Dr. Stockmann. Hm! Leave that to me, Katherine. It is an extraordinary thing that the postman doesn't come.

HOVSTAD, BILLING *and* HORSTER *have got up from the table and come into the sitting room.* EJLIF *and* MORTEN *come in after them.*

Billing (stretching himself). Ah!—one feels a new man after a meal like that.

Hovstad. The mayor wasn't in a very sweet temper tonight, then.

Dr. Stockmann. It is his stomach; he has a wretched digestion.

Hovstad. I rather think it was us two of the "People's Messenger" that he couldn't digest.

Mrs. Stockmann. I thought you came out of it pretty well with him.

Hovstad. Oh yes; but it isn't anything more than a sort of truce.

Billing. That is just what it is! That word sums up the situation.

Dr. Stockmann. We must remember that Peter is a lonely man, poor chap. He has no home comforts of any kind; nothing but everlasting business. And all that infernal weak tea wash that he pours into himself! Now then, my boys, bring chairs up to the table. Aren't we going to have that toddy, Katherine?

Mrs. Stockmann (going into the dining room). I am just getting it.

Dr. Stockmann. Sit down here on the couch beside me, Captain Horster. We so seldom see you. Please sit down, my friends. (*They sit down at the table.* MRS. STOCKMANN *brings a tray, with a spirit lamp, glasses, bottles, etc., upon it.*)

Mrs. Stockmann. There you are! This is arrack, and this is rum, and this one is the brandy. Now every one must help himself.

Dr. Stockmann (taking a glass). We will. (*They all mix themselves some toddy.*) And let us have the cigars. Ejlif, you know where the box is. And you, Morten, can fetch my pipe. (*The two boys go into the room on the right.*) I have a suspicion that Ejlif pockets a cigar now and then!—but I take no notice of it. (*Calls out.*) And my smoking cap too, Morten. Katherine, you can tell him where I left it. Ah, he has got it. (*The boys bring the various things.*) Now, my friends. I stick to my pipe, you know. This one has seen plenty of bad weather with me up north. (*Touches glasses with them.*) Your good health! Ah, it is good to be sitting snug and warm here.

Mrs. Stockmann (who sits knitting). Do you sail soon, Captain Horster?

Horster. I expect to be ready to sail next week.

Mrs. Stockmann. I suppose you are going to America?

Horster. Yes, that is the plan.

Mrs. Stockmann. Then you won't be able to take part in the coming election.

Horster. Is there going to be an election?

Billing. Didn't you know?

Horster. No, I don't mix myself up with those things.

Billing. But do you not take an interest in public affairs?

Horster. No, I don't know anything about politics.

Billing. All the same, one ought to vote, at any rate.

Horster. Even if one doesn't know anything about what is going on?

Billing. Doesn't know! What do you mean by that? A community is like a ship; every one ought to be prepared to take the helm.

Horster. Maybe that is all very well on shore; but on board ship it wouldn't work.

Hovstad. It is astonishing how little most sailors care about what goes on on shore.

Billing. Very extraordinary.

Dr. Stockmann. Sailors are like birds of passage; they feel equally at home in any latitude. And that is only an additional reason for our being all the more keen, Hovstad. Is there to be anything of public interest in tomorrow's "Messenger"?

Hovstad. Nothing about municipal affairs. But the day after tomorrow I was thinking of printing your article—

Dr. Stockmann. Ah, devil take it—my article! Look here, that must wait a bit.

Hovstad. Really? We had just got convenient space for it, and I thought it was just the opportune moment—

Dr. Stockmann. Yes, yes, very likely you are right; but it must wait all the same. I will explain to you later.

PETRA comes in from the hall, in hat and cloak and with a bundle of exercise books under her arm.

Petra. Good evening.

Dr. Stockmann. Good evening, Petra; come along.

Mutual greetings; PETRA takes off her things and puts them down on a chair by the door.

Petra. And you have all been sitting here enjoying yourselves, while I have been out slaving!

Dr. Stockmann. Well, come and enjoy yourself too!

Billing. May I mix a glass for you?

Petra (coming to the table). Thanks, I would rather do it; you always mix it too strong. But I forgot, father—I have a letter for you. (*Goes to the chair where she has laid her things.*)

Dr. Stockmann. A letter? From whom?

Petra (looking in her coat pocket). The postman gave it to me just as I was going out—

Dr. Stockmann (getting up and going to her). And you only give it to me now!

Petra. I really had not time to run up again. There it is!

Dr. Stockmann (seizing the letter). Let's see, let's see, child! (*Looks at the address.*) Yes, that's all right!

Mrs. Stockmann. Is it the one you have been expecting so anxiously, Thomas?

Dr. Stockmann. Yes, it is. I must go to my room now and—. Where shall I get a light, Katherine? Is there no lamp in my room again?

Mrs. Stockmann. Yes, your lamp is already lit on your desk.

Dr. Stockmann. Good, good. Excuse me for a moment—(*Goes into his study.*)

Petra. What do you suppose it is, mother?

Mrs. Stockmann. I don't know; for the last day or two he has always been asking if the postman has not been.

Billing. Probably some country patient.

Petra. Poor old dad!—he will overwork himself soon. (*Mixes a glass for herself.*) There, that will taste good!

Hovstad. Have you been teaching in the evening school again today?

Petra (sipping from her glass). Two hours.

Billing. And four hours of school in the morning—

Petra. Five hours.

Mrs. Stockmann. And you have still got exercises to correct, I see.

Petra. A whole heap, yes.

Horster. You are pretty full up with work too, it seems to me.

Petra. Yes—but that is good. One is so delightfully tired after it.

Billing. Do you like that?

Petra. Yes, because one sleeps so well, then.

Morten. You must be dreadfully wicked, Petra.

Petra. Wicked?

Morten. Yes, because you work so much. Mr. Rörlund says work is a punishment for our sins.

Ejlif. Pooh, what a duffer you are, to believe a thing like that!

Mrs. Stockmann. Come, come, Ejlif!

Billing (laughing). That's capital!

Hovstad. Don't you want to work as hard as that, Morten?

Morten. No, indeed I don't.

Hovstad. What do you want to be, then?

Morten. I should like best to be a Viking.

Ejlif. You would have to be a pagan then.

Morten. Well, I could become a pagan, couldn't I?

Billing. I agree with you, Morten! My sentiments, exactly.

Mrs. Stockmann (*signaling to him*). I am sure that is not true, Mr. Billing.

Billing. Yes, I swear it is! I am a pagan, and I am proud of it. Believe me, before long we shall all be pagans.

Morten. And then shall be allowed to do anything we like?

Billing. Well, you see, Morten—.

Mrs. Stockmann. You must go to your room now, boys; I am sure you have some lessons to learn for tomorrow.

Ejlif. I should like so much to stay a little longer—

Mrs. Stockmann. No, no; away you go, both of you.

The boys say good night and go into the room on the left.

Hovstad. Do you really think it can do the boys any harm to hear such things?

Mrs. Stockmann. I don't know, but I don't like it.

Petra. But you know, mother, I think you really are wrong about it.

Mrs. Stockmann. Maybe, but I don't like it—not in our own home.

Petra. There is so much falsehood both at home and at school. At home one must not speak, and at school we have to stand and tell lies to the children.

Horster. Tell lies?

Petra. Yes, don't you suppose we have to teach them all sorts of things that we don't believe?

Billing. That is perfectly true.

Petra. If only I had the means I would start a school of my own, and it would be conducted on very different lines.

Billing. Oh, bother the means—!

Horster. Well, if you are thinking of that, Miss Stockmann, I shall be delighted to provide you with a schoolroom. The great big old house my father left me is standing almost empty; there is an immense dining room downstairs—

Petra (*laughing*). Thank you very much; but I am afraid nothing will come of it.

Hovstad. No, Miss Petra is much more likely to take to journalism, I expect. By the way, have you had time to do anything with that English story you promised to translate for us?

Petra. No, not yet; but you shall have it in good time.

DR. STOCKMANN *comes in from his room with an open letter in his hand.*

Dr. Stockmann (waving the letter). Well, now the town will have something new to talk about, I can tell you!

Billing. Something new?

Mrs. Stockmann. What is this?

Dr. Stockmann. A great discovery, Katherine.

Hovstad. Really?

Mrs. Stockmann. A discovery of yours?

Dr. Stockmann. A discovery of mine. (*Walks up and down.*) Just let them come saying, as usual, that it is all fancy and a crazy man's imagination! But they will be careful what they say this time, I can tell you!

Petra. But, father, tell us what it is.

Dr. Stockmann. Yes, yes—only give me time, and you shall know all about it. If only I had Peter here now! It just shows how we men can go about forming our judgments, when in reality we are as blind as any moles—

Hovstad. What are you driving at, Doctor?

Dr. Stockmann (standing still by the table). Isn't it the universal opinion that our town is a healthy spot?

Hovstad. Certainly.

Dr. Stockmann. Quite an unusually healthy spot, in fact—a place that deserves to be recommended in the warmest possible manner either for invalids or for people who are well—

Mrs. Stockmann. Yes, but my dear Thomas—

Dr. Stockmann. And we have been recommending it and praising it—I have written and written, both in the "Messenger" and in pamphlets—

Hovstad. Well, what then?

Dr. Stockmann. And the Baths—we have called them the "main artery of the town's lifeblood," the "nerve center of our town," and the devil knows what else—

Billing. "The town's pulsating heart" was the expression I once used on an important occasion—

Dr. Stockmann. Quite so. Well, do you know what they really are, these great, splendid, much-praised Baths, that have cost so much money—do you know what they are?

Hovstad. No, what are they?

Mrs. Stockmann. Yes, what are they?

Dr. Stockmann. The whole place is a pesthouse!

Petra. The Baths, father?

Mrs. Stockmann (at the same time). Our Baths!

Hovstad. But, Doctor—

Billing. Absolutely incredible!

Dr. Stockmann. The whole Bath establishment is a whited, poisoned sepulcher, I tell you—the gravest possible danger to the public health! All the nastiness up at Mölledal, all that stinking filth, is infecting the water in the conduit pipes leading to the reservoir; and the same cursed, filthy poison oozes out on the shore too—

Horster. Where the bathing place is?

Dr. Stockmann. Just there.

Hovstad. How do you come to be so certain of all this, Doctor?

Dr. Stockmann. I have investigated the matter most conscientiously. For a long time past I have suspected something of the kind. Last year we had some very strange cases of illness among the visitors—typhoid cases, and cases of gastric fever—

Mrs. Stockmann. Yes, that is quite true.

Dr. Stockmann. At the time, we supposed the visitors had been infected before they came; but later on, in the winter, I began to have a different opinion; and so I set myself to examine the water, as well as I could.

Mrs. Stockmann. Then that is what you have been so busy with?

Dr. Stockmann. Indeed I have been busy, Katherine. But here I had none of the necessary scientific apparatus; so I sent samples, both of the drinking water and of the sea water, up to the University, to have an accurate analysis made by a chemist.

Hovstad. And have you got that?

Dr. Stockmann (showing him the letter). Here it is! It proves the presence of decomposing organic matter in the water—it is full of Infusoria. The water is absolutely dangerous to use, either internally or externally.

Mrs. Stockmann. What a mercy you discovered it in time.

Dr. Stockmann. You may well say so.

Hovstad. And what do you propose to do now, Doctor?

Dr. Stockmann. To see the matter put right—naturally.

Hovstad. Can that be done?

Dr. Stockmann. It must be done. Otherwise the Baths will be absolutely

useless and wasted. But we need not anticipate that; I have a very clear idea what we shall have to do.

Mrs. Stockmann. But why have you kept this all so secret, dear?

Dr. Stockmann. Do you suppose I was going to run about the town gossiping about it, before I had absolute proof? No, thank you. I am not such a fool.

Petra. Still, you might have told us—

Dr. Stockmann. Not a living soul. But tomorrow you may run round to the old “Badger”—

Mrs. Stockmann. Oh, Thomas! Thomas!

Dr. Stockmann. Well, to your grandfather, then. The old boy will have something to be astonished at! I know he thinks I am cracked—and there are lots of other people think so too, I have noticed. But now these good folks shall see—they shall just see—! (*Walks about, rubbing his hands.*) There will be a nice upset in the town, Katherine; you can’t imagine what it will be. All the conduit pipes will have to be relaid.

Hovstad (getting up). All the conduit pipes—?

Dr. Stockmann. Yes, of course. The intake is too low down; it will have to be lifted to a position much higher up.

Petra. Then you were right after all.

Dr. Stockmann. Ah, you remember, Petra—I wrote opposing the plans before the work was begun. But at that time no one would listen to me. Well, I am going to let them have it, now! Of course I have prepared a report for the Baths Committee; I have had it ready for a week, and was only waiting for this to come. (*Shows the letter.*) Now it shall go off at once. (*Goes into his room and comes back with some papers.*) Look at that! Four closely written sheets!—and the letter shall go with them. Give me a bit of paper, Katherine—something to wrap them up in. That will do! Now give it to—to—(*stamps his foot*)—what the deuce is her name?—give it to the maid, and tell her to take it at once to the Mayor.

MRS. STOCKMANN *takes the packet and goes out through the dining room.*

Petra. What do you think uncle Peter will say, father?

Dr. Stockmann. What is there for him to say? I should think he would be very glad that such an important truth has been brought to light.

Hovstad. Will you let me print a short note about your discovery in the “Messenger”?

Dr. Stockmann. I shall be very much obliged if you will.

Hovstad. It is very desirable that the public should be informed of it without delay.

Dr. Stockmann. Certainly.

Mrs. Stockmann (coming back). She has just gone with it.

Billing. Upon my soul, Doctor, you are going to be the foremost man in the town!

Dr. Stockmann (walking about happily). Nonsense! As a matter of fact I have done nothing more than my duty. I have only made a lucky find—that's all. Still, all the same—

Billing. Hovstad, don't you think the town ought to give Dr. Stockmann some sort of testimonial?

Hovstad. I will suggest it, anyway.

Billing. And I will speak to Aslaksen about it.

Dr. Stockmann. No, my good friends, don't let us have any of that nonsense. I won't hear of anything of the kind. And if the Baths Committee should think of voting me an increase of salary, I will not accept it. Do you hear, Katherine?—I won't accept it.

Mrs. Stockmann. You are quite right, Thomas.

Petra (lifting her glass). Your health, father!

Hovstad and Billing. Your health, Doctor! Good health!

Horster (touches glasses with DR. STOCKMANN). I hope it will bring you nothing but good luck.

Dr. Stockmann. Thank you, thank you, my dear fellows! I feel tremendously happy! It is a splendid thing for a man to be able to feel that he has done a service to his native town and to his fellow citizens. Hurrah, Katherine!

He puts his arms round her and whirls her round and round, while she protests with laughing cries. They all laugh, clap their hands, and cheer the DOCTOR. The boys put their heads in at the door to see what is going on.

ACT II

SCENE. *The same. The door into the dining room is shut. It is morning. MRS. STOCKMANN, with a sealed letter in her hand, comes in from the dining room, goes to the door of the DOCTOR'S study, and peeps in.*

Mrs. Stockmann. Are you in, Thomas?

Dr. Stockmann (from within his room). Yes, I have just come in. (*Comes into the room.*) What is it?

Mrs. Stockmann. A letter from your brother.

Dr. Stockmann. Aha, let us see! (*Opens the letter and reads:*) "I return herewith the manuscript you sent me"—(*Reads on in a low murmur.*) Hm!—

Mrs. Stockmann. What does he say?

Dr. Stockmann (putting the papers in his pocket). Oh, he only writes that he will come up here himself about midday.

Mrs. Stockmann. Well, try and remember to be at home this time.

Dr. Stockmann. That will be all right; I have got through all my morning visits.

Mrs. Stockmann. I am extremely curious to know how he takes it.

Dr. Stockmann. You will see he won't like its having been I, and not he, that made the discovery.

Mrs. Stockmann. Aren't you a little nervous about that?

Dr. Stockmann. Oh, he really will be pleased enough, you know. But, at the same time, Peter is so confoundedly afraid of anyone's doing any service to the town except himself.

Mrs. Stockmann. I will tell you what, Thomas—you should be good natured, and share the credit of this with him. Couldn't you make out that it was he who set you on the scent of this discovery?

Dr. Stockmann. I am quite willing. If only I can get the thing set right. I—

MORTEN KIIL *puts his head in through the door leading from the hall, looks round in an inquiring manner, and chuckles.*

Morten Küil (slyly). Is it—is it true?

Mrs. Stockmann (going to the door). Father!—is it you?

Dr. Stockmann. Ah, Mr. Kiil—good morning, good morning!

Mrs. Stockmann. But come along in.

Morten Küil. If it is true, I will; if not, I am off.

Dr. Stockmann. If what is true?

Morten Küil. This tale about the water supply. Is it true?

Dr. Stockmann. Certainly it is true. But how did you come to hear it?

Morten Küil (coming in). Petra ran in on her way to the school—

Dr. Stockmann. Did she?

Morten Küil. Yes; and she declares that—. I thought she was only making a fool of me, but it isn't like Petra to do that.

Dr. Stockmann. Of course not. How could you imagine such a thing!

Morten Küil. Oh well, it is better never to trust anybody; you may find you have been made a fool of before you know where you are. But it is really true, all the same?

Dr. Stockmann. You can depend upon it that it is true. Won't you sit down? (*Settles him on the couch.*) Isn't it a real bit of luck for the town—

Morten Küil (*suppressing his laughter*). A bit of luck for the town?

Dr. Stockmann. Yes, that I made the discovery in good time.

Morten Küil (*as before*). Yes, yes, yes!—But I should never have thought you the sort of man to pull your own brother's leg like this!

Dr. Stockmann. Pull his leg!

Mrs. Stockmann. Really, father dear—

Morten Küil (*resting his hands and his chin on the handle of his stick and winking slyly at the DOCTOR*). Let me see, what was the story? Some kind of beast that had got into the water pipes, wasn't it?

Dr. Stockmann. Infusoria—yes.

Morten Küil. And a lot of these beasts had got in, according to Petra—a tremendous lot.

Dr. Stockmann. Certainly; hundreds of thousands of them, probably.

Morten Küil. But no one can see them—isn't that so?

Dr. Stockmann. Yes; you can't see them.

Morten Küil (*with a quiet chuckle*). Damme—it's the finest story I have ever heard!

Dr. Stockmann. What do you mean?

Morten Küil. But you will never get the Mayor to believe a thing like that.

Dr. Stockmann. We shall see.

Morten Küil. Do you think he will be fool enough to—?

Dr. Stockmann. I hope the whole town will be fools enough.

Morten Küil. The whole town! Well, it wouldn't be a bad thing. It would just serve them right, and teach them a lesson. They think themselves so much cleverer than we old fellows. They hounded me out of the council; they did, I tell you—they hounded me out. Now they shall pay for it. You pull their legs too, Thomas!

Dr. Stockmann. Really, I—

Morten Küil. You pull their legs! (*Gets up.*) If you can work it so that the Mayor and his friends all swallow the same bait, I will give ten pounds to a charity—like a shot!

Dr. Stockmann. That is very kind of you.

Morten K il. Yes, I haven't got much money to throw away, I can tell you; but if you can work this, I will give five pounds to a charity at Christmas.

HOVSTAD comes in by the hall door.

Hovstad. Good morning! (*Stops.*) Oh, I beg your pardon—

Dr. Stockmann. Not at all; come in.

Morten K il (with another chuckle). Oho!—is he in this too?

Hovstad. What do you mean?

Dr. Stockmann. Certainly he is.

Morten K il. I might have known it! It must get into the papers. You know how to do it, Thomas! Set your wits to work. Now I must go.

Dr. Stockmann. Won't you stay a little while?

Morten K il. No, I must be off now. You keep up this game for all it is worth; you won't repent it, I'm damned if you will!

He goes out; MRS. STOCKMANN follows him into the hall.

Dr. Stockmann (laughing). Just imagine—the old chap doesn't believe a word of all this about the water supply.

Hovstad. Oh, that was it, then?

Dr. Stockmann. Yes, that was what we were talking about. Perhaps it is the same thing that brings you here?

Hovstad. Yes, it is. Can you spare me a few minutes, Doctor?

Dr. Stockmann. As long as you like, my dear fellow.

Hovstad. Have you heard from the Mayor yet?

Dr. Stockmann. Not yet. He is coming here later.

Hovstad. I have given the matter a great deal of thought since last night.

Dr. Stockmann. Well?

Hovstad. From your point of view, as a doctor and a man of science, this affair of the water supply is an isolated matter. I mean, you do not realize that it involves a great many other things.

Dr. Stockmann. How do you mean? Let us sit down, my dear fellow. No, sit here on the couch. (*HOVSTAD sits down on the couch, DR. STOCKMANN on a chair on the other side of the table.*) Now then. You mean that—?

Hovstad. You said yesterday that the pollution of the water was due to impurities in the soil.

Dr. Stockmann. Yes, unquestionably it is due to that poisonous morass up at M lledal.

Hovstad. Begging your pardon, Doctor, I fancy it is due to quite another morass altogether.

Dr. Stockmann. What morass?

Hovstad. The morass that the whole life of our town is built on and is rotting in.

Dr. Stockmann. What the deuce are you driving at, Hovstad?

Hovstad. The whole of the town's interests have, little by little, got into the hands of a pack of officials.

Dr. Stockmann. Oh, come!—they are not all officials.

Hovstad. No, but those that are not officials are at any rate the officials' friends and adherents; it is the wealthy folk, the old families in the town, that have got us entirely in their hands.

Dr. Stockmann. Yes, but after all they are men of ability and knowledge.

Hovstad. Did they show any ability or knowledge when they laid the conduit pipes where they are now?

Dr. Stockmann. No, of course that was a great piece of stupidity on their part. But that is going to be set right now.

Hovstad. Do you think that will be all such plain sailing?

Dr. Stockmann. Plain sailing or no, it has got to be done, anyway.

Hovstad. Yes, provided the press takes up the question.

Dr. Stockmann. I don't think that will be necessary, my dear fellow, I am certain my brother—

Hovstad. Excuse me, Doctor; I feel bound to tell you I am inclined to take the matter up.

Dr. Stockmann. In the paper?

Hovstad. Yes. When I took over the "People's Messenger" my idea was to break up this ring of self-opinionated old fossils who had got hold of all the influence.

Dr. Stockmann. But you know you told me yourself what the result had been; you nearly ruined your paper.

Hovstad. Yes, at the time we were obliged to climb down a peg or two, it is quite true; because there was a danger of the whole project of the Baths coming to nothing if they failed us. But now the scheme has been carried through, and we can dispense with these grand gentlemen.

Dr. Stockmann. Dispense with them, yes; but we owe them a great debt of gratitude.

Hovstad. That shall be recognized ungrudgingly. But a journalist of my democratic tendencies cannot let such an opportunity as this slip. The bubble of official infallibility must be pricked. This superstition must be destroyed, like any other.

Dr. Stockmann. I am whole heartedly with you in that, Mr. Hovstad; if it is a superstition, away with it!

Hovstad. I should be very reluctant to bring the Mayor into it, because he is your brother. But I am sure you will agree with me that truth should be the first consideration.

Dr. Stockmann. That goes without saying. (*With sudden emphasis.*) Yes, but—but—

Hovstad. You must not misjudge me. I am neither more self-interested nor more ambitious than most men.

Dr. Stockmann. My dear fellow—who suggests anything of the kind?

Hovstad. I am of humble origin, as you know; and that has given me opportunities of knowing what is the most crying need in the humbler ranks of life. It is that they should be allowed some part in the direction of public affairs, Doctor. That is what will develop their faculties and intelligence and self-respect—

Dr. Stockmann. I quite appreciate that.

Hovstad. Yes—and in my opinion a journalist incurs a heavy responsibility if he neglects a favorable opportunity of emancipating the masses—the humble and oppressed. I know well enough that in exalted circles I shall be called an agitator, and all that sort of thing; but they may call what they like. If only my conscience doesn't reproach me, then—

Dr. Stockmann. Quite right! Quite right, Mr. Hovstad. But all the same—devil take it! (*A knock is heard at the door.*) Come in!

ASLAKSEN appears at the door. He is poorly but decently dressed, in black, with a slightly crumpled white neckcloth; he wears gloves and has a felt hat in his hand.

Aslaksen (bowing). Excuse my taking the liberty, Doctor—

Dr. Stockmann (getting up). Ah, it is you, Aslaksen!

Aslaksen. Yes, Doctor.

Hovstad (standing up). Is it me you want, Aslaksen?

Aslaksen. No; I didn't know I should find you here. No, it was the Doctor I—

Dr. Stockmann. I am quite at your service. What is it?

Aslaksen. Is what I heard from Mr. Billing true, sir—that you mean to improve our water supply?

Dr. Stockmann. Yes, for the Baths.

Aslaksen. Quite so, I understand. Well, I have come to say that I will back that up by every means in my power.

Hovstad (to the DOCTOR). You see!

Dr. Stockmann. I shall be very grateful to you, but—

Aslaksen. Because it may be no bad thing to have us small tradesmen at your back. We form, as it were, a compact majority in the town—if we choose. And it is always a good thing to have the majority with you, Doctor.

Dr. Stockmann. That is undeniably true; but I confess I don't see why such unusual precautions should be necessary in this case. It seems to me that such a plain, straightforward thing—

Aslaksen. Oh, it may be very desirable, all the same. I know our local authorities so well; officials are not generally very ready to act on proposals that come from other people. That is why I think it would not be at all amiss if we made a little demonstration.

Hovstad. That's right.

Dr. Stockmann. Demonstration, did you say? What on earth are you going to make a demonstration about?

Aslaksen. We shall proceed with the greatest moderation, Doctor. Moderation is always my aim; it is the greatest virtue in a citizen—at least, I think so.

Dr. Stockmann. It is well known to be a characteristic of yours, Mr. Aslaksen.

Aslaksen. Yes, I think I may pride myself on that. And this matter of the water supply is of the greatest importance to us small tradesmen. The Baths promise to be a regular gold mine for the town. We shall all make our living out of them, especially those of us who are householders. That is why we will back up the project as strongly as possible. And as I am at present Chairman of the Householders' Association—

Dr. Stockmann. Yes—?

Aslaksen. And, what is more, local secretary of the Temperance Society—you know, sir, I suppose, that I am a worker in the temperance cause?

Dr. Stockmann. Of course, of course.

Aslaksen. Well, you can understand that I come into contact with a great many people. And as I have the reputation of a temperate and law-abiding citizen—like yourself Doctor—I have a certain influence in the town, a little bit of power, if I may be allowed to say so.

Dr. Stockmann. I know that quite well, Mr. Aslaksen.

Aslaksen. So you see it would be an easy matter for me to set on foot some testimonial, if necessary.

Dr. Stockmann. A testimonial?

Aslaksen. Yes, some kind of an address of thanks from the townsmen for your share in a matter of such importance to the community. I need scarcely say that it would have to be drawn up with the greatest regard to moderation, so as not to offend the authorities—who, after all, have the reins in their hands. If we pay strict attention to that, no one can take it amiss, I should think!

Hovstad. Well, and even supposing they didn't like it—

Aslaksen. No, no, no; there must be no discourtesy to the authorities, Mr. Hovstad. It is no use falling foul of those upon whom our welfare so closely depends. I have done that in my time, and no good ever comes of it. But no one can take exception to a reasonable and frank expression of a citizen's views.

Dr. Stockmann (shaking him by the hand). I can't tell you, dear Mr. Aslaksen, how extremely pleased I am to find such hearty support among my fellow citizens. I am delighted—delighted! Now, you will take a small glass of sherry, eh?

Aslaksen. No, thank you; I never drink alcohol of that kind.

Dr. Stockmann. Well, what do you say to a glass of beer, then?

Aslaksen. Nor that either, thank you, Doctor. I never drink anything as early as this. I am going into town now to talk this over with one or two householders, and prepare the ground.

Dr. Stockmann. It is tremendously kind of you, Mr. Aslaksen; but I really cannot understand the necessity for all these precautions. It seems to me that the thing should go of itself.

Aslaksen. The authorities are somewhat slow to move, Doctor. Far be it from me to seem to blame them—

Hovstad. We are going to stir them up in the paper tomorrow, Aslaksen.

Aslaksen. But not violently, I trust, Mr. Hovstad. Proceed with moderation, or you will do nothing with them. You may take my advice; I have gathered my experience in the school of life. Well, I must say good-by, Doctor. You know now that we small tradesmen are at your back at all events, like a solid wall. You have the compact majority on your side, Doctor.

Dr. Stockmann. I am very much obliged, dear Mr. Aslaksen. (*Shakes hands with him.*) Good-by, good-by.

Aslaksen. Are you going my way, towards the printing office, Mr. Hovstad?

Hovstad. I will come later; I have something to settle up first.

Aslaksen. Very well. (*Bows and goes out; STOCKMANN follows him into the hall.*)

Hovstad (as STOCKMANN comes in again). Well, what do you think of

that, Doctor? Don't you think it is high time we stirred a little life into all this slackness and vacillation and cowardice?

Dr. Stockmann. Are you referring to Aslaksen?

Hovstad. Yes, I am. He is one of those who are floundering in a bog—decent enough fellow though he may be, otherwise. And most of the people here are in just the same case—seesawing and edging first to one side and then to the other, so overcome with caution and scruple that they never dare to take any decided step.

Dr. Stockmann. Yes, but Aslaksen seemed to me so thoroughly well intentioned.

Hovstad. There is one thing I esteem higher than that; and that is for a man to be self-reliant and sure of himself.

Dr. Stockmann. I think you are perfectly right there.

Hovstad. That is why I want to seize this opportunity, and try if I cannot manage to put a little virility into these well-intentioned people for once. The idol of Authority must be shattered in this town. This gross and inexcusable blunder about the water supply must be brought home to the mind of every municipal voter.

Dr. Stockmann. Very well; if you are of opinion that it is for the good of the community, so be it. But not until I have had a talk with my brother.

Hovstad. Anyway, I will get a leading article ready; and if the Mayor refuses to take the matter up—

Dr. Stockmann. How can you suppose such a thing possible?

Hovstad. It is conceivable. And in that case—

Dr. Stockmann. In that case I promise you—. Look here, in that case you may print my report—every word of it.

Hovstad. May I? Have I your word for it?

Dr. Stockmann (*giving him the manuscript*). Here it is; take it with you. It can do no harm for you to read it through, and you can give it me back later on.

Hovstad. Good, good! That is what I will do. And now good-by, Doctor.

Dr. Stockmann. Good-by, good-by. You will see everything will run quite smoothly, Mr. Hovstad—quite smoothly.

Hovstad. Hm!—we shall see. (*Bows and goes out.*)

Dr. Stockmann (*opens the dining room door and looks in*). Katherine! Oh, you are back, Petra?

Petra (*coming in*). Yes, I have just come from the school.

Mrs. Stockmann (*coming in*). Has he not been here yet?

Dr. Stockmann. Peter? No. But I have had a long talk with Hovstad. He is quite excited about my discovery. I find it has a much wider bear-

ing than I at first imagined. And he has put his paper at my disposal if necessity should arise.

Mrs. Stockmann. Do you think it will?

Dr. Stockmann. Not for a moment. But at all events it makes me feel proud to know that I have the liberal-minded independent press on my side. Yes, and—just imagine—I have had a visit from the Chairman of the Householders' Association!

Mrs. Stockmann. Oh! What did he want?

Dr. Stockmann. To offer me his support too. They will support me in a body if it should be necessary. Katherine—do you know what I have got behind me?

Mrs. Stockmann. Behind you? No, what have you got behind you?

Dr. Stockmann. The compact majority.

Mrs. Stockmann. Really? Is that a good thing for you, Thomas?

Dr. Stockmann. I should think it was a good thing. (*Walks up and down rubbing his hands.*) By Jove, it's a fine thing to feel this bond of brotherhood between oneself and one's fellow citizens!

Petra. And to be able to do so much that is good and useful, father!

Dr. Stockmann. And for one's own native town into the bargain, my child!

Mrs. Stockmann. That was a ring at the bell.

Dr. Stockmann. It must be he, then. (*A knock is heard at the door.*) Come in!

Peter Stockmann (comes in from the hall). Good morning.

Dr. Stockmann. Glad to see you, Peter!

Mrs. Stockmann. Good morning, Peter. How are you?

Peter Stockmann. So so, thank you. (*To DR. STOCKMANN.*) I received from you yesterday, after office hours, a report dealing with the condition of the water at the Baths.

Dr. Stockmann. Yes. Have you read it?

Peter Stockmann. Yes, I have.

Dr. Stockmann. And what have you to say to it?

Peter Stockmann (with a sidelong glance). Hm!—

Mrs. Stockmann. Come along, Petra. (*She and PETRA go into the room on the left.*)

Peter Stockmann (after a pause). Was it necessary to make all these investigations behind my back?

Dr. Stockmann. Yes, because until I was absolutely certain about it—

Peter Stockmann. Then you mean that you are absolutely certain now?

Dr. Stockmann. Surely you are convinced of that.

Peter Stockmann. Is it your intention to bring this document before the Baths Committee as a sort of official communication?

Dr. Stockmann. Certainly. Something must be done in the matter—and that quickly.

Peter Stockmann. As usual, you employ violent expressions in your report. You say, among other things, that what we offer visitors in our Baths is a permanent supply of poison.

Dr. Stockmann. Well, can you describe it any other way, Peter! Just think—water that is poisonous, whether you drink it or bathe in it! And this we offer to the poor sick folk who come to us trustfully and pay us at an exorbitant rate to be made well again!

Peter Stockmann. And your reasoning leads you to this conclusion, that we must build a sewer to draw off the alleged impurities from Mölledal and must relay the water conduits.

Dr. Stockmann. Yes. Do you see any other way out of it? I don't.

Peter Stockmann. I made a pretext this morning to go and see the town engineer, and, as if only half seriously, broached the subject of these proposals as a thing we might perhaps have to take under consideration some time later on.

Dr. Stockmann. Some time later on!

Peter Stockmann. He smiled at what he considered to be my extravagance, naturally. Have you taken the trouble to consider what your proposed alterations would cost? According to the information I obtained, the expenses would probably mount up to fifteen or twenty thousand pounds.

Dr. Stockmann. Would it cost so much?

Peter Stockmann. Yes; and the worst part of it would be that the work would take at least two years.

Dr. Stockmann. Two years? Two whole years?

Peter Stockmann. At least. And what are we to do with the Baths in the meantime? Close them? Indeed we should be obliged to. And do you suppose anyone would come near the place after it had got about that the water was dangerous?

Dr. Stockmann. Yes, but, Peter, that is what it is.

Peter Stockmann. And all this at this juncture—just as the Baths are beginning to be known. There are other towns in the neighborhood with qualifications to attract visitors for bathing purposes. Don't you suppose they would immediately strain every nerve to divert the entire stream of strangers to themselves? Unquestionably they would; and then where should we be? We should probably have to abandon

the whole thing, which has cost us so much money—and then you would have ruined your native town.

Dr. Stockmann. I—should have ruined—!

Peter Stockmann. It is simply and solely through the Baths that the town has before it any future worth mentioning. You know that just as well as I.

Dr. Stockmann. But what do you think ought to be done, then?

Peter Stockmann. Your report has not convinced me that the condition of the water at the Baths is as bad as you represent it to be.

Dr. Stockmann. I tell you it is even worse!—or at all events it will be in summer, when the warm weather comes.

Peter Stockmann. As I said, I believe you exaggerate the matter considerably. A capable physician ought to know what measures to take—he ought to be capable of preventing injurious influences or of remedying them if they become obviously persistent.

Dr. Stockmann. Well? What more?

Peter Stockmann. The water supply for the Baths is now an established fact, and in consequence must be treated as such. But probably the Committee, at its discretion, will not be disinclined to consider the question of how far it might be possible to introduce certain improvements consistently with a reasonable expenditure.

Dr. Stockmann. And do you suppose that I will have anything to do with such a piece of trickery as that?

Peter Stockmann. Trickery!!

Dr. Stockmann. Yes, it would be a trick—a fraud, a lie, a downright crime towards the public, towards the whole community!

Peter Stockmann. I have not, as I remarked before, been able to convince myself that there is actually any imminent danger.

Dr. Stockmann. You have! It is impossible that you should not be convinced. I know I have represented the facts absolutely truthfully and fairly. And you know it very well, Peter, only you won't acknowledge it. It was owing to your action that both the Baths and the water conduits were built where they are; and that is what you won't acknowledge—that damnable blunder of yours. Pooh!—do you suppose I don't see through you?

Peter Stockmann. And even if that were true? If I perhaps guard my reputation somewhat anxiously, it is in the interests of the town. Without moral authority I am powerless to direct public affairs as seems, to my judgment, to be best for the common good. And on that account—and for various other reasons too—it appears to me to be a matter

of importance that your report should not be delivered to the Committee. In the interests of the public, you must withhold it. Then, later on, I will raise the question and we will do our best, privately; but nothing of this unfortunate affair—not a single word of it—must come to the ears of the public.

Dr. Stockmann. I am afraid you will not be able to prevent that now, my dear Peter.

Peter Stockmann. It must and shall be prevented.

Dr. Stockmann. It is no use, I tell you. There are too many people that know about it.

Peter Stockmann. That know about it? Who? Surely you don't mean those fellows on the "People's Messenger"?

Dr. Stockmann. Yes, they know. The liberal-minded independent press is going to see that you do your duty.

Peter Stockmann (after a short pause). You are an extraordinarily independent man, Thomas. Have you given no thought to the consequences this may have for yourself?

Dr. Stockmann. Consequences?—for me?

Peter Stockmann. For you and yours, yes.

Dr. Stockmann. What the deuce do you mean?

Peter Stockmann. I believe I have always behaved in a brotherly way to you—have always been ready to oblige or to help you?

Dr. Stockmann. Yes, you have, and I am grateful to you for it.

Peter Stockmann. There is no need. Indeed, to some extent I was forced to do so—for my own sake. I always hoped that, if I helped to improve your financial position, I should be able to keep some check on you.

Dr. Stockmann. What!! Then it was only for your own sake—!

Peter Stockmann. Up to a certain point, yes. It is painful for a man in an official position to have his nearest relative compromising himself time after time.

Dr. Stockmann. And do you consider that I do that?

Peter Stockmann. Yes, unfortunately, you do, without even being aware of it. You have a restless, pugnacious, rebellious disposition. And then there is that disastrous propensity of yours to want to write about every sort of possible and impossible thing. The moment an idea comes into your head, you must needs go and write a newspaper article or a whole pamphlet about it.

Dr. Stockmann. Well, but is it not the duty of a citizen to let the public share in any new ideas he may have?

Peter Stockmann. Oh, the public doesn't require any new ideas. The public is best served by the good, old-established ideas it already has.

Dr. Stockmann. And that is your honest opinion?

Peter Stockmann. Yes, and for once I must talk frankly to you. Hitherto I have tried to avoid doing so, because I know how irritable you are; but now I must tell you the truth, Thomas. You have no conception what an amount of harm you do yourself by your impetuosity. You complain of the authorities, you even complain of the government—you are always pulling them to pieces; you insist that you have been neglected and persecuted. But what else can such a cantankerous man as you expect?

Dr. Stockmann. What next! Cantankerous, am I?

Peter Stockmann. Yes, Thomas, you are an extremely cantankerous man to work with—I know that to my cost. You disregard everything that you ought to have consideration for. You seem completely to forget that it is me you have to thank for your appointment here as medical officer to the Baths—

Dr. Stockmann. I was entitled to it as a matter of course!—I and nobody else! I was the first person to see that the town could be made into a flourishing watering place, and I was the only one who saw it at that time. I had to fight singlehanded in support of the idea for many years; and I wrote and wrote—

Peter Stockmann. Undoubtedly. But things were not ripe for the scheme then—though, of course, you could not judge of that in your out-of-the-way corner up north. But as soon as the opportune moment came I—and the others—took the matter into our hands—

Dr. Stockmann. Yes, and made this mess of all my beautiful plan. It is pretty obvious now what clever fellows you were!

Peter Stockmann. To my mind the whole thing only seems to mean that you are seeking another outlet for your combativeness. You want to pick a quarrel with your superiors—an old habit of yours. You cannot put up with any authority over you. You look askance at anyone who occupies a superior official position; you regard him as a personal enemy, and then any stick is good enough to beat him with. But now I have called your attention to the fact that the town's interests are at stake—and, incidentally, my own too. And therefore I must tell you, Thomas, that you will find me inexorable with regard to what I am about to require you to do.

Dr. Stockmann. And what is that?

Peter Stockmann. As you have been so indiscreet as to speak of this delicate matter to outsiders, despite the fact that you ought to have

treated it as entirely official and confidential, it is obviously impossible to hush it up now. All sorts of rumors will get about directly, and everybody who has a grudge against us will take care to embellish these rumors. So it will be necessary for you to refute them publicly.

Dr. Stockmann. I! How? I don't understand.

Peter Stockmann. What we shall expect is that, after making further investigations, you will come to the conclusion that the matter is not by any means as dangerous or as critical as you imagined in the first instance.

Dr. Stockmann. Oho!—so that is what you expect!

Peter Stockmann. And, what is more, we shall expect you to make public profession of your confidence in the Committee and in their readiness to consider fully and conscientiously what steps may be necessary to remedy any possible defects.

Dr. Stockmann. But you will never be able to do that by patching and tinkering at it—never! Take my word for it, Peter; I mean what I say, as deliberately and emphatically as possible.

Peter Stockmann. As an officer under the Committee, you have no right to any individual opinion.

Dr. Stockmann (amazed). No right?

Peter Stockmann. In your official capacity, no. As a private person, it is quite another matter. But as a subordinate member of the staff of the Baths, you have no right to express any opinion which runs contrary to that of your superiors.

Dr. Stockmann. This is too much! I, a doctor, a man of science, have no right to—!

Peter Stockmann. The matter in hand is not simply a scientific one. It is a complicated matter, and has its economic as well as its technical side.

Dr. Stockmann. I don't care what it is! I intend to be free to express my opinion on any subject under the sun.

Peter Stockmann. As you please—but not on any subject concerning the Baths. That we forbid.

Dr. Stockmann (shouting). You forbid—! You! A pack of—

Peter Stockmann. I forbid it—I, your chief; and if I forbid it, you have to obey.

Dr. Stockmann (controlling himself). Peter—if you were not my brother—

Petra (throwing open the door). Father, you shan't stand this!

Mrs. Stockmann (coming in after her). Petra, Petra!

Peter Stockmann. Oh, so you have been eavesdropping.

Mrs. Stockmann. You were talking so loud, we couldn't help—

Petra. Yes, I was listening.

Peter Stockmann. Well, after all, I am very glad—

Dr. Stockmann (*going up to him*). You were saying something about forbidding and obeying?

Peter Stockmann. You obliged me to take that tone with you.

Dr. Stockmann. And so I am to give myself the lie, publicly?

Peter Stockmann. We consider it absolutely necessary that you should make some such public statement as I have asked for.

Dr. Stockmann. And if I do not—obey?

Peter Stockmann. Then we shall publish a statement ourselves to reassure the public.

Dr. Stockmann. Very well; but in that case I shall use my pen against you. I stick to what I have said; I will show that I am right and that you are wrong. And what will you do then?

Peter Stockmann. Then I shall not be able to prevent your being dismissed.

Dr. Stockmann. What—?

Petra. Father—dismissed!

Mrs. Stockmann. Dismissed!

Peter Stockmann. Dismissed from the staff of the Baths. I shall be obliged to propose that you shall immediately be given notice, and shall not be allowed any further participation in the Baths' affairs.

Dr. Stockmann. You would dare to do that!

Peter Stockmann. It is you that are playing the daring game.

Petra. Uncle, that is a shameful way to treat a man like father!

Mrs. Stockmann. Do hold your tongue, Petra!

Peter Stockmann (*looking at PETRA*). Oh, so we volunteer our opinions already, do we? Of course. (*To MRS. STOCKMANN.*) Katherine, I imagine you are the most sensible person in this house. Use any influence you may have over your husband, and make him see what this will entail for his family as well as—

Dr. Stockmann. My family is my own concern and nobody else's!

Peter Stockmann. —for his own family, as I was saying, as well as for the town he lives in.

Dr. Stockmann. It is I who have the real good of the town at heart! I want to lay bare the defects that sooner or later must come to the light of day. I will show whether I love my native town.

Peter Stockmann. You, who in your blind obstinacy want to cut off the most important source of the town's welfare?

Dr. Stockmann. The source is poisoned, man! Are you mad? We are mak-

ing our living by retailing filth and corruption! The whole of our flourishing municipal life derives its sustenance from a lie!

Peter Stockmann. All imagination—or something even worse. The man who can throw out such offensive insinuations about his native town must be an enemy to our community.

Dr. Stockmann (going up to him). Do you dare to—!

Mrs. Stockmann (throwing herself between them). Thomas!

Petra (catching her father by the arm). Don't lose your temper, father!

Peter Stockmann. I will not expose myself to violence. Now you have had a warning; so reflect on what you owe to yourself and your family. Good-by. (*Goes out.*)

Dr. Stockmann (walking up and down). Am I to put up with such treatment as this? In my own house, Katherine! What do you think of that!

Mrs. Stockmann. Indeed it is both shameful and absurd. Thomas—

Petra. If only I could give uncle a piece of my mind—

Dr. Stockmann. It is my own fault. I ought to have flown out at him long ago!—shown my teeth!—bitten! To hear him call me an enemy to our community! Me! I shall not take that lying down, upon my soul!

Mrs. Stockmann. But, dear Thomas, your brother has power on his side—

Dr. Stockmann. Yes, but I have right on mine, I tell you.

Mrs. Stockmann. Oh yes, right—right. What is the use of having right on your side if you have not got might?

Petra. Oh, mother!—how can you say such a thing!

Dr. Stockmann. Do you imagine that in a free country it is no use having right on your side? You are absurd, Katherine. Besides, haven't I got the liberal-minded, independent press to lead the way, and the compact majority behind me? That is might enough, I should think!

Mrs. Stockmann. But, good heavens, Thomas, you don't mean to—?

Dr. Stockmann. Don't mean to what?

Mrs. Stockmann. To set yourself up in opposition to your brother.

Dr. Stockmann. In God's name, what else do you suppose I should do but take my stand on right and truth?

Petra. Yes, I was just going to say that.

Mrs. Stockmann. But it won't do you any earthly good. If they won't do it, they won't.

Dr. Stockmann. Oho, Katherine! Just give me time, and you will see how I will carry the war into their camp.

Mrs. Stockmann. Yes, you carry the war into their camp, and you get your dismissal—that is what you will do.

Dr. Stockmann. In any case I shall have done my duty towards the public—towards the community. I, who am called its enemy!

Mrs. Stockmann. But towards your family, Thomas? Towards your own home! Do you think that is doing your duty towards those you have to provide for?

Petra. Ah, don't think always first of us, mother.

Mrs. Stockmann. Oh, it is easy for you to talk; you are able to shift for yourself, if need be. But remember the boys, Thomas; and think a little too of yourself, and of me—

Dr. Stockmann. I think you are out of your senses, Katherine! If I were to be such a miserable coward as to go on my knees to Peter and his damned crew, do you suppose I should ever know an hour's peace of mind all my life afterwards?

Mrs. Stockmann. I don't know anything about that; but God preserve us from the peace of mind we shall have, all the same, if you go on defying him! You will find yourself again without the means of subsistence, with no income to count upon. I should think we had had enough of that in the old days. Remember that, Thomas; think what that means.

Dr. Stockmann (*collecting himself with a struggle and clenching his fists*). And this is what this slavery can bring upon a free, honorable man! Isn't it horrible, Katherine?

Mrs. Stockmann. Yes, it is sinful to treat you so, it is perfectly true. But, good heavens, one has to put up with so much injustice in this world. There are the boys, Thomas! Look at them! What is to become of them? Oh, no, no, you can never have the heart—.

EJLIF and MORTEN have come in while she was speaking, with their school books in their hands.

Dr. Stockmann. The boys—! (*Recovers himself suddenly.*) No, even if the whole world goes to pieces, I will never bow my neck to this yoke! (*Goes towards his room.*)

Mrs. Stockmann (*following him*). Thomas—what are you going to do!

Dr. Stockmann (*at his door*). I mean to have the right to look my sons in the face when they are grown men. (*Goes into his room.*)

Mrs. Stockmann (*bursting into tears*). God help us all!

Petra. Father is splendid! He will not give in.

The boys look on in amazement; PETRA signs to them not to speak.

ACT III

SCENE. *The editorial office of the "People's Messenger." The entrance door is on the left-hand side of the back wall; on the right-hand side is another door with glass panels through which the printing room can be seen. Another door in the right-hand wall. In the middle of the room is a large table covered with papers, newspapers and books. In the foreground on the left a window, before which stand a desk and a high stool. There are a couple of easy chairs by the table, and other chairs standing along the wall. The room is dingy and uncomfortable; the furniture is old, the chairs stained and torn. In the printing room the compositors are seen at work, and a printer is working a hand press. HOVSTAD is sitting at the desk, writing. BILLING comes in from the right with DR. STOCKMANN'S manuscript in his hand.*

Billing. Well, I must say!

Hovstad (still writing). Have you read it through?

Billing (laying the manuscript on the desk). Yes, indeed I have.

Hovstad. Don't you think the Doctor hits them pretty hard?

Billing. Hard? Bless my soul, he's crushing! Every word falls like—how shall I put it?—like the blow of a sledge hammer.

Hovstad. Yes, but they are not the people to throw up the sponge at the first blow.

Billing. That is true; and for that reason we must strike blow upon blow until the whole of this aristocracy tumbles to pieces. As I sat in there reading this, I almost seemed to see a revolution in being.

Hovstad (turning round). Hush! Speak so that Aslaksen cannot hear you.

Billing (lowering his voice). Aslaksen is a chicken-hearted chap, a coward; there is nothing of the man in him. But this time you will insist on your own way, won't you? You will put the Doctor's article in?

Hovstad. Yes, and if the Mayor doesn't like it—

Billing. That will be the devil of a nuisance.

Hovstad. Well, fortunately we can turn the situation to good account, whatever happens. If the Mayor will not fall in with the Doctor's project, he will have all the small tradesmen down on him—the whole of the Householders' Association and the rest of them. And if he does fall in with it, he will fall out with the whole crowd of large shareholders in the Baths, who up to now have been his most valuable supporters—

Billing. Yes, because they will certainly have to fork out a pretty penny—

Hovstad. Yes, you may be sure they will. And in this way the ring will be broken up, you see, and then in every issue of the paper we will enlighten the public on the Mayor's incapability on one point and another, and make it clear that all the positions of trust in the town, the whole control of municipal affairs, ought to be put in the hands of the Liberals.

Billing. That is perfectly true! I see it coming—I see it coming; we are on the threshold of a revolution!

A knock is heard at the door.

Hovstad. Hush! (*Calls out.*) Come in! (DR. STOCKMANN *comes in by the street door.* HOVSTAD *goes to meet him.*) Ah, it is you, Doctor! Well?

Dr. Stockmann. You may set to work and print it, Mr. Hovstad!

Hovstad. Has it come to that, then?

Billing. Hurrah!

Dr. Stockmann. Yes, print away. Undoubtedly it has come to that. Now they must take what they get. There is going to be a fight in the town, Mr. Billing!

Billing. War to the knife, I hope! We will get our knives to their throats, Doctor!

Dr. Stockmann. This article is only a beginning. I have already got four or five more sketched out in my head. Where is Aslaksen?

Billing (*calls into the printing room*). Aslaksen, just come here for a minute!

Hovstad. Four or five more articles, did you say? On the same subject?

Dr. Stockmann. No—far from it, my dear fellow. No, they are about quite another matter. But they all spring from the question of the water supply and the drainage. One thing leads to another, you know. It is like beginning to pull down an old house, exactly.

Billing. Upon my soul, it's true; you find you are not done till you have pulled all the old rubbish down.

Aslaksen (*coming in*). Pulled down? You are not thinking of pulling down the Baths surely, Doctor?

Hovstad. Far from it, don't be afraid.

Dr. Stockmann. No, we meant something quite different. Well, what do you think of my article, Mr. Hovstad?

Hovstad. I think it is simply a masterpiece—

Dr. Stockmann. Do you really think so? Well, I am very pleased, very pleased.

Hovstad. It is so clear and intelligible. One need have no special knowl-

edge to understand the bearing of it. You will have every enlightened man on your side.

Aslaksen. And every prudent man too, I hope?

Billing. The prudent and the imprudent—almost the whole town.

Aslaksen. In that case we may venture to print it.

Dr. Stockmann. I should think so!

Hovstad. We will put it in tomorrow morning.

Dr. Stockmann. Of course—you must not lose a single day. What I wanted to ask you, Mr. Aslaksen, was if you would supervise the printing of it yourself.

Aslaksen. With pleasure.

Dr. Stockmann. Take care of it as if it were a treasure! No misprints—every word is important. I will look in again a little later; perhaps you will be able to let me see a proof. I can't tell you how eager I am to see it in print, and see it burst upon the public—

Billing. Burst upon them—yes, like a flash of lightning!

Dr. Stockmann. —and to have it submitted to the judgment of my intelligent fellow townsmen. You cannot imagine what I have gone through today. I have been threatened first with one thing and then with another; they have tried to rob me of my most elementary rights as a man—

Billing. What! Your rights as a man!

Dr. Stockmann. —they have tried to degrade me, to make a coward of me, to force me to put personal interests before my most sacred convictions—

Billing. That is too much—I'm damned if it isn't.

Hovstad. Oh, you mustn't be surprised at anything from that quarter.

Dr. Stockmann. Well, they will get the worst of it with me; they may assure themselves of that. I shall consider the "People's Messenger" my sheet anchor now, and every single day I will bombard them with one article after another, like bombshells—

Aslaksen. Yes, but—

Billing. Hurrah!—it is war, it is war!

Dr. Stockmann. I shall smite them to the ground—I shall crush them—I shall break down all their defenses, before the eyes of the honest public! That is what I shall do!

Aslaksen. Yes, but in moderation, Doctor—proceed with moderation—

Billing. Not a bit of it, not a bit of it! Don't spare the dynamite!

Dr. Stockmann. Because it is not merely a question of water supply and drains now, you know. No—it is the whole of our social life that we have got to purify and disinfect—

Billing. Spoken like a deliverer!

Dr. Stockmann. All the incapables must be turned out, you understand—and that in every walk of life! Endless vistas have opened themselves to my mind's eye today. I cannot see it all quite clearly yet, but I shall in time. Young and vigorous standard-bearers—those are what we need and must seek, my friends; we must have new men in command at all our outposts.

Billing. Hear, hear!

Dr. Stockmann. We only need to stand by one another, and it will all be perfectly easy. The revolution will be launched like a ship that runs smoothly off the stocks. Don't you think so?

Hovstad. For my part I think we have now a prospect of getting the municipal authority into the hands where it should lie.

Aslaksen. And if only we proceed with moderation, I cannot imagine that there will be any risk.

Dr. Stockmann. Who the devil cares whether there is any risk or not! What I am doing, I am doing in the name of truth and for the sake of my conscience.

Hovstad. You are a man who deserves to be supported, Doctor.

Aslaksen. Yes, there is no denying that the Doctor is a true friend to the town—a real friend to the community, that he is.

Billing. Take my word for it, Aslaksen, Dr. Stockmann is a friend of the people.

Aslaksen. I fancy the Householders' Association will make use of that expression before long.

Dr. Stockmann (*affected, grasps their hands*). Thank you, thank you, my dear staunch friends. It is very refreshing to me to hear you say that; my brother called me something quite different. By Jove, he shall have it back, with interest! But now I must be off to see a poor devil—. I will come back, as I said. Keep a very careful eye on the manuscript, Aslaksen, and don't for worlds leave out any of my notes of exclamation! Rather put one or two more in! Capital, capital! Well, good-by for the present—good-by, good-by!

They show him to the door, and bow him out.

Hovstad. He may prove an invaluable useful man to us.

Aslaksen. Yes, so long as he confines himself to this matter of the Baths. But if he goes farther afield, I don't think it would be advisable to follow him.

Hovstad. Hm!—that all depends—

Billing. You are so infernally timid, Aslaksen!

Aslaksen. Timid? Yes, when it is a question of the local authorities, I am timid, Mr. Billing; it is a lesson I have learned in the school of experience, let me tell you. But try me in higher politics in matters that concern the government itself, and then see if I am timid.

Billing. No, you aren't, I admit. But this is simply contradicting yourself.

Aslaksen. I am a man with a conscience, and that is the whole matter. If you attack the government, you don't do the community any harm, anyway; those fellows pay no attention to attacks, you see—they go on just as they are, in spite of them. But *local* authorities are different; they *can* be turned out, and then perhaps you may get an ignorant lot into office who may do irreparable harm to the householders and everybody else.

Hovstad. But what of the education of citizens by self-government—don't you attach any importance to that?

Aslaksen. When a man has interests of his own to protect, he cannot think of everything, Mr. Hovstad.

Hovstad. Then I hope I shall never have interests of my own to protect!

Billing. Hear, hear!

Aslaksen (with a smile). Hm! (*Points to the desk.*) Mr. Sheriff Stensgaard was your predecessor at that editorial desk.

Billing (spitting). Bah! That turncoat.

Hovstad. I am not a weathercock—and never will be.

Aslaksen. A politician should never be too certain of anything, Mr. Hovstad. And as for you, Mr. Billing, I should think it is time for you to be taking in a reef or two in your sails, seeing that you are applying for the post of secretary to the Bench.

Billing. I—!

Hovstad. Are you, Billing?

Billing. Well, yes—but you must clearly understand I am doing it only to annoy the bigwigs.

Aslaksen. Anyhow, it is no business of mine. But if I am to be accused of timidity and of inconsistency in my principles, this is what I want to point out: my political past is an open book. I have never changed, except perhaps to become a little more moderate, you see. My heart is still with the people; but I don't deny that my reason has a certain bias towards the authorities—the local ones, I mean. (*Goes into the printing room.*)

Billing. Oughtn't we to try and get rid of him, Hovstad?

Hovstad. Do you know anyone else who will advance the money for our paper and printing bill?

Billing. It is an infernal nuisance that we don't possess some capital to trade on.

Hovstad (sitting down at his desk). Yes, if we only had that, then—

Billing. Suppose you were to apply to Dr. Stockmann?

Hovstad (turning over some papers). What is the use? He has got nothing.

Billing. No, but he has got a warm man in the background, old Morten Kiil—"the Badger," as they call him.

Hovstad (writing). Are you so sure *he* has got anything?

Billing. Good Lord, of course he has! And some of it must come to the Stockmanns. Most probably he will do something for the children, at all events.

Hovstad (turning half round). Are you counting on that?

Billing. Counting on it? Of course I am not counting on anything.

Hovstad. That is right. And I should not count on the secretaryship to the Bench either, if I were you; for I can assure you—you won't get it.

Billing. Do you think I am not quite aware of that? My object is precisely *not* to get it. A slight of that kind stimulates a man's fighting power—it is like getting a supply of fresh bile—and I am sure one needs that badly enough in a hole-and-corner place like this, where it is so seldom anything happens to stir one up.

Hovstad (writing). Quite so, quite so.

Billing. Ah, I shall be heard of yet!—Now I shall go and write the appeal to the Householders' Association. (*Goes into the room on the right.*)

Hovstad (sitting at his desk, biting his penholder, says slowly). Hm!—that's it, is it? (*A knock is heard.*) Come in! (*PETRA comes in by the outer door. HOVSTAD gets up.*) What, you!—here?

Petra. Yes, you must forgive me—

Hovstad (pulling a chair forward). Won't you sit down?

Petra. No, thank you; I must go again in a moment.

Hovstad. Have you come with a message from your father, by any chance?

Petra. No, I have come on my own account. (*Takes a book out of her coat pocket.*) Here is the English story.

Hovstad. Why have you brought it back?

Petra. Because I am not going to translate it.

Hovstad. But you promised me faithfully—

Petra. Yes, but then I had not read it. I don't suppose you have read it either?

Hovstad. No, you know quite well I don't understand English; but—

Petra. Quite so. That is why I wanted to tell you that you must find something else. (*Lays the book on the table.*) You can't use this for the "People's Messenger."

Hovstad. Why not?

Petra. Because it conflicts with all your opinions.

Hovstad. Oh, for that matter—

Petra. You don't understand me. The burden of this story is that there is a supernatural power that looks after the so-called good people in this world and makes everything happen for the best in their case—while all the so-called bad people are punished.

Hovstad. Well, but that is all right. That is just what our readers want.

Petra. And are you going to be the one to give it to them? For myself, I do not believe a word of it. You know quite well that things do not happen so in reality.

Hovstad. You are perfectly right; but an editor cannot always act as he would prefer. He is often obliged to bow to the wishes of the public in unimportant matters. Politics are the most important thing in life—for a newspaper, anyway; and if I want to carry my public with me on the path that leads to liberty and progress, I must not frighten them away. If they find a moral tale of this sort in the serial at the bottom of the page, they will be all the more ready to read what is printed above it; they feel more secure, as it were.

Petra. For shame! You would never go and set a snare like that for your readers; you are not a spider!

Hovstad (smiling). Thank you for having such a good opinion of me. No; as a matter of fact that is Billing's idea and not mine.

Petra. Billing's!

Hovstad. Yes; anyway he propounded that theory here one day. And it is Billing who is so anxious to have that story in the paper; I don't know anything about the book.

Petra. But how can Billing, with his emancipated views—

Hovstad. Oh, Billing is a many-sided man. He is applying for the post of secretary to the Bench, too, I hear.

Petra. I don't believe it, Mr. Hovstad. How could he possibly bring himself to do such a thing?

Hovstad. Ah, you must ask him that.

Petra. I should never have thought it of him.

Hovstad (looking more closely at her). No? Does it really surprise you so much?

Petra. Yes. Or perhaps not altogether. Really, I don't quite know—

Hovstad. We journalists are not much worth, Miss Stockmann.

Petra. Do you really mean that?

Hovstad. I think so sometimes.

Petra. Yes, in the ordinary affairs of everyday life, perhaps; I can understand that. But now, when you have taken a weighty matter in hand—

Hovstad. This matter of your father's, you mean?

Petra. Exactly. It seems to me that now you must feel you are a man worth more than most.

Hovstad. Yes, today I do feel something of that sort.

Petra. Of course you do, don't you? It is a splendid vocation you have chosen—to smooth the way for the march of unappreciated truths, and new and courageous lines of thought. If it were nothing more than because you stand fearlessly in the open and take up the cause of an injured man—

Hovstad. Especially when that injured man is—ahem!—I don't rightly know how to—

Petra. When that man is so upright and so honest, you mean?

Hovstad (more gently). Especially when he is your father, I meant.

Petra (suddenly checked). That?

Hovstad. Yes, Petra—Miss Petra.

Petra. Is it *that*, that is first and foremost with you? Not the matter itself? Not the truth?—not my father's big generous heart?

Hovstad. Certainly—of course—that too.

Petra. No, thank you; you have betrayed yourself, Mr. Hovstad, and now I shall never trust you again in anything.

Hovstad. Can you really take it so amiss in me that it is mostly for your sake—?

Petra. What I am angry with you for is for not having been honest with my father. You talked to him as if the truth and the good of the community were what lay nearest to your heart. You have made fools of both my father and me. You are not the man you made yourself out to be. And that I shall never forgive you—never!

Hovstad. You ought not to speak so bitterly, Miss Petra—least of all now.

Petra. Why not now, especially?

Hovstad. Because your father cannot do without my help.

Petra (looking him up and down). Are you that sort of man too? For shame!

Hovstad. No, no, I am not. This came upon me so unexpectedly—you must believe that.

Petra. I know what to believe. Good-by.

Aslaksen (coming from the printing room, hurriedly and with an air of mystery).

Damnation, Hovstad!—(*Sees Petra.*) Oh, this is awkward—

Petra. There is the book; you must give it to some one else. (*Goes towards the door.*)

Hovstad (following her). But, Miss Stockmann—

Petra. Good-by. (*Goes out.*)

Aslaksen. I say—Mr. Hovstad—

Hovstad. Well, well!—what is it?

Aslaksen. The Mayor is outside in the printing room.

Hovstad. The Mayor, did you say?

Aslaksen. Yes, he wants to speak to you. He came in by the back door—didn't want to be seen, you understand.

Hovstad. What can he want? Wait a bit—I will go myself. (*Goes to the door of the printing room, opens it, bows and invites PETER STOCKMANN in.*) Just see, Aslaksen, that no one—

Aslaksen. Quite so. (*Goes into the printing room.*)

Peter Stockmann. You did not expect to see me here, Mr. Hovstad?

Hovstad. No, I confess I did not.

Peter Stockmann (looking round). You are very snug in here—very nice indeed.

Hovstad. Oh—

Peter Stockmann. And here I come, without any notice, to take up your time!

Hovstad. By all means, Mr. Mayor. I am at your service. But let me relieve you of your—(*takes STOCKMANN'S hat and stick and puts them on a chair.*) Won't you sit down?

Peter Stockmann (sitting down by the table). Thank you. (*HOVSTAD sits down.*) I have had an extremely annoying experience today, Mr. Hovstad.

Hovstad. Really? Ah well, I expect with all the various business you have to attend to—

Peter Stockmann. The Medical Officer of the Baths is responsible for what happened today.

Hovstad. Indeed? The Doctor?

Peter Stockmann. He has addressed a kind of report to the Baths Committee on the subject of certain supposed defects in the Baths.

Hovstad. Has he indeed?

Peter Stockmann. Yes—has he not told you? I thought he said—

Hovstad. Ah, yes—it is true he did mention something about—
Aslaksen (coming from the printing room). I ought to have that copy—
Hovstad (angrily). Ahem!—there it is on the desk.

Aslaksen (taking it). Right.

Peter Stockmann. But look there—that is the thing I was speaking of!

Aslaksen. Yes, that is the Doctor's article, Mr. Mayor.

Hovstad. Oh, is *that* what you were speaking about?

Peter Stockmann. Yes, that is it. What do you think of it?

Hovstad. Oh, I am only a layman—and I have only taken a very cursory glance at it.

Peter Stockmann. But you are going to print it?

Hovstad. I cannot very well refuse a distinguished man—

Aslaksen. I have nothing to do with editing the paper, Mr. Mayor—

Peter Stockmann. I understand.

Aslaksen. I merely print what is put into my hands.

Peter Stockmann. Quite so.

Aslaksen. And so I must—(moves off towards the printing room).

Peter Stockmann. No, but wait a moment, Mr. Aslaksen. You will allow me, Mr. Hovstad?

Hovstad. If you please, Mr. Mayor.

Peter Stockmann. You are a discreet and thoughtful man, Mr. Aslaksen.

Aslaksen. I am delighted to hear you think so, sir.

Peter Stockmann. And a man of very considerable influence.

Aslaksen. Chiefly among the small tradesmen, sir.

Peter Stockmann. The small taxpayers are the majority—here as everywhere else.

Aslaksen. That is true.

Peter Stockmann. And I have no doubt you know the general trend of opinion among them, don't you?

Aslaksen. Yes, I think I may say I do, Mr. Mayor.

Peter Stockmann. Yes. Well, since there is such a praiseworthy spirit of self-sacrifice among the less wealthy citizens of our town—

Aslaksen. What?

Hovstad. Self-sacrifice?

Peter Stockmann. It is pleasing evidence of a public-spirited feeling, extremely pleasing evidence. I might almost say I hardly expected it. But you have a closer knowledge of public opinion than I.

Aslaksen. But, Mr. Mayor—

Peter Stockmann. And indeed it is no small sacrifice that the town is going to make.

Hovstad. The town?

Aslaksen. But I don't understand. Is it the Baths—?

Peter Stockmann. At a provisional estimate, the alterations that the Medical Officer asserts to be desirable will cost somewhere about twenty thousand pounds.

Aslaksen. That is a lot of money, but—

Peter Stockmann. Of course it will be necessary to raise a municipal loan.

Hovstad (getting up). Surely you never mean that the town must pay—?

Aslaksen. Do you mean that it must come out of the municipal funds?—out of the ill-filled pockets of the small tradesmen?

Peter Stockmann. Well, my dear Mr. Aslaksen, where else is the money to come from?

Aslaksen. The gentlemen who own the Baths ought to provide that.

Peter Stockmann. The proprietors of the Baths are not in a position to incur any further expense.

Aslaksen. Is that absolutely certain, Mr. Mayor?

Peter Stockmann. I have satisfied myself that it is so. If the town wants these very extensive alterations, it will have to pay for them.

Aslaksen. But, damn it all—I beg your pardon—this is quite another matter, Mr. Hovstad!

Hovstad. It is, indeed.

Peter Stockmann. The most fatal part of it is that we shall be obliged to shut the Baths for a couple of years.

Hovstad. Shut them? Shut them altogether?

Aslaksen. For two years?

Peter Stockmann. Yes, the work will take as long as that—at least.

Aslaksen. I'm damned if we will stand that, Mr. Mayor! What are we householders to live upon in the meantime?

Peter Stockmann. Unfortunately that is an extremely difficult question to answer, Mr. Aslaksen. But what would you have us do? Do you suppose we shall have a single visitor in the town, if we go about proclaiming that our water is polluted, that we are living over a plague spot, that the entire town—

Aslaksen. And the whole thing is merely imagination?

Peter Stockmann. With the best will in the world, I have not been able to come to any other conclusion.

Aslaksen. Well then I must say it is absolutely unjustifiable of Dr. Stockmann—I beg your pardon, Mr. Mayor—

Peter Stockmann. What you say is lamentably true, Mr. Aslaksen. My brother has unfortunately always been a headstrong man.

Aslaksen. After this, do you mean to give him your support, Mr. Hovstad?

Hovstad. Can you suppose for a moment that I—?

Peter Stockmann. I have drawn up a short résumé of the situation as it appears from a reasonable man's point of view. In it I have indicated how certain possible defects might suitably be remedied without outrunning the resources of the Baths Committee.

Hovstad. Have you got it with you, Mr. Mayor?

Peter Stockmann (fumbling in his pocket). Yes, I brought it with me in case you should—

Aslaksen. Good Lord, there he is!

Peter Stockmann. Who? My brother?

Hovstad. Where? Where?

Aslaksen. He has just gone through the printing room.

Peter Stockmann. How unlucky! I don't want to meet him here, and I had still several things to speak to you about.

Hovstad (pointing to the door on the right). Go in there for the present.

Peter Stockmann. But—?

Hovstad. You will only find Billing in there.

Aslaksen. Quick, quick, Mr. Mayor—he is just coming.

Peter Stockmann. Yes, very well; but see that you get rid of him quickly.

(Goes out through the door on the right, which ASLAKSEN opens for him and shuts after him.)

Hovstad. Pretend to be doing something, Aslaksen. *(Sits down and writes.*

ASLAKSEN begins foraging among a heap of newspapers that are lying on a chair.)

Dr. Stockmann (coming in from the printing room). Here I am again. *(Puts down his hat and stick.)*

Hovstad (writing). Already, Doctor? Hurry up with what we were speaking about, Aslaksen. We are very pressed for time today.

Dr. Stockmann (to ASLAKSEN). No proof for me to see yet, I hear.

Aslaksen (without turning round). You couldn't expect it yet, Doctor.

Dr. Stockmann. No, no; but I am impatient, as you can understand. I shall not know a moment's peace of mind till I see it in print.

Hovstad. H'm!—It will take a good while yet, won't it, Aslaksen?

Aslaksen. Yes, I am almost afraid it will.

Dr. Stockmann. All right, my dear friends; I will come back. I do not mind coming back twice if necessary. A matter of such great importance—the welfare of the town at stake—it is no time to shirk trouble. *(Is just going, but stops and comes back.)* Look here—there is one thing more I want to speak to you about.

Hovstad. Excuse me, but could it not wait till some other time?

Dr. Stockmann. I can tell you in half a dozen words. It is only this. When my article is read tomorrow and it is realized that I have been quietly working the whole winter for the welfare of the town—

Hovstad. Yes, but, Doctor—

Dr. Stockmann. I know what you are going to say. You don't see how on earth it was any more than my duty—my obvious duty as a citizen. Of course it wasn't; I know that as well as you. But my fellow citizens, you know—! Good Lord, think of all the good souls who think so highly of me—!

Aslaksen. Yes, our townfolk have had a very high opinion of you so far, Doctor.

Dr. Stockmann. Yes, and that is just why I am afraid they—. Well, this is the point; when this reaches them, especially the poorer classes, and sounds in their ears like a summons to take the town's affairs into their own hands for the future—

Hovstad (getting up). Ahem! Doctor, I won't conceal from you the fact—

Dr. Stockmann. Ah!—I knew there was something in the wind! But I won't hear a word of it. If anything of that sort is being set on foot—

Hovstad. Of what sort?

Dr. Stockmann. Well, whatever it is—whether it is a demonstration in my honor, or a banquet, or a subscription list for some presentation to me—whatever it is, you must promise me solemnly and faithfully to put a stop to it. You too, Mr. Aslaksen; do you understand?

Hovstad. You must forgive me, Doctor, but sooner or later we must tell you the plain truth—

He is interrupted by the entrance of MRS. STOCKMANN, who comes in from the street door.

Mrs. Stockmann (seeing her husband). Just as I thought!

Hovstad (going towards her). You too, Mrs. Stockmann?

Dr. Stockmann. What on earth do you want here, Katherine?

Mrs. Stockmann. I should think you know very well what I want.

Hovstad. Won't you sit down? Or perhaps—

Mrs. Stockmann. No, thank you; don't trouble. And you must not be offended at my coming to fetch my husband; I am the mother of three children, you know.

Dr. Stockmann. Nonsense!—we know all about that.

Mrs. Stockmann. Well, one would not give you credit for much thought for your wife and children today; if you had had that, you would not have gone and dragged us all into misfortune.

Dr. Stockmann. Are you out of your senses, Katherine! Because a man

has a wife and children, is he not to be allowed to proclaim the truth—is he not to be allowed to be an actively useful citizen—is he not to be allowed to do a service to his native town!

Mrs. Stockmann. Yes, Thomas—in reason.

Aslaksen. Just what I say. Moderation is everything.

Mrs. Stockmann. And that is why you wrong us, Mr. Hovstad, in enticing my husband away from his home and making a dupe of him in all this.

Hovstad. I certainly am making a dupe of no one—

Dr. Stockmann. Making a dupe of me! Do you suppose *I* should allow myself to be duped!

Mrs. Stockmann. It is just what you do. I know quite well you have more brains than anyone in the town, but you are extremely easily duped, Thomas. (*Tō HOVSTAD.*) Please to realize that he loses his post at the Baths if you print what he has written—

Aslaksen. What!

Hovstad. Look here, Doctor—

Dr. Stockmann (*laughing*). Ha—ha!—just let them try! No, no—they will take good care not to. I have got the compact majority behind me, let me tell you!

Mrs. Stockmann. Yes, that is just the worst of it—your having any such horrid thing behind you.

Dr. Stockmann. Rubbish, Katherine!—Go home and look after your house and leave me to look after the community. How can you be so afraid, when I am so confident and happy? (*Walks up and down, rubbing his hands.*) Truth and the People will win the fight, you may be certain! I see the whole of the broadminded middle class marching like a victorious army—! (*Stops beside a chair.*) What the deuce is that lying there?

Aslaksen. Good Lord!

Hovstad. Ahem!

Dr. Stockmann. Here we have the topmost pinnacle of authority! (*Takes the Mayor's official hat carefully between his finger tips and holds it up in the air.*)

Mrs. Stockmann. The Mayor's hat!

Dr. Stockmann. And here is the staff of office too. How in the name of all that's wonderful—?

Hovstad. Well, you see—

Dr. Stockmann. Oh, I understand. He has been here trying to talk you over. Ha—ha!—he made rather a mistake there! And as soon as he

caught sight of me in the printing room— (*Bursts out laughing.*) Did he run away, Mr. Aslaksen?

Aslaksen (hurriedly). Yes, he ran away, Doctor.

Dr. Stockmann. Ran away without his stick or his— Fiddlesticks! Peter doesn't run away and leave his belongings behind him. But what the deuce have you done with him? Ah!—in there, of course. Now you shall see, Katherine!

Mrs. Stockmann. Thomas—please don't—!

Aslaksen. Don't be rash, Doctor.

DR. STOCKMANN *has put on the Mayor's hat and taken his stick in his hand. He goes up to the door, opens it, and stands with his hand to his hat at the salute.* PETER STOCKMANN *comes in, red with anger.* BILLING *follows him.*

Peter Stockmann. What does this tomfoolery mean?

Dr. Stockmann. Be respectful, my good Peter. I am the chief authority in the town now. (*Walks up and down.*)

Mrs. Stockmann (almost in tears). Really, Thomas!

Peter Stockmann (following him about). Give me my hat and stick.

Dr. Stockmann (in the same tone as before). If you are chief constable, let me tell you that I am the Mayor—I am the master of the whole town, please understand!

Peter Stockmann. Take off my hat, I tell you. Remember it is part of an official uniform.

Dr. Stockmann. Pooh! Do you think the newly awakened lionhearted people are going to be frightened by an official hat? There is going to be a revolution in the town tomorrow, let me tell you. You thought you could turn me out; but now I shall turn you out—turn you out of all your various offices. Do you think I cannot? Listen to me. I have triumphant social forces behind me. Hovstad and Billing will thunder in the "People's Messenger," and Aslaksen will take the field at the head of the whole Householders' Association—

Aslaksen. That I won't, Doctor.

Dr. Stockmann. Of course you will—

Peter Stockmann. Ah!—may I ask then if Mr. Hovstad intends to join this agitation?

Hovstad. No, Mr. Mayor.

Aslaksen. No, Mr. Hovstad is not such a fool as to go and ruin his paper and himself for the sake of an imaginary grievance.

Dr. Stockmann (looking round him). What does this mean?

Hovstad. You have represented your case in a false light, Doctor, and therefore I am unable to give you my support.

Billing. And after what the Mayor was so kind as to tell me just now, I—

Dr. Stockmann. A false light! Leave that part of it to me. Only print my article; I am quite capable of defending it.

Hovstad. I am not going to print it. I cannot and will not and dare not print it.

Dr. Stockmann. You dare not? What nonsense!—you are the editor; and an editor controls his paper, I suppose!

Aslaksen. No, it is the subscribers, Doctor.

Peter Stockmann. Fortunately, yes.

Aslaksen. It is public opinion—the enlightened public—householders and people of that kind; they control the newspapers.

Dr. Stockmann (composedly). And I have all these influences against me?

Aslaksen. Yes, you have. It would mean the absolute ruin of the community if your article were to appear.

Dr. Stockmann. Indeed.

Peter Stockmann. My hat and stick, if you please. (DR. STOCKMANN *takes off the hat and lays it on the table with the stick.* PETER STOCKMANN *takes them up.*) Your authority as mayor has come to an untimely end.

Dr. Stockmann. We have not got to the end yet. (*To HOVSTAD.*) Then it is quite impossible for you to print my article in the “People’s Messenger”?

Hovstad. Quite impossible—out of regard for your family as well.

Mrs. Stockmann. You need not concern yourself about his family, thank you, Mr. Hovstad.

Peter Stockmann (taking a paper from his pocket). It will be sufficient, for the guidance of the public, if this appears. It is an official statement. May I trouble you?

Hovstad (taking the paper). Certainly; I will see that it is printed.

Dr. Stockmann. But not mine. Do you imagine that you can silence me and stifle the truth! You will not find it so easy as you suppose. Mr. Aslaksen, kindly take my manuscript at once and print it as a pamphlet—at my expense. I will have four hundred copies—no, five—six hundred.

Aslaksen. If you offered me its weight in gold, I could not lend my press for any such purpose, Doctor. It would be flying in the face of public opinion. You will not get it printed anywhere in the town.

Dr. Stockmann. Then give it me back.

Hovstad (giving him the manuscript). Here it is.

Dr. Stockmann (taking his hat and stick). It shall be made public all the same. I will read it out at a mass meeting of the townspeople. All my fellow citizens shall hear the voice of truth!

Peter Stockmann. You will not find any public body in the town that will give you the use of their hall for such a purpose.

Aslaksen. Not a single one, I am certain.

Billing. No, I'm damned if you will find one.

Mrs. Stockmann. But this is too shameful! Why should every one turn against you like that?

Dr. Stockmann (angrily). I will tell you why. It is because all the men in this town are old women—like you; they all think of nothing but their families, and never of the community.

Mrs. Stockmann (putting her arm into his). Then I will show them that an—old woman can be a man for once. I am going to stand by you, Thomas!

Dr. Stockmann. Bravely said, Katherine! It shall be made public—as I am a living soul! If I can't hire a hall, I shall hire a drum, and parade the town with it and read it at every street corner.

Peter Stockmann. You are surely not such an arrant fool as that!

Dr. Stockmann. Yes, I am.

Aslaksen. You won't find a single man in the whole town to go with you.

Billing. No, I'm damned if you will.

Mrs. Stockmann. Don't give in, Thomas. I will tell the boys to go with you.

Dr. Stockmann. That is a splendid idea!

Mrs. Stockmann. Morten will be delighted; and Ejlif will do whatever he does.

Dr. Stockmann. Yes, and Petra!—and you too, Katherine!

Mrs. Stockmann. No, I won't do that; but I will stand at the window and watch you, that's what I will do.

Dr. Stockmann (puts his arms round her and kisses her). Thank you, my dear! Now you and I are going to try a fall, my fine gentlemen! I am going to see whether a pack of cowards can succeed in gagging a patriot who wants to purify society! (*He and his wife go out by the street door.*)

Peter Stockmann (shaking his head seriously). Now he has sent her out of her senses, too.

ACT IV

SCENE. *A big old-fashioned room in CAPTAIN HORSTER'S house. At the back folding doors, which are standing open, lead to an anteroom. Three windows in the left-hand wall. In the middle of the opposite wall a platform has been erected. On this is a small table with two candles, a water bottle and glass, and a bell. The room is lit by lamps placed between the windows. In the foreground on the left there is a table with candles and a chair. To the right is a door and some chairs standing near it. The room is nearly filled with a crowd of towns-people of all sorts, a few women and schoolboys being among them. People are still streaming in from the back, and the room is soon filled.*

1st Citizen (meeting another). Hullo, Lamstad! You here too?

2nd Citizen. I go to every public meeting, I do.

3rd Citizen. Brought your whistle too, I expect!

2nd Citizen. I should think so. Haven't you?

3rd Citizen. Rather! And old Evensen said he was going to bring a cowhorn, he did.

2nd Citizen. Good old Evensen! *(Laughter among the crowd.)*

4th Citizen (coming up to them). I say, tell me what is going on here tonight.

2nd Citizen. Dr. Stockmann is going to deliver an address attacking the Mayor.

4th Citizen. But the Mayor is his brother.

1st Citizen. That doesn't matter; Dr. Stockmann's not the chap to be afraid.

3rd Citizen. But he is in the wrong; it said so in the "People's Messenger."

2nd Citizen. Yes, I expect he must be in the wrong this time, because neither the Householders' Association nor the Citizens' Club would lend him their hall for his meeting.

1st Citizen. He couldn't even get the loan of the hall at the Baths.

2nd Citizen. No, I should think not.

A Man in another part of the crowd. I say—who are we to back up in this?

Another Man, beside him. Watch Aslaksen, and do as he does.

Billing (pushing his way through the crowd, with a writing case under

his arm). Excuse me, gentlemen—do you mind letting me through? I am reporting for the “People’s Messenger.” Thank you very much! (*He sits down at the table on the left.*)

A Workman. Who was that?

Second Workman. Don’t you know him? It’s Billing, who writes for Aslaksen’s paper.

CAPTAIN HORSTER *brings in* MRS. STOCKMANN *and* PETRA *through the door on the right*. EJLIF *and* MORTEN *follow them in*.

Horster. I thought you might all sit here; you can slip out easily from here, if things get too lively.

Mrs. Stockmann. Do you think there will be a disturbance?

Horster. One can never tell—with such a crowd. But sit down, and don’t be uneasy.

Mrs. Stockmann (sitting down). It was extremely kind of you to offer my husband the room.

Horster. Well, if nobody else would—

Petra (who has sat down beside her mother). And it was a plucky thing to do, Captain Horster.

Horster. Oh, it is not such a great matter as all that.

HOVSTAD *and* ASLAKSEN *make their way through the crowd*.

Aslaksen (going up to HORSTER). Has the Doctor not come yet?

Horster. He is waiting in the next room.

Movement in the crowd by the door at the back.

Hovstad. Look—here comes the Mayor!

Billing. Yes, I’m damned if he hasn’t come after all!

PETER STOCKMANN *makes his way gradually through the crowd, bows courteously, and takes up a position by the wall on the left. Shortly afterwards DR. STOCKMANN comes in by the right-hand door. He is dressed in a black frock coat, with a white tie. There is a little feeble applause, which is hushed down. Silence is obtained.*

Dr. Stockmann (in an undertone). How do you feel, Katherine?

Mrs. Stockmann. All right, thank you. (*Lowering her voice.*) Be sure not to lose your temper, Thomas.

Dr. Stockmann. Oh, I know how to control myself. (*Looks at his watch, steps on to the platform, and bows.*) It is a quarter past—so I will begin. (*Takes his manuscript out of his pocket.*)

Aslaksen. I think we ought to elect a chairman first.

Dr. Stockmann. No, it is quite unnecessary.

Some of the Crowd. Yes—yes!

Peter Stockmann. I certainly think too that we ought to have a chairman.

Dr. Stockmann. But I have called this meeting to deliver a lecture, Peter.

Peter Stockmann. Dr. Stockmann's lecture may possibly lead to a considerable conflict of opinion.

Voices in the Crowd. A chairman! A chairman!

Hovstad. The general wish of the meeting seems to be that a chairman should be elected.

Dr. Stockmann (restraining himself). Very well—let the meeting have its way.

Aslaksen. Will the Mayor be good enough to undertake the task?

Three Men (clapping their hands). Bravo! Bravo!

Peter Stockmann. For various reasons, which you will easily understand, I must beg to be excused. But fortunately we have among us a man who I think will be acceptable to you all. I refer to the President of the Householders' Association, Mr. Aslaksen.

Several Voices. Yes—Aslaksen! Bravo Aslaksen!

DR. STOCKMANN *takes up his manuscript and walks up and down the platform.*

Aslaksen. Since my fellow citizens choose to entrust me with this duty, I cannot refuse.

Loud applause. ASLAKSEN *mounts the platform.*

Billing (writing). "Mr. Aslaksen was elected with enthusiasm."

Aslaksen. And now, as I am in this position, I should like to say a few brief words. I am a quiet and peaceable man, who believes in discreet moderation, and—and—in moderate discretion. All my friends can bear witness to that.

Several Voices. That's right! That's right, Aslaksen!

Aslaksen. I have learned in the school of life and experience that moderation is the most valuable virtue a citizen can possess—

Peter Stockmann. Hear, hear!

Aslaksen.—And moreover that discretion and moderation are what enable a man to be of most service to the community. I would therefore suggest to our esteemed fellow citizen, who has called this meeting,

that he should strive to keep strictly within the bounds of moderation.

A Man by the door. Three cheers for the Moderation Society!

A Voice. Shame!

Several Voices. Sh!—Sh!

Aslaksen. No interruptions, gentlemen, please! Does anyone wish to make any remarks?

Peter Stockmann. Mr. Chairman.

Aslaksen. The Mayor will address the meeting.

Peter Stockmann. In consideration of the close relationship in which, as you all know, I stand to the present Medical Officer of the Baths, I should have preferred not to speak this evening. But my official position with regard to the Baths and my solicitude for the vital interests of the town compel me to bring forward a motion. I venture to presume that there is not a single one of our citizens present who considers it desirable that unreliable and exaggerated accounts of the sanitary condition of the Baths and the town should be spread abroad.

Several Voices. No, no! Certainly not! We protest against it!

Peter Stockmann. Therefore I should like to propose that the meeting should not permit the Medical Officer either to read or to comment on his proposed lecture.

Dr. Stockmann (impatiently). Not permit—! What the devil—!

Mrs. Stockmann (coughing). Ahem!—ahem!

Dr. Stockmann (collecting himself). Very well. Go ahead!

Peter Stockmann. In my communication to the "People's Messenger," I have put the essential facts before the public in such a way that every fair-minded citizen can easily form his own opinion. From it you will see that the main result of the Medical Officer's proposals—apart from their constituting a vote of censure on the leading men of the town—would be to saddle the ratepayers with an unnecessary expenditure of at least some thousands of pounds.

Sounds of disapproval among the audience, and some catcalls.

Aslaksen (ringing his bell). Silence, please, gentlemen! I beg to support the Mayor's motion. I quite agree with him that there is something behind this agitation started by the Doctor. He talks about the Baths; but it is a revolution he is aiming at—he wants to get the administration of the town put into new hands. No one doubts the honesty of the Doctor's intentions—no one will suggest that there can

be any two opinions as to that. I myself am a believer in self-government for the people, provided it does not fall too heavily on the ratepayers. But that would be the case here; and that is why I will see Dr. Stockmann damned—I beg your pardon—before I go with him in the matter. You can pay too dearly for a thing sometimes; that is my opinion.

Loud applause on all sides.

Hovstad. I, too, feel called upon to explain my position. Dr. Stockmann's agitation appeared to be gaining a certain amount of sympathy at first, so I supported it as impartially as I could. But presently we had reason to suspect that we had allowed ourselves to be misled by misrepresentation of the state of affairs—

Dr. Stockmann. Misrepresentation—!

Hovstad. Well, let us say a not entirely trustworthy representation. The Mayor's statement has proved that. I hope no one here has any doubt as to my liberal principles; the attitude of the "People's Messenger" towards important political questions is well known to everyone. But the advice of experienced and thoughtful men has convinced me that in purely local matters a newspaper ought to proceed with a certain caution.

Aslaksen. I entirely agree with the speaker.

Hovstad. And, in the matter before us, it is now an undoubted fact that Dr. Stockmann has public opinion against him. Now, what is an editor's first and most obvious duty, gentlemen? Is it not to work in harmony with his readers? Has he not received a sort of tacit mandate to work persistently and assiduously for the welfare of those whose opinions he represents? Or is it possible I am mistaken in that?

Voices from the crowd. No, no! You are quite right!

Hovstad. It has cost me a severe struggle to break with a man in whose house I have been lately a frequent guest—a man who till today has been able to pride himself on the undivided good will of his fellow citizens—a man whose only, or at all events whose essential, failing is that he is swayed by his heart rather than his head.

A few scattered voices. That is true! Bravo, Stockmann!

Hovstad. But my duty to the community obliged me to break with him. And there is another consideration that impels me to oppose him, and, as far as possible, to arrest him on the perilous course he has adopted; that is, consideration for his family—

Dr. Stockmann. Please stick to the water supply and drainage!

Hovstad.—consideration, I repeat, for his wife and his children for whom he has made no provision.

Morten. Is that us, mother?

Mrs. Stockmann. Hush!

Aslaksen. I will now put the Mayor's proposition to the vote.

Dr. Stockmann. There is no necessity! Tonight I have no intention of dealing with all that filth down at the Baths. No; I have something quite different to say to you.

Peter Stockmann (aside). What is coming now?

A Drunken Man (by the entrance door). I am a ratepayer! And therefore I have a right to speak too! And my entire—firm—inconceivable opinion is—

A number of voices. Be quiet, at the back there!

Others. He is drunk! Turn him out! (*They turn him out.*)

Dr. Stockmann. Am I allowed to speak?

Aslaksen (ringing his bell). Dr. Stockmann will address the meeting.

Dr. Stockmann. I should like to have seen anyone, a few days ago, dare to attempt to silence me as has been done tonight! I would have defended my sacred rights as a man, like a lion! But now it is all one to me; I have something of even weightier importance to say to you.

The crowd presses nearer to him, MORTEN KIIL conspicuous among them.

Dr. Stockmann (continuing). I have thought and pondered a great deal, these last few days—pondered over such a variety of things that in the end my head seemed too full to hold them—

Peter Stockmann (with a cough). Ahem!

Dr. Stockmann.—but I got them clear in my mind at last, and then I saw the whole situation lucidly. And that is why I am standing here tonight. I have a great revelation to make to you, my fellow citizens! I will impart to you a discovery of a far wider scope than the trifling matter that our water supply is poisoned and our medicinal Baths are standing on pestiferous soil.

A number of voices (shouting). Don't talk about the Baths! We won't hear you! None of that!

Dr. Stockmann. I have already told you that what I want to speak about is the great discovery I have made lately—the discovery that all the sources of our *moral* life are poisoned and that the whole fabric of our civic community is founded on the pestiferous soil of falsehood.

Voices of disconcerted Citizens. What is that he says?

Peter Stockmann. Such an insinuation—!

Aslaksen (with his hand on his bell). I call upon the speaker to moderate his language.

Dr. Stockmann. I have always loved my native town as a man only can love the home of his youthful days. I was not old when I went away from here; and exile, longing and memories cast as it were an additional halo over both the town and its inhabitants. (*Some clapping and applause.*) And there I stayed, for many years, in a horrible hole far away up north. When I came into contact with some of the people that lived scattered about among the rocks, I often thought it would of been more service to the poor half-starved creatures if a veterinary doctor had been sent up there, instead of a man like me. (*Murmurs among the crowd.*)

Billing (laying down his pen). I'm damned if I have ever heard—!

Hovstad. It is an insult to a respectable population!

Dr. Stockmann. Wait a bit! I do not think anyone will charge me with having forgotten my native town up there. I was like one of the eider ducks brooding on its nest, and what I hatched was—the plans for these Baths. (*Applause and protests.*) And then when fate at last decreed for me the great happiness of coming home again—I assure you, gentlemen, I thought I had nothing more in the world to wish for. Or rather, there was one thing I wished for—eagerly, untiringly, ardently—and that was to be able to be of service to my native town and the good of the community.

Peter Stockmann (looking at the ceiling). You chose a strange way of doing it—ahem!

Dr. Stockmann. And so, with my eyes blinded to the real facts, I reveled in happiness. But yesterday morning—no, to be precise, it was yesterday afternoon—the eyes of my mind were opened wide, and the first thing I realized was the colossal stupidity of the authorities—. (*Uproar, shouts and laughter. MRS. STOCKMANN coughs persistently.*)

Peter Stockmann. Mr. Chairman!

Aslaksen (ringing his bell). By virtue of my authority—!

Dr. Stockmann. It is a petty thing to catch me up on a word, Mr. Aslaksen. What I mean is only that I got scent of the unbelievable piggishness our leading men had been responsible for down at the Baths. I can't stand leading men at any price!—I have had enough of such people in my time. They are like billy goats in a young plantation; they do mischief everywhere. They stand in a free man's way, which—

ever way he turns, and what I should like best would be up to see them exterminated like any other vermin—. (*Uproar.*)

Peter Stockmann. Mr. Chairman, can we allow such expressions to pass?

Aslaksen (with his hand on his bell). Doctor—!

Dr. Stockmann. I cannot understand how it is that I have only now acquired a clear conception of what these gentry are, when I had almost daily before my eyes in this town such an excellent specimen of them—my brother Peter—slow-witted and hidebound in prejudice—.

Laughter, uproar and hisses. MRS. STOCKMANN *sits coughing assiduously.* ASLAKSEN *rings his bell violently.*

The Drunken Man (who has got in again). Is it me he is talking about? My name's Petersen, all right—but devil take me if I—

Angry Voices. Turn out that drunken man! Turn him out. (*He is turned out again.*)

Peter Stockmann. Who was that person?

1st Citizen. I don't know who he is, Mr. Mayor.

2nd Citizen. He doesn't belong here.

3rd Citizen. I expect he is a navvy from over at (*the rest is inaudible*).

Aslaksen. He had obviously had too much beer. Proceed, Doctor; but please strive to be moderate in your language.

Dr. Stockmann. Very well, gentlemen, I will say no more about our leading men. And if anyone imagines, from what I have just said, that my object is to attack these people this evening, he is wrong—absolutely wide of the mark. For I cherish the comforting conviction that these parasites—all these venerable relics of a dying school of thought—are most admirably paving the way for their own extinction; they need no doctor's help to hasten their end. Nor is it folk of that kind who constitute the most pressing danger to the community. It is not they who are most instrumental in poisoning the sources of our moral life and infecting the ground on which we stand. It is not they who are the most dangerous enemies of truth and freedom among us.

Shouts from all sides. Who then? Who is it? Name! Name!

Dr. Stockmann. You may depend upon it I shall name them! That is precisely the great discovery I made yesterday. (*Raises his voice.*) The most dangerous enemy of truth and freedom among us is the compact majority—yes, the damned compact Liberal majority—that is it! Now you know!

Tremendous uproar. Most of the crowd are shouting, stamping and hissing. Some of the older men among them exchange stolen glances

and seem to be enjoying themselves. MRS. STOCKMANN gets up, looking anxious. EJLIF and MORTEN advance threateningly upon some schoolboys who are playing pranks. ASLAKSEN rings his bell and begs for silence. HOVSTAD and BILLING both talk at once, but are inaudible. At last quiet is restored.

Aslaksen. As chairman, I call upon the speaker to withdraw the ill-considered expressions he has just used.

Dr. Stockmann. Never, Mr. Aslaksen! It is the majority in our community that denies me my freedom and seeks to prevent my speaking the truth.

Hovstad. The majority always has right on its side.

Billing. And truth too, by God!

Dr. Stockmann. The majority *never* has right on its side. Never, I say! That is one of these social lies against which an independent, intelligent man must wage war. Who is it that constitute the majority of the population in a country? Is it the clever folk or the stupid? I don't imagine you will dispute the fact that at present the stupid people are in an absolutely overwhelming majority all the world over. But, good Lord!—you can never pretend that it is right that the stupid folk should govern the clever ones! (*Uproar and cries.*) Oh, yes—you can shout me down, I know! but you cannot answer me. The majority has *might* on its side—unfortunately; but *right* it has *not*. I am in the right—I and a few other scattered individuals. The minority is always in the right. (*Renewed uproar.*)

Hovstad. Aha!—so Dr. Stockmann has become an aristocrat since the day before yesterday!

Dr. Stockmann. I have already said that I don't intend to waste a word on the puny, narrow-chested, short-winded crew whom we are leaving astern. Pulsating life no longer concerns itself with them. I am thinking of the few, the scattered few among us, who have absorbed new and vigorous truths. Such men stand, as it were, at the outposts, so far ahead that the compact majority has not yet been able to come up with them; and there they are fighting for truths that are too newly born into the world of consciousness to have any considerable number of people on their side as yet.

Hovstad. So the Doctor is a revolutionary now!

Dr. Stockmann. Good heavens—of course I am, Mr. Hovstad! I propose to raise a revolution against the lie that the majority has the monopoly of the truth. What sort of truths are they that the majority usually

supports? They are truths that are of such advanced age that they are beginning to break up. And if a truth is as old as that, it is also in a fair way to become a lie, gentlemen. (*Laughter and mocking cries.*) Yes, believe me or not, as you like; but truths are by no means as long-lived as Methuselah—as some folk imagine. A normally constituted truth lives, let us say, as a rule seventeen or eighteen, or at most twenty years; seldom longer. But truths as aged as that are always worn frightfully thin, and nevertheless it is only then that the majority recognizes them and recommends them to the community as wholesome moral nourishment. There is no great nutritive value in that sort of fare, I can assure you; and, as a doctor, I ought to know. These “majority truths” are like last year’s cured meat—like rancid, tainted ham; and they are the origin of the moral scurvy that is rampant in our communities.

Aslaksen. It appears to me that the speaker is wandering a long way from his subject.

Peter Stockmann. I quite agree with the Chairman.

Dr. Stockmann. Have you gone clean out of your senses, Peter? I am sticking as closely to my subject as I can; for my subject is precisely this, that it is the masses, the majority—this infernal compact majority—that poisons the sources of our moral life and infects the ground we stand on.

Hovstad. And all this because the great, broad-minded majority of the people is prudent enough to show deference only to well-ascertained and well-approved truths?

Dr. Stockmann. Ah, my good Mr. Hovstad, don’t talk nonsense about well-ascertained truths! The truths of which the masses now approve are the very truths that the fighters at the outposts held to in the days of our grandfathers. We fighters at the outposts nowadays no longer approve of them; and I do not believe there is any other well-ascertained truth except this, that no community can live a healthy life if it is nourished only on such old marrowless truths.

Hovstad. But instead of standing there using vague generalities, it would be interesting if you would tell us what these old marrowless truths are, that we are nourished on.

Applause from many quarters.

Dr. Stockmann. Oh, I could give you a whole string of such abominations; but to begin with I will confine myself to one well-approved truth, which at bottom is a foul lie, but upon which nevertheless

Mr. Hovstad and the "People's Messenger" and all the "Messenger's" supporters are nourished.

Hovstad. And that is—?

Dr. Stockmann. That is, the doctrine you have inherited from your forefathers and proclaim thoughtlessly far and wide—the doctrine that the public, the crowd, the masses, are the essential part of the population—that they constitute the People—that the common folk, the ignorant and incomplete element in the community, have the same right to pronounce judgment and to approve, to direct and to govern, as the isolated, intellectually superior personalities in it.

Billing. Well, damn me if ever I—

Hovstad (at the same time, shouting out). Fellow citizens, take good note of that!

A number of voices (angrily). Oho!—we are not the People! Only the superior folk are to govern, are they!

A Workman. Turn the fellow out, for talking such rubbish!

Another. Out with him!

Another (calling out). Blow your horn, Evensen!

A horn is blown loudly, amidst hisses and an angry uproar.

Dr. Stockmann (when the noise has somewhat abated). Be reasonable! Can't you stand hearing the voice of truth for once? I don't in the least expect you to agree with me all at once; but I must say I did expect Mr. Hovstad to admit I was right, when he had recovered his composure a little. He claims to be a freethinker—

Voices (in murmurs of astonishment). Freethinker, did he say? Is Hovstad a freethinker?

Hovstad (shouting). Prove it, Dr. Stockmann! When have I said so in print?

Dr. Stockmann (reflecting). No, confound it, you are right!—you have never had the courage to. Well, I won't put you in a hole, Mr. Hovstad. Let us say it is I that am the freethinker, then. I am going to prove to you, scientifically, that the "People's Messenger" leads you by the nose in a shameful manner when it tells you that you—that the common people, the crowd, the masses, are the real essence of the People. That is only a newspaper lie, I tell you! The common people are nothing more than the raw material of which a People is made. (*Groans, laughter and uproar.*) Well, isn't that the case? Isn't there an enormous difference between a well-bred and an ill-bred strain of animals? Take, for instance, a common barn-door hen. What sort of

eating do you get from a shrivelled up old scrag of a fowl like that? Not much, do you! And what sort of eggs does it lay? A fairly good crow or a raven can lay pretty nearly as good an egg. But take a well-bred Spanish or Japanese hen, or a good pheasant or a turkey—then you will see the difference. Or take the case of dogs, with whom we humans are on such intimate terms. Think first of an ordinary common cur—I mean one of the horrible, coarse-haired, low-bred curs that do nothing but run about the streets and befoul the walls of the houses. Compare one of these curs with a poodle whose sires for many generations have been bred in a gentleman's house, where they have had the best of food and had the opportunity of hearing soft voices and music. Do you not think that the poodle's brain is developed to quite a different degree from that of the cur? Of course it is. It is puppies of well-bred poodles like that, that showmen train to do incredibly clever tricks—things that a common cur could never learn to do even if it stood on its head. (*Uproar and mocking cries.*)

A Citizen (calls out). Are you going to make out we are dogs, now?

Another Citizen. We are not animals, Doctor!

Dr. Stockmann. Yes, but, bless my soul, we *are*, my friend! It is true we are the finest animals anyone could wish for; but, even among us, exceptionally fine animals are rare. There is a tremendous difference between poodle-men and cur-men. And the amusing part of it is, that Mr. Hovstad quite agrees with me as long as it is a question of four-footed animals—

Hovstad. Yes, it is true enough as far as they are concerned.

Dr. Stockmann. Very well. But as soon as I extend the principle and apply it to two-legged animals, Mr. Hovstad stops short. He no longer dares to think independently, or to pursue his ideas to their logical conclusion; so he turns the whole theory upside down and proclaims in the "People's Messenger" that it is the barn-door hens and street curs that are the finest specimens in the menagerie. But that is always the way, as long as a man retains the traces of common origin and has not worked his way up to intellectual distinction.

Hovstad. I lay no claim to any sort of distinction. I am the son of humble countryfolk, and I am proud that the stock I come from is rooted deep among the common people he insults!

Voices. Bravo, Hovstad! Bravo! Bravo!

Dr. Stockmann. The kind of common people I mean are not only to be found low down in the social scale; they crawl and swarm all around us—even in the highest social positions. You have only to look at your

own fine, distinguished Mayor! My brother Peter is every bit as plebeian as anyone that walks in two shoes—(*laughter and hisses*).

Peter Stockmann. I protest against personal allusions of this kind.

Dr. Stockmann (imperturbably). —and that, not because he is, like myself, descended from some old rascal of a pirate from Pomerania or thereabouts—because that is who we are descended from—

Peter Stockmann. An absurd legend. I deny it!

Dr. Stockmann. —but because he thinks what his superiors think and holds the same opinions as they. People who do that are, intellectually speaking, common people; and that is why my magnificent brother Peter is in reality so very far from any distinction—and consequently also so far from being liberal-minded.

Peter Stockmann. Mr. Chairman—!

Hovstad. So it is only the distinguished men that are liberal-minded in this country? We are learning something quite new! (*Laughter.*)

Dr. Stockmann. Yes, that is part of my new discovery too. And another part of it is that broad-mindedness is almost precisely the same thing as morality. That is why I maintain that it is absolutely inexcusable in the “People’s Messenger” to proclaim, day in and day out, the false doctrine that it is the masses, the crowd, the compact majority, that have the monopoly of broad-mindedness and morality—and that vice and corruption and every kind of intellectual depravity are the result of culture, just as all the filth that is draining into our Baths is the result of the tanneries up at Mölledal! (*Uproar and interruptions. DR. STOCKMANN is undisturbed, and goes on, carried away by his ardor, with a smile.*) And yet this same “People’s Messenger” can go on preaching that the masses ought to be elevated to higher conditions of life! But, bless my soul, if the “Messenger’s” teaching is to be depended upon, this very raising up the masses would mean nothing more or less than setting them straightway upon the paths of depravity! Happily the theory that culture demoralizes is only an old falsehood that our forefathers believed in and we have inherited. No, it is ignorance, poverty, ugly conditions of life, that do the devil’s work! In a house which does not get aired and swept every day—my wife Katherine maintains that the floor ought to be scrubbed as well, but that is a debatable question—in such a house, let me tell you, people will lose within two or three years the power of thinking or acting in a moral manner. Lack of oxygen weakens the conscience. And there must be a plentiful lack

of oxygen in very many houses in this town, I should think, judging from the fact that the whole compact majority can be unconscientious enough to wish to build the town's prosperity on a quagmire of falsehood and deceit.

Aslaksen. We cannot allow such a grave accusation to be flung at a citizen community.

A Citizen. I move that the Chairman direct the speaker to sit down.

Voices (angrily). Hear, hear! Quite right! Make him sit down!

Dr. Stockmann (losing his self-control). Then I will go and shout the truth at every street corner! I will write it in other towns' newspapers! The whole country shall know what is going on here!

Hovstad. It almost seems as if Dr. Stockmann's intention were to ruin the town.

Dr. Stockmann. Yes, my native town is so dear to me that I would rather ruin it than see it flourishing upon a lie.

Aslaksen. This is really serious.

Uproar and catcalls. MRS. STOCKMANN coughs, but to no purpose; her husband does not listen to her any longer.

Hovstad (shouting above the din). A man must be a public enemy to wish to ruin a whole community!

Dr. Stockmann (with growing fervor). What does the destruction of a community matter, if it lives on lies! It ought to be razed to the ground, I tell you! All who live by lies ought to be exterminated like vermin! You will end by infecting the whole country; you will bring about such a state of things that the whole country will deserve to be ruined. And if things come to that pass, I shall say from the bottom of my heart: Let the whole country perish, let all these people be exterminated!

Voices from the crowd. That is talking like an out-and-out enemy of the people!

Billing. There sounded the voice of the people, by all that's holy!

The whole crowd (shouting). Yes, yes! He is an enemy of the people! He hates his country! He hates his own people!

Aslaksen. Both as a citizen and as an individual, I am profoundly disturbed by what we have had to listen to. Dr. Stockmann has shown himself in a light I should never have dreamed of. I am unhappily obliged to subscribe to the opinion which I have just heard my estimable fellow citizens utter; and I propose that we should give ex-

pression to that opinion in a resolution. I propose a resolution as follows: "This meeting declares that it considers Dr. Thomas Stockmann, Medical Officer of the Baths, to be an enemy of the people."

A storm of cheers and applause. A number of men surround the DOCTOR and hiss him. MRS. STOCKMANN and PETRA have got up from their seats. MORTEN and EJLIF are fighting the other schoolboys for hissing; some of their elders separate them.

Dr. Stockmann (to the men who are hissing him). Oh, you fools! I tell you that—

Aslaksen (ringing his bell). We cannot hear you now, Doctor. A formal vote is about to be taken; but, out of regard for personal feelings, it shall be by ballot and not verbal. Have you any clean paper, Mr. Billing?

Billing. I have both blue and white here.

Aslaksen (going to him). That will do nicely; we shall get on more quickly that way. Cut it up into small strips—yes, that's it. (*To the meeting.*) Blue means no; white means yes. I will come round myself and collect votes.

PETER STOCKMANN leaves the hall. ASLAKSEN and one or two others go round the room with the slips of paper in their hats.

1st Citizen (to HOVSTAD). I say, what has come to the Doctor? What are we to think of it?

Hovstad. Oh, you know how headstrong he is.

2nd Citizen (to BILLING). Billing, you go to their house—have you ever noticed if the fellow drinks?

Billing. Well, I'm hanged if I know what to say. There are always spirits on the table when you go.

3rd Citizen. I rather think he goes quite off his head sometimes.

1st Citizen. I wonder if there is any madness in his family?

Billing. I shouldn't wonder if there were.

4th Citizen. No, it is nothing more than sheer malice; he wants to get even with somebody for something or other.

Billing. Well, certainly he suggested a rise in his salary on one occasion lately, and did not get it.

The Citizens (together). Ah!—then it is easy to understand how it is!

The Drunken Man (who has got amongst the audience again). I want a blue one, I do! And I want a white one too!

Voices. It's that drunken chap again! Turn him out!

Morten K il (*going up to* DR. STOCKMANN). Well, Stockmann, do you see what these monkey tricks of yours lead to?

Dr. Stockmann. I have done my duty.

Morten K il. What was that you said about the tanneries at M lledal?

Dr. Stockmann. You heard well enough. I said they were the source of all the filth.

Morten K il. My tannery too?

Dr. Stockmann. Unfortunately your tannery is by far the worst.

Morten K il. Are you going to put that in the papers?

Dr. Stockmann. I shall conceal nothing.

Morten K il. That may cost you dear, Stockmann. (*Goes out.*)

A Stout Man (*going up to* CAPTAIN HORSTER, *without taking any notice of the ladies*). Well, Captain, so you lend your house to enemies of the people?

Horster. I imagine I can do what I like with my own possessions, Mr. Vik.

The Stout Man. Then you can have no objection to my doing the same with mine.

Horster. What do you mean, sir?

The Stout Man. You shall hear from me in the morning. (*Turns his back on him and moves off.*)

Petra. Was that not your owner, Captain Horster?

Horster. Yes, that was Mr. Vik the shipowner.

Aslaksen (*with the voting papers in his hands, gets up on to the platform and rings his bell*). Gentlemen, allow me to announce the result. By the votes of every one here except one person—

A Young Man. That is the drunk chap!

Aslaksen. By the votes of every one here except a tipsy man, this meeting of citizens declares Dr. Thomas Stockmann to be an enemy of the people. (*Shouts and applause.*) Three cheers for our ancient and honorable citizen community! (*Renewed applause.*) Three cheers for our able and energetic Mayor, who has so loyally suppressed the promptings of family feeling! (*Cheers.*) The meeting is dissolved. (*Gets down.*)

Billing. Three cheers for the Chairman!

The whole crowd. Three cheers for Aslaksen! Hurrah!

Dr. Stockmann. My hat and coat, Petra! Captain, have you room on your ship for passengers to the New World?

Horster. For you and yours we will make room, Doctor.

Dr. Stockmann (*as* PETRA *helps him into his coat*). Good. Come, Katherine! Come, boys!

Mrs. Stockmann (in an undertone). Thomas, dear, let us go out by the back way.

Dr. Stockmann. No back ways for me, Katherine. (*Raising his voice.*) You will hear more of this enemy of the people, before he shakes the dust off his shoes upon you! I am not so forgiving as a certain Person; I do not say: "I forgive you, for ye know not what ye do."

Aslaksen (shouting). That is a blasphemous comparison, Dr. Stockmann!

Billing. It is, by God! It's dreadful for an earnest man to listen to.

A Coarse Voice. Threatens us now, does he!

Other Voices (excitedly). Let's go and break his windows! Duck him in the fjord!

Another Voice. Blow your horn, Evensen. Pip, pip!

Horn-blowing, hisses, and wild cries. DR. STOCKMANN goes out through the hall with his family, HORSTER elbowing a way for them.

The Whole Crowd (howling after them as they go). Enemy of the People! Enemy of the People!

Billing (as he puts his papers together). Well, I'm damned if I go and drink toddy with the Stockmanns tonight!

The crowd press towards the exit. The uproar continues outside; shouts of "Enemy of the People!" are heard from without.

ACT V

SCENE. DR. STOCKMANN'S study. Bookcases, and cabinets containing specimens, line the walls. At the back is a door leading to the hall; in the foreground on the left, a door leading to the sitting room. In the right-hand wall are two windows, of which all the panes are broken. The DOCTOR'S desk, littered with books and papers, stands in the middle of the room, which is in disorder. It is morning. DR. STOCKMANN in dressing gown, slippers and a smoking cap, is bending down and raking with an umbrella under one of the cabinets. After a little while he rakes out a stone.

Dr. Stockmann (calling through the open sitting room door). Katherine, I have found another one.

Mrs. Stockmann (from the sitting room). Oh, you will find a lot more yet, I expect.

Dr. Stockmann (adding the stone to a heap of others on the table). I shall

treasure these stones as relics. Ejlif and Morten shall look at them every day, and when they are grown up they shall inherit them as heirlooms. (*Rakes about under a bookcase.*) Hasn't—what the deuce is her name?—the girl, you know—hasn't she been to fetch the glazier, yet?

Mrs. Stockmann (coming in). Yes, but he said he didn't know if he would be able to come today.

Dr. Stockmann. You will see he won't dare to come.

Mrs. Stockmann. Well, that is just what Randine thought—that he didn't dare to, on account of the neighbors. (*Calls into the sitting room.*) What is it you want, Randine? Give it to me. (*Goes in, and comes out again directly.*) Here is a letter for you, Thomas.

Dr. Stockmann. Let me see it. (*Opens and reads it.*) Ah!—of course.

Mrs. Stockmann. Who is it from?

Dr. Stockmann. From the landlord. Notice to quit.

Mrs. Stockmann. Is it possible? Such a nice man—

Dr. Stockmann (looking at the letter). Does not dare do otherwise, he says. Doesn't like doing it, but dare not do otherwise—on account of his fellow citizens—out of regard for public opinion. Is in a dependent position—dare not offend certain influential men—

Mrs. Stockmann. There, you see, Thomas!

Dr. Stockmann. Yes, yes, I see well enough; the whole lot of them in the town are cowards; not a man among them dares do anything for fear of the others. (*Throws the letter on to the table.*) But it doesn't matter to us, Katherine. We are going to sail away to the New World, and—

Mrs. Stockmann. But, Thomas, are you sure we are well advised to take this step?

Dr. Stockmann. Are you suggesting that I should stay here, where they have pilloried me as an enemy of the people—branded me—broken my windows! And just look here, Katherine—they have torn a great rent in my black trousers too!

Mrs. Stockmann. Oh, dear!—and they are the best pair you have got!

Dr. Stockmann. You should never wear your best trousers when you go out to fight for freedom and truth. It is not that I care so much about the trousers, you know; you can always sew them up again for me. But that the common herd should dare to make this attack on me, as if they were my equals—that is what I cannot, for the life of me, swallow!

Mrs. Stockmann. There is no doubt they have behaved very ill to you,

Thomas; but is that sufficient reason for our leaving our native country for good and all?

Dr. Stockmann. If we went to another town, do you suppose we should not find the common people just as insolent as they are here? Depend upon it, there is not much to choose between them. Oh, well, let the curs snap—that is not the worst part of it. The worst is that, from one end of this country to the other, every man is the slave of his Party. Although, as far as that goes, I dare say it is not much better in the free West either; the compact majority, and liberal public opinion, and all that infernal old bag of tricks are probably rampant there too. But there things are done on a larger scale, you see. They may kill you, but they won't put you to death by slow torture. They don't squeeze a free man's soul in a vise, as they do here. And, if need be, one can live in solitude. (*Walks up and down.*) If only I knew where there was a virgin forest or a small South Sea island for sale, cheap—

Mrs. Stockmann. But think of the boys, Thomas.

Dr. Stockmann (standing still). What a strange woman you are, Katherine! Would you prefer to have the boys grow up in a society like this? You saw for yourself last night that half the population are out of their minds; and if the other half have not lost their senses, it is because they are mere brutes, with no sense to lose.

Mrs. Stockmann. But, Thomas dear, the imprudent things you said had something to do with it, you know.

Dr. Stockmann. Well, isn't what I said perfectly true? Don't they turn every idea topsy-turvy? Don't they make a regular hotchpotch of right and wrong? Don't they say that the things I know are true, are lies? The craziest part of it all is the fact of these "liberals," men of full age, going about in crowds imagining that they are the broadminded party! Did you ever hear anything like it, Katherine!

Mrs. Stockmann. Yes, yes, it's mad enough of them, certainly; but—(*PETRA comes in from the sitting room*). Back from school already?

Petra. Yes. I have been given notice of dismissal.

Mrs. Stockmann. Dismissal?

Dr. Stockmann. You too?

Petra. Mrs. Busk gave me my notice; so I thought it was best to go at once.

Dr. Stockmann. You were perfectly right, too!

Mrs. Stockmann. Who would have thought Mrs. Busk was a woman like that!

Petra. Mrs. Busk isn't a bit like that, mother; I saw quite plainly how it

hurt her to do it. But she didn't dare do otherwise, she said; and so I got my notice.

Dr. Stockmann (*laughing and rubbing his hands*). She didn't dare do otherwise, either! It's delicious!

Mrs. Stockmann. Well, after the dreadful scenes last night—

Petra. It was not only that. Just listen to this, father!

Dr. Stockmann. Well?

Petra. Mrs. Busk showed me no less than three letters she received this morning—

Dr. Stockmann. Anonymous, I suppose?

Petra. Yes.

Dr. Stockmann. Yes, because they didn't dare to risk signing their names, Katherine!

Petra. And two of them were to the effect that a man, who has been our guest here, was declaring last night at the Club that my views on various subjects are extremely emancipated—

Dr. Stockmann. You did not deny that, I hope?

Petra. No, you know I wouldn't. Mrs. Busk's own views are tolerably emancipated, when we are alone together; but now that this report about me is being spread, she dare not keep me on any longer.

Mrs. Stockmann. And some one who had been a guest of ours! That shows you the return you get for your hospitality Thomas!

Dr. Stockmann. We won't live in such a disgusting hole any longer. Pack up as quickly as you can, Katherine; the sooner we can get away, the better.

Mrs. Stockmann. Be quiet—I think I hear someone in the hall. See who it is, Petra.

Petra (*opening the door*). Oh, it's you, Captain Horster! Do come in.

Horster (*coming in*). Good morning. I thought I would just come in and see how you were.

Dr. Stockmann (*shaking his hand*). Thanks—that is really kind of you.

Mrs. Stockmann. And thank you, too, for helping us through the crowd, Captain Horster.

Petra. How did you manage to get home again?

Horster. Oh, somehow or other. I am fairly strong, and there is more sound than fury about these folk.

Dr. Stockmann. Yes, isn't their swinish cowardice astonishing? Look here, I will show you something! There are all the stones they have thrown through my windows. Just look at them! I'm hanged if there are more than two decently large bits of hardstone in the whole heap; the rest

are nothing but gravel—wretched little things. And yet they stood out there bawling and swearing that they would do me some violence; but as for *doing* anything—you don't see much of that in this town.

Horster. Just as well for you this time, doctor!

Dr. Stockmann. True enough. But it makes one angry all the same; because if some day it should be a question of a national fight in real earnest, you will see that public opinion will be in favor of taking to one's heels, and the compact majority will turn tail like a flock of sheep, Captain Horster. That is what is so mournful to think of; it gives me so much concern, that—. No, devil take it, it is ridiculous to care about it! They have called me an enemy of the people, so an enemy of the people let me be!

Mrs. Stockmann. You will never be that, Thomas.

Dr. Stockmann. Don't swear to that, Katherine. To be called an ugly name may have the same effect as a pin scratch in the lung. And that hateful name—I can't get quit of it. It is sticking here in the pit of my stomach, eating into me like a corrosive acid. And no magnesia will remove it.

Petra. Bah!—you should only laugh at them, father.

Horster. They will change their minds some day, Doctor.

Mrs. Stockmann. Yes, Thomas, as sure as you are standing here.

Dr. Stockmann. Perhaps, when it is too late. Much good may it do them! They may wallow in their filth then and rue the day when they drove a patriot into exile. When do you sail, Captain Horster?

Horster. Hm!—that was just what I had come to speak about—

Dr. Stockmann. Why, has anything gone wrong with the ship?

Horster. No; but what has happened is that I am not to sail in it.

Petra. Do you mean that you have been dismissed from your command?

Horster (smiling). Yes, that's just it.

Petra. You too.

Mrs. Stockmann. There, you see, Thomas!

Dr. Stockmann. And that for the truth's sake! Oh, if I had thought such a thing possible—

Horster. You mustn't take it to heart; I shall be sure to find a job with some shipowner or other, elsewhere.

Dr. Stockmann. And that is this man Vik—a wealthy man, independent of everyone and everything—! Shame on him!

Horster. He is quite an excellent fellow otherwise; he told me himself he would willingly have kept me on, if only he had dared—

Dr. Stockmann. But he didn't dare? No, of course not.

Horster. It is not such an easy matter, he said, for a party man—

Dr. Stockmann. The worthy man spoke the truth. A party is like a sausage machine; it mashes up all sorts of heads together into the same mincemeat—fatheads and blockheads, all in one mash!

Mrs. Stockmann. Come, come, Thomas dear!

Petra (to HORSTER). If only you had not come home with us, things might not have come to this pass.

Horster. I do not regret it.

Petra (holding out her hand to him). Thank you for that!

Horster (to DR. STOCKMANN). And so what I came to say was that if you are determined to go away, I have thought of another plan—

Dr. Stockmann. That's splendid!—if only we can get away at once.

Mrs. Stockmann. Hush!—wasn't that some one knocking?

Petra. That is uncle, surely.

Dr. Stockmann. Aha! (Calls out.) Come in!

Mrs. Stockmann. Dear Thomas, promise me definitely—

PETER STOCKMANN *comes in from the hall.*

Peter Stockmann. Oh, you are engaged. In that case, I will—

Dr. Stockmann. No, no, come in.

Peter Stockmann. But I wanted to speak to you alone.

Mrs. Stockmann. We will go into the sitting room in the meanwhile.

Horster. And I will look in again later.

Dr. Stockmann. No, go in there with them, Captain Horster; I want to hear more about—

Horster. Very well, I will wait, then. (*He follows MRS. STOCKMANN and PETRA into the sitting room.*)

Dr. Stockmann. I daresay you find it rather drafty here today. Put your hat on.

Peter Stockmann. Thank you, if I may. (*Does so.*) I think I caught cold last night; I stood and shivered—

Dr. Stockmann. Really? I found it warm enough.

Peter Stockmann. I regret that it was not in my power to prevent those excesses last night.

Dr. Stockmann. Have you anything particular to say to me besides that?

Peter Stockmann (taking a big letter from his pocket). I have this document for you, from the Baths Committee.

Dr. Stockmann. My dismissal?

Peter Stockmann. Yes, dating from today. (*Lays the letter on the table.*) It gives us pain to do it; but, to speak frankly, we dared not do otherwise on account of public opinion.

Dr. Stockmann (smiling). Dared not? I seem to have heard that word before, today.

Peter Stockmann. I must beg you to understand your position clearly. For the future you must not count on any practice whatever in the town.

Dr. Stockmann. Devil take the practice! But why are you so sure of that?

Peter Stockmann. The Householders' Association is circulating a list from house to house. All right-minded citizens are being called upon to give up employing you; and I can assure you that not a single head of a family will risk refusing his signature. They simply dare not.

Dr. Stockmann. No, no; I don't doubt it. But what then?

Peter Stockmann. If I might advise you, it would be best to leave the place for a little while—

Dr. Stockmann. Yes, the propriety of leaving the place *has* occurred to me.

Peter Stockmann. Good. And then, when you have had six months to think things over, if, after mature consideration, you can persuade yourself to write a few words of regret, acknowledging your error—

Dr. Stockmann. I might have my appointment restored to me, do you mean?

Peter Stockmann. Perhaps. It is not at all impossible.

Dr. Stockmann. But what about public opinion, then? Surely you would not dare to do it on account of public feeling.

Peter Stockmann. Public opinion is an extremely mutable thing. And, to be quite candid with you, it is a matter of great importance to us to have some admission of that sort from you in writing.

Dr. Stockmann. Oh, that's what you are after, is it! I will just trouble you to remember what I said to you lately about foxy tricks of that sort!

Peter Stockmann. Your position was quite different then. At that time you had reason to suppose you had the whole town at your back—

Dr. Stockmann. Yes, and now I feel I have the whole town *on* my back—*(flaring up)*. I would not do it if I had the devil and his dam on my back—! Never—never, I tell you!

Peter Stockmann. A man with a family has no right to behave as you do. You have no right to do it, Thomas.

Dr. Stockmann. I have no right! There is only one single thing in the world a free man has no right to do. Do you know what that is?

Peter Stockmann. No.

Dr. Stockmann. Of course you don't, but I will tell you. A free man has no right to soil himself with filth; he has no right to behave in a way that would justify his spitting in his own face.

Peter Stockmann. This sort of thing sounds extremely plausible, of course; and if there were no other explanation for your obstinacy—. But as it happens that there is—

Dr. Stockmann. What do you mean?

Peter Stockmann. You understand very well what I mean. But, as your brother and as a man of discretion, I advise you not to build too much upon expectations and prospects that may so very easily fail you.

Dr. Stockmann. What in the world is all this about?

Peter Stockmann. Do you really ask me to believe that you are ignorant of the terms of Mr. Kiil's will?

Dr. Stockmann. I know that the small amount he possesses is to go to an institution for indigent old workpeople. How does that concern me?

Peter Stockmann. In the first place, it is by no means a small amount that is in question. Mr. Kiil is a fairly wealthy man.

Dr. Stockmann. I had no notion of that!

Peter Stockmann. Hm!—hadn't you really? Then I suppose you had no notion, either, that a considerable portion of his wealth will come to your children, you and your wife having a liferent of the capital. Has he never told you so?

Dr. Stockmann. Never, on my honor! Quite the reverse; he has consistently done nothing but fume at being so unconscionably heavily taxed. But are you perfectly certain of this, Peter?

Peter Stockmann. I have it from an absolutely reliable source.

Dr. Stockmann. Then, thank God, Katherine is provided for—and the children too! I must tell her this at once—(*calls out*) Katherine, Katherine!

Peter Stockmann (restraining him). Hush, don't say a word yet!

Mrs. Stockmann (opening the door). What is the matter?

Dr. Stockmann. Oh, nothing, nothing; you can go back. (*She shuts the door. DR. STOCKMANN walks up and down in his excitement.*) Provided for!—Just think of it, we are all provided for. And for life! What a blessed feeling it is to know one is provided for!

Peter Stockmann. Yes, but that is just exactly what you are not. Mr. Kiil can alter his will any day he likes.

Dr. Stockmann. But he won't do that, my dear Peter. "The Badger" is much too delighted at my attack on you and your wise friends.

Peter Stockmann (starts and looks intently at him). Ah, that throws a light on various things.

Dr. Stockmann. What things?

Peter Stockmann. I see that the whole thing was a combined maneuver on

your part and his. These violent, reckless attacks that you have made against the leading men of the town, under the pretense that it was in the name of truth—

Dr. Stockmann. What about them?

Peter Stockmann. I see that they were nothing else than the stipulated price for that vindictive old man's will.

Dr. Stockmann (almost speechless). Peter—you are the most disgusting plebeian I have ever met in all my life.

Peter Stockmann. All is over between us. Your dismissal is irrevocable—we have a weapon against you now. (*Goes out.*)

Dr. Stockmann. For shame! For shame! (*Calls out.*) Katherine, you must have the floor scrubbed after him! Let—what's her name—devil take it, the girl who has always got soot on her nose—

Mrs. Stockmann (in the sitting room). Hush, Thomas, be quiet!

Petra (coming to the door). Father, grandfather is here, asking if he may speak to you alone.

Dr. Stockmann. Certainly he may. (*Going to the door.*) Come in, Mr. Kiil. (*MORTEN KIIL comes in. DR. STOCKMANN shuts the door after him.*) What can I do for you? Won't you sit down?

Morten Kiil. I won't sit. (*Looks around.*) You look very comfortable here today, Thomas.

Dr. Stockmann. Yes, don't we!

Morten Kiil. Very comfortable—plenty of fresh air. I should think you have got enough today of that oxygen you were talking about yesterday. Your conscience must be in splendid order today, I should think.

Dr. Stockmann. It is.

Morten Kiil So I should think. (*Taps his chest.*) Do you know what I have got here?

Dr. Stockmann. A good conscience, too, I hope.

Morten Kiil. Bah! No, it is something better than that. (*He takes a thick pocketbook from his breast pocket, opens it and displays a packet of papers.*)

Dr. Stockmann (looking at him in astonishment). Shares in the Baths?

Morten Kiil They were not difficult to get today.

Dr. Stockmann. And you have been buying—?

Morten Kiil. As many as I could pay for.

Dr. Stockmann. But, my dear Mr. Kiil—consider the state of the Baths' affairs!

Morten Kiil. If you behave like a reasonable man, you can soon set the Baths on their feet again.

Dr. Stockmann. Well, you can see for yourself that I have done all I can, but—. They are all mad in this town!

Morten K il. You said yesterday that the worst of this pollution came from my tannery. If that is true, then my grandfather and my father before me, and I myself, for many years past, have been poisoning the town like three destroying angels. Do you think I am going to sit quiet under that reproach?

Dr. Stockmann. Unfortunately I am afraid you will have to.

Morten K il. No, thank you. I am jealous of my name and reputation. They call me “the Badger,” I am told. A badger is a kind of pig, I believe; but I am not going to give them the right to call me that. I mean to live and die a clean man.

Dr. Stockmann. And how are you going to set about it?

Morten K il. You shall cleanse me, Thomas.

Dr. Stockmann. I!

Morten K il. Do you know what money I have bought these shares with? No, of course you can’t know—but I will tell you. It is the money that Katherine and Petra and the boys will have when I am gone. Because I have been able to save a little bit after all, you know.

Dr. Stockmann (flaring up). And you have gone and taken Katherine’s money for *this!*

Morten K il. Yes, the whole of the money is invested in the Baths now. And now I just want to see whether you are quite stark, staring mad, Thomas! If you still make out that these animals and other nasty things of that sort come from my tannery, it will be exactly as if you were to flay broad strips of skin from Katherine’s body, and Petra’s, and the boys’; and no decent man would do that—unless he were mad.

Dr. Stockmann (walking up and down). Yes, but I *am* mad; I *am* mad!

Morten K il. You cannot be so absurdly mad as all that, when it is a question of your wife and children.

Dr. Stockmann (standing still in front of him). Why couldn’t you consult me about it, before you went and bought all that trash?

Morten K il. What is done cannot be undone.

Dr. Stockmann (walks about uneasily). If only I were not so certain about it—! But I am absolutely convinced that I am right.

Morten K il (weighing the pocketbook in his hand). If you stick to your mad idea, this won’t be worth much, you know. (*Puts the pocketbook in his pocket.*)

Dr. Stockmann. But, hang it all! it might be possible for science to dis-

cover some prophylactic, I should think—or some antidote of some kind—

Morten Küil. To kill these animals, do you mean?

Dr. Stockmann. Yes, or to make them innocuous.

Morten Küil. Couldn't you try some ratsbane?

Dr. Stockmann. Don't talk nonsense! They all say it is only imagination, you know. Well, let it go at that! Let them have their own way about it! Haven't the ignorant, narrow-minded curs reviled me as an enemy of the people?—and haven't they been ready to tear the clothes off my back too?

Morten Küil. And broken all your windows to pieces!

Dr. Stockmann. And then there is my duty to my family. I must talk it over with Katherine; she is great on those things.

Morten Küil. That is right; be guided by a reasonable woman's advice.

Dr. Stockmann (advancing towards him). To think you could do such a preposterous thing! Risking Katherine's money in this way, and putting me in such a horribly painful dilemma! When I look at you, I think I see the devil himself—.

Morten Küil. Then I had better go. But I must have an answer from you before two o'clock—yes or no. If it is no, the shares go to a charity, and that this very day.

Dr. Stockmann. And what does Katherine get?

Morten Küil. Not a halfpenny. (*The door leading to the hall opens and HOVSTAD and ASLAKSEN make their appearance.*) Look at those two!

Dr. Stockmann (staring at them). What the devil!—have you actually the face to come into my house?

Hovstad. Certainly.

Aslaksen. We have something to say to you, you see.

Morten Küil (in a whisper). Yes or no—before two o'clock.

Aslaksen (glancing at HOVSTAD). Aha! (*MORTEN KÜIL goes out.*)

Dr. Stockmann. Well, what do you want with me? Be brief.

Hovstad. I can quite understand that you are annoyed with us for our attitude at the meeting yesterday—

Dr. Stockmann. Attitude, do you call it? Yes, it was a charming attitude! I call it weak, womanish—damnably shameful!

Hovstad. Call it what you like, we could not do otherwise.

Dr. Stockmann. You *dared* not do otherwise—isn't that it?

Hovstad. Well, if you like to put it that way.

Aslaksen. But why did you not let us have word of it beforehand?—just a hint to Mr. Hovstad or to me?

Dr. Stockmann. A hint? Of what?

Aslaksen. Of what was behind it all.

Dr. Stockmann. I don't understand you in the least.

Aslaksen (with a confidential nod). Oh yes, you do, Dr. Stockmann.

Hovstad. It is no good making a mystery of it any longer.

Dr. Stockmann (looking first at one of them and then at the other). What the devil do you both mean?

Aslaksen. May I ask if your father-in-law is not going round the town buying up all the shares in the Baths?

Dr. Stockmann. Yes, he has been buying Bath shares today; but—

Aslaksen. It would have been more prudent to get some one else to do it—some one less nearly related to you.

Hovstad. And you should not have let your name appear in the affair. There was no need for anyone to know that the attack on the Baths came from you. You ought to have consulted me, Dr. Stockmann.

Dr. Stockmann (looks in front of him; then a light seems to dawn on him and he says in amazement): Are such things conceivable? Are such things possible?

Aslaksen (with a smile). Evidently they are. But it is better to use a little finesse, you know.

Hovstad. And it is much better to have several persons in a thing of that sort; because the responsibility of each individual is lessened, when there are others with him.

Dr. Stockmann (composedly). Come to the point, gentlemen. What do you want?

Aslaksen. Perhaps Mr. Hovstad had better—

Hovstad. No, you tell him, Aslaksen.

Aslaksen. Well, the fact is that, now we know the bearings of the whole affair, we think we might venture to put the "People's Messenger" at your disposal.

Dr. Stockmann. Do you dare do that now? What about public opinion? Are you not afraid of a storm breaking upon our heads?

Hovstad. We will try to weather it.

Aslaksen. And you must be ready to go off quickly on a new tack, Doctor. As soon as your invective has done its work—

Dr. Stockmann. Do you mean, as soon as my father-in-law and I have got hold of the shares at a low figure?

Hovstad. Your reasons for wishing to get the control of the Baths are mainly scientific, I take it.

Dr. Stockmann. Of course; it was for scientific reasons that I persuaded

the old "Badger" to stand in with me in the matter. So we will tinker at the conduit pipes a little, and dig up a little bit of the shore, and it shan't cost the town a sixpence. That will be all right—eh?

Hovstad. I think so—if you have the "People's Messenger" behind you.

Aslaksen. The Press is a power in a free community, Doctor.

Dr. Stockmann. Quite so. And so is public opinion. And you, Mr. Aslaksen—I suppose you will be answerable for the Householders' Association?

Aslaksen. Yes, and for the Temperance Society. You may rely on that.

Dr. Stockmann. But, gentlemen—I really am ashamed to ask the question—but, what return do you—?

Hovstad. We should prefer to help you without any return whatever, believe me. But the "People's Messenger" is in rather a shaky condition; it doesn't go really well; and I should be very unwilling to suspend the paper now, when there is so much work to do here in the political way.

Dr. Stockmann. Quite so; that would be a great trial to such a friend of the people as you are. (*Flares up.*) But I am an enemy of the people, remember! (*Walks about the room.*) Where have I put my stick? Where the devil is my stick?

Hovstad. What's that?

Aslaksen. Surely you never mean—?

Dr. Stockmann (standing still). And suppose I don't give you a single penny of all I get out of it? Money is not very easy to get out of us rich folk, please to remember!

Hovstad. And you please to remember that this affair of the shares can be represented in two ways!

Dr. Stockmann. Yes, and you are just the man to do it. If I don't come to the rescue of the "People's Messenger," you will certainly take an evil view of the affair; you will hunt me down, I can well imagine—pursue me—try to throttle me as a dog does a hare.

Hovstad. It is a natural law; every animal must fight for its own livelihood.

Aslaksen. And get its food where it can, you know.

Dr. Stockmann (walking about the room). Then you go and look for yours in the gutter; because I am going to show you which is the strongest animal of us three! (*Finds an umbrella and brandishes it above his head.*) Ah, now—!

Hovstad. You are surely not going to use violence!

Aslaksen. Take care what you are doing with that umbrella.

Dr. Stockmann. Out of the window with you, Mr. Hovstad!

Hovstad (edging to the door). Are you quite mad!

Dr. Stockmann. Out of the window, Mr. Aslaksen! Jump, I tell you! You will have to do it, sooner or later.

Aslaksen (running round the writing table). Moderation, Doctor—I am a delicate man—I can stand so little—(*calls out*) help, help!

MRS. STOCKMANN, PETRA *and* HORSTER *come in from the sitting room.*

Mrs. Stockmann. Good gracious, Thomas! What is happening?

Dr. Stockmann (brandishing the umbrella). Jump out, I tell you! Out into the gutter!

Hovstad. An assault on an unoffending man! I call you to witness, Captain Horster. (*Hurries out through the hall.*)

Aslaksen (irresolutely). If only I knew the way about here—. (*Steals out through the sitting room.*)

Mrs. Stockmann (holding her husband back). Control yourself, Thomas!

Dr. Stockmann (throwing down the umbrella). Upon my soul, they have escaped after all.

Mrs. Stockmann. What did they want you to do?

Dr. Stockmann. I will tell you later on; I have something else to think about now. (*Goes to the table and writes something on a calling card.*) Look there, Katherine; what is written there?

Mrs. Stockmann. Three big No's; what does that mean?

Dr. Stockmann. I will tell you that too, later on. (*Holds out the card to PETRA.*) There, Petra; tell sooty-face to run over to "the Badger's" with that, as quickly as she can. Hurry up! (*PETRA takes the card and goes out to the hall.*)

Dr. Stockmann. Well, I think I have had a visit from every one of the devil's messengers today! But now I am going to sharpen my pen till they can feel its point; I shall dip it in venom and gall; I shall hurl my inkpot at their heads!

Mrs. Stockmann. Yes, but we are going away, you know, Thomas.

PETRA *comes back.*

Dr. Stockmann. Well?

Petra. She has gone with it.

Dr. Stockmann. Good. Going away, did you say? No, I'll be hanged if we are going away! We are going to stay where we are, Katherine!

Petra. Stay here?

Mrs. Stockmann. Here, in the town?

Dr. Stockmann. Yes, here. This is the field of battle—this is where the fight will be. This is where I shall triumph! As soon as I have had my trousers sewn up I shall go out and look for another house. We must have a roof over our heads for the winter.

Horster. That you shall have in my house.

Dr. Stockmann. Can I?

Horster. Yes, quite well. I have plenty of room, and I am almost never at home.

Mrs. Stockmann. How good of you, Captain Horster!

Petra. Thank you!

Dr. Stockmann (grasping his hand). Thank you, thank you! That is one trouble over! Now I can set to work in earnest at once. There is an endless amount of things to look through here, Katherine! Luckily I shall have all my time at my disposal; because I have been dismissed from the Baths, you know.

Mrs. Stockmann (with a sigh). Oh yes, I expected that.

Dr. Stockmann. And they want to take my practice away from me too. Let them! I have got the poor people to fall back upon, anyway—those that don't pay anything; and, after all, they need me most, too. But, by Jove, they will have to listen to me; I shall preach to them in season and out of season, as it says somewhere.

Mrs. Stockmann. But, dear Thomas, I should have thought events had showed you what use it is to preach.

Dr. Stockmann. You are really ridiculous, Katherine. Do you want me to let myself be beaten off the field by public opinion and the compact majority and all that devilry? No, thank you! And what I want to do is so simple and clear and straightforward. I only want to drum into the heads of these curs the fact that the liberals are the most insidious enemies of freedom—that party programs strangle every young and vigorous truth—that considerations of expediency turn morality and justice upside down—and that they will end by making life here unbearable. Don't you think, Captain Horster, that I ought to be able to make people understand that?

Horster. Very likely; I don't know much about such things myself.

Dr. Stockmann. Well, look here—I will explain! It is the party leaders that must be exterminated. A party leader is like a wolf, you see—like a voracious wolf. He requires a certain number of smaller victims to prey upon every year, if he is to live. Just look at Hovstad and Aslak-

sen! How many smaller victims have they not put an end to—or at any rate maimed and mangled until they are fit for nothing except to be householders or subscribers to the “People’s Messenger”! (*Sits down on the edge of the table.*) Come here, Katherine—look how beautifully the sun shines today! And this lovely spring air I am drinking in!

Mrs. Stockmann. Yes, if only we could live on sunshine and spring air, Thomas.

Dr. Stockmann. Oh, you will have to pinch and save a bit—then we shall get along. That gives me very little concern. What is much worse is, that I know of no one who is liberal-minded and high-minded enough to venture to take up my work after me.

Petra. Don’t think about that, father; you have plenty of time before you. Hullo, here are the boys already!

EJLIF and MORTEN come in from the sitting room.

Mrs. Stockmann. Have you got a holiday?

Morten. No; but we were fighting with the other boys between lessons—

Ejlif. That isn’t true; it was the other boys were fighting with us.

Morten. Well, and then Mr. Rörlund said we had better stay at home for a day or two.

Dr. Stockmann (*snapping his fingers and getting up from the table*). I have it! I have it, by Jove! You shall never set foot in the school again!

The Boys. No more school!

Mrs. Stockmann. But, Thomas—

Dr. Stockmann. Never, I say. I will educate you myself; that is to say, you shan’t learn a blessed thing—

Morten. Hooray!

Dr. Stockmann.—but I will make liberal-minded and high-minded men of you. You must help me with that, Petra.

Petra. Yes, father, you may be sure I will.

Dr. Stockmann. And my school shall be in the room where they insulted me and called me an enemy of the people. But we are too few as we are; I must have at least twelve boys to begin with.

Mrs. Stockmann. You will certainly never get them in this town.

Dr. Stockmann. We shall. (*To the boys.*) Don’t you know any street urchins—regular ragamuffins—?

Morten. Yes, father, I know lots!

Dr. Stockmann. That’s capital! Bring me some specimens of them. I am

going to experiment with curs, just for once; there may be some exceptional heads among them.

Morten. And what are we going to do, when you have made liberalminded and high-minded men of us?

Dr. Stockmann. Then you shall drive all the wolves out of the country, my boys!

EJLIF looks rather doubtful about it; MORTEN jumps about crying "Hurrah!"

Mrs. Stockmann. Let us hope it won't be the wolves that will drive you out of the country, Thomas.

Dr. Stockmann. Are you out of your mind, Katherine? Drive me out! Now—when I am the strongest man in the town!

Mrs. Stockmann. The strongest—now?

Dr. Stockmann. Yes, and I will go so far as to say that now I am the strongest man in the whole world.

Morten. I say!

Dr. Stockmann (lowering his voice). Hush! You mustn't say anything about it yet; but I have made a great discovery.

Mrs. Stockmann. Another one?

Dr. Stockmann. Yes. (*Gathers them round him, and says confidentially*): It is this, let me tell you—that the strongest man in the world is he who stands most alone.

Mrs. Stockmann (smiling and shaking her head). Oh, Thomas, Thomas!

Petra (encouragingly, as she grasps her father's hands). Father!

Anton Chekhov¹

1860–1904

Like Synge, Chekhov wrote plays more of mood than of action. Like Ibsen, he used symbols to convey psychological states. But where Synge was thoroughly Irish and Ibsen typically Norwegian, Chekhov was a spokesman for the Russia of his time. Through his greatest plays runs one recurring theme. That theme is change, and the tragedy of people who cannot adapt to it.

Chekhov's Russia was in a state of social flux. The old aristocracy was doomed, and the traditional class distinctions were soon to be broken down. These alterations in the social structure were inevitable, the dramatist saw, and his tragedies are those of people caught in the tide and unable to ride with it.

There is poignancy in Chekhov's tragic characters. They do not passively accept being submerged. They reach out toward their dreams; they hope for something better. Chekhov's dramatic moods alternate between hope and despair.

The cherry orchard in Chekhov's play is a symbol of an old, outdated way of life. Once productive and world-famous, the grandest possession of a proud family, the orchard has become a useless luxury which must be sold to pay heavy debts.

Madame Ranevskaya brought about the family calamity by her generous, foolish, spendthrift behavior. Yet she cannot face the need to turn the cherry orchard into a summer resort, which would be profitable. Her adopted daughter Varya tries to run the household economically, but her small efforts are useless. Madame Ranevskaya, accustomed to a life of extravagant ease, cannot change; and the estate is auctioned off. It is bought by a former serf who begins im-

¹ For a biography of Anton Chekhov, see Vol. 3, pp. 448–450, in this set.

mediately to have the cherry trees cut down. The family leaves, cheerfully dreaming of an untroubled life ahead, just as they had formerly dreamed that they could return to the happy past. Despite their optimism, however, one has the sense that they are really trapped, as much by their own shortcomings as by their social situation.

The servants, too, are unable to adapt to the new order. Old Firs cannot accept freedom after his long years of service; at the play's end, when he is forgotten and left behind, he lies down almost certainly to die. *The Cherry Orchard* ends with the sound of a snapping violin string which signals the end of a lovely but outmoded way of life.

Russian though it is in atmosphere, nineteenth-century though it is in setting, Chekhov's masterpiece is timeless. Today's world, too, is changing, and thinking people are forced to re-evaluate their ideas and attitudes. Chekhov saw the great danger in grasping thoughtlessly at panaceas. He longed to better the conditions in Russia under the czars, but he distrusted generalized solutions. He saw no practical answer to Russia's problems in Tolstoy's dreams of mankind's perfectibility, nor in Dostoevsky's Christianity, nor in communism. Chekhov wrote: "God preserve us from generalizations. There are a great many opinions in this world, and a good half of them are professed by people who have never been in trouble."

Chekhov makes no generalizations and no judgments. He gives no hint, in *The Cherry Orchard*, that he believes the new way of life will necessarily be better; nor does he condemn the old way as altogether bad.

Like the characters in Synge's play,² Chekhov's people are caught in a tragic dilemma. Like Synge, Chekhov has us believe that they will endure because of their humanity. The strength of Chekhov's people is their unquenchable hope. They cannot change the world to suit their weaknesses. When they cannot alter themselves to fit the world, they must simply endure. Their hope, their perseverance are remarkable. We cannot pity them. We admire them. This was Chekhov's message, as pertinent today as ever, and seldom so powerfully stated.

The Cherry Orchard

CAST OF CHARACTERS

LUBOV ANDREYEVNA RANEVSKAYA, *a landowner.*

ANYA, *her seventeen-year-old daughter.*

VARYA, *her adopted daughter,*
twenty-two years old.

LEONID ANDREYEVICH GAYEV,
MME. RANEVSKAYA'S *brother.*

YERMOLAY ALEXEYEVICH LOPAHIN, *a merchant.*

PYOTR SERGEYEVICH TROFIMOV, *a student.*

SIMEONOV-PISHCHIK, *a landowner.*

CHARLOTTA IVANOVNA, *a governess.*

SEMYON YEPIHODOV, *a clerk.*

DUNYASHA, *a maid.*

FIRS [*pronounced "fierce"*], *a man servant,*
aged eighty-seven.

YASHA, *a young valet.*

A TRAMP.

STATIONMASTER, POST-OFFICE CLERK,

GUESTS, SERVANTS.

The action takes place on Mme. Ranevskaya's estate.

ACT I

A room that is still called the nursery. One of the doors leads into ANYA'S room. Dawn, the sun will soon rise. It is May, the cherry trees are in blossom, but it is cold in the orchard; there is a morning frost. The windows are shut. Enter DUNYASHA with a candle, and LOPAHIN with a book in his hand.

Lopahin. The train is in, thank God. What time is it?

Dunyasha. Nearly two. (*Puts out the candle.*) It's light already.

Lopahin. How late is the train, anyway? Two hours at least. (*Yawns and stretches.*) I'm a fine one! What a fool I've made of myself! I came here on purpose to meet them at the station, and then I went and overslept. I fell asleep in my chair. How annoying! You might have waked me . . .

Dunyasha. I thought you'd left. (*Listens.*) I think they're coming!

Lopahin (listens). No, they've got to get the luggage, and one thing and another . . . (*Pause.*) Lubov Andreyevna spent five years abroad, I don't know what she's like now . . . She's a fine person—light-hearted, simple. I remember when I was a boy of fifteen, my poor father—he had a shop here in the village then—punched me in the face with his fist and made my nose bleed. We'd come into the yard, I don't know what for, and he'd had a drop too much. Lubov Andreyevna, I remember her as if it were yesterday—she was still young and so slim—led me to the washbasin, in this very room . . . in the nursery. "Don't cry, little peasant," she said, "it'll heal in time for your wedding. . . ." (*Pause.*) Little peasant . . . my father was a peasant, it's true, and here I am in a white waistcoat and yellow shoes. A pig in a pastry shop, you might say. It's true I'm rich, I've got a lot of money. . . . But when you look at it closely, I'm a peasant through and through. (*Pages the book.*) Here I've been reading this book and I didn't understand a word of it. . . . I was reading it and fell asleep. . . . (*Pause.*)

Dunyasha. And the dogs were awake all night, they feel that their masters are coming.

Lopahin. Dunyasha, why are you so—

Dunyasha. My hands are trembling. I'm going to faint.

Lopahin. You're too soft, Dunyasha. You dress like a lady, and look at the way you do your hair. That's not right. One should remember one's place.

Enter YEPHODOV with a bouquet; he wears a jacket and highly polished boots that squeak badly. He drops the bouquet as he comes in.

Yepihodov (picking up the bouquet). Here, the gardener sent these, said you're to put them in the dining room. (*Hands the bouquet to DUNYASHA.*)

Lopahin. And bring me some *kvass*.

Dunyasha. Yes, Sir. (*Exits.*)

Yepihodov. There's a frost this morning—three degrees below—and yet the cherries are all in blossom. I cannot approve of our climate. (*Sighs.*) I cannot. Our climate does not activate properly. And, Yermolay Alexeyevich, allow me to make a further remark. The other day I bought myself a pair of boots, and I make bold to assure you, they squeak so that it is really intolerable. What should I grease them with?

Lopahin. Oh, get out! I'm fed up with you.

Yepihodov. Every day I meet with misfortune. And I don't complain, I've got used to it, I even smile.

DUNYASHA enters, hands LOPAHIN the kvass.

Yepihodov. I am leaving. (*Stumbles against a chair, which falls over.*) There! (*Triumphantly, as it were.*) There again, you see what sort of circumstance, pardon the expression. . . . It is absolutely phenomenal! (*Exits.*)

Dunyasha. You know, Yermolay Alexeyevich, I must tell you, Yepihodov has proposed to me.

Lopahin. Ah!

Dunyasha. I simply don't know . . . he's a quiet man, but sometimes when he starts talking, you can't make out what he means. He speaks nicely—and it's touching—but you can't understand it. I sort of like him though, and he is crazy about me. He's an unlucky man . . . every day something happens to him. They tease him about it here . . . they call him Two-and-Twenty Troubles.

Lopahin (listening). There! I think they're coming.

Dunyasha. They *are* coming! What's the matter with me? I feel cold all over.

Lopahin. They really are coming. Let's go and meet them. Will she recognize me? We haven't seen each other for five years.

Dunyasha (in a flutter). I'm going to faint this minute. . . . Oh, I'm going to faint!

Two carriages are heard driving up to the house. LOPAHIN and DUNYASHA go out quickly. The stage is left empty. There is a noise in the adjoining rooms. FIRS, who had driven to the station to meet LUBOV ANDREYEVNA RANEVSKAYA, crosses the stage hurriedly, leaning on a stick. He is wearing an old-fashioned livery and a tall hat. He mutters to himself indistinctly. The hubbub off stage increases. A VOICE: "Come, let's go this way." Enter LUBOV ANDREYEVNA, ANYA and CHARLOTTA IVANOVNA, with a pet dog on a leash, all in traveling dresses; VARYA, wearing a coat and kerchief; GAYEV, SIMEONOV PISHCHIK, LOPAHIN, DUNYASHA with a bag and an umbrella, servants with luggage. All walk across the room.

Anya. Let's go this way. Do you remember what room this is, Mamma?

Mme. Ranevskaya (joyfully, through her tears). The nursery!

Varya. How cold it is! My hands are numb. (*To MME. RANEVSKAYA.*)

Your rooms are just the same as they were Mamma, the white one and the violet.

Mme. Ranevskaya. The nursery! My darling, lovely room! I slept here when I was a child . . . (*Cries.*) And here I am, like a child again! (*Kisses her brother and VARYA, and then her brother again.*) Varya's just the same as ever, like a nun. And I recognized Dunyasha. (*Kisses DUNYASHA.*)

Gayev. The train was two hours late. What do you think of that? What a way to manage things!

Charlotta (to PISHCHIK). My dog eats nuts, too.

Pishchik (in amazement). You don't say so!

All go out, except ANYA and DUNYASHA.

Dunyasha. We've been waiting for you for hours. (*Takes ANYA'S hat and coat.*)

Anya. I didn't sleep on the train for four nights and now I'm frozen . . .

Dunyasha. It was Lent when you left; there was snow and frost, and now . . . My darling! (*Laughs and kisses her.*) I have been waiting for you, my sweet, my darling! But I must tell you something . . . I can't put it off another minute . . .

Anya (listlessly). What now?

Dunyasha. The clerk, Yepihodov, proposed to me, just after Easter.

Anya. There you are, at it again . . . (*Straightening her hair.*) I've lost all my hairpins . . . (*She is staggering with exhaustion.*)

Dunyasha. Really, I don't know what to think. He loves me—he loves me so!

Anya (looking towards the door of her room, tenderly). My own room, my windows, just as though I'd never been away. I'm home! Tomorrow morning I'll get up and run into the orchard. Oh, if I could only get some sleep. I didn't close my eyes during the whole journey—I was so anxious.

Dunyasha. Pyotr Sergeyeovich came the day before yesterday.

Anya (joyfully). Petya!

Dunyasha. He's asleep in the bathhouse. He has settled there. He said he was afraid of being in the way. (*Looks at her watch.*) I should wake him, but Miss Varya told me not to. "Don't you wake him," she said.

Enter VARYA with a bunch of keys at her belt.

Varya. Dunyasha, coffee, and be quick . . . Mamma's asking for coffee.

Dunyasha. In a minute. (*Exits.*)

Varya. Well, thank God, you've come. You're home again. (*Fondling ANYA.*) My darling is here again. My pretty one is back.

Anya. Oh, what I've been through!

Varya. I can imagine.

Anya. When we left, it was Holy Week, it was cold then, and all the way Charlotta chattered and did her tricks. Why did you have to saddle me with Charlotta?

Varya. You couldn't have traveled all alone, darling—at seventeen!

Anya. We got to Paris, it was cold there, snowing. My French is dreadful. Mamma lived on the fifth floor; I went up there, and found all kinds of Frenchmen, ladies, an old priest with a book. The place was full of tobacco smoke, and so bleak. Suddenly I felt sorry for Mamma, so sorry, I took her head in my arms and hugged her and couldn't let go of her. Afterwards Mamma kept fondling me and crying . . .

Varya (*through tears*). Don't speak of it . . . don't.

Anya. She had already sold her villa at Mentone, she had nothing left, nothing. I hadn't a kopeck left either, we had only just enough to get home. And Mamma wouldn't understand! When we had dinner at the stations, she always ordered the most expensive dishes, and tipped the waiters a whole ruble. Charlotta, too. And Yasha kept ordering, too—it was simply awful. You know Yasha's Mamma's footman now, we brought him here with us.

Varya. Yes, I've seen the blackguard.

Anya. Well, tell me—have you paid the interest?

Varya. How could we?

Anya. Good heavens, good heavens!

Varya. In August the estate will be put up for sale.
 Anya. My God!

LOPAHIN *peeps in at the door and bleats.*

Lopahin. Meh-h-h. (*Disappears.*)

Varya (*through tears*). What I couldn't do to him! (*Shakes her fist threateningly.*)

Anya (*embracing VARYA, gently*). Varya, has he proposed to you? (*VARYA shakes her head.*) But he loves you. Why don't you come to an understanding? What are you waiting for?

Varya. Oh, I don't think anything will ever come of it. He's too busy, he has no time for me . . . pays no attention to me. I've washed my hands of him—I can't bear the sight of him. They all talk about our getting married, they all congratulate me—and all the time there's really nothing to it—it's all like a dream. (*In another tone.*) You have a new brooch—like a bee.

Anya (*sadly*). Mamma bought it. (*She goes into her own room and speaks gaily like a child.*) And you know, in Paris I went up in a balloon.

Varya. My darling's home, my pretty one is back! (*DUNYASHA returns with the coffeepot and prepares coffee. VARYA stands at the door of ANYA'S room.*) All day long, darling, as I go about the house, I keep dreaming. If only we could marry you off to a rich man, I should feel at ease. Then I would go into a convent, and afterwards to Kiev, to Moscow . . . I would spend my life going from one holy place to another . . . I'd go on and on . . . What a blessing that would be!

Anya. The birds are singing in the orchard. What time is it?

Varya. It must be after two. Time you were asleep, darling. (*Goes into ANYA'S room.*) What a blessing that would be!

YASHA *enters with a plaid and a traveling bag, crosses the stage.*

Yasha (*finically*). May I pass this way, please?

Dunyasha. A person could hardly recognize you, Yasha. Your stay abroad has certainly done wonders for you.

Yasha. Hm-m . . . and who are you?

Dunyasha. When you went away I was that high—(*Indicating with her hand.*) I'm Dunyasha—Fyodor Kozoyedev's daughter. Don't you remember?

Yasha. Hm! What a peach! (*He looks round and embraces her. She cries out and drops a saucer. YASHA leaves quickly.*)

Varya (*in the doorway, in a tone of annoyance*). What's going on here?

Dunyasha (through tears). I've broken a saucer.

Varya. Well, that's good luck.

Anya (coming out of her room). We ought to warn Mamma that Petya's here.

Varya. I left orders not to wake him.

Anya (musingly). Six years ago father died. A month later brother Grisha was drowned in the river. . . . Such a pretty little boy he was—only seven. It was more than Mamma could bear, so she went away, went away without looking back . . . (*Shudders.*) How well I understand her, if she only knew! (*Pauses.*) And Petya Trofimov was Grisha's tutor, he may remind her of it all . . .

Enter FIRS, wearing a jacket and a white waistcoat. He goes up to the coffeepot.

Firs (anxiously). The mistress will have her coffee here. (*Puts on white gloves.*) Is the coffee ready? (*Sternly, to DUNYASHA.*) Here, you! And where's the cream?

Dunyasha. Oh, my God! (*Exits quickly.*)

Firs (fussing over the coffeepot). Hah! the addlehead! (*Mutters to himself.*) Home from Paris. And the old master used to go to Paris too . . . by carriage. (*Laughs.*)

Varya. What is it, Firs?

Firs. What is your pleasure, Miss? (*Joyfully.*) My mistress has come home, and I've seen her at last! Now I can die. (*Weeps with joy.*)

Enter MME. RANEVSKAYA, GAYEV, and SIMEONOV-PISHCHIK. The latter is wearing a tight-waisted, pleated coat of fine cloth, and full trousers. GAYEV, as he comes in, goes through the motions of a billiard player with his arms and body.

Mme. Ranevskaya. Let's see, how does it go? Yellow ball in the corner! Bank shot in the side pocket!

Gayev. I'll tip it in the corner! There was a time, sister, when you and I used to sleep in this very room, and now I'm fifty-one, strange as it may seem.

Lopahin. Yes, time flies.

Gayev. Who?

Lopahin. I say, time flies.

Gayev. It smells of patchouli here.

Anya. I'm going to bed. Good night, Mamma. (*Kisses her mother.*)

Mme. Ranevskaya. My darling child! (*Kisses her hands.*) Are you happy to be home? I can't come to my senses.

Anya. Good night, Uncle.

Gayev (*kissing her face and hands*). God bless you, how like your mother you are! (*To his sister*.) At her age, Luba, you were just like her.

ANYA *shakes hands with* LOPAHIN *and* PISHCHIK, *then goes out, shutting the door behind her.*

Mme. Ranevskaya. She's very tired.

Pishchik. Well, it was a long journey.

Varya (*to* LOPAHIN *and* PISHCHIK). How about it, gentlemen? It's past two o'clock—isn't it time for you to go?

Mme. Ranevskaya (*laughs*). You're just the same as ever, Varya. (*Draws her close and kisses her*.) I'll have my coffee and then we'll all go. (*FIRS puts a small cushion under her feet*.) Thank you, my dear. I've got used to coffee. I drink it day and night. Thanks, my dear old man. (*Kisses him*.)

Varya. I'd better see if all the luggage has been brought in. (*Exits*.)

Mme. Ranevskaya. Can it really be I sitting here? (*Laughs*.) I feel like dancing, waving my arms about. (*Covers her face with her hands*.) But maybe I am dreaming! God knows I love my country, I love it tenderly; I couldn't look out of the window in the train, I kept crying so. (*Through tears*.) But I must have my coffee. Thank you, Firs, thank you, dear old man. I'm so happy that you're still alive.

Firs. Day before yesterday.

Gayev. He's hard of hearing.

Lopahin. I must go soon, I'm leaving for Kharkov about five o'clock. How annoying! I'd like to have a good look at you, talk to you . . . You're just as splendid as ever.

Pishchik (*breathing heavily*). She's even better looking. . . . Dressed in the latest Paris fashion. . . . Perish my carriage and all its four wheels. . . .

Lopahin. Your brother, Leonid Andreyevich, says I'm a vulgarian and an exploiter. But it's all the same to me—let him talk. I only want you to trust me as you used to. I want you to look at me with your touching, wonderful eyes, as you used to. Dear God! My father was a serf of your father's and grandfather's, but you, you yourself, did so much for me once . . . so much . . . that I've forgotten all about that; I love you as though you were my sister—even more.

Mme. Ranevskaya. I can't sit still, I simply can't. (*Jumps up and walks about in violent agitation*.) This joy is too much for me. . . . Laugh at me, I'm silly! My own darling bookcase! My darling table! (*Kisses it*.)

Gayev. While you were away, nurse died.

Mme. Ranevskaya (*sits down and takes her coffee*). Yes, God rest her soul; they wrote me about it.

Gayev. And Anastasy is dead. Petrushka Kossoy has left me and has gone into town to work for the police inspector. (*Takes a box of sweets out of his pocket and begins to suck one.*)

Pishchik. My daughter Dashenka sends her regards.

Lopahin. I'd like to tell you something very pleasant—cheering. (*Glancing at his watch.*) I am leaving directly. There isn't much time to talk. But I will put it in a few words. As you know, your cherry orchard is to be sold to pay your debts. The sale is to be on the twenty-second of August; but don't you worry, my dear, you may sleep in peace; there is a way out. Here is my plan. Give me your attention! Your estate is only fifteen miles from the town; the railway runs close by it; and if the cherry orchard and the land along the river bank were cut up into lots and these leased for summer cottages, you would have an income of at least 25,000 rubles a year out of it.

Gayev. Excuse me. . . . What nonsense.

Mme. Ranevskaya. I don't quite understand you, Yermolay Alexeyevich.

Lopahin. You will get an annual rent of at least ten rubles per acre, and if you advertise at once, I'll give you any guarantee you like that you won't have a square foot of ground left by autumn, all the lots will be snapped up. In short, congratulations, you're saved. The location is splendid—by that deep river. . . . Only, of course, the ground must be cleared . . . all the old buildings, for instance, must be torn down, and this house, too, which is useless, and, of course, the old cherry orchard must be cut down.

Mme. Ranevskaya. Cut down? My dear, forgive me, but you don't know what you're talking about. If there's one thing that's interesting—indeed, remarkable—in the whole province, it's precisely our cherry orchard.

Lopahin. The only remarkable thing about this orchard is that it's a very large one. There's a crop of cherries every other year, and you can't do anything with them; no one buys them.

Gayev. This orchard is even mentioned in the Encyclopedia.

Lopahin (*glancing at his watch*). If we can't think of a way out, if we don't come to a decision, on the twenty-second of August the cherry orchard and the whole estate will be sold at auction. Make up your minds! There's no other way out—I swear. None, none.

Firs. In the old days, forty or fifty years ago, the cherries were dried, soaked, pickled, and made into jam, and we used to—

Gayev. Keep still, Firs.

Firs. And the dried cherries would be shipped by the cartload. It meant a lot of money! And in those days the dried cherries were soft and juicy, sweet, fragrant. . . . They knew the way to do it, then.

Mme. Ranevskaya. And why don't they do it that way now?

Firs. They've forgotten. Nobody remembers it.

Pishchik (to MME. RANEVSKAYA). What's doing in Paris? Eh? Did you eat frogs there?

Mme. Ranevskaya. I ate crocodiles.

Pishchik. Just imagine!

Lopahin. There used to be only landowners and peasants in the country, but now these summer people have appeared on the scene. . . . All the towns, even the small ones, are surrounded by these summer cottages; and in another twenty years, no doubt, the summer population will have grown enormously. Now the summer resident only drinks tea on his porch, but maybe he'll take to working his acre, too, and then your cherry orchard will be a rich, happy, luxuriant place.

Gayev (indignantly). Poppycock!

Enter VARYA and YASHA.

Varya. There are two telegrams for you, Mamma dear. (*Picks a key from the bunch at her belt and noisily opens an old-fashioned bookcase.*) Here they are.

Mme. Ranevskaya. They're from Paris. (*Tears them up without reading them.*) I'm through with Paris.

Gayev. Do you know, Luba, how old this bookcase is? Last week I pulled out the bottom drawer and there I found the date burned in it. It was made exactly a hundred years ago. Think of that! We could celebrate its centenary. True, it's an inanimate object, but nevertheless, a bookcase . . .

Pishchik (amazed). A hundred years! Just imagine!

Gayev. Yes. (*Tapping it.*) That's something. . . . Dear, honored bookcase, hail to you who for more than a century have served the glorious ideals of goodness and justice! Your silent summons to fruitful toil has never weakened in all those hundred years (*through tears*), sustaining, through successive generations of our family, courage and faith in a better future, and fostering in us ideals of goodness and social consciousness. . . . (*Pauses.*)

Lopahin. Yes . . .

Mme. Ranevskaya. You haven't changed a bit, Leonid.

Gayev (somewhat embarrassed). I'll play it off the red in the corner! Tip it in the side pocket!

Lopahin (looking at his watch). Well, it's time for me to go . . .

Yasha (handing a pillbox to MME. RANEVSKAYA). Perhaps you'll take your pills now.

Pishchik. One shouldn't take medicines, dearest lady, they do neither harm nor good. . . . Give them here, my valued friend. (*Takes the pillbox, pours the pills into his palm, blows on them, puts them in his mouth, and washes them down with some kvass.*) There!

Mme. Ranevskaya (frightened). You must be mad!

Pishchik. I've taken all the pills.

Lopahin. What a glutton!

All laugh.

Firs. The gentleman visited us in Easter week, ate half a bucket of pickles, he did . . . (*Mumbles.*)

Mme. Ranevskaya. What's he saying?

Varya. He's been mumbling like that for the last three years—we're used to it.

Yasha. His declining years!

CHARLOTTA IVANOVNA, *very thin, tightly laced, dressed in white, a lorgnette at her waist, crosses the stage.*

Lopahin. Forgive me, Charlotta Ivanovna, I've not had time to greet you. (*Tries to kiss her hand.*)

Charlotta (pulling away her hand). If I let you kiss my hand, you'll be wanting to kiss my elbow next, and then my shoulder.

Lopahin. I've no luck today. (*All laugh.*) Charlotta Ivanovna, show us a trick.

Mme. Ranevskaya. Yes, Charlotta, do a trick for us.

Charlotta. I don't see the need. I want to sleep. (*Exits.*)

Lopahin. In three weeks we'll meet again. (*Kisses MME. RANEVSKAYA'S hand.*) Good-by till then. Time's up. (*To GAYEV*) Bye-bye. (*Kisses PISHCHIK.*) Bye-bye. (*Shakes hands with VARYA, then with FIRS and YASHA.*) I hate to leave. (*To MME. RANEVSKAYA*) If you make up your mind about the cottages, let me know; I'll get you a loan of 50,000 rubles. Think it over seriously.

Varya (crossly). Will you never go!

Lopahin. I'm going, I'm going. (*Exits.*)

Gayev. The vulgarian. But, excuse me . . . Varya's going to marry him, he's Varya's fiancé.

Varya. You talk too much, Uncle dear.

Mme. Ranevskaya. Well, Varya, it would make me happy. He's a good man.

Pishchik. Yes, one must admit, he's a most estimable man. And my Dashenka . . . she too says that . . . she says . . . lots of things (*Snores; but wakes up at once.*) All the same, my valued friend, could you oblige me . . . with a loan of 240 rubles? I must pay the interest on the mortgage tomorrow.

Varya (*alarmed*). We can't, we can't!

Mme. Ranevskaya. I really haven't any money.

Pishchik. It'll turn up. (*Laughs.*) I never lose hope, I thought everything was lost, that I was done for, when lo and behold, the railway ran through my land . . . and I was paid for it. . . . And something else will turn up again, if not today, then tomorrow . . . Dashenka will win two hundred thousand . . . she's got a lottery ticket.

Mme. Ranevskaya. I've had my coffee, now let's go to bed.

Firs (*brushes off GAYEV; admonishingly*). You've got the wrong trousers on again. What am I to do with you?

Varya (*softly*). Anya's asleep. (*Gently opens the window.*) The sun's up now, it's not a bit cold. Look, Mamma dear, what wonderful trees. And heavens, what air! The starlings are singing!

Gayev (*opens the other window*). The orchard is all white. You've not forgotten it? Luba? That's the long alley that runs straight, straight as an arrow; how it shines on moonlight nights, do you remember? You've not forgotten?

Mme. Ranevskaya (*looking out of the window into the orchard*). Oh, my childhood, my innocent childhood. I used to sleep in this nursery—I used to look out into the orchard, happiness waked with me every morning, the orchard was just the same then . . . nothing has changed. (*Laughs with joy.*) All, all white! Oh, my orchard! After the dark, rainy autumn and the cold winter, you are young again, and full of happiness, the heavenly angels have not left you . . . If I could free my chest and my shoulders from this rock that weighs on me, if I could only forget the past!

Gayev. Yes, and the orchard will be sold to pay our debts, strange as it may seem. . . .

Mme. Ranevskaya. Look! There is our poor mother walking in the orchard . . . all in white . . . (*Laughs with joy.*) It is she!

Gayev. Where?

Varya. What are you saying, Mamma dear!

Mme. Ranevskaya. There's no one there, I just imagined it. To the right, where the path turns towards the arbor, there's a little white tree, leaning over, that looks like a woman. . . .

TROFIMOV enters, wearing a shabby student's uniform and spectacles.

Mme. Ranevskaya. What an amazing orchard! White masses of blossom, the blue sky . . .

Trofimov. Lubov Andreyevna! (*She looks round at him.*) I just want to pay my respects to you, then I'll leave at once. (*Kisses her hand ardently.*)

I was told to wait until morning, but I hadn't the patience . . .

(*MME. RANEVSKAYA looks at him, perplexed.*)

Varya (through tears). This is Petya Trofimov.

Trofimov. Petya Trofimov, formerly your Grisha's tutor. . . . Can I have changed so much? (*MME. RANEVSKAYA embraces him and weeps quietly.*)

Gayev (embarrassed). Don't, don't, Luba.

Varya (crying). I told you, Petya, to wait until tomorrow.

Mme. Ranevskaya. My Grisha . . . my little boy . . . Grisha . . . my son.

Varya. What can one do, Mamma dear, it's God's will.

Trofimov (softly, through tears). There . . . there.

Mme. Ranevskaya (weeping quietly). My little boy was lost . . . drowned. Why? Why, my friend? (*More quietly.*) Anya's asleep in there, and here I am talking so loudly . . . making all this noise. . . . But tell me, Petya, why do you look so badly? Why have you aged so?

Trofimov. A mangy master, a peasant woman in the train called me.

Mme. Ranevskaya. You were just a boy then, a dear little student, and now your hair's thin—and you're wearing glasses! Is it possible you're still a student? (*Goes toward the door.*)

Trofimov. I suppose I'm a perpetual student.

Mme. Ranevskaya (kisses her brother, then VARYA). Now, go to bed . . . You have aged, too, Leonid.

Pishchik (follows her). So now we turn in. Oh, my gout! I'm staying the night here . . . Lubov Andreyevna, my angel, tomorrow morning. . . . I do need 240 rubles.

Gayev. He keeps at it.

Pishchik. I'll pay it back, dear . . . it's a trifling sum.

Mme. Ranevskaya. All right, Leonid will give it to you. Give it to him, Leonid.

Gayev. Me give it to him! That's a good one!

Mme. Ranevskaya. It can't be helped. Give it to him! He needs it. He'll pay it back.

MME. RANEVSKAYA, TROFIMOV, PISHCHIK, *and FIRS go out*; GAYEV, VARYA, *and YASHA remain.*

Gayev. Sister hasn't got out of the habit of throwing money around. (*To YASHA.*) Go away, my good fellow, you smell of the barnyard.

Yasha (with a grin). And you, Leonid Andreyevich, are just the same as ever.

Gayev. Who? (*To VARYA*) What did he say?

Varya (to YASHA). Your mother's come from the village; she's been sitting in the servants' room since yesterday, waiting to see you.

Yasha. Botheration!

Varya. You should be ashamed of yourself!

Yasha. She's all I needed! She could have come tomorrow. (*Exits.*)

Varya. Mamma is just the same as ever; she hasn't changed a bit. If she had her own way, she'd keep nothing for herself.

Gayev. Yes . . . (*Pauses.*) If a great many remedies are offered for some disease, it means it is incurable; I keep thinking and racking my brains; I have many remedies, ever so many, and that really means none. It would be fine if we came in for a legacy; it would be fine if we married off our Anya to a very rich man; or we might go to Yaroslavl and try our luck with our aunt, the Countess. She's very, very rich, you know. . . .

Varya (weeping). If only God would help us!

Gayev. Stop bawling. Aunt's very rich, but she doesn't like us. In the first place, Sister married a lawyer who was no nobleman . . . (*ANYA appears in the doorway.*) She married beneath her, and it can't be said that her behavior has been very exemplary. She's good, kind, sweet, and I love her, but no matter what extenuating circumstances you may adduce, there's no denying that she has no morals. You sense it in her least gesture.

Varya (in a whisper). Anya's in the doorway.

Gayev. Who? (*Pauses.*) It's queer, something got into my right eye—my eyes are going back on me. . . . And on Thursday, when I was in the circuit court—

Enter ANYA.

Varya. Why aren't you asleep, Anya?

Anya. I can't get to sleep, I just can't.

Gayev. My little pet! (*Kisses ANYA'S face and hands.*) My child! (*Weeps.*) You are not my niece, you're my angel! You're everything to me. Believe me, believe—

Anya. I believe you, Uncle. Everyone loves you and respects you . . . but, Uncle dear, you must keep still. . . . You must. What were you saying just now about my mother? Your own sister? What made you say that?

Gayev. Yes, yes . . . (*Covers his face with her hand.*) Really, that was awful! Good God! Heaven help me! Just now I made a speech to the bookcase . . . so stupid! And only after I was through, I saw how stupid it was.

Varya. It's true, Uncle dear, you ought to keep still. Just don't talk, that's all.

Anya. If you could only keep still, it would make things easier for you too.

Gayev. I'll keep still. (*Kisses ANYA'S and VARYA'S hands.*) I will. But now about business. On Thursday I was in court; well, there were a number of us there, and we began talking of one thing and another, and this and that, and do you know, I believe it will be possible to raise a loan on a promissory note, to pay the interest at the bank.

Varya. If only God would help us!

Gayev. On Tuesday I'll go and see about it again. (*To VARYA.*) Stop bawling. (*To ANYA.*) Your mamma will talk to Lopahin, and he, of course, will not refuse her . . . and as soon as you're rested, you'll go to Yaroslavl to the Countess, your great-aunt. So we'll be working in three directions at once, and the thing is in the bag. We'll pay the interest—I'm sure of it. (*Puts a candy in his mouth.*) I swear on my honor, I swear by anything you like, the estate shan't be sold. (*Excitedly.*) I swear by my own happiness! Here's my hand on it, you can call me a swindler and a scoundrel if I let it come to an auction! I swear by my whole being.

Anya (*relieved and quite happy again*). How good you are, Uncle, and how clever! (*Embraces him.*) Now I'm at peace, quite at peace, I'm happy.

Enter FIRS.

Firs (*reproachfully*). Leonid Andreyevich, have you no fear of God? When are you going to bed?

Gayev. Directly, directly. Go away, Firs, I'll . . . yes, I will undress myself. Now, children, 'nightie-'nightie. We'll consider details tomorrow, but now go to sleep. (*Kisses ANYA and VARYA.*) I am a man of the

eighties; they have nothing good to say of that period nowadays. Nevertheless, in the course of my life I have suffered not a little for my convictions. It's not for nothing that the peasant loves me; one should know the peasant; one should know from which—

Anya. There you go again, Uncle.

Varya. Uncle dear, be quiet.

Firs (angrily). Leonid Andreyevich!

Gayev. I'm coming, I'm coming! Go to bed! Double bank shot in the side pocket! Here goes a clean shot . . .

Exits, FIRS hobbling after him.

Anya. I am at peace now. I don't want to go to Yaroslavl—I don't like my great-aunt, but still, I am at peace, thanks to Uncle. (*Sits down.*)

Varya. We must get some sleep. I'm going now. While you were away something unpleasant happened. In the old servants' quarters there are only the old people, as you know; Yefim, Polya, Yevstigney, and Karp, too. They began letting all sorts of rascals in to spend the night. . . . I didn't say anything. Then I heard they'd been spreading a report that I gave them nothing but dried peas to eat—out of stinginess, you know . . . and it was all Yevstigney's doing. . . . All right, I thought, if that's how it is, I thought, just wait. I sent for Yevstigney. . . . (*Yawns.*) He comes. . . . "How's this, Yevstigney?" I say, "You fool . . ." (*Looking at ANYA.*) Anichka! (*Pauses.*) She's asleep. (*Puts her arm around ANYA.*) Come to your little bed. . . . Come . . . (*Leads her.*) My darling has fallen asleep. . . . Come.

They go out. Far away beyond the orchard a shepherd is piping. TROFIMOV crosses the stage and, seeing VARYA and ANYA, stands still.

Varya. Sh! She's asleep . . . asleep . . . Come, darling.

Anya (softly, half-asleep). I'm so tired. Those bells . . . uncle . . . dear. . . . Mamma and Uncle . . .

Varya. Come, my precious, come along. (*They go into ANYA'S room.*)

Trofimov (with emotion). My sunshine, my spring!

ACT II

A meadow. An old, long-abandoned, lopsided little chapel; near it, a well, large slabs, which had apparently once served as tombstones, and an old bench. In the background, the road to the Gayev estate. To one side poplars loom darkly, where the cherry orchard begins.

In the distance a row of telegraph poles, and far off, on the horizon, the faint outline of a large city which is seen only in fine, clear weather. The sun will soon be setting. CHARLOTTA, YASHA, and DUNYASHA are seated on the bench. YEPIHODOV stands near and plays a guitar. All are pensive. CHARLOTTA wears an old peaked cap. She has taken a gun from her shoulder and is straightening the buckle on the strap.

Charlotta (musingly). I haven't a real passport, I don't know how old I am, and I always feel that I am very young. When I was a little girl, my father and mother used to go from fair to fair and give performances, very good ones. And I used to do the *salto mortale*, and all sorts of other tricks. And when Papa and Mamma died, a German lady adopted me and began to educate me. Very good. I grew up and became a governess. But where I come from and who I am, I don't know. . . . Who were my parents? Perhaps they weren't even married. . . . I don't know. . . . (*Takes a cucumber out of her pocket and eats it.*) I don't know a thing. (*Pause.*) One wants so much to talk, and there isn't anyone to talk to. . . . I haven't anybody.

Yepihodov (plays the guitar and sings). "What care I for the jarring world? What's friend or foe to me? . . ." How agreeable it is to play the mandolin.

Dunyasha. That's a guitar, not a mandolin. (*Looks in a hand mirror and powders her face.*)

Yepihodov. To a madman in love it's a mandolin. (*Sings*) "Would that the heart were warmed by the fire of mutual love!" (*YASHA joins in.*)

Charlotta. How abominably these people sing. Pfui! Like jackals!

Dunyasha (to YASHA). How wonderful it must be though to have stayed abroad!

Yasha. Ah, yes, of course, I cannot but agree with you there. (*Yawns and lights a cigar.*)

Yepihodov. Naturally. Abroad, everything has long since achieved full perplexion.

Yasha. That goes without saying.

Yepihodov. I'm a cultivated man, I read all kinds of remarkable books. And yet I can never make out what direction I should take, what it is that I want, properly speaking. Should I live, or should I shoot myself, properly speaking? Nevertheless, I always carry a revolver about me. . . . Here it is . . . (*Shows revolver.*)

Charlotta. I've finished. I'm going. (*Puts the gun over her shoulder.*) You

are a very clever man, Yepihodov, and a very terrible one; women must be crazy about you. Br-r-r! (*Starts to go.*) These clever men are all so stupid; there's no one for me to talk to . . . always alone, alone, I haven't a soul . . . and who I am, and why I am, nobody knows. (*Exits unhurriedly.*)

Yepihodov. Properly speaking and letting other subjects alone, I must say regarding myself, among other things, that fate treats me mercilessly, like a storm treats a small boat. If I am mistaken, let us say, why then do I wake up this morning, and there on my chest is a spider of enormous dimensions . . . like this . . . (*indicates with both hands.*) Again, I take up a pitcher of kvass to have a drink, and in it there is something unseemly to the highest degree, something like a cockroach. (*Pause.*) Have you read Buckle? (*Pause.*) I wish to have a word with you, Avdotya Fyodorovna, if I may trouble you.

Dunyasha. Well, go ahead.

Yepihodov. I wish to speak with you alone. (*Sighs.*)

Dunyasha (embarrassed). Very well. Only first bring me my little cape.

You'll find it near the wardrobe. It's rather damp here.

Yepihodov. Certainly, ma'am; I will fetch it, ma'am. Now I know what to do with my revolver. (*Takes the guitar and goes off playing it.*)

Yasha. Two-and-Twenty Troubles! An awful fool, between you and me. (*Yawns.*)

Dunyasha. I hope to God he doesn't shoot himself! (*Pause.*) I've become so nervous, I'm always fretting. I was still a little girl when I was taken into the big house, I am quite unused to the simple life now, and my hands are white, as white as a lady's. I've become so soft, so delicate, so refined, I'm afraid of everything. It's so terrifying; and if you deceive me, Yasha, I don't know what will happen to my nerves. (*YASHA kisses her.*)

Yasha. You're a peach! Of course, a girl should never forget herself; and what I dislike more than anything is when a girl don't behave properly.

Dunyasha. I've fallen passionately in love with you; you're educated—you have something to say about everything. (*Pause.*)

Yasha (yawns). Yes, Ma'am. Now the way I look at it, if a girl loves someone, it means she is immoral. (*Pause.*) It's agreeable smoking a cigar in the fresh air. (*Listens.*) Someone's coming this way . . . It's our madam and the others. (*DUNYASHA embraces him impulsively.*) You go home, as though you'd been to the river to bathe; go by the little

path, or else they'll run into you and suspect me of having arranged to meet you here. I can't stand that sort of thing.

Dunyasha (coughing softly). Your cigar's made my head ache. (*Exits. YASHA remains standing near the chapel. Enter MME. RANEVSKAYA, GAYEV, and LOPAHIN.*)

Lopahin. You must make up your mind once and for all—there's no time to lose. It's quite a simple question, you know. Do you agree to lease your land for summer cottages or not? Answer in one word, yes or no; only one word!

Mme. Ranevskaya. Who's been smoking such abominable cigars here? (*Sits down.*)

Gayev. Now that the railway line is so near, it's made things very convenient. (*Sits down.*) Here we've been able to have lunch in town. Yellow ball in the side pocket! I feel like going into the house and playing just one game.

Mme. Ranevskaya. You can do that later.

Lopahin. Only one word! (*Imploringly.*) Do give me an answer!

Gayev (yawning). Who?

Mme. Ranevskaya (looks into her purse). Yesterday I had a lot of money and now my purse is almost empty. My poor Varya tries to economize by feeding us just milk soup; in the kitchen the old people get nothing but dried peas to eat, while I squander money thoughtlessly. (*Drops the purse, scattering gold pieces.*) You see there they go . . . (*Shows vexation.*)

Yasha. Allow me—I'll pick them up. (*Picks up the money.*)

Mme. Ranevskaya. Be so kind, Yasha. And why did I go to lunch in town? That nasty restaurant, with its music and the tablecloth smelling of soap . . . Why drink so much, Leonid? Why eat so much? Why talk so much? Today again you talked a lot, and all so inappropriately about the seventies, about the decadents. And to whom? Talking to waiters about decadents!

Lopahin. Yes.

Gayev (waving his hand). I'm incorrigible; that's obvious. (*Irritably, to YASHA.*) Why do you keep dancing about in front of me?

Yasha (laughs). I can't hear your voice without laughing—

Gayev. Either he or I—

Mme. Ranevskaya. Go away, Yasha; run along.

Yasha (handing MME. RANEVSKAYA her purse). I'm going, at once. (*Hardly able to suppress his laughter.*) This minute. (*Exits.*)

Lopahin. That rich man, Deriganov, wants to buy your estate. They say he's coming to the auction himself.

Mme. Ranevskaya. Where did you hear that?

Lopahin. That's what they are saying in town.

Gayev. Our aunt in Yaroslavl has promised to help; but when she will send the money, and how much, no one knows.

Lopahin. How much will she send? A hundred thousand? Two hundred?

Mme. Ranevskaya. Oh, well, ten or fifteen thousand; and we'll have to be grateful for that.

Lopahin. Forgive me, but such frivolous people as you are, so queer and unbusinesslike—I never met in my life. One tells you in plain language that your estate is up for sale, and you don't seem to take it in.

Mme. Ranevskaya. What are we to do? Tell us what to do.

Lopahin. I do tell you, every day; every day I say the same thing! You must lease the cherry orchard and the land for summer cottages, you must do it and as soon as possible—right away. The auction is close at hand. Please understand! Once you've decided to have the cottages, you can raise as much money as you like, and you're saved.

Mme. Ranevskaya. Cottages—summer people—forgive me, but it's all so vulgar.

Gayev. I agree with you absolutely.

Lopahin. I shall either burst into tears or scream or faint! I can't stand it! You've worn me out! (*To GAYEV.*) You're an old woman!

Gayev. Who?

Lopahin. An old woman! (*Gets up to go.*)

Mme. Ranevskaya (*alarmed*). No, don't go! Please stay, I beg you, my dear. Perhaps we shall think of something.

Lopahin. What is there to think of?

Mme. Ranevskaya. Don't go, I beg you. With you here it's more cheerful anyway. (*Pause.*) I keep expecting something to happen, it's as though the house were going to crash about our ears.

Gayev (*in deep thought*). Bank shot in the corner. . . . Three cushions in the side pocket. . . .

Mme. Ranevskaya. We have been great sinners . . .

Lopahin. What sins could you have committed?

Gayev (*putting a candy in his mouth*). They say I've eaten up my fortune in candy! (*Laughs.*)

Mme. Ranevskaya. Oh, my sins! I've squandered money away recklessly, like a lunatic, and I married a man who made nothing but debts. My husband drank himself to death on champagne, he was a terrific

drinker. And then, to my sorrow, I fell in love with another man, and I lived with him. And just then—that was my first punishment—a blow on the head: my little boy was drowned here in the river. And I went abroad, went away forever . . . never to come back, never to see this river again . . . I closed my eyes and ran, out of my mind. . . . But he followed me, pitiless, brutal. I bought a villa near Mentone, because he fell ill there; and for three years, day and night, I knew no peace, no rest. The sick man wore me out, he sucked my soul dry. Then last year, when the villa was sold to pay my debts, I went to Paris, and there he robbed me, abandoned me, took up with another woman, I tried to poison myself—it was stupid, so shameful—and then suddenly I felt drawn back to Russia, back to my own country, to my little girl. (*Wipes her tears away.*) Lord, Lord! Be merciful, forgive me my sins—don't punish me any more! (*Takes a telegram out of her pocket.*) This came today from Paris—he begs me to forgive him, implores me to go back . . . (*Tears up the telegram.*) Do I hear music? (*Listens.*)

Gayev. That's our famous Jewish band, you remember? Four violins, a flute, and a double bass.

Mme. Ranevskaya. Does it still exist? We ought to send for them some evening and have a party.

Lopahin (listens). I don't hear anything. (*Hums softly*) "The Germans for a fee will Frenchify a Russian." (*Laughs.*) I saw a play at the theater yesterday—awfully funny.

Mme. Ranevskaya. There was probably nothing funny about it. You shouldn't go to see plays, you should look at yourselves more often. How drab your lives are—how full of unnecessary talk.

Lopahin. That's true; come to think of it, we do live like fools. (*Pause.*) My pop was a peasant, an idiot; he understood nothing, never taught me anything, all he did was beat me when he was drunk, and always with a stick. Fundamentally, I'm just the same kind of blockhead and idiot. I was never taught anything—I have a terrible handwriting, I write so that I feel ashamed before people, like a pig.

Mme. Ranevskaya. You should get married, my friend.

Lopahin. Yes . . . that's true.

Mme. Ranevskaya. To our Varya, she's a good girl.

Lopahin. Yes.

Mme. Ranevskaya. She's a girl who comes of simple people, she works all day long; and above all, she loves you. Besides, you've liked her for a long time now.

Lopahin. Well, I've nothing against it. She's a good girl. (*Pause.*)

Gayev. I've been offered a place in the bank—6,000 a year. Have you heard?

Mme. Ranevskaya. You're not up to it. Stay where you are.

FIRS enters, carrying an overcoat.

Firs (to GAYEV). Please put this on, Sir, it's damp.

Gayev (putting it on). I'm fed up with you, Brother.

Firs. Never mind. This morning you drove off without saying a word.

(*Looks him over.*)

Mme. Ranevskaya. How you've aged, Firs.

Firs. I beg your pardon?

Lopahin. The lady says you've aged.

Firs. I've lived a long time; they were arranging my wedding and your papa wasn't born yet. (*Laughs.*) When freedom came I was already head footman. I wouldn't consent to be set free then; I stayed on with the master . . . (*Pause.*) I remember they were all very happy, but why they were happy, they didn't know themselves.

Lopahin. It was fine in the old days! At least there was flogging!

Firs (not hearing). Of course. The peasants kept to the masters, the masters kept to the peasants; but now they've all gone their own ways, and there's no making out anything.

Gayev. Be quiet, Firs. I must go to town tomorrow. They've promised to introduce me to a general who might let us have a loan.

Lopahin. Nothing will come of that. You won't even be able to pay the interest, you can be certain of that.

Mme. Ranevskaya. He's raving, there isn't any general. (*Enter TROFIMOV, ANYA, and VARYA.*)

Gayev. Here come our young people.

Anya. There's Mamma, on the bench.

Mme. Ranevskaya (tenderly). Come here, come along, my darlings.

(*Embraces ANYA and VARYA.*) If you only knew how I love you both!

Sit beside me—there, like that. (*All sit down.*)

Lopahin. Our perpetual student is always with the young ladies.

Trofimov. That's not any of your business.

Lopahin. He'll soon be fifty, and he's still a student!

Trofimov. Stop your silly jokes.

Lopahin. What are you so cross about, you queer bird?

Trofimov. Oh, leave me alone.

Lopahin (laughs). Allow me to ask you, what do you think of me?

Trofimov. What I think of you, Yermolay Alexeyevich, is this: you are a rich man who will soon be a millionaire. Well, just as a beast of prey, which devours everything that comes in its way, is necessary for the process of metabolism to go on, so you too are necessary. (*All laugh.*)

Varya. Better tell us something about the planets, Petya.

Mme. Ranevskaya. No, let's go on with yesterday's conversation.

Trofimov. What was it about?

Gayev. About man's pride.

Trofimov. Yesterday we talked a long time, but we came to no conclusion.

There is something mystical about man's pride in your sense of the word. Perhaps you're right, from your own point of view. But if you reason simply, without going into subtleties, then what call is there for pride? Is there any sense in it, if man is so poor a thing physiologically, and if, in the great majority of cases, he is coarse, stupid, and profoundly unhappy? We should stop admiring ourselves. We should work, and that's all.

Gayev. You die, anyway.

Trofimov. Who knows? And what does it mean—to die? Perhaps man has a hundred senses, and at his death only the five we know perish, while the other ninety-five remain alive.

Mme. Ranevskaya. How clever you are, Petya!

Lopahin (ironically). Awfully clever!

Trofimov. Mankind goes forward, developing its powers. Everything that is now unattainable for it will one day come within man's reach and be clear to him; only we must work, helping with all our might those who seek the truth. Here among us in Russia only the very few work as yet. The great majority of the intelligentsia, as far as I can see, seek nothing, do nothing, are totally unfit for work of any kind. They call themselves the intelligentsia, yet they are uncivil to their servants, treat the peasants like animals, are poor students, never read anything serious, do absolutely nothing at all, only talk about science, and have little appreciation of the arts. They are all solemn, have grim faces, they all philosophize and talk of weighty matters. And meanwhile the vast majority of us, ninety-nine out of a hundred, live like savages. At the least provocation—a punch in the jaw, and curses. They eat disgustingly, sleep in filth and stuffiness, bedbugs everywhere, stench and damp and moral slovenliness. And obviously, the only purpose of all our fine talk is to hoodwink ourselves and others. Show me where the public nurseries are that we've heard so much about, and the libraries. We read about them in novels, but in

reality they don't exist, there is nothing but dirt, vulgarity, and Asiatic backwardness. I don't like very solemn faces, I'm afraid of them, I'm afraid of serious conversations. We'd do better to keep quiet for a while.

Lopahin. Do you know, I get up at five o'clock in the morning, and I work from morning till night; and I'm always handling money, my own and other people's, and I see what people around me are really like. You've only to start doing anything to see how few honest, decent people there are. Sometimes when I lie awake at night, I think: "Oh, Lord, thou hast given us immense forests, boundless fields, the widest horizons, and living in their midst, we ourselves ought really to be giants."

Mme. Ranevskaya. Now you want giants! They're only good in fairy tales; otherwise they're frightening.

YEPIHODOV *crosses the stage at the rear, playing the guitar.*

Mme. Ranevskaya (pensively). There goes Yepihodov.

Anya (pensively). There goes Yepihodov.

Gayev. Ladies and gentlemen, the sun has set.

Trofimov. Yes.

Gayev (in a low voice, declaiming as it were). Oh, Nature, wondrous Nature, you shine with eternal radiance, beautiful and indifferent! You, whom we call our mother, unite within yourself life and death! You animate and destroy!

Varya (pleadingly). Uncle dear!

Anya. Uncle, again!

Trofimov. You'd better bank the yellow ball in the side pocket.

Gayev. I'm silent, I'm silent . . .

All sit plunged in thought. Stillness reigns. Only FIRS'S muttering is audible. Suddenly a distant sound is heard, coming from the sky as it were, the sound of a snapping string, mournfully dying away.

Mme. Ranevskaya. What was that?

Lopahin. I don't know. Somewhere far away, in the pits, a bucket's broken loose; but somewhere very far away.

Gayev. Or it might be some sort of bird, perhaps a heron.

Trofimov. Or an owl . . .

Mme. Ranevskaya (shudders). It's weird, somehow. (*Pause.*)

Firs. Before the calamity the same thing happened—the owl screeched, and the samovar hummed all the time.

Gayev. Before what calamity?

Firs. Before the Freedom. (*Pause.*)

Mme. Ranevskaya. Come, my friends, let's be going. It's getting dark.
(*To ANYA.*) You have tears in your eyes. What is it, my little one?
(*Embraces her.*)

Anya. I don't know, Mamma; it's nothing.

Trofimov. Somebody's coming.

A TRAMP appears, wearing a shabby white cap and an overcoat. He is slightly drunk.

Tramp. Allow me to inquire, will this short cut take me to the station?

Gayev. It will. Just follow that road.

Tramp. My heartfelt thanks. (*Coughing.*) The weather is glorious. (*Recites*)
"My brother, my suffering brother . . . Go down to the Volga!
Whose groans . . . ?" (*To VARYA.*) Mademoiselle, won't you spare
30 kopecks for a hungry Russian?

VARYA, frightened, cries out.

Lopahin (angrily). Even panhandling has its proprieties.

Mme. Ranevskaya (scared). Here, take this. (*Fumbles in her purse.*) I
haven't any silver . . . never mind, here's a gold piece.

Tramp. My heartfelt thanks. (*Exits. Laughter.*)

Varya (frightened). I'm leaving, I'm leaving . . . Oh, Mamma dear, at home
the servants have nothing to eat, and you gave him a gold piece!

Mme. Ranevskaya. What are you going to do with me? I'm such a fool.
When we get home, I'll give you everything I have. Yermolay
Alexeyevich, you'll lend me some more . . .

Lopahin. Yes, Ma'am.

Mme. Ranevskaya. Come, ladies and gentlemen, it's time to be going.

Oh! Varya, we've settled all about your marriage. Congratulations!

Varya (through tears). Really, Mamma, that's not a joking matter.

Lopahin. "Aurelia, get thee to a nunnery, go . . ."

Gayev. And do you know, my hands are trembling: I haven't played
billiards in a long time.

Lopahin. "Aurelia, nymph, in your orisons, remember me!"

Mme. Ranevskaya. Let's go, it's almost suppertime.

Varya. He frightened me! My heart's pounding.

Lopahin. Let me remind you, ladies and gentlemen, on the 22nd of
August the cherry orchard will be up for sale. Think about that!
Think!

All except TROFIMOV and ANYA go out.

Anya (laughs). I'm grateful to that tramp, he frightened Varya and so we're alone.

Trofimov. Varya's afraid we'll fall in love with each other all of a sudden. She hasn't left us alone for days. Her narrow mind can't grasp that we're above love. To avoid the petty and illusory, everything that prevents us from being free and happy—that is the goal and meaning of our life. Forward! Do not fall behind, friends!

Anya (strikes her hands together). How well you speak! (*Pause.*) It's wonderful here today.

Trofimov. Yes, the weather's glorious.

Anya. What have you done to me, Petya? Why don't I love the cherry orchard as I used to? I loved it so tenderly. It seemed to me there was no spot on earth lovelier than our orchard.

Trofimov. All Russia is our orchard. Our land is vast and beautiful, there are many wonderful places in it. (*Pause.*) Think of it, Anya, your grandfather, your great-grandfather and all your ancestors were serf owners, owners of living souls, and aren't human beings looking at you from every tree in the orchard, from every leaf, from every trunk? Don't you hear voices? Oh, it's terrifying! Your orchard is a fearful place, and when you pass through it in the evening or at night, the old bark on the trees gleams faintly, and the cherry trees seem to be dreaming of things that happened a hundred, two hundred years ago and to be tormented by painful visions. What is there to say? We're at least two hundred years behind, we've really achieved nothing yet, we have no definite attitude to the past, we only philosophize, complain of the blues, or drink vodka. It's all so clear: in order to live in the present, we should first redeem our past, finish with it, and we can expiate it only by suffering, only by extraordinary, unceasing labor. Realize that, Anya.

