| The Science of Mobile Being<br>Regina Cœli Academy<br>Natural Philosophy – Physics<br>Lecturer: Mr. Alan Aversa                    |          | O Creator ineffable, who of the riches of Thy wisdom didst<br>appoint three hierarchies of Angels and didst set them in<br>wondrous order over the highest heavens, and who didst<br>apportion the elements of the world most wisely: do Thou,<br>who art in truth the fountain of light and wisdom, deign to<br>shed upon the darkness of my understanding the rays of<br>Thine infinite brightness, and remove far from me the twofold<br>darkness in which I was born, namely, sin and ignorance. Do<br>Thou, who givest speech to the tongues of little children,<br>instruct my tongue and pour into my lips the grace of Thy<br>benediction. Give me keenness of apprehension, capacity for<br>remembering, method and ease in learning, insight in<br>interpretation, and copious eloquence in speech. Instruct my<br>beginning, direct my progress, and set Thy seal upon the<br>finished work, Thou, who art true God and true Man, who<br>livest and reignest world without end. Amen. |   |         |  |  |

Exploring the motions of matter (viz., "mobile being" or *ens mobile*)

- What is philosophical physics?
  - Does it study *ens mobile* from the perspective of being?
- What is modern physics?
  - Is it best termed "experimental physics" or "mathematical physics" or something else?
  - Maritain suggests the term *empiriological*.
- How are they the same?
- · How are they different?

A.M.D.G.

## Exploring the motions of matter (viz., "mobile being" or *ens mobile*)

- · What is philosophical physics?
  - Does it study *ens mobile* from the perspective of being?
- What is modern physics?
  - Is it best termed "experimental physics" or "mathematical physics" or "empirical physics" or something else?
  - Maritain suggests the term *empiriological*.
- · How are they the same?
- How are they different?

## All knowledge begins with being.

St. Thomas De Trinitate q. 2 a. 3 ad 7: "Sciences which are ordered to one another are so related that one can use the principles of another, just as posterior sciences can use the principles of prior sciences, whether they are superior or inferior: wherefore metaphysics, which is superior in dignity to all, uses truths that have been proved in other sciences. And in like manner theology—Although all other sciences are related to it in the order of generation, as serving it and as preambles to it—can make use of the principles of all the others, even if they are posterior to it in dignity."

## All knowledge begins with being.

St. Thomas De Trinitate q. 3 a. 1 ad 2: "The truth of things may also not be evident because of defect on our part, as in the case of divine and necessary things which, according to their own nature, are most knowable. Wherefore, to understand them, we are not capable of immediate intellection, from the very beginning, since it is in accordance with our nature to attain from things less knowable and posterior in themselves, to knowledge of those that are themselves more knowable and prior. But since from none of those things that we know last do we have any knowledge of those that are most knowable in themselves; but this cannot be except by believing. And this is evident even in the order of the sciences; since that science which is concerned with highest causes, namely, metaphysics, comes last in human knowledge; yet in sciences that are preambles to it there must be supposed certain truths which only in it are more fully revealed; therefore every science has some suppositions that must be believed in order to carry on the process of learning."
