil for another insofar as it is evil—in the sense of intending the very evil itself—then speaking evil in either of these ways will be illicit. And this is what it is to speak evil *per se* (*hoc est maledicere per se loquendo*).

By contrast, if someone commands or hopes for what is evil for another insofar as it is something good (*sub ratione boni*), then in such a case it is licit to speak evil. Nor will this be an instance of speaking evil *per se*; instead, it will be an instance of speaking evil incidentally (*per accidens*), since the speaker's principal intention is aimed at the good rather than at the evil. Now there are two types of good by reference to which one can speak an evil by commanding it or wishing for it:

(a) Sometimes the evil is spoken by reference to *the just* (*sub ratione iusti*). And this is the way in which a judge licitly speaks evil to the one upon whom he commands a punishment to be inflicted. This is also the way in which the Church speaks evil in anathematizing someone. So, too, the prophets, in conforming their will to God's justice, sometimes call down bad things on sinners (even though imprecations of this sort can also be understood the manner of a prediction).

(b) By contrast, sometimes the evil is spoken by reference to *the useful* (*sub ratione utilis*)—for instance, when someone wishes for a sinner to suffer some illness or some obstacle, or in order that he himself might be made better, or at least in order that he might stop being harmed by others.

**Reply to objection 1:** The Apostle prohibits speaking evil *per se*, while intending the evil.

**Reply to objection 2:** A similar reply should be given to the second objection.

**Reply to objection 3:** To wish evil for someone as a good is not contrary to the sentiment by which someone wishes good absolutely speaking for someone; just the opposite, it conforms to that sentiment.

**Reply to objection 4:** In the case of the Devil, one must consider his *nature* and his *sin*. His *nature* is good and from God, and so it is not licit to curse it. By contrast, his *sin* has to be cursed—this according to Job 3:8 (“Let them curse it who curse the day”). However, when a sinner curses the Devil because of the Devil's sin, he judges himself to be worthy of malediction for a similar reason. Accordingly, he is said to curse his own soul.

**Reply to objection 5:** Even if a sinner's sentiment is not seen in itself, it can nonetheless be perceived from a manifest sin for which a punishment is to be inflicted. In the same way, even though one cannot know whom God has cursed as far as final reprobation is concerned, one can nonetheless know who is cursed by God as far as guilt for a present sin is concerned.

## Article 2

### Is it licit to engage in malediction against a non-rational creature?

It seems that it is not licit to engage in malediction against a non-rational creature:

**Objection 1:** Malediction seems to be licit mainly insofar as it relates to punishment. But a non-rational creature is not susceptible to either sin or punishment. Therefore, it is not licit to engage in malediction against it.

**Objection 2:** The only thing found in a non-rational creature is the nature that God has made. But it is not licit to curse such a nature—even, as was explained above (a. 1), in the case of the Devil. Therefore, it is not in any way licit to engage in malediction against a non-rational creature.

**Objection 3:** A non-rational creature is either something permanent like a body or something transient like time. But as Gregory says in *Moralia* 4, “It is useless to curse something that does not exist,

but it would be vicious to curse it if it did exist.” Therefore, it is not in any way licit to engage in malediction against a non-rational creature.

**But contrary to this:** As Matthew 21:9 relates, our Lord cursed a fig tree (*ficulnea*); and as Job 3:1 tells us, “Job cursed his day.”

**I respond:** Blessing or cursing (*benedictio vel maledictio*) properly belong to that entity which things can happen well or badly to, viz., the rational creature, whereas good or bad is said to happen to non-rational creatures in relation to the rational creature, for the sake of which they exist.

Now there are many ways in which non-rational creatures are ordered toward the rational creature:

(a) In one way, *in the manner of assisting him (per modum subventionis)*, viz., insofar as human needs are met by non-rational creatures. And this is why in Genesis 3:17 the Lord says, “Cursed is the earth in your work,” in order that the man might be punished by the barrenness of the earth. This is also the way to understand what Deuteronomy 28:5 says: “Blessed shall be your barns ...,” and later (28:17), “Cursed shall be your barn ...” So, too, according to Gregory’s commentary, David cursed the mountains of Gelboe (2 Kings 1:21).

(b) In a second way, the non-rational creature is ordered toward the rational creature *in the manner of signifying him (per modum significationis)*. And this is the why our Lord cursed the fig tree insofar as it signified Judea.

(c) In a third way, the non-rational creature is ordered toward the rational creature *in the manner of containing him*—more specifically, in the manner of time or place. And this is why Job cursed the day of his own birth because of original sin, which he had contracted in being born, and because of its subsequent penalties. And this is also why David is understood to have cursed the mountains of Gelboe, as it says in 2 Kings 1:21, viz., for the sake of slaughtering the people who lived in those mountains.

By contrast, to curse non-rational creatures insofar as they are creatures of God is a sin of blasphemy. And to curse them considered in their own right is useless and vain and, as a result, illicit.

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

### Article 3

#### Is malediction a mortal sin?

It seems that malediction is not a mortal sin:

**Objection 1:** In his homily on the fire of purgatory, Augustine counts malediction among the slight sins (*inter levia peccata*). But these are venial sins. Therefore, malediction is a venial sin and not a mortal sin.

**Objection 2:** Things that proceed from a slight movement of the mind (*ex levi motu mentis*) do not seem to be mortal sins. But sometimes malediction proceeds from a slight movement. Therefore, malediction is not a mortal sin.

**Objection 3:** It is more serious to act in an evil way than to speak evil. But to act in an evil way is not always a mortal sin. Therefore, *a fortiori*, to engage in malediction is not always a mortal sin.

**But contrary to this:** Nothing except mortal sin excludes one from the kingdom of God. But malediction excludes one from the kingdom of God—this according to 1 Corinthians 6:10 (“Neither those who engage in malediction nor those who engage in violence (*neque maledici neque rapaces*) will possess the kingdom of God”). Therefore, malediction is a mortal sin.

**I respond:** The sort of malediction we are now talking about is that through which something evil is spoken either by commanding it or by wishing for it. Now to wish for evil for another or to move someone toward evil for another is in its own right (*secundum se*) incompatible with charity, by which

we love our neighbor by willing the good for him. And so it is by its genus a mortal sin. And the sin is more grievous to the extent that we are more obliged to love and revere the person whom we are speaking evil against. This is why Leviticus 20:9 says, “Let him who curses his father and his mother die the death.”

However, it is possible for a word spoken in malediction to be a venial sin, either (a) because of the insignificance of the evil called down upon the other in the malediction, or (b) because of the sentiment of the one who pronounces the words of malediction, when he pronounces such words from a slight movement or for fun or without deliberation (*ex subreptione*). For, as was explained above (q. 72, a. 2), sins involving words are weighed especially on the basis of the sentiment behind them (*maxime ex affectu pensantur*)

**Reply to objection 1 and objection 2 and objection 3:** The replies to the objections are clear from what has been said.

#### Article 4

##### Is malediction a more serious sin than detraction?

It seems that malediction is a more serious sin than detraction:

**Objection 1:** Malediction seems to be a certain sort of blasphemy. This is clear from what is said in Jude 9: “When Michael the Archangel, disputing with the Devil, contended over the body of Moses, he did not dare to bring against him the judgment of blasphemy ...,” and, according to a Gloss, ‘blasphemy’ is here being taken for ‘malediction’. But blasphemy is a more serious sin than detraction. Therefore, malediction is a more serious sin than detraction.

**Objection 2:** As was explained above (q. 73, a. 3), homicide is more serious than detraction. But malediction is a sin equal to homicide; for in *Super Matthaicum* Chrysostom says, “When you say, ‘Curse him and destroy his house and make everything perish,’ you are no different from a murderer.” Therefore, malediction is more serious than detraction.

**Objection 3:** A cause is greater than a sign. But one who engages in malediction causes evil by his command, whereas one who engages in detraction merely signifies an already existent evil. Therefore, the one who engages in malediction sins more grievously than the one who engages in detraction.

**But contrary to this:** Detraction cannot be done well. But as is clear from what was said above (a. 1), malediction can be done both well and badly. Therefore, detraction is more serious than malediction.

**I respond:** As was established in the First Part (*ST* 1, q. 48, a. 5), there are two kinds of evil, viz., *the evil of fault or sin (malum culpae)* and *the evil of punishment (malum poenae)*. As was shown in the same place, the evil of fault is worse. Hence, to speak the evil of fault is worse than to speak the evil of punishment, as long as the mode of speaking is the same. Therefore, to speak the evil of fault belongs to vilification, gossip, detraction, and even derision, whereas what belongs to the one who engages in malediction, in the sense in which we are now talking about it, is to speak the evil of punishment but not the evil of fault (except perhaps as a punishment).

However, the mode of speaking is not the same. For the four vices just mentioned involve speaking the evil of fault only by enunciating it, whereas engaging in malediction involves speaking the evil of punishment either by causing it in the manner of a command or by wishing for it. Now the very enunciation of fault is a sin (*peccatum*) insofar as some harm is thereby inflicted on one’s neighbor. And, all other things being equal, it is more grave to *inflict* harm than it is to *desire* harm. Hence, an instance of detraction, according to its common definition, is a more serious sin than an instance of malediction that expresses a simple desire. On the other hand, since a malediction which is pronounced in the manner

of a command has the nature of a cause, it can be (a) more serious than detraction if it inflicts more harm than a diminishment of someone's reputation or (b) less serious than detraction if it inflicts less harm.

Now all these points have to be taken in accord with what belongs *per se* to the nature of these vices. There are also other things which can be considered incidentally (*per accidens*) and which either add to or diminish the aforementioned vices.

**Reply to objection 1:** Speaking evil to a creature insofar as it is a creature redounds upon God and so it has *per accidens* the character of blasphemy. However, this is not so if the creature is cursed because of some fault. And the same argument holds for detraction.

**Reply to objection 2:** As has been explained, malediction taken in one sense includes the desire for something evil. Hence, if the one who engages in malediction wishes for someone to be killed, then he does not differ from a murderer in his desire. However, he does differ from a murderer insofar as the exterior act adds something to the act of will.

**Reply to objection 3:** This objection goes through for malediction insofar as the malediction involves a command.

## QUESTION 77

### Fraud in Buying and Selling

Next we have to consider sins that have to do with voluntary exchanges (*de peccatis quae sunt circa voluntarias commutationes*): first, fraud that is committed in buying and selling (*fraudulentia quae committitur in emptionibus et venditionibus*) (question 77); and, second, usury, which occurs in the case of loans (*usura, quae fit in mutuis*) (question 78). As regards other kinds of voluntary exchanges, there is no species of sin that is distinct from robbery or theft.

On the first topic there are four questions: (1) Concerning unjust selling on the part of the price (*ex parte pretii*), is it licit to sell something for more than it is worth? (2) What about unjust selling on the part of the thing sold (*ex parte rei venditae*)? (3) Is the seller obligated to reveal the defects of an item being sold? (4) Is it licit to sell something through trading for more than it was bought for?

### Article 1

#### Can someone licitly sell an item for more than it is worth?

It seems that someone can licitly sell an item for more than it is worth:

**Objection 1:** What is just in the exchanges of human life is determined by civil laws. But according to those laws it is licit for the buyer and the seller to deceive one another, and this occurs to the extent that (a) the seller sells an item for more than it is worth and (b) the buyer buys an item for less than it is worth. Therefore, it is licit for someone to sell an item for more than it is worth.

**Objection 2:** What is common to everyone seems to be natural and not to be a sin. But as Augustine relates in *De Trinitate* 13, the dictum of a certain comedian was accepted by everyone, viz., “You want to buy low and sell high (*vili vultis emere et care vendere*).” This is likewise consonant with what is said in Proverbs 20:14, “‘It’s bad, it’s bad!’, says every buyer; and when he has gone his way, then he boasts.” Therefore, it is licit to sell something for more than it is worth and to buy something for less than it is worth.

**Objection 3:** It does not seem illicit if something that ought to be done as a demand of moral uprightness (*ex debito honestatis*) is done by mutual agreement (*ex conventionione*) instead. But according to the Philosopher in *Ethics* 8, in a friendship of utility compensation ought to be made in accord with the utility gained by the one who receives the benefit, and this advantage sometimes exceeds the value of the thing handed over—as happens when someone is in great need of a certain thing in order to avoid a danger or in order to take advantage of an opportunity. Therefore, in contracts of buying and selling it is licit to hand something over for a higher price than it is worth.

**But contrary to this:** Matthew 7:12 says, “Do unto men whatever you want them to do unto you.” But no one wants to be sold a thing for a higher price than it is worth. Therefore, no one should sell a thing to another for a higher price than it is worth (*nullus debet alteri vendere rem carius quam valeat*).

**I respond:** To resort to fraud in order to sell something for more than a just price is altogether a sin, insofar as one deceives his neighbor to the neighbor’s loss. Hence, in *De Officio* Tully says, “Contracts should be entirely free from mendacity; the seller should not hire a bidder, nor should the buyer hire anyone to bid against him.”

However, if there is no fraud involved, then there are two ways in which we can talk about buying and selling:

(a) We can talk about them *in their own right (secundum se)*. On this score buying and selling seem to have been introduced for the common advantage of both the buyer and the seller, provided that, as is clear from the Philosopher in *Politics* 1, the buyer needs an item that belongs to the seller, and vice versa. Now what has been introduced for their common advantage should not be more of a burden for the one than for the other. And so the contract between them should be set up according to an equality or balance

in the items involved. But the quantity of the items used by men is measured by a given price, and, according to *Ethics 5*, this is why currency (*numisma*) was invented. And so if either (a) the price exceeds the quantity of the item's worth or, conversely, (b) the item exceeds the price, then the balance of justice is destroyed. And so to sell an item for more than it is worth or to buy it for less than it is worth is in its own right (*secundum se*) unjust and illicit.

(b) In a second way, we can talk about buying and selling insofar as they fall incidentally (*per accidens*) to the advantage of the one individual and to the detriment of the other, e.g., when one of them very much needs to have a certain item and the other suffers if he is deprived of it. And in such a case the just price will have to do not only with the item that is being sold, but also with the loss that the seller incurs by selling it. And so the item will be able to be sold licitly for more than it is worth in its own right (*plus quam valeat secundum se*), even though it is not being sold for more than it is worth to the one who now has it. However, if someone is helped a lot by the item that he receives from another, whereas the individual who is selling it does not suffer a loss by being deprived of that item, then he should not sell it for more than it is worth (*non debet eam supervendere*). For in that case the advantage that accrues to the other individual comes not from the seller but from the buyer's own situation instead, and no one should sell to another what does not belong to him, even if he can licitly sell to him a loss that he himself suffers. Still, someone who is helped a lot by the item that he receives from the other can of his own free will give something extra to the seller, and this is a matter of his own moral uprightness (*honestas*).

**Reply to objection 1:** As was explained above (*ST 1-2*, q. 96, a. 2), human law is given to a people many of whom many are deficient in virtue, and it is not given only to the virtuous. And so human law was unable to prohibit everything that is contrary to virtue. Instead, it is enough for it to prohibit those things that destroy the common life of men, while there are other things that it establishes as licit, not in the sense that it approves of them, but in the sense that it does not punish them.

So, then, the law establishes it as something licit and not incurring a punishment if, without fraud, a seller sells his item for more than it is worth or if a buyer buys an item for less than it is worth—unless the excess is too great, since in such a case even human law forces one to make restitution, e.g., if someone were deceived about the amount of a just price by more than fifty percent (*si aliquis sit deceptus ultra dimidiam iusti pretii quantitatem*).

However, as far as divine law is concerned, nothing contrary to virtue remains unpunished. Hence, according to divine law it is considered illicit if the balance of justice is not observed in buying and selling. And the one who has more [than he should] is obligated to compensate the one who has suffered a loss—if the loss is significant. I add this last point, because the just price of items is sometimes not fixed with precision, but instead involves an estimate, so that a small addition or subtraction does not seem to undermine the balance of justice.

**Reply to objection 2:** As Augustine says in the same place, “That comedian, either because he saw himself wanting to buy low and sell high, or because he experienced others wanting to buy low and sell high, believed that this was common to everyone. But since it is in reality a vice, each individual is able to acquire the sort of justice by which he resists and conquers it.” And he gives the example of someone who paid a just price for a certain book to someone who, because of his ignorance, was asking for a lower price. Hence, it is clear that the ‘common desire’ in question proceeds from vice rather than from nature. And so this desire is common to the many individuals who are walking along the broad path of vice.

**Reply to objection 3:** What is mainly considered in commutative justice is the equality or balance of things. By contrast, in a friendship of utility what is mainly considered is the equality of utility, and so compensation should be made according to perceived utility. However, in the case of buying compensation should be made according to the balance or equality of the things.

## Article 2

### Is a sale rendered unjust and illicit by a defect in the item sold?

It seems that a sale is not rendered unjust and illicit by a defect in the item sold:

**Objection 1:** Other aspects of an item should be counted as less important than the its substantial species. But the sale of an item does not seem to be rendered illicit because of a defect in the substantial species, e.g., if instead of genuine silver or gold someone sells alchemistic silver or gold, which is suitable for all the human uses for which silver and gold are needed, e.g., for vessels and other things of this sort. Therefore, *a fortiori*, a sale will not be illicit if there are defects in other aspects of an item.

**Objection 2:** A defect that belongs to an item and that has to do with quantity seems especially contrary to justice, which consists in an equality or balance. But quantity is known by means of a measure, and as is clear from the Philosopher in *Ethics 5*, the measures of the items that come into human use are not fixed determinately, but are greater in some places and less in others. Therefore, it is impossible to avoid defects on the part of an item being sold. And so it seems that a sale is not thereby rendered illicit.

**Objection 3:** It counts as a defect in an item if it lacks some appropriate quality. But extensive scientific knowledge is required in order to have cognition of an item's quality, and most sellers lack such knowledge. Therefore, a sale is not rendered illicit because of a defect in the item sold.

**But contrary to this:** In *De Officio* Ambrose says, "It is an obvious rule of justice that a good man should not depart from the truth, or inflict an unjust loss on anyone, or have any of his possessions connected with fraud."

**I respond:** There are three sorts of defects that can be considered in an item that is sold:

The first sort of defect has to do with the *species* of the item that is sold. And if a seller knows of this defect in an item that he sells, then he is committing fraud, and so the sale is rendered illicit. And it is this that Isaiah 1:22 addresses against certain individuals: "Your silver is turned into dross; your wine is diluted with water." For what has become a mixture (*quod permixtum est*) suffers a defect with respect to its species.

The second sort of defect has to do with *quantity*, which is known through a measuring instrument (*mensura*). And so if in a sale someone knowingly uses a defective instrument of measure, then he commits fraud and the sale is illicit. Hence, Deuteronomy 25:13-14 says, "You shall not have diverse weights in your bag, a greater and a lesser. Neither shall there be in you house a bigger bushel and a smaller." And later (25:16) it adds, "For the Lord abhors whoever does these things, and He loathes every injustice."

The third sort of defect has to do with *quality*, e.g., if one sells a diseased animal as if it were healthy. If someone does this knowingly, then he is committing fraud in the sale, and so the sale is illicit.

And in all such cases, not only does one sin by making an unjust sale, but he is also obligated to make restitution.

However, if, outside his knowledge, one of the aforementioned defects exists in the item sold, then the seller does not sin, since, as is clear from what was said above (q. 59, a. 2), he does something that is unjust *materially*, but his *action* is nonetheless not unjust. Still, once he becomes aware of the defect, he is obligated to compensate the buyer for his loss.

And what has been said about the seller should also be understood to apply on the side of the buyer. For it sometimes happens that the seller believes his own item to be less valuable with respect to its species. For instance, if someone is [unknowingly] selling gold in the place of copper, then if the buyer realizes this, he is buying it unjustly and is obligated to make restitution. And the same line of reasoning holds for defects with respect to quality and quantity.

**Reply to objection 1:** Gold and silver are valuable not only because of their usefulness for the

vessels that are fashioned from them or because of other things of this sort, but also because of the dignity and purity of their substance. And so if the gold or silver made by alchemists does not have the genuine species of gold and silver, then the sale is fraudulent and unjust. This is so especially because genuine gold and silver have by their natural operation other uses that do not belong to the specious gold produced through alchemy. For instance, gold has the property of giving joy and is medicinally helpful against certain diseases. Again, it can be put into operation more frequently, and genuine gold preserves its purity for a longer time than does specious gold.

However, if the gold made through alchemy were genuine gold, then it would not be illicit to sell it in place of real gold, since, as Augustine points out in *De Trinitate* 3 about things done through the art of the demons, nothing prevents an art from using natural causes to produce effects that are natural and genuine.

**Reply to objection 2:** The measures assigned to items for sale are bound to be diverse in diverse places because of the differences in the abundance and scarcity of the items. For in places where the items are more abundant, the measures are normally greater. However, in each place it belongs to the leaders of the city to determine what the just measures are for items put up for sale, taking into account the situation with respect to the places and the items. And so one is not permitted to disregard the measures that have been instituted by public authority or by custom.

**Reply to objection 3:** As Augustine explains in *De Civitate Dei* 11, the value of items for sale is thought of not as relative to the level of their nature—since sometimes a horse is sold for more than a servant—but relative to how men are going to use the item. And so the seller or buyer do not have to know the hidden qualities of the item sold; rather, they have to know only about those qualities by which the item is rendered fit for the uses men put it to, e.g., that a horse is strong and runs well, and similarly for the rest. But a seller or buyer can easily ascertain qualities of this sort.

### Article 3

#### Is a seller obligated to reveal the defects of an item he sells?

It seems that a seller is not obligated to reveal the defects of an item he sells (*venditor non teneatur dicere vitium rei venditae*):

**Objection 1:** Since the seller is not forcing the buyer to buy, it seems that the buyer takes on the item that he buys by his own judgment. But judgment concerning a thing and knowledge of it belong to the same individual. Therefore, it seems that it should not be imputed to the seller if the buyer is mistaken in his judgment and makes a purchase precipitately, without a diligent examination of the item's condition.

**Objection 2:** It seems stupid for someone to do something by which his own action is impeded. But if a seller reveals the defects of an item to be sold, then he is impeding his own selling; for in *De Officio* Tully introduces someone who says, "What could be more ridiculous than if, by order of the owner, a public advertiser were to cry out, 'I am offering my infested house for sale!'" Therefore, a seller is not obligated to reveal the defects of an item he sells.

**Objection 3:** It is more necessary for a man to know the way of virtue than to know the defects of items that are being sold. But a man is not obligated to give advice to everyone and to proclaim to everyone the truth about the things that pertain to virtue, even though he ought not to proclaim falsehoods [about them] to anyone. Therefore, *a fortiori*, a seller is not obligated to reveal the defects of an item being sold, as if he were in effect giving advice to the buyer.

**Objection 4:** If one were obligated to reveal defects in an item being sold, this would be only in order to lower the price. But sometimes the price would be lowered for some other reason, even without

any defect in the item sold. For instance, if a seller is bringing wheat to market in a place where there is a shortage of grain (*caestia frumenti*), he knows that many sellers might come bringing wheat; and if this were known by the buyers, then they would pay a lower price. However, it seems unnecessary for the seller to reveal this. Therefore, by parity of reasoning, neither is it necessary for him to reveal defects in the item being sold.

**But contrary to this:** In *De Officiis* Ambrose says, “In the case of contracts, the defects of the items that go up for sale must be stated; and if the seller does not reveal these defects, the contracts are voided because of fraudulent action, even if the items have already passed into the legal possession of the buyer.”

**I respond:** It is always illicit to expose someone to an occasion for danger or an occasion for suffering a loss, even though it is not necessary that a man always give another individual help or advice that pertains to some sort of well-being on his part. Instead, this is necessary only in determinate cases, e.g., when the other individual is under his care, or when that individual cannot be helped by anyone else.

Now a seller, in proposing an item to be sold, exposes the buyer to an occasion for suffering a loss or an occasion for danger by the very fact that he offers him a defective item, given that the buyer can suffer a loss or some sort of danger because of the item’s defect—(a) a *loss*, that is, if, because of its defectiveness, the item put up for sale has less value, whereas the seller does nothing at all to reduce the price because of the defect; (b) a *danger*, if, say, because of the defect the use of the item is rendered difficult or dangerous, e.g., if one sells someone a lame horse as a fast horse, or a ruined house as a sound house, or rotten or poisonous food as good food. Hence, if defects of this sort are hidden and the seller does not reveal them, then the sale will be illicit and fraudulent, and the seller is obligated to compensate for the loss.

On the other hand, if (a) the defects are manifest—e.g., when a horse is one-eyed—or when others can make use of the item even if the seller is not competent to use it (*cum usus rei, etsi non competat venditori, potest tamen esse conveniens aliis*), and if (b) because of a defect of this sort the seller lowers the price as much as is necessary, then he is not obligated to make a public display of the item’s defects. For in light of such a defect, the buyer might want to lower the price more than it should be lowered. Hence, the seller can licitly take his own indemnity into account by remaining silent about the defects of the item.

**Reply to objection 1:** A judgment can be made only about what is manifest, since, as *Ethics* 1 says, “Each individual judges what he knows.” Hence, if the defects of an item put up for sale are hidden, then if they are not made manifest by the seller, judgment is not adequately remitted to the buyer.

However, things would be otherwise if the defects were made manifest.

**Reply to objection 2:** No one has to announce the defects of an item up for sale through a public advertiser ahead of time, since if he were to reveal the defects ahead of time, the buyers might be scared off from buying the item even while they were still ignorant of other characteristics that make it good and useful.

However, the defects should be revealed to each individual, one by one, who comes forward to buy it and who can at the same time compare all the characteristics, good and bad, to one another. For nothing prevents an item from being defective in some aspects and useful in many others.

**Reply to objection 3:** Even though a man is not obligated, absolutely speaking, to proclaim to every man the truth about what pertains to the virtues, he would nonetheless be obligated to proclaim the truth in a case where, if he did not proclaim the truth, his action would, to the detriment of virtue, pose a danger to another. And so it is in the case under discussion.

**Reply to objection 4:** An item’s defects make the item less valuable *in the present* than it seems to be, whereas in the example described in the objection the item is expected to be of less value *in the future* because of an impending arrival of merchants that the buyers know nothing about. Hence, a seller who sells his item at the price that he finds does not seem to be acting contrary to justice if he does not

expound upon the future.

However, if he were to expound upon the future or to lower the price, then he would be a man of more abundant virtue—even though he does not seem to be obligated to do this by a demand of justice.

#### Article 4

##### Is one permitted, by trading, to sell something for more than he bought it for?

It seems that one is not permitted, by trading (*negotando*), to sell something for more than he bought it for (*non liceat negotando aliquid carius vendere quam emere*):

**Objection 1:** In *Super Matthaeum* 21:12 Chrysostom says, “He who buys a thing in order that he might sell it whole and unchanged at a profit is the trader who is cast out of God's temple.” And Cassiodorus, commenting on Psalm 70:15 (“Because I have not known learning”—or “trading,” according to another translation), says the same thing: “What is trading except buying low and wanting to sell high?” And he adds, “The Lord casts such traders out of His temple.” But no one is cast out of the temple except because of some sin. Therefore, trading of this sort is a sin.

**Objection 2:** As seems apparent from what has been said (a. 1), it is contrary to justice for someone to sell an item for more than it is worth or to buy it for less than it is worth. But someone who, in trading, sells an item for more than he bought it for must either buy it for less than it is worth or sell it for more than it is worth. Therefore, this cannot be done without sin.

**Objection 3:** Jerome says, “As for the clerical trader who has become rich from having been poor and famous from having been unknown, avoid him like a plague.” But trading does not seem to have been forbidden for clerics except because it is a sin. Therefore, it is a sin to buy something low and to sell it high by trading.

**But contrary to this:** In commenting on Psalm 70:15 (“Because I have not known learning”) Augustine says, “The trader who is greedy to make acquisitions blasphemes over his losses, and he lies and swears falsely about the prices of things. But these are vices of the man and not the art, which can be practiced without these vices.” Therefore, trading is not illicit in its own right.

**I respond:** It pertains to traders to engage in exchanges of things. Now as the Philosopher points out in *Politics* 1, there are two sorts of exchanges of things:

The first sort of exchange is, as it were, *natural* and *necessary*. More specifically, it is an exchange through which a thing is exchanged for a thing or a thing is exchanged for money—and this for the necessities of life (*propter necessitatem vitae*). This sort of exchange does not properly speaking have to do with traders (*negotatores*) but instead involves economists and politicians, who have to provide the home or the city with the necessities of life.

The second species of exchange is either money for money or any other sort of thing for money, not for the sake of the necessities of life, but instead for the sake of looking for profit (*lucrum*) And it is this sort of exchange that seems to belong properly to traders.

According to the Philosopher, the first sort of exchange is praiseworthy, since it is at the service of natural necessity. By contrast, the second sort of exchange is justly criticized, since, taken in its own right (*quantum est de se*), it is at the service of an excessive desire for profit (*deservit cupiditati lucri*), which knows no bounds and tends toward the infinite. And so trading, considered in itself, has a certain unseemliness (*turpitudinis*), insofar as it does not in its own right imply by its nature an upright and necessary end.

However, even if profit, which is the end of trading, does not by its own nature imply anything upright or necessary, it nonetheless does not imply by its own nature anything vicious or contrary to virtue, either. Hence, nothing prevents profit from being ordered toward some necessary or even upright

end. And if this occurs, then the trading will be rendered licit—for instance, when someone orders moderate profit, which he seeks through trading, toward sustaining his own household or even toward assisting the poor, or, again, when someone (a) undertakes his trading for the sake of the public welfare, so that necessary things will not be lacking in the life of his native land, and (b) seeks the profit not as an end but as the payment for his labor.

**Reply to objection 1:** Chrysostom’s words should be understood to apply to trading insofar as it places its ultimate end in profit, and this seems to happen mainly when someone sells an unaltered item for more. For if he sells for more an item that has been changed for the better, then he seems to be taking payment for his labor—even though profit itself can be licitly intended not as an ultimate end, but, as has been explained, for the sake of some other necessary or upright end.

**Reply to objection 2:** Not everyone who sells something for more than he bought it for counts as a trader, but only the one who buys the item in order to sell it for more. By contrast, if someone buys an item not in order to sell it, but in order to hold on to it, and if afterwards he wishes to sell it for some reason, then this is not trading, even if he sells it for more. For he can do this licitly, either because (a) he has improved the item in some way, or (b) because its price has changed, given the diversity of place or time, or (c) because of the risk he exposes himself to by transporting the item from one place to another or by arranging for it to be transported. And on this score, neither the buying nor the selling is unjust.

**Reply to objection 3:** Clerics should abstain not only from what is bad in its own right, but also from what has the appearance of evil. The latter happens in trading, both (a) because clerics should have contempt for what is ordered toward earthly profit, and (b) because of the frequent vices of traders, since, as Ecclesiasticus 26:28 puts it, “It is hard for a trader to be free from sins of the lips.”

There is also another reason, given that trading occupies the mind excessively with worldly cares and consequently draws it away from spiritual cares. Hence, in 2 Timothy 2:4 the Apostle says, “No man who is fighting for God entangles himself in worldly affairs.”

However, clerics are permitted to use exchanges of the first species, which are ordered toward the necessities of life, either by buying or by selling.

## QUESTION 78

### Usury, or Interest on Money Lent

Next we have to consider the sin of usury (*usura*), i.e., the sin of charging interest or a user's fee, which is perpetrated in connection with loans (*quod committitur in mutuis*). And on this topic there are four questions: (1) Is it a sin to receive money as the price for money lent, i.e., to receive interest or a user's fee for money lent? (2) Is one permitted to receive anything of usefulness for money lent, in compensation for the loan? (3) Is one obligated to make restitution of the just profits he has made from money gained through interest? (4) Is one permitted to receive money through a loan that is subject to usury, i.e., subject to interest or a user's fee?

#### Article 1

##### Is it a sin to receive usury, i.e., interest or a user's fee, for money lent?

It seems that it is not a sin to receive usury, i.e., interest or a user's fee, for money lent (*videtur quod accipere usuram pro pecunia mutuata non sit peccatum*):

**Objection 1:** No one sins by following Christ's example. But in Luke 19:23 our Lord says of Himself, "... that at my coming I might have exacted it—viz., the money lent—with interest." Therefore, it is not a sin to accept interest for loaning money.

**Objection 2:** As Psalm 18:8 says, "The law of the Lord is unspotted"—since, namely, it forbids sin. But some sort of usury is permitted in divine law—this according to Deuteronomy 23:19-20 ("You shall not lend your brother money or corn or any other thing at interest (*non faenerabis*), but [only] the alien"). And, what's more, usury is likewise promised as a reward for keeping the law—this according to Deuteronomy 28:12 ("You shall lend at interest to many nations (*faenerabis gentis multis*) and shall not borrow from anyone at interest"). Therefore, it is not a sin to receive usury.

**Objection 3:** In human affairs justice is determined by civil laws. But those laws permit one to receive user's fees. Therefore, it seems that this is not illicit.

**Objection 4:** Omitting the counsels does not bind one to a sin. But in Luke 6:35 one counsel posited among others is, "Grant a loan, hoping for nothing in return." Therefore, receiving interest is not a sin.

**Objection 5:** It does not seem to be a sin in its own right (*secundum se*) to receive a fee (*pretium*) for something that one is not obligated to do. But one is not in every instance obligated to make a loan to his neighbor. Therefore, one is sometimes permitted to receive a fee for a loan.

**Objection 6:** Silver money does not differ in species from silver formed into vessels. But it is licit to accept a fee for lending silver vessels. Therefore, it is likewise licit to accept a fee for lending silver money. Hence, usury is not a sin in its own right (*non est secundum se peccatum*).

**Objection 7:** Anyone can licitly receive an item that the owner of that item voluntarily hands over to him. But one who accepts a loan hands over the interest voluntarily. Therefore, one who makes a loan can licitly receive the interest.

**But contrary to this:** Exodus 22:25 says, "If you lend money to one of my poor people who dwells with you, you shall not press him like an extortioner or oppress him with interest."

**I respond:** To receive interest or a user's fee (*usura*) for money lent is, taken in its own right (*secundum se*) unjust, since what is being sold does not exist, and thereby an inequality or imbalance that is contrary to justice is manifestly created.

To make this evident, notice that certain items are such that the *use* of them is the *consumption* of the items themselves, in the way that we consume wine by making use of it for drink, and in the way that we consume wheat by making use of it for food. Hence, in such cases *the use* of the item should not be counted as something separate from *the item itself*. Instead, *the use* of the item is granted to someone by

the very fact that *the item itself* is granted to him. For this reason, in such cases ownership (*dominium*) is transferred by a loan. Therefore, if someone wanted to sell *the wine* separately and then to sell *the use of the wine* separately, he would be selling the same item twice or, alternatively, he would be selling something that does not exist. Hence, he would obviously be committing a sin of injustice. And, for a similar reason, one commits an injustice if he lends wine or wheat to someone while asking for twofold compensation, the first being *the restitution of an equal item* and the other being *a user's fee* (*pretium usus*), which is called usury or interest (*usura*).

By contrast, there are some items such that the *use* of them is *not* the very *consumption* of the item itself, in the way that the use of a house is to inhabit it and not to use it up (*non autem dissipatio*). And so in such cases the two things can be granted separately—as, for instance, when someone grants to another the ownership of a house, but reserves the use of the house to himself for some period of time, or conversely, when someone grants the use of a house while reserving to himself the ownership of the house. For this reason, a man can licitly receive a fee for the use of the house and, beyond this, ask for the leased house back, as is clear in the case of the letting and renting of a house.

Now according to the Philosopher in *Ethics* 5 and *Politics* 1, money was invented mainly for conducting exchanges, and so the proper and principal use of money is the consuming or exchanging of it, in the sense that it is spent in exchanges. And for this reason, it is illicit in its own right to receive a fee, called ‘interest’ or ‘usury’ (*usura*), for money lent. And just as a man is obligated to make restitution for other unjustly acquired things, so he is obligated to make restitution for the money that he receives through usury.

**Reply to objection 1:** ‘Interest’ is being taken metaphorically in this passage for the excess growth of spiritual goods that God demands, since He wills that we always be making progress in the gifts that we receive from Him. This is to our advantage, and not to His.

**Reply to objection 2:** The Jews were forbidden to receive interest from their brothers, viz., Jews, and from this one understands that it is bad, absolutely speaking, to receive interest from anyone; for we ought to treat every man as a neighbor and a brother—especially under the dispensation of the Gospel, to which all are called. Hence, Psalm 14:5 says without qualification (*absolute*), “... he who has not given his money for interest (*qui pecuniam suam non dedit ad usuram*),” and Ezechiel 18:17 says, “... who has not received interest (*qui usuram non acceperit*).

Now the fact that they might receive interest from strangers was not conceded to them as something licit, but was instead permitted in order to avoid a greater evil, viz., in order that they not receive interest, out of the avarice to which (as Isaiah 56:11 points out) they were given, from Jews who worshiped God.