Anya. The house in which we live has long ceased to be our own, and I will leave it, I give you my word.

Trofimov. If you have the keys, fling them into the well and go away. Be free as the wind.

Anya (in ecstasy). How well you put that!

Trofimov. Believe me, Anya, believe me! I'm not yet thirty, I'm young, I'm still a student—but I've already suffered so much. In winter I'm hungry, sick, harassed, poor as a beggar, and where hasn't Fate driven me? Where haven't I been? And yet always, every moment of the day and night, my soul is filled with inexplicable premonitions. . . . I have a premonition of happiness, Anya. . . . I see it already!

Anya (*pensively*). The moon is rising.

YEPIHODOV *is heard playing the same mournful tune on the guitar. The moon rises. Somewhere near the poplars VARYA is looking for ANYA and calling "Anya, where are you?"*

Trofimov. Yes, the moon is rising. (*Pause.*) There it is, happiness, it's approaching, it's coming nearer and nearer, I can already hear its footsteps. And if we don't see it, if we don't know it, what does it matter? Others will!

Varya's voice. "Anya! Where are you?"

Trofimov. That Varya again! (*Angrily.*) It's revolting!

Anya. Never mind, let's go down to the river. It's lovely there.

Trofimov. Come on. (*They go.*)

Varya's voice. "Anya! Anya!"

ACT III

A drawing room separated by an arch from a ballroom. Evening. Chandelier burning. The Jewish band is heard playing in the anteroom. In the ballroom they are dancing the Grand Rond. PISHCHIK is heard calling, "Promenade à une paire." PISHCHIK and CHARLOTTA, TROFIMOV and MME. RANEVSKAYA, ANYA and the POST-OFFICE CLERK, VARYA and the STATIONMASTER, and others, enter the drawing room in couples. DUNYASHA is in the last couple. VARYA weeps quietly, wiping her tears as she dances. All parade through drawing room. PISHCHIK calling "Grand rond, balancez!" and "Les cavaliers à genoux et remerciez vos dames!" FIRS wearing a dress coat, brings in soda water on a tray. PISHCHIK and TROFIMOV enter the drawing room.

Pishchik. I'm a full-blooded man; I've already had two strokes. Dancing's hard work for me; but as they say, "If you run with the pack, you can bark or not, but at least wag your tail." Still, I'm as strong as a horse. My late lamented father, who would have his joke, God rest his soul, used to say, talking about our origin, that the ancient line of the Simeonov-Pishchiks was descended from the very horse that Caligula had made a senator. (*Sits down.*) But the trouble is, I have no money. A hungry dog believes in nothing but meat. (*Snores and wakes up at once.*) It's the same with me—I can think of nothing but money.

Trofimov. You know, there *is* something equine about your figure.

Pishchik. Well, a horse is a fine animal—one can sell a horse.

Sound of billiards being played in an adjoining room. VARYA appears in the archway.

Trofimov (teasing her). Madam Lopahina! Madam Lopahina!

Varya (angrily). Mangy master!

Trofimov. Yes, I am a mangy master and I'm proud of it.

Varya (reflecting bitterly). Here we've hired musicians, and what shall we pay them with? (*Exits.*)

Trofimov (to PISHCHIK). If the energy you have spent during your lifetime looking for money to pay interest had gone into something else, in the end you could have turned the world upside down.

Pishchik. Nietzsche, the philosopher, the greatest, most famous of men, that colossal intellect, says in his works that it is permissible to forge bank notes.

Trofimov. Have you read Nietzsche?

Pishchik. Well . . . Dashenka told me . . . And now I've got to the point where forging banknotes is about the only way out for me. . . . The day after tomorrow I have to pay 310 rubles—I already have 130 . . . (*Feels in his pockets. In alarm.*) The money's gone! I've lost my money! (*Through tears.*) Where's my money? (*Joyfully.*) Here it is! Inside the lining. . . I'm all in a sweat. . . .

Enter MME. RANEVSKAYA and CHARLOTTA.

Mme. Ranevskaya (hums the "Lerginka"). Why isn't Leonid back yet? What is he doing in town? (*To DUNYASHA.*) Dunyasha, offer the musicians tea.

Trofimov. The auction hasn't taken place, most likely.

Mme. Ranevskaya. It's the wrong time to have the band, and the wrong time to give a dance. Well, never mind. (*Sits down and hums softly.*)

Charlotta (hands PISHCHIK a pack of cards). Here is a pack of cards. Think of any card you like.

Pishchik. I've thought of one.

Charlotta. Shuffle the pack now. That's right. Give it here, my dear Mr. Pishchik. *Ein, zwei, drei!* Now look for it—it's in your side pocket.

Pishchik (taking the card out of his pocket). The eight of spades! Perfectly right! Just imagine!

Charlotta (holding pack of cards in her hands. To TROFIMOV). Quickly, name the top card.

Trofimov. Well, let's see—the queen of spades.

Charlotta. Right! (*To PISHCHIK.*) Now name the top card.

Pishchik. The ace of hearts.

Charlotta. Right! (*Claps her hands and the pack of cards disappears.*) Ah, what lovely weather it is today! (*A mysterious feminine voice which seems to come from under the floor answers her*) “Oh, yes, it’s magnificent weather, Madam.”

Charlotta. You are my best ideal.

Voice. And I find you pleasing too, Madam.

Stationmaster (*applauding*). The lady ventriloquist, bravo!

Pishchik (*amazed*). Just imagine! Enchanting Charlotta Ivanovna, I’m simply in love with you.

Charlotta. In love? (*Shrugs her shoulders.*) Are you capable of love? *Guter Mensch, aber schlechter Musikant* [A good man but a bad musician]!

Trofimov (*claps PISHCHIK on the shoulder*). You old horse, you!

Charlotta. Attention please! One more trick! (*Takes a plaid from a chair.*) Here is a very good plaid; I want to sell it. (*Shaking it out.*) Does anyone want to buy it?

Pishchik (*in amazement*). Just imagine!

Charlotta. *Ein, zwei, drei!* (*Raises the plaid quickly, behind it stands ANYA. She curtsies, runs to her mother, embraces her, and runs back into the ballroom, amidst general enthusiasm.*)

Mme. Ranevskaya (*applauds*). Bravo! Bravo!

Charlotta. Now again! *Ein, zwei, drei!* (*Lifts the plaid; behind it stands VARYA bowing.*)

Pishchik (*running after her*). The rascal! What a woman, what a woman! (*Exits.*)

Mme. Ranevskaya. And Leonid still isn’t here. What is he doing in town so long? I don’t understand. It must be all over by now. Either the estate has been sold, or the auction hasn’t taken place. Why keep us in suspense so long?

Varya (*trying to console her*). Uncle’s bought it, I feel sure of that.

Trofimov (*mockingly*). Oh, yes!

Varya. Great-aunt sent him an authorization to buy it in her name, and to transfer the debt. She’s doing it for Anya’s sake. And I’m sure that God will help us, and Uncle will buy it.

Mme. Ranevskaya. Great-aunt sent fifteen thousand to buy the estate in her name, she doesn’t trust us, but that’s not even enough to pay the interest. (*Covers her face with her hands.*) Today my fate will be decided, my fate—

Trofimov (*teasing VARYA*). Madam Lopahina!

Varya (*angrily*). Perpetual student! Twice already you've been expelled from the university.

Mme. Ranevskaya. Why are you so cross, Varya? He's teasing you about Lopahin. Well, what of it? If you want to marry Lopahin, go ahead. He's a good man, and interesting, if you don't want to, don't. Nobody's compelling you, my pet!

Varya. Frankly, Mamma dear, I take this thing seriously; he's a good man and I like him.

Mme. Ranevskaya. All right then, marry him. I don't know what you're waiting for.

Varya. But, Mamma, I can't propose to him myself. For the last two years everyone's been talking to me about him—talking. But he either keeps silent, or else cracks jokes. I understand; he's growing rich, he's absorbed in business—he has no time for me. If I had money, even a little, say, 100 rubles, I'd throw everything up and go far away—I'd go into a nunnery.

Trofimov. What a blessing . . .

Varya. A student ought to be intelligent. (*Softly, with tears in her voice.*) How homely you've grown, Petya! How old you look! (*To MME. RANEVSKAYA, with dry eyes.*) But I can't live without work, Mamma dear; I must keep busy every minute.

Enter YASHA.

Yasha (*hardly restraining his laughter*). Yepihodov has broken a billiard cue! (*Exits.*)

Varya. Why is Yepihodov here? Who allowed him to play billiards? I don't understand these people! (*Exits.*)

Mme. Ranevskaya. Don't tease her, Petya. She's unhappy enough without that.

Trofimov. She bustles so—and meddles in other people's business. All summer long she's given Anya and me no peace. She's afraid of a love affair between us. What business is it of hers? Besides, I've given no grounds for it, and I'm far from such vulgarity. We are above love.

Mme. Ranevskaya. And I suppose I'm beneath love? (*Anxiously.*) What can be keeping Leonid? If I only knew whether the estate has been sold or not. Such a calamity seems so incredible to me that I don't know what to think—I feel lost. . . . I could scream. . . . I could do something stupid. . . . Save me, Petya, tell me something, talk to me!

Trofimov. Whether the estate is sold today or not, isn't it all one? That's all done with long ago—there's no turning back, the path is overgrown. Calm yourself, my dear. You mustn't deceive yourself. For once in your life you must face the truth.

Mme. Ranevskaya. What truth? You can see the truth, you can tell it from falsehood, but I seem to have lost my eyesight, I see nothing. You settle every great problem so boldly, but tell me, my dear boy, isn't it because you're young, because you don't yet know what one of your problems means in terms of suffering? You look ahead fearlessly, but isn't it because you don't see and don't expect anything dreadful, because life is still hidden from your young eyes? You're bolder, more honest, more profound than we are, but think hard, show just a bit of magnanimity, spare me. After all, I was born here, my father and mother lived here, and my grandfather; I love this house. Without the cherry orchard, my life has no meaning for me, and if it really must be sold, then sell me with the orchard. (*Embraces TROFIMOV, kisses him on the forehead.*) My son was drowned here. (*Weeps.*) Pity me, you good, kind fellow!

Trofimov. You know, I feel for you with all my heart.

Mme. Ranevskaya. But that should have been said differently, so differently! (*Takes out her handkerchief—a telegram falls on the floor.*) My heart is so heavy today—you can't imagine! The noise here upsets me—my inmost being trembles at every sound—I'm shaking all over. But I can't go into my own room; I'm afraid to be alone. Don't condemn me, Petya. . . . I love you as though you were one of us, I would gladly let you marry Anya—I swear I would—only, my dear boy, you must study—you must take your degree—you do nothing, you let yourself be tossed by Fate from place to place—it's so strange. It's true, isn't it? And you should do something about your beard, to make it grow somehow! (*Laughs.*) You're so funny!

Trofimov (*picks up the telegram*). I've no wish to be a dandy.

Mme. Ranevskaya. That's a telegram from Paris. I get one every day. One yesterday and one today. That savage is ill again—he's in trouble again. He begs forgiveness, implores me to go to him, and really I ought to go to Paris to be near him. Your face is stern, Petya; but what is there to do, my dear boy? What am I to do? He's ill, he's alone and unhappy, and who is to look after him, who is to keep him from doing the wrong thing, who is to give him his medicine on time? And why hide it or keep still about it—I love him! That's clear. I love him, love him! He's a millstone round my neck, he'll drag me to the bottom,

but I love that stone, I can't live without it. (*Presses TROFIMOV'S hand.*) Don't think badly of me, Petya, and don't say anything, don't say . . .

Trofimov (*through tears*). Forgive me my frankness in heaven's name; but, you know, he robbed you!

Mme. Ranevskaya. No, no, no, you mustn't say such things! (*Covers her ears.*)

Trofimov. But he's a scoundrel! You're the only one who doesn't know it. He's a petty scoundrel—a nonentity!

Mme. Ranevskaya (*controlling her anger*). You are twenty-six or twenty-seven years old, but you're still a schoolboy.

Trofimov. That may be.

Mme. Ranevskaya. You should be a man at your age. You should understand people who love—and ought to be in love yourself. You ought to fall in love! (*Angrily.*) Yes, yes! And it's not purity in you, it's prudishness, you're simply a queer fish, a comical freak!

Trofimov (*horrified*). What is she saying?

Mme. Ranevskaya. "I am above love!" You're not above love, but simply, as our *Firs* says, you're an addlehead. At your age not to have a mistress!

Trofimov (*horrified*). This is frightful! What is she saying! (*Goes rapidly into the ballroom, clutching his head.*) It's frightful—I can't stand it, I won't stay! (*Exits, but returns at once.*) All is over between us! (*Exits into anteroom.*)

Mme. Ranevskaya (*shouts after him*). Petya! Wait! You absurd fellow, I was joking. Petya!

Sound of somebody running quickly downstairs and suddenly falling down with a crash. ANYA and VARYA scream. Sound of laughter a moment later.

Mme. Ranevskaya. What's happened?

ANYA runs in.

Anya (*laughing*). Petya's fallen downstairs! (*Runs out.*)

Mme. Ranevskaya. What a queer bird that Petya is!

STATIONMASTER, *standing in the middle of the ballroom, recites Alexey Tolstoy's "Magdalene" to which all listen, but after a few lines, the sound of a waltz is heard from the anteroom and the reading breaks off. All dance. TROFIMOV, ANYA, VARYA, and MME. RANEVSKAYA enter from the anteroom.*

Mme. Ranevskaya. Petya, you pure soul, please forgive me. . . . Let's dance.

Dances with PETYA. ANYA and VARYA dance. FIRS enters, puts his stick down by the side door. YASHA enters from the drawing room and watches the dancers.

Yasha. Well, grandfather?

Firs. I'm not feeling well. In the old days it was generals, barons, and admirals that were dancing at our balls, and now we have to send for the Post Office clerk and the Stationmaster, and even they aren't too glad to come. I feel kind of shaky. The old master that's gone, their grandfather, dosed everyone with sealing wax, whatever ailed 'em. I've been taking sealing wax every day for twenty years or more. Perhaps that's what's kept me alive.

Yasha. I'm fed up with you, Grandpop. (*Yawns.*) It's time you croaked.

Firs. Oh, you addlehead! (*Mumbles.*)

TROFIMOV and MME. RANEVSKAYA dance from the ballroom into the drawing room.

Mme. Ranevskaya. *Merci.* I'll sit down a while. (*Sits down.*) I'm tired.
Enter ANYA.

Anya (excitedly). There was a man in the kitchen just now who said the cherry orchard was sold today.

Mme. Ranevskaya. Sold to whom?

Anya. He didn't say. He's gone. (*Dances off with TROFIMOV.*)

Yasha. It was some old man gabbing, a stranger.

Firs. And Leonid Andreyevich isn't back yet, he hasn't come. And he's wearing his lightweight between-season overcoat; like enough, he'll catch cold. Ah, when they're young they're green.

Mme. Ranevskaya. This is killing me. Go, Yasha, find out to whom it has been sold.

Yasha. But the old man left long ago. (*Laughs.*)

Mme. Ranevskaya. What are you laughing at? What are you pleased about?

Yasha. That Yepihodov is such a funny one. A funny fellow, Two-and-Twenty Troubles!

Mme. Ranevskaya. Firs, if the estate is sold, where will you go?

Firs. I'll go where you tell me.

Mme. Ranevskaya. Why do you look like that? Are you ill? You ought to go to bed.

Firs. Yes! (*With a snigger.*) Me go to bed, and who's to hand things round? Who's to see to things? I'm the only one in the whole house.

Yasha (*to MME. RANEVSKAYA*). Lubov Andreyevna, allow me to ask a favor of you, be so kind! If you go back to Paris, take me with you, I beg you. It's positively impossible for me to stay here. (*Looking around; sotto voce.*) What's the use of talking? You see for yourself, it's an uncivilized country, the people have no morals, and then the boredom! The food in the kitchen's revolting, and besides there's this Firs wanders about mumbling all sorts of inappropriate words. Take me with you, be so kind!

Enter PISHCHIK.

Pishchik. May I have the pleasure of a waltz with you, charming lady? (*MME. RANEVSKAYA accepts.*) All the same, enchanting lady, you must let me have 180 rubles. . . . You must let me have (*dancing*) just one hundred and eighty rubles. (*They pass into the ballroom.*)

Yasha (*hums softly*). "Oh, wilt thou understand the tumult in my soul?"

In the ballroom a figure in a gray top hat and checked trousers is jumping about and waving its arms; shouts: "Bravo, Charlotta Ivanovna!"

Dunyasha (*stopping to powder her face; to FIRS*). The young Miss has ordered me to dance. There are so many gentlemen and not enough ladies. But dancing makes me dizzy, my heart begins to beat fast, Firs Nikolayevich. The Post Office clerk said something to me just now that quite took my breath away. (*Music stops.*)

Firs. What did he say?

Dunyasha. "You're like a flower," he said.

Yasha (*yawns*). What ignorance. (*Exits.*)

Dunyasha. "Like a flower!" I'm such a delicate girl. I simply adore pretty speeches.

Firs. You'll come to a bad end.

Enter YEPIHODOV.

Yepihodov (*to DUNYASHA*). You have no wish to see me, Avdotya Fyodorovna . . . as though I was some sort of insect. (*Sighs.*) Ah, life!

Dunyasha. What is it you want?

Yepihodov. Indubitably you may be right. (*Sighs.*) But of course, if one looks at it from the point of view, if I may be allowed to say so, and apologizing for my frankness, you have completely reduced me to a

state of mind. I know my fate. Every day some calamity befalls me, and I grew used to it long ago, so that I look upon my fate with a smile. You gave me your word, and though I—

Dunyasha. Let's talk about it later, please. But just now leave me alone, I am daydreaming. (*Plays with a fan.*)

Yepihodov. A misfortune befalls me every day; and if I may be allowed to say so, I merely smile, I even laugh.

Enter VARYA.

Varya (to YEPIHODOV). Are you still here? What an impertinent fellow you are really! Run along, Dunyasha. (*To YEPIHODOV.*) Either you're playing billiards and breaking a cue, or you're wandering about the drawing room as though you were a guest.

Yepihodov. You cannot, permit me to remark, penalize me.

Varya. I'm not penalizing you; I'm just telling you. You merely wander from place to place, and don't do your work. We keep you as a clerk, but Heaven knows what for.

Yepihodov (offended). Whether I work or whether I walk, whether I eat or whether I play billiards, is a matter to be discussed only by persons of understanding and of mature years.

Varya (enraged). You dare say that to me—you dare? You mean to say I've no understanding? Get out of here at once! This minute!

Yepihodov (scared). I beg you to express yourself delicately.

Varya (beside herself). Clear out this minute! Out with you!

YEPIHODOV goes towards the door, VARYA following.

Varya. Two-and-Twenty Troubles! Get out—don't let me set eyes on you!

Exit YEPIHODOV. His voice is heard behind the door: "I shall lodge a complaint against you!"

Varya. Oh, you're coming back? (*She seizes the stick left near door by FIRS.*)

Well, come then . . . come . . . I'll show you . . . Ah, you're coming?

You're coming? . . . Come . . . (*Swings the stick just as LOPAHIN enters.*)

Lopahin. Thank you kindly.

Varya (angrily and mockingly). I'm sorry.

Lopahin. It's nothing. Thank you kindly for your charming reception.

Varya. Don't mention it. (*Walks away, looks back and asks softly.*) I didn't hurt you, did I?

Lopahin. Oh, no, not at all. I shall have a large bump, though.

Voices from the ballroom. Lopahin is here! Lopahin!

Enter PISHCHIK.

Pishchik. My eyes do see, my ears do hear! (*Kisses* LOPAHIN.)

Lopahin. You smell of cognac, my dear friends. And we've been celebrating here, too.

Enter MME. RANEVSKAYA.

Mme. Ranevskaya. Is that you, Yermolay Alexeyevich? What kept you so long? Where's Leonid?

Lopahin. Leonid Andreyevich arrived with me. He's coming.

Mme. Ranevskaya. Well, what happened? Did the sale take place? Speak!

Lopahin (*embarrassed, fearful of revealing his joy*). The sale was over at four o'clock. We missed the train—had to wait till half past nine. (*Sighing heavily*.) Ugh. I'm a little dizzy.

Enter GAYEV. *In his right hand he holds parcels, with his left he is wiping away his tears.*

Mme. Ranevskaya. Well, Leonid? What news? (*Impatiently, through tears*.) Be quick, for God's sake!

Gayev (*not answering, simply waves his hand. Weeping, to FIRS*). Here, take these; anchovies, Kerch herrings . . . I haven't eaten all day. What I've been through! (*The click of billiard balls comes through the open door of the billiard room and YASHA'S voice is heard: "Seven and eighteen!" GAYEV'S expression changes, he no longer weeps.*) I'm terribly tired. Firs, help me change. (*Exits, followed by FIRS.*)

Pishchik. How about the sale? Tell us what happened.

Mme. Ranevskaya. Is the cherry orchard sold?

Lopahin. Sold.

Mme. Ranevskaya. Who bought it?

Lopahin. I bought it.

Pause. MME. RANEVSKAYA *is overcome. She would fall to the floor were it not for the chair and table near which she stands. VARYA takes the keys from her belt, flings them on the floor in the middle of the drawing room and goes out.*

Lopahin. I bought it. Wait a bit, ladies and gentlemen, please, my head is swimming, I can't talk. (*Laughs.*) We got to the auction and Deriganov was there already. Leonid Andreyevich had only 15,000 and straight off Deriganov bid 30,000 over and above the mortgage. I saw how the land lay, got into the fight, bid 40,000. He bid 45,000. I bid fifty-five. He kept adding five thousands, I ten. Well . . . it came to

an end. I bid ninety above the mortgage and the estate was knocked down to me. Now the cherry orchard's mine! Mine! (*Laughs uproariously.*) Lord! God in Heaven! The cherry orchard's mine! Tell me that I'm drunk—out of my mind—that it's all a dream. (*Stamps his feet.*) Don't laugh at me! If my father and my grandfather could rise from their graves and see all that has happened—how their Yermolay, who used to be flogged, their half-literate Yermolay, who used to run about barefoot in winter, how that very Yermolay has bought the most magnificent estate in the world. I bought the estate where my father and grandfather were slaves, where they weren't even allowed to enter the kitchen. I'm asleep—it's only a dream—I only imagine it. . . . It's the fruit of your imagination, wrapped in the darkness of the unknown! (*Picks up the keys, smiling genially.*) She threw down the keys, wants to show she's no longer mistress here. (*Jingles keys.*) Well, no matter. (*The band is heard tuning up.*) Hey, musicians! Strike up! I want to hear you! Come, everybody, and see how Yermolay Lopahin will lay the ax to the cherry orchard and how the trees will fall to the ground. We will build summer cottages there, and our grandsons and great-grandsons will see a new life here. Music! Strike up!

The band starts to play. MME. RANEVSKAYA has sunk into a chair and is weeping bitterly.

Lopahin (reproachfully). Why, why didn't you listen to me? My dear friend, my poor friend, you can't bring it back now. (*Tearfully.*) Oh, if only this were over quickly! Oh, if only our wretched, disordered life were changed!

Pishchik (takes him by the arm; sotto voce). She's crying. Let's go into the ballroom. Let her be alone. Come. (*Takes his arm and leads him into the ballroom.*)

Lopahin. What's the matter? Musicians, play so I can hear you! Let me have things the way I want them. (*Ironically.*) Here comes the new master, the owner of the cherry orchard. (*Accidentally he trips over a little table, almost upsetting the candelabra.*) I can pay for everything. (*Exits with PISHCHIK. MME. RANEVSKAYA, alone, sits huddled up, weeping bitterly. Music plays softly. Enter ANYA and TROFIMOV quickly, ANYA goes to her mother and falls on her knees before her. TROFIMOV stands in the doorway.*)

Anya. Mamma, Mamma, you're crying! Dear, kind, good Mamma, my precious, I love you, I bless you! The cherry orchard is sold, it's gone,

that's true, quite true. But don't cry, Mamma, life is still before you, you still have your kind, pure heart. Let us go, let us go away from here, darling. We will plant a new orchard, even more luxuriant than this one. You will see it, you will understand, and like the sun at evening, joy—deep, tranquil joy—will sink into your soul, and you will smile, Mamma. Come, darling, let us go.

ACT IV

Scene as in Act I. No window curtains or pictures, only a little furniture, piled up in a corner, as if for sale. A sense of emptiness. Near the outer door and at the back, suitcases, bundles, etc., are piled up. A door open on the left and the voices of VARYA and ANYA are heard. LOPAHIN stands waiting. YASHA holds a tray with glasses full of champagne. YEPIHODOV in the anteroom is tying up a box. Behind the scene a hum of voices: peasants have come to say good-by. Voice of GAYEV: "Thanks, brothers, thank you."

Yasha. The country folk have come to say good-by. In my opinion, Yermolay Alexeyevich, they are kindly souls, but there's nothing in their heads. *(The hum dies away. Enter MME. RANEVSKAYA and GAYEV.*

She is not crying, but is pale, her face twitches and she cannot speak.)

Gayev. You gave them your purse, Luba. That won't do! That won't do!

Mme. Ranevskaya. I couldn't help it! I couldn't! *(They go out.)*

Lopahin (calls after them). Please, I beg you, have a glass at parting. I didn't think of bringing any champagne from town and at the station I could find only one bottle. Please, won't you? *(Pause.)* What's the matter, ladies and gentlemen, don't you want any? *(Moves away from the door.)* If I'd known, I wouldn't have bought it. Well, then I won't drink any, either. *(YASHA carefully sets the tray down on a chair.)* At least you have a glass, Yasha.

Yasha. Here's to the travelers! And good luck to those that stay! *(Drinks.)*

This champagne isn't the real stuff, I can assure you.

Lopahin. Eight rubles a bottle. *(Pause.)* It's devilishly cold here.

Yasha. They didn't light the stoves today—it wasn't worth it, since we're leaving. *(Laughs.)*

Lopahin. Why are you laughing?

Yasha. It's just that I'm pleased.

Lopahin. It's October, yet it's as still and sunny as though it were summer. Good weather for building. *(Looks at his watch, and speaks off.)*

Bear in mind, ladies and gentlemen, the train goes in forty-seven minutes, so you ought to start for the station in twenty minutes. Better hurry up!

Enter TROFIMOV wearing an overcoat.

Trofimov. I think it's time to start. The carriages are at the door. The devil only knows what's become of my rubbers; they've disappeared. (*Calling off.*) Anya! My rubbers are gone. I can't find them.

Lopahin. I've got to go to Kharkov. I'll take the same train you do. I'll spend the winter in Kharkov. I've been hanging round here with you, till I'm worn out with loafing. I can't live without work—I don't know what to do with my hands, they dangle as if they didn't belong to me.

Trofimov. Well, we'll soon be gone, then you can go on with your useful labors again.

Lopahin. Have a glass.

Trofimov. No, I won't.

Lopahin. So you're going to Moscow now?

Trofimov. Yes. I'll see them into town, and tomorrow I'll go on to Moscow.

Lopahin. Well, I'll wager the professors aren't giving any lectures, they're waiting for you to come.

Trofimov. That's none of your business.

Lopahin. Just how many years have you been at the university?

Trofimov. Can't you think of something new? Your joke's stale and flat.

(*Looking for his rubbers.*) We'll probably never see each other again, so allow me to give you a piece of advice at parting: don't wave your hands about! Get out of the habit. And another thing: building bungalows, figuring that summer residents will eventually become small farmers, figuring like that is just another form of waving your hands about. . . . Never mind, I love you anyway; you have fine, delicate fingers, like an artist; you have a fine, delicate soul.

Lopahin (embracing him). Good-by, my dear fellow. Thank you for everything. Let me give you some money for the journey, if you need it.

Trofimov. What for? I don't need it.

Lopahin. But you haven't any.

Trofimov. Yes, I have, thank you. I got some money for a translation—here it is in my pocket. (*Anxiously.*) But where are my rubbers?

Varya (from the next room). Here! Take the nasty things. (*Flings a pair of rubbers onto the stage.*)

Trofimov. What are you so cross about, Varya? Hm . . . and these are not my rubbers.

Lopahin. I sowed three thousand acres of poppies in the spring, and now I've made 40,000 on them, clear profit; and when my poppies were in bloom, what a picture it was! So, as I say, I made 40,000; and I am offering you a loan because I can afford it. Why turn up your nose at it? I'm a peasant—I speak bluntly.

Trofimov. Your father was a peasant, mine was a druggist—that proves absolutely nothing whatever. (*LOPAHIN takes out his wallet.*) Don't, put that away! If you were to offer me two hundred thousand I wouldn't take it. I'm a free man. And everything that all of you, rich and poor alike, value so highly and hold so dear hasn't the slightest power over me. It's like so much fluff floating in the air. I can get on without you, I can pass you by, I'm strong and proud. Mankind is moving towards the highest truth, towards the highest happiness possible on earth, and I am in the front ranks.

Lopahin. Will you get there?

Trofimov. I will. (*Pause.*) I will get there, or I will show others the way to get there.

The sound of axes chopping down trees is heard in the distance.

Lopahin. Well, good-by, my dear fellow. It's time to leave. We turn up our noses at one another, but life goes on just the same. When I'm working hard, without resting, my mind is easier, and it seems to me that I too know why I exist. But how many people are there in Russia, brother, who exist nobody knows why? Well, it doesn't matter. That's not what makes the wheels go round. They say Leonid Andreyevich has taken a position in the bank, 6,000 rubles a year. Only, of course, he won't stick to it, he's too lazy. . . .

Anya (in the doorway). Mamma begs you not to start cutting down the cherry trees until she's gone.

Trofimov. Really, you should have more tact! (*Exits.*)

Lopahin. Right away—right away! Those men . . . (*Exits.*)

Anya. Has Firs been taken to the hospital?

Yasha. I told them this morning. They must have taken him.

Anya (to YEPHODOV who crosses the room). Yephodov, please find out if Firs has been taken to the hospital.

Yasha (offended). I told Yegor this morning. Why ask a dozen times?

Yephodov. The aged Firs, in my definitive opinion, is beyond mending.

It's time he was gathered to his fathers. And I can only envy him.

(*Puts a suitcase down on a hatbox and crushes it.*) There now, of course. I knew it! (*Exits.*)

Yasha (mockingly). Two-and-Twenty Troubles!

Varya (through the door). Has Firs been taken to the hospital?

Anya. Yes.

Varya. Then why wasn't the note for the doctor taken too?

Anya. Oh! Then someone must take it to him. (*Exits.*)

Varya (from adjoining room). Where's Yasha? Tell him his mother's come and wants to say good-by.

Yasha (waves his hand). She tries my patience.

DUNYASHA has been occupied with the luggage. Seeing YASHA alone, she goes up to him.

Dunyasha. You might just give me one little look, Yasha. You're going away. . . . You're leaving me . . . (*Weeps and throws herself on his neck.*)

Yasha. What's there to cry about? (*Drinks champagne.*) In six days I shall be in Paris again. Tomorrow we get into an express train and off we go, that's the last you'll see of us. . . . I can scarcely believe it. *Vive la France!* It don't suit me here, I just can't live here. That's all there is to it. I'm fed up with the ignorance here, I've had enough of it. (*Drinks champagne.*) What's there to cry about? Behave yourself properly, and you'll have no cause to cry.

Dunyasha (pouffers her face, looking in pocket mirror). Do send me a letter from Paris. You know I loved you, Yasha, how I loved you! I'm a delicate creature, Yasha.

Yasha. Somebody's coming! (*Busies himself with the luggage; hums softly.*)

Enter MME. RANEVSKAYA, GAYEV, ANYA, and CHARLOTTA.

Gayev. We ought to be leaving. We haven't much time. (*Looks at YASHA.*) Who smells of herring?

Mme. Ranevskaya. In about ten minutes we should be getting into the carriages. (*Looks around the room.*) Good-by, dear old home, good-by, grandfather. Winter will pass, spring will come, you will no longer be here, they will have torn you down. How much these walls have seen! (*Kisses ANYA warmly.*) My treasure, how radiant you look! Your eyes are sparkling like diamonds. Are you glad? Very?

Anya (gaily). Very glad. A new life is beginning, Mamma.

Gayev. Well, really, everything is all right now. Before the cherry orchard was sold, we all fretted and suffered; but afterwards, when the question was settled finally and irrevocably, we all calmed down, and even felt quite cheerful. I'm a bank employee now, a financier. The yellow ball in the side pocket! And anyhow, you are looking better, Luba, there's no doubt of that.

Mme. Ranevskaya. Yes, my nerves are better, that's true. (*She is handed her hat and coat.*) I sleep well. Carry out my things, Yasha. It's time. (*To ANYA.*) We shall soon see each other again, my little girl. I'm going to Paris, I'll live there on the money your great-aunt sent us to buy the estate with—long live Auntie! But that money won't last long.

Anya. You'll come back soon, soon, Mamma, won't you? Meanwhile I'll study, I'll pass my high school examination, and then I'll go to work and help you. We'll read all kinds of books together, Mamma, won't we? (*Kisses her mother's hands.*) We'll read in the autumn evenings, we'll read lots of books, and a new wonderful world will open up before us. (*Falls into a reverie.*) Mamma, do come back.

Mme. Ranevskaya. I will come back, my precious. (*Embraces her daughter.*
Enter LOPAHIN and CHARLOTTA, who is humming softly.)

Gayev. Charlotta's happy: she's singing.

Charlotta (*picks up a bundle and holds it like a baby in swaddling clothes*). Bye, baby, bye. (*A baby is heard crying "Wah! Wah!"*) Hush, hush, my pet, my little one. "Wah! Wah!" I'm so sorry for you! (*Throws the bundle down.*) You will find me a position, won't you? I can't go on like this.

Lopahin. We'll find one for you, Charlotta Ivanovna, don't worry.

Gayev. Everyone's leaving us. Varya's going away. We've suddenly become of no use.

Charlotta. There's no place for me to live in town, I must go away. (*Hums.*)

Enter PISHCHIK.

Lopahin. There's nature's masterpiece!

Pishchik (*gasping*). Oh . . . let me get my breath . . . I'm in agony. . . .
Esteemed friends . . . Give me a drink of water. . . .

Gayev. Wants some money, I suppose. No, thank you . . . I'll keep out of harm's way. (*Exits.*)

Pishchik. It's a long while since I've been to see you, most charming lady. (*To LOPAHIN.*) So you are here . . . glad to see you, you intellectual giant . . . There . . . (*Gives LOPAHIN money.*) Here's 400 rubles, and I still owe you 840.

Lopahin (*shrugging his shoulders in bewilderment*). I must be dreaming . . .
Where did you get it?

Pishchik. Wait a minute . . . It's hot . . . A most extraordinary event! Some Englishmen came to my place and found some sort of white clay on my land . . . (*To MME. RANEVSKAYA.*) And 400 for you . . .

most lovely . . . most wonderful . . . (*Hands her the money.*) The rest later. (*Drinks water.*) A young man in the train was telling me just now that a great philosopher recommends jumping off roofs. "Jump!" says he; "that's the long and the short of it!" (*In amazement.*) Just imagine! Some more water!

Lopahin. What Englishmen?

Pishchik. I leased them the tract with the clay on it for twenty-four years. . . . And now, forgive me, I can't stay. . . . I must be dashing on. . . . I'm going over to Znoikov. . . to Kardamanov . . . I owe them all money . . . (*Drinks water.*) Good-by, everybody . . . I'll look in on Thursday. . . .

Mme. Ranevskaya. We're just moving into town; and tomorrow I go abroad.

Pishchik (upset). What? Why into town? That's why the furniture is like that . . . and the suitcases . . . Well, never mind! (*Through tears.*) Never mind . . . Men of colossal intellect, these Englishmen . . . Never mind . . . Be happy. God will come to your help . . . Never mind . . . Everything in this world comes to an end. (*Kisses MME. RANEVSKAYA'S hand.*) If the rumor reaches you that it's all up with me, remember this old . . . horse, and say: Once there lived a certain . . . Simeonov-Pishchik . . . the kingdom of Heaven be his . . . Glorious weather! . . . Yes . . . (*Exits, in great confusion, but at once returns and says in the doorway*) My daughter Dashenka sends her regards. (*Exits.*)

Mme. Ranevskaya. Now we can go. I leave with two cares weighing on me. The first is poor old Firs. (*Glancing at her watch.*) We still have about five minutes.

Anya. Mamma, Firs has already been taken to the hospital. Yasha sent him there this morning.

Mme. Ranevskaya. My other worry is Varya. She's used to getting up early and working; and now, with no work to do, she is like a fish out of water. She has grown thin and pale, and keeps crying, poor soul. (*Pause.*) You know this very well, Yermolay Alexeyevich; I dreamed of seeing her married to you, and it looked as though that's how it would be. (*Whispers to ANYA, who nods to CHARLOTTA and both go out.*) She loves you. You find her attractive. I don't know, I don't know why it is you seem to avoid each other; I can't understand it.

Lopahin. To tell you the truth, I don't understand it myself. It's all a puzzle. If there's still time, I'm ready now, at once. Let's settle it straight off, and have done with it! Without you, I feel I'll never be able to propose.

Mme. Ranevskaya. That's splendid. After all, it will only take a minute. I'll call her at once. . . .

Lopahin. And luckily, here's champagne too. (*Looks at the glasses.*) Empty! Somebody's drunk it all. (*YASHA coughs.*) That's what you might call guzzling . . .

Mme. Ranevskaya (animatedly). Excellent! We'll go and leave you alone. Yasha, *allez!* I'll call her. (*At the door.*) Varya, leave everything and come here. Come! (*Exits with YASHA.*)

Lopahin (looking at his watch). Yes . . . (*Pause behind the door, smothered laughter and whispering; at last, enter VARYA.*)

Varya (looking over the luggage in leisurely fashion). Strange, I can't find it . . .

Lopahin. What are you looking for?

Varya. Packed it myself, and I don't remember . . . (*Pause.*)

Lopahin. Where are you going now, Varya?

Varya. I? To the Ragulins'. I've arranged to take charge there—as housekeeper, if you like.

Lopahin. At Yashnevo? About fifty miles from here. (*Pause.*) Well, life in this house is ended!

Varya (examining luggage). Where is it? Perhaps I put it in the chest. Yes, life in this house is ended . . . There will be no more of it.

Lopahin. And I'm just off to Kharkov—by this next train. I've a lot to do there. I'm leaving Yepihodov here . . . I've taken him on.

Varya. Oh!

Lopahin. Last year at this time it was snowing, if you remember, but now it's sunny and there's no wind. It's cold, though . . . It must be three below.

Varya. I didn't look. (*Pause.*) And besides, our thermometer's broken. (*Pause. Voice from the yard: "Yermolay Alexeyevich!"*)

Lopahin (as if he had been waiting for the call). This minute! (*Exits quickly. VARYA sits on the floor and sobs quietly, her head on a bundle of clothes. Enter MME. RANEVSKAYA cautiously.*)

Mme. Ranevskaya. Well? (*Pause.*) We must be going.

Varya (wiping her eyes). Yes, it's time, Mamma dear. I'll be able to get to the Ragulins' today, if only we don't miss the train.

Mme. Ranevskaya (at the door). Anya, put your things on. (*Enter ANYA, GAYEV, CHARLOTTA. GAYEV wears a heavy overcoat with a hood. Enter servants and coachmen. YEPIHODOV bustles about the luggage.*)

Mme. Ranevskaya. Now we can start on our journey.

Anya (joyfully). On our journey!

Gayev. My friends, my dear, cherished friends, leaving this house forever,

can I be silent? Can I at leave-taking refrain from giving utterance to those emotions that now fill my being?

Anya (imploringly). Uncle!

Varya. Uncle, Uncle dear, don't.

Gayev (forlornly). I'll bank the yellow in the side pocket . . . I'll be silent . . .

Enter TROFIMOV, then LOPAHIN.

Trofimov. Well, ladies and gentlemen, it's time to leave.

Lopahin. Yepihodov, my coat.

Mme. Ranevskaya. I'll sit down just a minute. It seems as though I'd never before seen what the walls of this house were like, the ceilings, and now I look at them hungrily, with such tender affection.

Gayev. I remember when I was six years old sitting on that window sill on Whitsunday, watching my father going to church.

Mme. Ranevskaya. Has everything been taken?

Lopahin. I think so. (*Putting on his overcoat.*) Yepihodov, see that everything's in order.

Yepihodov (in a husky voice). You needn't worry, Yermolay Alexeyevich.

Lopahin. What's the matter with your voice?

Yepihodov. I just had a drink of water. I must have swallowed something.

Yasha (contemptuously). What ignorance!

Mme. Ranevskaya. When we're gone, not a soul will be left here.

Lopahin. Until the spring.

VARYA pulls an umbrella out of a bundle, as though about to hit someone with it. LOPAHIN pretends to be frightened.

Varya. Come, come, I had no such idea!

Trofimov. Ladies and gentlemen, let's get into the carriages—it's time.

The train will be in directly.

Varya. Petya, there they are, your rubbers, by that trunk. (*Tearfully*) And what dirty old things they are!

Trofimov (puts on rubbers). Let's go, ladies and gentlemen.

Gayev (greatly upset, afraid of breaking down). The train . . . the station . . .

Three cushions in the side pocket, I'll bank this one in the corner . . .

Mme. Ranevskaya. Let's go.

Lopahin. Are we all here? No one in there? (*Locks the side door on the left.*)

There are some things stored here, better lock up. Let us go!

Anya. Good-by, old house! Good-by, old life!

Trofimov. Hail to you, new life!

Exit with ANYA. VARYA looks round the room and goes out slowly. YASHA and CHARLOTTA with her dog go out.

Lopahin. And so, until the spring. Go along, friends . . . Bye-bye! (*Exits.*)

MME. RANEVSKAYA and GAYEV remain alone. As though they had been waiting for this, they throw themselves on each other's necks, and break into subdued, restrained sobs, afraid of being overheard.

Gayev (in despair). My sister! My sister!

Mme. Ranevskaya. Oh, my orchard—my dear, sweet, beautiful orchard! My life, my youth, my happiness—good-by! Good-by! (*Voice of ANYA, gay and summoning: "Mamma!" Voice of TROFIMOV, gay and excited: "Halloo!"*)

Mme. Ranevskaya. One last look at the walls, at the windows . . . Our poor mother loved to walk about this room . . .

Gayev. My sister, my sister! (*Voice of ANYA: "Mamma!" Voice of TROFIMOV: "Halloo!"*)

Mme. Ranevskaya. We're coming.

They go out. The stage is empty. The sound of doors being locked, of carriages driving away. Then silence. In the stillness is heard the muffled sound of the ax striking a tree, a mournful, lonely sound. Footsteps are heard. FIRS appears in the doorway on the right. He is dressed as usual in a jacket and white waistcoat and wears slippers. He is ill.

Firs (goes to the door, tries the handle). Locked! They've gone . . . (*Sits down on the sofa.*) They've forgotten me . . . Never mind . . . I'll sit here a bit . . . I'll wager Leonid Andreyevich hasn't put his fur coat on, he's gone off in his light overcoat . . . (*Sighs anxiously.*) I didn't keep an eye on him . . . Ah, when they're young, they're green . . . (*Mumbles something indistinguishable.*) Life has gone by as if I had never lived. (*Lies down.*) I'll lie down a while . . . There's no strength left in you, old fellow; nothing is left, nothing. Ah, you addlehead! (*Lies motionless. A distant sound is heard coming from the sky as it were, the sound of a snapping string mournfully dying away. All is still again, and nothing is heard but the strokes of the ax against a tree far away in the orchard.*)

George Bernard Shaw

1856–1950

George Bernard Shaw was born in Dublin, on July 26, 1856. His father, George Carr Shaw, was an unsuccessful corn merchant and an alcoholic. His mother was a talented musician, who taught Shaw, at an early age, to love and understand music.

Shaw had very little formal education. When he was ten he went to Wesleyan Connexional School, later Wesley College, in Dublin; four years later, he began work as a clerk in a land agent's office. He hated the work as much as he had previously hated school, and in 1876 he left Dublin for London. There his mother supported him by giving music lessons while Shaw wrote five novels which for some time he could not get published.

In 1885 Shaw began to write criticism, reviewing books and later music and drama for periodicals. His opinions were often startling to his readers. He championed Wagner, who was then new and unpopular. He attacked Shakespeare, partly for the shock value of it, and partly to gain recognition of Ibsen, whose work he admired. Shaw's *The Quintessence of Ibsenism* was published in 1891.

When he was twenty-six, Shaw became a socialist. He later said that the reading of Marx's *Capital* was the turning point in his life. Shaw joined the Fabian Society in 1884 and was soon a popular speaker on socialism.

Shaw's socialist opinions formed the basis for several of his plays, including the first one, *Widower's Houses*, produced in 1892. It dealt with the evils of slum landlords. This play encountered violent criticism which, typically, convinced Shaw that he was meant to be a dramatist.

His first critical success was *Candida*, produced in 1897. With the money *The Devil's Disciple* made in the United States in 1900, Shaw

was freed from the necessity of writing criticism for a living. In 1898 he married Charlotte Payne-Townshend, a wealthy Irish woman and a fellow Fabian.

Shaw had many unusual convictions, and he delighted in championing causes that were unpopular in his time, such as socialism and feminism. He was a life-long vegetarian and an anti-vivisectionist. He attacked compulsory vaccination and was scornful of doctors. He advocated the acceptance of a new alphabet.

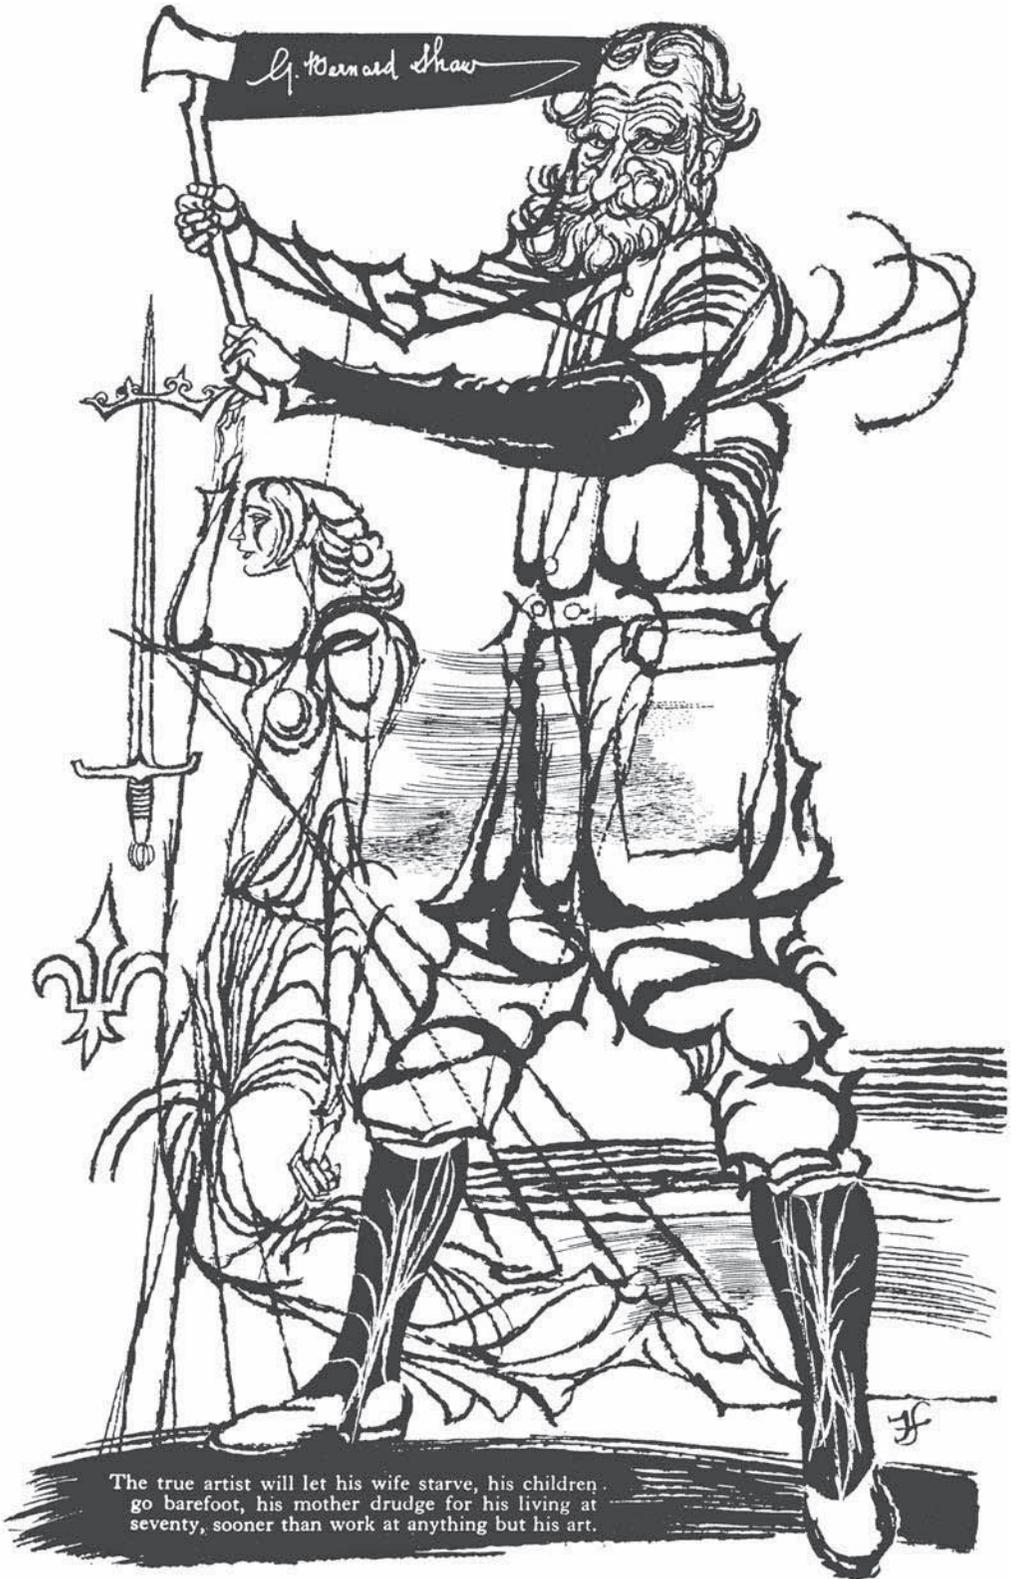

Shaw presented many of his controversial ideas in his plays and the sometimes lengthy introductions to them. He was awarded the Nobel Prize for literature in 1925. With the prize money he set up the Anglo-Swedish Literary Alliance. He refused both a knighthood and the Order of Merit. In his long lifetime he wrote more than fifty plays. He died November 2, 1950, at his home at Ayot St. Lawrence, Hertfordshire, England.

G. B. S. (as he was often called) was, among other things, an enemy of complacency. He delighted in shocking people, in stinging them out of their calmly accepted, conventional ideas. Few controversial subjects escaped the sharp attack of his wit. Religion, war, evolution, philanthropy—these are only a few of the topics on which he turned the bright light of his attention.

His greatest delight was to shock the English. He loved to take one of their common prejudices and turn it upside down. In his battle against English complacency, he used three powerful weapons—paradox, irony, and humor. All are evident in the drama that is reprinted here.

The Man of Destiny was first produced in 1897. Think back to that time. It is before World War I, before Mussolini, Hitler, and Stalin, before World War II and the Cold War. For most Englishmen the embodiment of all political evil was Napoleon. He had been dead for seventy-five years, but he was still the arch villain. He was the epitome of violence, of autocracy, of treachery. He was all that is

Notes from the artist: “. . . Shaw, dressed in his favorite suit, swinging an ax, considered by some to be his characteristic manner of approaching moral and social issues! In the background is the heroine of his play Saint Joan, and the quotation is from Man and Superman.”

G. Bernard Shaw

The true artist will let his wife starve, his children go barefoot, his mother drudge for his living at seventy, sooner than work at anything but his art.

J

un-English. He was a figure to frighten children and foreign offices. He was as close to being the devil incarnate as anyone ever was.

Yet Shaw, for an English audience, makes Napoleon the hero of his play. Here is the young leader, only two days after the Battle of Lodi. It was at Lodi that Napoleon first caught the attention of Europe. Overnight his name became one to conjure with. Shaw depicts him, indeed, as ruthless, ambitious, cruel. But there is no doubt that he is a hero.

What kind of man is Shaw's Napoleon? He is more than ambitious and cruel. He is also cunning, shrewd, and intelligent. Shaw would not permit the arch villain to appear stupid. It is the English, Shaw seems to be saying, who are the dull, stupid ones. Yet the English, he also is saying, finally defeated Napoleon. How could that be?

Napoleon himself, in the play, explains this. "The English are a race apart," he says. When an Englishman "wants a thing, he never tells himself that he wants it. He waits patiently until there comes into his mind, no one knows how, a burning conviction that it is his moral and religious duty to conquer those who possess the thing he wants. Then he becomes irresistible." The Englishman, Napoleon adds, "is never at a loss for an effective moral attitude." And he goes on to recount all the hypocrisies that underlie English life and opinion.

Paradox is piled on paradox in this play. Napoleon comes close to outwitting himself with his own cunning. The Lady is equally shrewd, but she too is defeated in the end. Only the English, with their invulnerable "effective moral attitude," are victorious.

Thus the play attacks not only English complacency with respect to Napoleon, but also English hypocrisy. The English never see anything clearly, Shaw appears to be saying. They are constantly fooling themselves. At heart, they are exactly what they say Napoleon is; that is, ruthless, grasping, and ambitious. Napoleon in the play, on the other hand, has some of the virtues the English claim to have but really do not: chivalry toward women, for instance. Above all, Shaw's Napoleon delights in conversation. He delights to match verbal wits with people. The Lieutenant, who may stand in the play for the English, cannot keep up with him. His ignorance is invincible. The Lady pleases Napoleon because she tries to outwit him. The English never tried to outwit Napoleon; they simply defeated him.

"It is even now impossible to live in England without sometimes feeling how much that country lost in not being conquered by him,"

says Shaw in his introduction to the play. The English, in other words, could have learned something from Napoleon, but they refused to do so. They thought they knew everything already.

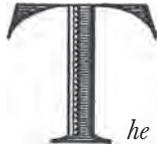

Shaw admired strong men—what some of his contemporaries called “supermen.” He wrote a play about Julius Caesar that portrayed him as having many of the characteristics that Napoleon has in this play: wit, cunning, a knowledge of human nature. But Shaw admired the English, too, even though he never stopped making fun of them. He decried their moral denseness, their hypocrisy, their pompous conceit. Yet they were, for Shaw, a nation to be reckoned with. They were “a race apart.” In his heart he loved them.

It should be remembered that Shaw himself was not English but Irish. England was his adopted country, but he never ceased to view it with the wry understanding of his native land. And Napoleon says one thing that may be the key to Shaw’s view of the English. The Lady admits that her grandmother was Irish. “Yes: I forgot the Irish,” Napoleon replies. “An English army led by an Irish general: that might be a match for a French army led by an Italian general.” The Duke of Wellington, who defeated Napoleon at Waterloo, was, in fact, an Irishman. But the impression we have is that Shaw is here talking about himself. And that is the most delicate, and delicious, irony of all.

The Man of Destiny

CAST OF CHARACTERS

NAPOLEON
A LIEUTENANT
GIUSEPPE
A STRANGE LADY

he twelfth of May, 1796, in north Italy, at Tavazzano, on the road from Lodi to Milan. The afternoon sun is blazing serenely over the plains of Lombardy, treating the Alps with respect and the anthills with indulgence, neither disgusted by the basking of the swine in the villages nor hurt by its cool reception in the churches, but ruthlessly disdainful of two hordes of mischievous insects which are the French and Austrian armies. Two days before, at Lodi, the Austrians tried to prevent the French from crossing the river by the narrow bridge there; but the French, commanded by a general aged 27, NAPOLEON BONAPARTE, who does not respect the rules of war, rushed the fireswept bridge, supported by a tremendous cannonade in which the young general assisted with his own hands. Cannonading is his technical specialty: he has been trained in the artillery under the old régime, and made perfect in the military arts of shirking his duties, swindling the paymaster over travelling expenses, and dignifying war with the noise and smoke of cannon, as depicted in all military portraits. He is, however, an original observer, and has perceived, for the first time since the invention of gunpowder, that a cannon ball, if it strikes a man, will kill him. To a thorough grasp of this remarkable discovery he adds a highly evolved faculty for physical geography and for the calculation of times and distances. He has

prodigious powers of work, and a clear realistic knowledge of human nature in public affairs, having seen it exhaustively tested in that department during the French Revolution. He is imaginative without illusions, and creative without religion, loyalty, patriotism, or any of the common ideals. Not that he is incapable of these ideals: on the contrary, he has swallowed them all in his boyhood, and now, having a keen dramatic faculty, is extremely clever at playing upon them by the arts of the actor and stage manager. Withal, he is no spoiled child. Poverty, ill luck, the shifts of impecunious shabby-gentility, repeated failure as a would-be author, humiliation as a rebuffed time server, reproof and punishment as an incompetent and dishonest officer, an escape from dismissal from the service so narrow that if the emigration of the nobles had not raised the value of even the most rascally lieutenant to the famine price of a general he would have been swept contemptuously from the army: these trials have ground his conceit out of him, and forced him to be self-sufficient and to understand that to such men as he is the world will give nothing that he cannot take from it by force. In this the world is not free from cowardice and folly; for NAPOLEON, as a merciless cannonader of political rubbish, is making himself useful: indeed, it is even now impossible to live in England without sometimes feeling how much that country lost in not being conquered by him as well as by Julius Caesar.

*However, on this May afternoon in 1796, it is early days with him. He has but recently been promoted general, partly by using his wife to seduce the Directory (then governing France); partly by the scarcity of officers caused by the emigration as aforesaid; partly by his faculty of knowing a country, with all its roads, rivers, hills, and valleys, as he knows the palm of his hand; and largely by that new faith of his in the efficacy of firing cannons at people. His army is, as to discipline, in a state which has so greatly shocked some modern writers before whom the following story has been enacted that they, impressed with the later glory of "L'Empereur," have altogether refused to credit it. But NAPOLEON is not L'Empereur yet: his men call him *Le Petit Caporal*, as he is still in the stage of gaining influence over them by displays of pluck. He is not in a position to force his will on them in orthodox military fashion by the cat-o'-nine-tails. The French Revolution, which has escaped suppression solely through, the monarchy's habit of being at least four years in arrear with its soldiers in the matter of pay, has substituted for that habit, as far as*

possible, the habit of not paying at all, except in promises and patriotic flatteries which are not compatible with martial law of the Prussian type. NAPOLEON has therefore approached the Alps in command of men without money, in rags, and consequently indisposed to stand much discipline, especially from upstart generals. This circumstance, which would have embarrassed an idealist soldier, has been worth a thousand cannon to NAPOLEON. He has said to his army, "You have patriotism and courage; but you have no money, no clothes, and hardly anything to eat. In Italy there are all these things, and glory as well, to be gained by a devoted army led by a general who regards loot as the natural right of the soldier. I am such a general. *En avant, mes enfants!*" The result has entirely justified him. The army conquers Italy as the locusts conquered Cyprus. They fight all day and march all night, covering impossible distances and appearing in incredible places, not because every soldier carries a field marshal's baton in his knapsack, but because he hopes to carry at least half a dozen silver forks there next day.

It must be understood, by the way, that the French Army does not make war on the Italians. It is there to rescue them from the tyranny of their Austrian conquerors, and confer republican institutions on them; so that in incidentally looting them it merely makes free with the property of its friends, who ought to be grateful to it, and perhaps would be if ingratitude were not the proverbial failing of their country. The Austrians, whom it fights, are a thoroughly respectable regular army, well disciplined, commanded by gentlemen versed in orthodox campaigning: at the head of them Beaulieu, practising the classic art of war under orders from Vienna, and getting horribly beaten by NAPOLEON, who acts on his own responsibility in defiance of professional precedents or orders from Paris. Even when the Austrians win a battle, all that is necessary is to wait until their routine obliges them to return to their quarters for afternoon tea, so to speak, and win it back again from them: a course pursued later on with brilliant success at Marengo. On the whole, with his foe handicapped by Austrian statesmanship, classic generalship, and the exigencies of the aristocratic social structure of Viennese society, NAPOLEON finds it possible to be irresistible without working heroic miracles. The world, however, likes miracles and heroes, and is quite incapable of conceiving the action of such forces as academic militarism or Viennese drawing-roomism. Hence it has already begun to manufacture "L'Empereur," and thus to make it difficult for

the romanticists of a hundred years later to credit the hitherto unrecorded little scene now in question at Tavazzano.

The best quarters in Tavazzano are at a little inn, the first house reached by travellers passing through the place from Milan to Lodi. It stands in a vineyard; and its principal room, a pleasant refuge from the summer heat, is open so widely at the back to this vineyard that it is almost a large veranda. The bolder children, much excited by the alarums and excursions of the past few days, and by an irruption of French troops at six o'clock, know that the French commander has quartered himself in this room, and are divided between a craving to peep in at the front windows, and a mortal dread of the sentinel, a young gentleman-soldier who, having no natural moustache, has had a most ferocious one painted on his face with boot blacking by his sergeant. As his heavy uniform, like all the uniforms of that day, is designed for parade without the least reference to his health or comfort, he perspires profusely in the sun; and his painted moustache has run in little streaks down his chin and round his neck, except where it has dried in stiff japanned flakes and had its sweeping outline chipped off in grotesque little bays and headlands, making him unspeakably ridiculous in the eye of History a hundred years later, but monstrous and horrible to the contemporary north Italian infant, to whom nothing would seem more natural than that he should relieve the monotony of his guard by pitchforking a stray child up on his bayonet, and eating it uncooked. Nevertheless one girl of bad character, in whom an instinct of privilege with soldiers is already stirring, does peep in at the safest window for a moment before a glance and a clink from the sentinel sends her flying. Most of what she sees she has seen before: the vineyard at the back, with the old wine-press and a cart among the vines; the door close on her right leading to the street entry; the landlord's best sideboard, now in full action for dinner, further back on the same side; the fireplace on the other side with a couch near it; another door, leading to the inner rooms, between it and the vineyard; and the table in the middle set out with a repast of Milanese risotto, cheese, grapes, bread, olives, and a big wickered flask of red wine.

The landlord, GIUSEPPE GRANDI, she knows well. He is a swarthy vivacious shrewdly cheerful black-curved bullet-headed grinning little innkeeper of 40. Naturally an excellent host, he is in the highest spirits this evening at his good fortune in having as his guest the French commander to protect him against the license of the troops.

He actually sports a pair of gold earrings which would otherwise have been hidden carefully under the wine-press with his little equipment of silver plate.

NAPOLEON, *sitting facing her on the further side of the table, she sees for the first time. He is working hard, partly at his meal, which he has discovered how to dispatch in ten minutes by attacking all the courses simultaneously (this practice is the beginning of his downfall), and partly at a military map on which he from time to time marks the position of the forces by taking a grape skin from his mouth and planting it on the map with his thumb like a wafer. There is no revolutionary untidiness about his dress or person; but his elbow has displaced most of the dishes and glasses; and his long hair trails into the risotto when he forgets it and leans more intently over the map.*

Giuseppe. Will your excellency—

Napoleon (intent on his map, but cramming himself mechanically with his left hand).

Don't talk. I'm busy.

Giuseppe (with perfect good humour). Excellency: I obey.

Napoleon. Some red ink.

Giuseppe. Alas! excellency, there is none.

Napoleon (with Corsican facetiousness). Kill something and bring me its blood.

Giuseppe (grinning). There is nothing but your excellency's horse, the sentinel, the lady upstairs, and my wife.

Napoleon. Kill your wife.

Giuseppe. Willingly, your excellency; but unhappily I am not strong enough. She would kill me.

Napoleon. That will do equally well.

Giuseppe. Your excellency does me too much honour. (Stretching his hand towards the flask) Perhaps some wine will answer your excellency's purpose.

Napoleon (hastily protecting the flask, and becoming quite serious). Wine! No: that would be waste. You are all the same: waste! waste! waste! (He marks the map with gravy, using his fork as a pen.) Clear away. (He finishes his wine; pushes back his chair; and uses his napkin, stretching his legs and leaning back, but still frowning and thinking.)

Giuseppe (clearing the table and removing the things to a tray on the sideboard). Every man to his trade, excellency. We innkeepers have

plenty of cheap wine: we think nothing of spilling it. You great generals have plenty of cheap blood: you think nothing of spilling it. Is it not so, excellency?

Napoleon. Blood costs nothing: wine costs money. (*He rises and goes to the fireplace.*)

Giuseppe. They say you are careful of everything except human life, excellency.

Napoleon. Human life, my friend, is the only thing that takes care of itself. (*He throws himself at his ease on the couch.*)

Giuseppe (admiring him). Ah, excellency, what fools we all are beside you! If I could only find out the secret of your success!

Napoleon. You would make yourself Emperor of Italy, eh?

Giuseppe. Too troublesome, excellency: I leave all that to you. Besides, what would become of my inn if I were Emperor? See how you enjoy looking on at me whilst I keep the inn for you and wait on you! Well, I shall enjoy looking on at you whilst you become Emperor of Europe, and govern the country for me. (*As he chatters, he takes the cloth off deftly without removing the map, and finally takes the corners in his hands and the middle in his mouth, to fold it up.*)

Napoleon. Emperor of Europe, eh? Why only Europe?

Giuseppe. Why, indeed? Emperor of the world, excellency! Why not? (*He folds and rolls up the cloth, emphasizing his phrase by the steps of the process.*) One man is like another (*fold*): one country is like another (*fold*): one battle is like another. (*At the last fold, he slaps the cloth on the table and deftly rolls it up, adding, by way of peroration*) Conquer one: conquer all. (*He takes the cloth to the sideboard, and puts it in a drawer.*)

Napoleon. And govern for all; fight for all; be everybody's servant under cover of being everybody's master. Giuseppe.

Giuseppe (at the sideboard). Excellency?

Napoleon. I forbid you to talk to me about myself.

Giuseppe (coming to the foot of the couch). Pardon. Your excellency is so unlike other great men. It is the subject they like best.

Napoleon. Well, talk to me about the subject they like next best, whatever that may be.

Giuseppe (unabashed). Willingly, your excellency. Has your excellency by any chance caught a glimpse of the lady upstairs?

Napoleon (sitting up promptly). How old is she?

Giuseppe. The right age, excellency.

Napoleon. Do you mean seventeen or thirty?

Giuseppe. Thirty, excellency.

Napoleon. Good-looking?

Giuseppe. I cannot see with your excellency's eyes: every man must judge that for himself. In my opinion, excellency, a fine figure of a lady. (*Slyly*) Shall I lay the table for her collation here?

Napoleon (brusquely, rising). No: lay nothing here until the officer for whom I am waiting comes back. (*He looks at his watch, and takes to walking to and fro between the fireplace and the vineyard.*)

Giuseppe (with conviction). Excellency: believe me, he has been captured by the accursed Austrians. He dare not keep you waiting if he were at liberty.

Napoleon (turning at the edge of the shadow of the veranda). Giuseppe: if that turns out to be true, it will put me into such a temper that nothing short of hanging you and your whole household, including the lady upstairs, will satisfy me.

Giuseppe. We are all cheerfully at your excellency's disposal, except the lady. I cannot answer for her; but no lady could resist you, General.

Napoleon (sourly, resuming his march). Hm! You will never be hanged. There is no satisfaction in hanging a man who does not object to it.

Giuseppe (sympathetically). Not the least in the world, excellency: is there? (*NAPOLEON again looks at his watch, evidently growing anxious.*) Ah, one can see that you are a great man, General: you know how to wait. If it were a corporal now, or a sub-lieutenant, at the end of three minutes he would be swearing, fuming, threatening, pulling the house about our ears.

Napoleon. Giuseppe: your flatteries are insufferable. Go and talk outside. (*He sits down again at the table, with his jaws in his hands, and his elbows propped on the map, poring over it with a troubled expression.*)

Giuseppe. Willingly, your excellency. You shall not be disturbed. (*He takes up the tray and prepares to withdraw.*)

Napoleon. The moment he comes back, send him to me.

Giuseppe. Instantaneously, your excellency.

A Lady's Voice (calling from some distant part of the inn). Giusep-pe! (*The voice is very musical, and the two final notes make an ascending interval.*)

Napoleon (startled). Who's that?

Giuseppe. The lady, excellency.

Napoleon. The lady upstairs?

Giuseppe. Yes, excellency. The strange lady.

Napoleon. Strange? Where does she come from?

Giuseppe (with a shrug). Who knows? She arrived here just before your excellency in a hired carriage belonging to the Golden Eagle at Borghetto. By herself, excellency. No servants. A dressing-bag and a trunk: that is all. The postillion says she left a horse at the Golden Eagle. A charger, with military trappings.

Napoleon. A woman with a charger! French or Austrian?

Giuseppe. French, excellency.

Napoleon. Her husband's charger, no doubt. Killed at Lodi, poor fellow.

The Lady's Voice (the two final notes now making a peremptory descending interval).

Giuseppe!

Napoleon (rising to listen). That's not the voice of a woman whose husband was killed yesterday.

Giuseppe. Husbands are not always regretted, excellency. (*Calling*) Coming, lady, coming. (*He makes for the inner door.*)

Napoleon (arresting him with a strong hand on his shoulder). Stop. Let her come. *Voice.* Giuseppe!! (*Impatiently.*)

Giuseppe. Let me go, excellency. It is my point of honour as an innkeeper to come when I am called. I appeal to you as a soldier.

A Man's Voice (outside, at the inn door, shouting). Here, someone. Hollo! Landlord! Where are you? (*Somebody raps vigorously with a whip handle on a bench in the passage.*)

Napoleon (suddenly becoming the commanding officer again and throwing GIUSEPPE off). My man at last. (*Pointing to the inner door*) Go. Attend to your business: the lady is calling you. (*He goes to the fireplace and stands with his back to it with a determined military air.*)

Giuseppe (with bated breath, snatching up his tray). Certainly, excellency. (*He hurries out by the inner door.*)

The Man's Voice (impatiently). Are you all asleep here?

The other door is kicked rudely open. A dusty sub-lieutenant bursts into the room. He is a tall chuckle-headed young man of 24, with the complexion and style of a man of rank, and a self-assurance on that ground which the French Revolution has failed to shake in the smallest degree. He has a thick silly lip, an eager credulous eye, an obstinate nose, and a loud confident voice. A young man without fear, without reverence, without imagination, without sense, hopelessly insusceptible to the Napoleonic or any other idea, stupendously egotistical, eminently qualified to rush in where angels fear to

tread, yet of a vigorous babbling vitality which bustles him into the thick of things. He is just now boiling with vexation, attributable by a superficial observer to his impatience at not being promptly attended to by the staff of the inn, but in which a more discerning eye can perceive a certain moral depth, indicating a more permanent and momentous grievance. On seeing NAPOLEON, he is sufficiently taken aback to check himself and salute; but he does not betray by his manner any of that prophetic consciousness of Marengo and Austerlitz, Waterloo and St. Helena, or the Napoleonic pictures of Delaroche and Meissonier, which later ages expect from him.

Napoleon (watch in hand). Well, sir, you have come at last. Your instructions were that I should arrive here at six, and find you waiting for me with my mail from Paris and with despatches. It is now twenty minutes to eight. You were sent on this service as a hard rider with the fastest horse in the camp. You arrive a hundred minutes late, on foot. Where is your horse?

The Lieutenant (moodily pulling of his gloves and dashing them with his cap and whip on the table). Ah! where indeed? That's just what I should like to know, General. *(With emotion)* You don't know how fond I was of that horse.

Napoleon (angrily sarcastic). Indeed! *(With sudden misgiving)* Where are the letters and despatches?

The Lieutenant (importantly, rather pleased than otherwise at having some remarkable news). I don't know.

Napoleon (unable to believe his ears). You don't know!

Lieutenant. No more than you do, General. Now I suppose I shall be court-martialled. Well, I don't mind being court-martialled; but *(with solemn determination)* I tell you, General, if ever I catch that innocent-looking youth, I'll spoil his beauty, the slimy little liar! I'll make a picture of him. I'll—

Napoleon (advancing from the hearth to the table). What innocent-looking youth? Pull yourself together, sir, will you; and give an account of yourself.

Lieutenant (facing him at the opposite side of the table, leaning on it with his fists). Oh, I'm all right, General: I'm perfectly ready to give an account of myself. I shall make the court-martial thoroughly understand that the fault was not mine. Advantage has been taken of the better side of my nature; and I'm not ashamed of it. But with all respect to you as my commanding officer, General, I say again that if ever I set eyes on that son of Satan, I'll—

Napoleon (angrily). So you said before.

Lieutenant (drawing himself upright). I say it again. Just wait until I catch him. Just wait: that's all. (*He folds his arms resolutely, and breathes hard, with compressed lips.*)

Napoleon. I am waiting, sir. For your explanation.

Lieutenant (confidently). You'll change your tone, General, when you hear what has happened to me.

Napoleon. Nothing has happened to you, sir: you are alive and not disabled. Where are the papers entrusted to you?

Lieutenant. Nothing happened to me! Nothing!! He swore eternal brotherhood with me. Was that nothing? He said my eyes reminded him of his sister's eyes. Was that nothing? He cried—actually cried—over the story of my separation from Angelica. Was that nothing? He paid for both bottles of wine, though he only ate bread and grapes himself. Perhaps you call that nothing. He gave me his pistols and his horse and his despatches—most important despatches—and let me go away with them. (*Triumphantly, seeing that he has reduced NAPOLEON to blank stupefaction*) Was that nothing?

Napoleon (enfeebled by astonishment). What did he do that for?

Lieutenant (as if the reason were obvious). To show his confidence in me, of course. (*NAPOLEON'S jaw does not exactly drop; but its hinges become nerveless.*) And I was worthy of his confidence: I brought them all back honourably. But would you believe it? when I trusted him with my pistols, and my horse, and my despatches—

Napoleon. What the devil did you do that for?

Lieutenant. I'm telling you: to show my confidence in him. And he betrayed it! abused it! never came back again! The thief! the swindler! the heartless treacherous little blackguard! You call that nothing, I suppose. But look here, General (*again resorting to the table with his fists for greater emphasis*): you may put up with this outrage from the Austrians if you like; but speaking for myself personally, I tell you that if ever I catch—

Napoleon (turning on his heel in disgust and irritably resuming his march to and fro). Yes: you have said that more than once already.

Lieutenant (excitedly). More than once! I'll say it fifty times; and what's more, I'll do it. You'll see, General. I'll show my confidence in him, so I will. I'll—

Napoleon. Yes, yes, sir: no doubt you will. What kind of man was he?

Lieutenant. Well, I should think you ought to be able to tell from his conduct the kind of man he was.

Napoleon. Psha! What was he like?

Lieutenant. Like! He was like—well, you ought to have just seen the fellow: that will give you a notion of what he was like. He won't be like it five minutes after I catch him; for I tell you that if ever—

Napoleon (shouting furiously for the innkeeper). Giuseppe! (*To the LIEUTENANT, out of all patience*) Hold your tongue, sir, if you can.

Lieutenant (plaintively). I warn you it's no use trying to put the blame on me. How was I to know the sort of fellow he was? (*He takes a chair from between the sideboard and the outer door; places it near the table; and sits down.*) If you only knew how hungry and tired I am, you'd have more consideration.

Giuseppe (returning). What is it, excellency?

Napoleon (struggling with his temper). Take this—this officer. Feed him; and put him to bed, if necessary. When he is in his right mind again, find out what has happened to him and bring me word. (*To the LIEUTENANT*) Consider yourself under arrest, sir.

Lieutenant (with sulky stiffness). I was prepared for that. It takes a gentleman to understand a gentleman. (*He throws his sword on the table.*)

Giuseppe (with sympathetic concern). Have you been attacked by the Austrians, Lieutenant? Dear! dear! dear!

Lieutenant (contemptuously). Attacked! I could have broken his back between my finger and thumb. I wish I had, now. No: it was by appealing to the better side of my nature: that's what I can't get over. He said he'd never met a man he liked so much as me. He put his handkerchief round my neck because a gnat bit me, and my stock was chafing it. Look! (*He pulls a handkerchief from his stock. GIUSEPPE takes it and examines it.*)

Giuseppe (to NAPOLEON). A lady's handkerchief, excellency. (*He smells it.*) Perfumed.

Napoleon. Eh? (*He takes it and looks at it attentively.*) Hm! (*He smells it.*) Ha! (*He walks thoughtfully across the room, looking at the handkerchief, which he finally sticks in the breast of his coat.*)

Lieutenant. Good enough for him, anyhow. I noticed that he had a woman's hands when he touched my neck, with his coaxing fawning ways, the mean effeminate little hound. (*Lowering his voice with thrilling intensity*) But mark my words, General. If ever—

The Lady's Voice (outside, as before). Giuseppe!

Lieutenant (petrified). What was that?

Giuseppe. Only a lady upstairs, Lieutenant, calling me.

Lieutenant. Lady!

Voice. Giuseppe, Giuseppe: where are you?

Lieutenant (murderously). Give me that sword. (*He snatches up the sword and draws it.*)

Giuseppe (rushing forward and seizing his right arm). What are you thinking of, Lieutenant? It's a lady: don't you hear? It's a woman's voice.

Lieutenant. It's his voice, I tell you. Let me go. (*He breaks away, and rushes to the edge of the veranda, where he posts himself, sword in hand, watching the door like a cat watching a mousehole.*)

It opens; and the STRANGE LADY steps in. She is tall and extraordinarily graceful, with a delicately intelligent, apprehensive, questioning face: perception in the brow, sensitiveness in the nostrils, character in the chin: all keen, refined, and original. She is very feminine, but by no means weak: the lithe tender figure is hung on a strong frame: the hands and feet, neck and shoulders, are useful vigorous members, of full size in proportion to her stature, which perceptibly exceeds that of NAPOLEON and the innkeeper, and leaves her at no disadvantage with the LIEUTENANT. Only, her elegance and radiant charm keep the secret of her size and strength. She is not, judging by her dress, an admirer of the latest fashions of the Directory; or perhaps she uses up her old dresses for travelling. At all events she wears no jacket with extravagant lapels, no Graeco-Tallien sham chiton, nothing, indeed, that the Princesse de Lamballe might not have worn. Her dress of flowered silk is long-waisted, with a Watteau pleat behind, but with the panniers reduced to mere rudiments, as she is too tall for them. It is cut low in the neck, where it is eked out by a creamy fichu. She is fair, with golden-brown hair and grey eyes.

She enters with the self-possession of a woman accustomed to the privileges of rank and beauty. The innkeeper, who has excellent natural manners, is highly appreciative of her. NAPOLEON is smitten self-conscious. His colour deepens: he becomes stiffer and less at ease than before. She is advancing in an infinitely well-bred manner to pay her respects to him when the LIEUTENANT pounces on her and seizes her right wrist. As she recognizes him, she becomes deadly pale. There is no mistaking her expression: a revelation of some fatal error, utterly unexpected, has suddenly appalled her in the midst of tranquillity, security, and victory. The next moment a wave of angry colour rushes up from beneath the creamy fichu and drowns her

whole face. One can see that she is blushing all over her body. Even the LIEUTENANT, ordinarily incapable of observation, can see a thing when it is painted red for him. Interpreting the blush as the involuntary confession of black deceit confronted with its victim, he addresses her in a loud crow of retributive triumph.

Lieutenant. So I've got you, my lad. So you've disguised yourself, have you? (*In a voice of thunder, releasing her wrist*) Take off that skirt.

Giuseppe (remonstrating). Oh, Lieutenant!

Lady (affrighted, but highly indignant at his having dared to touch her).

Gentlemen: I appeal to you. (*To NAPOLEON*) You, sir, are an officer: a general. You will protect me, will you not?

Lieutenant. Never you mind him, General. Leave me to deal with him.

Napoleon. With him! With whom, sir? Why do you treat this lady in such a fashion?

Lieutenant. Lady! He's a man! the man I showed my confidence in. (*Raising his sword*) Here, you—

Lady (running behind NAPOLEON and in her agitation clasping to her breast the arm which he extends before her as a fortification). Oh, thank you, General. Keep him away.

Napoleon. Nonsense, sir. This is certainly a lady (*she suddenly drops his arm and blushes again*); and you are under arrest. Put down your sword, sir, instantly.

Lieutenant. General: I tell you he's an Austrian spy. He passed himself off on me as one of General Masséna's staff this afternoon; and now he's passing himself off on you as a woman. Am I to believe my own eyes or not?

Lady. General: it must be my brother. He is on General Masséna's staff. He is very like me.

Lieutenant (his mind giving way). Do you mean to say that you're not your brother, but your sister? the sister who was so like me? who had my beautiful blue eyes? It's a lie: your eyes are not like mine: they're exactly like your own.

Napoleon (with contained exasperation). Lieutenant: will you obey my orders and leave the room, since you are convinced at last that this is no gentleman?

Lieutenant. Gentleman! I should think not. No gentleman would have abused my confid—

Napoleon (out of all patience). That will do, sir: do you hear? Will you leave the room? I order you to leave the room.

Lady. Oh pray let me go instead.

Napoleon (dryly). Excuse me, madam. With all possible respect for your brother, I do not yet understand what an officer on General Masséna's staff wants with my letters. I have some questions to put to you.

Giuseppe (discreetly). Come, Lieutenant. (*He opens the door.*)

Lieutenant. I'm off. General: take warning by me: be on your guard against the better side of your nature. (*To the lady*) Madam: my apologies. I thought you were the same person, only of the opposite sex; and that naturally misled me.

Lady (recovering her good humour). It was not your fault, was it? I'm so glad you're not angry with me any longer, Lieutenant. (*She offers her hand.*)

Lieutenant (bending gallantly to kiss it). Oh, madam, not the lea—(*Checking himself and looking at it*) You have your brother's hand.

And the same sort of ring!

Lady (sweetly). We are twins.

Lieutenant. That accounts for it. (*He kisses her hand.*) A thousand pardons. I didn't mind about the despatches at all: that's more the General's affair than mine: it was the abuse of my confidence through the better side of my nature. (*Taking his cap, gloves, and whip from the table and going*) You'll excuse my leaving you, General, I hope. Very sorry, I'm sure. (*He talks himself out of the room. GIUSEPPE follows him and shuts the door.*)

Napoleon (looking after them with concentrated irritation). Idiot!

The STRANGE LADY smiles sympathetically. He comes frowning down the room between the table and the fireplace, all his awkwardness gone now that he is alone with her.

Lady. How can I thank you, General, for your protection?

Napoleon (turning on her suddenly). My despatches: come! (*He puts out his hand for them.*)

Lady. General! (*She involuntarily puts her hands on her fichu as if to protect something there.*)

Napoleon. You tricked that blockhead out of them. You disguised yourself as a man. I want my despatches. They are there in the bosom of your dress, under your hands.

Lady (quickly removing her hands). Oh, how unkindly you are speaking to me! (*She takes her handkerchief from her fichu*) You frighten me. (*She touches her eyes as if to wipe away a tear.*)

Napoleon. I see you don't know me, madam, or you would save yourself the trouble of pretending to cry.

Lady (producing an effect of smiling through her tears). Yes, I do know you.

You are the famous General Buonaparte. (*She gives the name a marked Italian pronunciation: Bwauma-parr-te.*)

Napoleon (angrily, with the French pronunciation). Bonaparte, madam, Bonaparte. The papers, if you please.

Lady. But I assure you—(*He snatches the handkerchief rudely.*) General! (*Indignantly.*)

Napoleon (taking the other handkerchief from his breast). You lent one of your handkerchiefs to my lieutenant when you robbed him. (*He looks at the two handkerchiefs.*) They match one another. (*He smells them.*) The same scent. (*He flings them down on the table.*) I am waiting for my despatches. I shall take them, if necessary, with as little ceremony as I took the handkerchief.

Lady (in dignified reproof). General: do you threaten women?

Napoleon (bluntly). Yes.

Lady (disconcerted, trying to gain time). But I don't understand. I—

Napoleon. You understand perfectly. You came here because your Austrian employers calculated that I was six leagues away. I am always to be found where my enemies don't expect me. You have walked into the lion's den. Come! you are a brave woman. Be a sensible one: I have no time to waste. The papers. (*He advances a step ominously.*)

Lady (breaking down in the childish rage of impotence, and throwing herself in tears on the chair left beside the table by the LIEUTENANT). I brave! How little you know! I have spent the day in an agony of fear. I have a pain here from the tightening of my heart at every suspicious look, every threatening movement. Do you think everyone is as brave as you? Oh, why will not you brave people do the brave things? Why do you leave them to us, who have no courage at all? I'm not brave: I shrink from violence: danger makes me miserable.

Napoleon (interested). Then why have you thrust yourself into danger?

Lady. Because there is no other way: I can trust nobody else. And now it is all useless: all because of you, who have no fear because you have no heart, no feeling, no—(*She breaks off, and throws herself on her knees.*) Ah, General, let me go: let me go without asking any questions. You shall have your despatches and letters: I swear it.

Napoleon (holding out his hand). Yes: I am waiting for them.

She gasps, daunted by his ruthless promptitude into despair of moving him by cajolery. She looks up perplexedly at him, racking her

brains for some device to outwit him. He meets her regard inflexibly.

Lady (rising at last with a quiet little sigh). I will get them for you. They are in my room. *(She turns to the door.)*

Napoleon. I shall accompany you, madam.

Lady (drawing herself up with a noble air of offended delicacy). I cannot permit you, General, to enter my chamber.

Napoleon. Then you shall stay here, madam, whilst I have your chamber searched for my papers.

Lady (spitefully, openly giving up her plan). You may save yourself the trouble. They are not there.

Napoleon. No: I have already told you where they are *(pointing to her breast).*

Lady (with pretty piteousness). General: I only want to keep one little private letter. Only one. Let me have it.

Napoleon (cold and stern). Is that a reasonable demand, madam?

Lady (encouraged by his not refusing point-blank). No; but that is why you must grant it. Are your own demands reasonable? thousands of lives for the sake of your victories, your ambitions, your destiny! And what I ask is such a little thing. And I am only a weak woman, and you a brave man. *(She looks at him with her eyes full of tender pleading, and is about to kneel to him again.)*

Napoleon (brusquely). Get up, get up. *(He turns moodily away and takes a turn across the room, pausing for a moment to say, over his shoulder)* You're talking nonsense; and you know it. *(She sits down submissively on the couch. When he turns and sees her despair, he feels that his victory is complete, and that he may now indulge in a little play with his victim. He comes back and sits beside her. She looks alarmed and moves a little away from him; but a ray of rallying hope beams from her eye. He begins like a man enjoying some secret joke.)* How do you know I am a brave man?

Lady (amazed). You! General Buonaparte *(Italian pronunciation).*

Napoleon. Yes, I, General Bonaparte *(emphasizing the French pronunciation).*

Lady. Oh, how can you ask such a question? you! who stood only two days ago at the bridge at Lodi, with the air full of death, fighting a duel with cannons across the river! *(Shuddering.)* Oh, you do brave things.

Napoleon. So do you.

Lady. I! *(With a sudden odd thought)* Oh! Are you a coward?

Napoleon (laughing grimly and slapping his knees). That is the one question you must never ask a soldier. The sergeant asks after the recruit's height, his age, his wind, his limb, but never after his courage.

Lady (as if she had found it no laughing matter). Ah, you can laugh at fear. Then you don't know what fear is.

Napoleon. Tell me this. Suppose you could have got that letter by coining to me over the bridge at Lodi the day before yesterday! Suppose there had been no other way, and that this was a sure way—if only you escaped the cannon! (*She shudders and covers her eyes for a moment with her hands.*) Would you have been afraid?

Lady. Oh, horribly afraid, agonizingly afraid. (*She presses her hands on her heart.*) It hurts only to imagine it.

Napoleon (inflexibly). Would you have come for the despatches?

Lady (overcome by the imagined horror). Don't ask me. I must have come.

Napoleon. Why?

Lady. Because I must. Because there would have been no other way.

Napoleon (with conviction). Because you would have wanted my letter enough to bear your fear. (*He rises suddenly, and deliberately poses for an oration.*) There is only one universal passion: fear. Of all the thousand qualities a man may have, the only one you will find as certainly in the youngest drummer boy in my army as in me is fear. It is fear that makes men fight: it is indifference that makes them run away: fear is the mainspring of war. Fear! I know fear well, better than you, better than any woman. I once saw a regiment of good Swiss soldiers massacred by a mob in Paris because I was afraid to interfere: I felt myself a coward to the tips of my toes as I looked on at it. Seven months ago I revenged my shame by pounding that mob to death with cannon balls. Well, what of that? Has fear ever held a man back from anything he really wanted—or a woman either? Never. Come with me; and I will show you twenty thousand cowards who will risk death every day for the price of a glass of brandy. And do you think there are no women in the army braver than the men, though their lives are worth more? Psha! I think nothing of your fear or your bravery. If you had had to come across to me at Lodi, you would not have been afraid: once on the bridge, every other feeling would have gone down before the necessity—the necessity—for making your way to my side and getting what you wanted.

And now, suppose you had done all this! suppose you had come safely out with that letter in your hand, knowing that when the hour

came, your fear had tightened, not your heart, but your grip of your own purpose! that it had ceased to be fear, and had become strength, penetration, vigilance, iron resolution! how would you answer then if you were asked whether you were a coward?

Lady (rising). Ah, you are a hero, a real hero.

Napoleon. Pooh! there's no such thing as a real hero. (*He strolls about the room, making light of her enthusiasm, but by no means displeased with himself for having evoked it.*)

Lady. Ah yes, there is. There is a difference between what you call my bravery and yours. You wanted to win the Battle of Lodi for yourself and not for anyone else, didn't you?

Napoleon. Of course. (*Suddenly recollecting himself*) Stop: no (*He pulls himself piously together, and says, like a man conducting a religious service*) I am only the servant of the French Republic, following humbly in the footsteps of the heroes of classical antiquity. I win battles for humanity: for my country, not for myself.

Lady (disappointed). Oh, then you are only a womanish hero after all. (*She sits down again, all her enthusiasm gone.*)

Napoleon (greatly astonished). Womanish!

Lady (listlessly). Yes, like me. (*With deep melancholy*) Do you think that if I wanted those despatches only for myself, I dare venture into a battle for them? No: if that were all, I should not have the courage to ask to see you at your hotel, even. My courage is mere slavishness: it is of no use to me for my own purposes. It is only through love, through pity, through the instinct to save and protect someone else that I can do the things that terrify me.

Napoleon (contemptuously). Pshaw! (*He turns slightly away from her.*)

Lady. Aha! now you see that I'm not really brave. (*Relapsing into petulant listlessness*) But what right have you to despise me if you only win your battles for others? for your country! through patriotism! That is what I call womanish: it is so like a Frenchman!

Napoleon (furiously). I am no Frenchman.

Lady (innocently). I thought you said you won the Battle of Lodi for your country, General Bu—shall I pronounce it in Italian or French?

Napoleon. You are presuming on my patience, madam. I was born a French subject, but not in France.

Lady (affecting a marked access of interest in him). You were not born a subject at all, I think.

Napoleon (greatly pleased). Eh? Eh? You think not.

Lady. I am sure of it.

Napoleon. Well, well, perhaps not. (*The self-complacency of his assent catches his own ear. He stops short, reddening. Then, composing himself into a solemn attitude, modelled on the heroes of classical antiquity, he takes a high moral tone.*) But we must not live for ourselves alone, little one. Never forget that we should always think of others, and work for others, and lead and govern them for their own good. Self-sacrifice is the foundation of all true nobility of character.

Lady (*again relaxing her attitude with a sigh*). Ah, it is easy to see that you have never tried it, General.

Napoleon (*indignantly, forgetting all about Brutus and Scipio*). What do you mean by that speech, madam?

Lady. Haven't you noticed that people always exaggerate the value of the things they haven't got? The poor think they need nothing but riches to be quite happy and good. Everybody worships truth, purity, unselfishness, for the same reason: because they have no experience of them. Oh, if they only knew!

Napoleon (*with angry derision*). If they only knew! Pray do you know?

Lady. Yes. I had the misfortune to be born good. (*Glancing up at him for a moment*) And it is a misfortune, I can tell you, General. I really am truthful and unselfish and all the rest of it; and it's nothing but cowardice; want of character; want of being really, strongly, positively oneself.

Napoleon. Ha? (*Turning to her quickly with a flash of strong interest.*)

Lady (*earnestly, with rising enthusiasm*). What is the secret of your power? Only that you believe in yourself. You can fight and conquer for yourself and for nobody else. You are not afraid of your own destiny. You teach us what we all might be if we had the will and courage; and that (*suddenly sinking on her knees before him*) is why we all begin to worship you. (*She kisses his hands.*)

Napoleon (*embarrassed*). Tut! tut! Pray rise, madam.

Lady. Do not refuse my homage: it is your right. You will be Emperor of France—

Napoleon (*hurriedly*). Take care. Treason!

Lady (*insisting*). Yes, Emperor of France; then of Europe; perhaps of the world. I am only the first subject to swear allegiance. (*Again kissing his hand*) My Emperor!

Napoleon (*overcome, raising her*). Pray! pray! No, no: this is folly. Come: be calm, be calm. (*Petting her*) There! there! my girl.

Lady (struggling with happy tears). Yes, I know it is an impertinence in me to tell you what you must know far better than I do. But you are not angry with me, are you?

Napoleon. Angry! No, no: not a bit, not a bit. Come: you are a very clever and sensible and interesting woman. (*He pats her on the cheek.*) Shall we be friends?

Lady (enraptured). Your friend! You will let me be your friend! Oh! (*She offers him both her hands with a radiant smile.*) You see: I show my confidence in you.

This incautious echo of the LIEUTENANT undoes her. NAPOLEON starts: his eyes flash: he utters a yell of rage.

Napoleon. What!!!

Lady. What's the matter?

Napoleon. Show your confidence in me! So that I may show my confidence in you in return by letting you give me the slip with the despatches, eh? Ah, Dalila, Dalila, you have been trying your tricks on me; and I have been as gross a gull as my jackass of a lieutenant. (*Menacingly*) Come: the despatches. Quick: I am not to be trifled with now.

Lady (flying round the couch). General—

Napoleon. Quick, I tell you. (*He passes swiftly up the middle of the room and intercepts her as she makes for the vineyard.*)

Lady (at bay, confronting him and giving way to her temper). You dare address me in that tone.

Napoleon. Dare!

Lady. Yes, dare. Who are you that you should presume to speak to me in that coarse way. Oh, the vile, vulgar Corsican adventurer comes out in you very easily.

Napoleon (beside himself). You she devil! (*Savagely*) Once more, and only once, will you give me those papers or shall I tear them from you?—by force!

Lady. Tear them from me: by force!

As he glares at her like a tiger about to spring, she crosses her arms on her breast in the attitude of a martyr. The gesture and pose instantly awaken his theatrical instinct: he forgets his rage in the desire to show her that in acting, too, she has met her match. He keeps her a moment in suspense; then suddenly clears up his countenance; puts his hands behind him with provoking coolness; looks at her up and down a couple of times; takes a pinch of snuff; wipes his

fingers carefully and puts up his handkerchief, her heroic pose becoming more and more ridiculous all the time.

Napoleon (at last). Well?

Lady (disconcerted, but with her arms still crossed devotedly). Well: what are you going to do?

Napoleon. Spoil your attitude.

Lady. You brute! *(Abandoning the attitude, she comes to the end of the couch, where she turns with her back to it, leaning against it and facing him with her hands behind her.)*

Napoleon. Ah, that's better. Now listen to me. I like you. What's more, I value your respect.

Lady. You value what you have not got, then.

Napoleon. I shall have it presently. Now attend to me. Suppose I were to allow myself to be abashed by the respect due to your sex, your beauty, your heroism, and all the rest of it! Suppose I, with nothing but such sentimental stuff to stand between these muscles of mine and those papers which you have about you, and which I want and mean to have! suppose I, with the prize within my grasp, were to falter and sneak away with my hands empty; or, what would be worse, cover up my weakness by playing the magnanimous hero, and sparing you the violence I dared not use! would you not despise me from the depths of your woman's soul? Would any woman be such a fool? Well, Bonaparte can rise to the situation and act like a woman when it is necessary. Do you understand?

The LADY, without speaking, stands upright, and takes a packet of papers from her bosom. For a moment she has an intense impulse to dash them in his face. But her good breeding cuts her off from any vulgar method of relief. She hands them to him politely, only averting her head. The moment he takes them, she hurries across to the other side of the room; sits down; and covers her face with her hands.

Napoleon (gloating over the papers). Aha! That's right. That's right. *(Before he opens them, he looks at her and says)* Excuse me. *(He sees that she is hiding her face.)* Very angry with me, eh? *(He unties the packet, the seal of which is already broken, and puts it on the table to examine its contents.)*

Lady (quietly, taking down her hands and showing that she is not crying, but only thinking). No. You were right. But I am sorry for you.

Napoleon (pausing in the act of taking the uppermost paper from the packet). Sorry for me! Why?

Lady. I am going to see you lose your honour.

Napoleon. Hm! Nothing worse than that? (*He takes up the paper.*)

Lady. And your happiness.

Napoleon. Happiness! Happiness is the most tedious thing in the world to me. Should I be what I am if I cared for happiness? Anything else?

Lady. Nothing.

Napoleon. Good.

Lady. Except that you will cut a very foolish figure in the eyes of France.

Napoleon (quickly). What? (*The hand unfolding the paper involuntarily stops.*

The LADY looks at him enigmatically, in tranquil silence. He throws the letter down and breaks out into a torrent of scolding.) What do you mean? Eh? Are you at your tricks again? Do you think I don't know what these papers contain? I'll tell you, First, my information as to Beaulieu's retreat. There are only two things he can do—leather-brained idiot that he is!—shut himself up in Mantua or violate the neutrality of Venice by taking Peschiera. You are one of old Leatherbrain's spies: he has discovered that he has been betrayed, and has sent you to intercept the information at all hazards. As if that could save him from me, the old fool! The other papers are only my private letters from Paris, of which you know nothing.

Lady (prompt and businesslike). General: let us make a fair division. Take the information your spies have sent you about the Austrian army; and give me the Paris correspondence. That will content me.

Napoleon (his breath taken away by the coolness of the proposal). A fair di—(*he gasps*). It seems to me, madam, that you have come to regard my letters as your own property, of which I am trying to rob you.

Lady (earnestly). No: on my honour I ask for no letter of yours: not a word that has been written by you or to you. That packet contains a stolen letter: a letter written by a woman to a man: a man not her husband: a letter that means disgrace, infamy—

Napoleon. A love letter?

Lady (bitter-sweetly). What else but a love letter could stir up so much hate?

Napoleon. Why is it sent to me? To put the husband in my power, eh?

Lady. No, no: it can be of no use to you: I swear that it will cost you nothing to give it to me. It has been sent to you out of sheer malice: solely to injure the woman who wrote it.

Napoleon. Then why not send it to her husband instead of to me?

Lady (completely taken aback). Oh! (*Sinking back into the chair*) I—I don't know.
(*She breaks down.*)

Napoleon. Aha! I thought so: a little romance to get the papers back. Per Bacco, I can't help admiring you. I wish I could lie like that. It would save me a great deal of trouble.

Lady (wringing her hands). Oh, how *I* wish I really had told you some lie! You would have believed me then. The truth is the one thing nobody will believe.

Napoleon (with coarse familiarity, treating her as if she were a vivandière). Capital! Capital! (*He puts his hands behind him on the table, and lifts himself on to it, sitting with his arms akimbo and his legs wide apart*) Come: I am a true Corsican in my love for stories. But I could tell them better than you if I set my mind to it. Next time you are asked why a letter compromising a wife should not be sent to her husband, answer simply that the husband wouldn't read it. Do you suppose, you goose, that a man wants to be compelled by public opinion to make a scene, to fight a duel, to break up his household, to injure his career by a scandal, when he can avoid it all by taking care not to know?

Lady (revolted). Suppose that packet contained a letter about your own wife?

Napoleon (offended, coming off the table). You are impertinent, madam.

Lady (humbly). I beg your pardon. Caesar's wife is above suspicion.

Napoleon (with a deliberate assumption of superiority). You have committed an indiscretion. I pardon you. In future, do not permit yourself to introduce real persons in your romances.

Lady (politely ignoring a speech which is to her only a breach of good manners).

General: there really is a woman's letter there. (*Pointing to the packet*) Give it to me.

Napoleon (with brute conciseness). Why?

Lady. She is an old friend: we were at school together. She has written to me imploring me to prevent the letter falling into your hands.

Napoleon. Why has it been sent to me?

Lady. Because it compromises the director Barras.

Napoleon (frowning, evidently startled). Barras! (*Haughtily*) Take care, madam. The director Barras is my attached personal friend.

Lady (nodding placidly). Yes. You became friends through your wife.

Napoleon. Again! Have I not forbidden you to speak of my wife?
(*She keeps looking curiously at him, taking no account of the rebuke. More and more irritated, he drops his haughty manner, of which he*

is himself somewhat impatient, and says suspiciously, lowering his voice)

Who is this woman with whom you sympathize so deeply?

Lady. Oh, General! How could I tell you that?

Napoleon (ill-humouredly, beginning to walk about again in angry perplexity). Ay, ay: stand by one another. You are all the same, you women.

Lady (indignantly). We are not all the same, any more than you are. Do you think that if *I* loved another man, I should pretend to go on loving my husband, or be afraid to tell him or all the world? But this woman is not made that way. She governs men by cheating them; and they like it, and let her govern them. (*She turns her back to him in disdain.*)

Napoleon (not attending to her). Barras? Barras? (*Very threateningly, his face darkening*) Take care. Take care: do you hear? You may go too far.

Lady (innocently turning her face to him). What's the matter?

Napoleon. What are you hinting at? Who is this woman?

Lady (meeting his angry searching gaze with tranquil indifference as she sits looking up at him). A vain, silly, extravagant creature, with a very able and ambitious husband who knows her through and through: knows that she has lied to him about her age, her income, her social position, about everything that silly women lie about: knows that she is incapable of fidelity to any principle or any person; and yet cannot help loving her—cannot help his man's instinct to make use of her for his own advancement with Barras.

Napoleon (in a stealthy coldly furious whisper). This is your revenge, you she cat, for having had to give me the letters.

Lady. Nonsense! Or do you mean that you are that sort of man?

Napoleon (exasperated, clasps his hands behind him, his fingers twitching, and says, as he walks irritably away from her to the fireplace). This woman will drive me out of my senses. (*To her*) Begone.

Lady (seated immovably). Not without that letter.

Napoleon. Begone, I tell you. (*Walking from the fireplace to the vineyard and back to the table*) You shall have no letter. I don't like you. You're a detestable woman, and as ugly as Satan. I don't choose to be pestered by strange women. Be off. (*He turns his back on her. In quiet amusement, she leans her cheek on her hand and laughs at him. He turns again, angrily mocking her.*) Ha! ha! ha! What are you laughing at?

Lady. At you, General. I have often seen persons of your sex getting into

a pet and behaving like children; but I never saw a really great man do it before.

Napoleon (brutally, flinging the words in her face). Psha! Flattery! Flattery! Coarse, impudent flattery!

Lady (springing up with a bright flush in her cheeks). Oh, you are too bad. Keep your letters. Read the story of your own dishonour in them; and much good may they do you. Good-bye. *(She goes indignantly towards the inner door.)*

Napoleon. My own—! Stop. Come back. Come back, I order you. *(She proudly disregards his savagely peremptory tone and continues on her way to the door. He rushes at her; seizes her by the arm; and drags her back.)* Now, what do you mean? Explain. Explain. I tell you, or—*(Threatening her. She looks at him with unflinching defiance.)* Rrrr! you obstinate devil, you. *(Throwing her arm away)* Why can't you answer a civil question?

Lady (deeply offended by his violence). Why do you ask me? You have the explanation.

Napoleon. Where?

Lady (pointing to the letters on the table). There. You have only to read it.

He snatches the packet up; hesitates; looks at her suspiciously; and throws it down again.

Napoleon. You seem to have forgotten your solicitude for the honour of your old friend.

Lady. I do not think she runs any risk now. She does not quite understand her husband.

Napoleon. I am to read the letter, then? *(He stretches out his hand as if to take up the packet again, with his eye on her.)*

Lady. I do not see how you can very well avoid doing so now. *(He instantly withdraws his hand.)* Oh, don't be afraid. You will find many interesting things in it.

Napoleon. For instance?

Lady. For instance, a duel with Barras, a domestic scene, a broken household, a public scandal, a checked career, all sorts of things.

Napoleon. Hm! *(He looks at her; takes up the packet and looks at it, pursing his lips and balancing it in his hands; looks at her again; passes the packet into his left hand and puts it behind his back, raising his right to scratch the back of his head as he turns and goes up to the edge of the vineyard, where he stands for a moment look-*

ing out into the vines, deep in thought. The LADY watches him in silence, somewhat slightly. Suddenly he turns and comes back again, full of force and decision.) I grant your request, madam. Your courage and resolution deserve to succeed. Take the letters for which you have fought so well; and remember henceforth that you found the vile vulgar Corsican adventurer as generous to the vanquished after the battle as he was resolute in the face of the enemy before it. (*He offers her the packet.*)

Lady (*without taking it, looking hard at him*). What are you at now, I wonder? (*He dashes the packet furiously to the floor.*) Aha! I've spoilt that attitude, I think. (*She makes him a pretty mocking curtsey.*)

Napoleon (*snatching it up again*). Will you take the letters and begone (*advancing and thrusting them upon her*)?

Lady (*escaping around the table*). No: I don't want your letters.

Napoleon. Ten minutes ago, nothing else would satisfy you.

Lady (*keeping the table carefully between them*). Ten minutes ago you had not insulted me beyond all bearing.

Napoleon. I—(*swallowing his spleen*) I apologize.

Lady (*coolly*). Thanks. (*With forced politeness he offers her the packet across the table. She retreats a step out of its reach and says*) But don't you want to know whether the Austrians are at Mantua or Peschiera?

Napoleon. I have already told you that I can conquer my enemies without the aid of spies, madam.

Lady. And the letter? don't you want to read that?

Napoleon. You have said that it is not addressed to me. I am not in the habit of reading other people's letters. (*He again offers the packet.*)

Lady. In that case there can be no objection to your keeping it. All I wanted was to prevent your reading it. (*Cheerfully*) Good afternoon, General. (*She turns coolly towards the inner door.*)

Napoleon (*angrily flinging the packet on the couch*). Heaven grant me patience! (*He goes determinedly to the door, and places himself before it.*) Have you any sense of personal danger? Or are you one of those women who like to be beaten black and blue?

Lady. Thank you, General: I have no doubt the sensation is very voluptuous; but I had rather not. I simply want to go home: that's all. I was wicked enough to steal your despatches; but you have got them back; and you have forgiven me, because (*delicately reproducing his rhetorical cadence*) you are as generous to the vanquished after

the battle as you are resolute in the face of the enemy before it.
Won't you say good-bye to me? (*She offers her hand sweetly.*)

Napoleon (*repulsing the advance with a gesture of concentrated rage, and opening the door to call fiercely*). Giuseppe! (*Louder*) Giuseppe! (*He bangs the door to, and comes to the middle of the room. The LADY goes a little way into the vineyard to avoid him.*)

Giuseppe (*appearing at the door*). Excellency?

Napoleon. Where is that fool?

Giuseppe. He has had a good dinner, according to your instructions, excellency, and is now doing me the honour to gamble with me to pass the time.

Napoleon. Send him here. Bring him here. Come with him. (*GIUSEPPE, with unruffled readiness, hurries off. NAPOLEON turns curtly to the LADY, saying*) I must trouble you to remain some moments longer, madam. (*He comes to the couch.*)

She comes from the vineyard along the opposite side of the room to the sideboard, and posts herself there, leaning against it, watching him. He takes the packet from the couch and deliberately buttons it carefully into his breast pocket, looking at her meanwhile with an expression which suggests that she will soon find out the meaning of his proceedings, and will not like it. Nothing more is said until the LIEUTENANT arrives followed by GIUSEPPE, who stands modestly in attendance at the table. The LIEUTENANT, without cap, sword, or gloves, and much improved in temper and spirits by his meal, chooses the LADY'S side of the room, and waits, much at his ease, for NAPOLEON to begin.

Napoleon. Lieutenant.

Lieutenant (*encouragingly*). General.

Napoleon. I cannot persuade this lady to give me much information; but there can be no doubt that the man who tricked you out of your charge was, as she admitted to you, her brother.

Lieutenant (*triumphantly*). What did I tell you, General! What did I tell you!

Napoleon. You must find that man. Your honour is at stake; and the fate of the campaign, the destiny of France, of Europe, of humanity, perhaps, may depend on the information those despatches contain.

Lieutenant. Yes, I suppose they really are rather serious (*as if this had hardly occurred to him before*).

Napoleon (*energetically*). They are so serious, sir, that if you do not re-

cover them, you will be degraded in the presence of your regiment.

Lieutenant. Whew! The regiment won't like that, I can tell you.

Napoleon. Personally I am sorry for you. I would willingly hush up the affair if it were possible. But I shall be called to account for not acting on the despatches. I shall have to prove to all the world that I never received them, no matter what the consequences may be to you. I am sorry; but you see that I cannot help myself.

Lieutenant (good-naturedly). Oh, don't take it to heart, General: it's really very good of you. Never mind what happens to me: I shall scrape through somehow; and we'll beat the Austrians for you, despatches or no despatches. I hope you won't insist on my starting off on a wild goose chase after the fellow now. I haven't a notion where to look for him.

Giuseppe (deferentially). You forget, Lieutenant: he has your horse.

Lieutenant (starting). I forgot that. (*Resolutely*) I'll go after him, General: I'll find that horse if it's alive anywhere in Italy. And I shan't forget the despatches: never fear. *Giuseppe:* go and saddle one of those mangy old post-horses of yours while I get my cap and sword and things. Quick march. Off with you (*bustling him*).

Giuseppe. Instantly, Lieutenant, instantly. (*He disappears in the vineyard, where the light is now reddening with the sunset.*)

Lieutenant (looking about him on his way to the inner door). By the way, General, did I give you my sword or did I not? Oh, I remember now. (*Fretfully*) It's all that nonsense about putting a man under arrest: one never knows where to find—(*he talks himself out of the room*).

Lady (still at the sideboard). What does all this mean, General?

Napoleon. He will not find your brother.

Lady. Of course not. There's no such person.

Napoleon. The despatches will be irrecoverably lost.

Lady. Nonsense! They are inside your coat.

Napoleon. You will find it hard, I think, to prove that wild statement. (*The LADY starts. He adds, with clinching emphasis*) Those papers are lost.

Lady (anxiously, advancing to the corner of the table). And that unfortunate young man's career will be sacrificed?

Napoleon. His career! The fellow is not worth the gunpowder it would cost to have him shot. (*He turns contemptuously and goes to the hearth, where he stands with his back to her.*)

Lady (wistfully). You are very hard. Men and women are nothing to you but things to be used, even if they are broken in the use.

Napoleon (turning on her). Which of us has broken this fellow? I or you? Who tricked him out of the despatches? Did you think of his career then?

Lady (conscience-stricken). Oh, I never thought of that. It was wicked of me; but I couldn't help it, could I? How else could I have got the papers? (*Supplicating*) General: you will save him from disgrace.

Napoleon (laughing sourly). Save him yourself, since you are so clever: it was you who ruined him. (*With savage intensity*) I hate a bad soldier.

He goes out determinedly through the vineyard. She follows him a few steps with an appealing gesture, but is interrupted by the return of the LIEUTENANT, gloved and capped, with his sword on, ready for the road. He is crossing to the outer door when she intercepts him.

Lady. Lieutenant.

Lieutenant (importantly). You mustn't delay me, you know. Duty, madam, duty.

Lady (imploringly). Oh, sir, what are you going to do to my poor brother?

Lieutenant. Are you very fond of him?

Lady. I should die if anything happened to him. You must spare him. (*The LIEUTENANT shakes his head gloomily.*) Yes, yes: you must: you shall: he is not fit to die. Listen to me. If I tell you where to find him—if I undertake to place him in your hands a prisoner, to be delivered up by you to General Bonaparte—will you promise me on your honour as an officer and a gentleman not to fight with him or treat him unkindly in any way?

Lieutenant. But suppose he attacks me. He has my pistols.

Lady. He is too great a coward.

Lieutenant. I don't feel so sure about that. He's capable of anything.

Lady. If he attacks you, or resists you in any way, I release you from your promise.

Lieutenant. My promise! I didn't mean to promise. Look here: you're as bad as he is: you've taken an advantage of me through the better side of my nature. What about my horse?

Lady. It is part of the bargain that you are to have your horse and pistols back.

Lieutenant. Honour bright?

Lady. Honour bright. (*She offers her hand.*)

Lieutenant (taking it and holding it). All right: I'll be as gentle as a lamb with him. His sister's a very pretty woman. (*He attempts to kiss her.*)

Lady (slipping away from him). Oh, Lieutenant! You forget: your career is at stake—the destiny of Europe—of humanity.

Lieutenant. Oh, bother the destiny of humanity! (*Making for her*) Only a kiss.

Lady (retreating round the table). Not until you have regained your honour as an officer. Remember: you have not captured my brother yet.

Lieutenant (seductively). You'll tell me where he is, won't you?

Lady. I have only to send him a certain signal; and he will be here in quarter of an hour.

Lieutenant. He's not far off, then.

Lady. No: quite close. Wait here for him: when he gets my message he will come here at once and surrender himself to you. You understand?

Lieutenant (intellectually overtaxed). Well, it's a little complicated; but I daresay it will be all right.

Lady. And now, whilst you're waiting, don't you think you had better make terms with the General?

Lieutenant. Oh, look here: this is getting frightfully complicated. What terms?

Lady. Make him promise that if you catch my brother he will consider that you have cleared your character as a soldier. He will promise anything you ask on that condition.

Lieutenant. That's not a bad idea. Thank you: I think I'll try it.

Lady. Do. And mind, above all things, don't let him see how clever you are.

Lieutenant. I understand. He'd be jealous.

Lady. Don't tell him anything except that you are resolved to capture my brother or perish in the attempt. He won't believe you. Then you will produce my brother—

Lieutenant (interrupting as he masters the plot). And have the laugh at him! I say: what a jolly clever woman you are! (*Shouting*) Giuseppe!

Lady. Sh! Not a word to Giuseppe about me. (*She puts her finger on her lips. He does the same. They look at one another warningly. Then, with a ravishing smile, she changes the gesture into wafting him a kiss, and runs out through the inner door. Electrified, he bursts into a volley of chuckles.*)

GIUSEPPE comes back by the outer door.

Giuseppe. The horse is ready, Lieutenant.

Lieutenant. I'm not going just yet. Go and find the General and tell him I want to speak to him.

Giuseppe (shaking his head). That will never do, Lieutenant.

Lieutenant. Why not?

Giuseppe. In this wicked world a general may send for a lieutenant; but a lieutenant must not send for a general.

Lieutenant. Oh, you think he wouldn't like it. Well, perhaps you're right: one has to be awfully particular about that sort of thing now we're a republic.

NAPOLEON reappears, advancing from the vineyard, buttoning the breast of his coat, pale and full of gnawing thoughts.

Giuseppe (unconscious of NAPOLEON'S approach). Quite true, Lieutenant, quite true. You are all like innkeepers now in France: you have to be polite to everybody.

Napoleon (putting his hand on GIUSEPPE'S shoulder). And that destroys the whole value of politeness, eh?

Lieutenant. The very man I wanted! See here, General: suppose I catch that fellow for you!

Napoleon (with ironical gravity). You will not catch him, my friend.

Lieutenant. Aha! you think so; but you'll see. Just wait. Only, if I do catch him and hand him over to you, will you cry quits? Will you drop all this about degrading me in the presence of my regiment? Not that I mind, you know; but still no regiment likes to have all the other regiments laughing at it.

Napoleon (a cold ray of humour striking pallidly across his gloom). What shall we do with this officer, Giuseppe? Everything he says is wrong.

Giuseppe (promptly). Make him a general, excellency; and then everything he says will be right.

Lieutenant (crowing). Haw-aw! (*He throws himself ecstatically on the couch to enjoy the joke.*)

Napoleon (laughing and pinching GIUSEPPE'S ear). You are thrown away in this inn, Giuseppe. (*He sits down and places GIUSEPPE before him like a schoolmaster with a pupil.*) Shall I take you away with me and make a man of you?

Giuseppe (shaking his head rapidly and repeatedly). No no no no no no no. All my life long people have wanted to make a man of me. When I was a boy, our good priest wanted to make a man of me by teaching me to read and write. Then the organist at Melegnano wanted to make a man of me by teaching me to read music. The

recruiting sergeant would have made a man of me if I had been a few inches taller. But it always meant making me work; and I am too lazy for that, thank Heaven! So I taught myself to cook and became an innkeeper; and now I keep servants to do the work, and have nothing to do myself except talk, which suits me perfectly.

Napoleon (looking at him thoughtfully). You are satisfied?

Giuseppe (with cheerful conviction). Quite, excellency.

Napoleon. And you have no devouring devil inside you who must be fed with action and victory: gorged with them night and day: who makes you pay, with the sweat of your brain and body, weeks of Herculean toil for ten minutes of enjoyment: who is at once your slave and your tyrant, your genius and your doom: who brings you a crown in one hand and the oar of a galley slave in the other: who shows you all the kingdoms of the earth and offers to make you their master on condition that you become their servant! have you nothing of that in you?

Giuseppe. Nothing of it! Oh, I assure you, excellency, my devouring devil is far worse than that. He offers me no crowns and kingdoms: he expects to get everything for nothing: sausages! omelettes! grapes! cheese! polenta! wine! three times a day, excellency: nothing less will content him.

Lieutenant. Come: drop it, Giuseppe: you're making me feel hungry again.

GIUSEPPE, with an apologetic shrug, retires from the conversation.

Napoleon (turning to the LIEUTENANT with sardonic politeness). I hope I have not been making you feel ambitious.

Lieutenant. Not at all: I don't fly so high. Besides, I'm better as I am: men like me are wanted in the army just now. The fact is, the Revolution was all very well for civilians; but it won't work in the army. You know what soldiers are, General: they will have men of family for their officers. A subaltern must be a gentleman, because he's so much in contact with the men. But a general, or even a colonel, may be any sort of riff-raff if he understands his job well enough. A lieutenant is a gentleman: all the rest is chance. Why, who do you suppose won the Battle of Lodi? I'll tell you. My horse did.

Napoleon (rising). Your folly is carrying you too far, sir. Take care.

Lieutenant. Not a bit of it. You remember all that red-hot cannonade across the river: the Austrians blazing away at you to keep you from crossing, and you blazing away at them to keep them from

setting the bridge on fire? Did you notice where I was then?

Napoleon. I am sorry. I am afraid I was rather occupied at the moment.

Giuseppe (with eager admiration). They say you jumped off your horse and worked the big guns with your own hands, General.

Lieutenant. That was a mistake: an officer should never let himself down to the level of his men. (NAPOLEON looks at him dangerously, and begins to walk tigerishly to and fro.) But you might have been firing away at the Austrians still if we cavalry fellows hadn't found the ford and got across and turned old Beaulieu's flank for you. You know you didn't dare give the order to charge the bridge until you saw us on the other side. Consequently, I say that whoever found that ford won the Battle of Lodi. Well, who found it? I was the first man to cross; and I know. It was my horse that found it. (*With conviction, as he rises from the couch*) That horse is the true conqueror of the Austrians.

Napoleon (passionately). You idiot: I'll have you shot for losing those despatches: I'll have you blown from the mouth of a cannon: nothing less could make any impression on you. (*Baying at him*) Do you hear? Do you understand?

A French officer enters unobserved, carrying his sheathed sabre in his hand.

Lieutenant (unabashed). If I don't capture him, General. Remember the if.

Napoleon. If!! Ass: there is no such man.

The Officer (suddenly stepping between them and speaking in the unmistakable voice of the STRANGE LADY). Lieutenant: I am your prisoner. (*She offers him her sabre.*)

NAPOLEON gazes at her for a moment thunderstruck; then seizes her by the wrist and drags her roughly to him, looking closely and fiercely at her to satisfy himself as to her identity; for it now begins to darken rapidly into night, the red glow over the vineyard giving way to clear starlight.

Napoleon. Pah! (*He flings her hand away with an exclamation of disgust, and turns his back on them with his hand in his breast, his brow lowering, and his toes twitching.*)

Lieutenant (triumphantly, taking the sabre). No such man! eh, General? (*To the LADY*) I say: where's my horse?

Lady. Safe at Borghetto, waiting for you, Lieutenant.

Napoleon (turning on them). Where are the despatches?

Lady. You would never guess. They are in the most unlikely place in the world. Did you meet my sister here, any of you?

Lieutenant. Yes. Very nice woman. She's wonderfully like you; but of course she's better looking.

Lady (mysteriously). Well, do you know that she is a witch?

Giuseppe (in terror, crossing himself). Oh, no, no, no. It is not safe to jest about such things. I cannot have it in my house, excellency.

Lieutenant. Yes, drop it. You're my prisoner, you know. Of course I don't believe in any such rubbish; but still it's not a proper subject for joking.

Lady. But this is very serious. My sister has bewitched the General. (GIUSEPPE and the LIEUTENANT recoil from NAPOLEON.) General: open your coat: you will find the despatches in the breast of it. (*She puts her hand quickly on his breast.*) Yes: there they are: I can feel them. Eh? (*She looks up into his face half coaxingly, half mockingly.*) Will you allow me, General? (*She takes a button as if to unbutton his coat, and pauses for permission.*)

Napoleon (inscrutably). If you dare.

Lady. Thank you. (*She opens his coat and takes out the despatches.*) There! (*To GIUSEPPE, showing him the despatches*) See!

Giuseppe (flying to the outer door). No, in heaven's name! They're bewitched.

Lady (turning to the LIEUTENANT). Here, Lieutenant: you are not afraid of them.

Lieutenant (retreating). Keep off. (*Seizing the hilt of the sabre*) Keep off, I tell you.

Lady (to NAPOLEON). They belong to you, General. Take them.

Giuseppe. Don't touch them, excellency. Have nothing to do with them.

Lieutenant. Be careful, General: be careful.

Giuseppe. Burn them. And burn the witch too.

Lady (to NAPOLEON). Shall I burn them?

Napoleon (thoughtfully). Yes, burn them. Giuseppe: go and fetch a light.

Giuseppe (trembling and stammering). Do you mean go alone? in the dark? with a witch in the house?

Napoleon. Psha! You're a poltroon. (*To the LIEUTENANT*) Oblige me by going, Lieutenant.

Lieutenant (remonstrating). Oh, I say, General! No, look here, you know: nobody can say I'm a coward after Lodi. But to ask me to go into the dark by myself without a candle after such an awful conversation is a little too much. How would you like to do it yourself?

Napoleon (irritably). You refuse to obey my order?

Lieutenant (resolutely). Yes I do. It's not reasonable. But I'll tell you what I'll do. If Giuseppe goes, I'll go with him and protect him.

Napoleon (to GIUSEPPE). There! will that satisfy you? Be off, both of you.

Giuseppe (humbly, his lips trembling). W-willingly, your excellency. (*He goes reluctantly towards the inner door.*) Heaven protect me! (*To the LIEUTENANT*) After you, Lieutenant.

Lieutenant. You'd better go first: I don't know the way.

Giuseppe. You can't miss it. Besides (*imploringly, laying his hand on his sleeve*) I am only a poor innkeeper: you are a man of family.

Lieutenant. There's something in that. Here: you needn't be in such a fright. Take my arm. (*GIUSEPPE does so.*) That's the way. (*They go out, arm in arm.*)

It is now starry night. The LADY throws the packet on the table and seats herself at her ease on the couch, enjoying the sensation of freedom from petticoats.

Lady. Well, General: I've beaten you.

Napoleon (walking about). You are guilty of indelicacy: of unwomanliness. Is that costume proper?

Lady. It seems to me much the same as yours.

Napoleon. Psha! I blush for you.

Lady (naïvely). Yes: soldiers blush so easily. (*He growls and turns away. She looks mischievously at him, balancing the despatches in her hand.*) Wouldn't you like to read these before they're burnt, General? You must be dying with curiosity. Take a peep. (*She throws the packet on the table, and turns her face away from it.*) I won't look.

Napoleon. I have no curiosity whatever, madam. But since you are evidently burning to read them, I give you leave to do so.

Lady. Oh, I've read them already.

Napoleon (starting). What!

Lady. I read them the first thing after I rode away on that poor lieutenant's horse. So you see I know what's in them; and you don't.

Napoleon. Excuse me: I read them when I was out there in the vineyard ten minutes ago.

Lady. Oh! (*Jumping up*) Oh, General: I've not beaten you after all. I do admire you so. (*He laughs and pats her cheek.*) This time, really and truly without shamming, I do you homage (*kissing his hand*).

Napoleon (quickly withdrawing it). Brr! Don't do that. No more witchcraft.

Lady. I want to say something to you; only you would misunderstand it.

Napoleon. Need that stop you?

Lady. Well, it is this. I adore a man who is not afraid to be mean and selfish.

Napoleon (indignantly). I am neither mean nor selfish.

Lady. Oh, you don't appreciate yourself. Besides, I don't really mean meanness and selfishness.

Napoleon. Thank you. I thought perhaps you did.

Lady. Well, of course I do. But what I mean is a certain strong simplicity about you.

Napoleon. That's better.

Lady. You didn't want to read the letters; but you were curious about what was in them. So you went into the garden and read them when no one was looking, and then came back and pretended you hadn't. That's the meanest thing I ever knew any man do; but it exactly fulfilled your purpose; and so you weren't a bit afraid or ashamed to do it.

Napoleon (abruptly). Where did you pick up all these vulgar scruples? this (*with contemptuous emphasis*) conscience of yours? I took you for a lady: an aristocrat. Was your grandfather a shopkeeper, pray?

Lady. No: he was an Englishman.

Napoleon. That accounts for it. The English are a nation of shopkeepers. Now I understand why you've beaten me.

Lady. Oh, I haven't beaten you. And I'm not English.

Napoleon. Yes you are: English to the backbone. Listen to me: I will explain the English to you.

Lady (eagerly). Do. (*With a lively air of anticipating an intellectual treat, she sits down on the couch and composes herself to listen to him. Secure of his audience, he at once nerves himself for a performance. He considers a little before he begins; so as to fix her attention by a moment of suspense. His style is at first modelled on Talma's in Corneille's Cinna; but it is somewhat lost in the darkness, and Talma presently gives way to NAPOLEON, the voice coming through the gloom with startling intensity.*)

Napoleon. There are three sorts of people in the world: the low people, the middle people, and the high people. The low people and the high people are alike in one thing: they have no scruples, no morality. The low are beneath morality, the high above it. I am not afraid of either of them; for the low are unscrupulous without knowledge, so that they make an idol of me; whilst the high are unscrupulous with-

out purpose, so that they go down before my will. Look you: I shall go over all the mobs and all the courts of Europe as a plough goes over a field. It is the middle people who are dangerous: they have both knowledge and purpose. But they, too, have their weak point. They are full of scruples: chained hand and foot by their morality and respectability.

Lady. Then you will beat the English; for all shopkeepers are middle people.

Napoleon. No, because the English are a race apart. No Englishman is too low to have scruples: no Englishman is high enough to be free from their tyranny. But every Englishman is born with a certain miraculous power that makes him master of the world. When he wants a thing, he never tells himself that he wants it. He waits patiently until there comes into his mind, no one knows how, a burning conviction that it is his moral and religious duty to conquer those who possess the thing he wants. Then he becomes irresistible. Like the aristocrat, he does what pleases him and grabs what he covets: like the shopkeeper, he pursues his purpose with the industry and steadfastness that come from strong religious conviction and deep sense of moral responsibility. He is never at a loss for an effective moral attitude. As the great champion of freedom and national independence, he conquers and annexes half the world, and calls it Colonization. When he wants a new market for his adulterated Manchester goods, he sends a missionary to teach the natives the Gospel of Peace. The natives kill the missionary: he flies to arms in defence of Christianity; fights for it; conquers for it; and takes the market as a reward from heaven. In defence of his island shores, he puts a chaplain on board his ship; nails a flag with a cross on it to his topgallant mast; and sails to the end of the earth, sinking, burning, and destroying all who dispute the empire of the seas with him. He boasts that a slave is free the moment his foot touches British soil; and he sells the children of his poor at six years of age to work under the lash in his factories for sixteen hours a day. He makes two revolutions, and then declares war on our one in the name of law and order. There is nothing so bad or so good that you will not find Englishmen doing it; but you will never find an Englishman in the wrong. He does everything on principle. He fights you on patriotic principles; he robs you on business principles; he enslaves you on imperial principles; he bullies you on manly principles; he supports his king on loyal principles and cuts off his king's head on republican principles. His watchword is always

Duty; and he never forgets that the nation which lets its duty get on the opposite side to its interest is lost. He—

Lady. W-w-w-w-w-wh! Do stop a moment. I want to know how you make me out to be English at this rate.

Napoleon (dropping his rhetorical style). It's plain enough. You wanted some letters that belonged to me. You have spent the morning in stealing them: yes, stealing them, by highway robbery. And you have spent the afternoon in putting me in the wrong about them: in assuming that it was *I* who wanted to steal your letters: in explaining that it all came about through my meanness and selfishness, and your goodness, your devotion, your self-sacrifice. That's English.

Lady. Nonsense! I am sure I am not a bit English. The English are a very stupid people.

Napoleon. Yes, too stupid sometimes to know when they're beaten. But I grant that your brains are not English. You see, though your grandfather was an Englishman, your grandmother was—what? A Frenchwoman?

Lady. Oh no. An Irishwoman.

Napoleon (quickly). Irish! (*Thoughtfully*) Yes: I forgot the Irish. An English army led by an Irish general: that might be a match for a French army led by an Italian general. (*He pauses, and adds, half-jestingly, half moodily*) At all events, you have beaten me; and what beats a man first will beat him last. (*He goes meditatively into the moonlit vineyard and looks up.*)

She steals out after him. She ventures to rest her hand on his shoulder, overcome by the beauty of the night and emboldened by its obscurity.

Lady (softly). What are you looking at?

Napoleon (pointing up). My star.

Lady. You believe in that?

Napoleon. I do.

They look at it for a moment, she leaning a little on his shoulder.

Lady. Do you know that the English say that a man's star is not complete without a woman's garter?

Napoleon (scandalized: abruptly shaking her off and coming back into the room). Pah! The hypocrites! If the French said that, how they would hold up their hands in pious horror! (*He goes to the inner door and holds it open, shouting*) Hallo! Giuseppe! Where's that light, man? (*He comes between the table and the sideboard, and moves*

the second chair to the table, beside his own.) We have still to burn the letter. (He takes up the packet.)

GIUSEPPE *comes back, pale and still trembling, carrying in one hand a branched candlestick with a couple of candles alight, and a broad snuffers tray in the other.*

Giuseppe *(piteously, as he places the light on the table).* Excellency: what were you looking up at just now? Out there! *(He points across his shoulder to the vineyard, but is afraid to look round.)*

Napoleon *(unfolding the packet).* What is that to you?

Giuseppe. Because the witch is gone: vanished; and no one saw her go out.

Lady *(coming behind him from the vineyard).* We were watching her riding up to the moon on your broomstick, Giuseppe. You will never see her again.

Giuseppe. Gesu Maria! *(He crosses himself and hurries out.)*

Napoleon *(throwing down the letters in a heap on the table).* Now! *(He sits down at the table in the chair which he has just placed.)*

Lady. Yes; but you know you have THE letter in your pocket. *(He smiles; takes a letter from his pocket; and tosses it on top of the heap. She holds it up and looks at him, saying)* About Caesar's wife.

Napoleon. Caesar's wife is above suspicion. Burn it.

Lady *(taking up the snuffers and holding the letter to the candle flame with them).* I wonder would Caesar's wife be above suspicion if she saw us here together!

Napoleon *(echoing her, with his elbows on the table and his cheeks on his hands, looking at the letter).* I wonder!

The STRANGE LADY puts the letter down alight on the snuffers tray, and sits down beside NAPOLEON, in the same attitude, elbows on table, cheeks on hands, watching it burn. When it is burnt, they simultaneously turn their eyes and look at one another. The curtain steals down and hides them.

John M. Synge

1871–1909

John Millington Synge was born near Dublin, on April 16, 1871. He was educated at Trinity College, Dublin, and went to Germany, where he studied music. Later he settled in Paris with the young writers there and eked out a living writing literary criticism.

The turning point in Synge's life came when he met a fellow Irishman, William Butler Yeats, in Paris. Yeats took an interest in the young man, and became convinced that he would be a better writer if he gave up imitating the Paris literary fashions and became a truly Irish author. Yeats persuaded Synge, in 1893, to leave Paris and go to the Aran Islands to live the simple life of the Irish peasants there. This he did, soaking up the sound of the islanders' speech and the substance of their legends.

Yeats describes the young writer: "He was a solitary, undemonstrative man, never asking pity, nor complaining, nor seeking sympathy . . . all folded up in brooding intellect, knowing nothing of new books and newspapers, reading the great masters alone."

Synge's sketches about the islanders were collected in *The Aran Islands* (1907). He spent the rest of his short life writing the plays of Irish peasant life for which he has become famous. His first two, *The Shadow of the Glen* (1903) and *Riders to the Sea* (1904), were produced by the Irish National Theatre Society. This group organized the famous Abbey Theatre in 1904. Synge, Yeats, and Lady Gregory were the directors. When Synge's *The Playboy of the Western World* was presented there, the audience rioted in anger at what they understood to be Synge's criticism of Ireland. The play later helped make the Abbey Theatre world renowned.

Synge's poetry was collected in *Poems and Translations* (1909),

and he had nearly completed his last play, *Deirdre of the Sorrows*, when he died in Dublin on March 24, 1909.

Yeats wrote that Synge, like Shakespeare and other great playwrights, had a delight in language and a preoccupation with individual life. Another way of putting it is that Synge's plays are, at the same time, poetic and realistic. These traits were the ones most highly valued in the Irish dramatic renaissance that was inspired and promoted by Yeats and the Irish Literary Theatre. Other Irish writers, including Yeats himself, had one or the other characteristic to a high degree. Synge mastered and mingled the two.

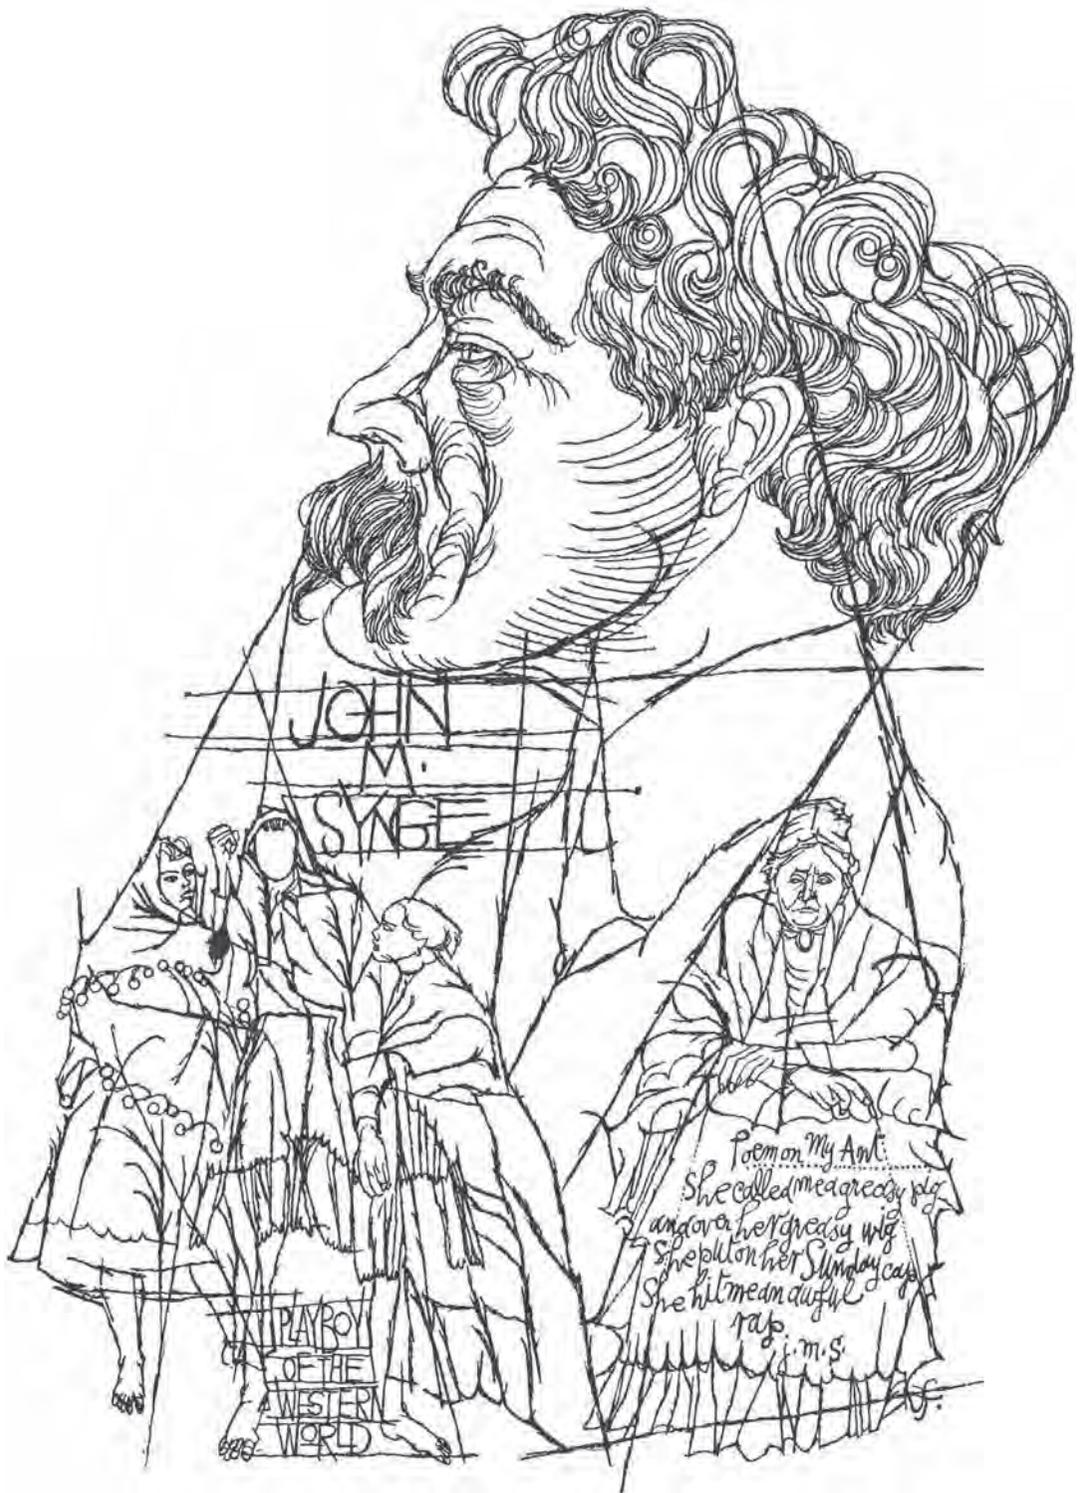

Synge was a painstaking observer and listener. Not an inflection of Irish peasant speech nor a habit of body or thought escaped his notice. He did not judge his people nor fight for their causes. Rather, he accepted and understood them with compassion and respect.

The Irish playwright was no mere reporter, however. He was a poet, with a poet's ear for the music of speech and a poet's grasp of symbolic meanings. He criticized Ibsen, whose realism he respected, for writing "in joyless and pallid words." The rhythm of Synge's beautiful Irish dialogue stays with us long after we have read his plays. Yeats said of Synge's language: "It makes the people of his imagination disembodied; it gives them a kind of innocence even in their anger and cursing."

Riders to the Sea shows Synge at his best. His perfect little oneact play is a moving tribute to the power of humanity to endure even the greatest hardships. When Maurya mourns for her six fine sons, the lament is also for all beauty and strength that must die.

After her last son has ridden away on the gray pony, death, to the sea's oblivion, after her "crying and keening" are done, the old woman speaks in her wisdom to the young people who cannot understand their misfortune: "What more can we want than that? No man at all can be living for ever, and we must be satisfied."

Notes from the artist: ". . . a scene from The Playboy of the Western World is shown at the left below the profile of Synge, while on the right is a facsimile of a poem written by Synge to his Aunt Jane when he was nine years old."

Riders to the Sea

CAST OF CHARACTERS

MAURYA, *an old woman*
BARTLEY, *her son*
CATHLEEN, *her daughter*
NORA, *a younger daughter*
MEN and WOMEN

SCENE. *An island of the west of Ireland.*

Cottage kitchen, with nets, oilskins, spinning-wheel, some new boards standing by the wall, etc. CATHLEEN, a girl of about twenty, finishes kneading cake, and puts it down in the pot-oven by the fire; then wipes her hands, and begins to spin at the wheel. NORA, a young girl, puts her head in at the door.

Nora (in a low voice). Where is she?

Cathleen. She's lying down, God help her, and may be sleeping, if she's able.

NORA comes in softly, and takes a bundle from under her shawl.

Cathleen (spinning the wheel rapidly). What is it you have?

Nora. The young priest is after bringing them. It's a shirt and a plain stocking were got off a drowned man in Donegal.

CATHLEEN stops her wheel with a sudden movement, and leans out to listen.

Nora. We're to find out if it's Michael's they are, some time herself will be down looking by the sea.

Cathleen. How would they be Michael's, Nora? How would he go the length of that way to the far north?

Nora. The young priest says he's known the like of it. "If it's Michael's they are," says he, "you can tell herself he's got a clean burial by the grace of God, and if they're not his, let no one say a word about them, for she'll be getting her death," says he, "with crying and lamenting."

The door which NORA half closed is blown open by a gust of wind.

Cathleen (looking out anxiously). Did you ask him would he stop Bartley going this day with the horses to the Galway fair?

Nora. "I won't stop him," says he, "but let you not be afraid. Herself does be saying prayers half through the night, and the Almighty God won't leave her destitute," says he, "with no son living."

Cathleen. Is the sea bad by the white rocks, Nora?

Nora. Middling bad, God help us. There's a great roaring in the west, and it's worse it'll be getting when the tide's turned to the wind.

She goes over to the table with the bundle.

Shall I open it now?

Cathleen. Maybe she'd wake up on us, and come in before we'd done. (*Coming to the table.*) It's a long time we'll be, and the two of us crying.

Nora (goes to the inner door and listens). She's moving about on the bed. She'll be coming in a minute.

Cathleen. Give me the ladder, and I'll put them up in the turf-loft, the way she won't know of them at all, and maybe when the tide turns she'll be going down to see would he be floating from the east.

They put the ladder against the gable of the chimney; CATHLEEN goes up a few steps and hides the bundle in the turf-loft. MAURYA comes from the inner room.

Maurya (looking up at CATHLEEN and speaking querulously). Isn't it turf enough you have for this day and evening?

Cathleen. There's a cake baking at the fire for a short space (*throwing down the turf*) and Bartley will want it when the tide turns if he goes to Connemara.

NORA picks up the turf and puts it round the pot-oven.

Maurya (sitting down on a stool at the fire). He won't go this day with the wind rising from the south and west. He won't go this day, for the young priest will stop him surely.

Nora. He'll not stop him, mother, and I heard Eamon Simon and Stephen Pheety and Colum Shawn saying he would go.

Maurya. Where is he itself?

Nora. He went down to see would there be another boat sailing in the week, and I'm thinking it won't be long till he's here now, for the tide's turning at the green head, and the hooker's tacking from the east.

Cathleen. I hear some one passing the big stones.

Nora (looking out). He's coming now, and he in a hurry.

Bartley (comes in and looks round the room. Speaking sadly and quietly). Where is the bit of new rope, Cathleen, was bought in Connemara?

Cathleen (coming down). Give it to him, Nora; it's on a nail by the white boards. I hung it up this morning, for the pig with the black feet was eating it.

Nora (giving him a rope). Is that it, Bartley?

Maurya. You'd do right to leave that rope, Bartley, hanging by the boards. (BARTLEY takes the rope.) It will be wanting in this place, I'm telling you, if Michael is washed up to-morrow morning, or the next morning, or any morning in the week, for it's a deep grave we'll make him by the grace of God.

Bartley (beginning to work with the rope). I've no halter the way I can ride down on the mare, and I must go now quickly. This is the one boat going for two weeks or beyond it, and the fair will be a good fair for horses I heard them saying below.

Maurya. It's a hard thing they'll be saying below if the body is washed up and there's no man in it to make the coffin, and I after giving a big price for the finest white boards you'd find in Connemara.

She looks round at the boards.

Bartley. How would it be washed up, and we after looking each day for nine days, and a strong wind blowing a while back from the west and south?

Maurya. If it wasn't found itself, that wind is raising the sea, and there was a star up against the moon, and it rising in the night. If it was a hundred horses, or a thousand horses you had itself, what is the price of a thousand horses against a son where there is one son only?

Bartley (working at the halter, to CATHLEEN). Let you go down each

day, and see the sheep aren't jumping in on the rye, and if the jobber comes you can sell the pig with the black feet if there is a good price going.

Maurya. How would the like of her get a good price for a pig?

Bartley (to CATHLEEN). If the west wind holds with the last bit of the moon let you and Nora get up weed enough for another cock for the kelp. It's hard set we'll be from this day with no one in it but one man to work.

Maurya. It's hard set we'll be surely the day you're drown'd with the rest. What way will I live and the girls with me, and I an old woman looking for the grave?

BARTLEY lays down the halter, takes off his old coat, and puts on a newer one of the same flannel.

Bartley (to NORA). Is she coming to the pier?

Nora (looking out). She's passing the green head and letting fall her sails.

Bartley (getting his purse and tobacco). I'll have half an hour to go down, and you'll see me coming again in two days, or in three days, or maybe in four days if the wind is bad.

Maurya (turning round to the fire, and putting her shawl over her head). Isn't it a hard and cruel man won't hear a word from an old woman, and she holding him from the sea?

Cathleen. It's the life of a young man to be going on the sea, and who would listen to an old woman with one thing and she saying it over?

Bartley (taking the halter). I must go now quickly. I'll ride down on the red mare, and the gray pony 'll run behind me. . . . The blessing of God on you.

He goes out.

Maurya (crying out as he is in the door). He's gone now, God spare us, and we'll not see him again. He's gone now, and when the black night is falling I'll have no son left me in the world.

Cathleen. Why wouldn't you give him your blessing and he looking round in the door? Isn't it sorrow enough is on every one in this house without your sending him out with an unlucky word behind him, and a hard word in his ear?

MAURYA takes up the tongs and begins raking the fire aimlessly without looking round.

Nora (turning towards her). You're taking away the turf from the cake.

Cathleen (crying out). The Son of God forgive us, Nora, we're after forgetting his bit of bread.

She comes over to the fire.

Nora. And it's destroyed he'll be going till dark night, and he after eating nothing since the sun went up.

Cathleen (turning the cake out of the oven). It's destroyed he'll be, surely. There's no sense left on any person in a house where an old woman will be talking for ever.

MAURYA sways herself on her stool.

Cathleen (cutting off some of the bread and rolling it in a cloth; to MAURYA). Let you go down now to the spring well and give him this and he passing. You'll see him then and the dark word will be broken, and you can say "God speed you," the way he'll be easy in his mind.

Maurya (taking the bread). Will I be in it as soon as himself?

Cathleen. If you go now quickly.

Maurya (standing up unsteadily). It's hard set I am to walk.

Cathleen (looking at her anxiously). Give her the stick, Nora, or maybe she'll slip on the big stones.

Nora. What stick?

Cathleen. The stick Michael brought from Connemara.

Maurya (taking a stick NORA gives her). In the big world the old people do be leaving things after them for their sons and children, but in this place it is the young men do be leaving things behind for them that do be old.

She goes out slowly. NORA goes over to the ladder.

Cathleen. Wait, Nora, maybe she'd turn back quickly. She's that sorry, God help her, you wouldn't know the thing she'd do.

Nora. Is she gone round by the bush?

Cathleen (looking out). She's gone now. Throw it down quickly, for the Lord knows when she'll be out of it again.

Nora (getting the bundle from the loft). The young priest said he'd be passing to-morrow, and we might go down and speak to him below if it's Michael's they are surely.

Cathleen (taking the bundle). Did he say what way they were found?

Nora (coming down). "There were two men," says he, "and they rowing round with poteen before the cocks crowed, and the oar of one of them caught the body, and they passing the black cliffs of the north."

Cathleen (trying to open the bundle). Give me a knife, Nora, the string's perished with the salt water, and there's a black knot on it you wouldn't loosen in a week.

Nora (giving her a knife). I've heard tell it was a long way to Donegal.

Cathleen (cutting the string). It is surely. There was a man in here a while ago—the man sold us that knife—and he said if you set off walking from the rocks beyond, it would be seven days you'd be in Donegal.

Nora. And what time would a man take, and he floating?

CATHLEEN opens the bundle and takes out a bit of a stocking. They look at them eagerly.

Cathleen (in a low voice). The Lord spare us, Nora! isn't it a queer hard thing to say if it's his they are surely?

Nora. I'll get his shirt off the hook the way we can put the one flannel on the other. *(She looks through some clothes hanging in the corner.)* It's not with them, Cathleen, and where will it be?

Cathleen. I'm thinking Bartley put it on him in the morning, for his own shirt was heavy with the salt in it *(pointing to the corner)*. There's a bit of a sleeve was of the same stuff. Give me that and it will do.

NORA brings it to her and they compare the flannel.

Cathleen. It's the same stuff, Nora; but if it is itself aren't there great rolls of it in the shops of Galway, and isn't it many another man may have a shirt of it as well as Michael himself?

Nora (who has taken up the stocking and counted the stitches, crying out). It's Michael, Cathleen, it's Michael; God spare his soul, and what will herself say when she hears this story, and Bartley on the sea?

Cathleen (taking the stocking). It's a plain stocking.

Nora. It's the second one of the third pair I knitted, and I put up three score stitches, and I dropped four of them.

Cathleen (counts the stitches). It's that number is in it *(crying out)*. Ah, Nora, isn't it a bitter thing to think of him floating that way to the far north, and no one to keen him but the black hags that do be flying on the sea?

Nora (swinging herself round, and throwing out her arms on the clothes). And isn't it a pitiful thing when there is nothing left of a man who was a great rower and fisher, but a bit of an old shirt and a plain stocking?

Cathleen (after an instant). Tell me is herself coming, Nora? I hear a little sound on the path.

Nora (looking out). She is, Cathleen. She's coming up to the door.

Cathleen. Put these things away before she'll come in. Maybe it's easier she'll be after giving her blessing to Hartley, and we won't let on we've heard anything the time he's on the sea.

Nora (helping CATHLEEN to close the bundle). We'll put them here in the corner.

They put them into a hole in the chimney corner. CATHLEEN goes back to the spinning-wheel.

Nora. Will she see it was crying I was?

Cathleen. Keep your back to the door the way the light'll not be on you.

NORA sits down at the chimney corner, with her back to the door. MAURYA comes in very slowly, without looking at the girls, and goes over to her stool at the other side of the fire. The cloth with the bread is still in her hand. The girls look at each other, and NORA points to the bundle of bread.

Cathleen (after spinning for a moment). You didn't give him his bit of bread?

MAURYA begins to keen softly, without turning round.

Cathleen. Did you see him riding down?

MAURYA goes on keening.

Cathleen (a little impatiently). God forgive you; isn't it a better thing to raise your voice and tell what you seen, than to be making lamentation for a thing that's done? Did you see Bartley, I'm saying to you.

Maurya (with a weak voice). My heart's broken from this day.

Cathleen (as before). Did you see Bartley?

Maurya. I seen the fearfulest thing.

Cathleen (leaves her wheel and looks out). God forgive you; he's riding the mare now over the green head, and the gray pony behind him.

Maurya (starts, so that her shawl falls back from her head and shows her white tossed hair. With a frightened voice). The gray pony behind him.

Cathleen (coming to the fire). What is it ails you, at all?

Maurya (speaking very slowly). I've seen the fearfulest thing any person

has seen, since the day Bride Dara seen the dead man with the child in his arms.

Cathleen and Nora. Uah.

They crouch down in front of the old woman at the fire.

Nora. Tell us what it is you seen.

Maurya. I went down to the spring well, and I stood there saying a prayer to myself. Then Bartley came along, and he riding on the red mare with the gray pony behind him. (*She puts up her hands, as if to hide something from her eyes.*) The Son of God spare us, Nora!

Cathleen. What is it you seen?

Maurya. I seen Michael himself.

Cathleen (speaking softly). You did not, mother; It wasn't Michael you seen, for his body is after being found in the far north, and he's got a clean burial by the grace of God.

Maurya (a little defiantly). I'm after seeing him this day, and he riding and galloping. Bartley came first on the red mare; and I tried to say "God speed you," but something choked the words in my throat. He went by quickly; and "the blessing of God on you," says he, and I could say nothing. I looked up then, and I crying, at the gray pony, and there was Michael upon it—with fine clothes on him, and new shoes on his feet.

Cathleen (begins to keen). It's destroyed we are from this day. It's destroyed, surely.

Nora. Didn't the young priest say the Almighty God wouldn't leave her destitute with no son living?

Maurya (in a low voice, but clearly). It's little the like of him knows of the sea. . . . Bartley will be lost now, and let you call in Eamon and make me a good coffin out of the white boards, for I won't live after them. I've had a husband, and a husband's father, and six sons in this house—six fine men, though it was a hard birth I had with every one of them and they coming to the world—and some of them were found and some of them were not found, but they're gone now the lot of them. . . . There were Stephen, and Shawn, were lost in the great wind, and found after in the Bay of Gregory of the Golden Mouth, and carried up the two of them on the one plank, and in by that door.

She pauses for a moment; the girls start as if they heard something through the door that is half open behind them.

Nora (in a whisper). Did you hear that, Cathleen? Did you hear a noise in the north-east?

Cathleen (in a whisper). There's some one after crying out by the seashore.

Maurya (continues without hearing anything). There was Sheamus and his father, and his own father again, were lost in a dark night, and not a stick or sign was seen of them when the sun went up. There was Patch after was drowned out of a curagh that turned over. I was sitting here with Bartley, and he a baby, lying on my two knees, and I seen two women, and three women, and four women coming in, and they crossing themselves, and not saying a word. I looked out then, and there were men coming after them, and they holding a thing in the half of a red sail, and water dripping out of it—it was a dry day, Nora—and leaving a track to the door.

She pauses again with her hand stretched out towards the door. It opens softly and old women begin to come in, crossing themselves on the threshold, and kneeling down in front of the stage with red petticoats over their heads.

Maurya (half in a dream, to CATHLEEN). Is it Patch, or Michael, or what is it at all?

Cathleen. Michael is after being found in the far north, and when he is found there how could he be here in this place?

Maurya. There does be a power of young men floating round in the sea, and what way would they know if it was Michael they had, or another man like him, for when a man is nine days in the sea, and the wind blowing, it's hard set his own mother would be to say what man was it.

Cathleen. It's Michael, God spare him, for they're after sending us a bit of his clothes from the far north.

She reaches out and hands MAURYA the clothes that belonged to MICHAEL. MAURYA stands up slowly and takes them in her hands. NORA looks out.

Nora. They're carrying a thing among them and there's water dripping out of it and leaving a track by the big stones.

Cathleen (in a whisper to the women who have come in). Is it Bartley it is?
One of the Women. It is surely, God rest his soul.

Two younger women come in and pull out the table. Then men carry in the body of BARTLEY, laid on a plank, with a bit of a sail over it, and lay it on the table.

Cathleen (to the women, as they are doing so). What way was he drowned?
One of the Women. The gray pony knocked him into the sea, and he was washed out where there is a great surf on the white rocks.

MAURYA has gone over and knelt down at the head of the table. The women are keening softly and swaying themselves with a slow movement. CATHLEEN and NORA kneel at the other end of the table. The men kneel near the door.

Maurya (raising her head and speaking as if she did not see the people around her). They're all gone now, and there isn't anything more the sea can do to me. . . . I'll have no call now to be up crying and praying when the wind breaks from the south, and you can hear the surf is in the east, and the surf is in the west, making a great stir with the two noises, and they hitting one on the other. I'll have no call now to be going down and getting Holy Water in the dark nights after Samhain, and I won't care what way the sea is when the other women will be keening. (*To NORA.*) Give me the Holy Water, Nora, there's a small sup still on the dresser.

NORA gives it to her.

Maurya (drops MICHAEL'S clothes across BARTLEY'S feet, and sprinkles the Holy Water over him). It isn't that I haven't prayed for you, Bartley, to the Almighty God. It isn't that I haven't said prayers in the dark night till you wouldn't know what I'd be saying; but it's a great rest I'll have now, and it's time surely. It's a great rest I'll have now, and great sleeping in the long nights after Samhain, if it's only a bit of wet flour we do have to eat, and maybe a fish that would be stinking.

She kneels down again, crossing herself, and saying prayers under her breath.

Cathleen (to an old man). Maybe yourself and Eamon would make a coffin when the sun rises. We have fine white boards herself bought, God help her, thinking Michael would be found, and I have a new cake you can eat while you'll be working.

The Old Man (looking at the boards). Are there nails with them?

Cathleen. There are not, Colum; we didn't think of the nails.

Another Man. It's a great wonder she wouldn't think of the nails, and all the coffins she's seen made already.

Cathleen. It's getting old she is, and broken.

MAURYA stands up again very slowly and spreads out the pieces of MICHAEL'S clothes beside the body, sprinkling them with the last of the Holy Water.

Nora (in a whisper to CATHLEEN). She's quiet now and easy; but the day Michael was drowned you could hear her crying out from this to the spring well. It's fonder she was of Michael, and would any one have thought that?

Cathleen (slowly and clearly). An old woman will be soon tired with anything she will do, and isn't it nine days herself is after crying and keening, and making great sorrow in the house?

Maurya (puts the empty cup mouth downwards on the table, and lays her hands together on BARTLEY'S jeet). They're all together this time, and the end is come. May the Almighty God have mercy on Bartley's soul, and on Michael's soul, and on the souls of Sheamus and Patch, and Stephen and Shawn (*bending her head*); and may He have mercy on my soul, Nora, and on the soul of every one is left living in the world.

She pauses, and the keening rises a little more loudly from the women, then sinks away.

Maurya (continuing). Michael has a clean burial in the far north, by the grace of the Almighty God. Bartley will have a fine coffin out of the white boards, and a deep grave surely. What more can we want than that? No man at all can be living for ever, and we must be satisfied.

She kneels down again and the curtain falls slowly.

Eugene O'Neill

1888–1953

Eugene Gladstone O'Neill was born on October 16, 1888, in a Broadway hotel in New York City. His father, James O'Neill, was a popular melodramatic actor who made a fortune by playing for almost twenty years in *The Count of Monte Cristo*. His mother, Ella Quinlan O'Neill, was addicted to drugs. His older brother was an alcoholic failure. The O'Neills, like characters in Eugene's plays, were sensitive people in torment.

As a boy, Eugene O'Neill was sometimes taken on road tours with his parents, sometimes put in Roman Catholic boarding schools. He enrolled in Princeton in 1906, but was expelled after one year and spent the next few years drifting from one job and one country to another. He shipped as a sailor to South America and Europe.

In 1912 came the turning point of his life. O'Neill entered a Connecticut sanatorium as a tuberculosis patient. There he had time both to consider his life and to read many books. From Strindberg he learned to appreciate dramatic realism. From Marx he gained a political philosophy. From Freud he learned of the dramas played out in the depths of each man's unconscious. O'Neill determined to become a playwright.

After he left the sanatorium he spent some months at Harvard as a student in Professor George Pierce Baker's famous 47 Workshop. In 1916 the newly organized Provincetown Players gave the first public performance of an O'Neill play, *Bound East for Cardiff*. The Players moved to a New York theater where they presented more of O'Neill's dramas. Then, in 1920, his success was secured when his first full-length play, *Beyond the Horizon*, won the Pulitzer Prize for Drama. Two other plays were later awarded Pulitzer Prizes—*Anna Christie* (1922) and *Strange Interlude* (1928). In 1936 O'Neill became the first American playwright to receive the Nobel Prize.

About 1947 O'Neill was stricken with Parkinson's disease, a palsy which made it impossible for him to write. He died on November 27, 1953, in Boston of pneumonia. He had been married three times and had three children.

A prolific writer, O'Neill turned out many plays, apparently on a great variety of subjects. With the exception of his one comedy, *Ah, Wilderness!*, however, his dramas all deal with the same general problem—the terrible predicament of man struggling against unseen forces for his place in a universe that is essentially alien to him. Although O'Neill was a talented innovator, bringing many new methods and effects to the stage, his importance as a dramatist rests mainly on the power with which he played variations on his huge theme.

Like the ancient writers of Greek tragedy, O'Neill saw man as the victim and plaything of forces which he could neither understand nor control. For the Greeks these influences were the gods. But for O'Neill they were the powerful forces of the unconscious. They were within man himself.

The Emperor Jones was produced in 1920. Its hero, Brutus Jones, an ex-Pullman porter, has fled to the West Indies to escape punishment for murder. At first he is very successful in the new life he makes for himself. In a mere two years he manages to have himself made Emperor. He rules his subjects with a ruthless and iron hand.

As the play begins, his reign is coming to an end. Jones tries to escape, but he finds himself trapped between civilization and the jungle—between his deepest desires and the guilt he feels. He is unable to throw off his superstition and primitive fear, yet he is equally unable to make a place for himself in modern society.

Tom-toms pound offstage throughout the last two-thirds of the play. This device, an example of O'Neill's theatrical imagination, is extremely powerful. The beat grows louder and faster as Jones races

Notes from the artist: ". . . O'Neill as a boy, suggesting some of the heroes of his plays, who have been described as wandering 'like eternally lost children through a haunted wood.' . . . The other figures are Death, with the ice tongs, from The Iceman Cometh, and a portrait of The Emperor Jones based on a primitive painting of King Christophe of Haiti."

EMPEROR
JONES

helplessly toward his doom. We have the impression that it is the drum that "cotches" Jones, not his rebellious subjects. The tom-toms symbolize his guilt and fear.

In his nightmare dash through the jungle, Jones fires his precious gunshots, one by one, at ghosts, wasting his strength in combating illusions. But the ghosts are in his own mind; he cannot escape them. As he stumbles through the wilderness he discards, piece by piece, the trappings of emperor, of civilization, that he had so proudly collected. He is left naked and alone with himself.

The Emperor Jones was the first modern drama to feature a Negro as a tragic hero. But the basic human situation that the play is about does not depend on its hero being a Negro. All men, O'Neill seems to be saying, are both emperors and fugitives. All men are trapped between civilization and the jungle. All men have guilts and fears, and cannot bear to be alone with their own "ghosts." When Jones is finally brought down by the enemy it is with a silver bullet—in the "eighth o' style," as Smithers, the cockney trader, says. The Emperor Jones has been defeated by forces stronger than he, but there is great dignity in the defeat.

The Emperor Jones

CAST OF CHARACTERS

BRUTUS JONES, *Emperor.*
HENRY SMITHERS, *a cockney trader.*
AN OLD NATIVE WOMAN.
LEM, *a native chief.*
SOLDIERS, *adherents of Lem.*
THE LITTLE FORMLESS FEARS; JEFF;
THE NEGRO CONVICTS; THE PRISON GUARD; THE PLANTERS;
THE AUCTIONEER; THE SLAVES;
THE CONGO WITCH DOCTOR; THE CROCODILE GOD.

The action of the play takes place on an island in the West Indies as yet not self-determined by white Marines. The form of native government is, for the time being, an empire.

SCENES

SCENE I: *In the palace of the Emperor Jones. Afternoon.*
SCENE II: *The edge of the Great Forest. Dusk.*
SCENE III: *In the Forest. Night.*
SCENE IV: *In the Forest. Night.*
SCENE V: *In the Forest. Night.*
SCENE VI: *In the Forest. Night.*
SCENE VII: *In the Forest. Night.*
SCENE VIII: *Same as Scene II—the edge of the Great Forest. Dawn.*

SCENE I

The audience chamber in the palace of the Emperor—a spacious, high-ceilinged room with bare, whitewashed walls. The floor is of white tiles. In the rear, to the left of center, a wide archway giving out on a portico with white pillars. The palace is evidently situated on high ground for beyond the portico nothing can be seen but a vista of distant hills, their summits crowned with thick groves of palm trees. In the right wall, center, a smaller arched doorway leading to the living quarters of the palace. The room is bare of furniture with the exception of one huge chair made of uncut wood which stands at center, its back to rear. This is very apparently the Emperor's throne. It is painted a dazzling, eye-smiting scarlet. There is a brilliant orange cushion on the seat and another smaller one is placed on the floor to serve as a footstool. Strips of matting, dyed scarlet, lead from the foot of the throne to the two entrances. It is late afternoon but the sunlight still blazes yellowly beyond the portico and there is an oppressive burden of exhausting heat in the air.

As the curtain rises, a native Negro WOMAN sneaks in cautiously from the entrance on the right. She is very old, dressed in cheap calico, barefooted, a red bandana handkerchief covering all but a few stray wisps of white hair. A bundle bound in colored cloth is carried over her shoulder on the end of a stick. She hesitates beside the doorway, peering back as if in extreme dread of being discovered. Then she begins to glide noiselessly, a step at a time, toward the doorway in the rear. At this moment, SMITHERS appears beneath the portico.

SMITHERS is a tall, stoop-shouldered man about forty. His bald head, perched on a long neck with an enormous Adam's apple, looks like an egg. The tropics have tanned his naturally pasty face with its small, sharp features to a sickly yellow, and native rum has painted his pointed nose to a startling red. His little, washy-blue eyes are red rimmed and dart about him like a ferret's. His expression is one of unscrupulous meanness, cowardly and dangerous. He is dressed in a worn riding suit of dirty white drill, puttees, spurs, and wears a white cork helmet. A cartridge belt with an automatic revolver is

around his waist. He carries a riding whip in his hand. He sees the WOMAN and stops to watch her suspiciously. Then, making up his mind, he steps quickly on tiptoe into the room. The WOMAN, looking back over her shoulder continually, does not see him until it is too late. When she does SMITHERS springs forward and grabs her firmly by the shoulder. She struggles to get away, fiercely but silently.

Smithers (tightening his grasp—roughly). Easy! None o' that, me birdie. You can't wiggle out, now I got me 'ooks on yer.

Woman (seeing the uselessness of struggling, gives way to frantic terror, and sinks to the ground, embracing his knees supplicatingly). No tell him! No tell him, Mister!

Smithers (with great curiosity). Tell 'im? (*Then scornfully*) Oh, you mean 'is bloomin' Majesty. What's the gaime, any'ow? What are you sneakin' away for? Been stealin' a bit, I s'pose. (*He taps her bundle with his riding whip significantly.*)

Woman (shaking her head vehemently). No, me no steal.

Smithers. Bloody liar! But tell me what's up. There's somethin' funny goin' on. I smelled it in the air first thing I got up this mornin'. You blacks are up to some devilment. This palace of 'is is like a bleedin' tomb. Where's all the 'ands? (*The WOMAN keeps sullenly silent. SMITHERS raises his whip threateningly*) Ow, yer won't, won't yer? I'll show yer what's what.

Woman (coweringly). I tell, Mister. You no hit. They go—all go. (*She makes a sweeping gesture toward the hills in the distance.*)

Smithers. Run away—to the 'ills?

Woman. Yes, Mister. Him Emperor—Great Father (*she touches her forehead to the floor with a quick mechanical jerk*) Him sleep after eat. Then they go—all go. Me old woman. Me left only. Now me go too.

Smithers (his astonishment giving way to an immense, mean satisfaction). Ow! So that's the ticket! Well, I know bloody well wot's in the air—when they runs orf to the 'ills. The tom-tom 'll be thumping out there bloomin' soon. (*With extreme vindictiveness*) And I'm bloody glad of it, for one! Serve 'im right! Puttin' on airs, the stinkin' nigger! 'Is Majesty! Gawd blimey! I only 'opes I'm there when they takes 'im out to shoot 'im. (*Suddenly*) 'E's still 'ere all right, ain't 'e?

Woman. Him sleep.

Smithers. 'E's bound to find out soon as 'e wakes up. 'E's cunnin' enough to know when 'is time's come. (*He goes to the doorway on right and whistles shrilly with his fingers in his mouth. The old WOMAN springs to her feet and runs out of the doorway, rear. SMITHERS goes after*

her, reaching for his revolver) Stop or I'll shoot! (Then stopping—indifferently) Pop orf then, if yer like, yer black cow. (He stands in the doorway, looking after her.)

JONES enters from the right. He is a tall, powerfully built, full-blooded Negro of middle age. His features are typically Negroid, yet there is something decidedly distinctive about his face—an underlying strength of will, a hardy, self-reliant confidence in himself that inspires respect. His eyes are alive with a keen, cunning intelligence. In manner he is shrewd, suspicious, evasive. He wears a light blue uniform coat, sprayed with brass buttons, heavy gold chevrons on his shoulders, gold braid on the collar, cuffs, etc. His pants are bright red with a light blue stripe down the side. Patent leather laced boots with brass spurs, and a belt with a long-barreled, pearl-handled revolver in a holster complete his make up. Yet there is something not altogether ridiculous about his grandeur. He has a way of carrying it off.

Jones (not seeing anyone—greatly irritated and blinking sleepily—shouts). Who dare whistle dat way in my palace? Who dare wake up de Emperor? I'll git de hide frayed off some o' you niggers sho'!

Smithers (showing himself—in a manner half-afraid and half-defiant). It was me whistled to yer. (As JONES frowns angrily) I got news for yer.

Jones (putting on his suavest manner, which fails to cover up his contempt for the white man). Oh, it's you, Mister Smithers. (He sits down on his throne with easy dignity) What news you got to tell me?

Smithers (coming close to enjoy his discomfiture). Don't yer notice nothin' funny today?

Jones (coldly). Funny? No. I ain't perceived nothin' of de kind!

Smithers. Then yer ain't so foxy as I thought yer was. Where's all your court? (Sarcastically) The Generals and the Cabinet Ministers and all?

Jones (imperturbably). Where dey mostly runs to minute I closes my eyes—drinkin' rum and talkin' big down in de town. (Sarcastically) How come you don't know dat? Ain't you sousin' with 'em most every day?

Smithers (stung but pretending indifference—with a wink). That's part of the day's work. I got ter—ain't I—in my business?

Jones (contemptuously). Yo' business!

Smithers (imprudently enraged). Gawd blimey, you was glad enough

for me ter take yer in on it when you landed here first. You didn' 'ave no 'igh and mighty airs in them days!

Jones (his hand going to his revolver like a flash—menacingly). Talk polite, white man! Talk polite, you heah me! I'm boss heah now, is you fergettin'? (*The COCKNEY seems about to challenge this last statement with the facts but something in the other's eyes holds and cows him.*)

Smithers (in a cowardly whine). No 'arm meant, old top.

Jones (condescendingly). I accepts yo' apology. (*Lets his hand fall from his revolver*) No use'n you rakin' up ole times. What I was den is one thing. What I is now 's another. You didn't let me in on yo' crooked work out o' no kind feelin's dat time. I done de dirty work fo' you—and most o' de brainwork, too, fo' dat matter—and I was wu'th money to you, dat's de reason.

Smithers. Well, blimey, I give yer a start, didn't I?—when no one else would. I wasn't afraid to 'ire you like the rest was—'count of the story about your breakin' jail back in the States.

Jones. No, you didn't have no s'cuse to look down on me fo' dat. You been in jail you'self more'n once.

Smithers (furiously). It's a lie! (*Then trying to pass it off by an attempt at scorn*) Garn! Who told yer that fairy tale?

Jones. Dey's some tings I ain't got to be tole. I kin see 'em in folk's eyes. (*Then after a pause—meditatively*) Yes, you sho' give me a start. And it didn't take long from dat time to git dese fool, woods' niggers right where I wanted dem. (*With pride*) From stowaway to Emperor in two years! Dat's goin' some!

Smithers (with curiosity). And I bet you got yer pile o' money 'id safe some place.

Jones (with satisfaction). I sho' has! And it's in a foreign bank where no pusson don't ever git it out but me no matter what come. You didn't s'pose I was holdin' down dis Emperor job for de glory in it, did you? Sho'! De fuss and glory part of it, dat's only to turn de heads o' de low-flung, bush niggers dat's here. Dey wants de big circus show for deir money. I gives it to 'em an' I gits de money. (*With a grin*) De long green, dat's me every time! (*Then rebukingly*) But you ain't got no kick agin me, Smithers. I'se paid you back all you done for me many times. Ain't I pertected you and winked at all de crooked tradin' you been doin' right out in de broad day? Sho' I has—and me makin' laws to stop it at de same time! (*He chuckles.*)

Smithers (grinning). But, meanin' no 'arm, you been grabbin' right and

left yourself, ain't yer? Look at the taxes you've put on 'em! Blimey! You've squeezed 'em dry!

Jones (chuckling). No, dey ain't all dry yet. I'se still heah, ain't I?

Smithers (smiling at his secret thought). They're dry right now, you'll find out. (*Changing the subject abruptly*) And as for me breakin' laws, you've broke 'em all yerself just as fast as yer made 'em.

Jones. Ain't I de Emperor? De laws don't go for him. (*Judicially*) You heah what I tells you, Smithers. Dere's little stealin' like you does, and dere's big stealin' like I does. For de little stealin' dey gits you in jail soon or late. For de big stealin' dey makes you Emperor and puts you in de Hall o' Fame when you croaks. (*Reminiscently*) If dey's one thing I learns in ten years on de Pullman ca's listenin' to de white quality talk, it's dat same fact. And when I gits a chance to use it I winds up Emperor in two years.

Smithers (unable to repress the genuine admiration of the small fry for the large). Yes, yer turned the bleedin' trick, all right. Blimey, I never seen a bloke 'as 'ad the bloomin' luck you 'as.

Jones (severely). Luck? What you mean—luck?

Smithers. I suppose you'll say as that swank about the silver bullet ain't luck—and that was what first got the fool blacks on yer side the time of the revolution, wasn't it?

Jones (with a laugh). Oh, dat silver bullet! Sho' was luck. But I makes dat luck, you heah? I loads de dice! Yessuh! When dat murderin' nigger ole Lem hired to kill me takes aim ten feet away and his gun misses fire and I shoots him dead, what you heah me say?

Smithers. You said yer'd got a charm so's no lead bullet'd kill yer. You was so strong only a silver bullet could kill yer, you told 'em. Blimey, wasn't that swank for yer—and plain, fat-eaded luck?

Jones (proudly). I got brains and I uses 'em quick. Dat ain't luck.

Smithers. Yer know they wasn't 'ardly liable to get no silver bullets. And it was luck 'e didn't 'it you that time.

Jones (laughing). And dere all dem fool bush niggers was kneelin' down and bumpin' deir heads on de ground like I was a miracle out o' de Bible. Oh, Lawd, from dat time on I has dem all eatin' out of my hand. I cracks de whip and dey jumps through.

Smithers (with a sniff) Yankee bluff done it.

Jones. Ain't a man's talkin' big what makes him big—long as he makes folks believe it? Sho', I talks large when I ain't got nothin' to back it up, but I ain't talkin' wild just de same. I knows I kin fool 'em—I

knows it—and dat's backin' enough fo' my game. And ain't I got to learn deir lingo and teach some of dem English befo' I kin talk to 'em? Ain't dat wuk? You ain't never learned ary word er it, Smithers, in de ten years you been heah, dough you knows it's money in yo' pocket tradin' wid 'em if you does. But you'se too shiftless to take de trouble.

Smithers (flushing). Never mind about me. What's this I've 'eard about yer really 'avin' a silver bullet moulded for yourself?

Jones. It's playin' out my bluff. I has de silver bullet moulded and I tells 'em when de time comes I kills myself wid it. I tells 'em dat's 'cause I'm de on'y man in de world big enuff to git me. No use'n deir tryin'. And dey falls down and bumps deir heads. (*He laughs*) I does dat so's I kin take a walk in peace widout no jealous nigger gunnin' at me from behind de trees.

Smithers (astonished). Then you 'ad it made—'onest?

Jones. Sho' did. Heah she be. (*He takes out his revolver, breaks it, and takes the silver bullet out of one chamber*) Five lead an' dis silver baby at de last. Don't she shine pretty? (*He holds it in his hand, looking at it admiringly, as if strangely fascinated.*)

Smithers. Let me see. (*Reaches out his hand for it.*)

Jones (harshly). Keep yo' hands whar dey b'long, white man. (*He replaces it in the chamber and puts the revolver back on his hip.*)

Smithers (snarling). Gawd blimey! Think I'm a bleedin' thief, you would.

Jones. No, 'tain't dat. I knows you'se scared to steal from me. On'y I ain't 'lowin' nary body to touch dis baby. She's my rabbit's foot.

Smithers (sneering). A bloomin' charm, wot? (*Venomously*) Well, you'll need all the bloody charms you 'as before long, s' 'elp me!

Jones (judicially). Oh, I'se good for six months yit 'fore dey gits sick o' my game. Den, when I sees trouble comin', I makes my getaway.

Smithers. Ho! You got it all planned, ain't yer?

Jones. I ain't no fool. I knows dis Emperor's time is sho't. Dat why I make hay when de sun shine. Was you thinkin' I'se aimin' to hold down dis job for life? No, suh! What good is gittin' money if you stays back in dis raggedy country? I wants action when I spends. And when I sees dese niggers gittin' up deir nerve to tu'n me out, and I'se got all de money in sight, I resigns on de spot and beats it quick.

Smithers. Where to?

Jones. None o' yo' business.

Smithers. Not back to the bloody States, I'll lay my oath.

Jones (suspiciously). Why don't I? (*Then with an easy laugh*) You mean 'count of dat story 'bout me breakin' from jail back dere? Dat's all talk.

Smithers (skeptically). Ho, yes!

Jones (sharply). You ain't 'sinuatin' I'se a liar, is you?

Smithers (hastily). No, Gawd strike me! I was only thinkin' o' the bloody lies you told the blacks 'ere about killin' white men in the States.

Jones (angered). How come dey're lies?

Smithers. You'd 'ave been in jail if you 'ad, wouldn't yer then? (*With venom*) And from what I've 'eard, it ain't 'ealthy for a black to kill a white man in the States. They burns 'em in oil, don't they?

Jones (with cool deadliness). You mean lynchin' 'd scare me? Well, I tells you, Smithers, maybe I does kill one white man back dere. Maybe I does. And maybe I kills another right heah 'fore long if he don't look out.

Smithers (trying to force a laugh). I was on'y spoofin' yer. Can't yer take a joke? And you was just sayin' you'd never been in jail.

Jones (in the same tone—slightly boastful). Maybe I goes to jail dere for gettin' in an argument wid razors ovah a crap game. Maybe I gits twenty years when dat colored man die. Maybe I gits in 'nother argument wid de prison guard was overseer ovah us when we're wukin' de road. Maybe he hits me wid a whip and I splits his head wid a shovel and runs away and files de chain off my leg and gits away safe. Maybe I does all dat an' maybe I don't. It's a story I tells you so's you knows I'se de kind of man dat if you evah repeats one word of it, I ends yo' stealin' on dis yearth mighty damn quick!

Smithers (terrified). Think I'd peach on yer? Not me! Ain't I always been yer friend?

Jones (suddenly relaxing). Sho' you has—and you better be.

Smithers (recovering his composure—and with it his malice). And just to show yer I'm yer friend, I'll tell yer that bit o' news I was goin' to.

Jones. Go ahead! Shoot de piece. Must be bad news from de happy way you look.

Smithers (warningly). Maybe it's gettin' time for you to resign—with that bloomin' silver bullet, wot? (*He finishes with a mocking grin.*)

Jones (puzzled). What's dat you say? Talk plain.

Smithers. Ain't noticed any of the guards or servants about the place today, I 'aven't.

Jones (carelessly). Dey're all out in de garden sleepin' under de trees.

When I sleeps, dey sneaks a sleep, too, and I pretends I never suspicions it. All I got to do is to ring de bell and dey come flyin', makin' a bluff dey was wukin' all de time.

Smithers (in the same mocking tone). Ring the bell now an' you'll bloody well see what I means.

Jones (startled to alertness, but preserving the same careless tone). Sho' I rings. *(He reaches below the throne and pulls out a big, common dinner bell which is painted the same vivid scarlet as the throne. He rings this vigorously—then stops to listen. Then he goes to both doors, rings again, and looks out.)*

Smithers (watching him with malicious satisfaction, after a pause—mockingly).

The bloody ship is sinkin' an' the bleedin' rats 'as slung their 'ooks.

Jones (in a sudden fit of anger flings the bell clattering into a corner). Low-flung, woods' niggers! *(Then catching SMITHERS' eye on him, he controls himself and suddenly bursts into a low chuckling laugh).* Reckon I overplays my hand dis once! A man can't take de pot on a bobtailed flush all de time. Was I sayin' I'd sit in six months mo'? Well, I'se changed my mind den. I cashes in and resigns de job of Emperor right dis minute.

Smithers (with real admiration). Blimey, but you're a cool bird, and no mistake.

Jones. No use'n fussin'. When I knows de game's up I kisses it good-by widout no long waits. Dey've all run off to de hills, ain't dey?

Smithers. Yes—every bleedin' man jack of 'em.

Jones. Den de revolution is at de post. And de Emperor better git his feet smokin' up de trail. *(He starts for the door in rear.)*

Smithers. Goin' out to look for your 'orse? Yer won't find any. They steals the 'orses first thing. Mine was gone when I went for 'im this mornin'. That's wot first give me a suspicion of wot was up.

Jones (alarmed for a second, scratches his head, then philosophically). Well, den I hoofs it. Feet, do yo' duty! *(He pulls out a gold watch and looks at it)* Three-thuty. Sundown's at six-thuty or dereabouts. *(Puts his watch back—with cool confidence)* I got plenty o' time to make it easy.

Smithers. Don't be so bloomin' sure of it. They'll be after you 'ot and 'eavy.

Ole Lem is at the bottom o' this business an' 'e 'ates you like 'ell. 'E'd rather do for you than eat 'is dinner, 'e would!

Jones (scornfully). Dat fool no-count nigger! Does you think I'se scared o'

him? I stands him on his thick head more'n once befo' dis, and I does it again if he comes in my way—(*Fiercely*) And dis time I leave him a dead nigger fo' sho'!

Smithers. You'll 'ave to cut through the big forest—an' these blacks 'ere can sniff and follow a trail in the dark like 'ounds. You'd 'ave to 'ustle to get through that forest in twelve hours even if you knew all the bloomin' trails like a native.

Jones (with indignant scorn). Look-a-heah, white man! Does you think I'se a natural bo'n fool? Give me credit fo' havin' some sense, fo' Lawd's sake! Don't you s'pose I'se looked ahead and made sho' of all de chances? I'se gone out in dat big forest, pretendin' to hunt, so many times dat I knows it high an' low like a book. I could go through on dem trails wid my eyes shut. (*With great contempt*) Think dese ign'rent bush niggers dat ain't got brains enuff to know deir own names even can catch Brutus Jones? Huh, I s'pects not! Not on yo' life! Why, man, de white men went after me wid blood-hounds where I come from an' I jes' laughs at 'em. It's a shame to fool dese black trash around heah, dey're so easy. You watch me, man. I'll make dem look sick, I will. I'll be 'cross de plain to de edge of de forest by time dark comes. Once in de woods in de night dey got a swell chance o' findin' dis baby! Dawn tomorrow I'll be out at de oder side and on de coast whar dat French gunboat is stayin'. She picks me up, takes me to Martinique when she go dar, and dere I is safe wid a mighty big bank roll in my jeans. It's easy as rollin' off a log.

Smithers (maliciously). But s'posin' somethin' 'appens wrong an' they do nab yer?

Jones (decisively). Dey don't—dat's de answer.

Smithers. But, just for argyment's sake—what'd you do?

Jones (frowning). I'se got five lead bullets in dis gun good enuff fo' common bush niggers—and after dat I got de silver bullet left to cheat 'em out o' gittin' me.

Smithers (feelingly). Ho, I was fergettin' that silver bullet. You'll bump yourself orf in style, won't yer? Blimey!

Jones (gloomily). You kin bet yo' whole roll on one thing, white man. Dis baby plays out his string to de end and when he quits, he quits wid a bang de way he ought. Silver bullet ain't none too good for him when he go, dat's a fac'! (*Then shaking off his nervousness—with a confident laugh*) Sho'! What is I talkin' about? Ain't come to dat yit and I never will—not wid trash niggers like

dese yere. (*Boastfully*) Silver bullet bring me luck anyway. I kin outguess, outrun, outfight, an' outplay de whole lot o' dem all ovah de board any time o' de day er night! You watch me! (*From the distant hills comes the faint, steady thump of a tom-tom, low and vibrating. It starts at a rate exactly corresponding to normal pulse beat—72 to the minute—and continues at a gradually accelerating rate from this point uninterruptedly to the very end of the play*).

JONES (*starts at the sound. A strange look of apprehension creeps into his face for a moment as he listens. Then he asks, with an attempt to regain his most casual manner*). What's dat drum beatin' fo'?

Smithers (*with a mean grin*). For you. That means the bleedin' ceremony 'as started. I've 'eard it before and I knows.

Jones. Cer'mony? What cer'mony?

Smithers. The blacks is 'oldin' a bloody meetin', 'avin' a war dance, gettin' their courage worked up b'fore they starts after you.

Jones. Let dem! Dey'll sho' need it!

Smithers. And they're there 'oldin' their 'eathen religious service—makin' no end of devil spells and charms to 'elp 'em against yer silver bullet. (*He guffaws loudly*) Blimey, but they're balmy as 'ell!

Jones (*a tiny bit awed and shaken in spite of himself*). Huh! Takes more'n dat to scare dis chicken!

Smithers (*scenting the other's feeling—maliciously*). Ternight when it's pitch black in the forest, they'll 'ave their pet devils and ghosts 'oundin' after you. You'll find yer bloody 'air 'll be standin' on end before termorrow mornin'. (*Seriously*) It's a bleedin' queer place, that stinkin' forest, even in daylight. Yer don't know what might 'appen in there, it's that rotten still. Always sends the cold shivers down my back minute I gets in it.

Jones (*with a contemptuous sniff*). I ain't no chicken liver like you is. Trees an' me, we'se friends, and dar's a full moon comin' bring me light. And let dem po' niggers make all de fool spells dey'se a min' to. Does yo' s'pect I'se silly enuff to b'lieve in ghosts an' ha'nts an' all dat ole woman's talk? G'long, white man! You ain't talkin' to me. (*With a chuckle*) Doesn't you know dey's got to do wid a man was member in good standin' o' de Baptist Church? Sho' I was dat when I was porter on de Pullmans, befo' I gits into my little trouble. Let dem try deir heathen tricks. De Baptist Church done pectect me and land dem all in hell. (*Then with more confident satisfaction*) And I'se got little silver bullet o' my own, don't forgit!

Smithers. Ho! You 'aven't give much 'eed to your Baptist Church since

you been down 'ere. I've 'eard myself you 'ad turned yer coat an' was takin' up with their blarsted witch doctors, or whatever the 'ell yer calls the swine.

Jones (vehemently). I pretends to! Sho' I pretends! Dat's part o' my game from de fust. If I finds out dem niggers believes dat black is white, den I yells it out louder 'n deir loudest. It don't git me nothin' to do missionary work for de Baptist Church. I'se after de coin, an' I lays my Jesus on de shelf for de time bein'. (*Stops abruptly to look at his watch—alertly*) But I ain't got de time to waste on no more fool talk wid you. I'se gwine away from heah dis secon'. (*He reaches in under the throne and pulls out an expensive Panama hat with a bright multicolored band and sets it jauntily on his head*) So long, white man! (*With a grin*) See you in jail sometime, maybe!

Smithers. Not me, you won't. Well, I wouldn't be in yer bloody boots for no bloomin' money, but 'ere's wishin' yer luck just the same.

Jones (contemptuously). You're de frightenedest man evah I see! I tells you I'se safe's 'f I was in New York City. It takes dem niggers from now to dark to git up de nerve to start somethin'. By dat time, I'se got a head start dey never kotch up wid.

Smithers (maliciously). Give my regards to any ghosts yer meets up with.

Jones (grinning). If dat ghost got money, I'll tell him never ha'nt you less'n he wants to lose it.

Smithers (flattered). Garn! (*Then curiously*) Ain't yer takin' no luggage with yer?

Jones. I travels light when I wants to move fast. And I got tinned grub buried on de edge o' de forest. (*Boastfully*) Now say dat I don't look ahead an' use my brains! (*With a wide, liberal gesture*) I will all dat's left in de palace to you—and you better grab all you kin sneak away wid befo' dey gits here.

Smithers (gratefully). Righto—and thanks ter yer. (*As JONES walks toward the door in rear—cautioningly*) Say! Look 'ere, you ain't goin' out that way, are yer?

Jones. Does you think I'd slink out de back door like a common nigger? I'se Emperor yit, ain't I? And de Emperor Jones leaves de way he comes, and dat black trash don't dare stop him—not yit, leastways. (*He stops for a moment in the doorway, listening to the far-off but insistent beat of the tom-tom*) Listen to dat roll call, will you? Must be mighty big drum carry dat far. (*Then with a laugh*) Well, if dey ain't no whole brass band to see me off, I sho' got de drum part of it. So long, white man. (*He puts his hands in his pockets and with*

studied carelessness, whistling a tune, he saunters out of the doorway and off to the left.)

Smithers (*looks after him with a puzzled admiration*). 'E's got 'is bloomin' nerve with 'im, s'elp me! (*Then angrily*) Ho—the bleedin' nigger—puttin' on 'is bloody airs! I 'opes they nabs 'im an' gives 'im what's what!

SCENE II

The end of the plain where the Great Forest begins. The foreground is sandy, level ground dotted by a few stones and clumps of stunted bushes cowering close against the earth to escape the buffeting of the trade wind. In the rear the forest is a wall of darkness dividing the world. Only when the eye becomes accustomed to the gloom can the outlines of separate trunks of the nearest trees be made out, enormous pillars of deeper blackness. A somber monotone of wind lost in the leaves moans in the air. Yet this sound serves but to intensify the impression of the forest's relentless immobility, to form a background throwing into relief its brooding, implacable silence.

JONES *enters from the left, walking rapidly. He stops as he nears the edge of the forest, looks around him quickly, peering into the dark as if searching for some familiar landmark. Then, apparently satisfied that he is where he ought to be, he throws himself on the ground, dog-tired.*

Well, heah I is. In de nick o' time, too! Little mo' an' it'd be blacker'n de ace of spades heahabouts. (*He pulls a bandana handkerchief from his hip pocket and mops off his perspiring face*) Sho'! Gimme air! I'se tuckered out sho' 'nuff. Dat soft Emperor job ain't no trainin' fo' a long hike ovah dat plain in de brilin' sun. (*Then with a chuckle*) Cheer up, nigger, de worst is yet to come. (*He lifts his head and stares at the forest. His chuckle peters out abruptly. In a tone of awe*) My goodness, look at dem woods, will you? Dat no-count Smithers said dey'd be black an' he sho' called de turn. (*Turning away from them quickly and looking down at his feet, he snatches at a chance to change the subject—solicitously*) Feet, you is holdin' up yo' end fine an' I sutinly hopes you ain't blisterin' none. It's time you git a rest. (*He takes off his shoes, his eyes studiously avoiding the forest. He feels of the soles of his feet gingerly*) You is still in de pink—on'y a little mite feverish. Cool yo'selfs. Remember you done got a long journey yit befo' you. (*He sits in a weary attitude, listening to the*

rhythmic beating of the tom-tom. He grumbles in a loud tone to cover up a growing uneasiness) Bush niggers! Wonder dey wouldn't git sick o' beatin' dat drum. Sound louder, seem like. I wonder if dey's startin' after me? (*He scrambles to his feet, looking back across the plain*) Couldn't see dem now, nohow, if dey was hundred feet away. (*Then shaking himself like a wet dog to get rid of these depressing thoughts*) Sho', dey's miles an' miles behind. What you gittin' fidgety about? (*But he sits down and begins to lace up his shoes in great haste, all the time muttering reassuringly*) You know what? Yo' belly is empty, dat's what's de matter wid you. Come time to eat! Wid nothin' but wind on yo' stumach, o' course you feels jiggedy. Well, we eats right heah an' now soon's I gits dese pesky shoes laced up. (*He finishes lacing up his shoes*) Dere! Now le's see! (*Gets on his hands and knees and searches the ground around him with his eyes*) White stone, white stone, where is you? (*He sees the first white stone and crawls to it—with satisfaction*) Heah you is! I knowed dis was de right place. Box of grub, come to me. (*He turns over the stone and feels in under it—in a tone of dismay*) Ain't heah! Gorry, is I in de right place or isn't I? Dere's 'nother stone. Guess dat's it. (*He scrambles to the next stone and turns it over*) Ain't heah, neither! Grub, whar is you? Ain't heah. Gorry, has I got to go hungry into dem woods—all de night? (*While he is talking he scrambles from one stone to another, turning them over in frantic haste. Finally, he jumps to his feet excitedly*) Is I lost de place? Must have! But how dat happen when I was followin' de trail across de plain in broad daylight? (*Almost plaintively*) I'se hungry, I is! I gotta git my feed. Whar's my strength gonna come from if I doesn't? Gorry, I gotta find dat grub high an' low somehow! Why it come dark so quick like dat? Can't see nothin'. (*He scratches a match on his trousers and peers about him. The rate of the beat of the far-off tom-tom increases perceptibly as he does so. He mutters in a bewildered voice*) How come all dese white stones come heah when I only remembers one? (*Suddenly, with a frightened gasp, he flings the match on the ground and stamps on it*) Nigger, is you gone crazy mad? Is you lightin' matches to show dem whar you is? Fo' Lawd's sake, use yo' haid. Gorry, I'se got to be careful! (*He stares at the plain behind him apprehensively, his hand on his revolver*) But how come all dese white stones? And whar's dat tin box o' grub I hid all wrapped up in oilcloth?

While his back is turned, the LITTLE FORMLESS FEARS creep out from the deeper blackness of the forest. They are black, shapeless, only

their glittering little eyes can be seen. If they have any describable form at all it is that of a grubworm about the size of a creeping child. They move noiselessly, but with deliberate, painful effort, striving to raise themselves on end, failing and sinking prone again. JONES turns about to face the forest. He stares up at the tops of the trees, seeking vainly to discover his whereabouts by their conformation.

Can't tell nothin' from dem trees! Gorry, no thin' 'round heah looks like I evah seed it befo'. I'se done lost de place sho' 'nuff! (*With mournful foreboding*) It's mighty queer! It's mighty queer! (*With sudden forced defiance—in an angry tone*) Woods, is you tryin' to put somethin' ovah on me? (*From the formless creatures on the ground in front of him comes a tiny gale of low mocking laughter like a rustling of leaves. They squirm upward toward him in twisted attitudes. JONES looks down, leaps backward with a yell of terror, yanking out his revolver as he does so—in a quavering voice*) What's dat? Who's dar? What is you? Git away from me befo' I shoots you up! You don't!—

He fires. There is a flash, a loud report, then silence broken only by the far-off, quickened throb of the tom-tom. The formless creatures have scurried back into the forest. JONES remains fixed in his position, listening intently. The sound of the shot, the reassuring feel of the revolver in his hand, have somewhat restored his shaken nerve. He addresses himself with renewed confidence.

Dey're gone. Dat shot fix 'em. Dey was only little animals—little wild pigs, I reckon. Dey've maybe rooted out yo' grub an' eat it. Sho', you fool nigger, what you think dey is—ha'nts? (*Excitedly*) Gorry, you give de game away when you fire dat shot. Dem niggers heah dat fo' su'tin! Time you beat it in de woods widout no long waits. (*He starts for the forest—hesitates before the plunge—then urging himself in with manful resolution*) Git in, nigger! What you skeered at? Ain't nothin' dere but de trees! Git in! (*He plunges boldly into the forest.*)

SCENE III

In the forest. The moon has just risen. Its beams, drifting through the canopy of leaves, make a barely perceptible, suffused, eerie glow. A dense low wall of underbrush and creepers is in the nearer foreground, fencing in a small triangular clearing. Beyond this is the massed blackness of the forest like an encompassing barrier. A path

is dimly discerned leading down to the clearing from left, rear, and winding away from it again toward the right. As the scene opens nothing can be distinctly made out. Except for the beating of the tom-tom, which is a trifle louder and quicker than at the close of the previous scene, there is silence, broken every few seconds by a queer, clicking sound. Then gradually the figure of the Negro JEFF can be discerned crouching on his haunches at the rear of the triangle. He is middle aged, thin, brown in color, is dressed in a Pullman porter's uniform and cap. He is throwing a pair of dice on the ground before him, picking them up, shaking them, casting them out with the regular, rigid, mechanical movements of an automaton. The heavy, plodding footsteps of someone approaching along the trail from the left are heard and JONES' voice, pitched on a slightly higher key and strained in a cheery effort to overcome its own tremors.

De moon's rizen. Does you heah dat, nigger? You gits more light from dis out. No mo' buttin' yo' fool head agin' de trunks an' scratchin' de hide off yo' legs in de bushes. Now you sees whar yo'se gwine. So cheer up! From now on you has a snap. *(He steps just to the rear of the triangular clearing and mops of his face on his sleeve. He has lost his Panama hat. His face is scratched, his brilliant uniform shows several large rents)* What time's it gittin' to be, I wonder? I dassent light no match to find out. Phoo'. It's wa'm an' dat's a fac'! *(Wearily)* How long I been makin' tracks in dese woods? Must be hours an' hours. Seems like fo'evah! Yit can't be, when de moon's jes' riz. Dis am a long night fo' yo', yo' Majesty! *(With a mournful chuckle)* Majesty! Der ain't much majesty 'bout dis baby now. *(With attempted cheerfulness)* Never min'. It's all part o' de game. Dis night come to an end like everything else. And when you gits dar safe and has dat bank roll in yo' hands you laughs at all dis. *(He starts to whistle but checks himself abruptly)* What yo' whistlin' for, you po'dope! Want all de worl' to heah you? *(He stops talking to listen)* Heah dat ole drum! Sho' gits nearer from de sound. Dey's packin' it along wid 'em. Time fo' me to move. *(He takes a step forward, then stops—worriedly)* What's dat odder queer clickety sound I heah? Dere it is! Sound close! Sound like—sound like— Fo' God sake, sound like some nigger was shootin' crap! *(Frightenedly)* I better beat it quick when I gits dem notions. *(He walks quickly into the clear space—then stands transfixed as he sees JEFF—in a terrified gasp)* Who dar? Who dat? Is dat you, Jeff? *(Starting toward the other, forgetful for a moment of his*

surroundings and really believing it is a living man that he sees—in a tone of happy relief) Jeff! I'se sho' mighty glad to see you! Dey tol' me you done died from dat razor cut I gives you. (*Stopping suddenly, bewilderedly*) But how you come to be heah, nigger? (*He stares fascinatedly at the other who continues his mechanical play with the dice. JONES' eyes begin to roll wildly. He stutters*) Ain't you gwine—look up—can't you speak to me? Is you—is you—a ha'nt? (*He jerks out his revolver in a frenzy of terrified rage*) Nigger, I kills you dead once. Has I got to kill you ag'in? You take it den. (*He fires. When the smoke clears away JEFF has disappeared. JONES stands trembling—then with a certain reassurance*) He's gone, anyway. Ha'nt or not ha'nt, dat shot fix him. (*The beat of the far-off tom-tom is perceptibly louder and more rapid. JONES becomes conscious of it—with a start, looking back over his shoulder*) Dey's gittin' near! Dey's comin' fast! And heah I is shootin' shots to let 'em know jes' whar I is! Oh, Gorry, I'se got to run. (*Forgetting the path he plunges wildly into the underbrush in the rear and disappears in the shadow.*)

SCENE IV

In the forest. A wide dirt road runs diagonally from right, front, to left, rear. Rising sheer on both sides the forest walls it in. The moon is now up. Under its light the road glimmers ghastly and unreal. It is as if the forest had stood aside momentarily to let the road pass through and accomplish its veiled purpose. This done, the forest will fold in upon itself again and the road will be no more. JONES stumbles in from the forest on the right. His uniform is ragged and torn. He looks about him with numbed surprise when he sees the road, his eyes blinking in the bright moonlight. He flops down exhaustedly and pants heavily for a while. Then with sudden anger.