Now in what is promised as a reward (“You shall lend with interest to many nations (*faenerabis gentis multas*)”), *faenus* is being used broadly for any loan—just as Ecclesiasticus 29:10 says, “Many have refused to lend, not out of wickedness (*multi non causa nequitiae non faenerati sunt*), i.e., they did not make loans. Therefore, what is promised to the Jews as a reward is an abundance of riches, in light of which it will happen that they are in a position to lend to others.

**Reply to objection 3:** Human laws leave some sins unpunished because of the condition of imperfect men, among whom many benefits would be impeded if all sins were strictly forbidden with penalties applied. And so human law makes a concession with respect to usury, not in the sense that it thinks it to be in accord with justice, but in order that advantages to the many might not be impeded.

Hence, in the civil law itself it is said that “items that are consumed by their use should not by either natural reason or civil reason admit of separate fruits of their use” (*neque ratione naturali neque civili recipiunt usumfructum*),” and that “the Senate did not establish separate fruits of use for these things, nor indeed could it have (*senatus non fecit earum rerum usumfructum, nec enim poterat*), though it did set up something like separate fruits of use,” viz., by allowing usury.

Moreover, in *Politics* 1 the Philosopher, led by natural reason, said, “The usurious acquisition of money is especially out of line with nature.”

**Reply to objection 4:** A man is not always obligated to make a loan, and so, in this regard, lending is posited among the *counsels*. However, it falls under the character of a *precept* that a man not seek to profit from a loan. Still, this could be called a *counsel* in comparison to the dictates of the Pharisees, who thought that some instances of usury were licit—just as love of one’s enemies could likewise be a counsel.

An alternative reply is that in the passage in question our Lord is talking about a hope that is posited in a man and not about the hope for usurious profit. For we ought to make a loan—or do any other good deed—because of our hope in God and not because of our hope in a man.

**Reply to objection 5:** One who is not obligated to make a loan can receive compensation for what he does, but he should not demand any more than that. Now he is compensated in accord with the balance of justice if what is rendered to him is as much as he lent. Hence, if he demands more for the separate fruits of the use of an item which does not have any use other than the substance’s being consumed (*si amplius exigit pro usufructu rei quae alium usum non habet nisi consumptionem substantiae*), he is demanding a fee for what does not exist. And so the demand is unjust.

**Reply to objection 6:** The principal use of silver vessels is not their very consumption, and so one can licitly sell their use while maintaining ownership of them. By contrast, the principal use of silver money is the dispersal of the money in exchanges. Hence, it is not licit for someone to sell the use of silver money in addition to wanting repayment of what he gave in the loan.

However, notice that there could be a secondary use of silver vessels for exchanges, and it would not be licit to sell such use of them. By the same token, there could be another and secondary use of silver money—as, for instance, if someone turned over stamped coins for showing or for making a security deposit. And a man can licitly sell such a use of silver money.

**Reply to objection 7:** Someone who pays interest does not pay it voluntarily in the absolute sense; instead, he pays it out of necessity, insofar as he needs a loan to receive money whose possessor does not want to lend it without a user’s fee.

## Article 2

### Can one request some other commodity for money lent?

It seems that one can request some other commodity for money lent:

**Objection 1:** Each individual can licitly look after his own indemnification. But sometimes one suffers a loss because he lends money. Therefore, it is licit for him to request, or even to demand, something else, in addition to the money lent, to cover his loss (*pro damno*).

**Objection 2:** As *Ethics* 6 points out, each individual is obligated by a sort of ‘debt of honesty’ (*ex quodam debito honestatis*) to repay someone who does him a favor. But an individual who lends money to someone in need does him a favor, and thanks is owed to him. Therefore, the one who receives the money is obligated by a natural debt to make some compensation. But it does not seem illicit for him to obligate himself to something which he is obligated to by the natural right. Therefore, it does not seem illicit if someone, in lending money to another, takes some compensation in light of this obligation.

**Objection 3:** As a Gloss on Isaiah 33:15 (“Blessed is he who empties his hand of every remuneration (*ab omni munere*)”) says, just as there are “certain remunerations via the *hand*, so there are remunerations via the *tongue* and remunerations via *service*.” But it is licit to accept service, or praise as well, from an individual to whom one has lent money. Therefore, by parity of reasoning, it is licit to accept any other gift whatsoever.

**Objection 4:** The relation of what is given to what is given is the same as the relation of what is borrowed to what is borrowed. But it is licit to receive money for some other money that has been given.

Therefore, it is licit to receive compensation of another loan for money that has been borrowed.

**Objection 5:** Someone who makes a loan and transfers ownership of his money places his money at a greater distance from himself than someone who commits his money to a merchant or a craftsman. But it is licit to receive a profit from money that is committed to a merchant or a craftsman. Therefore, it is likewise licit to receive a profit from money that is lent.

**Objection 6:** For money that is lent a man can accept a security deposit (*pignus*), the use of which could be sold for some price, as when a field or a house that is inhabited is accepted as a security deposit. Therefore, it is licit to realize some gain from lent money.

**Objection 7:** It sometimes happens because of a loan that one sells his items for a higher price, or that he buys something that belongs to another for a lower price, or, again, that the price increases because of a delay, or that the price decreases because things speed up—and in all these cases there seems to be, as it were, some compensation made for the loan. Therefore, it seems licit to expect, or even to demand, some commodity for money lent.

**But contrary to this:** Ezechiel 18:17 lists, among other things that are required for being a just man, “He has not received interest and excessive abundance (*usuram et superabundantiam non acceperit*).”

**I respond:** According to the Philosopher in *Ethics* 6, what is treated as money is anything “whose value can be measured by money.” And so in the same way that, as has been explained (a. 1), if someone, by an implicit or explicit agreement, receives money for money lent (or for any other thing that is consumed by being used), then he sins against justice, so, too, if someone, by an implicit or explicit agreement, receives any other sort of thing whose value can be measured by money, then he commits a similar sin.

However, if he receives something of the sort in question as a gratuitous gift without, as it were, demanding it and in the absence of any sort of implicit or explicit obligation, then he does not sin, because (a) even before he had lent the money, he could have licitly accepted a gift free of charge, and because (b) he has not been put in a worse position by the fact that he has made the loan.

By contrast, it is licit to demand as compensation for a loan things that are not measured by money, e.g., good will toward and love for the one who has made the loan, and other things of this sort.

**Reply to objection 1:** Someone who makes a loan can without sin enter into an agreement with the individual who receives the loan as regards compensation for a loss by which something that the lender ought to have is taken away. For this is to avoid a loss and not to sell the use of the money. What’s more, it is possible that the individual who receives the loan avoids a greater loss than the one making the loan incurs, and so it is to the advantage of the one who receives the loan to compensate for the other’s loss.

However, one cannot enter into an agreement as regards compensation for a loss that consists in his not profiting from the money lent, since he ought not to sell what he does not yet have and what he can be prevented from having in many ways.

**Reply to objection 2:** There are two possible ways in which compensation can be made for a favor.

In one way, *out of a debt of justice*, to which an individual is obligated by a fixed agreement. And this sort of debt takes into account the magnitude of the favor that one has received. And so an individual who receives a loan of money (or of any similar item the use of which is its consumption) is not obligated to pay back more than he received in the loan. Hence, it is contrary to justice if he is obliged to pay back more.

In the second way, an individual is obligated to make compensation for the favor *out of a debt of friendship*, in which the affection (*affectus*) with which someone bestowed the favor counts for more than even the magnitude of what he has done. And this sort of debt does not involve a civil obligation, which induces a certain necessity, so that the compensation is not spontaneous.

**Reply to objection 3:** If, because of money lent, someone were to expect or demand, as if through

an obligation imposed by an implicit or explicit agreement, compensation in the form of a remuneration via service or via the tongue, this is altogether the same as expecting or demanding a remuneration via the hand, since both of them can be evaluated in terms of money, as is clear in the case of those who hire out works that they perform with their hands or with their tongue.

By contrast, if someone renders a remuneration via service or via the tongue out of benevolence, which does not fall under an evaluation in terms of money, and not out of a real obligation (*non quasi ex obligatione rei exhibeat*), then it is licit to receive it, as well as to demand it and expect it.

**Reply to objection 4:** Money cannot be sold for more money than the amount of the borrowed money that has to be repaid. Nor is there anything to be demanded or expected here except the sentiment of benevolence (*benevolentiae affectus*), which does not fall under an evaluation in terms of money and from which a voluntary borrowing can proceed.

However, an obligation to make a loan in the future is incompatible with this, since such a loan would be able to be evaluated in terms of money. And so it is licit for someone who is borrowing one thing to borrow something else at the same time, but it is not licit to obligate him to make a loan in the future.

**Reply to objection 5:** One who lends money transfers ownership of the money to the individual to whom he makes the loan. Hence, the individual to whom the money is lent holds it at his own risk and is obligated to repay it in full. This is why the one who has made the loan should not demand any more money than this.

By contrast, one who commits his money to either a merchant or a craftsman by way of a partnership does not transfer ownership of his money to the latter; instead, the money remains his, so that it is with his money—and at his risk—that the merchant carries on business or the tradesman works. And so he licitly seeks part of the profit that results therefrom as his own.

**Reply to objection 6:** If someone, in return for money lent to him, pledges some item whose use can be assigned a price, then the one who made the loan should count the use of that thing as a payment for what he lent. Otherwise, if he wants the use of that item to be granted to him for free, this is the same as accepting money for the loan, which is usurious—unless, perhaps, it is an item such that its use is normally granted among friends without a fee, as is clear in the case of a book that is loaned.

**Reply to objection 7:** If someone wants to put his items up for sale at a higher price than is just, so that he might wait for the buyer to pay the money, then the sin of usury is obviously being committed. For this waiting period for the price to be paid has the character of a loan. Hence, whatever is being exacted over and above a just price is, as it were, the price of the loan—and this pertains to the character of usury.

Similarly, if a buyer wants to buy an item for a lower price than is just by paying his money before the item can be delivered to him, this is the sin of usury. For this sort of anticipatory payment of the money has the character of a loan, the price for which is, in a certain sense, that the price for the item being bought is lowered from what is just.

However, if the seller wants to lower the price from a just price in order to have the money sooner, then he does not sin by the sin of usury.

### Article 3

#### **Is one obligated to return whatever profit he has made from money obtained by charging interest?**

It seems that one is obligated to return whatever profit he has made from money obtained by charging interest (*quidquid aliquis de pecunia usuraria lucratus fuerit reddere teneatur*):

**Objection 1:** In Romans 11:16 the Apostle says, “If the root is holy, so are the branches.” Therefore, by the same line of reasoning, if the root is infected, so are the branches. But the root was usurious. Therefore, whatever is acquired from it is usurious. Therefore, one is obligated to return it.

**Objection 2:** As it says in *Extra de usuris*, decretal *Cum tu sicut asseris*, “Possessions accruing from usury must be sold, and the price for them must be repaid to those from whom they were wrested.” Therefore, by the same line of reasoning, anything else that is acquired from usurious money must be repaid.

**Objection 3:** What an individual buys with usurious money is owed to him by reason of the money that he handed over. Therefore, he has no more right to the thing he has acquired than he has to the money that he handed over. But he was obligated to repay the usurious money. Therefore, he is likewise obligated to repay what he acquired with it.

**But contrary to this:** Anyone is able to hold licitly what he has legitimately acquired. But what is acquired by means of usurious money is sometimes legitimately acquired. Therefore, it can be licitly held on to.

**I respond:** As was explained above (a. 1), there are certain items whose use is the consumption of the items themselves and which do not have separate fruits of their use (*non habent usumfructum*), according to the laws. And so if such items—e.g., money, wheat, wine, etc.—are extorted by a man’s being charged a user’s fee (*si talia ferint per usuram extorta*), he is obligated to pay back only what he has received, since what is acquired from such an item is not a fruit of the item itself, but is instead a fruit of human diligence—unless, perhaps, the other individual suffers a loss by being deprived of the item and loses something of his own goods, since in that case one is obligated to compensate him for his loss.

By contrast, there are certain items whose use is not their consumption, and such items do have separate fruits of their use (*talia habent usumfructum*), e.g., a house or a field, etc. And so if someone had extorted another’s house or field through usury, then he would be obligated to repay not only the house or the field, but also the fruits that had been received from them, since they are fruits of items that someone else owns, and so the fruits are owed to him.

**Reply to objection 1:** A root not only has the character of *matter*, e.g., usurious money, but also has the character of an *active cause*, insofar as it directs the nourishment. And so there is no parallel.

**Reply to objection 2:** Possessions accruing from user’s fees belong not to the ones whose user’s fees they were, but rather to those who bought the things. However, those possessions are still tied to those from whom the user’s fees were received, just like the usurer’s other goods are (*sicut et alia bona usurarii*).

And so it is not commanded that the possessions in question be assigned to those from whom the user’s fees were received, since it might be that the possessions are worth more than the user’s fees that they paid. Instead, it is commanded that the possessions be sold and that their value be restored in accord with the magnitude of the user’s fees that have been received.

**Reply to objection 3:** What is acquired through usurious money is owed, to be sure, to the one who acquired it, and this because of the usurious money paid to him as an instrumental cause, but also because of his own diligence as a principal cause. And so he has more of a right to the item acquired with the usurious money than he does to the usurious money itself.

#### Article 4

##### Is it licit to accept money by a loan made subject to a user’s fee?

It seems that it is not licit to accept money by a loan subject to a user’s fee (*non liceat pecuniam accipere mutuo sub usura*):

**Objection 1:** In Romans 1:32 the Apostle says, “It is not only those who commit the sins that are worthy of death, but also those who consent to those who commit the sins.” But whoever accepts money by a loan subject to a user’s fee consents to the usurer in his sin and presents him with an occasion for sinning. Therefore, he himself likewise sins.

**Objection 2:** One individual should not, for any temporal advantage, present another individual with any sort of occasion for sinning. For this has the character of active scandal, which, as was explained above (q. 43, a. 2), is always a sin. But one who asks for a loan from a usurer is expressly presenting him with an occasion for sinning. Therefore, there is no temporal advantage in light of which he is excused.

**Objection 3:** There is sometimes no less need to deposit money with a usurer than to receive money from him. But to deposit money with a usurer seems to be altogether illicit, just as it is illicit to deposit a sword with a furious man, or to commit a virgin to a lustful man, or to deposit food with a gluttonous man. Therefore, neither is it licit to receive a loan from a usurer.

**But contrary to this:** According to the Philosopher in *Ethics* 5, an individual who suffers an injury does not sin, and this is why, as he explains in the same place, justice is not a mean between two vices. But the usurer sins insofar as he does an injustice to the one who receives a loan subject to a user’s fee. Therefore, one who accepts a loan subject to a user’s fee does not sin.

**I respond:** It is in no way licit to induce a man to sin, but it is licit to use the sin of another for the good; for God likewise makes use of all sins for something good, since, as [Augustine] explains in *Enchiridion*, from every evil He draws forth some good. And so in response to Publicola’s question whether it is licit to make use of the oath of someone who swears by false gods, in which he manifestly sins by giving them divine reverence, Augustine says, “An individual who *uses*, not for evil but for the good, the faith of someone who swears by false gods does not associate himself with the sin by which the man swore by demons, but instead associates himself with his good intention, by which he serves the Faith.” However, if he were to *induce* the man to swear by false gods, then he would sin.

So, too, in the case under discussion, one should reply that it is in no way licit to induce someone, for the sake of some good, to make a loan subject to a user’s fee, but it is licit to accept a loan from someone who is prepared to make the loan and who charges a user’s fee, and this for the sake of some good, i.e., taking care of one’s own need or that of another, in the same way that it is licit for someone who is waylaid by robbers to display the goods which he has and which the robbers sin by stealing, in order that he not be killed—using as an example the ten men who, as reported in Jeremiah 41:8, said to Ismahel, “Do not kill us, for we have storehouses in the field.”

**Reply to objection 1:** One who accepts money by a loan subject to a user’s fee does not *consent* to the usurer’s sin but instead *uses* that sin. And it is receiving the loan, which is good, that pleases him, and not the collection of the user’s fee.

**Reply to objection 2:** One who receives money by a loan subject to a user’s fee gives the usurer an occasion for making a loan and not an occasion for receiving a user’s fee, whereas the usurer himself takes the occasion to sin out of the malice of his own heart. Hence, there is passive scandal on his part but not active scandal on the part of the one who asks for the loan. However, it is not the case that because of passive scandal of this sort another individual should desist from asking for a loan if he needs one, since passive scandal of this sort proceeds not from weakness or ignorance, but from malice.

**Reply to objection 3:** If someone committed his money to a usurer who did not have other money on which he might charge user’s fees, or if he committed his money with the intention of making more profit through the usury, then he would be providing matter to a sinner. Hence, he himself would be a participant in the sin.

However, if, in order to preserve his money more securely, someone commits it to a usurer who has other money with which to make usurious loans, then he does not sin but instead uses a sinning man for the good.

## QUESTION 79

### The integral parts of justice

Next we have to consider the integral parts of justice, viz., *to do good* and *to turn away from evil* (*facere bonum et declinare a malo*), and their opposed vices. On this topic there are four questions: (1) Are doing good and turning away from evil parts of justice? (2) Is transgression (*transgressio*) a specific sin? (3) Is omission (*omissio*) a specific sin? (4) What is the relation of omission to transgression?

#### Article 1

##### Are turning away from evil and doing good parts of justice?

It seems that turning away from evil and doing good are not parts of justice:

**Objection 1:** It belongs to every virtue to do good and to avoid evil. But the parts do not exceed the whole. Therefore, to turn away from evil and to do good should not be posited as parts of justice, which is a specific virtue.

**Objection 2:** A Gloss on Psalm 33:15 (“Turn away from evil and do good”) says, “The former”—viz., turning away from evil—“avoids sin, whereas the latter”— viz., to do good—“merits life and the palm.” But every part of a virtue merits life and the palm. Therefore, turning away from evil is not a part of justice.

**Objection 3:** Any things that are such that one of them is included in another are not distinct from one another as the parts of a whole. But to turn away from evil is included in doing good, since no one simultaneously does both evil and good. Therefore, to turn away from evil and to do good are not the parts of justice.

**But contrary to this:** In *De Correptione et Gratia* Augustine attributes “turning away from evil and doing good” to the justice of the law.

**I respond:** If we are talking about good and evil in general, then it belongs to every virtue to do good and to avoid. And on this score they cannot be posited as parts of justice—unless perhaps justice is understood as being every virtue, and despite the fact that justice, even taken in this way, has to do with a certain specific notion of the good, viz., what is owed in relation to divine law or human law.

However, insofar as it is a specific virtue, justice has to do with the nature of what is owed to one’s neighbor. And on this score it belongs to *specific justice* (a) to do good under the character of what is owed in relation to one’s neighbor and (b) to avoid the opposite evil, viz., what is harmful to one’s neighbor. By contrast, it belongs to *general [or legal] justice* (a) to do the good that is owed in relation to the community and to God and (b) to avoid the opposite evil.

Now these two parts of general justice or of specific justice are called *integral parts* because each of them is required for a perfect or complete act of justice (*utrumque eorum requiritur ad perfectum actum iustitiae*). For as is clear from what was said above (q. 58, a. 2), it belongs to justice to create an equality or balance in those matters that have to do with others. Now it belongs to the same thing both to bring something about (*aliquid constituere*) and to conserve what it has brought about (*constitutum conservare*). But someone brings about the balance of justice by doing good, i.e., by rendering to someone else what is owed to him, and he conserves the balance of justice, once it is brought about, by turning away from evil, i.e., by not inflicting harm on his neighbor.

**Reply to objection 1:** ‘Good’ and ‘evil’ are here being taken with a certain specific character by which they are appropriated to justice. Thus, the two of them are being posited as parts of justice according to a *proper* character of good and evil, and they are not being posited as parts of any other moral virtue. For the other moral virtues have to do with the passions, in which doing good is arriving at a mean, which is equivalent to turning away from the extremes as something bad. By contrast, justice has to do with exterior operations and entities, in which bringing about a balance is different from not

corrupting a balance that has already been brought about.

**Reply to objection 2:** Turning away from evil (*declinare a malo*), insofar as it is posited as a part of justice, does not involve a pure negation, i.e., *not doing evil (non facere malum)*, since this would not merit the palm but would only ward off punishment. Rather, it implies a movement of the will repudiating evil (*motum voluntatis repudiantis malum*), as the very name ‘*declinatio*’ shows. And this is meritorious, especially when someone is under siege to do evil and resists.

**Reply to objection 3:** To do good is the perfecting act of justice (*est actus completivus iustitiae*) and, as it were, its principal part. On the other hand, to turn away from evil is a less perfect act and a secondary part of justice. And so it is, as it were, the *material* part, without which the *formal* perfecting part cannot exist.

## Article 2

### Is transgression a specific sin?

It seems that transgression (*transgressio*) is not a specific sin:

**Objection 1:** No species is posited in the definition of its genus. But *transgression* is posited in the general definition of a sin; for Ambrose says that a sin is “a transgression of divine law.” Therefore, *transgression* is not a species of sin.

**Objection 2:** No species exceeds its genus. But *transgression* exceeds *sin*, since, as is clear from Augustine in *Contra Faustum* 22, a sin is “a word or a deed or a desire contrary to God’s law,” whereas a transgression is, in addition, contrary to nature or contrary to custom. Therefore, *transgression* is not a species of *sin*.

**Objection 3:** No species contains under itself all the parts into which the genus is divided. But the sin of transgression extends to all the capital vices and, in addition, to sins of the heart, sins of the mouth, and sins of deed. Therefore, transgression is not a specific sin.

**But contrary to this:** Transgression is opposed to a specific virtue, viz., justice.

**I respond:** The name ‘transgression’ is derived from corporeal movements and applied to moral acts. In the case of corporeal movements, someone is said to transgress because he crosses a terminus that has been fixed for him beforehand.

Now in moral matters the terminus beyond which a man should not pass is fixed for him beforehand by the negative precepts. And so ‘transgression’ is properly predicated when someone does something contrary to a negative precept. To be sure, this can, *materially* speaking, be proper to every species of sin, since through any species of mortal sin a man transgresses some divine precept. However, if it is taken *formally*, i.e., according to the special character of *doing something contrary to a negative precept*, then there are two ways in which this is a specific sin:

(a) in one way, insofar as transgression is opposed to the genera of sins that are opposed to the other virtues. For just as it pertains to the proper character of legal justice to be intent on the obligation imposed by a precept, so, too, it pertains to the *proper* character of transgression to be intent on contempt for the precept.

(b) in the second way, insofar as transgression is distinct from *omission*, which is contrary to an *affirmative* precept.

**Reply to objection 1:** Just as *legal justice* is every virtue in its subject and, as it were, *materially*, so, too, legal injustice is, *materially* speaking, every sin. And this is the sense in which Ambrose defined sin, viz., in accord with the character of legal injustice.

**Reply to objection 2:** An inclination of nature pertains to the precepts of the natural law. Likewise, an upright custom also has the force of a precept, since, as Augustine says in his letter *De*

*Ieiunio Sabbati*, “A custom of God’s people should be regarded as law.” And so both sin (*peccatum*) and transgression (*transgressio*) can be contrary to an upright custom and contrary to a natural inclination.

**Reply to objection 3:** As has been explained, all the species of sin enumerated in the objection can involve transgression according to a certain specific notion, but not according to their own proper notions. However, the sin of omission is altogether distinct from the sin of transgression.

### Article 3

#### Is omission a specific sin?

It seems that omission (*omissio*) is not a specific sin:

**Objection 1:** Every sin is either original sin or an actual sin. But omission is not original sin, since it is not contracted through one’s origin. Nor is it actual sin, since, as was explained above (*ST* 1-2, q. 71, a. 5) when we were talking about sin in general, an omission can occur in the absence of any act at all. Therefore, omission is not a specific sin.

**Objection 2:** Every sin is voluntary. But omission is sometimes necessary and not voluntary, e.g., when a woman who has vowed virginity is violated, or when someone loses an item that he is obligated to return, or when a priest is obligated to celebrate Mass and encounters some obstacle. Therefore, an omission is not always a sin.

**Objection 3:** For each specific sin one has to fix a time at which the sin begins to exist. But such a time cannot be fixed in the case of an omission, since one ‘behaves’ in the same way whenever he is not acting, and yet he is not always sinning. Therefore, omission is not a specific sin.

**Objection 4:** Every specific sin is opposed to some specific virtue. But one cannot name any specific virtue that omission is opposed to. This is both because (a) every virtue is such that its good can be omitted, and because (b) justice, to which it specifically seems to be opposed, always requires some act—even, as has been explained (a. 1), in the case of turning away from evil. By contrast, an omission can exist in the absence of any act at all. Therefore, omission is not a specific sin.

**But contrary to this:** James 4:17 says, “Therefore, for one who knows to do good and does not do it, it is a sin to him.”

**I respond:** Omission involves passing over the good—not just any good, but an obligatory good (*bonum debitum*). Now the good under the notion *obligatory* belongs properly to justice—to *legal justice* if the obligation is taken in relation to divine law or human law, and to *specific justice* insofar as the obligation is thought of in relation to one’s neighbor. Hence, in the sense, explained above (q. 58, a. 7), in which justice is a specific virtue, omission is likewise a specific sin distinct from sins that are opposed to the other virtues.

Now in the same way in which *doing good*, to which *omission* is opposed, is a certain specific part of justice distinct from *turning away from evil*, to which *transgression* is opposed, so, too, *omission* is distinct from *transgression*.

**Reply to objection 1:** Omission is not original sin but actual sin, not because it has some act that is essential to it, but in the sense that the negation of an act is traced back to the genus of the act. And on this score, as was explained above (*ST* 1-2, q. 71, a. 6), *not to act* is being treated as the doing of something.

**Reply to objection 2:** As has been explained, an omission has to do only with an obligatory good to which some individual is obligated. But no one is obligated to do the impossible. Hence, no one sins through omission if he does not do what he cannot do. Therefore, a violated woman who has vowed virginity does not sin through omission by not having virginity, but sins if she is not repentant for her past sin or if she does not do what she can to fulfill her vow by observing continence. Likewise, a priest

is not obligated to say Mass unless an appropriate opportunity is presupposed, and if such an opportunity is lacking, then he does not sin by omission. Similarly, someone is obligated to restore something on the assumption that he has the ability to do so, and if does not or cannot have the ability, then he does not sin by omission as long as he does what he can. And the same thing should be said about other such cases.

**Reply to objection 3:** Just as the sin of transgression is opposed to the negative precepts, which pertain to turning away from evil, so the sin of omission is opposed to the affirmative precepts, which pertain to doing good. Now the affirmative precepts do not impose an obligation for all times, but for a fixed time. And it is at that time that the sin of omission begins to exist.

Still, it can happen that someone is at that time incapable of doing what he ought to do. If this is not his fault, then, as has been explained, he does not commit the sin of omission. On the other hand, if it is because of his previous sin—e.g., when someone has gotten himself inebriated late at night and cannot rise for morning prayer, as he ought to—some claim that the sin of omission begins at the time when he applies himself to an act that is both illicit and incompatible with the act that he is obligated to perform. However, this does not seem to be true. For if he were forcibly awakened and went to morning prayer, he would not commit the sin of omission. Hence, one should claim that (a) the omission begins to be imputed to him as a fault when it was time to act, and yet that (b) the omission occurs because of the prior cause by which the subsequent omission is rendered voluntary.

**Reply to objection 4:** As has been explained, the sin of omission is directly opposed to justice (*omissio directe opponitur iustitiae*). For there is no such thing as the omission of the good of a virtue except under the notion *obligatory*, and this feature belongs to justice.

Now more is required for a meritorious act of virtue than is required for a demerit associated with sin, since the good emerges from an integrated cause, whereas evil emerges from each defect. And so an act is required for the merit of justice, but not for an omission.

#### Article 4

##### Is the sin of omission more serious than the sin of transgression?

It seems that the sin of omission is more serious than the sin of transgression:

**Objection 1:** A crime (*delictum*) seems to be the same thing as a dereliction (*derelictum*), and so, as a result, it seems to be the same thing as a sin of omission (*idem esse omissioni*). But a crime is more serious than a sin of transgression, since, as is clear from Leviticus 5, it stands in need of greater expiation. Therefore, the sin of omission is more serious than the sin of transgression.

**Objection 2:** As is clear from the Philosopher in *Ethics* 8, a greater evil is opposed to a greater good. But as is clear from what was said above (a. 1), *doing good*, to which the sin of omission is opposed, is a more noble part of justice than is *turning away from evil*, to which transgression is opposed. Therefore, omission is a more serious sin than transgression.

**Objection 3:** A sin of commission can be either venial or mortal. But the sin of omission seems always to be mortal, since it is opposed to an affirmative precept. Therefore, omission is a more serious sin than transgression.

**Objection 4:** As is clear from Chrysostom in *Super Matthaicum*, the *pain of loss* (*poena damni*), i.e., the absence of the vision of God, which is due for the sin of omission, is greater than the *pain of sense* (*poena sensus*), which is due for the sin of transgression. But the punishment is proportioned to the sin. Therefore, the sin of omission is more serious than the sin of transgression.

**But contrary to this:** To abstain from doing evil is easier than to fulfil the good. Therefore, someone who does not abstain from doing evil, i.e., who commits the sin of transgression, sins more seriously than someone who does not fulfill the good, i.e., who commits the sin of omission.

**I respond:** A sin is serious to the extent that it is distant from virtue. But as *Metaphysics* 10 says, “Contrariety is the maximum distance.” Hence, a contrary is more distant from its contrary than its contrary’s simple negation is; for instance, *black* is more distant from *white* than the simple negation *non-white* is. For whatever is black is non-white, but not vice versa.

Now it is obvious that transgression is contrary to an act of virtue, whereas omission involves the negation of such an act; for instance, the sin of omission occurs if someone does not show due reverence to his parents, whereas the sin of transgression occurs if he vilifies them or inflicts some sort of injury on them. Hence, it is obvious that, simply and absolutely speaking, transgression is a more serious sin than omission, even though it can be the case that some sin of omission is more serious than some sin of transgression.

**Reply to objection 1:** ‘Crime’ (*delictum*) as commonly understood signifies every kind of omission.

However, it is sometimes taken strictly for the omission of some one of those things that pertains to God, or for when a man forsakes knowingly and, as it were, contemptuously what he ought to do. And in this sense this of omission has a certain gravity by reason of which it requires greater expiation.

**Reply to objection 2:** Both *not doing good*, i.e., omitting, and *doing evil*, i.e., *transgressing*, are opposed to *doing good*, but the former is opposed to *doing good* as a contradictory, whereas the latter is opposed to *doing good* as a contrary, which involves a greater distance. And so transgression is the more serious sin.

**Reply to objection 3:** Just as the sin of omission is opposed to the affirmative precepts, so the sin of transgression is opposed to the negative precepts. And so both of them, if they are taken in their proper senses, involve the character of mortal sin.

However, ‘transgression’ or ‘omission’ can be taken in a broader sense for something’s lying *just beyond* the affirmative or negative precepts (*potest autem large dici ex eo quod aliquid sit praeter praecepta affirmativa vel negativa*), disposing one toward their opposites. And in this sense both transgression and omission, taken broadly, can be venial sins.

**Reply to objection 4:** The pain of loss corresponds to the sin of transgression because of the turning away from God, and the pain of sense corresponds to it because of the disordered turning toward a changeable good.

Similarly, it is not only the pain of loss but also the pain of sense that is due for the sin of omission—this according to Matthew 7:19 (“Every tree that does not bear good fruit will be cut down and thrown into the fire”). And this is because of the root from which the sin of omission proceeds, even though it does not necessarily involve an actual turning toward some changeable good.

## QUESTION 80

### The Potential Parts of Justice

Next we have to consider the potential parts of justice, i.e., the virtues that are annexed to it. And on this topic there are two things to be considered: First, we have to consider which virtues are annexed to justice (question 80). And, second, we have to look into each of the individual virtues annexed to justice (questions 81-120).

### The Only Article

#### Are the virtues annexed to justice suitably enumerated?

It seems that the virtues annexed to justice are not suitably enumerated:

**Objection 1:** Tully enumerates six of them, viz., religion (*religio*), piety (*pietas*), gratitude (*gratiam*), vindication (*vindicatio*), respect or reverence (*observantia*), and truthfulness (*veritas*). But vindication is itself a species of commutative justice, according to which, as was explained above (q. 61, a. 4), vengeance (*vindicta*) is paid back for injuries inflicted. Therefore, it should not be posited among the virtues annexed to justice.

**Objection 2:** In *Super Somnium Scipionis* Macrobius posits seven of them, viz., innocence (*innocentia*), friendliness (*amicitia*), concord (*concordia*), piety, religion, affection (*affectus*), and being humane (*humanitas*), several of which Tully overlooks. Therefore, it seems that the virtues adjoined to justice are not adequately enumerated.

**Objection 3:** Five parts of justice are posited by certain others, viz., *obedience* with respect to a superior (*obedientia respectu superioris*), *discipline* with respect to a subordinate (*disciplina respectu inferioris*), *fairness* with respect to equal (*equitas respectu aequalium*), and faithfulness and truthfulness with respect to everyone (*fides et veritas respectu omnium*). Of these, Tully posits only truthfulness. Therefore, he seems to have inadequately enumerated the virtues annexed to justice.

**Objection 4:** Andronicus Peripateticus posits nine parts annexed to justice, viz., generosity (*liberalitas*), kindness (*benignitas*), vindication (*vindicativa*), good sense (*eugnimosyna*), piety (*eusebia*), gratitude (*eucharistia*), sanctity (*sanctitas*), good exchange (*bona commutatio*), and good lawmaking (*legispositiva*). Of these, again, it is clear that Tully posits only vindication. Therefore, he seems to have given an inadequate enumeration..

**Objection 5:** In *Ethics 5* Aristotle posits equitableness (*epieikeia*) as adjoined to justice. But it seems that no mention was made of it in the foregoing enumerations. Therefore, the virtues annexed to justice have not been adequately enumerated.

**I respond:** There are two things that have to be taken into consideration concerning virtues that are adjoined to some principal virtue: first, that these virtues *agree* in some way with the principal virtue; and, second, that these virtues *fall short* in some way of the complete nature of the principal virtue.

Now since, as is clear from what was said above (q. 58, a. 2), justice is ordered toward others, all virtues that are ordered toward others can by reason of this similarity be annexed to justice. But as is likewise clear from what was said above (q. 58, a. 11), the nature of justice consists in repaying to the other what is *owed to him up to equality* or *in full* (*quod ei debetur secundum aequalitatem*).

Therefore, there are two ways in which a virtue that is ordered toward others might fall short of the nature of justice: (a) insofar as it falls short of the character of *being up to equality* or *in full* (*inquantum deficit a ratione aequalis*), and (b) insofar as it falls short of the character of *being something that is owed* [*in justice*] (*inquantum deficit a ratione debiti*).

A. For there are certain virtues that repay to someone else what is *owed* to him, but that cannot repay it *up to equality* or *in full*.

First of all, whatever is repaid by a man to God is *owed*, but it cannot be *equal*, i.e., such that the

man renders to God as much as is owed to Him—this according to Psalm 115:3 (“What shall I return to the Lord for all that He has given me?”). And on this score what is joined to justice is *religion (religio)*, which, as Tully puts it, “brings to bear the care and veneration of, i.e., the worship of, a higher nature that is called divine.”

Second, as is clear from the Philosopher in *Ethics* 8, parents cannot be repaid up to equality or in full for what is owed to them. And on this score what is annexed to justice is *piety (pietas)*, by which, as Tully says, “one renders service and diligent reverence to those joined to him by blood and to those who are devoted to his homeland.”

Third, as is clear from the Philosopher in *Ethics* 4, a man cannot repay the value of virtue up to equality or in full. And on this score what is adjoined to justice is *respect* or *reverence (observantia)*, by which, as Tully says, “men who are outstanding in some form of worthiness are deemed deserving of reverence and honor.”

B. On the other hand, falling short of *being something that is owed in justice* can be thought of in terms of the two sorts of debt, viz., *moral debt* and *legal debt*, in accord with which the Philosopher designates the two types of justice in *Ethics* 8.

A *legal debt or obligation (debitum legal)* is that which one is constrained to fulfill by law, and the justice that is the principal virtue has properly to do with this sort of debt.

By contrast, a *moral debt or obligation (debitum morale)* is what someone owes out of the uprightness of virtue. And since a debt or obligation involves necessity, there are two degrees of this sort of debt or obligation:

(a) For there is a sort of debt or obligation that is necessary in the sense that *without it moral uprightness (honestas morum) cannot be preserved*, and this degree has more of the nature of a debt.

This debt can be looked at *on the side of the one who is in debt*. And on this score what pertains to this debt is that a man present himself to others, in words and in deeds, such as he is. And so what is adjoined to justice is *truthfulness (veritas)*, through which, as Tully puts it, “what has been or will be is told unchanged.”

The debt can also be looked at *on the side of the one to whom the debt is owed*, so that someone repays another on the basis of what the latter has done. Sometimes this has to do with good things that he has done, and on this score what is adjoined to justice is *gratitude (gratia)*, which, as Tully puts it, “involves the desire to repay another, remembering instances of his friendship and service.” On the other hand, sometimes it has to do with bad things that he has done, and on this score what is adjoined to justice is *vindication (vindicatio)*, through which, as Tully puts it, “violence or injury—or anything derogatory (*obscurum*)—is repelled by defending or avenging oneself.”

(b) The other sort of debt is necessary in the sense of *contributing to a greater degree of moral uprightness*, though a degree without which moral uprightness can still be preserved. This is the sort of debt that *generosity (liberalitas)*, *affability* or *friendliness (affabilitas sive amicitia)*, and other things of this sort have to do with. Tully skips over these in the aforementioned enumeration, since they involve very little of the nature of something that is owed.

**Reply to objection 1:** The vindication which is executed by authority of a public power in conformity with a judicial sentence belongs to commutative justice. However, the vindication which (a) someone executes by his own initiative and yet is not against the law or which (b) someone requests from a judge belongs to a virtue adjoined to justice.

**Reply to objection 2:** Macrobius seems to have been looking at the two *integral* parts of justice, viz., *turning away from evil*, which *innocence (innocentia)* pertains to, and *doing good*, which the six other virtues pertain to.

Two of those others pertain to *equals*, viz., *friendliness* in exterior interactions (*amicitia in exteriori convictu*) and *interior concord*, whereas two apply to *superiors*, viz., *piety* with respect to one’s parents and *religion* with respect to God. On the other hand, two have to do with *subordinates*, viz., *affection*

(*affectus*), insofar as their goods please one, and *being humane* (*humanitas*), through which their defects are healed. For in *Etymologia* Isidore says, “Someone is called ‘humane’ because he has love and the affection of compassion for a man, and so ‘being humane’ (*humanitas*) is that virtue by which we take care of one another.”

Accordingly, *friendliness* is understood here insofar as it orders exterior intercourse, in the way that the Philosopher talks about it in *Ethics* 6. Friendliness can also be taken insofar as it properly has to do with affection, as is determined by the Philosopher in *Ethics* 8 and 9. And so three things belong to friendliness (*amicitia*), viz., (a) *benevolence*, which is here called *affection*; (b) *concord*, and (c) *beneficence*, which is here called *being humane*. Tully leaves these out because, as was explained above, they involve very little of the nature of a debt.

**Reply to objection 3:** *Obedience* (*obedientia*) is included under *respect* (*observantia*), which Tully does posit, since both obedience and the reverence of honor are due to excellent persons. On the other hand, *faithfulness* (*fides*), through which pronouncements are made, is included in *truthfulness* (*veritas*) as regards the fulfillment of promises. However, as will become clear below (q. 109), truthfulness contains more within itself.

Now *discipline* is not owed out of a necessary debt, since no one is obligated to his subordinate insofar as he is a subordinate (though someone can be obligated to a superior to provide for subordinates—this according to Matthew 24:25 (“... the faithful and prudent servant, whom his master places over his own family”).) And this is why Tully skips over it. However, it can be included under *being humane*, which is where Macrobius puts it.

*Fairness* (*equitas*), on the other hand, falls under *equitableness* (*epieikeia*) or under *friendliness* (*amicitia*).

**Reply to objection 4:** Certain things that belong to *genuine* justice are posited in this enumeration. For instance, *good exchange* (*bona commutatio*), of which he says that it is “a habit that safeguards equality or balance in exchanges,” belongs to *particular justice*. And *good lawmaking* (*legispositiva*), which is, as he himself says, “the knowledge of political exchanges related to the community,” belongs to *legal justice* as regards those things that have to be observed by everyone (*communiter sunt observanda*).

Now as regards things to be done in particular cases that sometimes lie beyond the common laws, he posits *good sense* (*eugnomo-syna*), i.e., *good judgment in exceptional cases* (*bona gnome*), which, as was established in the tract on prudence (q. 51, a. 4), is directive in such matters. And the reason why he says of it that it is a “voluntary justification” is that by means of it one preserves what is just by his own proper judgment and not according to the written law. Now these two virtues are attributed to prudence as that which *directs* them, but to justice as that which *executes* them.

On the other hand, *piety* (*eusebia*) is here said to be *good worship*, and so it is the same thing as *religion*. This is why he says of it that it is “knowledge of the service of God” (and he says this in the sense in which Socrates claimed that all virtues are types of knowledge.) And as will be explained below (q. 81, a. 8), he traces *sanctity* (*sanctitas*) back to the same thing.

Now *gratitude* (*eucharistia*) is the same as *good thanksgiving* (*bona gratia*), which Tully posits, just as he posits *vindication* (*vindicativa*).

Kindness (*benignitas*) seems to be the same as affection (*affectus*), which Macrobius posits. Hence, in *Etymologia* Isidore says, “Kindness is a man prepared to do good on the spur of the moment and a man gentle in speech.” And Andronicus himself says that kindness is “the habit of doing good spontaneously.”

*Generosity* (*liberalitas*), on the other hand, seems to belong to *being humane*.

**Reply to objection 5:** Equitableness (*epieikeia*) is adjoined to *legal justice* and not to *particular justice*. And it seems to be the same as what has been called *good sense* (*eugnomo-syna*).

## QUESTION 81

### Religion

Next we have to consider the individual virtues just mentioned, to the extent that this is relevant to our present purpose. The first to be considered is *religion* (*religio*) (questions 81-100); the second is *piety* (*pietas*) (question 101); the third is *respect* or *reverence* (*observantia*) (questions 102-105); the fourth is *gratitude* (questions 106-107); the fifth is *vindication* (*vindicta*) (question 108); the sixth is *truthfulness* (*veritas*) (questions 109-113); the seventh is *friendliness* (*amicitia*) (questions 114-116); the eighth is *generosity* (*liberalitas*) (questions 117-119); and the ninth is *equitableness* (*epieikeia*) (question 120).

The other virtues enumerated [in Question 80] have already been treated above, (a) partly in the treatise on charity, viz., *concord* (*concordia*) and others of this sort, and (b) partly in the present treatise on justice, e.g., *innocence* (*innocentia*) and *good exchange* (*bona commutatio*), whereas (c) *good lawmaking* (*legispositiva*) was treated in the treatise on prudence.

As for religion, there are three things that have to be considered: first, religion in its own right (question 81); second, its acts (questions 82-91); and, third, the opposed vices (questions 92-100).

On the first topic there are eight questions: (1) Does religion consist in a relation just to God? (2) Is religion a virtue? (3) Is religion a single virtue? (4) Is religion a special or specific virtue (*specialis virtus*)? (5) Is religion a theological virtue? (6) Is religion preeminent over the other moral virtues? (7) Does religion have exterior acts? (8) Is religion the same virtue as holiness (*sanctitas*)?

### Article 1

#### Does religion order a man only toward God?

It seems that religion does not order a man only toward God:

**Objection 1:** James 1:27 says, “Religion clean and undefiled before our God and Father is this: to visit orphans and widows in their tribulation, and to keep oneself unblemished by this world.” But to visit orphans and widows has to do with one’s relation to his neighbor, whereas to keep oneself unblemished by this world pertains to an ordering by which a man is ordered within himself. Therefore, it is not the case that religion implies being ordered just toward God.

**Objection 2:** In *De Civitate Dei* 10 Augustine says, “Since in customary Latin usage—not only among non-experts but even among the most educated—religion is said to be exhibited to our blood-relatives and in-laws, as well as to anyone closely connected with us in any way, the word ‘religion’ does not escape ambiguity when the question turns to the worship of God, with the result that we cannot say with confidence that religion involves just the worship of God (*cultus dei*).” Therefore, the name ‘religion’ is predicated not only in relation to God, but also in relation to one’s neighbors.

**Objection 3:** Adoration (*latria*) seems to belong to religion. But as Augustine says in *De Civitate Dei* 10, “*Latria* is understood as service (*servitus*).” Now we ought to serve not only God, but also our neighbors—this according to Galatians 5:13 (“Serve one another with the charity of the Spirit”). Therefore, religion likewise implies a relation to one’s neighbor.

**Objection 4:** Veneration (*cultus*) belongs to religion. But a man is said to venerate not only God, but also his neighbor—this according to Cato’s dictum, “Venerate your parents (*cole parentes*).” Therefore, religion likewise orders us toward our neighbor, and not only toward God.

**Objection 5:** Everyone who is in the state of salvation is subject to God. But not everyone who is in the state of salvation is called ‘religious’; instead, the only ones called ‘religious’ are those who bind themselves by certain vows and observances and who bind themselves to obey certain human beings. Therefore, ‘religion’ does not seem to imply the subjection of a man to God.

**But contrary to this:** In *Rhetoric* 2 Tully says, “Religion is what involves solicitude for and ceremonies directed toward a higher nature that is called divine.”

**I respond:** As Isidore says in *Etymologia*, “A religious individual (*religiosus*), so called from ‘religion’ (*religio*), is, as Cicero points out, one who studies and reads again and again (*relegere*) what is relevant to divine worship.” And so ‘religion’ (*religio*) seems to be derived from *reading again and again* (*relegere*) things relevant to divine worship, since such things have to be turned over frequently in one’s heart—this according to Proverbs 3:6 (“Think of Him in all your ways”).

On the other hand, ‘religion’ (*religio*) can also be thought of as being derived from the fact that “we must *choose again* (*reeligere*) the God whom we have lost through negligence,” as Augustine puts it in *De Civitate Dei* 10.

Again, ‘religion’ (*religio*) can be thought of as being derived from *being bound back* (*religari*); hence, in *De Vera Religione* Augustine says, “Religion binds us back to the one almighty God.”

Now regardless of whether the name ‘religion’ is derived from (a) frequent reading, or from (b) choosing again what has been lost through negligence, or from (c) being bound back, ‘religion’ properly implies being ordered toward God. For it is He Himself (a) to whom we ought to be mainly bound as our unfailing principle, and (b) to whom, as our ultimate end, our choices should likewise be assiduously directed, and (c) whom we lose through negligence by sinning and whom we must recover by believing and bearing witness to our faith.

**Reply to objection 1:** Religion has two sorts of acts:

Some of the acts are *proper* and *immediate* acts which religion *elicits* and through which a man is ordered toward God alone, e.g., sacrificing (*sacrificare*), adoring (*adorare*), and others of this sort.

However, there are other acts that religion produces *by the mediation of the virtues that it commands*, ordering those virtues toward reverence for God (*ordinans eos in divinam reverentiam*), since the virtue that the end belongs to has command over (*imperet*) the virtues that the means to the end belong to. Accordingly, (a) visiting orphans and widows in their troubles, which is an act *elicited by mercy*, is posited as an act of religion in the mode of *commanding* (*per modum imperii*), whereas (b) preserving oneself unspotted by this world belongs to religion in the mode of *commanding*, while it belongs to *temperance* or some such virtue as its *eliciting principle* (*elicitive*).

**Reply to objection 2:** It is not insofar as the name ‘religion’ is used in its proper sense, but rather when we extend the name ‘religion’, that religion is related to what is exhibited in human relations. Hence, a little before the words that are quoted, Augustine prefaces them with, “‘Religion’ seems more distinctly to signify reverence for God (*Dei cultum*) and not just any sort of reverence.”

**Reply to objection 3:** Since ‘servant’ is used in relation to a master, it must be the case that where there is a proper and specific conception of a master, there is likewise a specific and proper conception of service or servitude (*servitus*). Now it is clear that dominion belongs to God in a proper and singular way, since He has made all things and holds the highest place among all things. And so a special kind of service is owed to Him. This sort of service is called ‘*latría*’ among the Greeks, and so it belongs properly to religion.

**Reply to objection 4:** We are said to ‘worship’ or ‘cultivate’ (*colere*) men whom we call to mind often by honoring them, by remembering them, or by their presence. Certain things that are subject to us are also said to be cultivated by us; for instance, agricultural workers (*agricolae*) are so-called because they cultivate their fields, and men are said to be inculturated (*incolae dicuntur*) because they cultivate the places that they inhabit.

However, since special honor is owed to God as the first principle of all things, a special sort of worship or cultivation is due to Him as well. In Greek it is called by the name ‘*eusebia*’ or ‘*theosebia*’, as is clear from Augustine in *De Civitate Dei* 10.

**Reply to objection 5:** Even though everyone who worships God can generally be called ‘religious’, the ones who are called ‘religious’ in a special way (*specialiter*) are those who dedicate their whole lives to the worship and cult of God, withdrawing themselves from worldly affairs—just as, in the same way, the ones called ‘contemplatives’ are not those who engage in contemplation, but rather those who give their whole lives over to contemplation. Moreover, these individuals subject themselves to

human beings not for the sake of those human beings, but rather for the sake of God—this according to the Apostle in Galatians 4:14 (“You received me as an angel of God, even as Christ Jesus”).

## Article 2

### Is religion a virtue?

It seems that religion is not a virtue:

**Objection 1:** Showing reverence to God seems to belong to religion. But as is clear from what was said above (q. 19, a. 9), to show reverence is an act of fear. Therefore, religion is a gift [of the Holy Spirit] and not a virtue.

**Objection 2:** Every virtue consists in a free act of will (*virtus in libera voluntate consistit*); this is why it is called an elective or voluntary habit. But as has been explained (a. 1), *latria*, which implies a certain sort of servitude or service (*servitudo*), belongs to religion. Therefore, religion is not a virtue.

**Objection 3:** As *Ethics* 2 points out, the aptitude for the virtues exists in us by nature, and this is why what belongs to the virtues is derived from the dictates of natural reason. But it belongs to religion to offer ceremonial worship to the divine nature. However, as was explained above (*ST* 1-2, q. 99, a. 3), ceremonial worship is not derived from the dictates of natural reason. Therefore, religion is not a virtue.

**But contrary to this:** As is clear from what has gone before (q. 80), religion is numbered among the virtues.

**I respond:** As was explained above (q. 58, a. 3 and *ST* 1-2, q. 55, a. 3), it is virtue that makes the one who has it good and renders his action good. And so one must claim that every good act pertains to virtue.

Now it is clear that repaying a debt to someone has the character of something good, since by the fact that someone repays a debt to another, he stands in the appropriate relation to him and is, as it were, appropriately ordered toward him. But as is clear from Augustine in *De Natura Boni*, order belongs to the nature of the good, as do mode and species. Therefore, since it belongs to religion to render the honor that is due to someone, viz., to God, it is clear that religion is a virtue.

**Reply to objection 1:** To revere God is an act of the gift of fear. But it belongs to religion to do certain things out of reverence for God. Hence, it follows not that religion is the same thing as the gift of fear, but that religion is ordered toward fear as toward something more important (*ad aliquid principalius*). For as was established above (q. 9, a. 1 and *ST* 1-2, q. 68, a. 8), the gifts are more important than the moral virtues.

**Reply to objection 2:** Even a servant can voluntarily present to his master what he owes him, and so he “makes a virtue of necessity” by repaying his debt voluntarily. Similarly, rendering the service that is due to God can be an act of virtue insofar as a man does it voluntarily.

**Reply to objection 3:** It does belong to the dictates of natural reason that a man should do *something* to show reverence to God, but it does not belong to the dictates of natural reason that he should specifically do *these* things or *those* things. Rather, this belongs to the disposition of divine or human law.

## Article 3

### Is religion a single virtue?

It seems that religion is not a single virtue:

**Objection 1:** As has been explained (a. 1), through religion we are ordered toward God. But in

God there are three persons and, again, many attributes that differ from one another at least conceptually (*quae saltem ratione differunt*). But as is clear from what was said above (q. 9, a. 1 and *ST* 1-2, q. 68, a. 8), diverse conceptions of the object are sufficient for diversifying the virtues. Therefore, religion is not a single virtue.

**Objection 2:** There seems to be a single act of a single virtue, since habits are distinguished by their acts. But religion has many acts, e.g., worshiping and serving, vowing, praying, sacrificing, and many others of this sort. Therefore, religion is not a single virtue.

**Objection 3:** Adoration (*adoratio*) belongs to religion. But adoration is given to images under one conception and to God Himself under another conception. Therefore, since diverse conceptions make for distinct virtues, it seems that religion is not a single virtue.

**But contrary to this:** Ephesians 4:5-6 says, “One God, one faith ...” But genuine religion professes faith in a single God. Therefore, religion is a single virtue.

**I respond:** As was established above (*ST* 1-2, q. 54, a. 2), habits are distinguished by the diverse conceptions of their objects. Now it belongs to religion to show reverence to the one God in accord with a single conception, viz., insofar as He is the first principle of the creation and governance of things. Hence, Malachi 1:6 says, “If I am a father, then where is my honor?” For it belongs to a father both to produce and to govern. Therefore, it is clear that religion is a single virtue.

**Reply to objection 1:** The three divine persons are a single principle of the creation and governance of things, and so they are served by a single [virtue of] religion.

On the other hand, the different conceptions of the attributes come together in the conception of a first principle, since God produces all things and governs all things by the wisdom, will, and power of His goodness. And so religion is a single virtue.

**Reply to objection 2:** It is by the same act that a man *serves* God and *worships* Him, since *worship* has to do with God’s excellence, to which reverence is owed, whereas *service* (*servitus*) has to do with the subjection of man, who because of his condition as a subject is obligated to show reverence to God. And all the acts that are attributed to religion pertain to these two items, since through all of the acts a man professes God’s excellence and his own subjection to God, either by rendering something to Him or, again, by taking on something divine (*vel exhibendo aliquid ei vel iterum assumendo aliquid divinum*).

**Reply to objection 3:** The worship (*cultus*) that belongs to religion is not given to images insofar as they are considered in themselves as certain things; rather, it is given to them insofar as they are images that lead one to the incarnate God. On the other hand, the movement that is directed toward the image insofar as it is an image does not stop with the image, but instead tends toward that of which it is an image.

And so neither the conception of *latria* nor the virtue of religion is diversified by the fact that the worship that belongs to religion is shown to images of Christ.

#### Article 4

##### Is religion a specific virtue distinct from other virtues?

It seems that religion is not a specific virtue distinct from other virtues:

**Objection 1:** In *De Civitate Dei* 10 Augustine says, “True sacrifice is every work that is done in order that we might be joined to God in a sacred fellowship.” But sacrifice belongs to religion. Therefore, every act of virtue belongs to religion. And so religion is not a specific virtue.

**Objection 2:** In 1 Corinthians 10:31 the Apostle says, “Do everything for the glory of God.” But as was noted above (aa. 1-2), it belongs to religion to do things in order to give reverence to God. Therefore, religion is not a special virtue.

**Objection 3:** The charity (*caritas*) by which God is loved is not a virtue distinct from the charity

by which our neighbor is loved. But as *Ethics* 8 says, “To be honored is close to being loved.” Therefore, religion, by which God is honored, is not a virtue that is distinct in species from the respect (*observantia*) or service (*dulia*) or piety (*pietas*) by which our neighbor is honored. Therefore, it is not a specific virtue.

**But contrary to this:** Religion is posited as a part of justice distinct from its other parts.

**I respond:** Since a virtue is ordered toward the good, it follows that where there is a specific conception of the good, there must be a specific virtue. But the good toward which religion is ordered is to give due honor to God. Now honor is owed to someone by reason of his excellence. But a singular excellence belongs to God insofar as He infinitely surpasses all things and exceeds them in every way. Hence, a specific honor is due to Him—just as we notice in human affairs that different types of honor are owed to the different types of excellence possessed by persons, so that one type of honor is owed to one’s father, another type to one’s king, and so on. Hence, it is clear that religion is a specific virtue.

**Reply to objection 1:** Every act of virtue is said to be a ‘sacrifice’ insofar as it is ordered toward reverence for God. Hence, it does not follow from this that religion is a general virtue; rather, what follows is that religion *commands* all the other virtues, as has already been explained above (a. 1).

**Reply to objection 2:** All things, insofar as they are done for God’s glory, belong to religion—not in the sense that [the virtue of] religion *elicits* them, but in the sense that it *commands* them.

By contrast, the acts that belong to religion in the sense that [the virtue of] religion *elicits* them are those that by the very nature of their species involve reverence for God.

**Reply to objection 3:** The object of love (*amor*) is the good, whereas the object of honor or reverence is something excellent. Now God’s *goodness* is communicated to a creature, but not the *excellence* of His goodness. And this is why the charity by which God is loved is not a virtue distinct from the charity by which our neighbor is loved, whereas religion, by which God is honored, is distinct from the virtues by which our neighbor is honored.

## Article 5

### Is religion a theological virtue?

It seems that religion is a theological virtue:

**Objection 1:** In *Enchiridion* Augustine says, “God is worshiped by faith, hope, and charity,” which are the theological virtues. But it belongs to religion to worship God. Therefore, religion is a theological virtue.

**Objection 2:** A theological virtue is one that has God as its object. But religion has God for its object, since, as has been explained (a. 1), it orders one toward God alone. Therefore, religion is a theological virtue.

**Objection 3:** As is clear from what was said above (*ST* 1-2, q. 57, a. 3 and q. 62, a. 2), every virtue is either a theological virtue, an intellectual virtue, or a moral virtue. But it is clear that religion is not an intellectual virtue, since its perfection does not involve a consideration of the truth. Similarly, it is likewise not a moral virtue, to which it is proper to maintain a mean between excess and defect; for one cannot worship God to excess—this according to Ecclesiasticus 43:33 (“Blessing the Lord, exalt Him as much as you can, for He is greater than all praise”). Therefore, what is left is that religion is a theological virtue.

**But contrary to this:** Religion is posited as a part of justice, which is a moral virtue.

**I respond:** As has been explained above (aa. 2 and 4), it is religion that offers due worship to God. Therefore, there are two things to consider in the case of religion:

The first is *what* religion offers to God, viz., worship (*cultus*), and this is related to religion as its *matter* and *object*.

The other is *the one* to whom worship is offered, viz., God. To Him worship is given, not in the

sense that the acts by which God is worshiped attain to God Himself, in the way that when we believe God (*credimus Deo*), we attain to God by believing—for which reason, as was explained above (q. 2, a. 2), God is the object of [the virtue of] faith not only insofar as we *believe that God ... (credimus Deum)*, but also insofar as we *believe God (credimus Deo)*—but instead God is offered due worship insofar as certain of the acts by which God is worshiped are done out of reverence for God, e.g., the offering of sacrifices and other acts of this sort.

Hence, it is clear that God is related to the virtue of religion *not* as its *object* and *matter*, but as its *end*. And so religion is not a theological virtue, the *object* of which is the ultimate end, but is instead a moral virtue that has to do with the means to the end.

**Reply to objection 1:** It is always the case that a power or virtue that operates with respect to the end moves by its command a power or virtue that does those things that are ordered toward that end. Now the theological virtues—viz., faith, hope, and charity—have an act with respect to God as their proper object. And so by their command they cause an act of religion, which does things that are ordered toward God. And this is the reason why Augustine claims that God is worshiped by faith, hope, and charity.

**Reply to objection 2:** Religion orders a man toward God not as its *object* but as its *end*.

**Reply to objection 3:** Religion is neither a theological virtue nor an intellectual virtue, but is instead a moral virtue, since it is a part of justice. And in its case the mean is taken not, to be sure, from within the passions, but in accord with a certain equality or balance among the actions that are ordered toward God.

Now I say ‘equality’ or ‘balance’ here not absolutely speaking, since we cannot offer to God as much as we owe Him, but rather in accord with a consideration of human powers and divine acceptance. Now there can be excess in those things that pertain to the worship of God—not with respect to the circumstance ‘*how much?*’, but with respect to other circumstances, e.g., because the worship of God is offered to *someone* to whom it should not be offered, or is offered *when* it should not be offered, or is offered in other circumstances in which it should not be offered.

## Article 6

### Is religion preeminent over the other moral virtues?

It seems that religion is not preeminent over the other moral virtues (*non sit praeferenda aliis virtutibus moralibus*):

**Objection 1:** As is clear from *Ethics* 2, a moral virtue’s perfection consists in its attaining the mean. But religion falls short of attaining the mean of justice, since it does not at all repay God up to equality (*non reddit Deo omnino aequale*).

**Objection 2:** In what is given to men, something seems more praiseworthy to the extent that it is offered to someone who is more needy; hence, Isaiah 58:7 says, “Give your bread to one who is hungry.” But God does not need anything that is offered to Him by us—this according to Psalm 15:2 (“I said, ‘You are my God because you do not need my goods.’” Therefore, religion seems less praiseworthy than other virtues through which men are assisted.

**Objection 3:** Something is less praiseworthy to the extent that it is done out of a greater need—this according to 1 Corinthians 9:16 (“If I preach the Gospel, no glory comes to me, for a necessity lies upon me”). Now where what is owed is greater, there is a greater necessity. Therefore, since God especially is owed what is offered to Him by a man, it seems that religion is the least praiseworthy of the human virtues.

**But contrary to this:** In Exodus 20 the precepts pertaining to religion are posited at the beginning, as the most important precepts. But the ordering of the precepts is proportionate to the ordering of the

virtues, since the precepts of the Law are given concerning the acts of the virtues. Therefore, religion is the most important of the moral virtues.

**I respond:** The means to an end receive their goodness from their being ordered toward the end, and so the closer they are to the end, the better they are. Now as was established above (a. 5), the moral virtues have to do with things that are ordered toward God as their end. But religion approaches God more closely than the other moral virtues do, insofar as it does things that are directly and immediately ordered toward honoring God. And so religion is preeminent over the other moral virtues.

**Reply to objection 1:** The praise for a virtue rests in the *act of will* and not in the *power*. And so to fall short of balance or equality, which is the mean of justice, because of a defect in the *power* does not diminish the praise for the virtue, as long as the defect does not arise from an act of will.

**Reply to objection 2:** In case of things that are offered to another because of their usefulness to the other, the giving is more praiseworthy if it is done for someone who is more needy, and this because it is more useful to him. By contrast, God is not offered anything because of its usefulness to Him; instead, it is offered to Him for the sake of His glory and for its usefulness to us.

**Reply to objection 3:** Where there is necessity, the glory of supererogation is removed, but the merit of virtue is not excluded as long as the act is voluntary. And because of this the argument does not follow.

## Article 7

### Does adoration (*latría*) have any exterior act?

It seems that adoration (*latría*) does not have any exterior act:

**Objection 1:** John 4:24 says, “God is a spirit, and those who adore Him must adore Him in spirit and in truth.” But exterior acts belong not to the spirit but instead to the body. Therefore, religion, to which adoration (*adoratio*) belongs, has interior acts and not exterior acts.

**Objection 2:** The purpose (*finis*) of religion is to offer God reverence and honor. But it seems to show irreverence for someone excellent if he is offered what properly belongs to lower men. Therefore, since what man offers by corporeal actions seems to be ordered toward the needs of men or toward reverence for lower creatures, it does not seem that it can be fittingly elevated to reverence for God.

**Objection 3:** In *De Civitate Dei* 6 Augustine commends Seneca for criticizing certain individuals who offered to idols what was customarily offered to men, since things that belong to mortals are unfitting for immortals. But, *a fortiori*, those things are unfitting for the true God, who is exalted above all gods. Therefore, it seems reprehensible for someone to worship God by means of corporeal acts. Therefore, religion does not have any corporeal acts.

**But contrary to this:** Psalm 83:3 says, “My heart and my flesh have exulted in the living God.” But just as interior acts belong to the heart, so exterior acts belong to the members of the flesh. Therefore, it seems that God should be worshiped not only by means of interior acts, but also by means of exterior acts.

**I respond:** We show God reverence and honor not for His own sake, since He is in Himself full of glory and His glory cannot be added to by a creature, but rather for our own sake, since by the fact that we revere and honor God, our mind is subjected to Him, and this is what the perfection of our mind consists in. For each thing is brought to perfection by being subject to its superior—in the way that the body is brought to perfection in being vivified by the soul, and in the way that the atmosphere is brought to perfection in being illuminated by the sun.

Now in order for the human mind to be joined to God, it needs to be guided by sensible things, since, as the Apostle says in Romans 1:20, “The invisible things are clearly seen, being understood by the things that are made.” And so it is necessary to make use of certain corporeal things in order that a man’s

mind might be aroused by them as signs to the spiritual acts by which it is joined to God. And so religion does, to be sure, have interior acts as the acts which are the principal acts and which belong to religion in their own right, but it also has exterior acts as secondary acts that are ordered toward the interior acts.

**Reply to objection 1:** Our Lord is talking about what in divine worship is principal and intended in its own right.

**Reply to objection 2:** Exterior acts of the sort in question are not offered to God in the sense that He needs them—this according to Psalm 49:13 (“Will I eat the flesh of bulls or drink the blood of goats?”). Instead, they are offered to God as signs of interior and spiritual works that God accepts in their own right. Hence, in *De Civitate Dei* 10 Augustine says, “The visible sacrifice is a sacrament, i.e., a sacred sign, of the invisible sacrifice.”

**Reply to objection 3:** The idolaters are derided because they offer to idols things that belong to men not as signs that spur them on to spiritual thing, but as things accepted in their own right by the idols—and especially because those things were ostentatious and shameful.

## Article 8

### Is religion the same as holiness?

It seems that religion (*religio*) is not the same as holiness (*sanctitas*):

**Objection 1:** As has been established (a. 4), religion is a *specific* virtue. By contrast, holiness is a *general* virtue, since, as Andronicus puts it, “it makes individuals faithful and makes them observe what is just in the sight of God.” Therefore, holiness is not the same as religion.

**Objection 2:** Holiness seems to imply cleanliness (*munditia*); for in *De Divinis Nominibus*, chap. 12, Dionysius says, “Holiness is freedom from every sort of uncleanness, along with perfect and altogether immaculate cleanliness.” But cleanliness seems to belong especially to temperance, which excludes corporeal disgracefulness. Therefore, since religion belongs to justice, it seems that holiness is not the same as religion.

**Objection 3:** Things that are divided off by an opposition are not the same. But as was established above (q. 80), in one of the enumerations of the parts of justice, holiness is divided off from religion. Therefore, holiness is not the same as religion.

**But contrary to this:** Luke 1:74-75 says, “... that we might serve Him in holiness and justice.”

**I respond:** The name ‘holiness’ (*sanctitas*) seems to imply two things: (a) *cleanliness* (*munditia*), and the Greek name ‘*hagios*’ fits this signification, since ‘*hagios*’ means, as it were, without dirt (*sine terra*); and (b) *firmness* (*firmitas*), and this is why among the ancients the things called holy were those that were fortified by the laws in order that they not be violated, and, hence, something is said to be made holy because it is fortified by the law. The name ‘*sanctus*’ in Latin can likewise pertain to cleanliness, so that ‘*sanctus*’ means, as it were, “sprinkled with blood” (*sanguine tinctus*)—because, as Isidore explains in *Etymologia*, “those ancients who wanted to be purified were sprinkled with the blood of the victim.” And both significations comport with holiness being attributed to things that are used for divine worship, so that not just men, but also the temple and the vessels and other things of this sort are said to made holy by being used for divine worship.

*Cleanliness* is necessary for the mind’s being directed toward God, since the human mind is rendered impure by being immersed in lower things, just as anything whatsoever is rendered unclean (*sordescit*) by being mixed with what is worse than it—in the way that silver is made impure by being mixed with lead. Rather, the mind must be abstracted from lower things in order to be able to be joined to the highest entity. And so a mind without cleanliness can be applied to God. Hence, Hebrews 12:14 says, “Pursue peace with all men and holiness, without which no man shall see God.”

*Firmness* is likewise needed for the mind to be applied to God. For the mind is applied to Him as

the ultimate end and first principle; but things of this sort must be maximally unchangeable. Hence, in Romans 8:38-39 the Apostle said, "I am certain that neither death nor life will separate me from the charity of God."

So, then, holiness means that a man's mind applies itself and its acts to God. Hence, it differs from religion not in its essence, but only conceptually. For it is called religion insofar as it renders to God the service owed to Him in those matters that pertain specifically to divine worship, e.g., sacrifices, oblations, and others of this sort, whereas it is called holiness insofar as a man refers not only these actions but the acts of all the virtues to God, or insofar as a man disposes himself for divine worship by means of good works.

**Reply to objection 1:** Holiness is a specific virtue in its essence, and on this score it is in some sense the same as religion. However, it has a certain sort of generality insofar as by its command it orders all the acts of the virtues toward the divine good—in the same way that legal justice is called a general virtue insofar as it orders the acts of all the virtues toward the common good.

**Reply to objection 2:** Temperance does, to be sure, bring about cleanliness, but not in such a way that it has the character of holiness—unless it is referred to God. Hence, in *De Virginitate* Augustine says, "Virginity is honored not because it is virginity, but because it is consecrated to God."

**Reply to objection 3:** Holiness is distinct from religion because of the difference noted above—not because, as has been explained, it differs in reality from religion, but because it differs from religion merely conceptually.

## QUESTION 82

### Devotion

Next we have to consider the acts of religion: first, the interior acts (questions 82-83), which, given what was said above, are the more important; and, second, the exterior acts (questions 84-100), which are secondary.

Now the interior acts of religion seem to be devotion and prayer. Therefore, we must first discuss devotion (question 82) and, second, prayer (question 83).

On the first topic there are four questions: (1) Is devotion a specific act? (2) Is devotion an act of religion? (3) What is the cause of devotion? (4) What is the effect of devotion?

### Article 1

#### Is devotion a specific act?

It seems that devotion is not a specific act:

**Objection 1:** That which has to do with the *mode* of other acts does not seem to be a specific act. But devotion seems to have to do with the mode of other acts; for 2 Paralipomenon 29:31 says, “The whole multitude offered victims and praises and holocausts with a devout mind.” Therefore, devotion is not a specific act.

**Objection 2:** No specific act is found in diverse genera of acts. But devotion is found in diverse genera of acts, viz., in corporeal acts and also in spiritual acts; for someone is said to meditate devoutly and also to genuflect devoutly. Therefore, devotion is not a specific act.

**Objection 3:** Every specific act belongs either to an appetitive power (*virtus*) or to a cognitive power. But devotion is not appropriated to either, as is clear to anyone who runs through the individual species of acts, enumerated above (*ST* 1, q. 78 and *ST* 1-2, q. 23, a. 4), of the appetitive part [of the soul] and of the cognitive part. Therefore, devotion is not a specific act.

**But contrary to this:** As was established above (*ST* 1-2, q. 21, aa. 3-4), it is through acts that we gain merit. But devotion has a specific reason for gaining merit. Therefore, devotion is a specific act.

**I respond:** ‘Devotion’ comes from ‘vowing’ or ‘devoting’ (*devotio dicitur a devovendo*), and so the ones who are called ‘devout’ are those who devote themselves to God so as to submit themselves totally to Him. For this reason, in times past among the Gentiles the ones who were called ‘devout’ were those who devoted themselves to their idols unto death for the sake of saving their army, as Titus Livius reports about the two Decii.

Hence, devotion seems to be nothing other than a sort of willing (*voluntas*) to hand oneself over promptly to whatever has to do with the service of God. Hence, Exodus 35:20-21 says, “The multitude of the children of Israel offered their first fruits to the Lord with a prompt and devout mind.”

Now it is obvious that willing to do promptly whatever pertains to serving God is a certain specific act. Hence, devotion is a specific act of the will.

**Reply to objection 1:** The mover imposes a mode on the movement of the movable thing. But as was established above (*ST* 1-2, q. 9, a. 3), it is the will that moves the other powers of the soul to their acts. And so, since devotion is an act of will on the part of a man who is offering himself to God in order to serve Him who is the ultimate end, it follows that devotion imposes a mode on human acts, regardless of whether they are acts of the will itself with respect to the means to the end or the acts of the other powers that are moved by the will.

**Reply to objection 2:** Devotion is found in diverse genera of acts not as a species of those acts but in the way that the motion of the mover exists virtually in the movements of the movable things.

**Reply to objection 3:** Devotion is an act of the appetitive part of the soul and is, as has been explained, a certain movement of the will.

## Article 2

### Is devotion an act of religion?

It seems that devotion is not an act of religion:

**Objection 1:** As has been explained (a. 1), devotion has to do with someone's handing himself over to God. But this is done especially through charity; for in *De Divinis Nominibus*, chap. 4, Dionysius says, "Divine love engenders ecstasy, allowing them to be not lovers of their very selves, but lovers of those things which they love." Therefore, devotion is an act of charity more than of religion.

**Objection 2:** Charity precedes religion. But devotion seems to precede charity, since in the Scriptures charity is signified by fire, whereas devotion is signified by fat, which is the matter for fire. Therefore, devotion is not an act of religion.

**Objection 3:** As has been explained (a. 1), by religion a man is ordered just toward God. But devotion is also had with respect to men. For some are said to be devoted to certain holy men, and servants are said to be devoted to their masters—in the sense in which Pope Leo says, "The Jews, as if devoted to the Roman laws, said, 'We have no king but Caesar.'" Therefore, devotion is not an act of religion.

**But contrary to this:** As has been explained (a. 1), 'devotion' comes from 'vowing'. But a vow is act of religion. Therefore, so is devotion.

**I respond:** It belongs to the same virtue both (a) to *will* to do something and (b) to have a prompt will for *doing* it, since the two acts have the same object. For this reason, the Philosopher says in *Ethics* 5, "Justice is that by which men *will* what is just and *do* what is just."