I'm meltin' wid heat! Runnin' an' runnin' an' runnin'! Damn dis heah coat! Like a strait jacket! (*He tears off his coat and flings it away from him, revealing himself stripped to the waist*) Dere! Dat's better! Now I kin breathe! (*Looking down at his feet, the spurs catch his eye*) And to hell wid dese high-fangled spurs. Dey're what's been a-trippin' me up an' breakin' my neck. (*He unstraps them and flings them away disgustedly*) Dere! I gits rid o' dem frippety Emperor trappin's an' I travels lighter. Lawd! I'se tired! (*After a pause, listening to the insistent beat of the tom-tom in the distance*) I must 'a' put some distance between my-

self an' dem—runnin' like dat—and yit—dat damn drum sounds jes' de same—nearer, even. Well, I guess I a'most holds my lead anyhow. Dey won't never catch up. (*With a sigh*) If on'y my fool legs stands up. Oh, I'se sorry I evah went in for dis. Dat Emperor job is sho' hard to shake. (*He looks around him suspiciously*) How'd dis road evah git heah? Good level road, too. I never remembers seein' it befo'. (*Shaking his head apprehensively*) Dese woods is sho' full o' de queerest things at night. (*With a sudden terror*) Lawd God, don't let me see no more o' dem ha'n'ts! Dey gits my goat! (*Then trying to talk himself into confidence*) Ha'n'ts! You fool nigger, dey ain't no such things! Don't de Baptist parson tell you dat many time? Is you civilized, or is you like dese ign'rent black niggers heah? Sho'! Dat was all in yo' own head. Wasn't nothin' dere. Wasn't no Jeff! Know what? You jus' get seein' dem things 'cause yo' belly's empty and you's sick wid hunger inside. Hunger 'fects yo' head and yo' eyes. Any fool know dat. (*Then pleading fervently*) But bless God, I don't come across no more o' dem, whatever dey is! (*Then cautiously*) Rest! Don't talk! Rest! You needs it. Den you gits on yo' way again. (*Looking at the moon*) Night's half gone a'most. You hits de coast in de mawning! Den you's all safe.

From the right forward a small gang of Negroes enter. They are dressed in striped convict suits, their heads are shaven, one leg drags limpingly, shackled to a heavy ball and chain. Some carry picks, the others shovels. They are followed by a white man dressed in the uniform of a prison guard. A Winchester rifle is slung across his shoulders and he carries a heavy whip. At a signal from the GUARD they stop on the road opposite where JONES is sitting. JONES, who has been staring up at the sky, unmindful of their noiseless approach, suddenly looks down and sees them. His eyes pop out, he tries to get to his feet and fly, but sinks back, too numbed by fright to move. His voice catches in a choking prayer.

Lawd Jesus!

The PRISON GUARD cracks his whip—noiselessly—and at that signal all the convicts start to work on the road. They swing their picks, they shovel, but not a sound comes from their labor. Their movements, like those of JEFF in the preceding scene, are those of automatons—rigid, slow, and mechanical. The PRISON GUARD points sternly at JONES with his whip, motions him to take his place among the other shovelers. JONES gets to his feet in a hypnotized stupor. He mumbles subserviently.

Yes, suh! Yes, suh! I'se comin'.

As he shuffles, dragging one foot, over to his place, he curses under his breath with rage and hatred.

God damn yo' soul, I gits even wid you yit, sometime.

As if there were a shovel in his hands he goes through weary, mechanical gestures of digging up dirt, and throwing it to the roadside. Suddenly the GUARD approaches him angrily, threateningly. He raises his whip and lashes JONES viciously across the shoulders with it. JONES winces with pain and cowers abjectly. The GUARD turns his back on him and walks away contemptuously. Instantly JONES straightens up. With arms upraised as if his shovel were a club in his hands he springs murderously at the unsuspecting GUARD. In the act of crashing down his shovel on the white man's skull, JONES suddenly becomes aware that his hands are empty. He cries despairingly.

Whar's my shovel? Gimme my shovel 'til I splits his damn head!
(Appealing to his fellow convicts) Gimme a shovel, one o' you, fo' God's sake!

They stand fixed in motionless attitudes, their eyes on the ground. The GUARD seems to wait expectantly, his back turned to the attacker. JONES bellows with baffled, terrified rage, tugging frantically at his revolver.

I kills you, you white debil, if it's de last thing I evah does! Ghost or debil, I kill you agin!

He frees the revolver and fires point blank at the GUARD'S back. Instantly the walls of the forest close in from both sides, the road and the figures of the convict gang are blotted out in an enshrouding darkness. The only sounds are a crashing in the underbrush as JONES leaps away in mad flight and the throbbing of the tom-tom still far distant, but increased in volume of sound and rapidity of beat.

SCENE V

A large circular clearing, enclosed by the serried ranks of gigantic trunks of tall trees whose tops are lost to view. In the center is a big dead stump worn by time into a curious resemblance to an auction block. The moon floods the clearing with a clear light. JONES forces his way in through the forest on the left. He looks wildly about the

clearing with hunted, fearful glances. His pants are in tatters, his shoes cut and misshapen, flapping about his feet. He slinks cautiously to the stump in the center and sits down in a tense position, ready for instant flight. Then he holds his head in his hands and rocks back and forth, moaning to himself miserably.

Oh, Lawd, Lawd! Oh, Lawd, Lawd! (*Suddenly he throws himself on his knees and raises his clasped hands to the sky—in a voice of agonized pleading*) Lawd Jesus, heah my prayer! I'se a po' sinner, a po' sinner! I knows I done wrong, I knows it! When I cotches Jeff cheatin' wid loaded dice my anger overcomes me and I kills him dead! Lawd, I done wrong! When dat guard hits me wid de whip, my anger overcomes me, and I kills him dead. Lawd, I done wrong! And down heah whar dese fool bush niggers raises me up to the seat o' de mighty, I steals all I could grab. Lawd, I done wrong! I knows it! I'se sorry! Forgive me, Lawd! Forgive dis po' sinner! (*Then beseeching terrifiedly*) And keep dem away, Lawd! Keep dem away from me! And stop dat drum soundin' in my ears! Dat begin to sound ha'nted, too. (*He gets to his feet, evidently slightly reassured by his prayer—with attempted confidence*) De Lawd'll preserve me from dem ha'nts after dis. (*Sits down on the stump again*) I ain't skeered o' real men. Let dem come. But dem odders— (*He shudders—then looks down at his feet, working his toes inside the shoes—with a groan*) Oh, my po' feet! Dem shoes ain't no use no more 'ceptin' to hurt. I'se better off widout dem. (*He unlaces them and pulls them off—holds the wrecks of the shoes in his hands and regards them mournfully*) You was real, A-one patin' leather, too. Look at you now. Emperor, you'se gittin' mighty low!

He sighs dejectedly and remains with bowed shoulders, staring down at the shoes in his hands as if reluctant to throw them away. While his attention is thus occupied, a crowd of figures silently enter the clearing from all sides. All are dressed in Southern costumes of the period of the fifties of the last century. There are middle-aged men who are evidently well-to-do planters. There is one spruce, authoritative individual—the AUCTIONEER. There is a crowd of curious spectators, chiefly young belles and dandies who have come to the slave market for diversion. All exchange courtly greetings in dumb show and chat silently together. There is something stiff, rigid, unreal, marionettish about their movements. They group themselves about the stump. Finally a batch of slaves is led in from the left by an at-

tendant—three men of different ages, two women, one with a baby in her arms, nursing. They are placed to the left of the stump, beside JONES.

The white planters look them over appraisingly as if they were cattle, and exchange judgments on each. The dandies point with their fingers and make witty remarks. The belles titter bewitchingly. All this in silence save for the ominous throb of the tom-tom. The AUCTIONEER holds up his hand, taking his place at the stump. The groups strain forward attentively. He touches JONES on the shoulder peremptorily, motioning for him to stand on the stump—the auction block.

JONES looks up, sees the figures on all sides, looks wildly for some opening to escape, sees none, screams and leaps madly to the top of the stump to get as far away from them as possible. He stands there, cowering, paralyzed with horror. The AUCTIONEER begins his silent spiel. He points to JONES, appeals to the planters to see for themselves. Here is a good field hand, sound in wind and limb as they can see. Very strong still in spite of his being middle aged. Look at that back. Look at those shoulders. Look at the muscles in his arms and his sturdy legs. Capable of any amount of hard labor. Moreover, of a good disposition, intelligent and tractable. Will any gentleman start the bidding? The PLANTERS raise their fingers, make their bids. They are apparently all eager to possess JONES. The bidding is lively, the crowd interested. While this has been going on, JONES has been seized by the courage of desperation. He dares to look down and around him. Over his face abject terror gives way to mystification, to gradual realization—stutteringly.

What you all doin', white folks? What's all dis? What you all lookin' at me fo'? What you doin' wid me, anyhow? (*Suddenly convulsed with raging hatred and fear*) Is dis a auction? Is you sellin' me like dey uster befo' de war? (*Jerking out his revolver just as the AUCTIONEER knocks him down to one of the planters—glaring from him to the purchaser*) And you sells me? And you buys me? I shows you I'se a free nigger, damn yo' souls! (*He fires at the AUCTIONEER and at the PLANTER with such rapidity that the two shots are almost simultaneous. As if this were a signal the walls of the forest fold in. Only blackness remains and silence broken by JONES as he rushes off, crying with fear—and by the quickened, ever louder beat of the tom-tom.*)

SCENE VI

A cleared space in the forest. The limbs of the trees meet over it forming a low ceiling about five feet from the ground. The interlocked ropes of creepers reaching upward to entwine the tree trunks give an arched appearance to the sides. The space thus enclosed is like the dark, noisome hold of some ancient vessel. The moonlight is almost completely shut out and only a vague wan light filters through. There is the noise of someone approaching from the left, stumbling and crawling through the undergrowth. JONES' voice is heard between chattering moans.

Oh, Lawd, what I gwine do now? Ain't got no bullet left on'y de silver one. If mo' o' dem ha'nts come after me, how I gwine skeer dem away? Oh, Lawd, on'y de silver one left—an' I gotta save dat fo' luck. If I shoots dat one I'm a goner sho'! Lawd, it's black heah! Whar's de moon? Oh, Lawd, don't dis night evah come to an end! *(By the sounds, he is feeling his way cautiously forward)* Dere! Dis feels like a clear space. I gotta lie down an' rest. I don't care if dem niggers does cotch me. I gotta rest.

He is well forward now where his figure can be dimly made out. His pants have been so torn away that what is left of them is no better than a breech cloth. He flings himself full length, face downward on the ground, panting with exhaustion. Gradually it seems to grow lighter in the enclosed space and two rows of seated figures can be seen behind JONES. They are sitting in crumpled, despairing attitudes, hunched, facing one another with their backs touching the forest walls as if they were shackled to them. All are Negroes, naked save for loin cloths. At first they are silent and motionless. Then they begin to sway slowly forward toward each other and back again in unison, as if they were laxly letting themselves follow the long roll of a ship at sea. At the same time, a low, melancholy murmur rises among them, increasing gradually by rhythmic degrees, which seem to be directed and controlled by the throb of the tom-tom in the distance, to a long, tremulous wail of despair that reaches a certain pitch, unbearably acute, then falls by slow gradations of tone into silence and is taken up again. JONES starts, looks up, sees the figures, and throws himself down again to shut out the sight. A shudder of terror shakes his whole body as the wail rises up about him

again. *But the next time, his voice, as if under some uncanny compulsion, starts with the others. As their chorus lifts he rises to a sitting posture similar to the others, swaying back and forth. His voice reaches the highest pitch of sorrow, of desolation. The light fades out, the other voices cease, and only darkness is left. JONES can be heard scrambling to his feet and running off, his voice sinking down the scale and receding as he moves farther and farther away in the forest. The tom-tom beats louder, quicker, with a more insistent, triumphant pulsation.*

SCENE VII

The foot of a gigantic tree by the edge of a great river. A rough structure of boulders, like an altar, is by the tree. The raised riverbank is in the nearer background. Beyond this the surface of the river spreads out, brilliant and unruffled in the moonlight, blotted out and merged into a veil of bluish mist in the distance. JONES' voice is heard from the left rising and falling in the long, despairing wail of the chained slaves, to the rhythmic beat of the tom-tom. As his voice sinks into silence, he enters the open space. The expression of his face is fixed and stony, his eyes have an obsessed glare, he moves with a strange deliberation like a sleepwalker or one in a trance. He looks around at the tree, the rough stone altar, the moonlit surface of the river beyond, and passes his hand over his head with a vague gesture of puzzled bewilderment. Then, as if in obedience to some obscure impulse, he sinks into a kneeling, devotional posture before the altar. Then he seems to come to himself partly, to have an uncertain realization of what he is doing, for he straightens up and stares about him horrifiedly—in an incoherent mumble.

What—what is I doin'? What is—dis place? Seems like I know dat tree—an' dem stones—an' de river. I remember—seems like I been heah befo'. (*Tremblingly*) Oh, Gorry, I'se skeered in dis place! I'se skeered. Oh, Lawd, pfect dis sinner!

Crawling away from the altar, he cowers close to the ground, his face hidden, his shoulders heaving with sobs of hysterical fright. From behind the trunk of the tree, as if he had sprung out of it, the figure of the CONGO WITCH DOCTOR appears. He is wizened and old, naked except for the fur of some small animal tied about his waist, its bushy tail hanging down in front. His body is stained all

over a bright red. Antelope horns are on each side of his head, branching upward. In one hand he carries a bone rattle, in the other a charm stick with a bunch of white cockatoo feathers tied to the end. A great number of glass beads and bone ornaments are about his neck, ears, wrists, and ankles. He struts noiselessly with a queer prancing step to a position in the clear ground between JONES and the altar. Then with a preliminary, summoning stamp of his foot on the earth, he begins to dance and to chant. As if in response to his summons the beating of the tom-tom grows to a fierce, exultant boom whose throbs seem to fill the air with vibrating rhythm. JONES looks up, starts to spring to his feet, reaches a half-kneeling, half-squatting position and remains rigidly fixed there, paralyzed with awed fascination by this new apparition. The WITCH DOCTOR sways, stamping with his foot, his bone rattle clicking the time. His voice rises and falls in a weird, monotonous croon, without articulate word divisions. Gradually his dance becomes clearly one of a narrative in pantomime, his croon is an incantation, a charm to allay the fierceness of some implacable deity demanding sacrifice. He flees, he is pursued by devils, he hides, he flees again. Ever wilder and wilder becomes his flight, nearer and nearer draws the pursuing evil, more and more the spirit of terror gains possession of him. His croon, rising to intensity, is punctuated by shrill cries. JONES has become completely hypnotized. His voice joins in the incantation, in the cries, he beats time with his hands and sways his body to and fro from the waist. The whole spirit and meaning of the dance has entered into him, has become his spirit. Finally the theme of the pantomime halts on a howl of despair, and is taken up again in a note of savage hope. There is a salvation. The forces of evil demand sacrifice. They must be appeased. The WITCH DOCTOR points with his wand to the sacred tree, to the river beyond, to the altar, and finally to JONES with a ferocious command. JONES seems to sense the meaning of this. It is he who must offer himself for sacrifice. He beats his forehead abjectly to the ground, moaning hysterically.

Mercy, Oh, Lawd! Mercy! Mercy on dis po' sinner.

The WITCH DOCTOR springs to the riverbank. He stretches out his arms and calls to some GOD within its depths. Then he starts backward slowly, his arms remaining out. A huge head of a CROCODILE appears over the bank and its eyes, glittering greenly, fasten upon JONES. He stares into them fascinatedly. The WITCH DOCTOR prances up to him, touches him with his wand, motions with hideous com-

mand toward the waiting monster. JONES squirms on his belly nearer and nearer, moaning continually.

Mercy, Lawd! Mercy!

The CROCODILE heaves more of his enormous hulk onto the land. JONES squirms toward him. The WITCH DOCTOR'S voice shrills out in furious exultation, the tom-tom beats madly. JONES cries out in a fierce, exhausted spasm of anguished pleading.

Lawd, save me! Lawd Jesus, heah my prayer!

Immediately, in answer to his prayer, comes the thought of the one bullet left him. He snatches at his hip, shouting defiantly.

De silver bullet! You don't git me yit!

He fires at the green eyes in front of him. The head of the CROCODILE sinks back behind the riverbank, the WITCH DOCTOR springs behind the sacred tree and disappears. JONES lies with his face to the ground, his arms outstretched, whimpering with fear as the throb of the tom-tom fills the silence about him with a somber pulsation, a baffled but revengeful power.

SCENE VIII

Dawn. Same as Scene II, the dividing line of forest and plain. The nearest tree trunks are dimly revealed but the forest behind them is still a mass of glooming shadow. The tom-tom seems on the very spot, so loud and continuously vibrating are its beats. LEM enters from the left, followed by a small squad of his soldiers, and by the cockney trader, SMITHERS. LEM is a heavy-set, ape-faced old savage of the extreme African type, dressed only in a loincloth. A revolver and cartridge belt are about his waist. His soldiers are in different degrees of rag-concealed nakedness. All wear broad palm-leaf hats. Each one carries a rifle. SMITHERS is the same as in Scene I. One of the soldiers, evidently a tracker, is peering about keenly on the ground. He points to the spot where JONES entered the forest. LEM and SMITHERS come to look.

Smithers (after a glance, turns away in disgust). That's where 'e went in right enough. Much good it'll do yer. 'E's miles orf by this an' safe to the Coast, damn 's 'ide! I tole yer yer'd lose im, didn't I?—wastin' the 'ole bloomin' night beatin' yer bloody drum and castin' yer silly spells! Gawd blimey, wot a pack!

Lem (gutturally). We cotch him. (*He makes a motion to his soldiers who squat down on their haunches in a semicircle.*)

Smithers (exasperatedly). Well, ain't yer goin' in an' 'unt 'im in the woods? What the 'ell's the good of waitin'?

Lem (imperturbably—squatting down himself). We cotch him.

Smithers (turning away from him contemptuously). Aw! Garn! 'E's a better man than the lot o' you put together. I 'ates the sight o' 'im but I'll say that for 'im. (*A sound comes from the forest. The soldiers jump to their feet, cocking their rifles alertly. LEM remains sitting with an imperturbable expression, but listening intently. He makes a quick signal with his hand. His followers creep quickly into the forest, scattering so that each enters at a different spot.*)

Smithers. You ain't thinkin' that would be 'im, I 'ope?

Lem (calmly). We cotch him.

Smithers. Blarsted fat 'eads! (*Then after a second's thought—wonderingly*) Still an' all, it might 'appen. If 'e lost 'is bloody way in these stinkin' woods 'e'd likely turn in a circle without 'is knowin' it.

Lem (peremptorily). Sssh! (*The reports of several rifles sound from the forest, followed a second later by savage, exultant yells. The beating of the tom-tom abruptly ceases. LEM looks up at the white man with a grin of satisfaction*) We cotch him. Him dead.

Smithers (with a snarl). 'Ow d'yer know it's 'im an' 'ow d'yer know 'e's dead?

Lem. My mens dey got um silver bullets. Lead bullet no kill him. He got um strong charm. I cook um money, make um silver bullet, make um strong charm, too.

Smithers (astonished). So that's wot you was up to all night, wot? You was scared to put after 'im till you'd moulded silver bullets, eh?

Lem (simply stating a fact). Yes. Him got strong charm. Lead no good.

Smithers (slapping his thigh and guffawing). Haw-haw! If yer don't beat all 'ell! (*Then recovering himself—scornfully*) I'll bet yer it ain't 'im they shot at all, yer bleedin' looney!

Lem (calmly). Dey come bring him now. (*The soldiers come out of the forest, carrying JONES' limp body. He is dead. They carry him to LEM, who examines his body with great satisfaction.*)

Smithers (leans over his shoulder—in a tone of frightened awe). Well, they did for yer right enough, Jonesey, me lad! Dead as a 'erring! (*Mockingly*) Where's yer 'igh an' mighty airs now, yer bloomin' Majesty? (*Then with a grin*) Silver bullets! Gawd blimey, but yer died in the 'eighth o' style, any'ow!

Virginia Woolf

1882–1941

Virginia Woolf was born at Kensington, January 25, 1882. She was the second daughter of Sir Leslie Stephen and his second wife. Sir Leslie was a well-known essayist and editor of the *Dictionary of National Biography*. Virginia Woolf was related to several famous Victorian families, including the Darwins. During her childhood many literary men of the day came to visit her father. Ruskin was one of these early acquaintances.

Delicate health kept Virginia from attending school, and her father educated her. He allowed her free run of his library; and, despite her lack of formal schooling, she was much better read than most women of her time.

In 1905, shortly after her father's death, Virginia, with her sister Vanessa and her brothers Adrian and Thoby, moved to a section of London called Bloomsbury. Their house was a popular meeting place for young writers and artists, who came to be known as the Bloomsbury Group.

In 1912 she married Leonard Sidney Woolf. Together they founded the Hogarth Press in 1917. Between periods of deep depression Virginia Woolf wrote novels and critical essays. Her first two novels, *The Voyage Out*, in 1915, and *Night and Day*, in 1919, were traditional in form. In her later novels, such as *Mrs. Dalloway*, in 1925, and *To the Lighthouse*, in 1927, she developed a characteristic style and experimented with various methods of representing the unspoken thoughts and feelings of her characters. *The Waves* was published in 1931.

Many of Virginia Woolf's critical essays were first published in the *Times Literary Supplement*. Two collections, *The Common Reader* and *The Common Reader, Second Series*, were published during

her lifetime. *How Should One Read a Book?* is from the second series.

On March 28, 1941, Virginia Woolf drowned herself in a river near the Woolfs' wartime home in Sussex.

The Bloomsbury Group was made up of young British intellectuals. The members prized wit and good manners and were strongly opposed to the utilitarianism which their Victorian parents had valued. They attached considerable importance to a delicate appreciation of art.

Many contemporary writers were critical of the group's aristocratic attitudes. D. H. Lawrence, for example, described the members as "beetles that sting like scorpions." But they also had many staunch defenders, including T.S.Eliot.

In her essays, Virginia Woolf appears to be addressing a larger Bloomsbury. She speaks to us as intellectual equals who share her passion for books and who are, or want to be, "creative readers" like herself.

The following essay, as noted above, is taken from *The Common Reader, Second Series*. The title comes from Samuel Johnson's *Life of Gray*. "I rejoice to concur with the common reader," says Dr. Johnson, "for by the common sense of readers . . . must be generally decided all claim to poetical honours."

Some critics have suggested that Mrs. Woolf's ideal reader is far from common. In a sense, this is true. She was herself an omnivorous and demanding reader, devouring and digesting hundreds of books, and bringing to the art of reading an uncommonly acute mind. But she was always concerned to discover and state those elements of the art which good readers have in common. In this sense, her essays are true to the title. And it is in this sense that the essay reprinted here must be understood.

She begins by pointing out that there can be no hard and fast

Notes from the artist: "Virginia Woolf seated before a window with a view of a lighthouse, a symbol in one of her most important novels . . . while the three 'footprints' across the page recall her fictional biography of 'Flush,' Elizabeth Barrett Browning's spaniel."

VIRGINIA
WOOD

BLOOMSBURY

rules for reading, but she quickly goes on to say that liberty must not be interpreted as license. If reading is an art, it has principles. These are of particular importance, she suggests, in an age in which there are many books. You *cannot* read everything. What *should* you read?

Like many of the authors in this volume, she concludes that only the best books should be read. But how are we to discover them? One way is to write, she says. "Perhaps the quickest way to understand the elements of what a novelist is doing is not to read, but to write." Only then can you discover how difficult, and how magical, good writing is. It follows, too, that "you must be capable not only of great finesse of perception, but of great boldness of imagination if you are going to make use of all that the novelist—the great artist—gives." Reading is not a passive activity. One cannot do it, as it were, lying down. It is work.

It is rewarding. Nothing, Mrs. Woolf suggests, is more so. From novels we learn what it means to "be wrenched and uprooted." A great novel creates the world anew for a good reader. Biographies people the familiar world with characters who are more interesting than most of the people we know. When we read poetry, "our being for the moment is centred and constricted, as in any violent shock of personal emotion." Books, for the good reader, have a tremendous effect.

But, Mrs. Woolf says, "the first process, to receive impressions with the utmost understanding, is only half the process of reading; it must be completed, if we are to get the whole pleasure from the book, by another. We must pass judgment upon these multitudinous impressions." In other words, the good reader is a critic, too. His standards, she insists, must be very high.

These two points make the heart of the essay. The good reader must receive everything which the book gives him, and he must judge its worth. If he fails to do either—particularly, if he judges without first understanding—he has failed to do his best. The punishment is harsh and automatic. The bad reader is lost among good books. He lacks the highest pleasure available to man, according to Mrs. Woolf. If she is right, none but a fool would refuse to learn to read as well as he can.

How Should One Read a Book?

In the first place, I want to emphasize the note of interrogation at the end of my title. Even if I could answer the question for myself, the answer would apply only to me and not to you. The only advice, indeed, that one person can give another about reading is to take no advice, to follow your own instincts, to use your own reason, to come to your own conclusions. If this is agreed between us, then I feel at liberty to put forward a few ideas and suggestions because you will not allow them to fetter that independence which is the most important quality that a reader can possess. After all, what laws can be laid down about books? The battle of Waterloo was certainly fought on a certain day; but is *Hamlet* a better play than *Lear*? Nobody can say. Each must decide that question for himself. To admit authorities, however heavily furred and gowned, into our libraries and let them tell us how to read, what to read, what value to place upon what we read, is to destroy the spirit of freedom which is the breath of those sanctuaries. Everywhere else we may be bound by laws and conventions—there we have none.

But to enjoy freedom, if the platitude is pardonable, we have of course to control ourselves. We must not squander our powers, helplessly and ignorantly, squirting half the house in order to water a single rosebush; we must train them, exactly and powerfully, here on the very spot. This, it may be, is one of the first difficulties that faces us in a library. What is “the very spot”? There may well seem to be nothing but a conglomeration and huddle of confusion. Poems and novels, histories and memoirs, dictionaries and bluebooks; books written in all languages by men and women of all tempers, races, and ages jostle each other on the shelf. And outside the donkey brays, the women gossip at the pump, the colts gallop across the fields. Where are we to begin? How are we to bring

order into this multitudinous chaos and get the deepest and widest pleasure from what we read?

It is simple enough to say that since books have classes—fiction, biography, poetry—we should separate them and take from each what it is right that each should give us. Yet few people ask from books what books can give us. Most commonly we come to books with blurred and divided minds, asking of fiction that it shall be true, of poetry that it shall be false, of biography that it shall be flattering, of history that it shall enforce our own prejudices. If we could banish all such preconceptions when we read, that would be an admirable beginning. Do not dictate to your author; try to become him. Be his fellow-worker and accomplice. If you hang back, and reserve and criticize at first, you are preventing yourself from getting the fullest possible value from what you read. But if you open your mind as widely as possible, then signs and hints of almost imperceptible fineness, from the twist and turn of the first sentences, will bring you into the presence of a human being unlike any other. Steep yourself in this, acquaint yourself with this, and soon you will find that your author is giving you, or attempting to give you, something far more definite. The thirty-two chapters of a novel—if we consider how to read a novel first—are an attempt to make something as formed and controlled as a building; but words are more impalpable than bricks; reading is a longer and more complicated process than seeing. Perhaps the quickest way to understand the elements of what a novelist is doing is not to read, but to write; to make your own experiment with the dangers and difficulties of words. Recall, then, some event that has left a distinct impression on you—how at the corner of the street, perhaps, you passed two people talking. A tree shook; an electric light danced; the tone of the talk was comic, but also tragic; a whole vision, an entire conception, seemed contained in that moment.

But when you attempt to reconstruct it in words, you will find that it breaks into a thousand conflicting impressions. Some must be subdued; others emphasized; in the process you will lose, probably, all grasp upon the emotion itself. Then turn from your blurred and littered pages to the opening pages of some great novelist—Defoe, Jane Austen, Hardy. Now you will be better able to appreciate their mastery. It is not merely that we are in the presence of a different person—Defoe, Jane Austen, or Thomas Hardy—but that we are living in a different world. Here, in *Robinson Crusoe*, we are trudging a plain high road; one thing happens after another; the fact and the order of the fact is enough. But if the open air and adventure mean everything to Defoe they mean nothing to Jane

Austen. Hers is the drawing-room, and people talking, and by the many mirrors of their talk revealing their characters. And if, when we have accustomed ourselves to the drawing-room and its reflections, we turn to Hardy, we are once more spun around. The moors are round us and the stars are above our heads. The other side of the mind is now exposed—the dark side that comes uppermost in solitude, not the light side that shows in company. Our relations are not towards people, but towards Nature and destiny. Yet different as these worlds are, each is consistent with itself. The maker of each is careful to observe the laws of his own perspective, and however great a strain they may put upon us they will never confuse us, as lesser writers so frequently do, by introducing two different kinds of reality into the same book. Thus to go from one great novelist to another—from Jane Austen to Hardy, from Peacock to Trollope, from Scott to Meredith—is to be wrenched and uprooted; to be thrown this way and then that. To read a novel is a difficult and complex art. You must be capable not only of great finesse of perception, but of great boldness of imagination if you are going to make use of all that the novelist—the great artist—gives you.

But a glance at the heterogeneous company on the shelf will show you that writers are very seldom “great artists”; far more often a book makes no claim to be a work of art at all. These biographies and autobiographies, for example, lives of great men, of men long dead and forgotten, that stand cheek by jowl with the novels and poems, are we to refuse to read them because they are not “art”? Or shall we read them, but read them in a different way, with a different aim? Shall we read them in the first place to satisfy that curiosity which possesses us sometimes when in the evening we linger in front of a house where the lights are lit and the blinds not yet drawn, and each floor of the house shows us a different section of human life in being? Then we are consumed with curiosity about the lives of these people—the servants gossiping, the gentlemen dining, the girl dressing for a party, the old woman at the window with her knitting. Who are they, what are they, what are their names, their occupations, their thoughts, and adventures?

Biographies and memoirs answer such questions, light up innumerable such houses; they show us people going about their daily affairs, toiling, failing, succeeding, eating, hating, loving, until they die. And sometimes as we watch, the house fades and the iron railings vanish and we are out at sea; we are hunting, sailing, fighting; we are among savages and soldiers; we are taking part in great campaigns. Or if we like to stay here in England, in London, still the scene changes; the street narrows; the house

becomes small, cramped, diamond-paned, and malodorous. We see a poet, Donne, driven from such a house because the walls were so thin that when the children cried their voices cut through them. We can follow him, through the paths that lie in the pages of books, to Twickenham; to Lady Bedford's Park, a famous meeting-ground for nobles and poets; and then turn our steps to Wilton, the great house under the downs, and hear Sidney read the *Arcadia* to his sister; and ramble among the very marshes and see the very herons that figure in that famous romance; and then again travel north with that other Lady Pembroke, Anne Clifford, to her wild moors, or plunge into the city and control our merriment at the sight of Gabriel Harvey in his black velvet suit arguing about poetry with Spenser. Nothing is more fascinating than to grope and stumble in the alternate darkness and splendour of Elizabethan London. But there is no staying there. The Temples and the Swifts, the Harleys and the St. Johns beckon us on; hour upon hour can be spent disentangling their quarrels and deciphering their characters; and when we tire of them we can stroll on, past a lady in black wearing diamonds, to Samuel Johnson and Goldsmith and Garrick; or cross the channel, if we like, and meet Voltaire and Diderot, Madame du Deffand; and so back to England and Twickenham—how certain places repeat themselves and certain names!—where Lady Bedford had her Park once and Pope lived later, to Walpole's home at Strawberry Hill. But Walpole introduces us to such a swarm of new acquaintances, there are so many houses to visit and bells to ring that we may well hesitate for a moment, on the Miss Berrys' doorstep, for example, when behold, up comes Thackeray; he is the friend of the woman whom Walpole loved; so that merely by going from friend to friend, from garden to garden, from house to house, we have passed from one end of English literature to another and wake to find ourselves here again in the present, if we can so differentiate this moment from all that have gone before. This, then, is one of the ways in which we can read these lives and letters; we can make them light up the many windows of the past; we can watch the famous dead in their familiar habits and fancy sometimes that we are very close and can surprise their secrets, and sometimes we may pull out a play or a poem that they have written and see whether it reads differently in the presence of the author. But this again rouses other questions. How far, we must ask ourselves, is a book influenced by its writer's life—how far is it safe to let the man interpret the writer? How far shall we resist or give way to the sympathies and antipathies that the man himself rouses in us—so sensitive are words, so receptive of the character of the author?

These are questions that press upon us when we read lives and letters, and we must answer them for ourselves, for nothing can be more fatal than to be guided by the preferences of others in a matter so personal.

But also we can read such books with another aim, not to throw light on literature, not to become familiar with famous people, but to refresh and exercise our own creative powers. Is there not an open window on the right hand of the bookcase? How delightful to stop reading and look out! How stimulating the scene is, in its unconsciousness, its irrelevance, its perpetual movement—the colts galloping round the field, the woman filling her pail at the well, the donkey throwing back his head and emitting his long, acrid moan. The greater part of any library is nothing but the record of such fleeting moments in the lives of men, women, and donkeys. Every literature, as it grows old, has its rubbish-heap, its records of vanished moments and forgotten lives told in faltering and feeble accents that have perished. But if you give yourself up to the delight of rubbish-reading you will be surprised, indeed you will be overcome, by the relics of human life that have been cast out to moulder. It may be one letter—but what a vision it gives! It may be a few sentences—but what vistas they suggest! Sometimes a whole story will come together with such beautiful humour and pathos and completeness that it seems as if a great novelist had been at work, yet it is only an old actor, Tate Wilkinson, remembering the strange story of Captain Jones; it is only a young subaltern serving under Arthur Wellesley and falling in love with a pretty girl at Lisbon; it is only Maria Allen letting fall her sewing in the empty drawing-room and sighing how she wishes she had taken Dr. Burney's good advice and had never eloped with her Rishy. None of this has any value; it is negligible in the extreme; yet how absorbing it is now and again to go through the rubbish-heaps and find rings and scissors and broken noses buried in the huge past and try to piece them together while the colt gallops round the field, the woman fills her pail at the well, and the donkey brays.

But we tire of rubbish-reading in the long run. We tire of searching for what is needed to complete the half-truth which is all that the Wilkinsons, the Bunburys, and the Maria Allens are able to offer us. They had not the artist's power of mastering and eliminating; they could not tell the whole truth even about their own lives; they have disfigured the story that might have been so shapely. Facts are all that they can offer us, and facts are a very inferior form of fiction. Thus the desire grows upon us to have done with half-statements and approximations; to cease from searching out the minute shades of human character, to enjoy the greater

abstractness, the purer truth of fiction. Thus we create the mood, intense and generalized, unaware of detail, but stressed by some regular, recurrent beat, whose natural expression is poetry; and that is the time to read poetry when we are almost able to write it.

Western wind, when wilt thou blow?
The small rain down can rain.
Christ, if my love were in my arms,
And I in my bed again!

The impact of poetry is so hard and direct that for the moment there is no other sensation except that of the poem itself. What profound depths we visit then—how sudden and complete is our immersion! There is nothing here to catch hold of; nothing to stay us in our flight. The illusion of fiction is gradual; its effects are prepared; but who when they read these four lines stops to ask who wrote them, or conjures up the thought of Donne's house or Sidney's secretary; or enmeshes them in the intricacy of the past and the succession of generations? The poet is always our contemporary. Our being for the moment is centred and constricted, as in any violent shock of personal emotion. Afterwards, it is true, the sensation begins to spread in wider rings through our minds; remoter senses are reached; these begin to sound and to comment and we are aware of echoes and reflections. The intensity of poetry covers an immense range of emotion. We have only to compare the force and directness of

I shall fall like a tree, and find my grave
Only remembering that I grieve,

with the wavering modulation of

Minutes are numbered by the fall of sands,
As by an hour glass; the span of time
Doth waste us to our graves, and we look on it;
An age of pleasure, revelled out, comes home
At last and ends in sorrow; but the life,
Weary of riot, numbers every sand,
Wailing in sighs, until the last drop down,
So to conclude calamity in rest,

or place the meditative calm of

whether we be young or old,
Our destiny, our being's heart and home,

Is with infinitude, and only there;
 With hope it is, hope that can never die,
 Effort, and expectation, and desire,
 And something evermore about to be,

beside the complete and inexhaustible loveliness of

The moving Moon went up the sky,
 And no where did abide:
 Softly she was going up,
 And a star or two beside—

or the splendid fantasy of

And the woodland haunter
 Shall not cease to saunter
 When, far down some glade,
 Of the great world's burning,
 One soft flame upturning
 Seems, to his discerning,
 Crocus in the shade.

to bethink us of the varied art of the poet; his power to make us at once actors and spectators; his power to run his hand into character as if it were a glove, and be Falstaff or Lear; his power to condense, to widen, to state, once and for ever.

“We have only to compare”—with those words the cat is out of the bag, and the true complexity of reading is admitted. The first process, to receive impressions with the utmost understanding, is only half the process of reading; it must be completed, if we are to get the whole pleasure from a book, by another. We must pass judgment upon these multitudinous impressions; we must make of these fleeting shapes one that is hard and lasting. But not directly. Wait for the dust of reading to settle; for the conflict and the questioning to die down; walk, talk, pull the dead petals from a rose, or fall asleep. Then suddenly without our willing it, for it is thus that Nature undertakes these transitions, the book will return, but differently. It will float to the top of the mind as a whole. And the book as a whole is different from the book received currently in separate phrases. Details now fit themselves into their places. We see the shape from start to finish; it is a barn, a pigsty, or a cathedral. Now then we can compare book with book as we compare building with building. But this act of comparison means that our attitude has changed; we are no longer the friends of the writer, but his judges; and just as we cannot be too sympathetic as friends, so as judges we cannot be too severe. Are

they not criminals, books that have wasted our time and sympathy; are they not the most insidious enemies of society, corrupters, defilers, the writers of false books, faked books, books that fill the air with decay and disease? Let us then be severe in our judgments; let us compare each book with the greatest of its kind. There they hang in the mind the shapes of the books we have read solidified by the judgments we have passed on them—*Robinson Crusoe*, *Emma*, *The Return of the Native*. Compare the novels with these—even the latest and least of novels has a right to be judged with the best. And so with poetry—when the intoxication of rhythm has died down and the splendour of words has faded a visionary shape will return to us and this must be compared with *Lear*, with *Phèdre*, with *The Prelude*; or if not with these, with whatever is the best or seems to us to be the best in its own kind. And we may be sure that the newness of new poetry and fiction is its most superficial quality and that we have only to alter slightly, not to recast, the standards by which we have judged the old.

It would be foolish, then, to pretend that the second part of reading, to judge, to compare, is as simple as the first—to open the mind wide to the fast flocking of innumerable impressions. To continue reading without the book before you, to hold one shadow-shape against another, to have read widely enough and with enough understanding to make such comparisons alive and illuminating—that is difficult; it is still more difficult to press further and to say, “Not only is the book of this sort, but it is of this value; here it fails; here it succeeds; this is bad; that is good.” To carry out this part of a reader’s duty needs such imagination, insight, and learning that it is hard to conceive any one mind sufficiently endowed; impossible for the most self-confident to find more than the seeds of such powers in himself. Would it not be wiser, then, to remit this part of reading and to allow the critics, the gowned and furred authorities of the library, to decide the question of the book’s absolute value for us? Yet how impossible! We may stress the value of sympathy; we may try to sink our own identity as we read. But we know that we cannot sympathize wholly or immerse ourselves wholly; there is always a demon in us who whispers, “I hate, I love,” and we cannot silence him. Indeed, it is precisely because we hate and we love that our relation with the poets and novelists is so intimate that we find the presence of another person intolerable. And even if the results are abhorrent and our judgments are wrong, still our taste, the nerve of sensation that sends shocks through us, is our chief illuminant; we learn through feeling; we cannot suppress our own idiosyncrasy without impoverishing it. But as time goes on perhaps we can train our taste; perhaps we can make it submit to some con-

trol. When it has fed greedily and lavishly upon books of all sorts—poetry, fiction, history, biography—and has stopped reading and looked for long spaces upon the variety, the incongruity of the living world, we shall find that it is changing a little; it is not so greedy, it is more reflective. It will begin to bring us not merely judgments on particular books, but it will tell us that there is a quality common to certain books. Listen, it will say, what shall we call *this*? And it will read us perhaps *Lear* and then perhaps *Agamemnon* in order to bring out that common quality. Thus, with our taste to guide us, we shall venture beyond the particular book in search of qualities that group books together; we shall give them names and thus frame a rule that brings order into our perceptions. We shall gain a further and a rarer pleasure from that discrimination. But as a rule only lives when it is perpetually broken by contact with the books themselves—nothing is easier and more stultifying than to make rules which exist out of touch with facts, in a vacuum—now at least, in order to steady ourselves in this difficult attempt, it may be well to turn to the very rare writers who are able to enlighten us upon literature as an art. Coleridge and Dryden and Johnson, in their considered criticism, the poets and novelists themselves in their unconsidered sayings, are often surprisingly relevant; they light up and solidify the vague ideas that have been tumbling in the misty depths of our minds. But they are only able to help us if we come to them laden with questions and suggestions won honestly in the course of our own reading. They can do nothing for us if we herd ourselves under their authority and lie down like sheep in the shade of a hedge. We can only understand their ruling when it comes in conflict with our own and vanquishes it.

If this is so, if to read a book as it should be read calls for the rarest qualities of imagination, insight, and judgment, you may perhaps conclude that literature is a very complex art and that it is unlikely that we shall be able, even after a lifetime of reading, to make any valuable contribution to its criticism. We must remain readers; we shall not put on the further glory that belongs to those rare beings who are also critics. But still we have our responsibilities as readers and even our importance. The standards we raise and the judgments we pass steal into the air and become part of the atmosphere which writers breathe as they work. An influence is created which tells upon them even if it never finds its way into print. And that influence, if it were well instructed, vigorous and individual and sincere, might be of great value now when criticism is necessarily in abeyance; when books pass in review like the procession of animals in a shooting gallery, and the critic has only one second in which to load and aim and shoot and may well be pardoned if

he mistakes rabbits for tigers, eagles for barn-door fowls, or misses altogether and wastes his shot upon some peaceful sow grazing in a further field. If behind the erratic gunfire of the press the author felt that there was another kind of criticism, the opinion of people reading for the love of reading, slowly and unprofessionally, and judging with great sympathy and yet with great severity, might this not improve the quality of his work? And if by our means books were to become stronger, richer, and more varied, that would be an end worth reaching.

Yet who reads to bring about an end however desirable? Are there not some pursuits that we practise because they are good in themselves, and some pleasures that are final? And is not this among them? I have sometimes dreamt, at least, that when the Day of Judgment dawns and the great conquerors and lawyers and statesmen come to receive their rewards—their crowns, their laurels, their names carved indelibly upon imperishable marble—the Almighty will turn to Peter and will say, not without a certain envy when He sees us coming with our books under our arms, “Look, these need no reward. We have nothing to give them here. They have loved reading.”

Matthew Arnold

1822–1888

Matthew Arnold was born in Middlesex, England, December 24, 1822. His father was the noted Dr. Thomas Arnold, headmaster of Rugby. Young Arnold went to Rugby and Balliol College, Oxford, where he took the Newdigate Prize for poetry. In the Lake District he walked, skated, and sailed a boat. He had “Olympian manners.” When he visited the novelist George Sand in France, she said that he gave “the effect of a young Milton on his travels.”

In 1847 he became private secretary to Lord Lansdowne. His first collection of verse, *The Strayed Reveller and Other Poems*, in 1849, and a second three years later, were published under the initial “A.” He married Frances Lucy Wightman in 1851. Lansdowne had arranged an appointment for Arnold as an Inspector of Schools. He served in that department for thirty-five years. His work required almost continual travel in England, plus frequent inspection tours in Holland, Germany, Austria, Italy, and France.

Under his own name he published *Poems* in 1853 and *Poems: Second Series* two years later. The tragedy *Merope* appeared in 1858. Except for *New Poems* in 1867, most of his later work was devoted to the literature of ideas, criticism in particular. Much of this came out of his election in 1857 as professor of poetry at Oxford, a post he held for ten years. His inaugural address, *On the Modern Element in Literature*, and such lectures as *The Study of Poetry* (see below) and *On Translating Homer* belong among his most famous essays.

In 1868 the Arnold family moved to Harrow and in 1873 to Cobham, Surrey, Arnold’s home for the rest of his life. *Culture and Anarchy* was much talked about, but *Literature and Dogma*, published in 1873, became his first best seller of sorts. His 1883–84 lecture

tour in the United States was mildly successful. He made another visit two years later. As early as 1885 he had been troubled with angina pectoris. He continued to walk and skate a little. In the spring of 1888, he traveled to Liverpool to meet his daughter Lucy and his grandchild, inbound from America. Joyful at the reunion to come, he ran for a tram, leaped over a low fence, and fell dead. The date was April 15, 1888.

The *Study of Poetry* was first published in 1880 as an introduction to T. H. Ward's anthology, *The English Poets*. Like *Sweetness and Light*, its companion piece here, it shows us what a broad focus Arnold opened out on his time. At bottom, he was a poet-critic. Deliberately, he enlarged his viewpoint to take in the whole of society. He meant to deal with it in terms of those ideas—science, government, culture, history—by which, he felt, society was ordered; and this in turn required an expanded view of literature and of culture in general.

But he did not stop there. He was a reformer, at the topmost level. We recall his division of Englishmen into Barbarians (the upper class), Philistines (the middle class), and Populace (the working class). His mission, he felt, was to convert the heathen of the new middle class, swollen with industrial and financial power, and all but indifferent to any cultural demand that did not serve such power.

Thus he became a missionary politician of ideas, and most of his essays need to be understood first of all in that light. They are Epistles to the Philistines. He believed, as Lewis Mumford wrote nearly a hundred years later, that “an economy of abundance brings with it, not the duty to consume, but the readiness to create.” And what was to be created was nothing less than the well-rounded and harmonious personality of man. Have we reached that goal yet? Insofar as we have not, and in the ways that we have not, Arnold still speaks to us as directly as he spoke to his contemporaries.

Notes from the artist: “Suggestions of two of his major poems are woven into the portrait of Matthew Arnold . . . at the left are shells and sea life recalling ‘Dover Beach,’ while above his head the protagonists of ‘Sohrab and Rostum’ are shown in combat.”

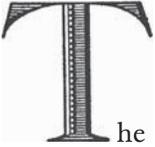

Almost a century later, the first pages of *The Study of Poetry* can still shock us a little. "Without poetry," Arnold writes, "our science will appear incomplete; and most of what now passes with us for religion and philosophy will be replaced by poetry." But only "the best poetry" will do. And how shall we recognize and define "the best poetry"? This last question alone has occupied many minds for a score of centuries. Arnold makes it his principal subject.

Except as data, science leaves out the life of feeling that gives tone to everything we do. But feeling is the medium and combining agent in poetry. Thus the idea that science will "appear incomplete" without poetry and the other arts becomes an ordinary fact. But what are we to make of the prediction that much of Victorian religion and philosophy would be "replaced by poetry"? We know, at least, that it has not happened. Poetry can hardly be said to have taken the place of religion and philosophy in any significant way. And we gather from Arnold's other essays that he was a religious reformer rather than an agnostic.

But he makes an excellent case for the possible uses of poetry as a cultural agent. He begins by trying to tell us how to read poetry, and how to tell the good from the bad. This involves a reevaluation of English poets from the beginning—rather too much for one essay. He quotes examples, to *show* us, rather than attempt to explain what good poetry is. (This approach, expanded to take in the whole poem as text, became the principal method of the American New Critics in the mid-twentieth century.) He takes his examples, not from English poetry alone, but from what he knows of European poetry in general.

Our second essay, *Sweetness and Light*, shows us Arnold as the missionary of culture marching boldly into the enemy camp. Armed with such slogans as "To make reason and the will of God prevail!" and "Perfection . . . consists in becoming something rather than in having something," he sets up his ideal of the harmonious man. Then, one by one, he attacks the enemy idols: wealth, the cult of bodily vigor and large families, Puritan religion, machinery, Bentham's utilitarianism and the rest. Culture, he asserts, is a democratic idea. It must be diffused "from one end of society to the other."

The Study of Poetry

he future of poetry is immense, because in poetry, where it is worthy of its high destinies, our race, as time goes on, will find an ever surer and surer stay. There is not a creed which is not shaken, not an accredited dogma which is not shown to be questionable, not a received tradition which does not threaten to dissolve. Our religion has materialized itself in the fact, in the supposed fact; it has attached its emotion to the fact, and now the fact is failing it. But for poetry the idea is everything; the rest is a world of illusion, of divine illusion. Poetry attaches its emotion to the idea; the idea *is* the fact. The strongest part of our religion to-day is its unconscious poetry.”

Let me be permitted to quote these words of my own, as uttering the thought which should, in my opinion, go with us and govern us in all our study of poetry. In the present work it is the course of one great contributory stream to the world-river of poetry that we are invited to follow. We are here invited to trace the stream of English poetry. But whether we set ourselves, as here, to follow only one of the several streams that make the mighty river of poetry, or whether we seek to know them all, our governing thought should be the same. We should conceive of poetry worthily, and more highly than it has been the custom to conceive of it. We should conceive of it as capable of higher uses, and called to higher destinies, than those which in general men have assigned to it hitherto. More and more mankind will discover that we have to turn to poetry to interpret life for us, to console us, to sustain us. Without poetry, our science will appear incomplete; and most of what now passes with us for religion and philosophy will be replaced by poetry. Science, I say, will appear incomplete without it. For finely and truly does Wordsworth call poetry “the impassioned expression which is in the countenance of all science”; and what is a countenance without its expression? Again,

Wordsworth finely and truly calls poetry “the breath and finer spirit of all knowledge”: our religion, parading evidences such as those on which the popular mind relies now; our philosophy, pluming itself on its reasonings about causation and finite and infinite being; what are they but the shadows and dreams and false shows of knowledge? The day will come when we shall wonder at ourselves for having trusted to them, for having taken them seriously; and the more we perceive their hollowness, the more we shall prize “the breath and finer spirit of knowledge” offered to us by poetry.

But if we conceive thus highly of the destinies of poetry, we must also set our standard for poetry high, since poetry, to be capable of fulfilling such high destinies, must be poetry of a high order of excellence. We must accustom ourselves to a high standard and to a strict judgment. Sainte-Beuve relates that Napoleon one day said, when somebody was spoken of in his presence as a charlatan: “Charlatan as much as you please; but where is there *not* charlatanism?”—“Yes,” answers Sainte-Beuve, “in politics, in the art of governing mankind, that is perhaps true. But in the order of thought, in art, the glory, the eternal honour is that charlatanism shall find no entrance; herein lies the inviolableness of that noble portion of man’s being.” It is admirably said, and let us hold fast to it. In poetry, which is thought and art in one, it is the glory, the eternal honour, that charlatanism shall find no entrance; that this noble sphere be kept inviolate and inviolable. Charlatanism is for confusing or obliterating the distinctions between excellent and inferior, sound and unsound or only half-sound, true and untrue or only half-true. It is charlatanism, conscious or unconscious, whenever we confuse or obliterate these. And in poetry, more than anywhere else, it is unpermissible to confuse or obliterate them. For in poetry the distinction between excellent and inferior, sound and unsound or only half-sound, true and untrue or only half-true, is of paramount importance. It is of paramount importance because of the high destinies of poetry. In poetry, as a criticism of life under the conditions fixed for such a criticism by the laws of poetic truth and poetic beauty, the spirit of our race will find, we have said, as time goes on and as other helps fail, its consolation and stay. But the consolation and stay will be of power in proportion to the power of the criticism of life. And the criticism of life will be of power in proportion as the poetry conveying it is excellent rather than inferior, sound rather than unsound or half-sound, true rather than untrue or half-true.

The best poetry is what we want; the best poetry will be found to have a power of forming, sustaining, and delighting us, as nothing else can.

A clearer, deeper sense of the best in poetry, and of the strength and joy to be drawn from it, is the most precious benefit which we can gather from a poetical collection such as the present. And yet in the very nature and conduct of such a collection there is inevitably something which tends to obscure in us the consciousness of what our benefit should be, and to distract us from the pursuit of it. We should therefore steadily set it before our minds at the outset, and should compel ourselves to revert constantly to the thought of it as we proceed.

Yes; constantly in reading poetry, a sense for the best, the really excellent, and of the strength and joy to be drawn from it should be present in our minds and should govern our estimate of what we read. But this real estimate, the only true one, is liable to be superseded, if we are not watchful, by two other kinds of estimate, the historic estimate and the personal estimate, both of which are fallacious. A poet or a poem may count to us historically, they may count to us on grounds personal to ourselves, and they may count to us really. They may count to us historically. The course of development of a nation's language, thought, and poetry is profoundly interesting; and by regarding a poet's work as a stage in this course of development we may easily bring ourselves to make it of more importance as poetry than in itself it really is, we may come to use a language of quite exaggerated praise in criticizing it; in short, to overrate it. So arises in our poetic judgments the fallacy caused by the estimate which we may call historic. Then, again, a poet or a poem may count to us on grounds personal to ourselves. Our personal affinities, likings, and circumstances have great power to sway our estimate of this or that poet's work, and to make us attach more importance to it as poetry than in itself it really possesses, because to us it is, or has been, of high importance. Here also we overrate the object of our interest, and apply to it a language of praise which is quite exaggerated. And thus we get the source of a second fallacy in our poetic judgments—the fallacy caused by an estimate which we may call personal.

Both fallacies are natural. It is evident how naturally the study of the history and development of a poetry may incline a man to pause over reputations and works once conspicuous but now obscure, and to quarrel with a careless public for skipping, in obedience to mere tradition and habit, from one famous name or work in its national poetry to another, ignorant of what it misses, and of the reason for keeping what it keeps, and of the whole process of growth in its poetry. The French have become diligent students of their own early poetry, which they long neglected; the study makes many of them dissatisfied with their so-called

classical poetry, the court-tragedy of the seventeenth century, a poetry which Pellisson long ago reproached with its want of the true poetic stamp, with its *politesse stérile et rampante* [rampant and sterile polish], but which nevertheless has reigned in France as absolutely as if it had been the perfection of classical poetry indeed. The dissatisfaction is natural; yet a lively and accomplished critic, M. Charles d'Héricault, the editor of Clément Marot, goes too far when he says that "the cloud of glory playing round a classic is a mist as dangerous to the future of a literature as it is intolerable for the purposes of history." "It hinders," he goes on, "it hinders us from seeing more than one single point, the culminating and exceptional point; the summary, fictitious and arbitrary, of a thought and of a work. It substitutes a halo for a physiognomy, it puts a statue where there was once a man, and hiding from us all trace of the labour, the attempts, the weaknesses, the failures, it claims not study but veneration; it does not show us how the thing is done, it imposes upon us a model. Above all, for the historian this creation of classic personages is inadmissible; for it withdraws the poet from his time, from his proper life, it breaks historical relationships, it blinds criticism by conventional admiration, and renders the investigation of literary origins unacceptable. It gives us a human personage no longer, but a God seated immovable amidst His perfect work, like Jupiter on Olympus; and hardly will it be possible for the young student, to whom such work is exhibited at such a distance from him, to believe that it did not issue ready made from that divine head."

All this is brilliantly and tellingly said, but we must plead for a distinction. Everything depends on the reality of a poet's classic character. If he is a dubious classic, let us sift him; if he is a false classic, let us explode him. But if he is a real classic, if his work belongs to the class of the very best (for this is the true and right meaning of the word *classic, classical*), then the great thing for us is to feel and enjoy his work as deeply as ever we can, and to appreciate the wide difference between it and all work which has not the same high character. This is what is salutary, this is what is formative; this is the great benefit to be got from the study of poetry. Everything which interferes with it, which hinders it, is injurious. True, we must read our classic with open eyes, and not with eyes blinded with superstition; we must perceive when his work comes short, when it drops out of the class of the very best, and we must rate it, in such cases, at its proper value. But the use of this negative criticism is not in itself; it is entirely in its enabling us to have a clearer sense and a deeper enjoyment of what is truly excellent. To trace the labour, the attempts, the weaknesses, the failures of a genuine classic, to acquaint oneself with his

time and his life and his historical relationships, is mere literary dilettantism unless it has that clear sense and deeper enjoyment for its end. It may be said that the more we know about a classic the better we shall enjoy him; and, if we lived as long as Methuselah and had all of us heads of perfect clearness and wills of perfect steadfastness, this might be true in fact as it is plausible in theory. But the case here is much the same as the case with the Greek and Latin studies of our schoolboys. The elaborate philological groundwork which we require them to lay is in theory an admirable preparation for appreciating the Greek and Latin authors worthily. The more thoroughly we lay the groundwork, the better we shall be able, it may be said, to enjoy the authors. True, if time were not so short, and schoolboys' wits not so soon tired and their power of attention exhausted; only, as it is, the elaborate philological preparation goes on, but the authors are little known and less enjoyed. So with the investigator of "historic origins" in poetry. He ought to enjoy the true classic all the better for his investigations; he often is distracted from the enjoyment of the best, and with the less good he overbusies himself, and is prone to overrate it in proportion to the trouble which it has cost him.

The idea of tracing historic origins and historical relationships cannot be absent from a compilation like the present. And naturally the poets to be exhibited in it will be assigned to those persons for exhibition who are known to prize them highly, rather than to those who have no special inclination towards them. Moreover the very occupation with an author, and the business of exhibiting him, disposes us to affirm and amplify his importance. In the present work, therefore, we are sure of frequent temptation to adopt the historic estimate, or the personal estimate, and to forget the real estimate; which latter, nevertheless, we must employ if we are to make poetry yield us its full benefit. So high is that benefit, the benefit of clearly feeling and of deeply enjoying the really excellent, the truly classic in poetry, that we do well, I say, to set it fixedly before our minds as our object in studying poets and poetry, and to make the desire of attaining it the one principle to which, as the *Imitation* says, whatever we may read or come to know, we always return. *Cum multa legeris et cognoveris, ad unum semper oportet redire principium.*

The historic estimate is likely in especial to affect our judgment and our language when we are dealing with ancient poets; the personal estimate when we are dealing with poets our contemporaries, or at any rate modern. The exaggerations due to the historic estimate are not in themselves, perhaps, of very much gravity. Their report hardly enters the general ear; probably they do not always impose even on the literary men who adopt them. But they lead to a dangerous abuse of language.

So we hear Caedmon, amongst our own poets, compared to Milton. I have already noticed the enthusiasm of one accomplished French critic for "historic origins." Another eminent French critic, M. Vitet, comments upon that famous document of the early poetry of his nation, the *Chanson de Roland*. It is indeed a most interesting document. The jocular or jongleur Taillefer, who was with William the Conqueror's army at Hastings, marched before the Norman troops, so said the tradition, singing "of Charlemagne and of Roland and of Oliver, and of the vassals who died at Roncevaux"; and it is suggested that in the *Chanson de Roland* by one Turolodus or Théroulde, a poem preserved in a manuscript of the twelfth century in the Bodleian Library at Oxford, we have certainly the matter, perhaps even some of the words, of the chant which Taillefer sang. The poem has vigour and freshness; it is not without pathos. But M. Vitet is not satisfied with seeing in it a document of some poetic value, and of very high historic and linguistic value; he sees in it a grand and beautiful work, a monument of epic genius. In its general design he finds the grandiose conception, in its details he finds the constant union of simplicity with greatness, which are the marks, he truly says, of the genuine epic, and distinguish it from the artificial epic of literary ages. One thinks of Homer; this is the sort of praise which is given to Homer, and justly given. Higher praise there cannot well be, and it is the praise due to epic poetry of the highest order only, and to no other. Let us try, then, the *Chanson de Roland* at its best. Roland, mortally wounded, lays himself down under a pine-tree, with his face turned towards Spain and the enemy—

*De plusurs choses à remembrer li prist,
De tantes teres cume li bers cunquist,
De dulce France, des humes de sun lign,
De Charlemagne sun seignor ki l'nurrit.*¹

That is primitive work, I repeat, with an undeniable poetic quality of its own. It deserves such praise, and such praise is sufficient for it. But now turn to Homer—

*[Hos photo; tous d'ede katechen physizoös aia
en Lakedaimoni authi, phile en patriidi gaie.]*²

-
1. "Then began he to call many things to remembrance—all the lands which his valour conquered, and pleasant France, and the men of his lineage, and Charlemagne his liege lord who nourished him."—*Chanson de Roland*, iii, 939–42.
 2. So said she; they long since in Earth's soft arms were reposing,
There, in their own dear land, their fatherland, Lacedaemon.
—*Iliad*, iii, 243, 244 (translated by Dr. Hawtrey). [Cf. *Great Books of the Western World* (Ed.).]

We are here in another world, another order of poetry altogether; here is rightly due such supreme praise as that which M. Vitet gives to the *Chanson de Roland*. If our words are to have any meaning, if our judgments are to have any solidity, we must not heap that supreme praise upon poetry of an order immeasurably inferior.

Indeed there can be no more useful help for discovering what poetry belongs to the class of the truly excellent, and can therefore do us most good, than to have always in one's mind lines and expressions of the great masters, and to apply them as a touchstone to other poetry. Of course we are not to require this other poetry to resemble them; it may be very dissimilar. But if we have any tact we shall find them, when we have lodged them well in our minds, an infallible touchstone for detecting the presence or absence of high poetic quality, and also the degree of this quality, in all other poetry which we may place beside them. Short passages, even single lines, will serve our turn quite sufficiently. Take the two lines which I have just quoted from Homer, the poet's comment on Helen's mention of her brothers; or take his

[*Ha deilo, ti sphoi domen Pelei anakti thneta?*
Humeis d'eston agero t'athanato te.
*E hina dystinoisi met' andrasiv alge echeton*³]

the address of Zeus to the horses of Peleus; or take finally his

[*Kai se, geron, to prin men akoumen olbion einai* ⁴]

the words of Achilles to Priam, a suppliant before him. Take that incomparable line and a half of Dante, Ugolino's tremendous words—

Io no piangeva; sì dentro impietrai.
*Piangevan elli . . .*⁵

take the lovely words of Beatrice to Virgil—

Io son fatta da Dio, sua mercè, tale,
Che la vostra miseria non mi tange,
*Nè fiamma d'esto incendio non m'assale . . .*⁶

-
3. Ah, unhappy pair, why gave we you to King Peleus, to a mortal? but ye are without old age, and immortal. Was it that with men born to misery ye might have sorrow?—*Iliad*, xvii, 443–45. [Cf. *Great Books of the Western World* (Ed.).]
 4. “Nay, and thou too, old man, in former days wast, as we hear, happy.”—*Iliad*, xxiv, 543. [Cf. *Great Books of the Western World* (Ed.).]
 5. “I wailed not, so of stone grew I within;—they wailed.”—*Inferno*, xxxiii, 39, 40. [Cf. *Great Books of the Western World* (Ed.).]
 6. “Of such sort hath God, thanked be His mercy, made me, that your misery toucheth me not, neither doth the flame of this fire strike me.”—*Inferno*, ii, 91–93. [Cf. *Great Books of the Western World* (Ed.).]

take the simple, but perfect, single line—

*In la sua voluntade è nostra pace.*⁷

Take of Shakespeare a line or two of Henry the Fourth's expostulation with sleep—

Wilt thou upon the high and giddy mast
Seal up the ship-boy's eyes, and rock his brains
In cradle of the rude imperious surge . . .

and take, as well, Hamlet's dying request to Horatio—

If thou didst ever hold me in thy heart,
Absent thee from felicity awhile,
And in this harsh world draw thy breath in pain
To tell my story . . .

Take of Milton that Miltonic passage—

Darken'd so, yet shone
Above them all the archangel; but his face
Deep scars of thunder had intrench'd, and care
Sat on his faded cheek . . .

add two such lines as—

And courage never to submit or yield
And what is else not to be overcome . . .

and finish with the exquisite close to the loss of Proserpine, the loss

. . . which cost Ceres all that pain
To seek her through the world.

These few lines, if we have tact and can use them, are enough even of themselves to keep clear and sound our judgments about poetry, to save us from fallacious estimates of it, to conduct us to a real estimate.

The specimens I have quoted differ widely from one another, but they have in common this: the possession of the very highest poetical quality. If we are thoroughly penetrated by their power, we shall find that we have acquired a sense enabling us, whatever poetry may be laid before us, to feel the degree in which a high poetical quality is present or wanting there. Critics give themselves great labour to draw out what in the abstract constitutes the characters of a high quality of poetry. It is much

7. "In His will is our peace."—*Paradiso*, iii, 85. [Cf. *Great Books of the Western World* (Ed.)]

better simply to have recourse to concrete examples—to take specimens of poetry of the high, the very highest quality, and to say: The characters of a high quality of poetry are what is expressed *there*. They are far better recognized by being felt in the verse of the master, than by being perused in the prose of the critic. Nevertheless if we are urgently pressed to give some critical account of them, we may safely, perhaps, venture on laying down, not indeed how and why the characters arise, but where and in what they arise. They are in the matter and substance of the poetry, and they are in its manner and style. Both of these, the substance and matter on the one hand, the style and manner on the other, have a mark, an accent, of high beauty, worth, and power. But if we are asked to define this mark and accent in the abstract, our answer must be: No, for we should thereby be darkening the question, not clearing it. The mark and accent are as given by the substance and matter of that poetry, by the style and manner of that poetry, and of all other poetry which is akin to it in quality.

Only one thing we may add as to the substance and matter of poetry, guiding ourselves by Aristotle's profound observation that the superiority of poetry over history consists in its possessing a higher truth and a higher seriousness [*philosophoteron kai spoudaioteron*]. Let us add, therefore, to what we have said, this: that the substance and matter of the best poetry acquire their special character from possessing, in an eminent degree, truth and seriousness. We may add yet further, what is in itself evident, that to the style and manner of the best poetry their special character, their accent, is given by their diction, and, even yet more, by their movement. And though we distinguish between the two characters, the two accents, of superiority, yet they are nevertheless vitally connected one with the other. The superior character of truth and seriousness, in the matter and substance of the best poetry, is inseparable from the superiority of diction and movement marking its style and manner. The two superiorities are closely related, and are in steadfast proportion one to the other. So far as high poetic truth and seriousness are wanting to a poet's matter and substance, so far also, we may be sure, will a high poetic stamp of diction and movement be wanting to his style and manner. In proportion as this high stamp of diction and movement, again, is absent from a poet's style and manner, we shall find, also, that high poetic truth and seriousness are absent from his substance and matter.

So stated, these are but dry generalities; their whole force lies in their application. And I could wish every student of poetry to make the application of them for himself. Made by himself, the application would im-

press itself upon his mind far more deeply than made by me. Neither will my limits allow me to make any full application of the generalities above propounded; but in the hope of bringing out, at any rate, some significance in them, and of establishing an important principle more firmly by their means, I will, in the space which remains to me, follow rapidly from the commencement the course of our English poetry with them in my view.

Once more I return to the early poetry of France, with which our own poetry, in its origins, is indissolubly connected. In the twelfth and thirteenth centuries, that seed-time of all modern language and literature, the poetry of France had a clear predominance in Europe. Of the two divisions of that poetry, its productions in the *langue d'oïl* and its productions in the *langue d'oc*, the poetry of the *langue d'oc*, of southern France, of the troubadours, is of importance because of its effect on Italian literature—the first literature of modern Europe to strike the true and grand note, and to bring forth, as in Dante and Petrarch it brought forth, classics. But the predominance of French poetry in Europe, during the twelfth and thirteenth centuries, is due to its poetry of the *langue d'oïl*, the poetry of northern France and of the tongue which is now the French language. In the twelfth century the bloom of this romance-poetry was earlier and stronger in England, at the court of our Anglo-Norman kings, than in France itself. But it was a bloom of French poetry; and as our native poetry formed itself, it formed itself out of this. The romance-poems which took possession of the heart and imagination of Europe in the twelfth and thirteenth centuries are French; “they are,” as Southey justly says, “the pride of French literature, nor have we anything which can be placed in competition with them.” Themes were supplied from all quarters; but the romance-setting which was common to them all, and which gained the ear of Europe, was French. This constituted for the French poetry, literature, and language, at the height of the Middle Ages, an unchallenged predominance. The Italian Brunetto Latini, the master of Dante, wrote his *Treasure* in French because, he says, “*la parole en est plus délectable et plus commune à toutes gens*” [their speech is more charming and more commonly shared by the whole people]. In the same century, the thirteenth, the French romance-writer, Christian of Troyes, formulates the claims, in chivalry and letters, of France, his native country, as follows:

*Or vous ert par ce livre apris,
Que Gresse ot de chevalerie
Le premier los et de clergie;*

*Puis vint chevalerie à Rome,
 Et de la clergie la some,
 Qui ore est en France venue.
 Diex doinst qu'ele i soit retenue,
 Et que li lius li abelisse
 Tant que de France n'isse
 L'onor qui s'i est arestée!*

Now by this book you will learn that first Greece had the renown for chivalry and letters; then chivalry and the primacy in letters passed to Rome, and now it is come to France. God grant it may be kept there; and that the place may please it so well, that the honour which has come to make stay in France may never depart thence!

Yet it is now all gone, this French romance-poetry, of which the weight of substance and the power of style are not unfairly represented by this extract from Christian of Troyes. Only by means of the historic estimate can we persuade ourselves now to think that any of it is of poetical importance.

But in the fourteenth century there comes an Englishman nourished on this poetry, taught his trade by this poetry, getting words, rhyme, metre from this poetry; for even of that stanza which the Italians used, and which Chaucer derived immediately from the Italians, the basis and suggestion was probably given in France. Chaucer (I have already named him) fascinated his contemporaries, but so too did Christian of Troyes and Wolfram of Eschenbach. Chaucer's power of fascination, however, is enduring; his poetical importance does not need the assistance of the historic estimate; it is real. He is a genuine source of joy and strength, which is flowing still for us and will flow always. He will be read, as time goes on, far more generally than he is read now. His language is a cause of difficulty for us; but so also, and I think in quite as great a degree, is the language of Burns. In Chaucer's case, as in that of Burns, it is a difficulty to be unhesitatingly accepted and overcome.

If we ask ourselves wherein consists the immense superiority of Chaucer's poetry over the romance-poetry—why it is that in passing from this to Chaucer we suddenly feel ourselves to be in another world, we shall find that his superiority is both in the substance of his poetry and in the style of his poetry. His superiority in substance is given by his large, free, simple, clear yet kindly view of human life—so unlike the total want, in the romance-poets, of all intelligent command of it. Chaucer has not their helplessness; he has gained the power to survey the world from a central, a truly human point of view. We have only to call to mind

the Prologue to *The Canterbury Tales*. The right comment upon it is Dryden's: "It is sufficient to say, according to the proverb, that *here is God's plenty*." And again: "He is a perpetual fountain of good sense." It is by a large, free, sound representation of things that poetry, this high criticism of life, has truth of substance; and Chaucer's poetry has truth of substance.

Of his style and manner, if we think first of the romance-poetry and then of Chaucer's divine liquidness of diction, his divine fluidity of movement, it is difficult to speak temperately. They are irresistible, and justify all the rapture with which his successors speak of his "gold dew-drops of speech." Johnson misses the point entirely when he finds fault with Dryden for ascribing to Chaucer the first refinement of our numbers, and says that Gower also can show smooth numbers and easy rhymes. The refinement of our numbers means something far more than this. A nation may have versifiers with smooth numbers and easy rhymes, and yet may have no real poetry at all. Chaucer is the father of our splendid English poetry; he is our "well of English undefiled," because by the lovely charm of his diction, the lovely charm of his movement, he makes an epoch and founds a tradition. In Spenser, Shakespeare, Milton, Keats, we can follow the tradition of the liquid diction, the fluid movement, of Chaucer; at one time it is his liquid diction of which in these poets we feel the virtue, and at another time it is his fluid movement. And the virtue is irresistible.

Bounded as is my space, I must yet find room for an example of Chaucer's virtue, as I have given examples to show the virtue of the great classics. I feel disposed to say that a single line is enough to show the charm of Chaucer's verse; that merely one line like this—

O martyr souted⁸ in virginitee!

has a virtue of manner and movement such as we shall not find in all the verse of romance-poetry; but this is saying nothing. The virtue is such as we shall not find, perhaps, in all English poetry, outside the poets whom I have named as the special inheritors of Chaucer's tradition. A single line, however, is too little if we have not the strain of Chaucer's verse well in our memory; let us take a stanza. It is from *The Prioress's Tale*, the story of the Christian child murdered in a Jewry—

My throte is cut unto my nekke-bone
Saidè this child, and as by way of kinde
I should have deyed, yea, longè time agone;

8. The French *soudé*; soldered, fixed fast.

But Jesu Christ, as ye in bookès finde,
 Will that his glory last and be in minde,
 And for the worship of his mother dere
 Yet may I sing *O Alma* loud and clere.

Wordsworth has modernized this Tale, and to feel how delicate and evanescent is the charm of verse, we have only to read Wordsworth's first three lines of this stanza after Chaucer's—

My throat is cut unto the bone, I trow,
 Said this young child, and by the law of kind
 I should have died, yea, many hours ago.

The charm is departed. It is often said that the power of liquidness and fluidity in Chaucer's verse was dependent upon a free, a licentious dealing with language, such as is now impossible; upon a liberty, such as Burns too enjoyed, of making words like *neck*, *bird*, into a dissyllable by adding to them, and words like *cause*, *rhyme*, into a dissyllable by sounding the *e* mute. It is true that Chaucer's fluidity is conjoined with this liberty, and is admirably served by it; but we ought not to say that it was dependent upon it. It was dependent upon his talent. Other poets with a like liberty do not attain to the fluidity of Chaucer; Burns himself does not attain to it. Poets, again, who have a talent akin to Chaucer's, such as Shakespeare or Keats, have known how to attain to his fluidity without the like liberty.

And yet Chaucer is not one of the great classics. His poetry transcends and effaces, easily and without effort, all the romance-poetry of Catholic Christendom; it transcends and effaces all the English poetry contemporary with it, it transcends and effaces all the English poetry subsequent to it down to the age of Elizabeth. Of such avail is poetic truth of substance, in its natural and necessary union with poetic truth of style. And yet, I say, Chaucer is not one of the great classics. He has not their accent. What is wanting to him is suggested by the mere mention of the name of the first great classic of Christendom, the immortal poet who died eighty years before Chaucer—Dante. The accent of such verse as

In la sua volontade è nostra pace . . .

is altogether beyond Chaucer's reach; we praise him, but we feel that this accent is out of the question for him. It may be said that it was necessarily out of the reach of any poet in the England of that stage of growth. Possibly; but we are to adopt a real, not a historic, estimate of poetry. However we may account for its absence, something is wanting, then, to the poetry of Chaucer, which poetry must have before it can be placed

in the glorious class of the best. And there is no doubt what that something is. It is the *σπουδαίότης* [*spoudaiotes*; seriousness] the high and excellent seriousness, which Aristotle assigns as one of the grand virtues of poetry. The substance of Chaucer's poetry, his view of things and his criticism of life, has largeness, freedom, shrewdness, benignity; but it has not this high seriousness. Homer's criticism of life has it, Dante's has it, Shakespeare's has it. It is this chiefly which gives to our spirits what they can rest upon; and with the increasing demands of our modern ages upon poetry, this virtue of giving us what we can rest upon will be more and more highly esteemed. A voice from the slums of Paris, fifty or sixty years after Chaucer, the voice of poor Villon out of his life of riot and crime, has at its happy moments (as, for instance, in the last stanza of "La Belle Heaulmière"⁹) more of this important poetic virtue of seriousness than all the productions of Chaucer. But its apparition in Villon, and in men like Villon, is fitful; the greatness of the great poets, the power of their criticism of life, is that their virtue is sustained.

To our praise, therefore, of Chaucer as a poet there must be this limitation; he lacks the high seriousness of the great classics, and therewith an important part of their virtue. Still, the main fact for us to bear in mind about Chaucer is his sterling value according to that real estimate which we firmly adopt for all poets. He has poetic truth of substance, though he has not high poetic seriousness, and corresponding to his truth of substance he has an exquisite virtue of style and manner. With him is born our real poetry.

For my present purpose I need not dwell on our Elizabethan poetry, or on the continuation and close of this poetry in Milton. We all of us profess to be agreed in the estimate of this poetry; we all of us recognize

9. The name *Heaulmière* is said to be derived from a headdress (helm) worn as a mark by courtesans. In Villon's ballad, a poor old creature of this class laments her days of youth and beauty. The last stanza of the ballad runs thus—

*Ainsi le bon temps regretons
Entre nous, pauvres vieilles sottes,
Assises bas, à croppetons,
Tout en un tas comme pelottes;
A petit feu de chenevottes
Tost allumées, tost estainctes.
Et jadis fusmes si mignottes!
Ainsi en prend à maintz et maintes.*

Thus amongst ourselves we regret the good time, poor silly old things, low-seated on our heels, all in a heap like so many balls; by a little fire of hemp-stalks, soon lighted, soon spent. And once we were such darlings! So fares it with many and many a one.

it as great poetry, our greatest, and Shakespeare and Milton as our poetical classics. The real estimate, here, has universal currency. With the next age of our poetry divergency and difficulty begin. An historic estimate of that poetry has established itself; and the question is, whether it will be found to coincide with the real estimate.

The age of Dryden, together with our whole eighteenth century which followed it, sincerely believed itself to have produced poetical classics of its own, and even to have made advance, in poetry, beyond all its predecessors. Dryden regards as not seriously disputable the opinion "that the sweetness of English verse was never understood or practised by our fathers." Cowley could see nothing at all in Chaucer's poetry. Dryden heartily admired it, and, as we have seen, praised its matter admirably; but of its exquisite manner and movement all he can find to say is that "there is the rude sweetness of a Scotch tune in it, which is natural and pleasing, though not perfect." Addison, wishing to praise Chaucer's numbers, compares them with Dryden's own. And all through the eighteenth century, and down even into our own times, the stereotyped phrase of approbation for good verse found in our early poetry has been, that it even approached the verse of Dryden, Addison, Pope, and Johnson.

Are Dryden and Pope poetical classics? Is the historic estimate, which represents them as such, and which has been so long established that it cannot easily give way, the real estimate? Wordsworth and Coleridge, as is well known, denied it; but the authority of Wordsworth and Coleridge does not weigh much with the young generation, and there are many signs to show that the eighteenth century and its judgments are coming into favour again. Are the favourite poets of the eighteenth century classics?

It is impossible within my present limits to discuss the question fully. And what man of letters would not shrink from seeming to dispose dictatorially of the claims of two men who are, at any rate, such masters in letters as Dryden and Pope; two men of such admirable talent, both of them, and one of them, Dryden, a man, on all sides, of such energetic and genial power? And yet, if we are to gain the full benefit from poetry, we must have the real estimate of it. I cast about for some mode of arriving, in the present case, at such an estimate without offence. And perhaps the best way is to begin, as it is easy to begin, with cordial praise.

When we find Chapman, the Elizabethan translator of Homer, expressing himself in his preface thus: "Though truth in her very nakedness sits in so deep a pit, that from Gades to Aurora and Ganges few eyes can sound her, I hope yet those few here will so discover and confirm that, the date

being out of her darkness in this morning of our poet, he shall now gird his temples with the sun," we pronounce that such a prose is intolerable. When we find Milton writing: "And long it was not after, when I was confirmed in this opinion, that he, who would not be frustrate of his hope to write well hereafter in laudable things, ought himself to be a true poem," we pronounce that such a prose has its own grandeur, but that it is obsolete and inconvenient. But when we find Dryden telling us: "What Virgil wrote in the vigour of his age, in plenty and at ease, I have undertaken to translate in my declining years; struggling with wants, oppressed with sickness, curbed in my genius, liable to be misconstrued in all I write," then we exclaim that here at last we have the true English prose, a prose such as we would all gladly use if we only knew how. Yet Dryden was Milton's contemporary.

But after the Restoration the time had come when our nation felt the imperious need of a fit prose. So, too, the time had likewise come when our nation felt the imperious need of freeing itself from the absorbing preoccupation which religion in the Puritan age had exercised. It was impossible that this freedom should be brought about without some negative excess, without some neglect and impairment of the religious life of the soul; and the spiritual history of the eighteenth century shows us that the freedom was not achieved without them. Still, the freedom was achieved; the preoccupation, an undoubtedly baneful and retarding one if it had continued, was got rid of. And as with religion amongst us at that period, so it was also with letters. A fit prose was a necessity; but it was impossible that a fit prose should establish itself amongst us without some touch of frost to the imaginative life of the soul. The needful qualities for a fit prose are regularity, uniformity, precision, balance. The men of letters, whose destiny it may be to bring their nation to the attainment of a fit prose, must of necessity, whether they work in prose or in verse, give a predominating, an almost exclusive attention to the qualities of regularity, uniformity, precision, balance. But an almost exclusive attention to these qualities involves some repression and silencing of poetry.

We are to regard Dryden as the puissant and glorious founder, Pope as the splendid high priest, of our age of prose and reason, of our excellent and indispensable eighteenth century. For the purposes of their mission and destiny their poetry, like their prose, is admirable. Do you ask me whether Dryden's verse, take it almost where you will, is not good?

A milk-white Hind, immortal and unchanged,
Fed on the lawns and in the forest ranged.

I answer: Admirable for the purposes of the inaugurator of an age of prose and reason. Do you ask me whether Pope's verse, take it almost where you will, is not good?

To Hounslow Heath I point, and Banstead Down;
Thence comes your mutton, and these chicks my own.

I answer: Admirable for the purposes of the high priest of an age of prose and reason. But do you ask me whether such verse proceeds from men with an adequate poetic criticism of life, from men whose criticism of life has a high seriousness, or even, without that high seriousness, has poetic largeness, freedom, insight, benignity? Do you ask me whether the application of ideas to life in the verse of these men, often a powerful application, no doubt, is a powerful *poetic* application? Do you ask me whether the poetry of these men has either the matter or the inseparable manner of such an adequate poetic criticism; whether it has the accent of

Absent thee from felicity awhile . . .

or of

And what is else not to be overcome . . .

or of

O martyr sould in virginitee!

I answer: It has not and cannot have them; it is the poetry of the builders of an age of prose and reason. Though they may write in verse, though they may in a certain sense be masters of the art of versification, Dryden and Pope are not classics of our poetry, they are classics of our prose.

Gray is our poetical classic of that literature and age; the position of Gray is singular, and demands a word of notice here. He has not the volume or the power of poets who, coming in times more favourable, have attained to an independent criticism of life. But he lived with the great poets, he lived, above all, with the Greeks, through perpetually studying and enjoying them; and he caught their poetic point of view for regarding life, caught their poetic manner. The point of view and the manner are not self-sprung in him, he caught them of others; and he had not the free and abundant use of them. But whereas Addison and Pope never had the use of them, Gray had the use of them at times. He is the scantiest and frailest of classics in our poetry, but he is a classic.

And now, after Gray, we are met, as we draw towards the end of the eighteenth century, we are met by the great name of Burns. We enter

now on times where the personal estimate of poets begins to be rife, and where the real estimate of them is not reached without difficulty. But in spite of the disturbing pressures of personal partiality, of national partiality, let us try to reach a real estimate of the poetry of Burns.

By his English poetry Burns in general belongs to the eighteenth century, and has little importance for us.

Mark ruffian Violence, distain'd with crimes,
Rousing elate in these degenerate times;
View unsuspecting Innocence a prey,
As guileful Fraud points out the erring way;
While subtle Litigation's pliant tongue
The life-blood equal sucks of Right and Wrong!

Evidently this is not the real Burns, or his name and fame would have disappeared long ago. Nor is Clarinda's love-poet, Sylvander, the real Burns either. But he tells us himself: "These English songs gravel me to death. I have not the command of the language that I have of my native tongue. In fact, I think that my ideas are more barren in English than in Scotch. I have been at 'Duncan Gray' to dress it in English, but all I can do is desperately stupid." We English turn naturally, in Burns, to the poems in our own language, because we can read them easily; but in those poems we have not the real Burns.

The real Burns is of course in his Scotch poems. Let us boldly say that of much of this poetry, a poetry dealing perpetually with Scotch drink, Scotch religion, and Scotch manners, a Scotchman's estimate is apt to be personal. A Scotchman is used to this world of Scotch drink, Scotch religion, and Scotch manners; he has a tenderness for it; he meets its poet half-way. In this tender mood he reads pieces like the "Holy Fair" or "Halloween." But this world of Scotch drink, Scotch religion, and Scotch manners is against a poet, not for him, when it is not a partial countryman who reads him; for in itself it is not a beautiful world, and no one can deny that it is of advantage to a poet to deal with a beautiful world. Burns's world of Scotch drink, Scotch religion, and Scotch manners is often a harsh, a sordid, a repulsive world; even the world of his "Cotter's Saturday Night" is not a beautiful world. No doubt a poet's criticism of life may have such truth and power that it triumphs over its world and delights us. Burns may triumph over his world, often he does triumph over his world, but let us observe how and where. Burns is the first case we have had where the bias of the personal estimate tends to mislead; let us look at him closely, he can bear it.

Many of his admirers will tell us that we have Burns, convivial, genuine, delightful, here—

Leeze me on drink! it gies us mair
 Than either school or college;
 It kindles wit, it waukens lair,
 It pangs us fou o' knowledge.
 Be 't whisky gill or penny wheep
 Or ony stronger potion,
 It never fails, on drinking deep,
 To kittle up our notion
 By night or day.

There is a great deal of that sort of thing in Burns, and it is unsatisfactory, not because it is bacchanalian poetry, but because it has not that accent of sincerity which bacchanalian poetry, to do it justice, very often has. There is something in it of bravado, something which makes us feel that we have not the man speaking to us with his real voice; something, therefore, poetically unsound.

With still more confidence will his admirers tell us that we have the genuine Burns, the great poet, when his strain asserts the independence, equality, dignity, of men, as in the famous song "For a' that and a' that"—

A prince can mak' a belted knight,
 A marquis, duke, and a' that;
 But an honest man's aboon his might,
 Guid faith he mauna fa' that!
 For a' that, and a' that,
 Their dignities, and a' that,
 The pith o' sense, and pride o' worth,
 Are higher rank than a' that.

Here they find his grand, genuine touches; and still more, when this puissant genius, who so often set morality at defiance, falls moralizing—

The sacred lowe o' weel-placed love
 Luxuriantly indulge it;
 But never tempt th' illicit rove,
 Tho' naething should divulge it.
 I waive the quantum o' the sin,
 The hazard o' concealing,
 But och! it hardens a' within,
 And petrifies the feeling.

Or in a higher strain—

Who made the heart, 'tis He alone
 Decidedly can try us;
 He knows each chord, its various tone;
 Each spring, its various bias.
 Then at the balance let's be mute,
 We never can adjust it;
 What's *done* we partly may compute,
 But know not what's resisted.

Or in a better strain yet, a strain, his admirers will say, unsurpassable—

To make a happy fireside clime
 To weans and wife,
 That's the true pathos and sublime
 Of human life.

There is a criticism of life for you, the admirers of Burns will say to us; there is the application of ideas to life! There is, undoubtedly. The doctrine of the last-quoted lines coincides almost exactly with what was the aim and end, Xenophon tells us, of all the teaching of Socrates. And the application is a powerful one; made by a man of vigorous understanding, and (need I say?) a master of language.

But for supreme poetical success more is required than the powerful application of ideas to life; it must be an application under the conditions fixed by the laws of poetic truth and poetic beauty. Those laws fix as an essential condition, in the poet's treatment of such matters as are here in question, high seriousness—the high seriousness which comes from absolute sincerity. The accent of high seriousness, born of absolute sincerity, is what gives to such verse as

In la sua volontade è nostra pace . . .

to such criticism of life as Dante's, its power. Is this accent felt in the passages which I have been quoting from Burns? Surely not; surely, if our sense is quick, we must perceive that we have not in those passages a voice from the very inmost soul of the genuine Burns; he is not speaking to us from these depths, he is more or less preaching. And the compensation for admiring such passages less, from missing the perfect poetic accent in them, will be that we shall admire more the poetry where that accent is found.

No; Burns, like Chaucer, comes short of the high seriousness of the great classics, and the virtue of matter and manner which goes with that high seriousness is wanting to his work. At moments he touches it in a pro-

found and passionate melancholy, as in those four immortal lines taken by Byron as a motto for *The Bride of Abydos*, but which have in them a depth of poetic quality such as resides in no verse of Byron's own—

Had we never loved sae kindly,
 Had we never loved sae blindly,
 Never met, or never parted,
 We had ne'er been broken-hearted.

But a whole poem of that quality Burns cannot make; the rest, in the "Farewell to Nancy," is verbiage.

We arrive best at the real estimate of Burns, I think, by conceiving his work as having truth of matter and truth of manner, but not the accent or the poetic virtue of the highest masters. His genuine criticism of life, when the sheer poet in him speaks, is ironic; it is not—

Thou Power Supreme, whose mighty scheme
 These woes of mine fulfil,
 Here firm I rest, they must be best
 Because they are Thy will!

It is far rather: "Whistle owre the lave o't!" Yet we may say of him as of Chaucer, that of life and the world, as they come before him, his view is large, free, shrewd, benignant—truly poetic, therefore; and his manner of rendering what he sees is to match. But we must note, at the same time, his great difference from Chaucer. The freedom of Chaucer is heightened, in Burns, by a fiery, reckless energy; the benignity of Chaucer deepens, in Burns, into an overwhelming sense of the pathos of things—of the pathos of human nature, the pathos, also, of non-human nature. Instead of the fluidity of Chaucer's manner, the manner of Burns has spring, bounding swiftness. Burns is by far the greater force, though he has perhaps less charm. The world of Chaucer is fairer, richer, more significant than that of Burns; but when the largeness and freedom of Burns get full sweep, as in *Tam o' Shanter*, or still more in that puissant and splendid production, *The Jolly Beggars*, his world may be what it will, his poetic genius triumphs over it. In the world of *The Jolly Beggars* there is more than hideousness and squalor, there is bestiality; yet the piece is a superb poetic success. It has a breadth, truth, and power which make the famous scene in Auerbach's Cellar, of Goethe's *Faust*, seem artificial and tame beside it, and which are only matched by Shakespeare and Aristophanes.

Here, where his largeness and freedom serve him so admirably, and also in those poems and songs where to shrewdness he adds infinite arch-

ness and wit, and to benignity infinite pathos, where his manner is flawless, and a perfect poetic whole is the result—in things like the address to the mouse whose home he had ruined, in things like “Duncan Gray,” “Tam Glen,” “Whistle and I’ll come to you my Lad,” “Auld Lang Syne” (this list might be made much longer)—here we have the genuine Burns, of whom the real estimate must be high indeed. Not a classic, nor with the excellent *σπουδαιότης* [spoudaiotes] of the great classics, nor with a verse rising to a criticism of life and a virtue like theirs; but a poet with thorough truth of substance and an answering truth of style, giving us a poetry sound to the core. We all of us have a leaning towards the pathetic, and may be inclined perhaps to prize Burns most for his touches of piercing, sometimes almost intolerable, pathos; for verse like—

We twa hae paidl’t i’ the burn
 From mornin’ sun till dine;
 But seas between us braid hae roar’d
 Sin auld lang syne . . .

where he is as lovely as he is sound. But perhaps it is by the perfection of soundness of his lighter and archer masterpieces that he is poetically most wholesome for us. For the votary misled by a personal estimate of Shelley, as so many of us have been, are, and will be—of that beautiful spirit building his many-coloured haze of words and images

Pinnacled dim in the intense inane—

no contact can be wholesomer than the contact with Burns at his archest and soundest. Side by side with the

On the brink of the night and the morning
 My coursers are wont to respire,
 But the Earth has just whispered a warning
 That their flight must be swifter than fire . . .

of *Prometheus Unbound*, how salutary, how very salutary, to place this from “Tam Glen”—

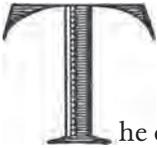

My minnie does constantly deave me
 And bids me beware o’ young men;
 They flatter, she says, to deceive me;
 But wha can think sae o’ Tam Glen?

But we enter on burning ground as we approach the poetry of times so near to us—poetry like that of Byron, Shelley, and Wordsworth—of which the estimates are so often not only personal, but personal with

passion. For my purpose, it is enough to have taken the single case of Burns, the first poet we come to of whose work the estimate formed is evidently apt to be personal, and to have suggested how we may proceed, using the poetry of the great classics as a sort of touchstone, to correct this estimate, as we had previously corrected by the same means the historic estimate where we met with it. A collection like the present, with its succession of celebrated names and celebrated poems, offers a good opportunity to us for resolutely endeavouring to make our estimates of poetry real. I have sought to point out a method which will help us in making them so, and to exhibit it in use so far as to put any one who likes in a way of applying it for himself.

At any rate the end to which the method and the estimate are designed to lead, and from leading to which, if they do lead to it, they get their whole value—the benefit of being able clearly to feel and deeply to enjoy the best, the truly classic, in poetry—is an end, let me say it once more at parting, of supreme importance. We are often told that an era is opening in which we are to see multitudes of a common sort of readers, and masses of a common sort of literature; that such readers do not want and could not relish anything better than such literature, and that to provide it is becoming a vast and profitable industry. Even if good literature entirely lost currency with the world, it would still be abundantly worth-while to continue to enjoy it by oneself. But it never will lose currency with the world, in spite of momentary appearances; it never will lose supremacy. Currency and supremacy are insured to it, not indeed by the world's delicate and conscious choice, but by something far deeper—by the instinct of self-preservation in humanity.

Sweetness and Light

he disparagers of culture make its motive curiosity; sometimes, indeed, they make its motive mere exclusiveness and vanity. The culture which is supposed to plume itself on a smattering of Greek and Latin is a culture which is begotten by nothing so intellectual as curiosity; it is valued either out of sheer vanity and ignorance, or else as an engine of social and class distinction, separating its holder, like a badge or title, from other people who have not got it. No serious man would call this *culture*, or attach any value to it, as culture, at all. To find the real ground for the very differing estimate which serious people will set upon culture, we must find some motive for culture in the terms of which may lie a real ambiguity; and such a motive the word *curiosity* gives us.

I have before now pointed out that we English do not, like the foreigners, use this word in a good sense as well as in a bad sense. With us the word is always used in a somewhat disapproving sense. A liberal and intelligent eagerness about the things of the mind may be meant by a foreigner when he speaks of curiosity, but with us the word always conveys a certain notion of frivolous and unedifying activity. In the *Quarterly Review*, some little time ago, was an estimate of the celebrated French critic, M. Sainte-Beuve, and a very inadequate estimate it in my judgment was. And its inadequacy consisted chiefly in this: that in our English way it left out of sight the double sense really involved in the word *curiosity*, thinking enough was said to stamp M. Sainte-Beuve with blame if it was said that he was impelled in his operations as a critic by curiosity, and omitting either to perceive that M. Sainte-Beuve himself, and many other people with him, would consider that this was praiseworthy and not blameworthy, or to point out why it ought really to be accounted worthy of blame and not of praise. For as there is a curiosity about intellectual matters which is futile, and merely a disease, so there

is certainly a curiosity—a desire after the things of the mind simply for their own sakes and for the pleasure of seeing them as they are—which is, in an intelligent being, natural and laudable. Nay, and the very desire to see things as they are implies a balance and regulation of mind which is not often attained without fruitful effort, and which is the very opposite of the blind and diseased impulse of mind which is what we mean to blame when we blame curiosity. Montesquieu says: “The first motive which ought to impel us to study is the desire to augment the excellence of our nature, and to render an intelligent being yet more intelligent.” This is the true ground to assign for the genuine scientific passion, however manifested, and for culture, viewed simply as a fruit of this passion; and it is a worthy ground, even though we let the term *curiosity* stand to describe it.

But there is of culture another view, in which not solely the scientific passion, the sheer desire to see things as they are, natural and proper in an intelligent being, appears as the ground of it. There is a view in which all the love of our neighbour, the impulses towards action, help, and beneficence, the desire for removing human error, clearing human confusion, and diminishing human misery, the noble aspiration to leave the world better and happier than we found it—motives eminently such as are called social—come in as part of the grounds of culture, and the main and pre-eminent part. Culture is then properly described not as having its origin in curiosity, but as having its origin in the love of perfection; it is *a study of perfection*. It moves by the force, not merely or primarily of the scientific passion for pure knowledge, but also of the moral and social passion for doing good. As, in the first view of it, we took for its worthy motto Montesquieu’s words: “To render an intelligent being yet more intelligent!” so, in the second view of it, there is no better motto which it can have than these words of Bishop Wilson: “To make reason and the will of God prevail!”

Only, whereas the passion for doing good is apt to be over-hasty in determining what reason and the will of God say, because its turn is for acting rather than thinking, and it wants to be beginning to act; and whereas it is apt to take its own conceptions, which proceed from its own state of development and share in all the imperfections and immaturities of this, for a basis of action; what distinguishes culture is that it is possessed by the scientific passion as well as by the passion of doing good; that it demands worthy notions of reason and the will of God, and does not readily suffer its own crude conceptions to substitute themselves for them. And knowing that no action or institution can be salutary and

stable which is not based on reason and the will of God, it is not so bent on acting and instituting, even with the great aim of diminishing human error and misery ever before its thoughts, but that it can remember that acting and instituting are of little use, unless we know how and what we ought to act and to institute.

This culture is more interesting and more far-reaching than that other, which is founded solely on the scientific passion for knowing. But it needs times of faith and ardour, times when the intellectual horizon is opening and widening all round us, to flourish in. And is not the close and bounded intellectual horizon within which we have long lived and moved now lifting up, and are not new lights finding free passage to shine in upon us? For a long time there was no passage for them to make their way in upon us, and then it was of no use to think of adapting the world's action to them. Where was the hope of making reason and the will of God prevail among people who had a routine which they had christened reason and the will of God, in which they were inextricably bound, and beyond which they had no power of looking? But now the iron force of adhesion to the old routine—social, political, religious—has wonderfully yielded; the iron force of exclusion of all which is new has wonderfully yielded. The danger now is, not that people should obstinately refuse to allow anything but their old routine to pass for reason and the will of God, but either that they should allow some novelty or other to pass for these too easily, or else that they should underrate the importance of them altogether, and think it enough to follow action for its own sake, without troubling themselves to make reason and the will of God prevail therein. Now, then, is the moment for culture to be of service, culture which believes in making reason and the will of God prevail, believes in perfection, is the study and pursuit of perfection, and is no longer debarred, by a rigid invincible exclusion of whatever is new, from getting acceptance for its ideas, simply because they are new.

The moment this view of culture is seized, the moment it is regarded not solely as the endeavour to see things as they are, to draw towards a knowledge of the universal order which seems to be intended and aimed at in the world, and which it is a man's happiness to go along with or his misery to go counter to—to learn, in short, the will of God—the moment, I say, culture is considered not merely as the endeavour to *see* and *learn* this, but as the endeavour, also, to make it *prevail*, the moral, social, and beneficent character of culture becomes manifest. The mere endeavour to see and learn the truth for our own personal satisfaction is indeed

a commencement for making it prevail, a preparing the way for this, which always serves this, and is wrongly, therefore, stamped with blame absolutely in itself and not only in its caricature and degeneration. But perhaps it has got stamped with blame, and disparaged with the dubious title of curiosity, because in comparison with this wider endeavour of such great and plain utility it looks selfish, petty, and unprofitable.

And religion, the greatest and most important of the efforts by which the human race has manifested its impulse to perfect itself—religion, that voice of the deepest human experience—does not only enjoin and sanction the aim which is the great aim of culture, the aim of setting ourselves to ascertain what perfection is and to make it prevail; but also, in determining generally in what human perfection consists, religion comes to a conclusion identical with that which culture—culture seeking the determination of this question through *all* the voices of human experience which have been heard upon it, of art, science, poetry, philosophy, history, as well as of religion, in order to give a greater fullness and certainty to its solution—likewise reaches. Religion says: *The kingdom of God is within you*; and culture, in like manner, places human perfection in an *internal* condition, in the growth and predominance of our humanity proper, as distinguished from our animality. It places it in the ever-increasing efficacy and in the general harmonious expansion of those gifts of thought and feeling which make the peculiar dignity, wealth, and happiness of human nature. As I have said on a former occasion: “It is in making endless additions to itself, in the endless expansion of its powers, in endless growth in wisdom and beauty, that the spirit of the human race finds its ideal. To reach this ideal, culture is an indispensable aid, and that is the true value of culture.” Not a having and a resting, but a growing and a becoming, is the character of perfection as culture conceives it; and here, too, it coincides with religion.

And because men are all members of one great whole, and the sympathy which is in human nature will not allow one member to be indifferent to the rest or to have a perfect welfare independent of the rest, the expansion of our humanity, to suit the idea of perfection which culture forms, must be a *general* expansion. Perfection, as culture conceives it, is not possible while the individual remains isolated. The individual is required, under pain of being stunted and enfeebled in his own development if he disobeys, to carry others along with him in his march towards perfection, to be continually doing all he can to enlarge and increase the volume of the human stream sweeping thitherward. And here, once

more, culture lays on us the same obligation as religion, which says, as Bishop Wilson has admirably put it, that "to promote the kingdom of God is to increase and hasten one's own happiness."

But, finally, perfection—as culture, from a thorough disinterested study of human nature and human experience learns to conceive it—is a harmonious expansion of *all* the powers which make the beauty and worth of human nature, and is not consistent with the over-development of any one power at the expense of the rest. Here culture goes beyond religion, as religion is generally conceived by us.

If culture, then, is a study of perfection, and of harmonious perfection, general perfection, and perfection which consists in becoming something rather than in having something, in an inward condition of the mind and spirit, not in an outward set of circumstances, it is clear that culture, instead of being the frivolous and useless thing which Mr. Bright, and Mr. Frederic Harrison, and many other Liberals are apt to call it, has a very important function to fulfil for mankind. And this function is particularly important in our modern world, of which the whole civilization is, to a much greater degree than the civilization of Greece and Rome, mechanical and external, and tends constantly to become more so. But above all in our own country has culture a weighty part to perform, because here that mechanical character, which civilization tends to take everywhere, is shown in the most eminent degree. Indeed nearly all the characters of perfection, as culture teaches us to fix them, meet in this country with some powerful tendency which thwarts them and sets them at defiance. The idea of perfection as an *inward* condition of the mind and spirit is at variance with the mechanical and material civilization in esteem with us, and nowhere, as I have said, so much in esteem as with us. The idea of perfection as a *general* expansion of the human family is at variance with our strong individualism, our hatred of all limits to the unrestrained swing of the individual's personality, our maxim of "every man for himself." Above all the idea of perfection as a *harmonious* expansion of human nature is at variance with our want of flexibility, with our inaptitude for seeing more than one side of a thing, with our intense energetic absorption in the particular pursuit we happen to be following. So culture has a rough task to achieve in this country. Its preachers have, and are likely long to have, a hard time of it, and they will much oftener be regarded, for a great while to come, as elegant or spurious Jeremiahs, than as friends and benefactors. That, however, will not prevent their doing in the end good service if they persevere. And meanwhile, the mode of action they have to pursue, and the sort of habits they

must fight against, ought to be made quite clear for every one to see who may be willing to look at the matter attentively and dispassionately.

Faith in machinery is, I said, our besetting danger; often in machinery most absurdly disproportioned to the end which this machinery, if it is to do any good at all, is to serve; but always in machinery, as if it had a value in and for itself. What is freedom but machinery? What is population but machinery? What is coal but machinery? What are railroads but machinery? What is wealth but machinery? What are, even, religious organizations but machinery? Now almost every voice in England is accustomed to speak of these things as if they were precious ends in themselves, and therefore had some of the characters of perfection indisputably joined to them. I have before now noticed Mr. Roebuck's stock argument for proving the greatness and happiness of England as she is, and for quite stopping the mouths of all gainsayers. Mr. Roebuck is never weary of reiterating this argument of his, so I do not know why I should be weary of noticing it. "May not every man in England say what he likes?" Mr. Roebuck perpetually asks; and that, he thinks, is quite sufficient, and when every man may say what he likes, our aspirations ought to be satisfied. But the aspirations of culture, which is the study of perfection, are not satisfied, unless what men say, when they may say what they like, is worth saying—has good in it, and more good than bad. In the same way the *Times*, replying to some foreign strictures on the dress, looks, and behaviour of the English abroad, urges that the English ideal is that every one should be free to do and to look just as he likes. But culture indefatigably tries, not to make what each raw person may like, the rule by which he fashions himself; but to draw ever nearer to a sense of what is indeed beautiful, graceful, and becoming, and to get the raw person to like that.

And in the same way with respect to railroads and coal. Every one must have observed the strange language current during the late discussions as to the possible failure of our supplies of coal. Our coal, thousands of people were saying, is the real basis of our national greatness; if our coal runs short, there is an end of the greatness of England. But what *is* greatness?—culture makes us ask. Greatness is a spiritual condition worthy to excite love, interest, and admiration; and the outward proof of possessing greatness is that we excite love, interest, and admiration. If England were swallowed up by the sea to-morrow, which of the two, a hundred years hence, would most excite the love, interest, and admiration of mankind—would most, therefore, show the evidences of having possessed greatness—the England of the last twenty years, or the Eng-

land of Elizabeth, of a time of splendid spiritual effort, but when our coal, and our industrial operations depending on coal, were very little developed? Well, then, what an unsound habit of mind it must be which makes us talk of things like coal or iron as constituting the greatness of England, and how salutary a friend is culture, bent on seeing things as they are, and thus dissipating delusions of this kind and fixing standards of perfection that are real!

Wealth, again, that end to which our prodigious works for material advantage are directed—the commonest of commonplaces tells us how men are always apt to regard wealth as a precious end in itself; and certainly they have never been so apt thus to regard it as they are in England at the present time. Never did people believe anything more firmly, than nine Englishmen out of ten at the present day believe that our greatness and welfare are proved by our being so very rich. Now, the use of culture is that it helps us, by means of its spiritual standard of perfection, to regard wealth as but machinery, and not only to say as a matter of words that we regard wealth as but machinery, but really to perceive and feel that it is so. If it were not for this purging effect wrought upon our minds by culture, the whole world, the future as well as the present, would inevitably belong to the Philistines. The people who believe most that our greatness and welfare are proved by our being very rich, and who most give their lives and thoughts to becoming rich, are just the very people whom we call Philistines. Culture says: “Consider these people, then, their way of life, their habits, their manners, the very tones of their voice; look at them attentively; observe the literature they read, the things which give them pleasure, the words which come forth out of their mouths, the thoughts which make the furniture of their minds; would any amount of wealth be worth having with the condition that one was to become just like these people by having it?” And thus culture begets a dissatisfaction which is of the highest possible value in stemming the common tide of men’s thoughts in a wealthy and industrial community, and which saves the future, as one may hope, from being vulgarized, even if it cannot save the present.

Population, again, and bodily health and vigour, are things which are nowhere treated in such an unintelligent, misleading, exaggerated way as in England. Both are really machinery; yet how many people all around us do we see rest in them and fail to look beyond them! Why, one has heard people, fresh from reading certain articles of the *Times* on the Registrar-General’s returns of marriages and births in this country, who would talk of our large English families in quite a solemn strain, as if they

had something in itself beautiful, elevating, and meritorious in them; as if the British Philistine would have only to present himself before the Great Judge with his twelve children, in order to be received among the sheep as a matter of right!

But bodily health and vigour, it may be said, are not to be classed with wealth and population as mere machinery; they have a more real and essential value. True; but only as they are more intimately connected with a perfect spiritual condition than wealth or population are. The moment we disjoin them from the idea of a perfect spiritual condition, and pursue them, as we do pursue them, for their own sake and as ends in themselves, our worship of them becomes as mere worship of machinery, as our worship of wealth or population, and as unintelligent and vulgarizing a worship as that is. Every one with anything like an adequate idea of human perfection has distinctly marked this subordination to higher and spiritual ends of the cultivation of bodily vigour and activity. "Bodily exercise profiteth little; but godliness is profitable unto all things," says the author of the Epistle to Timothy. And the utilitarian Franklin says just as explicitly: "Eat and drink such an exact quantity as suits the constitution of thy body, *in reference to the services of the mind.*" But the point of view of culture, keeping the mark of human perfection simply and broadly in view, and not assigning to this perfection, as religion or utilitarianism assign to it, a special and limited character—this point of view, I say, of culture is best given by these words of Epictetus: "It is a sign of *aphuia*," says he, that is, of a nature not finely tempered, "to give yourselves up to things which relate to the body; to make, for instance, a great fuss about exercise, a great fuss about eating, a great fuss about drinking, a great fuss about walking, a great fuss about riding. All these things ought to be done merely by the way: the formation of the spirit and character must be our real concern." This is admirable; and, indeed, the Greek word *euphuia*, a finely tempered nature, gives exactly the notion of perfection as culture brings us to conceive it: a harmonious perfection, a perfection in which the characters of beauty and intelligence are both present, which unites "the two noblest of things," as Swift, who of one of the two, at any rate, had himself all too little, most happily calls them in his *Battle of the Books*, "the two noblest of things, *sweetness and light.*" The *euphuēs* is the man who tends towards sweetness and light; the *aphuēs*, on the other hand, is our Philistine. The immense spiritual significance of the Greeks is due to their having been inspired with this central and happy idea of the essential character of human perfection; and Mr. Bright's misconception of culture, as a

smattering of Greek and Latin, comes itself, after all, from this wonderful significance of the Greeks having affected the very machinery of our education, and is in itself a kind of homage to it.

In thus making sweetness and light to be characters of perfection, culture is of like spirit with poetry, follows one law with poetry. Far more than on our freedom, our population, and our industrialism, many amongst us rely upon our religious organizations to save us. I have called religion a yet more important manifestation of human nature than poetry, because it has worked on a broader scale for perfection, and with greater masses of men. But the idea of beauty and of a human nature perfect on all its sides, which is the dominant idea of poetry, is a true and invaluable idea, though it has not yet had the success that the idea of conquering the obvious faults of our animality, and of a human nature perfect on the moral side—which is the dominant idea of religion—has been enabled to have; and it is destined, adding to itself the religious idea of a devout energy, to transform and govern the other.

The best art and poetry of the Greeks, in which religion and poetry are one, in which the idea of beauty and of a human nature perfect on all sides adds to itself a religious and devout energy, and works in the strength of that, is on this account of such surpassing interest and instructiveness for us, though it was—as, having regard to the human race in general, and, indeed, having regard to the Greeks themselves, we must own—a premature attempt, an attempt which for success needed the moral and religious fibre in humanity to be more braced and developed than it had yet been. But Greece did not err in having the idea of beauty, harmony, and complete human perfection, so present and paramount. It is impossible to have this idea too present and paramount; only, the moral fibre must be braced too. And we, because we have braced the moral fibre, are not on that account in the right way, if at the same time the idea of beauty, harmony, and complete human perfection is wanting or misapprehended amongst us; and evidently it *is* wanting or misapprehended at present. And when we rely as we do on our religious organizations, which in themselves do not and cannot give us this idea, and think we have done enough if we make them spread and prevail, then, I say, we fall into our common fault of overvaluing machinery.

Nothing is more common than for people to confound the inward peace and satisfaction which follows the subduing of the obvious faults of our animality with what I may call absolute inward peace and satisfaction—the peace and satisfaction which are reached as we draw near to complete spiritual perfection, and not merely to moral perfection, or rather

to relative moral perfection. No people in the world have done more and struggled more to attain this relative moral perfection than our English race has. For no people in the world has the command to *resist the devil*, to *overcome the wicked one*, in the nearest and most obvious sense of those words, had such a pressing force and reality. And we have had our reward, not only in the great worldly prosperity which our obedience to this command has brought us, but also, and far more, in great inward peace and satisfaction. But to me few things are more pathetic than to see people, on the strength of the inward peace and satisfaction which their rudimentary efforts towards perfection have brought them, employ, concerning their incomplete perfection and the religious organizations within which they have found it, language which properly applies only to complete perfection, and is a far-off echo of the human soul's prophecy of it. Religion itself, I need hardly say, supplies them in abundance with this grand language. And very freely do they use it; yet it is really the severest criticism of such an incomplete perfection as alone we have yet reached through our religious organizations.

The impulse of the English race towards moral development and self-conquest has nowhere so powerfully manifested itself as in Puritanism. Nowhere has Puritanism found so adequate an expression as in the religious organization of the Independents. The modern Independents have a newspaper, the *Nonconformist*, written with great sincerity and ability. The motto, the standard, the profession of faith which this organ of theirs carries aloft, is: "The Dissidence of Dissent and the Protestantism of the Protestant religion." There is sweetness and light, and an ideal of complete harmonious human perfection! One need not go to culture and poetry to find language to judge it. Religion, with its instinct for perfection, supplies language to judge it, language too which is in our mouths every day. "Finally, be of one mind, united in feeling," says St. Peter. There is an ideal which judges the Puritan ideal: "The Dissidence of Dissent and the Protestantism of the Protestant religion!" And religious organizations like this are what people believe in, rest in, would give their lives for! Such, I say, is the wonderful virtue of even the beginnings of perfection, of having conquered even the plain faults of our animality, that the religious organization which has helped us to do it can seem to us something precious, salutary, and to be propagated, even when it wears such a brand of imperfection on its forehead as this. And men have got such a habit of giving to the language of religion a special application, of making it a mere jargon, that for the condemnation which religion itself passes on the shortcomings of their religious organizations they

have no ear; they are sure to cheat themselves and to explain this condemnation away. They can only be reached by the criticism which culture, like poetry, speaking a language not to be sophisticated, and resolutely testing these organizations by the ideal of a human perfection complete on all sides, applies to them.

But men of culture and poetry, it will be said, are again and again failing, and failing conspicuously, in the necessary first stage to a harmonious perfection, in the subduing of the great obvious faults of our animality, which it is the glory of these religious organizations to have helped us to subdue. True, they do often so fail. They have often been without the virtues as well as the faults of the Puritan; it has been one of their dangers that they so felt the Puritan's faults that they too much neglected the practice of his virtues. I will not, however, exculpate them at the Puritan's expense. They have often failed in morality, and morality is indispensable. And they have been punished for their failure, as the Puritan has been rewarded for his performance. They have been punished wherein they erred; but their ideal of beauty, of sweetness and light, and a human nature complete on all its sides, remains the true ideal of perfection still; just as the Puritan's ideal of perfection remains narrow and inadequate, although for what he did well he has been richly rewarded. Notwithstanding the mighty results of the Pilgrim Fathers' voyage, they and their standard of perfection are rightly judged when we figure to ourselves Shakespeare or Virgil—souls in whom sweetness and light, and all that in human nature is most humane, were eminent—accompanying them on their voyage, and think what intolerable company Shakespeare and Virgil would have found them! In the same way let us judge the religious organizations which we see all around us. Do not let us deny the good and the happiness which they have accomplished; but do not let us fail to see clearly that their idea of human perfection is narrow and inadequate, and that the Dissidence of Dissent and the Protestantism of the Protestant religion will never bring humanity to its true goal. As I said with regard to wealth: Let us look at the life of those who live in and for it—so I say with regard to the religious organizations. Look at the life imaged in such a newspaper as the *Nonconformist*—a life of jealousy of the Establishment, disputes, tea-meetings, openings of chapels, sermons; and then think of it as an ideal of a human life completing itself on all sides, and aspiring with all its organs after sweetness, light, and perfection!

Another newspaper, representing, like the *Nonconformist*, one of the

religious organizations of this country, was a short time ago giving an account of the crowd at Epsom on the Derby day, and of all the vice and hideousness which was to be seen in that crowd; and then the writer turned suddenly round upon Professor Huxley, and asked him how he proposed to cure all this vice and hideousness without religion. I confess I felt disposed to ask the asker this question: and how do you propose to cure it with such a religion as yours? How is the ideal of a life so unlovely, so unattractive, so incomplete, so narrow, so far removed from a true and satisfying ideal of human perfection, as is the life of your religious organization as you yourself reflect it, to conquer and transform all this vice and hideousness? Indeed, the strongest plea for the study of perfection as pursued by culture, the clearest proof of the actual inadequacy of the idea of perfection held by the religious organizations—expressing, as I have said, the most wide-spread effort which the human race has yet made after perfection—is to be found in the state of our life and society with these in possession of it, and having been in possession of it I know not how many hundred years. We are all of us included in some religious organization or other; we all call ourselves, in the sublime and aspiring language of religion which I have before noticed, *children of God*. Children of God;—it is an immense pretension!—and how are we to justify it? By the works which we do, and the words which we speak. And the work which we collective children of God do, our grand centre of life, our *city* which we have builded for us to dwell in, is London! London, with its unutterable external hideousness, and with its internal canker of *publicè egestas, privatim opulentia* [public want, private opulence]—to use the words which Sallust puts into Cato's mouth about Rome—unequaled in the world! The word, again, which we children of God speak, the voice which most hits our collective thought, the newspaper with the largest circulation in England, nay, with the largest circulation in the whole world, is the *Daily Telegraph*! I say that when our religious organizations—which I admit to express the most considerable effort after perfection that our race has yet made—land us in no better result than this, it is high time to examine carefully their idea of perfection, to see whether it does not leave out of account sides and forces of human nature which we might turn to great use; whether it would not be more operative if it were more complete. And I say that the English reliance on our religious organizations and on their ideas of human perfection just as they stand is like our reliance on freedom, on muscular Christianity, on population, on coal, on wealth—mere belief in machin-

ery, and unfruitful; and that it is wholesomely counteracted by culture, bent on seeing things as they are, and on drawing the human race onwards to a more complete, a harmonious perfection.

Culture, however, shows its single-minded love of perfection, its desire simply to make reason and the will of God prevail, its freedom from fanaticism, by its attitude towards all this machinery, even while it insists that it *is* machinery. Fanatics, seeing the mischief men do themselves by their blind belief in some machinery or other—whether it is wealth and industrialism, or whether it is the cultivation of bodily strength and activity, or whether it is a political organization—or whether it is a religious organization—oppose with might and main the tendency to this or that political and religious organization, or to games and athletic exercises, or to wealth and industrialism, and try violently to stop it. But the flexibility which sweetness and light give, and which is one of the rewards of culture pursued in good faith, enables a man to see that a tendency may be necessary, and even, as a preparation for something in the future, salutary, and yet that the generations or individuals who obey this tendency are sacrificed to it, that they fall short of the hope of perfection by following it; and that its mischiefs are to be criticized, lest it should take too firm a hold and last after it has served its purpose.

Mr. Gladstone well pointed out, in a speech at Paris—and others have pointed out the same thing—how necessary is the present great movement towards wealth and industrialism, in order to lay broad foundations of material well-being for the society of the future. The worst of these justifications is, that they are generally addressed to the very people engaged, body and soul, in the movement in question; at all events, that they are always seized with the greatest avidity by these people, and taken by them as quite justifying their life; and that thus they tend to harden them in their sins. Now, culture admits the necessity of the movement towards fortune-making and exaggerated industrialism, readily allows that the future may derive benefit from it; but insists, at the same time, that the passing generations of industrialists—forming, for the most part, the stout main body of Philistinism—are sacrificed to it. In the same way, the result of all the games and sports which occupy the passing generation of boys and young men may be the establishment of a better and sounder physical type for the future to work with. Culture does not set itself against the games and sports; it congratulates the future, and hopes it will make a good use of its improved physical basis; but it points out that our passing generation of boys and young men is, meantime, sacrificed. Puritanism was perhaps necessary to develop the moral

fibre of the English race, Nonconformity to break the yoke of ecclesiastical domination over men's minds and to prepare the way for freedom of thought in the distant future; still, culture points out that the harmonious perfection of generations of Puritans and Nonconformists has been, in consequence, sacrificed. Freedom of speech may be necessary for the society of the future, but the young lions of the *Daily Telegraph* in the meanwhile are sacrificed. A voice for every man in his country's government may be necessary for the society of the future, but meanwhile Mr. Beales and Mr. Bradlaugh are sacrificed.

Oxford, the Oxford of the past, has many faults; and she has heavily paid for them in defeat, in isolation, in want of hold upon the modern world. Yet we in Oxford, brought up amidst the beauty and sweetness of that beautiful place, have not failed to seize one truth: the truth that beauty and sweetness are essential characters of a complete human perfection. When I insist on this, I am all in the faith and tradition of Oxford. I say boldly that this our sentiment for beauty and sweetness, our sentiment against hideousness and rawness, has been at the bottom of our attachment to so many beaten causes, of our opposition to so many triumphant movements. And the sentiment is true, and has never been wholly defeated, and has shown its power even in its defeat. We have not won our political battles, we have not carried our main points, we have not stopped our adversaries' advance, we have not marched victoriously with the modern world; but we have told silently upon the mind of the country, we have prepared currents of feeling which sap our adversaries' position when it seems gained, we have kept up our own communications with the future. Look at the course of the great movement which shook Oxford to its centre some thirty years ago! It was directed, as any one who reads Dr. Newman's *Apology* may see, against what in one word may be called "Liberalism." Liberalism prevailed; it was the appointed force to do the work of the hour; it was necessary, it was inevitable that it should prevail. The Oxford movement was broken, it failed; our wrecks are scattered on every shore:

Quæ regio in terris nostri non plena laboris?

[What place on earth is not full of our labours?]

But what was it, this Liberalism, as Dr. Newman saw it, and as it really broke the Oxford movement? It was the great middle-class Liberalism, which had for the cardinal points of its belief the Reform Bill of 1832, and local self-government, in politics; in the social sphere, free trade, unre-

stricted competition, and the making of large industrial fortunes; in the religious sphere, the Dissidence of Dissent and the Protestantism of the Protestant religion. I do not say that other and more intelligent forces than this were not opposed to the Oxford movement: but this was the force which really beat it; this was the force which Dr. Newman felt himself fighting with; this was the force which till only the other day seemed to be the paramount force in this country, and to be in possession of the future; this was the force whose achievements fill Mr. Lowe with such inexpressible admiration, and whose rule he was so horror-struck to see threatened. And where is this great force of Philistinism now? It is thrust into the second rank, it is become a power of yesterday, it has lost the future. A new power has suddenly appeared, a power which it is impossible yet to judge fully, but which is certainly a wholly different force from middle-class Liberalism; different in its cardinal points of belief, different in its tendencies in every sphere. It loves and admires neither the legislation of middle-class Parliaments, nor the local self-government of middle-class vestries, nor the unrestricted competition of middle-class industrialists, nor the dissidence of middle-class Dissent and the Protestantism of middle-class Protestant religion. I am not now praising this new force, or saying that its own ideals are better; all I say is, that they are wholly different. And who will estimate how much the currents of feeling created by Dr. Newman's movement, the keen desire for beauty and sweetness which it nourished, the deep aversion it manifested to the hardness and vulgarity of middle-class Liberalism, the strong light it turned on the hideous and grotesque illusions of middle-class Protestantism—who will estimate how much all these contributed to swell the tide of secret dissatisfaction which has mined the ground under the self-confident Liberalism of the last thirty years, and has prepared the way for its sudden collapse and supersession? It is in this manner that the sentiment of Oxford for beauty and sweetness conquers, and in this manner long may it continue to conquer!

In this manner it works to the same end as culture, and there is plenty of work for it yet to do. I have said that the new and more democratic force which is now superseding our old middle-class Liberalism cannot yet be rightly judged. It has its main tendencies still to form. We hear promises of its giving us administrative reform, law reform, reform of education, and I know not what; but those promises come rather from its advocates, wishing to make a good plea for it and to justify it for superseding middle-class Liberalism, than from clear tendencies which it has itself yet developed. But meanwhile it has plenty of well-intentioned friends against whom culture may with advantage continue to uphold

steadily its ideal of human perfection; that this is *an inward spiritual activity, having for its characters increased sweetness, increased light, increased life, increased sympathy*. Mr. Bright, who has a foot in both worlds, the world of middle-class Liberalism and the world of democracy, but who brings most of his ideas from the world of middle-class Liberalism in which he was bred, always inclines to inculcate that faith in machinery to which, as we have seen, Englishmen are so prone, and which has been the bane of middle-class Liberalism. He complains with a sorrowful indignation of people who “appear to have no proper estimate of the value of the franchise”; he leads his disciples to believe—what the Englishman is always too ready to believe—that the having a vote, like the having a large family, or a large business, or large muscles, has in itself some edifying and perfecting effect upon human nature. Or else he cries out to the democracy—“the men,” as he calls them, “upon whose shoulders the greatness of England rests”—he cries out to them: “See what you have done! I look over this country and see the cities you have built, the railroads you have made, the manufactures you have produced, the cargoes which freight the ships of the greatest mercantile navy the world has ever seen! I see that you have converted by your labours what was once a wilderness, these islands, into a fruitful garden; I know that you have created this wealth, and are a nation whose name is a word of power throughout all the world.” Why, this is just the very style of laudation with which Mr. Roebuck or Mr. Lowe debauch the minds of the middle classes, and make such Philistines of them. It is the same fashion of teaching a man to value himself not on what he *is*, not on his progress in sweetness and light, but on the number of the railroads he has constructed, or the bigness of the tabernacle he has built. Only the middle classes are told they have done it all with their energy, self-reliance, and capital, and the democracy are told they have done it all with their hands and sinews. But teaching the democracy to put its trust in achievements of this kind is merely training them to be Philistines to take the place of the Philistines whom they are superseding; and they too, like the middle class, will be encouraged to sit down at the banquet of the future without having on a wedding garment, and nothing excellent can then come from them. Those who know their besetting faults, those who have watched them and listened to them, or those who will read the instructive account recently given of them by one of themselves, the *Journeyman Engineer*, will agree that the idea which culture sets before us of perfection—an increased spiritual activity, having for its characters increased sweetness, increased light, increased life, increased sympathy—is an idea which the new democracy needs far more than the idea

of the blessedness of the franchise, or the wonderfulness of its own industrial performances.

Other well-meaning friends of this new power are for leading it, not in the old ruts of middle-class Philistinism, but in ways which are naturally alluring to the feet of democracy, though in this country they are novel and untried ways. I may call them the ways of Jacobinism. Violent indignation with the past, abstract systems of renovation applied wholesale, a new doctrine drawn up in black and white for elaborating down to the very smallest details a rational society for the future—these are the ways of Jacobinism. Mr. Frederic Harrison and other disciples of Comte—one of them, Mr. Congreve, is an old friend of mine, and I am glad to have an opportunity of publicly expressing my respect for his talents and character—are among the friends of democracy who are for leading it in paths of this kind. Mr. Frederic Harrison is very hostile to culture, and from a natural enough motive; for culture is the eternal opponent of the two things which are the signal marks of Jacobinism—its fierceness, and its addiction to an abstract system. Culture is always assigning to system-makers and systems a smaller share in the bent of human destiny than their friends like. A current in people's minds sets towards new ideas; people are dissatisfied with their old narrow stock of Philistine ideas, Anglo-Saxon ideas, or any other; and some man, some Bentham or Comte, who has the real merit of having early and strongly felt and helped the new current, but who brings plenty of narrowness and mistakes of his own into his feeling and help of it, is credited with being the author of the whole current, the fit person to be entrusted with its regulation and to guide the human race.

The excellent German historian of the mythology of Rome, Preller, relating the introduction at Rome under the Tarquins of the worship of Apollo, the god of light, healing, and reconciliation, will have us observe that it was not so much the Tarquins who brought to Rome the new worship of Apollo, as a current in the mind of the Roman people which set powerfully at that time towards a new worship of this kind, and away from the old run of Latin and Sabine religious ideas. In a similar way, culture directs our attention to the natural current there is in human affairs, and to its continual working, and will not let us rivet our faith upon any one man and his doings. It makes us see, not only his good side, but also how much in him was of necessity limited and transient; nay, it even feels a pleasure, a sense of an increased freedom and of an ampler future, in so doing.

I remember, when I was under the influence of a mind to which I feel the greatest obligations, the mind of a man who was the very incarnation

of sanity and clear sense, a man the most considerable, it seems to me, whom America has yet produced—Benjamin Franklin—I remember the relief with which, after long feeling the sway of Franklin’s imperturbable common sense, I came upon a project of his for a new version of the Book of Job, to replace the old version, the style of which, says Franklin, has become obsolete, and thence less agreeable. “I give,” he continues, “a few verses, which may serve as a sample of the kind of version I would recommend.” We all recollect the famous verse in our translation: “Then Satan answered the Lord and said: ‘Doth Job fear God for nought?’” Franklin makes this: “Does Your Majesty imagine that Job’s good conduct is the effect of mere personal attachment and affection?” I well remember how when first I read that, I drew a deep breath of relief, and said to myself: “After all, there is a stretch of humanity beyond Franklin’s victorious good sense!” So, after hearing Bentham cried loudly up as the renovator of modern society, and Bentham’s mind and ideas proposed as the rulers of our future, I open the *Deontology*. There I read: “While Xenophon was writing his history and Euclid teaching geometry, Socrates and Plato were talking nonsense under pretence of talking wisdom and morality. This morality of theirs consisted in words; this wisdom of theirs was the denial of matters known to every man’s experience.” From the moment of reading that, I am delivered from the bondage of Bentham! the fanaticism of his adherents can touch me no longer; I feel the inadequacy of his mind and ideas for supplying the rule of human society, for perfection.

Culture tends always thus to deal with the men of a system, of disciples, of a school; with men like Comte or, the late Mr. Buckle, or Mr. Mill. However much it may find to admire in these personages, or in some of them, it nevertheless remembers the text: “Be not ye called Rabbi!” and it soon passes on from any Rabbi. But Jacobinism loves a Rabbi; it does not want to pass on from its Rabbi in pursuit of a future and still unreached perfection; it wants its Rabbi and his ideas to stand for perfection, that they may with the more authority recast the world; and for Jacobinism, therefore, culture, eternally passing onwards and seeking, is an impertinence and an offence. But culture, just because it resists this tendency of Jacobinism to impose on us a man with limitations and errors of his own along with the true ideas of which he is the organ, really does the world and Jacobinism itself a service.

So, too, Jacobinism, in its fierce hatred of the past and of those whom it makes liable for the sins of the past, cannot away with the inexhaustible indulgence proper to culture, the consideration of circumstances, the severe judgment of actions joined to the merciful judgment of persons.

“The man of culture is in politics,” cries Mr. Frederic Harrison, “one of the poorest mortals alive!” Mr. Frederic Harrison wants to be doing business, and he complains that the man of culture stops him with a “turn for small fault-finding, love of selfish ease, and indecision in action.” Of what use is culture, he asks, except for “a critic of new books or a professor of *belles lettres*?” Why, it is of use because, in presence of the fierce exasperation which breathes, or rather, I may say, hisses, through the whole production in which Mr. Frederic Harrison asks that question, it reminds us that the perfection of human nature is sweetness and light. It is of use because, like religion, that other effort after perfection, it testifies that, where bitter envying and strife are, there is confusion and every evil work.

The pursuit of perfection, then, is the pursuit of sweetness and light. He who works for sweetness works in the end for light also; he who works for light works in the end for sweetness also. But he who works for sweetness and light united works to make reason and the will of God prevail. He who works for machinery, he who works for hatred, works only for confusion. Culture looks beyond machinery, culture hates hatred; culture has one great passion, the passion for sweetness and light. It has one even yet greater! the passion for making them *prevail*. It is not satisfied till we *all* come to a perfect man; it knows that the sweetness and light of the few must be imperfect until the raw and unkindled masses of humanity are touched with sweetness and light. If I have not shrunk from saying that we must work for sweetness and light, so neither have I shrunk from saying that we must have a broad basis, must have sweetness and light for as many as possible. Again and again I have insisted how those are the happy moments of humanity, how those are the marking epochs of a people’s life, how those are the flowering times for literature and art and all the creative power of genius, when there is a *national* glow of life and thought, when the whole of society is in the fullest measure permeated by thought, sensible to beauty, intelligent and alive. Only it must be *real* thought and *real* beauty; *real* sweetness and *real* light. Plenty of people will try to give the masses, as they call them, an intellectual food prepared and adapted in the way they think proper for the actual condition of the masses. The ordinary popular literature is an example of this way of working on the masses. Plenty of people will try to indoctrinate the masses with the set of ideas and judgments constituting the creed of their own profession or party. Our religious and political organizations give an example of this way of working on the masses. I condemn neither way; but culture works differently. It does not try to teach down to the level of inferior classes; it does not try to win them

for this or that sect of its own, with ready-made judgments and watchwords. It seeks to do away with classes; to make the best that has been thought and known in the world current everywhere; to make all men live in an atmosphere of sweetness and light, where they may use ideas, as it uses them itself, freely—nourished and not bound by them.

This is the *social idea*; and the men of culture are the true apostles of equality. The great men of culture are those who have had a passion for diffusing, for making prevail, for carrying from one end of society to the other, the best knowledge, the best ideas of their time; who have laboured to divest knowledge of all that was harsh, uncouth, difficult, abstract, professional, exclusive; to humanize it, to make it efficient outside the clique of the cultivated and learned, yet still remaining the *best* knowledge and thought of the time, and a true source, therefore, of sweetness and light. Such a man was Abelard in the Middle Ages, in spite of all his imperfections; and thence the boundless emotion and enthusiasm which Abelard excited. Such were Lessing and Herder in Germany, at the end of the last century; and their services to Germany were in this way inestimably precious. Generations will pass, and literary monuments will accumulate, and works far more perfect than the works of Lessing and Herder will be produced in Germany; and yet the names of these two men will fill a German with a reverence and enthusiasm such as the names of the most gifted masters will hardly awaken. And why? Because they *humanized* knowledge; because they broadened the basis of life and intelligence; because they worked powerfully to diffuse sweetness and light, to make reason and the will of God prevail. With Saint Augustine they said: "Let us not leave Thee alone to make in the secret of thy knowledge, as thou didst before the creation of the firmament, the division of light from darkness; let the children of thy spirit, placed in their firmament, make their light shine upon the earth, mark the division of night and day, and announce the revolution of the times; for the old order is passed, and the new arises; the night is spent, the day is come forth; and thou shalt crown the year with thy blessing, when thou shalt send forth labourers into thy harvest sown by other hands than theirs; when thou shalt send forth new labourers to new seed-times, whereof the harvest shall be not yet."

The foregoing consists of Chapter I of Arnold's CULTURE AND ANARCHY.

Sainte-Beuve

1804–1869

Charles Augustin Sainte-Beuve was born on December 23, 1804, at Boulogne-sur-Mer, France. His father, a commissioner of taxes, died before Charles's birth, leaving his mother little money. Until the boy was fourteen, he was educated at Boulogne. Then he went to the Collège Charlemagne in Paris.

In 1823 Sainte-Beuve began to study medicine, but from 1824 on he combined literary journalism with his medical studies. After 1827 he gave up medicine altogether and devoted all his time to literature. He became a regular critic for several Paris reviews.

Sainte-Beuve's essays were sympathetic to the writers of his own generation. These young Frenchmen—Flaubert, Mérimée, and others—had been fired by the ideas of Schiller, Goethe, and the English Romantic poets. Sainte-Beuve was one of their earliest champions.

Sainte-Beuve was especially friendly with Victor Hugo and his wife, until he fell passionately in love with Mme Hugo. This brought an end to the friendship and marked the beginning of deep spiritual and intellectual unrest for Sainte-Beuve.

In addition to literary criticism, he wrote poems and one novel, *Volupté*. Sainte-Beuve was elected to the French Academy in 1844. He lectured at Lausanne and at Liège, where he was professor of French literature for a time. In 1854 he was appointed professor of Latin poetry at the Collège de France; but, because of his progovernment political beliefs, the students refused to hear his lectures and he was forced to resign the post.

Sainte-Beuve was appointed a member of the Senate in 1865. He died in Paris on October 13, 1869. On his instructions, he was buried without any religious ceremony.

Sainte-Beuve has been called the father of modern criticism. He believed that criticism was itself an art rather than simply a means of commenting on art.

Two ideas characterize Sainte-Beuve's view of criticism. Both place him as an articulate spokesman of his time. He held that because literature reflects its time and place, the evaluation of any work necessarily varies according to the reader's background. He championed the "romantic" literature of his age against the "classical" style favored by older critics.

But even though he was, on the whole, a defender of the "romantics" against the "classical" writers, his definition of a classic work includes both. "A true classic," he writes, ". . . is an author who has enriched the human mind, increased its treasure, and caused it to advance a step; who has discovered some moral and not equivocal truth, or revealed some eternal passion in that heart where all seemed known and discovered." The emphasis is thus on the classic author's knowledge and insight, not on his style. A classic can be expressed, he says, "in no matter what form, only provided it be broad and great, refined and sensible, sane and beautiful in itself." It speaks "to all in (its) own peculiar style, a style which is found to be also that of the whole world, a style new without neologism, new and old, easily contemporary with all time."

This definition, which contains much food for thought, is clearly very far from being applicable only to the writers of one or another epoch. It does not exalt Wordsworth and Coleridge (typical "romantics") above Pope and Dr. Johnson (typical "classical" writers). It includes all great authors. It demands only that they be great.

"There is no receipt for making classics," Sainte-Beuve writes. "With regard to classics the least expected prove the best and greatest." He does not mean that originality is the highest virtue of great literature. Virgil "imitated" Homer; yet both are classics. And Dante imitated Virgil. Their spontaneity lies in the freshness of what they added. Though Virgil and Dante had models which they followed, they are at the same time always new. Classics are always new; but they are also deeply bedded in the common stock of human knowledge and experience. A work that was entirely new could hardly be a classic. It would share nothing of importance with its readers.

Sainte-Beuve peoples an imaginary "temple of taste" with writers

whom he believes to be classics. The immense variety in his choices proves that there is no one characteristic or set of characteristics which makes a classic. The only true test is whether a book gives us “that sensation of serenity and amenity . . . which reconciles us with mankind and with ourselves.” The best books, he says, are our best friends.

Montaigne was, for Sainte-Beuve, a classic author. In the second essay reprinted below, we see Sainte-Beuve’s philosophy of criticism put into practice. Following his tenet that a book should be studied at least partly through its author, he tells us a good deal about Montaigne and leaves the judgment of individual works to us.

Both in Montaigne’s time and in Sainte-Beuve’s, France was in political turmoil. The critic, writing three hundred years after the essayist, admires the personal traits that served Montaigne so well in time of crisis. Montaigne was moderate, orderly, witty, optimistic, fair, humble, and courageous, says Sainte-Beuve. Such a man is good to have around in time of trouble.

As to trouble itself, Sainte-Beuve concludes that Montaigne’s most pertinent advice may be not to anticipate it. The man who looks for trouble does not generally have to look far.

Sainte-Beuve’s essays were titled, in the original, *Causeries*. The French word means “talks” or “chats.” There is no question that the tone of the following essays is chatty and informal. This is one of the best things about them. Sainte-Beuve is a critic who is easy to read. He is entertaining. But that, he says, is one of the criteria of a classic author—that he entertain. By this token, Sainte-Beuve is himself a classic.

What Is a Classic?

A delicate question, to which somewhat diverse solutions might be given according to times and seasons. An intelligent man suggests it to me, and I intend to try, if not to solve it, at least to examine and discuss it face to face with my readers, were it only to persuade them to answer it for themselves, and, if I can, to make their opinion and mine on the point clear. And why, in criticism, should we not, from time to time, venture to treat some of those subjects which are not personal, in which we no longer speak of some one but of some thing? Our neighbours, the English, have well succeeded in making of it a special division of literature under the modest title of "Essays." It is true that in writing of such subjects, always slightly abstract and moral, it is advisable to speak of them in a season of quiet, to make sure of our own attention and of that of others, to seize one of those moments of calm moderation and leisure seldom granted our amiable France; even when she is desirous of being wise and is not making revolutions, her brilliant genius can scarcely tolerate them.

A classic, according to the usual definition, is an old author canonized by admiration, and an authority in his particular style. The word *classic* was first used in this sense by the Romans. With them not all the citizens of the different classes were properly called *classici*, but only those of the chief class, those who possessed an income of a certain fixed sum. Those who possessed a smaller income were described by the term *infra classem*, below the pre-eminent class. The word *classicus* was used in a figurative sense by Aulus Gellius, and applied to writers: a writer of worth and distinction, *classicus assiduusque scriptor*, a writer who is of account, has real property, and is not lost in the proletariat crowd. Such an expression implies an age sufficiently advanced to have already made some sort of valuation and classification of literature.

At first the only true classics for the moderns were the ancients. The Greeks, by peculiar good fortune and natural enlightenment of mind, had

no classics but themselves. They were at first the only classical authors for the Romans, who strove and contrived to imitate them. After the great periods of Roman literature, after Cicero and Virgil, the Romans in their turn had their classics, who became almost exclusively the classical authors of the centuries which followed. The Middle Ages, which were less ignorant of Latin antiquity than is believed, but which lacked proportion and taste, confused the ranks and orders. Ovid was placed above Homer, and Boetius seemed a classic equal to Plato. The revival of learning in the fifteenth and sixteenth centuries helped to bring this long chaos to order, and then only was admiration rightly proportioned. Thenceforth the true classical authors of Greek and Latin antiquity stood out in a luminous background, and were harmoniously grouped on their two heights.

Meanwhile modern literatures were born, and some of the more precocious, like the Italian, already possessed the style of antiquity. Dante appeared, and, from the very first, posterity greeted him as a classic. Italian poetry has since shrunk into far narrower bounds; but, whenever it desired to do so, it always found again and preserved the impulse and echo of its lofty origin. It is no indifferent matter for a poetry to derive its point of departure and classical source in high places; for example, to spring from Dante rather than to issue laboriously from Malherbe.

Modern Italy had her classical authors, and Spain had every right to believe that she also had hers at a time when France was yet seeking hers. A few talented writers endowed with originality and exceptional animation, a few brilliant efforts, isolated, without following, interrupted and recommenced, did not suffice to endow a nation with a solid and imposing basis of literary wealth. The idea of a classic implies something that has continuance and consistence, and which produces unity and tradition, fashions and transmits itself, and endures. It was only after the glorious years of Louis XIV that the nation felt with tremor and pride that such good fortune had happened to her. Every voice informed Louis XIV of it with flattery, exaggeration, and emphasis, yet with a certain sentiment of truth. Then arose a singular and striking contradiction: those men of whom Perrault was the chief, the men who were most smitten with the marvels of the age of Louis the Great, who even went the length of sacrificing the ancients to the moderns, aimed at exalting and canonizing even those whom they regarded as inveterate opponents and adversaries. Boileau avenged and angrily upheld the ancients against Perrault, who extolled the moderns—that is to say, Corneille, Molière, Pascal, and the eminent men of his age, Boileau, one of the first, included.

Kindly La Fontaine, taking part in the dispute in behalf of the learned Huet, did not perceive that, in spite of his defects, he was in his turn on the point of being held as a classic himself.

Example is the best definition. From the time France possessed her age of Louis XIV and could contemplate it at a little distance, she knew, better than by any arguments, what to be classical meant. The eighteenth century, even in its medley of things, strengthened this idea through some fine works, due to its four great men. Read Voltaire's *Age of Louis XIV*, Montesquieu's *Greatness and Fall of the Romans*, Buffon's *Epochs of Nature*, the beautiful pages of reverie and natural description of Rousseau's *Savoyard Vicar*, and say if the eighteenth century, in these memorable works, did not understand how to reconcile tradition with freedom of development and independence. But at the beginning of the present century and under the Empire, in sight of the first attempts of a decidedly new and somewhat adventurous literature, the idea of a classic in a few resisting minds, more sorrowful than severe, was strangely narrowed and contracted. The first Dictionary of the Academy (1694) merely defined a classical author as "a much-approved ancient writer, who is an authority as regards the subject he treats." The Dictionary of the Academy of 1835 narrows that definition still more, and gives precision and even limit to its rather vague form. It describes classical authors as those "who have become *models* in any language whatever," and in all the articles which follow, the expressions, *models*, *fixed rules* for composition and style, *strict rules* of art to which men must conform, continually recur. That definition of *classic* was evidently made by the respectable Academicians, our predecessors, in face and sight of what was then called *romantic*—that is to say, in sight of the enemy. It seems to me time to renounce those timid and restrictive definitions and to free our mind of them.

A true classic, as I should like to hear it defined, is an author who has enriched the human mind, increased its treasure, and caused it to advance a step; who has discovered some moral and not equivocal truth, or revealed some eternal passion in that heart where all seemed known and discovered; who has expressed his thought, observation, or invention, in no matter what form, only provided it be broad and great, refined and sensible, sane and beautiful in itself; who has spoken to all in his own peculiar style, a style which is found to be also that of the whole world, a style new without neologism, new and old, easily contemporary with all time.

Such a classic may for a moment have been revolutionary; it may at

least have seemed so, but it is not; it only lashed and subverted whatever prevented the restoration of the balance of order and beauty.

If it is desired, names may be applied to this definition which I wish to make purposely majestic and fluctuating, or in a word, all-embracing. I should first put there Corneille of the *Polyeucte*, *Cinna*, and *Horace*. I should put Molière there, the fullest and most complete poetic genius we have ever had in France. Goethe, the king of critics, said: "Molière is so great that he astonishes us afresh every time we read him. He is a man apart; his plays border on the tragic, and no one has the courage to try and imitate him. His *Avare*, where vice destroys all affection between father and son, is one of the most sublime works, and dramatic in the highest degree. In a drama every action ought to be important in itself, and to lead to an action greater still. In this respect *Tartuffe* is a model. What a piece of exposition the first scene is! From the beginning everything has an important meaning, and causes something much more important to be foreseen. The exposition in a certain play of Lessing that might be mentioned is very fine, but the world only sees that of *Tartuffe* once. It is the finest of the kind we possess. Every year I read a play of Molière, just as from time to time I contemplate some engraving after the great Italian masters."

I do not conceal from myself that the definition of the classic I have just given somewhat exceeds the notion usually ascribed to the term. It should, above all, include conditions of uniformity, wisdom, moderation, and reason, which dominate and contain all the others. Having to praise M. Royer-Collard, M. de Rémusat said: "If he derives purity of taste, propriety of terms, variety of expression, attentive care in suiting the diction to the thought, from our classics, he owes to himself alone the distinctive character he gives it all." It is here evident that the part allotted to classical qualities seems mostly to depend on harmony and *nuances* of expression, on graceful and temperate style: such is also the most general opinion. In this sense the pre-eminent classics would be writers of a middling order, exact, sensible, elegant, always clear, yet of noble feeling and airily veiled strength. Marie-Joseph Chénier has described the poetics of those temperate and accomplished writers in lines where he shows himself their happy disciple: "It is good sense, reason which does all—virtue, genius, soul, talent, and taste. What is virtue? reason put in practice; talent? reason expressed with brilliance; soul? reason delicately put forth; and genius is sublime reason."

While writing those lines he was evidently thinking of Pope, Boileau, and Horace, the master of them all. The peculiar characteristic of the

theory which subordinated imagination and feeling itself to reason, of which Scaliger perhaps gave the first sign among the moderns, is, properly speaking, the *Latin* theory, and for a long time it was also by preference the *French* theory. If it is used appositely, if the term *reason* is not abused, that theory possesses some truth; but it is evident that it is abused, and that if, for instance, reason can be confounded with poetic genius and make one with it in a moral epistle, it cannot be the same thing as the genius, so varied and so diversely creative in its expression of the passions, of the drama or the epic. Where will you find reason in the fourth book of the *Aeneid* and the transports of Dido? Be that as it may, the spirit which prompted the theory caused writers who ruled their inspiration, rather than those who abandoned themselves to it, to be placed in the first rank of classics; to put Virgil there more surely than Homer, Racine in preference to Corneille. The masterpiece to which the theory likes to point, which in fact brings together all conditions of prudence, strength, tempered boldness, moral elevation, and grandeur, is *Athalie*. Turenne in his two last campaigns and Racine in *Athalie* are the great examples of what wise and prudent men are capable of when they reach the maturity of their genius and attain their supremest boldness.

Buffon, in his *Discourse on Style*, insisting on the unity of design, arrangement, and execution, which are the stamps of true classical works, said: "Every subject is one, *and however vast it is, it can be comprised in a single treatise*. Interruptions, pauses, subdivisions should only be used when many subjects are treated, when, having to speak of great, intricate, and dissimilar things, the march of genius is interrupted by the multiplicity of obstacles, and contracted by the necessity of circumstances: otherwise, far from making a work more solid, a great number of divisions destroys the unity of its parts; the book appears clearer to the view, but the author's design remains obscure." And he continues his criticism, having in view Montesquieu's *Spirit of Laws*, an excellent book at bottom, but subdivided: the famous author, worn out before the end, was unable to infuse inspiration into all his ideas, and to arrange all his matter. However, I can scarcely believe that Buffon was not also thinking, by way of contrast, of Bossuet's *Discourse on Universal History*, a subject vast indeed, and yet of such a unity that the great orator was able to comprise it in a single treatise. When we open the first edition, that of 1681, before the division into chapters, which was introduced later, passed from the margin into the text, everything is developed in a single series, almost in one breath. It might be said that the orator has here acted like the nature of which Buffon speaks, that "he has worked on an eternal plan

from which he has nowhere departed," so deeply does he seem to have entered into the familiar counsels and designs of providence.

Are *Athalie* and the *Discourse on Universal History* the greatest masterpieces that the strict classical theory can present to its friends as well as to its enemies? In spite of the admirable simplicity and dignity in the achievement of such unique productions, we should like, nevertheless, in the interests of art, to expand that theory a little, and to show that it is possible to enlarge it without relaxing the tension. Goethe, whom I like to quote on such a subject, said: "I call the classical *healthy*, and the romantic *sickly*. In my opinion the Nibelungen song is as much a classic as Homer. Both are healthy and vigorous. The works of the day are romantic, not because they are new, but because they are weak, ailing, or sickly. Ancient works are classical not because they are old, but because they are powerful, fresh, and healthy. If we regarded romantic and classical from those two points of view we should soon all agree."

Indeed, before determining and fixing the opinions on that matter, I should like every unbiased mind to take a voyage round the world and devote itself to a survey of different literatures in their primitive vigour and infinite variety. What would be seen? Chief of all a Homer, the father of the classical world, less a single distinct individual than the vast living expression of a whole epoch and a semi-barbarous civilization. In order to make him a true classic, it was necessary to attribute to him later a design, a plan, literary invention, qualities of atticism and urbanity of which he had certainly never dreamed in the luxuriant development of his natural inspirations. And who appear by his side? August, venerable ancients, the Aeschyluses and the Sophocles, mutilated, it is true, and only there to present us with a *débris* of themselves, the survivors of many others as worthy, doubtless, as they to survive, but who have succumbed to the injuries of time. This thought alone would teach a man of impartial mind not to look upon the whole of even classical literatures with a too narrow and restricted view; he would learn that the exact and well-proportioned order which has since so largely prevailed in our admiration of the past was only the outcome of artificial circumstances.

And in reaching the modern world, how would it be? The greatest names to be seen at the beginning of literatures are those which disturb and run counter to certain fixed ideas of what is beautiful and appropriate in poetry. For example, is Shakespeare a classic? Yes, now, for England and the world; but in the time of Pope he was not considered so. Pope and his friends were the only pre-eminent classics; directly after their death they seemed so for ever. At the present time they are still

classics, as they deserve to be, but they are only of the second order, and are forever subordinated and relegated to their rightful place by him who has again come to his own on the height of the horizon.

It is not, however, for me to speak ill of Pope or his great disciples, above all, when they possess pathos and naturalness like Goldsmith: after the greatest they are perhaps the most agreeable writers and the poets best fitted to add charm to life. Once when Lord Bolingbroke was writing to Swift, Pope added a postscript, in which he said, "I think some advantage would result to our age, if we three spent three years together." Men who, without boasting, have the right to say such things must never be spoken of lightly; the fortunate ages, when men of talent could propose such things, then no chimera, are rather to be envied. The ages called by the name of Louis XIV or of Queen Anne are, in the dispassionate sense of the word, the only true classical ages, those which offer protection and a favourable climate to real talent. We know only too well how in our untrammelled times, through the instability and storminess of the age, talents are lost and dissipated. Nevertheless, let us acknowledge our age's part and superiority in greatness. True and sovereign genius triumphs over the very difficulties that cause others to fail: Dante, Shakespeare, and Milton were able to attain their height and produce their imperishable works in spite of obstacles, hardships, and tempests. Byron's opinion of Pope has been much discussed, and the explanation of it sought in the kind of contradiction by which the singer of *Don Juan* and *Childe Harold* extolled the purely classical school and pronounced it the only good one, while himself acting so differently. Goethe spoke the truth on that point when he remarked that Byron, great by the flow and source of poetry, feared that Shakespeare was more powerful than himself in the creation and realization of his characters. "He would have liked to deny it; the elevation so free from egoism irritated him; he felt when near it that he could not display himself at ease. He never denied Pope, because he did not fear him; he knew that Pope was only a *low wall* by his side."

If, as Byron desired, Pope's school had kept the supremacy and a sort of honorary empire in the past, Byron would have been the first and only poet in his particular style; the height of Pope's wall shuts out Shakespeare's great figure from sight, whereas when Shakespeare reigns and rules in all his greatness, Byron is only second.

In France there was no great classic before the age of Louis XIV; the Dantes and Shakespeares, the early authorities to whom, in times of emancipation, men sooner or later return, were wanting. There were

mere sketches of great poets, like Mathurin Régnier, like Rabelais, without any ideal, without the depth of emotion and the seriousness which canonizes. Montaigne was a kind of premature classic, of the family of Horace; but for want of worthy surroundings, like a spoiled child, he gave himself up to the unbridled fancies of his style and humour. Hence it happened that France, less than any other nation, found in her old authors a right to demand vehemently at a certain time literary liberty and freedom, and that it was more difficult for her, in enfranchising herself, to remain classical. However, with Molière and La Fontaine among her classics of the great period, nothing could justly be refused to those who possessed courage and ability.

The important point now seems to me to be to uphold, while extending, the idea and belief. There is no receipt for making classics; this point should be clearly recognized. To believe that an author will become a classic by imitating certain qualities of purity, moderation, accuracy, and elegance, independently of the style and inspiration, is to believe that after Racine the father there is a place for Racine the son; dull and estimable role, the worst in poetry. Further, it is hazardous to take too quickly and without opposition the place of a classic in the sight of one's contemporaries; in that case there is a good chance of not retaining the position with posterity. Fontanes in his day was regarded by his friends as a pure classic; see how at twenty-five years' distance his star has set. How many of these precocious classics are there who do not endure, and who are so only for a while! We turn round one morning and are surprised not to find them standing behind us. Madame de Sévigné would wittily say they possessed but an *evanescent colour*. With regard to classics, the least expected prove the best and greatest: seek them rather in the vigorous genius born immortal and flourishing forever. Apparently the least classical of the four great poets of the age of Louis XIV was Molière; he was then applauded far more than he was esteemed; men took delight in him without understanding his worth. After him, La Fontaine seemed the least classical: observe after two centuries what is the result for both. Far above Boileau, even above Racine, are they not now unanimously considered to possess in the highest degree the characteristics of an all-embracing morality?

Meanwhile there is no question of sacrificing or depreciating anything. I believe the temple of taste is to be rebuilt; but its reconstruction is merely a matter of enlargement, so that it may become the home of all noble human beings, of all who have permanently increased the sum of the mind's delights and possessions. As for me, who cannot, obviously,

in any degree pretend to be the architect or designer of such a temple, I shall confine myself to expressing a few earnest wishes, to submit, as it were, my designs for the edifice. Above all I should desire not to exclude anyone among the worthy, each should be in his place there, from Shakespeare, the freest of creative geniuses, and the greatest of classics without knowing it, to Andrieux, the last of classics in little. "There is more than one chamber in the mansions of my Father"; that should be as true of the kingdom of the beautiful here below, as of the kingdom of Heaven. Homer, as always and everywhere, should be first, likest a god; but behind him, like the procession of the three wise kings of the East, would be seen the three great poets, the three Homers, so long ignored by us, who wrote epics for the use of the old peoples of Asia, the poets Valmiki, Vyasa of the Hindus, and Firdousi of the Persians; in the domain of taste it is well to know that such men exist, and not to divide the human race. Our homage paid to what is recognized as soon as perceived, we must not stray further; the eye should delight in a thousand pleasing or majestic spectacles, should rejoice in a thousand varied and surprising combinations, whose apparent confusion would never be without concord and harmony. The oldest of the wise men and poets, those who put human morality into maxims, and those who in simple fashion sung it, would converse together in rare and gentle speech, and would not be surprised at understanding each other's meaning at the very first word. Solon, Hesiod, Theognis, Job, Solomon, and why not Confucius, would welcome the cleverest moderns, La Rochefoucauld and La Bruyère, who, when listening to them, would say "they knew all that we know, and in repeating life's experiences, we have discovered nothing." On the hill, most easily discernible, and of most accessible ascent, Virgil, surrounded by Menander, Tibullus, Terence, Fénelon, would occupy himself in discoursing with them with great charm and divine enchantment: his gentle countenance would shine with an inner light, and be tinged with modesty; as on the day when entering the theatre at Rome, just as they finished reciting his verses, he saw the people rise with a unanimous movement and pay to him the same homage as to Augustus. Not far from him, regretting the separation from so dear a friend, Horace, in his turn, would preside (as far as so accomplished and wise a poet could preside) over the group of poets of social life who could talk although they sang—Pope, Boileau, the one become less irritable, the other less faultfinding. Montaigne, a true poet, would be among them, and would give the finishing touch that should deprive that delightful corner of the air of a literary school. There would La Fontaine forget himself, and becoming less vola-

tile would wander no more. Voltaire would be attracted by it, but while finding pleasure in it would not have patience to remain. A little lower down, on the same hill as Virgil, Xenophon, with simple bearing, looking in no way like a general, but rather resembling a priest of the Muses, would be seen gathering round him the Attics of every tongue and of every nation, the Addison, Pellisson, Vauvenargues—all who feel the value of an easy persuasiveness, an exquisite simplicity, and a gentle negligence mingled with ornament. In the centre of the place, in the portico of the principal temple (for there would be several in the enclosure), three great men would like to meet often, and when they were together, no fourth, however great, would dream of joining their discourse or their silence. In them would be seen beauty, proportion in greatness, and that perfect harmony which appears but once in the full youth of the world. Their three names have become the ideal of art—Plato, Sophocles, and Demosthenes. Those demi-gods honoured, we see a numerous and familiar company of choice spirits who follow, the Cervantes and Molières, practical painters of life, indulgent friends who are still the first of benefactors, who laughingly embrace all mankind, turn man's experience to gaiety, and know the powerful workings of a sensible, hearty, and legitimate joy. I do not wish to make this description, which if complete would fill a volume, any longer. In the Middle Ages, believe me, Dante would occupy the sacred heights: at the feet of the singer of Paradise all Italy would be spread out like a garden; Boccaccio and Ariosto would there disport themselves, and Tasso would find again the orange groves of Sorrento. Usually a corner would be reserved for each of the various nations, but the authors would take delight in leaving it, and in their travels would recognize, where we should least expect it, brothers or masters. Lucretius, for example, would enjoy discussing the origin of the world and the reducing of chaos to order with Milton. But both arguing from their own point of view, they would only agree as regards divine pictures of poetry and nature.

Such are our classics; each individual imagination may finish the sketch and choose the group preferred. For it is necessary to make a choice, and the first condition of taste, after obtaining knowledge of all, lies not in continual travel, but in rest and cessation from wandering. Nothing blunts and destroys taste so much as endless journeyings; the poetic spirit is not the Wandering Jew. However, when I speak of resting and making choice, my meaning is not that we are to imitate those who charm us most among our masters in the past. Let us be content to know them, to penetrate them, to admire them; but let us, the late-comers,

endeavour to be ourselves. Let us have the sincerity and naturalness of our own thoughts, of our own feelings; so much is always possible. To that let us add what is more difficult, elevation, an aim, if possible, towards an exalted goal; and while speaking our own language, and submitting to the conditions of the times in which we live, whence we derive our strength and our defects, let us ask from time to time, our brows lifted towards the heights and our eyes fixed on the group of honoured mortals: *what would they say of us?*

But why speak always of authors and writings? Maybe an age is coming when there will be no more writing. Happy those who read and read again, those who in their reading can follow their unrestrained inclination! There comes a time in life when, all our journeys over, our experiences ended, there is no enjoyment more delightful than to study and thoroughly examine the things we know, to take pleasure in what we feel, and in seeing and seeing again the people we love: the pure joys of our maturity. Then it is that the word classic takes its true meaning, and is defined for every man of taste by an irresistible choice. Then taste is formed, it is shaped and definite; then good sense, if we are to possess it at all, is perfected in us. We have neither more time for experiments, nor a desire to go forth in search of pastures new. We cling to our friends, to those proved by a long intercourse. Old wine, old books, old friends. We say to ourselves with Voltaire in these delightful lines: "Let us enjoy, let us write, let us live, my dear Horace! . . . I have lived longer than you: my verse will not last so long. But on the brink of the tomb I shall make it my chief care—to follow the lessons of your philosophy—to despise death in enjoying life—to read your writings full of charm and good sense—as we drink an old wine which revives our senses."

In fact, be it Horace or another who is the author preferred, who reflects our thoughts in all the wealth of their maturity, of some one of those excellent and antique minds shall we request an interview at every moment; of some one of them shall we ask a friendship which never deceives, which could not fail us; to some one of them shall we appeal for that sensation of serenity and amenity (we have often need of it) which reconciles us with mankind and with ourselves.

Montaigne

While the good ship France is taking a somewhat haphazard course, getting into unknown seas, and preparing to double what the pilots (if there is a pilot) call the Stormy Cape, while the look-out at the mast-head thinks he sees the spectre of the giant Adamastor rising on the horizon, many honourable and peaceable men continue their work and studies all the same, and follow out to the end, or as far as they can, their favourite hobbies. I know, at the present time, a learned man who is collating more carefully than has ever yet been done the different early editions of Rabelais—editions, mark you, of which only one copy remains, of which a second is not to be found: from the careful collation of the texts some literary and maybe philosophical result will be derived with regard to the genius of the French Lucian-Aristophanes. I know another scholar whose devotion and worship is given to a very different man—to Bossuet: he is preparing a complete, exact, detailed history of the life and works of the great bishop. And as tastes differ, and “*human fancy is cut into a thousand shapes*” (Montaigne said that), Montaigne also has his devotees, he who, himself, was so little of one: a sect is formed round him. In his lifetime he had Mademoiselle de Gournay, his daughter of *alliance*, who was solemnly devoted to him; and his disciple, Charron, followed him closely, step by step, only striving to arrange his thoughts with more order and method. In our time amateurs, intelligent men, practise the religion under another form: they devote themselves to collecting the smallest traces of the author of the *Essays*, to gathering up the slightest relics, and Dr. Payen may be justly placed at the head of the group. For years he has been preparing a book on Montaigne, of which the title will be: “MICHEL DE MONTAIGNE, a collection of unedited or little known facts about the author of the *Essays*, his book, and his other writings, about his family, his friends, his admirers, his detractors.”

While awaiting the conclusion of the book, the occupation and amuse-

ment of a lifetime, Dr. Payen keeps us informed in short pamphlets of the various works and discoveries made about Montaigne.

If we separate the discoveries made during the last five or six years from the jumble of quarrels, disputes, cavilling, quackery, and lawsuits (for there have been all those), they consist in this—

In 1846 M. Macé found in the (then) Royal Library, amongst the “Collection Du Puys,” a letter of Montaigne, addressed to the king, Henri IV, September 2, 1590.

In 1847 M. Payen printed a letter, or a fragment of a letter of Montaigne of February 16, 1588, a letter corrupt and incomplete, coming from the collection of the Comtesse Boni de Castellane.

But, most important of all, in 1848, M. Horace de Viel-Castel found in London, at the British Museum, a remarkable letter of Montaigne, May 22, 1585, when Mayor of Bordeaux, addressed to M. de Matignon, the king’s lieutenant in the town. The great interest of the letter is that it shows Montaigne for the first time in the full discharge of his office with all the energy and vigilance of which he was capable. The pretended idler was at need much more active than he was ready to own.

M. Detcheverry, keeper of the records to the mayoralty of Bordeaux, found and published (1850) a letter of Montaigne, while mayor, to the jurats, or aldermen of the town, July 30, 1585.

M. Achille Jubinal found among the manuscripts of the National Library, and published (1850), a long, remarkable letter from Montaigne to the king, Henri IV, January 18, 1590, which happily coincides with that already found by M. Macé.

Lastly, to omit nothing and to do justice to all, in a “Visit to Montaigne’s Château in Périgord,” of which the account appeared in 1850, M. Bertrand de Saint-Germain described the place and pointed out the various Greek and Latin inscriptions that may still be read in Montaigne’s tower in the third-story chamber (the ground floor counting as the first), which the philosopher made his library and study.

M. Payen, collecting together and criticizing in his last pamphlet the various notices and discoveries, not all of equal importance, allowed himself to be drawn into some little exaggeration of praise; but we cannot blame him. Admiration, when applied to such noble, perfectly innocent, and disinterested subjects, is truly a spark of the sacred fire: it produces research that a less ardent zeal would quickly leave aside, and sometimes leads to valuable results. However, it would be well for those who, following M. Payen’s example, intelligently understand and greatly admire

Montaigne, to remember, even in their ardour, the advice of the wise man and the master. "There is more to do," said he, speaking of the commentators of his time, "in interpreting the interpretations than in interpreting the things themselves; and more books about books than on any other subject. We do nothing, but everything swarms with commentators; of authors there is a great rarity." Authors are of great price and very scarce at all times—that is to say, authors who really increase the sum of human knowledge. I should like all who write on Montaigne, and give us the details of their researches and discoveries, to imagine one thing—Montaigne himself reading and criticizing them. "What would he think of me and of the manner in which I am going to speak of him to the public?" If such a question was put, how greatly it would suppress useless phrases and shorten idle discussions! M. Payen's last pamphlet was dedicated to a man who deserves equally well of Montaigne—M. Gustave Brunet, of Bordeaux. He, speaking of M. Payen, in a work in which he pointed out interesting and various corrections of Montaigne's text, said: "May he soon decide to publish the fruits of his researches: he will have left nothing for future *Montaignologues*." *Montaignologues!* Great Heaven! what would Montaigne say of such a word coined in his honour? You who occupy yourselves so meritoriously with him, but who have, I think, no claim to appropriate him to yourselves, in the name of him whom you love, and whom we all love by a greater or lesser title, never, I beg of you, use such words; they smack of the brotherhood and the sect, of pedantry and of the chatter of the schools—things utterly repugnant to Montaigne.

Montaigne had a simple, natural, affable mind, and a very happy disposition. Sprung from an excellent father, who, though of no great education, entered with real enthusiasm into the movement of the Renaissance and all the *liberal* novelties of his time, the son corrected the excessive enthusiasm, vivacity, and tenderness he inherited by a great refinement and justness of reflection; but he did not abjure the original groundwork. It is scarcely more than thirty years ago that whenever the sixteenth century was mentioned it was spoken of as a barbarous epoch, Montaigne only excepted: therein lay error and ignorance. The sixteenth century was a great century, fertile, powerful, learned, refined in parts, although in some aspects it was rough, violent, and seemingly coarse. What it particularly lacked was taste, if by taste is meant the faculty of clear and perfect selection, the extrication of the elements of the beautiful. But in the succeeding centuries taste quickly became distaste. If, however, in literature it was crude, in the arts properly so-called, in those of

the hand and the chisel, the sixteenth century, even in France, is, in the quality of taste, far greater than the two succeeding centuries: it is neither meagre nor massive, heavy nor distorted. In art its taste is rich and of fine quality—at once unrestrained and complex, ancient and modern, special to itself and original. In the region of morals it is unequal and mixed. It was an age of contrasts, of contrasts in all their crudity, an age of philosophy and fanaticism, of scepticism and strong faith. Everything was at strife and in collision; nothing was blended and united. Everything was in ferment; it was a period of chaos; every ray of light caused a storm. It was not a gentle age, or one we can call an age of light, but an age of struggle and combat. What distinguished Montaigne and made a phenomenon of him was that in such an age he should have possessed moderation, caution, and order.

Born on the last day of February, 1533, taught the ancient languages as a game while still a child, waked even in his cradle by the sound of musical instruments, he seemed less fitted for a rude and violent epoch than for the commerce and *sanctuary of the Muses*. His rare good sense corrected what was too ideal and poetical in his early education; but he preserved the happy faculty of saying everything with freshness and wit. Married, when past thirty, to an estimable woman who was his companion for twenty-eight years, he seems to have put passion only into friendship. He immortalized his love for Étienne de la Boétie, whom he lost after four years of the sweetest and closest intimacy. For some time counsellor in the Parliament of Bordeaux, Montaigne, before he was forty, retired from public life and flung away ambition to live in his tower of Montaigne, enjoying his own society and his own intellect, entirely given up to his own observations and thoughts, and to the busy idleness of which we know all the sports and fancies. The first edition of the *Essays* appeared in 1580, consisting of only two books, and in a form representing only the first rough draft of what we have in the later editions. The same year Montaigne set out on a voyage to Switzerland and Italy. It was during that voyage that the aldermen of Bordeaux elected him mayor of their town. At first he refused and excused himself, but warned that it would be well to accept, and enjoined by the king, he took the office, “the more beautiful,” he said, “that there was neither renunciation nor gain other than the honour of its performance.” He filled the office for four years, from July 1582 to July 1586, being re-elected after the first two years. Thus Montaigne, at the age of fifty, and a little against his will, re-entered public life when the country was on the eve of civil disturbances which, quieted and lulled to sleep for a while, broke out

more violently at the cry of the League. Although, as a rule, lessons serve for nothing, since the art of wisdom and happiness cannot be taught, let us not deny ourselves the pleasure of listening to Montaigne; let us look on his wisdom and happiness; let him speak of public affairs, of revolutions and disturbances, and of his way of conducting himself with regard to them. We do not put forward a model, but we offer our readers an agreeable recreation.

Although Montaigne lived in so agitated and stormy a time, a period that a man who had lived through the Terror (M. Daunou) called the *most tragic century in all history*, he by no means regarded his age as the worst of ages. He was not of those prejudiced and afflicted persons, who, measuring everything by their visual horizon, valuing everything according to their present sensations, always declare that the disease they suffer from is worse than any ever before experienced by a human being. He was like Socrates, who did not consider himself a citizen of one city but of the world; with his broad and full imagination he embraced the universality of countries and of ages; he even judged more equitably the very evils of which he was witness and victim. "Who is it," he said, "that, seeing the bloody havoc of these civil wars of ours, does not cry out that the machine of the world is near dissolution, and that the day of judgment is at hand, without considering that many worse revolutions have been seen, and that, in the meantime, people are being merry in a thousand other parts of the earth for all this? For my part, considering the licence and impunity that always attend such commotions, I admire they are so moderate, and that there is not more mischief done. To him who feels the hailstones patter about his ears, the whole hemisphere appears to be in storm and tempest." And raising his thoughts higher and higher, reducing his own suffering to what it was in the immensity of nature, seeing there not only himself but whole kingdoms as mere specks in the infinite, he added in words which foreshadowed Pascal, in words whose outline and salient points Pascal did not disdain to borrow: "But whoever shall represent to his fancy, as in a picture, that great image of our mother nature, portrayed in her full majesty and lustre, whoever in her face shall read so general and so constant a variety, whoever shall observe himself in that figure, and not himself but a whole kingdom, no bigger than the least touch or prick of a pencil in comparison of the whole, that man alone is able to value things according to their true estimate and grandeur."

Thus Montaigne gives us a lesson, a useless lesson, but I state it all the same, because among the many unprofitable ones that have been writ-

ten down, it is perhaps of greater worth than most. I do not mean to underrate the gravity of the circumstances in which France is just now involved, for I believe there is pressing need to bring together all the energy, prudence, and courage she possesses in order that the country may come out with honour. However, let us reflect, and remember that, leaving aside the Empire, which as regards internal affairs was a period of calm, and before 1812 of prosperity, we who utter such loud complaints lived in peace from 1815 to 1830, fifteen long years; that the three days of July only inaugurated another order of things that for eighteen years guaranteed peace and industrial prosperity; in all, thirty-two years of repose. Stormy days came; tempests burst, and will doubtless burst again. Let us learn how to live through them, but do not let us cry out every day, as we are disposed to do, that never under the sun were such storms known as we are enduring. To get away from the present state of feeling, to restore lucidity and proportion to our judgments, let us read every evening a page of Montaigne.

A criticism of Montaigne on the men of his day struck me, and it bears equally well on those of ours. Our philosopher says somewhere that he knows a fair number of men possessing various good qualities—one, intelligence; another, heart; another, address, conscience or knowledge, or skill in languages; each has his share: “but of a great man as a whole, having so many good qualities together, or one with such a degree of excellence that we ought to admire him, or compare him with those we honour in the past, my fortune has never shown me one.” He afterwards made an exception in favour of his friend Étienne de la Boétie, but he belonged to the company of great men dead before attaining maturity, and showing promise without having time to fulfil it. Montaigne’s criticism called up a smile. He did not see a true and wholly great man in his time, the age of L’Hôpital, Coligny, and the Guises. Well! How does ours seem to you? We have as many great men as in Montaigne’s time, one distinguished for his intellect, another for his heart, a third for skill, some (a rare thing) for conscience, many for knowledge and language. But we too lack the perfect man, and he is greatly to be desired. One of the most intelligent observers of our day recognized and proclaimed it some years ago: “Our age,” said M. de Rémusat, “is wanting in great men.”

How did Montaigne conduct himself in his duties as first magistrate of a great city? If we take him literally and on a hasty first glance, we should believe he discharged them slackly and languidly. Did not Horace, doing the honours to himself, say that in war he one day let his shield fall (*relicta non bene parmula*)? We must not be in too great a hurry to

take too literally the men of taste who have a horror of overestimating themselves. Minds of a fine quality are more given to vigilance and to action than they are apt to confess. The man who boasts and makes a great noise, will, I am almost sure, be less brave in the combat than Horace, and less vigilant at the council board than Montaigne.

On entering office Montaigne was careful to warn the aldermen of Bordeaux not to expect to find in him more than there really was; he presented himself to them without affectation. "I represented to them faithfully and conscientiously all that I felt myself to be—a man without memory, without vigilance, without experience, and without energy; but also, without hate, without ambition, without avarice, and without violence." He should be sorry, while taking the affairs of the town in hand, that his feelings should be so strongly affected as those of his worthy father had been, who in the end had lost his place and health. *The eager and ardent pledge to satisfy an impetuous desire* was not his method. His opinion was "that you must lend yourself to others, and only give yourself to yourself." And repeating his thought, according to his custom in all kinds of metaphors and picturesque forms, he said again that if he sometimes allowed himself to be urged to the management of other men's affairs, he promised to take them in hand, not "into my lungs and liver." We are thus forewarned, we know what to expect. The mayor and Montaigne were two distinct persons; under his role and office he reserved to himself a certain freedom and secret security. He continued to judge things in his own fashion and impartially, although acting loyally for the cause confided to him. He was far from approving or even excusing all he saw in his party, and he could judge his adversaries and say of them: "He did that thing wickedly, and this virtuously." "I would have," he added, "matters go well on our side; but if they do not, I shall not run mad. I am heartily for the right party; but I do not affect to be taken notice of for an especial enemy to others." And he entered into some details and applications which at that time were piquant. Let us remark, however, in order to explain and justify his somewhat extensive profession of impartiality, that the chiefs of the party then in evidence, the three Henris, were famous and considerable men on several counts: Henri, Duke of Guise, head of the League; Henri, King of Navarre, leader of the Opposition; and the King Henri III in whose name Montaigne was mayor, who wavered between the two. When parties have neither chief nor head, when they are known by the body only, that is to say in their hideous and brutal reality, it is more difficult and also more hazardous to be just towards them and to assign to each its share of action.

The principle which guided him in his administration was to look only at the fact, at the result, and to grant nothing to noise and outward show: "How much more a good effect makes a noise, so much I abate of the goodness of it." For it is always to be feared that it was more performed for the sake of the noise than upon the account of goodness: "Being exposed upon the stall, 'tis half sold." That was not Montaigne's way: he made no show; he managed men and affairs as quietly as he could; he employed in a manner useful to all alike the gifts of sincerity and conciliation; the personal attraction with which nature endowed him was a quality of the highest value in the management of men. He preferred to warn men of evil rather than to take on himself the honour of repressing it: "Is there anyone who desires to be sick that he may see his physician's practice? And would not that physician deserve to be whipped who should wish the plague amongst us that he might put his art into practice?" Far from desiring that trouble and disorder in the affairs of the city should rouse and honour his government, he had ever willingly, he said, contributed all he could to their tranquillity and ease. He is not of those whom municipal honours intoxicate and elate, those "dignities of office" as he called them, and of which all the noise "goes from one cross-road to another." If he was a man desirous of fame, he recognized that it was of a kind greater than that. I do not know, however, if even in a vaster field he would have changed his method and manner of proceeding. To do good for the public imperceptibly would always seem to him the ideal of skill and the culminating point of happiness. "He who will not thank me," he said, "for the order and quiet calm that has accompanied my administration, cannot, however, deprive me of the share that belongs to me by the title of my good fortune." And he is inexhaustible in describing in lively and graceful expressions the kinds of effective and imperceptible services he believed he had rendered—services greatly superior to noisy and glorious deeds: "Actions which come from the workman's hand carelessly and noiselessly have most charm, that some honest man chooses later and brings from their obscurity to thrust them into the light for their own sake." Thus fortune served Montaigne to perfection, and even in his administration of affairs, in difficult conjunctures, he never had to belie his maxim, nor to step very far out of the way of life he had planned: "For my part I commend a gliding, solitary, and silent life." He reached the end of his magistracy almost satisfied with himself, having accomplished what he had promised himself, and much more than he had promised others.

The letter lately discovered by M. Horace de Vieil-Castel corroborates

the chapter in which Montaigne exhibits and criticizes himself in the period of his public life. "That letter," says M. Payen, "is entirely on affairs. Montaigne is mayor; Bordeaux, lately disturbed, seems threatened by fresh agitations; the king's lieutenant is away. It is Wednesday, May 22, 1585; it is night, Montaigne is wakeful, and writes to the governor of the province." The letter, which is of too special and local an interest to be inserted here, may be summed up in these words: Montaigne regretted the absence of Marshal de Matignon, and feared the consequences of its prolongation; he was keeping, and would continue to keep, him acquainted with all that was going on, and begged him to return as soon as his circumstances would permit. "We are looking after our gates and guards, and a little more carefully in your absence. . . . If anything important and fresh occurs, I shall send you a messenger immediately, so that if you hear no news from me, you may consider that nothing has happened." He begs M. de Matignon to remember, however, that he might not have time to warn him, "entreating you to consider that such movements are usually so sudden, that if they do occur they will take me by the throat without any warning." Besides, he will do everything to ascertain the march of events beforehand. "I will do what I can to hear news from all parts, and to that end shall visit and observe the inclinations of all sorts of men." Lastly, after keeping the marshal informed of everything, of the least rumours abroad in the city, he pressed him to return, assuring him "that we spare neither our care, nor, if need be, our lives to preserve everything in obedience to the king." Montaigne was never prodigal of protestations and praises, and what with others was a mere form of speech, was with him a real undertaking and the truth.

Things, however, became worse and worse: civil war broke out; friendly or hostile parties (the difference was not great) infested the country. Montaigne, who went to his country house as often as he could, whenever the duties of his office, which was drawing near its term, did not oblige him to be in Bordeaux, was exposed to every sort of insult and outrage. "I underwent," he said, "the inconveniences that moderation brings along with it in such a disease. I was pitied on all hands; to the Ghibelline I was a Guelph, and to the Guelph a Ghibelline." In the midst of his personal grievances he could disengage and raise his thoughts to reflections on the public misfortunes and on the degradation of men's characters. Considering closely the disorder of parties, and all the abject and wretched things which developed so quickly, he was ashamed to see leaders of renown stoop and debase themselves by cowardly complacency; for in those circumstances we know, like him, "that in the word

of command to march, draw up, wheel, and the like, we obey him indeed; but all the rest is dissolute and free." "It pleases me," said Montaigne ironically, "to observe how much pusillanimity and cowardice there is in ambition; by how abject and servile ways it must arrive at its end." Despising ambition as he did, he was not sorry to see it unmasked by such practices and degraded in his sight. However, his goodness of heart overcoming his pride and contempt, he adds sadly, "it displeases me to see good and generous natures, and that are capable of justice, every day corrupted in the management and command of this confusion. . . . We had ill-contrived souls enough without spoiling those that were generous and good." He rather sought in that misfortune an opportunity and motive for fortifying and strengthening himself. Attacked one by one by many disagreeables and evils, which he would have endured more cheerfully in a heap—that is to say, all at once—pursued by war, disease, by all the plagues (July 1585), in the course things were taking, he already asked himself to whom he and his could have recourse, of whom he could ask shelter and subsistence for his old age; and having looked and searched thoroughly all around, he found himself actually destitute and ruined. For, "to let a man's self fall plumb down, and from so great a height, it ought to be in the arms of a solid, vigorous, and fortunate friendship. They are very rare, if there be any." Speaking in such a manner, we perceive that La Boëtie had been some time dead. Then he felt that he must after all rely on himself in his distress, and must gain strength; now or never was the time to put into practice the lofty lessons he spent his life in collecting from the books of the philosophers. He took heart again, and attained all the height of his virtue: "In an ordinary and quiet time, a man prepares himself for moderate and common accidents; but in the confusion wherein we have been for these thirty years, every Frenchman, whether in particular or in general, sees himself every hour upon the point of the total ruin and overthrow of his fortune." And far from being discouraged and cursing fate for causing him to be born in so stormy an age, he suddenly congratulated himself: "Let us thank fortune that has not made us live in an effeminate, idle, and languishing age." Since the curiosity of wise men seeks the past for disturbances in states in order to learn the secrets of history, and, as we should say, the whole physiology of the body social, "so does my curiosity," he declares, "make me in some sort please myself with seeing with my own eyes this notable spectacle of our public death, its forms and symptoms; and, seeing I could not hinder it, am content to be destined to assist in it, and thereby to instruct myself." I shall not suggest

a consolation of that sort to most people; the greater part of mankind does not possess the heroic and eager curiosity of Empedocles and the elder Pliny, the two intrepid men who went straight to the volcanoes and the disturbances of nature to examine them at close quarters, at the risk of destruction and death. But to a man of Montaigne's nature, the thought of that stoical observation gave him consolation even amid real evils. Considering the condition of false peace and doubtful truce, the *régime* of dull and profound corruption which had preceded the last disturbances, he almost congratulated himself on seeing their cessation; for "it was," he said of the *régime* of Henri III, "a universal juncture of particular members, rotten to emulation of one another, and the most of them with inveterate ulcers, that neither required nor admitted of any cure. This conclusion therefore did really more animate than depress me." Note that his health, usually delicate, is here raised to the level of his morality, although what it had suffered through the various disturbances might have been enough to undermine it. He had the satisfaction of feeling that he had some hold against fortune, and that it would take a greater shock still to crush him.

Another consideration, humbler and more humane, upheld him in his troubles, the consolation arising from a common misfortune, a misfortune shared by all, and the sight of the courage of others. The people, especially the real people, they who are victims and not robbers, the peasants of his district, moved him by the manner in which they endured the same, or even worse, troubles than his. The disease or plague which raged at that time in the country pressed chiefly on the poor; Montaigne learned from them resignation and the practice of philosophy. "Let us look down upon the poor people that we see scattered upon the face of the earth, prone and intent upon their business, that neither know Aristotle nor Cato, example nor precept. Even from these does nature every day extract effects of constancy and patience, more pure and manly than those we so inquisitively study in the schools." And he goes on to describe them working to the bitter end, even in their grief, even in disease, until their strength failed them. "He that is now digging in my garden has this morning buried his father, or his son. . . . They never keep their beds but to die." The whole chapter is fine, pathetic, to the point, evincing noble, stoical elevation of mind, and also the cheerful and affable disposition which Montaigne said, with truth, was his by inheritance, and in which he had been nourished. There could be nothing better as regards "consolation in public calamities," except a chapter of some not more human, but of some truly divine, book, in which the hand of God should be

everywhere visible, not perfunctorily, as with Montaigne, but actually and lovingly present. In fact, the consolation Montaigne gives himself and others is perhaps as lofty and beautiful as human consolation without prayer can be.

He wrote the chapter, the twelfth of the third book, in the midst of the evils he described, and before they were ended. He concluded it in his graceful and poetical way with a collection of examples, "a heap of foreign flowers," to which he furnished only the thread for fastening them together.

There is Montaigne to the life; no matter how seriously he spoke, it was always with the utmost charm. To form an opinion on his style you have only to open him indifferently at any page and listen to his talk on any subject; there is none that he did not enliven and make suggestive. In the chapter "Of Liars," for instance, after enlarging on his lack of memory and giving a list of reasons by which he might console himself, he suddenly added this fresh and delightful reason, that, thanks to his faculty for forgetting, "the places I revisit, and the books I read over again, always smile upon me with a fresh novelty." It is thus that on every subject he touched he was continually new, and created sources of freshness.

Montesquieu, in a memorable exclamation, said: "The four great poets, Plato, Malebranche, Shaftesbury, Montaigne!" How true it is of Montaigne! No French writer, including the poets proper, had so lofty an idea of poetry as he had. "From my earliest childhood," he said, "poetry had power over me to transport and transpierce me." He considered, and therein shows penetration, that "we have more poets than judges and interpreters of poetry. It is easier to write than to understand." In itself and its pure beauty his poetry defies definition; whoever desired to recognize it at a glance and discern of what it actually consisted would see no more than "the brilliance of a flash of lightning." In the constitution and continuity of his style, Montaigne is a writer very rich in animated, bold similes, naturally fertile in metaphors that are never detached from the thought, but that seize it in its very centre, in its interior, that join and bind it. In that respect, fully obeying his own genius, he has gone beyond and sometimes exceeded the genius of language. His concise, vigorous, and always forcible style, by its poignancy, emphasizes and repeats the meaning. It may be said of his style that it is a continual epigram, or an ever-renewed metaphor, a style that has only been successfully employed by the French once, by Montaigne himself. If we wanted to imitate him, supposing we had the power and were naturally fitted for it—if we de-

sired to write with his severity, exact proportion, and diverse continuity of figures and turns—it would be necessary to force our language to be more powerful, and poetically more complete, than is usually our custom. Style *à la* Montaigne, consistent, varied in the series and assortment of the metaphors, exacts the creation of a portion of the tissue itself to hold them. It is absolutely necessary that in places the woof should be enlarged and extended, in order to weave into it the metaphor; but in defining him I come almost to write like him. The French language, French prose, which in fact always savours more or less of conversation, does not, naturally, possess the resources and the extent of canvas necessary for a continued picture: by the side of an animated metaphor it will often exhibit a sudden lacuna and some weak places. In filling this by boldness and invention as Montaigne did, in creating, in imagining the expression and locution that is wanting, our prose should appear equally finished. Style *à la* Montaigne would, in many respects, be openly at war with that of Voltaire. It could only come into being and flourish in the full freedom of the sixteenth century, in a frank, ingenious, jovial, keen, brave, and refined mind, of a unique stamp, that even for that time seemed free and somewhat licentious, and that was inspired and emboldened, but not intoxicated by the pure and direct spirit of ancient sources.

Such as he is, Montaigne is the French Horace; he is Horatian in the groundwork, often in the form and expression, although in that he sometimes approaches Seneca. His book is a treasurehouse of moral observations and of experience; at whatever page it is opened, and in whatever condition of mind, some wise thought expressed in a striking and enduring fashion is certain to be found. It will at once detach itself and engrave itself on the mind, a beautiful meaning in full and forcible words, in one vigorous line, familiar or great. The whole of his book, said Étienne Pasquier, is a real *seminary* of beautiful and remarkable sentences, and they come in so much the better that they run and hasten on without thrusting themselves into notice. There is something for every age, for every hour of life: you cannot read in it for any time without having the mind filled and lined as it were, or, to put it better, fully armed and clothed. We have just seen how much useful counsel and actual consolation it contains for an honourable man, born for private life, and fallen on times of disturbance and revolution. To this I shall add the counsel he gave those who, like myself and many men of my acquaintance, suffer from political disturbances without in any way provoking them, or believing ourselves capable of averting them. Montaigne, as Horace would have done, counsels them, while apprehending everything from afar off,

not to be too much preoccupied with such matters in advance; to take advantage to the end of pleasant moments and bright intervals. Stroke on stroke come his piquant and wise similes, and he concludes, to my thinking, with the most delightful one of all, and one, besides, entirely appropriate and seasonable: it is folly and fret, he said, “to take out your furred gown at Saint John because you will want it at Christmas.”

*The foregoing two essays were translated
by Elizabeth Lee.*

Sir Francis Bacon

1561–1626

Francis Bacon was born on January 22, 1561, in London, England. His father, Sir Nicholas Bacon, was Lord Keeper of the Seal to Queen Elizabeth I.

In 1573 Bacon entered Trinity College, Cambridge. He left, in 1576, and went abroad with the ambassador to France to learn the arts of diplomacy. When his father died suddenly, in 1579, he returned to England. There he studied law and was admitted to the bar in 1582.

The Earl of Essex befriended Bacon and tried to help him in his career. Later, when Essex was tried for treason, Bacon took a leading role in the prosecution and helped to bring about Essex' execution. This action has never been entirely understood.

When James I came to the throne, Bacon's career advanced rapidly. He became Attorney General in 1613, Lord Keeper of the Seal in 1617, and Lord Chancellor in 1618. He was made Baron Verulam in 1618 and Viscount St. Albans in 1621. Bacon defended the King's policies against Parliament, which brought him into conflict with the great lawyer Sir Edward Coke.

In 1621 Bacon was accused of taking bribes in his position as Lord Chancellor. The practice of receiving gifts was an old one, to which Bacon pleaded guilty. He claimed, however, that his judgment was

Notes from the artist: "A bold, forceful approach was used to present Bacon as the last of the 'all-round' intellectual giants. . . . In the background, a university; at right, the servant who accompanied Bacon to record his observations and thoughts."

not swayed by the gifts. Bacon was sentenced to prison, heavily fined, and disqualified from holding office. The prison sentence and fine were not enforced, but Bacon spent the rest of his life in writing and scientific research rather than in public office.

Because of Bacon's insistence that scientists should reach conclusions solely by experiment, he is considered one of the founders of the modern scientific method.

Bacon's philosophical writings are in the two completed parts of what he planned as a huge work, the *Instauratio magna*, or "Great Reconstruction of Philosophy." His *Essays*, published in 1597, are famous for their shrewdness and epigrammatic style. He died on April 9, 1626, after catching a cold while trying to see if meat could be preserved in snow.

Francis Bacon was a master of the aphorism. The first sentences of his essays are often particularly brilliant and memorable. People have been quoting them for three hundred years.

"Virtue is like a rich stone, best plain set," the essay *Of Beauty* begins. It is not only a trenchant phrase. It also sets the tone and makes the point of the entire essay. Physical beauty is, in itself, nothing to be proud of, Bacon is saying. "Beauty is as summer fruits, which are easy to corrupt, and cannot last," he writes. True beauty is inside, where virtue is; true beauty is in action, not in seeming. But Bacon also says that "virtue is best in a body that is comely, though not of delicate features." Virtue and beauty together make a fine package.

The advice Bacon gives in *Of Discourse* is as good as we are likely to find on the subject anywhere. Above all, do not be a bore, he says, and do not be rude. There are some subjects that should not be joked about, especially if it is done only to exhibit our own wit. It is both useful and polite to ask questions, but they should be chosen to put the other person in a good light rather than to expose his lack of knowledge. Perhaps the best advice of all is this: "Speech of a man's self ought to be seldom."

Of Studies contains some of Bacon's most famous sentences. For example: "Crafty men contemn studies, simple men admire them, and wise men use them." There is much truth in that. Again: "Some books are to be tasted, others to be swallowed, and some few to be chewed and digested." This is often quoted without the explanation

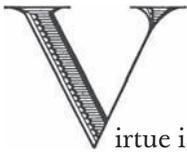

that follows. “That is,” Bacon says, “some books are to be read only in part; others to be read, but not curiously (*i.e.*, carefully); and some few to be read wholly, and with diligence and attention.”¹

Less famous, but perhaps even more interesting, is the sentence: “Reading maketh a full man; conference a ready man; and writing an exact man.” Each part of this statement deserves a full discourse. We do not really know our own thoughts unless we can write them down. Quickness of wit (which Bacon calls readiness) comes from conversation. The silent man is too often slow of mind. And without the ability and willingness to read, we are empty things. So much of the world is closed to us without books.

The style of Bacon’s essays is special and quite unique to him, though others have attempted to imitate it. Not a word is wasted. His entire output in the form—some fifty-eight essays—would, if closely printed, fill hardly a hundred pages. Yet those hundred pages would contain as much wisdom as most libraries. The cold, piercing brain of this distant, unknowable man saw through to the realities. We may not always like him and what he says, but we cannot deny that what he says is largely true, and relevant to our own concerns.

¹ Compare what Virginia Woolf has to say on this point in Vol. 5, pp. 5–14, in this set.

Of Beauty

irtue is like a rich stone, best plain set; and surely virtue is best in a body that is comely, though not of delicate features; and that hath rather dignity of presence, than beauty of aspect. Neither is it almost seen, that very beautiful persons are otherwise of great virtue; as if nature were rather busy not to err, than in labour to produce excellency. And therefore they prove accomplished, but not of great spirit; and study rather behaviour than virtue. But this holds not always: for Augustus Caesar, Titus Vespasianus, Philip le Bel of France, Edward the Fourth of England, Alcibiades of Athens, Ismail the Sophy of Persia were all high and great spirits; and yet the most beautiful men of their times. In beauty, that of favour is more than that of colour; and that of decent and gracious motion more than that of favour. That is the best part of beauty, which a picture cannot express; no nor the first sight of life. There is no excellent beauty that hath not some strangeness in the proportion. A man cannot tell whether Apelles or Albert Dürer were the more trifler; whereof the one would make a personage by geometrical proportions; the other, by taking the best parts out of divers faces, to make one excellent. Such personages, I think, would please nobody but the painter that made them. Not but I think a painter may make a better face than ever was; but he must do it by a kind of felicity (as a musician that maketh an excellent air in music) and not by rule. A man shall see faces, that if you examine them part by part, you shall find never a good; and yet altogether do well.

If it be true that the principal part of beauty is in decent motion, certainly it is no marvel though persons in years seem many times more amiable—*pulchrorum autumnus pulcher* [autumn is the beauty of beauties]—for no youth can be comely but by pardon, and considering the youth as to make up the comeliness. Beauty is as summer fruits, which are easy to corrupt, and cannot last; and for the most part it makes a dissolute youth, and an age a little out of countenance; but yet certainly again, if it light well, it maketh virtue shine, and vices blush.

Of Discourse

S

ome in their discourse desire rather commendation of wit, in being able to hold all arguments, than of judgment, in discerning what is true; as if it were a praise to know what might be said, and not what should be thought. Some have certain common places and themes wherein they are good, and want variety; which kind of poverty is for the most part tedious, and when it is once perceived, ridiculous. The honourablest part of talk is to give the occasion; and again to moderate and pass to somewhat else; for then a man leads the dance. It is good, in discourse and speech of conversation, to vary and intermingle speech of the present occasion with arguments, tales with reasons, asking of questions with telling of opinions, and jest with earnest: for it is a dull thing to tire, and, as we say now, to jade, any thing too far. As for jest, there be certain things which ought to be privileged from it; namely, religion, matters of state, great persons, any man's present business of importance, and any case that deserveth pity. Yet there be some that think their wits have been asleep, except they dart out somewhat that is piquant, and to the quick. This is a vein which should be bridled: *Parce, puer, stimulis, et fortius utere loris* [Spare the spurs, lad, and more vigorously use the reins]. And generally, men ought to find the difference between saltness and bitterness. Certainly, he that hath a satirical vein, as he maketh others afraid of his wit, so he had need be afraid of others' memory.

He that questioneth much shall learn much, and content much; but especially if he apply his questions to the skill of the persons whom he asketh; for he shall give them occasion to please themselves in speaking, and himself shall continually gather knowledge. But let his questions not be troublesome; for that is fit for a poser. And let him be sure to leave other men their turns to speak. Nay, if there be any that would reign and take up all the time, let him find means to take them off, and to bring

others on; as musicians use to do with those that dance too long galliards. If you dissemble sometimes your knowledge of that you are thought to know, you shall be thought another time to know that you know not.

Speech of a man's self ought to be seldom, and well chosen. I knew one was wont to say in scorn, "He must needs be a wise man, he speaks so much of himself": and there is but one case wherein a man may commend himself with good grace; and that is in commending virtue in another; especially if it be such a virtue whereunto himself pretendeth. Speech of touch towards others should be sparingly used; for discourse ought to be as a field, without coming home to any man. I knew two noblemen, of the west part of England, whereof the one was given to scoff, but kept ever royal cheer in his house; the other would ask of those that had been at the other's table, "Tell truly, was there never a flout or dry blow given?" To which the guest would answer, "Such and such a thing passed." The lord would say, "I thought he would mar a good dinner." Discretion of speech is more than eloquence; and to speak agreeably to him with whom we deal is more than to speak in good words or in good order. A good continued speech, without a good speech of interlocution, shows slowness; and a good reply or second speech, without a good settled speech, showeth shallowness and weakness. As we see in beasts, that those that are weakest in the course are yet nimblest in the turn; as it is betwixt the greyhound and the hare. To use too many circumstances ere one come to the matter is wearisome; to use none at all is blunt.

Of Studies

S

udies serve for delight, for ornament, and for ability. Their chief use for delight is in privateness and retiring; for ornament, is in discourse; and for ability, in the judgment and disposition of business. For expert men can execute, and perhaps judge of particulars, one by one; but the general counsels, and the plots and marshalling of affairs, come best from those that are learned. To spend too much time in studies is sloth; to use them too much for ornament is affectation; to make judgment wholly by their rules is the humour of a scholar. They perfect nature, and are perfected by experience: for natural abilities are like natural plants, that need pruning by study; and studies themselves do give forth directions too much at large, except they be bounded in by experience. Crafty men contemn studies, simple men admire them, and wise men use them; for they teach not their own use; but that is a wisdom without them, and above them, won by observation. Read not to contradict and confute; nor to believe and take for granted; nor to find talk and discourse; but to weigh and consider.

Some books are to be tasted, others to be swallowed, and some few to be chewed and digested; that is, some books are to be read only in parts; others to be read, but not curiously; and some few to be read wholly, and with diligence and attention. Some books also may be read by deputy, and extracts made of them by others; but that would be only in the less important arguments, and the meaner sort of books; else distilled books are like common distilled waters, flashy things. Reading maketh a full man; conference a ready man; and writing an exact man. And therefore, if a man write little, he had need have a great memory; if he confer little, he had need have a present wit: and if he read little, he had need have much cunning, to seem to know that he doth not. Histories make men wise; poets witty; the mathematics subtile; natural philosophy deep; moral grave; logic and rhetoric able to contend. *Abeunt studia in mores* [studies develop into habits]. Nay there is no stond or

impediment in the wit but may be wrought out by fit studies: like as diseases of the body may have appropriate exercises.

Bowling is good for the stone and reins; shooting for the lungs and breast; gentle walking for the stomach; riding for the head; and the like. So if a man's wit be wandering, let him study the mathematics; for in demonstrations, if his wit be called away never so little, he must begin again. If his wit be not apt to distinguish or find differences, let him study the schoolmen; for they are *cymini sectores* [hairsplitters, literally cumin-seed sorters]. If he be not apt to beat over matters, and to call up one thing to prove and illustrate another, let him study the lawyers' cases. So every defect of the mind may have a special receipt.

*The foregoing essays
are from a collection of Bacon's essays entitled
ESSAYS: CIVIL AND MORAL*

David Hume

1711–1776

The Homes or Humes were minor Scottish gentry. David Hume was born in Edinburgh, April 26 (Old Style), 1711. He left Edinburgh University about 1726. Like Congreve, Burke, and others, he tried the law and did not like it. A turn at business helped him to work off a slight nervous disorder. He went to France, where he wrote *A Treatise of Human Nature*. The three-volume work was published in England in 1739–40.

It got little notice. The first two volumes of his *Essays Moral and Political* were somewhat better received. He took various positions—tutor to a mad marquess, aide-de-camp to General James Sinclair in Vienna and Turin—in order to earn money for writing. More essays, a rewriting of Book I of the *Treatise* (this later became *Enquiry concerning Human Understanding*), and *An Enquiry concerning the Principles of Morals* were all published in 1751.

The next year he became keeper of the Advocates' Library in Edinburgh. There, by 1762, he had finished the *Four Dissertations* and his six-volume *History of England*. He was famous. How great that fame was he did not know until he went to Paris in 1763 as Acting Secretary of the British Embassy under the Earl of Hertford. The King gave him a reception. The great hostesses fought over him. He became a public idol, as Franklin did later.