Now as is clear from what was said above (q. 81), *doing* what pertains to divine worship or service obviously belongs properly to religion. Hence, it also belongs to religion to have a prompt *will* to execute things of this sort—which is what it is to be devout. And so it is clear that devotion is an act of religion.

**Reply to objection 1:** It belongs immediately to charity that a man hand himself over to God by adhering to Him through a certain union of spirit. But a man's handing himself over to God for works of divine worship belongs immediately to religion and mediately to charity, which is a principle of religion.

**Reply to objection 2:** Bodily fat is generated in digestion by natural heat (*generatur per calorem digerentem*), and bodily fat also conserves natural heat itself as its nourishment.

Similarly, charity causes devotion insofar as one is rendered prompt in serving his friend, and charity is also nourished by devotion, in just the way that any friendship is conserved and augmented by exercising and thinking about friendly deeds.

**Reply to objection 3:** Devotion that is directed toward God's saints, living or dead, does not stop with them but passes on to God, since we are venerating God in God's ministers. By contrast, the devotion that servants are said to have for their temporal masters is of a different type, in just the way that serving temporal masters likewise differs from serving God.

## Article 3

### Is contemplation, or meditation, a cause of devotion?

It seems that contemplation, or meditation, is not a cause of devotion:

**Objection 1:** No cause impedes its own effect. But subtle meditations on intelligible things oftentimes impede devotion. Therefore, contemplation, or meditation, is not a cause of devotion.

**Objection 2:** If contemplation were a proper and *per se* cause of devotion, then it would have to be the case that what belongs to a higher contemplation would excite more devotion. But the contrary

appears to be the case, since a greater devotion is frequently excited by a consideration of Christ's passion and of other mysteries having to do with his humanity than by a consideration of God's greatness. Therefore, contemplation is not a proper cause of devotion.

**Objection 3:** If contemplation were a proper cause of devotion, then it would have to be the case that those who are more fit for contemplation would be more fit for devotion. But we see the contrary of this, since devotion is often found more in simple men and the female sex, in whom one finds a lack of contemplation. Therefore, contemplation is not a proper cause of devotion.

**But contrary to this:** Psalm 38:4 says, "In my meditation a fire shall flame up." But it is spiritual fire that causes devotion. Therefore, meditation is a cause of devotion.

**I respond:** The *extrinsic* and principal cause of devotion is God, of whom Ambrose says in *Super Lucam*, "God calls those whom He deigns to call, and He renders religious those whom He wants to, and if He had willed it, He would have made devout Samaritans out of those who were not devout."

However, on our part the *intrinsic* cause has to be meditation, or contemplation. For it has been explained (a. 1) that devotion is a certain act of the will directed toward a man's handing himself over promptly to the service of God. But every act of the will proceeds from some sort of thought (*consideratio*), because the object of the will is an *understood* good (*bonum intellectum*). This is why in *De Trinitate* Augustine says that the will arises from intelligence. And so it must be the case that meditation is a cause of devotion, viz., insofar as it is through meditating that a man conceives of handing himself over to the service of God.

There are two sorts of thoughts that lead one to hand himself over to the service of God:

The first has to do with God's goodness and His gifts (*est ex parte divinae bonitatis et beneficiorum ipsius*)—this according to Psalm 72:28 ("It is good for me to adhere to God, to place my hope in the Lord God"). And this thought excites love (*excitat dilectionem*), which is a proximate cause of devotion.

The second, having to do with the man, is his thinking about his own defects, because of which he needs to rely on God—this according to Psalm 120:1-2 ("I have lifted my eyes to the mountains, from whence help will come to me. My help is from the Lord, who made heaven and earth"). And this sort of thought drives out presumption, by which one is prevented from subjecting himself to God as he relies on his own strength (*dum suae virtuti innititur*).

**Reply to objection 1:** It is thinking about things that are apt to excite love for God that causes devotion. By contrast, thinking of anything which is irrelevant to this and which distracts one's mind from such things impedes devotion.

**Reply to objection 2:** Whatever pertains to [Christ's] divinity is such that in its own right it excites love to the highest degree and, as a result, excites devotion, since God is to be loved above all things. But because of the human mind's weakness, the mind is such that just as it needs to be led by the hand by certain sensible things known to us to the *cognition* of divine things, so too it needs to be led by the hand to the *love* of divine things. The most important of these sensible things is the humanity of Christ, since in a Preface [for Christmas time] it says, "... in order that when we know God visibly, we are thereby caught up in the love of what is invisible." And so things that belong to Christ's humanity especially excite devotion, in the manner of being led by the hand, even though devotion has to do principally with those things that belong to His divinity.

**Reply to objection 3:** Knowledge—along with whatever else pertains to greatness—provides an occasion for a man's relying on himself and so not handing himself over totally to God. Hence it is that things of this sort occasionally impede devotion, and that devotion abounds in simple men and in women because they suppress pride (*elationem comprimendo*). However, if a man perfectly submits his knowledge and any other perfection to God, then by that very fact his devotion grows.

## Article 4

### Is joy an effect of devotion?

It seems that joy (*laetitia*) is not an effect of devotion:

**Objection 1:** As has been explained (a. 3), it is the passion of Christ that mainly excites one to devotion. But a sort of affliction in the soul follows upon thinking about the passion—this according to Lamentations 3:19-20 (“Remember my poverty, the wormwood, and the gall,” which pertains to the passion, and then, “I will be mindful and remember, and my soul will languish within me”). Therefore, pleasure (*delectatio*) or delight (*gaudium*) is not an effect of devotion.

**Objection 2:** Devotion consists principally in the interior sacrifice of one’s spirit. But Psalm 50:19 says, “A sacrifice to God is an afflicted spirit.” Therefore, affliction is more an effect of devotion than is agreeableness (*iucunditas*) or delight (*gaudium*).

**Objection 3:** In *De Homine* Gregory of Nyssa says, “Just as laughter proceeds from joy, so tears and groans are signs of sadness.” But it happens that some individuals break out into tears because of devotion. Therefore, joy (*laetitia*) or delight (*gaudium*) is not an effect of devotion.

**But contrary to this:** The Collect [for the Thursday after the Fourth Sunday of Lent] says, “... in order that we whom vowed fasting castigates, holy devotion might itself also make joyful.”

**I respond:** Devotion *in its own right* and *principally* is a cause of mental joy, whereas *as a consequence* and *incidentally* it is a cause of sadness. For it has been explained (a. 3) that devotion proceeds from two sorts of thinking:

(a) It proceeds principally from thinking about God’s goodness, since this sort of thinking pertains, as it were, to the terminus of the movement of a will that is handing itself over to God. And pleasure follows *per se* from this sort of thinking—this according to Psalm 76:4 (“I remembered God and was delighted”). However, this sort of thinking incidentally causes a certain sadness in individuals who do not yet enjoy God fully—this according to Psalm 41:3-4 (“My soul thirsts for the living God,” and later, “My tears have been ...”).

(b) As has been explained (a. 3), devotion is caused secondarily by thinking about one’s own defects, since this sort of thinking pertains to the terminus *from which* a man withdraws through the movement of a devout will—in order, namely, not to exist on his own (*ut non in se existat*), but to submit himself to God. Now this sort of thinking contrasts with the first sort. For in its own right it is apt to cause sadness as one mulls over his own defects, whereas incidentally it causes joy, viz., because of his trust (*spes*) in God’s help.

And so it is clear that delight (*delectatio*) follows primarily and *per se* from devotion, whereas a “sorrow that accords with God” (1 Corinthians 7:10) follows secondarily and incidentally.

**Reply to objection 1:** In thinking about the passion of Christ there is (a) something that saddens one, viz., the human defectiveness which was such that Christ had to suffer in order to destroy it, and (b) something that makes one joyful, viz., God’s graciousness towards us, which provided us with liberation from this defectiveness.

**Reply to objection 2:** The spirit which on the one hand is troubled by the defects of the present life is delighted on the other hand by thinking about God’s goodness and by trusting in God’s help.

**Reply to objection 3:** Tears flow forth not only because of sadness but also because of a certain tenderness of feeling, especially when what is being thought about is something delightful with an admixture of something sad. For instance, men often cry because of a feeling of piety when they recover their children or close friends whom they thought had perished. And tears proceed in this way from devotion.

## QUESTION 83

### Prayer

Next we have to consider prayer (*oratio*). And on this topic there are seventeen questions: (1) Is prayer an act of an appetitive power or an act of a cognitive power? (2) Is it appropriate to pray? (3) Is prayer an act of religion? (4) Is it God alone who is to be prayed to? (5) In prayer, should something determinate be asked for? (6) In praying, should we ask for temporal things? (7) Should we pray for others? (8) Should we pray for enemies? (9) What about the seven petitions of the Lord's Prayer? (10) Is praying proper to a rational creature? (11) Do the saints in heaven pray for us? (12) Should prayer be vocal? (13) Is attention required for prayer? (14) Should prayer be long-lasting? (15) Is prayer efficacious in obtaining what is asked for? (16) Is prayer meritorious? (17) What are the species of prayer?

### Article 1

#### Is prayer an act of an appetitive power?

It seems that prayer (*oratio*) is an act of an appetitive power:

**Objection 1:** It belongs to prayer to be heard out. But it is desire (*desiderium*) that is heard out by God—this according to Psalm 9:38 (“The Lord has heard the desire of the poor”). Therefore, prayer is desire. But desire is an act of an appetitive power. Therefore, so is prayer.

**Objection 2:** In *De Divinis Nominibus*, chap. 3, Dionysius says, “Before all else it is advantageous to begin with prayer, in the sense of handing ourselves over to God and uniting ourselves with Him.” But one's union with God comes about through love, which belongs to an appetitive power. Therefore, prayer belongs to an appetitive power.

**Objection 3:** In *De Anima* 3 the Philosopher posits two operations of the intellectual part [of the soul], the first of which is the *intellectual grasp* of indivisibles (*indivisibilium intelligentia*), through which we apprehend with respect to each thing what it is, and the second of which is *composition and division* (*compositio et divisio*), through which one apprehends that something is or is not the case. A third is added to these, viz. to reason discursively (*rationari*) by proceeding from what is known to what is not known. But prayer is not traced back to any of these operations. Therefore, prayer is an act of an appetitive power and not of an intellectual power.

**But contrary to this:** In *Etymologia* Isidore says, “To pray is the same as to speak.” But speaking belongs to the intellect. Therefore, prayer is an act of the intellectual power and not of an appetitive power.

**I respond:** According to Cassiodorus, ‘*oratio*’ is, as it were, reasoning of the mouth (*oris ratio*). Now theoretical reason and practical reason differ from one another in that theoretical reason has to do only with apprehending things, whereas practical reason has to do not only with apprehending things but also with causing them (*ratio practical est non solum apprehensiva sed etiam causativa*).

Now there are two ways in which something can be a cause of something else: (a) *completely* (*perfecte*), by inducing necessity, and this occurs when the effect is totally subject to the power of the cause; and (b) *incompletely* (*imperfecte*), by disposing only, viz., when the effect is not totally subject to the power of the cause. So, then, there are two ways in which reason is a cause of given things: (a) perfectly, in the sense of imposing necessity, and in this way it belongs to reason to command not only the lower powers and members of the body, but also men who are subjects—and this is done by *commanding* (*imperando*)—and (b) in the sense of inducing and in some way disposing, and in this way reason *asks* (*petit*) for something to be done by those who are not subject to it, whether they be equals or superiors.

Now both of these acts, viz., commanding (*imperare*) and asking (*petere*) or begging (*deprecare*),

imply some sort of ordering, insofar as a man arranges for something to be done by another. Hence, they pertain to reason, whose role is to provide order; this is why the Philosopher says in *Ethics* 1, “Reason pleads on behalf of the best things.”

Right now we are talking about prayer insofar as it signifies a sort of begging or petitioning; it is in this sense that in *De Verbo Domini* Augustine says, “Prayer is a sort of petition,” and that in *De Fide Orthodoxa* 3 Damascene says, “Praying is asking God for appropriate things.” So, then, it is clear that prayer in the sense in which we are now talking about it is an act of reason.

**Reply to objection 1:** The Lord is said to hear “the desire of the poor” either (a) because the desire is the cause of the begging, since the petition in some sense expounds upon the desire, or (b) in order to show how quickly God hears (*ad ostendendum exauditionis velocitatem*), since while something still exists in the desire of the poor, God hears it before they propose their prayer—this according to Isaiah 65:24 (“And it shall come to pass that before they cry out, I will hear them”).

**Reply to objection 2:** As was explained above (q. 82, q. 4 and *ST* 1-2, q. 9, a. 1), the will moves reason toward its end. Hence, with the will moving reason, nothing prevents an act of reason from tending toward charity’s end, which is to be united with God.

Now there are two ways in which prayer tends toward God when it is moved, as it were, by the willing that belongs to charity:

(a) *on the part of what is being asked for*, since what is principally to be asked for in prayer is that we be united with God—this according to Psalm 26:4 (“One thing I ask of the Lord, this I require, that I might dwell in the house of the Lord all the days of my life”).

(b) *on the part of the petitioner himself*, who must approach the one whom he is petitioning, either spatially, as in the case of a human being, or mentally, as in the case of God. Hence, in the same place [Dionysius] says, “When we invoke God by our prayers, we are present to Him with our mind revealed.” And, accordingly, Damascene likewise says, “Prayer is the ascent of the intellect toward God.”

**Reply to objection 3:** The three acts in question belong to theoretical reason. But, in addition, as has been explained, it belongs to practical reason to cause something either by way of *commanding* or by way of *asking*.

## Article 2

### Is it appropriate to pray?

It seems that it is not appropriate (*non sit conveniens*) to pray:

**Objection 1:** Prayer seems to be necessary for letting the one from whom we are asking something know what we need. But as Matthew 6:32 says, “Your Father knows that you need these things.” Therefore, it is not appropriate to pray to God.

**Objection 2:** Through prayer the mind of the one who is prayed to is bent toward doing what is being asked of him. But God’s mind is immutable and unbendable—this according to 1 Kings 15:29 (“But the victor in Israel will not spare, and He will not be moved to repent”). Therefore, it is not appropriate for us to pray to God.

**Objection 3:** It is more generous to give something to someone who has not asked for it than to give something to someone who has asked for it; for, as Seneca says, “Nothing is bought more dearly than what is bought with prayers.” But God is the most generous of all. Therefore, it does not seem appropriate for us to pray to God.

**But contrary to this:** Luke 18:1 says, “You must pray and not grow weary.”

**I respond:** Among the ancients there were three errors concerning prayer:

(a) Some claimed that human affairs are not governed by divine providence. From this it follows that it is useless (*vanum*) to pray or to worship God at all. Of these individuals Malachi 3:14 says, “You

have said, 'It is useless to serve God'."

(b) The second error was the opinion of those who claimed that all things, even within human affairs, happen by necessity, either because of the immutability of divine providence or because of the necessity of the stars, or because of the connection among causes. And according to these individuals, the usefulness of prayer is likewise ruled out.

(c) The third error was the opinion of those who claimed that human affairs are governed by divine providence and that human affairs do not come about by necessity, but they asserted that the plan of divine providence is similarly variable and that the plan of divine providence is changed by prayers and other things that belong to divine worship.

All these errors were refuted in the First Book (*ST* 1, q. 22, aa. 2 and 4; q. 23, a. 8; q. 115, a. 6; and q. 116, a. 3).

And so we must account for the usefulness of prayer in such a way that (a) we do not impose necessity on human affairs subject to divine providence and that (b) we do not come to think of God's plan as changeable. Therefore, to make this clear, consider that divine providence plans not only *which effects* will come to be, but also *from which causes* they will come to be and *in what order* they will come to be. Among other causes, human acts are also the causes of certain things. Hence, it is necessary for human beings to do certain things, not in order to *change God's plan* by their actions, but in order that by their acts they might bring to completion certain effects *in accord with the order planned by God*. The same thing holds in the case of natural causes.

Likewise, it is similar in the case of prayer. We do not pray for the purpose of *changing* God's plan; rather, we pray *in order to procure what God has planned to be fulfilled through the prayers of the saints*, so that, as Gregory puts it in *Dialogia*, "by asking, men might merit to receive what almighty God has planned from eternity to give them."

**Reply to objection 1:** It is necessary for us to put our prayers before God not in order that we might make clear to Him what our needs or desires are, but rather in order that we ourselves might realize that we must have recourse to God's assistance in these matters.

**Reply to objection 2:** As has been explained, our prayer is ordered not toward changing God's plan, but toward obtaining by our prayers what God has planned (*ut obtineatur nostris precibus quod Deus disposuit*).

**Reply to objection 3:** Out of His generosity God furnishes us with many things, including things that we have not asked for. But the fact that He wishes to bestow certain things on us when we ask for them is for the sake of our advantage, viz., so that we acquire a certain confidence in having recourse to God, and so that we recognize that He is the source of our goods. Hence, Chrysostom says, "Consider how much happiness is granted to you, and how much glory is bestowed upon you, by talking with God in your prayers, by having a conversation with Christ, by longing for what you want, by asking for what you desire."

### Article 3

#### Is prayer an act of [the virtue of] religion?

It seems that prayer is not an act of [the virtue of] religion:

**Objection 1:** Since religion is a part of justice, it exists in the will as its subject. But as is clear from what was said above (a. 1), prayer belongs to the intellective part [of the soul]. Therefore, praying seems to be not an act of religion, but an act of the gift of understanding, through which the mind ascends toward God.

**Objection 2:** Acts of adoration fall under the necessity of a precept. But prayer seems not to fall under the necessity of a precept, but instead apparently proceeds from a mere act of will, since it is

nothing other than asking for what one wants. Therefore, prayer does not seem to be an act of religion.

**Objection 3:** What seems to belong to religion is for someone to offer worship and ceremonies to the divine nature (*ut quis divinae naturae cultum caeremoniamque afferat*). But prayer does not seem to offer anything to God; instead, it apparently seeks to obtain something from Him. Therefore, prayer is not an act of religion.

**But contrary to this:** Psalm 140:2 says, “Let my prayer be directed like incense in Your sight,” where a Gloss says, “As regards the figure of incense, in the Old Law it was said to be offered as a sweet odor to the Lord.” But this pertains to religion. Therefore, prayer is an act of religion.

**I respond:** As was explained above (q. 81, aa. 2 & 4), it belongs properly to religion to show reverence and honor to God. And so everything by which reverence is shown to God belongs to religion. But through prayer a man shows reverence for God insofar as he subjects himself to Him and professes by praying that he needs God as the source of all good things. Hence, it is clear that prayer is properly an act of religion.

**Reply to objection 1:** As was explained above (q. 82, a. 1), the will moves the other powers of the soul toward their end. And so religion, which exists in the will, orders the other powers of the soul toward reverence for God. Now among the powers of the soul, the intellect is higher and closer to the will. And so after devotion, which belongs to the will itself, prayer, which belongs to the intellective part, is the main act of religion and the act by which religion moves a man’s intellect toward God.

**Reply to objection 2:** What falls under a precept is not only asking for what we desire, but also desiring something in the right way. But the desiring falls under a precept of charity, whereas the asking falls under a precept of religion. The latter precept is posited in Matthew 7:7 (“Ask and you will receive”).

**Reply to objection 3:** As is clear from the passage from Dionysius quoted above (a. 1, obj. 2), in praying a man hands over his mind to God, subjecting it to Him with reverence and in some sense presenting it to Him. And so just as the human mind is preeminent over the exterior or corporeal members, or over the exterior things that are used for service to God, so, too, prayer is preeminent over other acts of religion.

## Article 4

### Is it God alone who should be prayed to?

It seems that it is God alone who should be prayed to (*videtur quod solus Deus debeat orari*):

**Objection 1:** As has been explained (a. 3), prayer is an act of religion. But only God is to be worshiped by religion. Therefore, only God is to be prayed to.

**Objection 2:** A prayer is offered in vain to someone who has no cognition of the prayer. But it belongs to God alone to have cognition of a prayer. This is both because (a) for the most part prayer is carried out by an interior act, which only God has cognition of, rather than vocally—this according to what the Apostle says in 1 Corinthians 14:15 (“I will pray with my spirit, and I will pray with my mind”)—and also because (b), as Augustine says in *De Cura pro Mortuis Agenda*, “The dead, even the saints, do not know what the living, even their own children, are doing.” Therefore, prayer is to be offered only to God.

**Objection 3:** If we offer prayers to certain saints, this is only insofar as they are conjoined with God. But there are certain individuals living in this world—or even in Purgatory—who are very closely conjoined with God through grace. And yet prayer is not offered to them. Therefore, neither should we be offering prayer to the saints who are in Paradise.

**But contrary to this:** Job 5:1 says, “Call now if there be anyone that will answer you, and turn to some of the saints.”

**I respond:** There are two senses in which a prayer is directed to someone: (a) to be *fulfilled by* that individual (*per ipsum implenda*); (b) to be *obtained through the mediation of* that individual (*per ipsum impetranda*).

In the first sense, we direct our prayer only to God, since all our prayers should be ordered toward obtaining grace and glory, which only God grants—this according to Psalm 83:12 (“The Lord will give grace and glory”).

However, in the second sense, we direct our prayer to saintly angels and men, not in order that God might know of our petitions through them, but in order that our prayers might attain their effect through their prayers and merits. This is why Apocalypse 8:4 says, “The smoke of the incense of the prayers of the saints ascended up before God from the hand of the angel.” And this point is likewise clear from the very mode that the Church uses in praying. For we ask the Blessed Trinity to “*have mercy on us,*” whereas we ask other holy individuals to “*pray for us.*”

**Reply to objection 1:** The only one to whom we offer the worship of religion by praying is the one from whom we seek to obtain what we pray for, since we thereby confess Him as the author of our goods, whereas we do not offer the worship of religion to those whom we need as our intercessors before God.

**Reply to objection 2:** The dead, thought of in their natural condition, do not have cognition of what is happening in this world and especially of the interior movements of the heart. But as Gregory explains in *Moralia* 12, what is appropriate for the blessed in heaven to know about what is happening among us is made clear to them in the Word, even with respect to interior movements of the heart. Most especially, it befits their excellence to know the petitions that are made to them either vocally or in the heart. And so, given that God makes clear the petitions that we address to them, they have cognition of them.

**Reply to objection 3:** Those who exist in this world or in Purgatory do not yet enjoy the vision of the Word, so that they might be able to know what we are thinking or saying. And so we do not implore their assistance (*eorum suffragia*) in our prayer; rather, we ask assistance from the living by speaking with them.

## Article 5

### Should we ask God for anything determinate in our prayer?

It seems that we should not ask for anything determinate from God (*nihil determinate a Deo petere debeamus*) in our prayer:

**Objection 1:** As Damascene says, “Praying is asking God for what is appropriate.” Hence, a prayer by which one asks for what is not expedient is inefficacious—this according to James 4:3 (“You ask and you do not receive, because you ask badly”). But as Romans 8:26 says, “We do not know what to pray for as we should.” Therefore, we should not ask for anything determinate when we pray.

**Objection 2:** If one asks for something determinate from another, then he is trying to incline the other’s will toward doing what he himself wants. But as is explained by a Gloss on Psalm 32:1 (“Exalt, you just, in the Lord”), we should try to bring it about that we will what God wills, rather than that God wills what we will. Therefore, we should not ask for anything determinate from God.

**Objection 3:** We should not ask God for bad things, whereas He Himself invites us to take good things. But it is pointless to ask someone for what you are already being invited to take. Therefore, one should not ask for anything determinate from God in prayer.

**But contrary to this:** In Matthew 6:9ff. and Luke 11:2ff. our Lord taught His disciples to ask determinately for what is contained in the petitions of the Lord’s prayer.

**I respond:** As Valerius Maximus reports, “Socrates thought that nothing should be asked for from the immortal gods beyond their giving us good things, since these gods know precisely what would be

useful for each individual, whereas we in our prayers frequently ask for what it would have been better for us not to obtain.”

This opinion is in some sense true with respect to those things that can have a bad outcome, as well as with respect to those things that a man can use both well and badly, “such as riches”—as he says in the same place—“which have been the death of many; honors, which have sunk many; power (*regna*), the miserable results of which are often seen; splendid marriages, which sometimes turn homes upside down.”

However, there are certain goods that a man cannot use badly, viz., goods that cannot have a bad outcome. Now these are the goods by which we are beatified and by which we merit beatitude. These goods the saint seeks in their prayer without qualification—this according to Psalm 79:4 (“Show us your face, and we shall be saved”) and, again, Psalm 118:35 (“Lead me along the path of your commands”).

**Reply to objection 1:** Even though a man cannot know on his own what he should pray for, “the Spirit”—as it says in the same place—“aids us in our weakness” in that, by inspiring holy desires in us, He makes us ask in the correct way. Hence, in John 4:23-24 our Lord says that true adorers “must adore in spirit and in truth.”

**Reply to objection 2:** When we ask in prayer for what pertains to our salvation, we conform our will to the will of God, of whom 1 Timothy 2:4 says, “He wills all men to be saved.”

**Reply to objection 3:** As regards good things, God invites us to approach them not by bodily steps, but by pious desires and devout prayers.

## Article 6

### Should a man ask God for temporal things in his prayer?

It seems that a man should not ask God for temporal things in his prayer:

**Objection 1:** We seek what we pray for. But we should not seek temporal things, since Matthew 6:33 says, “Seek first the kingdom of God and His justice, and all these things [read: temporal things] will be added unto you.” He says that these things are not to be sought, but are to be added to what is sought. Therefore, temporal things should not be asked for from God in prayer.

**Objection 2:** One asks only for those things that he is concerned about. But we should not have concern for temporal things—this according to Matthew 6:25 (“Do not be concerned about your life, what you shall eat”). Therefore, we should not ask for temporal things in our prayer.

**Objection 3:** Our mind should be lifted up to God by our prayer. But in seeking temporal things one descends to those things which are below, contrary to what the Apostle says in 2 Corinthians 4:18 (“... while we look not at the things which are seen, but at the things which are not seen. For the things which are seen are temporal, but the things which are not seen are eternal”).

**Objection 4:** A man should not ask God for anything except what is good and useful. But sometimes temporal things are harmful not only spiritually, but even temporally. Therefore, they should not be asked for from God in prayer.

**But contrary to this:** Proverbs 30:8 says, “Give me only what is necessary for my life.”

**I respond:** As Augustine says in *Ad Probam, de orando Deum*, “It is permissible to pray for whatever it is permissible to desire.”

But it is permissible to desire temporal things—not, to be sure, as what is desired principally, so that we set up our end in them, but as certain subordinate goods by which we are aided in striving for beatitude, viz., insofar as our bodily life is sustained through them and insofar as they serve us instrumentally (*organice*) in acts of virtue. The Philosopher says the same thing in *Ethics* 1. Therefore, it is permissible to pray for temporal things.

This is what Augustine has to say in *Ad Probam*: “It is not inappropriate to want what is sufficient

for life if one wants that and no more. This is desired not for its own sake, but for the sake of the health of the body and of a fitting condition for the person of a man, in order that he not be discordant with those with whom he has to live. Therefore, one should pray for temporal goods—when they are had, that they might be held on to, and when they are not had, that they might be had.”

**Reply to objection 1:** Temporal goods are to be sought in a secondary way and not principally. Hence, in *De Sermone Domini in Monte* Augustine says, “When He said that *that*, viz., the kingdom of God, is to be sought first, He implied that *this*, viz., the temporal good, is to be sought afterwards (not in time, but in importance)—the former insofar as it is our *good*, the latter insofar as it is our *need* (*necessarium nostrum*).”

**Reply to objection 2:** As was established above (q. 55, a. 6), what is prohibited is not just any sort of concern for temporal things, but unnecessary and disordered concern.

**Reply to objection 3:** When our mind turns toward temporal things in order to find rest in them, it remains weighed down in them. But when it turns to them in relation to its pursuit of beatitude, it is not weighed down in them, but instead elevates them to a higher level.

**Reply to objection 4:** By the fact that we are asking for temporal things as something sought not principally but in relation to something else, in that sense we are asking God for them in order that they might be granted to us insofar as they are expedient for salvation.

## Article 7

### Should we pray for others?

It seems that we should not pray for others:

**Objection 1:** In praying we should follow the formula that our Lord has handed down to us. But in the Lord’s prayer we make petitions for ourselves and not for others when we say “Give us this day our daily bread” and other things of this sort. Therefore, we should not pray for others.

**Objection 2:** Prayer is made in order to be heard. But one of the conditions required for our prayer to be heard is that one pray for himself; hence, in commenting on John 16:23 (“If you ask the Father for anything in my name, He will give it to you”), Augustine says, “Everyone is heard for himself, but not for everyone. This is why He says, ‘He will give it to you’ and not just ‘He will give it’.” Therefore, it seems that we should pray only for ourselves and not for others.

**Objection 3:** We are forbidden to pray for others if they are bad—this according to Jeremiah 7:16 (“Do not pray for this people ... and do not oppose Me, for I will not listen to you”). On the other hand, it is unnecessary to pray for good people, since they are heard when they pray for themselves. Therefore, it seems that we should not pray for others.

**But contrary to this:** James 5:16 says, “Pray for one another, that you may be saved.”

**I respond:** As has been explained (a. 6), in praying we should ask for what we should desire. But we should desire good things not only for ourselves but also for others. For this belongs to the nature of love (*dilectio*), which, as is clear from what was said above (q. 25, aa. 1 and 12; q. 27, a. 2; q. 31, a. 10), we should show to our neighbors. And so charity requires that we pray for others.

Hence, in *Super Matthaem* Chrysostom says, “Necessity forces one to pray for himself, whereas the charity of fraternity urges one to pray for another. And the prayer that is more sweet before God is not the prayer that necessity sends, but the prayer that the charity of fraternity commends.”

**Reply to objection 1:** As Cyprian says in *De Oratione Dominica*, “We do not say ‘My Father’ but instead ‘Our Father’; nor do we say ‘Give me’ but instead ‘Give us’.” For the Master of unity does not want prayer to be made privately in the sense that one prays only for himself. He wants us to pray for everyone in the way that He Himself carried all of us together.”

**Reply to objection 2:** Praying for oneself is posited as a condition for prayer not in the sense that

it is necessary for effecting merit, but in the sense that it is necessary in order that it not to fail in obtaining what is prayed for (*sicut necessaria ad indeficientiam impetrandi*). For it sometimes happens that prayer for another does not obtain what is prayed for, even if it is offered with piety and perseverance and concerns things that pertain to salvation, because of an impediment on the part of the one for whom the prayer is offered—this according to Jeremiah 15:1 (“Even if Moses and Samuel should be standing before me, my soul is not turned toward that people”). Despite this, the prayer is still meritorious for the one who offers it, because he is praying out of charity—this according to Psalm 34:13 (“My prayer shall be turned to my own bosom”), where a Gloss explains, “Even if my prayer is of no profit to them, I am not deprived of my reward.”

**Reply to objection 3:** One should pray also for sinners, that they might be converted, as well as for the just, that they might persevere and make progress.

Yet those who pray are heard not on behalf of *all* sinners, but on behalf of *some*. For they are heard on behalf of those who are predestined, but not on behalf of those who are foreknown unto death (*non pro praescitis ad mortem*). Likewise, the corrections by which we correct our brothers have an effect in those who are predestined, but not in those who are reprobate—this according to Ecclesiastes 7:14 (“No one can correct someone whom God has despised”). And this is why 1 John 5:16 says, “He who knows that his brother is sinning by a sin that is not unto death, let him ask and life will be given to the one who sins by a sin that is not unto death.” However, just as no one, as long as he is alive here [below], should be deprived of the benefit of being corrected, since, as Augustine points out in *De Correptione et Gratia*, we are unable to distinguish those who are predestined from those who are reprobate, so, too, no one should be denied the assistance of prayer.

The just should likewise be prayed for, and this for three reasons. First, because the prayers of many are more easily heard. Hence, a Gloss on Romans 15:30 (“Help me in your prayers”) says, “The Apostle does well to ask the lesser brethren to pray for him. For many little ones, when they come together in one spirit, become large, and it is impossible for the prayers of the many not to be effective,” i.e., to obtain what can be obtained. Second, in order that many might give thanks to God for the benefits that He confers on the just, which also redound to the advantage of the many; this is clear from the Apostle in 2 Corinthians 1:11. Third, in order that the greater brethren not become proud as long as they keep in mind that they need the prayers of the lesser brethren.

## Article 8

### Should we pray for our enemies?

It seems that we should not pray for our enemies:

**Objection 1:** As Romans 15:4 says, “Whatever has been written has been written for our instruction.” But in Sacred Scripture one finds many curses (*imprecationes*) against enemies; for instance, Psalm 6:11 says, “Let all my enemies be ashamed and troubled; let them be ashamed and troubled very speedily.” Therefore, we likewise should pray against our enemies rather than on their behalf.

**Objection 2:** To be vindicated against one’s enemies is bad for the enemies. But the saints ask for vengeance against their enemies—this according to Apocalypse 6:10 (“How long do you not take vengeance for our blood against those who dwell on the earth?”) That is why they likewise rejoice over their vindication against the wicked—this according to Psalm 57:11 (“The just man will rejoice when he sees his vindication”). Therefore, one should pray not on behalf of his enemies, but against them.

**Objection 3:** A man’s works should not be contrary to his prayers. But men sometimes attack their enemies justly; otherwise, all war would be illicit—which is contrary to what was said above (q. 40, a. 1). Therefore, we should not pray for our enemies.

**But contrary to this:** Matthew 5:44 says, “Pray for those who persecute and calumniate you.”

**I respond:** As has been explained (a. 7), to pray for another belongs to charity. Hence, in the same way that we are obliged to love our enemies, we are obliged to pray for our enemies.

Now the way in which we are obliged to love our enemies was established above in the treatise on charity (q. 25, aa. 8-9), viz., (a) that we are obliged to love the nature in them and not their sin, and (b) that loving our enemies in a general way falls under a precept, whereas loving them in a specific way does not fall under a precept except with respect to the preparation of the mind, so that a man would be prepared to love his enemy even in a specific way and to help him in a case of extreme need, or if he sought forgiveness. On the other hand, to love one’s enemies and to help them in a specific way without exception (*absolute*) belongs to perfection.

Similarly, it is necessary that in the general prayers that we make for others we not exclude our enemies. On the other hand, that we pray for them in a specific way belongs to *perfection* and not to *necessity*, except in certain special cases.

**Reply to objection 1:** There are four ways to understand the curses that occur in Sacred Scripture:

In one way, as Augustine explains in *De Sermone Domini in Monte*, insofar as “the prophets used to foretell the future in the form of someone cursing.”

In the second way, in the sense that certain temporal evils are sometimes sent by God to sinners for their correction.

In the third way, the curses are interpreted as being asked for not against the men themselves, but against the reign of sin, so that sin might be destroyed by correcting the men.

In the fourth way, in order to conform one’s own will to divine justice as regards the damnation of those who have persevered in sin.

**Reply to objection 2:** In the same book Augustine says, “The vindication of the martyrs is that the reign of sin, under whose rule they had suffered so much, should be overthrown.”

An alternative reply is that, as is said in *De Quaestionibus Veteris et Novi Testamenti*, “They are asking not aloud but in their minds, in the way that the blood of Abel called out from the earth.” Moreover, they rejoice over the vindication not for its own sake, but for the sake of divine justice.

**Reply to objection 3:** It is licit to attack one’s enemies in order that they might be restrained from their sin, and this yields good both for them and for others. And so it is likewise licit to ask in prayer for certain temporal evils for one’s enemies, in order that they might be corrected. And in this way the prayer will not be contrary to the action.

## Article 9

### Is it appropriate to enumerate seven petitions in the Lord’s prayer?

It seems that it is not appropriate to enumerate seven petitions of the Lord’s prayer:

**Objection 1:** It is useless to ask for what is always the case. But the name of God is always holy—this according to Luke 1:49 (“Holy is His name”). Likewise, His kingdom lasts forever—this according to Psalm 144:13 (“Your kingdom, O Lord, is a kingdom for all ages”). Again, God’s will is always fulfilled—this according to Isaiah 46:10 (“All My will shall be done”). Therefore, it is useless to ask that the God’s name be hallowed, that His kingdom come, and that His will be done.

**Objection 2:** Receding from evil is prior to attaining the good. Therefore, it seems inappropriate for the petitions that pertain to attaining the good to be placed before the petitions that pertain to receding from evil.

**Objection 3:** Something is asked for in order that it might be given. But the preeminent gift of God is the Holy Spirit and the things given to us by Him. Therefore, it seems inappropriate for the petitions in question to be proposed, since they do not correspond to the gifts of the Holy Spirit.

**Objection 4:** According to Luke, only five petitions are posited in the Lord's prayer, as is clear from Luke 11:2ff. Therefore, it was superfluous for seven petitions to be posited according to Matthew 6:9ff.

**Objection 5:** It seems useless to seek the benevolence of someone who preempts us with his benevolence. But God preempts us with His benevolence, since, as 1 John 4:10 says, "He loved us first." Therefore, it is superfluous to preface the petitions with "Our Father who art in heaven," which seems to have to do with seeking benevolence.

**But contrary to this** the authority of Christ, who formulated the prayer, is sufficient.

**I respond:** The Lord's prayer is the most perfect prayer, since, as Augustine puts it, "If we pray correctly and fittingly, we will be unable to say anything other than what is posited in this prayer of our Lord's." For since prayer is in a certain sense the carrier of our desire in the eyes of God, it is right for us to ask in prayer only for those things that we can rightly desire.

Moreover, in the Lord's prayer not only do we ask for all the things that we can rightly desire, but these things are also asked for in the order in which they are to be desired, so that this prayer not only instructs us to ask but also informs all of our affections.

Now it is clear that what falls under our desire is first the end and then the means to the end. But our end is God, toward whom our affections tend in two ways: (a) insofar as we will God's glory, and (b) insofar as we will to enjoy His glory. The first of these pertains to the love by which we love God in Himself, whereas the second pertains to the love by which we love ourselves in God. And so the *first* petition is posited, *that His name be hallowed*, through which we seek the glory of God. Then the *second* petition is posited, *that His kingdom come*, through which we ask to arrive at the glory of His kingdom.

Now there are two ways in which something orders us toward the aforementioned end: (A) in its own right (*per se*) and (B) incidentally (*per accidens*).

(A) *In its own right*, a good that is useful for the end. But there are two ways in which something is useful for the good of beatitude:

(a) *directly and principally*, in accord with the merit through which we merit beatitude by obeying God. And what is posited on this score is: *Thy will be done on earth as it is heaven*.

(b) *instrumentally*, i.e., as assisting us in meriting, and what pertains to this is: *Give us this day our daily bread*, regardless of whether this is understood as the sacramental Bread, the daily use of which profits a man and in which all the other sacraments are understood, or as corporeal bread, where by 'bread' is understood "wholly sufficient food," as Augustine says in *Ad Probam*, and this is why in the Gospel of Matthew it is called 'supersubstantial' (*supersubstantialem*)—i.e., 'preeminent' (*praecipium*), as Jerome explains.

(B) *Incidentally* we are ordered toward beatitude by the removal of what prevents us from attaining it. Now there are three things that prevent us from obtaining it:

(a) The first is *sin*, which is directly excluded from the kingdom—this according to 1 Corinthians 6:9-10 ("Neither fornicators nor idolaters ... will possess the kingdom of God"). And what pertains to this is: *Forgive us our trespasses*.

(b) The second is *temptation* which impedes us from observing God's will. And what pertains to this is: *Lead us not into temptation*. Through this petition we do not ask not to be tempted, but rather ask that we not be conquered by temptation.

(c) The third is *present hardship* (*poenalitas praesens*), which impedes what is necessary for life. And on this score it says: *Deliver us from evil*.

**Reply to objection 1:** As Augustine points out in *De Sermone Domini in Monte*, when we say, *Hallowed be Thy name*, "this is not being asked for as if God's name were not holy, but in order that His name might be held as holy by men"—which pertains to propagating God's glory among men.

Now when *Thy kingdom come* is said, it is not said as if God did not now reign. Rather, as Augustine explains in *Ad Probam*, "We are stirring up our desire for that kingdom, in order that it might come to us and we might reign within it."

Again, *Thy will be done* is rightly understood as “May Thy commands be obeyed.” *On earth as it is in heaven*, i.e., as by the angels, so by men.

Hence, these three petitions will be perfectly fulfilled in the future life, whereas the other four petitions pertain to what is needed in the present life, as Augustine explains in *Enchiridion*.

**Reply to objection 2:** Since prayer is the carrier of desire, the order of the petitions corresponds not to the order of *execution* but instead to the order of *desire* or *intention*, in which (a) the end is prior to the means to the end and (b) the pursuit of the good is prior to the removal of evil.

**Reply to objection 3:** In *De Sermone Domini in Monte* Augustine adapts the seven petitions to the gifts and the beatitudes. This is what he says: “If the *fear of God* is that by which the blessed are *poor in spirit*, then let us ask that God’s name be hallowed among men with a chaste fear. If *piety* is that by which the blessed are *mEEK*, then let us ask that His kingdom come in order that we might be meek and not resist Him. If *knowledge* is that by which the blessed are *they who mourn*, then let us pray that His will be done, because then we will not be mourning. If *fortitude* is that by which the blessed are *they who hunger*, then let us pray that our daily bread be given to us. If *counsel* is that by which the blessed are merciful, then let us remit our debts in order that our debts might be remitted for us. If *understanding* is that by which the blessed are *pure of heart*, then let us pray that we not have a divided heart by running after temporal things, from which temptations arise in us. If *wisdom* is that by which the blessed are peaceable because they will be called children of God, then let us pray that we be liberated from evil, since the liberation itself will make us free children of God.”

**Reply to objection 4:** As Augustine says in *Enchiridion*, “In the Lord’s prayer Luke included five petitions and not seven. For in showing that the third petition is in some sense a repetition of the two preceding petitions, he makes it understood by omitting it, viz., because God’s will is mainly aimed toward our recognizing His holiness and reigning with Him.

Likewise, what Matthew posited at the end, *Deliver us from evil*, Luke did not posit, in order that each individual might know that he is liberated from evil in the very fact that he is not led into temptation.

**Reply to objection 5:** Prayer is directed toward God not in order that we might sway Him, but in order that we might stir up within ourselves the confidence to ask him. This is stirred up within us mainly by considering (a) His charity toward us, by which He wills our good—and this is why we say *Our Father*—and (b) His excellence, by which this is possible—and this is why we say *Who art in heaven*.

## Article 10

### Is praying proper to rational creatures?

It seems that praying is not proper or peculiar to rational creatures (*orare non sit proprium rationalis creaturae*):

**Objection 1:** Asking (*petere*) and receiving (*accipere*) seem to belong to the same thing. But to receive belongs also to uncreated persons, viz., the Son and the Holy Spirit. Therefore, it is likewise appropriate for them to pray. For instance, in John 14:15 the Son says, “I will ask the Father,” and the Apostle says of the Holy Spirit, “The Spirit asks urgently (*postulat*) on our behalf” (Romans 8:26).

**Objection 2:** Angels lie beyond rational creatures, since they are intellectual substances. But it belongs to the angels to pray; hence, in Psalm 146:9 it says, “Adore Him, all you His angels.” Therefore, it is not proper to rational creatures.

**Objection 3:** Praying belongs to one who is invoking God, which is mainly done by praying. But it is appropriate for non-rational animals to invoke God—this according to Psalm 146:9 (“Who gives the beasts their food, and the young ravens who invoke Him”). Therefore, praying is not proper to rational animals.

**But contrary to this:** As was established above, praying is an act of reason. But a creature is called rational because of reason. Therefore, praying is proper or peculiar to rational creatures.

**I respond:** As is clear from what was said above (a. 1), *praying* is an act of reason by which one implores a superior, in the way that *commanding* is an act of reason by which a subordinate is ordered toward something. Therefore, praying belongs peculiarly to someone to whom it is appropriate to have reason and who has a superior whom he is able to implore.

Now nothing is superior to the divine persons, whereas non-rational animals do not have reason. Hence, it is incongruous for both divine persons and non-rational animals to pray. Rather, praying is proper or peculiar to rational creatures.

**Reply to objection 1:** It is proper to the divine persons to receive *by nature*, whereas praying belongs to someone who receives *by grace*.

Moreover, the Son is said to ask, or to pray, with respect to His assumed nature, viz., His human nature, and not with respect to His divine nature. On the other hand, the Holy Spirit is said to ask urgently (*postulare*) because He makes us urgent askers.

**Reply to objection 2:** As was established in the First Part (*ST* 1, q. 79, a. 8), reason (*ratio*) and understanding (*intellectus*) are not diverse powers in us, but instead differ as the imperfect and the perfect. And so sometimes intellectual creatures, who are angels, are distinguished from rational creations, whereas sometimes they are included under *rational creatures*. And it is in this latter sense that prayer is said to be proper to rational creatures.

**Reply to objection 3:** The young ravens are said to ‘invoke’ God because of the natural desire by which all things in their own way desire to attain God’s goodness. In the same way, non-rational animals are likewise said to ‘obey’ God because of the natural instinct by which they are moved by God.

## Article 11

### Do the saints in heaven pray for us?

It seems that the saints in heaven (*sancti qui sunt in patria*) do not pray for us:

**Objection 1:** One’s act is more meritorious for himself than for others. But the saints in heaven do not merit for themselves, since they have already been established at their terminus. Therefore, they do not pray for us, either.

**Objection 2:** The saints perfectly conform their will to God, so that they will only what God wills. But what God wills is always fulfilled. Therefore, it is useless for the saints to pray for us.

**Objection 3:** Just as the saints in heaven are superior to us, so are those in purgatory, since they can no longer sin. But those in purgatory do not pray for us; it is instead we who pray for them. Therefore, the saints in heaven do not pray for us, either.

**Objection 4:** If the saints in heaven prayed for us, the prayer of the higher saints would be more efficacious. Therefore, it is the assistance of the prayer only of the higher saints, and not of the lower saints, that should be implored.

**Objection 5:** Peter’s soul is not Peter. Therefore, if the souls of the saints were praying for us for as long as they were separated from their bodies, then we should not be imploring St. Peter to pray for us; instead, we should be imploring his soul to pray for us.

**But contrary to this:** 2 Maccabees 15:14 says, “It is he who prays abundantly for the people and for the entire holy city—Jeremiah, the prophet of God.”

**I respond:** As Jerome explains, the error of Vigilantius was to claim that “while we are alive, we are mutually able to pray for one another, but after we have died, no one’s prayer will be heard for another—especially given that the martyrs, praying for their blood to be avenged, were not able to obtain this.”

But this is altogether false. For since, as has been said (aa. 7-8), prayer that is made on behalf of others proceeds from charity, to the extent that the saints in heaven are more perfect in charity, they pray all the more for pilgrims here on earth (*pro viatoribus*), who can be helped by these prayers; and to the extent that the saints are more closely joined to God, their prayers are all the more efficacious. For the divine order is such that the excellence of what is higher pours forth on what is lower, just like the brightness of the sun in the atmosphere. Hence, in Hebrews 7:25 it is said of Christ, "... going to God in His own right, in order to intercede on our behalf." For this reason, in *Contra Vigilantium* Jerome says, "If the apostles and martyrs, while still in their bodies, can pray for others, even while they must still be solicitous for themselves, then how much more will they be able to pray for others after their crowns, their victories, and their triumphs."

**Reply to objection 1:** Since the saints in heaven are blessed, they lack nothing except the glory of the body, for which they pray. But they pray for us, who lack the ultimate perfection of beatitude. And their prayers have the efficacy of procurement because of their previous merits and because of God's acceptance of them.

**Reply to objection 2:** The saints ask for what God wills to be done because of their prayers. And they ask for what they think will be fulfilled because of their prayers according to God's will.

**Reply to objection 3:** Even if those in purgatory are superior to us because of their inability to sin (*propter impeccabilitatem*), they are nonetheless inferior to us because of the punishments that they suffer. And, accordingly, they are not in the state of praying, but rather in the state of being prayed for.

**Reply to objection 4:** God wills that what is lower should be assisted by *everything* that is higher. And so one should implore not only the higher saints but also the lower saints. Otherwise, it would be the case that only God's mercy should be implored.

However, it sometimes happens that it is more efficacious to implore lower saints, either because the lower saints are implored in a more devout way or because God wants to make their holiness known.

**Reply to objection 5:** Since the saints merited while living in order that they might pray for us, we invoke them by the names by which they were called here and by which they are likewise more known to us—and also for the sake of making known our faith in the resurrection, just as one reads in Exodus 3:6 ("I am the God of Abraham, etc.").

## Article 12

### Should prayer be vocal?

It seems that prayer should not be vocal (*vocalis*):

**Objection 1:** As is clear from what has been said (a. 4), prayer is offered principally to God. But God has cognition of the language of the heart. Therefore, it is useless to employ vocal prayer.

**Objection 2:** As has been explained ((a. 1), through prayer a man's mind should ascend to God. But spoken words, like other sensible things, draw men back from ascending in contemplation to God. Therefore, spoken words should not be used in prayer.

**Objection 3:** Prayer should be offered to God in secret—this according to Matthew 6:6 ("But you, when you pray, go into your room and, with the door closed, pray to your Father in secret"). But prayer is made public by the voice. Therefore, prayer should not be vocal.

**But contrary to this:** Psalm 141:2 says, "I have cried with my voice to the Lord, and with my voice I have begged the Lord."

**I respond:** There are two kinds of prayer: *communal* prayer (*oratio communis*) and *individual* prayer (*oratio singularis*).

Communal prayer is prayer that is offered to God by the ministers of the Church in the person of all the faithful (*in persona totius fidelis populi*). And so this sort of prayer depends on the entire people, on

behalf of whom it is offered. This could not happen if it were not vocal. And so it is reasonable for things to be instituted in such a way that the ministers of the Church should enunciate prayers of this sort with full voice, so that the prayers can come to the notice of everyone.

By contrast, individual prayer is prayer that is offered by any given individual either for himself or for others. And it is not necessary for prayer of this sort to be vocal. Still, there are three reasons why such prayers are said out loud (*adiungitur vox tali orationi*):

First, in order to stir up interior devotion, by which the mind of the one who prays is elevated toward God. For through exterior signs, whether vocal signs or even certain artifacts, a man's mind is moved both by apprehension and, as a result, by affection. Hence, in *Ad Probam* Augustine says, "By words and other signs we stir ourselves more acutely to increase our holy desire." On the other hand, if the mind is distracted by this or in any way impeded by it, then one should cease doing it. This mainly happens with people whose mind is sufficiently prepared for devotion without any signs of this sort. Hence, the Psalmist said, "My heart has spoken to you, my face has sought you out" (Psalm 26:8). And 1 Kings 1:13 says of Hanna: "She spoke in her heart."

Second, vocal prayer is added, as it were, to rendering a debt, so that a man serves God with the totality of what he has from God, i.e., not only with his mind, but also with his body. This is appropriate mainly for prayer by which one makes satisfaction. Hence, Hosea 14:3 says, "Take away all iniquity and receive the good, and we will render the bulls of our lips."

Third, vocal prayer is added as an overflow from the soul into the body because of strong affection—this according to Psalm 15:9 ("My heart has been glad, and my tongue has rejoiced").

**Reply to objection 1:** Vocal prayer is offered not in order to make something God does not know manifest to Him, but rather in order that the mind of the one praying or of others might be stirred up toward God.

**Reply to objection 2:** Words that have to do with something else distract one's mind and impede the devotion of the one praying. But words that signify something that has to do with devotion stir up minds, especially less devout minds.

**Reply to objection 3:** As Chrysostom says in *Super Matthaicum*, "What our Lord forbids is praying in an assembly in order to be seen by the assembly. Hence, one who is praying should do nothing strange (*novum*) like shouting or pounding his breast or stretching out his hands." And yet, as Augustine says in *De Sermone Domini in Monte*, "It is not wrong to be seen by men; what is wrong is doing these things in order that you might be seen by men."

## Article 13

### Is it necessary for prayer to be done attentively?

It seems that it is necessary for prayer to be done attentively (*de necessitate orationis sit quod sit attenta*):

**Objection 1:** John 4:24 says, "God is a spirit; and those who adore Him must adore Him in spirit and in truth." But prayer is not "in spirit" if it is not done attentively. Therefore, it is necessary for prayer to be done attentively.

**Objection 2:** Prayer is the ascent of the intellect toward God. But when prayer is not done attentively, the intellect does not ascend to God. Therefore, it is necessary for prayer to be done attentively.

**Objection 3:** It is necessary for prayer to be wholly free from sin (*quod careat omni peccato*). But there is no lack of sin if someone suffers from a wandering mind during prayer (*quod aliquis orando evagationem mentis patitur*); for he seems not to be taking God seriously (*videtur eum deridere Deum*)—just as if someone were speaking to a man and not paying attention to what he was saying.

Hence, Basil says, “God’s assistance is not to be implored carelessly or with one’s mind wandering here and there, because such prayer will not only not obtain what it asks for, but will even irritate God.” Therefore, it seems to be necessary for prayer to be done attentively.

**But contrary to this:** Even holy men sometimes suffer from a wandering mind when they are praying—this according to Psalm 39:13 (“My heart has deserted me”).

**I respond:** This question arises mainly in regard to vocal prayer. On this topic, notice that there are two ways in which something can be called ‘necessary’ (*necessarium*):

In the first way, the thing in question is such that *through it the end is arrived at in a better way*. And in this sense attentiveness is absolutely necessary for prayer.

In the second way, the thing in question is such that *without it the thing cannot attain its effect*.

Now there are three effects of prayer:

(a) The first effect is common to all acts that are informed by charity, viz., *to merit* (*mereri*). And for this effect it is not necessarily required that attentiveness be present for the whole time. Instead, the force of the primary intention with which someone begins to pray renders the whole act of praying meritorious—as likewise happens in the case of other meritorious acts.

(b) The second effect of prayer is proper to it, viz., *to supplicate* (*impetrare*). And the primary intention, which God mainly takes into consideration, is sufficient for this effect as well. However, if the primary intention is lacking, then the prayer is neither meritorious nor supplicatory. For as Gregory puts it, “God does not listen to a prayer that the one who prays is not paying attention to.”

(c) The third effect of prayer is the one that it produces immediately (*praesentialiter*), viz., a sort of spiritual refreshment of the mind. And for this effect, attentiveness is necessarily required. Hence, 1 Corinthians 14:14 says, “When I pray in tongues ... my understanding is without fruit.”

However, notice that there are three sorts of attentiveness that can be applied to vocal prayer: (a) paying attention to the *verbal formula* (*verba*), lest one make a mistake in pronouncing it; (b) paying attention to the *meaning* of the words; and (c) paying attention to the *aim* of the prayer, viz., to God and to the thing for which one is praying—something that even very simple individuals (*idiotae*) can do. And as Hugh of St. Victor points out, sometimes this intention, by which the mind is carried toward God, is so intense that the mind is oblivious to everything else.

**Reply to objection 1:** The one who prays “in spirit and in truth” is he who undertakes prayer because of the inspiration of the Spirit (*ex instinctu spiritus*)—even if his mind afterwards wanders because of weakness.

**Reply to objection 2:** Because of the weakness of its nature, the human mind cannot remain elevated (*in alto*) for a long time. For the soul is pushed down toward lower things by the weight of the weakness of its nature. And so it happens that when the mind of the one who is praying ascends to God through contemplation, it suddenly wanders because of some sort of weakness.

**Reply to objection 3:** If one mentally wanders on purpose (*ex proposito*) in his prayer, then this is a sin, and it impedes the fruit of prayer. And it is against this sin that Augustine says in *Regula*, “When you pray to God with psalms and hymns, what you pronounce with your mouth should be turned over in your heart.”

However, the wandering of the mind that occurs unintentionally (*praeter intentionem*) does not destroy the fruit of prayer. Hence, Basil says, “If, weakened by sin, you are unable to pray with fixed attention (*fixe*), control yourself as much as you can and God will overlook it, since it is not out of negligence but out of weakness that you are unable to abide in His presence in the way that you ought to.”

## Article 14

### Should prayer last for a long time?

It seems that prayer should not last for a long time (*oratio non debeat esse diuturna*):

**Objection 1:** Matthew 6:7 says, “Do not do much talking when you are praying.” But someone who prays for a long time has to do a lot of talking, especially if the prayer is vocal. Therefore, prayer should not last for a long time.

**Objection 2:** Prayer expresses desire. But the more restricted to a single thing a desire is, the holier it is—this according to Psalm 26:4 (“One thing have I asked of the Lord, this alone I require”). Therefore, in like manner, the shorter a prayer is, the more acceptable it is to God.

**Objection 3:** It seems to be impermissible for a man to transgress the limits fixed by God, especially in those matters that pertain to the worship of God—this according to Exodus 19:21 (“...lest they should decide to transgress the intended limits in order to see the Lord, and a very great multitude of them should perish”). But as is clear from Matthew 6, the limits of praying have been fixed by God through the institution of the Lord’s prayer. Therefore, one is not permitted to extend his prayer beyond this.

**But contrary to this:** It seems that one should pray continuously. For in Luke 18:1 our Lord says, “Pray always, and do not cease.” And 1 Thessalonians 5:17 says, “Pray without intermission.”

**I respond:** There are two ways in which we can speak of prayer: (a) *in its own right* (*secundum seipsam*) and (b) *with respect to its cause* (*secundum causam suam*).

Now the *cause* of prayer is the desire belonging to charity, and this is what prayer should proceed from. This cause should be continuous in us either in actuality or virtually (*virtute*), since the power (*virtus*) of this desire remains in all the things that we do out of charity, and we ought “to do all things for the glory of God,” as 1 Corinthians 10:31 says. And on this score prayer should be continuous. Hence, in *Ad Probam* Augustine says, “We pray with a continuous desire in faith, hope, and charity themselves.”

However, prayer itself, considered *in its own right*, cannot be continuous (*assidua*), because there are other acts that one has to be occupied with. However, as Augustine says in the same place, “At fixed hours and times we also beseech God with words, in order to admonish ourselves with these signs of things and to find out for ourselves how much progress we are making in this desire, and to stir ourselves up more eagerly to do this.”

Now the quantity of each thing should be proportioned to the end; for instance, the quantity of the medicine should be proportioned to health. Hence, it is appropriate for prayer to last as long as is useful for stirring up the fervor of interior desire. However, when it exceeds this measure, so that it cannot continue without tedium, prayer should not be extended any further. Hence, in *Ad Probam* Augustine says, “The brethren in Egypt are said to make frequent prayers, but they are very short and uttered rapidly, so that the vigilantly erected attention that is necessary for someone who prays a lot should not slacken and languish because of more prolonged pauses. By doing this they show clearly enough that just as this attention should not be forced if one is unable to endure, so, too, it should not be broken off too quickly if one does endure.”

And just as this matter should be treated in the case of singular prayer by reference to the attention of the individual praying, so, too, it should be treated in the case of communal prayer by reference to the devotion of the people.

**Reply to objection 1:** In *Ad Probam* Augustine says, “If one is praying for a longer time, this is not to pray with more words. Many words are one thing; a longer-lasting affection is another thing. For it is written of our Lord Himself that He spent the whole night in prayer and that He prayed more profusely in order to give us an example.” Later on Augustine adds, “Let a lot of talking be absent from prayer, but do not stop praying a lot if your attention in praying persists. For talking a lot in praying is to do something necessary with too many words. And oftentimes this business is done more with groans than

with words.”

**Reply to objection 2:** The prolixity of a prayer consists not in asking for many things, but in the affection’s continuing to desire a single thing.

**Reply to objection 3:** Our Lord instituted this prayer not in order that we should use only *these words* in praying, but because the intention of our prayer should be aimed only at obtaining *these things*, no matter how we express them or think about them.

**Reply to the argument for the contrary:** Someone prays continuously either (a) because of a continuity of desire, as has been explained, or (b) because he does not stop praying at fixed times, or (c) because of the effect, whether it be the effect in the one praying, given that he remains more devout even after praying, or in someone else—as, for instance, when someone by his good deeds prompts another individual to pray for him, even when he himself has stopped praying.

## Article 15

### Is praying meritorious?

It seems that praying is not meritorious:

**Objection 1:** Every merit proceeds from grace. But praying precedes grace, since even grace itself is asked for through prayer—this according to Luke 11:3 (“Your Father in heaven will give the good Spirit to those who ask Him”). Therefore, praying is not a meritorious act.

**Objection 2:** If praying merits anything at all, it seems especially to merit what is asked for in the prayer. But praying does not always merit this, since even the prayers of the saints are oftentimes not heard; for instance, Paul was not heard when he asked for the sting of the flesh to be removed from him. Therefore, praying is not a meritorious act.

**Objection 3:** Prayer relies mainly on faith—this according to James 1:6 (“Let him ask in faith, without wavering”). But as is clear in the case of those who have unformed faith, faith is not sufficient for meriting. Therefore, praying is not a meritorious act.

**But contrary to this:** A Gloss on Psalm 34:13 (“My prayer shall be turned into my bosom”) says, “Even if it did not profit them, I at least did not lose out on my reward.” But a reward (*merces*) is not owed except for merit. Therefore, praying has the nature of merit.

**I respond:** As has been explained (a. 13), prayer, in addition to the effect of spiritual consolation that it brings to bear immediately, has two sorts of power with respect to future effects, viz., the power of meriting (*virtutem merendi*) and the power of supplication (*virtutem impetrandi*).

Now praying, like any other act of a virtue, has the effect of meriting insofar as it proceeds from the root of *charity*, the proper object of which is the eternal good that we merit enjoyment of. But praying proceeds from *charity* through the mediation of *religion*, which, as has been explained, praying is an act of, along with, in addition, certain other virtues that are required for prayer’s being good, viz., *humility* and *faith*.

For it belongs to *religion* to offer the prayer itself to God. On the other hand, what belongs to *charity* is the desire for the thing whose fulfillment prayer seeks. Moreover, *faith* is necessary in reference to God, whom we pray to, in the sense that we believe that we can obtain from Him what we are praying for. And humility is necessary in reference to the seeker, who recognizes his own neediness. *Devotion* is likewise necessary, but this belongs to *religion*, since devotion is the first act of religion and, as was explained above (q. 82, aa. 1-2), is necessary for all the subsequent acts.

Prayer has the efficacy of its supplication from the grace of God, whom we pray to, and who also induces us to pray. Hence, in *De Verbo Domini* Augustine says, “We would not be encouraged to ask for things if He were not willing to grant them.” And Chrysostom says, “He who encourages those who pray not to fail in their piety never withholds His kindnesses from someone who prays.”

**Reply to objection 1:** Just like any other virtuous act, prayer that is done in the absence of habitual grace (*sine gratia gratum faciente*) is not meritorious. And yet even a prayer that asks for habitual grace proceeds from some grace—from, as it were, a gratuitous gift—since praying is itself a certain “gift from God (*donum Dei*),” as Augustine puts it in *De Perseverantia*.

**Reply to objection 2:** Sometimes the merit of a prayer has mainly to do with something other than what is being asked for, since merit is mainly ordered toward beatitude, whereas the petition involved in a prayer sometimes extends to certain other things. This is clear from what has been said (a. 6).

Therefore, if some other thing that one seeks for himself is not useful to him for beatitude, then he does not merit that thing. In fact, sometimes in seeking and desiring that thing he loses merit—for instance, if he were to seek from God the completion of some sin, which is impossible to pray for piously.

On the other hand, sometimes the thing sought is neither necessary for salvation nor clearly contrary to salvation. In such a case, even if the one praying can merit eternal life by praying, he nonetheless does not merit to obtain what he is asking for. Hence, in *Librum Sententiarum Prosperi* Augustine says, “Someone who faithfully asks God for the necessities of this life is both mercifully heard and mercifully not heard. For the physician knows better than the sick individual what is useful for him.” Similarly, the reason why Paul was not heard when he sought to have the sting of the flesh removed from him was that it was not expedient.

On the other hand, if what is asked for is useful for the man’s salvation in the sense of pertaining to his salvation, then he merits that thing not only by praying for it but also by doing other good works. And so he undoubtedly receives what he asks for—though at a time when he should receive it. For as Augustine says in *Super Ioannem*, “Certain things are not denied but are deferred to an appropriate time.” However, this can be impeded if the individual does not persevere in asking for the thing in question. And this is why Basil says, “The reason why you sometimes ask and do not receive is that you have asked incorrectly, i.e., you have asked without faith (*infideliter*) or carelessly (*leviter*), or you have asked for what is unprofitable to you, or you have stopped asking.”

However, since, as was explained above (*ST* 1-2, q. 114, a. 6), a man cannot by his own worthiness merit eternal life for someone else (*non potest alii mereri vitam aeternam ex condigno*), it follows that sometimes he likewise cannot by his own worthiness merit for someone else those things that pertain to eternal life. For this reason, as was established above (a. 7), he is not always heard when he prays for someone else.

And so one posits four conditions which, when they all come together, are such that one always obtains what he asks for, viz., that he ask (a) *on his own behalf* for (b) *something that is necessary for salvation*, and that he ask for it (c) *with piety* and (d) *with perseverance*.

**Reply to objection 3:** Prayer relies mainly on faith not for the effect of meriting, since this depends mainly on charity, but for the effect of obtaining what is prayed for. For through faith a man has knowledge of God’s omnipotence and mercy, and it is through these that prayer obtains what it asks for.

## Article 16

### Do sinners obtain anything from God by praying?

It seems that sinners do not obtain anything from God by praying:

**Objection 1:** John 9:3 says, “We know that God does not hear sinners.” This is consonant with what Proverbs 28:9 says: “If someone turns his ears away from hearing the Law, his prayer will be accursed (*execrabilis*).” But an accursed prayer does not obtain anything from God. Therefore, sinners do not obtain anything from God.

**Objection 2:** As was established above (a. 15), the just obtain from God what they merit. But

sinner cannot merit anything, since they lack grace along with charity, which is “the virtue of piety,” as it is put by a Gloss on 2 Timothy 3:55 (“... having an appearance indeed of godliness, but negating its power”). And so they cannot pray with piety—which, as was explained above (a. 15), is what is required for a prayer to obtain what it asks for. Therefore, sinners do not obtain anything by praying.

**Objection 3:** In *Super Matthaem* Chrysostom says, “The Father does not willingly hear a prayer that Son has not prescribed.” But in the prayer which Christ prescribed it says, “Forgive us our trespasses, as we forgive those who trespass against us”—something that sinners do not do. Therefore, either they are lying when they say this and for this reason are not worthy to be heard, or, if they do not say the prayer, then they are not heard because they are not preserving the form of praying that was instituted by Christ.

**But contrary to this:** In *Super Ioannem* Augustine says, “If God did not hear sinners, then it would have been useless for the publican to say, ‘Lord, be merciful to me, a sinner.’” And in *Super Matthaem* Chrysostom says, “Everyone who asks receives, i.e., whether he be just or a sinner.”

**I respond:** There are two things that have to be taken account of in the case of a sinner, viz., his *nature*, which God loves, and his *sin*, which God hates.

Therefore, if a sinner in praying asks for something insofar as he is a sinner, i.e., in accord with his desire to commit a sin, then this is not heard by God in His mercy, but instead it is sometimes heard unto vindication, when God permits the sinner to fall further into sin. For as Augustine says, “In His mercy He negates certain things that He allows in His anger (*quaedam negat propitius quae concedit iratus*).”

By contrast, God does hear the prayer of a sinner that proceeds from the good desire that belongs to the nature—not out of justice, since the sinner does not merit this, but out of pure mercy, given that the four conditions mentioned above (a. 15, ad 2) are satisfied, viz., that he asks on his own behalf, that what he asks for is necessary for salvation, and that he asks with piety and with perseverance.

**Reply to objection 1:** As Augustine points out in *Super Ioannem*, those words were spoken by the blind man while he was “still unanointed,” i.e., when he was not yet perfectly illuminated. And so they have no authority (*verbum non est reatum*).

**Reply to objection 2:** A sinner cannot pray with piety in the sense that his prayer is informed by the habit of the virtue. But his prayer can nonetheless be pious in the sense that he seeks something that belongs to piety, just as someone who does not have the habit of justice can, as is clear from what was said above (q. 59, a. 2), will something just. And even though his prayer is not meritorious, it can nonetheless obtain what is asked for; for merit is based on justice, but obtaining what one prays for is based on grace.

**Reply to objection 3:** As has been explained, the Lord’s prayer is offered by the communal person of the whole Church (*profectus ex persona communi totius Ecclesiae*). And so if someone who does not want to forgive his neighbors their trespasses recites the Lord’s prayer, he is not lying, even though what he says is not true with respect to his own person. For it is true with respect to the person of the Church, outside of which merit, and thus the fruit of prayer, is lacking.

However, sometimes certain sinners are prepared to forgive their debtors. And so they themselves are heard when they pray—this according to Ecclesiasticus 28:2 (“Forgive your neighbor when he hurts you, and your sins will be forgiven you when you pray”),

## Article 17

### Is it appropriate to enumerate the parts of prayer as acts of supplication, acts of praying, acts of intercession, and acts of thanksgiving?

It seems that it is inappropriate to enumerate the parts of prayer as acts of supplication

(*obsecrationes*), acts of praying (*orationes*), acts of intercession (*postulationes*), and acts of thanksgiving (*gratiarum actiones*):

**Objection 1:** Supplicating (*obsecratio*) seems to be a certain sort of adjuring (*adiuratio*). But as Origen says in *Super Matthaem*, “A man who wishes to live in accord with the Gospel must not adjure another; for if he is not permitted to swear, then neither is he permitted to adjure.” Therefore, it is wrong to posit acts of supplication as a part of prayer.

**Objection 2:** According to Damascene, praying is asking for appropriate things from God (*petitio decentium a Deo*). Therefore, it is wrong for acts of praying (*orationes*) to be divided off from acts of intercession (*postulationes*)

**Objection 3:** Acts of thanksgiving (*gratiarum actiones*) have to do with the past, whereas the others have to do with the future. But past things are prior to future things. Therefore, it is wrong to place acts of thanksgiving after the others.

**But contrary to this** is the authority of the Apostle in 1 Timothy 2:1 [“I desire therefore, first of all, that supplications, prayers, intercessions, and thanksgivings be made for all men”].

**I respond:** Three things are required for prayer:

(a) *The one who is praying approaches God*, whom he is praying to. This is what is signified by the name ‘prayer’ or ‘praying’ (*oratio*), since praying is an ascent of the intellect toward God.

(b) What is next required is a *petition (petitio)*, which is signified by the name ‘act of intercession’ (*postulatio*), regardless of whether (i) the petition is proposed in a determinate way, which some call an *act of intercession (postulatio)* properly speaking, or (ii) in an indeterminate way, as when someone asks God for help, and this they call an *act of supplication (supplicatio)*, or (iii) a simple fact is stated—this according to John 11:3 (“Behold, the one whom you love is ill”)—and this they call an *act of intimation (insinuatio)*.

(c) What is required next is the reason for receiving what is asked for (*ratio impetrandi quod petitur*). And this is either on the part of God or on the part of the petitioner. On the part of God, the reason for receiving is His holiness, in light of which we ask to be heard—this according to Daniel 9:17-18 (“Incline your ear, my God, because of Your very self”). And this is what an *act of supplication (obsecratio)*, which is an entreaty (*contestatio*) by reference to sacred things, has to do with—as when we say, “Through your nativity, O Lord, free us.” On the other hand, the reason for receiving on the part of the petitioner is an *act of thanksgiving (gratiarum actio)*, since “in giving thanks for gifts received, we merit to receive even greater gifts,” as the Collect [for Ember Friday in September] puts it.

And so a Gloss on 1 Timothy 2:1 says: “In the Mass there are *acts of supplication* which precede the Consecration” and in which certain holy things are remembered; “there are *prayers* in the Consecration itself,” during which the mind should be especially elevated toward God, “whereas there are *acts of intercession* in the petitions that follow the Consecration, and *acts of thanksgiving* at the end.”

These four parts can be seen in many of the Church’s Collects. For instance, in the Collect for the Feast of the Holy Trinity, when it says, “Omnipotent and eternal God,” this has to do with ascent of *prayer* toward God; when it says, “Who gave your servants, etc.,” this has to do with an *act of thanksgiving*; when it says, “Grant, we beseech You, etc.,” this has to do with an *act of intercession*; and when it posits at the end, “Through our Lord, etc.,” this has to do with an *act of supplication*.

By contrast, in the *Collationes Patrum* it says that (a) an *act of supplication (obsecratio)* is a call for help because of our sins; that (b) a *prayer (oratio)* is when we vow something to God; that (c) an *act of intercession (postulatio)* is when we ask for something on behalf of others. But the first explanation above is better.

**Reply to objection 1:** An act of supplication is not an act of adjuring in order to compel someone, which is prohibited. Instead, it is an act of adjuring in order to beg for mercy.

**Reply to objection 2:** Prayer (*oratio*) as commonly understood includes all the things that are being discussed here. But insofar as it is divided off from the others, it properly implies the ascent toward God.

**Reply to objection 3:** There are diverse ways in which past things precede future things, but one and the same thing is future before it is past. And the act of giving thanks for one set of gifts precedes the act of asking for other gifts, but one and the same gift is first asked for and then, when it has been received, is such that one gives thanks for it. Now prayer, through which we approach Him whom we are asking, precedes an act of intercession. But an act of supplication precedes prayer, since it is on the basis of a consideration of God's goodness that we dare to approach Him.

## QUESTION 84

### Adoration

Next we have to consider the exterior acts of worship (*de exterioribus actibus latriae*): first, adoration (*adoratio*), through which one uses his body to venerate God (question 84); second, those acts by which some exterior thing is offered to God (questions 85-87); and, third, acts by which things that have to do with God are undertaken (questions 88-91).

On the first topic there are three questions: (1) Is adoration (*adoratio*) an act of worship (*actus latriae*)? (2) Does adoration involve an interior act or an exterior act? (3) Does adoration require a fixed place (*requirat determinationem loci*)?