Hume returned to London in 1766. He took Jean Jacques Rousseau along and found him a house in Staffordshire. But the disturbed Rousseau imagined a plot and fled back to France, where he accused Hume of betraying him. Hume served a year as Undersecretary of State. Then he retired to the company of Adam Smith and other friends in Edinburgh. Boswell, who had called him “the greatest writer in Britain,” visited him just before his death. Would Hume

admit to a belief in immortality? No, said Hume, and fended him off with his usual clearheaded good nature. He died on August 25, 1776.

Some writers give us trouble by using too many difficult words. In Hume's case we might almost say that the reverse is true. *Of the Standard of Taste* is a good example. Its very simplicity of statement, on first reading, makes it a little hard to grasp. Hume does not define his terms. What is "taste"? If we are patient, we shall see that the whole essay becomes a definition. And what is a "sentiment"? We go to the dictionary and find a meaning that seems closest to Hume's sense: "mental attitude, thought or judgment permeated or prompted by feeling."

He begins by attacking head-on the main difficulty in regard to taste: its great variety, and the variety of standards and points of view this implies. *Chacun à son goût*, says the French proverb, meaning "everyone to his taste." Is this cynicism, or mere intellectual courtesy, or the final wisdom of the matter? In any case, Hume would not have been content with it. If we understand what he is doing, we shall be well on the way to understanding his argument. He is not defining taste per se, though it comes to that. He is examining the various factors that have a bearing on it in order to set up a standard of taste. He does this by giving us a point-by-point description of the qualities requisite to a man of taste.

Often we are principally conscious of the difference between the standards of his time, in which he shared, and ours. For example, "blame" is a term we might apply to a hunting dog that failed to make a good point, not to a work of art or its creator. The distinction goes beyond vocabulary. The men of the eighteenth century spread moral judgment like a blanket over every aspect of human life. In the same way, Hume extends the operation of taste over theology, philosophy, ethics, science, poetry, and the other arts.

Notes from the artist: "Hume the man, as he saw himself in the quotation from Enquiry concerning Human Understanding, was the theme of this portrait. The gay figures in the background, suggesting music and dance, are taken from a Greek vase."

David Hume

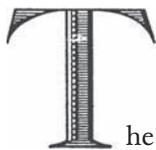

*Be a philosopher ; but amidst all your philosophy,
be still a man.*

Sometimes, as in the discussion of the characters in Homer and Fénelon, we find it difficult to guess whether a moral judgment or a judgment of taste is implied. Perhaps Hume is suggesting that they are close to being the same thing.

But in his discussion of the qualities that distinguish the man of taste, Hume stands on high and solid ground. We may disagree here and there, as, for example, in regard to his view that the object of poetry is “to please, by means of the passions and the imagination.” Shelley and Whitman, among others, give it a different character. But we can hardly fail to concur with Hume’s requirements for “a true judge in the finer arts.” He tells us that “strong sense, united to delicate sentiment, improved by practice, perfected by comparison, and cleared of all prejudice, can alone entitle critics to this valuable character; and the joint verdict of such, wherever they are to be found, is the true standard of taste and beauty.” In the two centuries or more since Hume wrote, we have hardly bettered that judgment.

Of the Standard of Taste

he great variety of Taste, as well as of opinion, which prevails in the world, is too obvious not to have fallen under every one's observation. Men of the most confined knowledge are able to remark a difference of taste in the narrow circle of their acquaintance, even where the persons have been educated under the same government, and have early imbibed the same prejudices. But those who can enlarge their view to contemplate distant nations and remote ages, are still more surprised at the great inconsistency and contrariety. We are apt to call barbarous whatever departs widely from our own taste and apprehension; but soon find the epithet of reproach retorted on us. And the highest arrogance and self-conceit is at last startled, on observing an equal assurance on all sides, and scruples, amidst such a contest of sentiment, to pronounce positively in its own favour.

As this variety of taste is obvious to the most careless inquirer, so will it be found, on examination, to be still greater in reality than in appearance. The sentiments of men often differ with regard to beauty and deformity of all kinds, even while their general discourse is the same. There are certain terms in every language which import blame, and others praise; and all men who use the same tongue must agree in their application of them. Every voice is united in applauding elegance, propriety, simplicity, spirit in writing; and in blaming fustian, affectation, coldness, and a false brilliancy. But when critics come to particulars, this seeming unanimity vanishes; and it is found that they had affixed a very different meaning to their expressions. In all matters of opinion and science, the case is opposite; the difference among men is there oftener found to lie in generals than in particulars, and to be less in reality than in appearance. An explanation of the terms commonly ends the controversy: and

the disputants are surprised to find that they had been quarrelling, while at bottom they agreed in their judgment.

Those who found morality on sentiment, more than on reason, are inclined to comprehend ethics under the former observation, and to maintain that, in all questions which regard conduct and manners, the difference among men is really greater than at first sight it appears. It is indeed obvious, that writers of all nations and all ages concur in applauding justice, humanity, magnanimity, prudence, veracity; and in blaming the opposite qualities. Even poets and other authors, whose compositions are chiefly calculated to please the imagination, are yet found, from Homer down to Fénelon, to inculcate the same moral precepts, and to bestow their applause and blame on the same virtues and vices. This great unanimity is usually ascribed to the influence of plain reason, which, in all these cases, maintains similar sentiments in all men, and prevents those controversies to which the abstract sciences are so much exposed. So far as the unanimity is real, this account may be admitted as satisfactory. But we must also allow that some part of the seeming harmony in morals may be accounted for from the very nature of language. The word virtue, with its equivalent in every tongue, implies praise, as that of vice does blame; and no one, without the most obvious and grossest impropriety, could affix reproach to a term, which in general acceptation is understood in a good sense: or bestow applause, where the idiom requires disapprobation. Homer's general precepts, where he delivers any such, will never be controverted; but it is obvious that, when he draws particular pictures of manners, and represents heroism in Achilles, and prudence in Ulysses, he intermixes a much greater degree of ferocity in the former, and of cunning and fraud in the latter, than Fénelon would admit of. The sage Ulysses, in the Greek poet, seems to delight in lies and fictions, and often employs them without any necessity, or even advantage. But his more scrupulous son, in the French epic writer, exposes himself to the most imminent perils, rather than depart from the most exact line of truth and veracity.

The admirers and followers of the Alcoran insist on the excellent moral precepts interspersed throughout that wild and absurd performance. But it is to be supposed, that the Arabic words, which correspond to the English, equity, justice, temperance, meekness, charity, were such as, from the constant use of that tongue, must always be taken in a good sense: and it would have argued the greatest ignorance, not of morals, but of language, to have mentioned them with any epithets, besides those of applause and approbation. But would we know, whether the pretended

prophet had really attained a just sentiment of morals, let us attend to his narration, and we shall soon find, that he bestows praise on such instances of treachery, inhumanity, cruelty, revenge, bigotry, as are utterly incompatible with civilized society. No steady rule of right seems there to be attended to; and every action is blamed or praised, so far only as it is beneficial or hurtful to the true believers.

The merit of delivering true general precepts in ethics is indeed very small. Whoever recommends any moral virtues, really does no more than is implied in the terms themselves. That people who invented the word charity, and used it in a good sense, inculcated more clearly, and much more efficaciously, the precept, Be charitable, than any pretended legislator or prophet who should insert such a maxim in his writings. Of all expressions, those which, together with their other meaning, imply a degree either of blame or approbation, are the least liable to be perverted or mistaken.

It is natural for us to seek a Standard of Taste; a rule by which the various sentiments of men may be reconciled; at least a decision afforded confirming one sentiment, and condemning another.

There is a species of philosophy which cuts off all hopes of success in such an attempt, and represents the impossibility of ever attaining any standard of taste. The difference, it is said, is very wide between judgment and sentiment. All sentiment is right; because sentiment has a reference to nothing beyond itself, and is always real, wherever a man is conscious of it. But all determinations of the understanding are not right; because they have a reference to something beyond themselves, to wit, real matter of fact; and are not always conformable to that standard. Among a thousand different opinions which different men may entertain of the same subject, there is one, and but one, that is just and true: and the only difficulty is to fix and ascertain it. On the contrary, a thousand different sentiments, excited by the same object, are all right; because no sentiment represents what is really in the object. It only marks a certain conformity or relation between the object and the organs or faculties of the mind; and if that conformity did not really exist, the sentiment could never possibly have being. Beauty is no quality in things themselves: it exists merely in the mind which contemplates them; and each mind perceives a different beauty. One person may even perceive deformity, where another is sensible of beauty; and every individual ought to acquiesce in his own sentiment, without pretending to regulate those of others. To seek the real beauty, or real deformity, is as fruitless an inquiry as to pretend to ascertain the real sweet or real bitter. Accord-

ing to the disposition of the organs, the same object may be both sweet and bitter; and the proverb has justly determined it to be fruitless to dispute concerning tastes. It is very natural, and even quite necessary, to extend this axiom to mental, as well as bodily taste; and thus common sense, which is so often at variance with philosophy, especially with the sceptical kind, is found, in one instance at least, to agree in pronouncing the same decision.

But though this axiom, by passing into a proverb, seems to have attained the sanction of common sense, there is certainly a species of common sense which opposes it, at least serves to modify and restrain it. Whoever would assert an equality of genius and elegance between Ogilby and Milton, or Bunyan and Addison, would be thought to defend no less an extravagance, than if he had maintained a mole-hill to be as high as Tenerife, or a pond as extensive as the ocean. Though there may be found persons who give the preference to the former authors, no one pays attention to such a taste; and we pronounce, without scruple, the sentiment of these pretended critics to be absurd and ridiculous. The principle of the natural equality of tastes is then totally forgot, and while we admit it on some occasions, where the objects seem near an equality, it appears an extravagant paradox, or rather a palpable absurdity, where objects so disproportioned are compared together.

It is evident that none of the rules of composition are fixed by reasonings a priori, or can be esteemed abstract conclusions of the understanding, from comparing those habitudes and relations of ideas which are eternal and immutable. Their foundation is the same with that of all the practical sciences, experience; nor are they any thing but general observations, concerning what has been universally found to please in all countries and in all ages. Many of the beauties of poetry, and even of eloquence, are founded on falsehood and fiction, on hyperboles, metaphors, and an abuse or perversion of terms from their natural meaning. To check the sallies of the imagination, and to reduce every expression to geometrical truth and exactness, would be the most contrary to the laws of criticism; because it would produce a work, which, by universal experience, has been found the most insipid and disagreeable. But though poetry can never submit to exact truth, it must be confined by rules of art, discovered to the author either by genius or observation. If some negligent or irregular writers have pleased, they have not pleased by their transgressions of rule or order, but in spite of these transgressions: they have possessed other beauties, which were conformable to just criticism; and the force of these beauties has been able to overpower censure, and

give the mind a satisfaction superior to the disgust arising from the blemishes. Ariosto pleases; but not by his monstrous and improbable fictions, by his bizarre mixture of the serious and comic styles, by the want of coherence in his stories, or by the continual interruptions of his narration. He charms by the force and clearness of his expression, by the readiness and variety of his inventions, and by his natural pictures of the passions, especially those of the gay and amorous kind: and, however his faults may diminish our satisfaction, they are not able entirely to destroy it. Did our pleasure really arise from those parts of his poem which we denominate faults, this would be no objection to criticism in general: it would only be an objection to those particular rules of criticism which would establish such circumstances to be faults, and would represent them as universally blamable. If they are found to please, they cannot be faults, let the pleasure which they produce be ever so unexpected and unaccountable.

But though all the general rules of art are founded only on experience, and on the observation of the common sentiments of human nature, we must not imagine that, on every occasion, the feelings of men will be conformable to these rules. Those finer emotions of the mind are of a very tender and delicate nature, and require the concurrence of many favourable circumstances to make them play with facility and exactness, according to their general and established principles. The least exterior hindrance to such small springs, or the least internal disorder, disturbs their motion, and confounds the operations of the whole machine. When we would make an experiment of this nature, and would try the force of any beauty or deformity, we must choose with care a proper time and place, and bring the fancy to a suitable situation and disposition. A perfect serenity of mind, a recollection of thought, a due attention to the object; if any of these circumstances be wanting, our experiment will be fallacious, and we shall be unable to judge of the catholic and universal beauty. The relation, which nature has placed between the form and the sentiment, will at least be more obscure; and it will require greater accuracy to trace and discern it. We shall be able to ascertain its influence, not so much from the operation of each particular beauty as from the durable admiration which attends those works that have survived all the caprices of mode and fashion, all the mistakes of ignorance and envy.

The same Homer who pleased at Athens and Rome two thousand years ago is still admired at Paris and at London. All the changes of climate, government, religion, and language have not been able to obscure his glory. Authority or prejudice may give a temporary vogue to a

bad poet or orator; but his reputation will never be durable or general. When his compositions are examined by posterity or by foreigners, the enchantment is dissipated, and his faults appear in their true colours. On the contrary, a real genius, the longer his works endure, and the more wide they are spread, the more sincere is the admiration which he meets with. Envy and jealousy have too much place in a narrow circle; and even familiar acquaintance with his person may diminish the applause due to his performances: but when these obstructions are removed, the beauties, which are naturally fitted to excite agreeable sentiments, immediately display their energy; and while the world endures, they maintain their authority over the minds of men.

It appears, then, that amidst all the variety and caprice of taste, there are certain general principles of approbation or blame, whose influence a careful eye may trace in all operations of the mind. Some particular forms or qualities, from the original structure of the internal fabric are calculated to please, and others to displease; and if they fail of their effect in any particular instance, it is from some apparent defect or imperfection in the organ. A man in a fever would not insist on his palate as able to decide concerning flavours; nor would one affected with the jaundice pretend to give a verdict with regard to colours. In each creature there is a sound and a defective state; and the former alone can be supposed to afford us a true standard of taste and sentiment. If, in the sound state of the organ, there be an entire or a considerable uniformity of sentiment among men, we may thence derive an idea of the perfect beauty; in like manner as the appearance of objects in daylight, to the eye of a man in health, is denominated their true and real colour, even while colour is allowed to be merely a phantasm of the senses.

Many and frequent are the defects in the internal organs, which prevent or weaken the influence of those general principles, on which depends our sentiment of beauty or deformity. Though some objects, by the structure of the mind, be naturally calculated to give pleasure, it is not to be expected that in every individual the pleasure will be equally felt. Particular incidents and situations occur, which either throw a false light on the objects, or hinder the true from conveying to the imagination the proper sentiment and perception.

One obvious cause why many feel not the proper sentiment of beauty is the want of that delicacy of imagination which is requisite to convey a sensibility of those finer emotions. This delicacy every one pretends to: every one talks of it; and would reduce every kind of taste or sentiment to its standard. But as our intention in this Essay is to mingle some

light of the understanding with the feelings of sentiment, it will be proper to give a more accurate definition of delicacy than has hitherto been attempted. And not to draw our philosophy from too profound a source, we shall have recourse to a noted story in *Don Quixote*.

It is with good reason, says Sancho to the squire with the great nose, that I pretend to have a judgment in wine: this is a quality hereditary in our family. Two of my kinsmen were once called to give their opinion of a hogshead, which was supposed to be excellent, being old and of a good vintage. One of them tastes it, considers it; and, after mature reflection, pronounces the wine to be good, were it not for a small taste of leather which he perceived in it. The other, after using the same precautions, gives also his verdict in favour of the wine; but with the reserve of a taste of iron, which he could easily distinguish. You cannot imagine how much they were both ridiculed for their judgment. But who laughed in the end? On emptying the hogshead, there was found at the bottom an old key with a leathern thong tied to it.

The great resemblance between mental and bodily taste will easily teach us to apply this story. Though it be certain that beauty and deformity, more than sweet and bitter, are not qualities in objects, but belong entirely to the sentiment, internal or external, it must be allowed, that there are certain qualities in objects which are fitted by nature to produce those particular feelings. Now, as these qualities may be found in a small degree, or may be mixed and confounded with each other, it often happens that the taste is not affected with such minute qualities, or is not able to distinguish all the particular flavours, amidst the disorder in which they are presented. Where the organs are so fine as to allow nothing to escape them, and at the same time so exact as to perceive every ingredient in the composition, this we call delicacy of taste, whether we employ these terms in the literal or metaphorical sense. Here then the general rules of beauty are of use, being drawn from established models, and from the observation of what pleases or displeases, when presented singly and in a high degree; and if the same qualities, in a continued composition, and in a smaller degree, affect not the organs with a sensible delight or uneasiness, we exclude the person from all pretensions to this delicacy. To produce these general rules or avowed patterns of composition is like finding the key with the leathern thong, which justified the verdict of Sancho's kinsmen, and confounded those pretended judges who had condemned them. Though the hogshead had never been emptied, the taste of the one was still equally delicate, and that of the other equally dull and languid; but it would have been more difficult to

have proved the superiority of the former, to the conviction of every bystander. In like manner, though the beauties of writing had never been methodized, or reduced to general principles; though no excellent models had ever been acknowledged, the different degrees of taste would still have subsisted, and the judgment of one man been preferable to that of another; but it would not have been so easy to silence the bad critic, who might always insist upon his particular sentiment, and refuse to submit to his antagonist. But when we show him an avowed principle of art; when we illustrate this principle by examples, whose operation, from his own particular taste, he acknowledges to be conformable to the principle; when we prove that the same principle may be applied to the present case, where he did not perceive or feel its influence: he must conclude, upon the whole, that the fault lies in himself, and that he wants the delicacy which is requisite to make him sensible of every beauty and every blemish in any composition or discourse.

It is acknowledged to be the perfection of every sense or faculty, to perceive with exactness its most minute objects, and allow nothing to escape its notice and observation. The smaller the objects are which become sensible to the eye, the finer is that organ, and the more elaborate its make and composition. A good palate is not tried by strong flavours, but by a mixture of small ingredients, where we are still sensible of each part, notwithstanding its minuteness and its confusion with the rest. In like manner, a quick and acute perception of beauty and deformity must be the perfection of our mental taste; nor can a man be satisfied with himself while he suspects that any excellence or blemish in a discourse has passed him unobserved. In this case, the perfection of the man, and the perfection of the sense of feeling, are found to be united. A very delicate palate, on many occasions, may be a great inconvenience both to a man himself and to his friends. But a delicate taste of wit or beauty must always be a desirable quality, because it is the source of all the finest and most innocent enjoyments of which human nature is susceptible. In this decision the sentiments of all mankind are agreed. Wherever you can ascertain a delicacy of taste, it is sure to meet with approbation; and the best way of ascertaining it is to appeal to those models and principles which have been established by the uniform consent and experience of nations and ages.

But though there be naturally a wide difference, in point of delicacy, between one person and another, nothing tends further to increase and improve this talent, than practice in a particular art, and the frequent survey or contemplation of a particular species of beauty. When objects

of any kind are first presented to the eye or imagination, the sentiment which attends them is obscure and confused; and the mind is, in a great measure, incapable of pronouncing concerning their merits or defects. The taste cannot perceive the several excellences of the performance, much less distinguish the particular character of each excellency and ascertain its quality and degree. If it pronounce the whole in general to be beautiful or deformed, it is the utmost that can be expected; and even this judgment a person so unpractised will be apt to deliver with great hesitation and reserve. But allow him to acquire experience in those objects, his feeling becomes more exact and nice: he not only perceives the beauties and defects of each part, but marks the distinguishing species of each quality, and assigns it suitable praise or blame. A clear and distinct sentiment attends him through the whole survey of the objects; and he discerns that very degree and kind of approbation or displeasure which each part is naturally fitted to produce. The mist dissipates which seemed formerly to hang over the object; the organ acquires greater perfection in its operations, and can pronounce, without danger of mistake, concerning the merits of every performance. In a word, the same address and dexterity which practice gives to the execution of any work, is also acquired by the same means in the judging of it.

So advantageous is practice to the discernment of beauty that, before we can give judgment on any work of importance, it will even be requisite that that very individual performance be more than once perused by us, and be surveyed in different lights with attention and deliberation. There is a flutter or hurry of thought which attends the first perusal of any piece, and which confounds the genuine sentiment of beauty. The relation of the parts is not discerned: the true characters of style are little distinguished. The several perfections and defects seem wrapped up in a species of confusion, and present themselves indistinctly to the imagination. Not to mention that there is a species of beauty, which, as it is florid and superficial, pleases at first, but being found incompatible with a just expression either of reason or passion, soon palls upon the taste, and is then rejected with disdain, at least rated at a much lower value.

It is impossible to continue in the practice of contemplating any order of beauty, without being frequently obliged to form comparisons between the several species and degrees of excellence, and estimating their proportion to each other. A man who has had no opportunity of comparing the different kinds of beauty is indeed totally unqualified to pronounce an opinion with regard to any object presented to him. By comparison

alone we fix the epithets of praise or blame, and learn how to assign the due degree of each. The coarsest daubing contains a certain lustre of colours and exactness of imitation, which are so far beauties, and would affect the mind of a peasant or Indian with the highest admiration. The most vulgar ballads are not entirely destitute of harmony or nature; and none but a person familiarized to superior beauties would pronounce their members harsh, or narration uninteresting. A great inferiority of beauty gives pain to a person conversant in the highest excellence of the kind, and is for that reason pronounced a deformity; as the most finished object with which we are acquainted is naturally supposed to have reached the pinnacle of perfection, and to be entitled to the highest applause. One accustomed to see, and examine, and weigh the several performances, admired in different ages and nations, can alone rate the merits of a work exhibited to his view, and assign its proper rank among the productions of genius.

But to enable a critic the more fully to execute this undertaking, he must preserve his mind free from all prejudice, and allow nothing to enter into his consideration, but the very object which is submitted to his examination. We may observe that every work of art, in order to produce its due effect on the mind, must be surveyed in a certain point of view, and cannot be fully relished by persons whose situation, real or imaginary, is not conformable to that which is required by the performance. An orator addresses himself to a particular audience, and must have a regard to their particular genius, interests, opinions, passions, and prejudices; otherwise he hopes in vain to govern their resolutions, and inflame their affections. Should they even have entertained some prepossessions against him, however unreasonable, he must not overlook this disadvantage: but, before he enters upon the subject, must endeavour to conciliate their affection, and acquire their good graces. A critic of a different age or nation, who should peruse this discourse, must have all these circumstances in his eye, and must place himself in the same situation as the audience, in order to form a true judgment of the oration. In like manner, when any work is addressed to the public, though I should have a friendship or enmity with the author, I must depart from this situation, and, considering myself as a man in general, forget, if possible, my individual being, and my peculiar circumstances. A person influenced by prejudice complies not with this condition, but obstinately maintains his natural position, without placing himself in that point of view which the performance supposes. If the work be addressed to persons of a different age or nation, he makes no allowance for their

peculiar views and prejudices; but, full of the manners of his own age and country, rashly condemns what seemed admirable in the eyes of those for whom alone the discourse was calculated. If the work be executed for the public, he never sufficiently enlarges his comprehension, or forgets his interest as a friend or enemy, as a rival or commentator. By this means his sentiments are perverted; nor have the same beauties and blemishes the same influence upon him, as if he had imposed a proper violence on his imagination, and had forgotten himself for a moment. So far his taste evidently departs from the true standard, and of consequence loses all credit and authority.

It is well known that, in all questions submitted to the understanding, prejudice is destructive of sound judgment, and perverts all operations of the intellectual faculties: it is no less contrary to good taste; nor has it less influence to corrupt our sentiment of beauty. It belongs to good sense to check its influence in both cases; and in this respect, as well as in many others, reason, if not an essential part of taste, is at least requisite to the operations of this latter faculty. In all the nobler productions of genius, there is a mutual relation and correspondence of parts; nor can either the beauties or blemishes be perceived by him whose thought is not capacious enough to comprehend all those parts, and compare them with each other, in order to perceive the consistence and uniformity of the whole. Every work of art has also a certain end or purpose for which it is calculated; and is to be deemed more or less perfect, as it is more or less fitted to attain this end. The object of eloquence is to persuade, of history to instruct, of poetry to please, by means of the passions and the imagination. These ends we must carry constantly in our view when we peruse any performance; and we must be able to judge how far the means employed are adapted to their respective purposes. Besides, every kind of composition, even the most poetical, is nothing but a chain of propositions and reasonings; not always, indeed, the justest and most exact, but still plausible and specious, however disguised by the colouring of the imagination. The persons introduced in tragedy and epic poetry must be represented as reasoning, and thinking, and concluding, and acting, suitably to their character and circumstances; and without judgment, as well as taste and invention, a poet can never hope to succeed in so delicate an undertaking. Not to mention that the same excellence of faculties which contributes to the improvement of reason, the same clearness of conception, the same exactness of distinction, the same vivacity of apprehension, are essential to the operations of true taste, and are its infallible concomitants. It seldom or never happens that a

man of sense, who has experience in any art, cannot judge of its beauty; and it is no less rare to meet with a man who has a just taste without a sound understanding.

Thus, though the principles of taste be universal, and nearly, if not entirely, the same in all men, yet few are qualified to give judgment on any work of art, or establish their own sentiment as the standard of beauty. The organs of internal sensation are seldom so perfect as to allow the general principles their full play, and produce a feeling correspondent to those principles. They either labour under some defect, or are vitiated by some disorder; and by that means excite a sentiment, which may be pronounced erroneous. When the critic has no delicacy, he judges without any distinction, and is only affected by the grosser and more palpable qualities of the object: the finer touches pass unnoticed and disregarded. Where he is not aided by practice, his verdict is attended with confusion and hesitation. Where no comparison has been employed, the most frivolous beauties, such as rather merit the name of defects, are the object of his admiration. Where he lies under the influence of prejudice, all his natural sentiments are perverted. Where good sense is wanting, he is not qualified to discern the beauties of design and reasoning, which are the highest and most excellent. Under some or other of these imperfections, the generality of men labour; and hence a true judge in the finer arts is observed, even during the most polished ages, to be so rare a character: strong sense, united to delicate sentiment, improved by practice, perfected by comparison, and cleared of all prejudice, can alone entitle critics to this valuable character; and the joint verdict of such, wherever they are to be found, is the true standard of taste and beauty.

But where are such critics to be found? By what marks are they to be known? How distinguish them from pretenders? These questions are embarrassing, and seem to throw us back into the same uncertainty from which, during the course of this Essay, we have endeavoured to extricate ourselves.

But if we consider the matter aright, these are questions of fact, not of sentiment. Whether any particular person be endowed with good sense and a delicate imagination, free from prejudice, may often be the subject of dispute, and be liable to great discussion and inquiry: but that such a character is valuable and estimable, will be agreed in by all mankind. Where these doubts occur, men can do no more than in other disputable questions which are submitted to the understanding: they must produce the best arguments that their invention suggests to them; they must acknowledge a true and decisive standard to exist somewhere, to

wit, real existence and matter of fact; and they must have indulgence to such as differ from them in their appeals to this standard. It is sufficient for our present purpose, if we have proved that the taste of all individuals is not upon an equal footing, and that some men in general, however difficult to be particularly pitched upon, will be acknowledged by universal sentiment to have a preference above others.

But, in reality, the difficulty of finding, even in particulars, the standard of taste, is not so great as it is represented. Though in speculation we may readily avow a certain criterion in science, and deny it in sentiment, the matter is found in practice to be much more hard to ascertain in the former case than in the latter. Theories of abstract philosophy, systems of profound theology, have prevailed during one age; in a successive period these have been universally exploded, their absurdity has been detected, other theories and systems have supplied their place, which again gave place to their successors, and nothing has been experienced more liable to the revolutions of chance and fashion than these pretended decisions of science. The case is not the same with the beauties of eloquence and poetry. Just expressions of passion and nature are sure, after a little time, to gain public applause, which they maintain for ever. Aristotle and Plato and Epicurus and Descartes may successively yield to each other: but Terence and Virgil maintain an universal, undisputed empire over the minds of men. The abstract philosophy of Cicero has lost its credit: the vehemence of his oratory is still the object of our admiration.

Though men of delicate taste be rare, they are easily to be distinguished in society by the soundness of their understanding, and the superiority of their faculties above the rest of mankind. The ascendant which they acquire gives a prevalence to that lively approbation with which they receive any productions of genius, and renders it generally predominant. Many men, when left to themselves, have but a faint and dubious perception of beauty, who yet are capable of relishing any fine stroke which is pointed out to them. Every convert to the admiration of the real poet or orator is the cause of some new conversion. And though prejudices may prevail for a time, they never unite in celebrating any rival to the true genius, but yield at last to the force of nature and just sentiment. Thus, though a civilized nation may easily be mistaken in the choice of their admired philosopher, they never have been found long to err in their affection for a favourite epic or tragic author.

But notwithstanding all our endeavours to fix a standard of taste, and reconcile the discordant apprehensions of men, there still remain two sources of variation, which are not sufficient indeed to confound all the

boundaries of beauty and deformity, but will often serve to produce a difference in the degrees of our approbation or blame. The one is the different humours of particular men; the other, the particular manners and opinions of our age and country. The general principles of taste are uniform in human nature: where men vary in their judgments, some defect or perversion in the faculties may commonly be remarked, proceeding either from prejudice, from want of practice, or want of delicacy: and there is just reason for approving one taste, and condemning another. But where there is such a diversity in the internal frame or external situation as is entirely blameless on both sides, and leaves no room to give one the preference above the other; in that case a certain degree of diversity in judgment is unavoidable, and we seek in vain for a standard, by which we can reconcile the contrary sentiments.

A young man, whose passions are warm, will be more sensibly touched with amorous and tender images than a man more advanced in years, who takes pleasure in wise, philosophical reflections, concerning the conduct of life, and moderation of the passions. At twenty, Ovid may be the favourite author, Horace at forty, and perhaps Tacitus at fifty. Vainly would we, in such cases, endeavour to enter into the sentiments of others, and divest ourselves of those propensities which are natural to us. We choose our favourite author as we do our friend, from a conformity of humour and disposition. Mirth or passion, sentiment or reflection, whichever of these most predominates in our temper, it gives us a peculiar sympathy with the writer who resembles us.

One person is more pleased with the sublime, another with the tender, a third with raillery. One has a strong sensibility to blemishes, and is extremely studious of correctness; another has a more lively feeling of beauties, and pardons twenty absurdities and defects for one elevated or pathetic stroke. The ear of this man is entirely turned towards conciseness and energy; that man is delighted with a copious, rich, and harmonious expression. Simplicity is affected by one; ornament by another. Comedy, tragedy, satire, odes, have each its partisans, who prefer that particular species of writing to all others. It is plainly an error in a critic, to confine his approbation to one species or style of writing, and condemn all the rest. But it is almost impossible not to feel a predilection for that which suits our particular turn and disposition. Such performances are innocent and unavoidable, and can never reasonably be the object of dispute, because there is no standard by which they can be decided.

For a like reason, we are more pleased, in the course of our reading,

with pictures and characters that resemble objects which are found in our own age and country, than with those which describe a different set of customs. It is not without some effort that we reconcile ourselves to the simplicity of ancient manners, and behold princesses carrying water from the spring, and kings and heroes dressing their own victuals. We may allow in general, that the representation of such manners is no fault in the author, nor deformity in the piece; but we are not so sensibly touched with them. For this reason, comedy is not easily transferred from one age or nation to another. A Frenchman or Englishman is not pleased with the *Andria* of Terence, or *Clizia* of Machiavelli; where the fine lady, upon whom all the play turns, never once appears to the spectators, but is always kept behind the scenes, suitably to the reserved humour of the ancient Greeks and modern Italians. A man of learning and reflection can make allowance for these peculiarities of manners; but a common audience can never divest themselves so far of their usual ideas and sentiments as to relish pictures which nowise resemble them.

But here there occurs a reflection, which may, perhaps, be useful in examining the celebrated controversy concerning ancient and modern learning; where we often find the one side excusing any seeming absurdity in the ancients from the manners of the age, and the other refusing to admit this excuse, or at least admitting it only as an apology for the author, not for the performance. In my opinion, the proper boundaries in this subject have seldom been fixed between the contending parties. Where any innocent peculiarities of manners are represented, such as those above mentioned, they ought certainly to be admitted; and a man who is shocked with them gives an evident proof of false delicacy and refinement. The poet's "monument more durable than brass," must fall to the ground like common brick or clay, were men to make no allowance for the continual revolutions of manners and customs, and would admit of nothing but what was suitable to the prevailing fashion. Must we throw aside the pictures of our ancestors, because of their ruffs and farthingales? But where the ideas of morality and decency alter from one age to another, and where vicious manners are described, without being marked with the proper characters of blame and disapprobation, this must be allowed to disfigure the poem, and to be a real deformity. I cannot, nor is it proper I should, enter into such sentiments; and however I may excuse the poet, on account of the manners of his age, I can never relish the composition. The want of humanity and of decency, so conspicuous in the characters drawn by several of the ancient poets, even sometimes by Homer and the Greek tragedians, diminishes considerably

the merit of their noble performances, and gives modern authors an advantage over them. We are not interested in the fortunes and sentiments of such rough heroes; we are displeas'd to find the limits of vice and virtue so much confounded; and whatever indulgence we may give to the writer on account of his prejudices, we cannot prevail on ourselves to enter into his sentiments, or bear an affection to characters which we plainly discover to be blamable.

The case is not the same with moral principles as with speculative opinions of any kind. These are in continual flux and revolution. The son embraces a different system from the father. Nay, there scarcely is any man who can boast of great constancy and uniformity in this particular. Whatever speculative errors may be found in the polite writings of any age or country, they detract but little from the value of those compositions. There needs but a certain turn of thought or imagination to make us enter into all the opinions which then prevailed, and relish the sentiments or conclusions derived from them. But a very violent effort is requisite to change our judgment of manners, and excite sentiments of approbation or blame, love or hatred, different from those to which the mind, from long custom, has been familiarized. And where a man is confident of the rectitude of that moral standard by which he judges, he is justly jealous of it, and will not pervert the sentiments of his heart for a moment in complaisance to any writer whatsoever.

Of all speculative errors, those which regard religion are the most excusable in compositions of genius; nor is it ever permitted to judge of the civility or wisdom of any people, or even of single persons, by the grossness or refinement of their theological principles. The same good sense that directs men in the ordinary occurrences of life is not hearkened to in religious matters, which are supposed to be placed altogether above the cognizance of human reason. On this account, all the absurdities of the pagan system of theology must be overlooked by every critic who would pretend to form a just notion of ancient poetry; and our posterity, in their turn, must have the same indulgence to their forefathers. No religious principles can ever be imputed as a fault to any poet while they remain merely principles, and take not such strong possession of his heart as to lay him under the imputation of bigotry or superstition. Where that happens, they confound the sentiments of morality, and alter the natural boundaries of vice and virtue. They are therefore eternal blemishes, according to the principle above mentioned; nor are the prejudices and false opinions of the age sufficient to justify them.

It is essential to the Roman Catholic religion to inspire a violent hatred

of every other worship, and to represent all pagans, Mohammedans, and heretics as the objects of divine wrath and vengeance. Such sentiments, though they are in reality very blamable, are considered as virtues by the zealots of that communion, and are represented in their tragedies and epic poems as a kind of divine heroism. This bigotry has disfigured two very fine tragedies of the French theatre, *Polyeucte* and *Athalie*; where an intemperate zeal for particular modes of worship is set off with all the pomp imaginable, and forms the predominant character of the heroes. "What is this," says the sublime Joad to Josabeth, finding her in discourse with Mathan the priest of Baal, "Does the daughter of David speak to this traitor? Are you not afraid lest the earth should open, and pour forth flames to devour you both? Or lest these holy walls should fall and crush you together? What is his purpose? Why comes that enemy of God hither to poison the air, which we breathe, with his horrid presence?" Such sentiments are received with great applause on the theatre of Paris; but at London the spectators would be full as much pleased to hear Achilles tell Agamemnon that he was a dog in his forehead, and a deer in his heart; or Jupiter threaten Juno with a sound drubbing, if she will not be quiet.

Religious principles are also a blemish in any polite composition, when they rise up to superstition, and intrude themselves into every sentiment, however remote from any connection with religion. It is no excuse for the poet that the customs of his country had burdened life with so many religious ceremonies and observances, that no part of it was exempt from that yoke. It must for ever be ridiculous in Petrarch to compare his mistress, Laura, to Jesus Christ. Nor is it less ridiculous in that agreeable libertine, Boccaccio, very seriously to give thanks to God Almighty and the ladies, for their assistance in defending him against his enemies.

*"Of the Standard of Taste" is from a collection
of Hume's essays entitled*

ESSAYS MORAL, POLITICAL AND LITERARY.

Arthur Schopenhauer

1788–1860

Arthur Schopenhauer was born in Danzig on February 22, 1788. His father, Heinrich, was a well-to-do merchant who had strongly liberal political opinions and broad cultural interests. His mother, Johanna, was a very intelligent woman and a successful novelist. Heinrich Schopenhauer's dislike of authoritarian government caused him to move the family to Hamburg in 1793 when Danzig surrendered to Prussia.

At an early age young Arthur's exceptional intelligence became evident. He studied at Hamburg, and in England and France, and then went into business at Hamburg. After his father's sudden death, probably by suicide, in 1805, Arthur took up his studies again, concentrating on classical literature, medicine, and philosophy. At the University of Berlin, from 1811 to 1813, he attended lectures by J.G. Fichte, of whose philosophy he became very scornful. He determined to work out his own philosophy, taking off from the ideas of Immanuel Kant.

Schopenhauer's doctoral thesis, *On the Fourfold Root of the Principle of Sufficient Reason*, was published in 1813. He went to live with his mother in Weimar, where, in her salon, he met many stimulating thinkers, including Goethe.

After a quarrel with his mother, Schopenhauer left Weimar for

Notes from the artist: "Schopenhauer as a young man together with a porcupine, illustrating the quotation from Parerga und Paralipomena, a remarkably modern parable of coexistence."

Arthur Schopenhauer!

A company of porcupines crowded themselves very close together one cold winter's day so as to profit by one another's warmth and so save themselves from being frozen to death. But soon they felt one another's quills, which induced them to separate again. And now, when the need for warmth brought them nearer together again, the second evil arose once more. So that they were driven backwards and forwards from one trouble to the other, until they had discovered a mean distance at which they could most tolerably exist.

Dresden in 1814. There he wrote his major work, *The World as Will and Idea*. He expected that this would be immediately accepted as an important, even revolutionary, philosophical work, but what little attention it attracted was unfavorable.

Schopenhauer began lecturing at the University of Berlin in 1820, but here too he failed. Hegel was the most highly thought of philosopher in Berlin at the time, and Schopenhauer's outspoken scorn for him was unpopular. From 1822 to 1831 Schopenhauer went from Italy to Munich and back to Berlin, traveling and living in isolation, a sick and resentful man. Finally, in 1831, he settled in Frankfurt-am-Main, where he lived in bitter solitude, continuing his attack on Hegel in occasional essays.

The apparent pessimism of Schopenhauer's philosophy—based on the idea that will is the foundation of the universe and that will is basically evil—was out of tune with his time. By 1850, however, the world mood had altered somewhat and Schopenhauer began to acquire some fame, especially in England, Russia, and the United States. He died at Frankfurt on September 21, 1860.

There is one aspect of Schopenhauer's personality and writing that most often comes to mind whenever his name is mentioned—his pessimism. It is difficult, however, if not dangerous, to accept such pigeonholing of so complex a person as Schopenhauer. His "pessimism" may be only a matter of point of view. His philosophy admits no possibility of free will. We cannot hope to improve our lot by our own efforts because we have no control over events—that is the province of Will. What we can hope for is not progress but quiet. This may appear a dismal state. But E. F. J. Payne, a translator of Schopenhauer, suggests in an introduction that it is no more pessimistic than the teachings of Brahmanism, Buddhism, and Christianity, which preach that the highest goal is the deliverance from earthly existence. Nietzsche, in an essay about Schopenhauer, goes even further and suggests that the philosopher is actually "joyful" for having faced a somber truth squarely and conquered it.

There is one point, however, on which all readers of Schopenhauer agree, whether or not they find his philosophy congenial. He is a fine writer. The clear beauty of his style makes his work a pleasure to read.

Like many good workmen, Schopenhauer is impatient with people

who abuse his craft. He is as irked as Virginia Woolf with mediocre writing, but he does not use her ladylike restraint in expressing his impatience. In *On Style* he dismisses Fichte and the Hegelians as “miserable dunces.” Their complicated style, he says, is only a cover-up for paucity of ideas.

This outspoken, often angry, frankness works on us sometimes as a sudden bang does on a person dropping off to sleep. It startles us to a sharp awareness, sometimes to agree with him, sometimes to argue.

Schopenhauer uses his shock tactics to good advantage in *On Some Forms of Literature*. From the first arbitrary statement that drama is the most perfect reflection of human existence, we know that we are reading a man who has strong opinions and does not hesitate to state them boldly. About the novel he says that insight, not incident, is the important thing. “The business of the novelist,” he says, “is not to relate great events, but to make small ones interesting.” He lists the four greatest novels. It is interesting to guess what his opinion would be of contemporary novelists. Using his own criteria, would he approve, for example, of Mann, Gide, Joyce, and Virginia Woolf? Would he disapprove of Hemingway?

Dealing a sarcastic blow at conventional historians—“History has always been the favorite study of those who wish to learn something without having to face the effort demanded by any branch of real knowledge, which taxes the intelligence”—he goes on to describe the acceptable historian. After a few additional shocks to complacency, Schopenhauer concludes that “a high degree of culture leads us to seek entertainment almost wholly from books and not from men.”

On the Comparative Place of Interest and Beauty in Works of Art has fewer bald statements of opinion presented as inarguable fact, but just as many stimulating ideas. By getting our agreement to a series of carefully reasoned premises, Schopenhauer brings us, as Plato does, to agree in conclusion to a proposition about which we might have argued in the beginning.

On Style

A large, decorative initial letter 'S' in a blackletter or gothic style, with intricate flourishes and a textured, woodcut-like appearance.

Style is the physiognomy of the mind, and a safer index to character than the face. To imitate another man's style is like wearing a mask, which, be it never so fine, is not long in arousing disgust and abhorrence, because it is lifeless; so that even the ugliest living face is better. Hence those who write in Latin and copy the manner of ancient authors may be said to speak through a mask; the reader, it is true, hears what they say, but he cannot observe their physiognomy too; he cannot see their *style*. With the Latin works of writers who think for themselves, the case is different, and their style is visible; writers, I mean, who have not condescended to any sort of imitation, such as Scotus Erigena, Petrarch, Bacon, Descartes, Spinoza, and many others. An affectation in style is like making grimaces. Further, the language in which a man writes is the physiognomy of the nation to which he belongs; and here there are many hard and fast differences, beginning from the language of the Greeks down to that of the Caribbean islanders.

To form a provincial estimate of the value of a writer's productions, it is not directly necessary to know the subject on which he has thought, or what it is that he has said about it; that would imply a perusal of all his works. It will be enough, in the main, to know *how* he has thought. This, which means the essential temper or general quality of his mind, may be precisely determined by his style. A man's style shows the formal nature of all his thoughts—the formal nature which can never change, be the subject or the character of his thoughts what it may: it is, as it were, the dough out of which all the contents of his mind are kneaded. When Eulenspiegel was asked how long it would take to walk to the next village, he gave the seemingly incongruous answer: *Walk*. He wanted to find out by the man's pace the distance he would cover in a given time. In the same way, when I have read a few pages of an author, I know fairly well how far he can bring me.

Every mediocre writer tries to mask his own natural style, because in his heart he knows the truth of what I am saying. He is thus forced, at the outset, to give up any attempt at being frank or naïve—a privilege which is thereby reserved for superior minds, conscious of their own worth, and therefore sure of themselves. What I mean is that these everyday writers are absolutely unable to resolve upon writing just as they think; because they have a notion that, were they to do so, their work might possibly look very childish and simple. For all that, it would not be without its value. If they would only go honestly to work, and say, quite simply, the things they have really thought, and just as they have thought them, these writers would be readable and, within their own proper sphere, even instructive.

But instead of that, they try to make the reader believe that their thoughts have gone much further and deeper than is really the case. They say what they have to say in long sentences that wind about in a forced and unnatural way; they coin new words and write prolix periods which go round and round the thought and wrap it up in a sort of disguise. They tremble between the two separate aims of communicating what they want to say and of concealing it. Their object is to dress it up so that it may look learned or deep, in order to give people the impression that there is very much more in it than for the moment meets the eye. They either jot down their thoughts bit by bit, in short, ambiguous, and paradoxical sentences, which apparently mean much more than they say—of this kind of writing Schelling's treatises on natural philosophy are a splendid instance; or else they hold forth with a deluge of words and the most intolerable diffusiveness, as though no end of fuss were necessary to make the reader understand the deep meaning of their sentences, whereas it is some quite simple if not actually trivial idea, examples of which may be found in plenty in the popular works of Fichte, and the philosophical manuals of a hundred other miserable dunces not worth mentioning; or, again, they try to write in some particular style which they have been pleased to take up and think very grand, a style, for example, par excellence profound and scientific, where the reader is tormented to death by the narcotic effect of long-spun periods without a single idea in them—such as are furnished in a special measure by those most impudent of all mortals, the Hegelians; or it may be that it is an intellectual style they have striven after, where it seems as though their object were to go crazy altogether; and so on in many other cases. All these endeavors to put off the *nascetur ridiculus mus* [birth of a ridicu-

lous mouse born of the mountains' labor]—to avoid showing the funny little creature that is born after such mighty throes—often make it difficult to know what it is that they really mean. And then, too, they write down words, nay, even whole sentences, without attaching any meaning to them themselves, but in the hope that someone else will get sense out of them.

And what is at the bottom of all this? Nothing but the untiring effort to sell words for thoughts; a mode of merchandise that is always trying to make fresh openings for itself, and by means of odd expressions, turns of phrase, and combinations of every sort, whether new or used in a new sense, to produce the appearance of intellect in order to make up for the very painfully felt lack of it.

It is amusing to see how writers with this object in view will attempt first one mannerism and then another, as though they were putting on the mask of intellect! This mask may possibly deceive the inexperienced for a while, until it is seen to be a dead thing, with no life in it at all; it is then laughed at and exchanged for another. Such an author will at one moment write in a dithyrambic vein, as though he were tipsy; at another, nay, on the very next page, he will be pompous, severe, profoundly learned and prolix, stumbling on in the most cumbrous way and chopping up everything very small; like the late Christian Wolf, only in a modern dress. Longest of all lasts the mask of unintelligibility; but this is only in Germany, whither it was introduced by Fichte, perfected by Schelling, and carried to its highest pitch in Hegel—always with the best results.

And yet nothing is easier than to write so that no one can understand; just as contrarily, nothing is more difficult than to express deep things in such a way that everyone must necessarily grasp them. All the arts and tricks I have been mentioning are rendered superfluous if the author really has any brains; for that allows him to show himself as he is, and confirms to all time Horace's maxim that good sense is the source and origin of good style:

Scribendi recte sapere est et principium et fons.

[Wisdom is the beginning and source of good writing.]

But those authors I have named are like certain workers in metal, who try a hundred different compounds to take the place of gold—the only metal which can never have any substitute. Rather than do that, there is nothing against which a writer should be more upon his guard than the manifest endeavor to exhibit more intellect than he really has; because this makes the reader suspect that he possesses very little; since it is al-

ways the case that if a man affects anything, whatever it may be, it is just there that he is deficient.

That is why it is praise to an author to say that he is naïve; it means that he need not shrink from showing himself as he is. Generally speaking, to be naïve is to be attractive; while lack of naturalness is everywhere repulsive. As a matter of fact, we find that every really great writer tries to express his thoughts as purely, clearly, definitely and shortly as possible. Simplicity has always been held to be a mark of truth; it is also a mark of genius. Style receives its beauty from the thought it expresses; but with sham-thinkers the thoughts are supposed to be fine because of the style. Style is nothing but the mere silhouette of thought; and an obscure or bad style means a dull or confused brain.

The first rule, then, for a good style is that *the author should have something to say*; nay, this is in itself almost all that is necessary. Ah, how much it means! The neglect of this rule is a fundamental trait in the philosophical writing, and, in fact, in all the reflective literature, of my country, more especially since Fichte. These writers all let it be seen that they want to appear as though they had something to say; whereas they have nothing to say. Writing of this kind was brought in by the pseudo-philosophers at the Universities, and now it is current everywhere, even among the first literary notabilities of the age. It is the mother of that strained and vague style, where there seem to be two or even more meanings in the sentence; also of that prolix and cumbrous manner of expression, called *le style empesé*; again, of that mere waste of words which consists in pouring them out like a flood; finally, of that trick of concealing the direst poverty of thought under a farrago of never-ending chatter, which clacks away like a windmill and quite stupefies one—stuff which a man may read for hours together without getting hold of a single clearly expressed and definite idea. However, people are easygoing, and they have formed the habit of reading page upon page of all sorts of such verbiage, without having any particular idea of what the author really means. They fancy it is all as it should be, and fail to discover that he is writing simply for writing's sake.

On the other hand, a good author, fertile in ideas, soon wins his reader's confidence that, when he writes, he has really and truly *something to say*; and this gives the intelligent reader patience to follow him with attention. Such an author, just because he really has something to say, will never fail to express himself in the simplest and most straightforward manner; because his object is to awake the very same thought in the reader that he has in himself, and no other. So he will be able to af-

firm with Boileau that his thoughts are everywhere open to the light of the day, and that his verse always says something, whether it says it well or ill:

*Ma pensée au grand jour partout s'offre et s'expose,
Et mon vers, bien ou mal, dit toujours quelque chose:*

while of the writers previously described it may be asserted, in the words of the same poet, that they talk much and never say anything at all—*qui parlant beaucoup ne disent jamais rien*.

Another characteristic of such writers is that they always avoid a positive assertion wherever they can possibly do so, in order to leave a loophole for escape in case of need. Hence they never fail to choose the more *abstract* way of expressing themselves; whereas intelligent people use the more *concrete*, because the latter brings things more within the range of actual demonstration, which is the source of all evidence.

There are many examples proving this preference for abstract expression; and a particularly ridiculous one is afforded by the use of the verb *to condition* in the sense of *to cause* or *to produce*. People say *to condition something* instead of *to cause it*, because being abstract and indefinite it says less; it affirms that *A* cannot happen without *B*, instead of that *A* is caused by *B*. A back door is always left open; and this suits people whose secret knowledge of their own incapacity inspires them with a perpetual terror of all positive assertion; while with other people it is merely the effect of that tendency by which everything that is stupid in literature or bad in life is immediately imitated—a fact proved in either case by the rapid way in which it spreads. The Englishman uses his own judgment in what he writes as well as in what he does; but there is no nation of which this eulogy is less true than of the Germans. The consequence of this state of things is that the word *cause* has of late almost disappeared from the language of literature, and people talk only of *condition*. The fact is worth mentioning because it is so characteristically ridiculous.

The very fact that these commonplace authors are never more than half-conscious when they write would be enough to account for their dullness of mind and the tedious things they produce. I say they are only half-conscious, because they really do not themselves understand the meaning of the words they use: they take words ready-made and commit them to memory. Hence when they write, it is not so much words as whole phrases that they put together—*phrases banales*. This is the explanation of that palpable lack of clearly expressed thought in what they say. The fact is

that they do not possess the die to give this stamp to their writing; clear thought of their own is just what they have not got. And what do we find in its place?—a vague, enigmatical intermixture of words, current phrases, hackneyed terms, and fashionable expressions. The result is that the foggy stuff they write is like a page printed with very old type.

On the other hand, an intelligent author really speaks to us when he writes, and that is why he is able to rouse our interest and commune with us. It is the intelligent author alone who puts individual words together with a full consciousness of their meaning, and chooses them with deliberate design. Consequently, his discourse stands to that of the writer described above, much as a picture that has been really painted, to one that has been produced by the use of a stencil. In the one case, every word, every touch of the brush, has a special purpose; in the other, all is done mechanically. The same distinction may be observed in music. For just as Lichtenberg says that Garrick's soul seemed to be in every muscle in his body, so it is the omnipresence of intellect that always and everywhere characterizes the work of genius.

I have alluded to the tediousness which marks the works of these writers, and in this connection it is to be observed, generally, that tediousness is of two kinds: objective and subjective. A work is objectively tedious when it contains the defect in question; that is to say, when its author has no perfectly clear thought or knowledge to communicate. For if a man has any clear thought or knowledge in him, his aim will be to communicate it, and he will direct his energies to this end; so that the ideas he furnishes are everywhere clearly expressed. The result is that he is neither diffuse, nor unmeaning, nor confused, and consequently not tedious. In such a case, even though the author is at bottom in error, the error is at any rate clearly worked out and well thought over, so that it is at least formally correct; and thus some value always attaches to the work. But for the same reason a work that is objectively tedious is at all times devoid of any value whatever.

The other kind of tediousness is only relative: a reader may find a work dull because he has no interest in the question treated of in it, and this means that his intellect is restricted. The best work may, therefore, be tedious subjectively, tedious, I mean, to this or that particular person; just as, contrarily, the worst work may be subjectively engrossing to this or that particular person who has an interest in the question treated of, or in the writer of the book.

It would generally serve writers in good stead if they would see that, while a man should, if possible, think like a great genius, he should talk

the same language as everyone else. Authors should use common words to say uncommon things. But they do just the opposite. We find them trying to wrap up trivial ideas in grand words, and to clothe their very ordinary thoughts in the most extraordinary phrases, the most farfetched, unnatural, and out-of-the-way expressions. Their sentences perpetually stalk about on stilts. They take so much pleasure in bombast, and write in such a high-flown, bloated, affected, hyperbolic and acrobatic style that their prototype is Ancient Pistol, whom his friend Falstaff once impatiently told to say what he had to say like a man of this world.¹

There is no expression in any other language exactly answering to the French *style empesé*; but the thing itself exists all the more often. When associated with affectation, it is in literature what assumption of dignity, grand airs and primness are in society, and equally intolerable. Dullness of mind is fond of donning this dress; just as in ordinary life it is stupid people who like being demure and formal.

An author who writes in the prim style resembles a man who dresses himself up in order to avoid being confounded or put on the same level with a mob—a risk never run by the gentleman, even in his worst clothes. The plebeian may be known by a certain showiness of attire and a wish to have everything spick-and-span; and in the same way, the commonplace person is betrayed by his style.

Nevertheless, an author follows a false aim if he tries to write exactly as he speaks. There is no style of writing but should have a certain trace of kinship with the epigraphic or monumental style, which is, indeed, the ancestor of all styles. For an author to write as he speaks is just as reprehensible as the opposite fault, to speak as he writes; for this gives a pedantic effect to what he says, and at the same time makes him hardly intelligible.

An obscure and vague manner of expression is always and everywhere a very bad sign. In ninety-nine cases out of a hundred it comes from vagueness of thought; and this again almost always means that there is something radically wrong and incongruous about the thought itself—in a word, that it is incorrect. When a right thought springs up in the mind, it strives after expression and is not long in reaching it, for clear thought easily finds words to fit it. If a man is capable of thinking anything at all, he is also always able to express it in clear, intelligible, and unambiguous terms. Those writers who construct difficult, obscure, involved,

1. *King Henry IV*, Part II, Act v, Sc. 3. [See *Great Books of the Western World* (Ed.)]

and equivocal sentences most certainly do not know aright what it is that they want to say: they have only a dull consciousness of it, which is still in the stage of struggle to shape itself as thought. Often, indeed, their desire is to conceal from themselves and others that they really have nothing at all to say. They wish to appear to know what they do not know, to think what they do not think, to say what they do not say. If a man has some real communication to make, which will he choose—an indistinct or a clear way of expressing himself? Even Quintilian remarks that things which are said by a highly educated man are often easier to understand and much clearer; and that the less educated a man is, the more obscurely he will write—*plerumque accidit ut faciliora sint ad intelligendum et lucidiora multo quae a doctissimo quoque dicuntur Erit ergo etiam obscurior quo quisque deterior.*

An author should avoid enigmatical phrases; he should know whether he wants to say a thing or does not want to say it. It is this indecision of style that makes so many writers insipid. The only case that offers an exception to this rule arises when it is necessary to make a remark that is in some way improper.

As exaggeration generally produces an effect the opposite of that aimed at, so words, it is true, serve to make thought intelligible—but only up to a certain point. If words are heaped up beyond it, the thought becomes more and more obscure again. To find where the point lies is the problem of style, and the business of the critical faculty; for a word too much always defeats its purpose. This is what Voltaire means when he says that *the adjective is the enemy of the substantive*. But, as we have seen, many people try to conceal their poverty of thought under a flood of verbiage.

Accordingly let all redundancy be avoided, all stringing together of remarks which have no meaning and are not worth perusal. A writer must make a sparing use of the reader's time, patience and attention, so as to lead him to believe that his author writes what is worth careful study, and will reward the time spent upon it. It is always better to omit something good than to add that which is not worth saying at all. This is the right application of Hesiod's maxim, *pleon hemisy pantos*²—the half is more than the whole. *Le secret pour être ennuyeux, c'est de tout dire* [The secret of being tedious is to tell everything]. Therefore, if possible, the quintessence only! Mere leading thoughts! Nothing that the reader would

2. *Works and Days*, 40.

think for himself. To use many words to communicate few thoughts is everywhere the unmistakable sign of mediocrity. To gather much thought into few words stamps the man of genius.

Truth is most beautiful undraped; and the impression it makes is deep in proportion as its expression has been simple. This is so partly because it then takes unobstructed possession of the hearer's whole soul, and leaves him no by-thought to distract him; partly, also, because he feels that here he is not being corrupted or cheated by the arts of rhetoric, but that all the effect of what is said comes from the thing itself. For instance, what declamation on the vanity of human existence could ever be more telling than the words of Job? "Man that is born of a woman hath but a short time to live and is full of misery. He cometh up, and is cut down, like a flower; he fleeth as it were a shadow, and never continueth in one stay."

For the same reason Goethe's naïve poetry is incomparably greater than Schiller's rhetoric. It is this, again, that makes many popular songs so affecting. As in architecture an excess of decoration is to be avoided, so in the art of literature a writer must guard against all rhetorical finery, all useless amplification, and all superfluity of expression in general; in a word, he must strive after chastity of style. Every word that can be spared is hurtful if it remains. The law of simplicity and naïveté holds good of all fine art, for it is quite possible to be at once simple and sublime.

True brevity of expression consists in everywhere saying only what is worth saying, and in avoiding tedious detail about things which everyone can supply for himself. This involves correct discrimination between what is necessary and what is superfluous. A writer should never be brief at the expense of being clear, to say nothing of being grammatical. It shows lamentable want of judgment to weaken the expression of a thought, or to stunt the meaning of a period, for the sake of using a few words less. But this is the precise endeavor of that false brevity nowadays so much in vogue, which proceeds by leaving out useful words and even by sacrificing grammar and logic. It is not only that such writers spare a word by making a single verb or adjective do duty for several different periods, so that the reader, as it were, has to grope his way through them in the dark; they also practice, in many other respects, an unseemingly economy of speech in the effort to effect what they foolishly take to be brevity of expression and conciseness of style. By omitting something that might have thrown a light over the whole sentence, they turn it into a conundrum, which the reader tries to solve by going over it again and again.

It is wealth and weight of thought, and nothing else, that gives brevity

to style, and makes it concise and pregnant. If a writer's ideas are important, luminous, and generally worth communicating, they will necessarily furnish matter and substance enough to fill out the periods which give them expression, and make these in all their parts both grammatically and verbally complete; and so much will this be the case that no one will ever find them hollow, empty or feeble. The diction will everywhere be brief and pregnant, and allow the thought to find intelligible and easy expression, and even unfold and move about with grace.

Therefore instead of contracting his words and forms of speech, let a writer enlarge his thoughts. If a man has been thinned by illness and finds his clothes too big, it is not by cutting them down but by recovering his usual bodily condition that he ought to make them fit him again.

Let me here mention an error of style, very prevalent nowadays, and, in the degraded state of literature and the neglect of ancient languages, always on the increase; I mean *subjectivity*. A writer commits this error when he thinks it enough if he himself knows what he means and wants to say, and takes no thought for the reader, who is left to get at the bottom of it as best he can. This is as though the author were holding a monologue, whereas, it ought to be a dialogue; and a dialogue, too, in which he must express himself all the more clearly inasmuch as he cannot hear the questions of his interlocutor.

Style should for this very reason never be subjective, but *objective*; and it will not be objective unless the words are so set down that they directly force the reader to think precisely the same thing as the author thought when he wrote them. Nor will this result be obtained unless the author has always been careful to remember that thought so far follows the law of gravity that it travels from head to paper much more easily than from paper to head; so that he must assist the latter passage by every means in his power. If he does this, a writer's words will have a purely objective effect, like that of a finished picture in oils; while the subjective style is not much more certain in its working than spots on the wall, which look like figures only to one whose phantasy has been accidentally aroused by them; other people see nothing but spots and blurs. The difference in question applies to literary method as a whole; but it is often established also in particular instances. For example, in a recently published work I found the following sentence: "I have not written in order to increase the number of existing books." This means just the opposite of what the writer wanted to say, and is nonsense as well.

He who writes carelessly confesses thereby at the very outset that he does not attach much importance to his own thoughts. For it is only where

a man is convinced of the truth and importance of his thoughts that he feels the enthusiasm necessary for an untiring and assiduous effort to find the clearest, finest, and strongest expression for them, just as for sacred relics or priceless works of art there are provided silver or golden receptacles. It was this feeling that led ancient authors, whose thoughts, expressed in their own words, have lived thousands of years, and therefore bear the honored title of *classics*, always to write with care. Plato, indeed, is said to have written the introduction to his *Republic* seven times over in different ways.³

As neglect of dress betrays want of respect for the company a man meets, so a hasty, careless, bad style shows an outrageous lack of regard for the reader, who then rightly punishes it by refusing to read the book. It is especially amusing to see reviewers criticizing the works of others in their own most careless style—the style of a hireling. It is as though a judge were to come into court in dressing gown and slippers! If I see a man badly and dirtily dressed, I feel some hesitation, at first, in entering into conversation with him; and when, on taking up a book, I am struck at once by the negligence of its style, I put it away.

Good writing should be governed by the rule that a man can think only one thing clearly at a time; and, therefore, that he should not be expected to think two or even more things in one and the same moment. But this is what is done when a writer breaks up his principal sentence into little pieces for the purpose of pushing into the gaps thus made two or three other thoughts by way of parenthesis, thereby unnecessarily and wantonly confusing the reader. And here it is again my own countrymen who are chiefly at fault. That German lends itself to this way of writing makes the thing possible, but does not justify it. No prose reads more easily or pleasantly than French, because, as a rule, it is free from the error in question. The Frenchman strings his thoughts together, as far as he can, in the most logical and natural order, and so lays them before his reader one after the other for convenient deliberation, so that every one of them may receive undivided attention. The German, on the other hand, weaves them together into a sentence which he twists and crosses, and crosses and twists again; because he wants to say six things all at once, instead of advancing them one by one. His aim should be to attract and hold the reader's attention; but, above and beyond neglect of this aim, he demands from the reader that he shall set the above-mentioned rule at defiance, and think three or four different thoughts at one and the same time; or since that is

3. *Translator's Note.*—It is a fact worth mentioning that the first twelve words of the *Republic* are placed in the exact order which would be natural in English.

impossible, that his thoughts shall succeed each other as quickly as the vibrations of a cord. In this way an author lays the foundation of his *style empesé*, which is then carried to perfection by the use of high-flown, pompous expressions to communicate the simplest things, and other artifices of the same kind.

In those long sentences rich in involved parenthesis, like a box of boxes one within another, and padded out like roast geese stuffed with apples, it is really the memory that is chiefly taxed; while it is the understanding and the judgment which should be called into play, instead of having their activity thereby actually hindered and weakened. This kind of sentence furnishes the reader with mere half-phrases, which he is then called upon to collect carefully and store up in his memory, as though they were the pieces of a torn letter, afterwards to be completed and made sense of by the other halves to which they respectively belong. He is expected to go on reading for a little without exercising any thought, nay, exerting only his memory, in the hope that, when he comes to the end of the sentence, he may see its meaning and so receive something to think about; and he is thus given a great deal to learn by heart before obtaining anything to understand. This is manifestly wrong and an abuse of the reader's patience.

The ordinary writer has an unmistakable preference for this style, because it causes the reader to spend time and trouble in understanding that which he would have understood in a moment without it; and this makes it look as though the writer had more depth and intelligence than the reader. This is, indeed, one of those artifices referred to above, by means of which mediocre authors unconsciously, and as it were by instinct, strive to conceal their poverty of thought and give an appearance of the opposite. Their ingenuity in this respect is really astounding.

It is manifestly against all sound reason to put one thought obliquely on top of another, as though both together formed a wooden cross. But this is what is done where a writer interrupts what he has begun to say for the purpose of inserting some quite alien matter, thus depositing with the reader a meaningless half-sentence, and bidding him keep it until the completion comes. It is much as though a man were to treat his guests by handing them an empty plate in the hope of something appearing upon it. And commas used for a similar purpose belong to the same family as notes at the foot of the page and parenthesis in the middle of the text; nay, all three differ only in degree. If Demosthenes and Cicero occasionally inserted words by ways of parenthesis, they would have done better to have refrained.

But this style of writing becomes the height of absurdity when the parenthesis are not even fitted into the frame of the sentence but wedged in so as directly to shatter it. If, for instance, it is an impertinent thing to interrupt another person when he is speaking, it is no less impertinent to interrupt oneself. But all bad, careless, and hasty authors, who scribble with the bread actually before their eyes, use this style of writing six times on a page, and rejoice in it. It consists in—it is advisable to give rule and example together, wherever it is possible—breaking up one phrase in order to glue in another. Nor is it merely out of laziness that they write thus. They do it out of stupidity; they think there is a charming *légèreté* about it; that it gives life to what they say. No doubt there are a few rare cases where such a form of sentence may be pardonable.

Few write in the way in which an architect builds, who, before he sets to work, sketches out his plan, and thinks it over down to its smallest details. Nay, most people write only as though they were playing dominoes; and, as in this game, the pieces are arranged half by design, half by chance, so it is with the sequence and connection of their sentences. They only have an idea of what the general shape of their work will be, and of the aim they set before themselves. Many are ignorant even of this, and write as the coral insects build; period joins to period, and the Lord only knows what the author means.

Life nowadays goes at a gallop; and the way in which this affects literature is to make it extremely superficial and slovenly.

On Some Forms of Literature

In the drama, which is the most perfect reflection of human existence, there are three stages in the presentation of the subject, with a corresponding variety in the design and scope of the piece.

At the first, which is also the most common, stage, the drama is never anything more than merely interesting. The persons gain our attention by following their own aims, which resemble ours; the action advances by means of intrigue and the play of character and incident; while wit and raillery season the whole.

At the second stage, the drama becomes *sentimental*. Sympathy is roused with the hero and, indirectly, with ourselves. The action takes a pathetic turn, but the end is peaceful and satisfactory.

The climax is reached with the third stage, which is the most difficult. There the drama aims at being *tragic*. We are brought face to face with great suffering and the storm and stress of existence; and the outcome of it is to show the vanity of all human effort. Deeply moved, we are either directly prompted to disengage our will from the struggle of life, or else a chord is struck in us which echoes a similar feeling.

The beginning, it is said, is always difficult. In the drama it is just the contrary; for these the difficulty always lies in the end. This is proved by countless plays which promise very well for the first act or two, and then become muddled, stick, or falter—notoriously so in the fourth act—and finally conclude in a way that is either forced or unsatisfactory or else long foreseen by everyone. Sometimes, too, the end is positively revolting, as in Lessing's *Emilia Galotti*, which sends the spectators home in a temper.

This difficulty in regard to the end of a play arises partly because it is everywhere easier to get things into a tangle than to get them out again; partly also because at the beginning we give the author carte blanche to

do as he likes, but, at the end, make certain definite demands upon him. Thus we ask for a conclusion that shall be either quite happy or else quite tragic, whereas human affairs do not easily take so decided a turn; and then we expect that it shall be natural, fit and proper, unlabored, and at the same time foreseen by no one.

These remarks are also applicable to an epic and to a novel; but the more compact nature of the drama makes the difficulty plainer by increasing it.

E nihilo nihil fit. That nothing can come from nothing is a maxim true in fine art as elsewhere. In composing an historical picture, a good artist will use living men as a model, and take the groundwork of the faces from life; and then proceed to idealize them in point of beauty or expression. A similar method, I fancy, is adopted by good novelists. In drawing a character they take a general outline of it from some real person of their acquaintance, and then idealize and complete it to suit their purpose.

A novel will be of a high and noble order the more it represents of inner, and the less it represents of outer, life; and the ratio between the two will supply a means of judging any novel, of whatever kind, from *Tristram Shandy* down to the crudest and most sensational tale of knight or robber. *Tristram Shandy* has, indeed, as good as no action at all; and there is not much in *La Nouvelle Héloïse* and *Wilhelm Meister*. Even *Don Quixote* has relatively little, and what there is, very unimportant, and introduced merely for the sake of fun. And these four are the best of all existing novels.

Consider, further, the wonderful romances of Jean Paul, and how much inner life is shown on the narrowest basis of actual event. Even in Walter Scott's novels there is a great preponderance of inner over outer life, and incident is never brought in except for the purpose of giving play to thought and emotion; whereas in bad novels incident is there on its own account. Skill consists in setting the inner life in motion with the smallest possible array of circumstance, for it is this inner life that really excites our interest.

The business of the novelist is not to relate great events, but to make small ones interesting.

History, which I like to think of as the contrary of poetry [*historoumenon* (investigated)—*pepoiemenon* (invented)], is for time what geography is for space; and it is no more to be called a science, in any strict sense of the word, than is geography, because it does not deal with uni-

versal truths but only with particular details. History has always been the favorite study of those who wish to learn something without having to face the effort demanded by any branch of real knowledge, which taxes the intelligence. In our time history is a favorite pursuit, as witness the numerous books upon the subject which appear every year.

If the reader cannot help thinking, with me, that history is merely the constant recurrence of similar things, just as in a kaleidoscope the same bits of glass are represented, but in different combinations, he will not be able to share all this lively interest; nor, however, will he censure it. But there is a ridiculous and absurd claim, made by many people, to regard history as a part of philosophy, nay, as philosophy itself; they imagine that history can take its place.

The preference shown for history by the greater public in all ages may be illustrated by the kind of conversation which is so much in vogue everywhere in society. It generally consists in one person relating something and then another person relating something else; so that in this way everyone is sure of receiving attention. Both here and in the case of history it is plain that the mind is occupied with particular details. But as in science, so also in every worthy conversation, the mind rises to the consideration of some general truth.

This objection does not, however, deprive history of its value. Human life is short and fleeting, and many millions of individuals share in it, who are swallowed by that monster of oblivion which is waiting for them with ever open jaws. It is thus a very thankworthy task to try to rescue something—the memory of interesting and important events, or the leading features and personages of some epoch—from the general shipwreck of the world.

From another point of view, we might look upon history as the sequel to zoology; for while with all other animals it is enough to observe the species, with man individuals, and therefore individual events, have to be studied; because every man possesses a character as an individual. And since individuals and events are without number or end, an essential imperfection attaches to history. In the study of it, all that a man learns never contributes to lessen that which he has still to learn. With any real science, a perfection of knowledge is, at any rate, conceivable.

When we gain access to the histories of China and of India, the endlessness of the subject matter will reveal to us the defects in the study, and force our historians to see that the object of science is to recognize the many in the one, to perceive the rules in any given example, and to apply to the life of nations a knowledge of mankind; not to go on counting up facts ad infinitum.

There are two kinds of history; the history of politics and the history of literature and art. The one is the history of the will; the other, that of the intellect. The first is a tale of woe, even of terror: it is a record of agony, struggle, fraud, and horrible murder en masse. The second is everywhere pleasing and serene, like the intellect when left to itself, even though its path be one of error. Its chief branch is the history of philosophy. This is, in fact, its fundamental bass, and the notes of it are heard even in the other kind of history. These deep tones guide the formation of opinion, and opinion rules the world. Hence philosophy, rightly understood, is a material force of the most powerful kind, though very slow in its working. The philosophy of a period is thus the fundamental base of its history.

The newspaper is the second hand in the clock of history; and it is not only made of baser metal than those which point to the minute and the hour, but it seldom goes right.

The so-called leading article is the chorus to the drama of passing events.

Exaggeration of every kind is as essential to journalism as it is to the dramatic art, for the object of journalism is to make events go as far as possible. Thus it is that all journalists are, in the very nature of their calling, alarmists; and this is their way of giving interest to what they write. Herein they are like little dogs; if anything stirs, they immediately set up a shrill bark.

Therefore, let us carefully regulate the attention to be paid to this trumpet of danger so that it may not disturb our digestion. Let us recognize that a newspaper is at best but a magnifying glass, and very often merely a shadow on the wall.

The pen is to thought what the stick is to walking; but you walk most easily when you have no stick, and you think with the greatest perfection when you have no pen in your hand. It is only when a man begins to be old that he likes to use a stick and is glad to take up his pen.

When a hypothesis has once come to birth in the mind, or gained a footing there, it leads a life so far comparable with the life of an organism, as that it assimilates matter from the outer world only when it is like in kind with it and beneficial; and when, contrarily, such matter is not like in kind but hurtful, the hypothesis, equally with the organism, throws it off, or, if forced to take it, gets rid of it again entire.

To gain immortality an author must possess so many excellences that

while it will not be easy to find anyone to understand and appreciate them all, there will be men in every age who are able to recognize and value some of them. In this way the credit of his book will be maintained throughout the long course of centuries, in spite of the fact that human interests are always changing.

An author like this, who has a claim to the continuance of his life even with posterity, can only be a man who, over the wide earth, will seek his like in vain, and offer a palpable contrast with everyone else in virtue of his unmistakable distinction. Nay, more: were he, like the wandering Jew, to live through several generations, he would still remain in the same superior position. If this were not so, it would be difficult to see why his thoughts should not perish like those of other men.

Metaphors and similes are of great value, in so far as they explain an unknown relation by a known one. Even the more detailed simile which grows into a parable or an allegory is nothing more than the exhibition of some relation in its simplest, most visible and palpable form. The growth of ideas rests, at bottom, upon similes, because ideas arise by a process of combining the similarities and neglecting the differences between things. Further, intelligence, in the strict sense of the word, ultimately consists in a seizing of relations; and a clear and pure grasp of relations is all the more often attained when the comparison is made between cases that lie wide apart from one another, and between things of quite different nature. As long as a relation is known to me as existing only in a single case, I have but an individual idea of it—in other words, only an intuitive knowledge of it; but as soon as I see the same relation in two different cases, I have a general idea of its whole nature, and this is a deeper and more perfect knowledge.

Since, then, similes and metaphors are such a powerful engine of knowledge, it is a sign of great intelligence in a writer if his similes are unusual and, at the same time, to the point. Aristotle also observes that by far the most important thing to a writer is to have this power of metaphor, for it is a gift which cannot be acquired, and it is a mark of genius.

As regards reading, to require that a man shall retain everything he has ever read is like asking him to carry about with him all he has ever eaten. The one kind of food has given him bodily, and the other mental, nourishment; and it is through these two means that he has grown to be what he is. The body assimilates only that which is like it; and so a man retains in his mind only that which interests him, in other words, that which suits his system of thought or his purposes in life.

If a man wants to read good books, he must make a point of avoiding bad ones; for life is short, and time and energy limited.

Repetitio est mater studiorum [Repetition is the mother of learning]. Any book that is at all important ought to be at once read through twice; partly because, on a second reading, the connection of the different portions of the book will be better understood, and the beginning comprehended only when the end is known; and partly because we are not in the same temper and disposition on both readings. On the second perusal we get a new view of every passage and a different impression of the whole book, which then appears in another light.

A man's works are the quintessence of his mind, and even though he may possess very great capacity, they will always be incomparably more valuable than his conversation. Nay, in all essential matters his works will not only make up for the lack of personal intercourse with him, but they will far surpass it in solid advantages. The writings even of a man of moderate genius may be edifying, worth reading, and instructive, because they are his quintessence—the result and fruit of all his thought and study; while conversation with him may be unsatisfactory.

So it is that we can read books by men in whose company we find nothing to please, and that a high degree of culture leads us to seek entertainment almost wholly from books and not from men.

On the Comparative Place of Interest and Beauty in Works of Art

In the productions of poetic genius, especially of the epic and dramatic kind, there is, apart from Beauty, another quality which is attractive: I mean Interest.

The beauty of a work of art consists in the fact that it holds up a clear mirror to certain ideas inherent in the world in general; the beauty of a work of poetic art in particular is that it renders the ideas inherent in mankind, and thereby leads it to a knowledge of these ideas. The means which poetry uses for this end are the exhibition of significant characters and the invention of circumstances which will bring about significant situations, giving occasion to the characters to unfold their peculiarities and show what is in them; so that by some such representation a clearer and fuller knowledge of the many-sided idea of humanity may be attained. Beauty, however, in its general aspect, is the inseparable characteristic of the idea when it has become known. In other words, everything is beautiful in which an idea is revealed, for to be beautiful means no more than clearly to express an idea.

Thus we perceive that beauty is always an affair of knowledge, and that it appeals to the knowing subject and not to the will; nay, it is a fact that the apprehension of beauty on the part of the subject involves a complete suppression of the will.

On the other hand, we call drama or descriptive poetry interesting when it represents events and actions of a kind which necessarily arouse concern or sympathy, like that which we feel in real events involving our own person. The fate of the person represented in them is felt in just the same fashion as our own: we await the development of events with anxiety; we eagerly follow their course; our hearts quicken when the hero is

threatened; our pulse falters as the danger reaches its acme, and throbs again when he is suddenly rescued. Until we reach the end of the story we cannot put the book aside; we lie awake far into the night sympathizing with our hero's troubles as though they were our own. Nay, instead of finding pleasure and recreation in such representations, we should feel all the pain which real life often inflicts upon us, or at least the kind which pursues us in our uneasy dreams, if in the act of reading or looking at the stage we had not the firm ground of reality always beneath our feet. As it is, in the stress of a too violent feeling, we can find relief from the illusion of the moment, and then give way to it again at will. Moreover, we can gain this relief without any such violent transition as occurs in a dream, when we rid ourselves of its terrors only by the act of awaking.

It is obvious that what is affected by poetry of this character is our will, and not merely our intellectual powers pure and simple. The word interest means, therefore, that which arouses the concern of the individual will, *quod nostra interest*; and here it is that beauty is clearly distinguished from interest. The one is an affair of the intellect, and that, too, of the purest and simplest kind. The other works upon the will. Beauty, then, consists in an apprehension of ideas; and knowledge of this character is beyond the range of the principle that nothing happens without a cause. Interest, on the other hand, has its origin nowhere but in the course of events; that is to say, in the complexities which are possible only through the action of this principle in its different forms.

We have now obtained a clear conception of the essential difference between the beauty and the interest of a work of art. We have recognized that beauty is the true end of every art and therefore, also, of the poetic art. It now remains to raise the question whether the interest of a work of art is a second end, or a means to the exhibition of its beauty; or whether the interest of it is produced by its beauty as an essential concomitant, and comes of itself as soon as it is beautiful; or whether interest is at any rate compatible with the main end of art; or, finally whether it is a hindrance to it.

In the first place, it is to be observed that the interest of a work of art is confined to works of poetic art. It does not exist in the case of fine art, or of music or architecture. Nay, with these forms of art it is not even conceivable, unless, indeed, the interest be of an entirely personal character, and confined to one or two spectators; as, for example, where a picture is a portrait of someone whom we love or hate; the building, my house or my prison; the music, my wedding dance, or the tune to which I marched to the war. Interest of this kind is clearly quite foreign to the es-

sence and purpose of art; it disturbs our judgment in so far as it makes the purely artistic attitude impossible. It may be, indeed, that to a smaller extent this is true of all interest.

Now, since the interest of a work of art lies in the fact that we have the same kind of sympathy with a poetic representation as with reality, it is obvious that the representation must deceive us for the moment; and this it can do only by its truth. But truth is an element in perfect art. A picture, a poem, should be as true as nature itself; but at the same time it should lay stress on whatever forms the unique character of its subject by drawing out all its essential manifestations, and by rejecting everything that is unessential and accidental. The picture or the poem will thus emphasize its idea, and give us that ideal truth which is superior to nature.

Truth, then, forms the point that is common both to interest and beauty in a work of art, as it is its truth which produces the illusion. The fact that the truth of which I speak is ideal truth might, indeed, be detrimental to the illusion, since it is just here that we have the general difference between poetry and reality, art and nature. But since it is possible for reality to coincide with the ideal, it is not actually necessary that this difference should destroy the illusion. In the case of fine arts there is, in the range of the means which art adopts, a certain limit, and beyond it illusion is impossible. Sculpture, that is to say, gives us mere colorless form; its figures are without eyes and without movement; and painting provides us with no more than a single view, enclosed within strict limits, which separate the picture from the adjacent reality. Here, then, there is no room for illusion, and consequently none for that interest or sympathy which resembles the interest we have in reality; the will is at once excluded, and the object alone is presented to us in a manner that frees it from any personal concern.

It is a highly remarkable fact that a spurious kind of fine art oversteps these limits, produces an illusion of reality, and arouses our interest; but at the same time it destroys the effect which fine art produces, and serves as nothing but a mere means of exhibiting the beautiful, that is, of communicating a knowledge of the ideas which it embodies. I refer to waxwork. Here, we might say, is the dividing line which separates it from the province of fine art. When waxwork is properly executed, it produces a perfect illusion; but for that very reason we approach a wax figure as we approach a real man, who, as such, is for the moment an object presented to our will. That is to say, he is an object of interest; he arouses the will, and consequently stills the intellect. We come up to a wax figure with the same reserve and caution as a real man would inspire in us: our will is

excited; it waits to see whether he is going to be friendly to us, or the reverse, fly from us, or attack us; in a word, it expects some action of him. But as the figure, nevertheless, shows no sign of life, it produces the impression which is so very disagreeable, namely, of a corpse. This is a case where the interest is of the most complete kind, and yet where there is no work of art at all. In other words, interest is not in itself a real end of art.

The same truth is illustrated by the fact that even in poetry it is only the dramatic and descriptive kind to which interest attaches; for if interest were, with beauty, the aim of art, poetry of the lyrical kind would, for that very reason, not take half so great a position as the other two.

In the second place, if interest were a means in the production of beauty, every interesting work would also be beautiful. That, however, is by no means the case. A drama or a novel may often attract us by its interest, and yet be so utterly deficient in any kind of beauty that we are afterwards ashamed of having wasted our time on it. This applies to many a drama which gives no true picture of the real life of man, which contains characters very superficially drawn, or so distorted as to be actual monstrosities, such as are not to be found in nature; but the course of events and the play of the action are so intricate, and we feel so much for the hero in the situation in which he is placed, that we are not content until we see the knot untangled and the hero rescued. The action is so cleverly governed and guided in its course that we remain in a state of constant curiosity as to what is going to happen, and we are utterly unable to form a guess; so that between eagerness and surprise our interest is kept active; and as we are pleasantly entertained, we do not notice the lapse of time. Most of Kotzebue's plays are of this character. For the mob this is the right thing: it looks for amusement, something to pass the time, not for intellectual perception. Beauty is an affair of such perception; hence sensibility to beauty varies as much as the intellectual faculties themselves. For the inner truth of a representation, and its correspondence with the real nature of humanity, the mob has no sense at all. What is flat and superficial it can grasp, but the depths of human nature are opened to it in vain.

It is also to be observed that dramatic representations which depend for their value on their interest lose by repetition, because they are no longer able to arouse curiosity as to their course, since it is already known. To see them often makes them stale and tedious. On the other hand, works of which the value lies in their beauty gain by repetition, as they are then more and more understood.

Most novels are on the same footing as dramatic representations of this character. They are creatures of the same sort of imagination as we see in the storyteller of Venice and Naples, who lays a hat on the ground and waits until an audience is assembled. Then he spins a tale which so captivates his hearers that, when he gets to the catastrophe, he makes a round of the crowd, hat in hand, for contributions, without the least fear that his hearers will slip away. Similar storytellers ply their trade in this country, though in a less direct fashion. They do it through the agency of publishers and circulating libraries. Thus they can avoid going about in rags, like their colleagues elsewhere; they can offer the children of their imagination to the public under the title of novels, short stories, romantic poems, fairy tales, and so on; and the public, in a dressing gown by the fireside, sits down more at its ease, but also with a greater amount of patience, to the enjoyment of the interest which they provide.

How very little aesthetic value there generally is in productions of this sort is well known; and yet it cannot be denied that many of them are interesting; or else how could they be so popular?

We see, then, in reply to our second question, that interest does not necessarily involve beauty; and, conversely, it is true that beauty does not necessarily involve interest. Significant characters may be represented that open up the depths of human nature, and it may all be expressed in actions and sufferings of an exceptional kind, so that the real nature of humanity and the world may stand forth in the picture in the clearest and most forcible lines; and yet no high degree of interest may be excited in the course of events by the continued progress of the action, or by the complexity and unexpected solution of the plot. The immortal masterpieces of Shakespeare contain little that excites interest; the action does not go forward in one straight line, but falters, as in *Hamlet*, all through the play; or else it spreads out in breadth, as in *The Merchant of Venice*, whereas length is the proper dimension of interest; or the scenes hang loosely together, as in *Henry IV*. Thus it is that Shakespeare's dramas produce no appreciable effect on the mob.

The dramatic requirement stated by Aristotle, and more particularly the unity of action, have in view the interest of the piece rather than its artistic beauty. It may be said, generally, that these requirements are drawn up in accordance with the principle of sufficient reason to which I have referred above. We know, however, that the idea, and, consequently, the beauty of a work of art, exist only for the perceptive intelligence which has freed itself from the domination of that principle. It is just here that we find the distinction between interest and beauty, as it is

obvious that interest is part and parcel of the mental attitude which is governed by the principle, whereas beauty is always beyond its range. The best and most striking refutation of the Aristotelian unities is Manzoni's. It may be found in the preface to his dramas.

What is true of Shakespeare's dramatic works is true also of Goethe's. Even *Egmont* makes little effect on the public, because it contains scarcely any complication or development; and if *Egmont* fails, what are we to say of *Tasso* or *Iphigenia*? That the Greek tragedians did not look to interest as a means of working upon the public is clear from the fact that the material of their masterpieces was almost always known to everyone: they selected events which had often been treated dramatically before. This shows us how sensitive was the Greek public to the beautiful, as it did not require the interest of unexpected events and new stories to season its enjoyment.

Neither does the quality of interest often attach to masterpieces of descriptive poetry. Father Homer lays the world and humanity before us in its true nature, but he takes no trouble to attract our sympathy by a complexity of circumstance, or to surprise us by unexpected entanglements. His pace is lingering; he stops at every scene; he puts one picture after another tranquilly before us, elaborating it with care. We experience no passionate emotion in reading him; our demeanor is one of pure perceptive intelligence; he does not arouse our will, but sings it to rest; and it costs us no effort to break off in our reading, for we are not in condition of eager curiosity. This is all still more true of Dante, whose work is not, in the proper sense of the word, an epic, but a descriptive poem. The same thing may be said of the four immortal romances: *Don Quixote*, *Tristram Shandy*, *La Nouvelle Héloïse*, and *Wilhelm Meister*. To arouse our interest is by no means the chief aim of these works; in *Tristram Shandy* the hero, even at the end of the book, is only eight years of age.

On the other hand, we must not venture to assert that the quality of interest is not to be found in masterpieces of literature. We have it in Schiller's dramas in an appreciable degree, and consequently they are popular; also in the *Oedipus Rex* of Sophocles. Among masterpieces of description, we find it in Ariosto's *Orlando Furioso*; nay, an example of a high degree of interest, bound up with the beautiful, is afforded in an excellent novel by Walter Scott—*The Heart of Midlothian*. This is the most interesting work of fiction that I know, where all the effects due to interest, as I have given them generally in the preceding remarks, may be most clearly observed. At the same time it is a very beautiful romance throughout; it shows the most varied pictures of life, drawn with striking

truth; and it exhibits highly different characters with great justice and fidelity.

Interest, then, is certainly compatible with beauty. That was our third question. Nevertheless, a comparatively small admixture of the element of interest may well be found to be most advantageous as far as beauty is concerned; for beauty is and remains the end of art. Beauty is in twofold opposition with interest; firstly, because it lies in the perception of the idea, and such perception takes its object entirely out of the range of the forms enunciated by the principle of sufficient reason; whereas interest has its sphere mainly in circumstance, and it is out of this principle that the complexity of circumstance arises. Secondly, interest works by exciting the will; whereas beauty exists only for the pure perceptive intelligence, which has no will. However, with dramatic and descriptive literature an admixture of interest is necessary, just as a volatile and gaseous substance requires a material basis if it is to be preserved and transferred. The admixture is necessary, partly, indeed, because interest is itself created by the events which have to be devised in order to set the characters in motion; partly because our minds would be weary of watching scene after scene if they had no concern for us, or of passing from one significant picture to another if we were not drawn on by some secret thread. It is this that we call interest; it is the sympathy which the event in itself forces us to feel, and which, by riveting our attention, makes the mind obedient to the poet, and able to follow him into all the parts of his story.

If the interest of a work of art is sufficient to achieve this result, it does all that can be required of it; for its only service is to connect the pictures by which the poet desires to communicate a knowledge of the idea, as if they were pearls, and interest were the thread that holds them together, and makes an ornament out of the whole. But interest is prejudicial to beauty as soon as it oversteps this limit; and this is the case if we are so led away by the interest of a work that whenever we come to any detailed description in a novel, or any lengthy reflection on the part of a character in a drama, we grow impatient and want to put spurs to our author, so that we may follow the development of events with greater speed. Epic and dramatic writings, where beauty and interest are both present in a high degree, may be compared to the working of a watch, where interest is the spring which keeps all the wheels in motion. If it worked unhindered, the watch would run down in a few minutes. Beauty, holding us in the spell of description and reflection, is like the barrel which checks its movement.

Or we may say that interest is the body of a poetic work, and beauty the soul. In the epic and the drama, interest, as a necessary quality of the action, is the matter; and beauty, the form that requires the matter in order to be visible.

*The foregoing three essays were translated
by T. Bailey Saunders.*

Friedrich Schiller

1759–1805

Johann Christoph Friedrich Schiller was born on November 10, 1759, at Marbach in Württemberg. His mother was the daughter of a small-town innkeeper, his father an army surgeon. Later, however, Schiller's father served as superintendent of forests and nurseries on the estates of the duke Karl Eugen of Württemberg. The Duke entered Friedrich in "Solitude," a military school he had founded. There young Schiller was forced to study law, although he had hoped to prepare for the church. When the school moved to Stuttgart, Schiller was allowed to take up the study of medicine. In 1780 he was appointed by the Duke as a regimental surgeon at Stuttgart.

Schiller was upset by the tyranny of both the school and the Duke and attracted by the revolutionary authors of the period. In 1781 he published a play, *Die Räuber* ("The Robbers"). It was produced the next year at Mannheim, and Schiller stole away to attend the performance. It was so successful that he began to work on another tragedy. The Duke, however, hearing of a second visit by Schiller to Mannheim, had him placed under military arrest. The Duke forbade him to write any more and insisted that he not leave Württemberg. In 1782 Schiller fled from the duchy.

After some weeks of extreme poverty and hunger, he finally found refuge in the home of a mother of a school friend at Bauerbach in Thuringia. Here he finished two plays, *Fiesco* and *Kabale und Liebe* ("Intrigue and Love").

He was appointed dramatist to the Mannheim Theater, but his contract was not renewed and Schiller stayed on in Mannheim for a while. Then, in 1785, he accepted the invitation of some admirers to visit Leipzig. For the next two years he was the guest of one of

them, C. G. Körner, in Leipzig and Dresden. In 1787 he finished *Don Carlos*, written in blank verse. He also, at this time, wrote joyful poems, including *An die Freude* (“Ode to Joy”), the basis of the last movement of Beethoven’s Ninth Symphony.

Schiller went to Weimar in 1787. Two years later he was appointed honorary professor of history at Jena—following the publication of the first volume of a history of the revolt of the Netherlands—a position which he held until 1793. During this time he met and married Charlotte von Lengefeld. He became a friend of Goethe, who had an important influence on his thought and work. In 1799 he took up permanent residence in Weimar, partly to be near Goethe. He continued to write very successful historical dramas. During his last years he was plagued with ill-health. Schiller died at Weimar on May 9, 1805.

Schiller was a Romantic. He was a German. In the first role he was a vigorous spokesman for his time. In the second, he was, and has often been since, an inspiration to his fellow nationals.

There were three phases of Schiller’s career. At first he wrote *Sturm und Drang* (“Storm and Stress”) poetry and plays of social criticism. The ideas of this literary school, largely influenced by Rousseau, were concerned with individual rights and scorn for convention. These ideas had a great appeal to young Schiller, newly out of the clutches of the dictatorial Duke and hence in revolt against authority of all sorts.

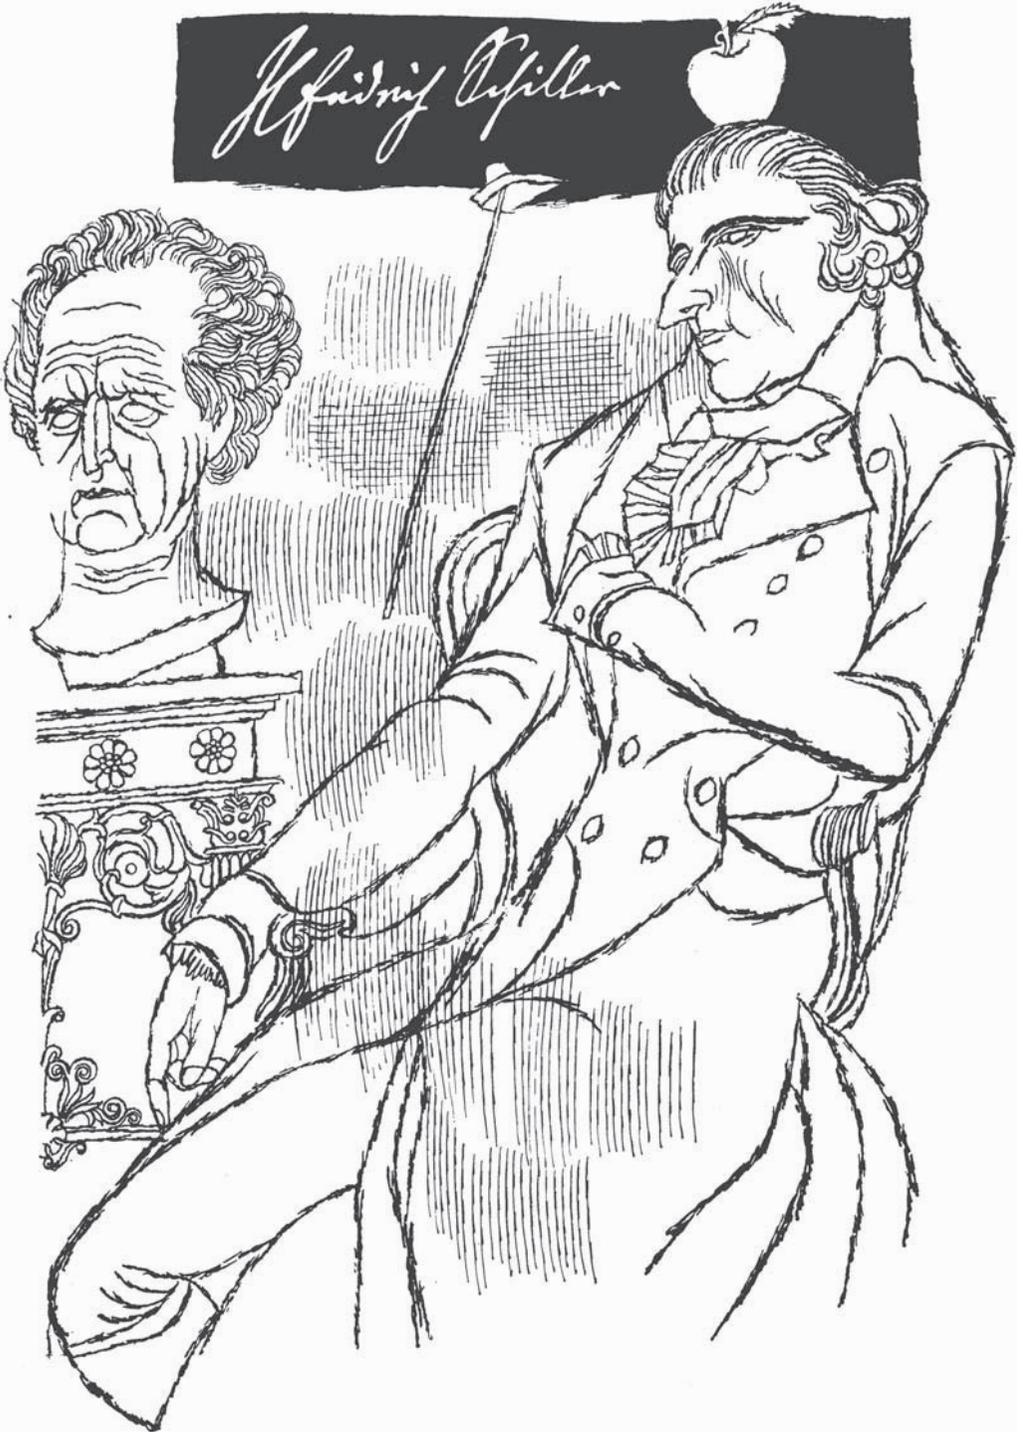

In the second stage of his writing life, he concentrated on history and philosophy, largely influenced by Kant. In the third, he wrote poetic dramas which exemplified his aesthetic ideas.

On Simple and Sentimental Poetry is Schiller’s definition of his aesthetic principles and at the same time a statement of his ethics.

The several pairs of concepts which Schiller talks of here repre-

Notes from the artist: “Schiller contemplating the bust of Goethe, his friend and source of inspiration. On Schiller’s head is an apple, nearby the hat of the tyrant Gessler, both suggesting Wilhelm Tell.”

Madame Tefiller

sent the differences between himself and Goethe—Goethe’s classic naïveté and his own Romantic sentimentalism.

Schiller eulogizes the *natural* or *simple*, in typically Rousseau fashion. Children and childlike people (as different from *childish* people) have this simplicity to a high degree, he says—or, as Wordsworth put it, they are “trailing clouds of glory.” Further, he says that true genius is necessarily simple—that is, modest rather than decent; intelligent rather than cunning; faithful from natural necessity rather than principles.

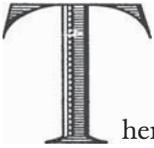

Schiller notes the dangers of growing out of this state of childlike simplicity. People may become burdened with troubles. They may become disillusioned “with the artifices, offended by the abuses . . . in social life.” Then, he says, the moral man must be careful to remain pure in the midst of impurities. It is fruitless and wrong then to yearn for lost innocence; there is no chance, and no sense in trying, to go back to a state of naïveté. “But when you have consoled yourself for having lost the happiness of nature,” he says, “let its perfection be a model to your heart.”

Reasonable men have free will, he says. And, in the loss of naïve innocence, they must depend on that free will to be moral persons.

Schiller explains the difference this way: the poet *is* nature, or he *seeks* nature. In the former case, he is a simple poet; in the second case a sentimental poet. The ideal, to Schiller, would be a perfect synthesis, each side keeping the other from excess.

The title of this essay is almost paradoxical in its modesty. For “simple” read “Goethe and classic.” For “sentimental” read “Schiller and modern.” For “poetry” read “life.” Then the scope of the essay begins to be apparent.

On Simple and Sentimental Poetry

here are moments in life when nature inspires us with a sort of love and respectful emotion, not because she is pleasing to our senses or because she satisfies our mind or our taste (it is often the very opposite that happens), but merely because she is nature. This feeling is often elicited when nature is considered in her plants, in the mineral kingdom, in rural districts; also in the case of human nature, in the case of children, and in the manners of country people and of the primitive races. Every man of refined feeling, provided he has a soul, experiences this feeling when he walks out under the open sky, when he lives in the country, or when he stops to contemplate the monuments of early ages; in short, when escaping from factitious situations and relations, he finds himself suddenly face to face with nature. This interest, which is often exalted in us so as to become a want, is the explanation of many of our fancies for flowers and for animals, our preference for gardens laid out in a natural style, our love of walks, of the country and those who live there, of a great number of objects proceeding from a remote antiquity, etc. It is taken for granted that no affectation exists in the matter, and moreover that no accidental interest comes into play. But this sort of interest which we take in nature is only possible under two conditions. First the object that inspires us with this feeling must be really nature, or something we take for nature; secondly, this object must be in the full sense of the word simple, that is, presenting the entire contrast of nature with art, all the advantage remaining on the side of nature. Directly this second condition is united to the first, but no sooner, nature assumes the character of simplicity.

Considered thus, nature is for us nothing but existence in all its freedom; it is the constitution of things taken in themselves; it is existence itself according to its proper and immutable laws.

It is strictly necessary that we should have this idea of nature to take

an interest in phenomena of this kind. If we conceive an artificial flower so perfectly imitated that it has all the appearance of nature and would produce the most complete illusion, or if we imagine the imitation of simplicity carried out to the extremest degree, the instant we discover it is only an imitation, the feeling of which I have been speaking is completely destroyed. It is, therefore, quite evident that this kind of satisfaction which nature causes us to feel is not a satisfaction of the aesthetical taste, but a satisfaction of the moral sense; for it is produced by means of a conception and not immediately by the single fact of intuition: accordingly it is by no means determined by the different degrees of beauty in forms. For, after all, is there anything so specially charming in a flower of common appearance, in a spring, a moss-covered stone, the warbling of birds, or the buzzing of bees, etc.? What is it that can give these objects a claim to our love? It is not these objects in themselves; it is an idea represented by them that we love in them. We love in them life and its latent action, the effects peacefully produced by beings of themselves, existence under its proper laws, the inmost necessity of things, the eternal unity of their nature.

These objects which captivate us are what we were, what we must be again some day. We were nature as they are; and culture, following the way of reason and of liberty, must bring us back to nature. Accordingly these objects are an image of our infancy irrevocably past—of our infancy which will remain eternally very dear to us, and thus they infuse a certain melancholy into us; they are also the image of our highest perfection in the ideal world whence they excite a sublime emotion in us.

But the perfection of these objects is not a merit that belongs to them, because it is not the effect of their free choice. Accordingly they procure quite a peculiar pleasure for us, by being our models without having anything humiliating for us. It is like a constant manifestation of the divinity surrounding us, which refreshes without dazzling us. The very feature that constitutes their character is precisely what is lacking in ours to make it complete; and what distinguishes us from them is precisely what they lack to be divine. We are free and they are necessary; we change, and they remain identical. Now it is only when these two conditions are united, when the will submits freely to the laws of necessity, and when, in the midst of all the changes of which the imagination is susceptible, reason maintains its rule—it is only then that the divine or the ideal is manifested. Thus we perceive eternally in them that which we have not, but which we are continually forced to strive after; that which we can never reach, but which we can hope to approach by continual progress. And

we perceive in ourselves an advantage which they lack, but in which some of them—the beings deprived of reason—cannot absolutely share, and in which the others, such as children, can only one day have a share by following our way. Accordingly, they procure us the most delicious feeling of our human nature, as an idea, though in relation to each determinate state of our nature they cannot fail to humble us.

As this interest in nature is based on an idea, it can only manifest itself in a soul capable of ideas, that is, in a moral soul. For the immense majority it is nothing more than pure affectation; and this taste of sentimentality so widely diffused in our day, manifesting itself, especially since the appearance of certain books, by sentimental excursions and journeys, by sentimental gardens and other fancies akin to these—this taste by no means proves that true refinement of sense has become general. Nevertheless it is certain that nature will always produce something of this impression, even on the most insensible hearts, because all that is required for this is the moral disposition or aptitude, which is common to all men. For all men, however contrary their acts may be to simplicity and to the truth of nature, are brought back to it in their ideas. This sensibility in connection with nature is specially and most strongly manifested, in the greater part of persons, in connection with those sorts of objects which are closely related to us, and which, causing us to look closer into ourselves, show us more clearly what in us departs from nature; for example, in connection with children, or with nations in a state of infancy. It is an error to suppose that it is only the idea of their weakness that, in certain moments, makes us dwell with our eyes on children with so much emotion. This may be true with those who, in the presence of a feeble being, are used to feel nothing but their own superiority. But the feeling of which I speak is only experienced in a very peculiar moral disposition, nor must it be confounded with the feeling awakened in us by the joyous activity of children. The feeling of which I speak is calculated rather to humble than to flatter our self-love; and if it gives us the idea of some advantage, this advantage is at all events not on our side.

We are moved in the presence of childhood, but it is not because from the height of our strength and of our perfection we drop a look of pity on it; it is, on the contrary, because from the depths of our impotence, of which the feeling is inseparable from that of the real and determinate state to which we have arrived, we raise our eyes to the child's determinateness and pure innocence. The feeling we then experience is too evidently mingled with sadness for us to mistake its source. In the child all is disposition and destination; in us all is in the state of a completed,

finished thing, and the completion always remains infinitely below the destination. It follows that the child is to us like a representation of the ideal; not, indeed, of the ideal as we have realized it, but such as our destination admitted; and, consequently, it is not at all the idea of its indigence, of its hindrances, that makes us experience emotion in the child's presence; it is, on the contrary, the idea of its pure and free force, of the integrity, the infinity of its being. This is the reason why, in the sight of every moral and sensible man, the child will always be a sacred thing; I mean an object which, by the grandeur of an idea, reduces to nothingness all grandeur realized by experience; an object which, in spite of all it may lose in the judgment of the understanding, regains largely the advantage before the judgment of reason.

Now it is precisely this contradiction between the judgment of reason and that of the understanding which produces in us this quite special phenomenon, this mixed feeling, called forth in us by the sight of the simple—I mean the simple in the manner of thinking. It is at once the idea of a childlike simplicity and of a childish simplicity. By what it has of childish simplicity it exposes a weak side to the understanding, and provokes in us that smile by which we testify our superiority (an entirely speculative superiority). But directly we have reason to think that childish simplicity is at the same time a childlike simplicity—that it is not consequently a want of intelligence, an infirmity in a theoretical point of view, but a superior force (practically), a heart full of truth and innocence which is its source, a heart that has despised the help of art because it was conscious of its real and internal greatness—directly this is understood, the understanding no longer seeks to triumph. Then raillery, which was directed against simpleness, makes way for the admiration inspired by noble simplicity. We feel ourselves obliged to esteem this object, which at first made us smile, and directing our eye to ourselves, to feel ourselves unhappy in not resembling it. Thus is produced that very special phenomenon of a feeling in which good-natured raillery, respect, and sadness are confounded. It is the condition of the simple that nature should triumph over art, either unconsciously to the individual and against his inclination, or with his full and entire cognizance. In the former case it is simplicity as a surprise, and the impression resulting from it is one of gaiety; in the second case it is simplicity of feeling, and we are moved.

With regard to simplicity as a surprise, the person must be morally capable of denying nature. In simplicity of feeling the person may be morally incapable of this, but we must not think him physically incapable, in order that it may make upon us the impression of the simple. This is

the reason why the acts and words of children only produce the impression of simplicity upon us when we forget that they are physically incapable of artifice, and in general only when we are exclusively impressed by the contrast between their natural character and what is artificial in us. Simplicity is a childlike ingenuousness which is encountered when it is not expected; and it is for this very reason that, taking the word in its strictest sense, simplicity could not be attributed to childhood properly speaking.

But in both cases, in simplicity as a surprise and simplicity as a feeling, nature must always have the upper hand, and art succumb to her.

Until we have established this distinction we can only form an incomplete idea of simplicity. The affections are also something natural, and the rules of decency are artificial; yet the triumph of the affections over decency is anything but simple. But when affection triumphs over artifice, over false decency, over dissimulation we shall have no difficulty in applying the word simple to this. Nature must therefore triumph over art, not by its blind and brutal force as a dynamical power, but in virtue of its form as a moral magnitude; in a word, not as a want, but as an internal necessity. It must not be insufficiency but the inopportune character of the latter that gives nature her victory; for insufficiency is only a want and a defect, and nothing that results from a want or defect could produce esteem. No doubt in the simplicity resulting from surprise, it is always the predominance of affection and a want of reflection that causes us to appear natural. But this want and this predominance do not by any means suffice to constitute simplicity; they merely give occasion to nature to obey without let or hindrance her moral constitution, that is, the law of harmony.

The simplicity resulting from surprise can only be encountered in man, and that only in as far as at the moment he ceases to be a pure and innocent nature. This sort of simplicity implies a will that is not in harmony with that which nature does of her own accord. A person simple after this fashion, when recalled to himself, will be the first to be alarmed at what he is; on the other hand, a person in whom simplicity is found as a feeling will only wonder at one thing, that is, at the way in which men feel astonishment. As it is not the moral subject as a person, but only his natural character set free by affection, that confesses the truth, it follows from this that we shall not attribute this sincerity to man as a merit, and that we shall be entitled to laugh at it, our raillery not being held in check by any personal esteem for his character. Nevertheless, as it is still the sincerity of nature which, even in the simplicity caused by surprise,

pierces suddenly through the veil of dissimulation, a satisfaction of a superior order is mixed with the mischievous joy we feel in having caught any one in the act. This is because nature, opposed to affectation, and truth, opposed to deception, must in every case inspire us with esteem. Thus we experience, even in the presence of simplicity originating in surprise, a really moral pleasure, though it be not in connection with a moral object.

I admit that in simplicity proceeding from surprise, we always experience a feeling of esteem for nature, because we must esteem truth; whereas in the simplicity of feeling we esteem the person himself, enjoying in this way not only a moral satisfaction, but also a satisfaction of which the object is moral. In both cases nature is right, since she speaks the truth; but in the second case not only is nature right, but there is also an act that does honour to the person. In the first case the sincerity of nature always puts the person to the blush, because it is involuntary; in the second it is always a merit which must be placed to the credit of the person, even when what he confesses is of a nature to cause a blush.

We attribute simplicity of feeling to a man when, in the judgments he pronounces on things, he passes without seeing them over all the factitious and artificial sides of an object, to keep exclusively to simple nature. We require of him all the judgments that can be formed of things without departing from a sound nature; and we only hold him entirely free in what presupposes a departure from nature, in his mode of thinking or feeling.

If a father relates to his son that such and such a person is dying of hunger, and if the child goes and carries the purse of his father to this unfortunate being, this is a simple action. It is in fact a healthy nature that acts in the child; and in a world where healthy nature would be the law, he would be perfectly right to act so. He only sees the misery of his neighbour and the speediest means of relieving him. The extension given to the right of property, in consequence of which part of the human race might perish, is not based on mere nature. Thus the act of this child puts to shame real society, and this is acknowledged by our heart in the pleasure it experiences from this action.

If a good-hearted man, inexperienced in the ways of the world, confides his secrets to another, who deceives him, but who is skilful in disguising his perfidy, and if by his very sincerity he furnishes him with the means of doing him injury, we find his conduct simple. We laugh at him, yet we cannot avoid esteeming him, precisely on account of his simplicity. This is because his trust in others proceeds from the rectitude

of his own heart; at all events, there is simplicity here only as far as this is the case.

Simplicity in the mode of thinking cannot then ever be the act of a depraved man; this quality belongs only to children, and to men who are children in heart. It often happens to these in the midst of the artificial relations of the great world to act or to think in a simple manner. Being themselves of a truly good and humane nature, they forget that they have to do with a depraved world; and they act, even in the courts of kings, with an ingenuousness and an innocence that are only found in the world of pastoral idylls.

Nor is it always such an easy matter to distinguish exactly childish candour from childlike candour, for there are actions that are on the skirts of both. Is a certain act foolishly simple, and must we laugh at it? Or is it nobly simple, and must we esteem the actors the higher on that account? It is difficult to know which side to take in some cases. A very remarkable example of this is found in the history of the government of Pope Adrian VI, related by Mr. [J. M.] Schröckh with all the solidity and the spirit of practical truth which distinguish him. Adrian, a Netherlander by birth, exerted the pontifical sway at one of the most critical moments for the hierarchy—at a time when an exasperated party laid bare without any scruple all the weak sides of the Roman Church, while the opposite party was interested in the highest degree in covering them over. I do not entertain the question how a man of a truly simple character ought to act in such a case, if such a character were placed in the papal chair. But, we ask, how could this simplicity of feeling be compatible with the part of a pope? This question gave indeed very little embarrassment to the predecessors and successors of Adrian. They followed uniformly the system adopted once for all by the court of Rome, not to make any concessions anywhere. But Adrian had preserved the upright character of his nation and the innocence of his previous condition. Issuing from the humble sphere of literary men to rise to this eminent position, he did not belie at that elevation the primitive simplicity of his character. He was moved by the abuses of the Roman Church, and he was much too sincere to dissimulate publicly what he confessed privately. It was in consequence of this manner of thinking that, in his instruction to his legate in Germany, he allowed himself to be drawn into avowals hitherto unheard of in a sovereign pontiff, and diametrically contrary to the principles of that court: “We know well,” he said among other things, “that for many years many abominable things have taken place in this holy chair; it is not therefore astonishing that the evil has been propagated from the head to

the members, from the pope to the prelates. We have all gone astray from the good road, and for a long time there is none of us, not one, who has done anything good." Elsewhere he orders his legate to declare in his name "that he, Adrian, cannot be blamed for what other popes have done before him; that he himself, when he occupied a comparatively mediocre position, had always condemned these excesses." It may easily be conceived how such simplicity in a pope must have been received by the Roman clergy. The smallest crime of which he was accused was that of betraying the Church and delivering it over to heretics. Now this proceeding, supremely imprudent in a pope, would yet deserve our esteem and admiration if we could believe it was real simplicity; that is that Adrian, without fear of consequences, had made such an avowal, moved by his natural sincerity, and that he would have persisted in acting thus, though he had understood all the drift of his clumsiness. Unhappily we have some reason to believe that he did not consider his conduct as altogether impolitic, and that in his candour he went so far as to flatter himself that he had served very usefully the interests of his Church by his indulgence to his adversaries. He did not even imagine that he ought to act thus in his quality as an honest man, he thought also as a pope to be able to justify himself, and forgetting that the most artificial of structures could only be supported by continuing to deny the truth, he committed the unpardonable fault of having recourse to means of safety, excellent perhaps in a natural situation, but here applied to entirely contrary circumstances. This necessarily modifies our judgment very much, and although we cannot refuse our esteem for the honesty of heart in which the act originates, this esteem is greatly lessened when we reflect that nature on this occasion was too easily mistress of art, and that the heart too easily overruled the head.

True genius is of necessity simple, or it is not genius. Simplicity alone gives it this character, and it cannot belie in the moral order what it is in the intellectual and aesthetical order. It does not know those rules, the crutches of feebleness, those pedagogues which prop up slippery spirits; it is only guided by nature and instinct, its guardian angel; it walks with a firm, calm step across all the snares of false taste, snares in which the man without genius, if he have not the prudence to avoid them the moment he detects them, remains infallibly imbedded. It is therefore the part only of genius to issue from the known without ceasing to be at home, or to enlarge the circle of nature without overstepping it. It does indeed sometimes happen that a great genius oversteps it; but only because geniuses have their moments of frenzy, when nature, their pro-

tector, abandons them, because the force of example impels them, or because the corrupt taste of their age leads them astray.

The most intricate problems must be solved by genius with simplicity, without pretension, with ease; the egg of Christopher Columbus is the emblem of all the discoveries of genius. It only justifies its character as genius by triumphing through simplicity over all the complications of art. It does not proceed according to known principles, but by feelings and inspiration; the sallies of genius are the inspirations of a God (all that healthy nature produces is divine); its feelings are laws for all time, for all human generations.

This childlike character imprinted by genius on its works is also shown by it in its private life and manners. It is modest, because nature is always so; but it is not decent, because corruption alone is decent. It is intelligent, because nature cannot lack intelligence; but it is not cunning, because art only can be cunning. It is faithful to its character and inclinations, but this is not so much because it has principles as because nature, notwithstanding all its oscillations, always returns to its equilibrium, and brings back the same wants. It is modest and even timid, because genius remains always a secret to itself; but it is not anxious, because it does not know the dangers of the road in which it walks. We know little of the private life of the greatest geniuses; but the little that we know of it—what tradition has preserved, for example, of Sophocles, of Archimedes, of Hippocrates, and in modern times of Ariosto, of Dante, of Tasso, of Raphael, of Albrecht Dürer, of Cervantes, of Shakespeare, of Fielding, of Sterne, etc.—confirms this assertion.

Nay, more; though this admission seems more difficult to support, even the greatest philosophers and great commanders, if great by their genius, have simplicity in their character. Among the ancients I need only name Julius Caesar and Epaminondas; among the moderns Henry IV in France, Gustavus Adolphus in Sweden, and the Czar Peter the Great. The Duke of Marlborough, Turenne, and Vendôme all present this character. With regard to the other sex, nature proposes to it simplicity of character as the supreme perfection to which it should reach. Accordingly, the love of pleasing in women strives after nothing so much as the appearance of simplicity; a sufficient proof, if it were the only one, that the greatest power of the sex reposes in this quality. But, as the principles that prevail in the education of women are perpetually struggling with this character, it is as difficult for them in the moral order to reconcile this magnificent gift of nature with the advantages of a good education as it is difficult for men to preserve them unchanged in the intellectual order; and the

woman who knows how to join a knowledge of the world to this sort of simplicity in manners is as deserving of respect as a scholar who joins to the strictness of scholastic rules the freedom and originality of thought.

Simplicity in our mode of thinking brings with it of necessity simplicity in our mode of expression, simplicity in terms as well as movement; and it is in this that grace especially consists. Genius expresses its most sublime and its deepest thoughts with this simple grace; they are the divine oracles that issue from the lips of a child; while the scholastic spirit, always anxious to avoid error, tortures all its words, all its ideas, and makes them pass through the crucible of grammar and logic, hard and rigid, in order to keep from vagueness, and uses few words in order not to say too much, enervates and blunts thought in order not to wound the reader who is not on his guard—genius gives to its expression, with a single and happy stroke of the brush, a precise, firm, and yet perfectly free form. In the case of grammar and logic, the sign and the thing signified are always heterogeneous, and strangers to each other: with genius, on the contrary, the expression gushes forth spontaneously from the idea, the language and the thought are one and the same; so that even though the expression thus gives it a body, the spirit appears as if disclosed in a nude state. This fashion of expression, when the sign disappears entirely in the thing signified, when the tongue, so to speak, leaves the thought it translates naked, while the other mode of expression cannot represent thought without veiling it at the same time: this is what is called originality and inspiration in style.

This freedom, this natural mode by which genius expresses itself in works of intellect, is also the expression of the innocence of heart in the intercourse of life. Every one knows that in the world men have departed from simplicity, from the rigorous veracity of language, in the same proportion as they have lost the simplicity of feelings. The guilty conscience easily wounded, the imagination easily seduced, made an anxious decency necessary. Without telling what is false, people often speak differently from what they think; we are obliged to make circumlocutions to say certain things, which however, can never afflict any but a sickly self-love, and that have no danger except for a depraved imagination. The ignorance of these laws of propriety (conventional laws), coupled with a natural sincerity which despises all kinds of bias and all appearance of falsity (sincerity I mean, not coarseness, for coarseness dispenses with forms because it is hampered), gives rise in the intercourse of life to a simplicity of expression that consists in naming things by their proper name without circumlocution. This is done because we do not venture to

designate them as they are, or only to do so by artificial means. The ordinary expressions of children are of this kind. They make us smile because they are in opposition to received manners; but men would always agree in the bottom of their hearts that the child is right.

It is true that simplicity of feeling cannot properly be attributed to the child any more than to the man—that is, to a being not absolutely subject to nature, though there is still no simplicity, except on the condition that it is pure nature that acts through him. But by an effort of the imagination, which likes to poetize things, we often carry over these attributes of a rational being to beings destitute of reason. It is thus that, on seeing an animal, a landscape, a building, and nature in general, from opposition to what is arbitrary and fantastic in the conceptions of man, we often attribute to them a simple character. But that implies always that in our thought we attribute a will to these things that have none, and that we are struck to see it directed rigorously according to the laws of necessity. Discontented as we are that we have ill employed our own moral freedom, and that we no longer find moral harmony in our conduct, we are easily led to a certain disposition of mind, in which we willingly address ourselves to a being destitute of reason, as if it were a person. And we readily view it as if it had really had to struggle against the temptation of acting otherwise, and proceed to make a merit of its eternal uniformity, and to envy its peaceable constancy. We are quite disposed to consider in those moments reason, this prerogative of the human race, as a pernicious gift and as an evil; we feel so vividly all that is imperfect in our conduct that we forget to be just to our destiny and to our aptitudes.

We see, then, in nature, destitute of reason, only a sister who, more fortunate than ourselves, has remained under the maternal roof, while in the intoxication of our freedom we have fled from it to throw ourselves into a stranger world. We regret this place of safety, we earnestly long to come back to it as soon as we have begun to feel the bitter side of civilization, and in the totally artificial life in which we are exiled we hear in deep emotion the voice of our mother. While we were still only children of nature we were happy, we were perfect: we have become free, and we have lost both advantages. Hence a twofold and very unequal longing for nature: the longing for happiness and the longing for the perfection that prevails there. Man, as a sensuous being, deploras sensibly the loss of the former of these goods; it is only the moral man who can be afflicted at the loss of the other.

Therefore, let the man with a sensible heart and a loving nature question himself closely. Is it your indolence that longs for its repose, or your

wounded moral sense that longs for its harmony? Ask yourself well, when, disgusted with the artifices, offended by the abuses that you discover in social life, you feel yourself attracted towards inanimate nature, in the midst of solitude ask yourself what impels you to fly the world. Is it the privation from which you suffer, its loads, its troubles? Or is it the moral anarchy, the caprice, the disorder that prevail there? Your heart ought to plunge into these troubles with joy, and to find in them the compensation in the liberty of which they are the consequence. You can, I admit, propose as your aim, in a distant future, the calm and the happiness of nature, but only that sort of happiness which is the reward of your dignity. Thus, then, let there be no more complaint about the loads of life, the inequality of conditions, or the hampering of social relations, or the uncertainty of possession, ingratitude, oppression, and persecution. You must submit to all these evils of civilization with a free resignation; it is the natural condition of good, par excellence, of the only good, and you ought to respect it under this head. In all these evils you ought only to deplore what is morally evil in them, and you must do so not with cowardly tears only. Rather watch to remain pure yourself in the midst of these impurities, free amidst this slavery, constant with yourself in the midst of these capricious changes, a faithful observer of the law amidst this anarchy. Be not frightened at the disorder that is without you, but at the disorder which is within; aspire after unity, but seek it not in uniformity; aspire after repose, but through equilibrium, and not by suspending the action of your faculties. This nature which you envy in the being destitute of reason deserves no esteem: it is not worth a wish. You have passed beyond it; it ought to remain forever behind you. The ladder that carried you having given way under your foot, the only thing for you to do is to seize again on the moral law freely, with a free consciousness, a free will, or else to roll down, hopeless of safety, into a bottomless abyss.

But when you have consoled yourself for having lost the happiness of nature, let its perfection be a model to your heart. If you can issue from the circle in which art keeps you enclosed and find nature again, if it shows itself to you in its greatness and in its calm, in its simple beauty, in its childlike innocence and simplicity, oh! then pause before its image, cultivate this feeling lovingly. It is worthy of you, and of what is noblest in man. Let it no more come into your mind to change with it; rather embrace it, absorb it into your being, and try to associate the infinite advantage it has over you with that infinite prerogative that is peculiar to you, and let the divine issue from this sublime union. Let nature breathe around you like a lovely idyll, where far from artifice and its wanderings

you may always find yourself again, where you may go to draw fresh courage, a new confidence, to resume your course, and kindle again in your heart the flame of the ideal, so readily extinguished amidst the tempests of life.

If we think of that beautiful nature which surrounded the ancient Greeks, if we remember how intimately that people, under its blessed sky, could live with that free nature; how their mode of imagining, and of feeling, and their manners approached far nearer than ours to the simplicity of nature, how faithfully the works of their poets express this; we must necessarily remark, as a strange fact, that so few traces are met among them of that sentimental interest that we moderns ever take in the scenes of nature and in natural characters. I admit that the Greeks are superiorly exact and faithful in their descriptions of nature. They reproduce their details with care, but we see that they take no more interest in them and no more heart in them than in describing a vestment, a shield, armour, a piece of furniture, or any production of the mechanical arts. In their love for the object it seems that they make no difference between what exists in itself and what owes its existence to art, to the human will. It seems that nature interests their minds and their curiosity more than moral feeling. They do not attach themselves to it with that depth of feeling, with that gentle melancholy, that characterize the moderns. Nay, more, by personifying nature in its particular phenomena, by deifying it, by representing its effects as the acts of free beings, they take from it that character of calm necessity which is precisely what makes it so attractive to us. Their impatient imagination only traverses nature to pass beyond it to the drama of human life. It only takes pleasure in the spectacle of what is living and free; it requires characters, acts, the accidents of fortune and of manners; and while it happens with us, at least in certain moral dispositions, to curse our prerogative, this free will, which exposes us to so many combats with ourselves, to so many anxieties and errors, and to wish to exchange it for the condition of beings destitute of reason, for that fatal existence that no longer admits of any choice, but which is so calm in its uniformity—while we do this, the Greeks, on the contrary, only have their imagination occupied in retracing human nature in the inanimate world, and in giving to the will an influence where blind necessity rules.

Whence can arise this difference between the spirit of the ancients and the modern spirit? How comes it that, being, for all that relates to nature, incomparably below the ancients, we are superior to them precisely on this point, that we render a more complete homage to nature; that we

have a closer attachment to it; and that we are capable of embracing even the inanimate world with the most ardent sensibility. It is because nature, in our time, is no longer in man, and that we no longer encounter it in its primitive truth except out of humanity, in the inanimate world. It is not because we are more conformable to nature—quite the contrary; it is because in our social relations, in our mode of existence, in our manners, we are in opposition with nature. This is what leads us, when the instinct of truth and of simplicity is awakened—this instinct which, like the moral aptitude from which it proceeds, lives incorruptible and indelible in every human heart—to procure for it in the physical world the satisfaction which there is no hope of finding in the moral order. This is the reason why the feeling that attaches us to nature is connected so closely with that which makes us regret our infancy, forever flown, and our primitive innocence. Our childhood is all that remains of nature in humanity, such as civilization has made it, of untouched, unmutilated nature. It is, therefore, not wonderful, when we meet out of us the impress of nature, that we are always brought back to the idea of our childhood.

It was quite different with the Greeks in antiquity. Civilization with them did not degenerate, nor was it carried to such an excess that it was necessary to break with nature. The entire structure of their social life reposed on feelings, and not on a factitious conception, on a work of art. Their very theology was the inspiration of a simple spirit, the fruit of a joyous imagination, and not, like the ecclesiastical dogmas of modern nations, subtle combinations of the understanding. Since, therefore, the Greeks had not lost sight of nature in humanity, they had no reason, when meeting it out of man, to be surprised at their discovery, and they would not feel very imperiously the need of objects in which nature could be retraced. In accord with themselves, happy in feeling themselves men, they would of necessity keep to humanity as to what was greatest to them, and they must needs try to make all the rest approach it; while we, who are not in accord with ourselves—we who are discontented with the experience we have made of our humanity—have no more pressing interest than to fly out of it and to remove from our sight a so ill-fashioned form. The feeling of which we are treating here is, therefore, not that which was known by the ancients; it approaches far more nearly that which we ourselves experience for the ancients. The ancients felt naturally; we, on our part, feel what is natural. It was certainly a very different inspiration that filled the soul of Homer, when he depicted his divine cowherd giving hospitality to Ulysses, from that which agitated the soul of the young Werther at the moment when he read the *Odyssey* on

issuing from an assembly in which he had only found tedium. The feeling we experience for nature resembles that of a sick man for health.

As soon as nature gradually vanishes from human life—that is, in proportion as it ceases to be experienced as a subject (active and passive)—we see it dawn and increase in the poetical world in the guise of an idea and as an object. The people who have carried furthest the want of nature, and at the same time the reflections on that matter, must needs have been the people who at the same time were most struck with this phenomenon of the simple, and gave it a name. If I am not mistaken, this people was the French. But the feeling of the simple, and the interest we take in it, must naturally go much farther back, and it dates from the time when the moral sense and the aesthetical sense began to be corrupt. This modification in the manner of feeling is exceedingly striking in Euripides, for example, if compared with his predecessors, especially Aeschylus; and yet Euripides was the favourite poet of his time. The same revolution is perceptible in the ancient historians. Horace, the poet of a cultivated and corrupt epoch, praises, under the shady groves of Tibur, the calm and happiness of the country, and he might be termed the true founder of this sentimental poetry, of which he has remained the unsurpassed model. In Propertius, Virgil, and others we find also traces of this mode of feeling; less of it is found in Ovid, who would have required for that more abundance of heart, and who in his exile at Tomis sorrowfully regrets the happiness that Horace so readily dispensed with in his villa at Tibur.

It is in the fundamental idea of poetry that the poet is everywhere the guardian of nature. When he can no longer entirely fill this part, and has already in himself suffered the deleterious influence of arbitrary and factitious forms, or has had to struggle against this influence, he presents himself as the witness of nature and as its avenger. The poet will, therefore, be the expression of nature itself, or his part will be to seek it, if men have lost sight of it. Hence arise two kinds of poetry, which embrace and exhaust the entire field of poetry. All poets—I mean those who are really so—will belong, according to the time when they flourish, according to the accidental circumstances that have influenced their education generally, and the different dispositions of mind through which they pass, will belong, I say, to the order of the sentimental poetry or to simple poetry.

The poet of a young world, simple and inspired, as also the poet who at an epoch of artificial civilization approaches nearest to the primitive bards, is austere and prudish, like the virginal Diana in her forests. Wholly unconfiding, he hides himself from the heart that seeks him, from the de-

sire that wishes to embrace him. It is not rare for the dry truth with which he treats his subject to resemble insensibility. The whole object possesses him, and to reach his heart it does not suffice, as with metals of little value, to stir up the surface; as with pure gold, you must go down to the lowest depths. Like the Deity behind this universe, the simple poet hides himself behind his work; he is himself his work, and his work is himself. A man must be no longer worthy of the work, nor understand it, or be tired of it, to be even anxious to learn who is its author.

Such appear to us, for instance, Homer in antiquity and Shakespeare among moderns: two natures infinitely different and separated in time by an abyss, but perfectly identical as to this trait of character. When, at a very youthful age, I became first acquainted with Shakespeare, I was displeased with his coldness, with his insensibility, which allows him to jest even in the most pathetic moments, to disturb the impression of the most harrowing scenes in *Hamlet*, in *King Lear*, and in *Macbeth*, etc., by mixing with them the buffooneries of a madman. I was revolted by his insensibility, which allowed him to pause sometimes at places where my sensibility would bid me hasten and bear me along, and which sometimes carried him away with indifference when my heart would be so happy to pause. Though I was accustomed, by the practice of modern poets, to seek at once the poet in his works, to meet his heart, to reflect with him in his theme—in a word, to see the object in the subject—I could not bear that the poet could in Shakespeare never be seized, that he would never give me an account of himself. For some years Shakespeare had been the object of my study and of all my respect, before I had learnt to love his personality. I was not yet able to comprehend nature at first hand. All that my eyes could bear was its image only, reflected by the understanding and arranged by rules; and on this score the sentimental poetry of the French, or that of the Germans of 1750 to 1780, was what suited me best. For the rest, I do not blush at this childish judgment; adult critics pronounced in that day in the same way, and carried their simplicity so far as to publish their decisions to the world.

The same thing happened to me in the case of Homer, with whom I made acquaintance at a later date. I remember now that remarkable passage of the sixth book of the *Iliad*, where Glaucus and Diomed meet each other in the strife, and then, recognizing each other as host and guest, exchange presents.¹ With this touching picture of the piety with which the laws of hospitality were observed even in war, may be com-

1. See *Great Books of the Western World*.

pared a picture of chivalrous generosity in Ariosto. The knights, rivals in love, Ferragus and Rinaldo—the former a Saracen, the latter a Christian—after having fought to extremity, all covered with wounds, make peace together, and mount the same horse to go and seek the fugitive Angelica. These two examples, however different in other respects, are very similar with regard to the impression produced on our heart; both represent the noble victory of moral feeling over passion, and touch us by the simplicity of feeling displayed in them. But what a difference in the way in which the two poets go to work to describe two such analogous scenes! Ariosto, who belongs to an advanced epoch, to a world where simplicity of manners no longer existed, in relating this trait cannot conceal the astonishment, the admiration, he feels at it. He measures the distance from those manners to the manners of his own age, and this feeling of astonishment is too strong for him. He abandons suddenly the painting of the object, and comes himself on the scene in person. This beautiful stanza [*Orlando Furioso*, canto i, stanza 22] is well known, and has been always specially admired at all times:

Oh nobleness, oh generosity of the ancient manners of chivalry!
 These were rivals, separated by their faith, suffering bitter pain
 throughout their frames in consequence of a desperate combat; and,
 without any suspicion, behold them riding in company along dark and
 winding paths. Stimulated by four spurs, the horse hastens his pace till
 they arrive at the place where the road divides.

Now let us turn to old Homer. Scarcely has Diomed learnt by the story of Glaucus, his adversary, that the latter has been, from the time of their fathers, the host and friend of his family, when he drives his lance into the ground, converses familiarly with him, and both agree henceforth to avoid each other in the strife. But let us hear Homer himself:

“Henceforth, however, I must be your host in middle Argos, and you mine in Lycia, if I should ever go there; let us avoid one another’s spears even during a general engagement; there are many noble Trojans and allies whom I can kill, if I overtake them and heaven delivers them into my hand; so again with yourself, there are many Achaeans whose lives you may take if you can; we two, then, will exchange armour, that all present may know of the old ties that subsist between us.”

With these words they sprang from their chariots, grasped one another’s hands, and plighted friendship.

It would have been difficult for a modern poet (at least to one who would be modern in the moral sense of the term) even to wait as long

as this before expressing his joy in the presence of such an action. We should pardon this in him the more easily, because we also, in reading it, feel that our heart makes a pause here, and readily turns aside from the object to bring back its thoughts on itself. But there is not the least trace of this in Homer. As if he had been relating something that is seen every day—nay, more, as if he had no heart beating in his breast—he continues, with his dry truthfulness:

But the son of Saturn made Glaucus take leave of his wits, for he exchanged golden armour for bronze, the worth of a hundred head of cattle for the worth of nine.

The poets of this order—the genuinely simple poets, are scarcely any longer in their place in this artificial age. Accordingly they are scarcely possible in it, or at least they are only possible on the condition of traversing their age, like scared persons, at a running pace, and of being preserved by a happy star from the influence of their age, which would mutilate their genius. Never, for aye and forever, will society produce these poets; but out of society they still appear sometimes at intervals, rather, I admit, as strangers who excite wonder, or as ill-trained children of nature who give offence. These apparitions, so very comforting for the artist who studies them, and for the real connoisseur who knows how to appreciate them, are, as a general conclusion, in the age when they are begotten, to a very small degree prosperous. The seal of empire is stamped on their brow, and we, we ask the Muses to cradle us, to carry us in their arms. The critics, as regular constables of art, detest these poets as disturbers of rules or of limits. Homer himself may have been only indebted to the testimony of ten centuries for the reward these aristarchs are kindly willing to concede him. Moreover, they find it a hard matter to maintain their rules against his example, or his authority against their rules.

SENTIMENTAL POETRY

I have previously remarked that the poet is nature, or he seeks nature. In the former case, he is a simple poet; in the second case, a sentimental poet.

The poetic spirit is immortal, nor can it disappear from humanity; it can only disappear with humanity itself, or with the aptitude to be a man, a human being. And actually, though man by the freedom of his imagination and of his understanding departs from simplicity, from truth, from the necessity of nature, not only a road always remains open to him to

return to it, but, moreover, a powerful and indestructible instinct, the moral instinct, brings him incessantly back to nature; and it is precisely the poetical faculty that is united to this instinct by the ties of the closest relationship. Thus man does not lose the poetic faculty directly he parts with the simplicity of nature; only this faculty acts out of him in another direction.

Even at present, nature is the only flame that kindles and warms the poetic soul. From nature alone it obtains all its force; to nature alone it speaks in the artificial culture-seeking man. Any other form of displaying its activity is remote from the poetic spirit. Accordingly it may be remarked that it is incorrect to apply the expression poetic to any of the so-styled productions of wit, though the high credit given to French literature has led people for a long period to class them in that category. I repeat that at present, even in the existing phase of culture, it is still nature that powerfully stirs up the poetic spirit, only its present relation to nature is of a different order from formerly.

As long as man dwells in a state of pure nature (I mean pure and not coarse nature), all his being acts at once like a simple sensuous unity, like a harmonious whole. The senses and reason, the receptive faculty and the spontaneously active faculty, have not been as yet separated in their respective functions; a fortiori they are not yet in contradiction with each other. Then the feelings of man are not the formless play of chance; nor are his thoughts an empty play of the imagination, without any value. His feelings proceed from the law of necessity, his thoughts from reality. But when man enters the state of civilization, and art has fashioned him, this sensuous harmony which was in him disappears, and henceforth he can only manifest himself as a moral unity, that is, as aspiring to unity. The harmony that existed as a fact in the former state, the harmony of feeling and thought, only exists now in an ideal state. It is no longer in him, but out of him; it is a conception of thought which he must begin by realizing in himself; it is no longer a fact, a reality of his life. Well, now let us take the idea of poetry, which is nothing else than expressing humanity as completely as possible, and let us apply this idea to these two states. We shall be brought to infer that on the one hand, in the state of natural simplicity, when all the faculties of man are exerted together, his being still manifests itself in a harmonious unity, where, consequently, the totality of his nature expresses itself in reality itself, the part of the poet is necessarily to imitate the real as completely as is possible. In the state of civilization, on the contrary, when this harmonious competition of the whole of human nature is no longer anything but an idea, the part

of the poet is necessarily to raise reality to the ideal, or, what amounts to the same thing, to represent the ideal. And actually, these are the only two ways in which, in general, the poetic genius can manifest itself. Their great difference is quite evident, but though there be great opposition between them, a higher idea exists that embraces both, and there is no cause to be astonished if this idea coincides with the very idea of humanity.

This is not the place to pursue this thought any further, as it would require a separate discussion to place it in its full light. But if we only compare the modern and ancient poets together, not according to the accidental forms which they may have employed, but according to their spirit, we shall be easily convinced of the truth of this thought. The thing that touches us in the ancient poets is nature; it is the truth of sense, it is a present and a living reality: modern poets touch us through the medium of ideas.

The path followed by modern poets is, moreover, that necessarily followed by man generally, individuals as well as the species. Nature reconciles man with himself; art divides and disunites him; the ideal brings him back to unity. Now, the ideal being an infinite that he never succeeds in reaching, it follows that civilized man can never become perfect in his kind, while the man of nature can become so in his. Accordingly in relation to perfection one would be infinitely below the other, if we only considered the relation in which they are both to their own kind and to their maximum. If, on the other hand, it is the kinds that are compared together, it is ascertained that the end to which man tends by civilization is infinitely superior to that which he reaches through nature. Thus one has his reward, because having for object a finite magnitude, he completely reaches this object: the merit of the other is to approach an object that is of infinite magnitude. Now, as there are only degrees, and as there is only progress in the second of these evolutions, it follows that the relative merit of the man engaged in the ways of civilization is never determinable in general, though this man, taking the individuals separately, is necessarily at a disadvantage compared with the man in whom nature acts in all its perfection. But we know also that humanity cannot reach its final end except by progress, and that the man of nature cannot make progress save through culture, and consequently by passing himself through the way of civilization. Accordingly there is no occasion to ask with which of the two the advantage must remain, considering this last end.

All that we say here of the different forms of humanity may be applied equally to the two orders of poets who correspond to them.

Accordingly it would have been desirable not to compare at all the ancient and the modern poets, the simple and the sentimental poets, or only to compare them by referring them to a higher idea (since there is really only one) which embraces both. For, sooth to say, if we begin by forming a specific idea of poetry, merely from the ancient poets, nothing is easier, but also nothing is more vulgar, than to depreciate the moderns by this comparison. If persons wish to confine the name of poetry to that which has in all times produced the same impression in simple nature, this places them in the necessity of contesting the title of poet in the moderns precisely in that which constitutes their highest beauties, their greatest originality and sublimity; for precisely in the points where they excel the most, it is the child of civilization whom they address, and they have nothing to say to the simple child of nature.

To the man who is not disposed beforehand to issue from reality in order to enter the field of the ideal, the richest and most substantial poetry is an empty appearance, and the sublimest flights of poetic inspiration are an exaggeration. Never will a reasonable man think of placing alongside Homer, in his grandest episodes, any of our modern poets; and it has a discordant and ridiculous effect to hear Milton or Klopstock honoured with the name of a "new Homer." But take in modern poets what characterizes them, what makes their special merit, and try to compare any ancient poet with them in this point, they will not be able to support the comparison any better, and Homer less than any other. I should express it thus: the power of the ancients consists in compressing objects into the finite, and the moderns excel in the art of the infinite.

What we have said here may be extended to the fine arts in general, except certain restrictions that are self-evident. If then the strength of the artists of antiquity consists in determining and limiting objects, we must no longer wonder that in the field of the plastic arts the ancients remain so far superior to the moderns, nor especially that poetry and the plastic arts with the moderns, compared respectively with what they were among the ancients, do not offer the same relative value. This is because an object that addresses itself to the eyes is only perfect in proportion as the object is clearly limited in it; while a work that is addressed to the imagination can also reach the perfection which is proper to it by means of the ideal and the infinite. This is why the superiority of the moderns in what relates to ideas is not of great aid to them in the plastic

arts, where it is necessary for them to determine in space, with the greatest precision, the image which their imagination has conceived, and where they must therefore measure themselves with the ancient artist just on a point where his superiority cannot be contested. In the matter of poetry it is another affair, and if the advantage is still with the ancients on that ground, as respects the simplicity of forms—all that can be represented by sensuous features, all that is something bodily—yet, on the other hand, the moderns have the advantage over the ancients as regards fundamental wealth, and all that can neither be represented nor translated by sensuous signs, in short, for all that is called mind and idea in the works of art.

From the moment that the simple poet is content to follow simple nature and feeling, that he is contented with the imitation of the real world, he can only be placed, with regard to his subject, in a single relation. And in this respect he has no choice as to the manner of treating it. If simple poetry produces different impressions—I do not, of course, speak of the impressions that are connected with the nature of the subject, but only of those that are dependent on poetic execution—the whole difference is in the degree; there is only one way of feeling, which varies from more to less; even the diversity of external forms changes nothing in the quality of aesthetic impressions. Whether the form be lyric or epic, dramatic or descriptive, we can receive an impression either stronger or weaker, but if we remove what is connected with the nature of the subject, we shall always be affected in the same way. The feeling we experience is absolutely identical; it proceeds entirely from one single and the same element to such a degree that we are unable to make any distinction. The very difference of tongues and that of times does not here occasion any diversity, for their strict unity of origin and of effect is precisely a characteristic of simple poetry.

It is quite different with sentimental poetry. The sentimental poet reflects on the impression produced on him by objects; and it is only on this reflection that his poetic force is based. It follows that the sentimental poet is always concerned with two opposite forces, has two modes of representing objects to himself and of feeling them; these are the real or limited, and the ideal or infinite; and the mixed feeling that he will awaken will always testify to this duality of origin. Sentimental poetry thus admitting more than one principle, it remains to know which of the two will be predominant in the poet, both in his fashion of feeling and in that of representing the object; and consequently a difference in the mode of treating it is possible. Here, then, a new subject is presented: shall

the poet attach himself to the real or the ideal? to the real as an object of aversion and of disgust, or to the ideal as an object of inclination? The poet will therefore be able to treat the same subject either in its satirical aspect or in its elegiac aspect—taking these words in a larger sense, which will be explained in the sequel: every sentimental poet will of necessity become attached to one or the other of these two modes of feeling.

SATIRICAL POETRY

The poet is a satirist when he takes as subject the distance at which things are from nature, and the contrast between reality and the ideal: as regards the impression received by the soul, these two subjects blend into the same. In the execution he may place earnestness and passion, or jests and levity, according as he takes pleasure in the domain of the will or in that of the understanding. In the former case it is avenging and pathetic satire; in the second case it is sportive, humorous, and mirthful satire.

Properly speaking, the object of poetry is not compatible either with the tone of punishment or that of amusement. The former is too grave for play, which should be the main feature of poetry; the latter is too trifling for seriousness, which should form the basis of all poetic play. Our mind is necessarily interested in moral contradictions, and these deprive the mind of its liberty. Nevertheless, all personal interest, and reference to a personal necessity, should be banished from poetic feeling. But mental contradictions do not touch the heart; nevertheless, the poet deals with the highest interests of the heart—nature and the ideal. Accordingly, it is a hard matter for him not to violate the poetic form in pathetic satire, because this form consists in the liberty of movement; and in sportive satire he is very apt to miss the true spirit of poetry, which ought to be the infinite. The problem can only be solved in one way: by the pathetic satire assuming the character of the sublime, and the playful satire acquiring poetic substance by enveloping the theme in beauty.

In satire the real as imperfection is opposed to the ideal, considered as the highest reality. In other respects it is by no means essential that the ideal should be expressly represented, provided the poet knows how to awaken it in our souls, but he must in all cases awaken it, otherwise he will exert absolutely no poetic action. Thus reality is here a necessary object of aversion; but it is also necessary, for the whole question centres here, that this aversion should come necessarily from the ideal, which is opposed to reality. To make this clear—this aversion might proceed from a purely sensuous source, and repose only on a want of which the satis-

faction finds obstacles in the real. How often, in fact, we think we feel against society a moral discontent, while we are simply soured by the obstacles that it opposes to our inclination. It is this entirely material interest that the vulgar satirist brings into play; and as by this road he never fails to call forth in us movements connected with the affections, he fancies that he holds our heart in his hand, and thinks he has graduated in the pathetic. But all pathos derived from this source is unworthy of poetry, which ought only to move us through the medium of ideas, and reach our heart only by passing through the reason. Moreover, this impure and material pathos will never have its effect on minds, except by over-exciting the affective faculties, and by occupying our hearts with painful feelings; in this it differs entirely from the truly poetic pathos which raises in us the feeling of moral independence, and which is recognized by the freedom of our mind persisting in it even while it is in the state of affection. And, in fact, when the emotion emanates from the ideal opposed to the real, the sublime beauty of the ideal corrects all impression of restraint; and the grandeur of the idea with which we are imbued raises us above all the limits of experience. Thus in the representation of some revolting reality, the essential thing is that the necessary be the foundation on which the poet or the narrator places the real: that he know how to dispose our mind for ideas. Provided the point from which we see and judge be elevated, it matters little if the object be low and far beneath us. When the historian Tacitus depicts the profound decadence of the Romans of the first century, it is a great soul which from a loftier position lets his looks drop down on a low object; and the disposition in which he places us is truly poetic, because it is the height where he is himself placed, and where he has succeeded in raising us, which alone renders so perceptible the baseness of the object.

Accordingly the satire of pathos must always issue from a mind deeply imbued with the ideal. It is nothing but an impulsion towards harmony that can give rise to that deep feeling of moral opposition and that ardent indignation against moral obliquity which amounted to the fullness of enthusiasm in Juvenal, Swift, Rousseau, Haller, and others. These same poets would have succeeded equally well in forms of poetry relating to all that is tender and touching in feeling, and it was only the accidents of life in their early days that diverted their minds into other walks. Nay, some amongst them actually tried their hand successfully in these other branches of poetry. The poets whose names have been just mentioned lived either at a period of degeneracy, and had scenes of painful moral obliquity presented to their view, or personal troubles had combined to

fill their souls with bitter feelings. The strictly austere spirit in which Rousseau, Haller, and others paint reality is a natural result, moreover, of the philosophical mind, when with rigid adherence to laws of thought it separates the mere phenomenon from the substance of things. Yet these outer and contingent influences, which always put restraint on the mind, should never be allowed to do more than decide the direction taken by enthusiasm, nor should they ever give the material for it. The substance ought always to remain unchanged, emancipated from all external motion or stimulus, and it ought to issue from an ardent impulsion towards the ideal, which forms the only true motive that can be put forth for satirical poetry, and indeed for all sentimental poetry.

While the satire of pathos is only adapted to elevated minds, playful satire can only be adequately represented by a heart imbued with beauty. The former is preserved from triviality by the serious nature of the theme; but the latter, whose proper sphere is confined to the treatment of subjects of morally unimportant nature, would infallibly adopt the form of frivolity, and be deprived of all poetic dignity, were it not that the substance is ennobled by the form, and did not the personal dignity of the poet compensate for the insignificance of the subject. Now, it is only given to mind imbued with beauty to impress its character, its entire image, on each of its manifestations, independently of the object of its manifestations. A sublime soul can only make itself known as such by single victories over the rebellion of the senses, only in certain moments of exaltation, and by efforts of short duration. In a mind imbued with beauty, on the contrary, the ideal acts in the same manner as nature, and therefore continuously; accordingly it can manifest itself in it in a state of repose. The deep sea never appears more sublime than when it is agitated; the true beauty of a clear stream is in its peaceful course.

The question has often been raised as to the comparative preference to be awarded to tragedy or comedy. If the question is confined merely to their respective themes, it is certain that tragedy has the advantage. But if our inquiry be directed to ascertain which has the more important personality, it is probable that a decision may be given in favour of comedy. In tragedy the theme in itself does great things; in comedy the object does nothing and the poet all. Now, as in the judgments of taste, no account must be kept of the matter treated of, it follows naturally that the aesthetic value of these two kinds will be in an inverse ratio to the proper importance of their themes.

The tragic poet is supported by the theme, while the comic poet, on the contrary, has to keep up the aesthetic character of his theme by his

own individual influence. The former may soar, which is not a very difficult matter, but the latter has to remain one and the same in tone; he has to be in the elevated region of art, where he must be at home, but where the tragic poet has to be projected and elevated by a bound. And this is precisely what distinguishes a soul of beauty from a sublime soul. A soul of beauty bears in itself by anticipation all great ideas; they flow without constraint and without difficulty from its very nature—an infinite nature, at least in potency, at whatever point of its career you seize it. A sublime soul can rise to all kinds of greatness, but by an effort; it can tear itself from all bondage, to all that limits and constrains it, but only by strength of will. Consequently the sublime soul is only free by broken efforts; the other with ease and always.

The noble task of comedy is to produce and keep up in us this freedom of mind, just as the end of tragedy is to re-establish in us this freedom of mind by aesthetic ways, when it has been violently suspended by passion. Consequently it is necessary that in tragedy the poet, as if he made an experiment, should artificially suspend our freedom of mind, since tragedy shows its poetic virtue by re-establishing it; in comedy, on the other hand, care must be taken that things never reach this suspension of freedom.

It is for this reason that the tragic poet invariably treats his theme in a practical manner, and the comic poet in a theoretic manner, even when the former, as happened with Lessing in his *Nathan*, should have the curious fancy to select a theoretical, and the latter should have that of choosing a practical subject. A piece is constituted a tragedy or a comedy not by the sphere from which the theme is taken, but by the tribunal before which it is judged. A tragic poet ought never to indulge in tranquil reasoning, and ought always to gain the interest of the heart; but the comic poet ought to shun the pathetic and bring into play the understanding. The former displays his art by creating continual excitement, the latter by perpetually subduing his passion; and it is natural that the art in both cases should acquire magnitude and strength in proportion as the theme of one poet is abstract, and that of the other pathetic in character. Accordingly, if tragedy sets out from a more exalted place, it must be allowed, on the other hand, that comedy aims at a more important end; and if this end could be actually attained it would make all tragedy not only unnecessary, but impossible. The aim that comedy has in view is the same as that of the highest destiny of man, and this consists in liberating himself from the influence of violent passions, and taking a calm and lucid survey of all that surrounds him, and also of his own be-

ing, and of seeing everywhere occurrence rather than fate or hazard, and ultimately rather smiling at the absurdities than shedding tears and feeling anger at sight of the wickedness of man.

It frequently happens in human life that facility of imagination, agreeable talents, a good-natured mirthfulness are taken for ornaments of the mind. The same fact is discerned in the case of poetical displays.

Now, public taste scarcely if ever soars above the sphere of the agreeable, and authors gifted with this sort of elegance of mind and style do not find it a difficult matter to usurp a glory which is or ought to be the reward of so much real labour. Nevertheless, an infallible test exists to enable us to discriminate a natural facility of manner from ideal gentleness, and qualities that consist in nothing more than natural virtue from genuine moral worth of character. This test is presented by trials such as those presented by difficulty and events offering great opportunities. Placed in positions of this kind, the genius whose essence is elegance is sure infallibly to fall into platitudes, and that virtue which only results from natural causes drops down to a material sphere. But a mind imbued with true and spiritual beauty is in cases of the kind we have supposed sure to be elevated to the highest sphere of character and of feeling. So long as Lucian merely furnishes absurdity, as in his *Wishes*, in the *Lapithas*, in *Jupiter Tragoedus*, etc., he is only a humorist, and gratifies us by his sportive humour; but he changes character in many passages in his *Nigrinus*, his *Timon*, and his *Alexander*, when his satire directs its shafts against moral depravity. Thus he begins in his *Nigrinus* his picture of the degraded corruption of Rome at that time in this way: "Wretch, why didst thou quit Greece, the sunlight, and that free and happy life? Why didst thou come here into this turmoil of splendid slavery, of service and festivals, of sycophants, flatterers, poisoners, orphan-robbers, and false friends?" It is on such occasions that the poet ought to show the lofty earnestness of soul which has to form the basis of all plays, if a poetical character is to be attained by them. A serious intention may even be detected under the malicious jests with which Lucian and Aristophanes pursue Socrates. Their purpose is to avenge truth against sophistry, and to do combat for an ideal which is not always prominently put forward. There can be no doubt that Lucian has justified this character in his *Diogenes* and *Demonax*. Again, among modern writers how grave and beautiful is the character depicted on all occasions by Cervantes in his *Don Quixote*! How splendid must have been the ideal that filled the mind of a poet who created a *Tom Jones* and a *Sophonisba*! How deeply and strongly our hearts are moved by the jests of *Yorick* when he pleases! I

detect this seriousness also in our own Wieland: even the wanton sportiveness of his humour is elevated and impeded by the goodness of his heart; it has an influence even on his rhythm; nor does he ever lack elastic power, when it is his wish, to raise us up to the most elevated planes of beauty and of thought.

The same judgment cannot be pronounced on the satire of Voltaire. No doubt, also, in his case, it is the truth and simplicity of nature which here and there make us experience poetic emotions, whether he really encounters nature and depicts it in a simple character, as many times in his *Ingénu*; or whether he seeks it and avenges it as in his *Candide* and elsewhere. But when neither one nor the other takes place, he can doubtless amuse us with his fine wit, but he assuredly never touches us as a poet. There is always rather too little of the serious under his raillery, and this is what makes his vocation as poet justly suspicious. You always meet his intelligence only; never his feelings. No ideal can be detected under this light gauze envelope; scarcely can anything absolutely fixed be found under this perpetual movement. His prodigious diversity of externals and forms, far from proving anything in favour of the inner fullness of his inspiration, rather testifies to the contrary; for he has exhausted all forms without finding a single one on which he has succeeded in impressing his heart. We are almost driven to fear that in the case of his rich talent the poverty of heart alone determined his choice of satire. And how could we otherwise explain the fact that he could pursue so long a road without ever issuing from its narrow rut? Whatever may be the variety of matter and of external forms, we see the inner form return everywhere with its sterile and eternal uniformity, and in spite of his so productive career, he never accomplished in himself the circle of humanity, that circle which we see joyfully traversed throughout by the satirists previously named.

ELEGIAC POETRY

When the poet opposes nature to art, and the ideal to the real, so that nature and the ideal form the principal object of his pictures, and that the pleasure we take in them is the dominant impression, I call him an elegiac poet. In this kind, as well as in satire, I distinguish two classes. Either nature and the ideal are objects of sadness, when one is represented as lost to man and the other as unattained; or both are objects of joy, being represented to us as reality. In the first case it is elegy in the narrower sense of the term; in the second case it is the idyll in its most extended acceptation.

Indignation in the pathetic and ridicule in mirthful satire are occasioned by an enthusiasm which the ideal has excited; and thus also sadness should issue from the same source in elegy. It is this, and this only, that gives poetic value to elegy, and any other origin for this description of poetical effusion is entirely beneath the dignity of poetry. The elegiac poet seeks after nature, but he strives to find her in her beauty, and not only in her mirth; in her agreement with conceptions, and not merely in her facile disposition towards the requirements and demands of sense. Melancholy at the privation of joys, complaints at the disappearance of the world's golden age, or at the vanished happiness of youth, affection, etc., can only become the proper themes for elegiac poetry if those conditions implying peace and calm in the sphere of the senses can moreover be portrayed as states of moral harmony. On this account I cannot bring myself to regard as poetry the complaints of Ovid, which he transmitted from his place of exile by the Black Sea; nor would they appear so to me however touching and however full of passages of the highest poetry they might be. His suffering is too devoid of spirit, and nobleness. His lamentations display a want of strength and enthusiasm; though they may not reflect the traces of a vulgar soul, they display a low and sensuous condition of a noble spirit that has been trampled into the dust by its hard destiny. If, indeed, we call to mind that his regrets are directed to Rome in the Augustan age, we forgive him the pain he suffers; but even Rome in all its splendour, except it be transfigured by the imagination, is a limited greatness, and therefore a subject unworthy of poetry, which, raised above every trace of the actual, ought only to mourn over what is infinite.

Thus the object of poetic complaint ought never to be an external object, but only an internal and ideal object; even when it deplores a real loss, it must begin by making it an ideal loss. The proper work of the poet consists in bringing back the finite object to the proportions of the infinite. Consequently, the external matter of elegy, considered in itself, is always indifferent, since poetry can never employ it as it finds it, and because it is only by what it makes of it that it confers on it a poetic dignity. The elegiac poet seeks nature, but nature as an idea, and in a degree of perfection that it has never reached in reality, although he weeps over this perfection as something that has existed and is now lost. When Ossian speaks to us of the days that are no more, and of the heroes that have disappeared, his imagination has long since transformed these pictures represented to him by his memory into a pure ideal, and changed these heroes into gods. The different experiences of such or such a life in

particular have become extended and confounded in the universal idea of transitoriness, and the bard, deeply moved, pursued by the increase of ruin everywhere present, takes his flight towards heaven, to find there in the course of the sun an emblem of what does not pass away.

I turn now to the elegiac poets of modern times. Rousseau, whether considered as a poet or a philosopher, always obeys the same tendency: to seek nature or to avenge it by art. According to the state of his heart, whether he prefers to seek nature or to avenge it, we see him at one time roused by elegiac feelings, at others showing the tone of the satire of Juvenal, and again, as in his *Julia*, delighting in the sphere of the idyll. His compositions have undoubtedly a poetic value, since their object is ideal; only he does not know how to treat it in a poetic fashion. No doubt his serious character prevents him from falling into frivolity; but this seriousness also does not allow him to rise to poetic play. Sometimes absorbed by passion, at others by abstractions, he seldom if ever reaches aesthetic freedom, which the poet ought to maintain in spite of his material before his object, and in which he ought to make the reader share. Either he is governed by his sickly sensibility and his impressions become a torture, or the force of thought chains down his imagination and destroys by its strictness of reasoning all the grace of his pictures. These two faculties, whose reciprocal influence and intimate union are what properly make the poet, are found in this writer in an uncommon degree, and he lacks only one thing—it is that the two qualities should manifest themselves actually united; it is that the proper activity of thought should show itself mixed more with feeling, and the sensuous more with thought. Accordingly, even in the ideal which he has made of human nature, he is too much taken up with the limits of this nature, and not enough with its capabilities; he always betrays a want of physical repose rather than want of moral harmony. His passionate sensuousness must be blamed when, to finish as quickly as possible that struggle in humanity which offends him, he prefers to carry man back to the unintelligent uniformity of his primitive condition, rather than see that struggle carried out in the intellectual harmony of perfect cultivation, when, rather than await the fulfilment of art he prefers not to let it begin; in short, when he prefers to place the aim nearer the earth, and to lower the ideal in order to reach it the sooner and the safer.

Among the poets of Germany who belong to this class, I shall mention here only Haller, Kleist, and Klopstock. The character of their poetry is sentimental; it is by the ideal that they touch us, not by sensuous reality; and that not so much because they are themselves nature as because

they know how to fill us with enthusiasm for nature. However, what is true in general, as well of these three poets as of every sentimental poet, does not evidently exclude the faculty of moving us, in particular, by beauties of the simple genus; without this they would not be poets. I only mean that it is not their proper and dominant characteristic to receive the impression of objects with a calm feeling, simple, easy, and to give forth in like manner the impression received. Involuntarily the imagination in them anticipates intuition, and reflection is in play before the sensuous nature has done its function; they shut their eyes and stop their ears to plunge into internal meditations. Their souls could not be touched by any impression without observing immediately their own movements, without placing before their eyes and outside themselves what takes place in them. It follows from this that we never see the object itself, but what the intelligence and reflection of the poet have made of the object; and even if this object be the person itself of the poet, even when he wishes to represent to us his own feelings, we are not informed of his state immediately or at first hand; we only see how this state is reflected in his mind, and what he has thought of it in the capacity of spectator of himself. When Haller deplores the death of his wife—every one knows this beautiful elegy—and begins in the following manner:

If I must needs sing of thy death,
 O Marian, what a song it would be!
 When sighs strive against words,
 And idea follows fast on idea,

we feel that this description is strictly true, but we feel also that the poet does not communicate to us, properly speaking, his feelings, but the thoughts that they suggest to him. Accordingly, the emotion we feel on hearing him is much less vivid; people remark that the poet's mind must have been singularly cooled down, to become thus a spectator of his own emotion.

Haller treated scarcely any subjects but the supersensuous, and part of the poems of Klopstock are also of this nature: this choice itself excludes them from the simple kind. Accordingly, in order to treat these supersensuous themes in a poetic fashion, as no body could be given to them, and they could not be made the objects of sensuous intuition, it was necessary to make them pass from the finite to the infinite, and raise them to the state of objects of spiritual intuition. In general, it may be said that it is only in this sense that a didactic poetry can be conceived without involving contradiction; for, repeating again what has been so often said,

poetry has only two fields, the world of sense and the ideal world, since in the sphere of conceptions, in the world of the understanding, it cannot absolutely thrive. I confess that I do not know as yet any didactic poem, either among the ancients or among the moderns, where the subject is completely brought down to the individual, or purely and completely raised to the ideal. The most common case, in the most happy essays, is where the two principles are used together; the abstract idea predominates, and the imagination, which ought to reign over the whole domain of poetry, has merely the permission to serve the understanding. A didactic poem in which thought itself would be poetic and would remain so is a thing which we must still wait to see.

What we say here of didactic poems in general is true in particular of the poems of Haller. The thought itself of these poems is not poetical, but the execution becomes so sometimes, occasionally by the use of images, at other times by a flight towards the ideal. It is from this last quality only that the poems of Haller belong to this class. Energy, depth, a pathetic earnestness—these are the traits that distinguish this poet. He has in his soul an ideal that enkindles it, and his ardent love of truth seeks in the peaceful valleys of the Alps that innocence of the first ages that the world no longer knows. His complaint is deeply touching; he retraces in an energetic and almost bitter satire the wanderings of the mind and of the heart, and he lovingly portrays the beautiful simplicity of nature. Only, in his pictures as well as in his soul, abstraction prevails too much, and the sensuous is overweighted by the intellectual. He constantly teaches rather than paints; and even in his paintings his brush is more energetic than lovable. He is great, bold, full of fire, sublime; but he rarely and perhaps never attains to beauty.

For the solidity and depth of ideas, Kleist is far inferior to Haller; in point of grace, perhaps, he would have the advantage—if, as happens occasionally, we did not impute to him as a merit, on the one side, that which really is a want on the other. The sensuous soul of Kleist takes especial delight at the sight of country scenes and manners; he withdraws gladly from the vain jingle and rattle of society, and finds in the heart of inanimate nature the harmony and peace that are not offered to him by the moral world. How touching is his “Aspiration after Repose”! How much truth and feeling there is in these verses!

O world, thou art the tomb of true life!
 Often a generous instinct attracts me to virtue;
 My heart is sad, a torrent of tears bathes my cheeks,

But example conquers, and thou, O fire of youth!
Soon you dry these noble tears.
A true man must live far from men!

But if the poetic instinct of Kleist leads him thus far away from the narrow circle of social relations, in solitude and among the fruitful inspirations of nature, the image of social life and of its anguish pursues him, and also alas! its chains. What he flees from he carries in himself, and what he seeks remains entirely outside him: never can he triumph over the fatal influence of his time. In vain does he find sufficient flame in his heart and enough energy in his imagination to animate by painting the cold conceptions of the understanding; cold thought each time kills the living creations of fancy, and reflection destroys the secret work of the sensuous nature. His poetry, it must be admitted, is of as brilliant colour and as variegated as the spring he celebrated in verse; his imagination is vivid and active; but it might be said that it is more variable than rich, that it sports rather than creates, that it always goes forward with a changeful gait, rather than stops to accumulate and mould things into shape. Traits succeed each other rapidly, with exuberance, but without concentrating to form an individual, without completing each other to make a living whole, without rounding to a form, a figure. While he remains in purely lyrical poetry, and pauses amidst his landscapes of country life, on the one hand the greater freedom of the lyrical form and, on the other, the more arbitrary nature of the subject prevent us from being struck with this defect; in these sorts of works it is in general rather the feelings of the poet than the object in itself of which we expect the portraiture. But this defect becomes too apparent when he undertakes, as in *Cissides und Paches*, or in his Seneca, to represent men and human actions; because here the imagination sees itself kept in within certain fixed and necessary limits, and because here the effect can only be derived from the object itself. Kleist becomes poor, tiresome, jejune, and insupportably frigid; an example full of lessons for those who, without having an inner vocation, aspire to issue from musical poetry, to rise to the regions of plastic poetry. A spirit of this family, Thomson, has paid the same penalty to human infirmity.

In the sentimental kind, and especially in that part of the sentimental kind which we name elegiac, there are but few modern poets, and still fewer ancient ones, who can be compared to our Klopstock. Musical poetry has produced in this poet all that can be attained out of the limits of the living form, and out of the sphere of individuality, in the region of

ideas. It would, no doubt, be doing him a great injustice to dispute entirely in his case that individual truth and that feeling of life with which the simple poet describes his pictures. Many of his odes, many separate traits in his dramas, and in his *Messias* ["Messiah"] represent the object with a striking truth, and mark the outline admirably; especially, when the object is his own heart, he has given evidence on many occasions of a great natural disposition and of a charming simplicity. I mean only that it is not in this that the proper force of Klopstock consists, and that it would not perhaps be right to seek for this throughout his work. Viewed as a production of musical poetry, the *Messias* is a magnificent work; but in the light of plastic poetry, where we look for determined forms and forms determined for the intuition, the *Messias* leaves much to be desired. Perhaps in this poem the figures are sufficiently determined, but they are not so with intuition in view. It is abstraction alone that created them, and abstraction alone can discern them. They are excellent types to express ideas, but they are not individuals nor living figures. With regard to the imagination, which the poet ought to address, and which he ought to command by putting before it always perfectly determinate forms, it is left here much too free to represent as it wishes these men and these angels, these divinities and demons, this paradise and this hell. We see quite well the vague outlines in which the understanding must be kept to conceive these personages; but we do not find the limit clearly traced in which the imagination must be enclosed to represent them. And what I say here of characters must apply to all that in this poem is, or ought to be, action and life, and not only in this epopee, but also in the dramatic poetry of Klopstock. For the understanding all is perfectly determined and bounded in them—I need only here recall his Judas, his Pilate, his Philo, his Solomon in the tragedy that bears that name—but for the imagination all this wants form too much, and I must readily confess I do not find that our poet is at all in his sphere here. His sphere is always the realm of ideas; and he knows how to raise all he touches to the infinite. It might be said that he strips away their bodily envelope, to spiritualize them, from all the objects with which he is occupied, in the same way that other poets clothe all that is spiritual with a body. The pleasure occasioned by his poems must almost always be obtained by an exercise of the faculty of reflection; the feelings he awakens in us, and that so deeply and energetically, flow always from supersensuous sources. Hence the earnestness, the strength, the elasticity, the depth, that characterize all that comes from him; but from that also issues that perpetual tension of mind in which we are kept when reading him. No poet—except

perhaps Young, who in this respect exacts even more than Klopstock, without giving us so much compensation—no poet could be less adapted than Klopstock to play the part of favourite author and guide in life, because he never does anything else than lead us out of life, because he never calls to arms anything save spirit, without giving recreation and refreshment to sensuous nature by the calm presence of any object. His muse is chaste, it has nothing of the earthly, it is immaterial and holy as his religion; and we are forced to admit with admiration that if he wanders sometimes on these high places, it never happened to him to fall from them. But precisely for this reason, I confess in all ingenuousness, that I am not free from anxiety for the common sense of those who quite seriously and unaffectedly make Klopstock the favourite book, the book in which we find sentiments fitting all situations, or to which we may revert at all times: perhaps even—and I suspect it—Germany has seen enough results of his dangerous influence. It is only in certain dispositions of the mind, and in hours of exaltation, that recourse can be had to Klopstock, and that he can be felt. It is for this reason that he is the idol of youth, without, however, being by any means the happiest choice that they could make. Youth, which always aspires to something beyond real life, which avoids all stiffness of form, and finds all limits too narrow, lets itself be carried away with love, with delight, into the infinite spaces opened up to them by this poet. But wait till the youth has become a man, and till, from the domain of ideas, he comes back to the world of experience, then you will see this enthusiastic love of Klopstock decrease greatly, without, however, a riper age changing at all the esteem due to this unique phenomenon, to this so extraordinary genius, to these noble sentiments—the esteem that Germany in particular owes to his high merit.

I have said that this poet was great specially in the elegiac style, and it is scarcely necessary to confirm this judgment by entering into particulars. Capable of exercising all kinds of action on the heart, and having graduated as master in all that relates to sentimental poetry, he can sometimes shake the soul by the most sublime pathos, at others cradle it with sweet and heavenly sensations. Yet his heart prefers to follow the direction of a lofty spiritual melancholy; and, however sublime be the tones of his harp and of his lyre, they are always the tender notes of his lute that resound with most truth and the deepest emotion. I take as witnesses all those whose nature is pure and sensuous: would they not be ready to give all the passages where Klopstock is strong and bold; all those fictions, all the magnificent descriptions, all the models of eloquence which

abound in the *Messias*, all those dazzling comparisons in which our poet excels—would they not exchange them for the pages breathing tenderness, the “Elegy to Ebert,” for example, or that admirable poem entitled “Bardalus,” or again, the “Tombs Opened before the Hour,” the “Summer’s Night,” the “Lake of Zurich,” and many other pieces of this kind? In the same way the *Messias* is dear to me as a treasure of elegiac feelings and of ideal paintings, though I am not much satisfied with it as the recital of an action and as an epic.

I ought, perhaps, before quitting this department, to recall the merits in this style of Uz, Denis, Gessner—in *Der Tod Abels* [“Death of Abel”]—Jacobi, Gerstenberg, Hölty, von Goeckingk, and several others who all knew how to touch by ideas, and whose poems belong to the sentimental kind in the sense in which we have agreed to understand the word. But my object is not here to write a history of German poetry; I only wished to clear up what I said further back by some examples from our literature. I wished to show that the ancient and the modern poets, the authors of simple poetry and of sentimental poetry, follow essentially different paths to arrive at the same end: that the former move by nature, individuality, a very vivid sensuous element; while the latter do it by means of ideas and a high spirituality, exercising over our minds an equally powerful though less extensive influence.

It has been seen, by the examples which precede, how sentimental poetry conceives and treats subjects taken from nature; perhaps the reader may be curious to know how also simple poetry treats a subject of the sentimental order. This is, as it seems, an entirely new question, and one of special difficulty; for, in the first place, has a subject of the sentimental order ever been presented in primitive and simple periods? And in modern times, where is the simple poet with whom we could make this experiment? This has not, however, prevented genius from setting this problem, and solving it in a wonderfully happy way. A poet in whose mind nature works with a purer and more faithful activity than in any other, and who is perhaps of all modern poets the one who departs the least from the sensuous truth of things, has proposed this problem to himself in his conception of a mind, and of the dangerous extreme of the sentimental character. This mind and this character have been portrayed by the modern poet we speak of, a character which with a burning sensuousness embraces the ideal and flies the real, to soar up to an infinite devoid of being, always occupied in seeking out of himself what he incessantly destroys in himself; a mind that only finds reality in his dreams, and to whom the realities of life are only limits and obstacles; in short,

a mind that sees only in its own existence a barrier, and goes on, as it were, logically to break down this barrier in order to penetrate to true reality.

It is interesting to see with what a happy instinct all that is of a nature to feed the sentimental mind is gathered together in *Werther*: a dreamy and unhappy love, a very vivid feeling for nature, the religious sense coupled with the spirit of philosophic contemplation, and lastly, to omit nothing, the world of Ossian, dark, formless, melancholy. Add to this the aspect under which reality is presented, all is depicted which is least adapted to make it lovable, or rather all that is most fit to make it hated; see how all external circumstances unite to drive back the unhappy man into his ideal world; and now we understand that it was quite impossible for a character thus constituted to save itself, and issue from the circle in which it was enclosed. The same contrast reappears in the *Torquato Tasso* of the same poet, though the characters are very different. Even his last romance presents, like his first, this opposition between the poetic mind and the common sense of practical men, between the ideal and the real, between the subjective mode and the objective mode of seeing and representing things; it is the same opposition, I say, but with what a diversity! Even in *Faust* we still find this contrast, rendered, I admit—as the subject required—much more coarsely on both hands, and materialized. It would be quite worth while if a psychological explanation were attempted of this character, personified and specified in four such different ways.

It has been observed further back that a mere disposition to frivolity of mind, to a merry humour, if a certain fund of the ideal is not joined to it, does not suffice to constitute the vocation of a satirical poet, though this mistake is frequently made. In the same way a mere disposition for tender sentiments, softness of heart, and melancholy do not suffice to constitute a vocation for elegy. I cannot detect the true poetical talent, either on one side or the other; it wants the essential, I mean the energetic and fruitful principle that ought to enliven the subject, and produce true beauty. Accordingly, the productions of this latter nature, of the tender nature, do nothing but enervate us; and without refreshing the heart, without occupying the mind, they are only able to flatter in us the sensuous nature. A constant disposition to this mode of feeling ends necessarily, in the long run, by weakening the character and makes it fall into a state of passivity from which nothing real can issue, either for external or for internal life. People have, therefore, been quite right to persecute by pitiless raillery this fatal mania of sentimentality and of tearful melan-

choly which possessed Germany eighteen years since, in consequence of certain excellent works that were ill understood and indiscreetly imitated. People have been right, I say, to combat this perversity, though the indulgence with which men are disposed to receive the parodies of these elegiac caricatures—that are very little better themselves—the complaisance shown to bad wit, to heartless satire and spiritless mirth, show clearly enough that this zeal against false sentimentalism does not issue from quite a pure source. In the balance of true taste one cannot weigh more than the other, considering that both here and there is wanting that which forms the aesthetic value of a work of art, the intimate union of spirit with matter, and the twofold relation of the work with the faculty of perception as well as with the faculty of the ideal.

People have turned Siegwart and his convent story into ridicule, and yet the *Travels into the South of France* are admired; yet both works have an equal claim to be esteemed in certain respects, and as little to be unreservedly praised in others. A true, though excessive, sensuousness gives value to the former of these two romances; a lively and sportive humour, a fine wit, recommends the other: but one totally lacks all sobriety of mind that would befit it, the other lacks all aesthetic dignity. If you consult experience, one is rather ridiculous; if you think of the ideal, the other is almost contemptible. Now, as true beauty must of necessity accord both with nature and with the ideal, it is clear that neither the one nor the other of these two romances could pretend to pass for a fine work. And notwithstanding all this, it is natural, as I know it by my own experience, that the romance of Thümmel should be read with much pleasure. As a fact it only wounds those requirements which have their principle in the ideal, and which consequently do not exist for the greater part of readers; requirements that, even in persons of most delicate feeling, do not make themselves felt at the moments when we read romances. With regard to the other needs of the mind, and especially to those of the senses, this book on the other hand affords unusual satisfaction. Accordingly, it must be, and will be so, that this book will remain justly one of the favourite works of our age, and of all epochs when men only write aesthetic works to please, and people only read to get pleasure.

But does not poetical literature also offer, even in its classical monuments, some analogous examples of injuries inflicted or attempted against the ideal and its superior purity? Are there not some who, by the gross, sensuous nature of their subject, seem to depart strangely from the spiritualism I here demand of all works of art? If this is permitted to the poet, the chaste nurseling of the muses, ought it not to be conceded to

the novelist, who is only the half-brother of the poet, and who still touches by so many points? I can the less avoid this question because there are masterpieces, both in the elegiac and in the satirical kind, where the authors seek and preach up a nature quite different from that I am discussing in this Essay, and where they seem to defend it, not so much against bad, as against good, morals. The natural conclusion would be either that this sort of poem ought to be rejected, or that, in tracing here the idea of elegiac poetry, we have granted far too much to what is arbitrary.

The question I asked was whether what was permitted by the poet might not be tolerated in a prose narrator, too? The answer is contained in the question. What is allowed in the poet proves nothing about what must be allowed in one who is not a poet. This tolerancy in fact reposes on the very idea which we ought to make to ourselves of the poet, and only on this idea; what in his case is legitimate freedom is only a licence worthy of contempt as soon as it no longer takes its source in the ideal, in those high and noble inspirations which make the poet.

The laws of decency are strangers to innocent nature; the experience of corruption alone has given birth to them. But when once this experience has been made, and natural innocence has disappeared from manners, these laws are henceforth sacred laws that man, who has a moral sense, ought not to infringe upon. They reign in an artificial world with the same right that the laws of nature reign in the innocence of primitive ages. But by what characteristic is the poet recognized? Precisely by his silencing in his soul all that recalls an artificial world, and by causing nature herself to revive in him with her primitive simplicity. The moment he has done this, he is emancipated by this alone from all the laws by which a depraved heart secures itself against itself. He is pure, he is innocent, and all that is permitted to innocent nature is equally permitted to him. But you who read him or listen to him, if you have lost your innocence, and if you are incapable of finding it again, even for a moment, in a purifying contact with the poet, it is your own fault, and not his: why do not you leave him alone? It is not for you that he has sung!

Here follows, therefore, in what relates to these kinds of freedoms, the rules that we can lay down.

Let us remark in the first place that nature only can justify these licences; whence it follows that you could not legitimately take them up of your own choice, nor with a determination of imitating them; the will, in fact, ought always to be directed according to the laws of morality, and on its part all condescending to the sensuous is absolutely unpardonable. These licences must, therefore, above all, be simplicity. But how can

we be convinced that they are actually simple? We shall hold them to be so if we see them accompanied and supported by all the other circumstances which also have their spring of action in nature; for nature can only be recognized by the close and strict consistency, by the unity and uniformity, of its effects. It is only a soul that has on all occasions a horror of all kinds of artifice, and which consequently rejects them even where they would be useful—it is only that soul which we permit to be emancipated from them when the artificial conventionalities hamper and hinder it. A heart that submits to all the obligations of nature has alone the right to profit also by the liberties which it authorizes. All the other feelings of that heart ought consequently to bear the stamp of nature: it will be true, simple, free, frank, sensible, and straightforward; all disguise, all cunning, all arbitrary fancy, all egotistical pettiness will be banished from his character, and you will see no trace of them in his writings.

Second rule: beautiful nature alone can justify freedoms of this kind; whence it follows that they ought not to be a mere outbreak of the appetites; for all that proceeds exclusively from the wants of sensuous nature is contemptible. It is, therefore, from the totality and the fullness of human nature that these vivid manifestations must also issue. We must find humanity in them. But how can we judge that they proceed in fact from our whole nature, and not only from an exclusive and vulgar want of the sensuous nature? For this purpose it is necessary that we should see—that they should represent to us—this whole of which they form a particular feature. This disposition of the mind to experience the impressions of the sensuous is in itself an innocent and an indifferent thing. It does not sit well on a man only because of its being common to animals with him; it augurs in him the lack of true and perfect humanity. It only shocks us in the poem because such a work having the pretension to please us, the author consequently seems to think us capable, us also, of this moral infirmity. But when we see in the man who has let himself be drawn into it by surprise all the other characteristics that human nature in general embraces; when we find in the work where these liberties have been taken the expression of all the realities of human nature, this motive of discontent disappears, and we can enjoy, without anything changing our joy, this simple expression of a true and beautiful nature. Consequently, this same poet who ventures to allow himself to associate us with feelings so basely human, ought to know on the other hand how to raise us to all that is grand, beautiful, and sublime in our nature.

We should, therefore, have found there a measure to which we could subject the poet with confidence, when he trespasses on the ground of

decency, and when he does not fear to penetrate as far as that in order freely to paint nature. His work is common, base, absolutely inexcusable from the moment it is frigid, and from the moment it is empty, because that shows a prejudice, a vulgar necessity, an unhealthy appeal to our appetites. His work on the other hand is beautiful and noble, and we ought to applaud it without any consideration for all the objections of frigid decency, as soon as we recognize in it simplicity, the alliance of spiritual nature and of the heart.

Perhaps I shall be told that if we adopt this criterion, most of the recitals of this kind composed by the French, and the best imitations made of them in Germany, would not perhaps find their interest in it; and that it might be the same, at least in part with many of the productions of our most intellectual and amiable poet, without even excepting his masterpieces. I should have nothing to reply to this. The sentence after all is anything but new, and I am only justifying the judgment pronounced long since on this matter by all men of delicate perceptions. But these same principles which, applied to the works of which I have just spoken, seem perhaps in too strict a spirit, might also be found too indulgent when applied to some other works. I do not deny, in fact, that the same reasons which make me hold to be quite inexcusable the dangerous pictures drawn by the Roman Ovid and the German Ovid, those of Crébillon, of Voltaire, of Marmontel, who pretends to write moral tales!—of Lacroix, and of many others—that these same reasons, I say, reconcile me with the elegies of the Roman Propertius and of the German Propertius, and even with some of the decried productions of Diderot. This is because the former of these works are only witty, prosaic, and voluptuous, while the others are poetic, human, and simple.

IDYLL

It remains for me to say a few words about this third kind of sentimental poetry—some few words and no more, for I propose to speak of it at another time with the developments particularly demanded by the theme.

This kind of poetry generally presents the idea and description of an innocent and happy humanity. This innocence and bliss seeming remote from the artificial refinements of fashionable society, poets have removed the scene of the idyll from crowds of worldly life to the simple shepherd's cot, and have given it a place in the infancy of humanity before the beginning of culture. These limitations are evidently accidental; they do

not form the object of the idyll, but are only to be regarded as the most natural means to attain this end. The end is everywhere to portray man in a state of innocence, which means a state of harmony and peace with himself and the external world.

But a state such as this is not merely met with before the dawn of civilization; it is also the state to which civilization aspires, as to its last end, if only it obeys a determined tendency in its progress. The idea of a similar state, and the belief of the possible reality of this state, is the only thing that can reconcile man with all the evils to which he is exposed in the path of civilization; and if this idea were only a chimera, the complaints of those who accuse civil life and the culture of the intelligence as an evil for which there is no compensation, and who represent this primitive state of nature that we have renounced as the real end of humanity—their complaints, I say, would have a perfectly just foundation. It is, therefore, of infinite importance for the man engaged in the path of civilization to see confirmed in a sensuous manner the belief that this idea can be accomplished in the world of sense, that this state of innocence can be realized in it; and as real experience, far from keeping up this belief, is rather made incessantly to contradict it, poetry comes here, as in many other cases, in aid of reason, to cause this idea to pass into the condition of an intuitive idea, and to realize it in a particular fact. No doubt this innocence of pastoral life is also a poetic idea, and the imagination must already have shown its creative power in that. But the problem, with this datum, becomes infinitely simpler and easier to solve; and we must not forget that the elements of these pictures already existed in real life, and that it was only requisite to gather up the separate traits to form a whole. Under a fine sky, in a primitive society, when all the relations are still simple, when science is limited to so little, nature is easily satisfied, and man turns to savagery only when he is tortured by want. All nations that have a history have a paradise, an age of innocence, a golden age. Nay, more than this, every man has his paradise, his golden age, which he remembers with more or less enthusiasm, according as he is more or less poetical. Thus experience itself furnishes sufficient traits to this picture which the pastoral idyll executes. But this does not prevent the pastoral idyll from remaining always a beautiful and an encouraging fiction; and poetic genius, in retracing these pictures, has really worked in favour of the ideal. For, to the man who has once departed from simple nature, and who has been abandoned to the dangerous guidance of his reason, it is of the greatest importance to find the laws of nature expressed in a faithful copy, to see their image in

a clear mirror, and to reject all the stains of artificial life. There is, however, a circumstance which remarkably lessens the aesthetic value of these sorts of poetry. By the very fact that the idyll is transported to the time that precedes civilization, it also loses the advantages thereof; and by its nature finds itself in opposition to itself. Thus, in a theoretical sense, it takes us back at the same time that in a practical sense it leads us on and ennobles us. Unhappily it places behind us the end towards which it ought to lead us, and consequently it can only inspire us with the sad feeling of a loss, and not the joyous feeling of a hope. As these poems can only attain their end by dispensing with all art, and by simplifying human nature, they have the highest value for the heart, but they are also far too poor for what concerns the mind, and their uniform circle is too quickly traversed. Accordingly, we can only seek them and love them in moments in which we need calm, and not when our faculties aspire after movement and exercise. A morbid mind will find its cure in them, a sound soul will not find its food in them. They cannot vivify, they can only soften. This defect, grounded in the essence of the pastoral idyll, has not been remedied by the whole art of poets. I know that this kind of poem is not without admirers, and that there are readers enough who prefer an Amyntus and a Daphnis to the most splendid masterpieces of the epic or the dramatic muse; but in them it is less the aesthetical taste than the feeling of an individual want that pronounces on works of art; and their judgment, by that very fact, could not be taken into consideration here. The reader who judges with his mind, and whose heart is sensuous, without being blind to the merit of these poems, will confess that he is rarely affected by them, and that they tire him most quickly. But they act with so much the more effect in the exact moment of need. But must the truly beautiful be reduced to await our hours of need? And is it not rather its office to awaken in our soul the want that it is going to satisfy?

The reproaches I here level against the bucolic idyll cannot be understood of the sentimental. The simple pastoral, in fact, cannot be deprived of aesthetic value, since this value is already found in the mere form. To explain myself: every kind of poetry is bound to possess an infinite ideal value, which alone constitutes it a true poetry; but it can satisfy this condition in two different ways. It can give us the feeling of the infinite as to form, by representing the object altogether limited and individualizing it; it can awaken in us the feeling of the infinite as to matter, in freeing its object from all limits in which it is enclosed, by idealizing this object; therefore it can have an ideal value either by an absolute representation

or by the representation of an absolute. Simple poetry takes the former road, the other is that of sentimental poetry. Accordingly, the simple poet is not exposed to failure in value so long as he keeps faithfully to nature, which is always completely circumscribed, that is, is infinite as regards form. The sentimental poet, on the contrary, by that very fact, that nature only offers him completely circumscribed objects, finds in it an obstruction when he wishes to give an absolute value to a particular object. Thus the sentimental poet understands his interests badly when he goes along the trail of the simple poet, and borrows his objects from him—objects which by themselves are perfectly indifferent, and which only become poetical by the way in which they are treated. By this he imposes on himself without any necessity the same limits that confine the field on the simple poet, without, however, being able to carry out the limitation properly, or to vie with his rival in absolute definiteness of representation. He ought rather, therefore, to depart from the simple poet, just in the choice of subject; because the latter having the advantage of him on the score of form, it is only by the nature of the objects that he can resume the upper hand.

Applying this to the pastoral idylls of the sentimental poet, we see why these poems, whatever amount of art and genius be displayed in them, do not fully satisfy the heart or the mind. An ideal is proposed in it, and, at the same time, the writer keeps to this narrow and poor medium of pastoral life. Would it not have been better, on the contrary, to choose for the ideal another frame, or for the pastoral world another kind of picture? These pictures are just ideal enough for painting to lose its individual truth in them, and, again, just individual enough for the ideal in them to suffer therefrom. For example, a shepherd of Gessner can neither charm by the illusion of nature nor by the beauty of imitation; he is too ideal a being for that, but he does not satisfy us any more as an ideal by the infinity of the thought; he is a far too limited creature to give us this satisfaction. He will, therefore, please up to a certain point all classes of readers, without exception, because he seeks to unite the simple with the sentimental, and he thus gives a commencement of satisfaction to the two opposite exigencies that may be brought to bear on any particular part of a poem; but the author, in trying to unite the two points, does not fully satisfy either one or the other exigency, as you do not find in him either pure nature or the pure ideal; he cannot rank himself as entirely up to the mark of a stringent critical taste, for taste does not accept anything equivocal or incomplete in aesthetical matters. It is a strange thing that, in the poet whom I have named, this equivocal character extends to the

language, which floats undecided between poetry and prose, as if he feared either to depart too far from nature by speaking rhythmical language, or if he completely freed himself from rhythm, to lose all poetic flight. Milton gives a higher satisfaction to the mind, in the magnificent picture of the first human pair, and of the state of innocence in paradise—the most beautiful idyll I know of the sentimental kind. Here nature is noble, inspired, simple, full of breadth, and, at the same time, of depth; it is humanity in its highest moral value, clothed in the most graceful form.

Thus, even in respect to the idyll, as well as to all kinds of poetry, we must once for all declare either for individuality or ideality; for to aspire to give satisfaction to both exigencies is the surest means, unless you have reached the terminus of perfection, to miss both ends. If the modern poet thinks he feels enough of the Greeks' mind to vie with them, notwithstanding all the indocility of his matter, on their own ground, namely that of simple poetry, let him do it exclusively, and place himself apart from all the requirements of the sentimental taste of his age. No doubt it is very doubtful if he come up to his models; between the original and the happiest imitation there will always remain a notable distance; but, by taking this road, he is at all events secure of producing a really poetic work. If, on the other hand, he feels himself carried to the ideal by the instinct of sentimental poetry, let him decide to pursue this end fully; let him seek the ideal in its purity, and let him not pause till he has reached the highest regions without looking behind him to know if the real follows him, and does not leave him by the way. Let him not lower himself to this wretched expedient of spoiling the ideal to accommodate himself to the wants of human weakness, and to turn out mind in order to play more easily with the heart. Let him not take us back to our infancy, to make us buy, at the cost of the most precious acquisitions of the understanding, a repose that can only last as long as the slumber of our spiritual faculties; but let him lead us on to emancipation, and give us this feeling of higher harmony which compensates for all his troubles and secures the happiness of the victor! Let him prepare as his task an idyll that realizes the pastoral innocence, even in the children of civilization, and in all the conditions of the most militant and excited life; of thought enlarged by culture; of the most refined art; of the most delicate social conventionalities—an idyll, in short, that is made, not to bring back man to Arcadia, but to lead him to Elysium.

This idyll, as I conceive it, is the idea of humanity definitely reconciled with itself, in the individual as well as in the whole of society; it is union

freely re-established between inclination and duty; it is nature purified, raised to its highest moral dignity; in short, it is no less than the ideal of beauty applied to real life. Thus, the character of this idyll is to reconcile perfectly all the contradictions between the real and the ideal, which formed the matter of satirical and elegiac poetry, and, setting aside their contradictions, to put an end to all conflict between the feelings of the soul. Thus, the dominant expression of this kind of poetry would be calm; but the calm that follows the accomplishment, and not that of indolence—the calm that comes from the equilibrium re-established between the faculties, and not from the suspending of their exercise; from the fullness of our strength, and not from our infirmity; the calm, in short, which is accompanied in the soul by the feeling of an infinite power. But precisely because idyll thus conceived removes all idea of struggle, it will be infinitely more difficult than it was in two previously named kinds of poetry to express movement; yet this is an indispensable condition, without which poetry can never act on men's souls. The most perfect unity is required, but unity ought not to wrong variety; the heart must be satisfied, but without the inspiration ceasing on that account. The solution of this problem is properly what ought to be given us by the theory of the idyll.

Now what are the relations of the two poetries to one another, and their relations to the poetic ideal? Here are the principles we have established.

Nature has granted this favour to the simple poet, to act always as an indivisible unity, to be at all times identical and perfect, and to represent, in the real world, humanity at its highest value. In opposition, it has given a powerful faculty to the sentimental poet, or, rather, it has imprinted an ardent feeling on him: this is to replace out of himself this first unity that abstraction has destroyed in him, to complete humanity in his person, and to pass from a limited state to an infinite state. They both propose to represent human nature fully, or they would not be poets; but the simple poet has always the advantage of sensuous reality over the sentimental poet, by setting forth as a real fact what the other aspires only to reach. Every one experiences this in the pleasure he takes in simple poetry. We there feel that the human faculties are brought into play; no vacuum is felt; we have the feeling of unity, without distinguishing anything of what we experience; we enjoy both our spiritual activity and also the fullness of physical life. Very different is the disposition of mind elicited by the sentimental poet. Here we feel only a vivid aspiration to produce in us this harmony of which we had in the other case the consciousness and reality; to make of ourselves a single and same totality; to realize in our-

selves the idea of humanity as a complete expression. Hence it comes that the mind is here all in movement, stretched, hesitating between contrary feelings; whereas it was before calm and at rest, in harmony with itself, and fully satisfied.

But if the simple poet has the advantage over the sentimental poet on the score of reality; if he causes really to live that of which the other can only elicit a vivid instinct, the sentimental poet, in compensation, has this great advantage over the simple poet: to be in a position to offer to this instinct a greater object than that given by his rival, and the only one he could give. All reality, we know, is below the ideal; all that exists has limits, but thought is infinite. This limitation, to which everything is subject in sensuous reality, is, therefore, a disadvantage for the simple poet, while the absolute, unconditional freedom of the ideal profits the sentimental poet. No doubt, the former accomplishes his object, but this object is limited; the second, I admit, does not entirely accomplish his, but his object is infinite. Here I appeal to experience. We pass pleasantly to real life and things from the frame of mind in which the simple poet has placed us. On the other hand, the sentimental poet will always disgust us, for a time, with real life. This is because the infinite character has, in a manner, enlarged our mind beyond its natural measure, so that nothing it finds in the world of sense can fill its capacity. We prefer to fall back in contemplation on ourselves, where we find food for this awakened impulse towards the ideal world; while, in the simple poet, we only strive to issue out of ourselves, in search of sensuous objects. Sentimental poetry is the offspring of retirement and science, and invites to it; simple poetry is inspired by the spectacle of life, and brings back life.

I have styled simple poetry a gift of nature, to show that thought has no share in it. It is a first jet, a happy inspiration, that needs no correction, when it turns out well, and which cannot be rectified if ill turned out. The entire work of the simple genius is accomplished by feeling; in that is its strength, and in it are its limits. If, then, he has not felt at once in poetic manner—that is, in a perfectly human manner—no art in the world can remedy this defect. Criticism may help him to see the defect, but can place no beauty in its stead. Simple genius must draw all from nature; it can do nothing, or almost nothing, by its will; and it will fulfil the idea of this kind of poetry provided nature acts in it by an inner necessity. Now, it is true that all which happens by nature is necessary, and all the productions, happy or not, of the simple genius, which is disassociated from nothing so much as from arbitrary will, are also imprinted with this character of necessity; momentary constraint is one thing, and the internal

necessity dependent on the totality of things, another. Considered as a whole, nature is independent and infinite; in isolated operations it is poor and limited. The same distinction holds good in respect to the nature of the poet. The very moment when he is most happily inspired depends on a preceding instant, and consequently only a conditional necessity can be attributed to him. But now the problem that the poet ought to solve is to make an individual state similar to the human whole, and consequently to base it in an absolute and necessary manner on itself. It is therefore necessary that at the moment of inspiration every trace of a temporal need should be banished, and that the object itself, however limited, should not limit the flight of the poet. But it may be conceived that this is only possible in so far as the poet brings to the object an absolute freedom, an absolute fullness of faculties, and in so far as he is prepared by an anterior exercise to embrace all things with all his humanity. Now he cannot acquire this exercise except by the world in which he lives, and of which he receives the impressions immediately. Thus simple genius is in a state of dependence with regard to experience, while the sentimental genius is forced from it. We know that the sentimental genius begins its operation at the place where the other finishes its own; its virtue is to complete by the elements which it derives from itself a defective object, and to transport itself by its own strength from a limited state to one of absolute freedom. Thus the simple poet needs a help from without, while the sentimental poet feeds his genius from his own fund, and purifies himself by himself. The former requires a picturesque nature, a poetical world, a simple humanity which casts its eyes around; for he ought to do his work without issuing from the sensuous sphere. If external aid fails him, if he be surrounded by matter not speaking to mind, one of two things will happen: either, if the general character of the poet-race is what prevails in him, he issues from the particular class to which he belongs as a poet, and becomes sentimental to be at any rate poetic; or, if his particular character as simple poet has the upper hand, he leaves his species, and becomes a common nature, in order to remain at any rate natural. The former of these two alternatives might represent the case of the principal poets of the sentimental kind in Roman antiquity and in modern times. Born at another period of the world, transplanted under another sky, these poets who stir us now by ideas, would have charmed us by individual truth and simple beauty. The other alternative is the almost unavoidable quicksand for a poet who, thrown into a vulgar world, cannot resolve to lose sight of nature.

I mean, to lose sight of actual nature; but the greatest care must be

given to distinguish actual nature from true nature, which is the subject of simple poetry. Actual nature exists everywhere; but true nature is so much the more rare because it requires an internal necessity that determines its existence. Every eruption of passion, however vulgar, is real—it may be even true nature; but it is not true human nature, for true human nature requires that the self-directing faculty in us should have a share in the manifestation, and the expression of this faculty is always dignified. All moral baseness is an actual human phenomenon, but I hope not real human nature, which is always noble. All the faults of taste cannot be surveyed that have been occasioned in criticism or the practice of art by this confusion between actual human nature and true human nature. The greatest trivialities are tolerated and applauded under the pretext that they are real nature. Caricatures not to be tolerated in the real world are carefully preserved in the poetic world and reproduced according to nature! The poet can certainly imitate a lower nature, and it enters into the very definition of a satirical poet; but then a beauty by its own nature must sustain and raise the object, and the vulgarity of the subject must not lower the imitator too much. If at the moment he paints he is true human nature himself, the object of his paintings is indifferent; but it is only on this condition we can tolerate a faithful reproduction of reality. Unhappy for us readers when the rod of satire falls into hands that nature meant to handle another instrument, and when, devoid of all poetic talent, with nothing but the ape's mimicry, they exercise it brutally at the expense of our taste!

But vulgar nature has even its dangers for the simple poet; for the simple poet is formed by this fine harmony of the feeling and thinking faculty, which yet is only an idea, never actually realized. Even in the happiest geniuses of this class, receptivity will always more or less carry the day over spontaneous activity. But receptivity is always more or less subordinate to external impressions, and nothing but a perpetual activity of the creative faculty could prevent matter from exercising a blind violence over this quality. Now every time this happens the feeling becomes vulgar instead of poetical.

No genius of the simple class, from Homer down to Bodmer, has entirely steered clear of this quicksand. It is evident that it is most perilous to those who have to struggle against external vulgarity, or who have parted with their refinement owing to a want of proper restraint. The first-named difficulty is the reason why even authors of high cultivation are not always emancipated from platitudes—a fact which has prevented many splendid talents from occupying the place to which they

were summoned by nature. For this reason, a comic poet whose genius has chiefly to deal with scenes of real life is more liable to the danger of acquiring vulgar habits of style and expression—a fact evidenced in the case of Aristophanes, Plautus, and all the poets who have followed in their track. Even Shakespeare, with all his sublimity, suffers us to fall very low now and then. Again, Lope de Vega, Molière, Regnard, Goldoni worry us with frequent trifling. Holberg drags us down into the mire. Schlegel, a German poet among the most remarkable for intellectual talent, with genius to raise him to a place among poets of the first order; Gellert, a truly simple poet; Rabener; and Lessing himself, if I am warranted to introduce his name in this category—this highly cultivated scholar of criticism and vigilant examiner of his own genius—all these suffer in different degrees from the platitudes and uninspired movements of the natures they chose as the theme of their satire. With regard to more recent authors of this class, I avoid naming any of them, as I can make no exceptions in their case.

But not only is simple genius exposed to the danger of coming too near to vulgar reality; the ease of expression, even this too close approximation to reality, encourages vulgar imitators to try their hand in poetry. Sentimental poetry, though offering danger enough, has this advantage, to keep this crowd at a distance, for it is not for the first comer to rise to the ideal; but simple poetry makes them believe that, with feeling and humour, you need only imitate real nature to claim the title of poet. Now nothing is more revolting than platitude when it tries to be simple and amiable, instead of hiding its repulsive nature under the veil of art. This occasions the incredible trivialities loved by the Germans under the name of simple and facetious songs, and which give them endless amusement round a well-garnished table. Under the pretext of good humour and of sentiment people tolerate these poverties; but this good humour and this sentiment ought to be carefully proscribed. The muses of the Pleisse, in particular, are singularly pitiful; and other muses respond to them, from the banks of the Seine and the Elbe. If these pleasantries are flat, the passion heard on our tragic stage is equally pitiful, for, instead of imitating true nature, it is only an insipid and ignoble expression of the actual. Thus, after shedding torrents of tears, you feel as you would after visiting a hospital or reading the “Human Misery” of Saltzmann. But the evil is worse in satirical poetry and comic romance, kinds which touch closely on every-day life, and which consequently, as all frontier posts, ought to be in safer hands. In truth, he less than any other is called on to become the painter of his century, who is himself the child and caricature of his

century. But as, after all, nothing is easier than to take in hand, among our acquaintances, a comic character—a big, fat man—and draw a coarse likeness of him on paper, the sworn enemies of poetic inspiration are often led to blot some paper in this way to amuse a circle of friends. It is true that a pure heart, a well-made mind, will never confound these vulgar productions with the inspirations of simple genius. But purity of feeling is the very thing that is wanting, and in most cases nothing is thought of but satisfying a want of sense, without spiritual nature having any share. A fundamentally just idea, ill understood, that works of *bel-esprit* serve to recreate the mind contributes to keep up this indulgence, if indulgence it may be called when nothing higher occupies the mind, and reader as well as writer find their chief interest therein. This is because vulgar natures, if overstrained, can only be refreshed by vacuity; and even a higher intelligence, when not sustained by a proportional culture, can only rest from its work amidst sensuous enjoyments, from which spiritual nature is absent.

Poetic genius ought to have strength enough to rise with a free and innate activity above all the accidental hindrances which are inseparable from every confined condition, to arrive at a representation of humanity in the absolute plenitude of its powers; it is not, however, permitted, on the other hand, to emancipate itself from the necessary limits implied by the very idea of human nature; for the absolute only in the circle of humanity is its true problem. Simple genius is not exposed to overstep this sphere, but rather not to fill it entirely, giving too much scope to external necessity, to accidental wants, at the expense of the inner necessity. The danger for the sentimental genius is, on the other hand, by trying to remove all limits, of nullifying human nature absolutely, and not only rising, as is its right and duty, beyond finite and determinate reality, as far as absolute possibility, or in other terms to idealize; but of passing even beyond possibility, or, in other words, dreaming. This fault—overstraining—is precisely dependent on the specific property of the sentimental process, as the opposite defect, inertia, depends on the peculiar operation of the simple genius. The simple genius lets nature dominate, without restricting it; and as nature in her particular phenomena is always subject to some want, it follows that the simple sentiment will not be always exalted enough to resist the accidental limitations of the present hour. The sentimental genius, on the contrary, leaves aside the real world, to rise to the ideal and to command its matter with free spontaneity. But while reason, according to law, aspires always to the unconditional, so the sentimental genius will not always remain calm enough to restrain

itself uniformly and without interruption within the conditions implied by the idea of human nature, and to which reason must always, even in its freest acts, remain attached. He could only confine himself in these conditions by help of a receptivity proportioned to his free activity; but most commonly this activity predominates over receptivity in the sentimental poet, as much as receptivity over activity in the simple poet. Hence, in the productions of simple genius, if sometimes inspiration is wanting, so also in works of sentimental poetry the object is often missed. Thus, though they proceed in opposite ways, they will both fall into a vacuum, for before the aesthetic judgment an object without inspiration, and inspiration without an object, are both negations.

The poets who borrow their matter too much from thought, and rather conceive poetic pictures by the internal abundance of ideas than by the suggestions of feeling, are more or less likely to be addicted to go thus astray. In their creations reason makes too little of the limits of the sensuous world, and thought is always carried too far for experience to follow it. Now, when the idea is carried so far that not only no experience corresponds to it—as is the case in the beau ideal—but also that it is repugnant to the conditions of all possible experience, so that, in order to realize it, one must leave human nature altogether, it is no longer a poetic but an exaggerated thought; that is, supposing it claims to be representable and poetical, for otherwise it is enough if it is not self-contradictory. If thought is contradictory it is not exaggeration, but nonsense; for what does not exist cannot exceed. But when the thought is not an object proposed to the fancy, we are just as little justified in calling it exaggerated. For simple thought is infinite, and what is limitless also cannot exceed. Exaggeration, therefore, is only that which wounds, not logical truth, but sensuous truth, and what pretends to be sensuous truth. Consequently, if a poet has the unhappy chance to choose for his picture certain natures that are merely superhuman and cannot possibly be represented, he can only avoid exaggeration by ceasing to be a poet, and not trusting the theme to his imagination. Otherwise one of two things would happen: either imagination, applying its limits to the object, would make a limited and merely human object of an absolute object—which happened with the gods of Greece—or the object would take away limits from fancy, that is, would render it null and void; and this is precisely exaggeration.

Extravagance of feeling should be distinguished from extravagance of portraiture: we are speaking of the former. The object of the feeling may be unnatural, but the feeling itself is natural, and ought accordingly to be

shadowed forth in the language of nature. While extravagant feelings may issue from a warm heart and a really poetic nature, extravagance of portraiture always displays a cold heart, and very often a want of poetic capacity. Therefore this is not a danger for the sentimental poet, but only for the imitator, who has no vocation; it is therefore often found with platitude, insipidity, and even baseness. Exaggeration of sentiment is not without truth, and must have a real object; as nature inspires it, it admits of simplicity of expression, and coming from the heart, it goes to the heart. As its object, however, is not in nature, but artificially produced by the understanding, it has only a logical reality, and the feeling is not purely human. It was not an illusion that Héloïse had for Abélard, Petrarch for Laura, Saint Preux for his Julia, Werther for his Charlotte; Agathon, Phantias, and Peregrinus—in Wieland—for the object of their dreams: the feeling is true, only the object is factitious and outside nature. If their thought had kept to simple sensuous truth, it could not have taken this flight; but on the other hand a mere play of fancy, without inner value, could not have stirred the heart: this is only stirred by reason. Thus this sort of exaggeration must be called to order, but it is not contemptible; and those who ridicule it would do well to find out if the wisdom on which they pride themselves is not want of heart, and if it is not through want of reason that they are so acute. The exaggerated delicacy in gallantry and honour which characterizes the chivalrous romances, especially of Spain, is of this kind; also the refined and even ridiculous tenderness of French and English sentimental romances of the best kind. These sentiments are not only subjectively true, but also objectively they are not without value; they are sound sentiments issuing from a moral source, only reprehensible as overstepping the limits of human truth. Without this moral reality how could they stir and touch so powerfully? The same remark applies to moral and religious fanaticism, patriotism, and the love of freedom when carried up to exaltation. As the object of these sentiments is always a pure idea, and not an external experience, imagination with its proper activity has here a dangerous liberty, and cannot, as elsewhere, be called back to bounds by the presence of a visible object. But neither the man nor the poet can withdraw from the law of nature, except to submit to that of reason. He can only abandon reality for the ideal; for liberty must hold to one or the other of these anchors. But it is far from the real to the ideal; and between the two is found fancy, with its arbitrary conceits and its unbridled freedom. It must needs be, therefore, that man in general, and the poet in particular, when he withdraws by liberty of his understanding from the dominion of feeling, without being

moved to it by the laws of reason—that is, when he abandons nature through pure liberty—he finds himself freed from all law, and therefore a prey to the illusions of fantasy.

It is testified by experience that entire nations, as well as individual men, who have parted with the safe direction of nature, are actually in this condition; and poets have gone astray in the same manner. The true genius of sentimental poetry, if its aim is to raise itself to the rank of the ideal, must overstep the limits of the existing nature; but false genius oversteps all boundaries without any discrimination, flattering itself with the belief that the wild sport of the imagination is poetic inspiration. A true poetical genius can never fall into this error, because it only abandons the real for the sake of the ideal, or at all events, it can only do so at certain moments when the poet forgets himself; but his main tendencies may dispose him to extravagance within the sphere of the senses. His example may also drive others into a chase of wild conceptions, because readers of lively fancy and weak understanding only remark the freedom which he takes with existing nature, and are unable to follow him in copying the elevated necessities of his inner being. The same difficulties beset the path of the sentimental genius in this respect, as those which afflict the career of a genius of the simple order. If a genius of this class carries out every work, obedient to the free and spontaneous impulses of his nature, the man devoid of genius who seeks to imitate him is not willing to consider his own nature a worse guide than that of the great poet. This accounts for the fact that masterpieces of simple poetry are commonly followed by a host of stale and unprofitable works in print, and masterpieces of the sentimental class by wild and fanciful effusions—a fact that may be easily verified on questioning the history of literature.

Two maxims are prevalent in relation to poetry, both of them quite correct in themselves, but mutually destructive in the way in which they are generally conceived. The first is that “poetry serves as a means of amusement and recreation,” and we have previously observed that this maxim is highly favourable to aridity and platitudes in poetical fictions. The other maxim, that “poetry is conducive to the moral progress of humanity,” takes under its shelter theories and views of the most wild and extravagant character. It may be profitable to examine more attentively these two maxims, of which so much is heard, and which are so often imperfectly understood and falsely applied.

We say that a thing amuses us when it makes us pass from a forced state to the state that is natural to us. The whole question here is to know in what our natural state ought to consist, and what a forced state means.

If our natural state is made to consist merely in the free development of all our physical powers, in emancipation from all constraint, it follows that every act of reason by resisting what is sensuous is a violence we undergo, and rest of mind combined with physical movement will be a recreation par excellence. But if we make our natural state consist in a limitless power of human expression and of freely disposing of all our strength, all that divides these forces will be a forced state, and recreation will be what brings all our nature to harmony. Thus, the first of these ideal recreations is simply determined by the wants of our sensuous nature; the second, by the autonomous activity of human nature. Which of these two kinds of recreation can be demanded of the poet? Theoretically, the question is inadmissible, as no one would put the human ideal beneath the brutal. But in practice the requirements of a poet have been especially directed to the sensuous ideal, and for the most part favour, though not the esteem, for these sorts of works is regulated thereby. Men's minds are mostly engaged in a labour that exhausts them, or an enjoyment that sets them asleep. Now labour makes rest a sensible want, much more imperious than that of the moral nature; for physical nature must be satisfied before the mind can show its requirements. On the other hand, enjoyment paralyses the moral instinct. Hence these two dispositions common in men are very injurious to the feeling for true beauty, and thus very few even of the best judge soundly in aesthetics. Beauty results from the harmony between spirit and sense; it addresses all the faculties of man, and can only be appreciated if a man employs fully all his strength. He must bring to it an open sense, a broad heart, a spirit full of freshness. All a man's nature must be on the alert, and this is not the case with those divided by abstraction, narrowed by formulas, enervated by application. They demand, no doubt, a material for the senses, but not to quicken, only to suspend, thought. They ask to be freed from what? From a load that oppressed their indolence, and not a rein that curbed their activity.

After this can one wonder at the success of mediocre talents in aesthetics? Or at the bitter anger of small minds against true energetic beauty? They reckon on finding therein a congenial recreation, and regret to discover that a display of strength is required to which they are unequal. With mediocrity they are always welcome; however little mind they bring, they want still less to exhaust the author's inspiration. They are relieved of the load of thought; and their nature can lull itself in beatific nothings on the soft pillow of platitude. In the temple of Thalia and Melpomene—at least, so it is with us—the stupid savant and the ex-

hausted man of business are received on the broad bosom of the goddess, where their intelligence is wrapt in a magnetic sleep, while their sluggish senses are warmed, and their imagination with gentle motions rocked.

Vulgar people may be excused what happens to the best capacities. Those moments of repose demanded by nature after lengthy labour are not favourable to aesthetic judgment, and hence in the busy classes few can pronounce safely on matters of taste. Nothing is more common than for scholars to make a ridiculous figure, in regard to a question of beauty, beside cultured men of the world; and technical critics are especially the laughing-stock of connoisseurs. Their opinion, from exaggeration, crudeness, or carelessness guides them generally quite awry, and they can only devise a technical judgment, and not an aesthetical one, embracing the whole work, in which feeling should decide. If they would kindly keep to technicalities, they might still be useful, for the poet in moments of inspiration and readers under his spell are little inclined to consider details. But the spectacle which they afford us is only the more ridiculous inasmuch as we see these crude natures—with whom all labour and trouble only develop at the most a particular aptitude—when we see them set up their paltry individualities as the representation of universal and complete feeling, and in the sweat of their brow pronounce judgment on beauty.

We have just seen that the kind of recreation poetry ought to afford is generally conceived in too restricted a manner, and only referred to a simple sensuous want. Too much scope, however, is also given to the other idea, the moral ennobling the poet should have in view inasmuch as too purely an ideal aim is assigned.

In fact, according to the pure ideal, the ennobling goes on to infinity, because reason is not restricted to any sensuous limits, and only finds rest in absolute perfection. Nothing can satisfy while a superior thing can be conceived; it judges strictly and admits no excuses of infirmity and finite nature. It only admits for limits those of thought, which transcends time and space. Hence the poet could no more propose to himself such an ideal of ennobling (traced for him by pure [didactic] reason) any more than the coarse ideal of recreation of sensuous nature. The aim is to free human nature from accidental hindrances, without destroying the essential idea of our humanity, or displacing its limits. All beyond this is exaggeration, and a quicksand in which the poet too easily suffers shipwreck if he mistakes the idea of nobleness. But, unfortunately, he cannot rise to the true ideal of ennobled human nature without going some steps beyond it. To rise so high he must abandon the world of reality, for, like

every ideal, it is only to be drawn from its inner moral source. He does not find it in the turmoil of worldly life, but only in his heart, and that only in calm meditation. But in this separation from real life he is likely to lose sight of all the limits of human nature, and seeking pure form he may easily lose himself in arbitrary and baseless conceptions. Reason will abstract itself too much from experience, and the practical man will not be able to carry out, in the crush of real life, what the contemplative mind has discovered on the peaceful path of thought. Thus, what makes a dreamy man is the very thing that alone could have made him a sage; and the advantage for the latter is not that he has never been a dreamer, but rather that he has not remained one.

We must not, then, allow the workers to determine recreation according to their wants, nor thinkers that of nobleness according to their speculations, for fear of either a too low physical poetry, or a poetry too given to hyperphysical exaggeration. And as these two ideas direct most men's judgments on poetry, we must seek a class of mind at once active, but not slavishly so, and idealizing, but not dreamy; uniting the reality of life within as few limits as possible, obeying the current of human affairs, but not enslaved by them. Such a class of men can alone preserve the beautiful unity of human nature, that harmony which all work for a moment disturbs, and a life of work destroys; such alone can, in all that is purely human, give by its feelings universal rules of judgment. Whether such a class exists, or whether the class now existing in like conditions answers to this ideal conception, I am not concerned to inquire. If it does not respond to the ideal it has only itself to blame. In such a class—here regarded as a mere ideal—the simple and sentimental would keep each other from extremes of extravagance and relaxation. For the idea of a beautiful humanity is not exhausted by either, but can only be presented in the union of both.

“On Simple and Sentimental Poetry”
is from a collection of Schiller's essays
entitled ESSAYS AESTHETICAL AND PHILOSOPHICAL.

Percy Bysshe Shelley

1792–1822

Percy Bysshe Shelley was born at Field Place in Sussex, England, on August 4, 1792. His father was a lawyer and member of Parliament. Shelley entered Eton at the age of twelve. His classmates called him “mad Shelley” because of his outspoken atheism. He went to Oxford in 1810 but was expelled at the end of five months for writing a pamphlet that attacked religion.

In 1811 Shelley eloped with Harriet Westbrook, a girl of sixteen. The couple separated in 1815, and the following year Harriet killed herself. After her death Shelley married Mary Wollstonecraft Godwin, the daughter of William Godwin, an essayist and political philosopher.

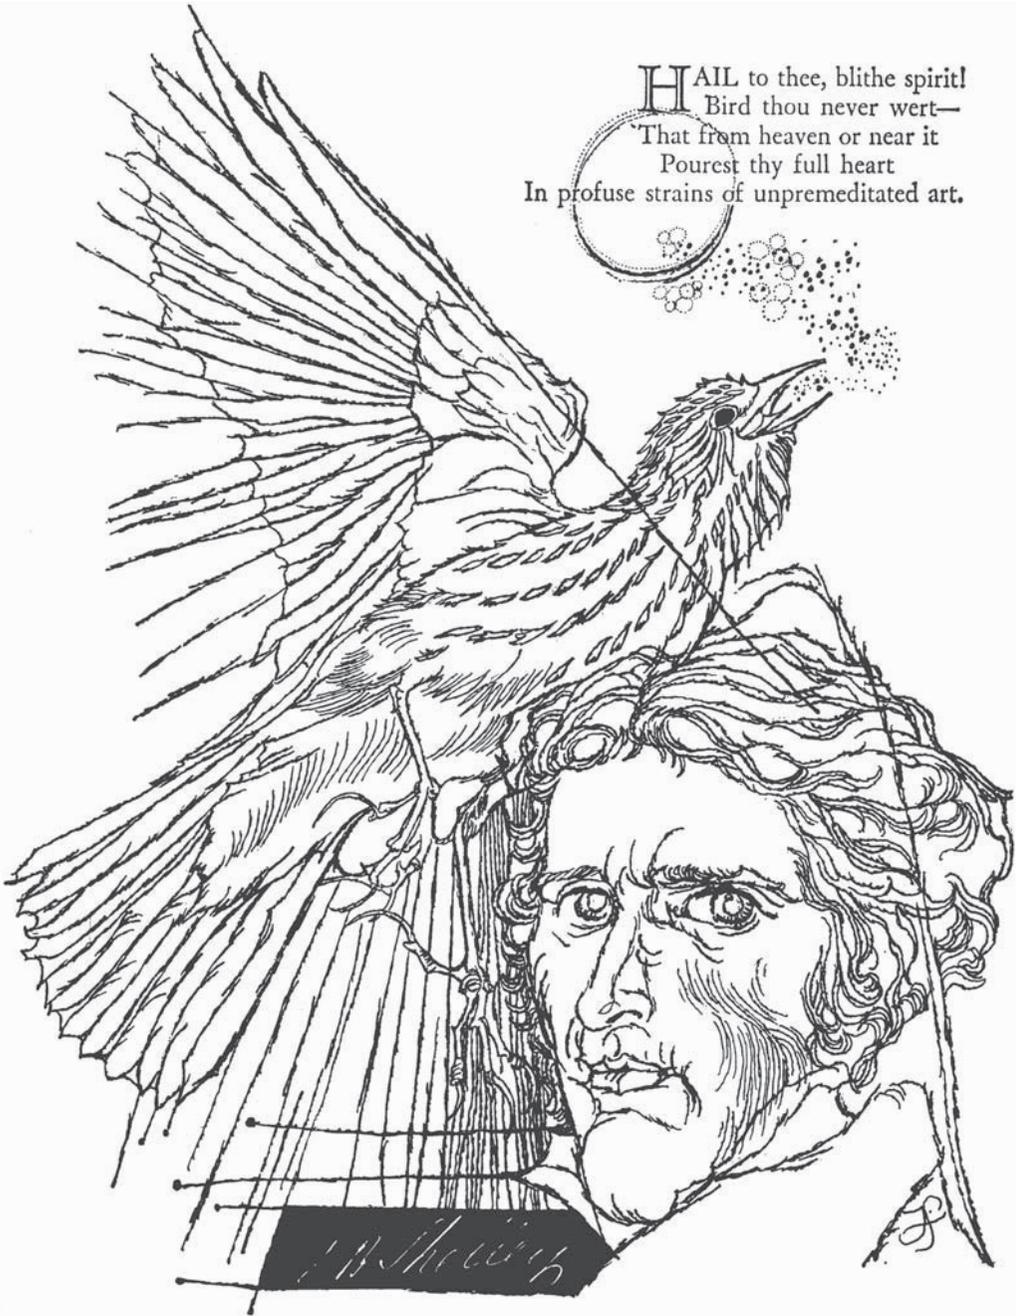

In 1818 the Shelleys left England for Italy, where the poet lived for the rest of his life. He had already published three long poems: *Queen Mab*, *Alastor*, and *The Revolt of Islam*.

In the remaining few years of his life, Shelley traveled in Italy. He visited with friends, especially Byron, and continued to write poetry, the subject matter and approach of which were in the Romantic vein of his time. His most famous long poem was *Adonais*, an elegy on the death of Keats.

Shelley thought of himself primarily as a reformer, a champion of beauty who would purify life of evil and ugliness. Matthew Arnold

Notes from the artist: “Shelley and the ‘Skylark’ drawn to suggest that both the man and the bird, though housed in fragile bodies, possessed great strength and power.”

HAIL to thee, blithe spirit!
Bird thou never wert—
That from heaven or near it
Pourest thy full heart
In profuse strains of unpremeditated art.

characterized Shelley's Romanticism by describing him as "a beautiful and ineffectual angel, beating in the void his luminous wings in vain."

The poet's success as a reformer may be questionable, but some of his lyric poems, such as *To a Skylark*, *Ode to the West Wind*, and *The Cloud*, are ranked with the greatest in English.

Shelley was drowned on July 8, 1822, while sailing with a friend off Leghorn, Italy. His body was recovered and cremated on the beach.

When Shelley set out to defend poetry he did a thorough job of it. In *A Defence of Poetry*, he attempts to prove that poets are philosophers; that they are the creators and protectors of moral and civil laws; and that if it were not for poets, scientists could not have developed either their theories or their inventions.

How is it possible to make such extravagant claims for poetry, which, for many people, is at worst useless and trivial, and at best an impractical delight?

Shelley starts by drawing a distinction between "reason" and "imagination." Imagination, he says, is "the principle of synthesis," reason "the principle of analysis." Imagination involves being, reason involves relations. "Reason is the enumeration of quantities already known; imagination is the perception of the value of those quantities, both separately and as a whole."

"Poetry," he goes on, "in a general sense, may be defined to be 'the expression of the imagination.'" We see immediately that he does not mean only verse. "The distinction between poets and prose-writers," he writes, "is a vulgar error." Bacon was a poet, he says, and so was Plato—not because they wrote beautifully (though they did that), but because they spoke the truth. Any important truth is, for Shelley, primarily poetic. "A poem is the very image of life expressed in its eternal truth."

But poetry is not only writing, either. "The functions of the poetical faculty are twofold; by one it creates new materials of knowledge, and power, and pleasure; by the other it engenders in the mind a desire to reproduce and arrange them." It is because of this that poetry is the creator and supporter of morals and law. But it is also for this reason that poetry underlies, and anticipates, scientific discoveries. Science, Shelley maintains, is analytical; it deals only

with relations between things which are already known. Poetry finds new things. It puts together rather than takes apart. It creates rather than breaks down. It produces a one rather than a many. If there were no poets to find new truths, there would be no science to find the relations between them.

Given this exalted sense of the term, it is possible that no one will dispute Shelley's view. Clearly, there are some scientists who are "poets" in Shelley's meaning of the word. Newton was one, Einstein another. Both had vital and vibrant imaginations. And a politician could be a poet, too. Dante had what is sometimes called, by hard-headed realists, a "dream" of world government. That dream, as expressed in *De Monarchia*,¹ will perhaps never come true—exactly or completely. But the fact that Dante had it, Shelley would perhaps contend, is the reason why the world now has a United Nations. Great ideas exist first in the poetic mind. The man of reason, who is also necessary, follows after.

The most famous statement from *A Defence of Poetry* is its concluding sentence: "Poets are the unacknowledged legislators of the world." This statement has been held to be nonsense or "romantic" exaggeration. But a careful reading of the essay will show that it makes sense. It follows from what Shelley has said. Given his view, it is undeniable.

¹ See the selection "On World Government" in Vol. 7, pp. 383–399, of this set.

A Defence of Poetry

According to one mode of regarding those two classes of mental action which are called reason and imagination, the former may be considered as mind contemplating the relations borne by one thought to another, however produced; and the latter, as mind acting upon those thoughts so as to colour them with its own light, and composing from them, as from elements, other thoughts, each containing within itself the principle of its own integrity. The one is the *topoiein*, or the principle of synthesis, and has for its object those forms which are common to universal nature and existence itself; the other is the *to logizein*, or principle of analysis, and its action regards the relations of things simply as relations, considering thoughts not in their integral unity but as the algebraical representations which conduct to certain general results. Reason is the enumeration of quantities already known; imagination is the perception of the value of those quantities, both separately and as a whole. Reason respects the differences, and imagination the similitudes of things. Reason is to the imagination as the instrument to the agent, as the body to the spirit, as the shadow to the substance.

Poetry, in a general sense, may be defined to be “the expression of the imagination”: and poetry is connate with the origin of man. Man is an instrument over which a series of external and internal impressions are driven, like the alternations of an ever-changing wind over an Aeolian lyre, which move it by their motion to ever-changing melody. But there is a principle within the human being, and perhaps within all sentient beings which acts otherwise than in a lyre, and produces not melody alone, but harmony, by an internal adjustment of the sounds and motions thus excited to the impressions which excite them. It is as if the lyre could accommodate its chords to the motions of that which strikes them, in a

determined proportion of sound; even as the musician can accommodate his voice to the sound of the lyre. A child at play by itself will express its delight by its voice and motions; and every inflection of tone and gesture will bear exact relation to a corresponding antitype in the pleasurable impressions which awakened it; it will be the reflected image of that impression; and as the lyre trembles and sounds after the wind has died away, so the child seeks, by prolonging in its voice and motions the duration of the effect, to prolong also a consciousness of the cause. In relation to the objects which delight a child, these expressions are what poetry is to higher objects. The savage (for the savage is to ages what the child is to years) expresses the emotions produced in him by surrounding objects in a similar manner; and language and gesture, together with plastic or pictorial imitation, become the image of the combined effect of those objects and his apprehension of them. Man in society, with all his passions and his pleasures, next becomes the object of the passions and pleasures of man; an additional class of emotions produces an augmented treasure of expression; and language, gesture, and the imitative arts become at once the representation and the medium, the pencil and the picture, the chisel and the statue, the chord and the harmony. The social sympathies, or those laws from which as from its elements society results, begin to develop themselves from the moment that two human beings coexist; the future is contained within the present as the plant within the seed; and equality, diversity, unity, contrast, mutual dependence become the principles alone capable of affording the motives according to which the will of a social being is determined to action, inasmuch as he is social; and constitute pleasure in sensation, virtue in sentiment, beauty in art, truth in reasoning, and love in the intercourse of kind. Hence men, even in the infancy of society, observe a certain order in their words and actions, distinct from that of the objects and the impressions represented by them, all expression being subject to the laws of that from which it proceeds. But let us dismiss those more general considerations which might involve an inquiry into the principles of society itself, and restrict our view to the manner in which the imagination is expressed upon its forms.

In the youth of the world, men dance and sing and imitate natural objects, observing in these actions, as in all others, a certain rhythm or order. And, although all men observe a similar, they observe not the same order in the motions of the dance, in the melody of the song, in the combinations of language, in the series of their imitations of natural objects. For there is a certain order or rhythm belonging to each of these classes of mimetic representation, from which the hearer and the

spectator receive an intenser and purer pleasure than from any other: the sense of an approximation to this order has been called taste by modern writers. Every man in the infancy of art observes an order which approximates more or less closely to that from which this highest delight results: but the diversity is not sufficiently marked as that its gradations should be sensible, except in those instances where the predominance of this faculty of approximation to the beautiful (for so we may be permitted to name the relation between this highest pleasure and its cause) is very great. Those in whom it exists to excess are poets, in the most universal sense of the word; and the pleasure resulting from the manner in which they express the influence of society or nature upon their own minds communicates itself to others, and gathers a sort of reduplication from the community. Their language is vitally metaphorical; that is, it marks the before unapprehended relations of things and perpetuates their apprehension, until words, which represent them, become, through time, signs for portions or classes of thought, instead of pictures of integral thoughts; and then, if no new poets should arise to create afresh the associations which have been thus disorganized, language will be dead to all the nobler purposes of human intercourse. These similitudes or relations are finely said by Bacon to be “the same footsteps of nature impressed upon the various subjects of the world”; and he considers the faculty which perceives them as the storehouse of axioms common to all knowledge. In the infancy of society every author is necessarily a poet, because language itself is poetry; and to be a poet is to apprehend the true and the beautiful, in a word, the good which exists in the relation subsisting, first between existence and perception, and secondly between perception and expression. Every original language near to its source is in itself the chaos of a cyclic poem: the copiousness of lexicography and the distinctions of grammar are the works of a later age, and are merely the catalogue and the form of the creations of poetry.

But poets, or those who imagine and express this indestructible order, are not only the authors of language and of music, of the dance, and architecture, and statuary, and painting; they are the institutors of laws and the founders of civil society, and the inventors of the arts of life, and the teachers, who draw into a certain propinquity with the beautiful and the true that partial apprehension of the agencies of the invisible world which is called religion. Hence all original religions are allegorical or susceptible of allegory, and, like Janus, have a double face of false and true. Poets, according to the circumstances of the age and nation in which they appeared, were called, in the earlier epochs of the world, legislators

or prophets: a poet essentially comprises and unites both these characters. For he not only beholds intensely the present as it is, and discovers those laws according to which present things ought to be ordered, but he beholds the future in the present, and his thoughts are the germs of the flower and the fruit of latest time. Not that I assert poets to be prophets in the gross sense of the word, or that they can foretell the form as surely as they foreknow the spirit of events: such is the pretence of superstition, which would make poetry an attribute of prophecy, rather than prophecy an attribute of poetry. A poet participates in the eternal, the infinite, and the one; as far as relates to his conceptions, time and place and number are not. The grammatical forms which express the moods of time, and the difference of persons, and the distinction of place are convertible with respect to the highest poetry without injuring it as poetry; and the choruses of Aeschylus, and the book of Job, and Dante's *Paradiso* would afford, more than any other writings, examples of this fact, if the limits of this essay did not forbid citation. The creations of sculpture, painting, and music are illustrations still more decisive.

Language, colour, form, and religious and civil habits of action are all the instruments and materials of poetry; they may be called poetry by that figure of speech which considers the effect as a synonym of the cause. But poetry in a more restricted sense expresses those arrangements of language, and especially metrical language, which are created by that imperial faculty whose throne is curtained within the invisible nature of man. And this springs from the nature itself of language, which is a more direct representation of the actions and passions of our internal being, and is susceptible of more various and delicate combinations than colour, form, or motion, and is more plastic and obedient to the control of that faculty of which it is the creation. For language is arbitrarily produced by the imagination, and has relation to thoughts alone; but all other materials, instruments, and conditions of art have relations among each other, which limit and interpose between conception and expression. The former is as a mirror which reflects, the latter as a cloud which enfeebles, the light of which both are mediums of communication. Hence the fame of sculptors, painters, and musicians, although the intrinsic powers of the great masters of these arts may yield in no degree to that of those who have employed language as the hieroglyphic of their thoughts, has never equalled that of poets in the restricted sense of the term; as two performers of equal skill will produce unequal effects from a guitar and a harp. The fame of legislators and founders of religion, so long as their institutions last, alone seems to exceed that of poets in the restricted sense;

but it can scarcely be a question whether, if we deduct the celebrity which their flattery of the gross opinions of the vulgar usually conciliates, together with that which belonged to them in their higher character of poets, any excess will remain.

We have thus circumscribed the word poetry within the limits of that art which is the most familiar and the most perfect expression of the faculty itself. It is necessary, however, to make the circle still narrower, and to determine the distinction between measured and unmeasured language; for the popular division into prose and verse is inadmissible in accurate philosophy.

Sounds as well as thoughts have relation both between each other and towards that which they represent, and a perception of the order of those relations has always been found connected with a perception of the order of the relations of thought. Hence the language of poets has ever affected a sort of uniform and harmonious recurrence of sound, without which it were not poetry, and which is scarcely less indispensable to the communication of its influence than the words themselves, without reference to that peculiar order. Hence the vanity of translation; it were as wise to cast a violet into a crucible that you might discover the formal principle of its colour and odour as seek to transfuse from one language into another the creations of a poet. The plant must spring again from its seed, or it will bear no flower—and this is the burden of the curse of Babel.

An observation of the regular mode of the recurrence of harmony in the language of poetical minds, together with its relation to music, produced metre, or a certain system of traditional forms of harmony and language. Yet it is by no means essential that a poet should accommodate his language to this traditional form, so that the harmony, which is its spirit, be observed. The practice is indeed convenient and popular, and to be preferred, especially in such composition as includes much action: but every great poet must inevitably innovate upon the example of his predecessors in the exact structure of his peculiar versification. The distinction between poets and prose-writers is a vulgar error. The distinction between philosophers and poets has been anticipated. Plato was essentially a poet—the truth and splendour of his imagery, and the melody of his language, are the most intense that it is possible to conceive. He rejected the harmony of the epic, dramatic, and lyrical forms, because he sought to kindle a harmony in thoughts divested of shape and action, and he forbore to invent any regular plan of rhythm which would include, under determinate forms, the varied pauses of his style. Cicero sought to imitate the cadence of his periods, but with little success. Bacon

was a poet.¹ His language has a sweet and majestic rhythm, which satisfies the sense no less than the almost superhuman wisdom of his philosophy satisfies the intellect; it is a strain which distends, and then bursts the circumference of the reader's mind, and pours itself forth together with it into the universal element with which it has perpetual sympathy. All the authors of revolutions in opinion are not only necessarily poets as they are inventors, nor even as their words unveil the permanent analogy of things by images which participate in the life of truth; but as their periods are harmonious and rhythmical, and contain in themselves the elements of verse, being the echo of the eternal music. Nor are those supreme poets who have employed traditional forms of rhythm on account of the form and action of their subjects less capable of perceiving and teaching the truth of things than those who have omitted that form. Shakespeare, Dante, and Milton (to confine ourselves to modern writers) are philosophers of the very loftiest power.

A poem is the very image of life expressed in its eternal truth. There is this difference between a story and a poem, that a story is a catalogue of detached facts, which have no other connection than time, place, circumstance, cause, and effect; the other is the creation of actions according to the unchangeable forms of human nature, as existing in the mind of the Creator, which is itself the image of all other minds. The one is partial, and applies only to a definite period of time, and a certain combination of events which can never again recur; the other is universal, and contains within itself the germ of a relation to whatever motives or actions have place in the possible varieties of human nature. Time, which destroys the beauty and the use of the story of particular facts, stripped of the poetry which should invest them, augments that of poetry, and forever develops new and wonderful applications of the eternal truth which it contains. Hence epitomes have been called the moths of just history; they eat out the poetry of it. A story of particular facts is as a mirror which obscures and distorts that which should be beautiful: poetry is a mirror which makes beautiful that which is distorted.

The parts of a composition may be poetical, without the composition as a whole being a poem. A single sentence may be considered as a whole, though it may be found in the midst of a series of unassimilated portions; a single word even may be a spark of inextinguishable thought. And thus all the great historians, Herodotus, Plutarch, Livy, were poets; and although the plan of these writers, especially that of Livy, restrained

1. See the *Filum Labyrinthi* and the *Essay on Death* particularly.

them from developing this faculty in its highest degree, they made copious and ample amends for their subjection, by filling all the interstices of their subjects with living images.

Having determined what is poetry, and who are poets, let us proceed to estimate its effects upon society.

Poetry is ever accompanied with pleasure: all spirits upon which it falls open themselves to receive the wisdom which is mingled with its delight. In the infancy of the world, neither poets themselves nor their auditors are fully aware of the excellence of poetry: for it acts in a divine and unapprehended manner, beyond and above consciousness; and it is reserved for future generations to contemplate and measure the mighty cause and effect in all the strength and splendour of their union. Even in modern times, no living poet ever arrived at the fullness of his fame: the jury which sits in judgment upon a poet, belonging as he does to all time, must be composed of his peers: it must be empanelled by time from the selectest of the wise of many generations. A poet is a nightingale, who sits in darkness and sings to cheer its own solitude with sweet sounds; his auditors are as men entranced by the melody of an unseen musician, who feel that they are moved and softened, yet know not whence or why. The poems of Homer and his contemporaries were the delight of infant Greece; they were the elements of that social system which is the column upon which all succeeding civilization has reposed. Homer embodies the ideal perfection of his age in human character; nor can we doubt that those who read his verses were awakened to an ambition of becoming like to Achilles, Hector, and Ulysses: the truth and beauty of friendship, patriotism, and persevering devotion to an object were unveiled to their depths in these immortal creations: the sentiments of the auditors must have been refined and enlarged by a sympathy with such great and lovely impersonations, until from admiring they imitated, and from imitation they identified themselves with the objects of their admiration. Nor let it be objected that these characters are remote from moral perfection, and that they are by no means to be considered as edifying patterns for general imitation. Every epoch, under names more or less specious, has deified its peculiar errors; Revenge is the naked idol of the worship of a semi-barbarous age; and Self-deceit is the veiled image of unknown evil, before which luxury and satiety lie prostrate. But a poet considers the vices of his contemporaries as the temporary dress in which his creations must be arrayed, and which cover without concealing the eternal proportions of their beauty. An epic or dramatic personage is understood to wear them around his soul, as he may the ancient

armour or modern uniform around his body; whilst it is easy to conceive a dress more graceful than either. The beauty of the internal nature cannot be so far concealed by its accidental vesture, but that the spirit of its form shall communicate itself to the very disguise, and indicate the shape it hides from the manner in which it is worn. A majestic form and graceful motions will express themselves through the most barbarous and tasteless costume. Few poets of the highest class have chosen to exhibit the beauty of their conceptions in its naked truth and splendour; and it is doubtful whether the alloy of costume, habit, etc., be not necessary to temper this planetary music for mortal ears.

The whole objection, however, of the immorality of poetry rests upon a misconception of the manner in which poetry acts to produce the moral improvement of man. Ethical science arranges the elements which poetry has created, and propounds schemes and proposes examples of civil and domestic life: nor is it for want of admirable doctrines that men hate, and despise, and censure, and deceive, and subjugate one another. But poetry acts in another and diviner manner. It awakens and enlarges the mind itself by rendering it the receptacle of a thousand unapprehended combinations of thought. Poetry lifts the veil from the hidden beauty of the world, and makes familiar objects be as if they were not familiar; it reproduces all that it represents, and the impersonations clothed in its Elysian light stand thenceforward in the minds of those who have once contemplated them as memorials of that gentle and exalted content which extends itself over all thoughts and actions with which it coexists. The great secret of morals is love; or a going out of our own nature, and an identification of ourselves with the beautiful which exists in thought, action, or person, not our own. A man, to be greatly good, must imagine intensely and comprehensively; he must put himself in the place of another and of many others; the pains and pleasures of his species must become his own. The great instrument of moral good is the imagination; and poetry administers to the effect by acting upon the cause. Poetry enlarges the circumference of the imagination by replenishing it with thoughts of ever new delight, which have the power of attracting and assimilating to their own nature all other thoughts, and which form new intervals and interstices whose void for ever craves fresh food. Poetry strengthens the faculty which is the organ of the moral nature of man, in the same manner as exercise strengthens a limb. A poet therefore would do ill to embody his own conceptions of right and wrong, which are usually those of his place and time, in his poetical creations, which participate in neither. By this assumption of the inferior office of inter-

preting the effect, in which perhaps after all he might acquit himself but imperfectly, he would resign a glory in the participation of the cause. There was little danger that Homer, or any of the eternal poets, should have so far misunderstood themselves as to have abdicated this throne of their widest dominion. Those in whom the poetical faculty, though great, is less intense, as Euripides, Lucan, Tasso, Spenser, have frequently affected a moral aim, and the effect of their poetry is diminished in exact proportion to the degree in which they compel us to advert to this purpose.

Homer and the cyclic poets were followed at a certain interval by the dramatic and lyrical poets of Athens, who flourished contemporaneously with all that is most perfect in the kindred expressions of the poetical faculty; architecture, painting, music, the dance, sculpture, philosophy, and we may add, the forms of civil life. For although the scheme of Athenian society was deformed by many imperfections which the poetry existing in chivalry and Christianity has erased from the habits and institutions of modern Europe; yet never at any other period has so much energy, beauty and virtue been developed; never was blind strength and stubborn form so disciplined and rendered subject to the will of man, or that will less repugnant to the dictates of the beautiful and the true, as during the century which preceded the death of Socrates. Of no other epoch in the history of our species have we records and fragments stamped so visibly with the image of the divinity in man. But it is poetry alone, in form, in action, and in language which has rendered this epoch memorable above all others, and the storehouse of examples to everlasting time. For written poetry existed at that epoch simultaneously with the other arts, and it is an idle inquiry to demand which gave and which received the light, which all, as from a common focus, have scattered over the darkest periods of succeeding time. We know no more of cause and effect than a constant conjunction of events: poetry is ever found to coexist with whatever other arts contribute to the happiness and perfection of man. I appeal to what has already been established to distinguish between the cause and the effect.

It was at the period here adverted to that the drama had its birth; and however a succeeding writer may have equalled or surpassed those few great specimens of the Athenian drama which have been preserved to us, it is indisputable that the art itself never was understood or practised according to the true philosophy of it as at Athens. For the Athenians employed language, action, music, painting, the dance, and religious institutions to produce a common effect in the representation of

the highest idealisms of passion and of power; each division in the art was made perfect in its kind by artists of the most consummate skill, and was disciplined into a beautiful proportion and unity one towards the other. On the modern stage few only of the elements capable of expressing the image of the poet's conception are employed at once. We have tragedy without music and dancing; and music and dancing without the highest impersonations of which they are the fit accompaniment, and both without religion and solemnity. Religious institution has indeed been usually banished from the stage. Our system of divesting the actor's face of a mask, on which the many expressions appropriated to his dramatic character might be moulded into one permanent and unchanging expression, is favourable only to a partial and inharmonious effect; it is fit for nothing but a monologue, where all the attention may be directed to some great master of ideal mimicry. The modern practice of blending comedy with tragedy, though liable to great abuse in point of practice, is undoubtedly an extension of the dramatic circle; but the comedy should be as in *King Lear*, universal, ideal, and sublime. It is perhaps the intervention of this principle which determines the balance in favour of *King Lear* against the *Oedipus Tyrannus* or the *Agamemnon*, or, if you will, the trilogies with which they are connected; unless the intense power of the choral poetry, especially that of the latter, should be considered as restoring the equilibrium. *King Lear*, if it can sustain this comparison, may be judged to be the most perfect specimen of the dramatic art existing in the world; in spite of the narrow conditions to which the poet was subjected by the ignorance of the philosophy of the drama which has prevailed in modern Europe. Calderón, in his religious Autos, has attempted to fulfil some of the high conditions of dramatic representations neglected by Shakespeare; such as the establishing a relation between the drama and religion, and the accommodating them to music and dancing; but he omits the observation of conditions still more important, and more is lost than gained by the substitution of the rigidly defined and ever-repeated idealisms of a distorted superstition for the living impersonations of the truth of human passions.

But I digress. The connection of scenic exhibitions with the improvement or corruption of the manners of men has been universally recognized: in other words, the presence or absence of poetry, in its most perfect and universal form, has been found to be connected with good and evil in conduct or habit. The corruption which has been imputed to the drama as an effect begins when the poetry employed in its constitution ends: I appeal to the history of manners whether the periods of

the growth of the one and the decline of the other have not corresponded with an exactness equal to any example of moral cause and effect.

The drama at Athens, or wheresoever else it may have approached to its perfection, ever coexisted with the moral and intellectual greatness of the age. The tragedies of the Athenian poets are as mirrors in which the spectator beholds himself, under a thin disguise of circumstance, stripped of all but that ideal perfection and energy which every one feels to be the internal type of all that he loves, admires, and would become. The imagination is enlarged by a sympathy with pains and passions so mighty that they distend in their conception the capacity of that by which they are conceived; the good affections are strengthened by pity, indignation, terror and sorrow; and an exalted calm is prolonged from the satiety of this high exercise of them into the tumult of familiar life: even crime is disarmed of half its horror and all its contagion by being represented as the fatal consequence of the unfathomable agencies of nature; error is thus divested of its wilfulness; men can no longer cherish it as the creation of their choice. In the drama of the highest order there is little food for censure or hatred; it teaches rather self-knowledge and self-respect. Neither the eye nor the mind can see itself, unless reflected upon that which it resembles. The drama, so long as it continues to express poetry, is a prismatic and many-sided mirror, which collects the brightest rays of human nature and divides and reproduces them from the simplicity of these elementary forms, and touches them with majesty and beauty, and multiplies all that it reflects, and endows it with the power of propagating its like wherever it may fall.

But in periods of the decay of social life, the drama sympathizes with that decay. Tragedy becomes a cold imitation of the form of the great masterpieces of antiquity, divested of all harmonious accompaniment of the kindred arts; and often the very form misunderstood, or a weak attempt to teach certain doctrines, which the writer considers as moral truths; and which are usually no more than specious flatteries of some gross vice or weakness, with which the author, in common with his auditors, are infected. Hence what has been called the classical and domestic drama. Addison's *Cato* is a specimen of the one; and would it were not superfluous to cite examples of the other! To such purposes poetry cannot be made subservient. Poetry is a sword of lightning, ever unsheathed, which consumes the scabbard that would contain it. And thus we observe that all dramatic writings of this nature are unimaginative in a singular degree; they affect sentiment and passion, which, divested of imagination, are other names for caprice and appetite. The period in our own

history of the grossest degradation of the drama is the reign of Charles II, when all forms in which poetry had been accustomed to be expressed became hymns to the triumph of kingly power over liberty and virtue. Milton stood alone illuminating an age unworthy of him. At such periods the calculating principle pervades all the forms of dramatic exhibition, and poetry ceases to be expressed upon them. Comedy loses its ideal universality: wit succeeds to humour; we laugh from self-complacency and triumph, instead of pleasure; malignity, sarcasm, and contempt succeed to sympathetic merriment; we hardly laugh, but we smile. Obscenity, which is ever blasphemy against the divine beauty in life, becomes, from the very veil which it assumes, more active if less disgusting: it is a monster for which the corruption of society for ever brings forth new food, which it devours in secret.

The drama being that form under which a greater number of modes of expression of poetry are susceptible of being combined than any other, the connection of poetry and social good is more observable in the drama than in whatever other form. And it is indisputable that the highest perfection of human society has ever corresponded with the highest dramatic excellence; and that the corruption or the extinction of the drama in a nation where it has once flourished is a mark of a corruption of manners, and an extinction of the energies which sustain the soul of social life. But, as Machiavelli says of political institutions, that life may be preserved and renewed, if men should arise capable of bringing back the drama to its principles. And this is true with respect to poetry in its most extended sense: all language, institution and form require not only to be produced but to be sustained: the office and character of a poet participates in the divine nature as regards providence, no less than as regards creation.

Civil war, the spoils of Asia, and the fatal predominance first of the Macedonian, and then of the Roman arms, were so many symbols of the extinction or suspension of the creative faculty in Greece. The bucolic writers, who found patronage under the lettered tyrants of Sicily and Egypt, were the latest representatives of its most glorious reign. Their poetry is intensely melodious; like the odour of the tuberose, it overcomes and sickens the spirit with excess of sweetness; whilst the poetry of the preceding age was as a meadow-gale of June, which mingles the fragrance of all the flowers of the field, and adds a quickening and harmonizing spirit of its own which endows the sense with a power of sustaining its extreme delight. The bucolic and erotic delicacy in written poetry is correlative with that softness in statuary, music, and the kindred arts,

and even in manners and institutions, which distinguished the epoch to which I now refer. Nor is it the poetical faculty itself, or any misapplication of it, to which this want of harmony is to be imputed. An equal sensibility to the influence of the senses and the affections is to be found in the writings of Homer and Sophocles: the former, especially, has clothed sensual and pathetic images with irresistible attractions. The superiority in these to succeeding writers consists in the presence of those thoughts which belong to the inner faculties of our nature, not in the absence of those which are connected with the external: their incomparable perfection consists in a harmony of the union of all. It is not what the erotic poets have, but what they have not, in which their imperfection consists. It is not inasmuch as they were poets, but inasmuch as they were not poets, that they can be considered with any plausibility as connected with the corruption of their age. Had that corruption availed so as to extinguish in them the sensibility to pleasure, passion, and natural scenery, which is imputed to them as an imperfection, the last triumph of evil would have been achieved.

For the end of social corruption is to destroy all sensibility to pleasure; and, therefore, it is corruption. It begins at the imagination and the intellect as at the core, and distributes itself thence as a paralysing venom, through the affections into the very appetites, until all become a torpid mass in which hardly sense survives. At the approach of such a period, poetry ever addresses itself to those faculties which are the last to be destroyed, and its voice is heard, like the footsteps of Astraea, departing from the world. Poetry ever communicates all the pleasure which men are capable of receiving: it is ever still the light of life; the source of whatever of beautiful or generous or true can have place in an evil time. It will readily be confessed that those among the luxurious citizens of Syracuse and Alexandria, who were delighted with the poems of Theocritus, were less cold, cruel, and sensual than the remnant of their tribe. But corruption must utterly have destroyed the fabric of human society before poetry can ever cease. The sacred links of that chain have never been entirely disjoined, which descending through the minds of many men is attached to those great minds, whence as from a magnet the invisible effluence is sent forth, which at once connects, animates, and sustains the life of all. It is the faculty which contains within itself the seeds at once of its own and of social renovation. And let us not circumscribe the effects of the bucolic and erotic poetry within the limits of the sensibility of those to whom it was addressed. They may have perceived the beauty of those immortal compositions simply as fragments and isolated portions;

those who are more finely organized, or born in a happier age, may recognize them as episodes to that great poem which all poets, like the cooperating thoughts of one great mind, have built up since the beginning of the world.

The same revolutions within a narrower sphere had place in ancient Rome; but the actions and forms of its social life never seem to have been perfectly saturated with the poetical element. The Romans appear to have considered the Greeks as the selectest treasuries of the selectest forms of manners and of nature, and to have abstained from creating in measured language, sculpture, music, or architecture anything which might bear a particular relation to their own condition, whilst it should bear a general one to the universal constitution of the world. But we judge from partial evidence, and we judge perhaps partially. Ennius, Varro, Pacuvius, and Accius, all great poets, have been lost. Lucretius is in the highest, and Virgil in a very high sense, a creator. The chosen delicacy of expressions of the latter are as a mist of light which conceal from us the intense and exceeding truth of his conceptions of nature. Livy is instinct with poetry. Yet Horace, Catullus, Ovid, and generally the other great writers of the Virgilian age saw man and nature in the mirror of Greece. The institutions also, and the religion of Rome, were less poetical than those of Greece, as the shadow is less vivid than the substance. Hence poetry in Rome seemed to follow, rather than accompany, the perfection of political and domestic society. The true poetry of Rome lived in its institutions; for whatever of beautiful, true, and majestic they contained could have sprung only from the faculty which creates the order in which they consist. The life of Camillus; the death of Regulus; the expectation of the senators, in their godlike state, of the victorious Gauls; the refusal of the republic to make peace with Hannibal after the battle of Cannae were not the consequences of a refined calculation of the probable personal advantage to result from such a rhythm and order in the shows of life to those who were at once the poets and the actors of these immortal dramas. The imagination beholding the beauty of this order created it out of itself according to its own idea; the consequence was empire, and the reward everlasting fame. These things are not the less poetry, *quia carent vate sacro* [because they lack a poet]. They are the episodes of that cyclic poem written by Time upon the memories of men. The Past, like an inspired rhapsodist, fills the theatre of everlasting generations with their harmony.

At length the ancient system of religion and manners had fulfilled the circle of its evolutions. And the world would have fallen into utter an-

archy and darkness, but that there were found poets among the authors of the Christian and chivalric systems of manners and religion, who created forms of opinion and action never before conceived; which, copied into the imaginations of men, became as generals to the bewildered armies of their thoughts. It is foreign to the present purpose to touch upon the evil produced by these systems: except that we protest, on the ground of the principles already established, that no portion of it can be attributed to the poetry they contain.

It is probable that the poetry of Moses, Job, David, Solomon, and Isaiah had produced a great effect upon the mind of Jesus and his disciples. The scattered fragments preserved to us by the biographers of this extraordinary person are all instinct with the most vivid poetry. But his doctrines seem to have been quickly distorted. At a certain period after the prevalence of a system of opinions founded upon those promulgated by him, the three forms into which Plato had distributed the faculties of mind underwent a sort of apotheosis, and became the object of the worship of the civilized world. Here it is to be confessed that "Light thickens," and

. . . the crow makes wing to the rooky wood,
Good things of day begin to droop and drowse;
Whiles night's black agents to their preys do rouse.²

But mark how beautiful an order has sprung from the dust and blood of this fierce chaos! how the world, as from a resurrection, balancing itself on the golden wings of knowledge and of hope, has reassumed its yet unwearied flight into the heaven of time. Listen to the music, unheard by outward ears, which is as a ceaseless and invisible wind, nourishing its everlasting course with strength and swiftness.

The poetry in the doctrines of Jesus, and the mythology and institutions of the Celtic conquerors of the Roman empire, outlived the darkness and the convulsions connected with their growth and victory, and blended themselves in a new fabric of manners and opinion. It is an error to impute the ignorance of the dark ages to the Christian doctrines or the predominance of the Celtic nations. Whatever of evil their agencies may have contained sprang from the extinction of the poetical principle, connected with the progress of despotism and superstition. Men, from causes too intricate to be here discussed, had become insensible and selfish; their own will had become feeble, and yet they were its slaves, and thence the slaves of the will of others; but fear, avarice, cruelty, and fraud character-

2. *Macbeth*, act iii, scene 2, *Great Books of the Western World* [Ed.].

ized a race amongst whom no one was to be found capable of *creating* in form, language, or institution. The moral anomalies of such a state of society are not justly to be charged upon any class of events immediately connected with them, and those events are most entitled to our approbation which could dissolve it most expeditiously. It is unfortunate for those who cannot distinguish words from thoughts that many of these anomalies have been incorporated into our popular religion.

It was not until the eleventh century that the effects of the poetry of the Christian and chivalric systems began to manifest themselves. The principle of equality had been discovered and applied by Plato in his *Republic* as the theoretical rule of the mode in which the materials of pleasure and of power, produced by the common skill and labour of human beings, ought to be distributed among them. The limitations of this rule were asserted by him to be determined only by the sensibility of each, or the utility to result to all. Plato, following the doctrines of Timaeus and Pythagoras, taught also a moral and intellectual system of doctrine, comprehending at once the past, the present, and the future condition of man. Jesus divulged the sacred and eternal truths contained in these views to mankind, and Christianity, in its abstract purity, became the exoteric expression of the esoteric doctrines of the poetry and wisdom of antiquity. The incorporation of the Celtic nations with the exhausted population of the south impressed upon it the figure of the poetry existing in their mythology and institutions. The result was a sum of the action and reaction of all the causes included in it; for it may be assumed as a maxim that no nation or religion can supersede any other without incorporating into itself a portion of that which it supersedes. The abolition of personal and domestic slavery, and the emancipation of women from a great part of the degrading restraints of antiquity, were among the consequences of these events.

The abolition of personal slavery is the basis of the highest political hope that it can enter into the mind of man to conceive. The freedom of women produced the poetry of sexual love. Love became a religion, the idols of whose worship were ever present. It was as if the statues of Apollo and the Muses had been endowed with life and motion, and had walked forth among their worshippers; so that earth became peopled by the inhabitants of a diviner world. The familiar appearance and proceedings of life became wonderful and heavenly, and a paradise was created as out of the wrecks of Eden. And as this creation itself is poetry, so its creators were poets; and language was the instrument of their art:

Galeotto fu il libro, e chi lo scrisse [Galeotto was the book, and he who wrote it].³ The Provençal Trouvères, or inventors, preceded Petrarch, whose verses are as spells, which unseal the inmost enchanted fountains of the delight which is in the grief of love. It is impossible to feel them without becoming a portion of that beauty which we contemplate: it were superfluous to explain how the gentleness and elevation of mind connected with these sacred emotions can render men more amiable, more generous and wise, and lift them out of the dull vapours of the little world of self. Dante understood the secret things of love even more than Petrarch. His *Vita Nuova* is an inexhaustible fountain of purity of sentiment and language: it is the idealized history of that period, and those intervals of his life which were dedicated to love. His apotheosis to Beatrice in Paradise, and the gradations of his own love and her loveliness, by which as by steps he feigns himself to have ascended to the throne of the Supreme Cause, is the most glorious imagination of modern poetry. The acutest critics have justly reversed the judgment of the vulgar, and the order of the great acts of the *Divina Commedia*, in the measure of the admiration which they accord to the Hell, Purgatory, and Paradise. The latter is a perpetual hymn of everlasting love. Love, which found a worthy poet in Plato alone of all the ancients, has been celebrated by a chorus of the greatest writers of the renovated world; and the music has penetrated the caverns of society, and its echoes still drown the dissonance of arms and superstition. At successive intervals, Ariosto, Tasso, Shakespeare, Spenser, Calderón, Rousseau, and the great writers of our own age have celebrated the dominion of love, planting as it were trophies in the human mind of that sublimest victory over sensuality and force. The true relation borne to each other by the sexes into which human kind is distributed has become less misunderstood; and if the error which confounded diversity with inequality of the powers of the two sexes has been partially recognized in the opinions and institutions of modern Europe, we owe this great benefit to the worship of which chivalry was the law, and poets the prophets.

The poetry of Dante may be considered as the bridge thrown over the stream of time, which unites the modern and ancient world. The distorted notions of invisible things which Dante and his rival Milton have idealized, are merely the mask and the mantle in which these great

3. From the episode of Paolo and Francesca in Dante's *Hell* (see *Great Books of the Western World*.) Their love was instigated by their reading the story of Galahad's (Gallehaut's) bringing together Lancelot and Guenevere in the Arthurian romance [Ed.].

poets walk through eternity enveloped and disguised. It is a difficult question to determine how far they were conscious of the distinction which must have subsisted in their minds between their own creeds and that of the people. Dante at least appears to wish to mark the full extent of it by placing Rhiphaeus, whom Virgil calls *justissimus unus* [the most upright], in Paradise, and observing a most poetical caprice in his distribution of rewards and punishments. And Milton's poem contains within itself a philosophical refutation of that system of which, by a strange and natural antithesis, it has been a chief popular support. Nothing can exceed the energy and magnificence of the character of Satan as expressed in *Paradise Lost*. It is a mistake to suppose that he could ever have been intended for the popular personification of evil. Implacable hate, patient cunning, and a sleepless refinement of device to inflict the extremest anguish on an enemy, these things are evil; and, although venial in a slave, are not to be forgiven in a tyrant; although redeemed by much that ennobles his defeat in one subdued, are marked by all that dishonours his conquest in the victor. Milton's Devil as a moral being is as far superior to his God as one who perseveres in some purpose which he has conceived to be excellent in spite of adversity and torture is to one who in the cold security of undoubted triumph inflicts the most horrible revenge upon his enemy not from any mistaken notion of inducing him to repent of a perseverance in enmity but with the alleged design of exasperating him to deserve new torments. Milton has so far violated the popular creed (if this shall be judged to be a violation) as to have alleged no superiority of moral virtue to his God over his Devil. And this bold neglect of a direct moral purpose is the most decisive proof of the supremacy of Milton's genius. He mingled as it were the elements of human nature as colours upon a single palette, and arranged them in the composition of his great picture according to the laws of epic truth, that is, according to the laws of that principle by which a series of actions of the external universe and of intelligent and ethical beings is calculated to excite the sympathy of succeeding generations of mankind. The *Divina Commedia* and *Paradise Lost* have conferred upon modern mythology a systematic form; and when change and time shall have added one more superstition to the mass of those which have arisen and decayed upon the earth, commentators will be learnedly employed in elucidating the religion of ancestral Europe, only not utterly forgotten because it will have been stamped with the eternity of genius.

Homer was the first and Dante the second epic poet: that is, the

second poet, the series of whose creations bore a defined and intelligible relation to the knowledge and sentiment and religion of the age in which he lived, and of the ages which followed it: developing itself in correspondence with their development. For Lucretius had limed the wings of his swift spirit in the dregs of the sensible world; and Virgil, with a modesty that ill became his genius, had affected the fame of an imitator, even whilst he created anew all that he copied; and none among the flock of mock-birds, though their notes are sweet, Apollonius Rhodius, Quintus Calaber, Smyrnaeus, Nonnus, Lucan, Statius, or Claudian, have sought even to fulfil a single condition of epic truth. Milton was the third epic poet. For if the title of epic in its highest sense be refused to the *Aeneid*, still less can it be conceded to the *Orlando Furioso*, the *Gerusalemme Liberata*, *Os Lusíadas* [the *Lusiad*], or the *Faerie Queene*.

Dante and Milton were both deeply penetrated with the ancient religion of the civilized world; and its spirit exists in their poetry probably in the same proportion as its forms survived in the unreformed worship of modern Europe. The one preceded and the other followed the Reformation at almost equal intervals. Dante was the first religious reformer, and Luther surpassed him rather in the rudeness and acrimony than in the boldness of his censures, of papal usurpation. Dante was the first awakener of entranced Europe; he created a language, in itself music and persuasion, out of a chaos of inharmonious barbarisms. He was the congregator of those great spirits who presided over the resurrection of learning; the Lucifer of that starry flock which in the thirteenth century shone forth from republican Italy, as from a heaven, into the darkness of the benighted world. His very words are instinct with spirit; each is as a spark, a burning atom of inextinguishable thought; and many yet lie covered in the ashes of their birth, and pregnant with a lightning which has yet found no conductor. All high poetry is infinite; it is as the first acorn, which contained all oaks potentially. Veil after veil may be undrawn, and the inmost naked beauty of the meaning never exposed. A great poem is a fountain for ever overflowing with the waters of wisdom and delight; and after one person and one age has exhausted all of its divine effluence which their peculiar relations enable them to share, another and yet another succeeds, and new relations are ever developed, the source of an unforeseen and an unconceived delight.

The age immediately succeeding to that of Dante, Petrarch, and Boccaccio was characterized by a revival of painting, sculpture, and architecture. Chaucer caught the sacred inspiration, and the superstructure of English literature is based upon the materials of Italian invention.

But let us not be betrayed from a defence into a critical history of poetry and its influence on society. Be it enough to have pointed out the effects of poets, in the large and true sense of the word, upon their own and all succeeding times.

But poets have been challenged to resign the civic crown to reasoners and mechanists on another plea. It is admitted that the exercise of the imagination is most delightful, but it is alleged that that of reason is more useful. Let us examine, as the grounds of this distinction, what is here meant by utility. Pleasure or good, in a general sense, is that which the consciousness of a sensitive and intelligent being seeks, and in which, when found, it acquiesces. There are two kinds of pleasure, one durable, universal, and permanent; the other transitory and particular. Utility may either express the means of producing the former or the latter. In the former sense, whatever strengthens and purifies the affections, enlarges the imagination, and adds spirit to sense is useful. But a narrower meaning may be assigned to the word utility, confining it to express that which banishes the importunity of the wants of our animal nature, the surrounding men with security of life, the dispersing the grosser delusions of superstition, and the conciliating such a degree of mutual forbearance among men as may consist with the motives of personal advantage.

Undoubtedly the promoters of utility, in this limited sense, have their appointed office in society. They follow the footsteps of poets, and copy the sketches of their creations into the book of common life. They make space, and give time. Their exertions are of the highest value, so long as they confine their administration of the concerns of the inferior powers of our nature within the limits due to the superior ones. But while the sceptic destroys gross superstitions, let him spare to deface, as some of the French writers have defaced, the eternal truths charactered upon the imaginations of men. Whilst the mechanist abridges, and the political economist combines, labour, let them beware that their speculations, for want of correspondence with those first principles which belong to the imagination, do not tend, as they have in modern England, to exasperate at once the extremes of luxury and want. They have exemplified the saying, "To him that hath, more shall be given; and from him that hath not, the little that he hath shall be taken away." The rich have become richer, and the poor have become poorer; and the vessel of the state is driven between the Scylla and Charybdis of anarchy and despotism. Such are the effects which must ever flow from an unmitigated exercise of the calculating faculty.

It is difficult to define pleasure in its highest sense; the definition in-

volving a number of apparent paradoxes. For, from an inexplicable defect of harmony in the constitution of human nature, the pain of the inferior is frequently connected with the pleasures of the superior portions of our being. Sorrow, terror, anguish, despair itself are often the chosen expressions of an approximation to the highest good. Our sympathy in tragic fiction depends on this principle; tragedy delights by affording a shadow of that pleasure which exists in pain. This is the source also of the melancholy which is inseparable from the sweetest melody. The pleasure that is in sorrow is sweeter than the pleasure of pleasure itself. And hence the saying, "It is better to go to the house of mourning than to the house of mirth." Not that this highest species of pleasure is necessarily linked with pain. The delight of love and friendship, the ecstasy of the admiration of nature, the joy of the perception and still more of the creation of poetry is often wholly unalloyed.

The production and assurance of pleasure in this highest sense is true utility. Those who produce and preserve this pleasure are poets or poetical philosophers.

The exertions of Locke, Hume, Gibbon, Voltaire, Rousseau,⁴ and their disciples, in favour of oppressed and deluded humanity, are entitled to the gratitude of mankind. Yet it is easy to calculate the degree of moral and intellectual improvement which the world would have exhibited had they never lived. A little more nonsense would have been talked for a century or two; and perhaps a few more men, women, and children burnt as heretics. We might not at this moment have been congratulating each other on the abolition of the Inquisition in Spain. But it exceeds all imagination to conceive what would have been the moral condition of the world if neither Dante, Petrarch, Boccaccio, Chaucer, Shakespeare, Calderón, Bacon, nor Milton had ever existed; if Raphael and Michelangelo had never been born; if the Hebrew poetry had never been translated; if a revival of the study of Greek literature had never taken place; if no monuments of ancient sculpture had been handed down to us; and if the poetry of the religion of the ancient world had been extinguished together with its belief. The human mind could never, except by the intervention of these excitements, have been awakened to the invention of the grosser sciences, and that application of analytical reasoning to the aberrations of society, which it is now attempted to exalt over the direct expression of the inventive and creative faculty itself.

We have more moral, political, and historical wisdom than we know

4. Although Rousseau has been thus classed, he was essentially a poet. The others, even Voltaire, were mere reasoners.

how to reduce into practice; we have more scientific and economical knowledge than can be accommodated to the just distribution of the produce which it multiplies. The poetry, in these systems of thought, is concealed by the accumulation of facts and calculating processes. There is no want of knowledge respecting what is wisest and best in morals, government, and political economy, or at least what is wiser and better than what men now practise and endure. But we let "*I dare not wait upon I would*, like the poor cat in the adage." We want the creative faculty to imagine that which we know; we want the generous impulse to act that which we imagine; we want the poetry of life; our calculations have outrun conception; we have eaten more than we can digest. The cultivation of those sciences which have enlarged the limits of the empire of man over the external world has, for want of the poetical faculty, proportionally circumscribed those of the internal world; and man, having enslaved the elements, remains himself a slave. To what but a cultivation of the mechanical arts in a degree disproportioned to the presence of the creative faculty, which is the basis of all knowledge, is to be attributed the abuse of all invention for abridging and combining labour, to the exasperation of the inequality of mankind? From what other cause has it arisen that the discoveries which should have lightened have added a weight to the curse imposed on Adam? Poetry, and the principle of Self, of which money is the visible incarnation, are the God and Mammon of the world.

The functions of the poetical faculty are twofold; by one it creates new materials of knowledge, and power, and pleasure; by the other it engenders in the mind a desire to reproduce and arrange them according to a certain rhythm and order, which may be called the beautiful and the good. The cultivation of poetry is never more to be desired than at periods when, from an excess of the selfish and calculating principle, the accumulation of the materials of external life exceed the quantity of the power of assimilating them to the internal laws of human nature. The body has then become too unwieldy for that which animates it.

Poetry is indeed something divine. It is at once the centre and circumference of knowledge; it is that which comprehends all science, and that to which all science must be referred. It is at the same time the root and blossom of all other systems of thought; it is that from which all spring, and that which adorns all, and that which, if blighted, denies the fruit and the seed, and withholds from the barren world the nourishment and the succession of the scions of the tree of life. It is the perfect and consummate surface and bloom of all things; it is as the odour and the

colour of the rose to the texture of the elements which compose it, as the form and splendour of unfaded beauty to the secrets of anatomy and corruption. What were virtue, love, patriotism, friendship—what were the scenery of this beautiful universe which we inhabit; what were our consolations on this side of the grave—and what were our aspirations beyond it, if poetry did not ascend to bring light and fire from those eternal regions where the owl-winged faculty of calculation dare not ever soar? Poetry is not like reasoning, a power to be exerted according to the determination of the will. A man cannot say, “I will compose poetry.” The greatest poet even cannot say it; for the mind in creation is as a fading coal, which some invisible influence, like an inconstant wind, awakens to transitory brightness; this power arises from within, like the colour of a flower which fades and changes as it is developed, and the conscious portions of our nature are unprophetic either of its approach or its departure. Could this influence be durable in its original purity and force, it is impossible to predict the greatness of the results; but when composition begins, inspiration is already on the decline, and the most glorious poetry that has ever been communicated to the world is probably a feeble shadow of the original conceptions of the poet. I appeal to the greatest poets of the present day whether it is not an error to assert that the finest passages of poetry are produced by labour and study. The toil and the delay recommended by critics can be justly interpreted to mean no more than a careful observation of the inspired moments, and an artificial connection of the spaces between their suggestions, by the intertexture of conventional expressions; a necessity only imposed by the limitedness of the poetical faculty itself: for Milton conceived the *Paradise Lost* as a whole before he executed it in portions. We have his own authority also for the muse having “dictated” to him the “unpremeditated song.” And let this be an answer to those who would allege the fifty-six various readings of the first line of the *Orlando Furioso*. Compositions so produced are to poetry what mosaic is to painting. The instinct and intuition of the poetical faculty is still more observable in the plastic and pictorial arts: a great statue or picture grows under the power of the artist as a child in the mother’s womb; and the very mind which directs the hands in formation is incapable of accounting to itself for the origin, the gradations, or the media of the process.

Poetry is the record of the best and happiest moments of the happiest and best minds. We are aware of evanescent visitations of thought and feeling, sometimes associated with place or person, sometimes regarding our own mind alone, and always arising unforeseen and departing un-

bidden, but elevating and delightful beyond all expression: so that even in the desire and the regret they leave, there cannot but be pleasure, participating as it does in the nature of its object. It is as it were the interpenetration of a diviner nature through our own; but its footsteps are like those of a wind over the sea, which the morning calm erases, and whose traces remain only, as on the wrinkled sand which paves it. These and corresponding conditions of being are experienced principally by those of the most delicate sensibility and the most enlarged imagination; and the state of mind produced by them is at war with every base desire. The enthusiasm of virtue, love, patriotism, and friendship is essentially linked with such emotions; and whilst they last, self appears as what it is, an atom to a universe. Poets are not only subject to these experiences as spirits of the most refined organization, but they can colour all that they combine with the evanescent hues of this ethereal world; a word, a trait in the representation of a scene or a passion will touch the enchanted chord, and reanimate, in those who have ever experienced those emotions, the sleeping, the cold, the buried image of the past. Poetry thus makes immortal all that is best and most beautiful in the world; it arrests the vanishing apparitions which haunt the interlunations of life, and veiling them, or in language or in form, sends them forth among mankind, bearing sweet news of kindred joy to those with whom their sisters abide—abide, because there is no portal of expression from the caverns of the spirit which they inhabit into the universe of things. Poetry redeems from decay the visitations of the divinity in man.

Poetry turns all things to loveliness; it exalts the beauty of that which is most beautiful, and it adds beauty to that which is most deformed; it marries exultation and horror, grief and pleasure, eternity and change; it subdues to union, under its light yoke, all irreconcilable things. It transmutes all that it touches, and every form moving within the radiance of its presence is changed by wondrous sympathy to an incarnation of the spirit which it breathes: its secret alchemy turns to potable gold the poisonous waters which flow from death through life; it strips the veil of familiarity from the world, and lays bare the naked and sleeping beauty, which is the spirit of its forms.

All things exist as they are perceived; at least in relation to the percipient.

The mind is its own place, and in itself
Can make a heaven of hell, a hell of heaven.

But poetry defeats the curse which binds us to be subjected to the acci-

dent of surrounding impressions. And whether it spreads its own figured curtain, or withdraws life's dark veil from before the scene of things, it equally creates for us a being within our being. It makes us the inhabitant of a world to which the familiar world is a chaos. It reproduces the common universe of which we are portions and percipients, and it purges from our inward sight the film of familiarity which obscures from us the wonder of our being. It compels us to feel that which we perceive, and to imagine that which we know. It creates anew the universe, after it has been annihilated in our minds by the recurrence of impressions blunted by reiteration. It justifies the bold and true word of Tasso: *Non merita nome di creatore, se non Iddio ed il Poeta* [No one deserves the name of creator except God and the Poet].

A poet, as he is the author to others of the highest wisdom, pleasure, virtue and glory, so he ought personally to be the happiest, the best, the wisest, and the most illustrious of men. As to his glory, let time be challenged to declare whether the fame of any other institutor of human life be comparable to that of a poet. That he is the wisest, the happiest, and the best, inasmuch as he is a poet, is equally incontrovertible: the greatest poets have been men of the most spotless virtue, of the most consummate prudence, and, if we would look into the interior of their lives, the most fortunate of men: and the exceptions, as they regard those who possessed the poetic faculty in a high yet inferior degree, will be found on consideration to confirm rather than destroy the rule. Let us for a moment stoop to the arbitration of popular breath, and usurping and uniting in our own persons the incompatible characters of accuser, witness, judge and executioner, let us decide without trial, testimony, or form that certain motives of those who are "there sitting where we dare not soar" are reprehensible. Let us assume that Homer was a drunkard, that Virgil was a flatterer, that Horace was a coward, that Tasso was a madman, that Bacon was a speculator, that Raphael was a libertine, that Spenser was a poet laureate. It is inconsistent with this division of our subject to cite living poets, but posterity has done ample justice to the great names now referred to. Their errors have been weighed and found to have been dust in the balance; if their sins were as scarlet, they are now white as snow: they have been washed in the blood of the mediator and redeemer, time. Observe in what a ludicrous chaos the imputations of real or fictitious crime have been confused in the contemporary calumnies against poetry and poets; consider how little is, as it appears—or appears as it is; look to your own motives, and judge not, lest ye be judged.

Poetry, as has been said, differs in this respect from logic, that it is not subject to the control of the active powers of the mind, and that its birth

and recurrence have no necessary connection with the consciousness or will. It is presumptuous to determine that these are the necessary conditions of all mental causation, when mental effects are experienced insusceptible of being referred to them. The frequent recurrence of the poetical power, it is obvious to suppose, may produce in the mind a habit of order and harmony correlative with its own nature and with its effects upon other minds. But in the intervals of inspiration, and they may be frequent without being durable, a poet becomes a man, and is abandoned to the sudden reflux of the influences under which others habitually live. But as he is more delicately organized than other men, and sensible to pain and pleasure, both his own and that of others, in a degree unknown to them, he will avoid the one and pursue the other with an ardour proportioned to this difference. And he renders himself obnoxious to calumny, when he neglects to observe the circumstances under which these objects of universal pursuit and flight have disguised themselves in one another's garments.

But there is nothing necessarily evil in this error, and thus cruelty, envy, revenge, avarice, and the passions purely evil have never formed any portion of the popular imputations on the lives of poets.

I have thought it most favourable to the cause of truth to set down these remarks according to the order in which they were suggested to my mind, by a consideration of the subject itself, instead of observing the formality of a polemical reply; but if the view which they contain be just, they will be found to involve a refutation of the arguers against poetry, so far at least as regards the first division of the subject. I can readily conjecture what should have moved the gall of some learned and intelligent writers who quarrel with certain versifiers; I, like them, confess myself unwilling to be stunned by the *Theseids* of the hoarse *Codri* of the day. *Bavius* and *Maeivius* undoubtedly are, as they ever were, insufferable persons. But it belongs to a philosophical critic to distinguish rather than confound.

The first part of these remarks has related to poetry in its elements and principles: and it has been shown, as well as the narrow limits assigned them would permit, that what is called poetry in a restricted sense has a common source with all other forms of order and of beauty, according to which the materials of human life are susceptible of being arranged, and which is poetry in an universal sense.

The second part will have for its object an application of these principles to the present state of the cultivation of poetry, and a defence of the attempt to idealize the modern forms of manners and opinions, and compel them into a subordination to the imaginative and creative faculty.

For the literature of England, an energetic development of which has ever preceded or accompanied a great and free development of the national will, has arisen as it were from a new birth. In spite of the low-thoughted envy which would undervalue contemporary merit, our own will be a memorable age in intellectual achievements, and we live among such philosophers and poets as surpass beyond comparison any who have appeared since the last national struggle for civil and religious liberty. The most unfailing herald, companion, and follower of the awakening of a great people to work a beneficial change in opinion or institution is poetry. At such periods there is an accumulation of the power of communicating and receiving intense and impassioned conceptions respecting man and nature. The persons in whom this power resides may often, as far as regards many portions of their nature, have little apparent correspondence with that spirit of good of which they are the ministers. But even whilst they deny and abjure, they are yet compelled to serve the power which is seated on the throne of their own soul. It is impossible to read the compositions of the most celebrated writers of the present day without being startled with the electric life which burns within their words. They measure the circumference and sound the depths of human nature with a comprehensive and all-penetrating spirit, and they are themselves perhaps the most sincerely astonished at its manifestations; for it is less their spirit than the spirit of the age. Poets are the hierophants of an unapprehended inspiration; the mirrors of the gigantic shadows which futurity casts upon the present; the words which express what they understand not; the trumpets which sing to battle and feel not what they inspire; the influence which is moved not, but moves. Poets are the unacknowledged legislators of the world.

Walt Whitman

1819–1892

Walt Whitman (Walter Whitman, Jr., in full) came of English, Welsh, and Dutch stock. He was born on the family farm in Huntington, Long Island, New York, May 31, 1819. In the early 1820's, his family moved to Brooklyn, where Whitman got a little schooling. He spent a leisurely youth teaching in country districts on Long Island and working as a newspaper printer and writer.

By 1846 he was editing the *Brooklyn Daily Eagle*. A few months with a New Orleans newspaper gave him a chance to explore the Mississippi Valley en route. In Brooklyn again, he began to meditate the poems for *Leaves of Grass*. This great book became the focus of his life. In 1855, almost singlehanded, he set and printed the first edition. "I greet you at the beginning of a great career," Emerson wrote; but the book went largely unread.

From early 1863 until the end of the Civil War, Whitman served as a volunteer nurse, letter writer, and friend in the national hospitals at Washington, D.C. Later he estimated that he made 600 visits and talked to as many as 100,000 sick or wounded, both Union and Confederate. As the author of "an indecent book," he was discharged from the Department of the Interior in 1865.

His friend W. D. O'Connor defended his name in *The Good Gray Poet* and found him another place in the Attorney General's office. There Whitman worked until he was partly disabled by a cerebral hemorrhage in 1873. Meantime his *Selected Poems* had been brought out in England. He published a fifth enlarged edition of *Leaves of Grass*. A prose work, *Democratic Vistas*, conveyed his vision of America's prospects and liabilities.

Except for trips to Colorado and Canada, he spent most of his later years in Camden, New Jersey. There friends—John Burroughs,

Horace Traubel, Dr. R. M. Bucke, and an English admirer, Mrs. Anne Gilchrist—gathered about him. In his last days he edited the ninth edition of *Leaves of Grass* and his *Complete Prose Works*. Weakened by pneumonia, he died in Camden of a complication of illnesses on March 26, 1892.

Let us imagine for a moment that we are Walt Whitman. The year is 1855. He has sold a house to get money for the first publication of *Leaves of Grass*. He is thirty-six, a calm, big-boned man whose hair is already turning gray. He has written a propaganda novel in favor of temperance, edited a few newspapers, and published some sentimental verses. By common standards he is a nobody, but a very self-reliant nobody, “one full-sized man unconquerable and simple.” He lives a ferry ride away from the most energetic city in the bustling new nation of the United States.

This is the man—this nobody, this farmer’s son from Long Island—who announces calmly out of the blue, in his first book, that he has elected himself the poet of American democracy, with options on the world and the universe. Even if it were a hoax, this would be the boldest act in the history of American literature. But it is not a hoax. It is a serene act of genius. He gives us the evidence in verse, plus an argument in prose. We cannot help noticing that the claim is not purely literary. It is also philosophical, social, and political. It demands for the poet—for Whitman himself, and for the poets who will come after him—the most exalted position, as lawgiver, seer, creator of the future, and delegate of the “divine average,” the free individual.

As if this were not enough, the poems in *Leaves of Grass* break all the rules. They shock the literary reader, who expects meter and rhymed endings. Their frankness violates the provincial conventions of the period. With two or three exceptions, the result is outrage. One reviewer calls Whitman “the poet who brought the slop-pail

Notes from the artist: “. . . Bold, sweeping lines in an abstract pattern swirl around and within the portrait of Whitman in workingman’s clothes. The strong, tough lines, like those of Whitman’s poetry, might be thought of as Leaves of Grass.”

into the parlor.” And what does Whitman do? He tries to promote the book. When it will not be promoted, he goes calmly about the business of preparing a second, expanded edition.

But the mystery remains. How did this man suddenly produce this book? We know that in the years between his journey to New Orleans and 1855, something has happened to Whitman. We do not know what. Perhaps he does not know himself. Perhaps it is only that all his lines of development have come together for the first time in the bold speeches of his poems. The answer, if we can find it anywhere, may be found in the *Preface* he wrote for *Leaves of Grass*.

It is infused with a sense of mission. In it Whitman speaks in the tone of a man who has experienced a religious conversion. He has fallen in love with the universe and found his true relation to it. His voice is the voice of a great ethical teacher: “Love the earth and sun and the animals, despise riches, give alms to every one that asks, stand up for the stupid and crazy, devote your income and labor to others, hate tyrants, argue not concerning God. . . .” Do these things, he writes, and “your very flesh shall be a great poem. . . .”

Preface to Leaves of Grass

merica does not repel the past, or what the past has produced under its forms, or amid other politics, or the idea of castes, or the old religions—accepts the lesson with calmness—is not impatient because the slough still sticks to opinions and manners in literature, while the life which served its requirements has passed into the new life of the new forms—perceives that the corpse is slowly borne from the eating and sleeping rooms of the house—perceives that it waits a little while in the door—that it was fittest for its days—that its action has descended to the stalwart and well-shaped heir who approaches—and that he shall be fittest for his days.

The Americans of all nations at any time upon the earth, have probably the fullest poetical nature. The United States themselves are essentially the greatest poem. In the history of the earth hitherto, the largest and most stirring appear tame and orderly to their ampler largeness and stir. Here at last is something in the doings of man that corresponds with the broadcast doings of the day and night. Here is action untied from strings, necessarily blind to particulars and details, magnificently moving in masses. Here is the hospitality which forever indicates heroes. Here the performance, disdainful of the trivial, unapproached in the tremendous audacity of its crowds and groupings, and the push of its perspective, spreads with crampless and flowing breadth, and showers its prolific and splendid extravagance. One sees it must indeed own the riches of the summer and winter, and need never be bankrupt while corn grows from the ground, or the orchards drop apples, or the bays contain fish, or men beget children upon women.

Other states indicate themselves in their deputies—but the genius of the United States is not best or most in its executives or legislatures, nor in its ambassadors or authors, or colleges or churches or parlors, nor

even in its newspapers or inventors—but always most in the common people, south, north, west, east, in all its States, through all its mighty amplitude. The largeness of the nation, however, were monstrous without a corresponding largeness and generosity of the spirit of the citizen. Not swarming states, nor streets and steamships, nor prosperous business, nor farms, nor capital, nor learning, may suffice for the ideal of man—nor suffice the poet. No reminiscences may suffice either. A live nation can always cut a deep mark, and can have the best authority the cheapest—namely, from its own soul. This is the sum of the profitable uses of individuals or states, and of present action and grandeur, and of the subjects of poets. (As if it were necessary to trot back generation after generation to the eastern records! As if the beauty and sacredness of the demonstrable must fall behind that of the mythical! As if men do not make their mark out of any times! As if the opening of the western continent by discovery, and what has transpired in North and South America, were less than the small theatre of the antique, or the aimless sleep walking of the middle ages!) The pride of the United States leaves the wealth and finesse of the cities, and all returns of commerce and agriculture, and all the magnitude of geography or shows of exterior victory, to enjoy the sight and realization of full-sized men, or one full-sized man unconquerable and simple.

The American poets are to enclose old and new, for America is the race of races. The expression of the American poet is to be transcendent and new. It is to be indirect, and not direct or descriptive or epic. Its quality goes through these to much more. Let the age and wars of other nations be chanted, and their eras and characters be illustrated, and that finish the verse. Not so the great psalm of the republic. Here the theme is creative, and has vista. Whatever stagnates in the flat of custom or obedience or legislation, the great poet never stagnates. Obedience does not master him, he masters it. High up out of reach he stands, turning a concentrated light—he turns the pivot with his finger—he baffles the swiftest runners as he stands, and easily overtakes and envelopes them. The time straying toward infidelity and confections and persiflage he withholds by steady faith. Faith is the antiseptic of the soul—it pervades the common people and preserves them—they never give up believing and expecting and trusting. There is that indescribable freshness and unconsciousness about an illiterate person, that humbles and mocks the power of the noblest expressive genius. The poet sees for a certainty how one not a great artist may be just as sacred and perfect as the greatest artist.

The power to destroy or remold is freely used by the greatest poet, but seldom the power of attack. What is past is past. If he does not expose superior models, and prove himself by every step he takes, he is not what is wanted. The presence of the great poet conquers—not parleying, or struggling, or any prepared attempts. Now he has passed that way, see after him! There is not left any vestige of despair, or misanthropy, or cunning, or exclusiveness, or the ignominy of a nativity or color, or delusion of hell or the necessity of hell—and no man thenceforward shall be degraded for ignorance or weakness or sin. The greatest poet hardly knows pettiness or triviality. If he breathes into anything that was before thought small, it dilates with the grandeur and life of the universe. He is a seer—he is individual—he is complete in himself—the others are as good as he, only he sees it, and they do not. He is not one of the chorus—he does not stop for any regulation—he is the president of regulation. What the eyesight does to the rest, he does to the rest. Who knows the curious mystery of the eyesight? The other senses corroborate themselves, but this is removed from any proof but its own, and foreruns the identities of the spiritual world. A single glance of it mocks all the investigations of man, and all the instruments and books of the earth, and all reasoning. What is marvelous? what is unlikely? what is impossible or baseless or vague—after you have once just opened the space of a peach pit, and given audience to far and near, and to the sunset, and had all things enter with electric swiftness, softly and duly, without confusion or jostling or jam?

The land and sea, the animals, fishes and birds, the sky of heaven and the orbs, the forests, mountains and rivers, are not small themes—but folks expect of the poet to indicate more than the beauty and dignity which always attach to dumb real objects—they expect him to indicate the path between reality and their souls. Men and women perceive the beauty well enough—probably as well as he. The passionate tenacity of hunters, woodmen, early risers, cultivators of gardens and orchards and fields, the love of healthy women for the manly form, seafaring persons, drivers of horses, the passion for light and the open air, all is an old varied sign of the unfailing perception of beauty, and of a residence of the poetic in outdoor people. They can never be assisted by poets to perceive—some may, but they never can. The poetic quality is not marshaled in rhyme or uniformity, or abstract addresses to things, nor in melancholy complaints or good precepts, but is the life of these and much else, and is in the soul. The profit of rhyme is that it drops seeds of a sweeter and more luxuriant rhyme, and of uniformity that it conveys itself into its own

roots in the ground out of sight. The rhyme and uniformity of perfect poems show the free growth of metrical laws, and bud from them as unerringly and loosely as lilacs and roses on a bush, and take shapes as compact as the shapes of chestnuts and oranges, and melons and pears, and shed the perfume impalpable to form. The fluency and ornaments of the finest poems or music or orations or recitations, are not independent but dependent. All beauty comes from beautiful blood and a beautiful brain. If the greatnesses are in conjunction in a man or woman, it is enough—the fact will prevail through the universe; but the gaggery and gilt of a million years will not prevail. Who troubles himself about his ornaments or fluency is lost. This is what you shall do: Love the earth and sun and the animals, despise riches, give alms to every one that asks, stand up for the stupid and crazy, devote your income and labor to others, hate tyrants, argue not concerning God, have patience and indulgence toward the people, take off your hat to nothing known or unknown, or to any man or number of men—go freely with powerful uneducated persons, and with the young, and with the mothers of families—re-examine all you have been told in school or church or in any book, and dismiss whatever insults your own soul; and your very flesh shall be a great poem, and have the richest fluency, not only in its words, but in the silent lines of its lips and face, and between the lashes of your eyes, and in every motion and joint of your body. The poet shall not spend his time in unneeded work. He shall know that the ground is already ploughed and manured; others may not know it, but he shall. He shall go directly to the creation. His trust shall master the trust of everything he touches—and shall master all attachment.

The known universe has one complete lover, and that is the greatest poet. He consumes an eternal passion, and is indifferent which chance happens, and which possible contingency of fortune or misfortune, and persuades daily and hourly his delicious pay. What balks or breaks others is fuel for his burning progress to contact and amorous joy. Other proportions of the reception of pleasure dwindle to nothing to his proportions. All expected from heaven or from the highest, he is rapport with in the sight of the daybreak, or the scenes of the winter woods, or the presence of children playing, or with his arm round the neck of a man or woman. His love above all love has leisure and expanse—he leaves room ahead of himself. He is no irresolute or suspicious lover—he is sure—he scorns intervals. His experience and the showers and thrills are not for nothing. Nothing can jar him—suffering and darkness cannot—death and

fear cannot. To him complaint and jealousy and envy are corpses buried and rotten in the earth—he saw them buried. The sea is not surer of the shore, or the shore of the sea, than he is the fruition of his love, and of all perfection and beauty.

The fruition of beauty is no chance of miss or hit—it is as inevitable as life—it is exact and plumb as gravitation. From the eyesight proceeds another eyesight, and from the hearing proceeds another hearing, and from the voice proceeds another voice, eternally curious of the harmony of things with man. These understand the law of perfection in masses and floods—that it is profuse and impartial—that there is not a minute of the light or dark, nor an acre of the earth and sea, without it—nor any direction of the sky, nor any trade or employment, nor any turn of events. This is the reason that about the proper expression of beauty there is precision and balance. One part does not need to be thrust above another. The best singer is not the one who has the most lithe and powerful organ. The pleasure of poems is not in them that take the handsomest measure and sound.

Without effort, and without exposing in the least how it is done, the greatest poet brings the spirit of any or all events and passions and scenes and persons, some more and some less, to bear on your individual character as you hear or read. To do this well is to compete with the laws that pursue and follow Time. What is the purpose must surely be there, and the clue of it must be there—and the faintest indication is the indication of the best, and then becomes the clearest indication. Past and present and future are not disjoined but joined. The greatest poet forms the consistence of what is to be, from what has been and is. He drags the dead out of their coffins and stands them again on their feet. He says to the past, Rise and walk before me that I may realize you. He learns the lesson—he places himself where the future becomes present. The greatest poet does not only dazzle his rays over character and scenes and passions—he finally ascends, and finishes all—he exhibits the pinnacles that no man can tell what they are for, or what is beyond—he glows a moment on the extremest verge. He is most wonderful in his last half-hidden smile or frown; by that flash of the moment of parting the one that sees it shall be encouraged or terrified afterward for many years. The greatest poet does not moralize or make applications of morals—he knows the soul. The soul has that measureless pride which consists in never acknowledging any lessons or deductions but its own. But it has sympathy as measureless as its pride, and the one balances the other, and neither can

stretch too far while it stretches in company with the other. The inmost secrets of art sleep with the twain. The greatest poet has lain close betwixt both, and they are vital in his style and thoughts.

The art of art, the glory of expression and the sunshine of the light of letters, is simplicity. Nothing is better than simplicity—nothing can make up for excess, or for the lack of definiteness. To carry on the heave of impulse and pierce intellectual depths and give all subjects their articulations are powers neither common nor very uncommon. But to speak in literature with the perfect rectitude and insouciance of the movements of animals, and the unimpeachableness of the sentiment of trees in the woods and grass by the roadside, is the flawless triumph of art. If you have looked on him who has achieved it you have looked on one of the masters of the artists of all nations and times. You shall not contemplate the flight of the gray gull over the bay, or the mettlesome action of the blood horse, or the tall leaning of sunflowers on their stalk, or the appearance of the sun journeying through heaven, or the appearance of the moon afterward, with any more satisfaction than you shall contemplate him. The great poet has less a marked style, and is more the channel of thoughts and things without increase or diminution, and is the free channel of himself. He swears to his art, I will not be meddling, I will not have in my writing any elegance, or effect, or originality, to hang in the way between me and the rest like curtains. I will have nothing hang in the way, not the richest curtains. What I tell I tell for precisely what it is. Let who may exalt or startle or fascinate or soothe, I will have purposes as health or heat or snow has, and be as regardless of observation. What I experience or portray shall go from my composition without a shred of my composition. You shall stand by my side and look in the mirror with me.

The old red blood and stainless gentility of great poets will be proved by their unconstraint. A heroic person walks at his ease through and out of that custom or precedent or authority that suits him not. Of the traits of the brotherhood of first-class writers, savans, musicians, inventors and artists, nothing is finer than silent defiance advancing from new free forms. In the need of poems, philosophy, politics, mechanism, science, behavior, the craft of art, an appropriate native grand opera, shipcraft, or any craft, he is greatest for ever and ever who contributes the greatest original practical example. The cleanest expression is that which finds no sphere worthy of itself, and makes one.

The messages of great poems to each man and woman are, Come to us on equal terms, only then can you understand us. We are no better than

you, what we enclose you enclose, what we enjoy you may enjoy. Did you suppose there could be only one Supreme? We affirm there can be unnumbered Supremes, and that one does not countervail another any more than one eyesight countervails another—and that men can be good or grand only of the consciousness of their supremacy within them. What do you think is the grandeur of storms and dismemberments, and the deadliest battles and wrecks, and the wildest fury of the elements, and the power of the sea, and the motion of Nature, and the throes of human desires, and dignity and hate and love? It is that something in the soul which says, Rage on, whirl on, I tread master here and everywhere—Master of the spasms of the sky and of the shatter of the sea, Master of nature and passion and death, and of all terror and all pain.

The American bards shall be marked for generosity and affection, and for encouraging competitors. They shall be Kosmos, without monopoly or secrecy, glad to pass anything to any one—hungry for equals night and day. They shall not be careful of riches and privilege—they shall be riches and privilege—they shall perceive who the most affluent man is. The most affluent man is he that confronts all the shows he sees by equivalents out of the stronger wealth of himself. The American bard shall delineate no class of persons, nor one or two out of the strata of interests, nor love most nor truth most, nor the soul most, nor the body most—and not be for the Eastern States more than the Western, or the Northern States more than the Southern.

Exact science and its practical movements are no checks on the greatest poet, but always his encouragement and support. The outset and remembrance are there—there the arms that lifted him first, and braced him best—there he returns after all his goings and comings. The sailor and traveler—the anatomist, chemist, astronomer, geologist, phrenologist, spiritualist, mathematician, historian, and lexicographer, are not poets, but they are the lawgivers of poets, and their construction underlies the structure of every perfect poem. No matter what rises or is uttered, they sent the seed of the conception of it—of them and by them stand the visible proofs of souls. If there shall be love and content between the father and the son, and if the greatness of the son is the exuding of the greatness of the father, there shall be love between the poet and the man of demonstrable science. In the beauty of poems are henceforth the tuft and final applause of science.

Great is the faith of the flush of knowledge, and of the investigation of the depths of qualities and things. Cleaving and circling here swells the soul of the poet, yet is president of itself always. The depths are fathom-

less, and therefore calm. The innocence and nakedness are resumed—they are neither modest nor immodest. The whole theory of the supernatural, and all that was twined with it or educed out of it, departs as a dream. What has ever happened—what happens, and whatever may or shall happen, the vital laws enclose all. They are sufficient for any case and for all cases—none to be hurried or retarded—any special miracle of affairs or persons inadmissible in the vast clear scheme where every motion and every spear of grass, and the frames and spirits of men and women and all that concerns them, are unspeakably perfect miracles, all referring to all, and each distinct and in its place. It is also not consistent with the reality of the soul to admit that there is anything in the known universe more divine than men and women.

Men and women, and the earth and all upon it, are to be taken as they are, and the investigation of their past and present and future shall be unintermitted, and shall be done with perfect candor. Upon this basis philosophy speculates, ever looking towards the poet, ever regarding the eternal tendencies of all toward happiness, never inconsistent with what is clear to the senses and to the soul. For the eternal tendencies of all toward happiness make the only point of sane philosophy. Whatever comprehends less than that—whatever is less than the laws of light and of astronomical motion—or less than the laws that follow the thief, the liar, the glutton and the drunkard, through this life and doubtless afterward—or less than vast stretches of time, or the slow formation of density, or the patient upheaving of strata—is of no account. Whatever would put God in a poem or system of philosophy as contending against some being or influence, is also of no account. Sanity and ensemble characterize the great master—spoilt in one principle, all is spoilt. The great master has nothing to do with miracles. He sees health for himself in being one of the mass—he sees the hiatus in singular eminence. To the perfect shape comes common ground. To be under the general law is great, for that is to correspond with it. The master knows that he is unspeakably great, and that all are unspeakably great—that nothing, for instance, is greater than to conceive children, and bring them up well—that to *be* is just as great as to perceive or tell.

In the make of the great masters the idea of political liberty is indispensable. Liberty takes the adherence of heroes wherever man and woman exist—but never takes any adherence or welcome from the rest more than from poets. They are the voice and exposition of liberty. They out of ages are worthy the grand idea—to them it is confided, and they

must sustain it. Nothing has precedence of it, and nothing can warp or degrade it.

As the attributes of the poets of the kosmos concentrate in the real body, and in the pleasure of things, they possess the superiority of genuineness over all fiction and romance. As they emit themselves, facts are showered over with light—the daylight is lit with more volatile light—the deep between the setting and rising sun goes deeper many fold. Each precise object or condition or combination or process exhibits a beauty—the multiplication table its—old age its—the carpenter's trade its—the grand opera its—the huge-hulled clean-shaped New York clipper at sea under steam or full sail gleams with unmatched beauty—the American circles and large harmonies of government gleam with theirs—and the commonest definite intentions and actions with theirs. The poets of the kosmos advance through all interpositions and coverings and turmoils and stratagems to first principles. They are of use—they dissolve poverty from its need, and riches from its conceit. You large proprietor, they say, shall not realize or perceive more than any one else. The owner of the library is not he who holds a legal title to it, having bought and paid for it. Any one and every one is owner of the library, (indeed he or she alone is owner,) who can read the same through all the varieties of tongues and subjects and styles, and in whom they enter with ease, and make supple and powerful and rich and large.

These American States, strong and healthy and accomplished, shall receive no pleasure from violations of natural models, and must not permit them. In paintings or moldings or carvings in mineral or wood, or in the illustrations of books or newspapers, or in the patterns of woven stuffs, or anything to beautify rooms or furniture or costumes, or to put upon cornices or monuments, or on the prows or sterns of ships, or to put anywhere before the human eye indoors or out, that which distorts honest shapes, or which creates unearthly beings or places or contingencies, is a nuisance and revolt. Of the human form especially, it is so great it must never be made ridiculous. Of ornaments to a work nothing *outré* can be allowed—but those ornaments can be allowed that conform to the perfect facts of the open air, and that flow out of the nature of the work, and come irrepressibly from it, and are necessary to the completion of the work. Most works are most beautiful without ornament. Exaggerations will be revenged in human physiology. Clean and vigorous children are jettied and conceived only in those communities where the models of natural forms are public every day. Great genius and the people of these

States must never be demeaned to romances. As soon as histories are properly told, no more need of romances.

The great poets are to be known by the absence in them of tricks, and by the justification of perfect personal candor. All faults may be forgiven of him who has perfect candor. Henceforth let no man of us lie, for we have seen that openness wins the inner and outer world, and that there is no single exception, and that never since our earth gathered itself in a mass have deceit or subterfuge or prevarication attracted its smallest particle or the faintest tinge of a shade—and that through the enveloping wealth and rank of a state, or the whole republic of states, a sneak or sly person shall be discovered and despised—and that the soul has never once been fooled and never can be fooled—and thrift without the loving nod of the soul is only a fetid puff—and there never grew up in any of the continents of the globe, nor upon any planet or satellite, nor in that condition which precedes the birth of babes, nor at any time during the changes of life, nor in any stretch of abeyance or action of vitality, nor in any process of formation or reformation anywhere, a being whose instinct hated the truth.

Extreme caution or prudence, the soundest organic health, large hope and comparison and fondness for women and children, large alimentiveness and destructiveness and causality, with a perfect sense of the oneness of nature, and the propriety of the same spirit applied to human affairs, are called up of the float of the brain of the world to be parts of the greatest poet from his birth out of his mother's womb, and from her birth out of her mother's. Caution seldom goes far enough. It has been thought that the prudent citizen was the citizen who applied himself to solid gains, and did well for himself and for his family, and completed a lawful life without debt or crime. The greatest poet sees and admits these economies as he sees the economies of food and sleep, but has higher notions of prudence than to think he gives much when he gives a few slight attentions at the latch of the gate. The premises of the prudence of life are not the hospitality of it, or the ripeness and harvest of it. Beyond the independence of a little sum laid aside for burial money, and of a few clapboards around and shingles overhead on a lot of American soil owned, and the easy dollars that supply the year's plain clothing and meals, the melancholy prudence of the abandonment of such a great being as a man is, to the toss and pallor of years of money-making, with all their scorching days and icy nights, and all their stifling deceits and underhand dodgings, or infinitesimals of parlors, or shameless stuffing while others starve, and all the loss of the bloom and odor of the earth,

and of the flowers and atmosphere, and of the sea, and of the true taste of the women and men you pass or have to do with in youth or middle age, and the issuing sickness and desperate revolt at the close of a life without elevation or naïveté (even if you have achieved a secure 10,000 a year, or election to Congress or the Governorship), and the ghastly chatter of a death without serenity or majesty, is the great fraud upon modern civilization and forethought, blotching the surface and system which civilization undeniably drafts, and moistening with tears the immense features it spreads and spreads with such velocity before the reached kisses of the soul.

Ever the right explanation remains to be made about prudence. The prudence of the mere wealth and respectability of the most esteemed life appears too faint for the eye to observe at all, when little and large alike drop quietly aside at the thought of the prudence suitable for immortality. What is the wisdom that fills the thinness of a year, or seventy or eighty years—to the wisdom spaced out by ages, and coming back at a certain time with strong reinforcements and rich presents, and the clear faces of wedding guests as far as you can look, in every direction, running gaily toward you? Only the soul is of itself—all else has reference to what ensues. All that a person does or thinks is of consequence. Nor can the push of charity or personal force ever be anything else than the profoundest reason, whether it brings argument to hand or no. No specification is necessary—to add or subtract or divide is in vain. Little or big, learned or unlearned, white or black, legal or illegal, sick or well, from the first inspiration down the windpipe to the last expiration out of it, all that a male or female does that is vigorous and benevolent and clean is so much sure profit to him or her in the unshakable order of the universe, and through the whole scope of it forever. The prudence of the greatest poet answers at last the craving and glut of the soul, puts off nothing, permits no letup for its own case or any case, has no particular sabbath or judgment day, divides not the living from the dead, or the righteous from the unrighteous, is satisfied with the present, matches every thought or act by its correlative, and knows no possible forgiveness or deputed atonement.

The direct trial of him who would be the greatest poet is today. If he does not flood himself with the immediate age as with vast oceanic tides—if he be not himself the age transfigured, and if to him is not opened the eternity which gives similitude to all periods and locations and processes, and animate and inanimate forms, and which is the bond of time, and rises up from its inconceivable vagueness and infiniteness in

the swimming shapes of today, and is held by the ductile anchors of life, and makes the present spot the passage from what was to what shall be, and commits itself to the representation of this wave of an hour, and this one of the sixty beautiful children of the wave—let him merge in the general run, and wait his development.

Still the final test of poems, or any character or work, remains. The prescient poet projects himself centuries ahead, and judges performer or performance after the changes of time. Does it live through them? Does it still hold on untired? Will the same style, and the direction of genius to similar points, be satisfactory now? Have the marches of tens and hundreds and thousands of years made willing detours to the right hand and the left hand for his sake? Is he beloved long and long after he is buried? Does the young man think often of him? and the young woman think often of him? and do the middle-aged and the old think of him?

A great poem is for ages and ages in common, and for all degrees and complexions, and all departments and sects, and for a woman as much as a man, and a man as much as a woman. A great poem is no finish to a man or woman, but rather a beginning. Has any one fancied he could sit at last under some due authority, and rest satisfied with explanations, and realize, and be content and full? To no such terminus does the greatest poet bring—he brings neither cessation nor sheltered fatness and ease. The touch of him, like Nature, tells in action. Whom he takes he takes with firm sure grasp into live regions previously unattained—thenceforward is no rest—they see the space and ineffable sheen that turn the old spots and lights into dead vacuums. Now there shall be a man cohered out of tumult and chaos—the elder encourages the younger and shows him how—they two shall launch off fearlessly together till the new world fits an orbit for itself, and looks unabashed on the lesser orbits of the stars, and sweeps through the ceaseless rings, and shall never be quiet again.

There will soon be no more priests. Their work is done. A new order shall arise, and they shall be the priests of man, and every man shall be his own priest. They shall find their inspiration in real objects today, symptoms of the past and future. They shall not deign to defend immortality or God, or the perfection of things, or liberty, or the exquisite beauty and reality of the soul. They shall arise in America, and be responded to from the remainder of the earth.

The English language befriends the grand American expression—it is brawny enough, and limber and full enough. On the tough stock of a race who through all change of circumstance was never without the idea of

political liberty, which is the animus of all liberty, it has attracted the terms of daintier and gayer and subtler and more elegant tongues. It is the powerful language of resistance—it is the dialect of common sense. It is the speech of the proud and melancholy races, and of all who aspire. It is the chosen tongue to express growth, faith, self-esteem, freedom, justice, equality, friendliness, amplitude, prudence, decision, and courage. It is the medium that shall well-nigh express the inexpressible.

No great literature, nor any like style of behavior or oratory, or social intercourse or household arrangements, or public institutions, or the treatment by bosses of employed people, nor executive detail, or detail of the army and navy, nor spirit of legislation or courts, or police or tuition or architecture, or songs or amusements, can long elude the jealous and passionate instinct of American standards. Whether or no the sign appears from the mouths of the people, it throbs a live interrogation in every freeman's and freewoman's heart, after that which passes by, or this built to remain. Is it uniform with my country? Are its disposals without ignominious distinctions? Is it for the ever-growing communes of brothers and lovers, large, well united, proud, beyond the old models, generous beyond all models? Is it something grown fresh out of the fields, or drawn from the sea for use to me today here? I know that what answers for me, an American, in Texas, Ohio, Canada, must answer for any individual or nation that serves for a part of my materials. Does this answer? Is it for the nursing of the young of the republic? Does it solve readily with the sweet milk of the nipples of the breasts of the Mother of Many Children?

America prepares with composure and good will for the visitors that have sent word. It is not intellect that is to be their warrant and welcome. The talented, the artist, the ingenious, the editor, the statesman, the erudite, are not unappreciated—they fall in their place and do their work. The soul of the nation also does its work. It rejects none, it permits all. Only toward the like of itself will it advance half-way. An individual is as superb as a nation when he has the qualities which make a superb nation. The soul of the largest and wealthiest and proudest nation may well go half-way to meet that of its poets.

*The foregoing is Whitman's preface
to the 1882 edition
of LEAVES OF GRASS.*

William Hazlitt

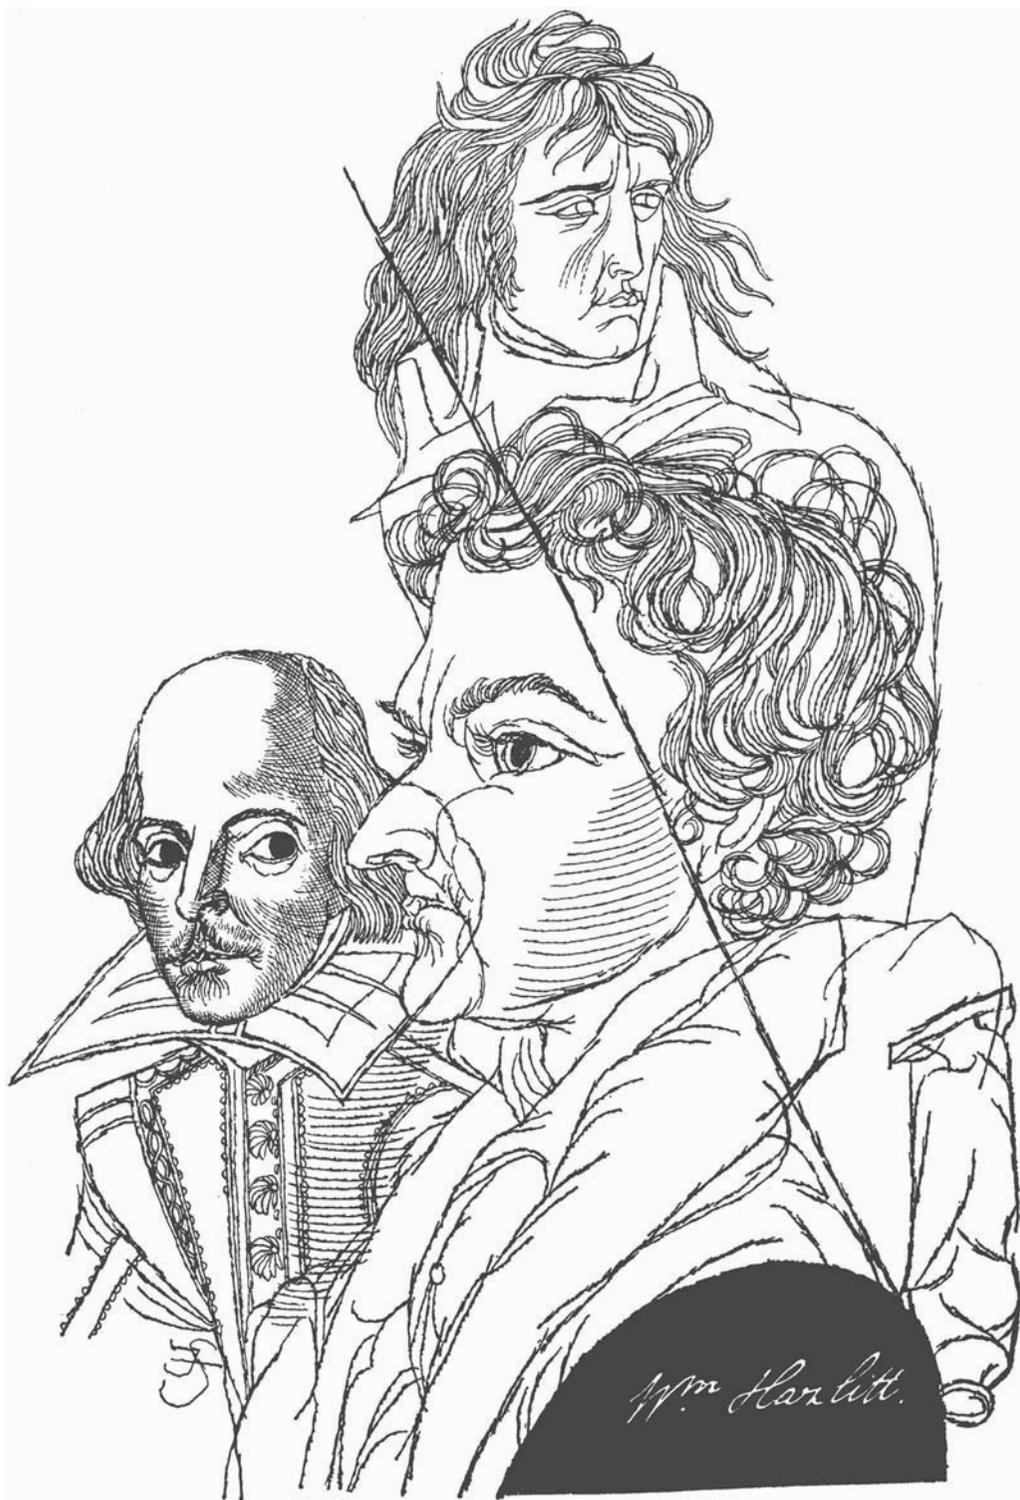

1778–1830

William Hazlitt was born at Maidstone, Kent, April 10, 1778. His father, a Unitarian minister and liberal of Irish stock, knew Franklin and favored the American Revolution. In 1783 he moved his family, first to Ireland, then to Philadelphia and Boston. A little later the Hazlitts returned to England. Young William grew up in the peaceful, flowery countryside at Wem in Shropshire, his mind full of the French Revolution, the great event of his time. All his life he remained a hot libertarian who also idolized Napoleon.

He was sent to a well-taught Unitarian academy at Hackney. Like Henry and William James, he tried painting first. In Paris, he earned his keep making copies of works at the Louvre. Back in England in 1803, he spent two years as a wandering portrait painter. His self-portrait, solidly painted, shows a gaunt-faced, brooding young man, not unhandsome, with lank black hair and big dark eyes.

In 1805 he turned to writing. *On the Principles of Human Action* and three other books of ideas were published in the next few years. He married Sarah Stoddart, a friend of the Lambs, and went to live at Winterslow. Hazlitt was penniless when his second child was born in 1811. He lectured on philosophy in London and got a job as parliamentary reporter on the *Morning Chronicle*. He became the paper's drama critic. A collection of theater articles and two books

Notes from the artist: "Hazlitt and two important figures in his life . . . at the left, Shakespeare, subject of several of Hazlitt's essays; above is Napoleon I, greatly admired by Hazlitt, who was deeply affected by the emperor's defeat at Waterloo."

of his “Round Table” essays made his reputation. He praised the Romantic poets. This brought him under attack by the thunderous William Gifford of the *Quarterly Review*. Hazlitt replied with all guns, to the delight of Keats and his other friends.

He wrote on every subject from art exhibitions to prize fights. His three famous lecture series, including *On the English Poets*, were gathered into books. Long separated from his wife, he fell in love with Sarah Walker, the daughter of his London landlord. She played him off against another man. He wrote the story, somewhat disguised, in *Liber Amoris*, a book that English critics found distasteful. Hazlitt married again later, traveled in France and Italy, and wrote a four-volume life of Napoleon. His best-known later work, *The Spirit of the Age*, contained studies of the leading men of his time. He died of cancer of the stomach in London on September 18, 1830.

Up to 1820 the name of Wordsworth was trampled underfoot,” said De Quincey; and the same was true of Coleridge. Why? Because they had made a revolution in poetry, and because at that time they supported the French Revolution. Hazlitt met them first in 1798, when he was twenty. A quarter-century later, in *My First Acquaintance with Poets*, he recovers the excitement of that youthful time when a new poetry and a new age were born together.

We see Coleridge, the big, “round-faced man in black,” in the character of a Unitarian clergyman, preaching a sermon as vivid as Father Mapple’s in Melville.¹ Later, with young Hazlitt, we go on a visit to Coleridge. Walking, of course—what are legs for?—we arrive at Nether Stowey, a “green and hilly” place near the sea. With Dorothy Wordsworth we eat the plain supper of poets and a day or two later get our first view of that other great man, William Wordsworth, “gaunt and Don Quixote-like” in his “brown fustian jacket and striped pantaloons.”

Hazlitt and Coleridge held nearly opposite opinions of Swift as a poet. But Coleridge, even in his later falling out with Hazlitt, must have found Hazlitt’s essay *On Swift* a generally admirable piece of work. Hazlitt shows a sound understanding of the color and depth of Swift’s moralism. He sees that it is central to Swift’s work.

¹ See *Moby Dick*, in *Great Books of the Western World*.

And he gives us here the best and truest image of Swift as a writer: a jealously irritable father out of patience with “that great baby the world.”

In *Of Persons One Would Wish to Have Seen*, Hazlitt leads us up three flights to an evening party at the rooms of Charles Lamb in Mitre-Court, London. The picture has its own snug charm. The host is there, and his sister Mary, here called “Mrs. Reynolds.” Others who take part in the conversation are William Ayrton, musician and critic; John Rickman, political economist; Erasmus Phillips, his secretary; Fanny Burney’s brother, Captain James Burney, and his son Martin; Barron Field, critic and lawyer; and George Dyer, poet. William Godwin, novelist and political writer, also appears to be present, but silent. The “Eugene Aram” mentioned by Hazlitt was a philologist hanged for murder, later the subject of a novel by Edward Bulwer-Lytton. The “Lord Brooke” of whom Lamb speaks has been named earlier as Fulke Greville, Elizabethan poet and statesman.

Which two persons now dead would *we* like to have seen? We have a century and a half of famous names to add to Hazlitt’s list. Lincoln and Jenny Lind? Sun Yat-sen and Vincent Van Gogh? Or Emily Dickinson and Buffalo Bill?

My First Acquaintance with Poets

M

y father was a Dissenting Minister, at Wem, in Shropshire; and in the year 1798 (the figures that compose the date are to me like the “dreaded name of Demogorgon”) Mr. Coleridge came to Shrewsbury, to succeed Mr. Rowe in the spiritual charge of a Unitarian Congregation there. He did not come till late on the Saturday afternoon before he was to preach; and Mr. Rowe, who himself went down to the coach, in a state of anxiety and expectation, to look for the arrival of his successor, could find no one at all answering the description but a round-faced man, in a short black coat (like a shooting-jacket) which hardly seemed to have been made for him, but who seemed to be talking at a great rate to his fellow-passengers. Mr. Rowe had scarce returned to give an account of his disappointment when the round-faced man in black entered, and dissipated all doubts on the subject by beginning to talk. He did not cease while he stayed; nor has he since, that I know of. He held the good town of Shrewsbury in delightful suspense for three weeks that he remained there, “fluttering the proud Salopians, like an eagle in a dovecote”; and the Welsh mountains that skirt the horizon with their tempestuous confusion agree to have heard no such mystic sounds since the days of

High-born Hoel’s harp or soft Llewellyn’s lay.

As we passed along between Wem and Shrewsbury, and I eyed their blue tops seen through the wintry branches, or the red rustling leaves of the sturdy oak-trees by the roadside, a sound was in my ears as of a Siren’s song; I was stunned, startled with it, as from deep sleep; but I had no notion then that I should ever be able to express my admiration to others in motley imagery of quaint allusion, till the light of his genius shone into my soul, like the sun’s rays glittering in the puddles of the

road. I was at that time dumb, inarticulate, helpless, like a worm by the wayside, crushed, bleeding, lifeless; but now, bursting from the deadly bands that “bound them,

With Styx nine times round them,”

my ideas float on winged words, and as they expand their plumes, catch the golden light of other years. My soul has indeed remained in its original bondage, dark, obscure, with longings infinite and unsatisfied; my heart, shut up in the prison-house of this rude clay, has never found, nor will it ever find, a heart to speak to; but that my understanding also did not remain dumb and brutish, or at length found a language to express itself, I owe to Coleridge. But this is not to my purpose.

My father lived ten miles from Shrewsbury, and was in the habit of exchanging visits with Mr. Rowe, and with Mr. Jenkins of Whitchurch (nine miles farther on), according to the custom of Dissenting Ministers in each other's neighborhood. A line of communication is thus established, by which the flame of civil and religious liberty is kept alive, and nourishes its smoldering fire unquenchable, like the fires in the *Agamemnon* of Aeschylus, placed at different stations, that waited for ten long years to announce with their blazing pyramids the destruction of Troy. Coleridge had agreed to come over and see my father, according to the courtesy of the country, as Mr. Rowe's probable successor; but in the meantime, I had gone to hear him preach the Sunday after his arrival. A poet and a philosopher getting up into a Unitarian pulpit to preach the gospel was a romance in these degenerate days, a sort of revival of the primitive spirit of Christianity, which was not to be resisted.

It was in January of 1798, that I rose one morning before daylight, to walk ten miles in the mud, to hear this celebrated person preach. Never, the longest day I have to live, shall I have such another walk as this cold, raw, comfortless one, in the winter of the year 1798. *Il y a des impressions que ni le tems ni les circonstances peuvent effacer. Dussé-je vivre des siècles entiers, le doux tems de ma jeunesse ne peut renaître pour moi, ni s'effacer jamais dans ma mémoire.* [“There are impressions that neither time nor circumstances can erase. Should I live whole centuries, the sweet period of my youth could never be reborn for me, nor could it ever fade from my memory.”] When I got there, the organ was playing the 100th Psalm, and when it was done, Mr. Coleridge rose and gave out his text, “And he went up into the mountain to pray, HIMSELF, ALONE.” As he gave out this text, his voice “rose like a steam of rich distilled perfumes,” and when he came to the two last words, which he pronounced loud, deep,

and distinct, it seemed to me, who was then young, as if the sounds had echoed from the bottom of the human heart, and as if that prayer might have floated in solemn silence through the universe. The idea of St. John came into my mind, "of one crying in the wilderness, who had his loins girt about, and whose food was locusts and wild honey." The preacher then launched into his subject, like an eagle dallying with the wind. The sermon was upon peace and war; upon church and state—not their alliance, but their separation—on the spirit of the world and the spirit of Christianity, not as the same, but as opposed to one another. He talked of those who had "inscribed the cross of Christ on banners dripping with human gore." He made a poetical and pastoral excursion—and to show the fatal effects of war, drew a striking contrast between the simple shepherd-boy, driving his team afield, or sitting under the hawthorn, piping to his flock, "as though he should never be old," and the same poor country-lad, crimped, kidnapped, brought into town, made drunk at an alehouse, turned into a wretched drummer-boy, with his hair sticking on end with powder and pomatum, a long cue at his back, and tricked out in the loathsome finery of the profession of blood:

Such were the notes our once-loved poet sung.

And for myself, I could not have been more delighted if I had heard the music of the spheres. Poetry and Philosophy had met together. Truth and Genius had embraced, under the eye and with the sanction of Religion. This was even beyond my hopes. I returned home well satisfied. The sun that was still laboring pale and wan through the sky, obscured by thick mists, seemed an emblem of the good cause; and the cold dank drops of dew, that hung half melted on the beard of the thistle, had something genial and refreshing in them; for there was a spirit of hope and youth in all nature, that turned everything into good. The face of nature had not then the brand of *JUS DIVINUM* on it:

Like to that sanguine flower inscrib'd with woe.

On the Tuesday following, the half-inspired speaker came. I was called down into the room where he was, and went half-hoping, half-afraid. He received me very graciously, and I listened for a long time without uttering a word. I did not suffer in his opinion by my silence. "For those two hours," he afterwards was pleased to say, "he was conversing with William Hazlitt's forehead!" His appearance was different from what I had anticipated from seeing him before. At a distance, and in the dim light of the chapel, there was to me a strange wildness in his aspect, a

dusky obscurity, and I thought him pitted with the smallpox. His complexion was at that time clear, and even bright—

As are the children of yon azure sheen.

His forehead was broad and high, light as if built of ivory, with large projecting eyebrows, and his eyes rolling beneath them, like a sea with darkened lustre. "A certain tender bloom his face o'erspread," a purple tinge as we see it in the pale thoughtful complexions of the Spanish portrait-painters, Murillo and Velasquez. His mouth was gross, voluptuous, open, eloquent; his chin good-humoured and round; but his nose, the rudder of the face, the index of the will, was small, feeble, nothing—like what he has done. It might seem that the genius of his face as from a height surveyed and projected him (with sufficient capacity and huge aspiration) into the world unknown of thought and imagination, with nothing to support or guide his veering purpose, as if Columbus had launched his adventurous course for the New World in a scallop, without oars or compass. So, at least, I comment on it after the event. Coleridge, in his person, was rather above the common size, inclining to the corpulent, or like Lord Hamlet, "somewhat fat and pursy." His hair (now, alas! grey) was then black and glossy as the raven's and fell in smooth masses over his forehead. This long pendulous hair is peculiar to enthusiasts, to those whose minds tend heavenward; and is traditionally inseparable (though of a different colour) from the pictures of Christ. It ought to belong, as a character, to all who preach Christ crucified, and Coleridge was at that time one of those!

It was curious to observe the contrast between him and my father, who was a veteran in the cause, and then declining into the vale of years. He had been a poor Irish lad, carefully brought up by his parents, and sent to the University of Glasgow (where he studied under Adam Smith) to prepare him for his future destination. It was his mother's proudest wish to see her son a Dissenting Minister. So, if we look back to past generations (as far as eye can reach), we see the same hopes, fears, wishes, followed by the same disappointments, throbbing in the human heart; and so we may see them (if we look forward) rising up forever, and disappearing, like vaporish bubbles, in the human breast! After being tossed about from congregation to congregation in the heats of the Unitarian controversy, and squabbles about the American war, he had been relegated to an obscure village, where he was to spend the last thirty years of his life, far from the only converse that he loved, the talk about disputed texts of Scripture, and the cause of civil and religious

liberty. Here he passed his days, repining, but resigned, in the study of the Bible, and the perusal of the Commentators—huge folios, not easily got through, one of which would outlast a winter! Why did he pore on these from morn to night (with the exception of a walk in the fields or a turn in the garden to gather broccoli plants or kidney beans of his own rearing, with no small degree of pride and pleasure)? Here were “no figures nor no fantasies”—neither poetry nor philosophy—nothing to dazzle, nothing to excite modern curiosity; but to his lack-lustre eyes there appeared within the pages of the ponderous, unwieldy, neglected tomes, the sacred name of Jehovah in Hebrew capitals: pressed down by the weight of the style, worn to the last fading thinness of the understanding, there were glimpses, glimmering notions of the patriarchal wanderings, with palm-trees hovering in the horizon, and processions of camels at the distance of three thousand years; there was Moses with the Burning Bush, the number of the Twelve Tribes, types, shadows, glosses on the law and the prophets; there were discussions (dull enough) on the age of Methuselah, a mighty speculation! there were outlines, rude guesses at the shape of Noah’s Ark and of the riches of Solomon’s Temple; questions as to the date of the creation, predictions of the end of all things; the great lapses of time, the strange mutations of the globe were unfolded with the voluminous leaf, as it turned over; and though the soul might slumber with an hieroglyphic veil of inscrutable mysteries drawn over it, yet it was in a slumber ill-exchanged for all the sharpened realities of sense, wit, fancy, or reason. My father’s life was comparatively a dream; but it was a dream of infinity and eternity, of death, the resurrection, and a judgment to come!

No two individuals were ever more unlike than were the host and his guest. A poet was to my father a sort of nondescript; yet whatever added grace to the Unitarian cause was to him welcome. He could hardly have been more surprised or pleased, if our visitor had worn wings. Indeed, his thoughts had wings: and as the silken sounds rustled round our little wainscoted parlor, my father threw back his spectacles over his forehead, his white hairs mixing with its sanguine hue; and a smile of delight beamed across his rugged, cordial face, to think that Truth had found a new ally in Fancy! Besides, Coleridge seemed to take considerable notice of me, and that of itself was enough. He talked very familiarly, but agreeably, and glanced over a variety of subjects. At dinner-time he grew more animated, and dilated in a very edifying manner on Mary Wollstonecraft and Mackintosh. The last, he said, he considered (on my father’s speaking of his *Vindiciae Gallicae* as a capital performance) as a clever,

scholastic man—a master of the topics—or, as the ready warehouseman of letters, who knew exactly where to lay his hand on what he wanted, though the goods were not his own. He thought him no match for Burke, either in style or matter. Burke was a metaphysician, Mackintosh a mere logician. Burke was an orator (almost a poet) who reasoned in figures, because he had an eye for nature: Mackintosh, on the other hand, was a rhetorician, who had only an eye to commonplaces. On this I ventured to say that I had always entertained a great opinion of Burke, and that (as far as I could find) the speaking of him with contempt might be made the test of a vulgar, democratical mind. This was the first observation I ever made to Coleridge, and he said it was a very just and striking one. I remember the leg of Welsh mutton and the turnips on the table that day had the finest flavor imaginable. Coleridge added that Mackintosh and Tom Wedgwood (of whom, however, he spoke highly) had expressed a very indifferent opinion of his friend Mr. Wordsworth, on which he remarked to them—“He strides on so far before you, that he dwindles in the distance!” Godwin had once boasted to him of having carried on an argument with Mackintosh for three hours with dubious success; Coleridge told him—“If there had been a man of genius in the room, he would have settled the question in five minutes.” He asked me if I had ever seen Mary Wollstonecraft, and I said, I had once for a few moments, and that she seemed to me to turn off Godwin’s objections to something she advanced with quite a playful, easy air. He replied, that “this was only one instance of the ascendancy which people of imagination exercised over those of mere intellect.” He did not rate Godwin very high (this was caprice or prejudice, real or affected), but he had a great idea of Mrs. Wollstonecraft’s powers of conversation; none at all of her talent for book-making. We talked a little about Holcroft. He had been asked if he was not much struck *with* him, and he said, he thought himself in more danger of being struck *by* him. I complained that he would not let me get on at all, for he required a definition of even the commonest word, exclaiming, “What do you mean by a *sensation*, Sir? What do you mean by an *idea*?” This, Coleridge said, was barricading the road to truth; it was setting up a turnpike gate at every step we took. I forget a great number of things, many more than I remember; but the day passed off pleasantly, and the next morning Mr. Coleridge was to return to Shrewsbury. When I came down to breakfast, I found that he had just received a letter from his friend, T. Wedgwood, making him an offer of £ 150 a year if he chose to waive his present pursuit, and devote himself entirely to the study of poetry and philosophy. Coleridge seemed to

make up his mind to close with this proposal in the act of tying on one of his shoes. It threw an additional damp on his departure. It took the wayward enthusiast quite from us to cast him into Deva's winding vales, or by the shores of old romance. Instead of living at ten miles' distance, of being the pastor of a Dissenting congregation at Shrewsbury, he was henceforth to inhabit the Hill of Parnassus, to be a Shepherd on the Delectable Mountains. Alas! I knew not the way thither, and felt very little gratitude for Mr. Wedgwood's bounty. I was presently relieved from this dilemma; for Mr. Coleridge, asking for a pen and ink, and going to a table to write something on a bit of card, advanced towards me with undulating step, and giving me the precious document, said that that was his address, *Mr. Coleridge, Nether Stowey, Somersetshire*; and that he should be glad to see me there in a few weeks' time, and, if I chose, would come half-way to meet me. I was not less surprised than the shepherd-boy (this simile is to be found in *Cassandra*), when he sees a thunderbolt fall close at his feet. I stammered out my acknowledgments and acceptance of this offer (I thought Mr. Wedgwood's annuity a trifle to it) as well as I could; and this mighty business being settled, the poet-preacher took leave, and I accompanied him six miles on the road. It was a fine morning in the middle of winter, and he talked the whole way. The scholar in Chaucer is described as going

Sounding on his way.

So Coleridge went on his. In digressing, in dilating, in passing from subject to subject, he appeared to me to float in air, to slide on ice. He told me in confidence (going along) that he should have preached two sermons before he accepted the situation at Shrewsbury, one on Infant Baptism, the other on the Lord's Supper, showing that he could not administer either, which would have effectually disqualified him for the object in view. I observed that he continually crossed me on the way by shifting from one side of the foot-path to the other. This struck me as an odd movement; but I did not at that time connect it with any instability of purpose or involuntary change of principle, as I have done since. He seemed unable to keep on in a straight line. He spoke slightly of Hume (whose *Essay on Miracles* he said was stolen from an objection started in one of South's sermons—*Credat Judaeus Apella!* ["Let Apella the Jew believe it."]¹). I was not very much pleased at this account of Hume, for I had just been reading, with infinite relish, that completest

1. Horace, *Satires* V, 100 [Ed.].

of all metaphysical choke-pears, his *Treatise on Human Nature*, to which the *Essays*, in point of scholastic subtlety and close reasoning, are mere elegant trifling, light summer reading. Coleridge even denied the excellence of Hume's general style, which I think betrayed a want of taste or candor. He however made me amends by the manner in which he spoke of Berkeley. He dwelt particularly on his *Essay on Vision* as a masterpiece of analytical reasoning. So it undoubtedly is. He was exceedingly angry with Dr. Johnson for striking the stone with his foot, in allusion to this author's *Theory of Matter and Spirit*, and saying, "Thus I confute him, Sir." Coleridge drew a parallel (I don't know how he brought about the connection) between Bishop Berkeley and Tom Paine. He said the one was an instance of a subtle, the other of an acute mind, than which no two things could be more distinct. The one was a shop-boy's quality, the other the characteristic of a philosopher. He considered Bishop Butler as a true philosopher, a profound and conscientious thinker, a genuine reader of nature and his own mind. He did not speak of his *Analogy*, but of his *Sermons at the Rolls' Chapel*, of which I had never heard. Coleridge somehow always contrived to prefer the *unknown* to the *known*. In this instance, he was right. The *Analogy* is a tissue of sophistry, of wire-drawn, theological special pleading; the *Sermons* (with the preface to them) are in a fine vein of deep, matured reflection, a candid appeal to our observation of human nature, without pedantry and without bias. I told Coleridge I had written a few remarks, and was sometimes foolish enough to believe that I had made a discovery on the same subject (the *Natural Disinterestedness of the Human Mind*)—and I tried to explain my view of it to Coleridge, who listened with great willingness, but I did not succeed in making myself understood. I sat down to the task shortly afterwards for the twentieth time, got new pens and paper, determined to make clear work of it, wrote a few meagre sentences in the skeleton-style of a mathematical demonstration, stopped half-way down the second page; and, after trying in vain to pump up any words, images, notions, apprehensions, facts, or observations, from that gulf of abstraction in which I had plunged myself for four or five years preceding, gave up the attempt as labour in vain, and shed tears of helpless despondency on the blank, unfinished paper. I can write fast enough now. Am I better than I was then? Oh no! One truth discovered, one pang of regret at not being able to express it, is better than all the fluency and flippancy in the world. Would that I could go back to what I then was! Why can we not revive past times as we can revisit old places? If I had the quaint muse of Sir Philip Sidney to assist me, I would write a *Sonnet to the Road*

between Wem and Shrewsbury, and immortalize every step of it by some fond enigmatical conceit. I would swear that the very milestones had ears, and that Harmer Hill stooped with all its pines, to listen to a poet, as he passed! I remember but one other topic of discourse in this walk. He mentioned Paley, praised the naturalness and clearness of his style, but condemned his sentiments, thought him a mere timeserving casuist, and said that "the fact of his work on Moral and Political Philosophy being made a textbook in our Universities was a disgrace to the national character." We parted at the six-mile stone; and I returned homeward, pensive, but much pleased. I had met with unexpected notice from a person whom I believed to have been prejudiced against me. "Kind and affable to me had been his condescension, and should be honoured ever with suitable regard." He was the first poet I had known, and he certainly answered to that inspired name. I had heard a great deal of his powers of conversation, and was not disappointed. In fact, I never met with anything at all like them, either before or since. I could easily credit the accounts which were circulated of his holding forth to a large party of ladies and gentlemen, an evening or two before, on the Berkeleian theory, when he made the whole material universe look like a transparency of fine words; and another story (which I believe he has somewhere told himself) of his being asked to a party at Birmingham, of his smoking tobacco and going to sleep after dinner on a sofa, where the company found him, to their no small surprise, which was increased to wonder when he started up of a sudden, and rubbing his eyes, looked about him, and launched into a three hours' description of the third heaven, of which he had had a dream, very different from Mr. Southey's *Vision of Judgment*, and also from that other *Vision of Judgment*, which Mr. Murray, the Secretary of the Bridge Street Junto, took into his especial keeping!

On my way back, I had a sound in my ears—it was the voice of Fancy; I had a light before me—it was the face of Poetry. The one still lingers there, the other has not quitted my side! Coleridge, in truth, met me half-way on the ground of philosophy, or I should not have been won over to his imaginative creed. I had an uneasy, pleasurable sensation all the time, till I was to visit him. During those months the chill breath of winter gave me a welcoming; the vernal air was balm and inspiration to me. The golden sunsets, the silver star of evening, lighted me on my way to new hopes and prospects. *I was to visit Coleridge in the spring.* This circumstance was never absent from my thoughts, and mingled with all my feelings. I wrote to him at the time proposed, and received an answer postponing my intended visit for a week or two, but very cordially urging

me to complete my promise then. This delay did not damp, but rather increased, my ardor. In the meantime, I went to Llangollen Vale, by way of initiating myself in the mysteries of natural scenery; and I must say I was enchanted with it. I had been reading Coleridge's description of England in his fine *Ode on the Departing Year*, and I applied it, *con amore*, to the objects before me. That valley was to me (in a manner) the cradle of a new existence: in the river that winds through it, my spirit was baptized in the waters of Helicon!

I returned home, and soon after set out on my journey with unworn heart, and untried feet. My way lay through Worcester and Gloucester, and by Upton, where I thought of Tom Jones and the adventure of the muff. I remember getting completely wet through one day, and stopping at an inn (I think it was Tewkesbury) where I sat up all night to read *Paul and Virginia*. Sweet were the showers in early youth that drenched my body, and sweet the drops of pity that fell upon the books I read! I recollect a remark of Coleridge's upon this very book—that nothing could show the gross indelicacy of French manners and the entire corruption of their imagination more strongly than the behavior of the heroine in the last fatal scene, who turns away from a person on board the sinking vessel, that offers to save her life, because he has thrown off his clothes to assist him in swimming. Was this a time to think of such a circumstance? I once hinted to Wordsworth, as we were sailing in his boat on Grasmere Lake, that I thought he had borrowed the idea of his *Poems on the Naming of Places* from the local inscriptions of the same kind in *Paul and Virginia*. He did not own the obligation, and stated some distinction without a difference, in defense of his claim to originality. Any the slightest variation would be sufficient for this purpose in his mind; for whatever he added or altered would inevitably be worth all that any one else had done, and contain the marrow of the sentiment.—I was still two days before the time fixed for my arrival, for I had taken care to set out early enough. I stopped these two days at Bridgewater; and when I was tired of sauntering on the banks of its muddy river, returned to the inn and read *Camilla*. So have I loitered my life away, reading books, looking at pictures, going to plays, hearing, thinking, writing on what pleased me best. I have wanted only one thing to make me happy; but wanting that, have wanted everything!

I arrived, and was well received. The country about Nether Stowey is beautiful, green and hilly, and near the sea-shore. I saw it but the other day, after an interval of twenty years, from a hill near Taunton. How was the map of my life spread out before me, as the map of the country lay at

my feet! In the afternoon, Coleridge took me over to All-Foxden, a romantic old family mansion of the St. Aubins, where Wordsworth lived. It was then in the possession of a friend of the poet's, who gave him the free use of it. Somehow, that period (the time just after the French Revolution) was not a time when nothing was given for nothing. The mind opened and a softness might be perceived coming over the heart of individuals, beneath "the scales that fence" our self-interest. Wordsworth himself was from home, but his sister kept house, and set before us a frugal repast; and we had free access to her brother's poems, the *Lyrical Ballads*, which were still in manuscript, or in the form of *Sybilline Leaves*. I dipped into a few of these with great satisfaction, and with the faith of a novice. I slept that night in an old room with blue hangings, and covered with the round-faced family portraits of the age of George I and II, and from the wooded declivity of the adjoining park that overlooked my window, at the dawn of day, could

hear the loud stag speak.

In the outset of life (and particularly at this time I felt it so) our imagination has a body to it. We are in a state between sleeping and waking, and have indistinct but glorious glimpses of strange shapes, and there is always something to come better than what we see. As in our dreams the fulness of the blood gives warmth and reality to the coinage of the brain, so in youth our ideas are clothed, and fed, and pampered with our good spirits; we breathe thick with thoughtless happiness, the weight of future years presses on the strong pulses of the heart, and we repose with undisturbed faith in truth and good. As we advance, we exhaust our fund of enjoyment and of hope. We are no longer wrapped in lamb's-wool, lulled in Elysium. As we taste the pleasures of life, their spirit evaporates, the sense palls; and nothing is left but the phantoms, the lifeless shadows of what has been!

That morning, as soon as breakfast was over, we strolled out into the park, and seating ourselves on the trunk of an old ash-tree that stretched along the ground, Coleridge read aloud with a sonorous and musical voice, the ballad of *Betty Foy*. I was not critically or sceptically inclined. I saw touches of truth and nature, and took the rest for granted. But in the *Thorn*, the *Mad Mother*, and the *Complaint of a Poor Indian Woman*, I felt that deeper power and pathos which have been since acknowledged,

In spite of pride, in erring reason's spite,

as the characteristics of this author; and the sense of a new style and a new spirit in poetry came over me. It had to me something of the effect that arises from the turning up of the fresh soil, or of the first welcome breath of spring:

While yet the trembling year is unconfirmed.

Coleridge and myself walked back to Stowey that evening, and his voice sounded high

Of Providence, foreknowledge, will, and fate,
Fix'd fate, free-will, foreknowledge absolute,

as we passed through echoing grove, by fairy stream or waterfall, gleaming in the summer moonlight! He lamented that Wordsworth was not prone enough to believe in the traditional superstitions of the place, and that there was a something corporeal, a matter-of-factness, a clinging to the palpable, or often to the petty, in his poetry, in consequence. His genius was not a spirit that descended to him through the air; it sprung out of the ground like a flower, or unfolded itself from a green spray, on which the goldfinch sang. He said, however (if I remember right), that this objection must be confined to his descriptive pieces, that his philosophic poetry had a grand and comprehensive spirit in it, so that his soul seemed to inhabit the universe like a palace, and to discover truth by intuition, rather than by deduction. The next day Wordsworth arrived from Bristol at Coleridge's cottage. I think I see him now. He answered in some degree to his friend's description of him, but was more gaunt and Don Quixote-like. He was quaintly dressed (according to the costume of that unconstrained period) in a brown fustian jacket and striped pantaloons. There was something of a roll, a lounge in his gait, not unlike his own *Peter Bell*. There was a severe, worn pressure of thought about his temples, a fire in his eye (as if he saw something in objects more than the outward appearance), an intense, high, narrow forehead, a Roman nose, cheeks furrowed by strong purpose and feeling, and a convulsive inclination to laughter about the mouth, a good deal at variance with the solemn, stately expression of the rest of his face. Chantrey's bust wants the marking traits; but he was teased into making it regular and heavy: Haydon's head of him, introduced into the *Entrance of Christ into Jerusalem*, is the most like his drooping weight of thought and expression. He sat down and talked very naturally and freely, with a mixture of clear, gushing accents in his voice, a deep guttural intonation, and a strong tincture of the northern burr, like the crust on wine. He instantly began to make

havoc of the half of a Cheshire cheese on the table, and said, triumphantly, that "his marriage with experience had not been so productive as Mr. Southey's in teaching him a knowledge of the good things of this life." He had been to see the *Castle Spectre* by Monk Lewis, while at Bristol, and described it very well. He said "it fitted the taste of the audience like a glove." This *ad captandum* merit was however by no means a recommendation of it, according to the severe principles of the new school, which reject rather than court popular effect. Wordsworth, looking out of the low, latticed window, said, "How beautifully the sun sets on that yellow bank!" I thought within myself, "With what eyes these poets see nature!" and ever after, when I saw the sunset stream upon the objects facing it, conceived I had made a discovery, or thanked Mr. Wordsworth for having made one for me! We went over to All-Foxden again the day following, and Wordsworth read us the story of *Peter Bell* in the open air; and the comment made upon it by his face and voice was very different from that of some later critics! Whatever might be thought of the poem, "his face was as a book where men might read strange matters," and he announced the fate of his hero in prophetic tones. There is a chaunt in the recitation both of Coleridge and Wordsworth, which acts as a spell upon the hearer, and disarms the judgment. Perhaps they have deceived themselves by making habitual use of this ambiguous accompaniment. Coleridge's manner is more full, animated, and varied; Wordsworth's more equable, sustained, and internal. The one might be termed more *dramatic*, the other more *lyrical*. Coleridge has told me that he himself liked to compose in walking over uneven ground, or breaking through the straggling branches of a copsewood; whereas Wordsworth always wrote (if he could) walking up and down a straight gravel-walk, or in some spot where the continuity of his verse met with no collateral interruption. Returning that same evening, I got into a metaphysical argument with Wordsworth, while Coleridge was explaining the different notes of the nightingale to his sister, in which we neither of us succeeded in making ourselves perfectly clear and intelligible. Thus I passed three weeks at Nether Stowey and in the neighborhood, generally devoting the afternoons to a delightful chat in an arbor made of bark by the poet's friend Tom Poole, sitting under two fine elm-trees, and listening to the bees humming round us, while we quaffed our flip. It was agreed, among other things, that we should make a jaunt down the Bristol Channel, as far as Linton. We set off together on foot, Coleridge, John Chester, and I. This Chester was a native of Nether Stowey, one of those who were attracted to Coleridge's discourse as flies are to honey, or bees in swarming time to the sound of a brass pan. He "followed in the chase like a dog

who hunts, not like one that made up the cry." He had on a brown cloth coat, boots, and corduroy breeches, was low in stature, bow-legged, had a drag in his walk like a drover, which he assisted by a hazel switch, and kept on a sort of trot by the side of Coleridge, like a running footman by a state coach, that he might not lose a syllable or sound that fell from Coleridge's lips. He told me his private opinion, that Coleridge was a wonderful man. He scarcely opened his lips, much less offered an opinion the whole way: yet of the three, had I to choose during that journey, I would be John Chester. He afterwards followed Coleridge into Germany, where the Kantian philosophers were puzzled how to bring him under any of their categories. When he sat down at table with his idol, John's felicity was complete; Sir Walter Scott's, or Mr. Blackwood's, when they sat down at the same table with the King, was not more so. We passed Dunster on our right, a small town between the brow of a hill and the sea. I remember eyeing it wistfully as it lay below us: contrasted with the woody scene around, it looked as clear, as pure, as embrowned and ideal as any landscape I have seen since, of Gaspar Poussin's or Domenichino's. We had a long day's march—(our feet kept time to the echoes of Coleridge's tongue)—through Minehead and by the Blue Anchor, and on to Linton, which we did not reach till near midnight, and where we had some difficulty in making a lodgment. We, however, knocked the people of the house up at last, and we were repaid for our apprehensions and fatigue by some excellent rashers of fried bacon and eggs. The view in coming along had been splendid. We walked for miles and miles on dark brown heaths overlooking the Channel, with the Welsh hills beyond, and at times descended into little sheltered valleys close by the sea-side, with a smuggler's face scowling by us, and then had to ascend conical hills with a path winding up through a coppice to a barren top, like a monk's shaven crown, from one of which I pointed out to Coleridge's notice the bare masts of a vessel on the very edge of the horizon, and within the red-orbed disk of the setting sun, like his own spectre ship in the *Ancient Mariner*. At Linton the character of the sea-coast becomes more marked and rugged. There is a place called the Valley of Rocks (I suspect this was only the poetical name for it), bedded among precipices overhanging the sea, with rocky caverns beneath, into which the waves dash, and where the sea-gull forever wheels its screaming flight. On the tops of these are huge stones thrown transverse, as if an earthquake had tossed them there, and behind these is a fretwork of perpendicular rocks, something like the Giant's Causeway. A thunderstorm came on while we were at the inn, and Coleridge was running out bare-headed to enjoy the commotion of the elements in the Valley of Rocks, but as if in spite,

the clouds only muttered a few angry sounds, and let fall a few refreshing drops. Coleridge told me that he and Wordsworth were to have made this place the scene of a prose tale, which was to have been in the manner of, but far superior to, the *Death of Abel*, but they had relinquished the design. In the morning of the second day, we breakfasted luxuriously in an old-fashioned parlor on tea, toast, eggs, and honey, in the very sight of the bee hives from which it had been taken, and a garden full of thyme and wild flowers that had produced it. On this occasion Coleridge spoke of Virgil's *Georgics*, but not well. I do not think he had much feeling for the classical or elegant. It was in this room that we found a little worn-out copy of *The Seasons*, lying in a window-seat, on which Coleridge exclaimed, "That is true fame!" He said Thomson was a great poet, rather than a good one; his style was as meretricious as his thoughts were natural. He spoke of Cowper as the best modern poet. He said the *Lyrical Ballads* were an experiment about to be tried by him and Wordsworth, to see how far the public taste would endure poetry written in a more natural and simple style than had hitherto been attempted; totally discarding the artifices of poetical diction, and making use only of such words as had probably been common in the most ordinary language since the days of Henry II. Some comparison was introduced between Shakespeare and Milton. He said "he hardly knew which to prefer. Shakespeare appeared to him a mere stripling in the art; he was as tall and as strong, with infinitely more activity than Milton, but he never appeared to have come to man's estate; or if he had, he would not have been a man, but a monster." He spoke with contempt of Gray, and with intolerance of Pope. He did not like the versification of the latter. He observed that "the ears of these couplet-writers might be charged with having short memories, that could not retain the harmony of whole passages." He thought little of Junius as a writer; he had a dislike of Dr. Johnson; and a much higher opinion of Burke as an orator and politician, than of Fox or Pitt. He, however, thought him very inferior in richness of style and imagery to some of our elder prose writers, particularly Jeremy Taylor. He like Richardson, but not Fielding; nor could I get him to enter into the merits of *Caleb Williams*. In short, he was profound and discriminating with respect to those authors whom he liked, and where he gave his judgment fair play; capricious, perverse, and prejudiced in his antipathies and distastes. We loitered on the "ribbed sea-sands," in such talk as this a whole morning, and, I recollect, met with a curious seaweed, of which John Chester told us the country name! A fisherman gave Coleridge an account of a boy that had been drowned the day before, and that they had tried to save him at the risk of their own lives. He said "he did not know

how it was that they ventured, but, Sir, we have a *nature* towards one another." This expression, Coleridge remarked to me, was a fine illustration of that theory of disinterestedness which I (in common with Butler) had adopted. I broached to him an argument of mine to prove that *likeness* was not mere association of ideas. I said that the mark in the sand put one in mind of a man's foot, not because it was part of a former impression of a man's foot (for it was quite new), but because it was like the shape of a man's foot. He assented to the justness of this distinction (which I have explained at length elsewhere, for the benefit of the curious) and John Chester listened; not from any interest in the subject, but because he was astonished that I should be able to suggest anything to Coleridge that he did not already know. We returned on the third morning, and Coleridge remarked the silent cottage smoke curling up the valleys where, a few evenings before, we had seen the lights gleaming through the dark.

In a day or two after we arrived at Stowey, we set out, I on my return home, and he for Germany. It was a Sunday morning, and he was to preach that day for Dr. Toulmin of Taunton. I asked him if he had prepared anything for the occasion? He said he had not even thought of the text, but should as soon as we parted. I did not go to hear him—this was a fault—but we met in the evening at Bridgewater. The next day we had a long day's walk to Bristol, and sat down, I recollect, by a well-side on the road, to cool ourselves and satisfy our thirst, when Coleridge repeated to me some descriptive lines of his tragedy of *Remorse*; which I must say became his mouth and that occasion better than they, some years after, did Mr. Elliston's and the Drury Lane boards—

Oh, memory! shield me from the world's poor strife,
And give those scenes thine everlasting life.

I saw no more of him for a year or two, during which period he had been wandering in the Harz Forest, in Germany; and his return was cometary, meteorous, unlike his setting out. It was not till some time after that I knew his friends Lamb and Southey. The last always appears to me (as I first saw him) with a commonplace book under his arm, and the first with a *bon mot* in his mouth. It was at Godwin's that I met him with Holcroft and Coleridge, where they were disputing fiercely which was the best—Man as he was, or man as he is to be. "Give me," says Lamb, "man as he is *not* to be." This saying was the beginning of a friendship between us, which I believe still continues.—Enough of this for the present.

On Swift

S

wift's reputation as a poet has been in a manner obscured by the greater splendour, by the natural force and inventive genius of his prose writings; but if he had never written either the *Tale of a Tub* or *Gulliver's Travels*, his name merely as a poet would have come down to us, and have gone down to posterity with well-earned honours. His *Imitations of Horace*, and still more his *Verses on His Own Death*, place him on the first rank of agreeable moralists in verse. There is not only a dry humour, an exquisite tone of irony, in these productions of his pen: but there is a touching, unpretending pathos, mixed up with the most whimsical and eccentric strokes of pleasantry and satire. His *Description of the Morning in London*, and of a *City Shower*, which were first published in the *Tatler*, are among the most delightful of the contents of that very delightful work. Swift shone as one of the most sensible of the poets; he is also distinguished as one of the most nonsensical of them. No man has written so many lackadaisical, slipshod, tedious, trifling, foolish, fantastical verses as he, which are so little an imputation on the wisdom of the writer; and which, in fact, only show his readiness to oblige others, and to forget himself. He has gone so far as to invent a new stanza of fourteen and sixteen syllable lines for Mary the cookmaid to vent her budget of nothings, and for Mrs. Harris to gossip with the deaf old housekeeper. Oh, when shall we have such another Rector of Laracor! The *Tale of a Tub* is one of the most masterly compositions in the language whether for thought, wit, or style. It is so capital and undeniable a proof of the author's talents, that Dr. Johnson, who did not like Swift, would not allow that he wrote it. It is hard that the same performance should stand in the way of a man's promotion to a bishopric, as wanting gravity, and at the same time be denied to be his, as having too much wit. It is a pity the Doctor did not find out some graver author, for whom he felt a critical kindness, on whom to father this splendid but unacknowledged

production. Dr. Johnson could not deny that *Gulliver's Travels* were his; he therefore disputed their merits, and said that after the first idea of them was conceived, they were easy to execute; all the rest followed mechanically. I do not know how that may be; but the mechanism employed is something very different from any that the author of *Rasselas* was in the habit of bringing to bear on such occasions. There is nothing more futile as well as invidious than this mode of criticizing a work of original genius. Its greatest merit is supposed to be in the invention; and you say, very wisely, that it is not in the execution. You might as well take away the merit of the invention of the telescope by saying that after its uses were explained and understood any ordinary eyesight could look through it. Whether the excellence of *Gulliver's Travels* is in the conception or the execution is of little consequence; the power is somewhere and it is a power that has moved the world. The power is not that of big words and vaunting commonplaces. Swift left these to those who wanted them; and has done what his acuteness and intensity of mind alone could enable anyone to conceive or to perform. His object was to strip empty pride and grandeur of the imposing air which external circumstances throw around them; and for this purpose he has cheated the imagination of the illusions which the prejudices of sense and of the world put upon it by reducing everything to the abstract predicament of size. He enlarges or diminishes the scale as he wishes to show the insignificance or the grossness of our overweening self-love. That he has done this with mathematical precision, with complete presence of mind and perfect keeping in a manner that comes equally home to the understanding of the man and of the child does not take away from the merit of the work or the genius of the author. He has taken a new view of human nature, such as a being of a higher sphere might take of it; he has torn the scales from off his moral vision; he has tried an experiment upon human life, and sifted its pretensions from the alloy of circumstances. He has measured it with a rule, has weighed it in a balance, and found it, for the most part, wanting and worthless—in substance and in show. Nothing solid, nothing valuable is left in his system but virtue and wisdom. What a libel is this upon mankind! What a convincing proof of misanthropy! What presumption and what *malice prepense*, to show men what they are, and to teach them what they ought to be! What a mortifying stroke aimed at national glory is that unlucky incident of Gulliver's wading across the channel and carrying off the whole fleet of Blefuscu! After that, we have only to consider which of the contending parties was in the right. What a shock to

personal vanity is given in the account of Gulliver's nurse Glumdalclitch! Still, notwithstanding the disparagement to her personal charms, her good nature remains the same amiable quality as before. I cannot see the harm, the misanthropy, the immoral and degrading tendency of this. The moral lesson is as fine as the intellectual exhibition is amusing. It is an attempt to tear off the mask of imposture from the world; and nothing but imposture has a right to complain of it. It is, indeed, the way with our quacks in morality to preach up the dignity of human nature, to pamper pride and hypocrisy with the idle mockeries of the virtues they pretend to, and which they have not: but it was not Swift's way to cant morality, or anything else; nor did his genius prompt him to write unmeaning panegyrics on mankind!

The determination with which Swift persisted in a preconcerted theory savoured of the morbid affection of which he died. There is nothing more likely to drive a man mad than the being unable to get rid of the idea of the distinction between right and wrong, and an obstinate, constitutional preference of the true to the agreeable. Swift was not a Frenchman. In this respect he differed from Rabelais and Voltaire. They have been accounted the three greatest wits in modern times; but their wit was of a peculiar kind in each. They are little beholden to each other; there is some resemblance between Lord Peter in the *Tale of a Tub* and Rabelais' Friar John; but in general they are all three authors of a substantive character in themselves. Swift's wit (particularly in his chief prose works) was serious, saturnine, and practical; Rabelais' was fantastical and joyous; Voltaire's was light, sportive, and verbal. Swift's wit was the wit of sense; Rabelais', the wit of nonsense; Voltaire's, of indifference to both. The ludicrous in Swift arises out of his keen sense of impropriety, his soreness and impatience of the least absurdity. He separates, with a severe and caustic air, truth from falsehood, folly from wisdom, "shows vice her own image, scorn her own feature"; and it is the force, the precision, and the honest abruptness with which the separation is made that excites our surprise, our admiration, and laughter. He sets a mark of reprobation on that which offends good sense and good manners, which cannot be mistaken, and which holds it up to our ridicule and contempt ever after. His occasional disposition to trifling was a relaxation from the excessive earnestness of his mind. His better genius was his spleen. It was the biting acrimony of his temper that sharpened his other faculties. The truth of his perceptions produced the pointed coruscations of his wit; his playful irony was the result of inward bitterness of thought; his imagination was the product of the literal, dry, incorrigible tenaciousness of his

understanding. He endeavoured to escape from the persecution of realities into the regions of fancy, and invented his Lilliputians and Brobdingnagians, Yahoos, and Houynhymms as a diversion to the more painful knowledge of the world around him: *they* only made him laugh, while men and women made him angry. His feverish impatience made him view the infirmities of that great baby the world with the same scrutinizing glance and jealous irritability that a parent regards the failings of its offspring.

Of Persons

One Would Wish to Have Seen

Lamb it was, I think, who suggested this subject, as well as the defence of Guy Fawkes, which I urged him to execute. As, however, he would undertake neither, I suppose I must do both, a task for which he would have been much fitter, no less from the temerity than the felicity of his pen—

Never so sure our rapture to create
As when it touched the brink of all we hate.

Compared with him, I shall, I fear, make but a commonplace piece of business of it; but I should be loth the idea was entirely lost, and besides I may avail myself of some hints of his in the progress of it. I am sometimes, I suspect, a better reporter of the ideas of other people than expounder of my own. I pursue the one too far into paradox or mysticism; the others I am not bound to follow farther than I like, or than seems fair and reasonable.

On the question being started, A[yrton] said, “I suppose the two first persons you would choose to see would be the two greatest names in English literature, Sir Isaac Newton and Mr. Locke?” In this A[yrton], as usual, reckoned without his host. Every one burst out a-laughing at the expression of Lamb’s face, in which impatience was restrained by courtesy.

“Yes, the greatest names,” he stammered out hastily, “but they were not persons—not persons.”

“Not persons?” said A[yrton], looking wise and foolish at the same time, afraid his triumph might be premature.

“That is,” rejoined Lamb, “not characters, you know. By Mr. Locke and Sir Isaac Newton, you mean the *Essay on the Human Understanding*, and the *Principia*, which we have to this day. Beyond their contents there

is nothing personally interesting in the men. But what we want to see any one *bodily* for is when there is something peculiar, striking, in the individuals, more than we can learn from their writings, and yet are curious to know. I dare say Locke and Newton were very like Kneller's portraits of them. But who could paint Shakespeare?"

"Ay," retorted A[yrton], "there it is; then I suppose you would prefer seeing him and Milton instead?"

"No," said Lamb, "neither. I have seen so much of Shakespeare on the stage and on book-stalls, in frontispieces and on mantel-pieces, that I am quite tired of the everlasting repetition; and as to Milton's face, the impressions that have come down to us of it I do not like: it is too starched and puritanical, and I should be afraid of losing some of the manna of his poetry in the leaven of his countenance and the precisian's band and gown."

"I shall guess no more," said A[yrton]. "Who is it, then, you would like to see 'in his habit as he lived,' if you had your choice of the whole range of English literature?"

Lamb then named Sir Thomas Browne and Fulke Greville, the friend of Sir Philip Sidney, as the two worthies whom he should feel the greatest pleasure to encounter on the floor of his apartment in their nightgown and slippers, and to exchange friendly greetings with them. At this A[yrton] laughed outright, and conceived Lamb was jesting with him; but as no one followed his example, he thought there might be something in it, and waited for an explanation in a state of whimsical suspense. Lamb then (as well as I can remember a conversation that passed twenty years ago—how time slips!) went on as follows: "The reason why I pitch upon these two authors is that their writings are riddles, and they themselves the most mysterious of personages. They resemble the soothsayers of old, who dealt in dark hints and doubtful oracles; and I should like to ask them the meaning of what no mortal but themselves, I should suppose, can fathom. There is Dr. Johnson: I have no curiosity, no strange uncertainty about him; he and Boswell together have pretty well let me into the secret of what passed through his mind. He and other writers like him are sufficiently explicit: my friends whose repose I should be tempted to disturb (were it in my power), are implicit, inextricable, inscrutable.

"When I look at that obscure but gorgeous prose-composition, the *Urn-Burial*, I seem to myself to look into a deep abyss, at the bottom of which are hid pearls and rich treasure; or it is like a stately labyrinth of doubt and withering speculation, and I would invoke the spirit of the author to

lead me through it. Besides, who would not be curious to see the lineaments of a man who, having himself been twice married, wished that mankind were propagated like trees! As to Fulke Greville, he is like nothing but one of his own 'Prologues spoken by the ghost of an old king of Ormus,' a truly formidable and inviting personage: his style is apocalyptic, cabalistical, a knot worthy of such an apparition to untie; and for the unravelling a passage or two, I would stand the brunt of an encounter with so portentous a commentator!"

"I am afraid, in that case," said A[yrton], "that if the mystery were once cleared up, the merit might be lost"; and turning to me, whispered a friendly apprehension that while Lamb continued to admire these old crabbed authors, he would never become a popular writer. Dr. Donne was mentioned as a writer of the same period, with a very interesting countenance, whose history was singular, and whose meaning was often quite as *uncomeatable*, without a personal citation from the dead, as that of any of his contemporaries. The volume was produced; and while some one was expatiating on the exquisite simplicity and beauty of the portrait prefixed to the old edition, A[yrton] got hold of the poetry, and exclaiming "What have we here?" read the following:

Here lies a shee Sunne and a hee Moone here,
She gives the best light to his Spheare,
Or each is both, and all, and so
They unto one another nothing owe.

There was no resisting this, till Lamb, seizing the volume, turned to the beautiful *Lines to his Mistress*, dissuading her from accompanying him abroad, and read them with suffused features and a faltering tongue. . . .

Some one then inquired of Lamb if we could not see from the window the Temple walk in which Chaucer used to take his exercise; and on his name being put to the vote, I was pleased to find that there was a general sensation in his favor in all but A[yrton], who said something about the ruggedness of the metre, and even objected to the quaintness of the orthography. I was vexed at this superficial gloss, pertinaciously reducing everything to its own trite level, and asked "if he did not think it would be worth while to scan the eye that had first greeted the Muse in that dim twilight and early dawn of English literature; to see the head round which the visions of fancy must have played like gleams of inspiration or a sudden glory; to watch those lips that 'lisp'd in numbers, for the num-

bers came'—as by a miracle, or as if the dumb should speak? Nor was it alone that he had been the first to tune his native tongue (however imperfectly to modern ears); but he was himself a noble, manly character, standing before his age and striving to advance it; a pleasant humorist withal, who has not only handed down to us the living manners of his time, but had, no doubt, store of curious and quaint devices, and would make as hearty a companion as Mine Host of the Tabard. His interview with Petrarch is fraught with interest. Yet I would rather have seen Chaucer in company with the author of the *Decameron*, and have heard them exchange their best stories together—the *Squire's Tale* against the *Story of the Falcon*, the *Wife of Bath's Prologue* against the *Adventures of Friar Albert*. How fine to see the high mysterious brow which learning then wore, relieved by the gay, familiar tone of men of the world, and by the courtesies of genius! Surely, the thoughts and feelings which passed through the minds of these great revivers of learning, these Cadmuses who sowed the teeth of letters, must have stamped an expression on their features as different from the moderns as their books, and well worth the perusal. Dante," I continued, "is as interesting a person as his own Ugolino, one whose lineaments curiosity would as eagerly devour in order to penetrate his spirit, and the only one of the Italian poets I should care much to see. There is a fine portrait of Ariosto by no less a hand than Titian's; light, Moorish, spirited, but not answering our idea. The same artist's large colossal profile of Peter Aretine [Pietro Aretino] is the only likeness of the kind that has the effect of conversing with 'the mighty dead'; and this is truly spectral, ghastly, necromantic." Lamb put it to me if I should like to see Spenser as well as Chaucer; and I answered, without hesitation, "No; for that his beauties were ideal, visionary, not palpable or personal, and therefore connected with less curiosity about the man. His poetry was the essence of romance, a very halo round the bright orb of fancy; and the bringing in the individual might dissolve the charm. No tones of voice could come up to the mellifluous cadence of his verse; no form but of a winged angel could vie with the airy shapes he has described. He was (to my apprehension) rather a 'creature of the element, that lived in the rainbow and played in the plighted clouds,' than an ordinary mortal. Or if he did appear, I should wish it to be as a mere vision, like one of his own pageants, and that he should pass by unquestioned like a dream or sound—

That was Arion crown'd:
So went he playing on the wat'ry plain."

Captain [Burney] muttered something about Columbus, and M[artin Burney] hinted at the Wandering Jew; but the last was set aside as spurious, and the first made over to the New World.

“I should like,” said [Mrs. Reynolds], “to have seen Pope talk with Patty Blount; and I *have* seen Goldsmith.” Every one turned round to look at [Mrs. Reynolds], as if by so doing they could get a sight at Goldsmith.

“Where,” asked a harsh, croaking voice, “was Dr. Johnson in the years 1745–6? He did not write anything that we know of, nor is there any account of him in Boswell during those two years. Was he in Scotland with the Pretender? He seems to have passed through the scenes in the Highlands in company with Boswell, many years after, ‘with lack-lustre eye,’ yet as if they were familiar to him, or associated in his mind with interests that he durst not explain. If so, it would be an additional reason for my liking him; and I would give something to have seen him seated in the tent with the youthful Majesty of Britain, and penning the Proclamation to all true subjects and adherents of the legitimate Government.”

“I thought,” said A[yrton], turning short round upon Lamb, “that you of the Lake School did not like Pope?”

“Not like Pope! My dear sir, you must be under a mistake—I can read him over and over forever!”

“Why, certainly, the *Essay on Man* must be allowed to be a masterpiece.”

“It may be so, but I seldom look into it.”

“Oh! then it’s his *Satires* you admire?”

“No, not his *Satires*, but his friendly *Epistles* and his compliments.”

“Compliments! I did not know he ever made any.”

“The finest,” said Lamb, “that were ever paid by the wit of man. Each of them is worth an estate for life—nay, is an immortality. There is that superb one to Lord Cornbury:

Despise low joys, low gains;
Disdain whatever Cornbury disdains;
Be virtuous, and be happy for your pains.

Was there ever more artful insinuation of idolatrous praise? And then that noble apotheosis of his friend Lord Mansfield (however little deserved), when, speaking of the House of Lords, he adds:

Conspicuous scene! another yet is nigh,
(More silent far) where kings and poets lie;
Where Murray (long enough his country’s pride)
Shall be no more than Tully or than Hyde.

And with what a fine turn of indignant flattery he addresses Lord Bolingbroke:

Why rail they then, if but one wreath of mine,
Oh! all accomplish'd St. John, deck thy shrine?

“Or turn,” continued Lamb, with a slight hectic on his cheek and his eyes glistening, “to his list of early friends:

But why then publish? Granville the polite,
And knowing Walsh, would tell me I could write;
Well-natured Garth inflamed with early praise,
And Congreve loved, and Swift endured my lays;
The courtly Talbot, Somers, Sheffield read,
Ev'n mitred Rochester would nod the head;
And St. John's self (great Dryden's friend before)
Received with open arms one poet more.
Happy my studies, if by these approved!
Happier their author, if by these beloved!
From these the world will judge of men and books,
Not from the Burnets, Oldmixons, and Cooks.”

Here his voice totally failed him, and throwing down the books, he said, “Do you think I would not wish to have been friends with such a man as this?”

“What say you to Dryden?”

“He rather made a show of himself, and courted popularity in that lowest temple of fame, a coffee-shop, so as in some measure to vulgarize one's idea of him. Pope, on the contrary, reached the very *beau ideal* of what a poet's life should be; and his fame while living seemed to be an emanation from that which was to circle his name after death. He was so far enviable (and one would feel proud to have witnessed the rare spectacle in him) that he was almost the only poet and man of genius who met with his reward on this side of the tomb, who realized in friends, fortune, the esteem of the world, the most sanguine hopes of a youthful ambition, and who found that sort of patronage from the great during his lifetime which they would be thought anxious to bestow upon him after his death. Read Gay's verses to him on his supposed return from Greece, after his translation of Homer was finished, and say if you would not gladly join the bright procession that welcomed him home, or see it once more land at Whitehall stairs.”

“Still,” said [Mrs. Reynolds], “I would rather have seen him talking

with Patty Blount, or riding by in a coronet-coach with Lady Mary Wortley Montagu!"

E[rasmus Phillips], who was deep in a game of piquet at the other end of the room, whispered to M[artin Burney] to ask if Junius would not be a fit person to invoke from the dead. "Yes," said Lamb, "provided he would agree to lay aside his mask."

We were now at a stand for a short time, when Fielding was mentioned as a candidate; only one, however, seconded the proposition. "Richardson?"

"By all means, but only to look at him through the glass-door of his back-shop, hard at work upon one of his novels (the most extraordinary contrast that ever was presented between an author and his works), but not to let him come behind his counter, lest he should want you to turn customer, nor to go upstairs with him, lest he should offer to read the first manuscript of Sir Charles Grandison, which was originally written in eight-and-twenty volumes octavo, or get out the letters of his female correspondents, to prove that Joseph Andrews was low."

There was but one statesman in the whole of English history that anyone expressed the least desire to see—Oliver Cromwell, with his fine, frank, rough, pimply face, and wily policy; and one enthusiast, John Bunyan, the immortal author of the *Pilgrim's Progress*. It seemed that if he came into the room, dreams would follow him, and that each person would nod under his golden cloud, "nigh-sphered in heaven," a canopy as strange and stately as any in Homer.

Of all persons near our own time, Garrick's name was received with the greatest enthusiasm, who was proposed by [Barron] F[ield]. He presently superseded both Hogarth and Handel, who had been talked of, but then it was on condition that he should act in tragedy and comedy, in the play and the farce, *Lear* and *Wildair* and *Abel Drugger*. What a sight for sore eyes that would be! Who would not part with a year's income at least, almost with a year of his natural life, to be present at it? Besides, as he could not act alone, and recitations are unsatisfactory things, what a troop he must bring with him—the silver-tongued Barry, and Quin, and Shuter and Weston, and Mrs. Clive and Mrs. Pritchard, of whom I have heard my father speak as so great a favourite when he was young. This would indeed be a revival of the dead, the restoring of art; and so much the more desirable, as such is the lurking scepticism mingled with our overstrained admiration of past excellence, that though we have the speeches of Burke, the portraits of Reynolds, the writings of Goldsmith, and the conversation of Johnson, to show what people could

do at that period, and to confirm the universal testimony to the merits of Garrick; yet, as it was before our time, we have our misgivings, as if he was probably, after all, little better than a Bartlemy-fair actor, dressed out to play Macbeth in a scarlet and laced cocked hat. For one, I should like to have seen and heard with my own eyes and ears. Certainly, by all accounts, if any one was ever moved by the true histrionic estus, it was Garrick. When he followed the Ghost in *Hamlet*, he did not drop the sword, as most actors do, behind the scenes, but kept the point raised the whole way round, so fully was he possessed with the idea, or so anxious not to lose sight of his part for a moment. Once at a splendid dinner party at Lord——'s, they suddenly missed Garrick, and could not imagine what was become of him, till they were drawn to the window by the convulsive screams and peals of laughter of a young Negro boy, who was rolling on the ground in an ecstasy of delight to see Garrick mimicking a turkey-cock in the courtyard, with his coat-tail stuck out behind, and in a seeming flutter of feathered rage and pride. Of our party only two persons present had seen the British Roscius; and they seemed as willing as the rest to renew their acquaintance with their old favourite.

We were interrupted in the hey-day and mid-career of this fanciful speculation, by a grumbler in a corner, who declared it was a shame to make all this rout about a mere player and farce-writer, to the neglect and exclusion of the fine old dramatists, the contemporaries and rivals of Shakespeare. Lamb said he had anticipated this objection when he had named the author of *Mustapha* and *Alaham*; and, out of caprice, insisted upon keeping him to represent the set, in preference to the wild, hare-brained enthusiast, Kit Marlowe; to the sexton of St. Ann's, Webster, with his melancholy yew-trees and death's-heads; to Dekker, who was but a garrulous proser; to the voluminous Heywood; and even to Beaumont and Fletcher, whom we might offend by complimenting the wrong author on their joint productions. Lord Brooke, on the contrary, stood quite by himself, or, in Cowley's words, was "a vast species alone." Some one hinted at the circumstances of his being a lord, which rather startled Lamb, but he said a *ghost* would perhaps dispense with strict etiquette, on being regularly addressed by his title. Ben Jonson divided our suffrages pretty equally. Some were afraid he would begin to traduce Shakespeare, who was not present to defend himself. "If he grows disagreeable," it was whispered aloud, "there is G[odwin] can match him." At length, his romantic visit to Drummond of Hawthornden was mentioned, and turned the scale in his favor.

Lamb inquired if there was any one that was hanged that I would choose to mention. And I answered, Eugene Aram. The name of the "Admirable Crichton" was suddenly started as a splendid example of *waste* talents, so different from the generality of his countrymen. This choice was mightily approved by a North Briton present, who declared himself descended from that prodigy of learning and accomplishment, and said he had family plate in his possession as vouchers for the fact, with the initials A.C.—*Admirable Crichton!* H—— laughed, or rather roared, as heartily at this as I should think he has done for many years.

The last-named Mitre-courtier then wished to know whether there were any metaphysicians to whom one might be tempted to apply the wizard spell. I replied, there were only six in modern times deserving the name—Hobbes, Berkeley, Butler, Hartley, Hume, Leibniz; and perhaps Jonathan Edwards, a Massachusetts man. As to the French, who talked fluently of having *created* this science, there was not a title in any of their writings that was not to be found literally in the authors I had mentioned. (Horne Tooke, who might have a claim to come in under the head of Grammar, was still living.) None of these names seemed to excite much interest, and I did not plead for the reappearance of those who might be thought best fitted by the abstracted nature of their studies for the present spiritual and disembodied state, and who, even while on this living stage, were nearly divested of common flesh and blood. As A[yrton], with an uneasy, fidgety face, was about to put some question about Mr. Locke and Dugald Stewart, he was prevented by M[artin Burney], who observed, "If J—— was here, he would undoubtedly be for having up those profound and redoubted scholiasts, Thomas Aquinas and Duns Scotus." I said this might be fair enough in him who had read, or fancied he had read, the original works, but I did not see how we could have any right to call up these authors to give an account of themselves in person, till we had looked into their writings.

By this time it should seem that some rumour of our whimsical deliberation had got wind, and had disturbed the *irritabile genus* in their shadowy abodes, for we received messages from several candidates that we had just been thinking of. Gray declined our invitation, though he had not yet been asked; Gay offered to come, and bring in his hand the Duchess of Bolton, the original Polly; Steele and Addison left their cards as Captain Sentry and Sir Roger de Coverley; Swift came in and sat down without speaking a word and quitted the room as abruptly; Otway and Chatterton were seen lingering on the opposite side of the Styx, but

could not muster enough between them to pay Charon his fare; Thomson fell asleep in the boat, and was rowed back again—and Burns sent a low fellow, one John Barleycorn, an old companion of his, who had conducted him to the other world, to say that he had during his lifetime been drawn out of his retirement as a show, only to be made an exciseman of, and that he would rather remain where he was. He desired, however, to shake hands by his representative—the hand, thus held out, was in a burning fever, and shook prodigiously.

The room was hung round with several portraits of eminent painters. While we were debating whether we should demand speech with these masters of mute eloquence, whose features were so familiar to us, it seemed that all at once they glided from their frames, and seated themselves at some little distance from us. There was Leonardo, with his majestic beard and watchful eye, having a bust of Archimedes before him; next him was Raphael's graceful head turned round to the Fornarina; and on his other side was Lucretia Borgia, with calm, golden locks; Michelangelo had placed the model of St. Peter's on the table before him; Correggio had an angel at his side; Titian was seated with his mistress between himself and Giorgione; Guido was accompanied by his own Aurora, who took a dice-box from him; Claude held a mirror in his hand; Rubens patted a beautiful panther (led in by a satyr) on the head; Vandyke appeared as his own Paris, and Rembrandt was hid under furs, gold chains, and jewels, which Sir Joshua eyed closely, holding his hand so as to shade his forehead. Not a word was spoken; and as we rose to do them homage, they still presented the same surface to the view. Not being *bona fide* representations of living people, we got rid of the splendid apparitions by signs and dumb show. As soon as they had melted into thin air, there was a loud noise at the outer door, and we found it was Giotto, Cimabue, and Ghirlandaio, who had been raised from the dead by their earnest desire to see their illustrious successors—

Whose names on earth
In Fame's eternal records live for aye!

Finding them gone, they had no ambition to be seen after them, and mournfully withdrew. "Egad!" said Lamb, "these are the very fellows I should like to have had some talk with, to know how they could see to paint when all was dark around them."

"But shall we have nothing to say," interrogated G. J—, "to the *Legend of Good Women*?"

“Name, name, Mr. J——,” cried H—— in a boisterous tone of friendly exultation, “name as many as you please, without reserve or fear of molestation!”

J—— was perplexed between so many amiable recollections, that the name of the lady of his choice expired in a pensive whiff of his pipe; and Lamb impatiently declared for the Duchess of Newcastle. Mrs. Hutchinson was no sooner mentioned, than she carried the day from the Duchess. We were the less solicitous on this subject of filling up the posthumous lists of Good Women, as there was already one in the room as good, as sensible, and in all respects as exemplary, as the best of them could be for their lives! “I should like vastly to have seen Ninon de l’Enclos,” said that incomparable person; and this immediately put us in mind that we had neglected to pay honour due to our friends on the other side of the Channel: Voltaire, the patriarch of levity, and Rousseau, the father of sentiment; Montaigne and Rabelais (great in wisdom and in wit); Molière and that illustrious group that are collected round him (in the print of that subject) to hear him read his comedy of the *Tartuffe* at the house of Ninon; Racine, La Fontaine, Rochefoucault, St. Evremont, etc.

“There is one person,” said a shrill, querulous voice, “I would rather see than all these—Don Quixote!”

“Come, come!” said H——; “I thought we should have no heroes, real or fabulous. What say you, Mr. Lamb? Are you for eking out your shadowy list with such names as Alexander, Julius Caesar, Tamerlane, or Genghis Khan?”

“Excuse me,” said Lamb, “on the subject of characters in active life, plotters and disturbers of the world, I have a crotchet of my own, which I beg leave to reserve.”

“No, no! come, out with your worthies!”

“What do you think of Guy Fawkes and Judas Iscariot?” H—— turned an eye upon him like a wild Indian, but cordial and full of smothered glee. “Your most exquisite reason!” was echoed on all sides; and A[yrton] thought that Lamb had now fairly entangled himself.

“Why I cannot but think,” retorted he of the wistful countenance, “that Guy Fawkes, that poor, fluttering annual scarecrow of straw and rags, is an ill-used gentleman. I would give something to see him sitting pale and emaciated, surrounded by his matches and his barrels of gunpowder, and expecting the moment that was to transport him to Paradise for his heroic self-devotion; but if I say any more, there is that fellow G[odwin] will make something of it. And as to Judas Iscariot, my reason is different. I would fain see the face of him who, having dipped his hand in the

same dish with the Son of Man, could afterwards betray him. I have no conception of such a thing; nor have I ever seen any picture (not even Leonardo's very fine one) that gave me the least idea of it."

"You have said enough, Mr. Lamb, to justify your choice."

"Oh! ever right, Menenius—ever right!"

"There is only one other person I can ever think of after this," continued H—; but without mentioning a name that once put on a semblance of mortality. "If Shakespeare was to come into the room, we should all rise up to meet him; but if that person was to come into it, we should all fall down and try to kiss the hem of his garment!"

As a lady present seemed now to get uneasy at the turn the conversation had taken, we rose up to go. The morning broke with that dim, dubious light by which Giotto, Cimabue, and Ghirlandaio must have seen to paint their earliest works; and we parted to meet again and renew similar topics at night, the next night, and the night after that, till that night overspread Europe which saw no dawn. The same event, in truth, broke up our little congress that broke up the great one. But that was to meet again: our deliberations have never been resumed.

Charles Lamb

1775–1834

Charles Lamb was born in the Inner Temple, London, February 10, 1775. He went to school with Coleridge at Christ's Hospital. They became close friends. In 1792 he took a job at East India House, where James Mill was later his colleague and John Stuart Mill would also be an official. Lamb held his post for thirty-three years.

After an unlucky love affair, he entered an asylum for a while in 1795. During the following year his sister, Mary Lamb, became unbalanced and stabbed her mother to death. In order to prevent her spending the rest of her life in an asylum, Lamb arranged to take care of his sister. He did so until he died. Each time the warning symptoms showed themselves, Mary Lamb, quietly and in tears, would go back to the asylum again.

Lamb's plays, *John Woodvil* and *Mr. H—*, were produced but were not well received. In 1807 he and Mary Lamb published *Tales Founded on the Plays of Shakespeare*. Other children's books and a number of articles for Leigh Hunt's *The Reflector* were written before 1811. Lamb's *Specimens of English Dramatic Poets*, together with Hazlitt's lectures, helped to bring the lesser Elizabethan writers back into favor.

The period of Lamb's weekly literary evenings, described by

Notes from the artist: "An elongated interpretation of Lamb reminiscent of a sketch made during his lifetime by Charles Pulham.

*Next to the portrait is a facsimile of Lamb's poem
Elegy on a Quid of Tobacco."*

Elegy

On a Luid of Tobacco.

It lay before me on the close-grazed grass
Beside my path, an old Tobacco quid:
And shall I by the mute adviser pass
Without one serious thought, now Heaven forbid!

perhaps some idle drunkard threw thee there.
Some husband, spendthrift of his weekly wage,
One who for wife and children takes no care,
But sits and tipsles by the alehouse fire.

Ah! luckless was the day he learnt to chew:
Embryo of ill the Luid that pleased him first!
Thirsty from that unhappy Luid he grew,
Then to the alehouse went to quench his thirst!

In great events from causes small arise,
The forest oak was once an acorn seed,
And many a wretch from drunkenness who dies
Owes all his evils to the Indian weed.

Let not temptation mortal, ere come nigh—
Suspect some ambush in the posley hid,—
From the first kiss of Love, ye maidens fly!
Ye youths avoid the first Tobacco Luid!

Charles
Lamb

Hazlitt, began about 1811. He proposed marriage to Fanny Kelly, an actress, but was refused. In 1818 his collected *Works* appeared—a little too early to include his best. In the *London Magazine*, after 1820, he began his most famous series, the *Essays of Elia*. (Elia was a “gay light-hearted foreigner” who had once been Lamb’s fellow clerk at South Sea House.)

Lamb was pensioned and moved to the country at Enfield. His sister’s malady grew constantly worse. During this period his great joy was the Lambs’ adopted daughter, Emma Isola. He died at Edmonton, December 27, 1834, from erysipelas and the effects of a fall on the London Road.

Lamb is the magician of the English familiar essay. At the first touch of his wand, we are friends. Happily we consent to go with him wherever he leads, charmed by the brisk voice, the liveliness of fancy, the literary reference from anywhere and everywhere that lights up each stone on the way. He is amused and amusing. We recall that he once joined the audience in hissing his own play.

My First Play (the first he saw, not the first he wrote) may remind us of our own first visit to a theater. Lamb’s recollection centers on a green curtain and the unbearable time it takes to go up on the lighted world of the stage. His gift is that he can make us remember that waiting as it happened to *us*, so that we almost seem to remember what he is telling us about himself.

We too fidget through the little preliminary drama of the weather. Will it stop raining? It does. We have “orders”—that is, passes—to the theater. They are a gift from his godfather the oilman. Lamb wanders off a little to chat happily about this godfather of his, who was a friend of the great Sheridan, and who left Charles a patch of land in Hertfordshire.

Then we are in the theater—a theater doubly magical because it belongs to the late eighteenth century and so is a little strange to us. What is a nonpareil? A kind of apple. The attraction was probably a revival of Thomas Arne’s *Artaxerxes*—in effect an opera, with sung speeches. Lamb saw the traditional Harlequin at his tricks. The Rich he mentions was John Rich, father of English pantomime. Later he watches a pantomime of *Robinson Crusoe*, and it was just as he had imagined it.

In *Dream Children*, Lamb tells stories of his own youth to the

children he might have had. His grandmother, Mary Field, had been caretaker of just such a great house as he describes, in Hertfordshire. And a girl of that country, Ann Simmons, to whom his first sonnets were written, might well have been the imaginary dead wife Alice of his dreams.

The third essay, *Sanity of True Genius*, makes a point that needs to be repeated in each generation. Art is not daydreaming. It is something willed. A true artist is seldom the servant of his visions. He is their master. They are the materials out of which he constructs his work, as a carpenter uses boards and nails to put up a house.

My First Play

At the north end of Cross-court there yet stands a portal, of some architectural pretensions, though reduced to humble use, serving at present for an entrance to a printing-office. This old doorway, if you are young, reader, you may not know was the identical pit entrance to old Drury–Garrick’s Drury—all of it that is left. I never pass it without shaking some forty years from off my shoulders, recurring to the evening when I passed through it to see *my first play*. The afternoon had been wet, and the condition of our going (the elder folks and myself) was that the rain should cease. With what a beating heart did I watch from the window the puddles, from the stillness of which I was taught to prognosticate the desired cessation! I seem to remember the last spurt, and the glee with which I ran to announce it.

We went with orders, which my godfather F. had sent us. He kept the oil shop (now Davies’s) at the corner of Featherstone-building, in Holborn. F. was a tall grave person, lofty in speech, and had pretensions above his rank. He associated in those days with John Palmer, the comedian, whose gait and bearing he seemed to copy; if John (which is quite as likely) did not rather borrow somewhat of his manner from my godfather. He was also known to and visited by Sheridan. It was to his house in Holborn that young Brinsley brought his first wife on her elopement with him from a boarding-school at Bath—the beautiful Maria Linley. My parents were present (over a quadrille table) when he arrived in the evening with his harmonious charge. From either of these connections it may be inferred that my godfather could command an order for the then Drury Lane theatre at pleasure—and, indeed, a pretty liberal issue of those cheap billets, in Brinsley’s easy autograph, I have heard him say was the sole remuneration which he had received for many years’ nightly illumination of the orchestra and various avenues of that theatre—and he was content it should be so. The honour of Sheridan’s familiarity—or supposed familiarity—was better to my godfather than money.

F. was the most gentlemanly of oilmen; grandiloquent, yet courteous. His delivery of the commonest matters of fact was Ciceronian. He had two Latin words almost constantly in his mouth (how odd sounds Latin from an oilman's lips!), which my better knowledge since has enabled me to correct. In strict pronunciation they should have been sounded *vice versa*—but in those young years they impressed me with more awe than they would now do, read aright from Seneca or Varro—in his own peculiar pronunciation, monosyllabically elaborated, or anglicized, into something like *verse verse*. By an imposing manner, and the help of these distorted syllables, he climbed (but that was little) to the highest parochial honours which St. Andrew's has to bestow.

He is dead—and thus much I thought due to his memory, both for my first orders (little wondrous talismans!—slight keys, and insignificant to outward sight, but opening to me more than Arabian paradises!) and, moreover, that by his testamentary beneficence I came into possession of the only landed property which I could ever call my own—situate near the roadway village of pleasant Puckeridge, in Hertfordshire. When I journeyed down to take possession, and planted foot on my own ground, the stately habits of the donor descended upon me, and I strode (shall I confess the vanity?) with larger paces over my allotment of three-quarters of an acre, with its commodious mansion in the midst, with the feeling of an English freeholder that all betwixt sky and centre was my own. The estate has passed into more prudent hands, and nothing but an agrarian can restore it.

In those days were pit orders. Beshrew the uncomfortable manager who abolished them!—with one of these we went. I remember the waiting at the door—not that which is left—but between that and an inner door in shelter—O when shall I be such an expectant again!—with the cry of nonpareils, an indispensable playhouse accompaniment in those days. As near as I can recollect, the fashionable pronunciation of the theatrical fruiteresses then was, “Chase some oranges, chase some numparels, chase a bill of the play”—chase *pro* chuse. But when we got in, and I beheld the green curtain that veiled a heaven to my imagination, which was soon to be disclosed—the breathless anticipations I endured! I had seen something like it in the plate prefixed to *Troilus and Cressida*, in Rowe's *Shakespeare*—the tent scene with Diomede—and a sight of that plate can always bring back in a measure the feeling of that evening. The boxes at that time, full of well-dressed women of quality, projected over the pit; and the pilasters reaching down were adorned with a glistening substance (I know not what) under glass (as it seemed), resembling—a

homely fancy—but I judged it to be sugar-candy—yet to my raised imagination, divested of its homelier qualities, it appeared a glorified candy! The orchestra lights at length rose, those “fair Auroras”! Once the bell sounded. It was to ring out yet once again—and, incapable of the anticipation, I reposed my shut eyes in a sort of resignation upon the maternal lap. It rang the second time. The curtain drew up—I was not past six years old, and the play was *Artaxerxes!*

I had dabbled a little in the Universal History—the ancient part of it—and here was the court of Persia. It was being admitted to a sight of the past. I took no proper interest in the action going on, for I understood not its import—but I heard the word Darius, and I was in the midst of Daniel. All feeling was absorbed in vision. Gorgeous vests, gardens, palaces, princesses, passed before me. I knew not players. I was in Persepolis for the time, and the burning idol of their devotion almost converted me into a worshipper. I was awe-struck, and believed those significations to be something more than elemental fires. It was all enchantment and a dream. No such pleasure has since visited me but in dreams. Harlequin’s Invasion followed; where, I remember, the transformation of the magistrates into reverend beldams seemed to me a piece of grave historic justice, and the tailor carrying his own head to be as sober a verity as the legend of St. Denys.

The next play to which I was taken was the *Lady of the Manor*, of which, with the exception of some scenery, very faint traces are left in my memory. It was followed by a pantomime, called “Lun’s Ghost”—a satiric touch, I apprehend, upon Rich, not long since dead—but to my apprehension (too sincere for satire), Lun was as remote a piece of antiquity as Lud—the father of a line of Harlequins—transmitting his dagger of lath (the wooden sceptre) through countless ages. I saw the primeval Motley come from his silent tomb in a ghastly vest of white patchwork, like the apparition of a dead rainbow. So Harlequins (thought I) look when they are dead.

My third play followed in quick succession. It was the *Way of the World*. I think I must have sat at it as grave as a judge; for I remember the hysteric affectations of good Lady Wishfort affected me like some solemn tragic passion. *Robinson Crusoe* followed; in which Crusoe, man Friday, and the parrot were as good and authentic as in the story. The clownery and pantaloony of these pantomimes have clean passed out of my head. I believe I no more laughed at them than at the same age I should have been disposed to laugh at the grotesque Gothic heads

(seeming to me then replete with devout meaning) that gape, and grin, in stone around the inside of the old Round Church (my church) of the Templars.

I saw these plays in the season 1781-2, when I was from six to seven years old. After the intervention of six or seven other years (for at school all play-going was inhibited), I again entered the doors of a theatre. That old Artaxerxes evening had never done ringing in my fancy. I expected the same feelings to come again with the same occasion. But we differ from ourselves less at sixty and sixteen, than the latter does from six. In that interval what had I not lost! At the first period I knew nothing, understood nothing, discriminated nothing. I felt all, loved all, wondered all—

Was nourished, I could not tell how—

I had left the temple a devotee, and was returned a rationalist. The same things were there materially; but the emblem, the reference, was gone! The green curtain was no longer a veil, drawn between two worlds, the unfolding of which was to bring back past ages, to present a “royal ghost”—but a certain quantity of green baize, which was to separate the audience for a given time from certain of their fellow-men who were to come forward and pretend those parts. The lights—the orchestra lights—came up a clumsy machinery. The first ring, and the second ring, was now but a trick of the prompter’s bell—which had been, like the note of the cuckoo, a phantom of a voice, no hand seen or guessed at which ministered to its warning. The actors were men and women painted. I thought the fault was in them; but it was in myself, and the alteration which those many centuries—of six short twelvemonths—had wrought in me. Perhaps it was fortunate for me that the play of the evening was but an indifferent comedy, as it gave me time to crop some unreasonable expectations, which might have interfered with the genuine emotions with which I was soon after enabled to enter upon the first appearance to me of Mrs. Siddons in *Isabella*. Comparison and retrospection soon yielded to the present attraction of the scene; and the theatre became to me, upon a new stock, the most delightful of recreations.

Dream Children, a Reverie

Children love to listen to stories about their elders, when *they* were children; to stretch their imagination to the conception of a traditional great-uncle, or grandame, whom they never saw. It was in this spirit that my little ones crept about me the other evening to hear about their great-grandmother Field, who lived in a great house in Norfolk (a hundred times bigger than that in which they and papa lived) which had been the scene—so at least it was generally believed in that part of the country—of the tragic incidents which they had lately become familiar with from the ballad of the Children in the Wood. Certain it is that the whole story of the children and their cruel uncle was to be seen fairly carved out in wood upon the chimney-piece of the great hall, the whole story down to the Robin Redbreasts; till a foolish rich person pulled it down to set up a marble one of modern invention in its stead, with no story upon it. Here Alice put out one of her dear mother's looks, too tender to be called upbraiding. Then I went on to say, how religious and how good their great-grandmother Field was, how beloved and respected by everybody, though she was not indeed the mistress of this great house, but had only the charge of it (and yet in some respects she might be said to be the mistress of it too) committed to her by the owner, who preferred living in a newer and more fashionable mansion which he had purchased somewhere in the adjoining county; but still she lived in it in a manner as if it had been her own, and kept up the dignity of the great house in a sort while she lived, which afterwards came to decay, and was nearly pulled down, and all its old ornaments stripped and carried away to the owner's other house, where they were set up, and looked as awkward as if some one were to carry away the old tombs they had seen lately at the Abbey, and stick them up in Lady C.'s tawdry gilt drawing-room. Here John smiled, as much as to say, "That would be foolish indeed." And then

I told how, when she came to die, her funeral was attended by a concourse of all the poor, and some of the gentry too, of the neighbourhood for many miles round, to show their respect for her memory, because she had been such a good and religious woman; so good indeed that she knew all the Psaltery by heart, ay, and a great part of the Testament besides. Here little Alice spread her hands. Then I told what a tall, upright, graceful person their great-grandmother Field once was; and how in her youth she was esteemed the best dancer—here Alice's little right foot played an involuntary movement, till, upon my looking grave, it desisted—the best dancer, I was saying, in the county, till a cruel disease, called a cancer, came, and bowed her down with pain; but it could never bend her good spirits, or make them stoop, but they were still upright, because she was so good and religious. Then I told how she was used to sleep by herself in a lone chamber of the great lone house; and how she believed that an apparition of two infants was to be seen at midnight gliding up and down the great staircase near where she slept, but she said “those innocents would do her no harm”; and how frightened I used to be, though in those days I had my maid to sleep with me, because I was never half so good or religious as she—and yet I never saw the infants. Here John expanded all his eyebrows and tried to look courageous. Then I told how good she was to all her grandchildren, having us to the great house in the holydays, where I in particular used to spend many hours by myself, in gazing upon the old busts of the twelve Caesars that had been emperors of Rome, till the old marble heads would seem to live again, or I to be turned into marble with them; how I never could be tired with roaming about that huge mansion, with its vast empty rooms, with their worn-out hangings, fluttering tapestry, and carved oaken panels, with the gilding almost rubbed out—sometimes in the spacious old-fashioned gardens, which I had almost to myself, unless when now and then a solitary gardening man would cross me—and how the nectarines and peaches hung upon the walls, without my ever offering to pluck them, because they were forbidden fruit, unless now and then,—and because I had more pleasure in strolling about among the old melancholy-looking yew-trees, or the firs, and picking up the red berries, and the fir-apples, which were good for nothing but to look at—or in lying about upon the fresh grass with all the fine garden smells around me—or basking in the orangery, till I could almost fancy myself ripening too along with the oranges and the limes in that grateful warmth—or in watching the dace that darted to and fro in the fishpond, at the bottom of the garden, with here and there a great sulky pike hanging midway down the water in silent state,

as if it mocked at their impertinent friskings—I had more pleasure in these busy-idle diversions than in all the sweet flavours of peaches, nectarines, oranges, and such-like common baits of children. Here John slyly deposited back upon the plate a bunch of grapes, which, not unobserved by Alice, he had meditated dividing with her, and both seemed willing to relinquish them for the present as irrelevant. Then, in somewhat a more heightened tone, I told how, though their great-grandmother Field loved all her grandchildren, yet in an especial manner she might be said to love their uncle, John L—, because he was so handsome and spirited a youth, and a king to the rest of us; and, instead of moping about in solitary corners, like some of us, he would mount the most mettlesome horse he could get, when but an imp no bigger than themselves, and make it carry him half over the county in a morning, and join the hunters when there were any out—and yet he loved the old great house and gardens too, but had too much spirit to be always pent up within their boundaries—and how their uncle grew up to man’s estate as brave as he was handsome, to the admiration of everybody, but of their great-grandmother Field most especially; and how he used to carry me upon his back when I was a lame-footed boy—for he was a good bit older than me—many a mile when I could not walk for pain;—and how in after life he became lame-footed too, and I did not always (I fear) make allowances enough for him when he was impatient and in pain, nor remember sufficiently how considerate he had been to me when I was lame-footed, and how when he died, though he had not been dead an hour, it seemed as if he had died a great while ago, such a distance there is betwixt life and death; and how I bore his death as I thought pretty well at first, but afterwards it haunted and haunted me; and though I did not cry or take it to heart as some do, and as I think he would have done if I had died, yet I missed him all day long, and knew not till then how much I had loved him. I missed his kindness, and I missed his crossness, and wished him to be alive again, to be quarrelling with him (for we quarrelled sometimes), rather than not have him again, and was as uneasy without him, as he, their poor uncle, must have been when the doctor took off his limb. Here the children fell a crying, and asked if their little mourning which they had on was not for Uncle John, and they looked up, and prayed me not to go on about their uncle, but to tell them some stories about their pretty dead mother. Then I told how for seven long years, in hope sometimes, sometimes in despair, yet persisting ever, I courted the fair Alice W—n; and as much as children could understand, I explained to them what coyness, and difficulty, and denial, meant in maidens—when suddenly turning to

Alice, the soul of the first Alice looked out at her eyes with such a reality of re-presentment that I became in doubt which of them stood there before me, or whose that bright hair was; and while I stood gazing, both the children gradually grew fainter to my view, receding, and still receding, till nothing at last but two mournful features were seen in the uttermost distance, which, without speech, strangely impressed upon me the effects of speech: "We are not of Alice, nor of thee, nor are we children at all. The children of Alice call Bartrum father. We are nothing; less than nothing, and dreams. We are only what might have been, and must wait upon the tedious shores of Lethe millions of ages before we have existence, and a name"—and immediately awaking, I found myself quietly seated in my bachelor arm-chair, where I had fallen asleep, with the faithful Bridget unchanged by my side—but John L. (or James Elia) was gone forever.

Sanity of True Genius

S

o far from the position holding true, that great wit (or genius, in our modern way of speaking) has a necessary alliance with insanity, the greatest wits, on the contrary, will ever be found to be the sanest writers. It is impossible for the mind to conceive of a mad Shakespeare. The greatness of wit, by which the poetic talent is here chiefly to be understood, manifests itself in the admirable balance of all the faculties. Madness is the disproportionate straining or excess of any one of them. "So strong a wit," says Cowley, speaking of a poetical friend,

—did Nature to him frame,
As all things but his judgment overcame;
His judgment like the heavenly moon did show,
Tempering that mighty sea below.