### Article 1

#### Is adoration an act of worship, i.e., an act of [the virtue of] religion?

It seems that adoration is not an act of worship, i.e., an act of [the virtue of] religion (*non sit actus latriae sive religionis*):

**Objection 1:** The worship that belongs to religion (*cultus religionis*) is owed to God alone. But it is not the case that adoration is owed to God alone, since Genesis 18:22 says that Abraham adored the angels, and 3 Kings 1:23 says that when the prophet Nathan was going into King David, he “adored him prostrate on the ground.” Therefore, adoration is not an act of religion.

**Objection 2:** As is clear from Augustine in *De Civitate Dei* 10, the worship that belongs to religion is owed to God insofar as we are beatified in Him. But adoration is owed to Him by reason of His majesty, since in commenting on Psalm 28:2 (“Adore the Lord in His holy court”) a Gloss says, “We come from these courts into the court where His majesty is adored.” Therefore, adoration is not an act of worship (*non est actus latriae*).

**Objection 3:** The worship that belongs to a single act of religion is owed to the three persons. But we do not adore the three persons by a single act of adoration (*una adoratione*); instead, we genuflect for each one individually (*singulariter*) in invoking the three persons.

**But contrary to this** are the words taken from Matthew 4:10, “You shall adore the Lord your God, and Him alone shall you serve.”

**I respond:** Adoration is ordered toward having reverence for the one who is adored. But it is obvious from what has been said that it is proper to religion to show reverence for God. Hence, the adoration by which God is adored is an act of religion.

**Reply to objection 1:** God is owed reverence because of His excellence, which is communicated to certain creatures not by way of equality but by way of participation. And so we venerate God by one sort of veneration that belongs to worship (*latria*), and we venerate excellent creatures by another sort of veneration that belongs to honor (*dulia*), which will be discussed below (q. 103). And since the things that are done exteriorly are signs of interior reverence, some exterior things pertaining to reverence, the greatest among which is *adoration*, are directed toward excellent creatures, whereas there is something that is directed toward God alone, viz., *sacrifice*. Thus, in *De Civitate Dei* 10 Augustine says, “There are many things taken from divine worship that are redirected toward honoring men—either through exaggerated obsequiousness or through nauseating flattery—yet in such a way that those to whom they are redirected are still treated as *men* who are to be revered and venerated and even adored, if they have a lot of extra influence (*si multum eis additur*). But who has ever thought that he should offer sacrifice except to one whom he knew or thought or imagined to be a *god*?”

Therefore, Nathan adored David with the reverence that is due to an excellent creature. On the other hand, as Esther 13:14 tells us, it was the reverence due to God that Mordechai refused to adore Aman with, fearing “lest he should transfer to a man the sort of honor that belongs to God.”

Again, it was the reverence due to God that John was forbidden to adore the angel with (Apocalypse 22:9), both (a) in order to exhibit the dignity human beings had acquired through Christ and by which they had been made equal to the angels—this is why it is added, “I am the fellow servant of you and of your brethren”—and (b) in order to rule out an occasion for idolatry—and this is why it is added, “Adore God.”

**Reply to objection 2:** What is meant by ‘divine majesty’ is every excellence of God’s, which includes everything that is in Him as the highest good, in whom we are beatified.

**Reply to objection 3:** Since there is a single excellence belonging to the three persons, what is owed to them is a single honor and a single reverence—and, as a result, a single act of adoration. It is a figure of this when, in Genesis 18:2, it is said of Abraham that when the three men appeared to him, he said to the one in adoration, “Lord, if I have found favor with you ...”

Now the three genuflections are a sign of the trinity of persons, but not of a distinction among acts of adoration.

## Article 2

### Does adoration involve a corporeal act?

It seems that adoration does not involve a corporeal act (*adoratio non importet actum coporalem*):

**Objection 1:** John 4:23 says, “... the true adorers (*adoratores*) will adore (*adorabunt*) the Father in spirit and truth.” But what is done “in spirit” does not belong to a corporeal act. Therefore, adoration does not involve a corporeal act.

**Objection 2:** The name ‘adoration’ (*adoratio*) is taken from prayer (*oratio*). But prayer consists mainly in an interior act—this according to 1 Corinthians 14:15 (“I will pray with the spirit, I will pray also with the understanding”). Therefore, adoration especially involves a spiritual act.

**Objection 3:** Corporeal acts belong to sentient cognition. But it is with a mental sense, and not with a bodily sense, that we attain to God. Therefore, adoration does not involve a corporeal act.

**But contrary to this:** A Gloss on Exodus 20:5 (“You shall not adore them, nor shall you worship them”) says, “Do not worship them inwardly (*affectu*) or adore them outwardly (*specie*).”

**I respond:** As Damascene says in *De Fide Orthodoxa* 4, “Since we are composed of a twofold nature, viz., intellectual and sentient, we offer a twofold adoration to God, viz., *spiritual* adoration, which consists in the mind’s interior devotion, and *corporeal* adoration, which consists in the exterior humbling of the body. And so in all acts of worship (*in omnibus actibus latriae*) what is interior is related as the more important element to what is exterior. Therefore, exterior adoration is done for the sake of interior adoration—so that, namely, through the signs of humility that we exhibit with our bodies, our affection is incited to subject itself to God. For it is connatural for us to proceed from what can be sensed to what can be understood (*connaturale est nobis ut per sensibilia ad intelligibilia procedamus*).

**Reply to objection 1:** Even corporeal adoration is done “in spirit,” insofar as it proceeds from spiritual devotion and is ordered toward it.

**Reply to objection 2:** In the same way that, as was explained above (q. 83, a. 12), prayer is first and foremost in the mind and is expressed secondarily in words, so, too, adoration consists mainly in an interior reverence for God and secondarily in certain corporeal signs of humility—in the way that we genuflect to signify our weakness in comparison to God, and in the way that we prostrate ourselves as if to profess that we are nothing of ourselves.

**Reply to objection 3:** Even if we cannot attain to God through our senses, it is nonetheless through signs which can be sensed that our mind is stimulated to tend toward God.

### Article 3

#### Does adoration require a fixed place?

It seems that adoration does not require a fixed place (*non requirat determinatum locum*):

**Objection 1:** John 4:21 says, “The time is coming when you will adore the Father neither on this mountain nor in Jerusalem.” But the same line of reasoning seems to hold for other places as well. Therefore, no fixed place is required for adoring.

**Objection 2:** Exterior adoration is ordered toward interior adoration. But interior adoration is offered to God as one who exists everywhere. Therefore, exterior adoration does not require a fixed place.

**Objection 3:** It is the same God who is adored in the New Testament and in the Old Testament. But in the Old Testament adoration was offered toward the west, since, as Exodus 26:18ff. has it, the entrance to the tabernacle faced toward the east. Therefore, for the same reason, we should now likewise adore toward the west if a fixed place is required for adoring.

**But contrary to this:** Isaiah 56:7, as quoted in John 2:16, says, “My house shall be called a house of prayer.”

**I respond:** As has been explained (a. 2), in adoration the interior devotion of the mind is the main thing, whereas what belongs exteriorly to corporeal signs is secondary. Now the mind apprehends God interiorly as not enclosed in any place. But corporeal signs must exist in a determinate place and position. And so a fixed place is not required—in the sense of being necessary for it—for adoration in its main element (*principaliter*), but it is required in accord with a certain fittingness, just as other corporeal signs are.

**Reply to objection 1:** By these words our Lord was foretelling the cessation of adoration both (a) according to the rite of the Jews, who adored in Jerusalem, and (b) according to the rite of the Samaritans, who adored on Mount Garizim. For both of these rites ceased with the coming of the spiritual truth of the Gospel, according to which “sacrifice is made to God in every place,” as Malachi 1:11 puts it.

**Reply to objection 2:** A fixed place is chosen for adoration not for the sake of the God who is being adored—so that He might be confined, as it were, to that place—but rather for the sake of those who are adoring. There are three reasons for this:

First, because the place is consecrated, with the result that those who pray there maintain spiritual devotion in order that they might better be heard—as is clear in the case of Solomon’s adoration (3 Kings 8).

Second, because of the sacred mysteries and other signs of sanctity that are contained in the place.

Third, because many adorers come together, with the result that the prayer is better heard—this according to Matthew 18:20 (“Where two or three are gathered together in my name, there I am in the midst of them”).

**Reply to objection 3:** It is with a certain fittingness that we adore toward the east. First, because of the indication of God’s majesty that is made manifest to us in the movement of the heavens, which is from the east. Second, because, as we read in Genesis 2:8 (according to the Septuagint translation), Paradise was established in the east and so we are, as it were, seeking to return to Paradise. Third, because of Christ, who is the light of the world, and who is called the ‘Orient’ (Zachariah 6:5), and “who ascends above the heaven of heavens to the east” (Psalm 67:34), and who is expected to come from the east as well—this according to Matthew 24:27 (“As lightning comes out of the east, and appears even unto the west, so shall also the coming of the Son of Man be”).

## QUESTION 85

### Sacrifice

Next we have to consider the acts by which certain exterior things are offered to God. There are two sorts of consideration with respect to such things. One has to do with things that are given to God by the faithful (questions 85-87), and the other has to do with vows, by which certain things are promised to Him (questions 88-91). On the first point we have to consider sacrifices (*sacrificia*) (question 85), oblations and first-fruits (*oblaciones et primitiae*) (question 86), and tithes (*decimae*) (question 87).

As regards sacrifices (*sacrificia*), there are four questions: (1) Is the offering of sacrifice to God part of the law of nature? (2) Is sacrifice to be offered to God alone? (3) Is the offering of sacrifice a specific act of virtue? (4) Is everyone obligated to offer sacrifice?

### Article 1

#### Is the offering of sacrifice to God part of the law of nature?

It seems that the offering of sacrifice to God is not part of the law of nature (*non sit de lege naturae*):

**Objection 1:** What is naturally right (*quae sunt iuris naturalis*) is common to everyone. But this is not so with sacrifices. For we read that some have offered bread and wine in sacrifice, as is said of Melchizedech in Genesis 14:18, and that some have offered *these* animals and that others have offered *those* animals. Therefore, the offering of sacrifice is not part of what is naturally right (*non est de iure naturali*).

**Objection 2:** Everyone who just observes that which belongs to what is naturally right. But we do not read that Isaac offered sacrifice—or even Adam, of whom Wisdom 10:2 nonetheless says that wisdom “led him out of his sin.” Therefore, the offering of sacrifice is not part what is naturally right (*non est de iure naturali*).

**Objection 3:** In *De Civitate Dei* 10 Augustine says that sacrifices are offered in order to signify something. But spoken words (*voces*), which, as the same Augustine says in *De Doctrina Christiana*, are the most important signs, “do not signify naturally but instead signify by convention (*ad placitum*),” according to the Philosopher. Therefore, sacrifices are not part of the natural law.

**But contrary to this:** There has always been some sort of offering of sacrifices in all ages and among every nation of men. But what is the case among all peoples seems to be natural. Therefore, the offering of sacrifice is likewise part of what is naturally right.

**I respond:** Natural reason dictates to man that he should be subject to some higher being—this because of the defects that he senses within himself and because of which he needs to be assisted and directed by a higher being. And whatever this being might be, it is called a God by everyone.

Now just as among natural things the lower are naturally subject to the higher, so, too, natural reason dictates to man, in accord with his natural inclination, that he should in his own mode exhibit subjection and honor to what is above him. But the mode that is appropriate for man is that he use sensible signs in order to express something, since he receives his cognition from sensible things. And so it follows from natural reason that man should make use of certain sensible things by offering them to God as a sign of the subjection and honor that he owes, in the manner of those who offer certain things to their masters in recognition of their lordship. But this pertains to the nature of sacrifice. And so the offering of sacrifice is part of what is naturally right.

**Reply to objection 1:** As was explained above (*ST* 1-2, q. 95, a. 2), some things belonging in common to what is naturally right are such that their determinations are part of positive law; for instance, the natural law dictates that evildoers should be punished, but it is determined by divine or human decision that they should be punished by such-and-such a punishment. Similarly, the offering of sacrifice

belongs in common to the natural law, and so everyone agrees in this. But the determination of sacrifices is by human or divine decision, and so people differ on this.

**Reply to objection 2:** Adam and Isaac, like other just men, offered sacrifice to God in a manner that was in keeping with their times; this is clear from Gregory, who says that among the ancients original sin was remitted for the children by the offering of sacrifices. Yet Scripture does not make mention of all the sacrifices offered by the just; instead, it mentions only those that happen to involve something special.

However, there might be a reason why Adam is not said to have offered sacrifices, viz., lest, given that the origin of *sin* is noted in him, it be signified at the same time that the origin of *sanctification* likewise lies in him. Isaac, on the other hand, signified Christ insofar as he himself had been offered in sacrifice. Hence, it was unnecessary to signify him as offering sacrifice.

**Reply to objection 3:** It is natural to man to signify his thoughts, but the fixing of the signs is by human convention.

## Article 2

### Should sacrifice be offered only to the most high God?

It seems that sacrifice need not be offered only to the most high God:

**Objection 1:** Since sacrifice should be offered to God, it seems that sacrifice should be offered to all those who have become partakers of the divine nature (*qui fit divinitatis consortes fiunt*). But as 2 Peter 1:4 says, holy men “are made partakers of the divine nature.” Hence, Psalm 81:6 says of them, “I have said, ‘You are gods.’” Likewise, as is clear from Job 1:6, the angels are called sons of God. Therefore, sacrifice should be offered to all of these.

**Objection 2:** The greater someone is, the greater the honor that should be shown to him. But the angels and the saints are much greater than any earthly princes, and yet the subjects of these earthly princes give much greater honor to them—prostrating themselves in their presence and offering gifts—than the offering of an animal or some other thing in sacrifice. Therefore, *a fortiori*, the angels and the saints can be offered sacrifices.

**Objection 3:** Temples and altars are set up in order to offer sacrifices. But temples and altars are set up to the angels and the saints. Therefore, sacrifices can likewise be offered to them.

**But contrary to this:** Exodus 22:20 says, “Anyone who offers sacrifices (*immolat*) to gods other than the Lord shall be put to death.”

**I respond:** As has been explained (a. 1), sacrifice is offered in order to signify something. Now the sacrifice that is offered exteriorly signifies an interior spiritual sacrifice by which the soul offers itself to God—this according to Psalm 50:19 (“A sacrifice to God is an afflicted spirit”)—since the exterior acts of [the virtue of] religion are ordered toward the exterior acts.

Now the soul offers itself in sacrifice to God as the source of its creation and the end of its beatification. But according to the true Faith, as was established in the First Part (*ST* 1, q. 90, a. 3 and q. 118, a. 2), God alone is the creator of our souls, and it is likewise in Him alone that the beatitude of our soul consists. And so just as we offer spiritual sacrifices to God the most high alone, so, too, we should also offer exterior sacrifices to Him alone—in the same way that “when praying and praising, we direct our meaningful words to Him to whom we offer the very things in our hearts that we are signifying,” as Augustine puts it in *De Civitate Dei* 10.

We likewise see it observed in every republic it is observed that they honor the highest ruler by some singular sign which, if it were shown to anyone else, it would be a crime of high treason (*esset crimen laesae maiestatis*). And so in divine law the death penalty is established for those who present

divine honor to others.

**Reply to objection 1:** The name ‘divine nature’ (*divinitas*) is communicated to certain individuals not through *equality*, but through *participation*. And so it is not the case that equal honor is owed to them.

**Reply to objection 2:** In the offering of a sacrifice what is taken into account is not the price of the killed animal, but the signification with which this sacrifice is made in honor of the highest ruler of the whole universe. Hence, as Augustine says in *De Civitate Dei* 10, “The demons (*daemones*) rejoice not in the stench of corpses, but in receiving divine honors.”

**Reply to objection 3:** As Augustine says in *De Civitate Dei* 8, “We do not set up temples and priests to the martyrs. For it is not they, but their God, who is our God. Hence, the priest does not say, ‘I offer sacrifice to you, Peter (or Paul).’ Instead, he gives thanks to God for their victories and we are encouraged to imitate them.”

### Article 3

#### Is the offering of sacrifice a specific act of virtue?

It seems that the offering of sacrifice is not a specific act of virtue:

**Objection 1:** In *De Civitate Dei* 10 Augustine says, “True sacrifice is every work that is done in order that we might cling to God in a holy relationship (*ut sancta societate inhaeremus Deo*).” But it is not the case that every good work is a specific act of some determinate virtue. Therefore, the offering of sacrifice is not a specific act of some determinate virtue.

**Objection 2:** The mortification of the body that is done by fasting belongs to [the virtue of] *abstinence*, but the mortification of the body that is done by continence belongs to [the virtue of] *chastity*, whereas the mortification of the body that is done in martyrdom belongs to [the virtue of] *fortitude*. Yet all of these things seem to be included under the offering of sacrifice—this according to Romans 12:1 (“Present your bodies as a living sacrifice (*hostiam viventem*)”). Again, in Hebrews 13:16 the Apostle says, “Do not forget to do good and foster communion, since by such sacrifices God’s favor is obtained.” But doing good and fostering communion belong to [the virtues of] *charity*, *mercy*, and *generosity*. Therefore, the offering of sacrifice is not a special act of some determinate virtue.

**Objection 3:** A sacrifice seems to be something that is presented to God. But there are many things presented to God, e.g., *devotion*, *prayer*, *tithes*, *first-fruits*, *oblations*, and *holocausts*. Therefore, sacrifice does not seem to be a special act of some determinate virtue.

**But contrary to this:** As is clear from the beginning of Leviticus, many specific precepts about sacrifices are given in the Law.

**I respond:** As was established above (*ST* 1-2, q. 18, aa. 6-7 and q. 60, a. 3), when the act of one virtue is ordered toward the end of another virtue, it in some way participates in the species of that virtue—just as, when someone steals in order to commit fornication, the stealing itself in some sense takes on the deformity of fornication, so that even if it were not a sin on other grounds, it would now be a sin by the fact that it is ordered toward fornication.

So, then, sacrifice is a certain specific act that is praiseworthy because it is done out of reverence for God (*ex hoc quod in divinam reverentiam fit*). For this reason, it belongs to a determinate virtue, viz., the virtue of religion.

Now it also happens that what is done in accord with other virtues is ordered toward reverence for God, e.g., when someone gives alms out of his own property for the sake of God, or when someone subjects his own body to affliction because of reverence for God. And, accordingly, the acts of other virtues can likewise be called ‘sacrifices’.

On the other hand, there are certain acts that are not praiseworthy for any reason other than that they are done because of reverence toward God. And these acts are called ‘sacrifices’ properly speaking, and they belong to the virtue of religion.

**Reply to objection 1:** The very fact that we want to cling to God in a certain spiritual relationship pertains to reverence for God. And so the act of any virtue takes on the nature of sacrifice by the fact that it is done in order that we might cling to God in a holy relationship.

**Reply to objection 2:** There are three sorts of human good. The first is the *good of the soul*, which is offered to God by a sort of interior sacrifice through devotion and prayer and other interior acts of this kind. And this is the most important sort of sacrifice (*hoc est principale sacrificium*).

The second is the *good of the body*, which is offered in some manner to God by martyrdom and by abstinence or continence.

The third is the *good of exterior goods*, the sacrifice of which is offered *directly* to God when we offer our possessions immediately to God, and *indirectly (mediate)* when we share them with our neighbors because of God.

**Reply to objection 3:** There are sacrifices (*sacrificia*) properly speaking when something is done to the things that have been offered to God; for instance, animals used to be killed, bread is broken and eaten and blessed. The very name suggests this, since ‘sacrifice’ derives from the fact that man *makes something sacred (facit aliquid sacrum)*.

By contrast, there is said to be an ‘offering’ (*oblatio*) in a direct sense when something is offered to God, even if nothing is done to it; for instance, money or food are said to be offered at the altar, and nothing is done to them.

Hence, every sacrifice is an offering, but not vice versa. First-fruits are offerings, since, as Deuteronomy 26 reports, they were offered to God, but they were not sacrifices, since nothing sacred happened with them. On the other hand, tithes are, properly speaking, neither sacrifices nor offerings, since they are offered immediately not to God, but to the ministers of the divine worship.

#### Article 4

##### Is everyone obligated to offer sacrifices?

It seems that not everyone is obligated to offer sacrifices:

**Objection 1:** In Romans 3:19 the Apostle says, “Whatever the Law says, it is speaking to those who are under the Law.” But the law about sacrifices was not given to everyone; instead, it was given to the Hebrew people alone. Therefore, sacrifices were not obligatory for everyone.

**Objection 2:** Sacrifices are offered to God in order to signify something. But not everyone understands significations of this sort. Therefore, not everyone is obligated to offer sacrifices.

**Objection 3:** Priests are so called because they offer sacrifices to God. But not everyone is a priest. Therefore, not everyone is obligated to offer sacrifices.

**But contrary to this:** As was established above (a. 1), offering sacrifice is part of the law of nature. But everyone is obligated to do those things that are part of the law of nature. Therefore, everyone is obligated to offer sacrifice.

**I respond:** As has been explained (a. 2), there are two sorts of sacrifice:

The first and most important sort is *interior* sacrifice, which everyone is obligated to offer, since everyone is obligated to offer a devout mind to God.

The second sort is *exterior* sacrifice, which is divided into two:

(a) There is an exterior sacrifice that is praiseworthy only because something is offered to God as a declaration of subjection to God. As regards this sort of exterior sacrifice, those who are under the New

Law or the Old Law are obligated in one way, whereas those who are not under the Law are obligated in a different way. For those who are under the Law are obligated to offer determinate sacrifices in accord with the precepts of the Law. By contrast, those who were not under the Law were obligated to do certain things exteriorly—but not *these* or *those* things in particular—in honor of God, in accord with what was appropriate for those among whom they lived.

(b) There is another sort of exterior sacrifice when exterior acts of the other virtues are taken up into reverence for God. Some of these acts fall under precepts, and everyone is obligated to do them, whereas others are supererogatory and such that not everyone is obligated to do them.

**Reply to objection 1:** As has been explained, not everyone was obligated with respect to the determinate sacrifices that were commanded in the Law; however, as has been explained, they were indeed obligated to offer certain interior and exterior sacrifices.

**Reply to objection 2:** Even though not everyone knows the virtue of sacrifice explicitly, they still know it implicitly—in the same way that, as was established above (q. 2, aa. 6-8), they have implicit faith.

**Reply to objection 3:** Priests offer sacrifices that are specifically ordered toward the worship of God (*specialiter ordinata ad cultum divinum*), not only for themselves but also for others. However, as is clear from what has been said above (a. 2 and the present article), there are other sacrifices that anyone can offer on his own behalf to God.

## QUESTION 86

### Oblations and First-fruits

Next we have to consider oblations and first-fruits. And on this topic there are four questions: (1) Do any oblations fall under the necessity of a precept? (2) To whom are oblations due? (3) What sorts of things should be offered as oblations? (4) Specifically as regards oblations of first-fruits, are men obligated by necessity to hand over first-fruits?

#### Article 1

##### Are men obligated to offer oblations by a necessity of precept?

It seems that men are not obligated to offer oblations by a necessity of precept (*homines non teneantur ad oblationes ex necessitate praecepti*):

**Objection 1:** As was established above (*ST* 1-2, q. 103, aa. 3-4), during the time of the Gospel men are not obligated to observe the ceremonial precepts of the Old Law. But the offering of oblations is posited among the ceremonial precepts of the Old Law, since Exodus 23:14-15 says, “Three times a year you shall celebrate feasts for me,” and then it is added, “You shall not appear empty-handed in my sight.” Therefore, men are not now obligated to offer oblations by a necessity of precept.

**Objection 2:** Before oblations are offered, they are up to a man’s will (*in voluntate hominis consistunt*), as is seen by our Lord’s saying at Matthew 5:23, “If you are offering your gift at the altar ....”—as if this is left to the choice of those making the offerings. But once the oblations have been offered, there is no room left for offering them again. Therefore, there is no way in which anyone is obligated to offer oblations by a necessity of precept.

**Objection 3:** If anyone is obligated to give something to the Church, then if he does not give it, he can be compelled to do it by having the Church’s sacraments withheld from him (*potest ad id compelli per subtractionem ecclesiasticorum sacramentorum*). But it seems illicit to deny the sacraments of the Church to someone who does not want to make an offering—this according to the decree of the Sixth Synod 1, q. 1 (“No one who is giving out Holy Communion may demand anything from the one is receiving grace, and if he does demand something, he should be deposed”). Therefore, men are not obligated by necessity to offer oblations.

**But contrary to this:** Gregory says, “Let every Christian take care to offer something to God at the celebration of Mass (*ad Missarum solemnias*).”

**I respond:** As has been explained (q. 85, a. 3), the name ‘oblation’ is common to all the things that are offered for the worship of God.

The result is that if anything is offered in divine worship as something sacred that then has to be consumed, then it is both an *oblation* and a *sacrifice*; hence, Exodus 29:18, “You shall offer a whole ram for a burnt-offering upon the altar; it is an oblation to the Lord, a most sweet odor of the victim that belongs to the Lord,” and Leviticus 2:1 says, “When a soul offers an oblation of sacrifice to the Lord, his offering shall be fine flour.”

However, if anything is offered in such a way that it remains in its entirety, either to be allotted to divine worship or to be set aside for the use of the ministers, then it will be an *oblation* but *not a sacrifice*. Oblations of this sort are such by their nature that they are offered voluntarily—this according to Exodus 25:2 (“You shall accept them from a man who offers them of his own accord (*ultroneus*)”).

Still, there are four ways in which it can happen that someone is obligated to offer such oblations:

First, *because of a previous agreement*, as when a piece of Church land is granted to someone in order that he might make fixed oblations at set times—though this has the character of rent.

Second, *because of a previous assignation or promise*, as when someone offers a donation while he is still alive, or when someone leaves something in his will to the Church, whether liquid or non-liquid,

to be handed over at some future time.

Third, *because of necessity on the part of the Church*, e.g., if the ministers of the Church do not have enough to sustain themselves.

Fourth, *because of custom*. For instance, the faithful are obligated to make certain customary oblations on certain feast days.

However, in these last two cases the oblation remains in some sense voluntary, viz., with respect to the quantity or the type of the thing that is offered.

**Reply to objection 1:** In the New Law men are not obligated to make oblations because of legal solemn feast days, in the way that Exodus spells out. Instead, as has been explained, they are obligated to make oblations for other reasons.

**Reply to objection 2:** It is the case both that (a) some are obligated to offer oblations before they do it, as in the first and third and fourth ways explained above, and that (b) some are obligated even after they offer them through an assignation or promise—since they are obligated to exhibit in reality what had been offered to the Church by way of an assignation.

**Reply to objection 3:** Those who do not render the offerings they owe can be punished by having the sacraments withheld, not by the very priest to whom the offerings were to be made—lest he seem to be demanding something for administering the sacraments—but by some superior.

## Article 2

### Are oblations owed to priests alone?

It seems not to be the case that oblations are owed to priests alone:

**Objection 1:** We see that among oblations the main ones are those set aside for the sacrifice of victims (*quae hostiarum sacrificiis deputantur*). But things that are given to the poor are called ‘victims’ or ‘sacrifices’ (*hostiae*) in Sacred Scripture—this according to Hebrews 13:16 (“Do not forget to do good and to share, since such victims [or sacrifices] (*hostiis*) are pleasing to God”). Therefore, oblations are owed much more to the poor.

**Objection 2:** In many parishes monks take a part of the oblations. But as Jerome says, “The case of clerics is different from the case of monks.” Therefore, it is not the case that oblations are owed to priests alone.

**Objection 3:** With the approval of the Church lay people purchase oblations such as bread and other things of this sort, and they do this only in order to turn these things to their own use. Therefore, oblations can belong to the laity as well.

**But contrary to this:** Pope Damasus says (as quoted in *Hanc Consuetudinem* 10, q. 1), “Only the priests, who are seen serving the Lord every day, are permitted to eat and drink of the oblations which are offered within the holy Church. For in the Old Testament the Lord forbade the children of Israel to eat the sacred loaves, with the exception of Aaron and his sons.”

**I respond:** As one reads from Moses in Deuteronomy 5:5, a priest (*sacerdos*) is appointed in some sense as a “mediator and middleman (*sequester et medius*)” between the people and God. And so it is up to him to deliver God’s doctrine and sacraments (*divina dogmata et sacramenta*) to the people; and, by the same token, those things that belong to the people, e.g., prayers and sacrifices and oblations, have to be delivered by him to the Lord—this according to the Apostle in Hebrews 5:1 (“Every priest (*pontifex*) taken from among men is appointed on behalf of men for those matters that pertain to God, in order that he might offer gifts and sacrifices for their sins”). And so the oblations that are offered to God by the people belong to the priests, not only in order that they might turn them to their own use, but also in order that they might faithfully dispense them, in part (a) by expending them in matters that pertain to divine

worship, and in part (b) by expending them in those matters that pertain to their own sustenance—for as 1 Corinthians 9:13 says, “Those who serve at the altar partake with the altar”—and in part (c) by expending them for the use of the poor, who are to be sustained as much as possible by the resources of the Church. For as Jerome notes in his commentary on Matthew, our Lord likewise kept a purse for the use of the poor.

**Reply to objection 1:** Just as things given to the poor are not properly speaking sacrifices, and yet are called ‘sacrifices’ insofar as they are given for the sake of God, so, too, for the same reason they can be called oblations—and yet not properly speaking, since they are not offered immediately to God.

Still, oblations properly speaking do come into the use of the poor, not by being dispensed by those who offer them, but rather by being dispensed by the priests.

**Reply to objection 2:** There are three ways in which monks and other religious can receive oblations: (a) *as poor people*, through the dispensation of the Church; (b) if they are *ministers of the altar*, in which case they can accept oblations that are voluntarily offered to them; and (c) if there are *parishes that belong to them*, in which case they can accept oblations that are owed to them as rectors of the Church.

**Reply to objection 3:** After oblations have been consecrated, as in the case of sacred vessels and vestments, they cannot come into the use of the laity. And this is how to interpret the passage cited from Pope Damasus.

However, oblations that are not consecrated can come into the use of the laity through the dispensation of the priests, either in the manner of a gift or in the manner of a purchase.

### Article 3

#### Can a man make oblations of whatever he licitly possesses?

It seems that a man cannot make oblations of whatever he licitly possesses (*non possit homo oblationes facere de omnibus rebus licite possessis*):

**Objection 1:** According to human laws, a prostitute (*meretrix*) acts shamefully in being a prostitute, but it is not shameful for her to receive her wages, and so she possesses the wages licitly. Yet it is not permissible for her to make an oblation from the money—this according to Deuteronomy 23:18 (“You shall not offer a prostitute’s wages in the house of the Lord your God”). Therefore, it is not the case that one is permitted to make an oblation of whatever he licitly possesses.

**Objection 2:** Likewise, it is forbidden to offer “the price of a dog” in the house of Lord. But it is clear that the price of a dog that has been justly sold is justly possessed. Therefore, it is not the case that one is permitted to make an oblation of whatever he justly possesses.

**Objection 3:** Malachi 1:8 says, “If you offer what is lame and sick, is this not bad?” But a lame and sick animal is justly possessed. Therefore, it seems that an oblation cannot be made of whatever is justly possessed.

**But contrary to this:** Proverbs 3:9 says, “Honor the Lord from your subsistence.” But what belongs to a man’s subsistence (*substantia*) is whatever he justly possesses. Therefore, an oblation can be made of whatever is justly possessed.

**I respond:** In *De Verbis Domini* Augustine says, “If you plundered someone weak and gave some of his spoils to a judge on the condition that judge rule in your favor, the force of justice is so great that even you would be displeased with the judge. Your God is not such as even you yourself ought not to be.” And Ecclesiasticus 34:21 says, “An oblation made by one who sacrifices something ill-gotten is stained.” Hence, it is clear that an oblation cannot be made of things that are acquired and held unjustly.

Now in the Old Law, in which prefigurement was fitting, certain things were thought of as unclean

because of their signification, and it was illicit to offer them. By contrast, in the New Law every creature of God is considered clean, as Titus 1:15 says. And so, absolutely speaking (*quantum est de se*), an oblation can be made of whatever is licitly possessed.

However, it happens incidentally (*per accidens*) that an oblation cannot be made of something that is licitly possessed, e.g., if the oblation tends toward the detriment of someone else, as with a son who offers to God the means by which he should be caring for his father—something that our Lord disapproves of in Matthew 15:5—or because of scandal, or because of contempt or something else of this sort.

**Reply to objection 1:** In the Old Law an oblation from the wages of a prostitute was prohibited because of uncleanness, whereas in the New Law the wages of a prostitute are prohibited because of scandal, lest the Church seem to be looking with favor on a sin by accepting an oblation of the profits of that sin.

**Reply to objection 2:** According to the Law, the dog is considered an unclean animal. Yet other unclean animals were bought back and their price could be offered—this according to Leviticus 27:27 (“If an animal is unclean, he who offers it shall buy it back”).

By contrast, dogs were neither offered nor bought back, both (a) because idolaters made use of dogs in their sacrifices to idols, and (b) because dogs signify rapaciousness, and an oblation cannot be made of this. But this prohibition ceases with the New Law.

**Reply to objection 3:** There were three reasons why the oblation of a blind or lame animal was considered illicit.

First, because of *that for which it was being offered*. This is why Malachi 1:8 says, “If you offer what is lame as a sacrifice, is this not bad?” For sacrifices had to be unblemished (*immaculata*).

Second, because of the *contempt*. Hence, in the same place it is added, “You have profaned my name by saying, ‘The table of the Lord is contaminated and what is placed upon it is contemptible.’”

Third, because of a *previous vow*, by which a man is obligated to render in its entirety what he had vowed. Hence, in the same place it is added, “Cursed is the deceitful man that has within his flock what is vigorous (*masculus*), and, making a vow, offers in sacrifice to the Lord what is feeble (*debile*).

These same reasons remain in the New Law, but when they do not apply, the oblation is not illicit.

#### Article 4

##### Are men obligated to hand over first-fruits?

It seems that men are not obligated to hand over first-fruits (*ad primitias solvendas homines non teneantur*):

**Objection 1:** In Exodus 13:9, after the law of primogeniture has been given, it is added, “It will be like a sign in your hand,”—and so it seems that this is a ceremonial precept. But the ceremonial precepts are not preserved in the New Law. Therefore, neither do first-fruits have to be handed over.

**Objection 2:** First-fruits were offered to the Lord for the special favor (*pro speciali beneficio*) that He had showed to that people; hence, Deuteronomy 26:2-3 says, “You shall take the first of all your fruits ... and you shall go to one who will be priest in those days and say to him, ‘I profess today before the Lord your God that I have come into the land before which He swore to our fathers that He would give it to us.’” Therefore, other nations are not obligated to hand over first-fruits.

**Objection 3:** That which someone is obligated to do should be determinate. But one does not find in either the New Law or the Old Law a determinate quantity of first-fruits. Therefore, men are not obligated by necessity to hand them over.

**But contrary to this:** *Decretals* 16, q. 7 says, “It is necessary to receive from all the people tithes

and first-fruits, which by law we decree to belong to the priests.”

**I respond:** First-fruits belong to a certain genus of oblations, since, as Deuteronomy 26:3 has it, they are offered to God along with a certain profession. Hence, in the same place it is added, “The priest takes the basket of first-fruits from the hand of the one who is bringing the first-fruits, and he puts the basket before the altar of the Lord your God.” And further on (Deuteronomy 26:10) he is ordered to say, “Therefore I now offer the first-fruits of the earth, which the Lord has given to me.”

Now the first-fruits were offered for a special reason, viz., in recognition of God’s beneficence (*in recognitionem divini beneficii*), in the sense that one professes that he perceives the fruits of the earth to be from God, and so he is obligated to offer something of them to God—this according to Paralipomenon 1 29:14 (“We have given to You what we have received from Your hand”). And since we should offer to God what is special, it was commanded that we offer to God first-fruits as something special from the fruits of the earth. And since a priest is appointed for the people in matters that have to do with God, the oblations were given over to the use of the priests. Hence, Numbers 18:8 says, “The Lord said to Aaron, ‘Behold, I have put you in charge of My first-fruits.’”

Now it is part of what is naturally right that a man should offer something in God’s honor from among the things that have been given to him by God. But that these things should be offered to such-and-such persons, or should be from the first-fruits, or should be offered in such-and-such a quantity, was something determined in the Old Law by divine right (*iure divino*), whereas in the New Law it is set by the determination of the Church, and men are obligated by the Church to hand over first-fruits according to the custom of their country and the needs of the Church’s ministers.

**Reply to objection 1:** The ceremonial precepts were a sign of the future, and so they ceased with the presence of the truth they had signified.

By contrast, the oblation of first-fruits was a sign of past beneficence, in light of which an obligation to recognize the beneficence is caused in accord with the dictate of natural reason. And an obligation of this sort remains at a general level.

**Reply to objection 2:** First-fruits were offered in the Old Law not only because of the favor of the promise of the land that was given over by God, but also because of the favor of the fruits of the earth that were given over by God. Hence, Deuteronomy 26:10 says, “I offer the land’s first fruits, which the Lord God has given to me.” And this latter reason is common to everyone.

An alternative reply is that just as God conferred the promised land as a sort of *special* favor, so, too, by a *general* favor He conferred dominion over the earth to the whole human race—this according to Psalm 113:16 (“He gave the earth to the children of men”).