The ground of the mistake is that men, finding in the raptures of the higher poetry a condition of exaltation, to which they have no parallel in their own experience, besides the spurious resemblance of it in dreams and fevers, impute a state of dreaminess and fever to the poet. But the true poet dreams being awake. He is not possessed by his subject, but has dominion over it. In the groves of Eden he walks familiar as in his native paths. He ascends the empyrean heaven, and is not intoxicated. He treads the burning marl without dismay; he wins his flight without self-loss through realms of chaos "and old night." Or if, abandoning himself to that severer chaos of a "human mind untuned," he is content awhile to be mad with Lear, or to hate mankind (a sort of madness) with Timon, neither is that madness, nor this misanthropy, so unchecked, but that—never letting the reins of reason wholly go, while most he seems to do so—he has his better genius still whispering at his ear, with the good

servant Kent suggesting saner counsels, or with the honest steward Flavius recommending kindlier resolutions. Where he seems most to recede from humanity, he will be found the truest to it. From beyond the scope of Nature if he summon possible existences, he subjugates them to the law of her consistency. He is beautifully loyal to that sovereign directress, even when he appears most to betray and desert her. His ideal tribes submit to policy; his very monsters are tamed to his hand, even as that wild sea-brood, shepherded by Proteus. He tames, and he clothes them with attributes of flesh and blood, till they wonder at themselves, like Indian Islanders forced to submit to European vesture. Caliban, the Witches, are as true to the laws of their own nature (ours with a difference), as Othello, Hamlet, and Macbeth. Herein the great and the little wits are differenced; that if the latter wander ever so little from nature or actual existence, they lose themselves and their readers. Their phantoms are lawless; their visions nightmares. They do not create, which implies shaping and consistency. Their imaginations are not active—for to be active is to call something into act and form—but passive, as men in sick dreams. For the supernatural, or something super-added to what we know of nature, they give you the plainly non-natural. And if this were all, and that these mental hallucinations were discoverable only in the treatment of subjects out of nature, or transcending it, the judgment might with some plea be pardoned if it ran riot, and a little wantonized: but even in the describing of real and everyday life, that which is before their eyes, one of these lesser wits shall more deviate from nature—show more of that inconsequence, which has a natural alliance with frenzy—than a great genius in his “maddest fits,” as Withers somewhere calls them. We appeal to any one that is acquainted with the common run of Lane’s novels—as they existed some twenty or thirty years back, those scanty intellectual viands of the whole female reading public, till a happier genius arose, and expelled forever the innutritious phantoms—whether he has not found his brain more “betossed,” his memory more puzzled, his sense of when and where more confounded, among the improbable events, the incoherent incidents, the inconsistent characters, or no characters, of some third-rate love-intrigue—where the persons shall be a Lord Glendamour and a Miss Rivers, and the scene only alternate between Bath and Bond Street—a more bewildering dreaminess induced upon him than he has felt wandering over all the fairy-grounds of Spenser. In the productions we refer to, nothing but names and places is familiar; the persons are neither of this world nor of any other conceivable one; an endless stream of activities without purpose, of purposes destitute of mo-

tive: we meet phantoms in our known walks; *fantasques* only christened. In the poet we have names which announce fiction; and we have absolutely no place at all, for the things and persons of the Fairy Queen prate not of their "whereabout." But in their inner nature, and the law of their speech and actions, we are at home, and upon acquainted ground. The one turns life into a dream: the other to the wildest dreams gives the sobrieties of everyday occurrences. By what subtle art of tracing the mental processes it is effected, we are not philosophers enough to explain, but in that wonderful episode of the cave of Mammon, in which the Money God appears first in the lowest form of a miser, is then a worker of metals, and becomes the god of all the treasures of the world; and has a daughter, Ambition, before whom all the world kneels for favours—with the Hesperian fruit, the waters of Tantalus, with Pilate washing his hands vainly, but not impertinently, in the same stream—that we should be at one moment in the cave of an old hoarder of treasures, at the next at the forge of the Cyclops, in a palace and yet in hell, all at once, with the shifting mutations of the most rambling dream, and our judgment yet all the time awake, and neither able nor willing to detect the fallacy, is a proof of that hidden sanity which still guides the poet in the wildest seeming-aberrations.

It is not enough to say that the whole episode is a copy of the mind's conceptions in sleep; it is, in some sort—but what a copy! Let the most romantic of us, that has been entertained all night with the spectacle of some wild and magnificent vision, recombine it in the morning, and try it by his waking judgment. That which appeared so shifting, and yet so coherent, while that faculty was passive, when it comes under cool examination shall appear so reasonless and so unlinked, that we are ashamed to have been so deluded; and to have taken, though but in sleep, a monster for a god. But the transitions in this episode are every whit as violent as in the most extravagant dream, and yet the waking judgment ratifies them.

entitled THE LAST ESSAYS OF ELIA.

Samuel Johnson

1709–1784

Samuel Johnson was born in Lichfield, England, on September 18, 1709. His father, Michael, a bookseller, was sheriff of the city that year. From his father, Samuel inherited his large, powerful, though not entirely healthy, body; and in his father's shop the boy gained an early interest in books.

When he was young, Samuel Johnson suffered from scrofula, a disease which disfigured his face and injured his eyesight. He was educated at Lichfield Grammar School and at Oxford, where he stayed from October, 1728, until December, 1729. For the next few years, Johnson made a meager living teaching, translating, and writing.

In 1735 he married a widow, Mrs. Elizabeth Porter, and set up a school at Edial, near Lichfield. The school failed and in 1737 he left for London, where he was to spend the rest of his life. During the next few years Johnson suffered poverty and enjoyed little success. He earned a living chiefly by writing for the *Gentleman's Magazine*.

In 1744 was published Johnson's *Life of Savage*, a biography of his friend Richard Savage; and his poem *The Vanity of Human Wishes* appeared in 1749. But it was the publication of Johnson's famous *Dictionary of the English Language* in 1755 that made his reputation. The *Dictionary* was an immediate success and was at once accepted as the standard authority. For two of the eight years he spent preparing the dictionary, Johnson supported himself in part by publishing a periodical, *The Rambler* (1750–52). Later, from 1758–60, he also published another periodical, *The Idler*.

In 1762 Johnson was given a government pension which made him financially independent. His remaining years were comparatively easy, but the death of his wife in 1752 had been a great blow to him,

and Johnson was never free from the periods of deep depression which had plagued him throughout his life.

At meetings of The Literary Club, which Johnson helped found in 1764, his genius as a conversationalist was displayed. James Boswell recorded these conversations, as well as every quirk and peculiarity of the great man, so that we probably know more about Johnson than about any writer who ever lived.¹

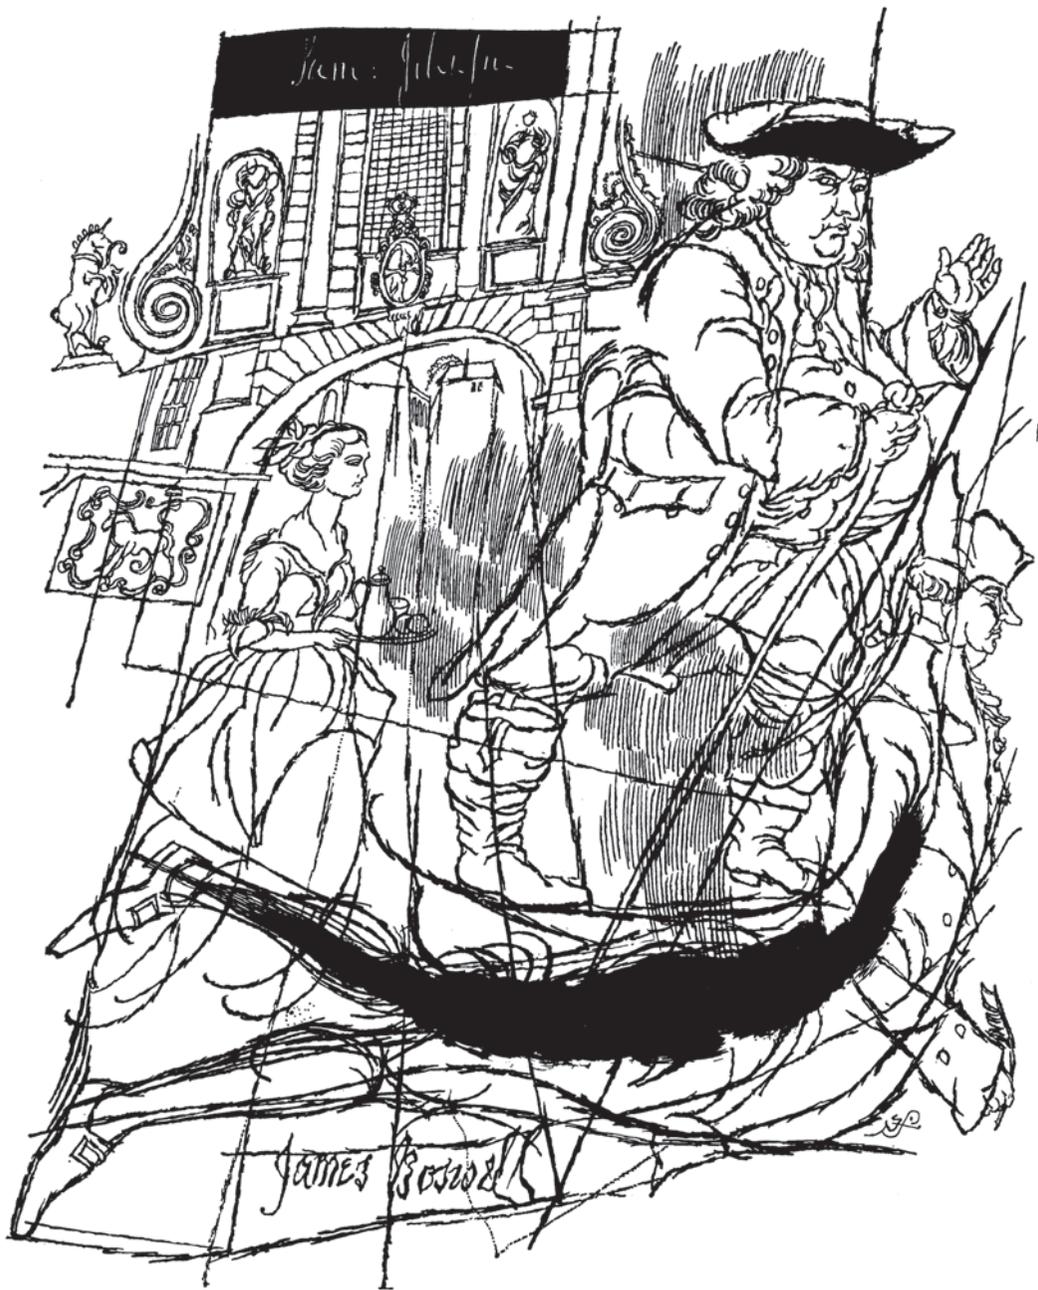

In 1765, Johnson brought out the long-awaited edition of Shakespeare's plays, which he had been promising for nearly ten years. In 1779–81 was published *Lives of the English Poets*, prefaces written for a large collection of English poetry. He died on December 13, 1784, and was buried in Westminster Abbey.

Shakespeare has been more studied, as well as more read and played, than any English dramatist. Dr. Johnson's critique, in the *Preface* that he wrote to his edition of the plays, reprinted below, is one of a long line of such works. Authors and editors had praised Shakespeare for a hundred years before Johnson's birth; and, of course, the flood of praise and criticism has continued unabated until our time. But there is reason to believe that Johnson's evaluation is the best general study of Shakespeare.

If it is not the best, it is certainly important to read today. Modern criticism of Shakespeare tends to ignore the main point of Johnson's critique. Much contemporary Shakespearean criticism seems to dehumanize Shakespeare, to treat him as difficult, strange, and recondite. It emphasizes the changes that his language has undergone, and points out the intricacy of his images. Doubtless such criticism is valuable. The complexities of Shakespeare should be observed and clarified. His uniquely involuted ironies and ambiguities should be understood.

¹ See his *Life of Samuel Johnson*, in *Great Books of the Western World*.

Notes from the artist: "Johnson and, below, the ever-present Boswell, followed by a coffeehouse waitress, in a fantasy of Fleet Street, scene of some of Johnson's famous verbal jousts."

But one sometimes has the feeling that this criticism misses the forest for the trees. Johnson does not fail to see the forest; he is able to view, and to appreciate, Shakespeare as a whole.

“Nothing can please many,” he writes, “and please long, but just representations of general nature.” Shakespeare’s characters, he goes on, “are not modified by the customs of particular places, unpractised by the rest of the world; by the peculiarities of studies or professions, which can operate but upon small numbers; or by the accidents of transient fashions or temporary opinions: they are the genuine progeny of common humanity, such as the world will always supply, and observation will always find.”

“Shakespeare has no heroes,” Johnson adds in a later place; “his scenes are occupied only by men who act and speak as the reader thinks that he should himself have spoken or acted on the same occasion.”

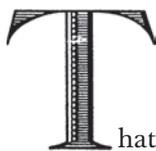

“This therefore is the praise of Shakespeare,” Johnson concludes, “that his drama is the mirror of life; that he who has mazed his imagination, in following the phantoms which other writers raise up before him, may here be cured of his delirious ecstasies, by reading human sentiments in human language, by scenes from which a hermit may estimate the transactions of the world, and a confessor predict the progress of the passions.”

Johnson does not praise Shakespeare unreservedly. He has many criticisms which some modern readers consider carping: for example, that Shakespeare is sometimes morally slack, sometimes a poor storyteller, sometimes vulgar, sometimes ignorant, and that he too often indulges in punning. The reader of Johnson’s *Preface* will have to decide for himself whether the things that Johnson takes exception to should be condemned or condoned. But he should not forget the chief point. Shakespeare’s plays exhibit “the real state of sublunary nature,” Johnson writes, “which partakes of good and evil, joy and sorrow, mingled with endless variety of proportion and innumerable modes of combination . . . in which, at the same time, the reveller is hasting to his wine, and the mourner burying his friend; in which the malignity of one is sometimes defeated by the frolic of another; and many mischiefs and many benefits are done and hindered without design.”

Shakespeare is the poet of life as we all know it and always will know it. Johnson is saying—and do we wish to dispute him?—that this is the highest praise which can be accorded any artist.

Johnson's *Preface* is useful and interesting for other reasons. It talks sense about the theater, and it talks sense, too, about the business of criticism. The sympathetic reader will not fail to derive delight from Johnson's style. This is the "grand style," so rare in English. The sentences are long and often complex, but they move like stately music to a deeply satisfying close. The combination of Shakespeare and Johnson is a wonderful one.

Preface to Shakespeare

That praises are without reason lavished on the dead, and that the honours due only to excellence are paid to antiquity, is a complaint likely to be always continued by those who, being able to add nothing to truth, hope for eminence from the heresies of paradox; or those who, being forced by disappointment upon consolatory expedients, are willing to hope from posterity what the present age refuses, and flatter themselves that the regard which is yet denied by envy will be at last bestowed by time.

Antiquity, like every other quality that attracts the notice of mankind, has undoubtedly votaries that reverence it, not from reason, but from prejudice. Some seem to admire indiscriminately whatever has been long preserved, without considering that time has sometimes co-operated with chance; all perhaps are more willing to honour past than present excellence; and the mind contemplates genius through the shades of age, as the eye surveys the sun through artificial opacity. The great contention of criticism is to find the faults of the moderns, and the beauties of the ancients. While an author is yet living we estimate his powers by his worst performance, and when he is dead, we rate them by his best.

To works, however, of which the excellence is not absolute and definite, but gradual and comparative; to works not raised upon principles demonstrative and scientific, but appealing wholly to observation and experience, no other test can be applied than length of duration and continuance of esteem. What mankind have long possessed they have often examined and compared; and if they persist to value the possession, it is because frequent comparisons have confirmed opinion in its favour. As among the works of nature no man can properly call a river deep, or a mountain high, without the knowledge of many mountains, and many rivers; so in the productions of genius, nothing can be styled excellent till it has been compared with other works of the same kind. Demonstration immediately displays its power, and has nothing to

hope or fear from the flux of years; but works tentative and experimental must be estimated by their proportion to the general and collective ability of man, as it is discovered in a long succession of endeavours. Of the first building that was raised, it might be with certainty determined that it was round or square; but whether it was spacious or lofty must have been referred to time. The Pythagorean scale of numbers was at once discovered to be perfect; but the poems of Homer we yet know not to transcend the common limits of human intelligence, but by remarking that nation after nation, and century after century, has been able to do little more than transpose his incidents, new-name his characters, and paraphrase his sentiments.

The reverence due to writings that have long subsisted arises therefore not from any credulous confidence in the superior wisdom of past ages, or gloomy persuasion of the degeneracy of mankind, but is the consequence of acknowledged and indubitable positions that what has been longest known has been most considered, and what is most considered is best understood.

The Poet, of whose works I have undertaken the revision, may now begin to assume the dignity of an ancient, and claim the privilege of established fame and prescriptive veneration. He has long outlived his century, the term commonly fixed as the test of literary merit. Whatever advantages he might once derive from personal allusions, local customs, or temporary opinions have for many years been lost; and every topic of merriment, or motive of sorrow, which the modes of artificial life afforded him, now only obscure the scenes which they once illuminated. The effects of favour and competition are at an end; the tradition of his friendships and his enmities has perished; his works support no opinion with arguments, nor supply any faction with invectives; they can neither indulge vanity nor gratify malignity; but are read without any other reason than the desire of pleasure, and are therefore praised only as pleasure is obtained; yet, thus unassisted by interest or passion, they have passed through variations of taste and changes of manners, and, as they devolved from one generation to another, have received new honours at every transmission.

But because human judgment, though it be gradually gaining upon certainty, never becomes infallible; and approbation, though long continued, may yet be only the approbation of prejudice or fashion; it is proper to enquire by what peculiarities of excellence Shakespeare has gained and kept the favour of his countrymen.

Nothing can please many, and please long, but just representations of

general nature. Particular manners can be known to few, and therefore few only can judge how nearly they are copied. The irregular combinations of fanciful invention may delight awhile, by that novelty of which the common satiety of life sends us all in quest; but the pleasures of sudden wonder are soon exhausted, and the mind can only repose on the stability of truth.

Shakespeare is above all writers, at least above all modern writers, the poet of nature; the poet that holds up to his readers a faithful mirror of manners and of life. His characters are not modified by the customs of particular places, unpractised by the rest of the world; by the peculiarities of studies or professions, which can operate but upon small numbers; or by the accidents of transient fashions or temporary opinions: they are the genuine progeny of common humanity, such as the world will always supply, and observation will always find. His persons act and speak by the influence of those general passions and principles by which all minds are agitated, and the whole system of life is continued in motion. In the writings of other poets a character is too often an individual; in those of Shakespeare it is commonly a species.

It is from this wide extension of design that so much instruction is derived. It is this which fills the plays of Shakespeare with practical axioms and domestic wisdom. It was said of Euripides that every verse was a precept; and it may be said of Shakespeare that from his works may be collected a system of civil and economical prudence. Yet his real power is not shown in the splendour of particular passages, but by the progress of his fable, and the tenor of his dialogue; and he that tries to recommend him by select quotations will succeed like the pedant in Hierocles, who, when he offered his house to sale, carried a brick in his pocket as a specimen.

It will not easily be imagined how much Shakespeare excels in accommodating his sentiments to real life but by comparing him with other authors. It was observed of the ancient schools of declamation that the more diligently they were frequented, the more was the student disqualified for the world, because he found nothing there which he should ever meet in any other place. The same remark may be applied to every stage but that of Shakespeare. The theatre, when it is under any other direction, is peopled by such characters as were never seen, conversing, in a language which was never heard, upon topics which will never arise in the commerce of mankind. But the dialogue of this author is often so evidently determined by the incident which produces it, and is pursued

with so much ease and simplicity, that it seems scarcely to claim the merit of fiction, but to have been gleaned by diligent selection out of common conversation, and common occurrences.

Upon every other stage the universal agent is love, by whose power all good and evil is distributed, and every action quickened or retarded. To bring a lover, a lady and a rival into the fable; to entangle them in contradictory obligations, perplex them with oppositions of interest, and harass them with violence of desires inconsistent with each other; to make them meet in rapture and part in agony; to fill their mouths with hyperbolical joy and outrageous sorrow; to distress them as nothing human ever was distressed; to deliver them as nothing human ever was delivered is the business of a modern dramatist. For this probability is violated, life is misrepresented, and language is depraved. But love is only one of many passions; and as it has no great influence upon the sum of life, it has little operation in the dramas of a poet who caught his ideas from the living world, and exhibited only what he saw before him. He knew that any other passion, as it was regular or exorbitant, was a cause of happiness or calamity.

Characters thus ample and general were not easily discriminated and preserved, yet perhaps no poet ever kept his personages more distinct from each other. I will not say with Pope that every speech may be assigned to the proper speaker, because many speeches there are which have nothing characteristic; but perhaps, though some may be equally adapted to every person, it will be difficult to find any that can be properly transferred from the present possessor to another claimant. The choice is right when there is reason for choice.

Other dramatists can only gain attention by hyperbolical or aggravated characters, by fabulous and unexampled excellence or depravity, as the writers of barbarous romances invigorated the reader by a giant and a dwarf; and he that should form his expectations of human affairs from the play, or from the tale, would be equally deceived. Shakespeare has no heroes; his scenes are occupied only by men who act and speak as the reader thinks that he should himself have spoken or acted on the same occasion: Even where the agency is supernatural the dialogue is level with life. Other writers disguise the most natural passions and most frequent incidents; so that he who contemplates them in the book will not know them in the world: Shakespeare approximates the remote, and familiarizes the wonderful; the event which he represents will not happen, but if it were possible, its effects would probably be such as he has

assigned; and it may be said that he has not only shown human nature as it acts in real exigencies but as it would be found in trials to which it cannot be exposed.

This therefore is the praise of Shakespeare, that his drama is the mirror of life; that he who has mazed his imagination, in following the phantoms which other writers raise up before him, may here be cured of his delirious ecstasies, by reading human sentiments in human language, by scenes from which a hermit may estimate the transactions of the world, and a confessor predict the progress of the passions.

His adherence to general nature has exposed him to the censure of critics, who form their judgments upon narrower principles. Dennis and Rhymer think his Romans not sufficiently Roman; and Voltaire censures his kings as not completely royal. Dennis is offended that Menenius, a senator of Rome, should play the buffoon; and Voltaire perhaps thinks decency violated when the Danish Usurper is represented as a drunkard. But Shakespeare always makes nature predominate over accident; and if he preserves the essential character, is not very careful of distinctions superinduced and adventitious. His story requires Romans or kings, but he thinks only on men. He knew that Rome, like every other city, had men of all dispositions; and wanting a buffoon, he went into the senate-house for that which the senate-house would certainly have afforded him. He was inclined to show a usurper and a murderer not only odious but despicable; he therefore added drunkenness to his other qualities, knowing that kings love wine like other men, and that wine exerts its natural power upon kings. These are the petty cavils of petty minds; a poet overlooks the casual distinction of country and condition, as a painter, satisfied with the figure, neglects the drapery.

The censure which he has incurred by mixing comic and tragic scenes, as it extends to all his works, deserves more consideration. Let the fact be first stated, and then examined.

Shakespeare's plays are not in the rigorous and critical sense either tragedies or comedies, but compositions of a distinct kind; exhibiting the real state of sublunary nature, which partakes of good and evil, joy and sorrow, mingled with endless variety of proportion and innumerable modes of combination; and expressing the course of the world, in which the loss of one is the gain of another; in which, at the same time, the reveller is hasting to his wine, and the mourner burying his friend; in which the malignity of one is sometimes defeated by the frolic of another; and many mischiefs and many benefits are done and hindered without design.

Out of this chaos of mingled purposes and casualties the ancient poets, according to the laws which custom had prescribed, selected: some the crimes of men, and some their absurdities; some the momentous vicissitudes of life, and some the lighter occurrences; some the terrors of distress, and some the gaieties of prosperity. Thus rose the two modes of imitation, known by the names of tragedy and comedy, compositions intended to promote different ends by contrary means, and considered as so little allied that I do not recollect among the Greeks or Romans a single writer who attempted both.

Shakespeare has united the powers of exciting laughter and sorrow not only in one mind, but in one composition. Almost all his plays are divided between serious and ludicrous characters, and, in the successive evolutions of the design, sometimes produce seriousness and sorrow, and sometimes levity and laughter.

That this is a practice contrary to the rules of criticism will be readily allowed; but there is always an appeal open from criticism to nature. The end of writing is to instruct; the end of poetry is to instruct by pleasing. That the mingled drama may convey all the instruction of tragedy or comedy cannot be denied, because it includes both in its alternations of exhibition and approaches nearer than either to the appearance of life, by showing how great machinations and slender designs may promote or obviate one another, and the high and the low co-operate in the general system by unavoidable concatenation.

It is objected that by this change of scenes the passions are interrupted in their progression, and that the principal event, being not advanced by a due gradation of preparatory incidents, wants at last the power to move, which constitutes the perfection of dramatic poetry. This reasoning is so specious that it is received as true even by those who in daily experience feel it to be false. The interchanges of mingled scenes seldom fail to produce the intended vicissitudes of passion. Fiction cannot move so much but that the attention may be easily transferred; and though it must be allowed that pleasing melancholy be sometimes interrupted by unwelcome levity, yet let it be considered likewise that melancholy is often not pleasing, and that the disturbance of one man may be the relief of another; that different auditors have different habitudes; and that, upon the whole, all pleasure consists in variety.

The players, who in their edition divided our author's works into comedies, histories, and tragedies, seem not to have distinguished the three kinds by any very exact or definite ideas.

An action which ended happily to the principal persons, however seri-

ous or distressful through its intermediate incidents, in their opinion constituted a comedy. This idea of a comedy continued long amongst us; and plays were written, which, by changing the catastrophe, were tragedies to-day, and comedies to-morrow.

Tragedy was not in those times a poem of more general dignity or elevation than comedy; it required only a calamitous conclusion, with which the common criticism of that age was satisfied, whatever lighter pleasure it afforded in its progress.

History was a series of actions, with no other than chronological succession, independent on each other, and without any tendency to introduce or regulate the conclusion. It is not always very nicely distinguished from tragedy. There is not much nearer approach to unity of action in the tragedy of Antony and Cleopatra than in the history of Richard the Second. But a history might be continued through many plays; as it had no plan, it had no limits.

Through all these denominations of the drama, Shakespeare's mode of composition is the same; an interchange of seriousness and merriment, by which the mind is softened at one time, and exhilarated at another. But whatever be his purpose, whether to gladden or depress, or to conduct the story, without vehemence or emotion, through tracts of easy and familiar dialogue, he never fails to attain his purpose; as he commands us, we laugh or mourn, or sit silent with quiet expectation, in tranquillity without indifference.

When Shakespeare's plan is understood, most of the criticisms of Rhymer and Voltaire vanish away. The play of Hamlet is opened, without impropriety, by two sentinels; Iago bellows at Brabantio's window, without injury to the scheme of the play, though in terms which a modern audience would not easily endure; the character of Polonius is seasonable and useful; and the Grave-diggers themselves may be heard with applause.

Shakespeare engaged in dramatic poetry with the world open before him; the rules of the ancients were yet known to few; the public judgment was unformed; he had no example of such fame as might force him upon imitation, nor critics of such authority as might restrain his extravagance: He therefore indulged his natural disposition, and his disposition, as Rhymer has remarked, led him to comedy. In tragedy he often writes, with great appearance of toil and study, what is written at last with little felicity; but in his comic scenes, he seems to produce without labour what no labour can improve. In tragedy he is always struggling after some occasion to be comic; but in comedy he seems to repose, or to

luxuriate, as in a mode of thinking congenial to his nature. In his tragic scenes there is always something wanting, but his comedy often surpasses expectation or desire. His comedy pleases by the thoughts and the language, and his tragedy for the greater part by incident and action. His tragedy seems to be skill, his comedy to be instinct.

The force of his comic scenes has suffered little diminution from the changes made by a century and a half, in manners or in words. As his personages act upon principles arising from genuine passion, very little modified by particular forms, their pleasures and vexations are communicable to all times and to all places; they are natural, and therefore durable; the adventitious peculiarities of personal habits are only superficial dyes, bright and pleasing for a little while, yet soon fading to a dim tinct, without any remains of former lustre; but the discriminations of true passion are the colours of nature; they pervade the whole mass, and can only perish with the body that exhibits them. The accidental compositions of heterogeneous modes are dissolved by the chance which combined them; but the uniform simplicity of primitive qualities neither admits increase, nor suffers decay. The sand heaped by one flood is scattered by another, but the rock always continues in its place. The stream of time, which is continually washing the dissoluble fabrics of other poets, passes without injury by the adamant of Shakespeare.

If there be, what I believe there is, in every nation, a style which never becomes obsolete, a certain mode of phraseology so consonant and congenial to the analogy and principles of its respective language as to remain settled and unaltered; this style is probably to be sought in the common intercourse of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hope of finding or making better; those who wish for distinction forsake the vulgar, when the vulgar is right; but there is a conversation above grossness and below refinement, where propriety resides, and where this poet seems to have gathered his comic dialogue. He is therefore more agreeable to the ears of the present age than any other author equally remote, and among his other excellencies deserves to be studied as one of the original masters of our language.

These observations are to be considered not as unexceptionably constant, but as containing general and predominant truth. Shakespeare's familiar dialogue is affirmed to be smooth and clear, yet not wholly without ruggedness or difficulty; as a country may be eminently fruitful, though it has spots unfit for cultivation: His characters are praised as

natural, though their sentiments are sometimes forced, and their actions improbable; as the earth upon the whole is spherical, though its surface is varied with protuberances and cavities.

Shakespeare with his excellencies has likewise faults, and faults sufficient to obscure and overwhelm any other merit. I shall show them in the proportion in which they appear to me, without envious malignity or superstitious veneration. No question can be more innocently discussed than a dead poet's pretensions to renown; and little regard is due to that bigotry which sets candour higher than truth.

His first defect is that to which may be imputed most of the evil in books or in men. He sacrifices virtue to convenience, and is so much more careful to please than to instruct that he seems to write without any moral purpose. From his writings indeed a system of social duty may be selected, for he that thinks reasonably must think morally; but his precepts and axioms drop casually from him; he makes no just distribution of good or evil, nor is always careful to show in the virtuous a disapprobation of the wicked; he carries his persons indifferently through right and wrong, and at the close dismisses them without further care, and leaves their examples to operate by chance. This fault the barbarity of his age cannot extenuate; for it is always a writer's duty to make the world better, and justice is a virtue independent on time or place.

The plots are often so loosely formed that a very slight consideration may improve them, and so carelessly pursued that he seems not always fully to comprehend his own design. He omits opportunities of instructing or delighting which the train of his story seems to force upon him, and apparently rejects those exhibitions which would be more affecting, for the sake of those which are more easy.

It may be observed that in many of his plays the latter part is evidently neglected. When he found himself near the end of his work, and, in view of his reward, he shortened the labour to snatch the profit. He therefore remits his efforts where he should most vigorously exert them, and his catastrophe is improbably produced or imperfectly represented.

He had no regard to distinction of time or place, but gives to one age or nation, without scruple, the customs, institutions, and opinions of another, at the expense not only of likelihood but of possibility. These faults Pope has endeavoured, with more zeal than judgment, to transfer to his imagined interpolators. We need not wonder to find Hector quoting Aristotle, when we see the loves of Theseus and Hippolyta combined with the Gothic mythology of fairies. Shakespeare, indeed, was not the only violator of chronology, for in the same age Sidney, who wanted not

the advantages of learning, has, in his *Arcadia*, confounded the pastoral with the feudal times, the days of innocence, quiet and security, with those of turbulence, violence, and adventure.

In his comic scenes he is seldom very successful when he engages his characters in reciprocations of smartness and contests of sarcasm; their jests are commonly gross, and their pleasantry licentious; neither his gentlemen nor his ladies have much delicacy, nor are sufficiently distinguished from his clowns by any appearance of refined manners. Whether he represented the real conversation of his time is not easy to determine; the reign of Elizabeth is commonly supposed to have been a time of stateliness, formality and reserve; yet perhaps the relaxations of that severity were not very elegant. There must, however, have been always some modes of gaiety preferable to others, and a writer ought to choose the best.

In tragedy his performance seems constantly to be worse, as his labour is more. The effusions of passion which exigence forces out are for the most part striking and energetic; but whenever he solicits his invention, or strains his faculties, the offspring of his throes is tumour, meanness, tediousness, and obscurity.

In narration he affects a disproportionate pomp of diction, and a wearisome train of circumlocution, and tells the incident imperfectly in many words, which might have been more plainly delivered in few. Narration in dramatic poetry is naturally tedious, as it is unanimated and inactive, and obstructs the progress of the action; it should therefore always be rapid, and enlivened by frequent interruption. Shakespeare found it an encumbrance, and instead of lightening it by brevity, endeavoured to recommend it by dignity and splendour.

His declamations or set speeches are commonly cold and weak, for his power was the power of nature; when he endeavoured, like other tragic writers, to catch opportunities of amplification, and instead of enquiring what the occasion demanded, to show how much his stores of knowledge could supply, he seldom escapes without the pity or resentment of his reader.

It is incident to him to be now and then entangled with an unwieldy sentiment, which he cannot well express, and will not reject; he struggles with it awhile, and if it continues stubborn, comprises it in words such as occur, and leaves it to be disentangled and evolved by those who have more leisure to bestow upon it.

Not that always where the language is intricate the thought is subtle, or the image always great where the line is bulky; the equality of words

to things is very often neglected, and trivial sentiments and vulgar ideas disappoint the attention, to which they are recommended by sonorous epithets and swelling figures.

But the admirers of this great poet have never less reason to indulge their hopes of supreme excellence than when he seems fully resolved to sink them in dejection, and mollify them with tender emotions by the fall of greatness, the danger of innocence, or the crosses of love. He is not long soft and pathetic without some idle conceit, or contemptible equivocation. He no sooner begins to move than he counteracts himself; and terror and pity, as they are rising in the mind, are checked and blasted by sudden frigidity.

A quibble is to Shakespeare what luminous vapours are to the traveller; he follows it at all adventures; it is sure to lead him out of his way, and sure to engulf him in the mire. It has some malignant power over his mind, and its fascinations are irresistible. Whatever be the dignity or profundity of his disquisition, whether he be enlarging knowledge or exalting affection, whether he be amusing attention with incidents, or enchainning it in suspense, let but a quibble spring up before him, and he leaves his work unfinished. A quibble is the golden apple for which he will always turn aside from his career, or stoop from his elevation. A quibble, poor and barren as it is, gave him such delight that he was content to purchase it, by the sacrifice of reason, propriety and truth. A quibble was to him the fatal Cleopatra for which he lost the world, and was content to lose it.

It will be thought strange that, in enumerating the defects of this writer, I have not yet mentioned his neglect of the unities; his violation of those laws which have been instituted and established by the joint authority of poets and of critics.

For his other deviations from the art of writing I resign him to critical justice, without making any other demand in his favour than that which must be indulged to all human excellence: that his virtues be rated with his failings: But, from the censure which this irregularity may bring upon him, I shall, with due reverence to that learning which I must oppose, adventure to try how I can defend him.

His histories, being neither tragedies nor comedies, are not subject to any of their laws; nothing more is necessary to all the praise which they expect than that the changes of action be so prepared as to be understood, that the incidents be various and affecting, and the characters consistent, natural, and distinct. No other unity is intended, and therefore none is to be sought.

In his other works he has well enough preserved the unity of action. He has not, indeed, an intrigue regularly perplexed and regularly unravelled: he does not endeavour to hide his design only to discover it, for this is seldom the order of real events, and Shakespeare is the poet of nature: But his plan has commonly what Aristotle requires, a beginning, a middle, and an end; one event is concatenated with another, and the conclusion follows by easy consequence. There are perhaps some incidents that might be spared, as in other poets there is much talk that only fills up time upon the stage; but the general system makes gradual advances, and the end of the play is the end of expectation.

To the unities of time and place he has shown no regard; and perhaps a nearer view of the principles on which they stand will diminish their value, and withdraw from them the veneration which, from the time of Corneille, they have very generally received, by discovering that they have given more trouble to the poet than pleasure to the auditor.

The necessity of observing the unities of time and place arises from the supposed necessity of making the drama credible. The critics hold it impossible that an action of months or years can be possibly believed to pass in three hours; or that the spectator can suppose himself to sit in the theatre, while ambassadors go and return between distant kings, while armies are levied and towns besieged, while an exile wanders and returns, or till he whom they saw courting his mistress, shall lament the untimely fall of his son. The mind revolts from evident falsehood, and fiction loses its force when it departs from the resemblance of reality.

From the narrow limitation of time necessarily arises the contraction of place. The spectator, who knows that he saw the first act at Alexandria, cannot suppose that he sees the next at Rome, at a distance to which not the dragons of Medea could, in so short a time, have transported him; he knows with certainty that he has not changed his place, and he knows that place cannot change itself; that what was a house cannot become a plain; that what was Thebes can never be Persepolis.

Such is the triumphant language with which a critic exults over the misery of an irregular poet, and exults commonly without resistance or reply. It is time therefore to tell him by the authority of Shakespeare that he assumes, as an unquestionable principle, a position which, while his breath is forming it into words, his understanding pronounces to be false. It is false that any representation is mistaken for reality; that any dramatic fable in its materiality was ever credible, or, for a single moment, was ever credited.

The objection arising from the impossibility of passing the first hour at

Alexandria, and the next at Rome, supposes that when the play opens, the spectator really imagines himself at Alexandria, and believes that his walk to the theatre has been a voyage to Egypt, and that he lives in the days of Antony and Cleopatra. Surely he that imagines this may imagine more. He that can take the stage at one time for the palace of the Ptolemies may take it in half an hour for the promontory of Actium. Delusion, if delusion be admitted, has no certain limitation; if the spectator can be once persuaded that his old acquaintances are Alexander and Caesar, that a room illuminated with candles is the plain of Pharsalia, or the bank of Granicus, he is in a state of elevation above the reach of reason, or of truth, and from the heights of empyrean poetry, may despise the circumscriptions of terrestrial nature. There is no reason why a mind thus wandering in ecstasy should count the clock, or why an hour should not be a century in that calenture of the brains that can make the stage a field.

The truth is that the spectators are always in their senses, and know, from the first act to the last, that the stage is only a stage, and that the players are only players. They came to hear a certain number of lines recited with just gesture and elegant modulation. The lines relate to some action, and an action must be in some place; but the different actions that complete a story may be in places very remote from each other; and where is the absurdity of allowing that space to represent first Athens, and then Sicily which was always known to be neither Sicily nor Athens, but a modern theatre?

By supposition, as place is introduced, time may be extended; the time required by the fable elapses for the most part between the acts; for, of so much of the action as is represented, the real and poetical duration is the same. If, in the first act, preparations for war against Mithridates are represented to be made in Rome, the event of the war may, without absurdity, be represented, in the catastrophe, as happening in Pontus; we know that there is neither war, nor preparation for war; we know that we are neither in Rome nor Pontus; that neither Mithridates nor Lucullus are before us. The drama exhibits successive imitations of successive actions; and why may not the second imitation represent an action that happened years after the first, if it be so connected with it that nothing but time can be supposed to intervene? Time is, of all modes of existence, most obsequious to the imagination; a lapse of years is as easily conceived as a passage of hours. In contemplation we easily contract the time of real actions, and therefore willingly permit it to be contracted when we only see their imitation.

It will be asked how the drama moves if it is not credited. It is credited with all the credit due to a drama. It is credited, whenever it moves, as a just picture of a real original; as representing to the auditor what he would himself feel if he were to do or suffer what is there feigned to be suffered or to be done. The reflection that strikes the heart is not that the evils before us are real evils but that they are evils to which we ourselves may be exposed. If there be any fallacy, it is not that we fancy the players, but that we fancy ourselves unhappy for a moment; but we rather lament the possibility than suppose the presence of misery, as a mother weeps over her babe when she remembers that death may take it from her. The delight of tragedy proceeds from our consciousness of fiction; if we thought murders and treasons real, they would please no more.

Imitations produce pain or pleasure, not because they are mistaken for realities, but because they bring realities to mind. When the imagination is recreated by a painted landscape, the trees are not supposed capable to give us shade, or the fountains coolness; but we consider how we should be pleased with such fountains playing beside us, and such woods waving over us. We are agitated in reading the history of Henry V, yet no man takes his book for the field of Agincourt. A dramatic exhibition is a book recited with concomitants that increase or diminish its effect. Familiar comedy is often more powerful on the theatre, than in the page; imperial tragedy is always less. The humour of Petruccio may be heightened by grimace; but what voice or what gesture can hope to add dignity or force to the soliloquy of Cato.

A play read affects the mind like a play acted. It is therefore evident that the action is not supposed to be real; and it follows that between the acts a longer or shorter time may be allowed to pass, and that no more account of space or duration is to be taken by the auditor of a drama than by the reader of a narrative, before whom may pass in an hour the life of a hero, or the revolutions of an empire.

Whether Shakespeare knew the unities, and rejected them by design, or deviated from them by happy ignorance, it is, I think, impossible to decide, and useless to enquire. We may reasonably suppose that, when he rose to notice, he did not want the counsels and admonitions of scholars and critics, and that he at last deliberately persisted in a practice which he might have begun by chance. As nothing is essential to the fable but unity of action, and as the unities of time and place arise evidently from false assumptions, and, by circumscribing the extent of the drama, lessen its variety, I cannot think it much to be lamented that they were not

known by him, or not observed: Nor, if such another poet could arise, should I very vehemently reproach him that his first act passed at Venice, and his next in Cyprus. Such violations of rules merely positive become the comprehensive genius of Shakespeare, and such censures are suitable to the minute and slender criticism of Voltaire:

*Non usque adeo permiscuit imis
Longus summa dies, ut non, si voce Metelli
Serventur leges, malint a Caesare tolli.*

[Not so far had that long day mixed high with
low that the laws might not rather be broken
by Caesar than kept by Metellus' word.]

Yet when I speak thus slightly of dramatic rules, I cannot but recollect how much wit and learning may be produced against me; before such authorities I am afraid to stand, not that I think the present question one of those that are to be decided by mere authority, but because it is to be suspected that these precepts have not been so easily received but for better reasons than I have yet been able to find. The result of my enquiries, in which it would be ludicrous to boast of impartiality, is that the unities of time and place are not essential to a just drama, that though they may sometimes conduce to pleasure, they are always to be sacrificed to the nobler beauties of variety and instruction; and that a play, written with nice observation of critical rules, is to be contemplated as an elaborate curiosity, as the product of superfluous and ostentatious art, by which is shown rather what is possible than what is necessary.

He that, without diminution of any other excellence, shall preserve all the unities unbroken deserves the like applause with the architect who shall display all the orders of architecture in a citadel without any deduction from its strength; but the principal beauty of a citadel is to exclude the enemy; and the greatest graces of a play are to copy nature and instruct life.

Perhaps, what I have here not dogmatically but deliberately written may recall the principles of the drama to a new examination. I am almost frightened at my own temerity; and when I estimate the fame and the strength of those that maintain the contrary opinion, am ready to sink down in reverential silence; as Aeneas withdrew from the defence of Troy when he saw Neptune shaking the wall, and Juno heading the besiegers.

Those whom my arguments cannot persuade to give their approbation

to the judgment of Shakespeare will easily, if they consider the condition of his life, make some allowance for his ignorance.

Every man's performances, to be rightly estimated, must be compared with the state of the age in which he lived, and with his own particular opportunities; and though to the reader a book be not worse or better for the circumstances of the author, yet as there is always a silent reference of human works to human abilities, and as the enquiry how far man may extend his designs, or how high he may rate his native force, is of far greater dignity than in what rank we shall place any particular performance, curiosity is always busy to discover the instruments, as well as to survey the workmanship, to know how much is to be ascribed to original powers, and how much to casual and adventitious help. The palaces of Peru or Mexico were certainly mean and incommensurable habitations if compared to the houses of European monarchs; yet who could forbear to view them with astonishment who remembered that they were built without the use of iron?

The English nation in the time of Shakespeare was yet struggling to emerge from barbarity. The philology of Italy had been transplanted hither in the reign of Henry VIII; and the learned languages had been successfully cultivated by Lilly, Linacre, and More; by Pole, Cheke, and Gardiner; and afterwards by Smith, Clerk, Haddon, and Ascham. Greek was now taught to boys in the principal schools; and those who united elegance with learning read, with great diligence, the Italian and Spanish poets. But literature was yet confined to professed scholars, or to men and women of high rank. The public was gross and dark; and to be able to read and write was an accomplishment still valued for its rarity.

Nations, like individuals, have their infancy. A people newly awakened to literary curiosity, being yet unacquainted with the true state of things, knows not how to judge of that which is proposed as its resemblance. Whatever is remote from common appearances is always welcome to vulgar, as to childish, credulity; and of a country unenlightened by learning, the whole people is the vulgar. The study of those who then aspired to plebeian learning was laid out upon adventures, giants, dragons, and enchantments. *The Death of Arthur* was the favourite volume.

The mind, which has feasted on the luxurious wonders of fiction, has no taste of the insipidity of truth. A play which imitated only the common occurrences of the world would, upon the admirers of Palmerin and Guy of Warwick, have made little impression; he that wrote for such an audience was under the necessity of looking round for strange events and

fabulous transactions, and that incredibility by which maturer knowledge is offended was the chief recommendation of writings to unskilful curiosity.

Our author's plots are generally borrowed from novels, and it is reasonable to suppose that he chose the most popular, such as were read by many, and related by more; for his audience could not have followed him through the intricacies of the drama had they not held the thread of the story in their hands.

The stories, which we now find only in remoter authors, were in his time accessible and familiar. The fable of *As You Like It*, which is supposed to be copied from Chaucer's Gamelyn, was a little pamphlet of those times; and old Mr. Cibber remembered the tale of Hamlet in plain English prose, which the critics have now to seek in Saxo Grammaticus.

His English histories he took from English chronicles and English ballads; and as the ancient writers were made known to his countrymen by versions, they supplied him with new subjects; he dilated some of Plutarch's lives into plays, when they had been translated by North.

His plots, whether historical or fabulous, are always crowded with incidents, by which the attention of a rude people was more easily caught than by sentiment or argumentation; and such is the power of the marvellous even over those who despise it that every man finds his mind more strongly seized by the tragedies of Shakespeare than of any other writer; others please us by particular speeches, but he always makes us anxious for the event, and has perhaps excelled all but Homer in securing the first purpose of a writer, by exciting restless and unquenchable curiosity and compelling him that reads his work to read it through.

The shows and bustle with which his plays abound have the same original. As knowledge advances, pleasure passes from the eye to the ear, but returns, as it declines, from the ear to the eye. Those to whom our author's labours were exhibited had more skill in pomps or processions than in poetical language, and perhaps wanted some visible and discriminated events, as comments on the dialogue. He knew how he should most please; and whether his practice is more agreeable to nature, or whether his example has prejudiced the nation, we still find that on our stage something must be done as well as said, and inactive declamation is very coldly heard, however musical or elegant, passionate or sublime.

Voltaire expresses his wonder that our author's extravagances are endured by a nation which has seen the tragedy of Cato. Let him be answered that Addison speaks the language of poets, and Shakespeare, of men. We find in Cato innumerable beauties which enamour us of its

author, but we see nothing that acquaints us with human sentiments or human actions; we place it with the fairest and the noblest progeny which judgment propagates by conjunction with learning, but Othello is the vigorous and vivacious offspring of observation impregnated by genius. Cato affords a splendid exhibition of artificial and fictitious manners, and delivers just and noble sentiments, in diction easy, elevated and harmonious, but its hopes and fears communicate no vibration to the heart; the composition refers us only to the writer; we pronounce the name of Cato, but we think on Addison.

The work of a correct and regular writer is a garden accurately formed and diligently planted, varied with shades, and scented with flowers; the composition of Shakespeare is a forest, in which oaks extend their branches, and pines tower in the air, interspersed sometimes with weeds and brambles, and sometimes giving shelter to myrtles and to roses; filling the eye with awful pomp, and gratifying the mind with endless diversity. Other poets display cabinets of precious rarities, minutely finished, wrought into shape, and polished unto brightness. Shakespeare opens a mine which contains gold and diamonds in unexhaustible plenty, though clouded by incrustations, debased by impurities, and mingled with a mass of meaner minerals.

It has been much disputed whether Shakespeare owed his excellence to his own native force, or whether he had the common helps of scholastic education, the precepts of critical science, and the examples of ancient authors.

There has always prevailed a tradition that Shakespeare wanted learning, that he had no regular education, nor much skill in the dead languages. Jonson, his friend, affirms, that he had small Latin, and no Greek; who, besides that he had no imaginable temptation to falsehood, wrote at a time when the character and acquisitions of Shakespeare were known to multitudes. His evidence ought therefore to decide the controversy, unless some testimony of equal force could be opposed.

Some have imagined that they have discovered deep learning in many imitations of old writers; but the examples which I have known urged were drawn from books translated in his time; or were such easy coincidences of thought, as will happen to all who consider the same subjects; or such remarks on life or axioms of morality as float in conversation, and are transmitted through the world in proverbial sentences.

I have found it remarked that in this important sentence, "Go before, I'll follow," we read a translation of, *I prae, sequar*. I have been told that when Caliban, after a pleasing dream, says, "I cry'd to sleep again,"

the author imitates Anacreon, who had, like every other man, the same wish on the same occasion.

There are a few passages which may pass for imitations, but so few that the exception only confirms the rule; he obtained them from accidental quotations, or by oral communication, and as he used what he had, would have used more if he had obtained it.

The *Comedy of Errors* is confessedly taken from the *Menaechmi* of Plautus; from the only play of Plautus which was then in English. What can be more probable than that he who copied that would have copied more; but that those which were not translated were inaccessible?

Whether he knew the modern languages is uncertain. That his plays have some French scenes proves but little; he might easily procure them to be written, and probably, even though he had known the language in the common degree, he could not have written it without assistance. In the story of Romeo and Juliet he is observed to have followed the English translation where it deviates from the Italian; but this on the other part proves nothing against his knowledge of the original. He was to copy, not what he knew himself, but what was known to his audience.

It is most likely that he had learned Latin sufficiently to make him acquainted with construction, but that he never advanced to an easy perusal of the Roman authors. Concerning his skill in modern languages, I can find no sufficient ground of determination; but as no imitations of French or Italian authors have been discovered, though the Italian poetry was then high in esteem, I am inclined to believe that he read little more than English, and chose for his fables only such tales as he found translated.

That much knowledge is scattered over his works is very justly observed by Pope, but it is often such knowledge as books did not supply. He that will understand Shakespeare must not be content to study him in the closet; he must look for his meaning sometimes among the sports of the field, and sometimes among the manufactures of the shop.

There is however proof enough that he was a very diligent reader, nor was our language then so indigent of books but that he might very liberally indulge his curiosity without excursion into foreign literature. Many of the Roman authors were translated, and some of the Greek; the Reformation had filled the kingdom with theological learning; most of the topics of human disquisition had found English writers; and poetry had been cultivated, not only with diligence, but success. This was a stock of knowledge sufficient for a mind so capable of appropriating and improving it.

But the greater part of his excellence was the product of his own genius. He found the English stage in a state of the utmost rudeness; no essays either in tragedy or comedy had appeared, from which it could be discovered to what degree of delight either one or other might be carried. Neither character nor dialogue were yet understood. Shakespeare may be truly said to have introduced them both amongst us, and in some of his happier scenes to have carried them both to the utmost height.

By what gradations of improvement he proceeded is not easily known; for the chronology of his works is yet unsettled. Rowe is of opinion, that "perhaps we are not to look for his beginning, like those of other writers, in his least perfect works; art had so little, and nature so large, a share in what he did that for ought I know," says he, "the performances of his youth, as they were the most vigorous, were the best." But the power of nature is only the power of using to any certain purpose the materials which diligence procures, or opportunity supplies. Nature gives no man knowledge, and when images are collected by study and experience, can only assist in combining or applying them. Shakespeare, however favoured by nature, could impart only what he had learned; and as he must increase his ideas, like other mortals, by gradual acquisition, he, like them, grew wiser as he grew older, could display life better, as he knew it more, and instruct with more efficacy, as he was himself more amply instructed.

There is a vigilance of observation and accuracy of distinction which books and precepts cannot confer; from this almost all original and native excellence proceeds. Shakespeare must have looked upon mankind with perspicacity, in the highest degree curious and attentive. Other writers borrow their characters from preceding writers, and diversify them only by the accidental appendages of present manners; the dress is a little varied, but the body is the same. Our author had both matter and form to provide; for except the characters of Chaucer, to whom I think he is not much indebted, there were no writers in English, and perhaps not many in other modern languages, which showed life in its native colours.

The contest about the original benevolence or malignity of man had not yet commenced. Speculation had not yet attempted to analyse the mind, to trace the passions to their sources, to unfold the seminal principles of vice and virtue, or sound the depths of the heart for the motives of action. All those enquiries which from that time that human nature became the fashionable study have been made sometimes with nice discernment but often with idle subtilty were yet unattempted. The tales,

with which the infancy of learning was satisfied, exhibited only the superficial appearances of action, related the events but omitted the causes, and were formed for such as delighted in wonders rather than in truth. Mankind was not then to be studied in the closet; he that would know the world was under the necessity of gleanings his own remarks, by mingling as he could in its business and amusements.

Boyle congratulated himself upon his high birth, because it favoured his curiosity, by facilitating his access. Shakespeare had no such advantage; he came to London a needy adventurer, and lived for a time by very mean employments. Many works of genius and learning have been performed in states of life that appear very little favourable to thought or to enquiry; so many that he who considers them is inclined to think that he sees enterprise and perseverance predominating over all external agency, and bidding help and hindrance vanish before them. The genius of Shakespeare was not to be depressed by the weight of poverty, nor limited by the narrow conversation to which men in want are inevitably condemned; the incumbrances of his fortune were shaken from his mind, "as dewdrops from a lion's mane."

Though he had so many difficulties to encounter, and so little assistance to surmount them, he has been able to obtain an exact knowledge of many modes of life, and many casts of native dispositions; to vary them with great multiplicity; to mark them by nice distinctions; and to show them in full view by proper combinations. In this part of his performances he had none to imitate, but has himself been imitated by all succeeding writers; and it may be doubted whether from all his successors more maxims of theoretical knowledge, or more rules of practical prudence, can be collected than he alone has given to his country.

Nor was his attention confined to the actions of men; he was an exact surveyor of the inanimate world; his descriptions have always some peculiarities, gathered by contemplating things as they really exist. It may be observed that the oldest poets of many nations preserve their reputation, and that the following generations of wit, after a short celebrity, sink into oblivion. The first, whoever they be, must take their sentiments and descriptions immediately from knowledge; the resemblance is therefore just, their descriptions are verified by every eye, and their sentiments acknowledged by every breast. Those whom their fame invites to the same studies copy partly them, and partly nature, till the books of one age gain such authority as to stand in the place of nature to another, and imitation, always deviating a little, becomes at last capricious and casual. Shakespeare, whether life or nature be his sub-

ject, shows plainly that he has seen with his own eyes; he gives the image which he receives, not weakened or distorted by the intervention of any other mind; the ignorant feel his representations to be just, and the learned see that they are complete.

Perhaps it would not be easy to find any author, except Homer, who invented so much as Shakespeare, who so much advanced the studies which he cultivated, or effused so much novelty upon his age or country. The form, the characters, the language, and the shows of the English drama are his. "He seems," says Dennis, "to have been the very original of our English tragical harmony, that is, the harmony of blank verse, diversified often by dissyllable and trissyllable terminations. For the diversity distinguishes it from heroic harmony, and by bringing it nearer to common use makes it more proper to gain attention, and more fit for action and dialogue. Such verse we make when we are writing prose; we make such verse in common conversation."

I know not whether this praise is rigorously just. The dissyllable termination, which the critic rightly appropriates to the drama, is to be found, though, I think, not in *Gorboduc* which is confessedly before our author; yet in *Hieronimo*, of which the date is not certain, but which there is reason to believe at least as old as his earliest plays. This however is certain, that he is the first who taught either tragedy or comedy to please, there being no theatrical piece of any older writer of which the name is known, except to antiquaries and collectors of books, which are sought because they are scarce, and would not have been scarce had they been much esteemed.

To him we must ascribe the praise, unless Spenser may divide it with him, of having first discovered to how much smoothness and harmony the English language could be softened. He has speeches, perhaps sometimes scenes, which have all the delicacy of Rowe, without his effeminacy. He endeavours indeed commonly to strike by the force and vigour of his dialogue, but he never executes his purpose better than when he tries to soothe by softness.

Yet it must be at last confessed that as we owe everything to him, he owes something to us; that, if much of his praise is paid by perception and judgment, much is likewise given by custom and veneration. We fix our eyes upon his graces, and turn them from his deformities, and endure in him what we should in another loathe or despise. If we endured without praising, respect for the father of our drama might excuse us; but I have seen, in the book of some modern critic, a collection of anomalies, which show that he has corrupted language by every mode of

depravation, but which his admirer has accumulated as a monument of honour.

He has scenes of undoubted and perpetual excellence, but perhaps not one play, which, if it were now exhibited as the work of a contemporary writer, would be heard to the conclusion. I am indeed far from thinking that his works were wrought to his own ideas of perfection; when they were such as would satisfy the audience, they satisfied the writer. It is seldom that authors, though more studious of fame than Shakespeare, rise much above the standard of their own age; to add a little of what is best will always be sufficient for present praise, and those who find themselves exalted into fame are willing to credit their encomiasts, and to spare the labour of contending with themselves.

It does not appear that Shakespeare thought his works worthy of posterity, that he levied any ideal tribute upon future times, or had any further prospect than of present popularity and present profit. When his plays had been acted, his hope was at an end; he solicited no addition of honour from the reader. He therefore made no scruple to repeat the same jests in many dialogues, or to entangle different plots by the same knot of perplexity, which may be at least forgiven him by those who recollect that of Congreve's four comedies two are concluded by a marriage in a mask, by a deception, which perhaps never happened, and which, whether likely or not, he did not invent.

So careless was this great poet of future fame that, though he retired to ease and plenty while he was yet little "declined into the vale of years," before he could be disgusted with fatigue, or disabled by infirmity, he made no collection of his works, nor desired to rescue those that had been already published from the depravations that obscured them, or secure to the rest a better destiny, by giving them to the world in their genuine state.

Of the plays which bear the name of Shakespeare in the late editions, the greater part were not published till about seven years after his death, and the few which appeared in his life are apparently thrust into the world without the care of the author, and therefore probably without his knowledge.

Of all the publishers, clandestine or professed, their negligence and unskilfulness has by the late revisers been sufficiently shown. The faults of all are indeed numerous and gross, and have not only corrupted many passages perhaps beyond recovery, but have brought others into suspicion, which are only obscured by obsolete phraseology, or by the writer's unskilfulness and affectation. To alter is more easy than to explain, and

temerity is a more common quality than diligence. Those who saw that they must employ conjecture to a certain degree were willing to indulge it a little further. Had the author published his own works, we should have sat quietly down to disentangle his intricacies, and clear his obscurities; but now we tear what we cannot loose, and eject what we happen not to understand.

The faults are more than could have happened without the concurrence of many causes. The style of Shakespeare was in itself ungrammatical, perplexed and obscure; his works were transcribed for the players by those who may be supposed to have seldom understood them; they were transmitted by copiers equally unskilful, who still multiplied errors; they were perhaps sometimes mutilated by the actors, for the sake of shortening the speeches; and were at last printed without correction of the press.

In this state they remained, not, as Dr. Warburton supposes, because they were unregarded, but because the editor's art was not yet applied to modern languages, and our ancestors were accustomed to so much negligence of English printers that they could very patiently endure it. At last an edition was undertaken by Rowe; not because a poet was to be published by a poet, for Rowe seems to have thought very little on correction or explanation, but that our author's works might appear like those of his fraternity, with the appendages of a life and commendatory preface. Rowe has been clamorously blamed for not performing what he did not undertake, and it is time that justice be done him, by confessing that though he seems to have had no thought of corruption beyond the printer's errors, yet he has made many emendations, if they were not made before, which his successors have received without acknowledgment, and which, if they had produced them, would have filled pages and pages with censures of the stupidity by which the faults were committed, with displays of the absurdities which they involved, with ostentatious expositions of the new reading, and self congratulations on the happiness of discovering it.

Of Rowe, as of all the editors, I have preserved the preface, and have likewise retained the author's life, though not written with much elegance or spirit; it relates however what is now to be known, and therefore deserves to pass through all succeeding publications.

The nation had been for many years content enough with Mr. Rowe's performance, when Mr. Pope made them acquainted with the true state of Shakespeare's text, showed that it was extremely corrupt, and gave reason to hope that there were means of reforming it. He collated the

old copies, which none had thought to examine before, and restored many lines to their integrity; but, by a very compendious criticism, he rejected whatever he disliked, and thought more of amputation than of cure.

I know not why he is commended by Dr. Warburton for distinguishing the genuine from the spurious plays. In this choice he exerted no judgment of his own; the plays which he received were given by Hemings and Condell, the first editors; and those which he rejected, though, according to the licentiousness of the press in those times, they were printed during Shakespeare's life, with his name, had been omitted by his friends, and were never added to his works before the edition of 1664, from which they were copied by the later printers.

This was a work which Pope seems to have thought unworthy of his abilities, being not able to suppress his contempt of "the dull duty of an editor." He understood but half his undertaking. The duty of a collator is indeed dull, yet, like other tedious tasks, is very necessary; but an emendatory critic would ill discharge his duty, without qualities very different from dullness. In perusing a corrupted piece, he must have before him all possibilities of meaning, with all possibilities of expression. Such must be his comprehension of thought, and such his copiousness of language. Out of many readings possible, he must be able to select that which best suits with the state of opinions, and modes of language prevailing in every age, and with his author's particular cast of thought, and turn of expression. Such must be his knowledge, and such his taste. Conjectural criticism demands more than humanity possesses, and he that exercises it with most praise has very frequent need of indulgence. Let us now be told no more of the dull duty of an editor.

Confidence is the common consequence of success. They whose excellence of any kind has been loudly celebrated are ready to conclude that their powers are universal. Pope's edition fell below his own expectations, and he was so much offended, when he was found to have left anything for others to do, that he passed the latter part of his life in a state of hostility with verbal criticism.

I have retained all his notes, that no fragment of so great a writer may be lost; his preface, valuable alike for elegance of composition and justness of remark, and containing a general criticism on his author, so extensive that little can be added, and so exact that little can be disputed, every editor has an interest to suppress, but that every reader would demand its insertion.

Pope was succeeded by Theobald, a man of narrow comprehension and

small acquisitions, with no native and intrinsic splendour of genius, with little of the artificial light of learning, but zealous for minute accuracy, and not negligent in pursuing it. He collated the ancient copies, and rectified many errors. A man so anxiously scrupulous might have been expected to do more, but what little he did was commonly right.

In his report of copies and editions he is not to be trusted without examination. He speaks sometimes indefinitely of copies, when he has only one. In his enumeration of editions, he mentions the two first folios as of high, and the third folio as of middle, authority; but the truth is that the first is equivalent to all others, and that the rest only deviate from it by the printer's negligence. Whoever has any of the folios has all, excepting those diversities which mere reiteration of editions will produce. I collated them all at the beginning, but afterwards used only the first.

Of his notes I have generally retained those which he retained himself in his second edition, except when they were confuted by subsequent annotators, or were too minute to merit preservation. I have sometimes adopted his restoration of a comma, without inserting the panegyric in which he celebrated himself for his achievement. The exuberant excrescence of his diction I have often lopped, his triumphant exultations over Pope and Rowe I have sometimes suppressed, and his contemptible ostentation I have frequently concealed; but I have in some places shown him, as he would have shown himself, for the reader's diversion, that the inflated emptiness of some notes may justify or excuse the contraction of the rest.

Theobald, thus weak and ignorant, thus mean and faithless, thus petulant and ostentatious, by the good luck of having Pope for his enemy, has escaped, and escaped alone, with reputation, from this undertaking. So willingly does the world support those who solicit favour, against those who command reverence; and so easily is he praised whom no man can envy.

Our author fell then into the hands of Sir Thomas Hanmer, the Oxford editor, a man, in my opinion, eminently qualified by nature for such studies. He had what is the first requisite to emendatory criticism, that intuition by which the poet's intention is immediately discovered, and that dexterity of intellect which dispatches its work by the easiest means. He had undoubtedly read much; his acquaintance with customs, opinions, and traditions seems to have been large; and he is often learned without show. He seldom passes what he does not understand without an attempt to find or to make a meaning, and sometimes hastily makes what

a little more attention would have found. He is solicitous to reduce to grammar what he could not be sure that his author intended to be grammatical. Shakespeare regarded more the series of ideas than of words; and his language, not being designed for the reader's desk, was all that he desired it to be, if it conveyed his meaning to the audience.

Hanmer's care of the metre has been too violently censured. He found the measures reformed in so many passages, by the silent labours of some editors, with the silent acquiescence of the rest, that he thought himself allowed to extend a little further the license, which had already been carried so far without reprehension; and of his corrections in general, it must be confessed that they are often just, and made commonly with the least possible violation of the text.

But, by inserting his emendations, whether invented or borrowed, into the page, without any notice of varying copies, he has appropriated the labour of his predecessors, and made his own edition of little authority. His confidence indeed, both in himself and others, was too great; he supposes all to be right that was done by Pope and Theobald; he seems not to suspect a critic of fallibility, and it was but reasonable that he should claim what he so liberally granted.

As he never writes without careful enquiry and diligent consideration, I have received all his notes, and believe that every reader will wish for more.

Of the last editor it is more difficult to speak. Respect is due to high place, tenderness to living reputation, and veneration to genius and learning; but he cannot be justly offended at that liberty of which he has himself so frequently given an example, nor very solicitous what is thought of notes, which he ought never to have considered as part of his serious employments, and which, I suppose, since the ardour of composition is remitted, he no longer numbers among his happy effusions.

The original and predominant error of his commentary is acquiescence in his first thoughts; that precipitation which is produced by consciousness of quick discernment; and that confidence which presumes to do, by surveying the surface, what labour only can perform, by penetrating the bottom. His notes exhibit sometimes perverse interpretations, and sometimes improbable conjectures; he at one time gives the author more profundity of meaning than the sentence admits, and at another discovers absurdities where the sense is plain to every other reader. But his emendations are likewise often happy and just; and his interpretation of obscure passages learned and sagacious.

Of his notes, I have commonly rejected those against which the gen-

eral voice of the public has exclaimed, or which their own incongruity immediately condemns, and which, I suppose, the author himself would desire to be forgotten. Of the rest, to part I have given the highest approbation, by inserting the offered reading in the text; part I have left to the judgment of the reader, as doubtful, though specious; and part I have censured without reserve, but I am sure without bitterness of malice, and, I hope, without wantonness of insult.

It is no pleasure to me, in revising my volumes, to observe how much paper is wasted in confutation. Whoever considers the revolutions of learning, and the various questions of greater or less importance, upon which wit and reason have exercised their powers, must lament the unsuccessfulness of enquiry, and the slow advances of truth, when he reflects that great part of the labour of every writer is only the destruction of those that went before him. The first care of the builder of a new system is to demolish the fabrics which are standing. The chief desire of him that comments an author is to show how much other commentators have corrupted and obscured him. The opinions prevalent in one age, as truths above the reach of controversy, are confuted and rejected in another, and rise again to reception in remoter times. Thus the human mind is kept in motion without progress. Thus sometimes truth and error, and sometimes contrarieties of error, take each other's place by reciprocal invasion. The tide of seeming knowledge which is poured over one generation retires and leaves another naked and barren; the sudden meteors of intelligence which for awhile appear to shoot their beams into the regions of obscurity on a sudden withdraw their lustre, and leave mortals again to grope their way.

These elevations and depressions of renown, and the contradictions to which all improvers of knowledge must for ever be exposed, since they are not escaped by the highest and brightest of mankind, may surely be endured with patience by critics and annotators, who can rank themselves but as the satellites of their authors. "How canst thou beg for life," says Achilles to his captive, "when thou knowest that thou art now to suffer only what must another day be suffered by Achilles?"

Dr. Warburton had a name sufficient to confer celebrity on those who could exalt themselves into antagonists, and his notes have raised a clamour too loud to be distinct. His chief assailants are the authors of the canons of criticism and of the review of Shakespeare's text; of whom one ridicules his errors with airy petulance, suitable enough to the levity of the controversy; the other attacks them with gloomy malignity, as if he were dragging to justice an assassin or incendiary. The one stings like

a fly, sucks a little blood, takes a gay flutter, and returns for more; the other bites like a viper, and would be glad to leave inflammations and gangrene behind him. When I think on one, with his confederates, I remember the danger of Coriolanus, who was afraid that “girls with spits, and boys with stones, should slay him in puny battle”; when the other crosses my imagination, I remember the prodigy in *Macbeth*,

An eagle tow’ring in his pride of place,
Was by a mousing owl hawk’d at and kill’d.

Let me however do them justice. One is a wit, and one a scholar. They have both shown acuteness sufficient in the discovery of faults, and have both advanced some probable interpretations of obscure passages; but when they aspire to conjecture and emendation, it appears how falsely we all estimate our own abilities, and the little which they have been able to perform might have taught them more candour to the endeavours of others.

Before Dr. Warburton’s edition, critical observations on Shakespeare had been published by Mr. Upton, a man skilled in languages, and acquainted with books, but who seems to have had no great vigour of genius or nicety of taste. Many of his explanations are curious and useful, but he likewise, though he professed to oppose the licentious confidence of editors, and adhere to the old copies, is unable to restrain the rage of emendation, though his ardour is ill seconded by his skill. Every cold empiric, when his heart is expanded by a successful experiment, swells into a theorist, and the laborious collator at some unlucky moment frolics in conjecture.

Critical, historical and explanatory notes have been likewise published upon Shakespeare by Dr. Grey, whose diligent perusal of the old English writers has enabled him to make some useful observations. What he undertook he has well enough performed, but as he neither attempts judicial nor emendatory criticism, he employs rather his memory than his sagacity. It were to be wished that all would endeavour to imitate his modesty who have not been able to surpass his knowledge.

I can say with great sincerity of all my predecessors, what I hope will hereafter be said of me, that not one has left Shakespeare without improvement, nor is there one to whom I have not been indebted for assistance and information. Whatever I have taken from them it was my intention to refer to its original author, and it is certain that what I have not given to another, I believed when I wrote it to be my own. In some perhaps I have been anticipated; but if I am ever found to encroach upon

the remarks of any other commentator, I am willing that the honour, be it more or less, should be transferred to the first claimant, for his right, and his alone, stands above dispute; the second can prove his pretensions only to himself, nor can himself always distinguish invention, with sufficient certainty, from recollection.

They have all been treated by me with candour, which they have not been careful of observing to one another. It is not easy to discover from what cause the acrimony of a scholiast can naturally proceed. The subjects to be discussed by him are of very small importance; they involve neither property nor liberty; nor favour the interest of sect or party. The various readings of copies, and different interpretations of a passage, seem to be questions that might exercise the wit, without engaging the passions. But, whether it be that "small things make mean men proud," and vanity catches small occasions; or that all contrariety of opinion, even in those that can defend it no longer, makes proud men angry; there is often found in commentaries a spontaneous strain of invective and contempt, more eager and venomous than is vented by the most furious controvertist in politics against those whom he is hired to defame.

Perhaps the lightness of the matter may conduce to the vehemence of the agency; when the truth to be investigated is so near to inexistence as to escape attention, its bulk is to be enlarged by rage and exclamation: That to which all would be indifferent in its original state may attract notice when the fate of a name is appended to it. A commentator has indeed great temptations to supply by turbulence what he wants of dignity, to beat his little gold to a spacious surface, to work that to foam which no art or diligence can exalt to spirit.

The notes which I have borrowed or written are either illustrative, by which difficulties are explained; or judicial, by which faults and beauties are remarked; or emendatory, by which deprivations are corrected.

The explanations transcribed from others, if I do not subjoin any other interpretation, I suppose commonly to be right; at least I intend by acquiescence to confess that I have nothing better to propose.

After the labours of all the editors, I found many passages which appeared to me likely to obstruct the greater number of readers, and thought it my duty to facilitate their passage. It is impossible for an expositor not to write too little for some, and too much for others. He can only judge what is necessary by his own experience; and how long so-ever he may deliberate will at last explain many lines which the learned will think impossible to be mistaken, and omit many for which the ig-

norant will want his help. These are censures merely relative, and must be quietly endured. I have endeavoured to be neither superfluously copious, nor scrupulously reserved, and hope that I have made my author's meaning accessible to many who before were frightened from perusing him, and contributed something to the public, by diffusing innocent and rational pleasure.

The complete explanation of an author not systematic and consequential, but desultory and vagrant, abounding in casual allusions and light hints, is not to be expected from any single scholiast. All personal reflections, when names are suppressed, must be in a few years irrecoverably obliterated; and customs, too minute to attract the notice of law, such as modes of dress, formalities of conversation, rules of visits, disposition of furniture, and practices of ceremony, which naturally find places in familiar dialogue, are so fugitive and unsubstantial that they are not easily retained or recovered. What can be known will be collected by chance, from the recesses of obscure and obsolete papers, perused commonly with some other view. Of this knowledge every man has some, and none has much; but when an author has engaged the public attention, those who can add anything to his illustration communicate their discoveries, and time produces what had eluded diligence.

To time I have been obliged to resign many passages, which, though I did not understand them, will perhaps hereafter be explained, having, I hope, illustrated some which others have neglected or mistaken, sometimes by short remarks, or marginal directions, such as every editor has added at his will, and often by comments more laborious than the matter will seem to deserve; but that which is most difficult is not always most important, and to an editor nothing is a trifle by which his author is obscured.

The poetical beauties or defects I have not been very diligent to observe. Some plays have more, and some fewer, judicial observations, not in proportion to their difference of merit, but because I gave this part of my design to chance and to caprice. The reader, I believe, is seldom pleased to find his opinion anticipated; it is natural to delight more in what we find or make than in what we receive. Judgment, like other faculties, is improved by practice, and its advancement is hindered by submission to dictatorial decisions, as the memory grows torpid by the use of a table book. Some initiation is however necessary; of all skill, part is infused by precept, and part is obtained by habit; I have therefore shown so much as may enable the candidate of criticism to discover the rest.

To the end of most plays, I have added short strictures, containing a general censure of faults, or praise of excellence; in which I know not how much I have concurred with the current opinion; but I have not, by any affectation of singularity, deviated from it. Nothing is minutely and particularly examined, and therefore it is to be supposed that in the plays which are condemned there is much to be praised, and in those which are praised much to be condemned.

The part of criticism in which the whole succession of editors has laboured with the greatest diligence, which has occasioned the most arrogant ostentation, and excited the keenest acrimony, is the emendation of corrupted passages, to which the public attention, having been first drawn by the violence of contention between Pope and Theobald, has been continued by the persecution which, with a kind of conspiracy, has been since raised against all the publishers of Shakespeare.

That many passages have passed in a state of depravation through all the editions is indubitably certain; of these the restoration is only to be attempted by collation of copies or sagacity of conjecture. The collator's province is safe and easy, the conjecturer's perilous and difficult. Yet as the greater part of the plays are extant only in one copy, the peril must not be avoided, nor the difficulty refused.

Of the readings which this emulation of amendment has hitherto produced, some from the labours of every publisher I have advanced into the text; those are to be considered as in my opinion sufficiently supported; some I have rejected without mention, as evidently erroneous; some I have left in the notes without censure or approbation, as resting in equipoise between objection and defence; and some, which seemed specious but not right, I have inserted with a subsequent animadversion.

Having classed the observations of others, I was at last to try what I could substitute for their mistakes, and how I could supply their omissions. I collated such copies as I could procure, and wished for more, but have not found the collectors of these rarities very communicative. Of the editions which chance or kindness put into my hands I have given an enumeration that I may not be blamed for neglecting what I had not the power to do.

By examining the old copies, I soon found that the later publishers, with all their boasts of diligence, suffered many passages to stand unauthorized, and contented themselves with Rowe's regulation of the text, even where they knew it to be arbitrary, and with a little consideration might have found it to be wrong. Some of these alterations are only the

ejection of a word for one that appeared to him more elegant or more intelligible. These corruptions I have often silently rectified; for the history of our language, and the true force of our words, can only be preserved by keeping the text of authors free from adulteration. Others, and those very frequent, smoothed the cadence, or regulated the measure; on these I have not exercised the same rigour; if only a word was transposed, or a particle inserted or omitted, I have sometimes suffered the line to stand; for the inconstancy of the copies is such as that some liberties may be easily permitted. But this practice I have not suffered to proceed far, having restored the primitive diction wherever it could for any reason be preferred.

The emendations, which comparison of copies supplied, I have inserted in the text; sometimes where the improvement was slight, without notice, and sometimes with an account of the reasons of the change.

Conjecture, though it be sometimes unavoidable, I have not wantonly nor licentiously indulged. It has been my settled principle that the reading of the ancient books is probably true, and therefore is not to be disturbed for the sake of elegance, perspicuity, or mere improvement of the sense. For though much credit is not due to the fidelity, nor any to the judgment of the first publishers, yet they who had the copy before their eyes were more likely to read it right than we who read it only by imagination. But it is evident that they have often made strange mistakes by ignorance or negligence, and that therefore something may be properly attempted by criticism, keeping the middle way between presumption and timidity.

Such criticism I have attempted to practise, and where any passage appeared inextricably perplexed, have endeavoured to discover how it may be recalled to sense, with least violence. But my first labour is always to turn the old text on every side, and try if there be any interstice through which light can find its way; nor would Huetius himself condemn me, as refusing the trouble of research, for the ambition of alteration. In this modest industry I have not been unsuccessful. I have rescued many lines from the violations of temerity, and secured many scenes from the inroads of correction. I have adopted the Roman sentiment that it is more honourable to save a citizen than to kill an enemy, and have been more careful to protect than to attack.

I have preserved the common distribution of the plays into acts, though I believe it to be in almost all the plays void of authority. Some of those which are divided in the later editions have no division in the first folio, and some that are divided in the folio have no division in the pre-

ceding copies. The settled mode of the theatre requires four intervals in the play, but few, if any, of our author's compositions can be properly distributed in that manner. An act is so much of the drama as passes without intervention of time or change of place. A pause makes a new act. In every real, and therefore in every imitative, action, the intervals may be more or fewer, the restriction of five acts being accidental and arbitrary. This Shakespeare knew, and this he practised; his plays were written, and at first printed, in one unbroken continuity, and ought now to be exhibited with short pauses, interposed as often as the scene is changed, or any considerable time is required to pass. This method would at once quell a thousand absurdities.

In restoring the author's works to their integrity, I have considered the punctuation as wholly in my power; for what could be their care of colons and commas who corrupted words and sentences. Whatever could be done by adjusting points is therefore silently performed, in some plays with much diligence, in others with less; it is hard to keep a busy eye steadily fixed upon evanescent atoms, or a discursive mind upon evanescent truth.

The same liberty has been taken with a few particles, or other words of slight effect. I have sometimes inserted or omitted them without notice. I have done that sometimes which the other editors have done always, and which indeed the state of the text may sufficiently justify.

The greater part of readers, instead of blaming us for passing trifles, will wonder that on mere trifles so much labour is expended, with such importance of debate, and such solemnity of diction. To these I answer with confidence that they are judging of an art which they do not understand; yet cannot much reproach them with their ignorance, nor promise that they would become in general, by learning criticism, more useful, happier or wiser.

As I practised conjecture more, I learned to trust it less; and after I had printed a few plays, resolved to insert none of my own readings in the text. Upon this caution I now congratulate myself, for every day increases my doubt of my emendations.

Since I have confined my imagination to the margin, it must not be considered as very reprehensible if I have suffered it to play some freaks in its own dominion. There is no danger in conjecture if it be proposed as conjecture; and while the text remains uninjured, those changes may be safely offered which are not considered even by him that offers them as necessary or safe.

If my readings are of little value, they have not been ostentatiously dis-

played or importunately obtruded. I could have written longer notes, for the art of writing notes is not of difficult attainment. The work is performed, first by railing at the stupidity, negligence, ignorance, and asinine tastelessness of the former editors, and showing, from all that goes before and all that follows, the inelegance and absurdity of the old reading; then by proposing something which to superficial readers would seem specious, but which the editor rejects with indignation; then by producing the true reading, with a long paraphrase, and concluding with loud acclamations on the discovery, and a sober wish for the advancement and prosperity of genuine criticism.

All this may be done, and perhaps done sometimes without impropriety. But I have always suspected that the reading is right which requires many words to prove it wrong; and the emendation wrong that cannot without so much labour appear to be right. The justness of a happy restoration strikes at once, and the moral precept may be well applied to criticism, *quod dubitas ne feceris* [do nothing that you doubt].

To dread the shore which he sees spread with wrecks is natural to the sailor. I had before my eye so many critical adventures ended in miscarriage that caution was forced upon me. I encountered in every page Wit struggling with its own sophistry, and Learning confused by the multiplicity of its views. I was forced to censure those whom I admired, and could not but reflect, while I was dispossessing their emendations, how soon the same fate might happen to my own, and how many of the readings which I have corrected may be by some other editor defended and established.

Criticks, I saw, that other's names efface,
And fix their own, with labour, in the place;
Their own, like others, soon their place resign'd,
Or disappear'd, and left the first behind. POPE.

That a conjectural critic should often be mistaken cannot be wonderful, either to others or himself, if it be considered that in his art there is no system, no principal and axiomatical truth that regulates subordinate positions. His chance of error is renewed at every attempt; an oblique view of the passage, a slight misapprehension of a phrase, a casual inattention to the parts connected, is sufficient to make him not only fail but fail ridiculously; and when he succeeds best, he produces perhaps but one reading of many probable, and he that suggests another will always be able to dispute his claims.

It is an unhappy state, in which danger is hid under pleasure. The al-

lurements of emendation are scarcely resistible. Conjecture has all the joy and all the pride of invention, and he that has once started a happy change is too much delighted to consider what objections may rise against it.

Yet conjectural criticism has been of great use in the learned world; nor is it my intention to depreciate a study that has exercised so many mighty minds, from the revival of learning to our own age, from the Bishop of Aleria to English Bentley. The critics on ancient authors have, in the exercise of their sagacity, many assistances, which the editor of Shakespeare is condemned to want. They are employed upon grammatical and settled languages, whose construction contributes so much to perspicuity that Homer has fewer passages unintelligible than Chaucer. The words have not only a known regimen but invariable quantities, which direct and confine the choice. There are commonly more manuscripts than one; and they do not often conspire in the same mistakes. Yet Scaliger could confess to Salmasius how little satisfaction his emendations gave him. *Illudunt nobis conjecturae nostrae, quarum nos pudet, posteaquam in meliores codices incidimus.* [Our conjectures mock us, when we were ashamed to make them, but later find them in the best editions.] And Lipsius could complain that critics were making faults by trying to remove them, *Ut olim vitiis, ita nunc remediis laboratur* [We are now inconvenienced by corrections, as formerly by errors]. And indeed, where mere conjecture is to be used, the emendations of Scaliger and Lipsius, notwithstanding their wonderful sagacity and erudition, are often vague and disputable, like mine or Theobald's.

Perhaps I may not be more censured for doing wrong than for doing little; for raising in the public, expectations which at last I have not answered. The expectation of ignorance is indefinite, and that of knowledge is often tyrannical. It is hard to satisfy those who know not what to demand, or those who demand by design what they think impossible to be done. I have indeed disappointed no opinion more than my own; yet I have endeavoured to perform my task with no slight solicitude. Not a single passage in the whole work has appeared to me corrupt which I have not attempted to restore; or obscure which I have not endeavoured to illustrate. In many I have failed like others; and from many, after all my efforts, I have retreated, and confessed the repulse. I have not passed over, with affected superiority, what is equally difficult to the reader and to myself, but where I could not instruct him, have owned my ignorance. I might easily have accumulated a mass of seeming learning upon easy scenes; but it ought not to be imputed to negligence that, where nothing

was necessary, nothing has been done, or that, where others have said enough, I have said no more.

Notes are often necessary, but they are necessary evils. Let him that is yet unacquainted with the powers of Shakespeare, and who desires to feel the highest pleasure that the drama can give, read every play from the first scene to the last with utter negligence of all his commentators. When his fancy is once on the wing, let it not stoop at correction or explanation. When his attention is strongly engaged, let it disdain alike to turn aside to the name of Theobald and of Pope. Let him read on through brightness and obscurity, through integrity and corruption; let him preserve his comprehension of the dialogue and his interest in the fable. And when the pleasures of novelty have ceased, let him attempt exactness, and read the commentators.

Particular passages are cleared by notes, but the general effect of the work is weakened. The mind is refrigerated by interruption; the thoughts are diverted from the principal subject; the reader is weary, he suspects not why; and at last throws away the book, which he has too diligently studied.

Parts are not to be examined till the whole has been surveyed; there is a kind of intellectual remoteness necessary for the comprehension of any great work in its full design and its true proportions; a close approach shows the smaller niceties, but the beauty of the whole is discerned no longer.

It is not very grateful to consider how little the succession of editors has added to this author's power of pleasing. He was read, admired, studied, and imitated, while he was yet deformed with all the improprieties which ignorance and neglect could accumulate upon him; while the reading was yet not rectified, nor his allusions understood; yet then did Dryden pronounce that "Shakespeare was the man, who, of all modern and perhaps ancient poets, had the largest and most comprehensive soul. All the images of nature were still present to him, and he drew them not laboriously, but luckily: When he describes any thing, you more than see it, you feel it too. Those who accuse him to have wanted learning give him the greater commendation: he was naturally learned: he needed not the spectacles of books to read nature; he looked inwards, and found her there. I cannot say he is every where alike; were he so, I should do him injury to compare him with the greatest of mankind. He is many times flat and insipid; his comic wit degenerating into clenches, his serious swelling into bombast. But he is always great when some great occasion

is presented to him: No man can say he ever had a fit subject for his wit, and did not then raise himself as high above the rest of poets,

Quantum lenta solent inter viburna cupressi."

[as cypresses will (rise) among delicate shrubs.]

It is to be lamented that such a writer should want a commentary; that his language should become obsolete, or his sentiments obscure. But it is vain to carry wishes beyond the condition of human things; that which must happen to all has happened to Shakespeare, by accident and time; and more than has been suffered by any other writer since the use of types has been suffered by him through his own negligence of fame, or perhaps by that superiority of mind which despised its own performances when it compared them with its powers, and judged those works unworthy to be preserved which the critics of following ages were to contend for the fame of restoring and explaining.

Among these candidates of inferior fame, I am now to stand the judgment of the public; and wish that I could confidently produce my commentary as equal to the encouragement which I have had the honour of receiving. Every work of this kind is by its nature deficient, and I should feel little solicitude about the sentence were it to be pronounced only by the skilful and the learned.

Dr. Johnson's "Preface to Shakespeare"

first appeared in the 1765 edition

of THE PLAYS OF WILLIAM SHAKESPEARE.

Thomas De Quincey

1785–1859

Born near Manchester, England, in 1785, Thomas De Quincey was the fifth of eight children. He himself would have eight. His father's death left the family with an ample £ 1,600 a year. Though De Quincey earned his living at writing, he seems to have had a small personal income most of his life. In the public and private schools he went to, he was noted for two things: early brilliance in Latin and Greek and a habit of running away. On one of these excursions he spent a year or more in the rough Soho district of London (an episode mentioned in his *Confessions of an English Opium-Eater*). But afterward he described his growing up as “a youth passed in the divinest happiness.”

In his second year at Oxford, he took opium for neuralgic pains and caught the habit. Four times in his life he went deep into the world of the drug; and four times broke out. On a visit to his mother near Bath he met Coleridge. When he left Oxford, De Quincey settled near Coleridge, Wordsworth, and Southey in the Lake District north of Liverpool. There he married Margaret Simpson and edited the *Westmorland Gazette*.

In 1820 he went to London, where he was welcomed by Charles Lamb and his circle. A year later, his *Confessions* were appearing in the *London Magazine* and he was famous—a tiny, neat-boned

*Notes from the artist: “De Quincey haunted by the dreams of opium. . . .
Poppies grow from his head, and among them is Ann of Oxford Street,
a little girl once befriended by De Quincey and then lost to him.
Around his neck is Death beating the drums, and a crocodile,
recurring images in his dreams. . . .*

man, hardly five feet three, handsome with an almost feminine delicacy, and one of the two most celebrated talkers (Coleridge was the other) in an age of great talkers. From that time on, he worked almost entirely for the magazines—*Blackwood's*, *Tait's*, the *Edinburgh Literary Gazette*—and his writings were not brought together until late in his career.

After his wife died in 1837, he moved his family to Lasswade, near Edinburgh. The children grew up largely in the care of his eldest daughter. De Quincey moved from one rented room to another, each so full of books and papers that he could hardly turn around in it. He loved both solitude and society, and could never get enough of either. He had a great fondness for the human race in all its varieties, and the human race repaid him in kind. His children were enchanted with him. His friends found him a delightful companion. If there had been no creditors in the world, De Quincey might have been that monster of nature, a completely happy man. He died in Edinburgh on December 8, 1859.

We may think of John Stuart Mill as the pure type of the man of ideas, English style. De Quincey, his older contemporary, is a rather more extreme specimen of the English man of letters. True, he spoke of himself as a “philosopher,” and wrote little fiction or poetry. Again, he was the author of *The Logic of Political Economy* and, like James Mill and his son, discussed Ricardo’s economic theories. But the difference between the man of ideas and the man of letters comes out strongly in his *Literature of Knowledge and Literature of Power*.

If we read it through once, we are struck with its straightforwardness. De Quincey usually likes to stop and make soundings, or curve away from the subject and come back to it. This time he sticks to the point from beginning to end. The point is basic and major. Is it any better or more generally understood now than in De Quincey’s time? We may doubt it.

There are, says De Quincey, two types of literature: the literature of knowledge and the literature of power. The function of the one is to teach—that is, convey information or ideas. The function of the other is to move the reader—that is, carry over or call forth emotion or action. The two may run together, and often do; but in function and nature they stand sharply apart.

The literature of knowledge is perishable. It will hold only until more accurate knowledge can be found. De Quincey mentions Sir Isaac Serventur *Principia* as an example of this. In the twentieth century, we have seen even the mechanics of Newton challenged by new theories. But the great works of the literature of power, De Quincey tells us, are “triumphant forever, as long as the languages exist in which they speak or can be taught to speak.” Such literature is “moral” and resembles “nature.” It nourishes the great truths of human feeling.

Our second essay, *On the Knocking at the Gate in Macbeth*, is De Quincey’s interpretation of a great scene from the literature of power—in this case, Shakespeare’s *Macbeth*. He tells us that he had always been puzzled by the solemn effect of that knocking after the murder of the “gracious Duncan.” Why was it so chilling? He cautions us against trusting what he calls our “understanding,” by which he means the habit of seeing things as they are supposed to be rather than as they are. Then he comes back to *Macbeth* and explains how he waited and “clung to the problem” until it could be solved. The solution came to him in the case of a very accomplished English murderer, a “Mr. Williams,” in which there was also a knocking at the door. De Quincey understood that we “identify” with the murderer and share his fear of discovery. From that point on, he gives us a superb view of murder as an emotional experience for the murderer. His essay has still another value: it is a perfect little step-by-step example of how the imagination works.

Literature of Knowledge and Literature of Power

What is it that we mean by literature? Popularly, and amongst the thoughtless, it is held to include everything that is printed in a book. Little logic is required to disturb that definition. The most thoughtless person is easily made aware that in the idea of literature one essential element is some relation to a general and common interest of man, so that what applies only to a local or professional or merely personal interest, even though presenting itself in the shape of a book, will not belong to literature. So far the definition is easily narrowed; and it is as easily expanded. For not only is much that takes a station in books not literature, but, inversely, much that really is literature never reaches a station in books. The weekly sermons of Christendom, that vast pulpit literature which acts so extensively upon the popular mind—to warn, to uphold, to renew, to comfort, to alarm—does not attain the sanctuary of libraries in the ten-thousandth part of its extent. The drama, again, as for instance the finest of Shakespeare’s plays in England and all leading Athenian plays in the noontide of the Attic stage, operated as a literature on the public mind, and were (according to the strictest letter of that term) published through the audiences that witnessed their representation some time before they were published as things to be read; and they were published in this scenical mode of publication with much more effect than they could have had as books during ages of costly copying or of costly printing.

Books, therefore, do not suggest an idea coextensive and interchangeable with the idea of literature, since much literature, scenic, forensic, or didactic (as from lecturers and public orators), may never come into books, and much that does come into books may connect itself with no literary interest. But a far more important correction, applicable to the common vague idea of literature, is to be sought, not so much in a better

definition of literature, as in a sharper distinction of the two functions which it fulfils. In that great social organ which, collectively, we call literature there may be distinguished two separate offices that may blend and often do so, but capable, severally, of a severe insulation and naturally fitted for reciprocal repulsion. There is, first, the literature of knowledge and, secondly, the literature of power. The function of the first is to teach; the function of the second is to move: the first is a rudder; the second, an oar or a sail. The first speaks to the mere discursive understanding; the second speaks ultimately, it may happen, to the higher understanding, or reason, but always through affections of pleasure and sympathy. Remotely it may travel towards an object seated in what Lord Bacon calls dry light; but proximately, it does and must operate—else it ceases to be a literature of power—on and through that humid light which clothes itself in the mists and glittering iris of human passions, desires, and genial emotions. Men have so little reflected on the higher functions of literature as to find it a paradox if one should describe it as a mean or subordinate purpose of books to give information. But this is a paradox only in the sense which makes it honorable to be paradoxical. Whenever we talk in ordinary language of seeking information or gaining knowledge, we understand the words as connected with something of absolute novelty. But it is the grandeur of all truth which can occupy a very high place in human interests that it is never absolutely novel to the meanest of minds: it exists eternally, by way of germ or latent principle, in the lowest as in the highest, needing to be developed but never to be planted. To be capable of transplantation is the immediate criterion of a truth that ranges on a lower scale. Besides which, there is a rarer thing than truth, namely, power, or deep sympathy with truth. What is the effect, for instance, upon society, of children? By the pity, by the tenderness, and by the peculiar modes of admiration, which connect themselves with the helplessness, with the innocence, and with the simplicity of children, not only are the primal affections strengthened and continually renewed, but the qualities which are dearest in the sight of heaven—the frailty, for instance, which appeals to forbearance, the innocence which symbolizes the heavenly, and the simplicity which is most alien from the worldly—are kept up in perpetual remembrance, and their ideals are continually refreshed. A purpose of the same nature is answered by the higher literature, viz., the literature of power. What do you learn from *Paradise Lost*? Nothing at all. What do you learn from a cookery-book? Something new, something that you did not know before, in every paragraph. But would you therefore put the wretched cookery-

book on a higher level of estimation than the divine poem? What you owe to Milton is not any knowledge, of which a million separate items are still but a million of advancing steps on the same earthly level; what you owe is power, that is, exercise and expansion to your own latent capacity of sympathy with the infinite, where every pulse and each separate influx is a step upwards, a step ascending as upon a Jacob's ladder from earth to mysterious altitudes above the earth. All the steps of knowledge, from first to last, carry you further on the same plane, but could never raise you one foot above your ancient level of earth; whereas the very first step in power is a flight, is an ascending movement into another element where earth is forgotten.

Were it not that human sensibilities are ventilated and continually called out into exercise by the great phenomena of infancy, or of real life as it moves through chance and change, or of literature as it recombines these elements in the mimicries of poetry, romance, etc., it is certain that, like any animal power or muscular energy falling into disuse, all such sensibilities would gradually droop and dwindle. It is in relation to these great moral capacities of man that the literature of power, as contradistinguished from that of knowledge, lives and has its field of action. It is concerned with what is highest in man; for the Scriptures themselves never condescended to deal by suggestion or cooperation with the mere discursive understanding: when speaking of man in his intellectual capacity, the Scriptures speak, not of the understanding, but of "the understanding heart," making the heart, *i.e.*, the great intuitive (or non-discursive) organ, to be the interchangeable formula for man in his highest state of capacity for the infinite. Tragedy, romance, fairy tale, or epopee, all alike restore to man's mind the ideals of justice, of hope, of truth, of mercy, of retribution, which else (left to the support of daily life in its realities) would languish for want of sufficient illustration. What is meant, for instance, by poetic justice? It does not mean a justice that differs by its object from the ordinary justice of human jurisprudence, for then it must be confessedly a very bad kind of justice; but it means a justice that differs from common forensic justice by the degree in which it attains its object, a justice that is more omnipotent over its own ends, as dealing, not with the refractory elements of earthly life, but with the elements of its own creation and with materials flexible to its own purest preconceptions. It is certain that, were it not for the literature of power, these ideals would often remain amongst us as mere arid notional forms; whereas, by the creative forces of man put forth in literature, they gain a vernal life of restoration and germinate

into vital activities. The commonest novel, by moving in alliance with human fears and hopes, with human instincts of wrong and right, sustains and quickens those affections. Calling them into action, it rescues them from torpor. And hence the pre-eminency, over all authors that merely teach, of the meanest that moves, or that teaches, if at all, indirectly *by* moving. The very highest work that has ever existed in the literature of knowledge is but a provisional work, a book upon trial and sufferance, and *quamdiu bene se gesserit* [as long as it wears well]. Let its teaching be even partially revised, let it be but expanded, nay, even let its teaching be but placed in a better order, and instantly it is superseded. Whereas the feeblest works in the literature of power, surviving at all, survive as finished and unalterable among men. For instance, the *Principia* of Sir Isaac Newton was a book militant on earth from the first. In all stages of its progress it would have to fight for its existence: first, as regards absolute truth; secondly, when that combat was over, as regards its form, or mode of presenting the truth. And as soon as a La Place, or anybody else, builds higher upon the foundations laid by this book, effectually he throws it out of the sunshine into decay and darkness; by weapons won from this book he superannuates and destroys this book, so that soon the name of Newton remains as a mere *nominis umbra* [shadow of a name], but his book, as a living power, has transmigrated into other forms. Now, on the contrary, the *Iliad*, the *Prometheus* of Aeschylus, the *Othello* or *King Lear*, the *Hamlet* or *Macbeth*, and the *Paradise Lost* are not militant but triumphant forever, as long as the languages exist in which they speak or can be taught to speak. They never can transmigrate into new incarnations. To reproduce these in new forms or variations, even if in some things they should be improved, would be to plagiarize. A good steam-engine is properly superseded by a better. But one lovely pastoral valley is not superseded by another, nor a statue of Praxiteles by a statue of Michelangelo. These things are separated, not by imparity, but by disparity. They are not thought of as unequal under the same standard, but as different in kind, and, if otherwise equal, as equal under a different standard. Human works of immortal beauty and works of nature in one respect stand on the same footing: they never absolutely repeat each other, never approach so near as not to differ; and they differ not as better and worse, or simply by more and less; they differ by undecipherable and incommunicable differences, that cannot be caught by mimicries, that cannot be reflected in the mirror of copies, that cannot become ponderable in the scales of vulgar comparison.

On the Knocking at the Gate in Macbeth

From my boyish days I had always felt a great perplexity on one point in *Macbeth*. It was this: the knocking at the gate, which succeeds to the murder of Duncan, produced to my feelings an effect for which I never could account. The effect was that it reflected back upon the murderer a peculiar awfulness and a depth of solemnity; yet, however obstinately I endeavoured with my understanding to comprehend this, for many years I never could see *why* it should produce such an effect.

Here I pause for one moment, to exhort the reader never to pay any attention to his understanding, when it stands in opposition to any other faculty of his mind. The mere understanding, however useful and indispensable, is the meanest faculty in the human mind, and the most to be distrusted; and yet the great majority of people trust to nothing else, which may do for ordinary life, but not for philosophical purposes. Of this out of ten thousand instances that I might produce, I will cite one. Ask of any person whatsoever, who is not previously prepared for the demand by a knowledge of the perspective, to draw in the rudest way the commonest appearance which depends upon the laws of that science; as, for instance, to represent the effect of two walls standing at right angles to each other, or the appearance of the houses on each side of a street, as seen by a person looking down the street from one extremity. Now in all cases, unless the person has happened to observe in pictures how it is that artists produce these effects, he will be utterly unable to make the smallest approximation to it. Yet why? For he has actually seen the effect every day of his life. The reason is that he allows his understanding to overrule his eyes. His understanding, which includes no intuitive knowledge of the laws of vision, can furnish him with no reason why a line which is known and can be proved to be a horizontal line should

not appear a horizontal line; a line that made any angle with the perpendicular, less than a right angle, would seem to him to indicate that his houses were all tumbling down together. Accordingly, he makes the line of his houses a horizontal line, and fails, of course, to produce the effect demanded. Here, then, is one instance out of many, in which not only the understanding is allowed to overrule the eyes, but where the understanding is positively allowed to obliterate the eyes, as it were; for not only does the man believe the evidence of his understanding in opposition to that of his eyes, but (what is monstrous!) the idiot is not aware that his eyes ever gave such evidence. He does not know that he has seen (and therefore *quoad* his consciousness has *not* seen) that which he *has* seen every day of his life.

But to return from this digression, my understanding could furnish no reason why the knocking at the gate in *Macbeth* should produce any effect, direct or reflected. In fact, my understanding said positively that it could *not* produce any effect. But I knew better; I felt that it did; and I waited and clung to the problem until further knowledge should enable me to solve it. At length, in 1812, Mr. Williams made his debut on the stage of Ratcliffe Highway, and executed those unparalleled murders which have procured for him such a brilliant and undying reputation. On which murders, by the way, I must observe, that in one respect they have had an ill effect, by making the connoisseur in murder very fastidious in his taste, and dissatisfied by anything that has been since done in that line. All other murders look pale by the deep crimson of his; and, as an amateur once said to me in a querulous tone, "There has been absolutely nothing *doing* since his time, or nothing that's worth speaking of." But this is wrong; for it is unreasonable to expect all men to be great artists, and born with the genius of Mr. Williams. Now it will be remembered that in the first of these murders (that of the Marrs), the same incident (of a knocking at the door, soon after the work of extermination was complete) did actually occur, which the genius of Shakespeare has invented; and all good judges, and the most eminent dilettanti, acknowledged the felicity of Shakespeare's suggestion, as soon as it was actually realized. Here, then, was a fresh proof that I was right in relying on my own feeling, in opposition to my understanding; and I again set myself to study the problem; at length I solved it to my own satisfaction, and my solution is this. Murder, in ordinary cases, where the sympathy is wholly directed to the case of the murdered person, is an incident of coarse and vulgar horror; and for this reason, that it flings the interest

exclusively upon the natural but ignoble instinct by which we cleave to life; an instinct which, as being indispensable to the primal law of self-preservation, is the same in kind (though different in degree) amongst all living creatures. This instinct, therefore, because it annihilates all distinctions, and degrades the greatest of men to the level of “the poor beetle that we tread on,” exhibits human nature in its most abject and humiliating attitude. Such an attitude would little suit the purposes of the poet. What then must he do? He must throw the interest on the murderer. Our sympathy must be with *him* (of course I mean a sympathy of comprehension, a sympathy by which we enter into his feelings, and are made to understand them—not a sympathy of pity or approbation). In the murdered person, all strife of thought, all flux and reflux of passion and of purpose, are crushed by one overwhelming panic; the fear of instant death smites him “with its petrific mace.” But in the murderer, such a murderer as a poet will condescend to, there must be raging some great storm of passion—jealousy, ambition, vengeance, hatred—which will create a hell within him; and into this hell we are to look.

In *Macbeth*, for the sake of gratifying his own enormous and teeming faculty of creation, Shakespeare has introduced two murderers: and, as usual in his hands, they are remarkably discriminated; but, though in *Macbeth* the strife of mind is greater than in his wife, the tiger spirit not so awake, and his feelings caught chiefly by contagion from her—yet, as both were finally involved in the guilt of murder, the murderous mind of necessity is finally to be presumed in both. This was to be expressed; and on its own account, as well as to make it a more proportionable antagonist to the unoffending nature of their victim, “the gracious Duncan,” and adequately to expound “the deep damnation of his taking off,” this was to be expressed with peculiar energy. We were to be made to feel that the human nature, *i.e.*, the divine nature of love and mercy, spread through the hearts of all creatures, and seldom utterly withdrawn from man—was gone, vanished, extinct; and that the fiendish nature had taken its place. And, as this effect is marvellously accomplished in the dialogues and soliloquies themselves, so it is finally consummated by the expedient under consideration; and it is to this that I now solicit the reader’s attention. If the reader has ever witnessed a wife, daughter, or sister in a fainting fit, he may chance to have observed that the most affecting moment in such a spectacle is that in which a sigh and a stirring announce the recommencement of suspended life. Or, if the reader has ever been present in a vast metropolis, on the day

when some great national idol was carried in funeral pomp to his grave, and chancing to walk near the course through which it passed, has felt powerfully in the silence and desertion of the streets, and in the stagnation of ordinary business, the deep interest which at that moment was possessing the heart of man—if all at once he should hear the deathlike stillness broken up by the sound of wheels rattling away from the scene, and making known that the transitory vision was dissolved, he will be aware that at no moment was his sense of the complete suspension and pause in ordinary human concerns so full and affecting, as at that moment when the suspension ceases, and the goings-on of human life are suddenly resumed. All action in any direction is best expounded, measured, and made apprehensible, by reaction. Now apply this to the case of *Macbeth*. Here, as I have said, the retiring of the human heart, and the entrance of the fiendish heart was to be expressed and made sensible. Another world has stepped in; and the murderers are taken out of the region of human things, human purposes, human desires. They are transfigured: Lady Macbeth is “unsexed”; Macbeth has forgot that he was born of woman; both are conformed to the image of devils; and the world of devils is suddenly revealed. But how shall this be conveyed and made palpable? In order that a new world may step in, this world must for a time disappear. The murderers, and the murder must be insulated—cut off by an immeasurable gulf from the ordinary tide and succession of human affairs—locked up and sequestered in some deep recess; we must be made sensible that the world of ordinary life is suddenly arrested—laid asleep—tranced—racked into a dread armistice; time must be annihilated; relation to things without abolished; and all must pass self-withdrawn into a deep syncope and suspension of earthly passion. Hence it is, that when the deed is done, when the work of darkness is perfect, then the world of darkness passes away like a pageantry in the clouds: the knocking at the gate is heard; and it makes known audibly that the reaction has commenced; the human has made its reflux upon the fiendish; the pulses of life are beginning to beat again; and the re-establishment of the goings-on of the world in which we live, first makes us profoundly sensible of the awful parenthesis that has suspended them.

O mighty poet! Thy works are not as those of other men, simply and merely great works of art, but are also like the phenomena of nature, like the sun and the sea, the stars and the flowers; like frost and snow, rain and dew, hailstorm and thunder, which are to be studied with

entire submission of our own faculties, and in the perfect faith that in them there can be no too much or too little, nothing useless or inert—but that, the further we press in our discoveries, the more we shall see proofs of design and self-supporting arrangement where the careless eye had seen nothing but accident!

Thomas Stearns Eliot

1888–1965

Thomas Stearns Eliot was born in St. Louis, Missouri, on September 26, 1888. His grandfather had founded the city's first Unitarian Church, as well as Washington University. His father was a successful businessman. Tom, a serious, bookish boy, was the youngest of seven children.

Eliot went to Smith Academy in St. Louis and Milton Academy near Boston. He entered Harvard when he was eighteen. A brilliant, hard-working student, he finished his undergraduate work in three years and took a master's degree in the fourth year. The teachers who had the greatest influence on him were George Santayana, Irving Babbitt, and Bertrand Russell.

He spent a year studying at the Sorbonne in Paris, where he wrote his first important poem, *The Love Song of J. Alfred Prufrock*. He returned to Harvard and continued his study of philosophy. In 1914 Eliot won a traveling scholarship and went to Germany. When World War I broke out, he left for England, where, except for a few intervals, he lived the rest of his life.

In England Eliot worked first as a teacher, then as a banker, devoting his evenings to study and writing. Later he became an editor in a publishing firm.

Bertrand Russell introduced him to the Bloomsbury group, who immediately recognized him as a talented writer. Leonard and Virginia Woolf published *The Waste Land*, often said to be the most influential English poem of the twentieth century, at the Hogarth Press in 1922.

In 1927 Eliot became a British citizen and was confirmed in the Anglican Church. In 1928 he published *For Lancelot Andrewes*, a volume of essays in which he first publicly stated his belief in Anglo-

Catholicism. Most of the poems, such as *Ash Wednesday* (1930), and the verse plays he later wrote reflect his religious attitude and his association with a traditional culture. One of his greatest achievements as a poet was *Four Quartets*, published in 1943.

Eliot's first wife, Vivienne Haigh-Wood, died in 1947. In 1957 he married Esmé Valerie Fletcher. He died in London on January 4, 1965.

He was awarded the Nobel Prize for literature in 1948. He received honorary degrees from many of the world's leading universities, as well as Britain's highest honor, the Order of Merit.

In an often quoted statement, Eliot described himself as “classicist in literature, royalist in politics, Anglo-Catholic in religion.” Two of these attitudes—classicist and Anglo-Catholic—are illustrated in these essays.

“Dante and Shakespeare divide the modern world between them,” Eliot writes. He goes on to indicate what seems to him the difference between them. “Shakespeare,” he says, “gives the greatest *width* of human passion; Dante the greatest altitude and greatest depth.” The range of Shakespeare is, indeed, wider than that of any poet. Eliot in his essay on Dante attempts to show us, by following Dante in his journey from Hell to Heaven, how the Italian poet plumbs deeper depths, and scales greater heights, than Shakespeare could reach. His argument is persuasive.

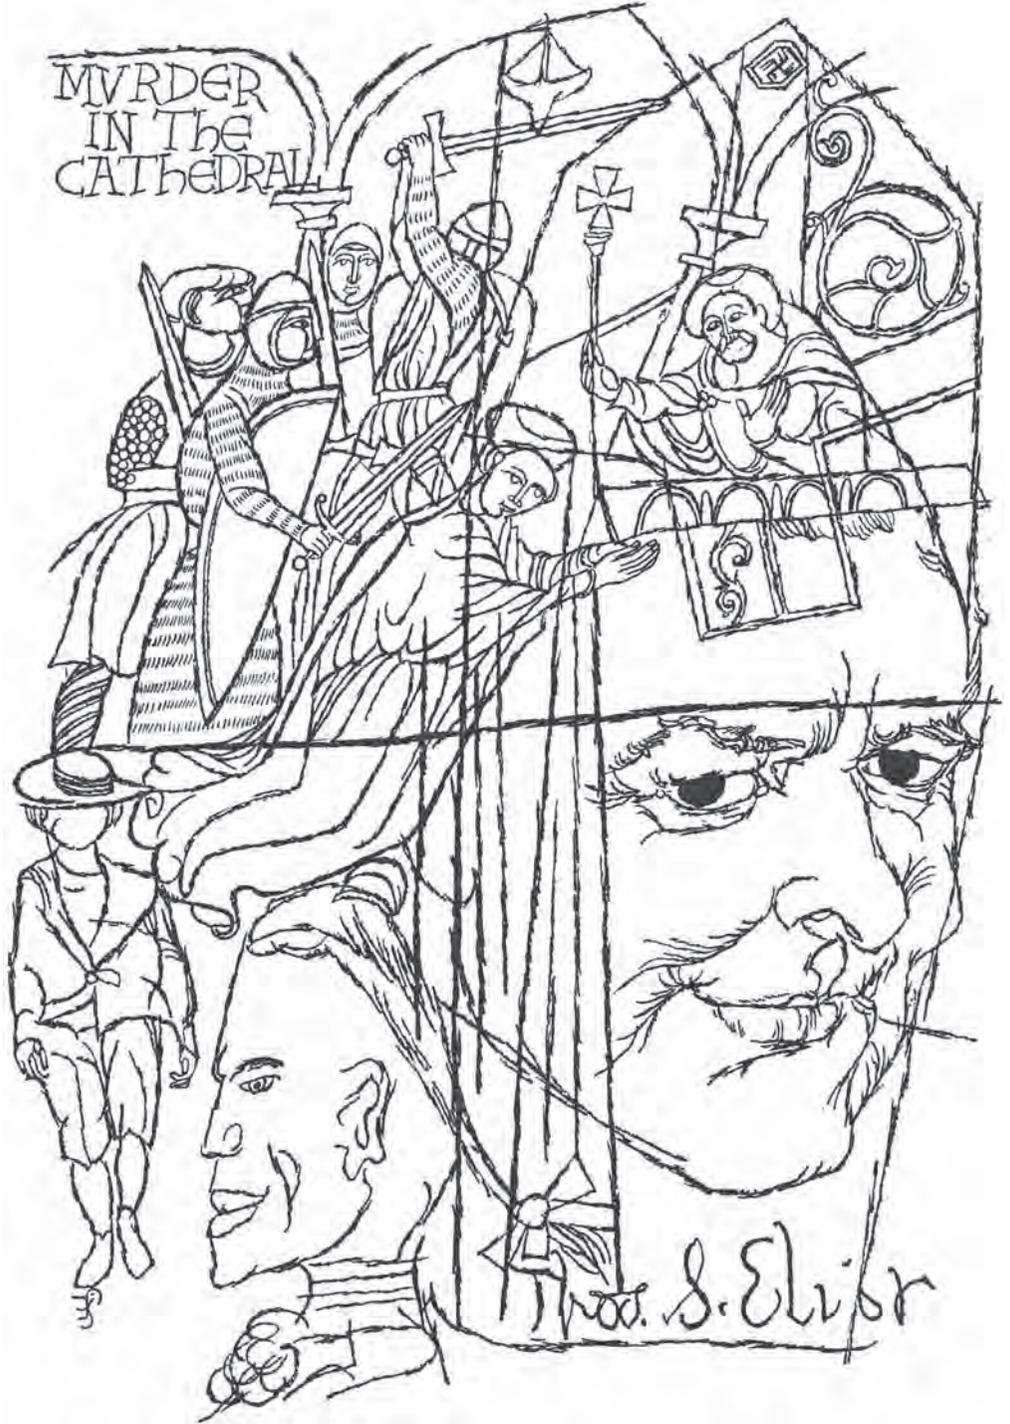

Dante, Eliot says, is easy to read. Easy, that is, in the way in which Eliot believes that all good poetry is easy—it can communicate before it is understood. This sounds like a paradox, as indeed it is. Eliot means that Dante's *Divine Comedy* has a first, an immediate, meaning for every reader. It is a story that is comprehensible to all.¹

The *Divine Comedy* is also, as Eliot points out, an allegory. It is,

¹ See *Great Books of the Western World*.

Notes from the artist: “. . . a linear portrait of Eliot with a background in medieval style, a scene from Murder in the Cathedral. The two figures below are from Eliot's youth . . . at left, the author as a boy; center, copy of a drawing of George Washington by Eliot when he was seven years old.”

MURDER
IN THE
CATHEDRAL

W. S. Elisor

he says, "one vast metaphor." The *full* understanding of the meaning of the metaphor is, Eliot suggests, unobtainable. The *Divine Comedy* is among the very highest of literary achievements. "The majority of poems one outgrows and outlives, as one outgrows and outlives the majority of human passions: Dante's is one of those which one can only just hope to grow up to at the end of life." Thus Dante is both easy and extraordinarily difficult. These are two criteria of poetic greatness.

Eliot begins the essay *Tradition and the Individual Talent* with another paradox. The truly original poet, he suggests, must have what he calls the historical sense. "This historical sense," Eliot writes, "which is a sense of the timeless as well as of the temporal and of the timeless and of the temporal together, is what makes a writer traditional. And it is at the same time what makes a writer most acutely conscious of his place in time, of his own contemporaneity."

Eliot goes on to say that the great art of the past exists in a kind of order, of which any new, important work must become a part. "Whoever has approved this idea of order, of the form of European, of English literature," he explains, "will not find it preposterous that the past should be altered by the present as much as the present is directed by the past." This startling idea follows from Eliot's conception of order. He does not mean, of course, that the writing of a new work will change any of the lines of Shakespeare. But if the new work is worthy to be placed in the tradition of European poetry, its existence will subtly change our view, our understanding, of Shakespeare. In this sense, Eliot is certainly correct in suggesting that "the poet who is aware of this will be aware of great difficulties and responsibilities."

Having made this point, Eliot turns to a still more important one. "Poetry," he says, "is not a turning loose of emotion, but an escape from emotion; it is not the expression of personality, but an escape from personality." The best poetry, he says, "is an expression of *significant* emotion, emotion which has its life in the poem and not in the history of the poet." Mere individuality is of no interest or importance. Novelty is preferable to repetition, but both are secondary compared to the truest art, which is impersonal.

Dante

I. THE "INFERO"

In my own experience of the appreciation of poetry I have always found that the less I knew about the poet and his work, before I began to read it, the better. A quotation, a critical remark, an enthusiastic essay, may well be the accident that sets one to reading a particular author; but an elaborate preparation of historical and biographical knowledge has always been to me a barrier. I am not defending poor scholarship; and I admit that such experience, solidified into a maxim, would be very difficult to apply in the study of Latin and Greek. But with authors of one's own speech, and even with some of those of other modern languages, the procedure is possible. At least, it is better to be spurred to acquire scholarship because you enjoy the poetry, than to suppose that you enjoy the poetry because you have acquired the scholarship. I was passionately fond of certain French poetry long before I could have translated two verses of it correctly. With Dante the discrepancy between enjoyment and understanding was still wider.

I do not counsel any one to postpone the study of Italian grammar until he has read Dante, but certainly there is an immense amount of knowledge which, until one has read some of his poetry with intense pleasure—that is, with as keen pleasure as one is capable of getting from any poetry—is positively undesirable. In saying this I am avoiding two possible extremes of criticism. One might say that understanding of the scheme, the philosophy, the concealed meanings, of Dante's verse was *essential* to appreciation; and on the other hand one might say that these things were quite irrelevant, that the poetry in his poems was one thing, which could be enjoyed by itself without studying a framework which had served the author in producing the poetry but could not serve the reader in enjoying it. The latter error is the more prevalent, and is probably the reason why many people's knowledge of the *Comedy* is limited to the *Inferno*, or

even to certain passages in it. The enjoyment of the *Divine Comedy* is a continuous process. If you get nothing out of it at first, you probably never will; but if from your first deciphering of it there comes now and then some direct shock of poetic intensity, nothing but laziness can deaden the desire for fuller and fuller knowledge.

What is surprising about the poetry of Dante is that it is, in one sense, extremely easy to read. It is a test (a positive test, I do not assert that it is always valid negatively) that genuine poetry can communicate before it is understood. The impression can be verified on fuller knowledge; I have found with Dante and with several other poets in languages in which I was unskilled, that about such impressions there was nothing fanciful. They were not due, that is, to *mis*understanding the passage, or to reading into it something not there, or to accidental sentimental evocations out of my own past. The impression was new, and of, I believe, the objective "poetic emotion." There are more detailed reasons for this experience on the first reading of Dante, and for my saying that he is easy to read. I do not mean that he writes very simple Italian, for he does not; or that his content is simple or always simply expressed. It is often expressed with such a force of compression that the elucidation of three lines needs a paragraph, and their allusions a page of commentary. What I have in mind is that Dante is, in a sense to be defined (for the word means little by itself), the most *universal* of poets in the modern languages. That does not mean that he is "the greatest," or that he is the most comprehensive—there is greater variety and detail in Shakespeare. Dante's universality is not solely a personal matter. The Italian language, and especially the Italian language in Dante's age, gains much by being the product of universal Latin. There is something much more *local* about the languages in which Shakespeare and Racine had to express themselves. This is not to say, either, that English and French are inferior, as vehicles of poetry, to Italian. But the Italian vernacular of the late Middle Ages was still very close to Latin, as literary expression, for the reason that the men, like Dante, who used it, were trained, in philosophy and all abstract subjects, in mediaeval Latin. Now mediaeval Latin is a very fine language; fine prose and fine verse were written in it; and it had the quality of a highly developed and literary Esperanto. When you read modern philosophy, in English, French, German, and Italian, you must be struck by national or racial differences of thought: modern languages *tend* to separate abstract thought (mathematics is now the only universal language); but mediaeval Latin tended to concentrate on what men of various races and lands could think together. Some of the character of

this universal language seems to me to inhere in Dante's Florentine speech; and the localization ("Florentine" speech) seems if anything to emphasize the universality, because it cuts across the modern division of nationality. To enjoy any French or German poetry, I think one needs to have some sympathy with the French or German mind; Dante, none the less an Italian and a patriot, is first a European.

This difference, which is one of the reasons why Dante is "easy to read," may be discussed in more particular manifestations. The style of Dante has a peculiar lucidity—a *poetic* as distinguished from an *intellectual* lucidity. The thought may be obscure, but the word is lucid, or rather translucent. In English poetry words have a kind of opacity which is part of their beauty. I do not mean that the beauty of English poetry is what is called mere "verbal beauty." It is rather that words have associations, and the groups of words *in* association have associations, which is a kind of local self-consciousness, because they are the growth of a *particular* civilization; and the same thing is true of other modern languages. The Italian of Dante, though essentially the Italian of today, is not in this way a modern language. The culture of Dante was not of one European country but of Europe. I am aware, of course, of a directness of speech which Dante shares with other great poets of pre-Reformation and pre-Renaissance times, notably Chaucer and Villon. Undoubtedly there is something in common between the three, so much that I should expect an admirer of any one of them to be an admirer of the others; and undoubtedly there is an opacity, or inspissation of poetic style throughout Europe after the Renaissance. But the lucidity and universality of Dante are far beyond those qualities in Villon and Chaucer, though they are akin.

Dante is "easier to read," for a foreigner who does not know Italian very well, for other reasons: but all related to this central reason, that in Dante's time Europe, with all its dissensions and dirtiness, was mentally more united than we can now conceive. It is not particularly the Treaty of Versailles that has separated nation from nation; nationalism was born long before; and the process of disintegration which for our generation culminates in that treaty began soon after Dante's time. One of the reasons for Dante's "easiness" is the following—but first I must make a digression.

I must explain why I have said that Dante is "easy to read," instead of talking about his "universality." The latter word would have been much easier to use. But I do not wish to be thought to claim a universality for Dante which I deny to Shakespeare or Molière or Sophocles. Dante is

no more “universal” than Shakespeare: though I feel that we can come nearer to understanding Dante than a foreigner can come to understanding those others. Shakespeare, or even Sophocles, or even Racine and Molière, are dealing with what is as universally human as the material of Dante; but they had no choice but to deal with it in a more local way. As I have said, the Italian of Dante is very near in feeling to mediaeval Latin: and of the mediaeval philosophers whom Dante read, and who were read by learned men of his time, there were, for instance, St. Thomas who was an Italian, St. Thomas’s predecessor Albertus, who was a German, Abelard who was French, and Hugh and Richard of St. Victor who were Scots. For the *medium* that Dante had to use compare the opening of the *Inferno*

*Nel mezzo del cammin di nostra vita
mi ritrovai per una selva oscura,
che la diritta via era smarrita.*

In the middle of the journey of our life I found myself in a dark wood,
having lost the straight path.

with the lines with which Duncan is introduced to Macbeth’s castle:

This castle hath a pleasant seat; the air
Nimbly and sweetly recommends itself
Unto our gentle senses.

This guest of summer,
The temple-haunting martlet, does approve
By his loved masonry that the heaven’s breath
Smells wooingly here: no jutty, frieze,
Buttress, nor coign of vantage, but this bird
Hath made his pendant bed and procreant cradle:
Where they most breed and haunt, I have observed
The air is delicate.

I do not at all pretend that we appreciate everything, even in one single line of Dante, that a cultivated Italian can appreciate. But I do maintain that more is lost in translating Shakespeare into Italian than in translating Dante into English. How can a foreigner find words to convey in his own language just that combination of intelligibility and remoteness that we get in many phrases of Shakespeare?

I am not considering whether the language of Dante or Shakespeare is superior, for I cannot admit the question: I merely affirm that the differences are such as make Dante easier for a foreigner. Dante’s advantages

are not due to greater genius, but to the fact that he wrote when Europe was still more or less one. And even had Chaucer or Villon been exact contemporaries of Dante, they would still have been farther, linguistically as well as geographically, from the centre of Europe than Dante.

But the simplicity of Dante has another detailed reason. He not only thought in a way in which every man of his culture in the whole of Europe then thought, but he employed a method which was common and commonly understood throughout Europe. I do not intend, in this essay, to go into questions of disputed interpretations of Dante's allegory. What is important for my purpose is the fact that the allegorical method was a definite method not confined to Italy; and the fact, apparently paradoxical, that the allegorical method makes for simplicity and intelligibility. We incline to think of allegory as a tiresome cross-word puzzle. We incline to associate it with dull poems (at best, *The Romance of the Rose*), and in a great poem to ignore it as irrelevant. What we ignore is, in a case like Dante's, its particular effect towards lucidity of style.

I do not recommend, in first reading the first canto of the *Inferno*, worrying about the identity of the Leopard, the Lion, or the She-Wolf. It is really better, at the start, not to know or care what they do mean. What we should consider is not so much the meaning of the images, but the reverse process, that which led a man having an idea to express it in images. We have to consider the type of mind which by nature and *practice* tended to express itself in allegory: and for a competent poet, allegory means *clear visual images*. And clear visual images are given much more intensity by having a meaning—we do not need to know what that meaning is, but in our awareness of the image we must be aware that the meaning is there too. Allegory is only one poetic method, but it is a method which has very great advantages.

Dante's is a *visual* imagination. It is a visual imagination in a different sense from that of a modern painter of still life: it is visual in the sense that he lived in an age in which men still saw visions. It was a psychological habit, the trick of which we have forgotten, but as good as any of our own. We have nothing but dreams, and we have forgotten that seeing visions—a practice now relegated to the aberrant and uneducated—was once a more significant, interesting, and disciplined kind of dreaming. We take it for granted that our dreams spring from below: possibly the quality of our dreams suffers in consequence.

All that I ask of the reader, at this point, is to clear his mind, if he can, of every prejudice against allegory, and to admit at least that it was not a device to enable the uninspired to write verses, but really a

mental habit, which when raised to the point of genius can make a great poet as well as a great mystic or saint. And it is the allegory which makes it possible for the reader who is not even a good Italian scholar to enjoy Dante. Speech varies, but our eyes are all the same. And allegory was not a local Italian custom, but a universal European method.

Dante's attempt is to make us see what he saw. He therefore employs very simple language, and very few metaphors, for allegory and metaphor do not get on well together. And there is a peculiarity about his *comparisons* which is worth noticing in passing.

There is a well-known comparison or simile in the great XVth canto of the *Inferno*, which Matthew Arnold singled out, rightly, for high praise; which is characteristic of the way in which Dante employs these figures. He is speaking of the crowd in Hell who peered at him and his guide under a dim light:

*e si ver noi aguzzevan le ciglia,
come vecchio sartor fa nella cruna.*

and sharpened their vision (knitted their brows) at us, like an old tailor peering at the eye of his needle.

The purpose of this type of simile is solely to make us see *more definitely* the scene which Dante has put before us in the preceding lines.

she looks like sleep,
As she would catch another Antony
In her strong toil of grace.

The image of Shakespeare's is much more complicated than Dante's, and more complicated than it looks. It has the grammatical form of a kind of simile (the "as if" form), but of course "catch in her toil" is a metaphor. But whereas the simile of Dante is merely to make you see more clearly how the people looked, and is explanatory, the figure of Shakespeare is expansive rather than intensive; its purpose is to *add* to what you see (either on the stage or in your imagination) a reminder of that fascination of Cleopatra which shaped her history and that of the world, and of that fascination being so strong that it prevails even in death. It is more elusive, and it is less possible to convey without close knowledge of the English language. Between men who could make such inventions as these there can be no question of greater or less. But as the whole poem of Dante is, if you like, one vast metaphor, there is hardly any place for metaphor in the detail of it.

There is all the more reason to acquaint oneself well with Dante's poem

first part by part, even dwelling specially on the parts that one likes most at first, because we cannot extract the full significance of any part without knowing the whole. We cannot understand the inscription at Hell Gate:

*Giustizia mosse il mio alto Fattore;
fecemi la divina Potestate,
la somma Sapienza e il primo Amore.*

Justice moved my high Maker; what made me were the divine Power,
the supreme Wisdom, and the primal Love—

until we have ascended to the highest Heaven and returned. But we can understand the first Episode that strikes most readers, that of Paolo and Francesca, enough to be moved by it as much as by any poetry, on the first reading. It is introduced by two similes of the same explanatory nature as that which I have just quoted:

*E come gli stornei ne portan l'ali,
nel freddo tempo, a schiera larga e piena,
così quel fiato gli spiriti mali;*

And as their wings bear along the starlings, at the cold season, in large full troop.

*E come i gru van cantando lor lai
facendo in aer di sè lunga riga;
così vid' io venir, traendo guai,
ombre portate dalla detta briga;*

And as the cranes go chanting their lays, making themselves a long streak in the air, so I saw the wailing shadows come, wailing, carried on the striving wind.

We can see and feel the situation of the two lost lovers, though we do not yet understand the meaning which Dante gives it. Taking such an episode by itself, we can get as much out of it as we get from the reading of a whole single play of Shakespeare. We do not understand Shakespeare from a single reading, and certainly not from a single play. There is a relation between the various plays of Shakespeare, taken in order; and it is a work of years to venture even one individual interpretation of the pattern in Shakespeare's carpet. It is not certain that Shakespeare himself knew what it was. It is perhaps a larger pattern than Dante's, but the pattern is less distinct. We can read with full comprehension the lines:

*Noi leggevamo un giorno per diletto
 di Lancillotto, come amor lo strinse;
 soli eravamo e senza alcun sospetto.
 Per più fiate gli occhi ci sospinse
 quella lettura, e scolorocci il viso;
 ma solo un punto fu quel che ci vinse.
 Quando leggemmo il disiato riso
 esser baciato da cotanto amante,
 questi, che mai da me non fia diviso,
 La bocca mi baciò tutto tremante:*

One day, for pastime, we read of Lancelot, how love constrained him; we were alone, and without all suspicion. Several times that reading urged our eyes to meet, and changed the colour of our faces; but one moment alone it was that overcame us. When we read how the fond smile was kissed by such a lover, he, who shall never be divided from me, kissed my mouth all trembling.

When we come to fit the episode into its place in the whole *Comedy*, and see how this punishment is related to all other punishments and to purgations and rewards, we can appreciate better the subtle psychology of the simple line of Francesca:

se fosse amico il re dell' universo

if the King of the Universe were our friend. . . .

or of the line

Amor, che a nullo amato amar perdona

Love, which to no loved one permits excuse for loving. . . .

or indeed of the line already quoted:

questi, che mai da me non fia diviso

he, who shall never be divided from me. . . .

Proceeding through the *Inferno* on a first reading, we get a succession of phantasmagoric but clear images, of images which are coherent, in that each reinforces the last; of glimpses of individuals made memorable by a perfect phrase, like that of the proud Farinata degli Uberti:

*ed ei s' ergea col petto e colla fronte,
 come avesse lo inferno in gran dispitto.*

He rose upright with breast and countenance, as though he entertained great scorn of Hell.

and of particular longer episodes, which remain separately in the memory. I think that among those which impress themselves most at the first reading are the episode of Brunetto Latini (Canto xv), Ulysses (Canto xxvi), Bertrand de Born (Canto xxviii), Adamo di Brescia (Canto xxx), and Ugolino (Canto xxxiii).

Although I think it would be a mistake to skip, and find it much better to await these episodes until we come to them in due course, they certainly remain in my memory as the parts of the *Inferno* which first convinced me, and especially the Brunetto and the Ulysses episodes, for which I was unprepared by quotation or allusion. And the two may well be put together: for the first is Dante's testimony of a loved master of arts, the second his reconstruction of a legendary figure of ancient epic; yet both have the quality of *surprise* which Poe declared to be essential to poetry. This *surprise*, at its highest, could by nothing be better illustrated than by the final lines with which Dante dismisses the damned master whom he loves and respects:

*Poi si rivolse, e parve di coloro
che coronno a Verona il drappo verde
per la campagna; e parve di costoro
quegli che vince e non colui che perde.*

Then he turned, and seemed like one of those who run for the green cloth at Verona through the open field; and of them he seemed like him who wins, and not like him who loses.

One does not need to know anything about the race for the roll of green cloth, to be *hit* by these lines; and in making Brunetto, so fallen, *run like the winner*, a quality is given to the punishment which belongs only to the greatest poetry. So Ulysses, unseen in the hornèd wave of flame,

*Lo maggior corno della fiamma antica
cominciò a crollarsi mormorando,
pur come quella cui vento affatica.
Indi la cima qua e là menando,
come fosse la lingua che parlasse,
gittò voce di fuori e disse: "Quando
mi diparti' da Circe, che sottrasse
me più d'un anno la presso a Gaeta. . ."*

The greater horn of the ancient flame began to shake itself murmuring, like a flame struggling against the wind. Then moving to and fro the peak, as though it were the tongue that spoke, threw forth a voice and

said: "When I left Circe, who kept me more than a year there near Gaeta. . . ."

is a creature of the pure poetic imagination, apprehensible apart from place and time and the scheme of the poem. The Ulysses episode may strike us first as a kind of excursion, an irrelevance, a self-indulgence on the part of Dante taking a holiday from his Christian scheme. But when we know the whole poem, we recognize how cunningly and convincingly Dante has made to fit in real men, his contemporaries, friends, and enemies, recent historical personages, legendary and Biblical figures, and figures of ancient fiction. He has been reproved or smiled at for satisfying personal grudges by putting in Hell men whom he knew and hated; but these, as well as Ulysses, are transformed in the whole; for the real and the unreal are all representative of types of sin, suffering, fault, and merit, and all become of the same reality and contemporary. The Ulysses episode is particularly "readable," I think, because of its continuous straightforward narrative, and because to an English reader the comparison with Tennyson's poem—a perfect poem at that—is very instructive. It is worth while noticing the greatly superior degree of *simplification* of Dante's version. Tennyson, like most poets, like most even of those whom we can call great poets, has to get his effect with a certain amount of *forcing*. Thus the line about the sea which

moans round with many voices,

a true specimen of Tennyson-Virgilianism, is too *poetical* in comparison with Dante, to be the highest poetry. (Only Shakespeare can be so "poetical" without giving any effect of overloading, or distracting us from the main issue:

Put up your bright swords or the dew will rust them.)

Ulysses and his shipmates pass through the pillars of Hercules, that "narrow pass"

*ov' Ercole segnò li suoi riguardi
acciochè l'uom più oltre non si metta.*

where Hercules set his marks, so that man should pass no farther.

*"O frati," dissi, "che per cento milia
perigli siete giunti all' occidente,
a questa tanto picciola vigilia
de' vostri sensi, ch' è del rimanente,
non vogliate negar l'esperienza
di retro al sol, del mondo senza gente.*

*Considerate la vostra semenza,
fatti non foste a viver come bruti
ma per seguir virtute e conoscenza."*

"O brothers!" I said, "who through a hundred thousand dangers have reached the West, deny not, to this so brief vigil of your senses that remains, experience of the world without men that lies behind the sun. Consider your nature, you were made not to live like beasts, but to pursue virtue and knowledge."

They fare forth until suddenly

*n'apparve una montagna bruna
per la distanza, e parvemi alta tanto
quanto veduta non n'aveva alcuna.
Noi ci allegrammo, e tosto tornò in pianto,
chè dalla nuova terra un turbo nacque,
e percosse del legno il primo canto.
Tre volte il fe' girar con tutte l'acque,
alla quarta levar la poppa in suso,
e la prora ire in giù, com' altrui piacque,
infìn che il mar fu sopra noi richiuso.*

there appeared a mountain brown in the distance; and it seemed to me the highest that I had ever seen. We rejoiced, but soon our joy was turned to lamentation: for a storm came up from the new land, and caught the stem of our ship. Three times it whirled her round with all the waters; the fourth time it heaved up the stern and drove her down at the head, as pleased Another; until the sea closed over us.

The story of Ulysses, as told by Dante, reads like a straightforward piece of romance, a well told seaman's yarn; Tennyson's Ulysses is primarily a very self-conscious poet. But Tennyson's poem is flat, it has only two dimensions; there is nothing more in it than what the average Englishman, with a feeling for verbal beauty, can see. We do not need, at first, to know what mountain the mountain was, or what the words mean *as pleased Another*, to feel that Dante's sense has further depths.

It is worth pointing out again how very right was Dante to introduce among his historical characters at least one character who even to him could hardly have been more than a fiction. For the *Inferno* is relieved from any question of pettiness or arbitrariness in Dante's selection of damned. It reminds us that Hell is not a place but a *state*; that man is damned or blessed in the creatures of his imagination as well as in men who have actually lived; and that Hell, though a state, is a state which

can only be thought of, and perhaps only experienced, by the projection of sensory images; and that the resurrection of the body has perhaps a deeper meaning than we understand. But these are such thoughts as come only after many readings; they are not necessary for the first poetic enjoyment.

The experience of a poem is the experience both of a moment and of a lifetime. It is very much like our intenser experiences of other human beings. There is a first, or an early moment which is unique, of shock and surprise, even of terror (*Ego dominus tuus* [I am thy God]); a moment which can never be forgotten, but which is never repeated integrally; and yet which would become destitute of significance if it did not survive in a larger whole of experience; which survives inside a deeper and a calmer feeling. The majority of poems one outgrows and outlives, as one outgrows and outlives the majority of human passions: Dante's is one of those which one can only just hope to grow up to at the end of life.

The last canto (xxxiv) is probably the most difficult on first reading. The vision of Satan may seem grotesque, especially if we have fixed in our minds the curly-haired Byronic hero of Milton; it is too like a Satan in a fresco in Siena. Certainly no more than the Divine Spirit can the Essence of Evil be confined in one form and place; and I confess that I tend to get from Dante the impression of a Devil suffering like the human damned souls; whereas I feel that the *kind* of suffering experienced by the Spirit of Evil should be represented as utterly different. I can only say that Dante made the best of a bad job. In putting Brutus, the noble Brutus, and Cassius with Judas Iscariot he will also disturb at first the English reader, for whom Brutus and Cassius must always be the Brutus and Cassius of Shakespeare: but if my justification of Ulysses is valid, then the presence of Brutus and Cassius is also. If any one is repelled by the last canto of the *Inferno*, I can only ask him to wait until he has read and lived for years with the last canto of the *Paradiso*, which is to my thinking the highest point that poetry has ever reached or ever can reach, and in which Dante amply repairs any failure of Canto xxxiv of the *Inferno*; but perhaps it is better, on our first reading of the *Inferno*, to omit the last canto and return to the beginning:

Per me si va nella città dolente;
per me si va nell' eterno dolore;
per me si va tra la perduta gente.
Giustizia mosse il mio alto Fattore;
fecemi la divina Potestate,
la somma Sapienza e il primo Amore.

[Through me is the way into the woeful city; through me is the way into the eternal woe; through me is the way among the lost people. Justice moved my lofty maker: the divine Power, the supreme Wisdom and the primal Love made me.]

II. THE "PURGATORIO" AND THE "PARADISO"

For the science or art of writing verse, one has learned from the *Inferno* that the greatest poetry can be written with the greatest economy of words, and with the greatest austerity in the use of metaphor, simile, verbal beauty, and elegance. When I affirm that more can be learned about how to write poetry from Dante than from any English poet, I do not at all mean that Dante's way is the only right way, or that Dante is thereby *greater* than Shakespeare or, indeed, any other English poet. I put my meaning into other words by saying that Dante can do less *harm* to any one trying to learn to write verse than can Shakespeare. Most great English poets are *imitable* in a way in which Dante was not. If you try to imitate Shakespeare you will certainly produce a series of stilted, forced, and violent distortions of language. The language of each great English poet is his own language; the language of Dante is the perfection of a common language. In a sense, it is more pedestrian than that of Dryden or Pope. If you follow Dante without talent, you will at worst be pedestrian and flat; if you follow Shakespeare or Pope without talent, you will make an utter fool of yourself.

But if one has learned this much from the *Inferno*, there are other things to be learnt from the two successive divisions of the poem. From the *Purgatorio* one learns that a straightforward philosophical statement can be great poetry; from the *Paradiso*, that more and more rarefied and remote *states of beatitude* can be the material for great poetry. And gradually we come to admit that Shakespeare understands a greater extent and variety of human life than Dante; but that Dante understands deeper degrees of degradation and higher degrees of exaltation. And a further wisdom is reached when we see clearly that this indicates the equality of the two men.

On the one hand, the *Purgatorio* and the *Paradiso* belong, in the way of understanding, together. It is apparently easier to accept damnation as poetic material than purgation or beatitude; less is involved that is strange to the modern mind. I insist that the full meaning of the *Inferno* can only be extracted after appreciation of the two later parts, yet it has sufficient meaning in and by itself for the first few readings. Indeed, the

Purgatorio is, I think, the most difficult of the three parts. It cannot be enjoyed by itself like the *Inferno*, nor can it be enjoyed merely as a sequel to the *Inferno*; it requires appreciation of the *Paradiso* as well; which means that its first reading is arduous and apparently unremunerative. Only when we have read straight through to the end of the *Paradiso*, and re-read the *Inferno*, does the *Purgatorio* begin to yield its beauty. Damnation and even blessedness are more exciting than purgation.

By compensation, the *Purgatorio* has a few episodes which, so to speak, "let us up" (as the counterpart to letting down) more easily than the rest, from the *Inferno*. We must not stop to orient ourselves in the new astronomy of the Mount of Purgatory. We must linger first with the shades of Casella and Manfred slain, and especially Buonconte and La Pia, those whose souls were saved from Hell only at the last moment.

*"Io fui di Montefeltro, io son Buonconte;
Giovanna o altri non ha di me cura;
perch' io vo tra costor con bassa fronte."
Ed io a lui: "Qual forza o qual ventura
ti travìò sì fuor di Campaldino
che non si seppe mai tua sepoltura?"
"Oh," rispos' egli, "a piè del Casentino
traversa ur' acqua che ha nome l'Archiano,
che sopra l'Ermo nasce in Apennino.
Dove il vocabol suo diventa vano
arriva' io forato nella gola,
fuggendo a piede e sanguinando il piano.
Quivi perdei la vista, e la parola
nel nome di Maria finii: e quivi
caddi, e rimase la mia carne sola."*

"I was of Montefeltro, I am Buonconte; neither Giovanna nor any other has care of me, wherefore I go with these, with lowered brow." I said to him: "What force or chance led you so far away from Campaldino that your place of sepulture has always been unknown?" "Oh," said he, "at the foot of Casentino a stream crosses, which is called Archiano, and rises in the Apennines above the Hermitage. There, where its name is lost, came I, jabbed in the throat, fleeing on foot, dripping blood over the plain. There my sight left me, and I ended speech with [crying on] the name of Mary. There I fell, and my flesh alone remained."

When Buonconte ends his story, the third spirit speaks:

*"Deh, quando tu sarai tornato al mondo,
e riposato della lunga via,"
seguito il terzo spirito al secondo,*

*“ricorditi di me, che son la Pia;
Siena mi fe’, disfecemi Maremma:
salsi colui che innanellata, pria
disposando, m’avea con la sua gemma.”*

“O pray, when you return to the world, and are rested from your long journey,” followed the third spirit after the second, “remember me, who am La Pia. Siena made me, Maremma unmade me: this is known to him who after due engagement wedded me with his ring.”

The next episode that impresses the reader coming fresh from the *Inferno* is the meeting with Sordello the poet (Canto vi), the soul who appeared

*altera e disdegnosa
e nel mover degli occhi onesta e tarda!*

Proud and disdainful, superb and slow in the movement of his eyes!

*E il dolce duca incominciava:
“Mantova” . . . e l’ombra, tutta in sè romita,
surse ver lui del loco ove pria stava,
dicendo: “O Mantovano, io son Sordello
della tua terra.” E l’un l’altro abbracciava.*

The gentle guide [Virgil] began: “Mantua” . . . and the shade, suddenly rapt, leapt towards him from the place where first it was, saying, “O Mantuan, I am Sordello of thy very soil.” And the one embraced the other.

The meeting with Sordello *a guisa di leon quando si posa*, like a couchant lion, is no more affecting than that with the poet Statius, in Canto xxi. Statius, when he recognizes his master Virgil, stoops to clasp his feet, but Virgil answers—the lost soul speaking to the saved:

*“Frate,
non far, chè tu se’ ombra, ed ombra vedi.”
Ed ei surgendo: “Or puoi la quantitate
comprender dell’ amor ch’ a te mi scalda,
quando dismento nostra vanitate,
trattando l’ombre come cosa salda.”*

“Brother! refrain, for you are but a shadow, and a shadow is but what you see.” Then the other, rising: “Now can you understand the quantity of love that warms me towards you, so that I forget our vanity, and treat the shadows like the solid thing.”

The last "episode" at all comparable to those of the *Inferno* is the meeting with Dante's predecessors, Guido Guinizelli and Arnaut Daniel (Canto xxvi). In this canto the Lustful are purged in flame, yet we see clearly how the flame of purgatory differs from that of hell. In hell, the torment issues from the very nature of the damned themselves, expresses their essence; they writhe in the torment of their own perpetually perverted nature. In purgatory the torment of flame is deliberately and consciously accepted by the penitent. When Dante approaches with Virgil these souls in purgatory flame, they crowd towards him:

*Poi verso me, quanto potevan farsi,
certi si feron, sempre con riguardo
di non uscir dove non fossero arsi.*

Then certain of them made towards me, so far as they could, but ever watchful not to come so far that they should not be in the fire.

The souls in purgatory suffer because they *wish to suffer*, for purgation. And observe that they suffer more actively and keenly, being souls preparing for blessedness, than Virgil suffers in eternal limbo. In their suffering is hope, in the anaesthesia of Virgil is hopelessness; that is the difference. The canto ends with the superb verses of Arnaut Daniel in his Provençal tongue:

*"Ieu sui Arnaut, que plor e vau cantan;
consiros vei la passada folor,
e vei jausen lo jorn, qu' esper, denan.
Ara vos prec, per aquella valor
que vos guida al som de l'escalina,
sovegna vos a temps de ma dolor."*

POI S' ASCOSE NEL FOCO CHE GLI AFFINA.

"I am Arnold, who weeps and goes singing. I see in thought all the past folly. And I see with joy the day for which I hope, before me. And so I pray you, by that Virtue which leads you to the topmost of the stair—be mindful in due time of my pain." Then dived he back into that fire which refines them.

These are the high episodes, to which the reader initiated by the *Inferno* must first cling, until he reaches the shore of Lethe, and Matilda, and the first sight of Beatrice. In the last cantos (xxix-xxxiii) of the *Purgatorio* we are already in the world of the *Paradiso*.

But in between these episodes is the narrative of the ascent of the Mount, with meetings, visions, and philosophical expositions, all impor-

tant, and all difficult for the uninstructed reader who finds it less exciting than the continuous phantasmagoria of the *Inferno*. The allegory in the *Inferno* was easy to swallow or ignore, because we could, so to speak, grasp the concrete end of it, its solidification into imagery; but as we ascend from Hell to Heaven we are more and more required to grasp the whole from idea to image.

Here I must make a diversion, before tackling a specifically philosophical passage of the *Purgatorio*, concerning the nature of Belief. I wish merely to indicate certain tentative conclusions of my own, which might affect one's reading of the *Purgatorio*.

Dante's debt to St. Thomas Aquinas, like his debt (a much smaller one) to Virgil, can be easily exaggerated; for it must not be forgotten that Dante read and made use of other great mediaeval philosophers as well. Nevertheless, the question of how much Dante took from Aquinas and how much from elsewhere is one which has been settled by others and is not relevant to my present essay. But the question of what Dante "believed" is always relevant. It would not matter, if the world were divided between those persons who are capable of taking poetry simply for what it is and those who cannot take it at all; if so, there would be no need to talk about this question to the former and no use in talking about it to the latter. But most of us are somewhat impure and apt to confuse issues: hence the justification of writing books about books, in the hope of straightening things out.

My point is that you cannot afford to *ignore* Dante's philosophical and theological beliefs, or to skip the passages which express them most clearly; but that on the other hand you are not called upon to believe them yourself. It is wrong to think that there are parts of the *Divine Comedy* which are of interest only to Catholics or to mediaevalists. For there is a difference (which here I hardly do more than assert) between philosophical *belief* and poetic *assent*. I am not sure that there is not as great a difference between philosophical belief and scientific belief; but that is a difference only now beginning to appear, and certainly inapposite to the thirteenth century. In reading Dante you must enter the world of thirteenth-century Catholicism: which is not the world of modern Catholicism, as his world of physics is not the world of modern physics. You are not called upon to believe what Dante believed, for your belief will not give you a goat's worth more of understanding and appreciation; but you are called upon more and more to understand it. If you can read poetry as poetry, you will "believe" in Dante's theology exactly as you believe in the physical reality of his journey; that is, you suspend both

belief and disbelief. I will not deny that it may be in practice easier for a Catholic to grasp the meaning, in many places, than for the ordinary agnostic; but that is not because the Catholic believes, but because he has been instructed. It is a matter of knowledge and ignorance, not of belief or scepticism. The vital matter is that Dante's poem is a whole; that you must in the end come to understand every part in order to understand any part.

Furthermore, we can make a distinction between what Dante believes as a poet and what he believed as a man. Practically, it is hardly likely that even so great a poet as Dante could have composed the *Comedy* merely with understanding and without belief; but his private belief becomes a different thing in becoming poetry. It is interesting to hazard the suggestion that this is truer of Dante than of any other philosophical poet. With Goethe, for instance, I often feel too acutely "this is what Goethe the man believed," instead of merely entering into a world which Goethe has created; with Lucretius also; less with the *Bhagavad-Gita*, which is the next greatest philosophical poem to the *Divine Comedy* within my experience. That is the advantage of a coherent traditional system of dogma and morals like the Catholic: it stands apart, for understanding and assent even without belief, from the single individual who propounds it. Goethe always arouses in me a strong sentiment of disbelief in what he believes: Dante does not. I believe that this is because Dante is the purer poet, not because I have more sympathy with Dante the man than Goethe the man.

We are not to take Dante for Aquinas or Aquinas for Dante. It would be a grievous error in psychology. The *belief attitude* of a man reading the *Summa* must be different from that of a man reading Dante, even when it is the same man, and that man a Catholic.

It is not necessary to have read the *Summa* (which usually means, in practice, reading some handbook) in order to understand Dante. But it is necessary to read the philosophical passages of Dante with the humility of a person visiting a new world, who admits that every part is essential to the whole. What is necessary to appreciate the poetry of the *Purgatorio* is not belief, but suspension of belief. Just as much effort is required of any modern person to accept Dante's allegorical method, as is required of the agnostic to accept his theology.

When I speak of understanding, I do not mean merely knowledge of books or words, any more than I mean belief: I mean a state of mind in which one sees certain beliefs, as the order of the deadly sins, in which

treachery and pride are greater than lust, and despair the greatest, as possible, so that we suspend our judgment altogether.

In the xvith Canto of the *Purgatorio* we meet Marco Lombardo, who discourses at some length on the Freedom of the Will, and on the Soul:

*Esce di mano a lui, che la vagheggia
prima che sia, a giusa di fanciulla
che piangendo e ridendo pargoleggia,
l'anima semplicetta, che sa nulla,
salvo che, mossa da lieto fattore,
volentier torna a ciò che la trastulla.
Di picciol bene in pria sente sapore;
quivi s'inganna, e retro ad esso corre,
se guida o fren non torce suo amore.
Onde convenne legge per fren porre;
convenne regge aver, che discernesse
della vera cittade almen la torre.*

From the hands of Him who loves her before she is, there issues like a little child that plays, with weeping and laughter, the simple soul, that knows nothing except that, come from the hands of a glad creator, she turns willingly to everything that delights her. First she tastes the flavour of a trifling good; then is beguiled, and pursues it, if neither guide nor check withhold her. Therefore laws were needed as a curb; a ruler was needed, who should at least see afar the tower of the true City.

Later (Canto xvii) it is Virgil himself who instructs Dante in the nature of Love:

*"Nè creator nè creatura mai,"
cominciò ei, "figiuol, fu senza amore,
o naturale o d'animo; e tu il sai.
Lo natural è sempre senza errore,
ma l'altro puote errar per malo obbietto,
o per poco o per troppo di vigore.
Mentre ch' egli è ne' primi ben diretto,
e ne' secondi sè stesso misura,
esser non può cagion di mal diletto;
ma, quando al mal si torce, o con più cura
o con men che non dee corre nel bene,
contra il fattore adopra sua fattura.
Quinci comprender puoi ch' esser conviene
amor sementa in voi d' ogni virtute,
e d' ogni operazion che merta pene.*

He began: "neither Creator, nor creature, my son, was ever without love, either natural or rational: and you know it. The natural is always without error; but the other may err through mistaking the object, or through excess or deficiency of force. While it is directed towards the primal goods, and in the secondary moderates itself, it cannot be the cause of delight of sin; but when turned to evil, or hurries towards the good with more or less solicitude than is right, then the creature works against the Creator. Accordingly you may understand how Love must be the seed in you both of every virtue and of every act that merits punishment."

I have quoted these two passages at some length, because they are of the sort that a reader might be inclined to skip, thinking that they are only for scholars, not for readers of poetry, or thinking that it is necessary to have studied the philosophy underlying them. It is not necessary to have traced the descent of this theory of the soul from Aristotle's *De Anima* in order to appreciate it as poetry. Indeed, if we worry too much about it at first as philosophy we are likely to prevent ourselves from receiving the poetic beauty. It is the philosophy of that world of poetry which we have entered.

But with the xxviiith canto we have left behind the stage of punishment and the stage of dialectic, and approach the state of Paradise. The last cantos have the quality of the *Paradiso* and prepare us for it; they move straightforward, with no detour or delay. The three poets, Virgil, Statius, and Dante, pass through the wall of flame which separates Purgatory from the Earthly Paradise. Virgil dismisses Dante, who henceforth shall proceed with a higher guide, saying:

*Non aspettar mio dir più, nè mio cenno.
Liberò, dritto e sano è tuo arbitrio,
e fallo fora non fare a suo senno:
per ch'io te sopra te corono e mitrio.*

No more expect my word, or sign. Your Will is free, straight and whole and not to follow its direction would be sin: wherefore I crown and mitre you (king and bishop) over yourself.

I.e., Dante has now arrived at a condition, for the purposes of the rest of his journey, which is that of the blessed: for political and ecclesiastical organization are only required because of the imperfections of the human will. In the Earthly Paradise Dante encounters a lady named Matilda, whose identity need not at first bother us,

*una donna soletta, che sì già
cantando ed iscegliendo fior da fiore,
ond' era pinta tutta la sua via.*

A lady alone, who went singing and plucking flower after flower, wherewith her path was pied.

After some conversation and explanation by Matilda of the reason and nature of the place, there follows a "Divine Pageant." To those who dislike—not what are popularly called pageants—but the serious pageants of royalty, of the church, of military funerals—the "pageantry" which we find here and in the *Paradiso* will be tedious; and still more to those, if there be any, who are unmoved by the splendour of the Revelations of St. John. It belongs to the world of what I call the *high dream*, and the modern world seems capable only of the *low dream*. I arrived at accepting it, myself, only with some difficulty. There were at least two prejudices, one against pre-Raphaelite imagery, which was natural to one of my generation, and perhaps affects generations younger than mine. The other prejudice—which affects this end of the *Purgatorio* and the whole of the *Paradiso*—is the prejudice that poetry not only must be found *through* suffering but can find its material only *in* suffering. Everything else was cheerfulness, optimism, and hopefulness; and these words stood for a great deal of what one hated in the nineteenth century. It took me many years to recognize that the states of improvement and beatitude which Dante describes are still further from what the modern world can conceive as cheerfulness, than are his states of damnation. And little things put one off: Rossetti's *Blessed Damozel*, first by my rapture and next by my revolt, held up my appreciation of Beatrice by many years.

We cannot understand fully Canto xxx of the *Purgatorio* until we know the *Vita Nuova*, which in my opinion should be read after the *Divine Comedy*. But at least we can begin to understand how skilfully Dante expresses the recrudescence of an ancient passion in a new emotion, in a new situation, which comprehends, enlarges, and gives a meaning to it.

*sopra candido vel cinta d'oliva
 donna m'apparve, sotto verde manto,
 vestita di color di fiamma viva.
 E lo spirito mio, che già cotanto
 tempo era stato che alla sua presenza
 non era di stupor, tremando, affranto,
 senza degli occhi aver più conoscenza,
 per occulta virtù che da lei mosse,
 d'antico amor sentì la gran potenza.
 Tosto che nella vista mi percosse
 l'alta virtù, che già m'avea trafitto
 primo ch'io fuor di puerizia fosse,*

*volsemi alla sinistra col rispetto
 col quale il fantolin corre alla mamma,
 quando ha paura o quando egli è afflito,
 per dire a Virgilio: "Men che dramma
 di sangue m'è rimaso, che non tremi;
 conosco i segni dell' antica fiamma."*

Olive-crowned over a white veil, a lady appeared to me, clad under a green mantle in colour of living flame. And my spirit, after so many years since trembling in her presence it had been broken with awe, without further knowledge by my eyes, felt, through hidden power which went out from her, the great strength of the old love. As soon as that lofty power struck my sense, which already had transfixed me before my adolescence, I turned leftwards with the trust of the little child who runs to his mama when he is frightened or distressed, to say to Virgil: "Hardly a drop of blood in my body does not shudder: I know the tokens of the ancient flame."

And in the dialogue that follows we see the passionate conflict of the old feelings with the new; the effort and triumph of a new renunciation, greater than renunciation at the grave, because a renunciation of feelings that persist beyond the grave. In a way, these cantos are those of the greatest *personal* intensity in the whole poem. In the *Paradiso* Dante himself, save for the Cacciaguida episode, becomes de- or super-personalized; and it is in these last cantos of the *Purgatorio*, rather than in the *Paradiso*, that Beatrice appears most clearly. But the Beatrice theme is essential to the understanding of the whole, *not* because we need to know Dante's biography—not, for instance, as the Wesendonck history is supposed to cast light upon *Tristan*—but because of Dante's *philosophy* of it. This, however, concerns more our examination of the *Vita Nuova*.

The *Purgatorio* is the most difficult because it is the *transitional* canto: the *Inferno* is one thing, comparatively easy; the *Paradiso* is another thing, more difficult as a whole than the *Purgatorio*, because more a whole. Once we have got the hang of the kind of feeling in it no one part is difficult. The *Purgatorio*, here and there, might be called "dry": the *Paradiso* is never dry, it is either incomprehensible or intensely exciting. With the exception of the episode of Cacciaguida—a pardonable exhibition of family and personal pride, because it provides splendid poetry—it is not episodic. All the other characters have the best credentials. At first, they seem less distinct than the earlier unblessed people; they seem ingeniously varied but fundamentally monotonous variations of insipid blessedness. It is a matter of gradual adjustment of our vision. We have

(whether we know it or not) a prejudice against beatitude as material for poetry. The eighteenth and nineteenth centuries knew nothing of it; even Shelley, who knew Dante well and who towards the end of his life was beginning to profit by it, the one English poet of the nineteenth century who could even have begun to follow those footsteps, was able to enounce the proposition that our sweetest songs are those which sing of saddest thought. The early work of Dante might confirm Shelley; the *Paradiso* provides the counterpart, though a different counterpart from the philosophy of Browning.

The *Paradiso* is not monotonous. It is as various as any poem. And take the *Comedy* as a whole, you can compare it to nothing but the entire dramatic work of Shakespeare. The comparison of the *Vita Nuova* with the *Sonnets* is another, and interesting, occupation. Dante and Shakespeare divide the modern world between them; there is no third.

We should begin by thinking of Dante fixing his gaze on Beatrice:

*Nel suo aspetto tal dentro mi fei,
qual si fe' Glauco nel gustar dell' erba,
che il fe' consorto in mar degli altri dei.
Trasumanar significar per verba
non si poria; pero l'esempio basti
a cui esperienza grazia serba.*

Gazing on her, so I became within, as did Glaucus, on tasting of the grass which made him sea-fellow of the other gods. To transcend humanity may not be told in words, wherefore let the instance suffice for him for whom that experience is reserved by Grace.

And as Beatrice says to Dante: "*You make yourself dull with false fancy*"; warns him, that here there are divers sorts of blessedness, as settled by Providence.

If this is not enough, Dante is informed by Piccarda (Canto III) in words which even those who know no Dante know:

la sua voluntade è nostra pace.

His will is our peace.

It is the mystery of the inequality, and of the indifference of that inequality, in blessedness, of the blessed. It is all the same, and yet each degree differs.

Shakespeare gives the greatest *width* of human passion; Dante the greatest altitude and greatest depth. They complement each other. It is futile to ask which undertook the more difficult job. But certainly the

“difficult passages” in the *Paradiso* are Dante’s difficulties rather than ours: his difficulty in making us apprehend sensuously the various states and stages of blessedness. Thus the long oration of Beatrice about the Will (Canto iv) is really directed at making us *feel* the reality of the condition of Piccarda; Dante has to educate our senses as he goes along. The insistence throughout is upon states of feeling; the reasoning takes only its proper place as a means of reaching these states. We get constantly verses like

*Beatrice mi guardò con gli occhi pieni
di faville d’ amor così divini,
che, vinta, mia virtù diedi le reni,
e quasi mi perdei con gli occhi chini.*

Beatrice looked on me with eyes so divine filled with sparks of love, that my vanquished power turned away, and I became as lost, with downcast eyes.

The whole difficulty is in admitting that this is something that we are meant to feel, not merely decorative verbiage. Dante gives us every aid of images, as when

*Come in peschiera, ch’ è tranquilla e pura,
traggonsi i pesci a a ciò che vien di fuori
per modo che lo stiman lor pastura;
sì vid’ io ben più di mille splendori
trarsi ver noi, ed in ciascun s’udia:
Ecco che crescerà li nostri amori.*

As in a fishpond still and clear, the fishes draw near to anything that falls from without in such a way as to make them think it something to eat, so I saw more than a thousand splendours draw towards us, and in each was heard: Lo! here is one that shall increase our loves.

About the persons whom Dante meets in the several spheres, we need only to enquire enough to consider why Dante placed them where he did.

When we have grasped the strict *utility* of the minor images, such as the one given above, or even the simple comparison admired by Landor:

*Quale alledetta che in aere si spazia
primo cantando, e poi tace contenta
dell’ ultima dolcezza che la sazia,*

Like the lark which soars in the air, first singing, and then ceases, content with the last sweetness that sates her,

we may study with respect the more elaborate imagery, such as that of the figure of the Eagle composed by the spirits of the just, which extends from Canto XVII onwards for some space. Such figures are not merely antiquated rhetorical devices, but serious and practical means of making the spiritual visible. An understanding of the rightness of such imagery is a preparation for apprehending the last and greatest canto, the most tenuous and most intense. Nowhere in poetry has experience so remote from ordinary experience been expressed so concretely, by a masterly use of that imagery of *light* which is the form of certain types of mystical experience.

*Nel suo profondo vidi che s'interna,
legato con amore in un volume,
ciò che per l'universo si squaderna;
sustanzia ed accidenti, e lor costume,
quasi conflati insieme per tal modo,
che ciò ch' io dico è un semplice lume.
La forma universal di questo nodo
credo ch' io vidi, perchè più di largo,
dicendo questo, mi sento ch' io godo.
Un punto solo m' è maggior letargo,
che venticinque secoli alla impresa,
che fe' Nettuno ammirar l'ombra d'Argo.*

Within its depths I saw ingathered, bound by love in one mass, the scattered leaves of the universe: substance and accidents and their relations, as though together fused, so that what I speak of is one simple flame. The universal form of this complex I think I saw, because, as I say this, more largely I feel myself rejoice. One single moment to me is more lethargy than twenty-five centuries upon the enterprise which made Neptune wonder at the shadow of the Argo (passing over him).

One can feel only awe at the power of the master who could thus at every moment realize the inapprehensible in visual images. And I do not know anywhere in poetry more authentic sign of greatness than the power of association which could in the last line, when the poet is speaking of the divine vision, yet introduce the Argo passing over the head of wondering Neptune. Such association is utterly different from that of Marino speaking in one breath of the beauty of the Magdalen and the opulence of Cleopatra (so that you are not quite sure what adjectives apply to which). It is the real right thing, the power of establishing relations between beauty of the most diverse sorts; it is the utmost power of the poet.

*O quanto è corto il dire, e come fioco
al mio concetto!*

How scant the speech, and how faint, for my conception!

In writing of the *Divine Comedy* I have tried to keep to a few very simple points of which I am convinced. First that the poetry of Dante is the one universal school of style for the writing of poetry in any language. There is much, naturally, which can profit only those who write Dante's own Tuscan language; but there is no poet in any tongue—not even in Latin or Greek—who stands so firmly as a model for all poets. I tried to illustrate his universal mastery in the use of images. In the actual writing I went so far as to say that he is safer to follow, even for us, than any English poet, including Shakespeare. My second point is that Dante's "allegorical" method has great advantages for the writing of *poetry*: it simplifies the diction, and makes clear and precise the images. That in good allegory, like Dante's, it is not necessary to understand the meaning first to enjoy the poetry, but that our enjoyment of the poetry makes us want to understand the meaning. And the third point is that the *Divine Comedy* is a complete scale of the *depths* and *heights* of human emotion; that the *Purgatorio* and *Paradiso* are to be read as extensions of the ordinarily very limited human range. Every degree of the feeling of humanity, from lowest to highest, has, moreover, an intimate relation to the next above and below, and all fit together according to the logic of sensibility.

I have only now to make certain observations on the *Vita Nuova*, which may also amplify what I have suggested about the mediaeval mind expressed in allegory.

NOTE TO SECTION II

The theory of poetic belief and understanding here employed for a particular study is similar to that maintained by Mr. I. A. Richards (see his *Practical Criticism*, pp. 179 ff. and pp. 271 ff.). I say "similar," because my own *general* theory is still embryonic, and Mr. Richards' also is capable of much further development. I cannot therefore tell how far the similarity extends; but for those who are interested in the subject, I should point out one respect in which my view differs from that of Mr. Richards; and then proceed to qualify my own tentative conclusions.

I am in agreement with Mr. Richards' statement on p. 271 (*op. cit.*). I agree for the reason that if you hold any contradictory theory you deny, I believe, the existence of "literature" as well as of "literary criticism." We may raise the

question whether "literature" exists; but for certain purposes, such as the purpose of this essay on Dante, we must assume that there is literature and literary appreciation; we must assume that the reader can obtain the full "literary" or (if you will) "aesthetic" enjoyment without sharing the beliefs of the author. *If* there is "literature," *if* there is "poetry," then it must be possible to have full literary or poetic appreciation without sharing the beliefs of the poet. That is as far as my thesis goes in the present essay. It may be argued whether there is literature, whether there is poetry, and whether there is any meaning in the term "full appreciation." But I have assumed for this essay that these things exist and that these terms are understood.

I deny, in short, that the reader must share the beliefs of the poet in order to enjoy the poetry fully. I have also asserted that we can distinguish between Dante's beliefs as a man and his beliefs as a poet. But we are forced to believe that there is a particular relation between the two, and that the poet "means what he says." If we learned, for instance, that *De Rerum Natura* was a Latin exercise which Dante had composed for relaxation after completing the *Divine Comedy*, and published under the name of one Lucretius, I am sure that our capacity for enjoying either poem would be mutilated. Mr. Richards' statement (*Science and Poetry*, p. 76 footnote) that a certain writer has effected "a complete severance between his poetry and *all* beliefs" is to me incomprehensible.

If you deny the theory that full poetic appreciation is possible without belief in what the poet believed, you deny the existence of "poetry" as well as "criticism"; and if you push this denial to its conclusion, you will be forced to admit that there is very little poetry that you can appreciate, and that your appreciation of it will be a function of your philosophy or theology or something else. If, on the other hand, I push *my* theory to the extreme, I find myself in as great a difficulty. I am quite aware of the ambiguity of the word "understand." In one sense, it means to understand without believing, for unless you can understand a view of life (let us say) without believing in it, the word "understand" loses all meaning, and the act of choice between one view and another is reduced to caprice. But if you yourself are convinced of a certain view of life, then you irresistibly and inevitably believe that if any one else comes to "understand" it fully, his understanding *must* terminate in belief. It is possible, and sometimes necessary, to argue that full understanding must identify itself with full belief. A good deal, it thus turns out, hangs on the meaning, if any, of this short word *full*.

In short, both the view I have taken in this essay, and the view which contradicts it, are, if pushed to the end, what I call heresies (not, of course, in the theological, but in a more general sense). Each is true only within a limited field of discourse, but unless you limit fields of discourse, you can have no discourse at all. Orthodoxy can only be found in such contradictions, though it must be remembered that a pair of contradictions may *both* be false, and that not all pairs of contradictions make up a truth.

And I confess to considerable difficulty in analysing my own feelings, a difficulty which makes me hesitate to accept Mr. Richards' theory of "pseudo-statements." On reading the line which he uses,

Beauty is truth, truth beauty . . .

I am at first inclined to agree with him, because this statement of equivalence means nothing to me. But on re-reading the whole Ode, this line strikes me as a serious blemish on a beautiful poem; and the reason must be either that I fail to understand it, or that it is a statement which is untrue. And I suppose that Keats meant something by it, however remote his truth and his beauty may have been from these words in ordinary use. And I am sure that he would have repudiated any explanation of the line which called it a pseudo-statement. On the other hand the line I have often quoted of Shakespeare,

Ripeness is all,

or the line I have quoted of Dante,

la sua voluntade è nostra pace,

strikes very differently on my ear. I observe that the propositions in these words are very different in kind, not only from that of Keats, but from each other. The statement of Keats seems to me meaningless: or perhaps, the fact that it is grammatically meaningless conceals another meaning from me. The statement of Shakespeare seems to me to have profound emotional meaning, with, at least, no literal fallacy. And the statement of Dante seems to me *literally true*. And I confess that it has more beauty for me now, when my own experience has deepened its meaning, than it did when I first read it. So I can only conclude that I cannot, in practice, wholly separate my poetic appreciation from my personal beliefs. Also that the distinction between a statement and a pseudo-statement is not always, in particular instances, possible to establish. The theory of Mr. Richards is, I believe, incomplete until he defines the species of religious, philosophical, scientific, and other beliefs, as well as that of "everyday" belief.

I have tried to make clear some of the difficulties inhering in my own theory. Actually, one probably has more pleasure in the poetry when one shares the beliefs of the poet. On the other hand there is a distinct pleasure in enjoying poetry as poetry when one does *not* share the beliefs, analogous to the pleasure of "mastering" other men's philosophical systems. It would appear that "literary appreciation" is an abstraction, and pure poetry a phantom; and that both in creation and enjoyment much always enters which is, from the point of view of "Art," irrelevant.

III. THE "VITA NUOVA"

All of Dante's "minor works" are important, because they are works of Dante; but the *Vita Nuova* has a special importance, because it does

more than any of the others help us to a fuller understanding of the *Divine Comedy*. I do not suggest that the others may be neglected; the *Convivio* is important, and also the *De Volgari Eloquio*: and every part of Dante's writings can give us some light on other parts. But the *Vita Nuova* is a youthful work, in which some of the method and design, and explicitly the intention, of the *Divine Comedy* are shown. Because it is an immature work, it requires some knowledge of the masterpiece to understand; and at the same time helps particularly towards understanding of the *Comedy*.

A great deal of scholarship has been directed upon examination of the early life of Dante, in connexion with the *Vita Nuova*. Critics may be roughly divided into those who regard it as primarily biographical, and those who regard it as primarily allegorical. It is much easier for the second group to make a good case than for the first. If this curious medley of verse and prose is biographical, then the biography has unquestionably been manipulated almost out of recognition to fit into conventional forms of allegory. The imagery of much of it is certainly in a very ancient tradition of vision literature: just as the scheme of the *Divine Comedy* has been shown to be closely similar to similar supernatural peregrination stories in Arabic and in old Persian literature—to say nothing of the descents of Ulysses and Aeneas—so there are parallels to the visions of the *Vita Nuova* such as the *Shepherd of Hermas* in Greek. And as the book is obviously not a literal statement, whether of vision or delusion, it is easy to make out a case for its being an entire allegory: for asserting, that is, that Beatrice is merely a personification of an abstract virtue, intellectual or moral.

I wish to make clear that my own opinions are opinions founded only upon reading the text. I do not think that they are such as can either be verified or refuted by scholars; I mean to restrict my comments to the unprovable and the irrefutable.

It appears likely, to any one who reads the *Vita Nuova* without prejudice, that it is a mixture of biography and allegory; but a mixture according to a recipe not available to the modern mind. When I say the "modern mind," I mean the minds of those who have read or could have read such a document as Rousseau's *Confessions*. The modern mind can understand the "confession," that is, the literal account of oneself, varying only in degree of sincerity and self-understanding, and it can understand "allegory" in the abstract. Nowadays "confessions," of an insignificant sort, pour from the press; every one *met son cœur à nu* [bares his heart], or pretends to; "personalities" succeed one another in interest. It is difficult to conceive of an age (of many ages) when human beings

cared somewhat about the salvation of the "soul," but not about each other as "personalities." Now Dante, I believe, had experiences which seemed to him of some importance; not of importance because they had happened to him and because he, Dante Alighieri, was an important person who kept press-cutting bureaux busy; but important in themselves; and therefore they seemed to him to have some philosophical and impersonal value. I find in it an account of a particular kind of experience: that is, of something which had actual experience (the experience of the "confession" in the modern sense) *and* intellectual and imaginative experience (the experience of thought and the experience of dream) as its materials; and which became a third kind. It seems to me of importance to grasp the simple fact that the *Vita Nuova* is neither a "confession" nor an "indiscretion" in the modern sense, nor is it a piece of Pre-Raphaelite tapestry. If you have that sense of intellectual and spiritual realities that Dante had, then a form of expression like the *Vita Nuova* cannot be classed either as "truth" or "fiction."

In the first place, the type of sexual experience which Dante describes as occurring to him at the age of nine years is by no means impossible or unique. My only doubt (in which I found myself confirmed by a distinguished psychologist) is whether it could have taken place so *late* in life as the age of nine years. The psychologist agreed with me that it is more likely to occur at about five or six years of age. It is possible that Dante developed rather late, and it is also possible that he altered the dates to employ some other significance of the number nine. But to me it appears obvious that the *Vita Nuova* could only have been written around a personal experience. If so, the details do not matter: whether the lady was the Portinari or not, I do not care; it is quite as likely that she is a blind for some one else, even for a person whose name Dante may have forgotten or never known. But I cannot find it incredible that what has happened to others should have happened to Dante with much greater intensity.

The same experience, described in Freudian terms, would be instantly accepted as fact by the modern public. It is merely that Dante, quite reasonably, drew other conclusions and used another mode of expression, which arouses incredulity. And we are inclined to think—as Remy de Gourmont, for once misled by his prejudices into the pedantic attitude, thought—that if an author like Dante follows closely a form of vision that has a long history, it proves that the story is mere allegory (in the modern sense) or fake. I find a much greater difference in sensibility between the *Vita Nuova* and the *Shepherd of Hermas* than Gourmont did. It is not

at all the simple difference between the genuine and the fraud; it is a difference in mind between the humble author of early Christian times and the poet of the thirteenth century, perhaps as great as that between the latter and ourselves. The similarities might prove that a certain *habit* in dream-imagery can persist throughout many changes of civilization. Gourmont would say that Dante borrowed; but that is imputing our own mind to the thirteenth century. I merely suggest that possibly Dante, in his place and time, was following something more essential than merely a "literary" tradition.

The attitude of Dante to the fundamental experience of the *Vita Nuova* can only be understood by accustoming ourselves to find meaning in *final causes* rather than in origins. It is not, I believe, meant as a description of what he *consciously* felt on his meeting with Beatrice, but rather as a description of what that meant on mature reflection upon it. The final cause is the attraction towards God. A great deal of sentiment has been spilt, especially in the eighteenth and nineteenth centuries, upon idealizing the reciprocal feelings of man and woman towards each other, which various realists have been irritated to denounce: this sentiment ignoring the fact that the love of man and woman (or for that matter of man and man) is only explained and made reasonable by the higher love, or else is simply the coupling of animals.

Let us entertain the theory that Dante, meditating on the astonishment of an experience at such an age, which no subsequent experience abolished or exceeded, found meanings in it which we should not be likely to find ourselves. His account is then just as reasonable as our own; and he is simply prolonging the experience in a different direction from that which we, with different mental habits and prejudices, are likely to take.

We cannot, as a matter of fact, understand the *Vita Nuova* without some saturation in the poetry of Dante's Italian contemporaries, or even in the poetry of his Provençal predecessors. Literary parallels are most important, but we must be on guard not to take them in a purely literary and literal way. Dante wrote more or less, at first, like other poets, not simply because he had read their works, but because his modes of feeling and thought were much like theirs. As for the Provençal poets, I have not the knowledge to read them at first hand. That mysterious people had a religion of their own which was thoroughly and painfully extinguished by the Inquisition; so that we hardly know more about them than about the Sumerians. I suspect that the difference between this unknown, and possibly maligned, Albigensianism and Catholicism has some correspondence with the difference between the poetry of the Provençal

school and the Tuscan. The system of Dante's organization of sensibility—the contrast between higher and lower carnal love, the transition from Beatrice living to Beatrice dead, rising to the Cult of the Virgin, seems to me to be his own.

At any rate, the *Vita Nuova*, besides being a sequence of beautiful poems connected by a curious vision-literature prose, is, I believe, a very sound psychological treatise on something related to what is now called "sublimation." There is also a practical sense of realities behind it, which is antiromantic: not to expect more from *life* than it can give or more from *human* beings than they can give; to look to *death* for what life cannot give. The *Vita Nuova* belongs to "vision literature"; but its philosophy is the Catholic philosophy of disillusion.

Understanding of the book is greatly advanced by acquaintance with Guido Guinicelli, Cavalcanti, Cino, and others. One ought, indeed, to study the development of the art of love from the Provençal poets onwards, paying just attention to both resemblances and differences in spirit; as well as the development of verse form and stanza form and vocabulary. But such study is vain unless we have first made the conscious attempt, as difficult and hard as rebirth, to pass through the looking-glass into a world which is just as reasonable as our own. When we have done that, we begin to wonder whether the world of Dante is not both larger and more solid than our own. When we repeat

Tutti li miei penser parlan d'Amore

[All my thoughts speak of love]

we must stop to think what *amore* means—something different from its Latin original, its French equivalent, or its definition in a modern Italian dictionary.

It is, I repeat, for several reasons necessary to read the *Divine Comedy* first. The first reading of the *Vita Nuova* gives nothing but Pre-Raphaelite quaintness. The *Comedy* initiates us into the world of mediaeval imagery, in the *Inferno* most apprehensible, in the *Paradiso* most rarefied. It initiates us also into the world of mediaeval thought and dogma: far easier for those who have had the college discipline of Plato and Aristotle, but possible even without that. The *Vita Nuova* plunges us direct into mediaeval sensibility. It is not, for Dante, a masterpiece, so that it is safer for us to read it, the first time, for the light it can throw on the *Comedy* than for itself.

Read in this way, it can be more useful than a dozen commentaries.

The effect of many books about Dante is to give the impression that it is more necessary to read about him than to read what he has written. But the next step after reading Dante again and again should be to read some of the books that he read, rather than modern books about his work and life and times, however good. We may easily be distracted by following up the histories of Emperors and Popes. With a poet like Shakespeare, we are less likely to ignore the text for the commentary. With Dante there is just as much need for concentrating on the text, and all the more because Dante's mind is more remote from the ways of thinking and feeling in which we have been brought up. What we need is not information but knowledge: the first step to knowledge is to recognize the differences between his form of thought and feeling and ours. Even to attach great importance to Thomism, or to Catholicism, may lead us astray, in attracting us too much to such differences as are entirely capable of intellectual formulation. The English reader needs to remember that even had Dante not been a good Catholic, even had he treated Aristotle or Thomas with sceptical indifference, his mind would still be no easier to understand; the forms of imagination, phantasmagoria, and sensibility would be just as strange to us. We have to learn to accept these forms: and this *acceptance* is more important than anything that can be called belief. There is almost a definite moment of acceptance at which the New Life begins.

What I have written is, as I promised, not an "introduction" to the study but a brief account of my own introduction to it. In extenuation, it may be observed that to write in this way of men like Dante or Shakespeare is really less presumptuous than to write of smaller men. The very vastness of the subject leaves a possibility that one may have something to say worth saying; whereas with smaller men, only minute and special study is likely to justify writing about them at all.

Tradition and the Individual Talent

In English writing we seldom speak of tradition, though we occasionally apply its name in deploring its absence. We cannot refer to “the tradition” or to “a tradition”; at most, we employ the adjective in saying that the poetry of So-and-so is “traditional” or even “too traditional.” Seldom, perhaps, does the word appear except in a phrase of censure. If otherwise, it is vaguely approbative, with the implication, as to the work approved, of some pleasing archaeological reconstruction. You can hardly make the word agreeable to English ears without this comfortable reference to the reassuring science of archaeology.

Certainly the word is not likely to appear in our appreciations of living or dead writers. Every nation, every race, has not only its own creative, but its own critical turn of mind; and is even more oblivious of the shortcomings and limitations of its critical habits than of those of its creative genius. We know, or think we know, from the enormous mass of critical writing that has appeared in the French language the critical method or habit of the French; we only conclude (we are such unconscious people) that the French are “more critical” than we, and sometimes even plume ourselves a little with the fact, as if the French were the less spontaneous. Perhaps they are; but we might remind ourselves that criticism is as inevitable as breathing, and that we should be none the worse for articulating what passes in our minds when we read a book and feel an emotion about it, for criticizing our own minds in their work of criticism. One of the facts that might come to light in this process is our tendency to insist, when we praise a poet, upon those aspects of his work in which he least resembles any one else. In these aspects or parts of his work we pretend to find what is individual, what is the peculiar essence of the man. We dwell with satisfaction upon the poet’s difference from his predecessors, especially his immediate predecessors; we endeavour to

find something that can be isolated in order to be enjoyed. Whereas if we approach a poet without this prejudice we shall often find that not only the best, but the most individual parts of his work may be those in which the dead poets, his ancestors, assert their immortality most vigorously. And I do not mean the impressionable period of adolescence, but the period of full maturity.

Yet if the only form of tradition, of handing down, consisted in following the ways of the immediate generation before us in a blind or timid adherence to its successes, "tradition" should positively be discouraged. We have seen many such simple currents soon lost in the sand; and novelty is better than repetition. Tradition is a matter of much wider significance. It cannot be inherited, and if you want it you must obtain it by great labour. It involves, in the first place, the historical sense, which we may call nearly indispensable to any one who would continue to be a poet beyond his twenty-fifth year; and the historical sense involves a perception, not only of the pastness of the past, but of its presence; the historical sense compels a man to write not merely with his own generation in his bones, but with a feeling that the whole of the literature of Europe from Homer and within it the whole of the literature of his own country has a simultaneous existence and composes a simultaneous order. This historical sense, which is a sense of the timeless as well as of the temporal and of the timeless and of the temporal together, is what makes a writer traditional. And it is at the same time what makes a writer most acutely conscious of his place in time, of his own contemporaneity.

No poet, no artist of any art, has his complete meaning alone. His significance, his appreciation is the appreciation of his relation to the dead poets and artists. You cannot value him alone; you must set him, for contrast and comparison, among the dead. I mean this as a principle of aesthetic, not merely historical, criticism. The necessity that he shall conform, that he shall cohere, is not one-sided; what happens when a new work of art is created is something that happens simultaneously to all the works of art which preceded it. The existing monuments form an ideal order among themselves, which is modified by the introduction of the new (the really new) work of art among them. The existing order is complete before the new work arrives; for order to persist after the supervention of novelty, the *whole* existing order must be, if ever so slightly, altered; and so the relations, proportions, values of each work of art towards the whole are readjusted; and this is conformity between the old and the new. Whoever has approved this idea of order, of the

form of European, of English literature will not find it preposterous that the past should be altered by the present as much as the present is directed by the past. And the poet who is aware of this will be aware of great difficulties and responsibilities.

In a peculiar sense he will be aware also that he must inevitably be judged by the standards of the past. I say judged, not amputated, by them; not judged to be as good as, or worse or better than, the dead; and certainly not judged by the canons of dead critics. It is a judgment, a comparison, in which two things are measured by each other. To conform merely would be for the new work not really to conform at all; it would not be new, and would therefore not be a work of art. And we do not quite say that the new is more valuable because it fits in; but its fitting in is a test of its value—a test, it is true, which can only be slowly and cautiously applied, for we are none of us infallible judges of conformity. We say: it appears to conform, and is perhaps individual, or it appears individual, and many conform; but we are hardly likely to find that it is one and not the other.

To proceed to a more intelligible exposition of the relation of the poet to the past: he can neither take the past as a lump, an indiscriminate bolus, nor can he form himself wholly on one or two private admirations, nor can he form himself wholly upon one preferred period. The first course is inadmissible, the second is an important experience of youth, and the third is a pleasant and highly desirable supplement. The poet must be very conscious of the main current, which does not at all flow invariably through the most distinguished reputations. He must be quite aware of the obvious fact that art never improves, but that the material of art is never quite the same. He must be aware that the mind of Europe—the mind of his own country—a mind which he learns in time to be much more important than his own private mind—is a mind which changes, and that this change is a development which abandons nothing *en route*, which does not superannuate either Shakespeare, or Homer, or the rock drawing of the Magdalenian draughtsmen. That this development, refinement perhaps, complication certainly, is not, from the point of view of the artist, any improvement. Perhaps not even an improvement from the point of view of the psychologist or not to the extent which we imagine; perhaps only in the end based upon a complication in economics and machinery. But the difference between the present and the past is that the conscious present is an awareness of the present in a way and to an extent which the past's awareness of itself cannot show.

Some one said: "The dead writers are remote from us because we

know so much more than they did." Precisely, and they are that which we know.

I am alive to a usual objection to what is clearly part of my program for the *métier* of poetry. The objection is that the doctrine requires a ridiculous amount of erudition (pedantry), a claim which can be rejected by appeal to the lives of poets in any pantheon. It will even be affirmed that much learning deadens or perverts poetic sensibility. While, however, we persist in believing that a poet ought to know as much as will not encroach upon his necessary receptivity and necessary laziness, it is not desirable to confine knowledge to whatever can be put into a useful shape for examinations, drawing-rooms, or the still more pretentious modes of publicity. Some can absorb knowledge, the more tardy must sweat for it. Shakespeare acquired more essential history from Plutarch than most men could from the whole British Museum. What is to be insisted upon is that the poet must develop or procure the consciousness of the past and that he should continue to develop this consciousness throughout his career.

What happens is a continual surrender of himself as he is at the moment to something which is more valuable. The progress of an artist is a continual self-sacrifice, a continual extinction of personality.

There remains to define this process of depersonalization and its relation to the sense of tradition. It is in this depersonalization that art may be said to approach the condition of science. I, therefore, invite you to consider, as a suggestive analogy, the action which takes place when a bit of finely filiated platinum is introduced into a chamber containing oxygen and sulphur dioxide.

Honest criticism and sensitive appreciation are directed not upon the poet but upon the poetry. If we attend to the confused cries of the newspaper critics and the susurrus of popular repetition that follows, we shall hear the names of poets in great numbers; if we seek not Blue-book knowledge but the enjoyment of poetry, and ask for a poem, we shall seldom find it. I have tried to point out the importance of the relation of the poem to other poems by other authors, and suggested the conception of poetry as a living whole of all the poetry that has ever been written. The other aspect of this Impersonal theory of poetry is the relation of the poem to its author. And I hinted, by an analogy, that the mind of the mature poet differs from that of the immature one not precisely in any valuation of "personality," not being necessarily more interesting, or having "more to say," but rather by being a more finely perfected me-

dium in which special, or very varied, feelings are at liberty to enter into new combinations.

The analogy was that of the catalyst. When the two gases previously mentioned are mixed in the presence of a filament of platinum, they form sulphurous acid. This combination takes place only if the platinum is present; nevertheless the newly formed acid contains no trace of platinum, and the platinum itself is apparently unaffected; has remained inert, neutral, and unchanged. The mind of the poet is the shred of platinum. It may partly or exclusively operate upon the experience of the man himself; but, the more perfect the artist, the more completely separate in him will be the man who suffers and the mind which creates; the more perfectly will the mind digest and transmute the passions which are its material.

The experience, you will notice, the elements which enter the presence of the transforming catalyst, are of two kinds: emotions and feelings. The effect of a work of art upon the person who enjoys it is an experience different in kind from any experience not of art. It may be formed out of one emotion, or may be a combination of several; and various feelings, inhering for the writer in particular words or phrases or images, may be added to compose the final result. Or great poetry may be made without the direct use of any emotion whatever: composed out of feelings solely. Canto xv of the *Inferno* (Brunetto Latini) is a working up of the emotion evident in the situation; but the effect, though single as that of any work of art, is obtained by considerable complexity of detail. The last quatrain gives an image, a feeling attaching to an image, which "came," which did not develop simply out of what precedes, but which was probably in suspension in the poet's mind until the proper combination arrived for it to add itself to. The poet's mind is in fact a receptacle for seizing and storing up numberless feelings, phrases, images, which remain there until all the particles which can unite to form a new compound are present together.

If you compare several representative passages of the greatest poetry you see how great is the variety of types of combination, and also how completely any semi-ethical criterion of "sublimity" misses the mark. For it is not the "greatness," the intensity, of the emotions, the components, but the intensity of the artistic process, the pressure, so to speak, under which the fusion takes place, that counts. The episode of Paolo and Francesca employs a definite emotion, but the intensity of the poetry is something quite different from whatever intensity in the supposed experience it may give the impression of. It is no more intense,

furthermore, than Canto XXVI, the voyage of Ulysses, which has not the direct dependence upon an emotion. Great variety is possible in the process of transmutation of emotion: the murder of Agamemnon, or the agony of Othello, gives an artistic effect apparently closer to a possible original than the scenes from Dante. In the *Agamemnon*, the artistic emotion approximates to the emotion of an actual spectator; in *Othello* to the emotion of the protagonist himself. But the difference between art and the event is always absolute; the combination which is the murder of Agamemnon is probably as complex as that which is the voyage of Ulysses. In either case there has been a fusion of elements. The ode of Keats contains a number of feelings which have nothing particular to do with the nightingale, but which the nightingale, partly, perhaps, because of its attractive name, and partly because of its reputation, served to bring together.

The point of view which I am struggling to attack is perhaps related to the metaphysical theory of the substantial unity of the soul: for my meaning is, that the poet has, not a "personality" to express, but a particular medium, which is only a medium and not a personality, in which impressions and experiences combine in peculiar and unexpected ways. Impressions and experiences which are important for the man may take no place in the poetry, and those which become important in the poetry may play quite a negligible part in the man, the personality.

I will quote a passage which is unfamiliar enough to be regarded with fresh attention in the light—or darkness—of these observations:

And now methinks I could e'en chide myself
 For doating on her beauty, though her death
 Shall be revenged after no common action.
 Does the silkworm expend her yellow labours
 For thee? For thee does she undo herself?
 Are lordships sold to maintain ladyships
 For the poor benefit of a bewildering minute?
 Why does yon fellow falsify highways,
 And put his life between the judge's lips,
 To refine such a thing—keeps horse and men
 To beat their valours for her? . . .

In this passage (as is evident if it is taken in its context) there is a combination of positive and negative emotions: an intensely strong attraction towards beauty and an equally intense fascination by the ugliness which is contrasted with it and which destroys it. This balance of contrasted emotion is in the dramatic situation to which the speech is

pertinent, but that situation alone is inadequate to it. This is, so to speak, the structural emotion, provided by the drama. But the whole effect, the dominant tone, is due to the fact that a number of floating feelings, having an affinity to this emotion by no means superficially evident, have combined with it to give us a new art emotion.

It is not in his personal emotions, the emotions provoked by particular events in his life, that the poet is in any way remarkable or interesting. His particular emotions may be simple, or crude, or flat. The emotion in his poetry will be a very complex thing, but not with the complexity of the emotions of people who have very complex or unusual emotions in life. One error, in fact, of eccentricity in poetry is to seek for new human emotions to express; and in this search for novelty in the wrong place it discovers the perverse. The business of the poet is not to find new emotions, but to use the ordinary ones and, in working them up into poetry, to express feelings which are not in actual emotions at all. And emotions which he has never experienced will serve his turn as well as those familiar to him. Consequently, we must believe that "emotion recollected in tranquillity" is an inexact formula. For it is neither emotion, nor recollection, nor, without distortion of meaning, tranquillity. It is a concentration, and a new thing resulting from the concentration, of a very great number of experiences which to the practical and active person would not seem to be experiences at all; it is a concentration which does not happen consciously or of deliberation. These experiences are not "recollected," and they finally unite in an atmosphere which is "tranquil" only in that it is a passive attending upon the event. Of course this is not quite the whole story. There is a great deal, in the writing of poetry, which must be conscious and deliberate. In fact, the bad poet is usually unconscious where he ought to be conscious, and conscious where he ought to be unconscious. Both errors tend to make him "personal." Poetry is not a turning loose of emotion, but an escape from emotion; it is not the expression of personality, but an escape from personality. But, of course, only those who have personality and emotions know what it means to want to escape from these things.

[*Ho de nous isos theioteron ti kai apathes estin.*]

[But the mind is in a way more godlike and suffers fewer changes.]

This essay proposes to halt at the frontier of metaphysics or mysticism, and confine itself to such practical conclusions as can be applied by the responsible person interested in poetry. To divert interest from the poet

to the poetry is a laudable aim: for it would conduce to a juster estimation of actual poetry, good and bad. There are many people who appreciate the expression of sincere emotion in verse, and there is a smaller number of people who can appreciate technical excellence. But very few know when there is an expression of *significant* emotion, emotion which has its life in the poem and not in the history of the poet. The emotion of art is impersonal. And the poet cannot reach this impersonality without surrendering himself wholly to the work to be done. And he is not likely to know what is to be done unless he lives in what is not merely the present, but the present moment of the past, unless he is conscious, not of what is dead, but of what is already living.

John Stuart Mill

1806–1873

First son of the Scottish philosopher James Mill, John Stuart Mill ¹ was born in London, May 20, 1806. The elder Mill, prompted by the schemes of Bentham and Helvétius, took his son's education in hand (see below). At three, young Mill was put to learning Greek. By the time he was thirteen, he had done more than enough work to earn a university degree.

After a year in France, where he branched out into chemistry, botany, advanced mathematics, and the French language, he read law and studied Condillac, Helvétius, and Dumont's treatise on Bentham. This led to writing for the newspapers and to the founding of the Utilitarian Society, dedicated to "the greatest good of the greatest number."

When young Mill was seventeen, his father got him a job with the India House, where he himself worked. From 1836, the year his father died, to 1856, J. S. Mill administered the company's relations with the native Indian states. His real career—as philosopher, political economist, logician, ethical theorist, and promoter of ideas—went on outside office hours.

He became the leader of social reform. His name appeared in every review. Wherever social neglect or abuse could be found, Mill attacked at once. His group played a strong hand in the English reform bills all through the century. His energy was prodigious. In one decade, the 1840's, among other books, Mill published his *Principles of Political Economy* and *System of Logic*, both two-volume works.

In 1851 he married Mrs. Harriet Taylor, his friend for twenty

¹John Stuart Mill's *On Liberty*, *Representative Government*, and *Utilitarianism* are in *Great Books of the Western World*.

years. She died some seven years later. *On the Subjection of Women* expressed their common view. Mill retired to a villa near Avignon, France, where she was buried. Except for one term in Parliament, he spent most of his later years there. During that period he wrote the famous *On Liberty*, *Considerations on Representative Government*, and the *Autobiography*, published after his death. He died in Avignon, May 8, 1873.

Our ME,” Carlyle wrote, “the only reality.” His friend Mill would not have agreed with him. Mill’s *Autobiography* is only in small part the story of a man. It stands largely as the history of a “continued mental progress,” of the branching and flowering of ideas, and of what fruit they bore in the world.

The first three chapters of the *Autobiography* are reprinted here. In these chapters Mill looks back on his education. Not his childhood. He had no childhood in the ordinary sense—or at least he tells us of none. Augustine’s *Confessions* is much occupied with his mother; Mill does not even mention his. He had no school, no playmates—or even play. The younger children in the family were his pupils. In the forefront of the book looms the gigantic presence of his father. Young Mill lived solely in his light, as eldest son, pupil, apprentice, and disciple. They worked at the same table, took the same walks together, and discussed the same ideas. But their relationship was moral and intellectual, not affectionate.

By the time he was eight, young Mill had learned arithmetic and read, in the Greek, Aesop’s *Fables*, Herodotus, Xenophon’s *Anabasis*, six dialogues of Plato, and other works. “But my father,” he writes, “in all his teaching, demanded of me not only the utmost that I could do, but much that I could by no possibility have done.” At

Notes from the artist: “An angular portrait of Mill resting above three figures representing his background and his work. At left is his father, James Mill, the sole tutor and teacher of Mill’s youth. At center is Jeremy Bentham, an important source of the doctrine of Utilitarianism. At right is a cartoon reflecting Mill’s interest in suffrage for women, a position he probably took at the behest of his wife, whom he adored. The quotation is from On Liberty.”

John Stuart Mill

We can never be sure that the opinion we are endeavouring to stifle is a false opinion; and if we were sure, stifling it would be an evil still.

the same time he was reading and reporting on dozens of histories: Hume, Gibbon, Plutarch, even the *Annual Register*, a year-by-year chronicle of events, founded by Edmund Burke. Then he took up Latin, Euclid, and algebra, and at twelve began a rigorous term of scholastic logic, plus Aristotle.²

Small wonder, then, that at the age of twenty Mill had a nervous crisis. This was not so much what we should call a breakdown as a breaking away—from the domination of his father, of the intellect itself. He discovered that he liked poetry, the poetry of Wordsworth in particular. The whole life of feeling opened to him. He became what he had never been trained to be: a whole man. His education might well have produced a neurotic, a monster, or a mere “intellectual machine set to grind certain tunes.” Instead, by some miracle of recovered balance, it helped to produce one of the most brilliant men of his generation.

²The writings of many of the authors mentioned above are to be found either in *Great Books of the Western World* or in this set of books.

Childhood and Youth

from *Autobiography*

It seems proper that I should prefix to the following biographical sketch, some mention of the reasons which have made me think it desirable that I should leave behind me such a memorial of so uneventful a life as mine. I do not for a moment imagine that any part of what I have to relate can be interesting to the public as a narrative, or as being connected with myself. But I have thought that in an age in which education and its improvement are the subject of more, if not of profounder, study than at any former period of English history, it may be useful that there should be some record of an education which was unusual and remarkable, and which, whatever else it may have done, has proved how much more than is commonly supposed may be taught, and well taught, in those early years which, in the common modes of what is called instruction, are little better than wasted. It has also seemed to me that in an age of transition in opinions, there may be somewhat both of interest and of benefit in noting the successive phases of any mind which was always pressing forward, equally ready to learn and to unlearn either from its own thoughts or from those of others. But a motive which weighs more with me than either of these, is a desire to make acknowledgment of the debts which my intellectual and moral development owes to other persons; some of them of recognized eminence, others less known than they deserve to be, and the one to whom most of all is due, one whom the world had no opportunity of knowing. The reader whom these things do not interest has only himself to blame if he reads farther, and I do not desire any other indulgence from him than that of bearing in mind, that for him these pages were not written.

I was born in London, on the 20th of May, 1806, and was the eldest son of James Mill, the author of *The History of British India*. My father, the son of a petty tradesman and (I believe) small farmer, at North-

water Bridge, in the county of Angus, was, when a boy, recommended by his abilities to the notice of Sir John Stuart, of Fettercairn, one of the Barons of the Exchequer in Scotland, and was, in consequence, sent to the University of Edinburgh at the expense of a fund established by Lady Jane Stuart (the wife of Sir John Stuart) and some other ladies for educating young men for the Scottish church. He there went through the usual course of study, and was licensed as a preacher, but never followed the profession; having satisfied himself that he could not believe the doctrines of that or any other church. For a few years he was a private tutor in various families in Scotland, among others that of the Marquis of Tweeddale; but ended by taking up his residence in London, and devoting himself to authorship. Nor had he any other means of support until 1819, when he obtained an appointment in the India House.

In this period of my father's life there are two things which it is impossible not to be struck with: one of them unfortunately a very common circumstance, the other a most uncommon one. The first is, that in his position, with no resource but the precarious one of writing in periodicals, he married and had a large family; conduct than which nothing could be more opposed, both as a matter of good sense and of duty, to the opinions which, at least at a later period of life, he strenuously upheld. The other circumstance is the extraordinary energy which was required to lead the life he led, with the disadvantages under which he laboured from the first, and with those which he brought upon himself by his marriage. It would have been no small thing, had he done no more than to support himself and his family during so many years by writing, without ever being in debt, or in any pecuniary difficulty; holding, as he did, opinions, both in politics and in religion, which were more odious to all persons of influence, and to the common run of prosperous Englishmen in that generation than either before or since; and being not only a man whom nothing would have induced to write against his convictions, but one who invariably threw into everything he wrote, as much of his convictions as he thought the circumstances would in any way permit: being, it must also be said, one who never did anything negligently; never undertook any task, literary or other, on which he did not conscientiously bestow all the labour necessary for performing it adequately. But he, with these burdens on him, planned, commenced, and completed the *History of India*; and this in the course of about ten years, a shorter time than has been occupied (even by writers who had no other employment) in the production of almost any other historical work of equal bulk, and of anything approaching to the same amount of reading and research.