**Reply to objection 3:** As Jerome says, “According to the tradition of the ancients, what was introduced was that those who had the most gave a 1/40th part to the priests in lieu of first-fruits, whereas those who had the least gave a 1/60th part.” Hence, it seems that, according to the custom of the country, first-fruits had to be offered between those two endpoints.

However, it is reasonable to think that the quantity of first-fruits was not fixed by the Law, because, as has been explained, first-fruits are given in the manner of an oblation, the nature of which is such that they are voluntary.

## QUESTION 87

### Tithes

Next we have to consider tenth parts, or tithes (*decimae*). And on this topic there are four questions: (1) Are men obligated by a necessity of precept to hand over tithes? (2) What sorts of things should tithes be given of? (3) To whom should tithes be given? (4) On whom is it incumbent to give tithes?

### Article 1

#### Are men obligated to give tithes by a necessity of precept?

It seems that men are not obligated to give tithes by a necessity of precept (*homines non teneantur dare decimas ex necessitate praecepti*):

**Objection 1:** The precept concerning the handing over of tithes is given in the Old Law; this is clear from Leviticus 27:30-32 (“All the tithes of the earth, whether of grains or of the fruit of trees, belong to the Lord ... Of all the tithes of oxen, and sheep, and goats, that pass under the shepherd’s rod, every tenth that comes shall be sanctified to the Lord.”). But this precept cannot be counted among the *moral* precepts, since natural reason does not dictate that a tenth part should be given more than that a ninth part or an eleventh part should be given. Therefore, it is a *judicial* precept or a *ceremonial* precept. But as was established above (*ST* 1-2, qq. 103 and 104), during the time of grace men are not obligated to keep either the ceremonial precepts or the judicial precepts of the Old Law. Therefore, men are not now obligated to hand over tithes.

**Objection 2:** During the time of grace men are obligated to observe only those things that have been mandated by Christ through the Apostles—this according to Matthew 28:20 (“... teaching them to observe everything that I have commanded you”) and according to Paul in Acts 20:27 (“For I have not avoided declaring to you all the counsel of God”). But nothing about the handing over of tithes is contained either in the teaching of Christ or in the teaching of the Apostles. For what our Lord says about tithes in Matthew 23:23 (“It is necessary to do these things”) seems to refer to a past era of legal observance, as Hilary points out in *Super Matthaëum*: “The tithing of oils, which was useful for prefiguring future events, was not to be omitted.” Therefore, during the time of grace men are not obligated to hand over tithes.

**Objection 3:** During the time of grace men are no more obligated to observe the Law than they were before the Law. But before the Law tithes were given not because of a precept, but only because of a vow. For Genesis 28:20ff. says that Jacob “took a vow, saying, ‘If the Lord will be with me and guard me along the path on which I walk ..., of all that you have given me, I will offer you tithes.’” Therefore, neither is it the case that men are obligated to hand over tithes during the time of grace.

**Objection 4:** In the Old Law men were obligated to hand over three types of tithes. They handed over certain of them to the Levites. For Numbers 18:24 says, “The Levites will be content with the oblation of tithes, which I have separated off for their use and for necessities.” There were, in addition, other tithes, which we read about in Deuteronomy 14:22-23: “You will separate off a tenth part of all your fruits that are brought forth on the earth from year to year, and you shall eat in the sight of the Lord your God in a place that God will choose.” And there were still other tithes that are added in the same place: “Every third year you will separate another tenth part of all the things that you grow in that time and you will place it at your gates, and the Levite who has no other part or possession with you will come, and the stranger and the orphan and the widow who are within your gates will eat and be satisfied. But in the time of grace men are not obligated to give tithes of the second and third types. Therefore, neither are they obligated to give tithes of the first type.

**Objection 5:** Unless it is immediately handed over, what is due without any fixing of a time obligates under pain of sin (*obligat ad peccatum*). Therefore, if in the time of grace a man were obligated

by a necessity of precept to hand over tithes, then in those lands in which tithes are not handed over everyone would be in a state of mortal sin (*omnes essent in peccato mortali*) and, as a result, even the ministers of the Church would be in a state of mortal sin because of their dissimulation—which is absurd. Therefore, it is not the case that men living in the time of grace are obligated to hand over tithes by a necessity of precept.

**But contrary to this:** Augustine says (and this is contained in *Decretals* 16, q. 1), “Tithes are required by obligation (*ex debito*) and if anyone does not want to give them, then he is taking what belongs to another.”

**I respond:** In the Old Law tithes were given for the sustenance of the ministers of God; hence, Malachi 3:10 says, “Bring every tenth part to my storehouse, so that there will be food in my house.” Hence, the precept about handing over tithes was (a) partly a *moral* precept instilled in natural reason and (b) partly a *judicial* precept that had force from being instituted by God.

For natural reason dictates that the people should provide for what was required for the sustenance of those who were ministering divine worship for the salvation of the whole people—just as stipends for sustenance are owed by the people to those who watch over the general welfare, such as rulers and soldiers and others of this sort. Hence, the Apostle likewise proves this in 1 Corinthians 9:7 by appeal to human custom when he says, “Does anyone ever serve as a soldier by providing his own stipends? Does anyone plant a vineyard and then not eat its fruits?”

By contrast, the determination of a fixed part that is to be offered to the ministers of divine worship does not derive from what is naturally right, but was instead introduced by divine institution in accord with the situation of that people to whom the Law was given. The people were divided into twelve tribes, where the twelfth tribe, viz., the Levitical tribe, which was as a whole given over to divine ministries, did not have any possessions. Hence, it was appropriate to establish that the other eleven tribes should give a tenth part of their yield to the Levites, in order that the Levites might live more respectably, and also because there were some who were going to violate this rule through negligence. Hence, as regards the fixing of a tenth part, the precept was *judicial*, just as many other precepts that are called *judicial* had been specially instituted to conserve the equality of men with one another in accord with the circumstances of that people, even though, as a consequence, these precepts were to signify something future, just as all the other things that happened to these people did—this according to 1 Corinthians 10:11 (“All these things happened to them as a figure”)—and in this regard the *judicial* precepts agreed with the *ceremonial* precepts, which had been instituted mainly in order to signify something future. Hence, even the precept about handing over tithes signifies something future, since one who gives a tenth part, which is a sign of perfection (because *ten* is in a way a complete number and the first limit of numbers, beyond which they do not proceed but instead begin again from *one*), while reserving the nine parts for himself, is, as it were, professing by a certain sign that imperfection belongs to himself and that perfection, which was going to come through the Christ, is to be looked forward to from God. Yet, as has been explained, the precept is not for this reason a *ceremonial* precept, but is instead a *judicial* precept.

Now as we explained above (*ST* 1-2, q. 104, a. 3), the difference between the *ceremonial* precepts of the Law and the *judicial* precepts is that during the time of the New Law it is illicit to observe the ceremonial precepts, whereas the *judicial* precepts, even if they do not oblige during the time of grace, can nonetheless be observed without sin, and certain individuals are indeed obligated to observe them if they are established by the authority of those whose role is to legislate. For instance, as we read in Exodus 22:1, it is a judicial precept of the Old Law that one who has stolen a sheep must give back four sheep. Now if this precept were established by some king, then his subjects would be obligated to obey it. So, too, the determination that a tenth part should be turned over is instituted in the time of the New Law by the authority of the Church in accord with a certain humaneness—more specifically, in order that the people of the New Law might show no less kindness to the ministers of the New Testament than the people of the Old Law showed to the ministers of the Old Covenant, since (a) the people of the New Law

have a greater obligation (*ad maiora obligetur*)—this according to Matthew 5:20 (“Unless your righteousness exceeds that of the Scribes and Pharisees, you will not enter into the kingdom of heaven”)—and since (b), as the Apostle shows in 2 Corinthians 3:7, the ministers of the New Testament have a higher dignity than do the ministers of the Old Testament.

So, then, it is clear that, as regards the handing over of tithes, men are obligated—partly by what is naturally right and partly as well by the Church’s determination. Still, the Church, taking into account the suitability for times and persons, could determine that a part of some other size should be turned over.

**Reply to objection 1:** This makes clear the reply to the first objection.

**Reply to objection 2:** To the extent that the precept concerning the handing over of tithes is a *moral* precept, it was given (a) by our Lord in the Gospel when He said at Matthew 10:10, “A laborer is worth his reward,” and also (b) by the Apostle, as is clear from 1 Corinthians 9:4. But the setting of a fixed part is reserved to the Church’s ordination.

**Reply to objection 3:** Before the time of the Old Law there were no determinate ministers of divine worship; it is said instead that the first-born were priests and received a double portion. And so there was likewise no fixed part that had to be given to the ministers of divine worship; instead, when some minister appeared, each individual voluntarily gave him whatever seemed appropriate to him. For instance, as Genesis 14:20 relates, Abraham by a prophetic instinct gave tithes to Melchisedech, the priest of the most high God. And, similarly, Jacob vowed that he would give tithes, even though he seems to have vowed the tithes not as something to be given to any ministers, but for divine worship, i.e., as the consummation of his sacrifices. This is why he says explicitly, “I will offer you tithes.”

**Reply to objection 4:** The second sort of tithes, which were reserved for the offering of sacrifices, have no place in the New Law, now that there have ceased to be legal victims.

By contrast, the third sort of tithes, which they were supposed to eat with the poor, are augmented in the New Law by our Lord’s commanding not only that the tenth part but that *everything* superfluous ought to be given to the poor—this according to Luke 11:41 (“Give whatever is left over as alms”). Again, the very tithes that are given to the ministers of the Church should be dispensed through them for the use of the poor.

**Reply to objection 5:** The ministers of the Church should take greater care to promote spiritual goods among the people than to collect temporal goods. And this is why the Apostle did not want to use the power that had been given to him by our Lord, viz., the power to receive stipends of food from those to whom he was preaching the Gospel, lest there be an impediment to the Gospel of Christ. And yet those who did not support him did not sin; otherwise, the Apostle would not have failed to correct them.

Similarly, it is laudable for the ministers of the Church not to require tithes in cases where tithes could not be required without scandal stemming from misuse or from some other cause. And yet those who do hand over tithes are not in a damnable state in those places where the Church does not ask them for tithes—except perhaps because of an obstinacy of mind when they have the intention of not handing over tithes even if tithes are sought from them.

## Article 2

### Are men obligated to give tithes of everything?

It seems not to be the case that men are obligated to give tithes of everything:

**Objection 1:** The giving of tithes seems to have been introduced by the Old Law. But in the Old Law there is no precept given concerning ‘personal tithes’, i.e., tithes that are given of those things that someone acquires by his own proper act, e.g., in business dealings or in military service (*puta de mercationibus vel de militia*). Therefore, no one is obligated to hand over tithes of such things.

**Objection 2:** As was explained above (q. 86, a. 3), oblations should not be made of goods that are ill-gotten. But oblations that are given to God without mediation seem to pertain more to divine worship than do tithes, which are given to the ministers. Therefore, it is likewise the case that tithes of ill-gotten goods should not be handed over.

**Objection 3:** Leviticus 27:30-32 mandates that tithes should be given only “of grains, fruits from trees,” and animals “that pass under the shepherd’s rod.” But beyond these there are certain other small things that are profitable for a man, e.g., herbs that grow in gardens and other things of this sort. Therefore, a man is not obligated to hand over tithes of such things.

**Objection 4:** A man can hand over only what falls within his power. But not everything that accrues from the fruits of the field or of animals remains within his power, since some of it is sometimes taken away by theft or robbery, some of it is sometimes transferred to someone else through a sale, and, again, some of it is owed to others, in the way that tributes are owed to rulers and wages are owed to workers. Therefore, no one is obligated to give tithes of these sorts of things.

**But contrary to this:** Genesis 28:22 says, “Of all things that You have given to me, I will offer you tithes.” But all the things that a man possesses have been given to him by God. Therefore, he should give tithes of everything.

**I respond:** Each thing must be judged mainly according to its root (*radix*). Now the root of the giving of tithes is the debt by which what is carnal is owed to those who plant what is spiritual—this according to 1 Corinthians 9:11 (“If we have planted spiritual goods for you, is it a big deal if we reap your carnal goods?”). It is on this root that the Church based its determination on the giving of tithes. But everything that any man possesses is contained under the carnal goods. And so tithes are to be given of all his possessions.

**Reply to objection 1:** In the Old Law there was a special reason, in accord with the situation of that people, why no precept was given about personal tithes. For all the other tribes had fixed possessions, from which they were able to provide sufficiently for the Levites, who lacked possessions. But, just as with other Jews, it was not forbidden to the Levites to make money by other sorts of honest work.

By contrast, the people of the New Law are diffused everywhere throughout the world, and most of them do not have possessions but live off of trading, and they would not contribute anything for the assistance of the ministers if they did not hand over a tithe from their trading. Moreover, the ministers of the New Law are strictly forbidden to enrich themselves by lucrative trading—this according to 2 Timothy 2:4 (“No one who is fighting for God entangles himself in worldly trading”). And so in the New Law men are obligated to give personal tithes, in accordance with the custom of their country and the neediness of the ministers. Hence, Augustine says (and this is quoted in *Decretals* 16, q. 1, chapter on tithes), “Hand over tithes of [what you earn] from military service, trading, and crafts.”

**Reply to objection 2:** There two ways in which things are ill-gotten:

In one way, because the acquisition is itself unjust, e.g., things which are acquired through robbery or usury and which a man is obligated to make restitution for, but not obligated to give tithes of. However, if a field has been bought with usurious funds, then the usurer is obligated to give a tithe on the fruits of that field, since those fruits come not from the usury but as a gift from God.

On the other hand, certain things are said to be ill-gotten because they are acquired by a shameful cause, e.g., by prostitution or by stage acting or other causes of this sort, where individuals are not obligated to make restitution for the things. Hence, they are obligated to give tithes on such things as with other personal tithes. However, the Church ought not to accept these tithes as long as the individuals remain in their sin, lest she seem to share in their sins. However, after they have repented, tithes of these goods can be accepted from them.

**Reply to objection 3:** Things that are ordered toward an end should be judged according to how they comport with the end. Now the giving of tithes is fitting not in its own right, but because of the

ministers, who are such that it does not comport with their respectability (*honestas*) that they should also demand even little things with exacting earnestness; for as is clear from the Philosopher in *Ethics* 4, this is counted as a vice. And so the Old Law did not dictate that tithes should be given of such little things, but instead left this up to the judgment of those who wished to give, since the little things were counted as nothing. This is why the Pharisees, who ascribed to themselves the perfect justice of the Law, gave tithes even of these little things. Nor were they reprimanded for this by our Lord; instead, they were reprimanded only for the fact that they disdained the more important, i.e., spiritual, precepts. He showed that they were instead commendable for these things in their own right when He said, “These things it was necessary to do”—viz., at the time of the Law, as Chrysostom explains. This seems to sound more like a certain sort of fittingness than an obligation. Hence, even now men are not obligated to give tithes of these little things, except perhaps because of the customs of their country.

**Reply to objection 4:** As regards things that are taken by theft or robbery, the one from whom they are taken is not obligated to hand over tithes of them before he recovers them—unless he incurred the loss through his own fault or through negligence, since the Church should not suffer a loss from this.

On the other hand, if he sells untithed wheat, then the Church can demand a tithe both from the buyer, since he possesses what is owed to the Church, and from the seller, who, as far as he himself is concerned, has defrauded the Church. However, if one of them gives a tithe, then the other one is not obligated to.

Now tithes are owed for the fruits of the earth insofar as they come as God’s gift. And so tithes do not count as a tax or a tribute, and they are not subject to the wages of workers. And so neither taxes nor the wages of workers are to be deducted before the tenth part has been handed over; instead, the tithes should be given from the entirety of the fruits before everything else.

### Article 3

#### Are tithes to be given to clerics?

It seems that tithes are not to be given to clerics:

**Objection 1:** According to Numbers 18:23-24, in the Old Testament the Levites were given tithes because they did not have any part in the possessions of the people. But in the New Testament the clerics have possessions, both ecclesiastical possessions and sometimes patrimonial possessions. In addition, they receive first-fruits and oblations for the living and the dead. Therefore, it is excessive for them to be given tithes.

**Objection 2:** It sometimes happens that (a) someone has a house in one parish and cultivates fields in another parish, or that (b) a shepherd tends his flock during one part of the year within the boundaries of one parish and during another part of the year within the boundaries of another parish, or that (c) he has his sheep-pen in one parish and grazes the sheep in another parish. In these and similar cases it seems impossible to discern which clerics the tithes should be given to. Therefore, it does not seem that tithes are to be given in a determinate way to any clerics.

**Objection 3:** In certain lands it is a common custom that soldiers hold tithes from the Church as a lien. Again, there are certain religious who receive tithes. Therefore, it does not seem that tithes are owed only to clerics who have the care of souls.

**But contrary to this:** Numbers 18:21 says, “I have given to the sons of Levi all the tithes of Israel for a possession, for the ministry by which they serve me in the tabernacle.” But clerics in the New Testament are the successors of the sons of Levi. Therefore, tithes are owed to clerics alone.

**I respond:** There are two things that have to be taken into consideration with tithes, viz., (a) the rightness itself of receiving tithes, and (b) the things themselves that are given under the name ‘tithes’.

Now the rightness of receiving tithes is spiritual, since it follows upon the debt by which the ministers of the altar are owed the cost of their ministry and by which temporal goods are owed to those who sow spiritual goods. And this pertains only to clerics who have the care of souls. And so it belongs only to them to have this rightness.

On the other hand, the things that are given under the name ‘tithes’ are corporeal. Hence, such things can fall into anyone’s use, and so they can likewise end up with laymen.

**Reply to objection 1:** As has been explained (a. 1), in the Old Law special tithes were allotted to assisting the poor. But in the New Law tithes are given to clerics not only for the sake of their own sustenance, but also in order that they might assist the poor out of those tithes. And so the tithes are not excessive; rather, ecclesiastical possessions and oblations and first-fruits are necessary as well for assisting the poor, along with the tithes.

**Reply to objection 2:** Personal tithes are owed to the church in whose parish a man lives in. By contrast, it seems reasonable for tithes consisting of farm produce to belong instead to the church within whose boundaries the farms are located. Still, the laws dictate that long-standing customs should be preserved in this matters.

Now a shepherd who grazes his flock in two parishes at different times should give tithes proportionately to both churches. And since the fruits of the flock come from the pasture, a tithe of the flock is owed more to the church in whose territory the flock grazes than to the church in whose territory the sheep-pen is located.

**Reply to objection 3:** Just as the Church can hand over to a layman things that have been received under the name ‘tithe’, so, too, the Church can allow laymen themselves to receive tithes by the right of receiving that has been reserved for the ministers, either because of some necessity on the part of the Church—in the way that, as was explained above, tithes are given through the Church to certain soldiers as a fee, or even for the assistance of the poor, as when tithes are given in the form of alms to certain lay religious or to religious who do not have the care of souls. However, it is appropriate for religious to receive tithes if they have the care of souls.

#### Article 4

##### Are clerics likewise obligated to give tithes?

It seems that clerics are likewise obligated to give tithes:

**Objection 1:** By common law the parish church should receive tithes of the land holdings that lie within its territory. But it sometimes happens that clerics have certain land holdings of their own within the territory of some parish church, or that another church has ecclesiastical holdings there. Therefore, it seems that clerics are obligated to give tithes related to their land holdings.

**Objection 2:** Some religious are clerics but are nonetheless obligated to give tithes to the churches by reason of the land holdings that they cultivate with their own hands. Therefore, it seems that clerics are not exempt (*immunes*) from handing over tithes.

**Objection 3:** Just as Numbers 18:21 commands that the Levites receive tithes from the people, so, too, it is also commanded that they give the tithes to the high priest. Therefore, the clerics have to give tithes to the supreme Pontiff for the same reason that laymen have to give tithes to the clerics.

**Objection 4:** Just as tithes ought to go for the sustenance of clerics, so, too, they should go for assisting the poor. Therefore, if clerics are excused from giving tithes, then by parity of reasoning the poor are excused, too. But this [consequent] is false. Therefore, the antecedent (*primum*) is false as well.

**But contrary to this:** A decretal of Pope Paschal says, “It is a novel genus of exacting when clerics demand tithes from clerics.”

**I respond:** A cause of giving cannot be the same as a cause of receiving, just as a cause of acting cannot be the same as a cause of being acted upon; however, it does happen, because of diverse causes and with respect to different things, that the same individual is both giving and receiving, just as it happens that the same individual is both acting and acted upon.

Now insofar as clerics are ministers of the altar planting spiritual goods among the faithful, the faithful owe them tithes. Hence, clerics, insofar as they are clerics, i.e., insofar as they have ecclesiastical possessions, are not obligated to hand over tithes. However, for another reason, viz., because they have possessions in their own right—either through inheriting them from their parents or through buying them, or for some other reason of this sort—they are obligated to hand over tithes.

**Reply to objection 1:** Just like anyone else, clerics are obligated to give tithes of their own holdings to the parish church, even if they are clerics at the same church. For it is one thing to have something as one's own and another thing to have it as something common.

However, the church's land holdings are not obligated to yield tithes, even if those holdings are within the limits of another parish.

**Reply to objection 2:** If religious who are clerics have the care of souls and dispense spiritual goods to the people, then (a) they are not obligated to give tithes and (b) they can receive tithes.

Things are different with other religious, even if they are clerics, as long as they do not dispense spiritual goods to the people. For they are obligated by common law to give tithes, although they do have a certain immunity in accord with the various concessions that have been made to them by the Apostolic See.

**Reply to objection 3:** Under the Old Law first-fruits were owed to the priests, whereas tithes were owed to the Levites. And since the Levites were under the priests, the Lord commanded that they hand over a tenth part of the tenth part to the high priest in lieu of first-fruits. Hence, for the same reason, at present clerics are obligated to give tithes to the supreme Pontiff if he should demand them.

**Reply to objection 4:** Tithes ought to go for assisting the poor by being dispensed by the clerics. And so the poor do not have a cause for receiving tithes, but do have an obligation to give them.

## QUESTION 88

### Vows

Next we have to consider vows (*de voto*), through which something is promised to God. And on this topic there are twelve questions: (1) What is a vow? (2) What may fall under a vow? (3) What sort of obligation attaches to a vow? (4) What is the advantage of making a vow? (5) Which virtue is vowing an act of? (6) Is it more meritorious to do something because of a vow or without a vow? (7) What sort of solemnity does a vow have? (8) Can those who are subject to someone else's power make a vow? (9) Can children be obligated by a vow to enter religious life (*possint voto obligari ad religionis ingressum*)? (10) Can a vow be dispensed with or changed? (11) Can one who is under a solemn vow of [sexual] continence (*in solempni voto continentiae*) be granted a dispensation? (12) Is the authority of a superior required for a dispensation from a vow?

### Article 1

#### Does a vow consist just in a resolution of the will?

It seems that a vow consists just in a resolution of the will (*votum consistat in solo proposito voluntatis*):

**Objection 1:** According to some, to make a vow is to formulate a good resolution (*conceptio boni propositi*), strengthened by the mind's deliberation, by which someone obligates himself to God to do something or not to do something. But formulating a good resolution, along with all these added things, can consist just in a movement of the will. Therefore, a vow consists just in a resolution of the will.

**Objection 2:** The very name 'vow' (*votum*) seems to be derived from willing (*a voluntate assumptum*), since someone is said to do by his own will (*proprio voto*) whatever he does voluntarily. But a resolution is an act of the will, whereas a promise is an act of reason. Therefore, a vow consists just in an act of the will.

**Objection 3:** In Luke 9:62 our Lord says, "No one who puts his hand to the plow and looks back is fit for the kingdom of God." But someone puts his hand to the plow by the very fact that has the resolve to do good. Therefore, if he looks back, desisting from his resolve to do good, then he is not fit for the kingdom of God. Therefore, by his good resolution alone he is obligated before God, even without making any promise. And so it seems that a vow consists just in a resolution of the will.

**But contrary to this:** Ecclesiastes 5:3 says, "If you have vowed something to God, do not delay in fulfilling it; for an unfaithful and foolish promise displeases Him." Therefore, to vow is to promise, and a vow is a promise.

**I respond:** Making a vow implies an obligation to do something or to forego something (*votum quandam obligationem ad aliquid faciendum vel dimittendum*). Now it is in the manner of a *promise* that one man obligates himself to another with respect to something. A promise is an act of reason, and it pertains to reason to give order; for just as, by commanding or pleading, a man in some sense orders what is to be done for him by others, so, too, by promising he orders what he himself is supposed to do for someone else.

Now a promise that is made by one man to another man can occur only through words or some kind of exterior sign, whereas a promise can be made to God only through an interior thought (*per solam interiorem cogitationem*), since as 1 Kings 16:7 says, "Men see what is apparent, but God sees the heart." Still, exterior words are sometimes enunciated either (a) in order to stir oneself up, as was explained above in the case of prayer (q. 83, a. 12), or (b) in order to call others to bear witness, so that one might refrain from breaking the vow not only out of fear of God but also out of fear of what other men might think (*sed etiam propter reverentiam hominum*).

Now a promise proceeds from the resolve to do something. But such a resolution requires some

deliberation, since it is the act of a deliberate will.

So, then, three things are necessarily required for a vow: (a) *deliberation (deliberatio)*, (b) a *resolution (propositum)* on the part of the will, and (c) a *promise (promissio)*, in which the notion of a vow is brought to fulfillment. Sometimes two other things are added: (d), for a sort of confirmation of the vow, an *oral pronouncement (pronuntiatio oris)*—this according to Psalm 65:13 (“I will pay you my vows, which my lips have uttered”)—and (e) *others witnessing to it (testimonium aliorum)*.

Hence, in *Sentences* 4, dist. 38 the Master says that a vow is “a certain sort of testifying to a freely undertaken promise which has to be made to God and to concern the things of God”—though ‘testifying’ can properly make reference to an interior testifying.

**Reply to objection 1:** The formulation of a good resolution is strengthened by the mind’s deliberation only by means of a promise that follows upon the deliberation.

**Reply to objection 2:** The will moves reason to promise something with respect to what is subject to its will. And a vow (*votum*) takes its name from the will (*voluntas*) in the sense that the will is the first mover.

**Reply to objection 3:** One who puts his hand to the plow is already doing something. By contrast, one who only formulates a resolution is not yet doing anything. But once he promises, he already begins to show that he is acting, even though he is not yet fulfilling his promise—just as one who puts his hand to the plow is not yet plowing, even though he has already put his hand to the plow.

## Article 2

### Does a vow always have to be made with respect to a better good?

It seems that a vow does not always have to be made with respect to a better good:

**Objection 1:** A better good is one that pertains to supererogation. But a vow is taken not only with respect to what is supererogatory, but also with respect to what pertains to [mere] salvation. For even “in Baptism men vow to renounce the devil and his pomps, and to preserve their faith,” as is asserted by a Gloss on Psalm 75:12 (“Make your vow to the Lord your God, and fulfill it”). Likewise, as Genesis 28:21 relates, Jacob vowed that “that the Lord would be his God.” But this is especially necessary for salvation. Therefore, a vow is not made only with respect to a better good.

**Objection 2:** As is clear from Hebrews 11:32, Jephthah is included in the catalogue of saints. But as is related in Judges 11:9, he killed his innocent daughter because of a vow. Therefore, given that the killing of the innocent is not a greater good but is instead illicit in its own right, it seems that a vow can be made not only with respect to a better good, but even with respect to what is illicit.

**Objection 3:** What redounds to the detriment of a person or is not good for anything does not have the character of a better good. But vows are sometimes made with respect to immoderate fasts and night vigils, which tend to be dangerous for a person. Again, sometimes vows are made with respect to certain indifferent matters or matters that amount to nothing. Therefore, a vow does not always have to do with a greater good.

**But contrary to this:** Deuteronomy 23:22 says, “If you do not want to promise, you will be without sin.”

**I respond:** As was explained above (a. 1), a vow is a promise made to God. But what is promised is something that one does voluntarily for someone. For it would be a threat (*comminatio*)—and not a promise—if one said that he was going to do something against someone.

Similarly, a promise would be empty if one were to promise to someone what is unacceptable to him. And so, since every sin is against God, no deed is acceptable to God unless it is virtuous, and, as a result, a vow should be made only with respect to some act of virtue and not with respect to anything

illicit or even with respect to anything indifferent.

However, since a vow implies a voluntary promise, whereas necessity excludes the will, what must absolutely be the case or not be the case does not fall under a vow. For it would be ridiculous for someone to vow that he will some day die or that he will not fly. On the other hand, what has *necessity of the end* rather than *absolute necessity*—viz., because without it one cannot be saved—falls under a vow insofar as it is done voluntarily, but not insofar as it involves necessity.

By contrast, what does not fall under either absolute necessity or necessity of the end is voluntary absolutely speaking, and so this is what falls under a vow in the most proper way. But it is this that is said to be a better good in comparison to a good that is necessary in general for salvation. And so, properly speaking, a vow is said to be made with respect a better good.

**Reply to objection 1:** Renouncing the pomps of the devil, along with preserving faith in Christ, falls under the vow of the baptized because it is done voluntarily, even though it is indeed necessary for salvation.

And something similar can be said about Jacob's vow, though one could also adopt an interpretation according to which Jacob vowed that he would treat the Lord as God by a special sort of worship to which he was not bound, e.g., by an oblation of tithes and other things of this sort that are added in that passage.

**Reply to objection 2:** Some [acts] are good no matter how things turn out (*in omnem eventum*)—e.g., works of virtue and others—and these can fall under a vow without qualification (*absolute*). On the other hand, some [acts] are bad no matter how things turn out—e.g., those that are sins in their own right (*secundum se*)—and these cannot in any way fall under a vow.

By contrast, some [acts] are good considered in themselves and, accordingly, can fall under a vow, and yet they can have an evil outcome in light of which they should not be complied with (*in quo non sunt observanda*). This is what happened with the vow made by Jephthah, who, as Judges 11:30-31 reports, made a vow to the Lord with these words, "If you deliver the children of Ammon into my hands, then whatever comes forth first from the doors of my house to meet me when I return in peace, I will offer it up for a burnt offering." For this was able to have a bad outcome if some animal that was unlawful to sacrifice (*aliquod animal non immolativum*) were to meet him—and this is indeed what happened. Thus, as Jerome says, "He was stupid in vowing"—since he did not exercise discretion—"and wicked in fulfilling the vow." Yet in the same place (Judges 11:29) it is said just before this that "the Spirit of the Lord came upon him," since his faith and devotion, by which he was moved to make the vow, were from the Holy Spirit. It is because of this, along with the victory that he won, that he is included in the catalogue of saints—and also because it is likely that he repented of the wicked deed he had done—a deed which, nonetheless, prefigured something good.

**Reply to objection 3:** The wasting away of one's own body through, for instance, night vigils and fasts, is not acceptable to God except insofar as it is a work of virtue, i.e., except insofar as it is done with due discretion, so that disordered desire (*concupiscentia*) is restrained and one's nature is not excessively burdened. Under this condition, acts of this sort can fall under a vow. This is why, in Romans 12:1, after he had said, "Present your bodies as a living sacrifice, holy and pleasing to God," the Apostle adds, "your reasonable service." But since a man easily fails in his judgment in matters that pertain to himself, it is more fitting that such vows should be either undertaken or omitted in accord with the judgment of a superior—yet in such a way if a man senses great and manifest harm because he is fulfilling such a vow and there is no possibility of having recourse to a superior, then he ought not keep the vow. On the other hand, vows that have to do with vain and useless things are more to be laughed at than to be fulfilled.

### Article 3

#### Does every vow obligate one to fulfill it?

It seems that not every vow obligates one to fulfill it (*non omne votum obliget ad sui observantiam*):

**Objection 1:** A man has more need of things done by other men than does God, who has no need of our goods. But a simple promise made to a man does not obligate one to keep it according to the institution of human law, and this seems to have been instituted because of the mutability of the human will. Therefore, all the less does a simple promise made to God, called a vow, obligate one to fulfill it.

**Objection 2:** No one is obligated to do what is impossible. But sometimes what one vows becomes impossible for him, either (a) because it depends on someone else's decision—as when someone vows to enter a monastery whose monks do not want to receive him—or (b) because of some defect that emerges later on—as with a woman who vows to preserve her virginity and is afterwards corrupted, or as with a man who vows to pay some money and afterwards loses the money. Therefore, it is not always the case that a vow is obligatory.

**Objection 3:** If someone is obligated to do something, then he is obligated to do it immediately. But one is not obligated to do immediately what he has vowed to do, especially when he makes his vow under some future condition. Therefore, a vow is not always obligatory.

**But contrary to this:** Ecclesiastes 6:3-4 says, “If you have vowed anything, then fulfill the vow ... It is much better not to make a vow than, after having made a vow, not to do what has been promised.”

**I respond:** It pertains to a man's faithfulness (*fidelitas*) that he does what he promises to do. Hence, according to Augustine, “Faithfulness' (*fides*) is taken from the fact that what is said is done (*ex hoc quod fiunt dicta*).” Now a man owes faithfulness especially to God, both by reason of His being the Lord and also by reason of the gifts that have been received. And so a man is especially obligated to fulfill vows made to God. For this is part of the faithfulness that a man owes to God, whereas breaking a vow is a species of unfaithfulness (*infidelitas*). Thus, Solomon gives the following as the reason why vows are to be fulfilled: “because a faithless promise (*infidelis promissio*) displeases God” (Ecclesiastes 5:3).

**Reply to objection 1:** In accord with moral uprightness (*honestas*), a man is obligated to another man for any promise whatsoever, and this is an obligation that belongs to what is *naturally* right (*est obligatio iuris naturalis*). However, certain other things are required in order for one to be obligated by a *civil* obligation for some promise.

Now even though God does not need our goods, we are nonetheless obligated to Him to the highest degree. And so a vow that is made to Him is obligatory to the highest degree.

**Reply to objection 2:** If what a man vows is for any reason rendered impossible, then he ought to do what is within his power (*quod est in se*); at the very least, he should have a prompt willingness to do what he is able to do.

Hence, the one who has vowed to enter a monastery should take care to do whatever he can in order to be accepted there. And if his intention was mainly to obligate himself to enter religious life, and if as a result he chose this religious order or this place as more fitting for him, then if he cannot be accepted there, he is obligated to enter another religious order (*tenetur aliam religionem intrare*). On the other hand, if his intention was mainly to obligate himself to *this* religious order or to *this* place—and this because of the special agreeableness of *this* religious order or *this* place, then he is not obligated to enter another religious order if *this* one is not willing to accept him.

By contrast, if it is by one's own fault that he falls into the impossibility of fulfilling a vow, then he is obligated from then on to do penance for his own past sin. For instance, if a woman who vows virginity is afterwards corrupted, then not only should she preserve what is within her power, viz.,

perpetual continence, but she should also do penance for what she has lost by sinning.

**Reply to objection 3:** The obligation that attaches to a vow is caused by one's own will and intention; hence, Deuteronomy 23:23 says, "But once it has come out from your lips, you shall fulfill it, and you will do as you have promised to the Lord your God; and you have spoken by your own will and with your own mouth." And so if it is the intention and will of the one who makes a vow to obligate himself to do something immediately, then he is obligated to do it immediately. On the other hand, if the vow is made for a certain time or under a certain condition, then he is not obligated to fulfill it immediately. However, he should not delay beyond the time for which he intended to obligate himself. For in the same place (Deuteronomy 23:21) it says, "When you make a vow to the Lord your God, do not delay in fulfilling it, since the Lord your God will require it; and if you do delay, it shall be imputed to you as a sin."

#### Article 4

##### Is it expedient to make a vow?

It seems not to be expedient to make a vow (*non expedit aliquid vovere*):

**Objection 1:** It is not expedient for anyone to deprive himself of a good that God has given him. But freedom is one of the greatest goods that God has given to man, and he seems to be deprived of it by the necessity that a vow imposes. Therefore, it does not seem expedient for a man to make any vow.

**Objection 2:** No one should put himself in danger. But anyone who takes a vow puts himself in danger, since something that, before the vow, he could have omitted without danger becomes dangerous if, after the vow, it is not done. Hence, in *Epistola ad Armentarium et Paulinum* Augustine says, "Since you have already made the vow, you have already bound yourself, and you are not permitted to do otherwise. If you do not do what you have vowed to do, you will not be such as you would have been if you had not vowed any such thing. For in the latter case you would have been less great, but not less good. But now you will be wretched to a greater degree if (may it not happen) you break faith with God than you would have been happy if you had persevered in the vow." Therefore, it is not expedient to vow anything.

**Objection 3:** In 1 Corinthians 4:16 the Apostle says, "Be imitators of me, as I am of Christ." But we do not read that either Christ or the apostles made any vows. Therefore, it seems that it is not expedient to vow anything.

**But contrary to this:** Psalm 75:12 says, "Make your vow to the Lord your God, and fulfill it."

**I respond:** As has been explained (aa. 1-2), a vow is a promise made to God. Now the reason for promising something to a man is different from the reason for promising something to God.

We promise something to a man because of its usefulness to him, where it is useful to him both that we offer something and that we assure him ahead of time of its being offered in the future.