And to this is to be added that, during the whole period, a considerable part of almost every day was employed in the instruction of his children: in the case of one of whom, myself, he exerted an amount of labour, care, and perseverance rarely, if ever, employed for a similar purpose, in endeavouring to give, according to his own conception, the highest order of intellectual education.

A man who, in his own practice, so vigorously acted up to the principle of losing no time, was likely to adhere to the same rule in the instruction of his pupil. I have no remembrance of the time when I began to learn Greek. I have been told that it was when I was three years old. My earliest recollection on the subject is that of committing to memory what my father termed vocables, being lists of common Greek words, with their signification in English, which he wrote out for me on cards. Of grammar, until some years later, I learnt no more than the inflections of the nouns and verbs, but, after a course of vocables, proceeded at once to translation; and I faintly remember going through Aesop's *Fables*, the first Greek book which I read. The *Anabasis*, which I remember better, was the second. I learnt no Latin until my eighth year. At that time I had read, under my father's tuition, a number of Greek prose authors, among whom I remember the whole of Herodotus, and of Xenophon's *Cyropaedia* and *Memorials of Socrates*; some of the lives of the philosophers by Diogenes Laertius; part of Lucian, and Isocrates' *ad Demonicum* and *ad Nicoclem*. I also read, in 1813, the first six dialogues (in the common arrangement) of Plato, from the *Euthyphro* to the *Theaetetus* inclusive: which last dialogue, I venture to think, would have been better omitted, as it was totally impossible I should understand it. But my father, in all his teaching, demanded of me not only the utmost that I could do, but much that I could by no possibility have done. What he was himself willing to undergo for the sake of my instruction may be judged from the fact that I went through the whole process of preparing my Greek lessons in the same room and at the same table at which he was writing: and as in those days Greek and English lexicons were not, and I could make no more use of a Greek and Latin lexicon than could be made without having yet begun to learn Latin, I was forced to have recourse to him for the meaning of every word which I did not know. This incessant interruption, he, one of the most impatient of men, submitted to, and wrote under that interruption several volumes of his History and all else that he had to write during those years.

The only thing besides Greek that I learnt as a lesson in this part of my childhood was arithmetic: this also my father taught me: it was the task

of the evenings, and I well remember its disagreeableness. But the lessons were only a part of the daily instruction I received. Much of it consisted in the books I read by myself, and my father's discourses to me, chiefly during our walks. From 1810 to the end of 1813 we were living in Newington Green, then an almost rustic neighbourhood. My father's health required considerable and constant exercise, and he walked habitually before breakfast, generally in the green lanes towards Hornsey. In these walks I always accompanied him, and with my earliest recollections of green fields and wild flowers is mingled that of the account I gave him daily of what I had read the day before. To the best of my remembrance, this was a voluntary rather than a prescribed exercise. I made notes on slips of paper while reading, and from these, in the morning walks, I told the story to him; for the books were chiefly histories, of which I read in this manner a great number: Robertson's histories, Hume, Gibbon; but my greatest delight, then and for long afterwards, was Watson's Philip the Second and Third. The heroic defence of the Knights of Malta against the Turks, and of the revolted provinces of the Netherlands against Spain, excited in me an intense and lasting interest. Next to Watson, my favourite historical reading was Hooke's History of Rome. Of Greece I had seen at that time no regular history, except school abridgments and the last two or three volumes of a translation of Rollin's *Ancient History*, beginning with Philip of Macedon. But I read with great delight Langhorne's translation of Plutarch. In English history, beyond the time at which Hume leaves off, I remember reading Burnet's *History of His Own Time*, though I cared little for anything in it except the wars and battles; and the historical part of the *Annual Register*, from the beginning to about 1788, when the volumes my father borrowed for me from Mr. Bentham left off. I felt a lively interest in Frederic of Prussia during his difficulties, and in Paoli, the Corsican patriot; but when I came to the American war, I took my part, like a child as I was (until set right by my father) on the wrong side, because it was called the English side. In these frequent talks about the books I read, he used, as opportunity offered, to give me explanations and ideas respecting civilization, government, morality, mental cultivation, which he required me afterwards to restate to him in my own words. He also made me read, and give him a verbal account of, many books which would not have interested me sufficiently to induce me to read them of myself: among others, Millar's *Historical View of the English Government*, a book of great merit for its time, and which he highly valued; Mosheim's *Ecclesiastical History*, McCrie's *Life of John Knox*, and even Sewel's and Ruttly's his-

ories of the Quakers. He was fond of putting into my hands books which exhibited men of energy and resource in unusual circumstances, struggling against difficulties and overcoming them: of such works I remember Beaver's *African Memoranda*, and Collins's account of the first settlement of New South Wales. Two books which I never wearied of reading were Anson's *Voyage*, so delightful to most young persons, and a Collection (Hawkesworth's, I believe) of Voyages round the World, in four volumes, beginning with Drake and ending with Cook and Bougainville. Of children's books, any more than of playthings, I had scarcely any, except an occasional gift from a relation or acquaintance: among those I had, *Robinson Crusoe* was pre-eminent, and continued to delight me through all my boyhood. It was no part however of my father's system to exclude books of amusement, though he allowed them very sparingly. Of such books he possessed at that time next to none, but he borrowed several for me; those which I remember are the *Arabian Nights*, Cazotte's *Arabian Tales*, *Don Quixote*, Miss Edgeworth's *Popular Tales*, and a book of some reputation in its day, Brooke's *Fool of Quality*.

In my eighth year I commenced learning Latin, in conjunction with a younger sister, to whom I taught it as I went on, and who afterwards repeated the lessons to my father: and from this time, other sisters and brothers being successively added as pupils, a considerable part of my day's work consisted of this preparatory teaching. It was a part which I greatly disliked; the more so, as I was held responsible for the lessons of my pupils, in almost as full a sense as for my own: I however derived from this discipline the great advantage of learning more thoroughly and retaining more lastingly the things which I was set to teach: perhaps, too, the practice it afforded in explaining difficulties to others may even at that age have been useful. In other respects, the experience of my boyhood is not favourable to the plan of teaching children by means of one another. The teaching, I am sure, is very inefficient as teaching, and I well knew that the relation between teacher and taught is not a good moral discipline to either. I went in this manner through the Latin grammar, and a considerable part of Cornelius Nepos and Caesar's *Commentaries*, but afterwards added to the superintendence of these lessons, much longer ones of my own.

In the same year in which I began Latin, I made my first commencement in the Greek poets with the *Iliad*. After I had made some progress in this, my father put Pope's translation into my hands. It was the first English verse I had cared to read, and it became one of the books in which for many years I most delighted: I think I must have read it from

twenty to thirty times through. I should not have thought it worthwhile to mention a taste apparently so natural to boyhood, if I had not, as I think, observed that the keen enjoyment of this brilliant specimen of narrative and versification is not so universal with boys, as I should have expected both *a priori* and from my individual experience. Soon after this time I commenced Euclid, and somewhat later, algebra, still under my father's tuition.

From my eighth to my twelfth year the Latin books which I remember reading were, the *Bucolics* of Virgil, and the first six books of the *Aeneid*; all Horace except the *Epodes*; the *Fables* of Phaedrus; the first five books of Livy (to which from my love of the subject I voluntarily added, in my hours of leisure, the remainder of the first decade); all Sallust; a considerable part of Ovid's *Metamorphoses*; some plays of Terence; two or three books of Lucretius; several of the Orations of Cicero, and of his writings on oratory; also his letters to Atticus, my father taking the trouble to translate to me from the French the historical explanations in Mongault's notes. In Greek I read the *Iliad* and *Odyssey* through; one or two plays of Sophocles, Euripides, and Aristophanes, though by these I profited little; all Thucydides; the *Hellenics* of Xenophon; a great part of Demosthenes, Aeschines, and Lysias; Theocritus; Anacreon; part of the *Anthology*; a little of Dionysius; several books of Polybius; and lastly Aristotle's *Rhetoric*, which, as the first expressly scientific treatise on any moral or psychological subject which I had read, and containing many of the best observations of the ancients on human nature and life, my father made me study with peculiar care, and throw the matter of it into synoptic tables. During the same years I learnt elementary geometry and algebra thoroughly, the differential calculus and other portions of the higher mathematics far from thoroughly: for my father, not having kept up this part of his early acquired knowledge, could not spare time to qualify himself for removing my difficulties, and left me to deal with them, with little other aid than that of books; while I was continually incurring his displeasure by my inability to solve difficult problems for which he did not see that I had not the necessary previous knowledge.

As to my private reading, I can only speak of what I remember. History continued to be my strongest predilection, and most of all ancient history. Mitford's *Greece* I read continually; my father had put me on my guard against the Tory prejudices of this writer, and his perversions of facts for the whitewashing of despots, and blackening of popular institutions. These points he discoursed on, exemplifying them from the Greek orators and historians, with such effect that in reading Mitford my sym-

pathies were always on the contrary side to those of the author, and I could, to some extent, have argued the point against him: yet this did not diminish the ever new pleasure with which I read the book. Roman history, both in my old favourite, Hooke, and in Ferguson, continued to delight me. A book which, in spite of what is called the dryness of its style, I took great pleasure in, was the *Ancient Universal History*, through the incessant reading of which I had my head full of historical details concerning the obscurest ancient people, while about modern history, except detached passages, such as the Dutch war of independence, I knew and cared comparatively little. A voluntary exercise, to which throughout my boyhood I was much addicted, was what I called writing histories. I successively composed a Roman history, picked out of Hooke; an abridgment of the *Ancient Universal History*; a History of Holland, from my favourite Watson and from an anonymous compilation; and in my eleventh and twelfth year I occupied myself with writing what I flattered myself was something serious. This was no less than a history of the Roman Government, compiled (with the assistance of Hooke) from Livy and Dionysius: of which I wrote as much as would have made an octavo volume, extending to the epoch of the Licinian Laws. It was, in fact, an account of the struggles between the patricians and plebeians, which now engrossed all the interest in my mind which I had previously felt in the mere wars and conquests of the Romans. I discussed all the constitutional points as they arose: though quite ignorant of Niebuhr's researches, I, by such lights as my father had given me, vindicated the Agrarian Laws on the evidence of Livy, and upheld to the best of my ability the Roman democratic party. A few years later, in my contempt of my childish efforts, I destroyed all these papers, not then anticipating that I could ever feel any curiosity about my first attempts at writing and reasoning. My father encouraged me in this useful amusement, though, as I think judiciously, he never asked to see what I wrote; so that I did not feel that in writing it I was accountable to any one, nor had the chilling sensation of being under a critical eye.

But though these exercises in history were never a compulsory lesson, there was another kind of composition which was so, namely, writing verses, and it was one of the most disagreeable of my tasks. Greek and Latin verses I did not write, nor learnt the prosody of those languages. My father, thinking this not worth the time it required, contented himself with making me read aloud to him, and correcting false quantities. I never composed at all in Greek, even in prose, and but little in Latin. Not that my father could be indifferent to the value of this practice, in giving

a thorough knowledge of those languages, but because there really was not time for it. The verses I was required to write were English. When I first read Pope's Homer, I ambitiously attempted to compose something of the same kind, and achieved as much as one book of a continuation of the *Iliad*. There, probably, the spontaneous promptings of my poetical ambition would have stopped; but the exercise, begun from choice, was continued by command. Conformably to my father's usual practice of explaining to me, as far as possible, the reasons for what he required me to do, he gave me, for this, as I well remember, two reasons highly characteristic of him: one was, that some things could be expressed better and more forcibly in verse than in prose: this, he said, was a real advantage. The other was, that people in general attached more value to verse than it deserved, and the power of writing it, was, on this account, worth acquiring. He generally left me to choose my own subjects, which, as far as I remember, were mostly addresses to some mythological personage or allegorical abstractions; but he made me translate into English verse many of Horace's shorter poems: I also remember his giving me Thomson's "Winter" to read, and afterwards making me attempt (without book) to write something myself on the same subject. The verses I wrote were, of course, the merest rubbish, nor did I ever attain any facility of versification, but the practice may have been useful in making it easier for me, at a later period, to acquire readiness of expression.¹ I had read, up to this time, very little English poetry; Shakespeare my father had put into my hands, chiefly for the sake of the historical plays, from which, however, I went on to the others. My father never was a great admirer of Shakespeare, the English idolatry of whom he used to attack with some severity. He cared little for any English poetry except Milton (for whom he had the highest admiration), Goldsmith, Burns, and Gray's "Bard," which he preferred to his *Elegy*: perhaps I may add Cowper and Beattie. He had some value for Spenser, and I remember his reading to me (unlike his usual practice of making me read to him), the first book of the *Fairie Queene*; but I took little pleasure in it. The poetry of the present century he saw scarcely any merit in, and I hardly became acquainted with any of it till I was grown up to manhood, except the metrical romances of Walter Scott, which I read at his recommendation and was intensely delighted with; as I always was with animated narrative. Dry-

1. In a subsequent stage of boyhood, when these exercises had ceased to be compulsory, like most youthful writers I wrote tragedies; under the inspiration not so much of Shakespeare as of Joanna Baillie, whose *Constantine Paleologus* in particular appeared to me one of the most glorious of human compositions. I still think it one of the best dramas of the last two centuries.

den's *Poems* were among my father's books, and many of these he made me read, but I never cared for any of them except "Alexander's Feast," which, as well as many of the songs in Walter Scott, I used to sing internally, to a music of my own: to some of the latter, indeed, I went so far as to compose airs, which I still remember. Cowper's short poems I read with some pleasure, but never got far into the longer ones; and nothing in the two volumes interested me like the prose account of his three hares. In my thirteenth year I met with Campbell's *Poems*, among which "Lochiel," "Hohenlinden," the "Exile of Erin," and some others, gave me sensations I had never before experienced from poetry. Here, too, I made nothing of the longer poems, except the striking opening of *Gertrude of Wyoming*, which long kept its place in my feelings as the perfection of pathos.

During this part of my childhood, one of my greatest amusements was experimental science; in the theoretical, however, not the practical sense of the word; not trying experiments—a kind of discipline which I have often regretted not having had—nor even seeing, but merely reading about them. I never remember being so wrapt up in any book, as I was in Joyce's *Scientific Dialogues*; and I was rather recalcitrant to my father's criticisms of the bad reasoning respecting the first principles of physics, which abounds in the early part of that work. I devoured treatises on chemistry, especially that of my father's early friend and school-fellow, Dr. Thomson, for years before I attended a lecture or saw an experiment.

From about the age of twelve, I entered into another and more advanced stage in my course of instruction; in which the main object was no longer the aids and appliances of thought, but the thoughts themselves. This commenced with logic, in which I began at once with the *Organon*, and read it to the *Analytics* inclusive, but profited little by the *Posterior Analytics*, which belongs to a branch of speculation I was not yet ripe for. Contemporaneously with the *Organon*, my father made me read the whole or parts of several of the Latin treatises on the scholastic logic; giving each day to him, in our walks, a minute account of what I had read, and answering his numerous and searching questions. After this, I went in a similar manner through the *Computatio sive Logica* of Hobbes, a work of a much higher order of thought than the books of the school logicians, and which he estimated very highly; in my own opinion beyond its merits, great as these are. It was his invariable practice, whatever studies he exacted from me, to make me as far as possible understand and feel the utility of them: and this he deemed peculiarly fitting in

the case of the syllogistic logic, the usefulness of which had been impugned by so many writers of authority. I well remember how, and in what particular walk, in the neighbourhood of Bagshot Heath (where we were on a visit to his old friend Mr. Wallace, then one of the mathematical professors at Sandhurst) he first attempted by questions to make me think on the subject, and frame some conception of what constituted the utility of the syllogistic logic, and when I had failed in this, to make me understand it by explanations. The explanations did not make the matter at all clear to me at the time; but they were not therefore useless; they remained as a nucleus for my observations and reflections to crystallize upon; the import of his general remarks being interpreted to me, by the particular instances which came under my notice afterwards. My own consciousness and experience ultimately led me to appreciate quite as highly as he did, the value of an early practical familiarity with the school logic. I know nothing, in my education, to which I think myself more indebted for whatever capacity of thinking I have attained. The first intellectual operation in which I arrived at any proficiency was dissecting a bad argument, and finding in what part the fallacy lay: and though whatever capacity of this sort I attained was due to the fact that it was an intellectual exercise in which I was most perseveringly drilled by my father, yet it is also true that the school logic, and the mental habits acquired in studying it, were among the principal instruments of this drilling. I am persuaded that nothing, in modern education, tends so much, when properly used, to form exact thinkers, who attach a precise meaning to words and propositions, and are not imposed on by vague, loose, or ambiguous terms. The boasted influence of mathematical studies is nothing to it; for in mathematical processes, none of the real difficulties of correct ratiocination occur. It is also a study peculiarly adapted to an early stage in the education of philosophical students, since it does not presuppose the slow process of acquiring, by experience and reflection, valuable thoughts of their own. They may become capable of disentangling the intricacies of confused and self-contradictory thought, before their own thinking faculties are much advanced; a power which, for want of some such discipline, many otherwise able men altogether lack; and when they have to answer opponents, only endeavour, by such arguments as they can command, to support the opposite conclusion, scarcely even attempting to confute the reasonings of their antagonists; and, therefore, at the utmost, leaving the question, as far as it depends on argument, a balanced one.

During this time, the Latin and Greek books which I continued to read

with my father were chiefly such as were worth studying, not for the language merely, but also for the thoughts. This included much of the orators, and especially Demosthenes, some of whose principal orations I read several times over, and wrote out, by way of exercise, a full analysis of them. My father's comments on these orations when I read them to him were very instructive to me. He not only drew my attention to the insight they afforded into Athenian institutions, and the principles of legislation and government which they often illustrated, but pointed out the skill and art of the orator—how everything important to his purpose was said at the exact moment when he had brought the minds of his audience into the state most fitted to receive it; how he made steal into their minds, gradually and by insinuation, thoughts which if expressed in a more direct manner would have aroused their opposition. Most of these reflections were beyond my capacity of full comprehension at the time; but they left seed behind, which germinated in due season. At this time I also read the whole of Tacitus, Juvenal, and Quintilian. The latter, owing to his obscure style and to the scholastic details of which many parts of his treatise are made up, is little read, and seldom sufficiently appreciated. His book is a kind of encyclopaedia of the thoughts of the ancients on the whole field of education and culture; and I have retained through life many valuable ideas which I can distinctly trace to my reading of him, even at that early age. It was at this period that I read, for the first time, some of the most important dialogues of Plato, in particular the *Gorgias*, the *Protagoras*, and the *Republic*. There is no author to whom my father thought himself more indebted for his own mental culture, than Plato, or whom he more frequently recommended to young students. I can bear similar testimony in regard to myself. The Socratic method, of which the Platonic dialogues are the chief example, is unsurpassed as a discipline for correcting the errors, and clearing up the confusions incident to the *intellectus sibi permissus*, the understanding which has made up all its bundles of associations under the guidance of popular phraseology. The close, searching *elenchus* by which the man of vague generalities is constrained either to express his meaning to himself in definite terms, or to confess that he does not know what he is talking about; the perpetual testing of all general statements by particular instances; the siege in form which is laid to the meaning of large abstract terms, by fixing upon some still larger class-name which includes that and more, and dividing down to the thing sought—marking out its limits and definition by a series of accurately drawn distinctions between it and each of the cognate objects which are successively parted off from it—all

this, as an education for precise thinking, is inestimable, and all this, even at that age, took such hold of me that it became part of my own mind. I have felt ever since that the title of Platonist belongs by far better right to those who have been nourished in, and have endeavoured to practise Plato's mode of investigation, than to those who are distinguished only by the adoption of certain dogmatical conclusions, drawn mostly from the least intelligible of his works, and which the character of his mind and writings makes it uncertain whether he himself regarded as anything more than poetic fancies, or philosophic conjectures.

In going through Plato and Demosthenes, since I could now read these authors, as far as the language was concerned, with perfect ease, I was not required to construe them sentence by sentence, but to read them aloud to my father, answering questions when asked: but the particular attention which he paid to elocution (in which his own excellence was remarkable) made this reading aloud to him a most painful task. Of all things which he required me to do, there was none which I did so constantly ill, or in which he so perpetually lost his temper with me. He had thought much on the principles of the art of reading, especially the most neglected part of it, the inflections of the voice, or *modulation* as writers on elocution call it (in contrast with *articulation* on the one side, and *expression* on the other), and had reduced it to rules, grounded on the logical analysis of a sentence. These rules he strongly impressed upon me, and took me severely to task for every violation of them: but I even then remarked (though I did not venture to make the remark to him) that though he reproached me when I read a sentence ill, and *told* me how I ought to have read it, he never, by reading it himself, *showed* me how it ought to be read. A defect running through his otherwise admirable modes of instruction, as it did through all his modes of thought, was that of trusting too much to the intelligibility of the abstract, when not embodied in the concrete. It was at a much later period of my youth, when practising elocution by myself, or with companions of my own age, that I for the first time understood the object of his rules, and saw the psychological grounds of them. At that time I and others followed out the subject into its ramifications and could have composed a very useful treatise, grounded on my father's principles. He himself left those principles and rules unwritten. I regret that when my mind was full of the subject, from systematic practice, I did not put them, and our improvements of them, into a formal shape.

A book which contributed largely to my education, in the best sense of the term, was my father's *History of India*. It was published in the be-

ginning of 1818. During the year previous, while it was passing through the press, I used to read the proof sheets to him; or rather, I read the manuscript to him while he corrected the proofs. The number of new ideas which I received from this remarkable book, and the impulse and stimulus as well as guidance given to my thoughts by its criticisms and disquisitions on society and civilization in the Hindu part, on institutions and the acts of governments in the English part, made my early familiarity with it eminently useful to my subsequent progress. And though I can perceive deficiencies in it now as compared with a perfect standard, I still think it, if not the most, one of the most instructive histories ever written, and one of the books from which most benefit may be derived by a mind in the course of making up its opinions.

The Preface, among the most characteristic of my father's writings, as well as the richest in materials of thought, gives a picture which may be entirely depended on, of the sentiments and expectations with which he wrote the History. Saturated as the book is with the opinions and modes of judgment of a democratic radicalism then regarded as extreme; and treating with a severity, at that time most unusual, the English Constitution, the English law, and all parties and classes who possessed any considerable influence in the country; he may have expected reputation, but certainly not advancement in life, from its publication; nor could he have supposed that it would raise up anything but enemies for him in powerful quarters: least of all could he have expected favour from the East India Company, to whose commercial privileges he was unqualifiedly hostile, and on the acts of whose government he had made so many severe comments: though, in various parts of his book, he bore a testimony in their favour, which he felt to be their just due, namely, that no government had on the whole given so much proof, to the extent of its lights, of good intention towards its subjects; and that if the acts of any other government had the light of publicity as completely let in upon them, they would, in all probability, still less bear scrutiny.

On learning, however, in the spring of 1819, about a year after the publication of the History, that the East India Directors desired to strengthen the part of their home establishment which was employed in carrying on the correspondence with India, my father declared himself a candidate for that employment, and, to the credit of the Directors, successfully. He was appointed one of the assistants of the Examiner of India Correspondence; officers whose duty it was to prepare drafts of despatches to India, for consideration by the Directors, in the principal departments of administration. In this office, and in that of Examiner,

which he subsequently attained, the influence which his talents, his reputation, and his decision of character gave him, with superiors who really desired the good government of India, enabled him to a great extent to throw into his drafts of despatches, and to carry through the ordeal of the Court of Directors and Board of Control, without having their force much weakened, his real opinions on Indian subjects. In his History he had set forth, for the first time, many of the true principles of Indian administration: and his despatches, following his History, did more than had ever been done before to promote the improvement of India, and teach Indian officials to understand their business. If a selection of them were published, they would, I am convinced, place his character as a practical statesman fully on a level with his eminence as a speculative writer.

This new employment of his time caused no relaxation in his attention to my education. It was in this same year, 1819, that he took me through a complete course of political economy. His loved and intimate friend, Ricardo, had shortly before published the book which formed so great an epoch in political economy; a book which never would have been published or written, but for the entreaty and strong encouragement of my father; for Ricardo, the most modest of men, though firmly convinced of the truth of his doctrines, deemed himself so little capable of doing them justice in exposition and expression, that he shrank from the idea of publicity. The same friendly encouragement induced Ricardo, a year or two later, to become a member of the House of Commons; where, during the few remaining years of his life, unhappily cut short in the full vigour of his intellect, he rendered so much service to his and my father's opinions both on political economy and on other subjects.

Though Ricardo's great work was already in print, no didactic treatise embodying its doctrines, in a manner fit for learners, had yet appeared. My father, therefore, commenced instructing me in the science by a sort of lectures, which he delivered to me in our walks. He expounded each day a portion of the subject, and I gave him next day a written account of it, which he made me rewrite over and over again until it was clear, precise, and tolerably complete. In this manner I went through the whole extent of the science; and the written outline of it which resulted from my daily *compte rendu*, served him afterwards as notes from which to write his *Elements of Political Economy*. After this I read Ricardo, giving an account daily of what I read, and discussing, in the best manner I could, the collateral points which offered themselves in our progress.

On Money, as the most intricate part of the subject, he made me read

in the same manner Ricardo's admirable pamphlets, written during what was called the Bullion controversy; to these succeeded Adam Smith; and in this reading it was one of my father's main objects to make me apply to Smith's more superficial view of political economy, the superior lights of Ricardo, and detect what was fallacious in Smith's arguments, or erroneous in any of his conclusions. Such a mode of instruction was excellently calculated to form a thinker; but it required to be worked by a thinker as close and vigorous as my father. The path was a thorny one, even to him, and I am sure it was so to me, notwithstanding the strong interest I took in the subject. He was often, and much beyond reason, provoked by my failures in cases where success could not have been expected; but in the main his method was right, and it succeeded. I do not believe that any scientific teaching ever was more thorough, or better fitted for training the faculties, than the mode in which logic and political economy were taught to me by my father. Striving, even in an exaggerated degree, to call forth the activity of my faculties, by making me find out everything for myself, he gave his explanations not before, but after, I had felt the full force of the difficulties; and not only gave me an accurate knowledge of these two great subjects, as far as they were then understood, but made me a thinker on both. I thought for myself almost from the first, and occasionally thought differently from him, though for a long time only on minor points, and making his opinion the ultimate standard. At a later period I even occasionally convinced him, and altered his opinion on some points of detail: which I state to his honour, not my own. It at once exemplifies his perfect candour, and the real worth of his method of teaching.

At this point concluded what can properly be called my lessons: when I was about fourteen I left England for more than a year; and after my return, though my studies went on under my father's general direction, he was no longer my schoolmaster. I shall therefore pause here, and turn back to matters of a more general nature connected with the part of my life and education included in the preceding reminiscences.

In the course of instruction which I have partially retraced, the point most superficially apparent is the great effort to give during the years of childhood an amount of knowledge in what are considered the higher branches of education, which is seldom acquired (if acquired at all) until the age of manhood. The result of the experiment shows the ease with which this may be done, and places in a strong light the wretched waste of so many precious years as are spent in acquiring the modicum of Latin and Greek commonly taught to schoolboys; a waste, which has led so

many educational reformers to entertain the ill-judged proposal of discarding these languages altogether from general education. If I had been by nature extremely quick of apprehension, or had possessed a very accurate and retentive memory, or were of a remarkably active and energetic character, the trial would not be conclusive; but in all these natural gifts I am rather below than above par; what I could do, could assuredly be done by any boy or girl of average capacity and healthy physical constitution: and if I have accomplished anything, I owe it, among other fortunate circumstances, to the fact that through the early training bestowed on me by my father, I started, I may fairly say, with an advantage of a quarter of a century over my contemporaries.

There was one cardinal point in this training, of which I have already given some indication, and which, more than anything else, was the cause of whatever good it effected. Most boys or youths who have had much knowledge drilled into them, have their mental capacities not strengthened, but overlaid by it. They are crammed with mere facts, and with the opinions or phrases of other people, and these are accepted as a substitute for the power to form opinions of their own: and thus the sons of eminent fathers, who have spared no pains in their education, so often grow up mere parroters of what they have learnt, incapable of using their minds except in the furrows traced for them. Mine, however, was not an education of cram. My father never permitted anything which I learnt to degenerate into a mere exercise of memory. He strove to make the understanding not only go along with every step of the teaching, but, if possible, precede it. Anything which could be found out by thinking I never was told, until I had exhausted my efforts to find it out for myself. As far as I can trust my remembrance, I acquitted myself very lamely in this department; my recollection of such matters is almost wholly of failures, hardly ever of success. It is true the failures were often in things in which success in so early a stage of my progress was almost impossible. I remember at some time in my thirteenth year, on my happening to use the word *idea*, he asked me what an *idea* was; and expressed some displeasure at my ineffectual efforts to define the word: I recollect also his indignation at my using the common expression that something was true in theory but required correction in practice; and how, after making me vainly strive to define the word *theory*, he explained its meaning, and showed the fallacy of the vulgar form of speech which I had used; leaving me fully persuaded that in being unable to give a correct definition of *Theory*, and in speaking of it as something which might be at variance with practice, I had shown unparalleled ignorance. In this he seems, and

perhaps was, very unreasonable; but I think, only in being angry at my failure. A pupil from whom nothing is ever demanded which he cannot do, never does all he can.

One of the evils most liable to attend on any sort of early proficiency, and which often fatally blights its promise, my father most anxiously guarded against. This was self-conceit. He kept me, with extreme vigilance, out of the way of hearing myself praised, or of being led to make self-flattering comparisons between myself and others. From his own intercourse with me I could derive none but a very humble opinion of myself; and the standard of comparison he always held up to me was not what other people did, but what a man could and ought to do. He completely succeeded in preserving me from the sort of influences he so much dreaded. I was not at all aware that my attainments were anything unusual at my age. If I accidentally had my attention drawn to the fact that some other boy knew less than myself—which happened less often than might be imagined—I concluded, not that I knew much, but that he, for some reason or other, knew little, or that his knowledge was of a different kind from mine. My state of mind was not humility, but neither was it arrogance. I never thought of saying to myself, I am, or I can do, so and so. I neither estimated myself highly nor lowly: I did not estimate myself at all. If I thought anything about myself, it was that I was rather backward in my studies, since I always found myself so, in comparison with what my father expected from me. I assert this with confidence, though it was not the impression of various persons who saw me in my childhood. They, as I have since found, thought me greatly and disagreeably self-conceited; probably because I was disputatious, and did not scruple to give direct contradictions to things which I heard said. I suppose I acquired this bad habit from having been encouraged in an unusual degree to talk on matters beyond my age, and with grown persons, while I never had inculcated in me the usual respect for them. My father did not correct this ill-breeding and impertinence, probably from not being aware of it, for I was always too much in awe of him to be otherwise than extremely subdued and quiet in his presence. Yet with all this I had no notion of any superiority in myself; and well was it for me that I had not. I remember the very place in Hyde Park where, in my fourteenth year, on the eve of leaving my father's house for a long absence, he told me that I should find, as I got acquainted with new people, that I had been taught many things which youths of my age did not commonly know; and that many persons would be disposed to talk to me of this, and to compliment me upon it. What other things he said on this topic I remember very imper-

fectly; but he wound up by saying that whatever I knew more than others could not be ascribed to any merit in me, but to the very unusual advantage which had fallen to my lot, of having a father who was able to teach me, and willing to give the necessary trouble and time; that it was no matter of praise to me, if I knew more than those who had not had a similar advantage, but the deepest disgrace to me if I did not. I have a distinct remembrance that the suggestion thus for the first time made to me, that I knew more than other youths who were considered well educated, was to me a piece of information, to which, as to all other things which my father told me, I gave implicit credence, but which did not at all impress me as a personal matter. I felt no disposition to glorify myself upon the circumstance that there were other persons who did not know what I knew; nor had I ever flattered myself that my acquirements, whatever they might be, were any merit of mine: but, now when my attention was called to the subject, I felt that what my father had said respecting my peculiar advantages was exactly the truth and common sense of the matter, and it fixed my opinion and feeling from that time forward.

It is evident that this, among many other of the purposes of my father's scheme of education, could not have been accomplished if he had not carefully kept me from having any great amount of intercourse with other boys. He was earnestly bent upon my escaping not only the ordinary corrupting influence which boys exercise over boys, but the contagion of vulgar modes of thought and feeling; and for this he was willing that I should pay the price of inferiority in the accomplishments which school-boys in all countries chiefly cultivate. The deficiencies in my education were principally in the things which boys learn from being turned out to shift for themselves, and from being brought together in large numbers. From temperance and much walking, I grew up healthy and hardy, though not muscular; but I could do no feats of skill or physical strength, and knew none of the ordinary bodily exercises. It was not that play, or time for it, was refused me. Though no holidays were allowed, lest the habit of work should be broken, and a taste for idleness acquired, I had ample leisure in every day to amuse myself; but as I had no boy companions, and the animal need of physical activity was satisfied by walking, my amusements, which were mostly solitary, were in general of a quiet, if not a bookish turn, and gave little stimulus to any other kind even of mental activity than that which was already called forth by my studies: I consequently remained long, and in a less degree have always remained, inexperienced in anything requiring manual dexterity; my mind as well as my hands did its work very lamely when it was applied, or ought to have

been applied, to the practical details which, as they are the chief interest of life to the majority of men, are also the things in which whatever mental capacity they have chiefly shows itself: I was constantly meriting reproof by inattention, inobservance, and general slackness of mind in matters of daily life. My father was the extreme opposite in these particulars: his senses and mental faculties were always on the alert; he carried decision and energy of character in his whole manner and into every action of life: and this, as much as his talents, contributed to the strong impression which he always made upon those with whom he came into personal contact. But the children of energetic parents frequently grow up unenergetic, because they lean on their parents, and the parents are energetic for them. The education which my father gave me was in itself much more fitted for training me to *know* than to *do*. Not that he was unaware of my deficiencies; both as a boy and as a youth I was incessantly smarting under his severe admonitions on the subject. There was anything but insensibility or tolerance on his part towards such shortcomings: but, while he saved me from the demoralizing effects of school life, he made no effort to provide me with any sufficient substitute for its practicalizing influences. Whatever qualities he himself, probably, had acquired without difficulty or special training, he seems to have supposed that I ought to acquire as easily. He had not, I think, bestowed the same amount of thought and attention on this, as on most other branches of education; and here, as well as in some other points of my tuition, he seems to have expected effects without causes.

MORAL INFLUENCES IN EARLY YOUTH. MY
FATHER'S CHARACTER AND OPINIONS

In my education, as in that of everyone, the moral influences, which are so much more important than all others, are also the most complicated, and the most difficult to specify with any approach to completeness. Without attempting the hopeless task of detailing the circumstances by which, in this respect, my early character may have been shaped, I shall confine myself to a few leading points, which form an indispensable part of any true account of my education.

I was brought up from the first without any religious belief, in the ordinary acceptation of the term. My father, educated in the creed of Scotch presbyterianism, had by his own studies and reflections been early led to reject not only the belief in revelation, but the foundations of what is commonly called Natural Religion. I have heard him say that the turning-

point of his mind on the subject was reading Butler's *Analogy*. That work, of which he always continued to speak with respect, kept him, as he said, for some considerable time, a believer in the divine authority of Christianity; by proving to him, that whatever are the difficulties in believing that the Old and New Testaments proceed from, or record the acts of, a perfectly wise and good being, the same and still greater difficulties stand in the way of the belief, that a being of such a character can have been the Maker of the universe. He considered Butler's argument as conclusive against the only opponents for whom it was intended. Those who admit an omnipotent as well as perfectly just and benevolent maker and ruler of such a world as this can say little against Christianity but what can, with at least equal force, be retorted against themselves. Finding, therefore, no halting place in Deism, he remained in a state of perplexity, until, doubtless after many struggles, he yielded to the conviction that concerning the origin of things nothing whatever can be known. This is the only correct statement of his opinion; for dogmatic atheism he looked upon as absurd; as most of those whom the world has considered atheists have always done. These particulars are important, because they show that my father's rejection of all that is called religious belief was not, as many might suppose, primarily a matter of logic and evidence: the grounds of it were moral, still more than intellectual. He found it impossible to believe that a world so full of evil was the work of an Author combining infinite power with perfect goodness and righteousness. His intellect spurned the subtleties by which men attempt to blind themselves to this open contradiction. The Sabaeen, or Manichean theory of a Good and Evil Principle, struggling against each other for the government of the universe, he would not have equally condemned; and I have heard him express surprise, that no one revived it in our time. He would have regarded it as a mere hypothesis; but he would have ascribed to it no depraving influence. As it was, his aversion to religion, in the sense usually attached to the term, was of the same kind with that of Lucretius: he regarded it with the feelings due not to a mere mental delusion, but to a great moral evil. He looked upon it as the greatest enemy of morality: first, by setting up factitious excellencies—belief in creeds, devotional feelings, and ceremonies not connected with the good of human kind—and causing these to be accepted as substitutes for genuine virtues: but above all, by radically vitiating the standard of morals; making it consist in doing the will of a being, on whom it lavishes indeed all the phrases of adulation, but whom in sober truth it depicts as eminently hateful. I have a hundred times heard him say, that all ages and nations have represented their gods as

wicked, in a constantly increasing progression, that mankind have gone on adding trait after trait till they reached the most perfect conception of wickedness which the human mind can devise, and have called this God, and prostrated themselves before it. This *ne plus ultra* of wickedness he considered to be embodied in what is commonly presented to mankind as the creed of Christianity. Think (he used to say) of a being who would make a Hell—who would create the human race with the infallible foreknowledge, and therefore with the intention, that the great majority of them were to be consigned to horrible and everlasting torment. The time, I believe, is drawing near when this dreadful conception of an object of worship will be no longer identified with Christianity; and when all persons with any sense of moral good and evil will look upon it with the same indignation with which my father regarded it. My father was as well aware as anyone that Christians do not, in general, undergo the demoralizing consequences which seem inherent in such a creed, in the manner or to the extent which might have been expected from it. The same slovenliness of thought, and subjection of the reason to fears, wishes, and affections which enable them to accept a theory involving a contradiction in terms, prevents them from perceiving the logical consequences of the theory. Such is the facility with which mankind believe at one and the same time things inconsistent with one another, and so few are those who draw from what they receive as truths, any consequences but those recommended to them by their feelings, that multitudes have held the undoubting belief in an Omnipotent Author of Hell, and have nevertheless identified that being with the best conception they were able to form of perfect goodness. Their worship was not paid to the demon which such a being as they imagined would really be, but to their own idea of excellence. The evil is, that such a belief keeps the ideal wretchedly low; and opposes the most obstinate resistance to all thought which has a tendency to raise it higher. Believers shrink from every train of ideas which would lead the mind to a clear conception and an elevated standard of excellence, because they feel (even when they do not distinctly see) that such a standard would conflict with many of the dispensations of nature, and with much of what they are accustomed to consider as the Christian creed. And thus morality continues a matter of blind tradition, with no consistent principle, nor even any consistent feeling, to guide it.

It would have been wholly inconsistent with my father's ideas of duty to allow me to acquire impressions contrary to his convictions and feelings respecting religion: and he impressed upon me from the first that the manner in which the world came into existence was a subject on which

nothing was known: that the question, "Who made me?" cannot be answered, because we have no experience or authentic information from which to answer it; and that any answer only throws the difficulty a step further back, since the question immediately presents itself, Who made God? He, at the same time, took care that I should be acquainted with what had been thought by mankind on these impenetrable problems. I have mentioned at how early an age he made me a reader of ecclesiastical history; and he taught me to take the strongest interest in the Reformation, as the great and decisive contest against priestly tyranny for liberty of thought.

I am thus one of the very few examples, in this country, of one who has not thrown off religious belief but never had it: I grew up in a negative state with regard to it. I looked upon the modern exactly as I did upon the ancient religion, as something which in no way concerned me. It did not seem to me more strange that English people should believe what I did not, than that the men I read of in Herodotus should have done so. History had made the variety of opinions among mankind a fact familiar to me, and this was but a prolongation of that fact. This point in my early education had, however, incidentally one bad consequence deserving notice. In giving me an opinion contrary to that of the world, my father thought it necessary to give it as one which could not prudently be avowed to the world. This lesson of keeping my thoughts to myself, at that early age, was attended with some moral disadvantages; though my limited intercourse with strangers, especially such as were likely to speak to me on religion, prevented me from being placed in the alternative of avowal or hypocrisy. I remember two occasions in my boyhood, on which I felt myself in this alternative, and in both cases I avowed my disbelief and defended it. My opponents were boys, considerably older than myself: one of them I certainly staggered at the time, but the subject was never renewed between us: the other who was surprised, and somewhat shocked, did his best to convince me for some time, without effect.

The great advance in liberty of discussion, which is one of the most important differences between the present time and that of my childhood, has greatly altered the moralities of this question; and I think that few men of my father's intellect and public spirit, holding with such intensity of moral conviction as he did, unpopular opinions on religion, or on any other of the great subjects of thought, would now either practise or inculcate the withholding of them from the world, unless in the cases, becoming fewer every day, in which frankness on these subjects would either risk the loss of means of subsistence, or would amount to exclusion from

some sphere of usefulness peculiarly suitable to the capacities of the individual. On religion in particular the time appears to me to have come when it is the duty of all who being qualified in point of knowledge, have on mature consideration satisfied themselves that the current opinions are not only false but hurtful, to make their dissent known; at least, if they are among those whose station or reputation, gives their opinion a chance of being attended to. Such an avowal would put an end, at once and for ever, to the vulgar prejudice that what is called, very improperly, unbelief is connected with any bad qualities either of mind or heart. The world would be astonished if it knew how great a proportion of its brightest ornaments—of those most distinguished even in popular estimation for wisdom and virtue—are complete sceptics in religion; many of them refraining from avowal, less from personal considerations, than from a conscientious, though now in my opinion a most mistaken apprehension, lest by speaking out what would tend to weaken existing beliefs, and by consequence (as they suppose) existing restraints, they should do harm instead of good.

Of unbelievers (so called) as well as of believers, there are many species, including almost every variety of moral type. But the best among them, as no one who has had opportunities of really knowing them will hesitate to affirm (believers rarely have that opportunity), are more genuinely religious, in the best sense of the word religion, than those who exclusively arrogate to themselves the title. The liberality of the age, or in other words the weakening of the obstinate prejudice which makes men unable to see what is before their eyes because it is contrary to their expectations, has caused it to be very commonly admitted that a Deist may be truly religious: but if religion stands for any graces of character and not for mere dogma, the assertion may equally be made of many whose belief is far short of Deism. Though they may think the proof incomplete that the universe is a work of design, and though they assuredly disbelieve that it can have an Author and Governor who is absolute in power as well as perfect in goodness, they have that which constitutes the principal worth of all religions whatever, an ideal conception of a Perfect Being, to which they habitually refer as the guide of their conscience; and this ideal of Good is usually far nearer to perfection than the objective Deity of those who think themselves obliged to find absolute goodness in the author of a world so crowded with suffering and so deformed by injustice as ours.

My father's moral convictions, wholly dissevered from religion, were very much of the character of those of the Greek philosophers; and were

delivered with the force and decision which characterized all that came from him. Even at the very early age at which I read with him the *Memorabilia* of Xenophon, I imbibed from that work and from his comments a deep respect for the character of Socrates, who stood in my mind as a model of ideal excellence: and I well remember how my father at that time impressed upon me the lesson of the "Choice of Hercules." At a somewhat later period the lofty moral standard exhibited in the writings of Plato operated upon me with great force. My father's moral inculcations were at all times mainly those of the *Socratici viri*; justice, temperance (to which he gave a very extended application), veracity, perseverance, readiness to encounter pain and especially labour; regard for the public good; estimation of persons according to their merits, and of things according to their intrinsic usefulness; a life of exertion in contradiction to one of self-indulgent sloth. These and other moralities he conveyed in brief sentences, uttered as occasion arose, of grave exhortation, or stern reprobation and contempt.

But though direct moral teaching does much, indirect does more; and the effect my father produced on my character did not depend solely on what he said or did with that direct object, but also, and still more, on what manner of man he was.

In his views of life he partook of the character of the Stoic, the Epicurean, and the Cynic, not in the modern but the ancient sense of the word. In his personal qualities the Stoic predominated. His standard of morals was Epicurean, inasmuch as it was utilitarian, taking as the exclusive test of right and wrong, the tendency of actions to produce pleasure or pain. But he had (and this was the Cynic element) scarcely any belief in pleasure; at least in his later years, of which alone, on this point, I can speak confidently. He was not insensible to pleasures; but he deemed very few of them worth the price which, at least in the present state of society, must be paid for them. The greater number of miscarriages in life, he considered to be attributable to the overvaluing of pleasures. Accordingly, temperance, in the large sense intended by the Greek philosophers—stopping short at the point of moderation in all indulgences—was with him, as with them, almost the central point of educational precept. His inculcations of this virtue fill a large place in my childish remembrances. He thought human life a poor thing at best, after the freshness of youth and of unsatisfied curiosity had gone by. This was a topic on which he did not often speak, especially, it may be supposed, in the presence of young persons: but when he did, it was with an air of settled and profound conviction. He would sometimes say that if life were made what it might be, by

good government and good education, it would be worth having; but he never spoke with anything like enthusiasm even of that possibility. He never varied in rating intellectual enjoyments above all others, even in value as pleasures, independently of their ulterior benefits. The pleasures of the benevolent affections he placed high in the scale; and used to say that he had never known a happy old man, except those who were able to live over again in the pleasures of the young. For passionate emotions of all sorts, and for everything which has been said or written in exaltation of them, he professed the greatest contempt. He regarded them as a form of madness. "The intense" was with him a by-word of scornful disapprobation. He regarded as an aberration of the moral standard of modern times, compared with that of the ancients, the great stress laid upon feeling. Feelings, as such, he considered to be no proper subjects of praise or blame. Right and wrong, good and bad, he regarded as qualities solely of conduct—of acts and omissions; there being no feeling which may not lead, and does not frequently lead, either to good or to bad actions: conscience itself, the very desire to act right, often leading people to act wrong. Consistently carrying out the doctrine that the object of praise and blame should be the discouragement of wrong conduct and the encouragement of right, he refused to let his praise or blame be influenced by the motive of the agent. He blamed as severely what he thought a bad action, when the motive was a feeling of duty, as if the agents had been consciously evil-doers. He would not have accepted as a plea in mitigation for inquisitors, that they sincerely believed burning heretics to be an obligation of conscience. But though he did not allow honesty of purpose to soften his disapprobation of actions, it had its full effect on his estimation of characters. No one prized conscientiousness and rectitude of intention more highly, or was more incapable of valuing any person in whom he did not feel assurance of it. But he disliked people quite as much for any other deficiency, provided he thought it equally likely to make them act ill. He disliked, for instance, a fanatic in any bad cause, as much or more than one who adopted the same cause from self-interest, because he thought him even more likely to be practically mischievous. And thus, his aversion to many intellectual errors, or what he regarded as such, partook, in a certain sense, of the character of a moral feeling. All this is merely saying that he, in a degree once common, but now very unusual, threw his feelings into his opinions; which truly it is difficult to understand how any one who possesses much of both can fail to do. None but those who do not care about opinions will confound it with intolerance. Those who, having opinions which they hold to be immensely im-

portant, and their contraries to be prodigiously hurtful, have any deep regard for the general good, will necessarily dislike, as a class and in the abstract, those who think wrong what they think right, and right what they think wrong: though they need not therefore be, nor was my father, insensible to good qualities in an opponent, nor governed in their estimation of individuals by one general presumption, instead of by the whole of their character. I grant that an earnest person, being no more infallible than other men, is liable to dislike people on account of opinions which do not merit dislike; but if he neither himself does them any ill office, nor connives at its being done by others, he is not intolerant: and the forbearance which flows from a conscientious sense of the importance to mankind of the equal freedom of all opinions is the only tolerance which is commendable, or, to the highest moral order of minds, possible.

It will be admitted that a man of the opinions and the character above described was likely to leave a strong moral impression on any mind principally formed by him, and that his moral teaching was not likely to err on the side of laxity or indulgence. The element which was chiefly deficient in his moral relation to his children was that of tenderness. I do not believe that this deficiency lay in his own nature. I believe him to have had much more feeling than he habitually showed, and much greater capacities of feeling than were ever developed. He resembled most Englishmen in being ashamed of the signs of feeling, and by the absence of demonstration starving the feelings themselves. If we consider further that he was in the trying position of sole teacher, and add to this that his temper was constitutionally irritable, it is impossible not to feel true pity for a father who did, and strove to do, so much for his children, who would have so valued their affection, yet who must have been constantly feeling that fear of him was drying it up at its source. This was no longer the case later in life, and with his younger children. They loved him tenderly: and if I cannot say so much of myself, I was always loyally devoted to him. As regards my own education, I hesitate to pronounce whether I was more a loser or gainer by his severity. It was not such as to prevent me from having a happy childhood. And I do not believe that boys can be induced to apply themselves with vigour, and what is so much more difficult, perseverance, to dry and irksome studies, by the sole force of persuasion and soft words. Much must be done, and much must be learnt, by children, for which rigid discipline and known liability to punishment are indispensable as means. It is, no doubt, a very laudable effort, in modern teaching, to render as much as possible of what the young are required to learn easy and interesting to them. But when this principle is pushed to

the length of not requiring them to learn anything *but* what has been made easy and interesting, one of the chief objects of education is sacrificed. I rejoice in the decline of the old brutal and tyrannical system of teaching, which, however, did succeed in enforcing habits of application; but the new, as it seems to me, is training up a race of men who will be incapable of doing anything which is disagreeable to them. I do not, then, believe that fear, as an element in education, can be dispensed with; but I am sure that it ought not to be the main element; and when it predominates so much as to preclude love and confidence on the part of the child to those who should be the unreservedly trusted advisers of after-years, and perhaps to seal up the fountains of frank and spontaneous communicativeness in the child's nature, it is an evil for which a large abatement must be made from the benefits, moral and intellectual, which may flow from any other part of the education.

During this first period of my life, the habitual frequenters of my father's house were limited to a very few persons, most of them little known to the world, but whom personal worth, and more or less of congeniality with at least his political opinions (not so frequently to be met with then as since) inclined him to cultivate; and his conversations with them I listened to with interest and instruction. My being an habitual inmate of my father's study made me acquainted with the dearest of his friends, David Ricardo, who by his benevolent countenance, and kindness of manner, was very attractive to young persons, and who, after I became a student of political economy, invited me to his house and to walk with him in order to converse on the subject. I was a more frequent visitor (from about 1817 or 1818) to Mr. Hume, who, born in the same part of Scotland as my father, and having been, I rather think, a younger schoolfellow or college companion of his, had on returning from India renewed their youthful acquaintance, and who coming like many others greatly under the influence of my father's intellect and energy of character, was induced partly by that influence to go into Parliament, and there adopt the line of conduct which has given him an honourable place in the history of his country. Of Mr. Bentham I saw much more, owing to the close intimacy which existed between him and my father. I do not know how soon after my father's first arrival in England they became acquainted. But my father was the earliest Englishman of any great mark who thoroughly understood, and in the main adopted, Bentham's general views of ethics, government and law: and this was a natural foundation for sympathy between them, and made them familiar companions in a period of Bentham's life during which he admitted much fewer visitors than was the case subsequently.

At this time Mr. Bentham passed some part of every year at Barrow Green House, in a beautiful part of the Surrey hills, a few miles from Godstone, and there I each summer accompanied my father in a long visit. In 1813, Mr. Bentham, my father, and I made an excursion, which included Oxford, Bath and Bristol, Exeter, Plymouth, and Portsmouth. In this journey I saw many things which were instructive to me, and acquired my first taste for natural scenery, in the elementary form of fondness for a "view." In the succeeding winter we moved into a house very near Mr. Bentham's, which my father rented from him, in Queen Square, Westminster. From 1814 to 1817 Mr. Bentham lived during half of each year at Ford Abbey, in Somersetshire (or rather in a part of Devonshire surrounded by Somersetshire), which intervals I had the advantage of passing at that place. This sojourn was, I think, an important circumstance in my education. Nothing contributes more to nourish elevation of sentiments in a people than the large and free character of their habitations. The middle-age architecture, the baronial hall, and the spacious and lofty rooms of this fine old place, so unlike the mean and cramped externals of English middle class life, gave the sentiment of a large and freer existence, and were to me a sort of poetic cultivation, aided also by the character of the grounds in which the Abbey stood; which were riant and secluded, umbrageous, and full of the sound of falling waters.

I owed another of the fortunate circumstances in my education, a year's residence in France, to Mr. Bentham's brother, General Sir Samuel Bentham. I had seen Sir Samuel Bentham and his family at their house near Gosport in the course of the tour already mentioned (he being then Superintendent of the Dockyard at Portsmouth), and during a stay of a few days which they made at Ford Abbey shortly after the peace, before going to live on the Continent. In 1820 they invited me for a six months' visit to them in the South of France, which their kindness ultimately prolonged to nearly a twelvemonth. Sir Samuel Bentham, though of a character of mind different from that of his illustrious brother, was a man of very considerable attainments and general powers, with a decided genius for mechanical art. His wife, a daughter of the celebrated chemist, Dr. Fordyce, was a woman of strong will and decided character, much general knowledge, and great practical good sense of the Edgeworth kind: she was the ruling spirit of the household, as she deserved, and was well qualified, to be. Their family consisted of one son (the eminent botanist) and three daughters, the youngest about two years my senior. I am indebted to them for much and various instruction, and for an almost parental interest in my welfare. When I first joined them, in May 1820, they occu-

pied the Château of Pompignan (still belonging to a descendant of Voltaire's enemy) on the heights overlooking the plain of the Garonne between Montauban and Toulouse. I accompanied them in an excursion to the Pyrenees, including a stay of some duration at Bagnères de Bigorre, a journey to Pau, Bayonne, and Bagnères de Luchon, and an ascent of the Pic du Midi de Bigorre.

This first introduction to the highest order of mountain scenery made the deepest impression on me, and gave a colour to my tastes through life. In October we proceeded by the beautiful mountain route of Castres and St. Pons, from Toulouse to Montpellier, in which last neighbourhood Sir Samuel had just bought the estate of Restinclière, near the foot of the singular mountain of St. Loup. During this residence in France I acquired a familiar knowledge of the French language, and acquaintance with the ordinary French literature; I took lessons in various bodily exercises, in none of which however I made any proficiency; and at Montpellier I attended the excellent winter courses of lectures at the Faculté des Sciences, those of M. Anglada on chemistry, of M. Provençal on zoology, and of a very accomplished representative of the eighteenth century metaphysics, M. Gergonne, on logic, under the name of Philosophy of the Sciences. I also went through a course of the higher mathematics under the private tuition of M. Lenthéric, a professor at the Lycée of Montpellier. But the greatest, perhaps, of the many advantages which I owed to this episode in my education was that of having breathed for a whole year the free and genial atmosphere of Continental life. This advantage was not the less real though I could not then estimate, nor even consciously feel it. Having so little experience of English life, and the few people I knew being mostly such as had public objects, of a large and personally disinterested kind, at heart, I was ignorant of the low moral tone of what, in England, is called society; the habit of, not indeed professing, but taking for granted in every mode of implication, that conduct is of course always directed towards low and petty objects; the absence of high feelings which manifests itself by sneering depreciation of all demonstrations of them, and by general abstinence (except among a few of the stricter religionists) from professing any high principles of action at all, except in those preordained cases in which such profession is put on as part of the costume and formalities of the occasion. I could not then know or estimate the difference between this manner of existence, and that of a people like the French, whose faults, if equally real, are at all events different; among whom sentiments, which by comparison at least may be called elevated, are the current coin of human intercourse, both

in books and in private life; and though often evaporating in profession, are yet kept alive in the nation at large by constant exercise, and stimulated by sympathy, so as to form a living and active part of the existence of great numbers of persons, and to be recognized and understood by all. Neither could I then appreciate the general culture of the understanding, which results from the habitual exercise of the feelings, and is thus carried down into the most uneducated classes of several countries on the Continent, in a degree not equalled in England among the so-called educated, except where an unusual tenderness of conscience leads to a habitual exercise of the intellect on questions of right and wrong. I did not know the way in which, among the ordinary English, the absence of interest in things of an unselfish kind, except occasionally in a special thing here and there, and the habit of not speaking to others, nor much even to themselves, about the things in which they do feel interest, causes both their feelings and their intellectual faculties to remain undeveloped, or to develop themselves only in some single and very limited direction; reducing them, considered as spiritual beings, to a kind of negative existence. All these things I did not perceive till long afterwards; but I even then felt, though without stating it clearly to myself, the contrast between the frank sociability and amiability of French personal intercourse, and the English mode of existence in which everybody acts as if everybody else (with few, or no exceptions) was either an enemy or a bore. In France, it is true, the bad as well as the good points, both of individual and of national character, come more to the surface, and break out more fearlessly in ordinary intercourse, than in England: but the general habit of the people is to show, as well as to expect, friendly feeling in every one towards every other, wherever there is not some positive cause for the opposite. In England it is only of the best-bred people, in the upper or upper middle ranks, that anything like this can be said.

In my way through Paris, both going and returning, I passed some time in the house of M. Say, the eminent political economist, who was a friend and correspondent of my father, having become acquainted with him on a visit to England a year or two after the peace. He was a man of the later period of the French Revolution, a fine specimen of the best kind of French Republican, one of those who had never bent the knee to Bonaparte though courted by him to do so; a truly upright, brave, and enlightened man. He lived a quiet and studious life, made happy by warm affections, public and private. He was acquainted with many of the chiefs of the Liberal party, and I saw various noteworthy persons while staying at his house; among whom I have pleasure in the recollection of having once

seen Saint-Simon, not yet the founder either of a philosophy or a religion, and considered only as a clever *original*. The chief fruit which I carried away from the society I saw was a strong and permanent interest in Continental Liberalism, of which I ever afterwards kept myself *au courant*, as much as of English politics: a thing not at all usual in those days with Englishmen, and which had a very salutary influence on my development, keeping me free from the error always prevalent in England, and from which even my father with all his superiority to prejudice was not exempt, of judging universal questions by a merely English standard. After passing a few weeks at Caen with an old friend of my father's, I returned to England in July 1821; and my education resumed its ordinary course.

LAST STAGE OF EDUCATION AND FIRST OF SELF-EDUCATION

For the first year or two after my visit to France, I continued my old studies, with the addition of some new ones. When I returned, my father was just finishing for the press his "Elements of Political Economy," and he made me perform an exercise on the manuscript, which Mr. Bentham practised on all his own writings, making what he called, "marginal contents"; a short abstract of every paragraph, to enable the writer more easily to judge of, and improve, the order of the ideas, and the general character of the exposition. Soon after, my father put into my hands Condillac's *Traité des Sensations*, and the logical and metaphysical volumes of his *Cours d'Études*; the first (notwithstanding the superficial resemblance between Condillac's psychological system and my father's) quite as much for a warning as for an example. I am not sure whether it was in this winter or the next that I first read a history of the French Revolution. I learnt with astonishment that the principles of democracy, then apparently in so insignificant and hopeless a minority everywhere in Europe, had borne all before them in France thirty years earlier, and had been the creed of the nation. As may be supposed from this, I had previously a very vague idea of that great commotion. I knew only that the French had thrown off the absolute monarchy of Louis XIV and XV, had put the King and Queen to death, guillotined many persons, one of whom was Lavoisier, and had ultimately fallen under the despotism of Bonaparte. From this time, as was natural, the subject took an immense hold of my feelings. It allied itself with all my juvenile aspirations to the character of a democratic champion. What had happened so lately seemed as if it might easily happen

again: and the most transcendent glory I was capable of conceiving was that of figuring, successful or unsuccessful, as a Girondist in an English Convention.

During the winter of 1821–2, Mr. John Austin, with whom at the time of my visit to France my father had but lately become acquainted, kindly allowed me to read Roman law with him. My father, notwithstanding his abhorrence of the chaos of barbarism called English Law, had turned his thoughts towards the bar as on the whole less ineligible for me than any other profession: and these readings with Mr. Austin, who had made Bentham's best ideas his own, and added much to them from other sources and from his own mind, were not only a valuable introduction to legal studies, but an important portion of general education. With Mr. Austin I read Heineccius on the Institutes, his *Roman Antiquities*, and part of his exposition of the Pandects; to which was added a considerable portion of Blackstone. It was at the commencement of these studies that my father, as a needful accompaniment to them, put into my hands Bentham's principal speculations, as interpreted to the Continent, and indeed to all the world, by Dumont, in the *Traité de Législation*. The reading of this book was an epoch in my life, one of the turning points in my mental history.

My previous education had been, in a certain sense, already a course of Benthamism. The Benthamic standard of "the greatest happiness" was that which I had always been taught to apply; I was even familiar with an abstract discussion of it, forming an episode in an unpublished dialogue on "Government," written by my father on the Platonic model. Yet in the first pages of Bentham it burst upon me with all the force of novelty. What thus impressed me was the chapter in which Bentham passed judgment on the common modes of reasoning in morals and legislation, deduced from phrases like "law of nature," "right reason," "the moral sense," "natural rectitude," and the like, and characterized them as dogmatism in disguise, imposing its sentiments upon others under cover of sounding expressions which convey no reason for the sentiment, but set up the sentiment as its own reason. It had not struck me before that Bentham's principle put an end to all this. The feeling rushed upon me, that all previous moralists were superseded, and that here indeed was the commencement of a new era in thought. This impression was strengthened by the manner in which Bentham put into scientific form the application of the happiness principle to the morality of actions, by analysing the various classes and orders of their consequences. But what struck me at the time most of all, was the Classification of Offences, which is much

more clear, compact and imposing in Dumont's *rédaction* than in the original work of Bentham from which it was taken. Logic and the dialectics of Plato, which had formed so large a part of my previous training, had given me a strong relish for accurate classification. This taste had been strengthened and enlightened by the study of botany, on the principles of what is called the Natural Method, which I had taken up with great zeal, though only as an amusement, during my stay in France; and when I found scientific classification applied to the great and complex subject of Punishable Acts, under the guidance of the ethical principle of Pleasurable and Painful Consequences, followed out in the method of detail introduced into these subjects by Bentham, I felt taken up to an eminence from which I could survey a vast mental domain, and see stretching out into the distance intellectual results beyond all computation. As I proceeded further, there seemed to be added to this intellectual clearness, the most inspiring prospects of practical improvements in human affairs. To Bentham's general view of the construction of a body of law I was not altogether a stranger, having read with attention that admirable compendium, my father's article "Jurisprudence": but I had read it with little profit and scarcely any interest, no doubt from its extremely general and abstract character, and also because it concerned the form more than the substance of the *corpus juris*, the logic rather than the ethics of law. But Bentham's subject was Legislation, of which Jurisprudence is only the formal part: and at every page he seemed to open a clearer and broader conception of what human opinions and institutions ought to be, how they might be made what they ought to be, and how far removed from it they now are. When I laid down the last volume of the *Traité*, I had become a different being. The "principle of utility" understood as Bentham understood it, and applied in the manner in which he applied it through these three volumes, fell exactly into its place as the keystone which held together the detached and fragmentary component parts of my knowledge and beliefs. It gave unity to my conceptions of things. I now had opinions; a creed, a doctrine, a philosophy; in one among the best senses of the word, a religion; the inculcation and diffusion of which could be made the principal outward purpose of a life. And I had a grand conception laid before me of changes to be effected in the condition of mankind through that doctrine. The *Traité de Législation* wound up with what was to me a most impressive picture of human life as it would be made by such opinions and such laws as were recommended in the treatise. The anticipations of practicable improvement were studiously moderate, deprecating and discountenancing as reveries of vague enthusiasm many

things which will one day seem so natural to human beings, that injustice will probably be done to those who once thought them chimerical. But, in my state of mind, this appearance of superiority to illusion added to the effect which Bentham's doctrines produced on me, by heightening the impression of mental power, and the vista of improvement which he did open was sufficiently large and brilliant to light up my life, as well as to give a definite shape to my aspirations.

After this I read, from time to time, the most important of the other works of Bentham which had then seen the light, either as written by himself or as edited by Dumont. This was my private reading: while, under my father's direction, my studies were carried into the higher branches of analytic psychology. I now read Locke's *Essay*, and wrote out an account of it, consisting of a complete abstract of every chapter, with such remarks as occurred to me: which was read by, or (I think) to, my father, and discussed throughout. I performed the same process with Helvétius' *De l'Esprit*, which I read of my own choice. This preparation of abstracts, subject to my father's censorship, was of great service to me, by compelling precision in conceiving and expressing psychological doctrines, whether accepted as truths or only regarded as the opinion of others. After Helvétius, my father made me study what he deemed the really master-production in the philosophy of mind, Hartley's *Observations on Man*. This book, though it did not, like the *Traité de Législation*, give a new colour to my existence, made a very similar impression on me in regard to its immediate subject. Hartley's explanation, incomplete as in many points it is, of the more complex mental phenomena by the law of association, commended itself to me at once as a real analysis, and made me feel by contrast the insufficiency of the merely verbal generalizations of Condillac, and even of the instructive gropings and feelings about for psychological explanations of Locke. It was at this very time that my father commenced writing his *Analysis of the Mind*, which carried Hartley's mode of explaining the mental phenomena to so much greater length and depth. He could only command the concentration of thought necessary for this work during the complete leisure of his holiday of a month or six weeks annually: and he commenced it in the summer of 1822, in the first holiday he passed at Dorking; in which neighbourhood, from that time to the end of his life, with the exception of two years, he lived, as far as his official duties permitted, for six months of every year. He worked at the *Analysis* during several successive vacations, up to the year 1829 when it was published, and allowed me to read the manuscript, portion by portion, as it advanced. The other principal English writers on mental

philosophy I read as I felt inclined, particularly Berkeley, Hume's *Essays*, Reid, Dugald Stewart and Brown on *Cause and Effect*. Brown's *Lectures* I did not read until two or three years later, nor at that time had my father himself read them.

Among the works read in the course of this year, which contributed materially to my development, I ought to mention a book (written on the foundation of some of Bentham's manuscripts and published under the pseudonym of Philip Beauchamp) entitled *Analysis of the Influence of Natural Religion on the Temporal Happiness of Mankind*. This was an examination not of the truth, but of the usefulness of religious belief, in the most general sense, apart from the peculiarities of any special Revelation; which, of all the parts of the discussion concerning religion, is the most important in this age, in which real belief in any religious doctrine is feeble and precarious, but the opinion of its necessity for moral and social purposes almost universal; and when those who reject revelation very generally take refuge in an optimistic Deism, a worship of the order of Nature and the supposed course of Providence at least as full of contradictions, and perverting to the moral sentiments, as any of the forms of Christianity, if only it is as completely realized. Yet, very little, with any claim to a philosophical character, has been written by sceptics against the usefulness of this form of belief. The volume bearing the name of Philip Beauchamp had this for its special object. Having been shown to my father in manuscript, it was put into my hands by him, and I made a marginal analysis of it as I had done of the *Elements of Political Economy*. Next to the *Traité de Législation*, it was one of the books which by the searching character of its analysis produced the greatest effect upon me. On reading it lately after an interval of many years, I find it to have some of the defects as well as the merits of the Benthamic modes of thought, and to contain, as I now think, many weak arguments, but with a great overbalance of sound ones, and much good material for a more completely philosophic and conclusive treatment of the subject.

I have now, I believe, mentioned all the books which had any considerable effect on my early mental development. From this point I began to carry on my intellectual cultivation by writing still more than by reading. In the summer of 1822 I wrote my first argumentative essay. I remember very little about it, except that it was an attack on what I regarded as the aristocratic prejudice, that the rich were, or were likely to be, superior in moral qualities to the poor. My performance was entirely argumentative, without any of the declamation which the subject would admit of, and might be expected to suggest to a young writer. In that department how-

ever I was, and remained, very inapt. Dry argument was the only thing I could manage, or willingly attempted; though passively I was very susceptible to the effect of all composition, whether in the form of poetry or oratory, which appealed to the feelings on any basis of reason. My father, who knew nothing of this essay until it was finished, was well satisfied, and as I learnt from others, even pleased with it; but, perhaps from a desire to promote the exercise of other mental faculties than the purely logical, he advised me to make my next exercise in composition one of the oratorical kind: on which suggestion, availing myself of my familiarity with Greek history and ideas and with the Athenian orators, I wrote two speeches, one an accusation, the other a defence of Pericles, on a supposed impeachment for not marching out to fight the Lacedaemonians on their invasion of Attica. After this I continued to write papers on subjects often very much beyond my capacity, but with great benefit both from the exercise itself, and from the discussions which it led to with my father.

I had now also begun to converse, on general subjects, with the instructed men with whom I came in contact: and the opportunities of such contact naturally became more numerous. The two friends of my father from whom I derived most, and with whom I most associated, were Mr. Grote and Mr. John Austin. The acquaintance of both with my father was recent, but had ripened rapidly into intimacy. Mr. Grote was introduced to my father by Mr. Ricardo, I think in 1819 (being then about twenty-five years old), and sought assiduously his society and conversation. Already a highly instructed man, he was yet, by the side of my father, a tyro on the great subjects of human opinion; but he rapidly seized on my father's best ideas; and in the department of political opinion he made himself known as early as 1820, by a pamphlet in defence of Radical Reform, in reply to a celebrated article by Sir James Mackintosh, then lately published in the *Edinburgh Review*. Mr. Grote's father, the banker, was, I believe, a thorough Tory, and his mother intensely Evangelical; so that for his liberal opinions he was in no way indebted to home influences. But, unlike most persons who have the prospect of being rich by inheritance, he had, though actively engaged in the business of banking, devoted a great portion of time to philosophic studies; and his intimacy with my father did much to decide the character of the next stage in his mental progress. Him I often visited, and my conversations with him on political, moral, and philosophical subjects gave me, in addition to much valuable instruction, all the pleasure and benefit of sympathetic communion with a man of the high intellectual and moral eminence which his life and writings have since manifested to the world.

Mr. Austin, who was four or five years older than Mr. Grote, was the eldest son of a retired miller in Suffolk, who had made money by contracts during the war, and who must have been a man of remarkable qualities, as I infer from the fact that all his sons were of more than common ability and all eminently gentlemen. The one with whom we are now concerned, and whose writings on jurisprudence have made him celebrated, was for some time in the army, and served in Sicily under Lord William Bentinck. After the peace he sold his commission and studied for the bar, to which he had been called for some time before my father knew him. He was not, like Mr. Grote, to any extent a pupil of my father, but he had attained, by reading and thought, a considerable number of the same opinions, modified by his own very decided individuality of character. He was a man of great intellectual powers which in conversation appeared at their very best; from the vigour and richness of expression with which, under the excitement of discussion, he was accustomed to maintain some view or other of most general subjects; and from an appearance of not only strong, but deliberate and collected will; mixed with a certain bitterness, partly derived from temperament, and partly from the general cast of his feelings and reflections. The dissatisfaction with life and the world, felt more or less in the present state of society and intellect by every discerning and highly conscientious mind, gave in his case a rather melancholy tinge to the character, very natural to those whose passive moral susceptibilities are more than proportioned to their active energies. For it must be said, that the strength of will of which his manner seemed to give such strong assurance expended itself principally in manner. With great zeal for human improvement, a strong sense of duty, and capacities and acquirements the extent of which is proved by the writings he has left, he hardly ever completed any intellectual task of magnitude. He had so high a standard of what ought to be done, so exaggerated a sense of deficiencies in his own performances, and was so unable to content himself with the amount of elaboration sufficient for the occasion and the purpose, that he not only spoilt much of his work for ordinary use by overlabouring it, but spent so much time and exertion in superfluous study and thought, that when his task ought to have been completed, he had generally worked himself into an illness without having half finished what he undertook. From this mental infirmity (of which he is not the sole example among the accomplished and able men whom I have known), combined with liability to frequent attacks of disabling though not dangerous ill-health, he accomplished, through life, little in comparison with what he seemed capable of; but what he did produce is held in the very

highest estimation by the most competent judges; and, like Coleridge, he might plead as a set-off that he had been to many persons, through his conversation, a source not only of much instruction but of great elevation of character. On me his influence was most salutary. It was moral in the best sense. He took a sincere and kind interest in me, far beyond what could have been expected towards a mere youth from a man of his age, standing, and what seemed austerity of character. There was in his conversation and demeanour a tone of highmindedness which did not show itself so much, if the quality existed as much, in any of the other persons with whom at that time I associated. My intercourse with him was the more beneficial, owing to his being of a different mental type from all other intellectual men whom I frequented, and he from the first set himself decidedly against the prejudices and narrownesses which are almost sure to be found in a young man formed by a particular mode of thought or a particular social circle.

His younger brother, Charles Austin, of whom at this time and for the next year or two I saw much, had also a great effect on me, though of a very different description. He was but a few years older than myself, and had then just left the University, where he had shone with great *éclat* as a man of intellect and a brilliant orator and converser. The effect he produced on his Cambridge contemporaries deserves to be accounted an historical event; for to it may in part be traced the tendency towards Liberalism in general, and the Benthamic and politico-economic form of it in particular, which showed itself in a portion of the more active-minded young men of the higher classes from this time to 1830. The Union Debating Society, at that time at the height of its reputation, was an arena where what were then thought extreme opinions, in politics and philosophy, were weekly asserted, face to face with their opposites, before audiences consisting of the *élite* of the Cambridge youth: and though many persons afterwards of more or less note (of whom Lord Macaulay is the most celebrated), gained their first oratorical laurels in those debates, the really influential mind among these intellectual gladiators was Charles Austin. He continued, after leaving the University, to be, by his conversation and personal ascendancy, a leader among the same class of young men who had been his associates there; and he attached me among others to his car. Through him I became acquainted with Macaulay, Hyde and Charles Villiers, Strutt (now Lord Belper), Romilly (now Lord Romilly and Master of the Rolls); and various others who subsequently figured in literature or politics, and among whom I heard discus-

sions on many topics, as yet to a certain degree new to me. The influence of Charles Austin over me differed from that of the persons I have hitherto mentioned, in being not the influence of a man over a boy, but that of an elder contemporary. It was through him that I first felt myself, not a pupil under teachers, but a man among men. He was the first person of intellect whom I met on a ground of equality, though as yet much his inferior on that common ground. He was a man who never failed to impress greatly those with whom he came in contact, even when their opinions were the very reverse of his. The impression he gave was that of boundless strength, together with talents which, combined with such apparent force of will and character, seemed capable of dominating the world. Those who knew him, whether friendly to him or not, always anticipated that he would play a conspicuous part in public life. It is seldom that men produce so great an immediate effect by speech, unless they, in some degree, lay themselves out for it; and he did this in no ordinary degree. He loved to strike, and even to startle. He knew that decision is the greatest element of effect, and he uttered his opinions with all the decision he could throw into them, never so well pleased as when he astonished any one by their audacity. Very unlike his brother, who made war against the narrower interpretations and applications of the principles they both professed, he, on the contrary, presented the Benthamic doctrines in the most startling form of which they were susceptible, exaggerating everything in them which tended to consequences offensive to any one's preconceived feelings. All which, he defended with such verve and vivacity, and carried off by a manner so agreeable as well as forcible, that he always either came off victor, or divided the honours of the field. It is my belief that much of the notion popularly entertained of the tenets and sentiments of what are called Benthamites or Utilitarians had its origin in paradoxes thrown out by Charles Austin. It must be said, however, that his example was followed, *haud passibus aequis* [without restraint], by younger proselytes, and that to *outrer* whatever was by anybody considered offensive in the doctrines and maxims of Benthamism became at one time the badge of a small coterie of youths. All of these who had anything in them, myself among others, quickly outgrew this boyish vanity; and those who had not, became tired of differing from other people, and gave up both the good and the bad part of the heterodox opinions they had for some time professed.

It was in the winter of 1822-3 that I formed the plan of a little society, to be composed of young men agreeing in fundamental principles—ac-

knowledging Utility as their standard in ethics and politics, and a certain number of the principal corollaries drawn from it in the philosophy I had accepted—and meeting once a fortnight to read essays and discuss questions conformably to the premises thus agreed on. The fact would hardly be worth mentioning, but for the circumstance that the name I gave to the society I had planned was the Utilitarian Society. It was the first time that any one had taken the title of Utilitarian; and the term made its way into the language from this humble source. I did not invent the word, but found it in one of Galt's novels, the *Annals of the Parish*, in which the Scotch clergyman, of whom the book is a supposed autobiography, is represented as warning his parishioners not to leave the Gospel and become utilitarians. With a boy's fondness for a name and a banner I seized on the word, and for some years called myself and others by it as a sectarian appellation; and it came to be occasionally used by some others holding the opinions which it was intended to designate. As those opinions attracted more notice, the term was repeated by strangers and opponents, and got into rather common use just about the time when those who had originally assumed it, laid down that along with other sectarian characteristics. The Society so called consisted at first of no more than three members, one of whom, being Mr. Bentham's amanuensis, obtained for us permission to hold our meetings in his house. The number never, I think, reached ten, and the society was broken up in 1826. It had thus an existence of about three years and a half. The chief effect of it as regards myself, over and above the benefit of practice in oral discussion, was that of bringing me in contact with several young men at that time less advanced than myself, among whom, as they professed the same opinions, I was for some time a sort of leader, and had considerable influence on their mental progress. Any young man of education who fell in my way, and whose opinions were not incompatible with those of the Society, I endeavoured to press into its service; and some others I probably should never have known, had they not joined it. Those of the members who became my intimate companions—no one of whom was in any sense of the word a disciple, but all of them independent thinkers on their own basis—were William Eyton Tooke, son of the eminent political economist, a young man of singular worth both moral and intellectual, lost to the world by an early death; his friend William Ellis, an original thinker in the field of political economy, now honourably known by his apostolic exertions for the improvement of education; George Graham, afterwards an official assignee of the Bankruptcy Court, a thinker of originality and power on almost all abstract subjects; and (from the time

when he came first to England to study for the bar in 1824 or 1825) a man who has made considerably more noise in the world than any of these, John Arthur Roebuck.

In May 1823, my professional occupation and status for the next thirty-five years of my life were decided by my father's obtaining for me an appointment from the East India Company, in the office of the Examiner of India Correspondence, immediately under himself. I was appointed in the usual manner, at the bottom of the list of clerks, to rise, at least in the first instance, by seniority; but with the understanding that I should be employed from the beginning in preparing drafts of despatches, and be thus trained up as a successor to those who then filled the higher departments of the office. My drafts of course required, for some time, much revision from my immediate superiors, but I soon became well acquainted with the business, and by my father's instructions and the general growth of my own powers, I was in a few years qualified to be, and practically was, the chief conductor of the correspondence with India in one of the leading departments, that of the Native States. This continued to be my official duty until I was appointed Examiner, only two years before the time when the abolition of the East India Company as a political body determined my retirement. I do not know any one of the occupations by which a subsistence can now be gained, more suitable than such as this to any one who, not being in independent circumstances, desires to devote a part of the twenty-four hours to private intellectual pursuits. Writing for the press cannot be recommended as a permanent resource to any one qualified to accomplish anything in the higher departments of literature or thought: not only on account of the uncertainty of this means of livelihood, especially if the writer has a conscience, and will not consent to serve any opinions except his own, but also because the writings by which one can live are not the writings which themselves live, and are never those in which the writer does his best. Books destined to form future thinkers take too much time to write, and when written come, in general, too slowly into notice and repute, to be relied on for subsistence. Those who have to support themselves by their pen must depend on literary drudgery, or at best on writings addressed to the multitude; and can employ in the pursuits of their own choice only such time as they can spare from those of necessity; which is generally less than the leisure allowed by office occupations, while the effect on the mind is far more enervating and fatiguing. For my own part I have, through life, found office duties an actual rest from the other mental occupations which I have carried on simultaneously with them. They

were sufficiently intellectual not to be a distasteful drudgery, without being such as to cause any strain upon the mental powers of a person used to abstract thought, or to the labour of careful literary composition. The drawbacks, for every mode of life has its drawbacks, were not, however, unfelt by me. I cared little for the loss of the chances of riches and honours held out by some of the professions, particularly the bar, which had been, as I have already said, the profession thought of for me. But I was not indifferent to exclusion from Parliament, and public life: and I felt very sensibly the more immediate unpleasantness of confinement to London; the holiday allowed by India-house practice not exceeding a month in the year, while my taste was strong for a country life, and my sojourn in France had left behind it an ardent desire of travelling. But though these tastes could not be freely indulged, they were at no time entirely sacrificed. I passed most Sundays, throughout the year, in the country, taking long rural walks on that day even when residing in London. The month's holiday was, for a few years, passed at my father's house in the country: afterwards a part or the whole was spent in tours, chiefly pedestrian, with some one or more of the young men who were my chosen companions; and, at a later period, in longer journeys or excursions, alone or with other friends. France, Belgium, and Rhenish Germany were within easy reach of the annual holiday: and two longer absences, one of three, the other of six months, under medical advice, added Switzerland, the Tyrol, and Italy to my list. Fortunately, also, both these journeys occurred rather early, so as to give the benefit and charm of the remembrance to a large portion of life.

I am disposed to agree with what has been surmised by others, that the opportunity which my official position gave me of learning by personal observation the necessary conditions of the practical conduct of public affairs has been of considerable value to me as a theoretical reformer of the opinions and institutions of my time. Not, indeed, that public business transacted on paper, to take effect on the other side of the globe, was of itself calculated to give much practical knowledge of life. But the occupation accustomed me to see and hear the difficulties of every course, and the means of obviating them, stated and discussed deliberately with a view to execution; it gave me opportunities of perceiving when public measures, and other political facts, did not produce the effects which had been expected of them, and from what causes; above all, it was valuable to me by making me, in this portion of my activity, merely one wheel in a machine, the whole of which had to work together. As a speculative writer, I should have had no one to consult but myself, and should have

encountered in my speculations none of the obstacles which would have started up whenever they came to be applied to practice. But as a secretary conducting political correspondence, I could not issue an order or express an opinion, without satisfying various persons very unlike myself that the thing was fit to be done. I was thus in a good position for finding out by practice the mode of putting a thought which gives it easiest admittance into minds not prepared for it by habit; while I became practically conversant with the difficulties of moving bodies of men, the necessities of compromise, the art of sacrificing the non-essential to preserve the essential. I learnt how to obtain the best I could, when I could not obtain everything; instead of being indignant or dispirited because I could not have entirely my own way, to be pleased and encouraged when I could have the smallest part of it; and when even that could not be, to bear with complete equanimity the being overruled altogether. I have found, through life, these acquisitions to be of the greatest possible importance for personal happiness, and they are also a very necessary condition for enabling any one, either as theorist or as practical man, to effect the greatest amount of good compatible with his opportunities.

of John Stuart Mill's AUTOBIOGRAPHY.*

Mark Twain¹

1835–1910

In 1883, when Mark Twain was already a famous author, he could look back with longing on his career as a river-boat pilot. “I loved the profession far better than any I have followed since,” he wrote. What had been the great appeal? In *Life on the Mississippi* he explains.

The sleepy town of Hannibal, Missouri, was galvanized each day by the arrival of the packet boat. All was turmoil and excitement, and Mark Twain and other small boys raced to the dock, as to a circus. For them the desire to be a steamboat pilot was as fond a dream as being an airplane pilot or an astronaut is for boys today. Such dreams are achieved only by determination and courage.

Mark Twain’s apprenticeship under his pilot chief was grueling, and he tells us that if he had known what was required he “should not have had the courage to begin.” He was taught to recognize the changing shape of the river, the deadly shoals appearing overnight, the feel of the boat, and the face of the water. His memory had to be quick, his judgment alert, and he had to have the courage and confidence to rely on them. “Every trivial detail of twelve hundred miles of river” had to be known “with absolute exactness.”

At the wheel on one occasion he was ordered to “shave those steamships as close as you’d peel an apple.” It was certainly hair raising, for he knew that one little error could be fatal. Ship, cargo, and all hands and passengers, if there were any, would be swallowed up by the treacherous river. Yet Twain took “a measureless pride” in the profession, once he had learned it. The river-boat pilot, he said, is the most independent being on earth—more so than a king,

¹ For a biography of Mark Twain, see Vol. 2, pp. 342–344, in this set.

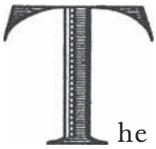

who is, after all, a servant of parliament. Once the ship is under way, the pilot's word is law, and not even a king would dare to contradict him.

Today we can read stories of aviation written by such flyers as Saint-Exupery and Charles Lindbergh. Our newspapers and magazines give us minute accounts of the astronauts' flights. Thousands of boys are stirred by the daring skill and absolute command of these modern heroes, as they were in Mark Twain's day by the lonely courage of the pilot.

Life on the Mississippi is unique as the saga of the nineteenth-century pilot on the majestic old river, and it is notable for its humorous realism. Rudyard Kipling had Mark Twain's humor in mind when he said, "Cervantes was a relation of his." As you read, you might keep a lookout for this alleged similarity.

Learning the River

from *Life on the Mississippi*

THE RIVER AND ITS HISTORY

The Mississippi is well worth reading about. It is not a commonplace river, but on the contrary is in all ways remarkable. Considering the Missouri its main branch, it is the longest river in the world—four thousand three hundred miles. It seems safe to say that it is also the crookedest river in the world, since in one part of its journey it uses up one thousand three hundred miles to cover the same ground that the crow would fly over in six hundred and seventy-five. It discharges three times as much water as the St. Lawrence, twenty-five times as much as the Rhine, and three hundred and thirty-eight times as much as the Thames. No other river has so vast a drainage basin; it draws its water supply from twenty-eight states and territories; from Delaware on the Atlantic seaboard, and from all the country between that and Idaho on the Pacific slope—a spread of forty-five degrees of longitude. The Mississippi receives and carries to the Gulf water from fifty-four subordinate rivers that are navigable by steamboats, and from some hundreds that are navigable by flats and keels. The area of its drainage basin is as great as the combined areas of England, Wales, Scotland, Ireland, France, Spain, Portugal, Germany, Austria, Italy, and Turkey; and almost all this wide region is fertile; the Mississippi valley, proper, is exceptionally so.

It is a remarkable river in this: that instead of widening toward its mouth, it grows narrower; grows narrower and deeper. From the junction of the Ohio to a point halfway down to the sea, the width averages a mile in high water; thence to the sea the width steadily diminishes, until, at the “Passes,” above the mouth, it is but little over half a mile. At the junction of the Ohio the Mississippi’s depth is eighty-seven feet; the depth increases gradually, reaching one hundred and twenty-nine just above the mouth.

The difference in rise and fall is also remarkable—not in the upper, but in the lower river. The rise is tolerably uniform down to Natchez (three hundred and sixty miles above the mouth)—about fifty feet. But at Bayou La Fourche the river rises only twenty-four feet; at New Orleans only fifteen, and just above the mouth only two and one-half.

An article in the New Orleans *Times-Democrat*, based upon reports of able engineers, states that the river annually empties four hundred and six million tons of mud into the Gulf of Mexico—which brings to mind Captain Marryat's rude name for the Mississippi—"the Great Sewer." This mud, solidified, would make a mass a mile square and two hundred and forty-one feet high.

The mud deposit gradually extends the land—but only gradually; it has extended it not quite a third of a mile in the two hundred years which have elapsed since the river took its place in history.

The belief of the scientific people is that the mouth used to be at Baton Rouge, where the hills cease, and that the two hundred miles of land between there and the Gulf was built by the river. This gives us the age of that piece of country, without any trouble at all—one hundred and twenty thousand years. Yet it is much the youthfulest batch of country that lies around there anywhere.

The Mississippi is remarkable in still another way—its disposition to make prodigious jumps by cutting through narrow necks of land, and thus straightening and shortening itself. More than once it has shortened itself thirty miles at a single jump!

These cutoffs have had curious effects: they have thrown several river towns out into the rural districts, and built up sand bars and forests in front of them. The town of Delta used to be three miles below Vicksburg; a recent cutoff has radically changed the position, and Delta is now *two miles above* Vicksburg.

Both of these river towns have been retired to the country by that cutoff. A cutoff plays havoc with boundary lines and jurisdictions: for instance, a man is living in the state of Mississippi today, a cutoff occurs tonight, and tomorrow the man finds himself and his land over on the other side of the river, within the boundaries and subject to the laws of the state of Louisiana! Such a thing, happening in the upper river in the old times, could have transferred a slave from Missouri to Illinois and made a free man of him.

The Mississippi does not alter its locality by cutoffs alone; it is always changing its habitat *bodily*—is always moving *bodily* *sidewise*. At Hard Times, Louisiana, the river is two miles west of the region it used to oc-

copy. As a result, the original site of that settlement is not now in Louisiana at all, but on the other side of the river, in the state of Mississippi. *Nearly the whole of that one thousand three hundred miles of old Mississippi River which La Salle floated down in his canoes, two hundred years ago, is good solid dry ground now.* The river lies to the right of it, in places, and to the left of it in other places.

Although the Mississippi's mud builds land but slowly, down at the mouth, where the Gulf's billows interfere with its work, it builds fast enough in better-protected regions higher up: for instance, Prophet's Island contained one thousand five hundred acres of land thirty years ago; since then the river has added seven hundred acres to it.

THE BOY'S AMBITION

When I was a boy, there was but one permanent ambition among my comrades in our village ¹ on the west bank of the Mississippi River. That was, to be a steamboatman. We had transient ambitions of other sorts, but they were only transient. When a circus came and went, it left us all burning to become clowns; the first Negro minstrel show that ever came to our section left us all suffering to try that kind of life; now and then we had a hope that, if we lived and were good, God would permit us to be pirates. These ambitions faded out, each in its turn; but the ambition to be a steamboatman always remained.

Once a day a cheap, gaudy packet arrived upward from St. Louis, and another downward from Keokuk. Before these events, the day was glorious with expectancy; after them, the day was a dead and empty thing. Not only the boys, but the whole village, felt this. After all these years I can picture that old time to myself now, just as it was then: the white town drowsing in the sunshine of a summer's morning; the streets empty, or pretty nearly so; one or two clerks sitting in front of the Water Street stores, with their splint-bottomed chairs tilted back against the walls, chins on breasts, hats slouched over their faces, asleep—with shingle-shavings enough around to show what broke them down; a sow and a litter of pigs loafing along the sidewalk, doing a good business in watermelon rinds and seeds; two or three lonely little freight piles scattered about the "levee"; a pile of "skids" on the slope of the stone-paved wharf, and the fragrant town drunkard asleep in the shadow of them; two or three wood flats at the head of the wharf, but nobody to listen to the

1. Hannibal, Missouri.

peaceful lapping of the wavelets against them; the great Mississippi, the majestic, the magnificent Mississippi, rolling its mile-wide tide along, shining in the sun; the dense forest away on the other side; the "point" above the town, and the "point" below, bounding the river glimpse and turning it into a sort of sea, and withal a very still and brilliant and lonely one. Presently a film of dark smoke appears above one of those remote "points"; instantly a Negro drayman, famous for his quick eye and prodigious voice, lifts up the cry, "S-t-e-a-m-boat a-comin'!" and the scene changes! The town drunkard stirs, the clerks wake up, a furious clatter of drays follows, every house and store pours out a human contribution, and all in a twinkling the dead town is alive and moving. Drays, carts, men, boys, all go hurrying from many quarters to a common center, the wharf. Assembled there, the people fasten their eyes upon the coming boat as upon a wonder they are seeing for the first time. And the boat *is* rather a handsome sight, too. She is long and sharp and trim and pretty; she has two tall, fancy-topped chimneys, with a gilded device of some kind swung between them; a fanciful pilothouse, all glass and "gingerbread," perched on top of the "texas" deck behind them; the paddle boxes are gorgeous with a picture or with gilded rays above the boat's name; the boiler deck, the hurricane deck, and the texas deck are fenced and ornamented with clean white railings; there is a flag gallantly flying from the jack staff; the furnace doors are open and the fires glaring bravely; the upper decks are black with passengers; the captain stands by the big bell, calm, imposing, the envy of all; great volumes of the blackest smoke are rolling and tumbling out of the chimneys—a husbanded grandeur created with a bit of pitch pine just before arriving at a town; the crew are grouped on the forecastle; the broad stage is run far out over the port bow, and an envied deck hand stands picturesquely on the end of it with a coil of rope in his hand; the pent steam is screaming through the gauge cocks; the captain lifts his hand, a bell rings, the wheels stop; then they turn back, churning the water to foam, and the steamer is at rest. Then such a scramble as there is to get aboard, and to get ashore, and to take in freight and to discharge freight, all at one and the same time; and such a yelling and cursing as the mates facilitate it all with! Ten minutes later the steamer is under way again, with no flag on the jack staff and no black smoke issuing from the chimneys. After ten more minutes the town is dead again, and the town drunkard asleep by the skids once more.

My father was a justice of the peace, and I supposed he possessed the power of life and death over all men, and could hang anybody that of-

fended him. This was distinction enough for me as a general thing; but the desire to be a steamboatman kept intruding, nevertheless. I first wanted to be a cabin boy, so that I could come out with a white apron on and shake a tablecloth over the side, where all my old comrades could see me: later I thought I would rather be the deck hand who stood on the end of the stage plank with the coil of rope in his hand, because he was particularly conspicuous. But these were only daydreams—they were too heavenly to be contemplated as real possibilities. By and by one of our boys went away. He was not heard of for a long time. At last he turned up as apprentice engineer or “striker” on a steamboat. This thing shook the bottom out of all my Sunday-school teachings. That boy had been notoriously worldly, and I just the reverse; yet he was exalted to this eminence, and I left in obscurity and misery. There was nothing generous about this fellow in his greatness. He would always manage to have a rusty bolt to scrub while his boat tarried at our town, and he would sit on the inside guard and scrub it, where we all could see him and envy him and loathe him. And whenever his boat was laid up he would come home and swell around the town in his blackest and greasiest clothes, so that nobody could help remembering that he was a steamboatman; and he used all sorts of steamboat technicalities in his talk, as if he were so used to them that he forgot common people could not understand them. He would speak of the “labboard” side of a horse in an easy, natural way that would make one wish he was dead. And he was always talking about “St. Looy” like an old citizen; he would refer casually to occasions when he was “coming down Fourth Street,” or when he was “passing by the Planter’s House,” or when there was a fire and he took a turn on the brakes of “the old Big Missouri”; and then he would go on and lie about how many towns the size of ours were burned down there that day. Two or three of the boys had long been persons of consideration among us because they had been to St. Louis once and had a vague general knowledge of its wonders, but the day of their glory was over now. They lapsed into a humble silence, and learned to disappear when the ruthless “cub”-engineer approached. This fellow had money, too, and hair oil. Also an ignorant silver watch and a showy brass watch chain. He wore a leather belt and used no suspenders. If ever a youth was cordially admired and hated by his comrades, this one was. No girl could withstand his charms. He “cut out” every boy in the village. When his boat blew up at last, it diffused a tranquil contentment among us such as we had not known for months. But when he came home the next week, alive, renowned, and appeared in church all battered up and

bandaged, a shining hero, stared at and wondered over by everybody, it seemed to us that the partiality of Providence for an undeserving reptile had reached a point where it was open to criticism.

This creature's career could produce but one result, and it speedily followed. Boy after boy managed to get on the river. The minister's son became an engineer. The doctor's and the postmaster's sons became "mud clerks"; the wholesale liquor dealer's son became a barkeeper on a boat; four sons of the chief merchant, and two sons of the county judge, became pilots. Pilot was the grandest position of all. The pilot, even in those days of trivial wages, had a princely salary—from a hundred and fifty to two hundred and fifty dollars a month, and no board to pay. Two months of his wages would pay a preacher's salary for a year. Now some of us were left disconsolate. We could not get on the river—at least our parents would not let us.

So, by and by, I ran away. I said I would never come home again till I was a pilot and could come in glory. But somehow I could not manage it. I went meekly aboard a few of the boats that lay packed together like sardines at the long St. Louis wharf, and humbly inquired for the pilots, but got only a cold shoulder and short words from mates and clerks. I had to make the best of this sort of treatment for the time being, but I had comforting daydreams of a future when I should be a great and honored pilot, with plenty of money, and could kill some of these mates and clerks and pay for them.

A CUB-PILOT'S EXPERIENCE

What with lying on the rocks four days at Louisville, and some other delays, the poor old *Paul Jones* fooled away about two weeks in making the voyage from Cincinnati to New Orleans. This gave me a chance to get acquainted with one of the pilots, and he taught me how to steer the boat, and thus made the fascination of river life more potent than ever for me.

It also gave me a chance to get acquainted with a youth who had taken deck passage—more's the pity; for he easily borrowed six dollars of me on a promise to return to the boat and pay it back to me the day after we should arrive. But he probably died or forgot, for he never came. It was doubtless the former, since he had said his parents were wealthy, and he only traveled deck passage because it was cooler.²

2. "Deck" passage—*i. e.*, steerage passage.

I soon discovered two things. One was that a vessel would not be likely to sail for the mouth of the Amazon under ten or twelve years; and the other was that the nine or ten dollars still left in my pocket would not suffice for so impossible an exploration as I had planned, even if I could afford to wait for a ship. Therefore it followed that I must contrive a new career. The *Paul Jones* was now bound for St. Louis. I planned a siege against my pilot, and at the end of three hard days he surrendered. He agreed to teach me the Mississippi River from New Orleans to St. Louis for five hundred dollars, payable out of the first wages I should receive after graduating. I entered upon the small enterprise of "learning" twelve or thirteen hundred miles of the great Mississippi River with the easy confidence of my time of life. If I had really known what I was about to require of my faculties, I should not have had the courage to begin. I supposed that all a pilot had to do was to keep his boat in the river, and I did not consider that that could be much of a trick, since it was so wide.

The boat backed out from New Orleans at four in the afternoon, and it was "our watch" until eight. Mr. Bixby, my chief, "straightened her up," plowed her along past the sterns of the other boats that lay at the Levee, and then said, "Here, take her; shave those steamships as close as you'd peel an apple." I took the wheel, and my heartbeat fluttered up into the hundreds; for it seemed to me that we were about to scrape the side off every ship in the line, we were so close. I held my breath and began to claw the boat away from the danger; and I had my own opinion of the pilot who had known no better than to get us into such peril, but I was too wise to express it. In half a minute I had a wide margin of safety intervening between the *Paul Jones* and the ships; and within ten seconds more I was set aside in disgrace, and Mr. Bixby was going into danger again and flaying me alive with abuse of my cowardice. I was stung, but I was obliged to admire the easy confidence with which my chief loafed from side to side of his wheel, and trimmed the ships so closely that disaster seemed ceaselessly imminent. When he had cooled a little he told me that the easy water was close ashore and the current outside, and therefore we must hug the bank, upstream, to get the benefit of the former, and stay well out, downstream, to take advantage of the latter. In my own mind I resolved to be a downstream pilot and leave the upstreaming to people dead to prudence.

Now and then Mr. Bixby called my attention to certain things. Said he, "This is Six-Mile Point." I assented. It was pleasant enough information, but I could not see the bearing of it. I was not conscious that it was a

matter of any interest to me. Another time he said, "This is Nine-Mile Point." Later he said, "This is Twelve-Mile Point." They were all about level with the water's edge; they all looked about alike to me; they were monotonously unpicturesque. I hoped Mr. Bixby would change the subject. But no; he would crowd up around a point, hugging the shore with affection, and then say: "The slack water ends here, abreast this bunch of China trees; now we cross over." So he crossed over. He gave me the wheel once or twice, but I had no luck. I either came near chipping off the edge of a sugar plantation, or I yawed too far from shore, and so dropped back into disgrace again and got abused.

The watch was ended at last, and we took supper and went to bed. At midnight the glare of a lantern shone in my eyes, and the night watchman said:

"Come, turn out!"

And then he left. I could not understand this extraordinary procedure; so I presently gave up trying to, and dozed off to sleep. Pretty soon the watchman was back again, and this time he was gruff. I was annoyed. I said:

"What do you want to come bothering around here in the middle of the night for? Now, as like as not, I'll not get to sleep again tonight."

The watchman said:

"Well, if this ain't good, I'm blessed."

The "off-watch" was just turning in, and I heard some brutal laughter from them, and such remarks as "Hello, watchman! ain't the new cub turned out yet? He's delicate, likely. Give him some sugar in a rag, and send for the chambermaid to sing 'Rock-a-by Baby' to him?"

About this time Mr. Bixby appeared on the scene. Something like a minute later I was climbing the pilothouse steps with some of my clothes on and the rest in my arms. Mr. Bixby was close behind, commenting. Here was something fresh—this thing of getting up in the middle of the night to go to work. It was a detail in piloting that had never occurred to me at all. I knew that boats ran all night, but somehow I had never happened to reflect that somebody had to get up out of a warm bed to run them. I began to fear that piloting was not quite so romantic as I had imagined it was; there was something very real and worklike about this new phase of it.

It was a rather dingy night, although a fair number of stars were out. The big mate was at the wheel, and he had the old tub pointed at a star and was holding her straight up the middle of the river. The shores on either hand were not much more than half a mile apart, but they

seemed wonderfully far away and ever so vague and indistinct. The mate said:

“We’ve got to land at Jones’s plantation, sir.”

The vengeful spirit in me exulted. I said to myself, “I wish you joy of your job, Mr. Bixby; you’ll have a good time finding Mr. Jones’s plantation such a night as this; and I hope you never *will* find it as long as you live.”

Mr. Bixby said to the mate:

“Upper end of the plantation, or the lower?”

“Upper.”

“I can’t do it. The stumps there are out of water at this stage. It’s no great distance to the lower, and you’ll have to get along with that.”

“All right, sir. If Jones don’t like it, he’ll have to lump it, I reckon.”

And then the mate left. My exultation began to cool and my wonder to come up. Here was a man who not only proposed to find this plantation on such a night, but to find either end of it you preferred. I dreadfully wanted to ask a question, but I was carrying about as many short answers as my cargo room would admit of, so I held my peace. All I desired to ask Mr. Bixby was the simple question whether he was ass enough to really imagine he was going to find that plantation on a night when all plantations were exactly alike and all of the same color. But I held in. I used to have fine inspirations of prudence in those days.

Mr. Bixby made for the shore and soon was scraping it, just the same as if it had been daylight. And not only that, but singing:

Father in heaven, the day is declining, etc.

It seemed to me that I had put my life in the keeping of a peculiarly reckless outcast. Presently he turned on me and said:

“What’s the name of the first point above New Orleans?”

I was gratified to be able to answer promptly, and I did. I said I didn’t know.

“Don’t *know*?”

This manner jolted me. I was down at the foot again, in a moment. But I had to say just what I had said before.

“Well, you’re a smart one!” said Mr. Bixby. “What’s the name of the *next* point?”

Once more I didn’t know.

“Well, this beats anything. Tell me the name of *any* point or place I told you.”

I studied awhile and decided that I couldn’t.

“Look here! What do you start out from, above Twelve-Mile Point, to cross over?”

“I—I—don’t know.”

“You—you—don’t know?” mimicking my drawling manner of speech. “What *do* you know?”

“I—I—nothing, for certain.”

“By the great Caesar’s ghost, I believe you! You’re the stupidest dunderhead I ever saw or ever heard of, so help me Moses! The idea of *you* being a pilot—*you!* Why, you don’t know enough to pilot a cow down a lane.”

Oh, but his wrath was up! He was a nervous man, and he shuffled from one side of his wheel to the other as if the floor was hot. He would boil awhile to himself, and then overflow and scald me again.

“Look here! What do you suppose I told you the names of those points for?”

I tremblingly considered a moment, and then the devil of temptation provoked me to say:

“Well, to—to—be entertaining, I thought.”

This was a red rag to the bull. He raged and stormed so (he was crossing the river at the time) that I judged it made him blind, because he ran over the steering oar of a trading scow. Of course the traders sent up a volley of red-hot profanity. Never was a man so grateful as Mr. Bixby was; because he was brimful, and here were subjects who could *talk back*. He threw open a window, thrust his head out, and such an irruption followed as I never had heard before. The fainter and farther away the scowmen’s curses drifted, the higher Mr. Bixby lifted his voice and the weightier his adjectives grew. When he closed the window he was empty. You could have drawn a seine through his system and not caught curses enough to disturb your mother with. Presently he said to me in the gentlest way:

“My boy, you must get a little memorandum book; and every time I tell you a thing, put it down right away. There’s only one way to be a pilot, and that is to get this entire river by heart. You have to know it just like A B C.”

That was a dismal revelation to me; for my memory was never loaded with anything but blank cartridges. However, I did not feel discouraged long. I judged that it was best to make some allowances, for doubtless Mr. Bixby was “stretching.” Presently he pulled a rope and struck a few strokes on the big bell. The stars were all gone now, and the night was as black as ink. I could hear the wheels churn along the bank, and I was

not entirely certain that I could see the shore. The voice of the invisible watchman called up from the hurricane deck:

“What’s this, sir?”

“Jones’s plantation.”

I said to myself, “I wish I might venture to offer a small bet that it isn’t.” But I did not chirp. I only waited to see. Mr. Bixby handled the engine bells, and in due time the boat’s nose came to the land, a torch glowed from the forecandle, a man skipped ashore, a darky’s voice on the bank said: “Gimme de k’yarpetbag, Mass’ Jones,” and the next moment we were standing up the river again, all serene. I reflected deeply awhile, and then said—but not aloud—“Well, the finding of that plantation was the luckiest accident that ever happened; but it couldn’t happen again in a hundred years.” And I fully believed it *was* an accident, too.

By the time we had gone seven or eight hundred miles up the river, I had learned to be a tolerably plucky upstream steersman, in daylight; and before we reached St. Louis I had made a trifle of progress in night work, but only a trifle. I had a notebook that fairly bristled with the names of towns, “points,” bars, islands, bends, reaches, etc.; but the information was to be found only in the notebook—none of it was in my head. It made my heart ache to think I had only got half of the river set down; for as our watch was four hours off and four hours on, day and night, there was a long four-hour gap in my book for every time I had slept since the voyage began.

My chief was presently hired to go on a big New Orleans boat, and I packed my satchel and went with him. She was a grand affair. When I stood in her pilothouse I was so far above the water that I seemed perched on a mountain; and her decks stretched so far away, fore and aft, below me, that I wondered how I could ever have considered the little *Paul Jones* a large craft. There were other differences, too. The *Paul Jones’s* pilothouse was a cheap, dingy, battered rattletrap, cramped for room; but here was a sumptuous glass temple; room enough to have a dance in; showy red and gold window curtains; an imposing sofa; leather cushions and a back to the high bench where visiting pilots sit, to spin yarns and “look at the river”; bright, fanciful “cuspidors,” instead of a broad wooden box filled with sawdust; nice new oilcloth on the floor; a hospitable big stove for winter; a wheel as high as my head, costlily with inlaid work; a wire tiller rope; bright brass knobs for the bells; and a tidy, white-aproned, black “texas-tender,” to bring up tarts and ices and coffee during midwatch, day and night. Now this was “something like”; and so I began to take heart once more to believe that piloting was a romantic sort

of occupation after all. The moment we were under way I began to prowl about the great steamer and fill myself with joy. She was as clean and as dainty as a drawing room; when I looked down her long, gilded saloon, it was like gazing through a splendid tunnel; she had an oil picture, by some gifted sign painter, on every stateroom door; she glittered with no end of prism-fringed chandeliers; the clerk's office was elegant, the bar was marvelous, and the barkeeper had been barbered and upholstered at incredible cost. The boiler deck (*i. e.*, the second story of the boat, so to speak) was as spacious as a church, it seemed to me; so with the forecastle; and there was no pitiful handful of deck hands, firemen, and roustabouts down there, but a whole battalion of men. The fires were fiercely glaring from a long row of furnaces, and over them were eight huge boilers! This was unutterable pomp. The mighty engines—but enough of this. I had never felt so fine before. And when I found that the regiment of natty servants respectfully “sir’d” me, my satisfaction was complete.

A DARING DEED

When I returned to the pilothouse St. Louis was gone, and I was lost. Here was a piece of river which was all down in my book, but I could make neither head nor tail of it; you understand, it was turned around. I had seen it when coming upstream, but I had never faced about to see how it looked when it was behind me. My heart broke again, for it was plain that I had got to learn this troublesome river *both ways*.

The pilothouse was full of pilots, going down to “look at the river.” What is called the “upper river” (the two hundred miles between St. Louis and Cairo, where the Ohio comes in) was low; and the Mississippi changes its channel so constantly that the pilots used to always find it necessary to run down to Cairo to take a fresh look, when their boats were to lie in port a week; that is, when the water was at a low stage. A deal of this “looking at the river” was done by poor fellows who seldom had a berth, and whose only hope of getting one lay in their being always freshly posted and therefore ready to drop into the shoes of some reputable pilot, for a single trip, on account of such pilot's sudden illness, or some other necessity. And a good many of them constantly ran up and down inspecting the river, not because they ever really hoped to get a berth, but because (they being guests of the boat) it was cheaper to “look at the river” than stay ashore and pay board. In time these fellows grew dainty in their tastes, and only infested boats that had an estab-

lished reputation for setting good tables. All visiting pilots were useful, for they were always ready and willing, winter or summer, night or day, to go out in the yawl and help buoy the channel or assist the boat's pilots in any way they could. They were likewise welcomed because all pilots are tireless talkers, when gathered together, and as they talk only about the river they are always understood and are always interesting. Your true pilot cares nothing about anything on earth but the river, and his pride in his occupation surpasses the pride of kings.

We had a fine company of these river inspectors along this trip. There were eight or ten, and there was abundance of room for them in our great pilothouse. Two or three of them wore polished silk hats, elaborate shirt fronts, diamond breastpins, kid gloves, and patent-leather boots. They were choice in their English, and bore themselves with a dignity proper to men of solid means and prodigious reputation as pilots. The others were more or less loosely clad, and wore upon their heads tall felt cones that were suggestive of the days of the Commonwealth.

I was a cipher in this august company, and felt subdued, not to say torpid. I was not even of sufficient consequence to assist at the wheel when it was necessary to put the tiller hard down in a hurry; the guest that stood nearest did that when occasion required—and this was pretty much all the time, because of the crookedness of the channel and the scant water. I stood in a corner; and the talk I listened to took the hope all out of me. One visitor said to another:

“Jim, how did you run Plum Point, coming up?”

“It was in the night, there, and I ran it the way one of the boys on the *Diana* told me; started out about fifty yards above the woodpile on the false point, and held on the cabin under Plum Point till I raised the reef—quarter less twain—then straightened up for the middle bar till I got well abreast the old one-limbed cottonwood in the bend, then got my stern on the cottonwood, and head on the low place above the point, and came through a-booming—nine and a half.”

“Pretty square crossing, an't it?”

“Yes, but the upper bar's working down fast.”

Another pilot spoke up and said:

“I had better water than that, and ran it lower down; started out from the false point—mark twain—raised the second reef abreast the big snag in the bend, and had quarter less twain.”

One of the gorgeous ones remarked:

“I don't want to find fault with your leadsmen, but that's a good deal of water for Plum Point, it seems to me.”

There was an approving nod all around as this quiet snub dropped on the boaster and “settled” him. And so they went on talk-talk-talking. Meantime, the thing that was running in my mind was, “Now, if my ears hear aright, I have not only to get the names of all the towns and islands and bends, and so on, by heart, but I must even get up a warm personal acquaintanceship with every old snag and one-limbed cottonwood and obscure woodpile that ornaments the banks of this river for twelve hundred miles; and more than that, I must actually know where these things are in the dark, unless these guests are gifted with eyes that can pierce through two miles of solid blackness. I wish the piloting business was in Jericho and I had never thought of it.”

At dusk Mr. Bixby tapped the big bell three times (the signal to land), and the captain emerged from his drawing room in the forward end of the “texas,” and looked up inquiringly. Mr. Bixby said:

“We will lay up here all night, captain.”

“Very well, sir.”

That was all. The boat came to shore and was tied up for the night. It seemed to me a fine thing that the pilot could do as he pleased, without asking so grand a captain’s permission. I took my supper and went immediately to bed, discouraged by my day’s observations and experiences. My late voyage’s notebooking was but a confusion of meaningless names. It had tangled me all up in a knot every time I had looked at it in the daytime. I now hoped for respite in sleep; but no, it reveled all through my head till sunrise again, a frantic and tireless nightmare.

Next morning I felt pretty rusty and low-spirited. We went booming along, taking a good many chances, for we were anxious to “get out of the river” (as getting out to Cairo was called) before night should overtake us. But Mr. Bixby’s partner, the other pilot, presently grounded the boat, and we lost so much time getting her off that it was plain the darkness would overtake us a good long way above the mouth. This was a great misfortune, especially to certain of our visiting pilots, whose boats would have to wait for their return, no matter how long that might be. It sobered the pilothouse talk a good deal. Coming upstream, pilots did not mind low water or any kind of darkness; nothing stopped them but fog. But downstream work was different; a boat was too nearly helpless, with a stiff current pushing behind her; so it was not customary to run downstream at night in low water.

There seemed to be one small hope, however: if we could get through the intricate and dangerous Hat Island crossing before night, we could venture the rest, for we would have plainer sailing and better water. But

it would be insanity to attempt Hat Island at night. So there was a deal of looking at watches all the rest of the day, and a constant ciphering upon the speed we were making. Hat Island was the eternal subject; sometimes hope was high and sometimes we were delayed in a bad crossing, and down it went again. For hours all hands lay under the burden of this suppressed excitement; it was even communicated to me, and I got to feeling so solicitous about Hat Island, and under such an awful pressure of responsibility, that I wished I might have five minutes on shore to draw a good, full, relieving breath, and start over again. We were standing no regular watches. Each of our pilots ran such portions of the river as he had run when coming upstream, because of his greater familiarity with it; but both remained in the pilothouse constantly.

An hour before sunset Mr. Bixby took the wheel, and Mr. W. stepped aside. For the next thirty minutes every man held his watch in his hand and was restless, silent, and uneasy. At last somebody said, with a dooeful sigh:

“Well, yonder’s Hat Island—and we can’t make it.”

All the watches closed with a snap, everybody sighed and muttered something about its being “too bad, too bad—ah, if we could *only* have got here half an hour sooner!” and the place was thick with the atmosphere of disappointment. Some started to go out, but loitered, hearing no bell-tap to land. The sun dipped behind the horizon, the boat went on. Inquiring looks passed from one guest to another; and one who had his hand on the doorknob and had turned it, waited, then presently took away his hand and let the knob turn back again. We bore steadily down the bend. More looks were exchanged, and nods of surprised admiration—but no words. Insensibly the men drew together behind Mr. Bixby, as the sky darkened and one or two dim stars came out. The dead silence and sense of waiting became oppressive. Mr. Bixby pulled the cord, and two deep, mellow notes from the big bell floated off on the night. Then a pause, and one more note was struck. The watchman’s voice followed, from the hurricane deck:

“Labboard lead, there! Stabboard lead!”

The cries of the leadsmen began to rise out of the distance, and were gruffly repeated by the word-passers on the hurricane deck.

“M-a-r-k three! M-a-r-k three! Quarter-less-three! Half twain! Quarter twain! M-a-r-k twain! Quarter-less—”

Mr. Bixby pulled two bell ropes, and was answered by faint jinglings far below in the engine room, and our speed slackened. The steam began

to whistle through the gauge cocks. The cries of the leadsmen went on—and it is a weird sound, always, in the night. Every pilot in the lot was watching now, with fixed eyes, and talking under his breath. Nobody was calm and easy but Mr. Bixby. He would put his wheel down and stand on a spoke, and as the steamer swung into her (to me) utterly invisible marks—for we seemed to be in the midst of a wide and gloomy sea—he would meet and fasten her there. Out of the murmur of half-audible talk, one caught a coherent sentence now and then—such as:

“There; she’s over the first reef all right!”

After a pause, another subdued voice:

“Her stern’s coming down just *exactly* right, by *George!*”

“Now she’s in the marks; over she goes!”

Somebody else muttered:

“Oh, it was done beautiful—*beautiful!*”

Now the engines were stopped altogether, and we drifted with the current. Not that I could see the boat drift, for I could not, the stars being all gone by this time. This drifting was the dismalest work; it held one’s heart still. Presently I discovered a blacker gloom than that which surrounded us. It was the head of the island. We were closing right down upon it. We entered its deeper shadow, and so imminent seemed the peril that I was likely to suffocate; and I had the strongest impulse to do *something*, anything, to save the vessel. But still Mr. Bixby stood by his wheel, silent, intent as a cat, and all the pilots stood shoulder to shoulder at his back.

“She’ll not make it!” somebody whispered.

The water grew shoaler and shoaler, by the leadsmen’s cries, till it was down to:

“Eight-and-a-half! E-i-g-h-t feet! E-i-g-h-t feet! Seven-and—”

Mr. Bixby said warningly through his speaking tube to the engineer:

“Stand by, now!”

“Ay, ay, sir!”

“Seven-and-a-half! Seven feet! *Six*-and—”

We touched bottom! Instantly Mr. Bixby set a lot of bells ringing, shouted through the tube, “*Now*, let her have it—every ounce you’ve got!” then to his partner, “Put her hard down! snatch her! snatch her!” The boat rasped and ground her way through the sand, hung upon the apex of disaster a single tremendous instant, and then over she went! And such a shout as went up at Mr. Bixby’s back never loosened the roof of a pilothouse before.

There was no more trouble after that. Mr. Bixby was a hero that night; and it was some little time, too, before his exploit ceased to be talked about by rivermen.

Fully to realize the marvelous precision required in laying the great steamer in her marks in that murky waste of water, one should know that not only must she pick her intricate way through snags and blind reefs, and then shave the head of the island so closely as to brush the overhanging foliage with her stern, but at one place she must pass almost within arm's reach of a sunken and invisible wreck that would snatch the hull timbers from under her if she should strike it, and destroy a quarter of a million dollars' worth of steamboat and cargo in five minutes, and maybe a hundred and fifty human lives into the bargain.

The last remark I heard that night was a compliment to Mr. Bixby, uttered in soliloquy and with unction by one of our guests. He said:

"By the Shadow of Death, but he's a lightning pilot!"

PERPLEXING LESSONS

At the end of what seemed a tedious while, I had managed to pack my head full of islands, towns, bars, "points," and bends; and a curiously inanimate mass of lumber it was, too. However, inasmuch as I could shut my eyes and reel off a good long string of these names without leaving out more than ten miles of river in every fifty, I began to feel that I could take a boat down to New Orleans if I could make her skip those little gaps. But of course my complacency could hardly get start enough to lift my nose a trifle into the air, before Mr. Bixby would think of something to fetch it down again. One day he turned on me suddenly with this settler:

"What is the shape of Walnut Bend?"

He might as well have asked me my grandmother's opinion of protoplasm. I reflected respectfully, and then said I didn't know it had any particular shape. My gunpowdery chief went off with a bang, of course, and then went on loading and firing until he was out of adjectives.

I had learned long ago that he only carried just so many rounds of ammunition, and was sure to subside into a very placable and even remorseful old smoothbore as soon as they were all gone. That word "old" is merely affectionate; he was not more than thirty-four. I waited. By and by he said:

"My boy, you've got to know the *shape* of the river perfectly. It is all there is left to steer by on a very dark night. Everything else is blotted

out and gone. But mind you, it hasn't the same shape in the night that it has in the daytime."

"How on earth am I ever going to learn it, then?"

"How do you follow a hall at home in the dark? Because you know the shape of it. You can't see it."

"Do you mean to say that I've got to know all the million trifling variations of shape in the banks of this interminable river as well as I know the shape of the front hall at home?"

"On my honor, you've got to know them *better* than any man ever did know the shapes of the halls in his own house."

"I wish I was dead!"

"Now, I don't want to discourage you, but—"

"Well, pile it on me; I might as well have it now as another time."

"You see, this has got to be learned; there isn't any getting around it. A clear starlight night throws such heavy shadows that, if you didn't know the shape of a shore perfectly, you would claw away from every bunch of timber, because you would take the black shadow of it for a solid cape; and you see you would be getting scared to death every fifteen minutes by the watch. You would be fifty yards from shore all the time when you ought to be within fifty feet of it. You can't see a snag in one of those shadows, but you know exactly where it is, and the shape of the river tells you when you are coming to it. Then there's your pitch-dark night; the river is a very different shape on a pitch-dark night from what it is on a starlight night. All shores seem to be straight lines, then, and mighty dim ones, too; and you'd *run* them for straight lines, only you know better. You boldly drive your boat right into what seems to be a solid, straight wall (you knowing very well that in reality there is a curve there), and that wall falls back and makes way for you. Then there's your gray mist. You take a night when there's one of these grisly, drizzly, gray mists, and then there isn't *any* particular shape to a shore. A gray mist would tangle the head of the oldest man that ever lived. Well, then, different kinds of *moonlight* change the shape of the river in different ways. You see—"

"Oh, don't say any more, please! Have I got to learn the shape of the river according to all these five hundred thousand different ways? If I tried to carry all that cargo in my head it would make me stoop-shouldered."

"*No!* you only learn *the* shape of the river; and you learn it with such absolute certainty that you can always steer by the shape that's *in your head*, and never mind the one that's before your eyes."

“Very well, I’ll try it; but, after I have learned it, can I depend on it? Will it keep the same form and not go fooling around?”

Before Mr. Bixby could answer, Mr. W. came in to take the watch, and he said:

“Bixby, you’ll have to look out for President’s Island, and all that country clear away up above the Old Hen and Chickens. The banks are caving and the shape of the shores changing like everything. Why, you wouldn’t know the point above 40. You can go up inside³ the old sycamore snag, now.”

So that question was answered. Here were leagues of shore changing shape. My spirits were down in the mud again. Two things seemed pretty apparent to me. One was that in order to be a pilot a man had got to learn more than any one man ought to be allowed to know; and the other was that he must learn it all over again in a different way every twenty-four hours.

That night we had the watch until twelve. Now it was an ancient river custom for the two pilots to chat a bit when the watch changed. While the relieving pilot put on his gloves and lit his cigar, his partner, the retiring pilot, would say something like this:

“I judge the upper bar is making down a little at Hale’s Point; had quarter twain with the lower lead and mark twain⁴ with the other.”

“Yes, I thought it was making down a little, last trip. Meet any boats?”

“Met one abreast the head of 21, but she was away over hugging the bar, and I couldn’t make her out entirely. I took her for the *Sunny South*—hadn’t any skylights forward of the chimneys.”

And so on. And as the relieving pilot took the wheel his partner⁵ would mention that we were in such-and-such a bend, and say we were abreast of such-and-such a man’s woodyard or plantation. This was courtesy; I supposed it was *necessity*. But Mr. W. came on watch full twelve minutes late on this particular night—a tremendous breach of etiquette; in fact, it is the unpardonable sin among pilots. So Mr. Bixby gave him no greeting whatever, but simply surrendered the wheel and marched out of the pilothouse without a word. I was appalled; it was a villainous night for blackness, we were in a particularly wide and blind part of the river, where there was no shape or substance to anything, and it seemed incredible that Mr. Bixby should have left that poor fellow to kill the boat,

3. It may not be necessary, but still it can do no harm to explain that “inside” means between the snag and the shore.—M. T.

4. Two fathoms. Quarter twain is 2¼ fathoms, 13½ feet. Mark three is three fathoms.

5. “Partner” is technical for “the other pilot.”

trying to find out where he was. But I resolved that I would stand by him anyway. He should find that he was not wholly friendless. So I stood around, and waited to be asked where we were. But Mr. W. plunged on serenely through the solid firmament of black cats that stood for an atmosphere, and never opened his mouth. "Here is a proud devil!" thought I; "here is a limb of Satan that would rather send us all to destruction than put himself under obligations to me, because I am not yet one of the salt of the earth and privileged to snub captains and lord it over everything dead and alive in a steamboat." I presently climbed up on the bench; I did not think it was safe to go to sleep while this lunatic was on watch.

However, I must have gone to sleep in the course of time, because the next thing I was aware of was the fact that day was breaking, Mr. W. gone, and Mr. Bixby at the wheel again. So it was four o'clock and all well—but me; I felt like a skinful of dry bones, and all of them trying to ache at once.

Mr. Bixby asked me what I had stayed up there for. I confessed that it was to do Mr. W. a benevolence—tell him where he was. It took five minutes for the entire preposterousness of the thing to filter into Mr. Bixby's system, and then I judge it filled him nearly up to the chin; because he paid me a compliment—and not much of a one either. He said:

"Well, taking you by and large, you do seem to be more different kinds of an ass than any creature I ever saw before. What did you suppose he wanted to know for?"

I said I thought it might be a convenience to him.

"Convenience! D--- nation! Didn't I tell you that a man's got to know the river in the night the same as he'd know his own front hall?"

"Well, I can follow the front hall in the dark if I know it *is* the front hall; but suppose you set me down in the middle of it in the dark and not tell me which hall it is; how am *I* to know?"

"Well, you've *got* to, on the river!"

"All right. Then I'm glad I never said anything to Mr. W."

"I should say so! Why, he'd have slammed you through the window and utterly ruined a hundred dollars' worth of window sash and stuff."

I was glad this damage had been saved, for it would have made me unpopular with the owners. They always hated anybody who had the name of being careless and injuring things.

I went to work now to learn the shape of the river; and of all the eluding and ungraspable objects that ever I tried to get mind or hands on, that was the chief. I would fasten my eyes upon a sharp, wooded

point that projected far into the river some miles ahead of me, and go to laboriously photographing its shape upon my brain; and just as I was beginning to succeed to my satisfaction, we would draw up toward it and the exasperating thing would begin to melt away and fold back into the bank! If there had been a conspicuous dead tree standing upon the very point of the cape, I would find that tree inconspicuously merged into the general forest, and occupying the middle of a straight shore, when I got abreast of it! No prominent hill would stick to its shape long enough for me to make up my mind what its form really was, but it was as dissolving and changeful as if it had been a mountain of butter in the hottest corner of the tropics. Nothing ever had the same shape when I was coming downstream that it had borne when I went up. I mentioned these little difficulties to Mr. Bixby. He said:

“That’s the very main virtue of the thing. If the shapes didn’t change every three seconds they wouldn’t be of any use. Take this place where we are now, for instance. As long as that hill over yonder is only one hill, I can boom right along the way I’m going; but the moment it splits at the top and forms a V, I know I’ve got to scratch to starboard in a hurry, or I’ll bang this boat’s brains out against a rock; and then the moment one of the prongs of the V swings behind the other, I’ve got to waltz to larboard again, or I’ll have a misunderstanding with a snag that would snatch the keelson out of this steamboat as neatly as if it were a sliver in your hand. If that hill didn’t change its shape on bad nights there would be an awful steamboat graveyard around here inside of a year.”

It was plain that I had got to learn the shape of the river in all the different ways that could be thought of—upside down, wrong end first, inside out, fore-and-aft, and “thortships”—and then know what to do on gray nights when it hadn’t any shape at all. So I set about it. In the course of time I began to get the best of this knotty lesson, and my self-complacency moved to the front once more. Mr. Bixby was all fixed, and ready to start it to the rear again. He opened on me after this fashion:

“How much water did we have in the middle crossing at Hole-in-the-Wall, trip before last?”

I considered this an outrage. I said:

“Every trip, down and up, the leadsmen are singing through that tangled place for three-quarters of an hour on a stretch. How do you reckon I can remember such a mess as that?”

“My boy, you’ve got to remember it. You’ve got to remember the exact

spot and the exact marks the boat lay in when we had the shoalest water, in every one of the five hundred shoal places between St. Louis and New Orleans; and you mustn't get the shoal soundings and marks of one trip mixed up with the shoal soundings and marks of another, either, for they're not often twice alike. You must keep them separate."

When I came to myself again, I said.

"When I get so that I can do that, I'll be able to raise the dead, and then I won't have to pilot a steamboat to make a living. I want to retire from this business. I want a slush bucket and a brush; I'm only fit for a roustabout. I haven't got brains enough to be a pilot; and if I had I wouldn't have strength enough to carry them around, unless I went on crutches."

"Now drop that! When I say I'll learn ⁶ a man the river, I mean it. And you can depend on it, I'll learn him or kill him."

CONTINUED PERPLEXITIES

There was no use in arguing with a person like this. I promptly put such a strain on my memory that by and by even the shoal water and the countless crossing marks began to stay with me. But the result was just the same. I never could more than get one knotty thing learned before another presented itself. Now I had often seen pilots gazing at the water and pretending to read it as if it were a book; but it was a book that told me nothing. A time came at last, however, when Mr. Bixby seemed to think me far enough advanced to bear a lesson on water-reading. So he began:

"Do you see that long, slanting line on the face of the water? Now, that's a reef. Moreover, it's a bluff reef. There is a solid sand bar under it that is nearly as straight up and down as the side of a house. There is plenty of water close up to it, but mighty little on top of it. If you were to hit it you would knock the boat's brains out. Do you see where the line fringes out at the upper end and begins to fade away?"

"Yes, sir."

"Well, that is a low place; that is the head of the reef. You can climb over there, and not hurt anything. Cross over, now, and follow along close under the reef—easy water there—not much current."

I followed the reef along till I approached the fringed end. Then Mr. Bixby said:

"Now get ready. Wait till I give the word. She won't want to mount

6. "Teach" is not in the river vocabulary.

the reef; a boat hates shoal water. Stand by—wait—*wait*—keep her well in hand. *Now* cramp her down! Snatch her! snatch her!”

He seized the other side of the wheel and helped to spin it around until it was hard down, and then we held it so. The boat resisted, and refused to answer for a while, and next she came surging to starboard, mounted the reef, and sent a long, angry ridge of water foaming away from her bows.

“Now watch her; watch her like a cat, or she’ll get away from you. When she fights strong and the tiller slips a little, in a jerky, greasy sort of way, let up on her a trifle; it is the way she tells you at night that the water is too shoal; but keep edging her up, little by little, toward the point. You are well up on the bar now; there is a bar under every point, because the water that comes down around it forms an eddy and allows the sediment to sink. Do you see those fine lines on the face of the water that branch out like the ribs of a fan? Well, those are little reefs; you want to just miss the ends of them, but run them pretty close. Now look out—look out! Don’t you crowd that slick, greasy-looking place; there ain’t nine feet there; she won’t stand it. She begins to smell it; look sharp, I tell you! Oh, blazes, there you go! Stop the starboard wheel! Quick! Ship up to back! Set her back!”

The engine bells jingled and the engines answered promptly, shooting white columns of steam far aloft out of the ’scapepipes, but it was too late. The boat had “smelt” the bar in good earnest; the foamy ridges that radiated from her bows suddenly disappeared, a great swell came rolling forward, and swept ahead of her, she careened far over to larboard, and went tearing away toward the shore as if she were about scared to death. We were a good mile from where we ought to have been when we finally got the upper hand of her again.

During the afternoon watch the next day, Mr. Bixby asked me if I knew how to run the next few miles. I said:

“Go inside the first snag above the point, outside the next one, start out from the lower end of Higgins’s woodyard, make a square crossing, and—”

“That’s all right. I’ll be back before you close up on the next point.”

But he wasn’t. He was still below when I rounded it and entered upon a piece of the river which I had some misgivings about. I did not know that he was hiding behind a chimney to see how I would perform. I went gaily along, getting prouder and prouder, for he had never left the boat in my sole charge such a length of time before. I even got to

“setting” her and letting the wheel go entirely, while I vaingloriously turned my back and inspected the stern marks and hummed a tune, a sort of easy indifference which I had prodigiously admired in Bixby and other great pilots. Once I inspected rather long, and when I faced to the front again my heart flew into my mouth so suddenly that if I hadn’t clapped my teeth together I should have lost it. One of those frightful bluff reefs was stretching its deadly length right across our bows! My head was gone in a moment; I did not know which end I stood on; I gasped and could not get my breath; I spun the wheel down with such rapidity that it wove itself together like a spider’s web; the boat answered and turned square away from the reef, but the reef followed her! I fled, but still it followed, still it kept—right across my bows! I never looked to see where I was going, I only fled. The awful crash was imminent. Why didn’t that villain come? If I committed the crime of ringing a bell I might get thrown overboard. But better that than kill the boat. So in blind desperation, I started such a rattling “shivaree” down below as never had astounded an engineer in this world before, I fancy. Amidst the frenzy of the bells the engines began to back and fill in a curious way, and my reason forsook its throne—we were about to crash into the woods on the other side of the river. Just then Mr. Bixby stepped calmly into view on the hurricane deck. My soul went out to him in gratitude. My distress vanished; I would have felt safe on the brink of Niagara with Mr. Bixby on the hurricane deck. He blandly and sweetly took his toothpick out of his mouth between his fingers, as if it were a cigar—we were just in the act of climbing an overhanging big tree, and the passengers were scudding astern like rats—and lifted up these commands to me ever so gently:

“Stop the starboard! Stop the larboard! Set her back on both!”

The boat hesitated, halted, pressed her nose among the boughs a critical instant, then reluctantly began to back away.

“Stop the larboard! Come ahead on it! Stop the starboard! Come ahead on it! Point her for the bar!”

I sailed away as serenely as a summer’s morning. Mr. Bixby came in and said, with mock simplicity:

“When you have a hail, my boy, you ought to tap the big bell three times before you land, so that the engineers can get ready”

I blushed under the sarcasm, and said I hadn’t had any hail.

“Ah! Then it was for wood, I suppose. The officer of the watch will tell you when he wants to wood up.”

I went on consuming, and said I wasn't after wood.

"Indeed? Why? what could you want over here in the bend, then? Did you ever know of a boat following a bend upstream at this stage of the river?"

"No, sir—and *I* wasn't trying to follow it. I was getting away from a bluff reef."

"No, it wasn't a bluff reef; there isn't one within three miles of where you were."

"But I saw it. It was as bluff as that one yonder."

"Just about. Run over it!"

"Do you give it as an order?"

"Yes. Run over it!"

"If I don't, I wish I may die."

"All right; I am taking the responsibility."

I was just as anxious to kill the boat, now, as I had been to save it before. I impressed my orders upon my memory, to be used at the inquest, and made a straight break for the reef. As it disappeared under our bows I held my breath; but we slid over it like oil.

"Now, don't you see the difference? It wasn't anything but a *wind* reef. The wind does that."

"So I see. But it is exactly like a bluff reef. How am I ever going to tell them apart?"

"I can't tell you. It is an instinct. By and by you will just naturally *know* one from the other, but you never will be able to explain why or how you know them apart."

It turned out to be true. The face of the water, in time, became a wonderful book—a book that was a dead language to the uneducated passenger, but which told its mind to me without reserve, delivering its most cherished secrets as if it uttered them with a voice. And it was not a book to be read once and thrown aside, for it had a new story to tell every day. Throughout the long twelve hundred miles there was never a page that was void of interest, never one that you could leave unread without loss, never one that you would want to skip, thinking you could find higher enjoyment in some other thing. There never was so wonderful a book written by man; never one whose interest was so absorbing, so unflagging, so sparkingly renewed with every reperusal. The passenger who could not read it was charmed with a peculiar sort of faint dimple on its surface (on the rare occasions when he did not overlook it altogether); but to the pilot that was an *italicized* passage; indeed, it was more than

that, it was a legend of the largest capitals, with a string of shouting exclamation points at the end of it, for it meant that a wreck or a rock was buried there that could tear the life out of the strongest vessel that ever floated. It is the faintest and simplest expression the water ever makes, and the most hideous to a pilot's eye. In truth, the passenger who could not read this book saw nothing but all manner of pretty pictures in it, painted by the sun and shaded by the clouds, whereas to the trained eye these were not pictures at all, but the grimmest and most dead-earnest of reading matter.

Now when I had mastered the language of this water, and had come to know every trifling feature that bordered the great river as familiarly as I knew the letters of the alphabet, I had made a valuable acquisition. But I had lost something, too. I had lost something which could never be restored to me while I lived. All the grace, the beauty, the poetry, had gone out of the majestic river! I still kept in mind a certain wonderful sunset which I witnessed when steamboating was new to me. A broad expanse of the river was turned to blood; in the middle distance the red hue brightened into gold, through which a solitary log came floating, black and conspicuous; in one place a long, slanting mark lay sparkling upon the water; in another the surface was broken by boiling, tumbling rings, that were as many-tinted as an opal; where the ruddy flush was faintest, was a smooth spot that was covered with graceful circles and radiating lines, ever so delicately traced; the shore on our left was densely wooded, and the somber shadow that fell from this forest was broken in one place by a long, ruffled trail that shone like silver; and high above the forest wall a clean-stemmed dead tree waved a single leafy bough that glowed like a flame in the unobstructed splendor that was flowing from the sun. There were graceful curves, reflected images, woody heights, soft distances; and over the whole scene, far and near, the dissolving lights drifted steadily, enriching it every passing moment with new marvels of coloring.

I stood like one bewitched. I drank it in, in a speechless rapture. The world was new to me, and I had never seen anything like this at home. But as I have said, a day came when I began to cease from noting the glories and the charms which the moon and the sun and the twilight wrought upon the river's face; another day came when I ceased altogether to note them. Then, if that sunset scene had been repeated, I should have looked upon it without rapture, and should have commented upon it, inwardly, after this fashion: "This sun means that we are

going to have wind tomorrow; that floating log means that the river is rising, small thanks to it; that slanting mark on the water refers to a bluff reef which is going to kill somebody's steamboat one of these nights if it keeps on stretching out like that; those tumbling 'boils' show a dissolving bar and a changing channel there; the lines and circles in the slick water over yonder are a warning that that troublesome place is shoaling up dangerously; that silver streak in the shadow of the forest is the 'break' from a new snag, and he has located himself in the very best place he could have found to fish for steamboats; that tall dead tree, with a single living branch, is not going to last long, and then how is a body ever going to get through this blind place at night without the friendly old landmark?"

No, the romance and beauty were all gone from the river. All the value any feature of it had for me now was the amount of usefulness it could furnish toward compassing the safe piloting of a steamboat. Since those days, I have pitied doctors from my heart. What does the lovely flush in a beauty's cheek mean to a doctor but a "break" that ripples above some deadly disease? Are not all her visible charms sown thick with what are to him the signs and symbols of hidden decay? Does he ever see her beauty at all, or doesn't he simply view her professionally, and comment upon her unwholesome condition all to himself? And doesn't he sometimes wonder whether he has gained most or lost most by learning his trade?

COMPLETING MY EDUCATION

Whoever has done me the courtesy to read my chapters which have preceded this may possibly wonder that I deal so minutely with piloting as a science. It was the prime purpose of those chapters; and I am not quite done yet. I wish to show, in the most patient and painstaking way, what a wonderful science it is. Ship channels are buoyed and lighted, and therefore it is a comparatively easy undertaking to learn to run them; clear-water rivers with gravel bottoms change their channels very gradually, and therefore one needs to learn them but once; but piloting becomes another matter when you apply it to vast streams like the Mississippi and the Missouri, whose alluvial banks cave and change constantly, whose snags are always hunting up new quarters, whose sand bars are never at rest, whose channels are forever dodging and shirking, and whose obstructions must be confronted in all nights and all weathers without the aid of a single lighthouse or a single buoy; for

there is neither light nor buoy to be found anywhere in all this three or four thousand miles of villainous river.⁷ I feel justified in enlarging upon this great science for the reason that I feel sure no one has ever yet written a paragraph about it who had piloted a steamboat himself, and so had a practical knowledge of the subject. If the theme was hackneyed, I should be obliged to deal gently with the reader; but since it is wholly new, I have felt at liberty to take up a considerable degree of room with it.

When I had learned the name and position of every visible feature of the river; when I had so mastered its shape that I could shut my eyes and trace it from St. Louis to New Orleans; when I had learned to read the face of the water as one would cull the news from the morning paper; and finally, when I had trained my dull memory to treasure up an endless array of soundings and crossing marks, and keep fast hold on them, I judged that my education was complete; so I got to tilting my cap to the side of my head, and wearing a toothpick in my mouth at the wheel. Mr. Bixby had his eye on these airs. One day he said:

“What is the height of that bank yonder, at Burgess’s?”

“How can I tell, sir? It is three-quarters of a mile away.”

“Very poor eye—very poor. Take the glass.”

I took the glass and presently said:

“I can’t tell. I suppose that the bank is about a foot and a half high.”

“Foot and a half? That’s a six-foot bank. How high was the bank along here last trip?”

“I don’t know; I never noticed.”

“You didn’t? Well, you must always do it hereafter.”

“Why?”

“Because you’ll have to know a good many things that it tells you. For one thing, it tells you the stage of the river—tells you whether there’s more water or less in the river along here than there was last trip.”

“The leads tell me that.” I rather thought I had the advantage of him there.

“Yes, but suppose the leads lie? The bank would tell you so, and then you would stir those leadsmen up a bit. There was a ten-foot bank here last trip, and there is only a six-foot bank here now. What does that signify?”

“That the river is four feet higher than it was last trip.”

“Very good. Is the river rising or falling?”

7. True at the time referred to; not true now (1882).

“Rising.”

“No, it ain’t.”

“I guess I am right, sir. Yonder is some driftwood floating down the stream.”

“A rise *starts* the driftwood, but then it keeps on floating awhile after the river is done rising. Now the bank will tell you about this. Wait till you come to a place where it shelves a little. Now here: do you see this narrow belt of fine sediment? That was deposited while the water was higher. You see the driftwood begins to strand, too. The bank helps in other ways. Do you see that stump on the false point?”

“Ay, ay, sir.”

“Well, the water is just up to the roots of it. You must make a note of that.”

“Why?”

“Because that means that there’s seven feet in the chute of 103.”

“But 103 is a long way up the river yet.”

“That’s where the benefit of the bank comes in. There is water enough in 103 *now*, yet there may not be by the time we get there, but the bank will keep us posted all along. You don’t run close chutes on a falling river, upstream, and there are precious few of them that you are allowed to run at all downstream. There’s a law of the United States against it. The river may be rising by the time we get to 103, and in that case we’ll run it. We are drawing—how much?”

“Six feet aft—six and a half forward.”

“Well, you do seem to know something.”

“But what I particularly want to know is, if I have got to keep up an everlasting measuring of the banks of this river, twelve hundred miles, month in and month out?”

“Of course!”

My emotions were too deep for words for a while. Presently I said:

“And how about these chutes? Are there many of them?”

“I should say so! I fancy we sha’n’t run any of the river this trip as you’ve ever seen it run before—so to speak. If the river begins to rise again, we’ll go up behind bars that you’ve always seen standing out of the river, high and dry, like a roof of a house; we’ll cut across low places that you’ve never noticed at all, right through the middle of bars that cover three hundred acres of river; we’ll creep through cracks where you’ve always thought was solid land; we’ll dart through the woods and leave twenty-five miles of river off to one side; we’ll see the hindside of every island between New Orleans and Cairo.”

“Then I’ve got to go to work and learn just as much more river as I already know.”

“Just about twice as much more, as near as you can come at it.”

“Well, one lives to find out. I think I was a fool when I went into this business.”

“Yes, that is true. And you are yet. But you’ll not be when you’ve learned it.”

“Ah, I never can learn it.”

“I will see that you *do*.”

By and by I ventured again:

“Have I got to learn all this thing just as I know the rest of the river—shapes and all—and so I can run it at night?”

“Yes. And you’ve got to have good fair marks from one end of the river to the other, that will help the bank tell you when there is water enough in each of these countless places—like that stump, you know. When the river first begins to rise, you can run half a dozen of the deepest of them; when it rises a foot more you can run another dozen; the next foot will add a couple of dozen, and so on: so you see you have to know your banks and marks to a dead moral certainty, and never get them mixed; for when you start through one of those cracks, there’s no backing out again, as there is in the big river; you’ve got to go through, or stay there six months if you get caught on a falling river. There are about fifty of these cracks which you can’t run at all except when the river is brimful and over the banks.”

“This new lesson is a cheerful prospect.”

“Cheerful enough. And mind what I’ve just told you; when you start into one of those places you’ve got to go through. They are too narrow to turn around in, too crooked to back out of, and the shoal water is always *up at the head*; never elsewhere. And the head of them is always likely to be filling up, little by little, so that the marks you reckon their depth by, this season, may not answer for next.”

“Learn a new set, then, every year?”

“Exactly. Cramp her up to the bar! What are you standing up through the middle of the river for?”

The next few months showed me strange things. On the same day that we held the conversation above narrated we met a great rise coming down the river. The whole vast face of the stream was black with drifting dead logs, broken boughs, and great trees that had caved in and been washed away. It required the nicest steering to pick one’s way through this rushing raft, even in the daytime, when crossing from point to

point; and at night the difficulty was mightily increased; every now and then a huge log, lying deep in the water, would suddenly appear right under our bows, coming head-on; no use to try to avoid it then; we could only stop the engines, and one wheel would walk over that log from one end to the other, keeping up a thundering racket and careening the boat in a way that was very uncomfortable to passengers. Now and then we would hit one of these sunken logs a rattling bang, dead in the center, with a full head of steam, and it would stun the boat as if she had hit a continent. Sometimes this log would lodge and stay right across our nose, and back the Mississippi up before it; we would have to do a little crawfishing, then, to get away from the obstruction. We often hit *white* logs in the dark, for we could not see them until we were right on them, but a black log is a pretty distinct object at night. A white snag is an ugly customer when the daylight is gone.

Of course, on the great rise, down came a swarm of prodigious timber rafts from the headwaters of the Mississippi, coal barges from Pittsburgh, little trading scows from everywhere, and broadhorns from "Posey County," Indiana, freighted with "fruit and furniture"—the usual term for describing it, though in plain English the freight thus aggrandized was hoop-poles and pumpkins. Pilots bore a mortal hatred to these craft, and it was returned with usury. The law required all such helpless traders to keep a light burning, but it was a law that was often broken. All of a sudden, on a murky night, a light would hop up, right under our bows, almost, and an agonized voice, with the backwoods "whang" to it, would wail out:

"Whar'n the— you goin' to! Cain't you see nothin', you dash-dashed aig-suckin', sheep-stealin', one-eyed son of a stuffed monkey!"

Then for an instant, as he whistled by, the red glare from our furnaces would reveal the scow and the form of the gesticulating orator, as if under a lightning flash, and in that instant our firemen and deck hands would send and receive a tempest of missiles and profanity, one of our wheels would walk off with the crashing fragments of a steering oar, and down the dead blackness would shut again. And that flatboatman would be sure to go into New Orleans and sue our boat, swearing stoutly that he had a light burning all the time, when in truth his gang had the lantern down below to sing and lie and drink and gamble by, and no watch on deck. Once at night, in one of those forest-bordered crevices (behind an island) which steamboatmen intensely describe with the phrase "as dark as the inside of a cow," we should have eaten up a Posey County family,

fruit, furniture, and all, but that they happened to be fiddling down below and we just caught the sound of the music in time to sheer off, doing no serious damage, unfortunately, but coming so near it that we had good hopes for a moment. These people brought up their lantern, then, of course; and as we backed and filled to get away, the precious family stood in the light of it—both sexes and various ages—and cursed us till everything turned blue. Once a coal-boatman sent a bullet through our pilothouse where we borrowed a steering oar of him in a very narrow place.

THE RIVER RISES

During this big rise these small-fry craft were an intolerable nuisance. We were running chute after chute—a new world to me and if there was a particularly cramped place in a chute, we would be pretty sure to meet a broadhorn there; and if he failed to be there, we would find him in a still worse locality, namely, the head of the chute, on the shoal water. And then there would be no end of profane cordialities exchanged.

Sometimes, in the big river, when we would be feeling our way cautiously along through a fog, the deep hush would suddenly be broken by yells and a clamor of tin pans, and all in an instant a log raft would appear vaguely through the webby veil, close upon us; and then we did not wait to swap knives, but snatched our engine bells out by the roots and piled on all the steam we had, to scramble out of the way! One doesn't hit a rock or a solid log raft with a steamboat when he can get excused.

You will hardly believe it, but many steamboat clerks always carried a large assortment of religious tracts with them in those old departed steamboating days. Indeed they did! Twenty times a day we would be cramping up around a bar, while a string of these small-fry rascals were drifting down into the head of the bend away above and beyond us a couple of miles. Now a skiff would dart away from one of them, and come fighting its laborious way across the desert of water. It would "ease all" in the shadow of our forecastle, and the panting oarsmen would shout, "Gimme a pa-a-per!" as the skiff drifted swiftly astern. The clerk would throw over a file of New Orleans journals. If these were picked up *without comment*, you might notice that now a dozen other skiffs had been drifting down upon us without saying anything. You understand, they had been waiting to see how No. 1 was going to fare. No. 1 making

no comment, all the rest would bend to their oars and come on now; and as fast as they came the clerk would heave over neat bundles of religious tracts, tied to shingles. The amount of hard swearing which twelve packages of religious literature will command when impartially divided up among twelve raftsmen's crews, who have pulled a heavy skiff two miles on a hot day to get them, is simply incredible.

As I have said, the big rise brought a new world under my vision. By the time the river was over its banks we had forsaken our old paths and were hourly climbing over bars that had stood ten feet out of water before; we were shaving stumpy shores, like that at the foot of Madrid Bend, which I had always seen avoided before; we were clattering through chutes like that of 82, where the opening at the foot was an unbroken wall of timber till our nose was almost at the very spot. Some of these chutes were utter solitudes. The dense, untouched forest overhung both banks of the crooked little crack, and one could believe that human creatures had never intruded there before. The swinging grapevines, the grassy nooks and vistas glimpsed as we swept by, the flowering creepers waving their red blossoms from the tops of dead trunks, and all the spendthrift richness of the forest foliage, were wasted and thrown away there. The chutes were lovely places to steer in; they were deep, except at the head; the current was gentle; under the "points" the water was absolutely dead, and the invisible banks so bluff that where the tender willow thickets projected you could bury your boat's broadside in them as you tore along, and then you seemed fairly to fly.

Behind other islands we found wretched little farms, and wretcheder little log cabins; there were crazy rail fences sticking a foot or two above the water, with one or two jean-clad, chills-racked, yellow-faced male misers roosting on the top rail, elbows on knees, jaws in hands, grinding tobacco and discharging the result at floating chips through crevices left by lost teeth; while the rest of the family and the few farm animals were huddled together in an empty wood flat riding at her moorings close at hand. In this flatboat the family would have to cook and eat and sleep for a lesser or greater number of days (or possibly weeks), until the river should fall two or three feet and let them get back to their log cabins and their chills again—chills being a merciful provision of an all-wise Providence to enable them to take exercise without exertion. And this sort of watery camping out was a thing which these people were rather liable to be treated to a couple of times a year: by the December rise out of the Ohio, and the June rise out of the Mis-

Mississippi. And yet these were kindly dispensations, for they at least enabled the poor things to rise from the dead now and then, and look upon life when a steamboat went by. They appreciated the blessing, too, for they spread their mouths and eyes wide open and made the most of these occasions. Now what *could* these banished creatures find to do to keep from dying of the blues during the low-water season!

Once, in one of these lovely island chutes, we found our course completely bridged by a great fallen tree. This will serve to show how narrow some of the chutes were. The passengers had an hour's recreation in a virgin wilderness, while the boat hands chopped the bridge away; for there was no such thing as turning back, you comprehend.

From Cairo to Baton Rouge, when the river is over its banks, you have no particular trouble in the night; for the thousand-mile wall of dense forest that guards the two banks all the way is only gapped with a farm or woodyard opening at intervals, and so you can't "get out of the river" much easier than you could get out of a fenced lane; but from Baton Rouge to New Orleans it is a different matter. The river is more than a mile wide, and very deep—as much as two hundred feet, in places. Both banks, for a good deal over a hundred miles, are shorn of their timber and bordered by continuous sugar plantations, with only here and there a scattering sapling or a row of ornamental China trees. The timber is shorn off clear to the rear of the plantations, from two to four miles. When the first frost threatens to come, the planters snatch off their crops in a hurry. When they have finished grinding the cane, they form the refuse of the stalks (which they call *bagasse*) into great piles and set fire to them, though in other sugar countries the bagasse is used for fuel in the furnaces of the sugar mills. Now the piles of damp bagasse burn slowly, and smoke like Satan's own kitchen.

An embankment ten or fifteen feet high guards both banks of the Mississippi all the way down that lower end of the river, and this embankment is set back from the edge of the shore from ten to perhaps a hundred feet, according to circumstances; say thirty or forty feet, as a general thing. Fill that whole region with an impenetrable gloom of smoke from a hundred miles of burning bagasse piles, when the river is over the banks, and turn a steamboat loose along there at midnight and see how she will feel. And see how you will feel, too! You find yourself away out in the midst of a vague, dim sea that is shoreless, that fades out and loses itself in the murky distances; for you cannot discern the thin rib of embankment, and you are always imagining you see a

straggling tree when you don't. The plantations themselves are transformed by the smoke, and look like a part of the sea. All through your watch you are tortured with the exquisite misery of uncertainty. You hope you are keeping in the river, but you do not know. All that you are sure about is that you are likely to be within six feet of the bank *and* destruction, when you think you are a good half mile from shore. And you are sure, also, that if you chance suddenly to fetch up against the embankment and topple your chimneys overboard, you will have the small comfort of knowing that it is about what you were expecting to do. One of the great Vicksburg packets darted out into a sugar plantation one night, at such a time, and had to stay there a week. But there was no novelty about it; it had often been done before.

I thought I had finished this chapter, but I wish to add a curious thing, while it is in my mind. It is only relevant in that it is connected with piloting. There used to be an excellent pilot on the river, a Mr. X, who was a somnambulist. It was said that if his mind was troubled about a bad piece of river, he was pretty sure to get up and walk in his sleep and do strange things. He was once fellow pilot for a trip or two with George Ealer, on a great New Orleans passenger packet. During a considerable part of the first trip George was uneasy, but got over it by and by, as X seemed content to stay in his bed when asleep. Late one night the boat was approaching Helena, Ark.; the water was low, and the crossing above the town in a very blind and tangled condition. X had seen the crossing since Ealer had, and as the night was particularly drizzly, sullen, and dark, Ealer was considering whether he had not better have X called to assist in running the place, when the door opened and X walked in. Now, on very dark nights, light is a deadly enemy to piloting; you are aware that if you stand in a lighted room, on such a night, you cannot see things in the street to any purpose; but if you put out the lights and stand in the gloom you can make out objects in the street pretty well. So, on very dark nights, pilots do not smoke; they allow no fire in the pilothouse stove, if there is a crack which can allow the least ray to escape; they order the furnaces to be curtained with huge tarpaulins and the skylights to be closely blinded. Then no light whatever issues from the boat. The undefinable shape that now entered the pilothouse had Mr. X's voice. This said:

"Let me take her, George; I've seen this place since you have, and it is so crooked that I reckon I can run it myself easier than I could tell you how to do it."

"It is kind of you, and I swear *I* am willing. I haven't got another drop

of perspiration left in me. I have been spinning around and around the wheel like a squirrel. It is so dark I can't tell which way she is swinging till she is coming around like a whirligig."

So Ealer took a seat on the bench, panting and breathless. The black phantom assumed the wheel without saying anything, steadied the waltzing steamer with a turn or two, and then stood at ease, coaxing her a little to this side and then to that, as gently and as sweetly as if the time had been noonday. When Ealer observed this marvel of steering, he wished he had not confessed! He stared, and wondered, and finally said:

"Well, I thought I knew how to steer a steamboat, but that was another mistake of mine."

X said nothing, but went serenely on with his work. He rang for the leads; he rang to slow down the steam; he worked the boat carefully and neatly into invisible marks, then stood at the center of the wheel and peered blandly out into the blackness, fore and aft, to verify his position; as the leads shoaled more and more, he stopped the engines entirely, and the dead silence and suspense of "drifting" followed; when the shoalest water was struck, he cracked on the steam, carried her handsomely over, and then began to work her warily into the next system of shoal marks; the same patient, heedful use of leads and engines followed, the boat slipped through without touching bottom, and entered upon the third and last intricacy of the crossing; imperceptibly she moved through the gloom, crept by inches into her marks, drifted tediously till the shoalest water was cried, and then, under a tremendous head of steam, went swinging over the reef and away into deep water and safety!

Ealer let his long-pent breath pour in a great relieving sigh, and said:

"That's the sweetest piece of piloting that was ever done on the Mississippi River! I wouldn't believe it could be done, if I hadn't seen it."

There was no reply, and he added:

"Just hold her five minutes longer, partner, and let me run down and get a cup of coffee."

A minute later Ealer was biting into a pie, down in the "texas," and comforting himself with coffee. Just then the night watchman happened in, and was about to happen out again, when he noticed Ealer and exclaimed:

"Who is at the wheel, sir?"

"X."

"Dart for the pilothouse, quicker than lightning!"

The next moment both men were flying up the pilothouse companion-way, three steps at a jump! Nobody there! The great steamer was

whistling down the middle of the river at her own sweet will! The watchman shot out of the place again; Ealer seized the wheel, set an engine back with power, and held his breath while the boat reluctantly swung away from a "towhead," which she was about to knock into the middle of the Gulf of Mexico!

By and by the watchman came back and said:

"Didn't that lunatic tell you he was asleep, when he first came up here?"

"No."

"Well, he was. I found him walking along on top of the railings, just as unconcerned as another man would walk a pavement; and I put him to bed; now just this minute there he was again, away astern, going through that sort of tightrope deviltry the same as before."

"Well, I think I'll stay by next time he has one of those fits. But I hope he'll have them often. You just ought to have seen him take this boat through Helena crossing. *I* never saw anything so gaudy before. And if he can do such a gold-leaf, kid-glove, diamond-breastpin piloting when he is sound asleep, what *couldn't* he do if he was dead!"

SOUNDING

When the river is very low, and one's steamboat is "drawing all the water" there is in the channel—or a few inches more, as was often the case in the old times—one must be painfully circumspect in his piloting. We used to have to "sound" a number of particularly bad places almost every trip when the river was at a very low stage.

Sounding is done in this way: The boat ties up at the shore, just above the shoal crossing; the pilot not on watch takes his "cub" or steersman and a picked crew of men (sometimes an officer also), and goes out in the yawl—provided the boat has not that rare and sumptuous luxury, a regularly devised "sounding-boat"—and proceeds to hunt for the best water, the pilot on duty watching his movements through a spyglass, meantime, and in some instances assisting by signals of the boat's whistle, signifying "try higher up" or "try lower down"; for the surface of the water, like an oil painting, is more expressive and intelligible when inspected from a little distance than very close at hand. The whistle signals are seldom necessary, however; never, perhaps, except when the wind confuses the significant ripples upon the water's surface. When the yawl has reached the shoal place, the speed is slackened, the pilot begins to sound the depth with a pole ten or twelve feet long, and the steersman at the tiller

obeys the order to “hold her up to starboard”; so “let her fall off to larboard”;⁸ or “steady—steady as you go.”

When the measurements indicate that the yawl is approaching the shoalest part of the reef, the command is given to “Ease all!” Then the men stop rowing and the yawl drifts with the current. The next order is, “Stand by with the buoy!” The moment the shallowest point is reached, the pilot delivers the order, “Let go the buoy!” and over she goes. If the pilot is not satisfied, he sounds the place again; if he finds the water higher up or lower down, he removes the buoy to that place. Being finally satisfied, he gives the order, and all the men stand their oars straight up in the air, in line; a blast from the boat’s whistle indicates that the signal has been seen; then the men “give away” on their oars and lay the yawl alongside the buoy; the steamer comes creeping carefully down, is pointed straight at the buoy, husband her power for the coming struggle, and presently, at the critical moment, turns on all her steam and goes grinding and wallowing over the buoy and the sand; and gains the deep water beyond. Or maybe she doesn’t; maybe she “strikes and swings.” Then she has to while away several hours (or days) sparring herself off.

Sometimes a buoy is not laid at all, but the yawl goes ahead, hunting the best water, and the steamer follows along in its wake. Often there is a deal of fun and excitement about sounding, especially if it is a glorious summer day, or a blustering night. But in winter the cold and the peril take most of the fun out of it.

A buoy is nothing but a board four or five feet long, with one end turned up; it is a reversed schoolhouse bench, with one of the supports left and the other removed. It is anchored on the shoalest part of the reef by a rope with a heavy stone made fast to the end of it. But for the resistance of the turned-up end of the reversed bench, the current would pull the buoy under water. At night, a paper lantern with a candle in it is fastened on top of the buoy, and this can be seen a mile or more, a little glimmering spark in the waste of blackness.

Nothing delights a cub so much as an opportunity to go out sounding. There is such an air of adventure about it; often there is danger; it is so gaudy and man-of-warlike to sit up in the stern sheets and steer a swift yawl; there is something fine about the exultant spring of the boat when an experienced old sailor crew throw their souls into the oars; it is lovely to see the white foam stream away from the bows; there is music

8. The term “larboard” is never used at sea, now, to signify the left hand; but was always used on the river in my time.

in the rush of the water; it is deliciously exhilarating, in summer, to go speeding over the breezy expanses of the river when the world of wavelets is dancing in the sun. It is such grandeur, too, to the cub, to get a chance to give an order; for often the pilot will simply say, "Let her go about!" and leave the rest to the cub, who instantly cries, in his sternest tone of command, "Ease starboard! Strong on the larboard! Starboard, give way! With a will, men!" The cub enjoys sounding for the further reason that the eyes of the passengers are watching all the yawl's movements with absorbing interest, if the time be daylight; and if it be night, he knows that those same wondering eyes are fastened upon the yawl's lantern as it glides out into the gloom and dims away in the remote distance.

One trip a pretty girl of sixteen spent her time in our pilothouse with her uncle and aunt, every day and all day long. I fell in love with her. So did Mr. Thornburg's cub, Tom G. Tom and I had been bosom friends until this time; but now a coolness began to arise. I told the girl a good many of my river adventures, and made myself out a good deal of a hero; Tom tried to make himself appear to be a hero, too, and succeeded to some extent, but then he always had a way of embroidering. However, virtue is its own reward, so I was a barely perceptible trifle ahead in the contest. About this time something happened which promised handsomely for me: the pilots decided to sound the crossing at the head of 21. This would occur about nine or ten o'clock at night, when the passengers would be still up; it would be Mr. Thornburg's watch, therefore my chief would have to do the sounding. We had a perfect love of a sounding boat—long, trim, graceful, and as fleet as a greyhound; her thwarts were cushioned; she carried twelve oarsmen; one of the mates was always sent in her to transmit orders to her crew, for ours was a steamer where no end of "style" was put on.

We tied up at the shore above 21, and got ready. It was a foul night, and the river was so wide there that a landsman's uneducated eyes could discern no opposite shore through such a gloom. The passengers were alert and interested; everything was satisfactory. As I hurried through the engine room, picturesquely gotten up in storm toggery, I met Tom, and could not forbear delivering myself of a mean speech:

"Ain't you glad *you* don't have to go out sounding?"

Tom was passing on, but he quickly turned, and said:

"Now just for that, you can go and get the sounding pole yourself. I was going after it, but I'd see you in Halifax, now, before I'd do it."

"Who wants you to get it? I don't. It's in the sounding boat."

"It ain't, either. It's been new-painted; and it's been up on the ladies' cabin guards two days, drying."

I flew back, and shortly arrived among the crowd of watching and wondering ladies just in time to hear the command:

"Give way, men!"

I looked over, and there was the gallant sounding boat booming away, the unprincipled Tom presiding at the tiller, and my chief sitting by him with the sounding pole which I had been sent on a fool's errand to fetch. Then that young girl said to me:

"Oh, how awful to have to go out in that little boat on such a night! Do you think there is any danger?"

I would rather have been stabbed. I went off, full of venom, to help in the pilothouse. By and by the boat's lantern disappeared, and after an interval a wee spark glimmered upon the face of the water a mile away. Mr. Thornburg blew the whistle in acknowledgment, backed the steamer out, and made for it. We flew along for a while, then slackened steam and went cautiously gliding toward the spark. Presently Mr. Thornburg exclaimed:

"Hello, the buoy lantern's out!"

He stopped the engines. A moment or two later he said:

"Why, there it is again!"

So he came ahead on the engines once more, and rang for the leads. Gradually the water shoaled up, and then began to deepen again! Mr. Thornburg muttered:

"Well, I don't understand this. I believe that buoy has drifted off the reef. Seems to be a little too far to the left. No matter, it is safest to run over it, anyhow."

So, in that solid world of darkness we went creeping down on the light. Just as our bows were in the act of plowing over it, Mr. Thornburg seized the bell ropes, rang a startling peal, and exclaimed:

"My soul, it's the sounding boat!"

A sudden chorus of wild alarms burst out far below—a pause—and then a sound of grinding and crashing followed. Mr. Thornburg exclaimed:

"There! The paddle wheel has ground the sounding boat to lucifer matches! Run! See who is killed!"

I was on the main deck in the twinkling of an eye. My chief and the third mate and nearly all the men were safe. They had discovered their danger when it was too late to pull out of the way; then, when the great guards overshadowed them a moment later, they were prepared and

knew what to do; at my chief's order they sprang at the right instant, seized the guard, and were hauled aboard. The next moment the sounding yawl swept aft to the wheel and was struck and splintered to atoms. Two of the men and the cub Tom were missing—a fact which spread like wildfire over the boat. The passengers came flocking to the forward gangway, ladies and all, anxious-eyed, white-faced, and talked in awed voices of the dreadful thing. And often and again I heard them say, "Poor fellows! poor boy, poor boy!"

By this time the boat's yawl was manned and away, to search for the missing. Now a faint call was heard, off to the left. The yawl had disappeared in the other direction. Half the people rushed to one side to encourage the swimmer with their shouts; the other half rushed the other way to shriek to the yawl to turn about. By the callings the swimmer was approaching, but some said the sound showed failing strength. The crowd massed themselves against the boiler-deck railings, leaning over and staring into the gloom; and every faint and fainter cry wrung from them such words as "Ah, poor fellow, poor fellow! is there *no way to save him?*"

But still the cries held out, and drew nearer, and presently the voice said pluckily:

"I can make it! Stand by with a rope!"

What a rousing cheer they gave him! The chief mate took his stand in the glare of a torch basket, a coil of rope in his hand, and his men grouped about him. The next moment the swimmer's face appeared in the circle of light, and in another one the owner of it was hauled aboard, limp and drenched, while cheer on cheer went up. It was that devil Tom.

The yawl crew searched everywhere, but found no sign of the two men. They probably failed to catch the guard, tumbled back, and were struck by the wheel and killed. Tom had never jumped for the guard at all, but had plunged headfirst into the river and dived under the wheel. It was nothing; I could have done it easy enough, and I said so; but everybody went on just the same, making a wonderful to-do over that ass, as if he had done something great. That girl couldn't seem to have enough of that pitiful "hero" the rest of the trip; but little I cared; I loathed her, anyway.

The way we came to mistake the sounding boat's lantern for the buoy light was this: My chief said that after laying the buoy he fell away and watched it till it seemed to be secure; then he took up a position a few hundred yards below it and a little to one side of the steamer's course,

headed the sounding boat upstream, and waited. Having to wait some time, he and the officer got to talking; he looked up when he judged that the steamer was about on the reef; saw that the buoy was gone, but supposed that the steamer had already run over it; he went on with his talk; he noticed that the steamer was getting very close down to him, but that was the correct thing; it was her business to shave him closely, for convenience in taking him aboard; he was expecting her to sheer off, until the last moment; then it flashed upon him that she was trying to run him down, mistaking his lantern for the buoy light; so he sang out, "Stand by to spring for the guard, men!" and the next instant the jump was made.

A PILOT'S NEEDS

But I am wandering from what I was intending to do; that is, make plainer than perhaps appears in the previous chapters some of the peculiar requirements of the science of piloting. First of all, there is one faculty which a pilot must incessantly cultivate until he has brought it to absolute perfection. Nothing short of perfection will do. That faculty is memory. He cannot stop with merely thinking a thing is so and so; he must *know* it; for this is eminently one of the "exact" sciences. With what scorn a pilot was looked upon, in the old times, if he ever ventured to deal in that feeble phrase "I think," instead of the vigorous one, "I know!" One cannot easily realize what a tremendous thing it is to know every trivial detail of twelve hundred miles of river and know it with absolute exactness. If you will take the longest street in New York, and travel up and down it, conning its features patiently until you know every house and window and lamppost and big and little sign by heart, and know them so accurately that you can instantly name the one you are abreast of when you are set down at random in that street in the middle of an inky black night, you will then have a tolerable notion of the amount and the exactness of a pilot's knowledge who carries the Mississippi River in his head. And then, if you will go on until you know every street crossing, the character, size, and position of the crossing stones, and the varying depth of mud in each of these numberless places, you will have some idea of what the pilot must know in order to keep a Mississippi steamer out of trouble. Next, if you will take half of the signs in that long street, and *change their places* once a month, and still manage to know their new positions accurately on dark nights, and keep up with these repeated changes without making any mistakes,

you will understand what is required of a pilot's peerless memory by the fickle Mississippi.

I think a pilot's memory is about the most wonderful thing in the world. To know the Old and New Testaments by heart, and be able to recite them glibly, forward or backward, or begin at random anywhere in the book and recite both ways and never trip or make a mistake, is no extravagant mass of knowledge, and no marvelous facility, compared to a pilot's massed knowledge of the Mississippi and his marvelous facility in the handling of it. I make this comparison deliberately, and believe I am not expanding the truth when I do it. Many will think my figure too strong, but pilots will not.

And how easily and comfortably the pilot's memory does its work; how placidly effortless is its way; how *unconsciously* it lays up its vast stores, hour by hour, day by day, and never loses or mislays a single valuable package of them all! Take an instance. Let a leadsman cry, "Half twain! half twain! half twain! half twain! half twain!" until it becomes as monotonous as the ticking of a clock; let conversation be going on all the time, and the pilot be doing his share of the talking, and no longer consciously listening to the leadsman; and in the midst of this endless string of half twains let a single "quarter twain!" be interjected, without emphasis, and then the half-twain cry go on again, just as before; two or three weeks later that pilot can describe with precision the boat's position in the river when that quarter twain was uttered, and give you such a lot of head marks, stern marks, and side marks to guide you, that you ought to be able to take the boat there and put her in that same spot again yourself! The cry of "quarter twain" did not really take his mind from his talk, but his trained faculties instantly photographed the bearings, noted the change of depth, and laid up the important details for future reference without requiring any assistance from *him* in the matter. If you were walking and talking with a friend, and another friend at your side kept up a monotonous repetition of the vowel sound A, for a couple of blocks, and then in the midst interjected an R, thus, A, A, A, A, A, R, A, A, A, etc., and gave the R no emphasis, you would not be able to state, two or three weeks afterward, that the R had been put in, nor be able to tell what objects you were passing at the moment it was done. But you could if your memory had been patiently and laboriously trained to do that sort of thing mechanically.

Give a man a tolerably fair memory to start with, and piloting will develop it into a very colossus of capability. But *only in the matters it is daily drilled in*. A time would come when the man's faculties could not

help noticing landmarks and soundings, and his memory could not help holding on to them with the grip of a vise; but if you asked that same man at noon what he had had for breakfast, it would be ten chances to one that he could not tell you. Astonishing things can be done with the human memory if you will devote it faithfully to one particular line of business.

At the time that wages soared so high on the Missouri River, my chief, Mr. Bixby, went up there and learned more than a thousand miles of that stream with an ease and rapidity that were astonishing. When he had seen each division *once* in the daytime and *once* at night, his education was so nearly complete that he took out a "daylight" license; a few trips later he took out a full license, and went to piloting day and night—and he ranked AI, too.

Mr. Bixby placed me as steersman for a while under a pilot whose feats of memory were a constant marvel to me. However, his memory was born in him, I think, not built. For instance, somebody would mention a name. Instantly Mr. Brown would break in:

"Oh, I knew *him*. Sallow-faced, redheaded fellow, with a little scar on the side of his throat, like a splinter under the flesh. He was only in the Southern trade six months. That was thirteen years ago. I made a trip with him. There was five feet in the upper river then; the *Henry Blake* grounded at the foot of Tower Island drawing four and a half; the *George Elliott* unshipped her rudder on the wreck of the *Sunflower*—"

"Why, the *Sunflower* didn't sink until—"

"I know when she sunk; it was three years before that, on the 2d of December; Asa Hardy was captain of her, and his brother John was first clerk; and it was his first trip in her, too; Tom Jones told me these things a week afterward in New Orleans; he was first mate of the *Sunflower*. Captain Hardy stuck a nail in his foot the 6th of July of the next year, and died of the lockjaw on the 15th. His brother John died two years after—3rd of March—erysipelas. I never saw either of the Hardys—they were Alleghany River men—but people who knew them told me all these things. And they said Captain Hardy wore yarn socks winter and summer just the same, and his first wife's name was Jane Shook—she was from New England—and his second one died in a lunatic asylum. It was in the blood. She was from Lexington, Kentucky. Name was Horton before she was married."

And so on, by the hour, the man's tongue would go. He could *not* forget anything. It was simply impossible. The most trivial details remained as distinct and luminous in his head, after they had lain there for

years, as the most memorable events. His was not simply a pilot's memory; its grasp was universal. If he were talking about a trifling letter he had received seven years before, he was pretty sure to deliver you the entire screed from memory. And then, without observing that he was departing from the true line of his talk, he was more than likely to hurl in a long-drawn parenthetical biography of the writer of that letter; and you were lucky indeed if he did not take up that writer's relatives, one by one, and give you their biographies, too.

Such a memory as that is a great misfortune. To it, all occurrences are of the same size. Its possessor cannot distinguish an interesting circumstance from an uninteresting one. As a talker, he is bound to clog his narrative with tiresome details and make himself an insufferable bore. Moreover, he cannot stick to his subject. He picks up every little grain of memory he discerns in his way, and so is led aside. Mr. Brown would start out with the honest intention of telling you a vastly funny anecdote about a dog. He would be "so full of laugh" that he could hardly begin; then his memory would start with the dog's breed and personal appearance; drift into a history of his owner; of his owner's family, with descriptions of weddings and burials that had occurred in it, together with recitals of congratulatory verses and obituary poetry provoked by the same; then this memory would recollect that one of these events occurred during the celebrated "hard winter" of such-and-such a year, and a minute description of that winter would follow, along with the names of people who were frozen to death, and statistics showing the high figures which pork and hay went up to. Pork and hay would suggest corn and fodder; corn and fodder would suggest cows and horses; cows and horses would suggest the circus and certain celebrated bareback riders; the transition from the circus to the menagerie was easy and natural; from the elephant to equatorial Africa was but a step; then of course the heathen savages would suggest religion; and at the end of three or four hours' tedious jaw, the watch would change, and Brown would go out of the pilothouse muttering extracts from sermons he had heard years before about the efficacy of prayer as a means of grace. And the original first mention would be all you had learned about that dog, after all this waiting and hungering.

A pilot must have a memory; but there are two higher qualities which he must also have. He must have good and quick judgment and decision, and a cool, calm courage that no peril can shake. Give a man the merest trifle of pluck to start with, and by the time he has become a pilot he

cannot be unmanned by any danger a steamboat can get into; but one cannot quite say the same for judgment. Judgment is a matter of brains, and a man must *start* with a good stock of that article or he will never succeed as a pilot.

The growth of courage in the pilothouse is steady all the time, but it does not reach a high and satisfactory condition until some time after the young pilot has been "standing his own watch" alone and under the staggering weight of all the responsibilities connected with the position. When the apprentice has become pretty thoroughly acquainted with the river, he goes clattering along so fearlessly with his steamboat, night or day, that he presently begins to imagine that it is *his* courage that animates him; but the first time the pilot steps out and leaves him to his own devices he finds out it was the other man's. He discovers that the article has been left out of his own cargo altogether. The whole river is bristling with exigencies in a moment; he is not prepared for them; he does not know how to meet them; all his knowledge forsakes him; and within fifteen minutes he is as white as a sheet and scared almost to death. Therefore pilots wisely train these cubs by various strategic tricks to look danger in the face a little more calmly. A favorite way of theirs is to play a friendly swindle upon the candidate.

Mr. Bixby served me in this fashion once, and for years afterward I used to blush, even in my sleep, when I thought of it. I had become a good steersman; so good, indeed, that I had all the work to do on our watch, night and day. Mr. Bixby seldom made a suggestion to me; all he ever did was to take the wheel on particularly bad nights or in particularly bad crossings, land the boat when she needed to be landed, play gentleman of leisure nine-tenths of the watch, and collect the wages. The lower river was about bankfull, and if anybody had questioned my ability to run any crossing between Cairo and New Orleans without help or instruction, I should have felt irreparably hurt. The idea of being afraid of any crossing in the lot, in the *daytime*, was a thing too preposterous for contemplation. Well, one matchless summer's day I was bowling down the bend above Island 66, brimful of self-conceit and carrying my nose as high as a giraffe's, when Mr. Bixby said:

"I am going below awhile. I suppose you know the next crossing?"

This was almost an affront. It was about the plainest and simplest crossing in the whole river. One couldn't come to any harm, whether he ran it right or not; and as for depth, there never had been any bottom there. I knew all this, perfectly well.

“Know how to *run* it? Why, I can run it with my eyes shut.”

“How much water is there in it?”

“Well, that is an odd question. I couldn’t get bottom there with a church steeple.”

“You think so, do you?”

The very tone of the question shook my confidence. That was what Mr. Bixby was expecting. He left, without saying anything more. I began to imagine all sorts of things. Mr. Bixby, unknown to me, of course, sent somebody down to the forecastle with some mysterious instructions to the leadsmen, another messenger was sent to whisper among the officers, and then Mr. Bixby went into hiding behind a smokestack where he could observe results. Presently the captain stepped out on the hurricane deck; next the chief mate appeared; then a clerk. Every moment or two a straggler was added to my audience; and before I got to the head of the island I had fifteen or twenty people assembled down there under my nose. I began to wonder what the trouble was. As I started across, the captain glanced aloft at me and said, with a sham uneasiness in his voice:

“Where is Mr. Bixby?”

“Gone below, sir.”

But that did the business for me. My imagination began to construct dangers out of nothing, and they multiplied faster than I could keep the run of them. All at once I imagined I saw shoal water ahead! The wave of coward agony that surged through me then came near dislocating every joint in me. All my confidence in that crossing vanished. I seized the bell rope; dropped it, ashamed; seized it again; dropped it once more; clutched it tremblingly once again, and pulled it so feebly that I could hardly hear the stroke myself. Captain and mate sang out instantly, and both together:

“Starboard lead there! and quick about it!”

This was another shock. I began to climb the wheel like a squirrel; but I would hardly get the boat started to port before I would see new dangers on that side, and away I would spin to the other; only to find perils accumulating to starboard, and be crazy to get to port again. Then came the leadsmen’s sepulchral cry:

“D-e-e-p four!”

Deep four in a bottomless crossing! The terror of it took my breath away.

“M-a-r-k three! M-a-r-k three! Quarter-less-three! Half twain!”

This was frightful! I seized the bell ropes and stopped the engines.

“Quarter twain! Quarter twain! *Mark twain!*”

I was helpless. I did not know what in the world to do. I was quaking

from head to foot, and I could have hung my hat on my eyes, they stuck out so far.

“Quarter-less-twain! Nine-and-a-half!”

We were *drawing* nine! My hands were in a nerveless flutter. I could not ring a bell intelligibly with them. I flew to the speaking tube and shouted to the engineer:

“Oh, Ben, if you love me, *back* her! Quick, Ben! Oh, back the immortal *soul* out of her!”

I heard the door close gently. I looked around, and there stood Mr. Bixby, smiling a bland, sweet smile. Then the audience on the hurricane deck sent up a thurgust of humiliating laughter. I saw it all, now, and I felt meaner than the meanest man in human history. I laid it in the lead, set the boat in her marks, came ahead on the engines, and said:

“It was a fine trick to play on an orphan, *wasn't* it? I suppose I'll never hear the last of how I was ass enough to heave the lead at the head of 66.”

“Well, no, you won't, maybe. In fact I hope you won't; for I want you to learn something by that experience. Didn't you *know* there was no bottom in that crossing?”

“Yes, sir, I did.”

“Very well, then. You shouldn't have allowed me or anybody else to shake your confidence in that knowledge. Try to remember that. And another thing: when you get into a dangerous place, don't turn coward. That isn't going to help matters any.”

It was a good enough lesson, but pretty hardy learned. Yet about the hardest part of it was that for months I so often had to hear a phrase which I had conceived a particular distaste for. It was, “Oh, Ben, if you love me, back her!”

RANK AND DIGNITY OF PILOTING

In my preceding chapters I have tried, by going into the minutiae of the science of piloting, to carry the reader step by step to a comprehension of what the science consists of; and at the same time I have tried to show him that it is a very curious and wonderful science, too, and very worthy of his attention. If I have seemed to love my subject, it is no surprising thing, for I loved the profession far better than any I have followed since, and I took a measureless pride in it. The reason is plain: a pilot, in those days, was the only unfettered and entirely independent human being that lived in the earth. Kings are but the hampered servants of parliament and the people; parliaments sit in chains forged by their constituency; the editor of a newspaper cannot be independent, but

must work with one hand tied behind him by party and patrons, and be content to utter only half or two-thirds of his mind; no clergyman is a free man and may speak the whole truth, regardless of his parish's opinions; writers of all kinds are manacled servants of the public. We write frankly and fearlessly, but then we "modify" before we print. In truth, every man and woman and child has a master, and worries and frets in servitude; but, in the day I write of, the Mississippi pilot had *none*. The captain could stand upon the hurricane deck, in the pomp of a very brief authority, and give him five or six orders while the vessel backed into the stream, and then that skipper's reign was over. The moment that the boat was under way in the river, she was under the sole and unquestioned control of the pilot. He could do with her exactly as he pleased, run her when and whither he chose, and tie her up to the bank whenever his judgment said that that course was best. His movements were entirely free; he consulted no one, he received commands from nobody, he promptly resented even the merest suggestions. Indeed, the law of the United States forbade him to listen to commands or suggestions, rightly considering that the pilot necessarily knew better how to handle the boat than anybody could tell him. So here was the novelty of a king without a keeper, an absolute monarch who was absolute in sober truth and not by a fiction of words. I have seen a boy of eighteen taking a great steamer serenely into what seemed almost certain destruction, and the aged captain standing mutely by, filled with apprehension but powerless to interfere. His interference, in that particular instance, might have been an excellent thing, but to permit it would have been to establish a most pernicious precedent. It will easily be guessed, considering the pilot's boundless authority, that he was a great personage in the old steamboating days. He was treated with marked courtesy by the captain and with marked deference by all the officers and servants; and this deferential spirit was quickly communicated to the passengers, too. I think pilots were about the only people I ever knew who failed to show, in some degree, embarrassment in the presence of traveling foreign princes. But then, people in one's own grade of life are not usually embarrassing objects.

*The foregoing consists of Chapters 1, 4, and 6 through 14
of Mark Twain's LIFE ON THE MISSISSIPPI.*

La Bruyère

1645–1696

The French critic and essayist Jean de la Bruyère was born in Paris in 1645, the son of a commoner who was a government official. He studied at the University of Orléans and passed the bar examination, but he never practiced law. In 1673 he bought a post in the Revenue Department at Caen that conferred prestige and an income. He sold the post fourteen years later and returned to Paris.

A few years earlier, La Bruyère had been introduced to the Condé household by the influential historian and theologian Bishop Bossuet. The Prince de Condé was one of the great nobles of France, and La Bruyère was engaged to tutor Condé's grandson, Louis, due de Bourbon. He also taught the young man's child wife, Mlle de Nantes, a daughter of Louis XIV.

At the age of forty, soon after entering the Condé household, La Bruyère published the first edition of his great work, the *Characters*. The work consisted of short portrait sketches, some of them translated from the Greek of Theophrastus, some original with La Bruyère.

Many of the portraits, though they were given classical names, depicted courtiers and literary figures of the time. La Bruyère made many enemies, but the friendship of Bossuet and the influence of Condé were sufficient protection. La Bruyère continued to bring out new editions of his book, each containing more biting and satirical characters than the last. The books were read avidly, if indignantly, and a series of "keys" were circulated in manuscript purporting to identify the persons he described.

Because so many powerful literary figures were offended by his work, La Bruyère was turned down by the French Academy on three different occasions. Finally, in 1693, his friends pushed through

his election. His speech of admission, thoroughly unrepentant, was criticized as sharply as his books. This speech, a few letters to Condé, a disputed posthumous treatise, and the successive editions of the *Characters* are all that survive of what was probably a considerable body of writings. La Bruyère died suddenly on May 10, 1696.

His classical model, Theophrastus (371/370–288/287 B.C.), the Greek philosopher and scientist, was a friend and student of both Plato and Aristotle, and the latter's successor as director of the Lyceum at Athens. He produced two extant works of botany and a collection of ethical *Characters*—brief, witty delineations of moral types. The publication of the *Characters* in 1592, in a Latin version by Casaubon, immediately created a vogue. Scores of authors, both in England and France, began to produce books of characters. Some imitated the moral, philosophical tone of Theophrastus, but others were sharp and satirical. Many writers saw in the Theophrastian characters an ideal way to express their criticisms of society—and of their enemies.

No one, perhaps, was a more successful writer of characters than La Bruyère, whose work had the advantage of appearing after nearly a century of experiment with the form. He learned from his predecessors, particularly what should be avoided in a character, and added to this knowledge an extremely ready wit, a precise faculty of observation, and the capacity to write what is called classical French style better than any other French writer, it is said, with the single exception of Racine.

La Bruyère was a conservative man. In “the battle of the books,” he took the side of the ancients, holding that their books excelled those of the moderns. He respected royalty and would not tolerate revolutionary or even critical ideas in politics or religion. As a tutor in the household of a great prince, however, he could observe at firsthand the corruption of high society and court life. The pretensions of hypocritical courtiers, of would-be intellectuals, sanctimonious churchmen, and the newly rich all lay before him.

La Bruyère was too intelligent and independent to tolerate the vice, wastefulness, and stupidity that he saw all around him. But he satirized individuals rather than the traditions and institutions. He showed his sympathy with the poor by ridiculing the people who

exploited them, but he did not attack the institutions which kept them impoverished. He exposed the monumental selfishness of the high official Champagne, who wallowed in luxuries while depriving the poor of bread; but he said nothing against the venal system of government in which Champagne held office.

It is perhaps this shortcoming in *La Bruyère* which has kept him from being ranked with such great essayists and social critics as Montaigne and Voltaire. He did not examine into causes, as they did, but only exposed their symptoms on the surface of life. On the other hand, *La Bruyère* has much of Montaigne's urbane wit, and there are flashes of bitter truth in his *Characters* that would do credit to Voltaire. He reminds us often of a great artist who requires only half a dozen lines to draw a portrait. In swiftness and skill, his characterizations have never been surpassed.

Characters

ARSÈNE

Arsène contemplates mankind from the summit of his mind and, seen from that eminence, men frighten him, so to speak, by their littleness. Praised and exalted to the skies by certain people who have arranged to admire each other reciprocally, he believes he possesses not only the good qualities he really has but all a man can have, which he will never have; thus occupied and filled with his sublime thoughts he barely gives himself time to deliver a few oracular statements; uplifted above human judgments by his character, he leaves to common minds the merit of an orderly, coherent life, and is himself responsible for his irregularities only to the circle of friends who regard them in a spirit of idolatry. They alone are competent to judge, can think and write; they alone ought to be writers. There is no other literary work, however well received in the world, however universally enjoyed by men of taste, which he—I will not say approves—but even condescends to read. He cannot be reformed by this portrait, for he will not read it.

CLÉANTE

Cléante is a gentleman; he chose a wife who is the most agreeable and reasonable woman in the world. Both are the delight and pleasure of the society they frequent; it would be impossible to find more probity and politeness anywhere else. To-morrow they leave each other and their deed of separation is drawn up at the notary's. Indeed, there are some merits which are not made to go together, there are certain incompatible virtues.

CHAMPAGNE

Champagne, at the moment he leaves a long dinner which inflates his belly, in the agreeable fumes of Avenay and Sillery wines, signs an order

someone presents to him by which a whole province will be deprived of bread, unless it is countermanded. He is excusable; how can anyone in the first hour of digestion understand that people somewhere else may die of hunger?

GITON

Giton has a fresh complexion, a full face and bulging cheeks, a fixed and assured gaze, broad shoulders, a projecting stomach, a firm and deliberate tread. He speaks with confidence; he makes those who converse with him repeat what they have said and he only moderately enjoys what is said. He unfolds an ample handkerchief and blows his nose noisily; he spits to a great distance and sneezes very loudly. He sleeps by day, he sleeps by night; he snores in company. At table and in walking he occupies more room than anyone else. He takes the centre and walks with his equals; he stops and they stop; he walks on and they walk on; all regulate themselves by him. He interrupts and corrects those who are talking; he is not interrupted, he is listened to as long as he likes to talk; his opinion is accepted, the rumours he spreads are believed. If he sits down you will see him settle into an arm-chair, cross his legs, frown, pull his hat over his eyes and see no one, or lift it up again and show his brow from pride and audacity. He is cheerful, a hearty laugh, impatient, presumptuous, quick to anger, irreligious, politic, mysterious about current affairs; he believes he has talents and wit.

He is rich.

PHÉDON

Phédon has hollow eyes, a bilious complexion, a dry body and a thin face; he sleeps little and his slumber is very light; he is abstracted, dreamy and with all his wit seems stupid; he forgets to say what he knows or to speak of events which are known to him; and if he does so sometimes he comes out badly, he thinks he is a nuisance to those he speaks to, he relates things briefly but frigidly; he is not listened to, he does not stir laughter. He applauds, he smiles at what others say to him, he is of their opinion; he runs, he flies to render them little services. He is complaisant, flattering, eager, he is mysterious about his own affairs, sometimes a liar; he is superstitious, scrupulous, timid. He walks gently and lightly, he seems afraid to touch the ground; he walks with lowered eyes and dares not raise them to the passers-by. He is never among those who

form a circle for discussion; he places himself behind the person who is speaking, furtively gathers what he says and goes away if he is looked at. He occupies no space, claims no place; he walks with hunched shoulders, his hat pulled over his eyes so as not to be seen; he shrinks and hides himself in his cloak; there are no streets or galleries so overcrowded and filled with people but that he finds a means of traversing them easily, of slipping through them without being noticed. If he is asked to sit down, he places himself just on the edge of the chair; he speaks in a low tone in conversation and articulates badly; yet with his friends he is open about public affairs, bitter against the age, very little disposed in favour of the ministers of state and the government. He never opens his mouth except to reply; he coughs and blows his nose behind his hat; he spits almost on himself, and he waits until he is alone to sneeze, or if it happens to him it is unperceived by the company present: he costs nobody a salute or a compliment.

He is poor.

DÉMOPHILE

Démophile, at my right, laments and exclaims: "All is lost, the country is done for, at least it is on the road to destruction. How can so strong, so general a coalition be resisted? What means are there, I do not say to overcome, but even to resist so many powerful enemies? There is no precedent for it in the monarchy. A hero, an Achilles, would succumb to it. Grievous faults have been committed (he goes on), I know what I am saying, it is my occupation, I have seen war and history has taught me a great deal." Then he speaks with admiration of Olivier Le Daim and Jacques Coeur: "There were men!" says he, "There were ministers!" He relates the worst and most unlucky news which could be invented; sometimes a party of our troops have been lured into an ambush and cut to pieces; sometimes certain troops besieged in a castle have surrendered unconditionally and have all been slaughtered: if you say the rumour is false and has not been confirmed, he does not listen, he adds that such a general has been killed; and although it is true that the general has only been slightly wounded and you assure him of the fact, he deplores his death, pities his widow, his children, the state; he pities himself: "He has lost a good friend and a powerful protector." He says that the German cavalry is invincible and grows pale at the very name of the Emperor's cuirassiers. "If such a place is attacked," he continues, "the siege will be raised. Either we shall remain on the defensive without risking battle;

or, if we fight, we shall lose, and if we lose it, there is the enemy at the frontier." And as Démophile gives the enemy wings, here he is in the heart of the kingdom: already he hears the tocsin sounding from the belfries and the call to arms; he thinks of his property and his estates; where will he place his money, his furniture, his family? Where will he fly to? Switzerland or Venice?

*The foregoing consists
of a selection of sketches
from La Bruyère's CHARACTERS.*

Thomas Carlyle

1795–1881

Thomas Carlyle, the prophet of heroes and hero worship, was born of humble parents in Ecclefechan, Scotland, in 1795. His father, a stonemason and small farmer, strained the family resources to provide his talented son with an education. The family bonds of the Carlyles were to remain strong through thick and thin—mostly thin—and Thomas later gave much financial assistance to his brothers.

At the age of fourteen, Thomas walked ninety miles to the University of Edinburgh, where he enrolled to study the ministry. Things turned out differently. He was attracted to mathematics and even more to literature, became a teacher for a spell, and then, in 1818, a hack writer for Edinburgh publications. It was about this time that he fell in love with the writings and the personality of Goethe, and read voraciously in German authors of the time, who were little known in England. In 1823–24, he published a life of the poet Schiller and a translation of Goethe's *Wilhelm Meister's Apprenticeship*. He was fast becoming, with Coleridge, the interpreter of German thinkers in England. He was himself profoundly influenced by the philosophy of Kant and Fichte. He thenceforth looked for the reality and divinity of men, especially heroes, behind the appearances. Clothes do not make the man, he wrote in his *Sartor Resartus*; they conceal the spiritual self. Neither is the world to be

Notes from the artist: "The quiet mood of Carlyle reading in his garden is interrupted by the dynamic figure of Oliver Cromwell, and that of the symbol of 'Liberty' in the French Revolution. These are two examples of the 'strong-man' concept, which so attracted Carlyle. The quotation is from his book on this subject, On Heroes, Hero-Worship, and the Heroic in History."

In books lies the soul of the whole Past Time; the articulate audible voice of the Past, when the body and material substance of it has altogether vanished like a dream.

J. Carlyle

judged by its sordid strivings for pleasure and economic gains—its mere outer garment.

In 1826 Carlyle had married the brilliant Jane Baillie Welsh, and soon after settled down with her on a lonely farm at Craigenputtock, where he lived inexpensively and wrote for periodicals. There Ralph Waldo Emerson paid him a visit, and the two men remained close friends for life. In 1834 John Stuart Mill persuaded Carlyle to come to London, where materials for his work in progress, *The French Revolution*, would be available. When the first volume was completed, he gave it to Mill to read, but a foolish servant girl used it to make a fire. Carlyle was undaunted. "It will be good for the character," he reflected; and he wrote the whole volume over again. The finished work, published in 1837, was immensely popular and established Carlyle's fame on firm ground.

Carlyle's theme is the divinely inspired hero-king. He is no ordinary hereditary monarch; without him the nation falters and disintegrates. He is the "Ablest Man . . . the truest hearted, justest, the Noblest Man." The Anglo-Saxon word for king is *Könning*, which means Able-man. He is the man who is able to direct the scattered forces of the nation, torn by jealousies and special interests, to an ideal goal.

The first problem is to find this man. Although there are many counterfeit heroes, Carlyle warns us against skepticism and fault-finding. It is better that the leader make mistakes than that there should be no leader at all. A second problem which crops up is whether leaders or laws are the best safeguard of our liberties and welfare. Sometimes the fate of a country seems to depend on a single man, a Washington or a Lincoln. Yet we see to it that laws are passed to which all heroes and would-be heroes must bow. There is no doubt how Carlyle would stand on this issue.

Of the two heroes whom Carlyle portrays in the essay which follows, Napoleon had a much better reputation than Cromwell. Carlyle reverses this judgment, and makes a stirring defense of the real Cromwell—so much misunderstood and maligned. Even his rigors and cruelties were virtues—marks of an indomitable will to do what had to be done. Napoleon was also an "Able-man." Yet in the end he betrayed his cause for a throne, whereas Cromwell remained true to the Revolution, and could not be tempted.

What are the moving forces of history? is the question that has been raised. It cannot be avoided if we are to understand the things that are going on today, and what the future is likely to bring. In the nineteenth century several theories were advanced. For Hegel world history was a battleground of ideas and spiritual forces; for Marx it was a battleground of classes, technologies, and economic forces. Hegel saw history progressing toward something like the Prussian monarchy, whereas for Marx the goal is the classless society.

Carlyle's interpretation was altogether different. The decisive and constructive forces in history are its great men and heroes. Every era and every crisis of history has its superlative men, who are able to take the helm and to convert chaos and destruction into something meaningful and worthy. But they must be given a chance. They must be recognized for what they are. When doubt, distrust, and envy stifle the natural inclination to revere and obey true leaders, stagnation and degeneracy follow. This was what had happened in his own time, Carlyle thought. Petty men, calculation, meanness dominated the national scene.

The very opposite view was put forward by Tolstoy a few years later. In his novel *War and Peace*, he argues that the leaders supposed to have shaped history were actually its pawns—and heartless egoists at that. He shows us Napoleon on the battlefield and Napoleon grunting in his bathtub. In neither role is he exceptional or admirable.

Such clashes of opposing judgments help us to find the truth for ourselves.

The Hero as King

W e come now to the last form of Heroism, that which we call Kingship. The Commander over men, he to whose will our wills are to be subordinated, and loyally surrender themselves, and find their welfare in doing so, may be reckoned the most important of Great Men. He is practically the summary for us of all the various figures of Heroism; Priest, Teacher, whatsoever of earthly or of spiritual dignity we can fancy to reside in a man, embodies itself here, to command over us, to furnish us with constant practical teaching, to tell us for the day and hour what we are to do. He is called *Rex*, Regulator, *Roi*; our own name is still better: King, *Könning*, which means *Can-ning*, Able-man.

Numerous considerations, pointing towards deep, questionable, and indeed unfathomable regions, present themselves here: on the most of which we must resolutely for the present forbear to speak at all. As Burke said that perhaps fair trial by jury was the soul of government, and that all legislation, administration, parliamentary debating, and the rest of it, went on, in "order to bring twelve impartial men into a jury-box"; so, by much stronger reason, may I say here that the finding of your Ableman and getting him invested with the symbols of ability, with dignity, worship (worth-ship), royalty, kingship, or whatever we call it, so that he may actually have room to guide according to his faculty of doing it, is the business, well or ill accomplished, of all social procedure whatsoever in this world! Hustings speeches, parliamentary motions, Reform Bills, French Revolutions, all mean at heart this; or else nothing. Find in any country the Ablest Man that exists there; raise him to the supreme place, and loyally reverence him: you have a perfect government for that country; no ballot-box, parliamentary eloquence, voting, constitution-building, or other machinery whatsoever can improve it a whit. It is in the perfect state: an ideal country. The Ablest Man; he means also the

truest hearted, justest, the Noblest Man: what he tells us to do must be precisely the wisest, fittest that we could anywhere or anyhow learn: the thing which it will in all ways behove us, with right loyal thankfulness, and nothing doubting, to do! Our doing and life were then, so far as government could regulate it, well regulated; that were the ideal of constitutions.

Alas, we know very well that Ideals can never be completely embodied in practice. Ideals must ever lie a very great way off; and we will right thankfully content ourselves with any not intolerable approximation thereto! Let no man, as Schiller says, too querulously “measure by a scale of perfection the meagre product of reality” in this poor world of ours. We will esteem him no wise man; we will esteem him a sickly, discontented, foolish man. And yet, on the other hand, it is never to be forgotten that Ideals do exist; that if they be not approximated to at all, the whole matter goes to wreck! Infallibly. No bricklayer builds a wall perfectly perpendicular; mathematically this is not possible; a certain degree of perpendicularity suffices him; and he, like a good bricklayer, who must have done with his job, leaves it so. And yet if he sway too much from the perpendicular; above all, if he throw plummet and level quite away from him, and pile brick on brick heedless, just as it comes to hand! Such bricklayer, I think, is in a bad way. He has forgotten himself: but the Law of Gravitation does not forget to act on him; he and his wall rush down into confused welter of ruin!

This is the history of all rebellions, French Revolutions, social explosions in ancient or modern times. You have put the too Unable man at the head of affairs! The too ignoble, unvaliant, fatuous man. You have forgotten that there is any rule, or natural necessity whatever, of putting the Able Man there. Brick must lie on brick as it may and can. Unable Simulacrum of Ability, quack, in a word, must adjust himself with quack, in all manner of administration of human things—which accordingly lie unadministered, fermenting into unmeasured masses of failure, of indigent misery: in the outward, and in the inward or spiritual, miserable millions stretch out the hand for their due supply, and it is not there. The law of gravitation acts; Nature’s laws do none of them forget to act. The miserable millions burst forth into Sansculottism, or some other sort of madness; bricks and bricklayers lie as a fatal chaos!

Much sorry stuff, written some hundred years ago or more, about the Divine right of Kings, moulders unread now in the Public Libraries of this country. Far be it from us to disturb the calm process by which it is disappearing harmlessly from the earth, in those repositories! At the

same time, not to let the immense rubbish go without leaving us, as it ought, some soul of it behind—I will say that it did mean something; something true, which it is important for us and all men to keep in mind. To assert that in whatever man you chose to lay hold of (by this or the other plan of clutching at him); and clapped a round piece of metal on the head of, and called King—there straightway came to reside a divine virtue, so that he became a kind of God, and a Divinity inspired him with faculty and right to rule over you to all lengths: this—what can we do with this but leave it to rot silently in the Public Libraries? But I will say withal, and that is what these Divine-right men meant, that in Kings, and in all human authorities, and relations that men god-created can form among each other, there is verily either a Divine Right or else a Diabolic Wrong: one or the other of these two! For it is false altogether what the last Sceptical Century taught us, that this world is a steam engine. There is a God in this world; and a God's-sanction, or else the violation of such, does look out from all ruling and obedience, from all moral acts of men. There is no act more moral between men than that of rule and obedience. Woe to him that claims obedience when it is not due; woe to him that refuses it when it is! God's law is in that, I say, however the Parchment laws may run: there is a Divine Right or else a Diabolic Wrong at the heart of every claim that one man makes upon another.

It can do none of us harm to reflect on this: in all the relations of life it will concern us; in Loyalty and Royalty, the highest of these. I esteem the modern error, that all goes by self-interest and the checking and balancing of greedy knaveries, and that, in short, there is nothing divine whatever in the association of men, a still more despicable error, natural as it is to an unbelieving century, than that of a divine right in people called Kings. I say, find me the true *Könning*, King, or Able-man, and he has a divine right over me. That we knew in some tolerable measure how to find him, and that all men were ready to acknowledge his divine right when found: this is precisely the healing which a sick world is everywhere, in these ages, seeking after! The true King, as guide of the practical, has ever something of the Pontiff in him—guide of the spiritual, from which all practice has its rise. This too is a true saying, That the King is head of the Church. But we will leave the Polemic stuff of a dead century to lie quiet on its bookshelves.

Certainly it is a fearful business, that of having your Ableman to seek, and not knowing in what manner to proceed about it! That is the world's sad predicament in these times of ours. They are times of Revolution, and

have long been. The bricklayer with his bricks, no longer heedful of plummet or the law of gravitation, have toppled, tumbled, and it all welters as we see! But the beginning of it was not the French Revolution; that is rather the end, we can hope. It were truer to say, the beginning was three centuries farther back: in the Reformation of Luther. That the thing which still called itself Christian Church had become a Falsehood, and brazenly went about pretending to pardon men's sins for metallic coined money, and to do much else which in the everlasting truth of Nature it did not now do: here lay the vital malady. The inward being wrong, all outward went ever more and more wrong. Belief died away; all was Doubt, Disbelief. The builder cast away his plummet; said to himself, "What is gravitation? Brick lies on brick there!" Alas, does it not still sound strange to many of us, the assertion that there is a God's truth in the business of god-created men; that all is not a kind of grimace, an "expediency," diplomacy, one knows not what!

From that first necessary assertion of Luther's, "You, self-styled *Papa*, you are no Father in God at all; you are—a Chimera, whom I know not how to name in polite language!"—from that onward to the shout which rose round Camille Desmoulins in the Palais Royal, "*Aux armes!*" when the people had burst up against all manner of Chimeras—I find a natural historical sequence. That shout too, so frightful, half-infernal, was a great matter. Once more the voice of awakened nations; starting confusedly, as out of nightmare, as out of death-sleep, into some dim feeling that Life was real; that God's world was not an expediency and diplomacy! Infernal; yes, since they would not have it otherwise. Infernal, since not celestial or terrestrial! Hollowness, insincerity has to cease; sincerity of some sort has to begin. Cost what it may, reigns of terror, horrors of French Revolution or what else, we have to return to truth. Here is a Truth, as I said: a Truth clad in hell-fire, since they would not but have it so!

A common theory among considerable parties of men in England and elsewhere used to be that the French Nation had, in those days, as it were gone mad; that the French Revolution was a general act of insanity, a temporary conversion of France and large sections of the world into a kind of Bedlam. The event had risen and raged; but was a madness and nonentity, gone now happily into the region of Dreams and the Picturesque! To such comfortable philosophers, the Three Days of July 1830 must have been a surprising phenomenon. Here is the French Nation risen again, in musketry and death-struggle, out shooting and being shot, to make that same mad French Revolution good! The sons and grandsons

of those men, it would seem, persist in the enterprise: they do not disown it; they will have it made good; will have themselves shot, if it be not made good! To philosophers who had made up their life-system on that "madness" quietus, no phenomenon could be more alarming. Poor Niebuhr, they say, the Prussian professor and historian, fell broken-hearted in consequence; sickened, if we can believe it, and died of the Three Days! It was surely not a very heroic death: little better than Racine's, dying because Louis XIV looked sternly on him once. The world had stood some considerable shocks, in its time; might have been expected to survive the Three Days too, and be found turning on its axis after even them! The Three Days told all mortals that the old French Revolution, mad as it might look, was not a transitory ebullition of Bedlam, but a genuine product of this Earth where we all live; that it was verily a fact, and that the world in general would do well everywhere to regard it as such.

Truly, without the French Revolution, one would not know what to make of an age like this at all. We will hail the French Revolution, as shipwrecked mariners might the sternest rock, in a world otherwise all of baseless sea and waves. A true Apocalypse, though a terrible one, to this false withered artificial time; testifying once more that Nature is preternatural; if not divine, then diabolic; that Semblance is not reality; that it has to become reality, or the world will take fire under it—burn it into what it is, namely Nothing! Plausibility has ended; empty Routine has ended; much has ended. This, as with a Trump of Doom, has been proclaimed to all men. They are the wisest who will learn it soonest. Long confused generations before it be learned; peace impossible till it be! The earnest man, surrounded, as ever, with a world of inconsistencies, can await patiently, patiently strive to do his work, in the midst of that. Sentence of Death is written down in Heaven against all that; sentence of Death is now proclaimed on the Earth against it: this he with his eyes may see. And surely, I should say, considering the other side of the matter, what enormous difficulties lie there, and how fast, fearfully fast, in all countries, the inexorable demand for solution of them is pressing on—he may easily find other work to do than labouring in the Sansculottic province at this time of day!

To me, in these circumstances, that of "Hero worship" becomes a fact inexpressibly precious—the most solacing fact one sees in the world at present. There is an everlasting hope in it for the management of the world. Had all traditions, arrangements, creeds, societies that men ever instituted sunk away, this would remain. The certainty of heroes being sent us; our faculty, our necessity, to reverence heroes when sent: it shines

like a polestar through smoke-clouds, dust-clouds, and all manner of downrushing and conflagration.

Hero worship would have sounded very strange to those workers and fighters in the French Revolution. Not reverence for Great Men; not any hope or belief, or even wish, that Great Men could again appear in the world! Nature, turned into a "Machine," was as if effete now; could not any longer produce Great Men: I can tell her, she may give up the trade altogether, then; we cannot do without Great Men! But neither have I any quarrel with that of "Liberty and Equality"; with the faith that, wise great men being impossible, a level immensity of foolish small men would suffice. It was a natural faith then and there. "Liberty and Equality; no Authority needed any longer. Hero worship, reverence for such Authorities, has proved false, is itself a falsehood; no more of it! We have had such forgeries, we will now trust nothing. So many base plated coins passing in the market, the belief has now become common that no gold any longer exists—and even that we can do very well without gold!" I find this, among other things, in that universal cry of Liberty and Equality; and find it very natural, as matters then stood.

And yet surely it is but the transition from false to true. Considered as the whole truth, it is false altogether—the product of entire sceptical blindness, as yet only struggling to see. Hero worship exists forever, and everywhere: not Loyalty alone; it extends from divine adoration down to the lowest practical regions of life. "Bending before men," if it is not to be a mere empty grimace, better dispensed with than practised, is Hero worship—a recognition that there does dwell in that presence of our brother something divine; that every created man, as Novalis said, is a "revelation in the Flesh." They were Poets too that devised all those graceful courtesies which make life noble! Courtesy is not a falsehood or grimace; it need not be such. And Loyalty, religious Worship itself, are still possible; nay still inevitable.

May we not say, moreover, while so many of our late heroes have worked rather as revolutionary men, that nevertheless every Great Man, every genuine man, is by the nature of him a son of order, not of disorder? It is a tragical position for a true man to work in revolutions. He seems an anarchist; and indeed a painful element of anarchy does encumber him at every step—him to whose whole soul anarchy is hostile, hateful. His mission is order; every man's is. He is here to make what was disorderly, chaotic, into a thing ruled, regular. He is the missionary of order. Is not all work of man in this world a making of order? The carpenter finds rough trees: shapes them, constrains them into square

fitness, into purpose and use. We are all born enemies of disorder: it is tragical for us all to be concerned in image-breaking and down-pulling; for the Great Man, more a man than we, it is doubly tragical.

Thus too all human things, maddest French Sansculottisms, do and must work towards order. I say, there is not a man in them, raging in the thickest of the madness, but is impelled withal, at all moments, towards order. His very life means that; disorder is dissolution, death. No chaos but it seeks a centre to revolve round. While man is man, some Cromwell or Napoleon is the necessary finish of a Sansculottism. Curious: in those days when Hero worship was the most incredible thing to every one, how it does come out nevertheless, and assert itself practically, in a way which all have to credit. Divine right, take it on the great scale, is found to mean divine might withal! While old false formulas are getting trampled everywhere into destruction, new genuine substances unexpectedly unfold themselves indestructible. In rebellious ages, when Kingship itself seems dead and abolished, Cromwell, Napoleon step forth again as Kings. The history of these men is what we have now to look at, as our last phasis of Heroism. The old ages are brought back to us; the manner in which Kings were made, and Kingship itself first took rise, is again exhibited in the history of these two.

We have had many civil wars in England; wars of Red and White Roses, wars of Simon de Montfort; wars enough which are not very memorable. But that war of the Puritans has a significance which belongs to no one of the others. Trusting to your candour, which will suggest on the other side what I have not room to say, I will call it a section once more of that great universal war which alone makes up the true history of the world—the war of belief against unbelief! The struggle of men intent on the real essence of things, against men intent on the semblances and forms of things. The Puritans, to many, seem mere savage iconoclasts, fierce destroyers of forms; but it were more just to call them haters of untrue forms. I hope we know how to respect Laud and his King as well as them. Poor Laud seems to me to have been weak and ill-starred, not dishonest—an unfortunate pedant rather than anything worse. His “dreams” and superstitions, at which they laugh so, have an affectionate, lovable kind of character. He is like a college tutor, whose whole world is forms, college rules; whose notion is that these are the life and safety of the world. He is placed suddenly, with that unalterable luckless notion of his, at the head not of a college but of a nation, to regulate the most complex deep-reaching interests of men. He thinks they ought to go by the old

decent regulations; nay that their salvation will lie in extending and improving these. Like a weak man, he drives with spasmodic vehemence towards his purpose; cramps himself to it, heeding no voice of prudence, no cry of pity: He will have his college rules obeyed by his collegians; that first; and till that, nothing. He is an ill-starred pedant, as I said. He would have it the world was a college of that kind, and the world *was not* that. Alas, was not his doom stern enough? Whatever wrongs he did, were they not all frightfully avenged on him?

It is meritorious to insist on forms; Religion and all else naturally clothes itself in forms. Everywhere the formed world is the only habitable one. The naked formlessness of Puritanism is not the thing I praise in the Puritans; it is the thing I pity—praising only the spirit which had rendered that inevitable! All substances clothe themselves in forms: but there are suitable true forms, and then there are untrue unsuitable. As the briefest definition, one might say, forms which *grow* round a substance, if we rightly understand that, will correspond to the real nature and purport of it, will be true, good; forms which are consciously *put* round a substance, bad. I invite you to reflect on this. It distinguishes true from false in ceremonial form, earnest solemnity from empty pageant, in all human things.

There must be a veracity, a natural spontaneity in forms. In the commonest meeting of men, a person making what we call “set speeches,” is not he an offence? In the mere drawing-room, whatsoever courtesies you see to be grimaces, prompted by no spontaneous reality within, are a thing you wish to get away from. But suppose now it were some matter of vital concernment, some transcendent matter (as Divine Worship is), about which your whole soul, struck dumb with its excess of feeling, knew not how to *form* itself into utterance at all, and preferred formless silence to any utterance there possible—what should we say of a man coming forward to represent or utter it for you in the way of upholsterer-mummery? Such a man—let him depart swiftly, if he love himself! You have lost your only son; are mute, struck down, without even tears: an importunate man importunately offers to celebrate funeral games for him in the manner of the Greeks! Such mummery is not only not to be accepted—it is hateful, unendurable. It is what the old prophets called “idolatry,” worshipping of hollow shows; what all earnest men do and will reject. We can partly understand what those poor Puritans meant. Laud dedicating that St. Catherine Creed’s Church, in the manner we have it described, with his multiplied ceremonial bowings, gesticulations, exclamations: surely it is rather the rigorous formal pedant, intent on his

“college rules,” than the earnest prophet, intent on the essence of the matter!

Puritanism found such forms insupportable; trampled on such forms; we have to excuse it for saying, No form at all rather than such! It stood preaching in its bare pulpit, with nothing but the Bible in its hand. Nay, a man preaching from his earnest soul into the earnest souls of men: is not this virtually the essence of all Churches whatsoever? The nakedest, savagest reality, I say, is preferable to any semblance, however dignified. Besides, it will clothe itself with due semblance by and by, if it be real. No fear of that; actually no fear at all. Given the living man, there will be found clothes for him; he will find himself clothes. But the suit of clothes pretending that *it* is both clothes and man! We cannot “fight the French” by three hundred thousand red uniforms; there must be *men* in the inside of them! Semblance, I assert, must actually *not* divorce itself from Reality. If Semblance do, why then there must be men found to rebel against Semblance, for it has become a lie! These two antagonisms at war here, in the case of Laud and the Puritans, are as old nearly as the world. They went to fierce battle over England in that age; and fought out their confused controversy to a certain length, with many results for all of us.

In the age which directly followed that of the Puritans, their cause or themselves were little likely to have justice done them. Charles II and his Rochesters were not the kind of men you would set to judge what the worth or meaning of such men might have been. That there could be any faith or truth in the life of a man was what these poor Rochesters, and the age they ushered in, had forgotten. Puritanism was hung on gibbets, like the bones of the leading Puritans. Its work nevertheless went on accomplishing itself. All true work of a man, hang the author of it on what gibbet you like, must and will accomplish itself. We have our *habeas corpus*, our free representation of the people; acknowledgment, wide as the world, that all men are, or else must, shall, and will become, what we call free men; men with their life grounded on reality and justice, not on tradition, which has become unjust and a chimera! This in part and much besides this was the work of the Puritans.

And indeed, as these things became gradually manifest, the character of the Puritans began to clear itself. Their memories were, one after another, taken down from the gibbet; nay a certain portion of them are now, in these days, as good as canonized. Eliot, Hampden, Pym, nay Ludlow, Hutchinson, Vane himself, are admitted to be a kind of Heroes; political Conscript Fathers, to whom in no small degree we owe what

makes us a free England: it would not be safe for anybody to designate these men as wicked now. Few Puritans of note but find their apologists somewhere, and have a certain reverence paid them by earnest men. One Puritan, I think, and almost he alone, our poor Cromwell, seems to hang yet on the gibbet, and find no hearty apologist anywhere. Him neither saint nor sinner will acquit of great wickedness. A man of ability, infinite talent, courage, and so forth: but he betrayed the cause. Selfish ambition, dishonesty, duplicity; a fierce, coarse, hypocritical *Tartuffe*; turning all that noble struggle for constitutional liberty into a sorry farce played for his own benefit: this and worse is the character they give of Cromwell. And then there come contrasts with Washington and others; above all, with these noble Pym and Hampdens, whose noble work he stole for himself, and ruined into a futility and deformity.

This view of Cromwell seems to me the not unnatural product of a century like the eighteenth. As we said of the valet, so of the sceptic: He does not know a Hero when he sees him! The valet expected purple mantles, gilt sceptres, body-guards and flourishes of trumpets: the sceptic of the eighteenth century looks for regulated respectable formulas, principles, or what else he may call them; a style of speech and conduct which has got to seem "respectable," which can plead for itself in a handsome articulate manner, and gain the suffrages of an enlightened sceptical eighteenth century! It is, at bottom, the same thing that both the valet and he expect: the garnitures of some acknowledged royalty, which then they will acknowledge! The King coming to them in the rugged unformulistic state shall be no King.

For my own share, far be it from me to say or insinuate a word of disparagement against such characters as Hampden, Eliot, Pym, whom I believe to have been right worthy and useful men. I have read diligently what books and documents about them I could come at—with the honestest wish to admire, to love and worship them like Heroes; but I am sorry to say, if the real truth must be told, with very indifferent success! At bottom, I found that it would not do. They are very noble men, these; step along in their stately way, with their measured euphemisms, philosophies, parliamentary eloquences, ship-moneys, *Monarchies of Man*: a most constitutional, unblamable, dignified set of men. But the heart remains cold before them; the fancy alone endeavours to get up some worship of them. What man's heart does, in reality, break forth into any fire of brotherly love for these men? They are become dreadfully dull men! One breaks down often enough in the constitutional eloquence of the admirable Pym, with his "seventhly and lastly." You find that it may be

the admirablest thing in the world, but that it is heavy—heavy as lead, barren as brick-clay; that, in a word, for you there is little or nothing now surviving there! One leaves all these nobilities standing in their niches of honour: the rugged outcast Cromwell, he is the man of them all in whom one still finds human stuff. The great savage Baresark: he could write no euphemistic *Monarchy of Man*; did not speak, did not work with glib regularity; had no straight story to tell for himself anywhere. But he stood bare, not cased in euphemistic coat of mail; he grappled like a giant, face to face, heart to heart, with the naked truth of things! That, after all, is the sort of man for one. I plead guilty to valuing such a man beyond all other sorts of men. Smooth-shaven Respectabilities not a few one finds, that are not good for much. Small thanks to a man for keeping his hands clean, who would not touch the work but with gloves on!

Neither, on the whole, does this constitutional tolerance of the eighteenth century for the other happier Puritans seem to be a very great matter. One might say it is but a piece of Formulism and Scepticism, like the rest. They tell us it was a sorrowful thing to consider that the foundation of our English Liberties should have been laid by “superstition.” These Puritans came forward with Calvinistic incredible Creeds, Anti-Laudisms, Westminster Confessions; demanding, chiefly of all, that they should have liberty to worship in their own way. Liberty to tax themselves: that was the thing they should have demanded! It was superstition, fanaticism, disgraceful ignorance of constitutional philosophy to insist on the other thing! Liberty to tax oneself? Not to pay out money from your pocket except on reason shown? No century, I think, but a rather barren one would have fixed on that as the first right of man! I should say, on the contrary, a just man will generally have better cause than money in what shape soever, before deciding to revolt against his government. Ours is a most confused world, in which a good man will be thankful to see any kind of government maintain itself in a not insupportable manner; and here in England, to this hour, if he is not ready to pay a great many taxes which he can see very small reason in, it will not go well with him, I think! He must try some other climate than this. Taxgatherer? Money? He will say: “Take my money, since you can, and it is so desirable to you; take it, and take yourself away with it; and leave me alone to my work here. *I* am still here; can still work, after all the money you have taken from me!” But if they come to him, and say, “Acknowledge a lie; pretend to say you are worshipping God, when you are not doing it: believe not the thing that *you* find true, but the thing

that I find, or pretend to find true!" He will answer: "No; by God's help, no! You may take my purse; but I cannot have my moral Self annihilated. The purse is any highwayman's who might meet me with a loaded pistol: but the Self is mine and God my maker's; it is not yours; and I will resist you to the death, and revolt against you, and, on the whole, front all manner of extremities, accusations and confusions, in defence of that!"

Really, it seems to me the one reason which could justify revolting, this of the Puritans. It has been the soul of all just revolts among men. Not hunger alone produced even the French Revolution: no, but the feeling of the insupportable all-pervading falsehood which had now embodied itself in hunger, in universal material scarcity and nonentity, and thereby become indisputably false in the eyes of all! We will leave the eighteenth century with its "liberty to tax itself." We will not astonish ourselves that the meaning of such men as the Puritans remained dim to it. To men who believe in no reality at all, how shall a real human soul, the intensest of all realities, as it were the Voice of this world's Maker still speaking to us, be intelligible? What it cannot reduce into constitutional doctrines relative to "taxing," or other the like material interest, gross, palpable to the sense, such a century will needs reject as an amorphous heap of rubbish. Hampdens, Pym, and ship-money will be the theme of much constitutional eloquence, striving to be fervid—which will glitter, if not as fire does, then as ice does: and the irreducible Cromwell will remain a chaotic mass of "madness," "hypocrisy," and much else.

From of old, I will confess, this theory of Cromwell's falsity has been incredible to me. Nay I cannot believe the like of any Great Man whatever. Multitudes of Great Men figure in history as false, selfish men; but if we will consider it, they are but figures for us, unintelligible shadows; we do not see into them as men that could have existed at all. A superficial unbelieving generation only, with no eye but for the surfaces and semblances of things, could form such notions of Great Men. Can a great soul be possible without a conscience in it, the essence of all real souls, great or small? No, we cannot figure Cromwell as a falsity and fatuity; the longer I study him and his career, I believe this the less. Why should we? There is no evidence of it. Is it not strange that, after all the mountains of calumny this man has been subject to, after being represented as the very prince of liars, who never, or hardly ever, spoke truth, but always some cunning counterfeit of truth, there should not yet have been one falsehood

brought clearly home to him? A prince of liars, and no lie spoken by him. Not one that I could yet get sight of. It is like Pocke asking Grotius, Where is your proof of Mohammed's Pigeon? No proof! Let us leave all these calumnious chimeras, as chimeras ought to be left. They are not portraits of the man; they are distracted phantasms of him, the joint product of hatred and darkness.

Looking at the man's life with our own eyes, it seems to me, a very different hypothesis suggests itself. What little we know of his earlier obscure years, distorted as it has come down to us, does it not all betoken an earnest, affectionate, sincere kind of man? His nervous melancholic temperament indicates rather a seriousness *too* deep for him. Of those stories of "Spectres"; of the white Spectre in broad daylight, predicting that he should be King of England, we are not bound to believe much; probably no more than of the other black Spectre, or Devil in person, to whom the officer saw him sell himself before Worcester Fight! But the mournful, over-sensitive, hypochondriac humour of Oliver, in his young years, is otherwise indisputably known. The Huntingdon Physician told Sir Philip Warwick himself, he had often been sent for at midnight; Mr. Cromwell was full of hypochondria, thought himself near dying, and "had fancies about the Town-cross." These things are significant. Such an excitable deep-feeling nature, in that rugged stubborn strength of his, is not the symptom of falsehood; it is the symptom and promise of quite other than falsehood!

The young Oliver is sent to study law; falls, or is said to have fallen, for a little period, into some of the dissipations of youth; but if so, speedily repents, abandons all this: not much above twenty, he is married, settled as an altogether grave and quiet man. "He pays-back what money he had won at gambling," says the story; he does not think any gain of that kind could be really his. It is very interesting, very natural, this "conversion," as they well name it; this awakening of a great true soul from the worldly slough, to see into the awful truth of things; to see that time and its shows all rested on eternity, and this poor Earth of ours was the threshold either of Heaven or of Hell! Oliver's life at St. Ives or Ely, as a sober industrious farmer, is it not altogether as that of a true and devout man? He has renounced the world and its ways; its prizes are not the thing that can enrich him. He tills the earth; he reads his Bible; daily assembles his servants round him to worship God. He comforts persecuted ministers, is fond of preachers; nay can himself preach—exhorts his neighbours to be wise, to redeem the time. In all this what "hypocrisy," "ambition," "cant," or other falsity? The man's hopes, I do believe, were fixed on the other

Higher World; his aim to get well thither, by walking well through his humble course in this world. He courts no notice: what could notice here do for him? "Ever in his great Taskmaster's eye."

It is striking, too, how he comes out once into public view; he, since no other is willing to come: in resistance to a public grievance. I mean, in that matter of the Bedford Fens. No one else will go to law with authority; therefore he will. That matter once settled, he returns back into obscurity, to his Bible and his plough. Gain influence? His influence is the most legitimate; derived from personal knowledge of him, as a just, religious, reasonable and determined man. In this way he has lived till past forty; old age is now in view of him, and the earnest portal of death and eternity; it was at this point that he suddenly became "ambitious"! I do not interpret his parliamentary mission in that way!

His successes in parliament, his successes through the war, are honest successes of a brave man who has more resolution in the heart of him, more light in the head of him than other men. His prayers to God; his spoken thanks to the God of Victory, who had preserved him safe, and carried him forward so far, through the furious clash of a world all set in conflict, through desperate looking envelopments at Dunbar; through the death-hail of so many battles; mercy after mercy; to the "crowning mercy" of Worcester Fight: all this is good and genuine for a deep-hearted Calvinistic Cromwell. Only to vain unbelieving Cavaliers, worshipping not God but their own "lovelocks," frivolities and formalities, living quite apart from contemplations of God, living without God in the world, need it seem hypocritical.

Nor will his participation in the King's death involve him in condemnation with us. It is a stern business killing of a King! But if you once go to war with him, it lies there; this and all else lies there. Once at war, you have made wager of battle with him: it is he to die, or else you. Reconciliation is problematic; may be possible, or, far more likely, is impossible. It is now pretty generally admitted that the parliament, having vanquished Charles I, had no way of making any tenable arrangement with him. The large Presbyterian party, apprehensive now of the Independents, were most anxious to do so; anxious indeed as for their own existence; but it could not be. The unhappy Charles, in those final Hampton Court negotiations, shows himself as a man fatally incapable of being dealt with. A man who, once for all, could not and would not understand: whose thought did not in any measure represent to him the real fact of the matter; nay worse, whose *word* did not at all represent his thought. We may say this of him without cruelty, with deep pity rather: but it is

true and undeniable. Forsaken there of all but the name of Kingship, he still, finding himself treated with outward respect as a King, fancied that he might play off party against party, and smuggle himself into his old power by deceiving both. Alas, they both discovered that he was deceiving them. A man whose word will not inform you at all what he means or will do is not a man you can bargain with. You must get out of that man's way, or put him out of yours! The Presbyterians, in their despair, were still for believing Charles, though found false, unbelievable again and again. Not so Cromwell: "For all our fighting," says he, "we are to have a little bit of paper?" No!

In fact, everywhere we have to note the decisive practical eye of this man; how he drives toward the practical and practicable; has a genuine insight into what *is* fact. Such an intellect, I maintain, does not belong to a false man: the false man sees false shows, plausibilities, expediences: the true man is needed to discern even practical truth. Cromwell's advice about the parliament's Army, early in the contest, how they were to dismiss their city tapsters, flimsy riotous persons, and choose substantial yeomen, whose heart was in the work, to be soldiers for them: this is advice by a man who *saw*. Fact answers, if you see into fact. Cromwell's Ironsides were the embodiment of this insight of his; men fearing God; and without any other fear. No more conclusively genuine set of fighters ever trod the soil of England, or of any other land.

Neither will we blame greatly that word of Cromwell's to them; which was so blamed: "If the King should meet me in battle, I would kill the King." Why not? These words were spoken to men who stood as before a Higher than Kings. They had set more than their own lives on the cast. The parliament may call it, in official language, a fighting "*for* the King"; but we, for our share, cannot understand that. To us it is no dilettante work, no sleek officiality; it is sheer rough death and earnest. They have brought it to the calling forth of war; horrid internecine fight, man grappling with man in fire-eyed rage—the infernal element in man called forth, to try it by that! *Do* that therefore; since that is the thing to be done. The successes of Cromwell seem to me a very natural thing! Since he was not shot in battle, they were an inevitable thing. That such a man, with the eye to see, with the heart to dare, should advance, from post to post, from victory to victory, till the Huntingdon Farmer became, by whatever name you might call him, the acknowledged Strongest Man in England, virtually the King of England, requires no magic to explain it!

Truly it is a sad thing for a people, as for a man, to fall into scepticism,

into dilettantism, insincerity; not to know a sincerity when they see it. For this world, and for all worlds, what curse is so fatal? The heart lying dead, the eye cannot see. What intellect remains is merely the vulpine intellect. That a true King be sent them is of small use; they do not know him when sent. They say scornfully, Is this your King? The Hero wastes his heroic faculty in bootless contradiction from the unworthy; and can accomplish little. For himself he does accomplish a heroic life, which is much, which is all; but for the world he accomplishes comparatively nothing. The wild rude sincerity, direct from Nature, is not glib in answering from the witness-box; in your small-debt *piepowder* court, he is scouted as a counterfeit. The vulpine intellect "detects" him. For being a man worth any thousand men, the response, your Knox, your Cromwell gets, is an argument for two centuries, whether he was a man at all. God's greatest gift to this Earth is sneeringly flung away. The miraculous talisman is a paltry plated coin, not fit to pass in the shops as a common guinea.

Lamentable this! I say, this must be remedied. Till this be remedied in some measure, there is nothing remedied. "Detect quacks"? Yes do, for Heaven's sake; but know withal the men that are to be trusted! Till we know that, what is all our knowledge; how shall we even so much as "detect"? For the vulpine sharpness, which considers itself to be knowledge, and "detects" in that fashion, is far mistaken. Dupes indeed are many: but, of all dupes, there is none so fatally situated as he who lives in undue terror of being duped. The world does exist; the world has truth in it or it would not exist! First recognize what is true, we shall then discern what is false; and properly never till then.

"Know the men that are to be trusted": alas, this is yet, in these days, very far from us. The sincere alone can recognize sincerity. Not a Hero only is needed, but a world fit for him; a world not of valets—the Hero comes almost in vain to it otherwise! Yes, it is far from us: but it must come; thank God, it is visibly coming. Till it do come, what have we? Ballot-boxes, suffrages, French Revolutions: if we are as valets, and do not know the Hero when we see him, what good are all these? A heroic Cromwell comes; and for a hundred and fifty years he cannot have a vote from us. Why, the insincere, unbelieving world is the natural property of the quack, and of the father of quacks and quackeries! Misery, confusion, unveracity are alone possible there. By ballot-boxes we alter the figure of our quack; but the substance of him continues. The valet world has to be governed by the sham hero, by the King merely dressed in King gear. It is his; he is its! In brief, one of two things: We shall either learn to

know a Hero, a true governor and captain, somewhat better when we see him; or else go on to be forever governed by the unheroic; had we ballot-boxes clattering at every street-corner, there were no remedy in these.

Poor Cromwell, great Cromwell! The inarticulate prophet; prophet who could not speak. Rude, confused, struggling to utter himself, with his savage depth, with his wild sincerity; and he looked so strange, among the elegant euphemisms, dainty little Falklands, didactic Chillingworths, diplomatic Clarendons! Consider him. An outer hull of chaotic confusion, visions of the Devil, nervous dreams, almost semi-madness; and yet such a clear determinate man's energy working in the heart of that. A kind of chaotic man. The ray as of pure starlight and fire, working in such an element of boundless hypochondria, unformed black of darkness! And yet withal this hypochondria, what was it but the very greatness of the man? The depth and tenderness of his wild affections: the quantity of sympathy he had with things—the quantity of insight he would yet get into the heart of things, the mastery he would yet get over things: this was his hypochondria. The man's misery, as man's misery always does, came of his greatness. Samuel Johnson too is that kind of man. Sorrow-stricken, half-distracted; the wide element of mournful black enveloping him—wide as the world. It is the character of a prophetic man; a man with his whole soul *seeing*, and struggling to see.

On this ground, too, I explain to myself Cromwell's reputed confusion of speech. To himself the internal meaning was sun-clear; but the material with which he was to clothe it in utterance was not there. He had lived silent; a great unnamed sea of thought round him all his days; and in his way of life little call to attempt naming or uttering that. With his sharp power of vision, resolute power of action, I doubt not he could have learned to write books withal, and speak fluently enough: he did harder things than writing of books. This kind of man is precisely he who is fit for doing manfully all things you will set him on doing. Intellect is not speaking and logicizing; it is seeing and ascertaining. Virtue, *Vir-tus*, manhood, *hero-hood*, is not fair-spoken immaculate regularity; it is first of all what the Germans well name it, *Tugend* (*Taugend*, *dow-ing* or *Doughtiness*), Courage and the Faculty to *do*. This basis of the matter Cromwell had in him.

One understands moreover how, though he could not speak in parliament, he might preach, rhapsodic preaching; above all, how he might be great in extempore prayer. These are the free outpouring utterances of what is in the heart: method is not required in them; warmth, depth, sincerity are all that is required. Cromwell's habit of prayer is a notable feature of him. All his great enterprises were commenced with prayer.

In dark inextricable-looking difficulties, his officers and he used to assemble, and pray alternately, for hours, for days, till some definite resolution rose among them, some "door of hope," as they would name it, disclosed itself. Consider that. In tears, in fervent prayers, and cries to the great God, to have pity on them, to make His light shine before them. They, armed Soldiers of Christ, as they felt themselves to be; a little band of Christian Brothers, who had drawn the sword against a great black devouring world not Christian, but Mammonish, Devilish—they cried to God in their straits, in their extreme need, not to forsake the Cause that was His. The light which now rose upon them—how could a human soul, by any means at all, get better light? Was not the purpose so formed like to be precisely the best, wisest, the one to be followed without hesitation any more? To them it was as the shining of Heaven's own splendour in the waste-howling darkness; the Pillar of Fire by night that was to guide them on their desolate perilous way. Was it not such? Can a man's soul, to this hour, get guidance by any other method than intrinsically by that same—devout prostration of the earnest struggling soul before the Highest, the Giver of all Light; be such prayer a spoken, articulate, or be it a voiceless, inarticulate one? There is no other method. "Hypocrisy"? One begins to be weary of all that. They who call it so have no right to speak on such matters. They never formed a purpose, what one can call a purpose. They went about balancing expediences, plausibilities; gathering votes, advices; they never were alone with the truth of a thing at all. Cromwell's prayers were likely to be "eloquent," and much more than that. His was the heart of a man who *could* pray.

But indeed his actual speeches, I apprehend, were not nearly so ineloquent, incondite, as they look. We find he was, what all speakers aim to be, an impressive speaker, even in parliament; one who, from the first, had weight. With that rude passionate voice of his, he was always understood to mean something, and men wished to know what. He disregarded eloquence, nay despised and disliked it; spoke always without premeditation of the words he was to use. The reporters, too, in those days seem to have been singularly candid; and to have given the printer precisely what they found on their own notepaper. And withal, what a strange proof is it of Cromwell's being the premeditative ever-calculating hypocrite, acting a play before the world, That to the last he took no more charge of his speeches! How came he not to study his words a little, before flinging them out to the public? If the words were true words, they could be left to shift for themselves.

But with regard to Cromwell's "lying," we will make one remark. This, I suppose, or something like this, to have been the nature of it. All parties

found themselves deceived in him; each party understood him to be meaning this, heard him even say so, and behold he turns out to have been meaning that! He was, cry they, the chief of liars. But now, intrinsically, is not all this the inevitable fortune, not of a false man in such times, but simply of a superior man? Such a man must have reticences in him. If he walk wearing his heart upon his sleeve for daws to peck at, his journey will not extend far! There is no use for any man's taking up his abode in a house built of glass. A man always is to be himself the judge how much of his mind he will show to other men; even to those he would have work along with him. There are impertinent inquiries made: your rule is to leave the inquirer *un*informed on that matter; not, if you can help it, *mis*informed; but precisely as dark as he was! This, could one hit the right phrase of response, is what the wise and faithful man would aim to answer in such a case.

Cromwell, no doubt of it, spoke often in the dialect of small subaltern parties; uttered to them a part of his mind. Each little party thought him all its own. Hence their rage, one and all, to find him not of their party, but of his own party! Was it his blame? At all seasons of his history he must have felt, among such people, how, if he explained to them the deeper insight he had, they must either have shuddered aghast at it, or believing it, their own little compact hypothesis must have gone wholly to wreck. They could not have worked in his province any more; nay perhaps they could not now have worked in their own province. It is the inevitable position of a great man among small men. Small men, most active, useful, are to be seen everywhere, whose whole activity depends on some conviction which to you is palpably a limited one, imperfect, what we call an error. But would it be a kindness always, is it a duty always or often, to disturb them in that? Many a man, doing loud work in the world, stands only on some thin traditionality, conventionality; to him indubitable, to you incredible: break that beneath him, he sinks to endless depths! "I might have my hand full of truth," said Fontenelle, "and open only my little finger."

And if this be the fact even in matters of doctrine, how much more in all departments of practice! He that cannot withal keep his mind to himself cannot practise any considerable thing whatever. And we call it "dissimulation," all this? What would you think of calling the general of an army a dissembler because he did not tell every corporal and private soldier, who pleased to put the question, what his thoughts were about everything? Cromwell, I should rather say, managed all this in a manner we must admire for its perfection. An endless vortex of such questioning

“corporals” rolled confusedly round him through his whole course whom he did answer. It must have been as a great true-seeing man that he managed this too. Not one proved falsehood, as I said; not one! Of what man that ever wound himself through such a coil of things will you say so much?

But in fact there are two errors, widely prevalent, which pervert to the very basis our judgments formed about such men as Cromwell; about their “ambition,” “falsity,” and suchlike. The first is what I might call substituting the goal of their career for the course and starting point of it. The vulgar historian of a Cromwell fancies that he had determined on being Protector of England at the time when he was ploughing the marsh lands of Cambridgeshire. His career lay all mapped out: a program of the whole drama which he then step by step dramatically unfolded, with all manner of cunning, deceptive dramaturgy, as he went on—the hollow, scheming ὑποκριτής [*hypokrites*] or play-actor that he was! This is a radical perversion; all but universal in such cases. And think for an instant how different the fact is! How much does one of us foresee of his own life? Short way ahead of us it is all dim; an unwound skein of possibilities, of apprehensions, attemptabilities, vague-looming hopes. This Cromwell had not his life lying all in that fashion of program, which he needed then, with that unfathomable cunning of his, only to enact dramatically, scene after scene! Not so. We see it so; but to him it was in no measure so. What absurdities would fall away of themselves, were this one undeniable fact kept honestly in view by history! Historians indeed will tell you that they do keep it in view; but look whether such is practically the fact! Vulgar history, as in this Cromwell’s case, omits it altogether; even the best kinds of history only remember it now and then. To remember it duly with rigorous perfection, as in the fact it stood, requires indeed a rare faculty; rare, nay impossible. A very Shakespeare for faculty; or more than Shakespeare; who could enact a brother man’s biography, see with the brother man’s eyes at all points of his course what things he saw; in short, know his course and him, as few “historians” are like to do. Half or more of all the thick-plied perversions which distort our image of Cromwell will disappear if we honestly so much as try to represent them so; in sequence, as they were; not in the lump, as they are thrown down before us.

But a second error, which I think the generality commit, refers to this same “ambition” itself. We exaggerate the ambition of Great Men; we mistake what the nature of it is. Great Men are not ambitious in that

sense; he is a small poor man that is ambitious so. Examine the man who lives in misery because he does not shine above other men; who goes about producing himself, pruriently anxious about his gifts and claims; struggling to force everybody, as it were begging everybody for God's sake to acknowledge him a great man, and set him over the heads of men! Such a creature is among the wretchedest sights seen under this sun. A great man? A poor, morbid, prurient, empty man; fitter for the ward of a hospital than for a throne among men. I advise you to keep out of his way. He cannot walk on quiet paths; unless you will look at him, wonder at him, write paragraphs about him, he cannot live. It is the emptiness of the man, not his greatness. Because there is nothing in himself, he hungers and thirsts that you would find something in him. In good truth, I believe no great man, not so much as a genuine man who had health and real substance in him of whatever magnitude, was ever much tormented in this way.

Your Cromwell, what good could it do him to be "noticed" by noisy crowds of people? God his Maker already noticed him. He, Cromwell, was already there; no notice would make him other than he already was. Till his hair was grown grey; and Life from the downhill slope was all seen to be limited, not infinite but finite, and all a measurable matter how it went—he had been content to plough the ground, and read his Bible. He in his old days could not support it any longer, without selling himself to falsehood that he might ride in gilt carriages to Whitehall, and have clerks with bundles of papers haunting him, "Decide this, decide that," which in utmost sorrow of heart no man can perfectly decide! What could gilt carriages do for this man? From of old, was there not in his life a weight of meaning, a terror and a splendour as of Heaven itself? His existence there as man set him beyond the need of gilding. Death, Judgment and Eternity: these already lay as the background of whatsoever he thought or did. All his life lay begirt as in a sea of nameless thoughts, which no speech of a mortal could name. God's word, as the Puritan prophets of that time had read it: this was great, and all else was little to him. To call such a man "ambitious," to figure him as the prurient windbag described above, seems to me the poorest solecism. Such a man will say: "Keep your gilt carriages and huzzaing mobs, keep your red-tape clerks, your influentialities, your important businesses. Leave me alone, leave me alone; there is too much of life in me already!" Old Samuel Johnson, the greatest soul in England in his day, was not ambitious. "Corsica Boswell" flaunted at public shows with printed ribbons round his hat; but the great old Samuel stayed at home. The world-

wide soul wrap-up in its thoughts, in its sorrows; what could parading, and ribbons in the hat, do for it?

Ah yes, I will say again: The great silent men! Looking round on the noisy inanity of the world, words with little meaning, actions with little worth, one loves to reflect on the great Empire of Silence. The noble silent men, scattered here and there, each in his department; silently thinking, silently working; whom no morning newspaper makes mention of! They are the salt of the Earth. A country that has none or few of these is in a bad way. Like a forest which had no roots, which had all turned into leaves and boughs; which must soon wither and be no forest. Woe for us if we had nothing but what we can show, or speak. Silence, the great Empire of Silence: higher than the stars; deeper than the Kingdoms of Death! It alone is great; all else is small. I hope we English will long maintain our *grand talent pour le silence*. Let others that cannot do without standing on barrel-heads, to spout, and be seen of all the marketplace, cultivate speech exclusively—become a most green forest without roots! Solomon says, there is a time to speak; but also a time to keep silence. Of some great silent Samuel, not urged to writing, as old Samuel Johnson says he was, by want of money, and nothing other, one might ask, “Why do not you too get up and speak; promulgate your system, found your sect?” “Truly,” he will answer, “I am continent of my thought hitherto; happily I have yet had the ability to keep it in me, no compulsion strong enough to speak it. My “system” is not for promulgation first of all; it is for serving myself to live by. That is the great purpose of it to me. And then the “honour”? Alas, yes; but as Cato said of the statue: “So many statues in that Forum of yours, may it not be better if they ask, Where is Cato’s statue?”

But, now, by way of counterpoise to this of silence, let me say that there are two kinds of ambition; one wholly blamable, the other laudable and inevitable. Nature has provided that the great silent Samuel shall not be silent too long. The selfish wish to shine over others, let it be accounted altogether poor and miserable. “Seekest thou great things, seek them not”: this is most true. And yet, I say, there is an irrepressible tendency in every man to develop himself according to the magnitude which Nature has made him of; to speak out, to act out, what Nature has laid in him. This is proper, fit, inevitable; nay it is a duty, and even the summary of duties for a man. The meaning of life here on earth might be defined as consisting in this: To unfold your self, to work what thing you have the faculty for. It is a necessity for the human being, the first law of our existence. Coleridge beautifully remarks that the infant learns to

speaking by this necessity it feels. We will say therefore: To decide about ambition, whether it is bad or not, you have two things to take into view. Not the coveting of the place alone, but the fitness of the man for the place withal: that is the question. Perhaps the place was his; perhaps he had a natural right, and even obligation, to seek the place! Mirabeau's ambition to be Prime Minister, how shall we blame it, if he were "the only man in France that could have done any good there"? Hopefuler perhaps had he not so clearly felt how much good he could do! But a poor Necker, who could do no good, and had even felt that he could do none, yet sitting broken-hearted because they had flung him out, and he was now quit of it, well might Gibbon mourn over him. Nature, I say, has provided amply that the silent great man shall strive to speak withal; *too* amply, rather!

Fancy, for example, you had revealed to the brave old Samuel Johnson, in his shrouded-up existence, that it was possible for him to do priceless divine work for his country and the whole world. That the perfect Heavenly Law might be made law on this earth; that the prayer he prayed daily, "Thy kingdom come," was at length to be fulfilled! If you had convinced his judgment of this; that it was possible, practicable; that he the mournful silent Samuel was called to take a part in it! Would not the whole soul of the man have flamed up into a divine clearness, into noble utterance and determination to act; casting all sorrows and misgivings under his feet, counting all affliction and contradiction small—the whole dark element of his existence blazing into articulate radiance of light and lightning? It were a true ambition this! And think now how it actually was with Cromwell. From of old, the sufferings of God's Church, true zealous preachers of the truth flung into dungeons, whipped, set on pillories, their ears cropped off, God's Gospel-cause trodden under foot of the unworthy: all this had lain heavy on his soul. Long years he had looked upon it, in silence, in prayer; seeing no remedy on Earth; trusting well that a remedy in Heaven's goodness would come—that such a course was false, unjust, and could not last forever. And now behold the dawn of it; after twelve years silent waiting, all England stirs itself; there is to be once more a parliament, the Right will get a voice for itself: inexpressible well-grounded hope has come again into the Earth. Was not such a parliament worth being a member of? Cromwell threw down his ploughs and hastened thither.

He spoke there—rugged bursts of earnestness, of a self-seen truth, where we get a glimpse of them. He worked there; he fought and strove, like a strong true giant of a man, through cannon tumult and all else—

on and on, till the Cause triumphed, its once so formidable enemies all swept from before it, and the dawn of hope had become clear light of victory and certainty. That *he* stood there as the strongest soul of England, the undisputed Hero of all England—what of this? It was possible that the law of Christ's Gospel could now establish itself in the world! The Theocracy which John Knox in his pulpit might dream of as a "devout imagination," this practical man, experienced in the whole chaos of most rough practice, dared to consider as capable of being realized. Those that were highest in Christ's Church, the devoutest wisest men, were to rule the land: in some considerable degree, it might be so and should be so. Was it not true, God's truth? And if true, was it not then the very thing to do? The strongest practical intellect in England dared to answer, Yes! This I call a noble true purpose; is it not, in its own dialect, the noblest that could enter into the heart of statesman or man? For a Knox to take it up was something; but for a Cromwell, with his great sound sense and experience of what our world was—history, I think, shows it only this once in such a degree. I account it the culminating point of Protestantism; the most heroic phasis that "Faith in the Bible" was appointed to exhibit here below. Fancy it: that it were made manifest to one of us, how we could make the Right supremely victorious over Wrong, and all that we had longed and prayed for, as the highest good to England and all lands, an attainable fact!

Well, I must say, the vulpine intellect, with its knowingness, its alertness and expertness in "detecting hypocrites," seems to me a rather sorry business. We have had one such statesman in England; one may, that I can get sight of, who never had in the heart of him any such purpose at all. One man, in the course of fifteen hundred years; and this was his welcome. He had adherents by the hundred or the ten; opponents by the million. Had England rallied all round him—why, then, England might have been a Christian land! As it is, vulpine knowingness sits yet at its hopeless problem, "Given a world of Knaves, to educe an Honesty from their united action"; how cumbrous a problem, you may see in Chancery Law-Courts, and some other places! Till at length, by Heaven's just anger, but also by Heaven's great grace, the matter begins to stagnate; and this problem is becoming to all men a palpably hopeless one.

But with regard to Cromwell and his purposes: Hume and a multitude following him come upon me here with an admission that Cromwell was sincere at first; a sincere "Fanatic" at first, but gradually became a "Hypocrite" as things opened round him. This of the Fanatic-Hypocrite

is Hume's theory of it; extensively applied since—to Mohammed and many others. Think of it seriously, you will find something in it—not much, not at all, very far from all. Sincere hero hearts do not sink in this miserable manner. The Sun flings forth impurities, gets balefully incrustated with spots; but it does not quench itself, and become no Sun at all, but a mass of Darkness! I will venture to say that such never befell a great, deep Cromwell; I think, never. Nature's own lion-hearted son! Antaeus-like, his strength is got by touching the Earth, his mother; lift him up from the Earth, lift him up into hypocrisy, inanity, his strength is gone. We will not assert that Cromwell was an immaculate man; that he fell into no faults, no insincerities among the rest. He was no dilettante professor of "perfections," "immaculate conducts." He was a rugged Orson, rending his rough way through actual true work—doubtless with many a fall therein. Insincerities, faults, very many faults daily and hourly: it was too well known to him; known to God and him! The Sun was dimmed many a time; but the Sun had not himself grown a Dimness. Cromwell's last words, as he lay waiting for death, are those of a Christian heroic man. Broken prayers to God, that He would judge him and this cause, He since man could not, in justice yet in pity. They are most touching words. He breathed out his wild great soul, its toils and sins all ended now, into the presence of his Maker, in this manner.

I, for one, will not call the man a Hypocrite! Hypocrite, mummer, the life of him a mere theatricality; empty barren quack, hungry for the shouts of mobs? The man had made obscurity do very well for him till his head was grey; and now he was, there as he stood recognized unblamed, the virtual King of England. Cannot a man do without King's coaches and cloaks? Is it such a blessedness to have clerks forever pestering you with bundles of papers in red-tape? A simple Diocletian prefers planting of cabbages; a George Washington, no very immeasurable man, does the like. One would say, it is what any genuine man could do; and would do. The instant his real work were out in the matter of Kingship—away with it!

Let us remark, meanwhile, how indispensable everywhere a King is, in all movements of men. It is strikingly shown, in this very War, what becomes of men when they cannot find a Chief Man, and their enemies can. The Scotch nation was all but unanimous in Puritanism, zealous and of one mind about it, as in this English end of the Island was far from being the case. But there was no great Cromwell among them; poor tremulous, hesitating, diplomatic Argyles and suchlike; none of them had a heart true enough for the truth, or durst commit himself to the truth.

They had no leader; and the scattered Cavalier party in that country had one: Montrose, the noblest of all the Cavaliers; an accomplished, gallant-hearted, splendid man; what one may call the Hero-Cavalier. Well, look at it; on the one hand subjects without a King; on the other a King without subjects! The subjects without King can do nothing; the subjectless King can do something. This Montrose, with a handful of Irish or Highland savages, few of them so much as guns in their hands, dashes at the drilled Puritan armies like a wild whirlwind; sweeps them, time after time, some five times over, from the field before him. He was at one period, for a short while, master of all Scotland. One man; but he was a man: a million zealous men, but without the one; they against him were powerless! Perhaps of all the persons in that Puritan struggle, from first to last, the single indispensable one was verily Cromwell. To see and dare, and decide; to be a fixed pillar in the welter of uncertainty; a King among them, whether they called him so or not.

Precisely here, however, lies the rub for Cromwell. His other proceedings have all found advocates, and stand generally justified; but this dismissal of the Rump Parliament and assumption of the Protectorship is what no one can pardon him. He had fairly grown to be King in England; Chief Man of the victorious party in England: but it seems he could not do without the King's cloak, and sold himself to perdition in order to get it. Let us see a little how this was.

England, Scotland, Ireland, all lying now subdued at the feet of the Puritan Parliament, the practical question arose, What was to be done with it? How will you govern these nations, which Providence in a wondrous way has given up to your disposal? Clearly those hundred surviving members of the Long Parliament, who sit there as supreme authority, cannot continue for ever to sit. What is to be done? It was a question which theoretical constitution-builders may find easy to answer; but to Cromwell, looking there into the real practical facts of it, there could be none more complicated. He asked of the Parliament, What it was they would decide upon? It was for the Parliament to say. Yet the Soldiers too, however contrary to formula, they who had purchased this victory with their blood, it seemed to them that they also should have something to say in it! We will not "For all our fighting have nothing but a little piece of paper." We understand that the Law of God's Gospel, to which He through us has given the victory, shall establish itself, or try to establish itself, in this land!

For three years, Cromwell says, this question had been sounded in the

ears of the Parliament. They could make no answer; nothing but talk, talk. Perhaps it lies in the nature of parliamentary bodies; perhaps no Parliament could in such case make any answer but even that of talk, talk! Nevertheless the question must and shall be answered. You sixty men there, becoming fast odious, even despicable, to the whole nation, whom the nation already calls Rump Parliament, you cannot continue to sit there: who or what then is to follow? "Free Parliament," right of Election, constitutional formulas of one sort or the other—the thing is a hungry fact coming on us, which we must answer or be devoured by it! And who are you that prate of constitutional formulas, rights of parliament? You have had to kill your King, to make Pride's Purges, to expel and banish by the law of the stronger whosoever would not let your cause prosper: there are but fifty or three-score of you left there, debating in these days. Tell us what we shall do; not in the way of formula, but of practicable fact!

How they did finally answer remains obscure to this day. The diligent Godwin himself admits that he cannot make it out. The likeliest is that this poor parliament still would not and indeed could not dissolve and disperse; that when it came to the point of actually dispersing, they again, for the tenth or twentieth time, adjourned it—and Cromwell's patience failed him. But we will take the favourablest hypothesis ever started for the Parliament; the favourablest, though I believe it is not the true one, but too favourable.

According to this version: At the uttermost crisis, when Cromwell and his officers were met on the one hand, and the fifty or sixty Rump Members on the other, it was suddenly told Cromwell that the Rump in its despair *was* answering in a very singular way; that in their splenetic envious despair, to keep out the army at least, these men were hurrying through the House a kind of Reform Bill—Parliament to be chosen by the whole of England; equable electoral division into districts; free suffrage, and the rest of it! A very questionable, or indeed for them an unquestionable thing. Reform Bill, free suffrage of Englishmen? Why, the Royalists themselves, silenced indeed but not exterminated, perhaps out-number us; the great numerical majority of England was always indifferent to our cause, merely looked at it and submitted to it. It is in weight and force, not by counting of heads, that we are the majority! And now with your formulas and Reform Bills, the whole matter, sorely won by our swords, shall again launch itself to sea; become a mere hope, and likelihood, small even as a likelihood? And it is not a likelihood; it is a certainty, which we have won, by God's strength and our own right hands, and do now hold here. Cromwell walked down to these refractory

members; interrupted them in that rapid speed of their Reform Bill; ordered them to begone, and talk there no more. Can we not forgive him? Can we not understand him? John Milton, who looked on it all near at hand, could applaud him. The Reality had swept the formulas away before it. I fancy most men who were realities in England might see into the necessity of that.

The strong daring man, therefore, has set all manner of Formulas and logical superficialities against him; has dared appeal to the genuine fact of this England, Whether it will support him or not? It is curious to see how he struggles to govern in some constitutional way; find some Parliament to support him; but cannot. His first parliament, the one they call Barebones's Parliament, is, so to speak, a Convocation of the Notables. From all quarters of England the leading Ministers and chief Puritan officials nominate the men most distinguished by religious reputation, influence and attachment to the true cause: these are assembled to shape out a plan. They sanctioned what was past; shaped as they could what was to come. They were scornfully called Barebones's Parliament, the man's name, it seems, was not Barebones, but Barbone—a good enough man. Nor was it a jest, their work; it was a most serious reality—a trial on the part of these Puritan notables how far the law of Christ could become the law of this England. There were men of sense among them, men of some quality; men of deep piety I suppose the most of them were. They failed, it seems, and broke down, endeavouring to reform the Court of Chancery! They dissolved themselves, as incompetent; delivered up their power again into the hands of the Lord-General Cromwell, to do with it what he liked and could.

What will he do with it? The Lord-General Cromwell, "Commander-in-Chief of all the Forces raised and to be raised"; he hereby sees himself, at this unexampled juncture, as it were the one available Authority left in England, nothing between England and utter Anarchy but him alone. Such is the undeniable fact of his position and England's, there and then. What will he do with it? After deliberation, he decides that he will accept it; will formally, with public solemnity, say and vow before God and men, "Yes, the fact is so, and I will do the best I can with it!" Protectorship, Instrument of Government—these are the external forms of the thing; worked out and sanctioned as they could in the circumstances be, by the judges, by the leading official people, "Council of Officers and Persons of Interest in the Nation"; and as for the thing itself, undeniably enough, at the pass matters had now come to, there *was* no alternative but anarchy or that. Puritan England might accept it or not; but Puritan

England was, in real truth, saved from suicide thereby! I believe the Puritan people did, in an inarticulate, grumbling, yet on the whole grateful and real way, accept this anomalous act of Oliver's; at least, he and they together made it good, and always better to the last. But in their parliamentary articulate way, they had their difficulties, and never knew fully what to say to it!

Oliver's second parliament, properly his *first* regular parliament, chosen by the rule laid down in the Instrument of Government, did assemble, and worked; but got, before long, into bottomless questions as to the Protector's right, as to "usurpation," and so forth; and had at the earliest legal day to be dismissed. Cromwell's concluding speech to these men is a remarkable one. So likewise to his third parliament, in similar rebuke for their pedantries and obstinacies. Most rude, chaotic, all these speeches are; but most earnest-looking. You would say, it was a sincere helpless man; not used to speak the great inorganic thought of him, but to act it rather! A helplessness of utterance, in such bursting fulness of meaning. He talks much about "births of Providence." All these changes, so many victories and events, were not forethoughts, and theatrical contrivances of men, of me or of men; it is blind blasphemers that will persist in calling them so! He insists with a heavy sulphurous wrathful emphasis on this. As he well might. As if a Cromwell in that dark, huge game he had been playing, the world wholly thrown into chaos round him, had foreseen it all, and played it all off like a precontrived puppet-show by wood and wire! These things were foreseen by no man, he says; no man could tell what a day would bring forth: they were "births of Providence," God's finger guided us on, and we came at last to clear height of victory, God's Cause triumphant in these nations; and you as a parliament could assemble together, and say in what manner all this could be organized, reduced into rational feasibility among the affairs of men. You were to help with your wise counsel in doing that. "You have had such an opportunity as no parliament in England ever had." Christ's Law, the Right and True, was to be in some measure made the law of this land. In place of that, you have got into your idle pedantries, constitutionalities, bottomless cavillings and questionings about written laws for my coming here; and would send the whole matter into chaos again, because I have no notary's parchment, but only God's voice from the battle whirlwind, for being President among you! That opportunity is gone; and we know not when it will return. You have had your constitutional Logic; and Mammon's Law, not Christ's Law, rules yet in this land. "God be judge between you and me!" These are his final words to them: Take you your

constitution formulas in your hand; and I my informal struggles, purposes, realities and acts; and "God be judge between you and me!"

We said above what shapeless, involved chaotic things the printed speeches of Cromwell are. Wilfully ambiguous, unintelligible, say the most: a hypocrite shrouding himself in confused Jesuitic jargon! To me they do not seem so. I will say rather, they afforded the first glimpses I could ever get into the reality of this Cromwell, nay into the possibility of him. Try to believe that he means something, search lovingly what that may be: you will find a real *speech* lying imprisoned in these broken rude tortuous utterances; a meaning in the great heart of this inarticulate man! You will, for the first time, begin to see that he was a man; not an enigmatic chimera, unintelligible to you, incredible to you. The histories and biographies written of this Cromwell, written in shallow sceptical generations that could not know or conceive of a deep believing man, are far more obscure than Cromwell's speeches. You look through them only into the infinite vague of Black and the Inane. "Heats and Jealousies," says Lord Clarendon himself: "heats and jealousies," mere crabbed whims, theories and crochets; these induced slow, sober, quiet Englishmen to lay down their ploughs and work; and fly into red fury of confused war against the best-conditioned of Kings! Try if you can find that true Scepticism writing about belief may have great gifts; but it is really *ultra vires* there. It is blindness laying down the laws of optics.

Cromwell's third Parliament split on the same rock as his second. Ever the constitutional Formula: How came *you* there? Show us some notary parchment! Blind pedants: "Why, surely the same power which makes you a Parliament, that, and something more, made me a Protector!" If my Protectorship is nothing, what in the name of wonder is your Parliamentership, a reflex and creation of that?

Parliaments having failed, there remained nothing but the way of despotism. Military dictators, each with his district, to coerce the Royalists and other gainsayers, to govern them, if not by act of parliament, then by the sword. Formula shall not carry it, while the reality is here! I will go on, protecting oppressed Protestants abroad, appointing just judges, wise managers, at home, cherishing true Gospel ministers; doing the best I can to make England a Christian England, greater than old Rome, the Queen of Protestant Christianity; I, since you will not help me; I while God leaves me life! Why did he not give it up; retire into obscurity again, since the law would not acknowledge him? cry several. That is where they mistake. For him there was no giving of it up! Prime Ministers have governed countries, Pitt, Pombal, Choiseul; and their word was a law

while it held: but this Prime Minister was one that could not get resigned. Let him once resign, Charles Stuart and the Cavaliers waited to kill him; to kill the Cause and him. Once embarked, there is no retreat, no return. This Prime Minister could retire nowhither except into his tomb.

One is sorry for Cromwell in his old days. His complaint is incessant of the heavy burden Providence has laid on him. Heavy; which he must bear till death. Old Colonel Hutchinson, as his wife relates it, Hutchinson, his old battle-mate, coming to see him on some indispensable business, much against his will—Cromwell “follows him to the door,” in a most fraternal, domestic, conciliatory style; begs that he would be reconciled to him, his old brother in arms; says how much it grieves him to be misunderstood, deserted by true fellow-soldiers, dear to him from of old: the rigorous Hutchinson, cased in his republican formula, sullenly goes his way. And the man’s head now white; his strong arm growing weary with its long work! I think always too of his poor mother, now very old, living in that palace of his; a right brave woman: as indeed they lived all an honest God-fearing Household there: if she heard a shot go off, she thought it was her son killed. He had to come to her at least once a day that she might see with her own eyes that he was yet living. The poor old mother! What had this man gained; what had he gained? He had a life of sore strife and toil, to his last day. Fame, ambition, place in history? His dead body was hung in chains; his “place in history”—place in history forsooth!—has been a place of ignominy, accusation, blackness and disgrace; and here, this day, who knows if it is not rash in me to be among the first that ever ventured to pronounce him not a knave and a liar, but a genuinely honest man! Peace to him. Did he not, in spite of all, accomplish much for us? We walk smoothly over his great rough heroic life; step over his body sunk in the ditch there. We need not spurn it, as we step on it! Let the Hero rest. It was not to men’s judgment that he appealed; nor have men judged him very well.

Precisely a century and a year after this of Puritanism had got itself hushed up into decent composure, and its results made smooth in 1688, there broke out a far deeper explosion, much more difficult to hush up, known to all mortals, and like to be long known, by the name of French Revolution. It is properly the third and final act of Protestantism; the explosive confused return of mankind to reality and fact, now that they were perishing of semblance and sham. We call our English Puritanism the second act: “Well then, the Bible is true; let us go by the Bible!” “In Church,” said Luther; “In Church and State,” said Cromwell, “let us go by what actually is God’s Truth.” Men have to return to reality; they

cannot live on semblance. The French Revolution, or third act, we may well call the final one; for lower than that savage Sansculottism men cannot go. They stand there on the nakedest haggard fact, undeniable in all seasons and circumstances; and may and must begin again confidently to build up from that. The French explosion, like the English one, got its King—who had no notary parchment to show for himself. We have still to glance for a moment at Napoleon, our second modern King.

Napoleon does by no means seem to me so great a man as Cromwell. His enormous victories which reached over all Europe, while Cromwell abode mainly in our little England, are but as the high stilts on which the man is seen standing; the stature of the man is not altered thereby. I find in him no such sincerity as in Cromwell; only a far inferior sort. No silent walking, through long years, with the Awful Unnamable of this Universe; “walking with God,” as he called it; and faith and strength in that alone: latent thought and valour, content to lie latent, then burst out as in blaze of Heaven’s lightning! Napoleon lived in an age when God was no longer believed; the meaning of all silence, latency was thought to be nonentity: he had to begin not out of the Puritan Bible, but out of poor sceptical *Encyclopédies*. This was the length the man carried it. Meritorious to get so far. His compact, prompt, everyway articulate character is in itself perhaps small, compared with our great chaotic inarticulate Cromwell’s. Instead of “dumb Prophet struggling to speak,” we have a portentous mixture of the Quack withal! Hume’s notion of the Fanatic-Hypocrite, with such truth as it has, will apply much better to Napoleon than it did to Cromwell, to Mohammed or the like—where indeed taken strictly it has hardly any truth at all. An element of blamable ambition shows itself, from the first, in this man; gets the victory over him at last, and involves him and his work in ruin.

“False as a bulletin” became a proverb in Napoleon’s time. He makes what excuse he could for it: that it was necessary to mislead the enemy, to keep up his own men’s courage, and so forth. On the whole, there are no excuses. A man in no case has liberty to tell lies. It had been, in the long run, better for Napoleon too if he had not told any. In fact, if a man have any purpose reaching beyond the hour and day, meant to be found extant next day, what good can it ever be to promulgate lies? The lies are found out; ruinous penalty is exacted for them. No man will believe the liar next time even when he speaks truth, when it is of the last importance that he be believed. The old cry of wolf! A Lie is *no*-thing; you cannot of nothing make something; you make *nothing* at last, and lose your labour into the bargain.

Yet Napoleon had a sincerity; we are to distinguish between what is

superficial and what is fundamental in insincerity. Across these outer manoeuverings and quackeries of his, which were many and most blamable, let us discern withal that the man had a certain instinctive ineradicable feeling for reality; and did base himself upon fact, so long as he had any basis. He has an instinct of Nature better than his culture was. His *savants*, Bourrienne tells us, in that voyage to Egypt were one evening busily occupied arguing that there could be no God. They had proved it, to their satisfaction, by all manner of logic. Napoleon looking up into the stars, answers, "Very ingenious, Messieurs: but who made all that?" The atheistic logic runs off from him like water; the great fact stares him in the face: "Who made all that?" So too in practice: he, as every man that can be great, or have victory in this world, sees, through all entanglements, the practical heart of the matter; drives straight towards that. When the steward of his Tuileries Palace was exhibiting the new upholstery, with praises, and demonstration how glorious it was, and how cheap withal, Napoleon, making little answer, asked for a pair of scissors, clipped one of the gold tassels from a window-curtain, put it in his pocket, and walked on. Some days afterwards, he produced it at the right moment, to the horror of his upholstery functionary; it was not gold but tinsel! In Saint Helena, it is notable how he still, to his last days, insists on the practical, the real. "Why talk and complain; above all, why quarrel with one another? There is no result in it; it comes to nothing that one can do. Say nothing, if one can do nothing!" He speaks often so, to his poor discontented followers; he is like a piece of silent strength in the middle of their morbid querulousness there.

And accordingly was there not what we can call a faith in him, genuine so far as it went? That this new enormous democracy asserting itself here in the French Revolution is an insuppressible fact, which the whole world, with its old forces and institutions cannot put down; this was a true insight of his, and took his conscience and enthusiasm along with it—a faith. And did he not interpret the dim purport of it well? "*La carrière ouverte aux talens*, The implements to him who can handle them": this actually is the truth, and even the whole truth; it includes whatever the French Revolution, or any Revolution, could mean. Napoleon, in his first period, was a true democrat. And yet by the nature of him, fostered too by his military trade, he knew that democracy, if it were a true thing at all, could not be an anarchy: the man had a heart-hatred for anarchy. On that twentieth of June (1792), Bourrienne and he sat in a coffee-house as the mob rolled by: Napoleon expresses the deepest contempt for persons in authority that they do not restrain this rabble. On the tenth of

August he wonders why there is no man to command these poor Swiss; they would conquer if there were. Such a faith in democracy, yet hatred of Anarchy, it is that carries Napoleon through all his great work. Through his brilliant Italian Campaigns, onwards to the Peace of Leoben, one would say, his inspiration is: "Triumph to the French Revolution; assertion of it against these Austrian Simulacra that pretend to call it a Simulacrum!" Withal, however, he feels, and has a right to feel, how necessary a strong authority is; how the Revolution cannot prosper or last without such. To bridle in that great devouring, self-devouring French Revolution; to tame it, so that its intrinsic purpose can be made good, that it may become organic, and be able to live among other organisms and formed things, not as a wasting destruction alone: is not this still what he partly aimed at, as the true purport of his life; nay what he actually managed to do? Through Wagrams, Austerlitzes; triumph after triumph—he triumphed so far. There was an eye to see in this man, a soul to dare and do. He rose naturally to be the King. All men saw that he *was* such. The common soldiers used to say on the march: "These babbling *avocats*, up at Paris; all talk and no work! What wonder it runs all wrong? We shall have to go and put our *Petit Caporal* there!" They went, and put him there; they and France at large. Chief-consulship, Emperorship, victory over Europe; till the poor Lieutenant of *La Fère*, not unnaturally, might seem to himself the greatest of all men that had been in the world for some ages.

But at this point, I think, the fatal charlatan element got the upper hand. He apostatized from his old faith in facts: took to believing in semblances; strove to connect himself with Austrian dynasties, Popedom, with the old false feudalities which he once saw clearly to be false; considered that he would found "his dynasty" and so forth; that the enormous French Revolution meant only that! The man was "given-up to strong delusion, that he should believe a lie"; a fearful but most sure thing. He did not know true from false now when he looked at them—the fearfulest penalty a man pays for yielding to untruth of heart. Self and false ambition had now become his god: self-deception once yielded to, all other deceptions follow naturally more and more. What a paltry patchwork of theatrical paper mantles, tinsel and mummery had this man wrapped his own great reality in, thinking to make it more real thereby! His hollow Pope's-Concordat, pretending to be a re-establishment of Catholicism, felt by himself to be the method of extirpating it, *la vaccine de la religion*: his ceremonial coronations, consecrations by the old Italian chimera in Notre Dame—"wanting nothing to complete the pomp of it," as Augereau

said, "nothing but the half-million of men who had died to put an end to all that"! Cromwell's inauguration was by the sword and Bible; what we must call a genuinely true one. Sword and Bible were borne before him, without any chimera: were not these the real emblems of Puritanism; its true decoration and insignia? It had used them both in a very real manner, and pretended to stand by them now! But this poor Napoleon mistook: he believed too much in the dupeability of men; saw no fact deeper in men than hunger and this! He was mistaken. Like a man that should build upon cloud; his house and he fall down in confused wreck, and depart out of the world.

Alas, in all of us this charlatan element exists; and might be developed, were the temptation strong enough. "Lead us not into temptation"! But it is fatal, I say, that it be developed. The thing into which it enters as a cognisable ingredient is doomed to be altogether transitory, and, however huge it may look, is in itself small. Napoleon's working, accordingly, what was it with all the noise it made? A flash as of gunpowder widespread; a blazing up as of dry heath. For an hour the whole Universe seems wrapped in smoke and flame; but only for an hour. It goes out: the Universe with its old mountains and streams, its stars above and kind soil beneath is still there.

The Duke of Weimar told his friends always, To be of courage; this Napoleonism was unjust, a falsehood, and could not last. It is true doctrine. The heavier this Napoleon trampled on the world, holding it tyrannously down, the fiercer would the world's recoil against him be, one day. Injustice pays itself with frightful compound interest. I am not sure but he had better have lost his best park of artillery, or had his best regiment drowned in the sea, than shot that poor German bookseller, Palm! It was a palpable tyrannous murderous injustice, which no man, let him paint an inch thick, could make out to be other. It burnt deep into the hearts of men, it and the like of it; suppressed fire flashed in the eyes of men, as they thought of it—waiting their day! Which day came: Germany rose round him. What Napoleon did will in the long-run amount to what he did justly; what Nature with her laws will sanction. To what of reality was in him; to that and nothing more. The rest was all smoke and waste. *La carrière ouverte aux talents*: that great true message, which has yet to articulate and fulfil itself everywhere, he left in a most inarticulate state. He was a great *ébauche*, a rude draught never completed; as indeed what great man is other? Left in *too* rude a state, alas!

His notions of the world, as he expresses them there at Saint Helena, are almost tragical to consider. He seems to feel the most unaffected sur-

prise that it has all gone so; that he is flung out on the rock here, and the world is still moving on its axis. France is great, and all great; and at bottom, he is France. England itself, he says, is by nature only an appendage of France; "another Isle of Oleron to France." So it was by nature, by Napoleon-nature; and yet look how in fact—here am I! He cannot understand it: inconceivable that the reality has not corresponded to his program of it; that France was not all great, that he was not France. "Strong delusion," that he should believe the thing to be which *is* not! The compact, clear-seeing, decisive Italian nature of him, strong, genuine, which he once had, has enveloped itself, half-dissolved itself, in a turbid atmosphere of French fanfaronade. The world was not disposed to be trodden down underfoot; to be bound into masses, and built together, as he liked, for a pedestal to France and him: the world had quite other purposes in view! Napoleon's astonishment is extreme. But alas, what help now? He had gone that way of his; and Nature also had gone her way. Having once parted with reality, he tumbles helpless in vacuity; no rescue for him. He had to sink there, mournfully as man seldom did; and break his great heart, and die—this poor Napoleon: a great implement too soon wasted, till it was useless: our last Great Man!

*The foregoing consists of Lecture VI
in Carlyle's*

ON HEROES, HERO-WORSHIP, AND THE HEROIC IN HISTORY.

Ralph Waldo Emerson

1803–1882

Descended from a line of Massachusetts clergymen, Ralph Waldo Emerson was born in Boston, May 25, 1803. His father, a Unitarian minister, died when he was a small boy. All but penniless, Emerson finished Harvard with honors at eighteen, taught and preached his way through divinity school, and in 1829 was ordained minister of the Second Church in Boston. A little later he married Ellen Tucker. When she died in 1831, he was already known as a preacher second only to the famous William Ellery Channing.

This was his point of crisis. He left the ministry and set up shop as lay preacher to America and the world. He wanted new ideas, new men, a new age. In England he visited Wordsworth and Coleridge, and became a lifelong friend of Carlyle. Settled in Concord and married again, he lived by lecturing and published an anonymous first book, *Nature*, in 1836. In it most of his chief ideas were laid out for use. His 1837 Harvard address, “The American Scholar,” announced his broad program.

This was regarded as “the latest form of infidelity.” He was a rebel, and attracted others. The Transcendentalist movement, derived in part from Coleridge, Carlyle, and the German philosophers, began to be talked about. By 1849, when he had published *Representative Men* and the first and second series of *Essays*, Emerson

Notes from the artist: “The standing figure of Emerson is set in a fantasy of figures and objects significant in his life and work. Below the quotation from the essay Self-Reliance is Thoreau, who put into practice the principles of Transcendentalism. At lower left is a Phi Beta Kappa key, recalling ‘The American Scholar’ address. Next to the key is Louisa May Alcott, another admirer of Emerson. Other symbols suggest the New England countryside and Emerson’s early manifesto Nature.”

To believe your own
thought, to believe that
what is true for you or
your private heart
is true for all
men, that
is genius.

R. Waldo
Emerson

was known in Europe and already accepted as a great figure in his own country. His reputation was still building when he died, after years of fading health, on April 27, 1882. What now seems to us his best work survives in a few of the poems, his vigorous and solid *English Traits*, several studies of character, and the *Journals*.

Emerson's essay on Henry David Thoreau was written after his friend's death. It is a shrewd and vivid picture, made with fresh colors, and touched here and there with humor. Beyond that, we may find a little comedy of provincial character in it.

They had both grown up in poor families (Emerson's mother was left with six children, and Thoreau's mother kept a boardinghouse). They were both Massachusetts men and Concord men (one of Emerson's ancestors had helped found the town and Thoreau was born there). They were both educated at Harvard (Emerson tells us how highhandedly Thoreau treated his old college), both poets and writer-philosophers.

"The other world is all my art; my pencils will draw no other," said Thoreau, echoing Plato's vision of the ideal. It was perhaps the one basic idea that he shared with Emerson. Beyond that, in their views of the world and universe, they were more often than not widely apart. Each came from one of the sharply marked classes in early New England: Emerson from the ruling professional class and Thoreau from the laboring and farming class. Emerson made a living at lecturing, where Thoreau failed. Surveying and pencil making earned Thoreau what little money he needed. Emerson felt that it was enough to expound his ideas; Thoreau believed that his must be acted out. He could build a boat; it was all Emerson could do to row one. Emerson meant to take the world for his province; Thoreau made his province the world. Like Whitman, Emerson said *yes* to his time; Thoreau, like Melville, said *no*.

How then could they understand each other? There lies the comedy. It is remarkable how much Emerson did understand. He gives us a clear and affectionate view of Thoreau as the "born protestant," a man who could be a hedgehog to his neighbors. But how much of this *was* downright oddity of character, and how much a deliberate acting out of his ideas? He refused to pay taxes to what he considered an unjust government and went to jail for it. (A friend paid the fine without letting him know.) *Was* this defiant individualism,

or was it a truly social act? Did it come out of a sense, higher than most men could boast, of what citizen and government should demand of each other?

Emerson does not mention how he tried to take care of the younger man. He “provided the acres” for Thoreau’s experiment at Walden. But he was doubtful. These were the years in which all America seemed to be moving westward. Thoreau, who might have been one of the leaders, was wasted as “the captain of a huckleberry party.” Was it true? Was he, in fact, a potential Audubon and Kit Carson, with a larger grasp than either? Did he need a glimpse of Lake Chad, or even Grand Lake in Colorado, to give him the relative scale of his Walden Pond? Or was he right in believing that if he could live deeply with his own countryside, get his own bass tree and muskrat and dragonfly down on the page, that would be enough for any man’s lifetime? Emerson gives us the means to ask these questions. He does not answer them.

Thoreau

Henry David Thoreau was the last male descendant of a French ancestor who came to this country from the Isle of Guernsey. His character exhibited occasional traits drawn from this blood, in singular combination with a very strong Saxon genius.

He was born in Concord, Massachusetts, on the 12th of July, 1817. He was graduated at Harvard College in 1837, but without any literary distinction. An iconoclast in literature, he seldom thanked colleges for their service to him, holding them in small esteem, while yet his debt to them was important. After leaving the university he joined his brother in teaching a private school, which he soon renounced. His father was a manufacturer of lead pencils, and Henry applied himself for a time to this craft, believing he could make a better pencil than was then in use. After completing his experiments, he exhibited his work to chemists and artists in Boston, and having obtained their certificates to its excellence and to its equality with the best London manufacture, he returned home contented. His friends congratulated him that he had now opened his way to fortune. But he replied that he should never make another pencil. "Why should I? I would not do again what I have done once." He resumed his endless walks and miscellaneous studies, making every day some new acquaintance with Nature, though as yet never speaking of zoology or botany, since, though very studious of natural facts, he was incurious of technical and textual science.

At this time, a strong, healthy youth fresh from college, while all his companions were choosing their profession or eager to begin some lucrative employment, it was inevitable that his thoughts should be exercised on the same question, and it required rare decision to refuse all the accustomed paths and keep his solitary freedom at the cost of disappointing the natural expectations of his family and friends: all the more difficult that he had a perfect probity, was exact in securing his own independence, and in holding every man to the like duty. But Thoreau

never faltered. He was a born protestant. He declined to give up his large ambition of knowledge and action for any narrow craft or profession, aiming at a much more comprehensive calling, the art of living well. If he slighted and defied the opinions of others, it was only that he was more intent to reconcile his practice with his own belief. Never idle or self-indulgent, he preferred, when he wanted money, earning it by some piece of manual labor agreeable to him, as building a boat or a fence, planting, grafting, surveying or other short work, to any long engagements. With his hardy habits and few wants, his skill in woodcraft, and his powerful arithmetic, he was very competent to live in any part of the world. It would cost him less time to supply his wants than another. He was therefore secure of his leisure.

A natural skill for mensuration, growing out of his mathematical knowledge and his habit of ascertaining the measures and distances of objects which interested him, the size of trees, the depth and extent of ponds and rivers, the height of mountains and the air-line distance of his favorite summits—this, and his intimate knowledge of the territory about Concord, made him drift into the profession of land surveyor. It had the advantage for him that it led him continually into new and secluded grounds, and helped his studies of Nature. His accuracy and skill in this work were readily appreciated, and he found all the employment he wanted.

He could easily solve the problems of the surveyor, but he was daily beset with graver questions, which he manfully confronted. He interrogated every custom, and wished to settle all his practice on an ideal foundation. He was a protestant *à outrance*, and few lives contain so many renunciations. He was bred to no profession; he never married; he lived alone; he never went to church; he never voted; he refused to pay a tax to the state; he ate no flesh, he drank no wine, he never knew the use of tobacco; and, though a naturalist, he used neither trap nor gun. He chose, wisely no doubt for himself, to be the bachelor of thought and Nature. He had no talent for wealth, and knew how to be poor without the least hint of squalor or inelegance. Perhaps he fell into his way of living without forecasting it much, but approved it with later wisdom. "I am often reminded," he wrote in his journal, "that if I had bestowed on me the wealth of Croesus, my aims must be still the same, and my means essentially the same." He had no temptations to fight against—no appetites, no passions, no taste for elegant trifles. A fine house, dress, the manners and talk of highly cultivated people were all thrown away on him. He much preferred a good Indian, and considered these refine-

ments as impediments to conversation, wishing to meet his companion on the simplest terms. He declined invitations to dinner parties, because there each was in everyone's way, and he could not meet the individuals to any purpose. "They make their pride," he said, "in making their dinner cost much; I make my pride in making my dinner cost little." When asked at table what dish he preferred, he answered, "The nearest." He did not like the taste of wine, and never had a vice in his life. He said—"I have a faint recollection of pleasure derived from smoking dried lily stems, before I was a man. I had commonly a supply of these. I have never smoked anything more noxious."

He chose to be rich by making his wants few, and supplying them himself. In his travels, he used the railroad only to get over so much country as was unimportant to the present purpose, walking hundreds of miles, avoiding taverns, buying a lodging in farmers' and fishermen's houses, as cheaper and more agreeable to him, and because there he could better find the men and the information he wanted.

There was somewhat military in his nature, not to be subdued, always manly and able, but rarely tender, as if he did not feel himself except in opposition. He wanted a fallacy to expose, a blunder to pillory, I may say required a little sense of victory, a roll of the drum, to call his powers into full exercise. It cost him nothing to say No; indeed he found it much easier than to say Yes. It seemed as if his first instinct on hearing a proposition was to controvert it, so impatient was he of the limitations of our daily thought. This habit, of course, is a little chilling to the social affections; and though the companion would in the end acquit him of any malice or untruth, yet it mars conversation. Hence, no equal companion stood in affectionate relations with one so pure and guileless. "I love Henry," said one of his friends, "but I cannot like him; and as for taking his arm, I should as soon think of taking the arm of an elm tree."

Yet, hermit and stoic as he was, he was really fond of sympathy, and threw himself heartily and childlike into the company of young people whom he loved, and whom he delighted to entertain, as he only could, with the varied and endless anecdotes of his experiences by field and river: and he was always ready to lead a huckleberry party or a search for chestnuts or grapes. Talking, one day, of a public discourse, Henry remarked that whatever succeeded with the audience was bad. I said, "Who would not like to write something which all can read, like *Robinson Crusoe*? and who does not see with regret that his page is not solid with a right materialistic treatment, which delights everybody?" Henry objected, of course, and vaunted the better lectures which reached only a few

persons. But at supper a young girl, understanding that he was to lecture at the Lyceum, sharply asked him, "Whether his lecture would be a nice, interesting story, such as she wished to hear, or whether it was one of those old philosophical things that she did not care about." Henry turned to her, and bethought himself, and, I saw, was trying to believe that he had matter that might fit her and her brother, who were to sit up and go to the lecture, if it was a good one for them.

He was a speaker and actor of the truth, born such, and was ever running into dramatic situations from this cause. In any circumstance it interested all bystanders to know what part Henry would take, and what he would say; and he did not disappoint expectation, but used an original judgment on each emergency. In 1845 he built himself a small framed house on the shores of Walden Pond, and lived there two years alone, a life of labor and study. This action was quite native and fit for him. No one who knew him would tax him with affectation. He was more unlike his neighbors in his thought than in his action. As soon as he had exhausted the advantages of that solitude, he abandoned it. In 1847, not approving some uses to which the public expenditure was applied, he refused to pay his town tax, and was put in jail. A friend paid the tax for him, and he was released. The like annoyance was threatened the next year. But as his friends paid the tax, notwithstanding his protest, I believe he ceased to resist. No opposition or ridicule had any weight with him. He coldly and fully stated his opinion without affecting to believe that it was the opinion of the company. It was of no consequence if every one present held the opposite opinion. On one occasion he went to the university library to procure some books. The librarian refused to lend them. Mr. Thoreau repaired to the President, who stated to him the rules and usages, which permitted the loan of books to resident graduates, to clergymen who were alumni, and to some others resident within a circle of ten miles' radius from the college. Mr. Thoreau explained to the President that the railroad had destroyed the old scale of distances—that the library was useless, yes, and President and college useless, on the terms of his rules—that the one benefit he owed to the college was its library—that, at this moment, not only his want of books was imperative, but he wanted a large number of books, and assured him that he, Thoreau, and not the librarian, was the proper custodian of these. In short, the President found the petitioner so formidable, and the rules getting to look so ridiculous, that he ended by giving him a privilege which in his hands proved unlimited thereafter.

No truer American existed than Thoreau. His preference of his country

and condition was genuine, and his aversion from English and European manners and tastes almost reached contempt. He listened impatiently to news or bon mots gleaned from London circles; and though he tried to be civil, these anecdotes fatigued him. The men were all imitating each other, and on a small mold. Why can they not live as far apart as possible, and each be a man by himself? What he sought was the most energetic nature; and he wished to go to Oregon, not to London. "In every part of Great Britain," he wrote in his diary, "are discovered traces of the Romans, their funereal urns, their camps, their roads, their dwellings. But New England, at least, is not based on any Roman ruins. We have not to lay the foundations of our houses on the ashes of a former civilization."

But idealist as he was, standing for abolition of slavery, abolition of tariffs, almost for abolition of government, it is needless to say he found himself not only unrepresented in actual politics, but almost equally opposed to every class of reformers. Yet he paid the tribute of his uniform respect to the Anti-Slavery party. One man, whose personal acquaintance he had formed, he honored with exceptional regard. Before the first friendly word had been spoken for Captain John Brown, he sent notices to most houses in Concord that he would speak in a public hall on the condition and character of John Brown, on Sunday evening, and invited all people to come. The Republican Committee, the Abolitionist Committee, sent him word that it was premature and not advisable. He replied: "I did not send to you for advice, but to announce that I am to speak." The hall was filled at an early hour by people of all parties, and his earnest eulogy of the hero was heard by all respectfully, by many with a sympathy that surprised themselves.

It was said of Plotinus that he was ashamed of his body, and 'tis very likely he had good reason for it—that his body was a bad servant, and he had not skill in dealing with the material world, as happens often to men of abstract intellect. But Mr. Thoreau was equipped with a most adapted and serviceable body. He was of short stature, firmly built, of light complexion, with strong, serious blue eyes, and a grave aspect—his face covered in the late years with a becoming beard. His senses were acute, his frame well-knit and hardy, his hands strong and skillful in the use of tools. And there was a wonderful fitness of body and mind. He could pace sixteen rods more accurately than another man could measure them with rod and chain. He could find his path in the woods at night, he said, better by his feet than his eyes. He could estimate the measure of a tree very well by his eye; he could estimate the weight of a calf or a

pig, like a dealer. From a box containing a bushel or more of loose pencils, he could take up with his hands fast enough just a dozen pencils at every grasp. He was a good swimmer, runner, skater, boatman, and would probably outwalk most countrymen in a day's journey. And the relation of body to mind was still finer than we have indicated. He said he wanted every stride his legs made. The length of his walk uniformly made the length of his writing. If shut up in the house he did not write at all.

He had a strong common sense, like that which Rose Flammock, the weaver's daughter in Scott's romance, commends in her father, as resembling a yardstick, which, while it measures dowlas and diaper, can equally well measure tapestry and cloth of gold. He had always a new resource. When I was planting forest trees, and had procured half a peck of acorns, he said that only a small portion of them would be sound, and proceeded to examine them and select the sound ones. But finding this took time, he said, "I think if you put them all into water the good ones will sink"; which experiment we tried with success. He could plan a garden or a house or a barn; would have been competent to lead a "Pacific Exploring Expedition"; could give judicious counsel in the gravest private or public affairs.

He lived for the day, not cumbered and mortified by his memory. If he brought you yesterday a new proposition, he would bring you today another not less revolutionary. A very industrious man, and setting, like all highly organized men, a high value on his time, he seemed the only man of leisure in town, always ready for any excursion that promised well or for conversation prolonged into late hours. His trenchant sense was never stopped by his rules of daily prudence, but was always up to the new occasion. He liked and used the simplest food, yet, when someone urged a vegetable diet, Thoreau thought all diets a very small matter, saying that "the man who shoots the buffalo lives better than the man who boards at the Graham House." He said, "You can sleep near the railroad and never be disturbed: Nature knows very well what sounds are worth attending to, and has made up her mind not to hear the railroad whistle. But things respect the devout mind, and a mental ecstasy was never interrupted." He noted what repeatedly befell him, that, after receiving from a distance a rare plant, he would presently find the same in his own haunts. And those pieces of luck which happen only to good players happened to him. One day, walking with a stranger, who inquired where Indian arrowheads could be found, he replied, "Everywhere," and, stooping forward, picked one on the instant from the

ground. At Mount Washington, in Tuckerman's Ravine, Thoreau had a bad fall and sprained his foot. As he was in the act of getting up from his fall, he saw for the first time the leaves of the *Arnica mollis*.

His robust common sense, armed with stout hands, keen perceptions and strong will, cannot yet account for the superiority which shone in his simple and hidden life. I must add the cardinal fact, that there was an excellent wisdom in him, proper to a rare class of men, which showed him the material world as a means and symbol. This discovery, which sometimes yields to poets a certain casual and interrupted light, serving for the ornament of their writing, was in him an unsleeping insight; and whatever faults or obstructions of temperament might cloud it, he was not disobedient to the heavenly vision. In his youth, he said, one day, "The other world is all my art; my pencils will draw no other; my jackknife will cut nothing else; I do not use it as a means." This was the muse and genius that ruled his opinions, conversation, studies, work and course of life. This made him a searching judge of men. At first glance he measured his companion and, though insensible to some fine traits of culture, could very well report his weight and caliber. And this made the impression of genius which his conversation sometimes gave.

He understood the matter in hand at a glance, and saw the limitations and poverty of those he talked with, so that nothing seemed concealed from such terrible eyes. I have repeatedly known young men of sensibility converted in a moment to the belief that this was the man they were in search of, the man of men, who could tell them all they should do. His own dealing with them was never affectionate, but superior, didactic, scorning their petty ways—very slowly conceding, or not conceding at all, the promise of his society at their houses, or even at his own. "Would he not walk with them?" "He did not know. There was nothing so important to him as his walk; he had no walks to throw away on company." Visits were offered him from respectful parties, but he declined them. Admiring friends offered to carry him at their own cost to the Yellowstone River—to the West Indies—to South America. But though nothing could be more grave or considered than his refusals, they remind one, in quite new relations, of that fop Brummel's reply to the gentleman who offered him his carriage in a shower, "But where will *you* ride, then?"—and what accusing silences, and what searching and irresistible speeches, battering down all defenses, his companions can remember!

Mr. Thoreau dedicated his genius with such entire love to the fields, hills and waters of his native town that he made them known and interesting to all reading Americans, and to people over the sea. The river

on whose banks he was born and died he knew from its springs to its confluence with the Merrimack. He had made summer and winter observations on it for many years, and at every hour of the day and night. The result of the recent survey of the water commissioners appointed by the State of Massachusetts he had reached by his private experiments several years earlier. Every fact which occurs in the bed, on the banks or in the air over it; the fishes, and their spawning and nests, their manners, their food; the shad flies which fill the air on a certain evening once a year, and which are snapped at by the fishes so ravenously that many of these die of repletion; the conical heaps of small stones on the river shallows; the huge nests of small fishes, one of which will sometimes overflow a cart; the birds which frequent the stream, heron, duck, sheldrake, loon, osprey; the snake, muskrat, otter, woodchuck and fox, on the banks; the turtle, frog, hyla and cricket, which make the banks vocal—were all known to him, and, as it were, townsmen and fellow creatures; so that he felt an absurdity or violence in any narrative of one of these by itself apart, and still more of its dimensions on an inch rule, or in the exhibition of its skeleton, or the specimen of a squirrel or a bird in brandy. He liked to speak of the manners of the river, as itself a lawful creature, yet with exactness, and always to an observed fact. As he knew the river, so the ponds in this region.

One of the weapons he used, more important to him than microscope, or alcohol receiver to other investigators, was a whim which grew on him by indulgence, yet appeared in gravest statement, namely, of extolling his own town and neighborhood as the most favored center for natural observation. He remarked that the flora of Massachusetts embraced almost all the important plants of America—most of the oaks, most of the willows, the best pines, the ash, the maple, the beech, the nuts. He returned Kane's Arctic Voyage to a friend of whom he had borrowed it, with the remark that "Most of the phenomena noted might be observed in Concord." He seemed a little envious of the Pole, for the coincident sunrise and sunset, or five minutes' day after six months: a splendid fact, which Annursnuc had never afforded him. He found red snow in one of his walks, and told me that he expected to find yet the *Victoria regia* in Concord. He was the attorney of the indigenous plants, and owned to a preference of the weeds to the imported plants, as of the Indian to the civilized man, and noticed, with pleasure, that the willow bean poles of his neighbor had grown more than his beans. "See these weeds," he said, "which have been hoed at by a million farmers all spring and summer, and yet have prevailed, and just now come out

triumphant over all lanes, pastures, fields and gardens, such is their vigor. We have insulted them with low names, too—as Pigweed, Wormwood, Chickweed, Shad-blossom.” He says, “They have brave names, too—Ambrosia, Stellaria, Amelanchier, Amaranth, etc.”

I think his fancy for referring everything to the meridian of Concord did not grow out of any ignorance or depreciation of other longitudes or latitudes, but was rather a playful expression of his conviction of the indifference of all places, and that the best place for each is where he stands. He expressed it once in this wise: “I think nothing is to be hoped from you, if this bit of mold under your feet is not sweeter to you to eat than any other in this world, or in any world.”

The other weapon with which he conquered all obstacles in science was patience. He knew how to sit immovable, a part of the rock he rested on, until the bird, the reptile, the fish, which had retired from him, should come back and resume its habits, nay, moved by curiosity, should come to him and watch him.

It was a pleasure and a privilege to walk with him. He knew the country like a fox or a bird, and passed through it as freely by paths of his own. He knew every track in the snow or on the ground, and what creature had taken this path before him. One must submit abjectly to such a guide, and the reward was great. Under his arm he carried an old music book to press plants; in his pocket, his diary and pencil, a spyglass for birds, microscope, jackknife and twine. He wore a straw hat, stout shoes, strong gray trousers, to brave scrub oaks and smilax, and to climb a tree for a hawk’s or a squirrel’s nest. He waded into the pool for the water plants, and his strong legs were no insignificant part of his armor. On the day I speak of he looked for the *Menyanthes*, detected it across the wide pool, and, on examination of the florets, decided that it had been in flower five days. He drew out of his breast pocket his diary, and read the names of all the plants that should bloom on this day, whereof he kept account as a banker when his notes fall due. The *Cypripedium* not due till tomorrow. He thought that, if waked up from a trance, in this swamp, he could tell by the plants what time of the year it was within two days. The redstart was flying about, and presently the fine grosbeaks, whose brilliant scarlet “makes the rash gazer wipe his eye,” and whose fine clear note Thoreau compared to that of a tanager which has got rid of its hoarseness. Presently he heard a note which he called that of the night warbler, a bird he had never identified, had been in search of twelve years, which always, when he saw it, was in the act of diving down into a tree or bush, and which it was vain to seek:

the only bird which sings indifferently by night and by day. I told him he must beware of finding and booking it, lest life should have nothing more to show him. He said, "What you seek in vain for, half your life, one day you come full upon, all the family at dinner. You seek it like a dream, and as soon as you find it you become its prey."

His interest in the flower or the bird lay very deep in his mind, was connected with Nature—and the meaning of Nature was never attempted to be defined by him. He would not offer a memoir of his observations to the Natural History Society. "Why should I? To detach the description from its connections in my mind would make it no longer true or valuable to me: and they do not wish what belongs to it." His power of observation seemed to indicate additional senses. He saw as with microscope, heard as with ear trumpet, and his memory was a photographic register of all he saw and heard. And yet none knew better than he that it is not the fact that imports, but the impression or effect of the fact on your mind. Every fact lay in glory in his mind, a type of the order and beauty of the whole.

His determination on Natural History was organic. He confessed that he sometimes felt like a hound or a panther, and, if born among Indians, would have been a fell hunter. But, restrained by his Massachusetts culture, he played out the game in this mild form of botany and ichthyology. His intimacy with animals suggested what Thomas Fuller records of Butler the apiologist, that "either he had told the bees things or the bees had told him." Snakes coiled round his legs; the fishes swam into his hand, and he took them out of the water; he pulled the woodchuck out of its hole by the tail, and took the foxes under his protection from the hunters. Our naturalist had perfect magnanimity; he had no secrets: he would carry you to the heron's haunt, or even to his most prized botanical swamp—possibly knowing that you could never find it again, yet willing to take his risks.

No college ever offered him a diploma, or a professor's chair; no academy made him its corresponding secretary, its discoverer or even its member. Perhaps these learned bodies feared the satire of his presence. Yet so much knowledge of Nature's secret and genius few others possessed; none in a more large and religious synthesis. For not a particle of respect had he to the opinions of any man or body of men, but homage solely to the truth itself; and as he discovered everywhere among doctors some leaning of courtesy, it discredited them. He grew to be revered and admired by his townsmen, who had at first known him only as an oddity. The farmers who employed him as a surveyor soon

discovered his rare accuracy and skill, his knowledge of their lands, of trees, of birds, of Indian remains and the like, which enabled him to tell every farmer more than he knew before of his own farm, so that he began to feel a little as if Mr. Thoreau had better rights in his land than he. They felt, too, the superiority of character which addressed all men with a native authority.

Indian relics abound in Concord—arrowheads, stone chisels, pestles and fragments of pottery; and on the riverbank, large heaps of clamshells and ashes mark spots which the savages frequented. These, and every circumstance touching the Indian, were important in his eyes. His visits to Maine were chiefly for love of the Indian. He had the satisfaction of seeing the manufacture of the bark canoe, as well as of trying his hand in its management on the rapids. He was inquisitive about the making of the stone arrowhead, and in his last days charged a youth setting out for the Rocky Mountains to find an Indian who could tell him that: "It was well worth a visit to California to learn it." Occasionally, a small party of Penobscot Indians would visit Concord, and pitch their tents for a few weeks in summer on the riverbank. He failed not to make acquaintance with the best of them, though he well knew that asking questions of Indians is like catechizing beavers and rabbits. In his last visit to Maine he had great satisfaction from Joseph Polis, an intelligent Indian of Oldtown, who was his guide for some weeks.

He was equally interested in every natural fact. The depth of his perception found likeness of law throughout Nature, and I know not any genius who so swiftly inferred universal law from the single fact. He was no pedant of a department. His eye was open to beauty, and his ear to music. He found these, not in rare conditions, but wheresoever he went. He thought the best of music was in single strains, and he found poetic suggestion in the humming of the telegraph wire.

His poetry might be bad or good; he no doubt wanted a lyric facility and technical skill, but he had the source of poetry in his spiritual perception. He was a good reader and critic, and his judgment on poetry was to the ground of it. He could not be deceived as to the presence or absence of the poetic element in any composition, and his thirst for this made him negligent and perhaps scornful of superficial graces. He would pass by many delicate rhythms, but he would have detected every live stanza or line in a volume and knew very well where to find an equal poetic charm in prose. He was so enamored of the spiritual beauty that he held all actual written poems in very light esteem in the comparison. He admired Aeschylus and Pindar; but when someone was com-

mending them, he said that Aeschylus and the Greeks, in describing Apollo and Orpheus, had given no song, or no good one. "They ought not to have moved trees, but to have chanted to the gods such a hymn as would have sung all their old ideas out of their heads, and new ones in." His own verses are often rude and defective. The gold does not yet run pure, is drossy and crude. The thyme and marjoram are not yet honey. But if he want lyric fineness and technical merits, if he have not the poetic temperament, he never lacks the causal thought, showing that his genius was better than his talent. He knew the worth of the Imagination for the uplifting and consolation of human life, and liked to throw every thought into a symbol. The fact you tell is of no value, but only the impression. For this reason his presence was poetic, always piqued the curiosity to know more deeply the secrets of his mind. He had many reserves, an unwillingness to exhibit to profane eyes what was still sacred in his own, and knew well how to throw a poetic veil over his experience. All readers of *Walden* will remember his mythical record of his disappointments: "I long ago lost a hound, a bay horse and a turtledove, and am still on their trail. Many are the travelers I have spoken concerning them, describing their tracks, and what calls they answered to. I have met one or two who have heard the hound, and the tramp of the horse, and even seen the dove disappear behind a cloud, and they seemed as anxious to recover them as if they had lost them themselves."

His riddles were worth the reading, and I confide that if at any time I do not understand the expression, it is yet just. Such was the wealth of his truth that it was not worth his while to use words in vain. His poem entitled "Sympathy" reveals the tenderness under that triple steel of stoicism, and the intellectual subtility it could animate. His classic poem on "Smoke" suggests Simonides, but is better than any poem of Simonides. His biography is in his verses. His habitual thought makes all his poetry a hymn to the Cause of causes, the Spirit which vivifies and controls his own:

I hearing get, who had but ears,
And sight, who had but eyes before;
I moments live, who lived but years,
And truth discern, who knew but learning's lore.

And still more in these religious lines:

Now chiefly is my natal hour,
And only now my prime of life;
I will not doubt the love untold,

Which not my worth nor want have bought,
Which wooed me young, and woos me old,
And to this evening hath me brought.

While he used in his writings a certain petulance of remark in reference to churches or churchmen, he was a person of a rare, tender and absolute religion, a person incapable of any profanation, by act or by thought. Of course, the same isolation which belonged to his original thinking and living detached him from the social religious forms. This is neither to be censured nor regretted. Aristotle long ago explained it, when he said, "One who surpasses his fellow citizens in virtue is no longer a part of the city. Their law is not for him, since he is a law to himself."

Thoreau was sincerity itself, and might fortify the convictions of prophets in the ethical laws by his holy living. It was an affirmative experience which refused to be set aside. A truth-speaker he, capable of the most deep and strict conversation; a physician to the wounds of any soul; a friend, knowing not only the secret of friendship, but almost worshipped by those few persons who resorted to him as their confessor and prophet, and knew the deep value of his mind and great heart. He thought that without religion or devotion of some kind nothing great was ever accomplished: and he thought that the bigoted sectarian had better bear this in mind.

His virtues, of course, sometimes ran into extremes. It was easy to trace to the inexorable demand on all for exact truth that austerity which made this willing hermit more solitary even than he wished. Himself of a perfect probity, he required not less of others. He had a disgust at crime, and no worldly success would cover it. He detected paltering as readily in dignified and prosperous persons as in beggars, and with equal scorn. Such dangerous frankness was in his dealing that his admirers called him "that terrible Thoreau," as if he spoke when silent, and was still present when he had departed. I think the severity of his ideal interfered to deprive him of a healthy sufficiency of human society.

The habit of a realist to find things the reverse of their appearance inclined him to put every statement in a paradox. A certain habit of antagonism defaced his earlier writings—a trick of rhetoric not quite outgrown in his later, of substituting for the obvious word and thought its diametrical opposite. He praised wild mountains and winter forests for their domestic air, in snow and ice he would find sultriness, and commended the wilderness for resembling Rome and Paris. "It was so dry, that you might call it wet."

The tendency to magnify the moment, to read all the laws of Nature

in the one object or one combination under your eye, is of course comic to those who do not share the philosopher's perception of identity. To him there was no such thing as size. The pond was a small ocean; the Atlantic, a large Walden Pond. He referred every minute fact to cosmical laws. Though he meant to be just, he seemed haunted by a certain chronic assumption that the science of the day pretended completeness, and he had just found out that the savants had neglected to discriminate a particular botanical variety, had failed to describe the seeds or count the sepals. "That is to say," we replied, "the blockheads were not born in Concord; but who said they were? It was their unspeakable misfortune to be born in London, or Paris, or Rome; but, poor fellows, they did what they could, considering that they never saw Bateman's Pond, or Nine-Acre Corner, or Becky Stow's Swamp; besides, what were you sent into the world for, but to add this observation?"

Had his genius been only contemplative, he had been fitted to his life, but with his energy and practical ability he seemed born for great enterprise and for command; and I so much regret the loss of his rare powers of action that I cannot help counting it a fault in him that he had no ambition. Wanting this, instead of engineering for all America, he was the captain of a huckleberry party. Pounding beans is good to the end of pounding empires one of these days; but if, at the end of years, it is still only beans!

But these foibles, real or apparent, were fast vanishing in the incessant growth of a spirit so robust and wise, and which effaced its defeats with new triumphs. His study of Nature was a perpetual ornament to him, and inspired his friends with curiosity to see the world through his eyes, and to hear his adventures. They possessed every kind of interest.

He had many elegancies of his own, while he scoffed at conventional elegance. Thus, he could not bear to hear the sound of his own steps, the grit of gravel; and therefore never willingly walked in the road, but in the grass, on mountains and in woods. His senses were acute, and he remarked that by night every dwelling house gives out bad air, like a slaughterhouse. He liked the pure fragrance of melilot. He honored certain plants with special regard, and, over all, the pond lily—then, the gentian, and the *Mikania scandens*, and "life-everlasting," and a bass tree which he visited every year when it bloomed, in the middle of July. He thought the scent a more oracular inquisition than the sight—more oracular and trustworthy. The scent, of course, reveals what is concealed from the other senses. By it he detected earthiness. He de-

lighted in echoes, and said they were almost the only kind of kindred voices that he heard. He loved Nature so well, was so happy in her solitude, that he became very jealous of cities and the sad work which their refinements and artifices made with man and his dwelling. The axe was always destroying his forest. "Thank God," he said, "they cannot cut down the clouds!" "All kinds of figures are drawn on the blue ground with this fibrous white paint."

I subjoin a few sentences taken from his unpublished manuscripts, not only as records of his thought and feeling, but for their power of description and literary excellence:

Some circumstantial evidence is very strong, as when you find a trout in the milk.

The chub is a soft fish, and tastes like boiled brown paper salted.

The youth gets together his materials to build a bridge to the moon, or, perchance, a palace or temple on the earth, and, at length the middle-aged man concludes to build a woodshed with them.

The locust z-ing.

Devil's-needles zigzagging along the Nut-Meadow brook.

Sugar is not so sweet to the palate as sound to the healthy ear.

I put on some hemlock boughs, and the rich salt crackling of their leaves was like mustard to the ear, the crackling of uncountable regiments. Dead trees love the fire.

The bluebird carries the sky on his back.

The tanager flies through the green foliage as if it would ignite the leaves.

If I wish for a horsehair for my compass sight I must go to the stable; but the hairbird, with her sharp eyes, goes to the road.

Immortal water, alive even to the superficies.

Fire is the most tolerable third party.

Nature made ferns for pure leaves, to show what she could do in that line.

No tree has so fair a bole and so handsome an instep as the beech.

How did these beautiful rainbow tints get into the shell of the fresh-water clam, buried in the mud at the bottom of our dark river?

Hard are the times when the infant's shoes are second foot.

We are strictly confined to our men to whom we give liberty.

Nothing is so much to be feared as fear. Atheism may comparatively be popular with God himself.

Of what significance the things you can forget? A little thought is sexton to all the world.

How can we expect a harvest of thought who have not had a seed-time of character?

Only he can be trusted with gifts who can present a face of bronze to expectations.

I ask to be melted. You can only ask of the metals that they be tender to the fire that melts them. To nought else can they be tender.

There is a flower known to botanists, one of the same genus with our summer plant called "Life-Everlasting," a *Gnaphalium* like that, which grows on the most inaccessible cliffs of the Tyrolese mountains, where the chamois dare hardly venture, and which the hunter, tempted by its beauty, and by his love (for it is immensely valued by the Swiss maidens), climbs the cliffs to gather, and is sometimes found dead at the foot, with the flower in his hand. It is called by botanists the *Gnaphalium leontopodium*, but by the Swiss *Edelweisse*, which signifies *Noble Purity*. Thoreau seemed to me living in the hope to gather this plant, which belonged to him of right. The scale on which his studies proceeded was so large as to require longevity, and we were the less prepared for his sudden disappearance. The country knows not yet, or in the least part, how great a son it has lost. It seems an injury that he should leave in the midst his broken task which none else can finish, a kind of indignity to so noble a soul that he should depart out of Nature before yet he has been really shown to his peers for what he is. But he, at least, is content. His soul was made for the noblest society; he had in a short life exhausted the capabilities of this world; wherever there is knowledge, wherever there is virtue, wherever there is beauty, he will find a home.

Nathaniel Hawthorne¹

1804–1864

Hawthorne's sketch of Lincoln is one of the most famous face-to-face impressions of the President ever written. It described Lincoln as he appeared in 1862, a year after he took office. At this time he was not generally popular nor even well known. He had been elected to the presidency in what Hawthorne called a "jumble of human vicissitudes." He had won the Republican nomination in 1860, though Seward had been expected to be named, and he had won the presidential election because the vote was split among four candidates.

After a year in office, the war, which Lincoln had reluctantly declared against his countrymen, had gone steadily against the North. Lincoln had not yet been able to unify the command of the armed forces, nor find good generals. But he had suspended constitutional rights, established conscription, and levied huge sums to carry on the war. Such things, though unavoidable, did not tend to make Lincoln popular.

What Hawthorne would say about Lincoln, however, depended not only on the existing situation but upon Hawthorne's appraisal—his vision and faith. How would the fastidious scholar and novelist, representing the oldest and proudest cultural tradition of New England, size up the ungainly backwoods lawyer who had been catapulted into the highest office in the land? Lincoln was "the homeliest man I ever saw," Hawthorne wrote. "The whole physiognomy is as coarse a one as you would meet anywhere. . . ." His manners were uncouth, his clothes a little disreputable, and his innumerable yarns and anecdotes smacked of "frontier freedom." He was clearly lack-

¹ For a biography of Hawthorne, see Vol. 3, pp. 124–126, in this set.

ing in refinement and “bookish cultivation.” On the other hand, he possessed a natural dignity, kindness, subtlety, and an unpretentious wisdom. And, in short, Hawthorne would as soon have “Uncle Abe for a ruler” as any man in the country. Even his backwoods faults were piquant and exciting.

Hawthorne could not have known, at this time, that some of Lincoln’s speeches would be rated as the best in the English language. He missed many points of his greatness. Yet his estimate of the President was as glowing and affirmative as that of Walt Whitman,² who wrote after Lincoln’s death. One thing that Hawthorne loved in Lincoln was his basic humility and humanity. What he disliked most in human beings, as his novels and tales show, was pride and pretense.

A year after writing the sketch of Lincoln, Hawthorne insisted on standing by his friend, Franklin Pierce, then regarded as a traitor to the North. He knew he would lose friends and money by it but nevertheless insisted. Yet he does not want to be regarded as a hero or martyr. “I always measure out my heroism very accurately according to the exigencies of the occasion,” he wrote, “and should be the last man in the world to throw away a bit of it needlessly.”

It was a similar ironic humor, and dislike of pretense, that Hawthorne saw in Lincoln.

² See *Death of Abraham Lincoln*, Vol. 6, pp. 174–183, in this set.

Sketch of Abraham Lincoln

Of course, there was one other personage, in the class of statesmen, whom I should have been truly mortified to leave Washington without seeing; since (temporarily, at least, and by force of circumstances) he was the man of men. But a private grief had built up a barrier about him, impeding the customary free intercourse of Americans with their chief magistrate; so that I might have come away without a glimpse of his very remarkable physiognomy, save for a semiofficial opportunity of which I was glad to take advantage. The fact is, we were invited to annex ourselves, as supernumeraries, to a deputation that was about to wait upon the President, from a Massachusetts whip factory, with a present of a splendid whip.

Our immediate party consisted only of four or five (including Major Ben Perley Poore, with his notebook and pencil), but we were joined by several other persons, who seemed to have been lounging about the precincts of the White House, under the spacious porch, or within the hall, and who swarmed in with us to take the chances of a presentation. Nine o'clock had been appointed as the time for receiving the deputation, and we were punctual to the moment; but not so the President, who sent us word that he was eating his breakfast, and would come as soon as he could. His appetite, we were glad to think, must have been a pretty fair one; for we waited about half an hour in one of the antechambers, and then were ushered into a reception room, in one corner of which sat the secretaries of War and of the Treasury, expecting, like ourselves, the termination of the Presidential breakfast. During this interval there were several new additions to our group, one or two of whom were in a working garb, so that we formed a very miscellaneous collection of people, mostly unknown to each other, and without any common sponsor, but all with an equal right to look our head servant in the face.

By and by there was a little stir on the staircase and in the passageway,¹ [and in lounged a tall, loose-jointed figure, as of an exaggerated Yankee port and demeanor, whom (as being about the homeliest man I ever saw, yet by no means repulsive or disagreeable) it was impossible not to recognize as Uncle Abe.

Unquestionably, Western man though he be, and Kentuckian by birth, President Lincoln is the essential representative of all Yankees, and the veritable specimen, physically, of what the world seems determined to regard as our characteristic qualities. It is the strangest and yet the fittest thing in the jumble of human vicissitudes that he, out of so many millions, unlocked for, unselected by any intelligible process that could be based upon his genuine qualities, unknown to those who chose him, and unsuspected of what endowments may adapt him for his tremendous responsibility, should have found the way open for him to fling his lank personality into the chair of state—where, I presume, it was his first impulse to throw his legs on the council table, and tell the Cabinet ministers a story. There is no describing his lengthy awkwardness, nor the uncouthness of his movement; and yet it seemed as if I had been in the habit of seeing him daily, and had shaken hands with him a thousand times in some village street; so true was he to the aspect of the pattern American, though with a certain extravagance which, possibly, I exaggerated still further by the delighted eagerness with which I took it in. If put to guess his calling and livelihood, I should have taken him for a country schoolmaster as soon as anything else. He was dressed in a rusty black frock coat and pantaloons, unbrushed, and worn so faithfully that the suit had adapted itself to the curves and angularities of his figure, and had grown to be an outer skin of the man. He had shabby slippers on his feet. His hair was black, still unmixed with gray, stiff, somewhat bushy, and had apparently been acquainted with neither brush nor comb that morning, after the disarrangement of the pillow; and as to a nightcap, Uncle Abe probably knows nothing of such effeminacies. His complexion is dark and sallow, betokening, I fear, an insalubrious atmosphere around

1. We are compelled to omit two or three pages, in which the author describes the interview, and gives his idea of the personal appearance and deportment of the President. The sketch appears to have been written in a benign spirit, and perhaps conveys a not inaccurate impression of its august subject; but it lacks *reverence*, and it pains us to see a gentleman of ripe age, and who has spent years under the corrective influence of foreign institutions, falling into the characteristic and most ominous fault of Young America. [This footnote, the apparent addition of a genteel editor, was actually written by Hawthorne himself for a version of the *Sketch* in which part of his portrait of Lincoln was omitted (*Atlantic Monthly*, July, 1862). The suppressed passage was subsequently printed in the *Atlantic* and in this text is set off by brackets (Ed.).]

the White House; he has thick black eyebrows and an impending brow; his nose is large, and the lines about his mouth are very strongly defined.

The whole physiognomy is as coarse a one as you would meet anywhere in the length and breadth of the States; but, withal, it is redeemed, illuminated, softened, and brightened by a kindly though serious look out of his eyes, and an expression of homely sagacity, that seems weighted with rich results of village experience. A great deal of native sense; no bookish cultivation, no refinement; honest at heart, and thoroughly so, and yet, in some sort, sly—at least, endowed with a sort of tact and wisdom that are akin to craft, and would impel him, I think, to take an antagonist in flank, rather than to make a bull-run at him right in front. But, on the whole, I like this fallow, queer, sagacious visage, with the homely human sympathies that warmed it; and, for my small share in the matter, would as lief have Uncle Abe for a ruler as any man whom it would have been practicable to put in his place.

Immediately on his entrance the President accosted our member of Congress, who had us in charge, and, with a comical twist of his face, made some jocular remark about the length of his breakfast. He then greeted us all round, not waiting for an introduction, but shaking and squeezing everybody's hand with the utmost cordiality, whether the individual's name was announced to him or not. His manner towards us was wholly without pretense, but yet had a kind of natural dignity, quite sufficient to keep the forwardest of us from clapping him on the shoulder and asking him for a story. A mutual acquaintance being established, our leader took the whip out of its case, and began to read the address of presentation. The whip was an exceedingly long one, its handle wrought in ivory (by some artist in the Massachusetts State Prison, I believe), and ornamented with a medallion of the President, and other equally beautiful devices; and along its whole length there was a succession of golden bands and ferrules. The address was shorter than the whip, but equally well made, consisting chiefly of an explanatory description of these artistic designs, and closing with a hint that the gift was a suggestive and emblematic one, and that the President would recognize the use to which such an instrument should be put.

This suggestion gave Uncle Abe rather a delicate task in his reply, because, slight as the matter seemed, it apparently called for some declaration, or intimation, or faint foreshadowing of policy in reference to the conduct of the war, and the final treatment of the Rebels. But the President's Yankee aptness and not-to-be-caughtness stood him in good stead, and he jerked or wiggled himself out of the dilemma with an uncouth

dexterity that was entirely in character; although, without his gesticulation of eye and mouth—and especially the flourish of the whip, with which he imagined himself touching up a pair of fat horses—I doubt whether his words would be worth recording, even if I could remember them. The gist of the reply was, that he accepted the whip as an emblem of peace, not punishment; and, this great affair over, we retired out of the presence in high good humor, only regretting that we could not have seen the President sit down and fold up his legs (which is said to be a most extraordinary spectacle), or have heard him tell one of those delectable stories for which he is so celebrated. A good many of them are afloat upon the common talk of Washington, and are certainly the aptest, pithiest, and funniest little things imaginable; though, to be sure, they smack of the frontier freedom, and would not always bear repetition in a drawing room, or on the immaculate page of the *Atlantic*].

Good Heavens! what liberties have I been taking with one of the potentates of the earth, and the man on whose conduct more important consequences depend than on that of any other historical personage of the century! But with whom is an American citizen entitled to take a liberty, if not with his own chief magistrate? However, lest the above allusions to President Lincoln's little peculiarities (already well known to the country and to the world) should be misinterpreted, I deem it proper to say a word or two in regard to him, of unfeigned respect and measurable confidence. He is evidently a man of keen faculties, and, what is still more to the purpose, of powerful character. As to his integrity, the people have that intuition of it which is never deceived. Before he actually entered upon his great office, and for a considerable time afterwards, there is no reason to suppose that he adequately estimated the gigantic task about to be imposed on him, or, at least, had any distinct idea how it was to be managed; and I presume there may have been more than one veteran politician who proposed to himself to take the power out of President Lincoln's hands into his own, leaving our honest friend only the public responsibility for the good or ill success of the career. The extremely imperfect development of his statesmanly qualities, at that period, may have justified such designs. But the President is teachable by events, and has now spent a year in a very arduous course of education; he has a flexible mind, capable of much expansion, and convertible towards far loftier studies and activities than those of his early life; and if he came to Washington a backwoods humorist, he has already transformed himself into as good a statesman (to speak moderately) as his prime minister.

Walt Whitman¹

1819–1892

This lecture on Lincoln was first given fifteen years after the assassination of the sixteenth President. The popularity of Abraham Lincoln had risen to the highest pinnacle. What words could Whitman find in any way worthy of the Great Emancipator? Would not any praise or tribute, so close to the unbelievable tragedy, sound paltry and insincere?

In Whitman's case there was a special difficulty. He had no use for histories which see the meaning of events "in single eminent persons," and was impatient with Carlyle's *Cromwell* and with hero worship in general. Speaking of the Civil War heroes, including Lincoln, he warned against giving undue weight to personalities. It is easy to exaggerate the role of saviors and "exceptional men." The real heroes of the Civil War in Whitman's poetry were the rank and file soldiers and the embattled people. His *Leaves of Grass* began with:

One's-self I sing, a simple separate person,
Yet utter the word Democratic, the word En-Masse.

Whitman was no hero-worshiper; he was the apostle of the average man, or of every man.

The sum of all known reverence I add up to you, whoever you are.

How then can Whitman give the greatest hero in American history his due?

There is no use trying to anticipate too closely what your reaction to this speech will be, but one or two general impressions may help

¹ For a biography of Whitman, see Vol. 5, pp. 243–245 in this set.

you to form yours. We are given only one close-up picture of Lincoln; it is imposing but also touching. We see him in 1861, just before he took office—a tall, ungainly figure, stretching his long limbs with composure as he faced the curious gaze of thirty or forty thousand men, unknown to him, and stared back with equal curiosity. They wanted to see the man who had been placed in command, and would take on his shoulders the vast impending conflict. And when they had seen him, they went quietly away.

The story of the murder of the President is told with moving and vivid simplicity—as if by an eyewitness. We also see the tragedy in the perspective of other great martyrs. The course of history had been altered when Socrates was given the hemlock and when Caesar was cut down in the Senate House. The death of Lincoln had already left its mark on America, consecrating and strengthening the Union so dearly paid for in blood and sacrifice.

Yet throughout Whitman's speech we hear little of Lincoln's wisdom, courage, magnanimity, shrewdness, humor, and humanity. His great personal gifts and achievements are scarcely mentioned, never praised. Whitman's theme seems rather to be the national struggle for the preservation of the Union, a struggle enmeshing the lives of the soldiers in the battlefield, and all the men and women who worked and suffered through the long years at home. The tribute to Lincoln thus tends to become a tribute to the people whom he led to victory. They are the heroes, collectively, and Lincoln is one with them; when they suffer he suffers and their achievement is his achievement.

Whitman called himself the poet of democracy. Do you think that in his democratic outlook Lincoln loses something of greatness and appeal? Is there perhaps a gain in realism and conviction?

Death of Abraham Lincoln

How often since that dark and dripping Saturday—that chilly April day, now fifteen years bygone—my heart has entertained the dream, the wish, to give of Abraham Lincoln’s death its own special thought and memorial. Yet now the sought-for opportunity offers, I find my notes incompetent (why, for truly profound themes, is statement so idle? why does the right phrase never offer?) and the fit tribute I dreamed of waits unprepared as ever. My talk here indeed is less because of itself or anything in it, and nearly altogether because I feel a desire, apart from any talk, to specify the day, the martyrdom. It is for this, my friends, I have called you together. Oft as the rolling years bring back this hour, let it again, however briefly, be dwelt upon. For my own part, I hope and desire, till my own dying day, whenever the 14th or 15th of April comes, to annually gather a few friends and hold its tragic reminiscence. No narrow or sectional reminiscence. It belongs to these states in their entirety—not the North only, but the South—perhaps belongs most tenderly and devoutly to the South, of all; for there, really, this man’s birth-stock. There and thence his antecedent stamp. Why should I not say that thence his manliest traits—his universality—his canny, easy ways and words upon the surface—his inflexible determination and courage at heart? Have you never realized it, my friends, that Lincoln, though grafted on the West, is essentially, in personnel and character, a Southern contribution?

And though by no means proposing to resume the secession war tonight, I would briefly remind you of the public conditions preceding that contest. For twenty years, and especially during the four or five before the war actually began, the aspect of affairs in the United States, though without the flash of military excitement, presents more than the survey of a battle, or any extended campaign, or series, even of Nature’s convulsions. The hot passions of the South—the strange mixture at the North

of inertia, incredulity, and conscious power—the incendiarism of the abolitionists—the rascality and *grip* of the politicians, unparalleled in any land, any age. To these I must not omit adding the honesty of the essential bulk of the people everywhere—yet with all the seething fury and contradiction of their natures more aroused than the Atlantic’s waves in wildest equinox. In politics, what can be more ominous (though generally unappreciated then), what more significant than the Presidentiads of Fillmore and Buchanan? proving conclusively that the weakness and wickedness of elected rulers are just as likely to afflict us here, as in the countries of the Old World, under their monarchies, emperors, and aristocracies. In that Old World were everywhere heard underground rumblings that died out, only to again surely return. While in America the volcano, though civic yet, continued to grow more and more convulsive—more and more stormy and threatening.

In the height of all this excitement and chaos, hovering on the edge at first, and then merged in its very midst, and destined to play a leading part, appears a strange and awkward figure. I shall not easily forget the first time I ever saw Abraham Lincoln. It must have been about the 18th or 19th of February, 1861. It was rather a pleasant afternoon, in New York City, as he arrived there from the West, to remain a few hours, and then pass on to Washington, to prepare for his inauguration. I saw him in Broadway, near the site of the present post office. He came down, I think from Canal Street, to stop at the Astor House. The broad spaces, sidewalks, and street in the neighborhood, and for some distance, were crowded with solid masses of people, many thousands. The omnibuses and other vehicles had all been turned off, leaving an unusual hush in that busy part of the city. Presently two or three shabby hack barouches made their way with some difficulty through the crowd, and drew up at the Astor House entrance. A tall figure stepped out of the center of these barouches, paused leisurely on the sidewalk, looked up at the granite walls and looming architecture of the grand old hotel—then, after a relieving stretch of arms and legs, turned round for over a minute to slowly and good-humoredly scan the appearance of the vast and silent crowds. There were no speeches—no compliments—no welcome—as far as I could hear, not a word said. Still much anxiety was concealed in that quiet. Cautious persons had feared some marked insult or indignity to the President-elect, for he possessed no personal popularity at all in New York City, and very little political. But it was evidently tacitly agreed that if the few political supporters of Mr. Lincoln present would entirely

abstain from any demonstration on their side, the immense majority, who were anything but supporters, would abstain on their side also. The result was a sulky, unbroken silence, such as certainly never before characterized so great a New York crowd.

Almost in the same neighborhood I distinctly remembered seeing La Fayette on his visit to America in 1825. I had also personally seen and heard, various years afterward, how Andrew Jackson, Clay, Webster, Hungarian Kossuth, Filibuster Walker, the Prince of Wales on his visit, and other celebres, native and foreign, had been welcomed there—all that indescribable human roar and magnetism, unlike any other sound in the universe—the glad exulting thundershouts of countless unloosed throats of men! But on this occasion, not a voice—not a sound. From the top of an omnibus (driven up one side, close by, and blocked by the curbstone and the crowds), I had, I say, a capital view of it all, and especially of Mr. Lincoln, his look and gait—his perfect composure and coolness—his unusual and uncouth height, his dress of complete black, stovepipe hat pushed back on the head, dark-brown complexion, seamed and wrinkled yet canny-looking face, black, bushy head of hair, disproportionately long neck, and his hands held behind as he stood observing the people. He looked with curiosity upon that immense sea of faces, and the sea of faces returned the look with similar curiosity. In both there was a dash of comedy, almost farce, such as Shakespeare puts in his blackest tragedies. The crowd that hemmed around consisted I should think of thirty to forty thousand men, not a single one his personal friend—while I have no doubt (so frenzied were the ferments of the time) many an assassin's knife and pistol lurked in hip or breast pocket there, ready, soon as break and riot came.

But no break or riot came. The tall figure gave another relieving stretch or two of arms and legs; then with moderate pace, and accompanied by a few unknown-looking persons, ascended the portico steps of the Astor House, disappeared through its broad entrance—and the dumb show ended.

I saw Abraham Lincoln often the four years following that date. He changed rapidly and much during his presidency—but this scene, and him in it, are indelibly stamped upon my recollection. As I sat on the top of my omnibus and had a good view of him, the thought, dim and inchoate then, has since come out clear enough, that four sorts of genius, four mighty and primal hands, will be needed to the complete limning of this man's future portrait—the eyes and brains and finger touch of Plutarch and Aeschylus and Michelangelo, assisted by Rabelais.

And now—(Mr. Lincoln passing on from this scene to Washington, where he was inaugurated, amid armed cavalry, and sharpshooters at every point—the first instance of the kind in our history—and I hope it will be the last)—now the rapid succession of well-known events (too well known—I believe, these days, we almost hate to hear them mentioned)—the national flag fired on at Sumter—the uprising of the North, in paroxysms of astonishment and rage—the chaos of divided councils—the call for troops—the first Bull Run—the stunning cast-down, shock, and dismay of the North—and so in full flood the secession war. Four years of lurid, bleeding, murky, murderous war. Who paint those years, with all their scenes?—the hard-fought engagements—the defeats, plans, failures—the gloomy hours, days, when our nationality seemed hung in pall of doubt, perhaps death—the Mephistophelean sneers of foreign lands and attachés—the dreaded Scylla of European interference, and the Charybdis of the tremendously dangerous latent strata of secession sympathizers throughout the free States (far more numerous than is supposed)—the long marches in summer—the hot sweat, and many a sunstroke, as on the rush to Gettysburg in '63—the night battles in the woods, as under Hooker at Chancellorsville—the camps in winter—the military prisons—the hospitals—(alas! alas! the hospitals).

The secession war? Nay, let me call it the Union war. Though whatever called, it is even yet too near us—too vast and too closely overshadowing—its branches unformed yet (but certain) shooting too far into the future—and the most indicative and mightiest of them yet ungrown. A great literature will yet arise out of the era of those four years, those scenes—era compressing centuries of native passion, first-class pictures, tempests of life and death—an inexhaustible mine for the histories, drama, romance, and even philosophy of peoples to come—indeed the vertebre of poetry and art (of personal character too) for all future America—far more grand, in my opinion, to the hands capable of it, than Homer's siege of Troy, or the French wars to Shakespeare.

But I must leave these speculations, and come to the theme I have assigned and limited myself to. Of the actual murder of President Lincoln, though so much has been written, probably the facts are yet very indefinite in most persons' minds. I read from my memoranda, written at the time, and revised frequently and finally since.

The day, April 14, 1865, seems to have been a pleasant one throughout the whole land—the moral atmosphere pleasant too—the long storm, so dark, so fratricidal, full of blood and doubt and gloom, over and ended at last by the sunrise of such an absolute national victory, and utter

breakdown of secessionism—we almost doubted our own senses! Lee had capitulated beneath the apple tree of Appomattox. The other armies, the flanges of the revolt, swiftly followed. And could it really be, then? Out of all the affairs of this world of woe and failure and disorder, was there really come the confirmed, unerring sign of plan, like a shaft of pure light—of rightful rule—of God? So the day, as I say, was propitious. Early herbage, early flowers were out. (I remember where I was stopping at the time, the season being advanced, there were many lilacs in full bloom. By one of those caprices that enter and give tinge to events without being at all a part of them, I find myself always reminded of the great tragedy of that day by the sight and odor of these blossoms. It never fails.)

But I must not dwell on accessories. The deed hastens. The popular afternoon paper of Washington, the little *Evening Star*, had spattered all over its third page, divided among the advertisements in a sensational manner, in a hundred different places, *The President and his Lady will be at the Theatre this evening. . . .* (Lincoln was fond of the theatre. I have myself seen him there several times. I remember thinking how funny it was that he, in some respects the leading actor in the stormiest drama known to real history's stage through centuries, should sit there and be so completely interested and absorbed in those human jackstraws, moving about with their silly little gestures, foreign spirit, and flatulent text.)

On this occasion the theatre was crowded, many ladies in rich and gay costumes, officers in their uniforms, many well-known citizens, young folks, the usual clusters of gaslights, the usual magnetism of so many people, cheerful, with perfumes, music of violins and flutes (and over all, and saturating all, that vast, vague wonder, *Victory*, the nation's victory, the triumph of the Union, filling the air, the thought, the sense, with exhilaration more than all music and perfumes).

The President came betimes, and, with his wife, witnessed the play from the large stage boxes of the second tier, two thrown into one, and profusely draped with the national flag. The acts and scenes of the piece—one of those singularly written compositions which have at least the merit of giving entire relief to an audience engaged in mental action or business excitements and cares during the day, as it makes not the slightest call on either the moral, emotional, aesthetic, or spiritual nature—a piece (*Our American Cousin*) in which, among other characters, so called, a Yankee, certainly such a one as was never seen, or the least like it ever seen, in North America, is introduced in England, with a varied

fol-de-rol of talk, plot, scenery, and such phantasmagoria as goes to make up a modern popular drama—had progressed through perhaps a couple of its acts, when in the midst of this comedy, or nonesuch, or whatever it is to be called, and to offset it, or finish it out, as if in Nature's and the great Muse's mockery of those poor mimes, came interpolated that scene, not really or exactly to be described at all (for on the many hundreds who were there it seems to this hour to have left a passing blur, a dream, a blotch)—and yet partially to be described as I now proceed to give it. There is a scene in the play representing a modern parlor, in which two unprecedented English ladies are informed by the impossible Yankee that he is not a man of fortune, and therefore undesirable for marriage-catching purposes; after which, the comments being finished, the dramatic trio make exit, leaving the stage clear for a moment. At this period came the murder of Abraham Lincoln. Great as all its manifold train, circling round it, and stretching into the future for many a century, in the politics, history, art, etc., of the New World, in point of fact the main thing, the actual murder, transpired with the quiet and simplicity of any commonest occurrence—the bursting of a bud or pod in the growth of vegetation, for instance. Through the general hum following the stage pause, with the change of positions, came the muffled sound of a pistol shot, which not one-hundredth part of the audience heard at the time—and yet a moment's hush—somehow, surely, a vague startled thrill—and then, through the ornamented, draperied, starred and striped space-way of the President's box, a sudden figure, a man, raises himself with hands and feet, stands a moment on the railing, leaps below to the stage (a distance of perhaps fourteen or fifteen feet), falls out of position, catching his boot heel in the copious drapery (the American flag), falls on one knee, quickly recovers himself, rises as if nothing had happened (he really sprains his ankle, but unfelt then)—and so the figure, Booth, the murderer, dressed in plain black broad-cloth, bareheaded, with full, glossy, raven hair, and his eyes like some mad animal's flashing with light and resolution, yet with a certain strange calmness, holds aloft in one hand a large knife—walks along not much back from the footlights—turns fully toward the audience his face of statuesque beauty, lit by those basilisk eyes, flashing with desperation, perhaps insanity—launches out in a firm and steady voice the words *Sic semper tyrannis*—and then walks with neither slow nor very rapid pace diagonally across to the back of the stage, and disappears. (Had not all this terrible scene—making the mimic ones preposterous—had it not all been rehearsed, in blank, by Booth, beforehand?)

A moment's hush—a scream—the cry of *murder*—Mrs. Lincoln leaning out of the box, with ashy cheeks and lips, with involuntary cry, pointing to the retreating figure, *He has killed the President*. And still a moment's strange, incredulous suspense—and then the deluge!—then that mixture of horror, noises, uncertainty—(the sound, somewhere back, of a horse's hoofs clattering with speed)—the people burst through chairs and railings, and break them up—there is inextricable confusion and terror—women faint—quite feeble persons fall, and are trampled on—many cries of agony are heard—the broad stage suddenly fills to suffocation with a dense and motley crowd, like some horrible carnival—the audience rush generally upon it, at least the strong men do—the actors and actresses are all there in their play-costumes and painted faces, with mortal fright showing through the rouge—the screams and calls, confused talk—redoubled, trebled—two or three manage to pass up water from the stage to the President's box—others try to clamber up—etc., etc.

In the midst of all this, the soldiers of the President's guard, with others, suddenly drawn to the scene, burst in—(some two hundred altogether)—they storm the house, through all the tiers, especially the upper ones, inflamed with fury, literally charging the audience with fixed bayonets, muskets and pistols, shouting *Clear out! clear out! you sons of*— . . . Such the wild scene, or a suggestion of it rather, inside the playhouse that night.

Outside, too, in the atmosphere of shock and craze, crowds of people, filled with frenzy, ready to seize any outlet for it, come near committing murder several times on innocent individuals. One such case was especially exciting. The infuriated crowd, through some chance, got started against one man, either for words he uttered, or perhaps without any cause at all, and were proceeding at once to actually hang him on a neighboring lamppost, when he was rescued by a few heroic policemen, who placed him in their midst, and fought their way slowly and amid great peril toward the station house. It was a fitting episode of the whole affair. The crowd rushing and eddying to and fro—the night, the yells, the pale faces, many frightened people trying in vain to extricate themselves—the attacked man, not yet freed from the jaws of death, looking like a corpse—the silent, resolute, half-dozen policemen, with no weapons but their little clubs, yet stern and steady through all those eddying swarms—made a fitting side-scene to the grand tragedy of the murder. They gained the station house with the protected man, whom they placed in security for the night, and discharged him in the morning.

And in the midst of that pandemonium, infuriated soldiers, the au-

dience and the crowd, the stage, and all its actors and actresses, its paintpots, spangles, and gaslights—the life blood from those veins, the best and sweetest of the land, drips slowly down, and death's ooze already begins its little bubbles on the lips.

Thus the visible incidents and surroundings of Abraham Lincoln's murder, as they really occurred. Thus ended the attempted secession of these States; thus the four years' war. But the main things come subtly and invisibly afterward, perhaps long afterward—neither military, political, nor (great as those are) historical. I say, certain secondary and indirect results, out of the tragedy of this death, are, in my opinion, greatest. Not the event of the murder itself. Not that Mr. Lincoln strings the principal points and personages of the period, like beads, upon the single string of his career. Not that his idiosyncrasy, in its sudden appearance and disappearance, stamps this Republic with a stamp more marked and enduring than any yet given by any one man—(more even than Washington's)—but, joined with these, the immeasurable value and meaning of that whole tragedy lies, to me, in senses finally dearest to a nation (and here all our own)—the imaginative and artistic senses—the literary and dramatic ones. Not in any common or low meaning of those terms, but a meaning precious to the race, and to every age. A long and varied series of contradictory events arrives at last at its highest poetic, single, central, pictorial denouement. The whole involved, baffling, multiform whirl of the secession period comes to a head, and is gathered in one brief flash of lightning-illumination—one simple, fierce deed. Its sharp culmination, and as it were solution, of so many bloody and angry problems illustrates those climax-moments on the stage of universal Time, where the historic Muse at one entrance and the tragic Muse at the other, suddenly ringing down the curtain, close an immense act in the long drama of creative thought, and give it radiation, tableau, stranger than fiction. Fit radiation—fit close! How the imagination—how the student loves these things! America, too, is to have them. For not in all great deaths, nor far or near—not Caesar in the Roman senate-house, or Napoleon passing away in the wild night storm at St. Helena—not Paleologus, falling, desperately fighting, piled over dozens deep with Grecian corpses—not calm old Socrates, drinking the hemlock—outvies that terminus of the secession war, in one man's life, here in our midst, in our own time—that seal of the emancipation of three million slaves—that parturition and delivery of our at last really free Republic, born again, henceforth to commence its career of genuine homogeneous Union, compact, consistent with itself.

Nor will ever future American patriots and Unionists, indifferently over the whole land, or North or South, find a better moral to their lesson. The final use of the greatest men of a nation is, after all, not with reference to their deeds in themselves, or their direct bearing on their times or lands. The final use of a heroic-eminent life—especially of a heroic-eminent death—is its indirect filtering into the nation and the race, and to give, often at many removes, but unerringly, age after age, color and fiber to the personalism of the youth and maturity of that age, and of mankind. Then there is a cement to the whole people, subtler, more underlying, than any thing in written constitution, or courts or armies—namely, the cement of a death identified thoroughly with that people, at its head, and for its sake. Strange (is it not?) that battles, martyrs, agonies, blood, even assassination, should so condense—perhaps only really, lastingly condense—a nationality.

I repeat it—the grand deaths of the race—the dramatic deaths of every nationality—are its most important inheritance value—in some respects beyond its literature and art—(as the hero is beyond his finest portrait, and the battle itself beyond its choicest song or epic). Is not here indeed the point underlying all tragedy? the famous pieces of the Grecian masters—and all masters? Why, if the old Greeks had had this man, what trilogies of plays—what epics—would have been made out of him! How the rhapsodes would have recited him! How quickly that quaint tall form would have entered into the region where men vitalize gods, and gods divinify men! But Lincoln, his times, his death—great as any, any age—belong altogether to our own, and our autochthonic. (Sometimes indeed I think our American days, our own stage—the actors we know and have shaken hands, or talked with—more fateful than any thing in Aeschylus—more heroic than the fighters around Troy—afford kings of men for our democracy prouder than Agamemnon—models of character cute and hardy as Ulysses—deaths more pitiful than Priam's.)

When, centuries hence (as it must, in my opinion, be centuries hence before the life of these States, or of democracy, can be really written and illustrated), the leading historians and dramatists seek for some personage, some special event, incisive enough to mark with deepest cut, and mnemonize, this turbulent nineteenth century of ours (not only these states, but all over the political and social world)—something, perhaps, to close that gorgeous procession of European feudalism, with all its pomp and caste prejudices (of whose long train we in America are yet so inextricably the heirs)—something to identify with terrible identification, by far the greatest revolutionary step in the history of the United

States (perhaps the greatest of the world, our century)—the absolute extirpation and erasure of slavery from the States—those historians will seek in vain for any point to serve more thoroughly their purpose, than Abraham Lincoln's death.

Dear to the Muse—thrice dear to nationality—to the whole human race—precious to this Union—precious to democracy—unspeakably and forever precious—their first great Martyr Chief.

Virginia Woolf¹

1882–1941

The *Art of Biography* is not a manual for biographers, any more than Lucian's *The Way to Write History* is a manual for historians. Both raise more questions than they answer. This is particularly true of Mrs. Woolf's essay, which, despite its title, is concerned to ask whether biography can be considered an art at all. But if it is not an art, Virginia Woolf wonders, is it then a science? Or if not that, a craft?

Great English biographies did not appear, she says, until the later eighteenth century—long after there were great poets, novelists, and other literary artists. She seems to consider only three biographers as of the highest class: Johnson, for his *Lives of the English Poets*; Boswell, for his *Life of Johnson*; and John Gibson Lockhart, for his *Life of Sir Walter Scott*.

Why are great biographies so rare? The answer, says Mrs. Woolf, lies in the limitations of the genre itself. The biographer is caught in a kind of trap. If he decides to be bound by such facts about his subject as he can discover from written records and from his subject's friends and relations, he soon discovers that there are gaps in the story that must either be left unfilled or be filled by his own intuitions and knowledge of general human nature. On the other hand, if he decides to "create," in an artistic sense, a unified, meaningful character out of his subject, he will find that this character is in some cases, at least, contradicted by the facts. It is the biographer's misfortune, she suggests, that something is known about everybody, but not everything about anybody. The biographer is thus limited in his use of facts, and frustrated in the use of his imagination.

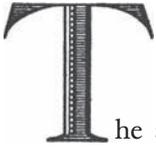

¹ For a biography of Virginia Woolf, see Vol. 5, pp. 1–3, in this set.

In addition to this, Virginia Woolf points out, popular opinion about great men is bound to change. The reader of Macaulay's essay on Machiavelli or Carlyle's on Cromwell will not fail to see that different generations have different views of the same men. The biographer "must go ahead of the rest of us. . . . His sense of truth must be alive and on tiptoe." But since this is so, she is saying, biography cannot be called a science.

There remains the question whether biography can be called an art. Even such superb biographies as Boswell's *Johnson* cannot, Virginia Woolf says, be compared with Shakespeare's characterization of Falstaff, for example, or Dickens' portrait of Mr. Micawber. The poet or novelist is free. Biography, on the other hand, is too restricted by facts to be a creative art.

Is this not an exaggeration? Was Shakespeare free in creating Falstaff? In combining his traits he had to preserve plausibility, and make him fit in with the other characters of *Henry IV*. And once he had created this lovable rascal, he was bound to see that he continued to act in character. The poet is not entirely free, then, nor the biographer completely bound by facts. Are there not gaps in any life which must be creatively supplied by the biographer? These are questions that are likely to occur to you. But Mrs. Woolf is persuasive. She is also disarming when she admits that, though biography is not an art, the biographer "does more to stimulate the imagination than any poet or novelist save the very greatest."

The Art of Biography

he art of biography, we say—but at once we go on to ask, Is biography an art? The question is foolish perhaps, and ungenerous certainly, considering the keen pleasure that biographers have given us. But the question asks itself so often that there must be something behind it. There it is, whenever a new biography is opened, casting its shadow on the page; and there would seem to be something deadly in that shadow, for after all, of the multitude of lives that are written, how few survive!

But the reason for this high death rate, the biographer might argue, is that biography, compared with the arts of poetry and fiction, is a young art. Interest in ourselves and in other people's selves is a late development of the human mind. Not until the eighteenth century in England did that curiosity express itself in writing the lives of private people. Only in the nineteenth century was biography fully grown and hugely prolific. If it is true that there have been only three great biographers—Johnson, Boswell, and Lockhart—the reason, he argues, is that the time was short; and his plea, that the art of biography has had but little time to establish itself and develop itself, is certainly borne out by the textbooks. Tempting as it is to explore the reason—why, that is, the self that writes a book of prose came into being so many centuries after the self that writes a poem, why Chaucer preceded Henry James—it is better to leave that insoluble question unasked, and so pass to his next reason for the lack of masterpieces. It is that the art of biography is the most restricted of all the arts. He has his proof ready to hand. Here it is in the preface in which Smith, who has written the life of Jones, takes this opportunity of thanking old friends who have lent letters, and “last but not least” Mrs. Jones, the widow, for that help “without which,” as he puts it, “this biography could not have been written.” Now the novelist, he points out, simply says in his foreword, “Every character in this book is fictitious.” The novelist is free; the biographer is tied.

There, perhaps, we come within hailing distance of that very difficult, again perhaps insoluble, question: What do we mean by calling a book a work of art? At any rate, here is a distinction between biography and fiction—a proof that they differ in the very stuff of which they are made. One is made with the help of friends, of facts; the other is created without any restrictions save those that the artist, for reasons that seem good to him, chooses to obey. That is a distinction; and there is good reason to think that in the past biographers have found it not only a distinction but a very cruel distinction.

The widow and the friends were hard taskmasters. Suppose, for example, that the man of genius was immoral, ill-tempered, and threw the boots at the maid's head. The widow would say, "Still I loved him—he was the father of my children; and the public, who love his books, must on no account be disillusioned. Cover up; omit." The biographer obeyed. And thus the majority of Victorian biographies are like the wax figures now preserved in Westminster Abbey, that were carried in funeral processions through the street—effigies that have only a smooth superficial likeness to the body in the coffin.

Then, towards the end of the nineteenth century, there was a change. Again for reasons not easy to discover, widows became broader-minded, the public keener-sighted; the effigy no longer carried conviction or satisfied curiosity. The biographer certainly won a measure of freedom. At least he could hint that there were scars and furrows on the dead man's face. Froude's Carlyle is by no means a wax mask painted rosy red. And following Froude there was Sir Edmund Gosse, who dared to say that his own father was a fallible human being. And following Edmund Gosse in the early years of the present century came Lytton Strachey.

The figure of Lytton Strachey is so important a figure in the history of biography that it compels a pause. For his three famous books, *Eminent Victorians*, *Queen Victoria*, and *Elizabeth and Essex*, are of a stature to show both what biography can do and what biography cannot do. Thus they suggest many possible answers to the question whether biography is an art, and if not, why it fails.

Lytton Strachey came to birth as an author at a lucky moment. In 1918, when he made his first attempt, biography, with its new liberties, was a form that offered great attractions. To a writer like himself, who had wished to write poetry or plays but was doubtful of his creative power, biography seemed to offer a promising alternative. For at last it was possible to tell the truth about the dead; and the Victorian age was rich in re-

markable figures many of whom had been grossly deformed by the effigies that had been plastered over them. To recreate them, to show them as they really were, was a task that called for gifts analogous to the poet's or the novelist's, yet did not ask for that inventive power in which he found himself lacking.

It was well worth trying. And the anger and the interest that his short studies of Eminent Victorians aroused showed that he was able to make Manning, Florence Nightingale, Gordon, and the rest live as they had not lived since they were actually in the flesh. Once more they were the centre of a buzz of discussion. Did Gordon really drink, or was that an invention? Had Florence Nightingale received the Order of Merit in her bedroom or in her sitting-room? He stirred the public, even though a European war was raging, to an astonishing interest in such minute matters. Anger and laughter mixed; and editions multiplied.

But these were short studies with something of the over-emphasis and the foreshortening of caricatures. In the lives of the two great Queens, Elizabeth and Victoria, he attempted a far more ambitious task. Biography had never had a fairer chance of showing what it could do. For it was now being put to the test by a writer who was capable of making use of all the liberties that biography had won: he was fearless; he had proved his brilliance; and he had learned his job. The result throws great light upon the nature of biography. For who can doubt that after reading the two books again, one after the other, that the *Victoria* is a triumphant success, and that the *Elizabeth* by comparison is a failure? But it seems too, as we compare them, that it was not Lytton Strachey who failed; it was the art of biography. In the *Victoria* he treated biography as a craft; he submitted to its limitations. In the *Elizabeth* he treated biography as an art; he flouted its limitations.

But we must go on to ask how we have come to this conclusion and what reasons support it. In the first place it is clear that the two Queens present very different problems to their biographer. About Queen Victoria everything was known. Everything she did, almost everything she thought, was a matter of common knowledge. No one has ever been more closely verified and exactly authenticated than Queen Victoria. The biographer could not invent her, because at every moment some document was at hand to check his invention. And, in writing of Victoria, Lytton Strachey submitted to the conditions. He used to the full the biographer's power of selection and relation, but he kept strictly within the world of fact. Every statement was verified; every fact was authenticated. And the result is a life which, very possibly, will do for the

old Queen what Boswell did for the old dictionary maker. In time to come Lytton Strachey's Queen Victoria will be Queen Victoria, just as Boswell's Johnson is now Dr. Johnson. The other versions will fade and disappear. It was a prodigious feat, and no doubt, having accomplished it, the author was anxious to press further. There was Queen Victoria, solid, real, palpable. But undoubtedly she was limited. Could not biography produce something of the intensity of poetry, something of the excitement of drama, and yet keep also the peculiar virtue that belongs to fact—its suggestive reality, its own, proper creativeness?

Queen Elizabeth seemed to lend herself perfectly to the experiment. Very little was known about her. The society in which she lived was so remote that the habits, the motives, and even the actions of the people of that age were full of strangeness and obscurity. "By what art are we to worm our way into those strange spirits? those even stranger bodies? The more clearly we perceive it, the more remote that singular universe becomes," Lytton Strachey remarked on one of the first pages. Yet there was evidently a "tragic history" lying dormant, half-revealed, half-concealed, in the story of the Queen and Essex. Everything seemed to lend itself to the making of a book that combined the advantages of both worlds, that gave the artist freedom to invent, but helped his invention with the support of facts—a book that was not only a biography but also a work of art.

Nevertheless, the combination proved unworkable; fact and fiction refused to mix. Elizabeth never became real in the sense that Queen Victoria had been real, yet she never became fictitious in the sense that Cleopatra or Falstaff is fictitious. The reason would seem to be that very little was known—he was urged to invent; yet something was known—his invention was checked. The Queen thus moves in an ambiguous world, between fact and fiction, neither embodied nor disembodied. There is a sense of vacancy and effort, of a tragedy that has no crisis, of characters that meet but do not clash.

If this diagnosis is true we are forced to say that the trouble lies with biography itself. It imposes conditions, and those conditions are that it must be based upon fact. And by fact in biography we mean facts that can be verified by other people besides the artist. If he invents facts as an artist invents them—facts that no one else can verify—and tries to combine them with facts of the other sort, they destroy each other.

Lytton Strachey himself seems in the *Queen Victoria* to have realized the necessity of this condition, and to have yielded to it instinctively. "The first forty-two years of the Queen's life," he wrote, "are illumi-

nated by a great and varied quantity of authentic information. With Albert's death a veil descends." And when with Albert's death the veil descended and authentic information failed, he knew that the biographer must follow suit. "We must be content with a brief and summary relation," he wrote and the last years are briefly disposed of. But the whole of Elizabeth's life was lived behind a far thicker veil than the last years of Victoria. And yet, ignoring his own admission, he went on to write, not a brief and summary relation, but a whole book about those strange spirits and even stranger bodies of whom authentic information was lacking. On his own showing, the attempt was doomed to failure.

It seems, then, that when the biographer complained that he was tied by friends, letters, and documents he was laying his finger upon a necessary element in biography; and that it is also a necessary limitation. For the invented character lives in a free world where the facts are verified by one person only—the artist himself. Their authenticity lies in the truth of his own vision. The world created by that vision is rarer, intenser, and more wholly of a piece than the world that is largely made of authentic information supplied by other people. And because of this difference the two kinds of fact will not mix; if they touch they destroy each other. No one, the conclusion seems to be, can make the best of both worlds; you must choose, and you must abide by your choice.

But though the failure of *Elizabeth and Essex* leads to this conclusion, that failure, because it was the result of a daring experiment carried out with magnificent skill, leads the way to further discoveries. Had he lived, Lytton Strachey would no doubt himself have explored the vein that he had opened. As it is, he has shown us the way in which others may advance. The biographer is bound by facts—that is so; but, if it is so, he has the right to all the facts that are available. If Jones threw boots at the maid's head, had a mistress in Islington, or was found drunk in a ditch after a night's debauch, he must be free to say so—so far at least as the law of libel and human sentiment allow.

But these facts are not like the facts of science—once they are discovered, always the same. They are subject to changes of opinion; opinions change as the times change. What was thought a sin is now known, by the light of facts won for us by the psychologists, to be perhaps a misfortune; perhaps a curiosity; perhaps neither one nor the other, but a trifling foible of no great importance one way or the other. The accent on sex has changed within living memory. This leads to the destruction of a great deal of dead matter still obscuring the true features of the

human face. Many of the old chapter headings—life at college, marriage, career—are shown to be very arbitrary and artificial distinctions. The real current of the hero's existence took, very likely, a different course.

Thus the biographer must go ahead of the rest of us, like the miner's canary, testing the atmosphere, detecting falsity, unreality, and the presence of obsolete conventions. His sense of truth must be alive and on tiptoe. Then again, since we live in an age when a thousand cameras are pointed, by newspapers, letters, and diaries, at every character from every angle, he must be prepared to admit contradictory versions of the same face. Biography will enlarge its scope by hanging up looking glasses at odd corners. And yet from all this diversity it will bring out, not a riot of confusion, but a richer unity. And again, since so much is known that used to be unknown, the question now inevitably asks itself, whether the lives of great men only should be recorded. Is not anyone who has lived a life, and left a record of that life, worthy of biography—the failures as well as the successes, the humble as well as the illustrious? And what is greatness? And what smallness? He must revise our standards of merit and set up new heroes for our admiration.

Biography thus is only at the beginning of its career; it has a long and active life before it, we may be sure—a life full of difficulty, danger, and hard work. Nevertheless, we can also be sure that it is a different life from the life of poetry and fiction—a life lived at a lower degree of tension. And for that reason its creations are not destined for the immortality which the artist now and then achieves for his creations.

There would seem to be certain proof of that already. Even Dr. Johnson as created by Boswell will not live as long as Falstaff as created by Shakespeare. Micawber and Miss Bates we may be certain will survive Lockhart's Sir Walter Scott and Lytton Strachey's Queen Victoria. For they are made of more enduring matter. The artist's imagination at its most intense fires out what is perishable in fact; he builds with what is durable; but the biographer must accept the perishable, build with it, imbed it in the very fabric of his work. Much will perish; little will live. And thus we come to the conclusion, that he is a craftsman, not an artist; and his work is not a work of art, but something betwixt and between.

Yet on that lower level the work of the biographer is invaluable; we cannot thank him sufficiently for what he does for us. For we are incapable of living wholly in the intense world of the imagination. The imagination is a faculty that soon tires and needs rest and refreshment.

But for a tired imagination the proper food is not inferior poetry or minor fiction—indeed they blunt and debauch it—but sober fact, that “authentic information” from which, as Lytton Strachey has shown us, good biography is made. When and where did the real man live; how did he look; did he wear laced boots or elastic-sided; who were his aunts, and his friends; how did he blow his nose; whom did he love, and how; and when he came to die did he die in his bed like a Christian, or . . .

By telling us the true facts, by sifting the little from the big, and shaping the whole so that we perceive the outline, the biographer does more to stimulate the imagination than any poet or novelist save the very greatest. For few poets and novelists are capable of that high degree of tension which gives us reality. But almost any biographer, if he respects facts, can give us much more than another fact to add to our collection. He can give us the creative fact; the fertile fact; the fact that suggests and engenders. Of this, too, there is certain proof. For how often, when a biography is read and tossed aside, some scene remains bright, some figure lives on in the depths of the mind, and causes us, when we read a poem or a novel, to feel a start of recognition, as if we remembered something that we had known before.

Xenophon

c. 430–355 B.C.

Xenophon, the Greek historian and essayist, was born in Athens about 430 B.C., of an aristocratic family. He made the acquaintance of the philosopher Socrates, who at the time was instructing the youth of Athens through his brilliant conversations. He may have taken part in the war with Sparta, which ended, in 404, with the downfall of the Athenian empire. In 401 he was asked, along with other Greeks, to join the expedition of the younger Cyrus against the latter's brother Artaxerxes, who, according to Cyrus, had usurped the Persian throne. Xenophon appears to have accepted the invitation with alacrity, partly, no doubt, because the venture held promise of riches and honor, but also because it gave him an opportunity to escape from the uncongenial atmosphere of democratic Athens. His book, the *Anabasis* (or "Upcountry March"), is a description of the events that occurred on this expedition.

After the main body of the Greeks returned home, Xenophon remained in Asia and served with troops fighting the Persians. He captured a wealthy Persian near Pergamum and the ransom he obtained gave him an income for life.

In Greece once more, Xenophon, rather than return to Athens, went into the service of Agesilous, king of Sparta. He fought in a battle against his fellow citizens and was banished by them. The Spartans gave him a home in Elis, where he lived for a time in retirement, hunting, enjoying country life, and writing his memoirs and histories. When Athens and Sparta later became allies, Xenophon's banishment was repealed. He did not return to Athens, however, but spent his last years at Corinth.

The *Anabasis* is Xenophon's most famous book, but he also wrote the *Cyropaedia*, an account of the youth and training of Cyrus, the

Hellenica, a continuation of Thucydides' history to 362, the *Memorabilia*, a portrait and defense of Socrates, and numerous other works on country life, hunting, military training, and politics.

The Persian expedition that Xenophon describes in the *Anabasis* started from Sardis in 401. Ten thousand Greeks marched inland to Cunaxa, where a great battle was fought in which Cyrus was killed. The Greeks then attempted to negotiate a safe return with the Persian satrap, Tissaphernes, but their officers were treacherously murdered and they were left leaderless, deep in enemy country, without knowledge of the terrain and almost totally without money or supplies. Faced with disaster, the Greeks maintained strict discipline and elected new officers, one of whom was Xenophon. It was he, more than any other leader in that long retreat, who invented the stratagems and maintained the morale of the troops.

The selection reprinted here covers the most dramatic part of the journey. It had been decided to march up the valley of the Tigris River and to make for the shores of the Euxine (Black) Sea, where there were several Greek colonies. Part of the way led through the wilds of Kurdistan, where the ten thousand had to defend themselves against almost constant raids by savage tribesmen; and part of the way led through the forbidding and desolate highlands of Armenia and Georgia. The Greeks were a sea-faring, island people, and this march over a thousand miles of rough country was bitter and hard. Many times, Xenophon says, they wanted to give up, but he inspired them to take heart, and they went on. Finally they reached Trebizond. Xenophon, at the center of the line, could hear the vanguard shouting something. He gathered together some cavalry and "rode forward to give support, and, quite soon, they heard the soldiers shouting 'The sea! The sea!' and passing the word down the column. Then certainly they all began to run . . . and when they had all got to the top, the soldiers, with tears in their eyes, embraced each other and their generals and captains."

This scene is one of the most famous in all literature. It bears comparison with Prescott's ¹ account of Cortés' first view of the valley of Mexico and the story, in the Bible, of Moses and his people

¹ See Vol. 6, pp. 231-243, in this set.

looking down on the land of Canaan. Indeed, for these Greeks the sea was the Promised Land.

The selection from the *Memorabilia* portrays Socrates at the zenith and close of his career. For Xenophon, Socrates is the perfect man, the embodiment of the highest humanity and morality. Justice, courage, self-restraint, piety, patriotism were combined in him with affability and kindness, and with a rare ability to impart these qualities to others. It is easy to see that Xenophon is defending Socrates against the charges that had been brought against him at his trial and after. He is saying, in effect: How could such a man have been guilty of “atheism,” of “corrupting the youth,” and of “making the worse appear the better cause”?

Plato is also concerned to defend the good name of Socrates. In his dialogues, especially the *Phaedo*, *Crito*, and *Apology*,² he also describes Socrates as a model of virtue. In other respects, however, Plato’s portrait is strikingly different from Xenophon’s. Socrates becomes highly complex and subtle, full of charm, ironic humor and paradox—close to common sense, but also to mysticism. His eloquence is said to have paralyzed and bewitched his listeners. Those reputed to be wise ended by bowing to his wisdom, the enchanting youth were themselves enchanted, and the revelers were drunk under the table by the imperturbable Socrates, who continued meanwhile his customary philosophical discourse.

A similar contrast is seen in the accounts given of Socrates’ moral teachings. For Plato they are subtle proposals backed by ingenious arguments. For Xenophon they are simply common sense rules of morality and piety.

Which of these contrasting reports of Socrates and his teachings is nearer the truth? Most authorities favor Plato’s version. But could not both accounts be valid in a sense? Plato, the greatest pupil of Socrates, would have the closest view and understanding. But Xenophon’s impression was that of a soldier and popular historian, and was intelligible to everyone. It was very effective in clearing Socrates’ name of the false charges that had led to his execution.

The March to the Sea

from *The Persian Expedition*

THE ENTRY INTO KURDISTAN

At about the last watch, with enough of the night remaining for them to be able to cross the plain under cover of darkness, they got up when the signal was given and marched toward the mountain, which they reached at dawn. Chirisophus then took the lead with his own troops and also all the light troops; Xenophon brought up the rear with the hoplites of the rear-guard, but with no light troops at all, as there seemed to be no danger of any attack being made on them from the rear while they were on the ascent.

Chirisophus reached the summit before any of the enemy realized what was happening. He then went steadily forward, and as the various contingents of the army crossed the pass they followed him into the villages which lay in the folds and recesses of the mountains. The Carduchi immediately abandoned their houses and fled into the mountains with their women and children. Plenty of food remained for the Greeks to take, and there were a lot of brazen utensils in the furniture of the houses too. The Greeks did not take any of these, or pursue the people. They wished to behave leniently on the chance that the Carduchi, since they were enemies of the King, might be willing for them to go through their country peaceably. Food, however, was a matter of necessity, and they took whatever they came across. The Carduchi paid no attention when they called out to them, and indeed gave no signs at all of friendly feeling.

It was already dark when the last of the Greeks had come down from the summit to the villages, since, owing to the narrowness of the road, the ascent and descent had taken up the whole day. At this point some of

the Carduchi got together in a body and made an attack on the last of the Greeks. They killed some and wounded others with stones and arrows, though they were not in great numbers, as the Greek army had come upon them unexpectedly. Indeed, if more of them had got together on this occasion, a large part of the army might possibly have been wiped out.

So for that night they encamped as they were in the villages, and the Carduchi lit a number of beacons on the mountains all round them as signals to each other. At dawn it was decided at a meeting of the Greek generals and captains to take on the march only the strongest and most essential of the baggage animals, and to leave the rest behind; also to let go all the slaves in the army that had been captured recently. This was because the great numbers of baggage animals and slaves slowed up the march, and there were numbers of men who were in charge of these and so were out of action; and with so many people on the march, they had to provide and transport double the necessary quantity of supplies. After having made this decision, they gave orders by herald that it was to be carried into effect.

When they had had breakfast and started on their way, the generals stationed themselves in a narrow part of the road and took away from the soldiers any of the proscribed articles which they found had not been left behind. The men did as they were told, though there were some cases of people getting away with things, cases when a soldier was in love with a particularly good-looking boy or woman. For that day, then, they went ahead, having a certain amount of fighting to do and resting from time to time.

On the next day there was a great storm, but they had to go forward as there were not sufficient supplies. Chirisophus was leading the march and Xenophon was with the rear-guard. The enemy made violent attacks and in the narrow passes came to close range with their bows and slings with the result that they had to travel slowly, as they were constantly chasing the enemy off and then returning again. Xenophon had often to order a halt when the enemy launched his violent attacks; and on these occasions Chirisophus, when the word was passed forward, halted his men too; but on one occasion he did not stop, but led on fast, passing back the word to follow him. It was obvious that something was the matter, but there was no time to go forward and see what was the cause of this haste. The result was that for the rear-guard the march almost turned into a full retreat. Here a gallant Spartan soldier, called Leonymus, was

killed by an arrow which went into the side of his body through the shield and the jerkin, and Basias the Arcadian was also killed, shot clean through the head.

When they reached the place where they were to camp, Xenophon went just as he was to Chirisophus and blamed him for not waiting, the result of which had been that the soldiers had had to fight at the same time as they were retreating. "And now," he said, "two most gallant fellows have been killed, and we could not recover their bodies or bury them."

Chirisophus replied: "Look at the mountains. See how impassable they are in every direction. This one road, which you see, is a steep one, and you can see that there are men on it, a great crowd, who have occupied the pass and are on guard there. That is why I was in a hurry and so did not wait for you. I thought there was a chance of being able to get there first, before the pass was seized. The guides we have say that there is no other road."

Xenophon said: "I have got two men. When the enemy were giving us trouble, we set an ambush—which also gave us a chance of getting our breath back—and we killed some of them, and made up our minds to take a few alive just for this very reason, to have the services of guides who know the country."

At once they brought the two men and questioned them separately, to see if they knew of any other road apart from the obvious one. One of the two, although he was threatened in every kind of way, said that he did not know of any other road. Since he said nothing that was of any help he was killed, with the other man looking on. The survivor then said that the reason why the other man had denied knowledge of another road was that he happened to have a daughter who had been married to somebody in that direction. He declared that he would lead them by a road that was a possible one for animals as well as men. He was then asked whether there was any part of the road which was difficult to get past, and he replied that there was one height which it would be impossible to pass, unless it was occupied in advance. It was then decided to call a meeting of the captains, peltasts and hoplites as well, to give them an account of the situation, and ask who was willing to do a good job and come forward as a volunteer for the expedition. The hoplites who came forward were Aristonymus the Methydrian and Agasias the Stymphalian, and Callimachus of Parrhasia put forward a separate claim for himself, saying that he was willing to go, if he could take with him volunteers from the whole army. "Personally," he said, "I am sure

that a lot of the young men will follow if I am their leader." Then they asked if any of the officers of the light-armed troops would volunteer to join with the others. Aristreas of Chios came forward, a man who, on many occasions of this sort, was worth a lot to the army.

FIGHTING IN THE MOUNTAINS

It was now afternoon, and they told the volunteers to have their food and then start. They bound the guide and handed him over to them, and made arrangements that, if they took the height, they should guard the position for the night and give a trumpet signal at dawn: those on the height should then make an attack on the Carduchi holding the regular way out of the valley, while the rest of them should proceed as quickly as they could and join up with them.

After agreeing on this plan, the volunteers set out, a force of about two thousand. There was a lot of rain at the time. Xenophon, with the rear-guard, led on towards the regular exit from the valley, in order that the enemy might give their attention to this part of the road and that the party which was making a detour might, as far as possible, escape detection. However, when the rear-guard got to a watercourse which they had to cross to make their way up to the higher ground, the natives at this point rolled down boulders big enough to fill a wagon, some bigger, some smaller, which came crashing down against the rocks and ricocheted off, so that it was absolutely impossible even to get near the pass. Some of the captains, finding things impossible in one direction, tried somewhere else, and continued their efforts until it became dark. Then, when they thought that their retreat would be unobserved, they went back for supper. Those of them who had been in the rear-guard had not had any breakfast either. The enemy, however, went on rolling down stones all through the night, as was evident from the noise.

Meanwhile the men who had taken the guide went round in a detour and came upon the guards sitting round their campfire. They killed some of them and drove the others downhill, and then stayed there under the impression that they were occupying the height. This, however, was not the case. Above them there was a small hill, past which ran the narrow road where the guard had been stationed. Nevertheless there was a way from this position to where the enemy was stationed on the regular road.

They passed the night where they were, and, at the first sign of dawn, formed up and marched in silence against the enemy. As there was a mist they got close up to them without being noticed. Then, as soon as they

came into sight of each other, the trumpet sounded, and they raised their war-cry and charged down on the men, who did not wait for them, but abandoned the road and fled. Only a few were killed, as they were quick on their feet.

Meanwhile Chirisophus' men, on hearing the trumpet, immediately attacked uphill along the regular road; and some of the generals advanced along little-used paths, just where they happened to find themselves, climbing up as best they could and pulling each other up with their spears. These were the first ones to join up with the party that had previously occupied the position.

Xenophon, with half the rear-guard, went by the same way as those who had the guide, as it was the easiest going for the baggage animals. He had placed the other half of his men in the rear of the animals. As they went forward they came to a ridge commanding the road and found it occupied by the enemy. They had either to dislodge them or else be cut off from the rest of the Greeks. They themselves might have gone by the same road as the others, but this was the only possible route for the baggage animals. Then they shouted out words of encouragement to each other and made an assault on the ridge with the companies in column. They did not attack from every direction but left the enemy a way of escape, if he wanted to run away. So long as they were climbing up, each man by the best route he could find, the natives shot arrows at them and hurled down stones; but they made no attack when it came to close quarters, and, in the end, abandoned the position and fled.

The Greeks had no sooner got past this hill when they saw in front of them another hill, also occupied by the enemy. They decided to make an assault on this hill too, but Xenophon realized that, if they left the hill which they had just taken unguarded, the enemy might reoccupy it and make an attack on the baggage animals as they were going past. (The baggage train extended a long way, as it was going along a narrow road.) He therefore left on the hill the captains Cephisodorus, the son of Cephisophon, an Athenian, and Archagoras, an exile from Argos, while he himself advanced with the rest upon the second hill and took it too by the same methods as before.

There was still a third hill left to deal with, and much the steepest of the three. It was the one that overlooked the guard who had been surprised at their fire during the night by the volunteers. However, when the Greeks got close to it, the natives gave up this hill without putting up a fight, a thing which surprised everyone and made them think that they had abandoned the hill through fear of being cut off and surrounded. Ac-

tually they had seen from the top what had happened further down the road and had all gone off to attack the rear-guard.

Xenophon climbed to the summit with the youngest of his men, and ordered the rest to lead on slowly, so that the companies in the rear could join up with them, and he told them to halt under arms on level ground when they had gone a little way along the road. At this point Archagoras of Argos came running with the news that his men had been driven off the hill and that Cephisodorus and Amphicrates had been killed together with all the rest who had not managed to jump down from the rock and reach the rear-guard. After achieving this success, the natives appeared on a ridge opposite the third hill. Xenophon spoke to them through an interpreter. He suggested a truce and asked them to hand over the dead. They replied that they would give back the bodies on condition that the Greeks did not burn their houses, and Xenophon agreed to this. However, while this conversation was going on and the rest of the army was going forward, all the natives in the district had rushed up: and when the Greeks began to come down from the hill and make their way towards the rest where they were standing by their arms, then, in great numbers and with terrific shouting, the enemy launched an attack. On reaching the summit of the hill from which Xenophon was descending, they began to roll down rocks. They broke one man's leg, and the man who was carrying Xenophon's shield ran away, taking the shield with him. Eurylochus of Lusias, however, a hoplite, ran up and held his shield in front of both of them during the retreat. The rest rejoined their comrades who were already in battle order.

The whole Greek army was now together again. They camped where they were and found a number of comfortable houses and plenty of food. There was a lot of wine, so much so that the people stored it in cellars which were plastered over the top. Xenophon and Chirisophus came to an arrangement with the enemy by which they got back the dead bodies and gave up their guide. For the dead they did, to the best of their ability, everything that is usually done at the burial of brave men. On the next day they set out without a guide, and the enemy fought back at them, and tried to stop their march by occupying any narrow passes there might be ahead of them. Whenever they got in the way of the vanguard, Xenophon led his men up into the mountains from the rear and made the road-block in front of the vanguard ineffectual by trying to get on to higher ground than those who were manning it; and whenever they made an attack on the rear-guard, Chirisophus rendered this attempt to block the march ineffectual by altering direction and trying to get on to

higher ground than those who were attempting it. So they were continually coming to each other's help and giving each other the most valuable support. There were times, too, when the natives gave a lot of trouble to the parties who had climbed up to higher ground, when they were on their way down again. The natives were quick on their feet, and so could get away even when they did not start running until we were right on top of them. Their only arms were bows and slings, and as bowmen they were very good. The bows they had were between four and five feet long and their arrows were of more than three feet. When they shot they put out the left foot and rested the bottom of the bow against it as they drew back the string. Their arrows went through shields and breastplates. When the Greeks got hold of any, they fitted them with straps and used them as javelins. In this type of country the Cretans were extremely useful. Stratocles, a Cretan himself, was their commander.

THE CROSSING INTO ARMENIA

They camped for this day in the villages overlooking the plain of the river Centrites, which is about two hundred feet across, and forms the boundary between Armenia and the country of the Carduchi. The Greeks rested here and were glad to see the plain. The river was more than half a mile distant from the Carduchian mountains. They felt very pleased, then, as they camped here, with plenty of provisions, and often talked over the hardships they had been through; for they had been fighting continually through all the seven days during which they had been going through the country of the Carduchi, and had suffered more than they had suffered in all their engagements with the King and with Tissaphernes. Consequently the thought that they had escaped from all this made them sleep well.

At dawn, however, they saw that on the other side of the river there were cavalry, ready for action, and prepared to prevent them crossing over: on the high ground above the cavalry were infantry formations to stop them getting into Armenia. These were Armenian, Mardian and Chaldaean mercenaries in the service of Orontas and Artouchas. The Chaldaeans were said to be a free nation and good fighting men. They were armed with long wicker shields and spears. The high ground, on which the infantry was formed up, was three or four hundred feet away from the river. The only visible road led uphill and looked as though it had been specially built.

It was at this point that the Greeks attempted to cross; but, on making

the attempt, they found that the water rose above their breasts, and the river-bed was uneven, covered with large slippery boulders. It was impossible for them to hold their arms in the water and, if they tried, the river swept them off their feet, while, if one held one's arms above one's head, one was left with no defence against the arrows and other missiles. They therefore withdrew and camped where they were on the bank of the river. They then saw that great numbers of the Carduchi had got together under arms and were occupying the position on the mountain where they had been themselves on the previous night. At this point the Greeks certainly felt very downhearted: they saw how difficult the river was to cross, and they saw also the troops ready to stop them crossing, and now the Carduchi waiting to set upon them from the rear if they attempted it. So for that day and the following night they stayed where they were, not knowing what to do.

Xenophon had a dream. He dreamed that he was bound in fetters, but the fetters fell off of their own accord, so that he was free and recovered the complete use of his limbs. Just before dawn he went to Chirisophus and told him that he felt confident that things would be all right, and he related his dream. Chirisophus was delighted, and at the first sign of dawn all the generals assembled and offered a sacrifice. The appearance of the victims was favourable from the very first. Then the generals and captains left the sacrifice and passed round the word to the troops to have their breakfast.

While Xenophon was having breakfast two young men came running up to him. Everyone knew that it was permissible to come to him whether he was in the middle of breakfast or supper, or to wake him from his sleep and talk to him, if they had anything to say which had a bearing on the fighting. These young men now told him that they had been collecting kindling for their fire, and had then seen on the other side of the river, on the rocks that went right down to the water, an old man and a woman and some girls storing away what looked like bundles of clothing in a hollow rock. On seeing this, they had come to the conclusion that this was a safe place to get across, as the ground there was inaccessible to the enemy's cavalry. So they had undressed and taken their daggers and gone across naked, expecting that they would have to swim. However, they went ahead and got to the other side without the water ever reaching up to the crutch. Once on the other side they made off with the clothing and came back again.

Xenophon at once poured a libation and gave directions for the young men to join in it and pray to the gods who had sent the dream and re-

vealed the ford, that they should bring what remained to a happy fulfilment. As soon as he had made the libation he took the young men to Chirisophus and they told their story to him. Chirisophus, after hearing it, also made a libation, and, when the libations were over, they gave instructions for the soldiers to pack their belongings, while they themselves called a meeting of the generals and discussed the question of how to make the crossing as efficient as possible, and how they could defeat the enemy in front and at the same time suffer no losses from those in the rear. They decided that Chirisophus should go first with half the army, while the other half stayed behind with Xenophon, and that the baggage animals and the general crowd should go across between the two.

When things were in order, they set off, and the two young men led the way, keeping the river on their left. The way to the ford was a distance of less than half a mile and, as they marched, the enemy's cavalry formations on the other bank kept pace with them. On reaching the bank of the river where the ford was, they grounded arms, and then Chirisophus himself first put a ceremonial wreath on his head, threw aside his cloak and took up his arms, telling the rest to follow his example. He ordered the captains to lead their companies across in columns, some on the left and others on the right of him. The soothsayers then cut the throats of the animals over the river, and meanwhile the enemy were shooting arrows and slinging. However, they were still out of range. The appearance of the victims was pronounced favourable, and then all the soldiers sang the paean and raised the battle-cry, and all the women joined in the cry; for a number of the soldiers had their mistresses with them in the army.

Chirisophus and his men then went into the river. Xenophon, with those of the rear-guard who were quickest on their feet, ran back at full speed to the ford opposite the road into the Armenian mountains. He was trying to give the impression that he intended to make a crossing there and so cut off the cavalry on the river-bank. When the enemy saw that Chirisophus' men were getting across the river easily and that Xenophon's men were running back on their tracks, they became frightened of being cut off and fled at full speed in the direction, apparently, of the river crossing further up. However, on reaching the road, they turned uphill into the mountains. Lycius, who was in command of the cavalry formation, and Aeschines, who was in command of the formation of peltasts that accompanied Chirisophus, gave pursuit as soon as they saw the enemy in full retreat, and the soldiers shouted out to each other

not to stay behind but to go on after them into the mountains. However, when Chirisophus had got across he did not pursue the cavalry, but immediately went up on to the high ground that went down to the river to attack the enemy who were up there. They, seeing their own cavalry in flight and hoplites moving up to attack them, abandoned the heights overlooking the river.

When Xenophon saw that things were going well on the other side, he made his way back as quickly as he could to that part of the army which had crossed, for there were also the Carduchi to think of, and they were evidently coming down into the plain with the intention of making an attack on the rear. Chirisophus was now holding the high ground, and Lycius, who with a few men had made an attempt at a pursuit, had captured some of their baggage animals, which they had abandoned, and some fine clothing and some drinking cups as well. The Greek baggage train and the general crowd was actually engaged in crossing. Xenophon then brought his men round and halted them in battle order, facing the Carduchi. He ordered the captains to split up their companies into sections of twenty-five men and bring each section round into line on the left: the captains and the section commanders were then to advance towards the Carduchi while those in the rear were to halt facing the river.

As soon as the Carduchi saw that the troops in the rear of the general crowd were thinning out and that there appeared now to be only a few of them, they began to come on faster, chanting their songs as they came. Chirisophus, however, when his own position was secure, sent Xenophon the peltasts and slingers and archers, and told them to do what they were ordered. Xenophon saw them coming across, and sent a messenger to tell them not to cross, but to stay on the further bank: when his own men started to cross over, they were to go into the river on each side of them as though they intended to cross to the other side, the javelin throwers with their weapons at the ready, and the archers with arrows fitted to their bowstrings; but they were not to go far into the river. The orders he gave to his own men were that, when they were within range of the enemy slingers and could hear the stones rattling on the shields, they were to sing the paeon and charge: when the enemy ran away and the trumpeter sounded the attack from the river, the men in the rear were to wheel right and go first, and then they were all to run to the river and get across as fast as they could, each at the point opposite his own position, so as not to get in each other's way: the best man would be the one who got to the other side first.

The Carduchi saw that there were now not many left in the baggage train; for a number even of those who had been detailed to remain behind had gone over to see what was happening either to the animals or to their kit or to their mistresses. Consequently the Carduchi came on with confidence and began to sling stones and shoot arrows. The Greeks then sang the paean and advanced on them at the double. The natives could not stand up to them, since, though they were armed well enough for quick attacks and retreats in the mountains, when it came to standing up to close fighting they were insufficiently armed. At this point the trumpeter sounded the attack, and the enemy ran away all the faster, while the Greeks turned about and escaped across the river as quickly as they could. Some of the enemy saw what they were doing and ran back again to the river where they wounded a few men with their arrows; but the majority of them were obviously still running away even when the Greeks had got to the other side. The relieving party, in their desire to show off their courage, had gone into the water further than they should, and came back across the river after Xenophon's party. A few of these men too were wounded.

THEY SACK THE CAMP OF TIRIBAZUS

After crossing the river they formed up in order about midday and marched at least fifteen miles through Armenia, over country that was entirely flat, with gently sloping hills. Because of the wars between the Armenians and the Carduchi there were no villages near the river; but the one which they reached at the end of their march was a big one, containing a palace belonging to the satrap; most of the houses were built like fortresses and there were plenty of provisions. Then a two days' march of thirty miles took them past the sources of the river Tigris, and from here a three days' march of forty-five miles brought them to the Teleboas, a beautiful river, but not a large one. There were a number of villages near the river, and all this part is called Western Armenia. Its governor was Tiribazus who was a personal friend of the King, and when he was present no one else had the right to assist the King in mounting his horse. He now rode up to the Greeks with a cavalry escort and sent forward an interpreter to say that he would like to speak with their commanders. The generals thought it best to hear what he had to say and, going forward till they were within hearing distance, asked him what he wanted. He replied that he would like to come to terms by which he would undertake to do the Greeks no harm and they would

undertake not to burn the houses, though they could take any supplies which they needed. The generals agreed to this and made a treaty on these terms.

After this came a three days' march of forty-five miles over level ground. Tiribazus with his force kept pace with them, with about a mile between the armies. In the course of the march they came to a palace with a number of villages, full of all kinds of supplies, in the vicinity. There was a heavy fall of snow in the night, while they were in camp here, and at dawn it was decided that troops with their officers should take up quarters separately in the villages. There were no enemies in sight, and it seemed a safe thing to do because of the quantity of snow that had fallen. In these quarters they had all kinds of good food—meat, corn, old wines with a delicious bouquet, raisins, and all sorts of vegetables. However, some of the soldiers who had wandered off some way from the camp reported that at night they had clearly seen a number of camp-fires. The generals then decided that it was not safe for the troops to be in separate quarters, and that the whole army should be brought together again. Consequently they camped all together; and it looked also as though the weather was clearing up. However, while they were spending the night here, there was a tremendous fall of snow, so much of it that it covered over both the arms and the men lying on the ground. The baggage animals too were embedded in the snow. The soldiers felt very reluctant to get to their feet, as, when they were lying down, the snow which fell on them and did not slip off kept them warm. But when Xenophon was tough enough to get up and, without putting his clothes on, to start splitting logs, someone else soon got up too and took over the job of splitting the wood from him. Then others also got up and lit fires and rubbed themselves down with ointment. A lot of ointment was found in this place and they used it instead of olive oil. It was made of hog's lard, sesame, bitter almonds and turpentine. A perfumed oil, too, made from the same ingredients, was found here.

After the snowstorm it was decided to take up separate quarters again under cover, and the soldiers went back with a lot of shouting and jubilation to the houses and the stores of food. The ones who, when they had left the houses, had acted like hooligans and burned them down, now had to pay for it by having uncomfortable quarters. The generals gave a detachment of men to Democrates of Temenus, and sent him out from here by night to the mountains where those who had been out of camp had said they had seen the fires. They chose him because he had already on previous occasions won the reputation for bringing in accurate

information on subjects like this. When he said something was there, it was there; and when he said it wasn't, it wasn't. He now went out to the mountains and said that he had not seen any fires, but he returned with a prisoner who was armed with a Persian bow and quiver and a battle-ax like those which the Amazons carry. This prisoner was questioned as to where he came from, and said that he was a Persian and was going from Tiribazus' army to get provisions. They then asked him what was the size of the army and what was the purpose for which it had been mobilized. He replied that Tiribazus had under him his own force together with mercenary troops from the Chalybes and Taochi: his plan was to attack the Greeks, as they crossed the mountain, in a narrow pass through which went their only possible road.

When they heard this the generals decided to bring the army together again. They left a guard, with Sophaenetus the Stymphalian in command of those who stayed behind, and immediately set out, with the man who had been captured to show them the way. After they had crossed the mountains, the peltasts went forward, and, coming in sight of the enemy's camp, raised a shout and charged down on it without waiting for the hoplites. When the natives heard the noise, they did not stand their ground, but took to flight. In spite of this, some of them were killed and about twenty horses were captured, as was Tiribazus' own tent which contained some couches with silver legs and some drinking vessels; also some men who said that they were his bakers and cup-bearers.

As soon as the generals of the hoplites found out what had occurred, they decided to return to their camp as quickly as possible, in case an attack might be made on those who had been left behind. So they sounded the trumpet to call the men back, set off and got back to their camp on the same day.

MARCHING THROUGH THE SNOW

Next day they decided that they ought to get away as fast as they could, before the native army could reassemble and occupy the pass. They packed their belongings at once and, taking a number of guides with them, set off through deep snow. On the same day they passed the height where Tiribazus had intended to attack them, and then pitched camp. From here a three days' march of forty-five miles through desert country brought them to the river Euphrates, which they crossed without getting wet beyond the navel. The source of the river was said to be not far from here.

Next came a three days' march of forty-five miles over level ground

and through deep snow. The third day's march was a hard one, with a north wind blowing into their faces, cutting into absolutely everything like a knife and freezing people stiff. One of the soothsayers then proposed making a sacrifice to the wind and his suggestion was carried out. It was agreed by all that there was then a distinct falling off in the violence of the wind. The snow was six feet deep and many of the animals and the slaves perished in it, as did about thirty of the soldiers. They kept their fires going all night, as there was plenty of wood in the place where they camped, though those who came up late got no wood. The ones who had arrived before and had lit the fires would not let the latecomers approach their fire unless they gave them a share of their corn or any other foodstuff they had. So each shared with the other party what he had. When the fires were made, great pits were formed reaching down to the ground as the snow melted. This gave one a chance of measuring the depth of the snow.

The whole of the next day's march from here was through the snow, and a number of the soldiers suffered from bulimia. Xenophon, who, as he commanded the rear-guard, came upon men who had collapsed, did not know what the disease was. However, someone who had had experience of it told him that it was a clear case of bulimia, and that if they had something to eat they would be able to stand up. So he went through the baggage train and distributed to the sufferers any edibles that he could find there, and also sent round those who were able to run with more supplies to them. As soon as they had had something to eat they stood up and went on marching.

On this march Chirisophus came to a village about nightfall, and found by the well some women and girls, who had come out of the village in front of the fortification to get water. They asked the Greeks who they were, and the interpreter replied in Persian and said they were on their way from the King to the satrap. The women answered that he was not there, and said that he was about three miles away. Since it was late, they went inside the fortification with the water-carriers to see the head-man of the village. So Chirisophus and as many of the troops as could camped there, but as for the rest of the soldiers, those who were unable to finish the march spent the night without food and without fires, and some died in the course of it. Some of the enemy too had formed themselves into bands and seized upon any baggage animals that could not make the journey, fighting among themselves for the animals. Soldiers who had lost the use of their eyes through snow-blindness or whose toes had dropped off from frost-bite were left behind.

It was a relief to the eyes against snow-blindness if one held something

black in front of the eyes while marching; and it was a help to the feet if one kept on the move and never stopped still, and took off one's shoes at night. If one slept with one's shoes on, the straps sank into the flesh and the soles of the shoes froze to the feet. This was the more likely to happen since, when their old shoes were worn out, they had made themselves shoes of undressed leather from the skins of oxen that had just been flayed. Some soldiers who were suffering from these kinds of complaints were left behind. They had seen a piece of ground that looked black because the snow had gone from it, and they imagined that the snow there had melted—as it actually had done—this being the effect of a fountain which was sending up vapour in a wooded hollow near by. The soldiers turned aside here, sat down, and refused to go any further.

As soon as Xenophon, who was with the rear-guard, heard of this, he begged them, using every argument he could think of, not to get left behind. He told them that there were large numbers of the enemy, formed into bands, who were coming up in the rear, and in the end he got angry. They told him to kill them on the spot, for they could not possibly go on. Under the circumstances the best thing to do seemed to be to scare, if possible, the enemy who were coming up and so prevent them from falling upon the soldiers in their exhausted condition. By this time it was already dark, and the enemy were making a lot of noise as they advanced, quarrelling over the plunder which they had. Then the rear-guard, since they had the use of their limbs, jumped up and charged the enemy at the double, while the sick men shouted as hard as they could and clashed their shields against their spears. The enemy were panic-stricken and threw themselves down through the snow into the wooded hollows, and not a sound was heard from them afterwards. Xenophon and his troops told the sick men that a detachment would come to help them on the next day, and he then proceeded with the march. However, before they had gone half a mile they came across some more soldiers resting by the road in the snow, all covered up, with no guard posted. Xenophon's men roused them up, but they said that the troops in front were not going forward. Xenophon then went past them and sent on the most able-bodied of the peltasts to find out what was holding them up. They reported back that the whole army was resting in this way; so Xenophon's men posted what guards they could, and also spent the night there, without a fire and without supper. When it was near daybreak Xenophon sent the youngest of his men back to the sick with instructions to make them get up and force them to march on. At this point Chirisophus sent a detachment from his troops in the

village to see what was happening to the troops in the rear. Xenophon's men were glad to see them and handed over the sick to them to escort to the camp. They then went on themselves and, before they had marched two miles, got to the village where Chirisophus was camping. Now that they had joined forces again, it seemed safe for the troops to take up their quarters in the villages. Chirisophus stayed where he was, and the other officers drew lots for the villages which were in sight, and each went with his men to the one he got.

On this occasion Polycrates, an Athenian captain, asked leave to go on independently and, taking with him the men who were quickest on their feet, ran to the village which had been allotted to Xenophon and surprised all the villagers, with their head-man, inside the walls, together with seventeen colts which were kept there for tribute to the King, and the head-man's daughter, who had only been married nine days ago. Her husband had gone out to hunt hares and was not captured in the village.

The houses here were built underground; the entrances were like wells, but they broadened out lower down. There were tunnels dug in the ground for the animals, while the men went down by ladder. Inside the houses there were goats, sheep, cows and poultry with their young. All these animals were fed on food that was kept inside the houses. There was also wheat, barley, beans and barley-wine in great bowls. The actual grains of barley floated on top of the bowls, level with the brim, and in the bowls there were reeds of various sizes and without joints in them. When one was thirsty, one was meant to take a reed and suck the wine into one's mouth. It was a very strong wine, unless one mixed it with water, and, when one got used to it, it was a very pleasant drink.

Xenophon invited the chief of the village to have supper with him, and told him to be of good heart, as he was not going to be deprived of his children, and that, if he showed himself capable of doing the army a good turn until they reached another tribe, they would restock his house with provisions when they went away. He promised to co-operate and, to show his good intentions, told them of where some wine was buried. So for that night all the soldiers were quartered in the villages and slept there with all sorts of food around them, setting a guard over the head-man of the village and keeping a watchful eye on his children too.

On the next day Xenophon visited Chirisophus and took the head-man with him. Whenever he went past a village he turned into it to see those who were quartered there. Everywhere he found them feasting and merry-

making, and they would invariably refuse to let him go before they had given him something for breakfast. In every single case they would have on the same table lamb, kid, pork, veal and chicken, and a number of loaves, both wheat and barley. When anyone wanted, as a gesture of friendship, to drink to a friend's health, he would drag him to a huge bowl, over which he would have to lean, sucking up the drink like an ox. They invited the head-man too to take what he liked, but he refused their invitations, only, if he caught sight of any of his relatives, he would take them along with him.

When they came to Chirisophus, they found his men also feasting, with wreaths of hay round their heads, and with Armenian boys in native dress waiting on them. They showed the boys what to do by signs, as though they were deaf mutes. After greeting each other, Chirisophus and Xenophon together interrogated the head-man through the interpreter who spoke Persian, and asked him what country this was. He replied that it was Armenia. Then they asked him for whom the horses were being kept, and he said that they were a tribute paid to the King. The next country, he said, was the land of the Chalybes, and he told them the way there.

Xenophon then went away and took the head-man back to his own people. He gave him back the horse (rather an old one) which he had taken, and told him to fatten it up and sacrifice it. This was because he had heard that it was sacred to the sun and he was afraid that it might die, as the journey had done it no good. He took some of the colts himself, and gave one colt to each of the generals and captains. The horses in this part of the world were smaller than the Persian horses, but much more finely bred. The head-man told the Greeks to tie small bags round the feet of the horses and baggage animals whenever they made them go through snow, as, without these bags, they sank in up to their bellies.

THEY CAPTURE A PASS BY A MANOEUVRE

When the eighth day came, Xenophon handed over the head-man of the village to Chirisophus for a guide. He left behind all his family for him in the village, except for his son, who was just growing up. He gave the young man to Plisthenes of Amphipolis to look after, with the idea that, if the father was a reliable guide, he could take back his son too when he left them. They brought all the provisions they could into the head-man's house, and then packed their belongings and set out.

The head-man was not put under any restraint and led them on

through the snow. When they had already marched for three days Chirisophus got angry with him for not having brought them to any villages. The man said that there were none in this part of the country. Chirisophus then struck him, but did not have him bound. As a result of this he ran away and escaped in the night, leaving his son behind. This affair—ill-treating the guide and then not taking adequate precautions—was the only occasion on the march when Chirisophus and Xenophon fell out. Plisthenes was devoted to the young man, took him home with him, and found him a most trusty companion.

They then marched for seven days, doing fifteen miles a day, to the river Phasis, which was a hundred feet across. Next came a two days' march of thirty miles. At the pass which led down into the plain there were Chalybes, Taochi and Phasians to bar their way, and, when Chirisophus saw that the enemy was holding the pass, he came to a halt, keeping about three miles away from them, so as not to approach them while marching in column. He sent orders to the other officers to bring up their companies on his flank, so that the army should be in line. When the rear-guard had got into position he called a meeting of the generals and captains, and spoke as follows: "As you see, the enemy are holding the pass over the mountain. Now is the time to decide what is the best method of dealing with them. What I suggest is that we give orders to the troops to have a meal, and meanwhile decide whether it is best to cross the mountain to-day or to-morrow."

"I think, on the other hand," said Cleanor, "that we should get ready for battle and make an attack, as soon as we have finished our meal. My reason is that, if we let this day go by, the enemy who are now watching us will gain confidence and, if they do, others will probably join them in greater numbers."

Xenophon spoke next, and said: "This is my view. If we have to fight a battle, what we must see to is how we may fight with the greatest efficiency. But if we want to get across the mountain with the minimum of inconvenience, then, I think, what we must consider is how to ensure that our casualties in dead and wounded are as light as possible. The mountain, so far as we can see, extends for more than six miles, but except just for the part on our road, there is no evidence anywhere of men on guard against us. It would be a much better plan, then, for us to try to steal a bit of the undefended mountain from them when they are not looking, and to capture it from them, if we can, by taking the initiative, than to fight an action against a strong position and against troops who are waiting ready for us. It is much easier to march uphill

without fighting than to march on the level when one has enemies on all sides; and one can see what is in front of one's feet better by night, when one is not fighting, than by day, if one is; and rough ground is easier for the feet, if one is not fighting as one marches, than level ground is, when there are weapons flying round one's head. I do not think that it is impossible for us to steal this ground from them. We can go by night, so as to be out of their observation; and we can keep far enough away from them to give them no chance of hearing us. And I would suggest that, if we make a feint at attacking here, we should find the rest of the mountain even less defended, as the enemy would be likely to stay here in a greater concentration. But I am not the person who ought to be talking about stealing. I gather that you Spartans, Chirisophus—I mean the real officer class—study how to steal from your earliest boyhood, and think that so far from it being a disgrace it is an actual distinction to steal anything that is not forbidden by law. And, so that you may become expert thieves and try to get away with what you steal, it is laid down by law that you get a beating if you are caught stealing. Here then is an excellent opportunity for you to give an exhibition of the way in which you were brought up, and to preserve us from blows, by seeing to it that we are not caught stealing our bit of mountain."

"Well," said Chirisophus, "what I have gathered about you Athenians is that you are remarkably good at stealing public funds, even though it is a very risky business for whoever does so; and your best men are the greatest experts at it, that is if it is your best men who are considered the right people to be in the government. So here is a chance for you too to give an exhibition of the way in which you were brought up."

"Then," said Xenophon, "I am prepared, as soon as we have had our meal, to take the rear-guard and go to seize the position in the mountains. I have got guides already, as my light troops ambushed and made prisoners of a few of the natives who have been following behind to pick up what they could. I have also been informed by them that the mountains are not impassable: they provide pasture for goats and cattle. If, therefore, we once get hold of a part of the range, there will be a possible route for our baggage animals as well. I do not expect either that the enemy will stand their ground when they see that we are holding the heights and on a level with them, as they show no willingness at the moment to come down on to a level with us."

"But why," said Chirisophus, "should you go and leave vacant the command of the rear-guard? It would be better to send others, that is if some good soldiers do not come forward as volunteers."

Then Aristonymus of Methydria, a commander of hoplites, and Aristeas of Chios, and Nicomachus of Oeta, commanders of light infantry, came forward, and it was agreed that they would light a number of fires as soon as they had seized the heights. When this was settled they had their meal, and afterwards Chirisophus led the army forward about a mile in the direction of the enemy, so as to give the impression that it was at this point that he intended to attack.

When they had had supper and it became dark, the troops detailed for the job set off and seized the mountain height, while the others rested where they were. As soon as the enemy realized that the heights had been occupied, they were on the look out and kept a number of fires burning through the night. At daybreak Chirisophus offered sacrifices and then advanced on the road, while the troops who had seized the mountain ridge made an attack along the heights. Most of the enemy stood their ground at the pass, but part of them went to engage the troops on the heights. However, before the main bodies came to close quarters, the troops on the heights were in action and the Greeks were winning and driving the enemy back. At the same moment in the plain the Greek peltasts advanced at the double against the enemy's battle line, and Chirisophus with the hoplites followed at a quick march behind. However, when the enemy guarding the road saw that their troops higher up were being defeated, they took to flight. Not many of them were killed, but a very great number of shields were captured. The Greeks cut these shields up with their swords and so made them useless. When they reached the summit, they offered sacrifices and set up a trophy. Then they descended into the plain and came among villages full of plenty of good food.

THE GREEKS CATCH SIGHT OF THE SEA

Next came a five days' march of ninety miles into the country of the Taochi, and here provisions began to run short. The Taochi lived behind strong fortifications inside which they had all their provisions stored up. The Greeks arrived at one of these fortifications, which had no city or dwellings attached to it, but into which men and women and a lot of cattle had got together, and Chirisophus, as soon as he reached the place, launched an attack on it. When the first body of attackers became tired, another body of troops relieved them, and then another, since it was impossible to surround the place with the whole lot together, as there was precipitous ground all round it. On the arrival of Xenophon with the

rear-guard, both hoplites and peltasts, Chirisophus exclaimed: "You have come where you are needed. This position must be taken. If we fail to do so, there are no supplies for the army."

They then discussed the situation together, and, when Xenophon asked what it was that was stopping them from getting inside, Chirisophus said: "This approach, which you see, is the only one there is. But when one tries to get in by that way, they roll down boulders from that rock which overhangs the position. Whoever gets caught by one, ends up like this." And he pointed out some men who had had their legs and ribs broken.

"But," said Xenophon, "when they have used up their boulders, what is there to stop us getting inside? In front of us we see only these few men, and of these only two or three who are armed. And, as you can see yourself, the piece of ground where we are bound to be exposed to the stones, as we go over it, is about a hundred and fifty feet in length. Of this distance, about a hundred feet is covered with large pine trees spaced at intervals. If the men take shelter against their trunks, what damage could come to them either from the rolling stones or the stones flying through the air? All that is left is fifty feet, over which we must run when the stones cease coming at us."

"But," said Chirisophus, "as soon as we begin to advance towards the wooded part, great numbers of stones are hurled down at us."

"That," said Xenophon, "is just what we want. They will use up their stones all the quicker. Let us advance, then, to the point from which we shall not have far to run forward if we are to do so, and from which we can easily retreat if we want to."

Then Chirisophus and Xenophon went forward, accompanied by one of the captains, Callimachus of Parrhasia, since on that day he held the position of chief officer among the captains of the rear-guard. The other captains stayed behind in safety. Afterwards about seventy men reached the shelter of the trees, not in a body, but one by one, each man looking after himself as well as he could. Agasias of Stymphalus and Aristonymus of Methyria (also captains of the rear-guard) with some others were standing by outside the trees, as it was not safe for more than one company to stand among them.

Callimachus had a good scheme. He kept running forward two or three paces from the tree under which he was sheltering, and, when the stones came down on him, he nimbly drew back again. Each time he ran forward more than ten wagon-loads of stones were used. Agasias saw that the whole army was watching what Callimachus was doing, and feared that he would not be the first man to get into the fortification; so,