By contrast, we make a promise to God because of its usefulness to *us* and not because of its usefulness to Him. Hence, in the letter cited above Augustine says, "He is a kind and not a needy exacter; and He does not grow rich from what is rendered to Him, but instead He makes those who render to Him grow rich within themselves." And just as what we give to God is useful for us rather than for Him—since, as Augustine adds in the same place, "What is rendered to Him is added to the one who renders it"—so, too, a promise by which we vow something to God is not useful to Him, who does not need to be assured by us, but is instead useful to *us*, insofar as, by vowing, we fix our will immovably with respect to something that it is expedient for us to do. And this is why it is expedient to make vows.

**Reply to objection 1:** Just as not being able to sin does not diminish one's freedom, so, too, the necessity of a will fixed on the good does not diminish one's freedom. This is clear in the case of God

and in the case of the blessed in heaven. And the necessity of a vow is like this, since it bears a certain similarity to the way in which the blessed in heaven are confirmed in the good (*similitudinem quandam habens cum confirmatione beatorum*). Hence, in the same letter Augustine says, “It is a happy necessity that compels one toward what is better.”

**Reply to objection 2:** When the danger arises from the very deed that is being done, then that particular thing that is done is not expedient, as when someone crosses a river over a rickety bridge. By contrast, if the danger threatens because the man fails in the deed itself, then the deed does not thereby cease to be expedient; for instance, it is expedient to climb onto a horse, even though danger threatens someone who falls from a horse. Otherwise, one who have to forego all goods that can be dangerous incidentally because of some turn of events (*ex aliquo eventu possent esse periculosa*). Hence, Ecclesiastes 11:4 says, “One who pays attention to the wind never sows, and one who pays attention to the clouds never reaps.”

Now danger threatens one who makes a vow not because of the vow itself, but through the fault of the man, who changes his mind and transgresses the vow. This is why, in the same letter, Augustine says, “Do not repent that you have made the vow. Indeed, rejoice that you are no longer permitted to do what you would have been permitted to do to your detriment.”

**Reply to objection 3:** It was not appropriate for Christ to make vows in His own right (*secundum se*), both (a) because He was God and also (b), insofar as He was a man, He had a will that was confirmed in the good in the sense that He was a comprehender [of the divine essence] (*quasi comprehensor existens*). Still, according to a Gloss, it is in His person, through a certain similitude, that Psalm 2:26 says, “I will fulfill my vows in the sight of those who fear Him.”

Now the apostles are thought of as having vowed what pertained to the state of perfection when, having left everything behind, they followed Christ.

## Article 5

### Is a vow an act of worship (*latría*), i.e., an act of the virtue of religion?

It seems that a vow is not an act of worship (*latría*), i.e., an act [of the virtue] of religion (*religio*):

**Objection 1:** Every work of virtue may fall under a vow. But it belongs to the same virtue both to promise something and to do it. Therefore, vows belong to every virtue whatsoever and not specifically to [the virtue] of religion.

**Objection 2:** According to Tully, it belongs to religion “to offer worship and ceremonies to God.” But one who makes a vow is not yet offering anything to God, but is only promising to do so. Therefore, a vow is not an act of [the virtue] of religion.

**Objection 3:** The worship that belongs to [the virtue of] religion should be given only to God. But vows are made not only to God, but also to saints and to prelates, whom those professing the religious state (*religiosi profitentes*) vow obedience to. Therefore, a vow is not an act of [the virtue of] religion.

**But contrary to this:** Isaiah 19:21 says, “They shall worship him with sacrifices and offerings, and they shall make vows to the Lord and fulfill them.” But to worship God (*colere Deum*) is properly an act of [the virtue] of worship (*latría*), i.e., an act of [the virtue] of religion.

**I respond:** As was explained above (q. 81, a. 1), every act of virtue belongs to religion or worship in the manner of a *command*, insofar as it is ordered toward reverence for God, which is the proper end of worship. Now to order other acts toward their end belongs to the *commanding* virtue and not to the *commanded* virtues. And so the very ordering of the acts of any virtue toward the service of God is the proper act of [the virtue of] worship.

Now it is clear from what was said above (a. 1) that a vow is a promise made to God and that a

promise is nothing other than the ordering of what is promised toward the one to whom it is promised. Hence, a vow is an ordering of what one is vowing toward reverence for, i.e., service to, God. And so it is clear that making a vow is properly an act of [the virtue of] worship, i.e., an act of [the virtue of] religion.

**Reply to objection 1:** What falls under a vow is, to be sure, sometimes the act of another virtue, e.g., fasting or preserving continence, but sometimes it is an act of religion, e.g., offering sacrifice or praying. Yet both sorts of promise made to God belong to [the virtue of] religion in the way that has already been explained.

Hence, it is clear that some vows belong to [the virtue of] religion just by reason of the promise that has been made to God, where the promise is the *essence* of a vow, whereas sometimes it is *also* by reason of the thing that has been promised, where the thing is the *matter* of a vow.

**Reply to objection 2:** Insofar as the one who makes a promise obligates himself to give, he is already giving, just as something is said to come to be when its cause comes to be; for an effect is contained virtually in its cause. And this is why gratitude is shown not only to the one who gives, but also to the one who promises.

**Reply to objection 3:** A vow is made to God alone, whereas a promise can be made to a man as well, and the very promise of something good that is made to man can fall under a vow insofar as it is a virtuous act. And the way understand a vow by which someone makes a vow to saints or prelates is that the very promise made to saints or prelates falls under the vow *materially*, viz., insofar as the man vows to God that he will fulfill what he is promising to the saints or to the prelates.

## Article 6

### Is it more laudable and meritorious to do something without a vow than with a vow?

It seems that it is more laudable and meritorious to do something without a vow than with a vow:

**Objection 1:** In *De Vita Contemplativa* Prosper says, “We should abstain or fast in such a way that we do not subject ourselves to the necessity of fasting, lest we do something voluntary unwillingly and without devotion.” But one who vows a fast subjects himself to the necessity of fasting. Therefore, it would be better for him to fast without a vow.

**Objection 2:** In 2 Corinthians 9:7 the Apostle says, “Everyone as he has determined in his heart, not with sadness or by necessity; for God loves a cheerful giver.” But some do the things they vow with sadness, and this seems to proceed from the necessity that the vow imposes. For as *Metaphysics* 5 points out, “Necessity brings sadness.” Therefore, it is better to do something without a vow than with a vow.

**Objection 3:** As was established above (a. 4), a vow is necessary for a man’s will to be strengthened with respect to the thing that he vows. But the will cannot be strengthened with respect to doing something any more than when he actually does it. Therefore, it is not better to do something with a vow than without a vow.

**But contrary to this:** A Gloss on Psalm 75:12 (“Make your vow, and fulfill it”) says, “Vowing gives counsel to the will.” But a counsel has to do only with a better good. Therefore, it is better to do a better work from a vow than without a vow, since one who does it without a vow fulfills only one counsel, viz., the counsel to do it, whereas one who does it with a vow fulfills two counsels, viz., the counsel to vow it and the counsel to do it.

**I respond:** There are three reasons why doing the same work with a vow is better and more meritorious than doing it without a vow.

First, as has been explained (a. 5), vowing is an act of worship (*actus latriae*), which is the most important of the moral virtues. But the work of a more noble virtue is better and more meritorious. Hence, the act of a lower virtue is better and more meritorious because it commanded by a higher virtue

whose act is effected by the command. For instance, an act of faith or hope is better if it is commanded by charity. And so the acts of the other moral virtues, e.g., fasting, which is an act of abstinence, and being continent, which is an act of chastity, are better and more meritorious if they are effected by a vow, since as such they already belong to divine worship in the sense that they are sacrifices to God. Hence, in *De Virginitate* Augustine says, “Virginitas itself is honored not because it is virginity, but because it is promised to God. It is the continence of piety that recommends and preserves it.”

Second, someone who vows something and does it subjects himself to God more than someone who merely does it. For he subjects himself to God not only with respect to the act, but also with respect to the power, since for the duration he cannot do otherwise—in the same way that, as Anselm points out in *De Similitudine*, he who gives a man the tree along with the fruit gives more than he who gives him just the fruit. And this is why, as has been explained (a. 5), gratitude is shown to those who promise.

Third, through a vow one’s will is unchangeably strengthened in the good. Now as is clear from the Philosopher in *Ethics* 2, doing something from a will confirmed in the good belongs to the perfection of virtue—just as sinning with an obstinate mind makes the sin worse and, as was explained above (q. 14, a. 2), is called a sin against the Holy Spirit.

**Reply to objection 1:** This passage should be taken to be about a necessity of *coercion*, which causes involuntariness and excludes devotion. Hence, he distinctly says, “... lest we do something voluntary unwillingly and without devotion.” By contrast, the necessity that belongs to a vow is by way of the immutability of the will, and so it strengthens the will and increases one’s devotion. Therefore, the argument does not go through.

**Reply to objection 2:** According to the Philosopher, the necessity of coercion causes sadness insofar as it is contrary to the will. But the necessity of a vow, insofar as it strengthens the will, does not cause sadness in those who are well disposed, but instead causes joy. This is why, in *Epistola ad Armentarium et Paulinum*, Augustine says, “Do not regret that you have made the vow. Indeed, rejoice that you are no longer permitted to do what you would have been permitted to do to your detriment.”

However, if the same deed, considered in itself, were rendered sad and involuntary after the vow, even while the resolution to fulfill the vow remained, this would still be more meritorious than if it happened without the vow. For the fulfillment of the vow is an act of [the virtue of] religion, which is a higher virtue than abstinence, whose act is fasting.

**Reply to objection 3:** Someone who does something without a vow has an unchangeable will with respect to the particular act that he is performing and for the time when he is performing it, but his resolution does not remain entirely fixed for the future, as does the will of the one who has made a vow. For the latter has obligated his will to do something (and perhaps to do it many times) even before he performs this particular act.

## Article 7

### Is a vow solemnized by the reception of Holy Orders and by the profession of a particular Rule?

It seems not to be the case that a vow is solemnized by the reception of Holy Orders and by the profession of a particular Rule (*votum non solemnizetur per susceptionem sacri ordinis et per professionem ad certam regulam*):

**Objection 1:** As has been explained (a. 1), a vow is a promise made to God. But the things that are done pertaining to solemnization seem to be ordered toward men and not to God. Therefore, they are related incidentally (*per accidens*) to the vow. Therefore, it is not the case that solemnization of this sort is a proper condition for a vow.

**Objection 2:** What pertains to the condition of a thing (*ad conditionem alicuius rei*) seems to be

such that it can belong to all the things in which that thing is found. But many things that can fall under a vow are such that either they do not pertain to Holy Orders or they do not pertain to a particular Rule, as when someone vows to make a pilgrimage or something of this sort. Therefore, the solemnity that occurs in the reception of Holy Orders, or in the making a promise with respect to a particular Rule, does not belong to the condition of a vow.

**Objection 3:** A solemn vow seems to be the same thing as a public vow. But there are many vows that can be made in public other than a vow that is made in the reception of Holy Orders or in the profession of a particular Rule—and even the latter vows can be made in secret. Therefore, it is not only vows of this sort that are solemn.

**But contrary to this:** As will be explained in the Third Part of this work, only vows of the sort in question (a) are impediments to contracting marriage and (b) bring to naught a marriage contract that has already been made.

**I respond:** Each thing is such that solemnization is applied to it in keeping with its condition. For instance, the solemnity of a new army, viz., in an array of horses and arms and an assembly of soldiers, is different from the solemnization of a marriage, which consists in an array of the spouses and a gathering of those close to them.

Now a vow is a promise made to God. Hence, the solemnization of a vow involves something spiritual that pertains to God, i.e., some spiritual blessing or consecration which is used by the institution of the apostles in the profession of a particular Rule—which, according to Dionysius in *De Ecclesiasticis Hierarchibus*, is the second level after the reception of Holy Orders. And the reason for this is that solemnization used to be applied only when someone gave himself up totally to some thing. For instance, the solemnization of a marriage is applied only in the celebration of matrimony, when both of the spouses hand the power of their body over to the other. And, similarly, the solemnization of a vow is applied when someone, through the reception of Holy Orders, is applied to divine ministry, and in the profession of a particular Rule, when someone takes on the state of perfection by renouncing the world along with his own will.

**Reply to objection 1:** Solemnization pertains not only to men but also to God, insofar as it involves a spiritual consecration or blessing whose author is God—even though a man administers it—this according to Numbers 6:27 (“They will invoke my name over the children of Israel, and I will bless them”). And so a solemn vow carries a stronger obligation before God than a simple vow does, and one who breaks a solemn vow sins more gravely.

The claim that a simple vow carries no less of an obligation before God than a solemn vow does should be taken to mean that one who breaks either sort of vow commits a mortal sin.

**Reply to objection 2:** As has been explained, solemnization is usually applied not to particular acts but to the assumption of a new state. And so when someone vows certain particular deeds, e.g., a pilgrimage or some special fast, solemnization is not congruent with such a vow; instead, solemnization is congruent only with a vow by which someone subjects himself totally to a divine ministry or type of service. Still, this sort of, as it were, universal vow includes many particular deeds.

**Reply to objection 3:** By the fact that a vow is made in public it can have a certain human solemnity without having a spiritual and divine solemnity of the sort that the vows discussed above have, even if they are made before just a few people. Hence, it is one thing for a vow to be public and another thing for it to be solemn.

## Article 8

### Are those who are subject to someone else's power impeded from making a vow?

It seems that those who are subject to someone else's power are not impeded from making a vow:

**Objection 1:** A lesser bond is exceeded by a greater bond. But the obligation by which one is subject to a man is a lesser bond than a vow, through which one is obligated to God. Therefore, those who are subject to someone else's power are not impeded from making a vow.

**Objection 2:** Children are under the power of their father. But children can make a profession of a religious Rule (*possunt profiteri in aliqua religione*) even without the consent of their parents (*etiam sine voluntate parentum*). Therefore, one is not impeded from making a vow by the fact that he is subject to someone else's power.

**Objection 3:** To do is greater than to promise. But religious who are under the power of prelates can do certain things without the permission (*sine licentia*) of their prelates, e.g., recite certain Psalms or undertake certain sorts of abstinence. Therefore, *a fortiori*, they can promise something of this sort by making a vow to God.

**Objection 4:** If anyone does what he cannot do under the law (*de iure*), then he commits a sin. But subjects do not sin by making a vow, since this is never prohibited. Therefore, it seems that they can make a vow under the law.

**But contrary to this:** In Numbers 30:4ff. it is commanded that "if a woman living in her father's house and still a girl makes a vow, then the vow is not binding unless her father consents." And it says the same thing about a woman who has a husband. Therefore, by parity of reasoning, no other persons subject to someone else's power can obligate themselves by making a vow.

**I respond:** As was explained above (a. 7), a vow is a certain promise made to God. But no one can, through a promise, obligate himself in fixed way to what is under someone else's control; rather, he can obligate himself in fixed way only to what is altogether under his own control. Now if someone is subject to someone else, then with respect to that in which he is subject, it is not under his control to do what he pleases, but it instead depends upon the other's will. And so without the consent of his superior he cannot obligate himself in a firm way through a vow in those matters in which he is subject to the other.

**Reply to objection 1:** As was explained above (a. 2), only what is virtuous falls under a promise made to God. But as was likewise explained above (q. 86, a. 3), it is contrary to virtue that a man should offer to God something that belongs to another. And so the nature of a vow cannot be altogether preserved when someone who is situated under a power vows something that is under someone else's control—except under the condition that the one whose control it is under does not object.

**Reply to objection 2:** By the fact that a man reaches the age of the puberty, if he has the status of a free man (*si sit liberae conditionis*), then those things that pertain to his own person are such that they are under his own control, e.g., that he should obligate himself to religious life through a vow or that he should contract marriage. However, arrangements within the family do not fall under his power. Hence, in these matters he cannot vow anything that is valid without the consent of his father.

On the other hand, since a servant (*servus*) is under the power of his master even with respect to his personal actions, he cannot by a vow obligate himself to religious life, through which he would be removed from the service of his master.

**Reply to objection 3:** A religious is subject to his prelate with respect to his actions in accord with his profession of the Rule. And so even if someone can do something at an hour when he is not given other things to do by the prelate, still, since there is no exempt time at which the prelate cannot give him something to do, no vow by a religious is fixed except with the consent of his prelate—just as no vow made by a girl living at home is fixed except with the consent of her father, and no vow made by a wife is fixed except with the consent of her husband.

**Reply to objection 4:** Even though a vow made by those who are under someone else's power is not firm without the consent of those to whom they are subject, still, they do not sin in making the vow, since the necessary condition is understood in their vows, viz., if it is approved by, or not objected to, by their superiors.

### Can children, by making a vow, obligate themselves to enter religious life?

It seems that children cannot, by making a vow, obligate themselves to enter religious life (*pueri non possint voto se obligare ad religionis ingressum*):

**Objection 1:** Since mental deliberation is required for making a vow, only those who have the use of reason are fit to make a vow. But this is lacking in children, just as it is those who are out of their minds or furious (*sicut et in amentibus et furiosis*). Therefore, just as those who are out of their minds or furious cannot bind themselves to anything by making a vow, so, too, neither can children, it seems, obligate themselves to religious life by making a vow.

**Objection 2:** What can be done legally (*rite*) cannot be abnegated by another. But as *Decretals* 20, q. 2, chap. *puella* has it, a vow to enter religious life (*votum religionis*) made by a boy or a girl before the age of puberty can be revoked by the parents or by a guardian (*tutor*). Therefore, it seems that before the age of fourteen, a boy or girl cannot legally make a vow.

**Objection 3:** According to the Rule of St. Benedict and the second statute of Innocent IV, a year of probation is given to those entering religious life, in order that the probation might precede the obligation attaching to a vow. Therefore, it seems to be illicit for children to be obligated to religious life before the year of probation.

**But contrary to this:** What is not legally done is not valid, even if no one revokes it. But as *Decretals* 20, q. 17, chap. *puella* has it, a girl's vow, even one that is made before the age of puberty, is valid if it is not revoked within a year by the parents. Therefore, children can licitly and legally be obligated by a vow to enter religious life, even before the age of puberty.

**I respond:** As is clear from what was said above (a. 7), there are two types of vow, viz., *simple* and *solemn*. And since, as has been explained (a. 7), the solemnization of a vow consists in a certain spiritual benediction and consecration, which is performed by a minister of the Church, it follows that the solemnization of a vow falls under the administration of the Church.

A simple vow has its efficacy from the mind's deliberation, in light of which one intends to obligate himself. Now there are two ways in which it can happen that such an obligation lacks force:

(a) *because of a defect of reason*, as is clear in the case of those who are not in their right minds and the furious, who cannot obligate themselves to anything by a vow while they are in a fury or not in their right minds.

(b) *because the one who makes the vow is subject to someone else's power*, as was explained above (a. 8).

And these two ways come together in the case of children before the age of puberty, since (a) they suffer a defect of reason in most cases (*ut in pluribus*) and (b) they are naturally under the care of their parents or under the care of guardians who take the place of their parents. And so in light of this twofold cause their vows do not have force.

It happens, however, that, because of a natural disposition, in some children, albeit only a few of them, the use of reason is accelerated, and for this reason they are said to be 'capable of deceit' (*doli capaces*). However, they are not for this reason exempted in any way from the care of their parents; for this care is subject to human law, which takes into account what happens in most cases.

Therefore, one should reply that if boys or girls before the age of puberty do not yet have the use of reason, then they are in no way able to obligate themselves to anything by a vow. But if they have attained the use of reason before the age of puberty, then, just taking this into account, they can obligate themselves, but their vow can be invalidated by their parents, whose care they still remain subject to.

Yet however much they are capable of deceit before the age of puberty, they are still not able to be obligated by a *solemn* vow of the religious state (*non potest obligari voto solemnī religionis*), and this because of a statute of the Church that takes into account what happens for the most part. However, after the age of puberty, they can now obligate themselves by a vow of the religious state, either a simple vow or a solemn vow, without the consent of their parents.

**Reply to objection 1:** This argument goes through for children who have not yet attained the use of reason and whose vows, as has been explained, are invalid.

**Reply to objection 2:** The vows of those who are under someone else's power contain an implicit condition, viz., as long as the vows are not revoked by a superior, and, as has been explained, the vows are rendered licit and valid if that condition holds.

**Reply to objection 3:** This argument goes through for a solemn vow that is made by means of a profession.

## Article 10

### Can a dispensation be granted in the case of a vow?

It seems that a dispensation cannot be granted in the case of a vow (*in voto dispensari non possit*):

**Objection 1:** It is a lesser thing for a vow to be changed than for a dispensation to be granted in the case of a vow. But a vow cannot be changed; for Leviticus 27:9-10 says, "An animal that can be sacrificed to the Lord, if someone vows this, will be holy and cannot be changed, either a better one for one that is bad or a worse one for one that is good." Therefore, *a fortiori*, a dispensation cannot be granted in the case of a vow.

**Objection 2:** One cannot be granted a dispensation by any man in matters having to do with natural law and in the case of divine precepts; this is especially so with the precepts of the first tablet, which are ordered directly toward loving God, which is the ultimate end of the precepts. But to fulfill a vow is a matter that has to do with natural law, and, as is clear from what has been said above (a. 3), it is also a precept of divine law that pertains to the act of worship. Therefore, a dispensation cannot be granted in the case of a vow.

**Objection 3:** As has been explained (a. 3), the obligation that attaches to a vow is founded on the faithfulness that a man owes to God. But no one can be granted a dispensation in the case of this faithfulness. Therefore, neither can he be granted a dispensation in the case of a vow.

**But contrary to this:** What proceeds from a common will seems to be more firm than what proceeds from the singular will of any particular person. But in matters pertaining to law, which has its force from a common will, one can be granted a dispensation through a man. Therefore, it seems that one can likewise be granted a dispensation through a man in the case of a vow.

**I respond:** A dispensation in the case of a vow should be understood in the manner of a dispensation that is granted from the observance of some law. For as was explained above (*ST* 1-2, q. 96, a. 6 and q. 97, a. 4), a law is made by looking to what is good for the most part (*in pluribus*). However, since in a given case of the relevant sort it happens that it is not good, it was necessary for it to be determined by someone that in this particular case the law need not be observed. And this is, properly speaking, what it is to grant a dispensation. For a dispensation seems to imply a measured distribution or application of what is common to what is contained under it, in the way in which one is said to dispense

food to a family.

Similarly, one who makes a vow establishes in a certain way a law for himself, binding himself to something that is good in its own right and good for the most part. Yet it can happen that in a given case it is either simply bad or disadvantageous or an obstacle to a greater good—which, as is clear from what was said above (a. 3), is contrary to the character of what falls under a vow. And so in such a case it must be determined that the vow should not be kept. And if the determination is made in an absolute way that a given vow is not to be fulfilled, then this is said to constitute a *dispensation* from the vow, whereas if it is determined that something else should be imposed instead of what was supposed to have been fulfilled, then this is said to constitute a *commuting* of the vow. Hence, it is a lesser thing to commute a vow than to grant a dispensation from the vow. Still, both lie within the power of the Church.

**Reply to objection 1:** By the very fact that what was vowed was an animal eligible to be sacrificed, the animal was considered holy in the sense of being given over for divine worship, and this was the reason why it could not be changed—just as no one could exchange an item which he had vowed and which was already consecrated, e.g., a chalice or a house, for something better or for something worse.

However, an animal that was unable to be sanctified because it was not eligible to be sacrificed (*quia not erat immolatum*) could be, and was supposed to be, bought back, as the Law states in the same place. And so even now vows can be commuted if no consecration has taken place in the meantime.

**Reply to objection 2:** Just as a man is obligated by natural law and divine precept to fulfill a vow, so, too, he is obligated by the same law and precepts to obey the law or mandate of his superiors. And yet when he is granted a dispensation in a case of human law, this does not bring it about that a human law is not obeyed, which is contrary to natural law and to divine mandate; instead, what is brought about is that what was a law is not a law in this case.

So, too, by the authority of the superior who grants a dispensation, it is brought about that what was contained under a vow is not now contained under it insofar as it is determined in this case that this is not an appropriate matter for a vow. And so when a prelate of the Church grants a dispensation from a vow, he does not give a dispensation from a precept of natural or divine law, but instead makes a determination about what fell under an obligation deriving from human deliberation, which was unable to take everything into account.

**Reply to objection 3:** It is irrelevant to the faithfulness owed to God for a man to do what is such that to vow it is bad or disadvantageous or an obstacle to a greater good—which is what a dispensation from a vow focuses on. And so receiving a dispensation from a vow is not contrary to the faithfulness that is owed to God.

## Article 11

### Can a dispensation be granted in the case of a solemn vow of [sexual] continence?

It seems that a dispensation can be granted in the case of a solemn vow of [sexual] continence:

**Objection 1:** As has been explained (a. 10), one reason for granting a dispensation in the case of a vow is that the vow impedes a greater good. But a vow of continence, even if it is a solemn vow, can be an obstacle to a greater good, since the common good is more godlike than is the good of a single individual. But someone's continence can impede the good of the whole multitude, e.g., when the peace of the fatherland could be secured through a contract of marriage between persons who have vowed continence. Therefore, it seems that a dispensation can be granted in the case of a solemn vow of continence.

**Objection 2:** Worship (*latria*) is a more noble virtue than chastity. But if someone vows an act of

worship, e.g., offering a sacrifice to God, he can receive a dispensation from that vow. Therefore, *a fortiori*, someone can receive a dispensation from a vow of continence, which involves an act of chastity.

**Objection 3:** Just as a vow of abstinence, when observed, can lead to danger for a person, so, too, can the observance of a vow of continence. But in the case of a vow of abstinence, if it leads to corporeal danger for the one who makes the vow, then a dispensation can be granted. Therefore, by parity of reasoning, a dispensation can likewise be granted in the case of a vow of continence.

**Objection 4:** Just as a vow of continence is included within the religious profession by which it is solemnized, so, too, are the vow of poverty and the vow of obedience. But a dispensation can be granted in the case of the vows of poverty and obedience, as is clear in the case of those who are raised to the episcopacy after their religious profession. Therefore, it seems that a dispensation can be granted in the case of a solemn vow of continence.

**But contrary to this:** Ecclesiasticus 26:20 says, “A continent soul outweighs everything (*omnis ponderatio non est digna animae continentis*).”

Furthermore, in *De Statu Monachium*, at the end of the Decretal *Cum ad monasterium*, it says, “The renunciation of property, like the preservation of chastity, is so bound up with the monastic rule that not even the Supreme Pontiff can be lenient in opposition to it (*contra eam nec summus pontifex possit indulgere*).

**I respond:** In the case of a solemn vow of continence there are three possible things to consider: (a) the *matter* of the vow, viz., continence itself; (b) the *perpetuity* of the vow, since by the vow one binds himself to the perpetual observance of chastity; and (c) the *solemnization itself* of the vow.

Hence, as is clear from the passage cited above, some claim that no dispensation can be granted because of the *continence itself*. Some give as a reason for this that it is through continence that a man overcomes his ‘domestic enemy’, or that it is through continence that a man is perfectly conformed to Christ as regards purity of soul and body.

But this line of reasoning does not seem to work. For the goods of the soul, such as contemplation and prayer, are much better than the goods of the body, and yet one can be granted a dispensation from a vow to pray or from a vow to contemplate. Hence, if one looks simply (*absolute*) at the dignity of continence, there does not seem to be any reason why a dispensation cannot be granted in the case of a vow of continence—especially because in 1 Corinthians 7:34 the Apostle encourages continence *for the sake of* contemplation, asserting that “an unmarried woman thinks of the things that belong to God,” where the end is more important than the means to the end.

And so others look for a reason in the *perpetuity* and *universality* of the vow in question. They claim that a vow of continence cannot be subject to an omission except through something that is altogether contrary to it, which is never permitted in the case of any vow.

But this is manifestly false. For just as engaging in carnal intercourse is contrary to continence, so, too, eating meat or drinking wine is contrary to abstaining from such things, and yet vows involving things of this sort can be dispensed with.

And so it seems to others that a dispensation can be granted in the case of a solemn vow of continence because of some common advantage or necessity, as is clear in the example brought up above about making peace among territories by contracting a marriage.

However, because the Decretal cited above explicitly says that not even the Supreme Pontiff can grant a monk a permission contrary to the preservation of chastity, it seems that we must make a different reply, viz. that, as was explained above (a. 10) and is contained in Leviticus 27:9-10, what is once made holy for the Lord cannot be changed to other uses.

Now a prelate of the Church cannot bring it about, even in the case of inanimate things, that something that has been made holy should lose its holiness—for instance, that a consecrated chalice should cease to be consecrated, as long as it remains intact. Hence, *a fortiori*, no prelate can bring it about that a man consecrated to God should cease to be consecrated for as long as he lives. But, as has

been explained (a. 7), the solemnity of a vow consists in a certain sort of consecration or blessing of the one who is making the vow. And so it cannot be brought about by any prelate of the Church that someone who has pronounced a solemn vow ceases to be consecrated with respect to what he was consecrated for, e.g., that he who is a priest should not be a priest—even though a prelate can, for some reason, keep him from exercising his [Holy] Orders. For a similar reason, the Pope is unable to bring it about that someone who has professed the religious life is not a religious—even though certain lawyers have in ignorance claimed the contrary.

Therefore, one has to figure out whether continence is tied essentially to the reason why the vow is solemnized. For if it is not tied to it essentially, then the solemnity of the consecration can remain without the obligation of continence—something that cannot happen if continence is tied essentially to the reason why the vow is solemnized.

Now continence is not tied essentially to Holy Orders, but is instead tied to Holy Orders by an *ecclesiastical statute*. Hence, it seems that one can be granted a dispensation by the Church in the case of a vow of continence that has been solemnized by the reception of Holy Orders. By contrast, the obligation of continence is *essential* to the state of religious life, through which (a) a man renounces the world and is bound totally to the service of God and which (b) cannot exist together with matrimony, in which one is pressed upon by the necessity of taking care of his wife, children, and family, and of taking care of the things that are required for this. Hence, in 1 Corinthians 7:33 the Apostle says, “He who has a wife is solicitous for the things of the world, how he might please his wife, and is divided.” Hence, the name ‘monk’ (*monachus*) is taken from unity (*monos*) as an opposite to the sort of division just mentioned.

And so the Church cannot grant a dispensation for a vow solemnized in a profession of the religious state, and the decretal gives the reason, viz., that “chastity is tied to the monastic Rule.”

**Reply to objection 1:** The dangers associated with human things should be obviated by means of human things and not by means of divine things being turned to human use. But those who have professed the religious state are dead to the world and live for God. Hence, they are not to be called back to human life by reason of any turn of events whatsoever.

**Reply to objection 2:** A dispensation can be granted in the case of a vow of temporary continence, just as in the case of a vow of temporary prayer or of temporary abstinence.

However, the fact that a dispensation cannot be granted in the case of a vow of continence solemnized by a profession [of religious life] stems not from its being an act of chastity, but from the fact that it begins to belong to [the virtue of] worship (*latria*) through the profession of religious life.

**Reply to objection 3:** Food is directly ordered toward the conservation of a person, and so abstinence from food can directly turn into a danger for the person. Hence, this is the reason why a vow of abstinence can receive a dispensation.

By contrast, sexual intercourse (*coitus*) is directly ordered not to the conservation of a person, but to the conservation of the species. Hence, abstinence from sexual intercourse does not directly turn into a danger for the person. On the other hand, if some personal danger does incidentally (*per accidens*) arise from this, then it can be alleviated in other ways, viz., through abstinence [from food] or through other corporeal remedies.

**Reply to objection 4:** Just as a religious who becomes a bishop is not absolved of the vow of continence, so neither is he absolved of the vow poverty, since he ought to have nothing as his own, but should instead act as the dispenser of the common goods of the Church. Similarly, he is likewise not absolved of the vow of obedience; instead, he is incidentally not obligated to obey if he has no superior—just like the abbot of a monastery, who is nonetheless not absolved of the vow of obedience.

**Reply to argument to the contrary:** The passage from Ecclesiasticus that is posited in the argument to the contrary should be understood to mean that neither the fruitfulness of the flesh nor any corporeal good is to be compared with continence, which is counted among the goods of the soul, as

Augustine points out in *De Sancta Virginitate*. Hence, it explicitly says “a continent *soul*” and not “continent *body (carnis)*.”

## Article 12

### Is the authority of a prelate required for changing a vow or granting a dispensation from a vow?

It seems that the authority of a prelate is not required for changing or dispensing with a vow:

**Objection 1:** One can enter religious life (*potest intrare religionem*) without the authority of any higher prelate. But in entering religious life a man is absolved of vows made in the world, even of a vow to make a pilgrimage to the Holy Land (*etiam a voto terrae sanctae*). Therefore, there can be a change in a vow or a dispensation from a vow without the authority of a higher prelate.

**Objection 2:** A dispensation from a vow seems to consist in determining that in this case the vow does not have to be observed. But if a prelate makes this determination incorrectly (*male*), then the one who has made the vow does not seem to be absolved from the vow, since, as has been explained (aa. 10-11), no prelate can grant a dispensation in a way contrary to God’s precept concerning the fulfillment of a vow. Similarly, even if someone does determine correctly (*recte*) by the proper authority that in this case the vow does not have to be fulfilled, the one in question does not [in any case] seem to be obligated by the vow. For, as has been explained (a. 2), a vow does not obligate when it has a worse outcome. Therefore, the dispensation from a vow does not require the authority of any prelate.

**Objection 3:** If it belongs to the power of prelates to grant a dispensation from a vow, then, by parity of reasoning, this would belong to everyone. But it does not belong to everyone to grant a dispensation from every vow. Therefore, granting a dispensation for vows does not belong to the power of prelates.

**But contrary to this:** Just as a law obligates one to do something, so, too, does a vow. But as was explained above (*ST* 1-2, q. 96, a. 6 and q. 97, a. 4), the authority of a superior is required for granting a dispensation from a precept of the law. Therefore, by parity of reasoning, the authority of a superior is likewise required for granting a dispensation from a vow.

**I respond:** As was explained above (a. 2), a vow is a promise made to God with respect to something that is acceptable to God. Now what is acceptable in a given promise to the one to whom the promise is made depends on his judgment (*ex eius pendet arbitrio*). But a prelate in the Church acts in the place of God. And so what is required in cases in which vows are changed or dispensed with is a prelate’s authority, which determines in the person of God what is acceptable to God—this according to 2 Corinthians 2:10 (“... for I have done it for your sake in the person of Christ”). And he explicitly says “for your sake” because every dispensation that is sought from a prelate ought to be made either for the honor of Christ, in whose person he gives the dispensation, or for the advantage of the Church, which is His body.

**Reply to objection 1:** All other vows have to do with particular deeds, but through a vow of religious life (*per religionem*) a man hands over his whole life to the service of God. But the particular is contained within the universal. And this is why the decretal says, “One who exchanges temporary service for the perpetual observance of the religious life is not held guilty of a broken vow.” Nor is one who enters religious life obligated to fulfill vows of fasting or prayer or other such things that he made while in the world, since one who enters religious life dies to his prior life. Also, singular observances do not fit in with religious life, and the burden of religious life is difficult enough for a man that it is unnecessary to add other burdens.

**Reply to objection 2:** Some have claimed that prelates can grant dispensations from vows as they please, since, as was explained above in the case the vows of subordinates (a. 8), every vow conditionally

includes the consent of the superior; for instance, the vow of a servant or of a child contains the understood condition: *as long as it pleases the father or master or as long as he does not object*. And so a subordinate could without any remorse of conscience omit the fulfillment of a vow whenever a prelate tells him to omit it.

But the position just laid out is based on something false. For since, as is clear from 2 Corinthians 10:8, the power of a spiritual prelate, who is not a master but a dispenser, is given for building up and not for tearing down, it follows that just as a prelate cannot command what in its own right displeases God, viz., sins, so neither can he prohibit what in its own right pleases God, viz., works of virtue. And so a man can unconditionally (*absolute*) vow works of virtue.

However, it does belong to a prelate to judge what is more virtuous and more pleasing to God. And so in obvious cases a prelate's dispensation would not excuse one from sin—for instance, if a prelate were to grant someone a dispensation from a vow to enter religious life when there was no apparent cause impeding [the fulfillment of the vow]. But if there is an apparent impeding cause that might cast at least a doubt on the matter, then the individual could stand by the judgment of a prelate who was dispensing him from the vow or changing the vow. But the individual could not stand by his own judgment, since he himself is not acting in the place of God—except perhaps in a case where what the individual had vowed was clearly illicit and he could not in a timely fashion have recourse to a superior.

**Reply to objection 3:** Since, the Supreme Pontiff acts most fully in the place of Christ in the Church as a whole, he himself has the fullness of the power to grant dispensations in the case of all vows for which dispensations can be granted. But granting dispensations is entrusted to other lower prelates in the case of vows that are commonly made and need frequent dispensations — for instance, vows to make pilgrimages and fasts and other things of this sort — so that men easily have someone to have recourse to. However, more serious vows, e.g., vows of continence and vows to make a pilgrimage to the Holy Land, are reserved to the Supreme Pontiff.
